Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all learned MAC address	N/A	This column must be empty.	N/.A

L2VPN/ClearAllPWStatistics

This table is used to clear all PW statistics.

XML structure

```
<L2VPN>
  <ClearAllPWStatistics>
    <Clear></Clear>
  </ClearAllPWStatistics>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN

Table name	ClearAllPWStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all PW statistics	N/A	This column must be empty.	N/A

L2VPN/ClearVSIPWStatistics

This table is used to clear specific PW related to the specific VSI.

XML structure

```
<L2VPN>
  <ClearVSIPWStatistics>
    <ClearVSIPWStatistic>
      <VsiName></VsiName>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <Clear></Clear>
    </ClearVSIPWStatistic>
  </ClearVSIPWStatistics>
</L2VPN>
```

L2VPN

L2VPN/Base

This table contains global L2VPN information.

XML structure

```
<L2VPN>
  <Base>
    <Enable></Enable>
    <StatisticsInterval></StatisticsInterval>
    <DrniPeerLinkVxlanMappingQinq></DrniPeerLinkVxlanMappingQinq>
    <IgnoreACState></IgnoreACState>
    <IgnoreACStateEncapsulation></IgnoreACStateEncapsulation>
    <BandWidthSharing></BandWidthSharing>
    <Log></Log>
  </Base>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations and does not support rollback.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether L2VPN feature is enabled globally	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	This column doesn`t support combing ‘merge’ and ‘delete’ operations with other columns.
StatisticsInterval	Interval for collecting packets statistics	N/A	Unsigned integer • **Value range:** 30 to 65535. • **Unit:** seconds.	N/A

DrniPeerLinkVxlanMappingQinq	Dynamic AC encapsulation type	N/A	Boolean: • **true—**VXLAN Mapping Type. • **false—**Static AC Mapping Type (default).	The VXLAN ID must not be greater than 16000000
IgnoreACState	Whether to ignore the state of ACs	N/A	Boolean: • **true** • **false** (default).	N/A
IgnoreACStateEncapsulation	IgnoreACState Encapsulation	N/A	Enumeration: • 0—ALL. • 1—VPLS. • 2—VPWS	N/A
BandWidthSharing	BandWidth sharing settings	N/A	Boolean: • **True** • **false** (default).	N/A
Log	L2vpn log	N/A	Boolean: • **True**(default) • **false**	N/A

L2VPN/VSIs

This table contains information about VSIs.

XML structure

Table description

Item	Description
Feature name	L2VPN
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
HubSpoke	Support for hub spoke capability.	N/A	Boolean: • true—Supported. • false—Not supported(default).	Support for this column depends on the device model. This column cannot be modified.
ArpSuppression	ARP flooding suppression	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Need confirm by products .
NdSuppression	ND flooding suppression	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Need confirm by products .
MacLearning	MAC address learning	N/A	Boolean: • true—Enabled(default). • false—Disabled.	Support for this column depends on the device model.
MacLimit	MAC table limit	N/A	Unsigned integer. Value range: The value range varies by device model.	Support for this column depends on the device model.
AlarmEnable	Whether enable alarm	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
Flooding	Flooding for all destination-un known frames	N/A	Boolean: • true—Enabled(default). • false—Disabled.	N/A
FloodType	Flood type	N/A	Enumeration: • 1—Broadcast • 2—Unknown unicast • 4—Unknown multicast • 3—Broadcast and unknown unicast. • 5—Broadcast and unknown multicast. • 6—Unknown unicast and unknown multicast. • 7—Broadcast, unknown unicast, and unknown multicast. • 9—Broadcast DCI • 10—Unknown unicast DCI • 11—Broadcast and unknown unicast on DCI	The value is always 7 when Flooding is enabled. The value must be set when flooding set to disabled.

			tunnels. • 12—Unknown multicast DCI • 13—Broadcast and unknown multicast on DCI tunnels. • 14—Unknown unicast and unknown multicast on DCI tunnels. • 15—Broadcast, unknown unicast, and unknown multicast on DCI tunnels. • 17—Broadcast all-direction • 18—Unknown unicast all-direction • 20—Unknown multicast all-direction • 19—Broadcast and unknown unicast in all directions. • 21—Broadcast and unknown multicast in all directions. • 22—Unknown unicast and unknown multicast in all directions. • 23—Broadcast, unknown unicast, and unknown multicast in all directions. Default: 7	
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	The range of VsiInterfaceID is reference in table of Base which in Data API.
Statistics	VSI statistics	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
StatisticsOverlayTunnel	Overlay Tunnel statistics	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
Description	description for the VSI	N/A	String. Length: 1 to 80 characters.	N/A
Bandwidth	VSI bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	Support for this column depends on the device model.
BroadcastRestrain	Broadcast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	Support for this column depends on the device model. The default value of BroadcastRestrai

				n is the value of VSIBroadcastRestrainDefault in the Base table of Data API.
MulticastRestrain	Multicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	Support for this column depends on the device model. The default value of MulticastRestrain is the value of VSIMulticastRestrainDefault in the Base table of Data API.
UnknownUnicastRestrain	Unknown-unicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	Support for this column depends on the device model. The default value of UnknownUnicast Restrain is the value of VSIUnUnicastRestrainDefault in the Base table of Data API.
AdminStatus	Administratively status	N/A	Enumeration: • 1—Administratively up(default). • 2—Administratively down.	N/A
Dscp	DSCP value	N/A	Unsigned integer Value range: 0 to 63.	Support for this column depends on the device model.
ServiceClass	Service class value	N/A	Unsigned integer Value range: The value range varies by device model.	Support for this column depends on the device model. The maximum value for this column is defined in the Base table of Data API.
DualReceive	Dual receive function for PW redundancy	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this column depends on the device model.
DiffServMode	DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode • TrustType	N/A
IngressMode	DiffServ mode	N/A	Enumeration:	If the value for

	in the inbound direction		• 1—Uniform. • 2—Pipe. • 3—Short-pipe.	IngressMode is set to Uniform, the ServiceClass column cannot be configured. When you remove or delete the DiffServ mode, you must and only need to specify this column and you do not need to specify the ServiceClass, EgressMode, or TrustType column.
ServiceClass	Service class value	N/A	Enumeration: • 0—be • 1—af1. • 2—af2. • 3—af3. • 4—af4. • 5—ef. • 6—cs6. • 7—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
TrustType	Trusted protocol type	N/A	Enumeration: • 2—Inner-dot1p. • 3—DSCP.	Use this column only when the value for the EgressMode column is 3.
PrivateVsi	Private Vsi type	N/A	Enumeration: • 0—**not** privated • 1—primary • 2—community • 3—isolated	N/A
SecondaryVsis	SecondaryVsi List	Sublist	N/A	N/A
StraightForwardingtoAc	VSI straight forwarding to ac	N/A	Boolean: • **true**—Enabled. • **false—**Disabled	N/A
MacLearningRate	Mac learning rate	N/A	Unsigned integer Value range: 0 to 1000.	N/A
MacLimitDropUnknow	Mac-table limit drop-unknow	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
EvpnBinding	EvpnBinding configuration	Data structure	Members include: • Encapsulation • Instance	N/A

			VsiTag	
Encapsulation	Encapsulation mode	N/A	Enumeration: • 1—Vxlan • 3—MPLS • 4—SRv6	N/A
Instance	Evpn instance name	N/A	String. Length: 1 to 31 characters.	N/A
VsiTag	Vsitag id	N/A	Unsigned integer Value range: 1 to 4094.	N/A
DefaultPwId	Default PW id	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column cannot be modified.
Etree	E-tree	Sublist	N/A	N/A
EsMode	EVPN redundancy mode	N/A	Enumeration: • 0—All-active (default). • 1—Single-active	N/A
Esi	Ethernet segment identifier	N/A	String. Length: 9 to 24 characters.	N/A

L2VPN/VSIs/SecondaryVsis

This table is a sublist of VSIs. This table contains Secondary Vsi information.

XML structure

```
<L2VPN>
  <VSIs>
    <VSI>
      <SecondaryVsis>
        <SecondaryVsi>
          <SecondaryVsiName></SecondaryVsiName>
        </SecondaryVsi>
      </SecondaryVsis>
    </VSI>
  </VSIs>
</L2VPN>
```

Table description

Item	Description

      <VccvBfdRawBfd></VccvBfdRawBfd>
      <VccvBfdTemplate></VccvBfdTemplate>
      <FlowLabel></FlowLabel>
      <Static></Static>
    </PWClass>
  </PWClasses>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	PWClasses
Table type	Multi-instance table
Row name	PWClass
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PWClassName	PW class name	Index	String. Length: 1 to 19 characters.	N/A
ControlWord	control word for MPLS PWs	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
PWType	PW type for MPLS PWs	N/A	Enumeration: • 1—VLAN(default). • 2—Ethernet.	N/A
SequencingBoth	Sequencing for both incoming and outgoing packets	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this column depends on the device model.
SRv6PWType	PW type for SRv6 PWs	N/A	Enumeration: • 0—None(default). • 1—VLAN. 2—Ethernet.	N/A
VccvCc	Vccv cc	N/A	Enumeration: • 1—control-word. • 2—router-alert. • 3—ttl.	N/A
VccvBfd	Configure Bidirectional Forwarding Detection (BFD) for PWs	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
VccvBfdRawBfd	PW-ACH Encapsulation for BFD	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Only Support when Vccv cc is control-word
VccvBfdTemplate	BFD template name	N/A	String. Length: 1 to 63 characters.	N/A
FlowLabel	Enable L2VPN flow label	N/A	Enumeration: • 1—send. • 2—receive. • 3—both.	N/A
Static	Enable static flow label	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A

L2VPN/SRVs

This table contains information about service instances of layer 2 ethernet interfaces.

XML structure

```
<L2VPN>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Encap></Encap>
      <SVlanRange></SVlanRange>
      <CVlanRange></CVlanRange>
    </SRV>
  </SRVs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SRVs
Table type	Multi-instance table
Row name	SRV
Restrictions	This table supports only layer 2 Ethernet interfaces. You must follow these restrictions: • Specify SVlanRange and not CVlanRange when the value of Encap is SvlanId or SvlanIdOnlyTagged or SvlanList or SvlanListOnlyTagged; • Specify both SVlanRange and CVlanRange when the value of Encap is SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll; the value of CVlanRange must is 1-4094 when the value of Encap is SvlanIdCvlanAll. • Specify CVlanRange and not SVlanRange when the value of Encap is CvlanId or CvlanList; • Don't specify SVlanRange and CVlanRange when the value of Encap is Default or Untagged or Tagged.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about

				IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Encap	Encapsulation type	N/A	Enumeration: • **1**—Default. • 2—Untagged. • 3—Tagged • 4—SvlanId • 5—SvlanIdOnlyTagged • 6—SvlanIdCvlanId • 7—CvlanId • 8—CvlanList • 9—SvlanIdCvlanList • 10—SvlanIdCvlanAll • 11—SvlanList • 12—SvlanListOnlyTagged • 13—SvlanListCvlanList	Can not be modified after creation. You must and only need specify this column when you remove or delete the encapsulation, and the **SVlanRange** column or **CVlanRange** column is ignored.
SVlanRange	A outer VLAN ID or a list of outer VLAN IDs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must is larger than the start VLAN ID. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The value must be different in different VLAN ID ranges. If this column is required, you must also specify the **Encap** column.
CVlanRange	A inner VLAN ID or a list of inner VLAN IDs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must be larger than the start VLAN ID. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The value must be different in different VLAN ID ranges. If this column is required, you must also specify the **Encap** column.

L2VPN/ACs

This table contains information about ACs.

XML structure

```
<L2VPN>
  <ACs>
    <AC>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <AccessMode></AccessMode>
      <Hub></Hub>
      <Statistics></Statistics>
      <Bandwidth></Bandwidth>
      <LearningMode></LearningMode>
      <Flooding></Flooding>
      <FloodType></FloodType>
      <ForwardingMode></ForwardingMode>
      <TrackEntryNumber></TrackEntryNumber>
      <MicrosegmentID></MicrosegmentID>
      <OnDemand></OnDemand>
      <Leaf></Leaf>
      <UMRPreferred></UMRPreferred>
    </AC>
  </ACs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	ACs
Table type	Multi-instance table
Row name	AC
Restrictions	This table supports only layer 2 Ethernet interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For

				information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	You must create a service instance first before you merge, replace or create ACs.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs. You must specify this column when the operation is create, merge or replace. Can not be modified after creation.
AccessMode	The access mode of this AC	N/A	Enumeration: • **1**—Vlan. • **2**—Ethernet.	Can not be modified after creation. By default, the value is 1.
Hub	Hub spoke attribute for the Link.	N/A	Boolean: • true—Hub. • false—Spoke(default).	You must first create the VSI with the hub-spoke capability. Can not be modified after creation.
Statistics	Whether statistics function is enabled	N/A	Boolean: • true. • false (default).	N/A
Bandwidth	AC bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	Support for this column depends on the device model.
LearningMode	MAC learning mode of this AC	N/A	Enumeration: • 0—MAC mode. • 1—SVID only. • 2—Double VIDs. • 3—Learning disabled	By Default,the value is 0 (MAC mode). Support for this column depends on the device.
Flooding	Enabling status of flooding	N/A	Boolean: • true—Enabled(default). • false—Disabled.	N/A
FloodType	Flooding type	N/A	Enumeration:	The value must be

			• 1—All ports. • 2—Source port.	set when flooding set to disabled.
ForwardingMode	Forwarding mode of this AC	N/A	Enumeration: • 0—MAC mode (default). • 1—SVID only. • 2—Double VIDs.	Support for this column depends on the device model.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3 A Track entry number list cannot contain duplicate Track entry numbers.
MicrosegmentID	Microsegment ID.	N/A	Unsigned integer. Value range: 1 to 65535.	Can not be modified after creation. Support for this column depends on the device model.
OnDemand	Whether download AC on-demand.	N/A	Boolean: • true. • false(default).	Can not be modified after creation. By default, the value is false. Support for this column depends on the device model.
Leaf	Leaf role	N/A	Boolean: • true. • false(default).	N/A
UMRPreferred	UMR Preferred	N/A	Boolean: • true. • false(default).	N/A

L2VPN/L3Interfaces

This table contains information about ACs for Layer 3 Ethernet interfaces.

XML structure

```
<L2VPN>
  <L3Interfaces>
    <L3Interface>
      <IfIndex></IfIndex>
      <VsiName></VsiName>

Table description

Item	Description
Feature name	L2VPN
Table name	L3Interfaces
Table type	Multi-instance table
Row name	L3Interface
Restrictions	This table supports only layer 3 Ethernet interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs. You must specify this column when the operation is create, merge or replace. Can not be modified after creation.

AccessMode	Access mode of the AC	N/A	Enumeration: • **1**—VLAN. • **2**—Ethernet.	Cannot be modified after creation. By default, the value is 2.
Hub	Hub spoke attribute for the Link.	N/A	Boolean: • true—Hub. • false—Spoke(default).	You must first create the VSI with the hub-spoke capability. Can not be modified after creation.
TrackEntryNumber	Track entry number	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3 A Track entry number list cannot contain duplicate Track entry numbers.
AcStatistics	Whether statistics function is enabled	N/A	Boolean: • true. • false (default).	Deleting or removing VsiName will delete this member
Leaf	Leaf role	N/A	Boolean: • true. • false(default).	N/A
UMRPreferred	UMR Preferred	N/A	Boolean: • true. • false(default).	N/A
AcMacLimit	MacLimit configuration	Subtable	N/A	Support for this column depends on the device model.

L2VPN/L3Interfaces/AcMacLimit

This table contains information about AcMacLimit for Layer 3 Ethernet interfaces.

XML structure

```
<L2VPN>
  <L3Interfaces>
    <L3Interface>
      <AcMacLimit>
        <ForwardAction></ForwardAction>
        <AlarmEnable></AlarmEnable>
        <MacMaximum></MacMaximum>
      </AcMacLimit>
    </L3Interface>
```

```
  </L3Interfaces>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	AcMacLimit
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only layer 3 Ethernet interfaces. Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ForwardAction	Action mode	N/A	Enumeration: • **0**—Forward(default) • **1**—Discard	Deleting or removing VsiName will delete this member
AlarmEnable	Whether enable alarm	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	Deleting or removing VsiName will delete this member
MacMaximum	The maximum of MAC	N/A	Unsigned integer. The value range varies by device model.	Deleting or removing VsiName will delete this member

L2VPN/FloodingMACs

This table contains information about MAC address which which can be selectively flooded.

XML structure

```
<L2VPN>
  <FloodingMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
    </MAC>
  </FloodingMACs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	FloodingMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated. The value can't be broadcast address.	Example: 00-0c-af-e3-5d-c0. Some versions only support unicast address or all 0s.

L2VPN/LocalMACs

This table contains information about setting static local MAC addresses for each VSI.

XML structure

```
<L2VPN>
  <LocalMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
```

```
      <IfIndex></IfIndex>
      <SrvID></SrvID>
    </MAC>
  </LocalMACs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	LocalMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI first.
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. IfIndex cannot be modified after creation.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	SrvID cannot be modified after creation.

L2VPN/VSIInterfaces

This table is used to create or delete VSI interfaces

XML structure

```
<L2VPN>
  <VSIInterfaces>
    <Interface>
```

```
      <ID></ID>
      <LocalEnable></LocalEnable>
      <L3VNI></L3VNI>
      <ArpSendRate></ArpSendRate>
      <PrefixRouteGenerate></PrefixRouteGenerate>
    </Interface>
  </VSIInterfaces>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VSI interface ID	Index	Unsigned integer	The range of VsiInterfaceID is reference in table of Base which in Data API.
LocalEnable	Local distributed gateway	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
L3VNI	L3 VNI for the tenant	N/A	Unsigned integer	N/A
ArpSendRate	ARP packet sending rate limit	N/A	Unsigned integer Value range: 0 to 500.	By default, the value is 0 for no limit.
PrefixRouteGenerate	Whether EVPN route advertisement is enabled.	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	N/A

L2VPN/VSIIpv4Subnets

This table contains information about IPv4 subnet configurations.

XML structure

```
<L2VPN>
  <VSIIpv4Subnets>
    <Ipv4Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <WildCardMask></WildCardMask>
    </Ipv4Subnet>
  </VSIIpv4Subnets>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIIpv4Subnets
Table type	Multi-instance table
Row name	Ipv4Subnet
Restrictions	You must specify a gateway interface for the VSI at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv4 address	Index	String, dotted decimal notation.	N/A
WildCardMask	Wildcard mask	Index	String, dotted decimal notation.	N/A

L2VPN/VSIIpv6Subnets

This table contains information about IPv6 subnet configurations.

XML structure

```
<L2VPN>
  <VSIIpv6Subnets>
    <Ipv6Subnet>
      <VsiName></VsiName>
```

```
      <SubnetAddress></SubnetAddress>
      <PrefixLength></PrefixLength>
    </Ipv6Subnet>
  </VSIIpv6Subnets>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIIpv6Subnets
Table type	Multi-instance table
Row name	Ipv6Subnet
Restrictions	You must specify a gateway interface for the VSI at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: ABCD:EF01::1
PrefixLength	Prefix length of the IPv6 address	Index	Unsigned integer. • Value range: 1- 128.	N/A

L2VPN/InterfaceConfigs

This table contains information about configurations of interfaces.

XML structure

```
<L2VPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <SoftwareLearning></SoftwareLearning>
      <Dci></Dci>
      <VxlanOverVxlan></VxlanOverVxlan>
      <MacBasedAc></MacBasedAc>
      <LearningMode></LearningMode>
      <ForwardingMode></ForwardingMode>
      <Esi></Esi>
```

```
      <EsMode></EsMode>
      <EvpnTrackBfd></EvpnTrackBfd>
      <VtepAccess></VtepAccess>
      <TrackState></TrackState>
    </InterfaceConfig>
  </InterfaceConfigs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	InterfaceConfigs
Table type	Single-instance table
Row name	InterfaceConfig
Restrictions	You must first enable the L2VPN feature globally.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SoftwareLearning	Whether learning MAC addresses through software function is enabled	N/A	Boolean: • true • false (default)	If the default value is used, the get or get-bulk operation cannot obtain this column.
Dci	Whether Dci is enabled	N/A	Boolean: • true • false (default)	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.

VxlanOverVxlan	Whether VXLAN over VXLAN is enabled	N/A	Boolean: • true • false (default)	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
MacBasedAc	Whether mac based ac is enable	N/A	Boolean: • true • false (default)	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
LearningMode	MAC learning mode	N/A	Enumeration: • 0—MAC mode (default). • 1—SVID only. • 2—Double VIDs. • 3—Learning disabled.	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
ForwardingMode	Forwarding mode	N/A	Enumeration: • 0—MAC mode (default). • 1—SVID only. • 2—Double VIDs.	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
Esi	Ethernet segment identifier	N/A	String. Length: 9 to 24 characters.	N/A
EsMode	EVPN redundancy mode	N/A	Enumeration: • 1—All-active (default). • 2—Single-active	If the default value is used, the get or get-bulk operation cannot obtain this column.
EvpnTrackBfd	Static BFD session on the AC-side interface for fast DF/BDF switchover	N/A	String. Length: 1 to 15 characters.	Can’t configure on the sub-interface.
VtepAccess	Whether the interface is a VTEP access port	N/A	Boolean: • true • false (default)	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
TrackState	Track PW state, and	N/A	HexBinary.	If the default value

	specify the encapslution type of the PWs to be tracked		Value range: 0 to 1.	is used, the get or get-bulk operation cannot obtain this column.

L2VPN/SrvRewrites

This table contains information about VLAN tag rewrite capability of service instances.

XML structure

```
<L2VPN>
  <SrvRewrites>
    <SrvRewrite>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Inbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
        <Symmetric></Symmetric>
      </Inbound>
      <Outbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
      </Outbound>
    </SrvRewrite>
  </SrvRewrites>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SrvRewrites
Table type	Multi-instance table
Row name	SrvRewrite
Restrictions	You must first enable the L2VPN feature globally.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	You must create a service instance before you merge, replace or create SrvRewrites.
Inbound	Inbound direction of packets	N/A	Members include: • RewriteType • SvlanID • CvlanID • Symmetric	RewriteType must be specified.
Outbound	Outbound direction of packets	N/A	Members include: • RewriteType • SvlanID • CvlanID	The members of RewriteType must be specified.
RewriteType	Rewrite type	N/A	Unsigned integer. Value: • 1: NEST • 2: REMARK_ONE • 3: REMARK_TWO • 4: STRIP_SVLAN • 5: STRIP_CVLAN • 6: STRIP_BOTH	N/A
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Applies the opposite VLAN tag processing rule to outgoing traffic	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	By default, the value is false.

L2VPN/L3Rewrites

This table contains information about rewrite capability of ac interface.

XML structure

```
<L2VPN>
  <L3Rewrites>
    <L3Rewrite>
      <IfIndex></IfIndex>
      <RewriteType></RewriteType>
      <SVlanID></SVlanID>
      <CVlanID></CVlanID>
      <Symmetric></Symmetric>
    </L3Rewrite>
  </L3Rewrites>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	L3Rewrites
Table type	Multi-instance table
Row name	L3Rewrite
Restrictions	You must enable L2VPN feature globally at first.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
RewriteType	RewriteType	N/A	Unsigned integer.	

			Value: • 1: NEST_S • 2: NEST_C • 3: NEST_SC • 4: STRIP_S • 5: STRIP_C • 6: STRIP_SC • 7: REMARK_1TO1 • 8: REMARK_1TO2 • 9: REMARK_2TO1 • 10: REMARK_2TO2 • 11: SWAP • 12: REMARK_OFFSET_INCREASE • 13: REMARK_OFFSET_DECREASE	
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Symmetric	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	By default, the value is false.

L2VPN/CEMClasses

This table contains CEM class information.

XML structure

```
<L2VPN>
  <CEMClasses>
    <CEMClass>
      <CEMClassName></CEMClassName>
      <IdleCode></IdleCode>
      <JitterBuffer></JitterBuffer>
      <PayLoadFrame></PayLoadFrame>
      <RtpHeader></RtpHeader>
    </CEMClass>
  </CEMClasses>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN

Table name	CEMClasses
Table type	Multi-instance table
Row name	CEMClass
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CEMClassName	CEM class name	Index	String. Length: 1 to 19 characters.	N/A
IdleCode	Idle-code	N/A	HexBinary. The range is 0 to 2	A null set (all bits set to zero) automatically passes.
JitterBuffer	Jitter-buffer	N/A	Unsigned integer Value range: 1 to 500	N/A
PayLoadFrame	Payload frame	N/A	Unsigned integer Number of frames in a packet,which must be 8,16,24,32,40,48	N/A
RtpHeader	Rtp-header Enable	N/A	Boolean: • true—Supported. • false—Not supported(default).	N/A

L2VPN/Cems

This table contains information about Cems.

XML structure

```
<L2VPN>
   <Cems>
    <IfIndex></IfIndex>
    <ClassAttach></ClassAttach>
    <JitterBuffer></JitterBuffer>
    <ClockRecover></ClockRecover>
    <SignalingCas></SignalingCas>
  </Cems>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	Cems
Table type	Multi-instance table
Row name	Cem
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ClassAttach	Cem Class-attach	N/A	String. Length: 1 to 19 characters.	N/A
ClockRecover	Cem Clock Recover	N/A	Unsigned integer. Value: • 1: ACR • 2: DCR	N/A
ClockTransmit	Cem Clock Transmit Differential	N/A	Boolean: • true—Differential. • false—Notdifferential(default).	N/A
SignalingCas	Cem Signaling Cas	N/A	Boolean: • true—Supported. • false—Notsupported(default).	N/A

L2VPN/Drni

This table contains information about Drni Peer Link information.

XML structure

```
<L2VPN>
   <Drni>
    <EthIPLTnlSourceIpAddr></EthIPLTnlSourceIpAddr>
    <EthIPLTnlDestinationIpAddr></EthIPLTnlDestinationIpAddr>
  </Drni>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	Drni
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EthIPLTnlSourceIpAddr	Source Ip Address	N/A	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
EthIPLTnlDestinationIpAddr	Destination Ip Address	N/A	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.

Table description

Item	Description
Feature name	L2VPN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether L2VPN feature is enabled globally	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
SupportVsiInterface	Whether VSI interface feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
VsiInterfaceMinID	Minimum VSI interface ID.	N/A	Unsigned integer.	N/A
VsiInterfaceMaxID	Maximum VIS interface ID.	N/A	Unsigned integer.	N/A
SupportSRV	Whether SRV feature is supported	N/A	Boolean: • **true**—Supported. • **false—**Not supported.	N/A
SupportControlWord	Whether control word feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVPLSHubSpoke	Whether VPLS hub-spoke feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVPLSMACLimit	Whether VPLS MAC limit feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
MACLimitMAX	Maximum VPLS MAC limit	N/A	Unsigned interger	N/A
SupportVPWSInterworking	Whether VPWS interworking feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A

SupportVPWSDualReceive	Whether VPWS dualreceive feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVPLSDualReceive	Whether VPLS dualreceive feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVSIStatistics	Whether VSI statistics feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportPWStatistics	Whether PW statistics feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVSIBandwidth	Whether VSI bandwidth feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVSIBroadcastRestrain	Whether VSI broadcast suppression feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
VSIBroadcastRestrainDefault	The default value of broadcast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportVSIMulticastRestrain	Whether VSI multicast suppression feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
VSIMulticastRestrainDefault	The default value of multicast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportVSIUnUnicastRestrain	Whether VSI Unknown-unicast suppression feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
VSIUnUnicastRestrainDefault	The default value of Unknown-unicast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportACBa	Whether AC	N/A	Boolean:	N/A

ndwidth	bandwidth feature is supported		• **true**—Supported. • **false**—Not supported.	
SupportVxlanOverVxlan	Whether VXLAN over VXLAN is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportDscp	Whether the DSCP feature is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportServiceClass	Whether the service class feature is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
ServiceClassValueMax	Maximum service class value.	N/A	Unsigned integer.	N/A
StatisticsInterval	Interval for collecting packets statistics	N/A	Unsigned integer Value range: 30 to 65535. Unit: seconds.	N/A
SupportOverlayTunnelStatistics	Whether the Overlay Tunnel statistics feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportVPLSDualReceive	Whether VPLS dual receive feature is supported	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
DrniPeerLinkVxlanMappingQinq	Dynamic AC encapsulation type	N/A	Boolean: • **true—**VXLAN Mapping Type. • **false—**Static AC Mapping Type .	N/A
IgnoreACState	Whether to ignore the state of ACs	N/A	Boolean: • **true** • **false** (default).	N/A
IgnoreACStateEncapsulation	IgnoreACState Encapsulation	N/A	Enumeration: • 0—ALL. • 1—VPLS. • 2—VPWS	N/A
BandWidthSharing	BandWidth sharing settings	N/A	Boolean: • **True** • **false** (default).	N/A
Log	L2vpn log	N/A	Boolean: • **True**(default). • **false**	N/A

L2VPN/SrvEncapCapabilities

This table contains the encapsulation capabilities of service instance.

XML structure

```
<L2VPN>

Table description

Item	Description
Feature name	L2VPN
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	When the number of VSIs is large, it is recommended to use the <get-bulk> operation instead of the <get> operation that may cost a lot of time and cause the UI to get stuck.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
HubSpoke	Support for hub spoke capability	N/A	Boolean: • true—Supported. • false—Not supported.	This column cannot be modified.Support for this column depends on the device model.
VsiIndex	VSI index	N/A	Unsigned integer.	N/A
VxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
NvgreID	NVGRE ID	N/A	Unsigned integer, Value range: 4096-16777214.	N/A
ArpSuppression	ARP flooding suppression	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
NdSuppression	ND flooding suppression	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
MacLearning	MAC address learning	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
MacLimit	MAC table limit	N/A	Unsigned integer. Value range:	Support for this column depends on the device

			The value range varies by device model.	model.
AlarmEnable	Whether enable alarm	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Flooding	Flooding for all destination-unknown frames	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
FloodType	Flood type	N/A	Enumeration: • 1—Broadcast • 2—Unknown unicast • 4—Unknown multicast • 3—Broadcast and unknown unicast. • 5—Broadcast and unknown multicast. • 6—Unknown unicast and unknown multicast. • 7—Broadcast, unknown unicast, and unknown multicast. • 9—Broadcast DCI • 10—Unknown unicast DCI • 12—Unknown multicast DCI • 11—Broadcast and unknown unicast on DCI tunnels. • 13—Broadcast and unknown multicast on DCI tunnels. • 14—Unknown unicast and unknown multicast on DCI tunnels. • 15—Broadcast, unknown unicast, and unknown multicast on DCI tunnels. • 17—Broadcast all-direction • 18—Unknown unicast all-direction • 20—Unknown multicast all-direction • 19—Broadcast and unknown unicast in all directions. • 21—Broadcast and unknown multicast in all directions. • 22—Unknown unicast and unknown multicast in all directions. • 23—Broadcast, unknown unicast, and unknown multicast in all directions.	N/A
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer.	N/A

Statistics	VSI statistics	N/A	Boolean: • **true**—Enabled. • **false—**Disabled	N/A
StatisticsOverlayTunnel	Overlay Tunnel statistics	N/A	Boolean: • **true**—Enabled. • **false—**Disabled	N/A
Description	Description for the VSI	N/A	String. Length: 1 to 80 characters.	N/A
Bandwidth	VSI bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	N/A
BroadcastRestrain	Broadcast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The maximum value varies by device model.	N/A
MulticastRestrain	Multicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The maximum value varies by device model.	N/A
UnknownUnicastRestrain	Unknown-unicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The maximum value varies by device model.	N/A
AdminStatus	Administratively status	N/A	Enumeration: • **1**—Administratively up. • **2**—Administratively down.	N/A
Status	VSI status	N/A	Enumeration: • **1**—Up. • **2**—Down.	N/A
LocMacCnt	The count of local MAC addresses	N/A	Unsigned integer.	The value is always zero when the mode of VSI is not VXLAN. The value may be not zero when the mode of VSI is VXLAN.
Dscp	DSCP value	N/A	Unsigned integer. Value range: 0-63.	Support for this column depends on the device
ServiceClass	Service class value	N/A	Unsigned integer. Value range: The value range varies by device model.	Support for this column depends on the device
IsL3VNI	L3-VNI status	N/A	Boolean:	N/A

			• **true**—Enabled. • **false—**Disabled	
DualReceive	Dual receive function for PW redundancy	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this column depends on the device model.
DiffServMode	DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode • TrustType	N/A
IngressMode	DiffServ mode in the inbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
ServiceClass	Service class value	N/A	Enumeration: • 0—be • 1—af1. • 2—af2. • 3—af3. • 4—af4. • 5—ef. • 6—cs6. • 7—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
TrustType	Trusted protocol type	N/A	Enumeration: • 2—Inner-dot1p. • 3—DSCP.	Use this column only when the value for the EgressMode column is 3.
PrivateVsi	Private Vsi type	N/A	Enumeration: • 0—not privated • 1—primary • 2—community • 3—isolated	N/A
SecondaryVsis	Secondary Vsi List	Sublist	N/A	N/A
StraightForwardingtoAc	VSI straight forwarding to ac	N/A	Boolean: • **true**—Enabled. • **false—**Disabled	N/A
MacLearningRate	Mac learning rate	N/A	Unsigned integer Value range: 0 to 1000.	N/A
MacLimitDropUnknow	Mac-table limit drop-unknow	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
EvpnBinding	EvpnBinding	Data	Members include:	N/A

	configuration	structure	• Encapsulation • Instance VsiTag	
Encapsulation	Encapsulation mode	N/A	Enumeration: • 1—Vxlan • 3—MPLS • 4—SRv6	N/A
Instance	Evpn instance name	N/A	String. Length: 1 to 31 characters.	N/A
VsiTag	Vsitag id	N/A	Unsigned integer Value range: 1 to 4094.	N/A
DefaultPwId	Default PW id	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column cannot be modified.
Etree	E-tree	Sublist	N/A	N/A
EsMode	EVPN redundancy mode	N/A	Enumeration: • 0—All-active (default). • 1—Single-active	N/A
Esi	Ethernet segment identifier	N/A	String. Length: 9 to 24 characters.	N/A

L2VPN/VSIs/SecondaryVsis

This table is a sublist of VSIs. This table contains Secondary Vsi information.

XML structure

```
<L2VPN>
  <VSIs>
    <VSI>
      <SecondaryVsis>
        <SecondaryVsi>
          <SecondaryVsiName></SecondaryVsiName>
        </SecondaryVsi>
      </SecondaryVsis>
    </VSI>
  </VSIs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SecondaryVsis

Table type	Single-instance table
Row name	SecondaryVsi
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SecondaryVsiName	Secondary Vsi Name	Index	String. Length: 1 to 31 characters.	N/A

L2VPN/MACInfos

This table contains global L2VPN MAC information.

XML structure

```
<L2VPN>
  <MACInfos>
    <MACInfo>
      <VsiName></VsiName>
      <MACCount></MACCount>
      <MAC></MAC>
      <MACState></MACState>
      <Aging></Aging>
    </MACInfo>
  </MACInfos>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	MACInfos
Table type	Multi-instance table
Row name	MACInfo
Restrictions	This table supports only global configurations and does not support rollback.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. • Length: 1 to 31 characters.	N/A
MACCount	The number of MAC	N/A	Unsigned integer	N/A
MAC	MAC address	N/A	String, dotted decimal notation.	N/A
MACState	MAC state	N/A	Boolean: • **true** • **false** (default).	N/A
Aging	Aging time	N/A	Unsigned integer.	

L2VPN/PWClasses

This table contains PW class information.

XML structure

```
<L2VPN>
  <PWClasses>
    <PWClass>
      <PWClassName></PWClassName>
      <ControlWord></ControlWord>
      <PWType></PWType>
      <SequencingBoth></SequencingBoth>
      <SRv6PWType></SRv6PWType>
      <VccvCc></VccvCc>
      <VccvBfd></VccvBfd>
      <VccvBfdRawBfd></VccvBfdRawBfd>
      <VccvBfdTemplate></VccvBfdTemplate>
      <FlowLabel></FlowLabel>
      <Static></Static>
    </PWClass>
  </PWClasses>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	PWClasses
Table type	Multi-instance table
Row name	PWClass

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PWClassName	PW class name	Index	String. Length: 1 to 19 characters.	N/A
ControlWord	Control word for MPLS PWs	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
PWType	PW type for MPLS PWs	N/A	Enumeration: • 1—VLAN. • 2—Ethernet.	N/A
SequencingBoth	Sequencing for both incoming and outgoing packets	N/A	Boolean: • true—Enabled. • false—Disabled.	Support for this column depends on the device model.
SRv6PWType	PW type for SRv6 PWs	N/A	Enumeration: • 0—None. • 1—VLAN. • 2—Ethernet.	N/A
VccvCc	Vccv cc	N/A	Enumeration: • 1—control-word. • 2—router-alert. • 3—ttl.	N/A
VccvBfd	Configure Bidirectional Forwarding Detection (BFD) for PWs	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
VccvBfdRawBfd	PW-ACH Encapsulation for BFD	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Only Support when Vccv cc is control-word
VccvBfdTemplate	BFD template name	N/A	String. Length: 1 to 63 characters.	N/A
FlowLabel	Enable L2VPN flow label	N/A	Enumeration: • 1—send. • 2—receive. • 3—both.	N/A
Static	Enable static flow label	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A

L2VPN/SRVs

This table contains information about service instances of layer 2 ethernet interfaces.

XML structure

```
<L2VPN>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <SrvID></SrvID>
      <Encap></Encap>
      <SVlanRange></SVlanRange>
      <CVlanRange></CVlanRange>
    </SRV>
  </SRVs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SRVs
Table type	Multi-instance table
Row name	SRV
Restrictions	This table supports only layer 2 Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an	N/A	String.	

	interface		Length: 2 to 47 characters.	
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Encap	Encapsulation type	N/A	Enumeration: • **1**—Default. • 2—Untagged. • 3—Tagged • 4—SvlanId • 5—SvlanIdOnlyTagged • 6—SvlanIdCvlanId • 7—CvlanId • 8—CvlanList • 9—SvlanIdCvlanList • 10—SvlanIdCvlanAll • 11—SvlanList • 12—SvlanListOnlyTagged • 13—SvlanListCvlanList	N/A
SVlanRange	A outer VLAN ID or a list of outer VLAN IDs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must is larger than the start VLAN ID. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The column is available when the value of Encap is SvlanId or SvlanIdOnlyTagged or SvlanList or SvlanListOnlyTagged or SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll.
CVlanRange	A inner VLAN ID or a list of inner VLAN IDs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must is larger than the start VLAN ID. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The column is available when the value of Encap is CvlanId or CvlanList or SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll.

L2VPN/ACs

Table description

Item	Description
Feature name	L2VPN
Table name	ACs
Table type	Multi-instance table
Row name	AC
Restrictions	This table supports only layer 2 Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For

				relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
AccessMode	The access mode of this AC	N/A	Enumeration: • **1**—Vlan. • **2**—Ethernet.	N/A
Hub	Hub spoke attribute for the Link.	N/A	Boolean: • true—Hub. • false—Spoke.	Only exists when the VSI supports hub-spoke capability.
Statistics	Whether statistics function is enabled	N/A	Boolean: • true. • false.	N/A
Bandwidth	AC bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	N/A
LearningMode	MAC learning mode of the AC	N/A	Enumeration: • 0—MAC mode. • 1—SVID only. • 2—Double VIDs. • 3—Learning disabled	By Default,the value is 0 (MAC mode). Support for this column depends on the device.
InPkts	Number of inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InOctets	Number of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPkts	Number of Outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctets	Number of Outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
Flooding	Enabling status of flooding	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

FloodType	Flooding type	N/A	Enumeration: • 1—All ports. • 2—Source port.	N/A
ForwardingMode	Forwarding mode of this AC	N/A	Enumeration: • 0—MAC mode. • 1—SVID only. • 2—Double VIDs.	Support for this column depends on the device.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3
InPktsRate	Rate of inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InOctetsRate	Rate of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPktsRate	Rate of outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctetsRate	Rate of outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
MicrosegmentID	Microsegment ID.	N/A	Unsigned integer. Value range: 1 to 65535.	Support for this column depends on the device.
OnDemand	Whether download AC on-demand.	N/A	Boolean: • true. • false.	Support for this column depends on the device.
Leaf	Leaf role	N/A	Boolean: • true. • false.	N/A
UMRPreferred	UMR Preferred	N/A	Boolean: • true. • false	N/A

L2VPN/L3Interfaces

This table contains information about ACs for Layer 3 Ethernet interfaces.

XML structure

```

Table description

Item	Description
Feature name	L2VPN
Table name	L3Interfaces
Table type	Multi-instance table
Row name	L3Interface
Restrictions	This table supports only layer 3 Ethernet interfaces.
Support for row creation and deletion	This table supports only layer 3 Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs.
AccessMode	Access mode of the AC	N/A	Enumeration: • **1**—VLAN. • **2**—Ethernet.	N/A
Hub	Hub spoke attribute for the Link.	N/A	Boolean: • true—Hub. • false—Spoke.	Only exists when the VSI supports hub-spoke capability.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3
InPkts	Number of inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InOctets	Number of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPkts	Number of outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctets	Number of outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InPktsRate	Rate of inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InOctetsRate	Rate of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPktsRate	Rate of outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctetsRate	Rate of outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcStatistics	Whether statistics function is enabled	N/A	Boolean: • true. • false.	Deleting or removing VsiName will delete this member
Leaf	Leaf role	N/A	Boolean: • true. • false.	N/A
UMRPreferre	UMR Preferred	N/A	Boolean:	N/A

d			• true. • false.	
AcMacLimit	MacLimit configuration	Subtable	N/A	Support for this column depends on the device model.

L2VPN/L3Interfaces/AcMacLimit

This table contains information about AcMacLimit for Layer 3 Ethernet interfaces.

XML structure

```
<L2VPN>
  <L3Interfaces>
    <L3Interface>
      <AcMacLimit>
        <ForwardAction></ForwardAction>
        <AlarmEnable></AlarmEnable>
        <MacMaximum></MacMaximum>
      </AcMacLimit>
    </L3Interface>
  </L3Interfaces>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	AcMacLimit
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only layer 3 Ethernet interfaces. Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For

				information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ForwardAction	Action mode	N/A	Enumeration: • **0**—Forward(default) • **1**—Discard	Deleting or removing VsiName will delete this member
AlarmEnable	Whether enable alarm	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	Deleting or removing VsiName will delete this member
MacMaximum	The maximum of MAC	N/A	Unsigned integer. The value range varies by device model.	Deleting or removing VsiName will delete this member

L2VPN/FloodingMACs

This table contains information about MAC addresses which can be selectively flooded.

XML structure

```
<L2VPN>
  <FloodingMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
    </MAC>
  </FloodingMACs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	FloodingMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

L2VPN/LocalMACs

This table contains information about local MAC addresses of each VSI.

XML structure

```
<L2VPN>
  <LocalMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <SrvID></SrvID>
      <Type></Type>
    </MAC>
  </LocalMACs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	LocalMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	Only supported when the mode of VSI is VXLAN.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A

MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
Type	Type of local MAC address	N/A	Enumeration: • 0—Dynamic • 1—Static	N/A

L2VPN/VSIStatistics

This table contains VSI traffic statistics.

XML structure

```
<L2VPN>
  <VSIStatistics>
    <Statistics>
      <VsiName></VsiName>
      <InPkts></InPkts>
      <InOctets></InOctets>

InPkts	Number of inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InOctets	Number of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InErrors	Number of inbound error packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InDiscards	Number of inbound discard packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPkts	Number of Outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctets	Number of Outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutErrors	Number of Outbound error packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutDiscards	Number of Outbound discard packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
InPktsRate	Rate of inbound	N/A	Unsigned integer64.	N/A

	packets		Value range: 0 to 2^{64} - 1.	
InOctetsRate	Rate of inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutPktsRate	Rate of outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
OutOctetsRate	Rate of outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcInPkts	Number of AC inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcInOctets	Number of AC inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcOutPkts	Number of AC outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcOutOctets	Number of AC outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcInPktsRate	Rate of AC inbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcInOctetsRate	Rate of AC inbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcOutPktsRate	Rate of AC outbound packets	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
AcOutOctetsRate	Rate of AC outbound bytes	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A

L2VPN/AvailableVSIInterfaceID

This table contains the available VSI interface ID.

XML structure

```
<L2VPN>
  <AvailableVSIInterfaceID>
    <ID></ID>
  </AvailableVSIInterfaceID>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	AvailableVSIInterfaceID

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Available VSI interface ID	N/A	Unsigned integer.	The range of VsiInterfaceID is reference in table of Base which in Data API.

L2VPN/VSIInterfaces

This table contains information about VSI interfaces.

XML structure

```
<L2VPN>
  <VSIInterfaces>
    <Interface>
      <ID></ID>
      <IfIndex></IfIndex>
      <Name></Name>
      <LocalEnable></LocalEnable>
      <L3VNI></L3VNI>
      <ArpSendRate></ArpSendRate>
      <PrefixRouteGenerate></PrefixRouteGenerate>
    </Interface>
  </VSIInterfaces>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	You must enabled global L2VPN feature at first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VSI interface ID	Index	Unsigned integer.	N/A
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
LocalEnable	Local distributed gateway	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
L3VNI	L3 VNI for the tenant	N/A	Unsigned integer	N/A
ArpSendRate	ARP packet sending rate limit	N/A	Unsigned integer.	0 for no limit.
PrefixRouteGenerate	Whether EVPN route advertisement is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

L2VPN/VSIIpv4Subnets

This table contains information about IPv4 subnet configurations.

XML structure

```
<L2VPN>
  <VSIIpv4Subnets>
    <Ipv4Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <WildCardMask></WildCardMask>
      <VsiInterfaceID></VsiInterfaceID>
    </Ipv4Subnet>
  </VSIIpv4Subnets>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIIpv4Subnets
Table type	Multi-instance table
Row name	Ipv4Subnet
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv4 address	Index	String, dotted decimal notation.	N/A
WildCardMask	Wildcard mask	Index	String, dotted decimal notation.	N/A
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	N/A

L2VPN/VSIIpv6Subnets

This table contains information about IPv6 subnet configurations.

XML structure

```
<L2VPN>
  <VSIIpv6Subnets>
    <Ipv6Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <PrefixLength></PrefixLength>
      <VsiInterfaceID></VsiInterfaceID>
    </Ipv6Subnet>
  </VSIIpv6Subnets>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	VSIIpv6Subnets
Table type	Multi-instance table
Row name	Ipv6Subnet
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: ABCD:EF01::1
PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 1- 128.	N/A
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	N/A

L2VPN/InterfaceConfigs

This table contains information about configurations of interfaces.

XML structure

```
<L2VPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <SoftwareLearning></SoftwareLearning>
      <Dci></Dci>
      <VxlanOverVxlan></VxlanOverVxlan>
      <MacBasedAc></MacBasedAc>
      <LearningMode></LearningMode>
      <ForwardingMode></ForwardingMode>
      <Esi></Esi>
      <EsMode></EsMode>
      <EvpnTrackBfd></EvpnTrackBfd>
      <VtepAccess></VtepAccess>
      <TrackState></TrackState>
```

```
    </InterfaceConfig>
  </InterfaceConfigs>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	InterfaceConfigs
Table type	Single-instance table
Row name	InterfaceConfig
Restrictions	You must first enable the L2VPN feature globally. You must first carete the interface.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
SoftwareLearning	Whether learning MAC addresses through software function is enabled	N/A	Boolean: • true • false	N/A
Dci	Whether Dci is enabled	N/A	Boolean: • true • false	N/A
VxlanOverVxlan	Whether VXLAN over VXLAN is enabled	N/A	Boolean: • true • false	N/A
MacBasedAc	Whether mac based ac is enable	N/A	Boolean: • true • false	Support for this column depends on the device model.

LearningMode	MAC learning mode	N/A	Enumeration: • 0—MAC mode (default). • 1—SVID only. • 2—Double VIDs. • 3—Learning disabled.	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
ForwardingMode	Forwarding mode	N/A	Enumeration: • 0—MAC mode (default). • 1—SVID only. • 2—Double VIDs.	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
Esi	Ethernet segment identifier	N/A	String. Length: 9 to 24 characters.	N/A
EsMode	EVPN redundancy mode	N/A	Enumeration: • 1—All-active(default). • 2—Single-active.	If the default value is used, the get or get-bulk operation cannot obtain this column.
EvpnTrackBfd	Static BFD session on the AC-side interface for fast DF/BDF switchover	N/A	String. Length: 1 to 15 characters.	Can’t configure on the sub-interface.
VtepAccess	Whether the interface is a VTEP access port	N/A	Boolean: • true • false (default)	Support for this column depends on the device model. If the default value is used, the get or get-bulk operation cannot obtain this column.
TrackState	Track PW state, and specify the encapslution type of the PWs to be tracked	N/A	HexBinary. Value range: 0 to 1.	Specify the PW encapsulation type in bits. Only the SRv6 type is supported at present. Non-supported bits will be ignored. 0x0 represents to disable tracking PW state (default). 0x00000001 represents to track the state of PWs encapsulated by SRv6. If the default value is used, the get or get-bulk operation

				cannot obtain this column.

L2VPN/SrvRewrites

This table contains information about VLAN tag rewrite capability of service instances.

XML structure

```
<L2VPN>
  <SrvRewrites>
    <SrvRewrite>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <IfName></IfName>
      <Inbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
        <Symmetric></Symmetric>
      </Inbound>
      <Outbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
      </Outbound>
    </SrvRewrite>
  </SrvRewrites>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SrvRewrites
Table type	Multi-instance table
Row name	SrvRewrite
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface

				name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
Inbound	Inbound direction of packets	N/A	Members include: • RewriteType • SvlanID • CvlanID • Symmetric	NA
Outbound	Outbound direction of packets	N/A	Members include: • RewriteType • SvlanID • CvlanID	N/A
RewriteType	Rewrite type	N/A	Unsigned integer. Value: • 1: NEST • 2: REMARK_ONE • 3: REMARK_TWO • 4: STRIP_SVLAN • 5: STRIP_CVLAN • 6: STRIP_BOTH	N/A
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Whether opposite VLAN tag processing is enabled for outgoing traffic	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	By default, the value is false.

L2VPN/L3Rewrites

This table contains information about rewrite capability of ac interface.

XML structure

```
<L2VPN>
  <L3Rewrites>
    <L3Rewrite>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <RewriteType></RewriteType>
      <SVlanID></SVlanID>
      <CVlanID></CVlanID>
      <Symmetric></Symmetric>
    </L3Rewrite>
  </L3Rewrites>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	L3Rewrites
Table type	Multi-instance table
Row name	L3Rewrite
Restrictions	You must enable L2VPN feature globally at first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
RewriteType	RewriteType	N/A	Unsigned integer. Value: • 1: NEST_S	

			• 2: NEST_C • 3: NEST_SC • 4: STRIP_S • 5: STRIP_C • 6: STRIP_SC • 7: REMARK_1TO1 • 8: REMARK_1TO2 • 9: REMARK_2TO1 • 10: REMARK_2TO2 • 11: SWAP • 12: REMARK_OFFSET_INCREASE • 13: REMARK_OFFSET_DECREASE	
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Symmetric	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A.

L2VPN/Links

This table contains information about link.

XML structure

```
<L2VPN>
  <Links>
    <Link>
      <VsiIndex></VsiIndex>
      <LinkID></LinkID>
      <LinkType></LinkType>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TunnelID></TunnelID>
    </Link>
  </Links>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	Links

Table type	Multi-instance table
Row name	Link
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiIndex	VSI index	Index	Unsigned integer.	N/A
LinkID	RewriteType	N/A	Unsigned integer	N/A
LinkType	Link type	N/A	Unsigned integer.	N/A
IfIndex	Interface index	N/A	Unsigned integer.	N/A
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
TunnelID	Tunnel id	N/A	Unsigned integer.	N/A

L2VPN/CEMClasses

This table contains CEM class information.

XML structure

```
<L2VPN>
  <CEMClasses>
    <CEMClass>
      <CEMClassName></CEMClassName>S
      <IdleCode></IdleCode>
      <JitterBuffer></JitterBuffer>
      <PayLoadFrame></PayLoadFrame>
      <RtpHeader></RtpHeader>
    </CEMClass>
  </CEMClasses>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	CEMClasses
Table type	Multi-instance table
Row name	CEMClass
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CEMClassNam e	CEM class name	Index	String. Length: 1 to 19 characters.	N/A
IdleCode	Idle-code	N/A	HexBinary. • The range is 0 to 2	A null set (all bits set to zero) automatically passes.
JitterBuffer	Jitter-buffer	N/A	Unsigned integer Value range: 1 to 500	N/A
PayLoadFrame	Payload frame	N/A	Unsigned integer Number of frames in a packet,which must be 8,16,24,32,40,48	N/A
RtpHeader	Rtp-header Enable	N/A	Boolean: • true—Supported. • false—Notsupported(default).	N/A

L2VPN/Cems

This table contains information about Cems.

XML structure

```
<L2VPN>
   <Cems>
    <IfIndex></IfIndex>
    <ClassAttach></ClassAttach>
    <JitterBuffer></JitterBuffer>
    <ClockRecover></ClockRecover>
    <SignalingCas></SignalingCas>
  </Cems>
</L2VPN>
```

Item	Description
Feature name	L2VPN
Table name	Cems
Table type	Multi-instance table

Row name	Cem
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ClassAttach	Cem Class-attach	N/A	String. Length: 1 to 19 characters.	N/A
ClockRecover	Cem Clock Recover	N/A	Unsigned integer. Value: • 1: ACR • 2: DCR	N/A
ClockTransmit	Cem Clock Transmit Differential	N/A	Boolean: • true—Differential. • false—Notdifferential(default).	N/A
SignalingCas	Cem Signaling Cas	N/A	Boolean: • true—Supported. • false—Notsupported(default).	N/A

L2VPN/Drni

This table contains information about Drni Peer Link information.

XML structure

```
<L2VPN>
   <Drni>
    <EthIPLTnlSourceIpAddr></EthIPLTnlSourceIpAddr>
    <EthIPLTnlDestinationIpAddr></EthIPLTnlDestinationIpAddr>
  </Drni>
</L2VPN>
```

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Parameters don’t exist. 参数不存在。	When the spare board is not prepared,the parameters don’t exist. 备板未准备，参数不存在。

L2VPN/VSI

Message	Explanation
When set is operated, the set value doesn’t meet the requirements of the module. SET操作时，所设的值不符合模块要求。	When set is operated, the set value doesn’t meet the requirements of the module. SET操作时，所设的值不符合模块要求。
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Executing the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。

L2VPN/PWCLASSES

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。

Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Parameters don’t exist. 参数不存在。	The MOR value of the column doesn’t exist. 列的MOR值不存在。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1. Edit is not allowed. 2.No support for message sorting,the variable can’t be modified. 1.不允许编辑。 2.不支持消息排序，变量不允许修改。
Failure to apply for resources. 申请资源失败。	Failure to apply for resources.Such as failure in memory applications. 申请资源失败，比如申请内存失败。

L2VPN/SRV

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Non-two-layer interface has no AC data. 2.The current interface is not a Ethernet interface and aggregate interface. 3.Encap does not support. 1.非二层接口无 AC 数据。 2.当前接口不是以太接口和聚合接口。 3.不支持 Encap。
Parameters don’t exist. 参数不存在。	Invaild service instance ID. 无效的服务实例ID。
Configration information does not meet module requirements.	Configration information does not meet module requirements.

配置信息不符合模块要求。	

L2VPN/L3INTERFACES

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Interface does not support L3AC. 2.Hub-spoke function is not supported. 3.The user has the attribute column label,but there is no Vsiname tag at the same time. 1.接口不支持 L3AC。 2.不支持 hub-spoke 功能。 3.用户具有属性列标签，同时没有 Vsiname 标签。
Executes the set command,and the variable exists,but the assignment fails because the condition is not satisfied in the currnet environment. 执行SET命令,变量存在，但因当前环境下条件不满足而导致赋值失败。	Executes the set command,and the variable exists,but the assignment fails because the condition is not satisfied in the currnet environment.For example,set MTU=1 in the Ethernet SNAO format. 执行SET命令,变量存在，但因当前环境下条件不满足而导致赋值失败。例如在以太网SNAO格式中设置MTU=1。
Parameters don’t exist. 参数不存在。	Delete failure due to unconfigtured AC. 由于未配置AC删除失败。

L2VPN/AC

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向	1.Access a no-access node. 2.Send/receive data timeout.

服务器发起连接失败。	3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Non-two-layer interface has no AC data. 2.The current interface is not a Ethernet interface and aggregate interface. 3.Interface does not support AC statistics. 4.Interface does not support AC bandwidth. 5.Hub-spoke function is not supported. 1.非二层接口无AC数据。 2.当前接口不是以太接口和聚合接口。 3.接口不支持AC统计。 4.接口不支持AC带宽。 5.不支持Encap。
When you delete the operation,you bring the AC mode or hub tag,but there is no VSI name tag. 删除操作时，若带了ACmode或Hub标签，但是没有带VsiName标签，报错，不允许修改。	When you delete the operation,you bring the AC mode or hub tag,but there is no VSI name tag. 删除操作时，若带了ACmode或Hub标签，但是没有带VsiName标签，报错，不允许修改。

L2VPN/FLOODINGMAC

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。

L2VPN/LOCALMAC

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。

的情况。	
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Parameters don’t exist. 参数不存在。	VSI index doesn’t exist.. VSI索引不存在。

L2VPN/CLEARVSISTATISTICS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support VSI statistics. 接口不支持 VSI 统计。

L2VPN/CLEARALLVSISTATISTICS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support VSI statistics. 接口不支持 VSI 统计。

L2VPN/VSISTATISTICS

Message	Explanation
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server.
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Invaild configuration messages. 无效的配置信息。

L2VPN/AVAILABLE INTERFACE ID

Message	Explanation
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。

L2VPN/INTERFACE ID

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无 RBAC 权限。
When set is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	Unauthorized VSIIFID. 未经授权的 VSIIFID。
Parameters don’t exist. 参数不存在。	1.VSIIFID doesn’t exist. 2.Invalid VXLAN-ID. 1.VSIIFID 不存在。

	2.无效的 VXLAN-ID。

L2VPN/VSIIPV4SUBNETS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Vsiif is not supported. 不支持 VSIIF。
When set is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	Invalid subnet address. 无效的子网地址。

L2VPN/VSIIPV6SUBNETS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Invalid VSI index. 无效的 VSI 索引。
When set is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	Invalid subnet address. 无效的子网地址。

L2VPN/CLEARALLPWSTATISTICS

Message	Explanation
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

L2VPN/CLEARVSIPWSTATISTICS

Message	Explanation
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

L2VPN/CLEARVSIXCGSTATISTICS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

L2VPN/CLEARVSIMACTAB

Message	Explanation
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。

L2VPN/IFCFG

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Do not support Mac software learning. 2.The sub interface cannot configure the DCI. 1.不支持Mac软件学习。 2.子接口未配置DCI。
Parameters don’t exist. 参数不存在。	The configturation of delete has a default value and doesn’t allow delete. Delete配置有默认值且不允许删除。
Can’t configure on the sub-interface. 子接口不可配置。	The sub interface cannot configure the EVPN TRACK BFD. 1.子接口不支持evpn track bfd。

L2VPN/CLEAR AC STATISTICS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set commamd, the variable exists but	1.Non-two-layer interface has no AC data.

can not be modified. 执行SET命令，变量存在但不能被修改。	2.The current interface is not a Ethernet interface and aggregate interface. 3.Interface does not support AC statistics. 1.非二层接口无AC数据。 2.当前接口不是以太接口和聚合接口。 3.接口不支持AC统计。
Parameters don't exist. 参数不存在。	The instance number of the configured message does not exist. 配置消息的实例编号不存在。

L2VPN/CLEAR ALL AC STATISTICS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support AC statistics. 接口不支持AC统计。

L2VPN/REWRITE

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Non-two-layer interfaces have no SRV data. 2.The current interface is not a stack interface. 3.SRV rewrite is not supported. 4.When there is a symmetric attribute,inbound can only be configured. 5.The property does not configure inbound or outbound. 6.The rewriting direction is not consistent with the configuration information. 7.Illegal labels. 8.Delete rows are not supported. 1.非二层接口无 SRV 数据。 2.当前接口无栈接口。 3.不支持 SRV 重写。 4.当有对称属性是，只能配置 inbound。 5.未配置 inbound 或 outbound 属性。 6.重写方向与配置信息不一致。

	7.非法的标签。 8.不支持删除行。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无 RBAC 权限。
Parameters don’t exist. 参数不存在。	The rewrite information of the specified object does not exist. 指定对象的重写信息不存在。
When *set* is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	When *set* is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。

L2VPN/VBRECIDS

Message	Explanation
Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
When *set* is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	When *set* is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。

Column name	Column description	Column type	Data type and restrictions	Remarks
name	VRF name	Index	String. Length: 1 to 31 characters.	After an instance is created, its VRF cannot be modified

Column name	Column description	Column type	Data type and restrictions	Remarks
vrf-root	Information of the vrf-root	Sublist	The details of the sublist refer to vrf-root table.	N/A

ietf-network-instance/network-instances/vrf-root

This table contains vrf-root information.

XML structure

Please refer to the XML Structure of ietf-network-instance/network-instances.

Table description

Item	Description
Feature name	ietf-network-instance
Table name	Vrf-root
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Example

```
配置一个 vpn 为 a 的 ospfv3 实例，并在该实例下创建一个 area
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>
    </target>
    <config xmlns:xc="urn:ietf:params:xml:ns:netconf:base:1.0">
      <v:network-instances
xmlns:v="urn:ietf:params:xml:ns:yang:ietf-network-instance">
        <v:network-instance xc:operation="merge">
          <v:name>a</v:name>
          <v:vrf-root>
            <v:routing>
              <v:control-plane-protocols>
                <v:control-plane-protocol>
```

```
                        <v:type>ospfv3</v:type>
                        <v:name>12</v:name>
                        <v:mode>0</v:mode>
                        <b:ospfv3 xmlns:b="urn:ietf:params:xml:ns:yang:ietf-ospfv3">
                           <b:instance>
                              <b:af>ipv6</b:af>
                              <b:areas>

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnVRF
Table type	Multi-instance table
Row name	VRF
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
Description	VPN instance description.	N/A	String, case-sensitive. Length: 1 to 79 characters.	Public instance doesn't support the column.
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	The VRF RD must be the same as the RD of address family.
IPv4RD	IPv4 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or	Public instance doesn't support the column.

			IP_address:nn.	
IPv6RD	IPv6 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
FlowSpecRD	IPv4 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
IPv6FlowSpecRD	IPv6 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
Ipv4RoutingLimit	The maximum number of active routes limit of ipv4 address family view.	Data structure	Members include: • `Ipv4MaxRoutes` • `Ipv4RouteThreshold` • `Ipv4SimplyAlert`.	N/A
Ipv4MaxRoutes	The maximum number of active routes of ipv4 address family view.	N/A	Unsigned integer.	N/A
Ipv4RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutually exclusive with Ipv4SimplyAlert.
Ipv4SimplyAlert	Whether to print syslog.	N/A	Boolean: • true—Print syslog. • false—Does not print syslog (default).	Mutually exclusive with Ipv4RouteThreshold.
Ipv6RoutingLimit	The maximum number of active routes limit of ipv6 address family view.	Data structure	Members include: • `Ipv6MaxRoutes` • `Ipv6RouteThreshold` • `Ipv6SimplyAlert`.	N/A
Ipv6MaxRoutes	The maximum number of active routes of ipv6 address family view.	N/A	Unsigned integer.	N/A
Ipv6RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutually exclusive with Ipv6SimplyAlert.
Ipv6SimplyAlert	Whether to print syslog.	N/A	Boolean: • true—Print syslog. • false—Does not print syslog (default).	Mutually exclusive with Ipv6RouteThreshold.
TtlMode	TTL processing mode	N/A	Enumeration: • 1—Pipe. • 2—Uniform.	N/A
ExportRoutePolicy	The export route policy in VPN	N/A	String.	N/A

	view.		Length: 1 to 63 characters.	
EVPNExportRoutePolicy	The export route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ExportRoutePolicy	The export route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ExportRoutePolicy	The export route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
ImportRoutePolicy	The import route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNImportRoutePolicy	The import route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ImportRoutePolicy	The import route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ImportRoutePolicy	The import route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
TunnelPolicy	The tunnel policy in VPN instance view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv4TunnelPolicy	The tunnel policy in IPv4 address family view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv6TunnelPolicy	The tunnel policy in IPv6 address family view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv4VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: • Ipv4VrfLabelMode. • Ipv4VrfLabelValue.	Public instance doesn't support the column.
Ipv4VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: • **1**—PerInstance. • **2**—PerRoute. • **3**—PerNextHop (default).	N/A
Ipv4VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
Ipv6VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: • Ipv6VrfLabelMode. • Ipv6VrfLabelValue.	Public instance doesn't support the column.

Ipv6VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: • **1**—PerInstance. • **2**—PerRoute. • **3**—PerNextHop (default).	N/A
Ipv6VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
SnmpContextName	SNMP context name	N/A	String. Length: 1 to 32 characters.	N/A
VpnId	ID of VPN instance	N/A	String. The format is OUI<0-FFFFFF>:index<0-FFFFFFFF>	Example: 20:1
Ipv4EvpnMplsRouting	IPv4 EVPN MPLS routing function	N/A	Enumeration: • 0—Disable.(default) • 1—MPLS • 2—SDWAN	N/A
Ipv6EvpnMplsRouting	IPv6 EVPN MPLS routing function	N/A	Enumeration: • 0—Disable.(default) • 1—MPLS • 2—SDWAN	N/A
DiffServMode	MPLS DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode	N/A
IngressMode	DiffServ mode in the inbound direction	N/A	Enumeration: • **1**—Uniform. • **2**—Pipe. • **3**—Short-pipe.	N/A
ServiceClass	Service class value	N/A	Enumeration: • **0**—be • **1**—af1. • **2**—af2. • **3**—af3. • **4**—af4. • **5**—ef. • **6**—cs6. • **7**—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • **1**—Uniform. • **2**—Pipe. • **3**—Short-pipe.	N/A
SdwanVnId	SDWAN virtual network ID.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
RedirectPublic	Perform route lookup in the public routing	N/A	Enumeration: • **0**—Disable (default).	N/A

	table when VPN route lookup fails		• **1**—Enable.	

L3vpn/L3vpnIf

This table contains information about VPN instance-to-interface bindings.

XML structure

```
<L3vpn>
  <L3vpnIf>
    <Bind>
      <VRF></VRF>
      <IfIndex></IfIndex>
    </Bind>
  </L3vpnIf>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnIf
Table type	Multi-instance table
Row name	Bind
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	Public instance doesn't support the column.
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. Public instance doesn't support the column.

L3vpn/L3vpnRT

This table contains L3VPN route target information.

XML structure

```
<L3vpn>
  <L3vpnRT>
    <RT>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </RT>
  </L3vpnRT>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRT
Table type	Multi-instance table
Row name	RT
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
AddressFamily	Address family.	Index	Enumeration. • **1**—IPv4 unicast • **2**—IPv6 unicast • **3**—VPN • **4**—EVPN • **5**—IPv4 flowspec • **6**—IPv6 flowspec	N/A
RTType	RT type.	Index	Enumeration. • **1**—Import • **2**—Export	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RTEntry	Route target.	Index	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 100:1 or 192.168.1.1:1.

L3vpn/L3vpnPeer

This table contains L3VPN peer information.

XML structure

```
<L3vpn>
  <L3vpnPeer>
    <Peer>
      <PeerName></PeerName>
      <PeerId></PeerId>
      <UserProfile></UserProfile>
    </Peer>
  </L3vpnPeer>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnPeer
Table type	Multi-instance table
Row name	Peer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerName	VPN peer name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
PeerId	Peer ID	N/A	Unsigned integer. Value range: 1 to 134217727	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfile	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	A user profile name can contain alphabets, digits, and underlines, and it must begin with an alphabet.

L3vpn/L3vpnRep

This table contains L3VPN route replication configuration.

XML structure

```
<L3vpn>
  <L3vpnRep>
    <Replicate>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RepVRF></RepVRF>
      <Protocol></Protocol>
      <ProtocolID></ProtocolID>
      <Advertise></Advertise>
      <RoutePolicyName></RoutePolicyName>
    </Replicate>
  </L3vpnRep>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRep
Table type	Multi-instance table
Row name	Replicate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
AddressFamily	Address family	Index	Enumeration.	N/A

			• **1**—IPv4 unicast • **2**—IPv6 unicast • **3**—VPN (currently not supported) • **4**—EVPN (currently not supported)	
RepVRF	Source VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
Protocol	Protocol name	Index	Enumeration. • **1—**Direct • **2**—Static • **3**—RIP • **4**—OSPF • **5**—IS-IS • **6**—EIGRP (IPv6 currently not supported) • **7**—BGP • **8**—UNR • **9**—Vlink-Direct	N/A
Protocol ID	Process ID or autonomous System number	Index	Unsigned integer. Value range: • 1 to 65535 for IGP protocol and EIGPR process ID. • 1 to 4294967295 for BGP AS number. • 0 for direct and static routes.	N/A
Advertise	Advertise the replicated routes to routing protocols	N/A	Enumeration. • 0—Not advertise. • 1—Advertise.	N/A
RoutePolicyNam e	Name of the routing policy applied to replicated routes	N/A	String. Length: 1 to 63 characters.	A null string indicates no routing policy is applied to replicated routes.

L3vpn/L3vpnReflector

This table contains L3VPN reflector information.

XML structure

```
<L3vpn>
  <L3vpnReflector>
    <Reflector>

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnReflector
Table type	Multi-instance table
Row name	Reflector
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
IpAddress	Destination ip of packet waiting to reflect.	N/A	IPv4 address string .	Example: 1.1.1.1. Get result contains IpAddress column indicates the reflector under the vrf exists.
SrcPort	UDP source port number of packet waiting to reflect.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 49184	N/A
DestPort	UDP destination port number of packet waiting to reflect.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 7	N/A

L3vpn/Global

This table contains L3VPN global information.

XML structure

```
<L3vpn>
  <Global>
```

```
    <IPv6RouterId></IPv6RouterId>
    <AsNotation></AsNotation>
  </Global>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6RouterId	Destination TE IPv6 router ID.	N/A	IPv6: hexadecimal string, colon-separated.	N/A
ASNotation	AsNumber Notation Type	N/A	Boolean: • true—dot. • false—plain	N/A

L3vpn/L3vpnDefaultColor

This table contains L3VPN default color information.

XML structure

```
<L3vpn>
  <L3vpnDefaultColor>
    <DefaultColor>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <Color></Color>
      <EvpnColor></EvpnColor>
    </DefaultColor>
  </L3vpnDefaultColor>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnVRF
Table type	Multi-instance table
Row name	VRF
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
VrfIndex	VPN instance index.	N/A	Unsigned integer. Value range: 0 to 4294967295.	For information about the string type, see "**错误! 未找到引用源。**.
Description	VPN instance description.	N/A	String, case-sensitive. Length: 1 to 79 characters.	Public instance doesn't support the column.

Column name	Column description	Column type	Data type and restrictions	Remarks
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	The VRF RD must be the same as the RD of address family.
IPv4RD	IPv4 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
IPv6RD	IPv6 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
FlowSpecRD	IPv4 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
IPv6FlowSpecRD	IPv6 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
CreationTime	Creation time.	N/A	String. The format is YYYY-MM-DDTHH:MM:SS.	N/A
AssociatedInterfaceCount	The number of interfaces that are binded with this VRF.	N/A	Unsigned integer.	N/A
Ipv4RoutingLimit	The maximum number of active routes limit of ipv4 address family view.	Data structure	Members include: • `Ipv4MaxRoutes` • `Ipv4RouteThreshold` • `Ipv4SimplyAlert`.	N/A
Ipv4MaxRoutes	The maximum number of active routes of ipv4 address family view.	N/A	Unsigned integer.	N/A
Ipv4RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutually exclusive with Ipv4SimplyAlert.
Ipv4SimplyAlert	Whether to print syslog.	N/A	Boolean: • true—Print syslog. • false—Does not print syslog (default).	Mutually exclusive with Ipv4RouteThreshold.
Ipv6RoutingLimit	The maximum number of active routes limit of ipv6 address family view.	Data structure	Members include: • `Ipv6MaxRoutes` • `Ipv6RouteThreshold` • `Ipv6SimplyAlert`.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6MaxRoutes	The maximum number of active routes of ipv6 address family view.	N/A	Unsigned integer.	N/A
Ipv6RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutually exclusive with Ipv6SimplyAlert.
Ipv6SimplyAlert	Whether to print syslog.	N/A	Boolean: • true—Print syslog. • false—Does not print syslog (default).	Mutually exclusive with Ipv6RouteThreshold.
TtlMode	TTL processing mode	N/A	Enumeration: • 1—Pipe. • 2—Uniform.	N/A
ExportRoutePolicy	The export route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNExportRoutePolicy	The export route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ExportRoutePolicy	The export route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ExportRoutePolicy	The export route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
ImportRoutePolicy	The import route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNImportRoutePolicy	The import route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ImportRoutePolicy	The import route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ImportRoutePolicy	The import route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
TunnelPolicy	The tunnel policy in VPN instance view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv4TunnelPolicy	The tunnel policy in IPv4 address family view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv6TunnelPolicy	The tunnel policy in IPv6 address family view.	N/A	String. Length: 1 to 126 characters.	Public instance doesn't support the column.
Ipv4VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: • Ipv4VrfLabelMode • Ipv4VrfLabelValue	Public instance doesn't support the column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: • **1**—PerInstance. • **2**—PerRoute. • **3**—PerNextHop.	N/A
Ipv4VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
Ipv6VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: • Ipv6VrfLabelMode • Ipv6VrfLabelValue	Public instance doesn't support the column.
Ipv6VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: • **1**—PerInstance. • **2**—PerRoute. • **3**—PerNextHop.	N/A
Ipv6VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
SnmpContextName	SNMP context name	N/A	String. Length: 1 to 32 characters.	N/A
VpnId	ID of VPN instance	N/A	String. The format is OUI<0-FFFFFF>:index<0-FFFFFFFF>	Example: 20:1
Ipv4VrfStatus	IPv4 VPN instance status	N/A	Enumeration. • **0**—Down. • **1**—Up.	N/A
Ipv6VrfStatus	IPv6 VPN instance status	N/A	Enumeration. • **0**—Down. • **1**—**Up**.	N/A
Ipv4EvpnMplsRouting	IPv4 EVPN MPLS routing.	N/A	Enumeration: • 0—Disable.(default) • 1—MPLS. • 2—SDWAN.	N/A
Ipv6EvpnMplsRouting	IPv6 EVPN MPLS routing.	N/A	Enumeration: • 0—Disable.(default) • 1—MPLS. • 2—SDWAN.	N/A
DiffServMode	MPLS DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode	N/A
IngressMode	DiffServ mode in the inbound direction	N/A	Enumeration: • **1**—Uniform. • **2**—Pipe.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—Short-pipe.	
ServiceClass	Service class value	N/A	Enumeration: • **0**—be • **1**—af1. • **2**—af2. • **3**—af3. • **4**—af4. • **5**—ef. • **6**—cs6. • **7**—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • **1**—Uniform. • **2**—Pipe. • **3**—Short-pipe.	N/A
SdwanVnId	SDWAN virtual network ID.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
RedirectPublic	Perform route lookup in the public routing table when VPN route lookup fails	N/A	Enumeration: • **0**—Disabled. • **1—**Enabled.	N/A

L3vpn/L3vpnIf

This table contains information about VPN instance-to-interface bindings.

XML structure

```
<L3vpn>
  <L3vpnIf>
    <Bind>
      <VRF></VRF>
      <IfIndex></IfIndex>
      <Name></Name>
    </Bind>
  </L3vpnIf>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnIf
Table type	Multi-instance table
Row name	Bind

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	Public instance doesn't support the column.
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. Public instance doesn't support the column.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

L3vpn/L3vpnRT

This table contains L3VPN Route target information.

XML structure

```
<L3vpn>
  <L3vpnRT>
    <RT>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </RT>
  </L3vpnRT>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn

Item	Description
Table name	L3vpnRT
Table type	Multi-instance table
Row name	RT
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
AddressFamily	Address family.	Index	Enumeration. • **1**—IPv4 unicast • **2**—IPv6 unicast • **3**—VPN • **4**—EVPN • **5**—IPv4 flowspec • **6**—IPv6 flowspec	N/A
RTType	RT type.	Index	Enumeration. • **1**—Import • **2**—Export	N/A
RTEntry	Route target.	Index	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 100:1 or 192.168.1.1:1.

L3vpn/L3vpnPeer

This table contains L3VPN peer information.

XML structure

```
<L3vpn>
  <L3vpnPeer>
    <Peer>
      <PeerName></PeerName>
      <PeerId></PeerId>
      <UserProfile></UserProfile>
    </Peer>
  </L3vpnPeer>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnPeer
Table type	Multi-instance table
Row name	Peer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerName	VPN peer name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
PeerId	Peer ID	N/A	Unsigned integer. Value range: 1 to 134217727	N/A
UserProfile	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	A user profile name can contain alphabets, digits, and underlines, and it must begin with an alphabet.

L3vpn/L3vpnRep

This table contains L3VPN route replication information.

XML structure

```
<L3vpn>
  <L3vpnRep>
    <Replicate>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RepVRF></RepVRF>
      <Protocol></Protocol>
      <ProtocolID></ProtocolID>
      <Advertise></Advertise>
      <RoutePolicyName></RoutePolicyName>
    </Replicate>
  </L3vpnRep>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRep
Table type	Multi-instance table
Row name	Rep
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
AddressFamily	Address family.	Index	Enumeration. • **1**—IPv4 unicast • **2**—IPv6 unicast • **3**—VPN (currently not supported) • **4**—EVPN(currently not supported)	N/A
RepVRF	Source VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
Protocol	Protocol.	Index	Enumeration. • **1—**Direct • **2**—Static • **3**—Rip • **4**—OSPF • **5**—ISIS • **6**—EIGRP（ipv6 currently not supported） • **7**—BGP • **8**—UNR • **9**—Vlink-Direct	N/A
Protocol ID	Process ID/ Autonomous System number	Index	Unsigned integer. Value range: 1 to 65535,or 1 to 4294967295,or 0	For IGP Protocol and EIGRP Protocol,This is 1 to 65535. For BGP Protocol ,This is 1 to 4294967295. For Direct Protocol and Static Protocol,This is

				0.
Advertise	The routes can be advertised to routing protocols	N/A	**Enumeration.** • **0**—Not advertise • **1**—Advertise	N/A
RoutePolicyName	Specify a routing policy	N/A	String. Length: 1 to 63 characters.	A null string indicates without specify a routing policy

L3vpn/ Global

This table contains L3VPN global information.

XML structure

```
<L3vpn>
  <Global>
    <IPv6RouterId></IPv6RouterId>
    <AsNotation></AsNotation>
  </Global>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6RouterId	Destination TE IPv6 router ID.	N/A	IPv6: hexadecimal string, colon-separated.	N/A
ASNotation	AsNumber Notation Type	N/A	Boolean: • true—dot. • false—plain	N/A

L3vpn/L3vpnDefaultColor

This table contains L3VPN default color information.

XML structure

```
<L3vpn>
  <L3vpnDefaultColor>
    <DefaultColor>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <Color></Color>
      <EvpnColor></EvpnColor>
    </DefaultColor>
  </L3vpnDefaultColor>
</L3vpn>
```

Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnDefaultColor
Table type	Multi-instance table
Row name	DefaultColor
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
AddressFamily	Address family.	Index	Enumeration. • 1—IPv4 unicast • 2—IPv6 unicast • 3—VPN (currently not supported) • 4—EVPN (currently not supported)	N/A
Color	Default color.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
EvpnColor	EVPN default color.	N/A	Unsigned integer. Value range: 0 to 4294967295.	Public instance doesn't support the column.

Appendix

- A string contains only one VRF name.

  Example: vpn1,vpn2 (name with comma)

  It is going to find the information of the VRF whose name is “vpn1,vpn2”, rather than ”vpn1” and “vpn2”.

  Example: vpn1 vpn2 (name with space)

  It is going to find the information of the VRF whose name is “vpn1 vpn2”, rather than ”vpn1” and “vpn2”.

- When a VRF’s name is the same as another VRF’s index, name is used prior to index.

  Example: VRF-1’s name is vpn and index is 1; VRF-2's name is 1 and index is 2;

  When the VrfIndex is assigned to 1, it is considered as VRF-2’s name rather than VRF-1's index.

L3vpn

L3vpn/L3vpnVRF

Message	Explanation
The VRF instance is being deleted. 该VRF正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance already has an RD. 该VRF已经配置RD。	Configuration already exists, when set new configuration.
RouteThreshold and SimplyAlert can’t both be null. 请输入RouteThreshold或者SimplyAlert选项。	Invalid configuration.
Can’t connect to an L3VPN process. 连接不上L3VPN进程。	Operation failed when L3VPN process has not been started.
IPv4 route limit is exceeded. IPv4路由门限超过最大值。	Invalid configuration, please modify configuration under the guidance.
IPv6 route limit is exceeded. IPv6路由门限超过最大值。	Invalid configuration, please modify configuration under the guidance.
The IPv4 route limit cannot be 0. IPv4路由门限不能为0。	Invalid configuration, please modify configuration under the guidance.
The IPv6 route limit cannot be 0. IPv6路由门限不能为0。	Invalid configuration, please modify configuration under the guidance.
Route distinguisher format error. 路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The IPv4 route distinguisher format error. IPv4路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The IPv6 route distinguisher format error. IPv6路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The FlowSpec route distinguisher format error. FlowSpec路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The VRF RD is inconsistent with IPv4 RD. 全局RD与IPv4的RD不一致。	Invalid configuration.
The VRF RD is inconsistent with IPv6 RD. 全局RD与IPv6的RD不一致。	Invalid configuration.
The VRF RD is inconsistent with FlowSpec RD. 全局RD与FlowSpec的RD不一致。	Invalid configuration.
The label allocation mode must be ‘PerInstance’. 这个标签值的申请模式必须是每实例。	Invalid configuration. Please modify configuration under the guidance.
The static label is already allocated to another VPN instance. Please specify another label.	Invalid configuration. Please modify configuration under the guidance.

这个静态标签值已经被其他VRF占用，请重新指定标签值。	
Not enough resources to allocate the static label. 系统资源不足导致标签申请未成功。	No enough resource. Please check your device.
The static label is already allocated to the current VPN instance. Please specify another label. 这个静态标签值已经被当前VRF占用，请重新指定标签值。	Invalid configuration. Please modify configuration under the guidance.
The static label is already used by another module. Please specify another label. 这个静态标签值已经被其他模块占用，请重新指定标签值。	Invalid configuration. Please modify configuration under the guidance.
The VPN ID must be unique. 不同VPN实例的VPN ID不能相同。	Invalid configuration, please modify configuration under the guidance.
Public instance does not support description. 公网实例下不支持描述信息。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support VRF label. 公网实例下不支持VRF标签。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support EVPN routing policy. 公网实例下不支持EVPN路由策略。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support tunnel policy. 公网实例下不支持隧道策略。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support snmp context-name. 公网实例下不支持SNMP上下文。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support VPN ID. 公网实例下不支持VPN ID。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support to enable EVPN to advertise the routes of a VPN instance. 公网实例下不支持开启EVPN通告VPN路由功能。	Invalid configuration. Please modify configuration under the guidance.
Public instance does not support TTL MODE. 公网实例下不支持TTL MODE。	Invalid configuration. Please modify configuration under the guidance.
ServiceClass must exist when IngressMode is pipe or short-pipe. 仅当IngressMode为pipe或short-pipe时serviceclass才能配置。	Invalid configuration. Please modify configuration under the guidance.
ServiceClass must not exist when IngressMode is uniform. 当IngressMode为uniform时serviceclass不能配置。	Invalid configuration. Please modify configuration under the guidance.
IngressMode and EgressMode must both exist or both not exist. 必须同时配置或删除IngressMode和EgressMode。	Invalid configuration. Please modify configuration under the guidance.
DiffSerMode must be empty when IngressMode is empty.	Invalid configuration. Please modify configuration under the guidance.

IngressMode为空时DiffSerMode必须为空。	
RouteThreshold and SimplyAlert cant't both be configured. RouteThreshold和SimplyAlert选项不能同时配置。	Invalid configuration.
RedirectPublic not supported. 不支持RedirectPublic。	Invalid configuration.

L3vpn/L3vpnIf

Message	Explanation
The interface is already bound to another VRF instance. 该接口已经和其他VRF绑定。	The specified configuration is already existed, when creating a new configuration.
The interface doesn't exist. 接口不存在。	The specified interface is not existed.
Failed to allocate memory. 内存不足。	No enough resource, please check your device.
Configurations on the interface ware already removed. 接口下配置已删除。	When configurations take effect, some other configurations on the interface will be removed.
The interface is not supported. 接口不支持。	The specified interface is not supported.
The SDWAN VN-ID has already been used by another VPN instance. 该SDWAN VN-ID已被其他VPN实例使用。	Invalid configuration. Please edit the configuration by following the guidance.

L3vpn/L3vpnRT

Message	Explanation
NULL	NULL

L3vpn/L3vpnPeer

Message	Explanation
The VPN peer does not exist. VPN peer不存在。	The specified VPN peer does not exist, when deleting or removing.
The VPN peer ID cannot be modified. VPN peer ID不能被修改。	The specified VPN peer ID cannot be modified.
The VPN peer ID has been used. VPN peer ID已经被使用。	The specified VPN peer ID has been used.

VPN peer ID and profile-name do not have default value, must be empty. VPN peer ID和profile-name无默认值，必须下刷空列。	The specified configuration must be empty, when deleting or removing.
The VPN peer not supported. 不支持L3vpnPeer。	Invalid configuration.

L3vpn/L3vpnRep

Message	Explanation
The IPv6 address family doesn't support the EIGRP protocol. IPv6地址族下不支持配置EIGRP。	The IPv6 address family doesn't support the EIGRP protocol.
ProtocolID must be a number between 1 to 65535 if Protocol is IGP or EIGRP. 对于IGP和EIGRP，ProtocolID字段取值范围为1-65535。	The value of ProtocolID must be a number between 1 to 65535 if the protocol is IGP or EIGRP.
ProtocolID must be 0 if Protocol is direct, static, or vlink-direct. 对于Direct,Static和Vlink-Direct，ProtocolID字段必须为0。	The value of ProtocolID must be 0 if the protocol is direct, static, or vlink-direct.
Advertise must be 0 if Protocol is BGP. BGP协议中Advertise字段必须为0	The value of Advertise must be 0 if the protocol is BGP.

L3vpn/L3vpnDefaultColor

Message	Explanation
Public instance does not support EvpnColor. 在公网实例下不支持配置 EvpnColor	Public instance does not support EvpnColor. 在公网实例下不支持配置 EvpnColor

</LAGG>
```

Table description

Item	Description
Feature name	LAGG
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMac	LACP system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0..

Column name	Column description	Column type	Data type and restrictions	Remarks
				This column does not support a multicast, all-zero, or all-F MAC address.
SystemNum	LACP system number	N/A	Unsigned integer. Value range:1 to 3.	N/A
SystemPriority	Priority assigned to the local system	N/A	Unsigned integer Value range: 0 to 65535. Default: 32768.	The smaller the value, the higher the system LACP priority.
LoadSharingMode	Global link-aggregation load sharing mode.	N/A	Each bit represents a LoadSharing Mode As follows: • 1—Ingress Port • 2—Destination MAC • 4—Source MAC • 8—Destination IP • 16—Source IP • 32—VLAN ID • 64—Layer 4 destination-port • 128—Layer 4 source-port • 256—IP Protocol • 512—MPLS Label1 • 1024—MPLS Labe2 • 2048—MPLS Labe3 • 4096—Packet type-based sharing • 8192—Per-packet Default: 0	Examples: • 32—Mode is VLAN ID. • 37—Mode are VLAN ID, Source MAC and Ingress Port. Not configured for S-channel bundle group.
ManagementVlanList	Management VLAN	N/A	Bitmap. Using Base64 encoding mode.	N/A
AutoAggregationEnable	Automatic aggregation.	N/A	Boolean: • true—Enable. • false—Disable(default).	N/A
Capability	System capability of link aggregation	Data structure	Members include: • MaxGroupNum. • MaxSelectPortNum.	N/A
MaxGroupNum	The maximum number of aggregation groups that the system can create.	N/A	Unsigned integer. Length:32bits.	N/A
MaxSelectPortNum	The maximum number of Selected ports per aggregation group.	N/A	Unsigned integer. Length:32bits.	N/A
LoadSharing	Global	N/A	Unsigned integer64.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Algorithm	link-aggregation load sharing algorithm.		Default: 0.	
DefaultSelectedPortEnable	Aggregation member ports are selected by default.	N/A	Boolean: • true—Enable (default). • false—Disable.	N/A
LacpTrafficRedirectEnable	Aggregation traffic redirection.	N/A	Boolean: • true—Enable. • false—Disable (default).	N/A
LocalFirstHashEnable	Local-first link aggregation load sharing.	N/A	Boolean: • true—Enable (default). • false—Disable.	N/A

LAGG/LAGGGroups

This table contains information about link aggregation groups.

```

Table description

Item	Description
Feature name	LAGG
Table name	LAGGGroups
Table type	Multi-instance table
Row name	LAGGGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupId	Aggregation group ID	Index	Unsigned integer. Value range: • Layer 2 aggregation group: 1 to 16384. • Layer 3 aggregation group: 16385 to 32768. • Blade aggregation group: 32769 to 36864. • S-channel bundle group: 36865 to 40960.	You can specify an aggregation group name, for example: • Bridge-Aggregation1. • Route-Aggregation1. • Blade-Aggregation1. • Schannel-Bundle1.
LinkMode	Link aggregation mode	N/A	Enumeration: • 1—Static(default). • 2—Dynamic. • 3—Static backup.	Not configured for blade aggregation group.
LacpEdgeEnable	Edge aggregate interface feature	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Not configured for blade aggregation group.
LoadSharing Mode	Link-aggregation load sharing mode	N/A	Each bit represents a LoadSharing Mode As follows:	Examples: • 32—Mode is VLAN ID.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Ingress Port • 2—Destination MAC • 4—Source MAC • 8—Destination IP • 16—Source IP • 32—VLAN ID • 64—Layer 4 destination-port • 128—Layer 4 source-port • 256—IP Protocol • 512—MPLS Label1 • 1024—MPLS Labe2 • 2048—MPLS Labe3 • 4096—Packet type-based sharing • 8192—Per-packet Default: 0	• 37—Mode are VLAN ID, Source MAC and Ingress Port. Not configured for S-channel bundle group.
IrfSelectMode	Irf device select mode	N/A	Enmeration: • 0—None (default). • 1—Master-first. • 2—Bandwidth-first.	Not configured for S-channel bundle group.
Mode	Dynamic load sharing mode of link aggregation	N/A	Enmeration: • 0—None (default). • 1—Spray. • 2—Fixed. • 4—Eligible.	N/A
FlowletGapTime	Flowlet gap time of dynamic load sharing	N/A	Unsigned integer Value range: 16 to 65535 Default: 1000.	N/A
SMLAGGroupId	S-MLAG group ID.	N/A	Unsigned integer. Value range: 1 to 1024. Default: The aggregate interface is not assigned to any S-MLAG group.	Only support the bridge aggregation group.
IgnoreSpeedEnable	Ignore the port speed in setting the aggregation states of member ports.	N/A	Boolean: • true—Enable. • false—Disable (default).	Not configured for S-channel bundle group
LacpTrafficRedirectEnable	Aggregation traffic redirection.	N/A	Boolean: • true—Enable. • false—Disable (default).	Not configured for S-channel bundle group
MaxSelected	The maximum number of Selected ports.	Data structure	Members include: • PortNum. • LacpSync.	This configuration will not take effect in the following situations: • On a DR interface • The interface has been assigned to a smart trunk.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• The interface has been assigned to an S-MLAG group. Not configured for blade aggregation group.
PortNum	The maximum number of Selected ports in an aggregation group.	N/A	Unsigned integer.	N/A
LacpSync	Use LACPDUs to synchronize the maximum number of Selected ports.	N/A	Boolean: • true. • false (default).	N/A
MinSelected	The minimum number of Selected ports.	Data structure	Members include: • PortNum. • PortPercentage.	This configuration will not take effect in the following situations: • On a DR interface • The interface has been assigned to a smart trunk. • The interface has been assigned to an S-MLAG group. Not configured for blade aggregation group.
PortNum	The minimum number of Selected ports in the aggregation group.	N/A	Unsigned integer.	N/A
PortPercentage	The minimum percentage of Selected ports in the aggregation group.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
MadEnable	LACP MAD detection.	N/A	Boolean: • true—Enable. • false—Disable (default).	Not configured for S-channel bundle group
BfdIpv4	Link aggregation IPv4 BFD.	Data structure	Members include: • SourceIp. • DestinationIp.	Not configured for S-channel bundle group
SourceIp	Source IPv4 address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	N/A
DestinationIp	Destination IPv4 address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	N/A
BfdIpv6	Link aggregation IPv6 BFD.	Data structure	Members include: • SourceIp. • DestinationIp.	Not configured for S-channel bundle group

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIp	Source IPv6 address of the BFD session.	N/A	String.	N/A
DestinationIp	Destination IPv6 address of the BFD session.	N/A	String.	N/A
BfdCompatible	BFD compatible mode.	N/A	Boolean: • true—Enable. • false—Disable (default).	Not configured for S-channel bundle group
SecondaryDown	Secondary member port State.	N/A	Boolean: • true—Down. • false—UP (default).	Only support the route aggregation group.
ReversionDelay	Reversion delay.	N/A	Unsigned integer Value range 1 to 65535	The unit is second. Only support the route aggregation group.

LAGG/LAGGMembers

This table contains information about link aggregation members.

XML structure

```
<LAGG>
  <LAGGMembers>
    <LAGGMember>
      <IfIndex></IfIndex>
      <GroupId></GroupId>
      <BindMode></BindMode>
      <LacpMode></LacpMode>
      <LacpShortPeriodEnable></LacpShortPeriodEnable>
      <ActorPortPriority></ActorPortPriority>
      <ManagementPortEnable></ManagementPortEnable>
      <LacpTransparentEnable></LacpTransparentEnable>
      <PrimaryPort></PrimaryPort>
    </LAGGMember>
  </LAGGMembers>
</LAGG>
```

Table description

Item	Description
Feature name	LAGG
Table name	LAGGMembers
Table type	Multi-instance table

Item	Description
Row name	LAGGMember
Restrictions	This table supports only Ethernet interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Member port index	Index	Unsigned integer. Length: 32 bits.	N/A
GroupId	Aggregation group ID	N/A	Unsigned integer. Value range: • Layer 2 aggregation group: 1 to 16384. • Layer 3 aggregation group: 16385 to 32768. • S-channel bundle group: 36865 to 40960. Default: 0. Not assigned to any link aggreagation group.	You can specify an aggregation group name, for example: • Bridge-Aggregation1. • Route-Aggregation1. • Blade-Aggregation1. • Schannel-Bundle1.
BindMode	Binding mode	N/A	Enumeration: • 1—Normal. Not check aggregation group configuration • 2—Force. Synchronize aggregation group configuration (Layer 3 Ethernet interfaces do not support Force to join aggregation groups) • 3—check. Check aggregation group configuration	N/A
LacpMode	LACP mode of a member port	N/A	Enumeration: • 1—Active (default). • 2—Passive.	N/A
LacpShortPeriodEnable	LACP short period function	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
ActorPortPriority	Priority assigned to this local port	N/A	Unsigned integer Value range: 0 to 65535 Default: 32768.	The smaller the value, the higher the system LACP priority.
ManagementPortEnable	Enable the management port feature	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
LacpTranspar	LACP	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
entEnable	transparent function		• true—Enabled. • false—Disabled (default).	
PrimaryPort	Whether the primary role is assigned to this local port.	N/A	Boolean: • true—Primary. • false—None (default).	N/A

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemID	The Actor's System ID	N/A	A 6-octet MAC address value.	N/A
SystemMac	LACP system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.. This column does not support a multicast, all-zero, or all-F MAC address.
SystemNum	LACP system number	N/A	Unsigned integer. Value range:1 to 3.	N/A
SystemPriority	The priority assigned to the Actor System	N/A	Unsigned integer: 0 to 65535. The smaller the value, the higher the system LACP priority.	N/A
LoadSharing Mode	Global link-aggregation load sharing mode.	N/A	Each bit represents a LoadSharing Mode As follows: • 1—Ingress Port • 2—Destination MAC • 4—Source MAC • 8—Destination IP • 16—Source IP • 32—VLAN ID • 64—Layer 4 destination-port • 128—Layer 4 source-port • 256—IP Protocol • 512—MPLS Label1 • 1024—MPLS Labe2 • 2048—MPLS Labe3 • 4096—Packet type-based sharing • 8192—Per-packet	Examples: • 32—Mode is VLAN ID. • 37—Mode are VLAN ID, Source MAC and Ingress Port. 0 represent for nothing configured.
Management VlanList	Management VLAN	N/A	Bitmap. Using Base64 encoding mode	N/A
AutoAggregationEnable	Automatic aggregation	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Capability	System capability of link aggregation	Data structure	Members include: • MaxGroupNum. • MaxSelectPortNum.	N/A
MaxGroupNum	The maximum number of aggregation groups that the system can	N/A	Unsigned integer. Length:32bits.	This value will take effect at the next reboot when you first configured. 0 represent for nothing

Column name	Column description	Column type	Data type and restrictions	Remarks
	create.			configured.
MaxSelectPortNum	The maximum number of Selected ports per aggregation group.	N/A	Unsigned integer. Length:32bits.	This value will take effect at the next reboot when you first configured. 0 represent for nothing configured.
LoadSharingAlgorithm	Global link-aggregation load sharing algorithm.	N/A	Unsigned integer64. Length: 64 bits.	N/A
DefaultSelectedPortEnable	Aggregation member ports are selected by default.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
LacpTrafficRedirectEnable	Aggregation traffic redirection.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
LocalFirstHashEnable	Local-first link aggregation load sharing.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
DefaultCapability	Default link aggregation capability.	Data structure	Members include: • MaxGroupNum. • MaxSelectPortNum.	N/A
MaxGroupNum	Maximum number of aggregation groups supported by default.	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not configured.
MaxSelectPortNum	The maximum number of Selected ports per aggregation group by default.	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not configured.
CurrentCapability	Current link aggregation capability.	Data structure	Members include: • MaxGroupNum. • MaxSelectPortNum.	N/A
MaxGroupNum	Effective supported maximum number of aggregation groups.	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not configured.
MaxSelectPortNum	Effective supported maximum number of Selected ports per aggregation	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not

Column name	Column description	Column type	Data type and restrictions	Remarks
	group.			configured.
NextRebootCapability	Link aggregation capability at the next reboot.	Data structure	Members include: • MaxGroupNum. • MaxSelectPortNum.	N/A
MaxGroupNum	Supported maximum number of aggregation groups at the next reboot.	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not configured.
MaxSelectPortNum	Supported maximum number of Selected ports per aggregation group at the next reboot.	N/A	Unsigned integer. Length: 32 bits.	This value will take effect at the next reboot if you first configure it. 0 represents that this column is not configured.

Table description

Item	Description
Feature name	LAGG
Table name	LAGGGroups
Table type	Multi-instance table
Row name	LAGGGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupId	Aggregation group ID	Index	Unsigned integer. • Layer 2 aggregation group: 1 to 16384. • Layer 3 aggregation group: 16385 to 32768. • Blade aggregation group: 32769 to 36864. • S-channel bundle group:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			36865 to 40960.	
LinkMode	Link aggregation mode	N/A	Enumeration: • **1**—Static. • **2**—Dynamic. • **3**—Static backup.	N/A
IfIndex	Aggregate interface index	N/A	Unsigned integer.	N/A
IfName	Aggregate interface name	N/A	String Length: 2 to 47 characters	N/A
MemberList	Member list	N/A	Bitmap. No length restrictions. Each octet within this value specifies a set of eight ports, with the first octet specifying ports 1 through 8, the second octet specifying ports 9 through 16, etc. Within each octet, the most significant bit represents the lowest numbered port, and the least significant bit represents the highest numbered port. Thus, each port of the bridge is represented by a single bit within the value of this object. If that bit has a value of '1' then that port is included in the set of ports; the port is not included if its bit has a value of '0'.	N/A
MemberListEx	Member list	Data structure	Members include MemberPortName	N/A
MemberPortName	Member port name	N/A	String Length: 2 to 47 characters	N/A
SelectedMemberList	Selected member list	N/A	Bitmap. No length restrictions.	Same **restriction with** MemberList.
LacpEdgeEnable	Edge aggregate interface feature	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
LoadSharingMode	Link-aggregation load sharing mode	N/A	Each bit represents a LoadSharing Mode As follows: • 1—Ingress Port • 2—Destination MAC • 4—Source MAC • 8—Destination IP • 16—Source IP • 32—VLAN ID • 64—Layer 4 destination-port • 128—Layer 4 source-port	Examples: • 32—Mode is VLAN ID. • 37—Mode are VLAN ID, Source MAC and Ingress Port.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 256—IP Protocol • 512—MPLS Label1 • 1024—MPLS Labe2 • 2048—MPLS Labe3 • 4096—Packet type-based sharing • 8192—Per-packet	
PartnerSystemID	The Partner's System ID	N/A	A 6-octet MAC address value. A value of zero indicates that there is no known Partner or the aggregation is static mode.	N/A
PartnerSystemPriority	The priority assigned to the Partner System	N/A	Unsigned integer: 0 to 65535	The smaller the value, the higher the system LACP priority.
Management Port	Management port	N/A	Interface Index ID	N/A
IrfSelectMode	Irf device select mode	N/A	Enumeration: • 0—None. • 1—Master-first. • 2—Bandwidth-first.	N/A
Mode	Dynamic load sharing mode of link aggregation	N/A	Enmeration: • 0—None. • 1—Spray. • 2—Fixed. • 4—Eligible.	N/A
FlowletGapTime	Flowlet gap time of dynamic load sharing	N/A	Unsigned integer Value range: 16 to 65535	N/A
SMLAGGroupId	S-MLAG group ID.	N/A	Unsigned integer. Value range:1to 1024. Default: The aggregate interface is not assigned to any S-MLAG group.	N/A
IgnoreSpeedEnable	Ignore the port speed in setting the aggregation states of member ports.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
LacpTrafficRedirectEnable	Aggregation traffic redirection.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
MaxSelected	The maximum number of Selected ports.	Data structure	Members include: • PortNum. • LacpSync.	N/A
PortNum	The maximum number of Selected ports in an aggregation group.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LacpSync	Use LACPDUs to synchronize the maximum number of Selected ports.	N/A	Boolean: • true. • false.	N/A
MinSelected	The minimum number of Selected ports.	Data structure	Members include: • PortNum. • PortPercentage.	N/A
PortNum	The minimum number of Selected ports in the aggregation group.	N/A	Unsigned integer.	N/A
PortPercentage	The minimum percentage of Selected ports in the aggregation group.	N/A	Unsigned integer. Value range:1to 100.	N/A
MadEnable	LACP MAD detection.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
BfdIpv4	Link aggregation IPv4 BFD.	Data structure	Members include: • SourceIp. • DestinationIp.	N/A
SourceIp	Source IPv4 address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DestinationIp	Destination IPv4 address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
BfdIpv6	Link aggregation IPv6 BFD.	Data structure	Members include: • SourceIp. • DestinationIp.	N/A
SourceIp	Source IPv6 address of the BFD session.	N/A	IPv6: Hexadecimal string, colon-separated.	IPv6 example: 1:2:3:4:5:6:7:8.
DestinationIp	Destination IPv6 address of the BFD session.	N/A	IPv6: Hexadecimal string, colon-separated.	IPv6 example: 1:2:3:4:5:6:7:8.
BfdCompatible	BFD compatible mode.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
SecondaryDown	Secondary member port State.	N/A	Boolean: • true—Down. • false—UP.	N/A
ReversionDelay	Reversion delay.	N/A	Unsigned integer Value range 1 to 65535	The unit is second

Table description

Item	Description
Feature name	LAGG
Table name	LAGGMembers
Table type	Multi-instance table

Item	Description
Row name	LAGGMember
Restrictions	This table supports only Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Member port index	Index	Unsigned integer.	N/A
IfName	Member port name	N/A	String Length: 2 to 47 characters	N/A
GroupId	Aggregation group ID	N/A	Unsigned integer. • 0: Not assigned to any link aggreagation group. • Layer 2 aggregation group: 1 to 16384. • Layer 3 aggregation group: 16385 to 32768. • Blade aggregation group: 32769 to 36864. • S-channel bundle group: 36865 to 40960.	N/A
IfAggName	Aggregation group name	N/A	String Length: 2 to 47 characters	N/A
SelectedStatus	Selected status of a member port	N/A	Enumeration: • 1—Selected. • 2—Unselected. • 3—Individual.	N/A
UnSelectedReason	Unselected reason of a member port	N/A	Enumeration: • 0—The port is attached to this aggregator. Indicate that selected status of a member port is Selected or Individual. • 1—The number of Selected ports had reached the upper limit. • 2—Hardware resources were not enough. • 3—The link aggregation configuration of the port was incorrect • 4—The link aggregation configuration of its peer port was incorrect. • 5—The number of Selected ports was below the lower limit. • 6—The physical or line protocol state of the port was down.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 7—The port is not selected for an aggregator. • 8—The port's hardware restriction prevented it for being Selected. • 9—The speed configuration of the port was different from that of the reference port. • 10—The duplex mode of the port was different from that of the reference port. • 11—The port and the aggregate interface had different attribute configurations. • 12—The port was in secondary state in a redundancy group. • 13—The BFD session state of the port was down. • 14—No LACPDU was received by the reference port. • 15—The reference port received its own LACPDUs. • 16—The link of the port was not aggregatable. • 17—The link of the peer port was not aggregatable. • 18—The card that hosts the port was absent. • 19—The port’s operational key was invalid. • 20—Link-aggregation traffic redirection was triggered on the local port. • 21—The port had not received LACPDUs. • 22—The operational key of the peer port was different from that of the reference port. • 23—Link-aggregation traffic redirection was triggered on the peer port. • 24—The system MAC address of the peer port was different from that of the peer port for the reference port. • 25—The peer port did not have the Synchronization	

Column name	Column description	Column type	Data type and restrictions	Remarks
			flag. • 26—The port was in Standby state. • 27—Other reason. • 28—The port was secondary member port in the aggregation group in 1+1 backup mode. • 29—The member port has low link quality. • 30—The operational key of the peer port was different than the other peer ports for the DR group to which this aggregate interface belongs. • 31—The system MAC address of the peer port was different than the other peer ports for the DR group to which this aggregate interface belongs. • 32—The system priority of the peer port was different than the other peer ports for the DR group to which this aggregate interface belongs. • 33—The speed of the port was different than the member ports of the peer DR interface. • 34—The link-aggregation lacp isolate setting had been configured • 35—The role of the aggregate interface is secondary in a smart trunk	
LacpEnable	LACP enable flag of a member port	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
LacpMode	LACP mode of a member port	N/A	Enumeration: • 1—Active. • 2—Passive.	N/A
LacpShortPeriodEnable	LACP short period function	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
ActorPortPriority	The priority assigned to this port by the Actor	N/A	Unsigned integer Value eange: 0 to 65535 The smaller the value, the higher the system LACP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			priority.	
ActorState	The Actor's state variables for the port	N/A	Encoded as individual bits within a single octet • LACP_Activity is encoded in bit 0. This flag indicates the Activity control value with regard to this link. Active LACP is encoded as a 1; Passive LACP is encoded as a 0. • LACP_Timeout is encoded in bit 1. This flag indicates the Timeout control value with regard to this link. Short Timeout is encoded as a 1; Long Timeout is encoded as a 0. • Aggregation is encoded in bit 2. If TRUE (encoded as a 1), this flag indicates that the System considers this link to be Aggregatable. If FALSE (encoded as a 0), the link is considered to be Individual. • Synchronization is encoded in bit 3. If TRUE (encoded as a 1), the System considers this link to be IN_SYNC. If FALSE (encoded as a 0), then this link is currently OUT_OF_SYNC. • Collecting is encoded in bit 4. TRUE (encoded as a 1) means collection of incoming frames on this link is definitely enabled. Its value is otherwise FALSE (encoded as a 0). • Distributing is encoded in bit 5. FALSE (encoded as a 0) means distribution of outgoing frames on this link is definitely disabled. Its value is otherwise TRUE (encoded as a 1). • Defaulted is encoded in bit 6. If TRUE (encoded as a 1), this flag indicates that the Actor's Receive machine is using Defaulted operational Partner information, administratively configured for the Partner. If FALSE (encoded as a 0), the operational Partner	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			information in use has been received in a LACPDU; • Expired is encoded in bit 7. If TRUE (encoded as a 1), this flag indicates that the Actor's Receive machine is in the EXPIRED state; if FALSE (encoded as a 0), this flag indicates that the Actor's Receive machine is not in the EXPIRED state.	
ActorOperKey	The operational Key value assigned to the port by the Actor	N/A	Unsigned integer	
ActorPort	The port number assigned to the port by the Actor	N/A	Unsigned integer	
PartnerSystemID	The Partner's System ID	N/A	A 6-octet MAC address value. A value of zero indicates that there is no known Partner or the aggregation is static mode.	
PartnerSystemPriority	The priority assigned to the Partner System	N/A	Unsigned integer Value eange: 0 to 65535	The smaller the value, the higher the system LACP priority.
PartnerPortPriority	The priority assigned to this port by the Partner	N/A	Unsigned integer Value eange: 0 to 65535	The smaller the value, the higher the system LACP priority.
PartnerState	The Partner's state variables for the port	N/A	Encoded as individual bits within a single octet.	Encoded meaning in every bits relate to **ActorState**.
PartnerOperKey	The operational Key value assigned to the port by the Partner	N/A	Unsigned integer.	N/A
PartnerPort	The port number assigned to the port by the Partner	N/A	Unsigned integer.	N/A
ManagementPortEnable	Enable the management port feature	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
LacpTransparentEnable	LACP transparent function	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
PrimaryPort	Whether the primary role is assigned to this local port	N/A	Boolean: • true—Primary. • false—None.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Packets	Packet state	Data structure	Members include: • Received. • Sent. • Illegal.	N/A
Received	Total number of received LACPDUs.	N/A	Unsigned integer.	N/A
Sent	Total number of sent LACPDUs.	N/A	Unsigned integer.	N/A
Illegal	Total number of illegal messages.	N/A	Unsigned integer.	N/A

LAGG event stream

LAGG event stream description.

MemberEvent event

This event is used to report interface-specific aggregation actions.

XML structure for event subscription

```
<MemberEvent>
</MemberEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LAGG</stream>
      <filter type="subtree">
      <MemberEvent xmlns="http://www.h3c.com/netconf/event:1.0/LAGG:1.0">
      </MemberEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	LAGG
Event name	MemberEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LAGG:1.0
Support for extended query	No

XML structure for event report

```
<MemberEvent>
  <MemberInfo>
    <IfName></IfName>
    <IfAggName></IfAggName>
    <State></State>
  </MemberInfo>
</MemberEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2022-01-24T15:28:49</eventTime>
  <MemberEvent xmlns="LAGG:1.0">
```

```
    <MemberInfo>
      <IfName>GigabitEthernet2/0/1</IfName>
      <IfAggName>Bridge-Aggregation1</IfAggName>
      <State>1</State>
    </MemberInfo>
  </MemberEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
IfName	Interface name	String. Length: 0 to 47 characters.	N/A
IfAggName	Aggregation interface name	String. Length: 0 to 47 characters.	N/A
State	Interface state in aggregation	Enumeration: • 0—Unspec • 1—Join aggregation. • 2—Leave aggregation.	N/A

LB

LB/ClearVirtualServerStats

This table is used to clear the statistics of the virtual server.

XML structure

```
<LB>
  <ClearVirtualServerStats>
    <ClearVirtualServerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearVirtualServerStat>
  </ClearVirtualServerStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearVirtualServerStats
Table type	Multi-instance table
Row name	ClearVirtualServerStat
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Clear	Action of clearing the specified virtual server.	N/A	This column must be empty.	• N/A

LB/ClearAllVirtualServerStats

This table is used to clear all virtual servers' statistics.

XML structure

```
<LB>
  <ClearAllVirtualServerStats>
    <Clear></Clear>
  </ClearAllVirtualServerStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearAllVirtualServerStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all virtual servers' statistics.	N/A	This column must be empty.	• N/A

LB/ClearRealServerStats

This table is used to clear the statistics of the real server.

XML structure

```
<LB>
  <ClearRealServerStats>
    <ClearRealServerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearRealServerStat>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Protocol	IPv4 protocol number.	Index	Unsigned integer. Value range: 0 to 255.	N/A
DstIpv4Address	IPv4 destination address.	Index	String. Dotted decimal notation.	N/A
SrcIpv4Address	IPv4 source address.	Index	String. Dotted decimal notation.	N/A
DstPort	Destination port.	Index	Unsigned integer. Value range: 0 to 65535.	If Protocol isn't TCP (6) or UDP (17), this column must be zero.
SrcPort	Source port.	Index	Unsigned integer. Value range: 0 to 65535.	If Protocol isn't TCP (6) or UDP (17), this column must be zero.
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			0 to 255.	
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Protocol	IPv4 protocol number.	Index	Unsigned integer. Value range: 0 to 255.	N/A
DstIpv4Address	IPv4 destination address.	Index	String. Dotted decimal notation.	N/A
SrcIpv4Address	IPv4 source address.	Index	String. Dotted decimal notation.	N/A
DstPort	Destination port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPort	Source port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VirtualServer	Name of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ZoneType	Zone type of the result.	N/A	Enumeration: • 0—Class. • 1—Default class. • 2—Default server farm. • 3—Default link group.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the result.	N/A	Enumeration: • 1—Drop. • 2—Forward all. • 3—Server farm. • 4—Address of LB device. • 5—Match HTTP virtual server. • 6—No matched virtual server. • 7—Link group. • 8—Waiting.	N/A
DropType	Drop reason of the result	N/A	Enumeration: • 1—Action drop. • 2—Virtual server limited. • 3—No real server. • 4—No class or server farm. • 5—Match sticky but real server limited. • 6—No server farm in action. • 7—No link. • 8—No class or link group. • 9—Match sticky but link limited. • 10—No link group in action. • 11—Server farm busy. • 12—Queue overflow.	N/A
ServerFarm	Name of the sever farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
RealServer	Name of the real server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
LinkGroup	Name of the link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
Link	Name of the link.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
ScheduleType	The method of selecting real server.	N/A	Enumeration: • 0—Algorithm. • 1—Sticky. • 2—Proximity.	N/A

LB/TestIpv6Routes

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Clear	Action of clearing the specified DNS listener.	N/A	This column must be empty.	• N/A

LB/ClearAllDNSListenerStats

This table is used to clear all DNS listener' statistics.

XML structure

```
<LB>
  <ClearAllDNSListenerStats>
    <Clear></Clear>
  </ClearAllDNSListenerStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearAllDNSListenerStats
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all DNS listener' statistics.	N/A	This column must be empty.	• N/A

LB/ClearDNSServerStats

This table is used to clear the statistics of the DNS server.

XML structure

```
<LB>
  <ClearDNSServerStats>
    <ClearDNSServerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearDNSServerStat>
  </ClearDNSServerStats>
</LB>
```

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all DNS proxies' statistics.	N/A	This column must be empty.	• N/A

LB/ClearClassCounter

This table is used to clear all rule match counter statistics of a class.

XML structure

```
<LB>
  <ClearClassCounters>
    <ClearClassCounter>
      <ClassName></ClassName>
      <Clear></Clear>
    </ClearClassCounter>
  </ClearClassCounters>
</LB>
```

Table description

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Name of the class proxy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	•
Clear	Action of clearing rule match counter statistics.	N/A	This column must be empty.	• N/A

LB/ClearAllClassCounter

This table is used to clear rule match counter statistics of all classes.

XML structure

```
<LB>
  <ClearAllClassCounters>
    <Clear></Clear>
  </ClearAllClassCounters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearAllClassCounters
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear rule match counter statistics of all classe.	N/A	This column must be empty.	N/A

LB/ClearIpv4ProximityCounter

This table is used to clear the used counter statistics for the IPv4 proximity of a VPN instance.

XML structure

```
<LB>
  <ClearIpv4ProximityCounters>
    <ClearIpv4ProximityCounter>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Clear></Clear>
    </ClearIpv4ProximityCounter>
  </ClearIpv4ProximityCounters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearIpv4ProximityCounters
Table type	Multi-instance table
Row name	ClearIpv4ProximityCounter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. • Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. • Dotted decimal notation.	N/A
Clear	Action of clearing the count of the specified IPv4 proximity.	N/A	This column must be empty.	N/A

LB/ClearAllIpv4ProximityCounter

This table is used to clear the used counter statistics of all IPv4 proximities.

XML structure

```
<LB>
  <ClearAllIpv4ProximityCounters>
    <Clear></Clear>
  </ClearAllIpv4ProximityCounters>
```

```
</LB>
```

Table description

Item	Description
Feature name	LB

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Action of clearing the count of all IPv4 proximities.	N/A	This column must be empty.	N/A

LB/ClearIpv6ProximityCounter

This table is used to clear the used counter statistics for the IPv6 proximity of a VPN instance.

XML structure

```
<LB>
  <ClearIpv6ProximityCounters>
    <ClearIpv6ProximityCounter>
      <VRF></VRF>
      <Ipv6Address></Ipv6Address>
      <Clear></Clear>
    </ClearIpv6ProximityCounter>
  </ClearIpv6ProximityCounters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearIpv6ProximityCounters
Table type	Multi-instance table
Row name	ClearIpv6ProximityCounter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. • Length: 0 to 31 characters.	The null string indicates the public network.
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
Clear	Action of clearing the the count of the specified IPv6 proximity.	N/A	This column must be empty.	N/A

LB/ClearAllIpv6ProximityCounter

This table is used to clear the used counter statistics of all IPv6 proximities.

XML structure

```
<LB>
  <ClearAllIpv6ProximityCounters>
    <Clear></Clear>
  </ClearAllIpv6ProximityCounters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearAllIpv6ProximityCounters
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Action of clearing the count of all IPv6 proximities.	N/A	This column must be empty.	N/A

LB/ClearServerFarmMemberStats

This table is used to clear the statistics of the server farm member.

XML structure

```
<LB>
  <ClearServerFarmMemberStats>
    <ClearServerFarmMemberStat>
      <ServerFarm></ServerFarm>
      <RealServer></RealServer>
      <PortNumber></PortNumber>
      <Clear></Clear>
    </ClearServerFarmMemberStat>
  </ClearServerFarmMemberStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearServerFarmMemberStats
Table type	Multi-instance table
Row name	ClearServerFarmMemberStat
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RealServer	Name of the server farm member.	N/A	String, case-insensitive. • Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Clear	Action of clearing the specified server farm member.	N/A	This column must be empty.	N/A

LB/ClearLinkGroupMemberStats

This table is used to clear the statistics of the link group member.

XML structure

```
<LB>
  <ClearLinkGroupMemberStats>
    <ClearLinkGroupMemberStat>
      <LinkGroup></LinkGroup>
      <Link></Link>
      <Clear></Clear>
    </ClearLinkGroupMemberStat>
  </ClearLinkGroupMemberStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearLinkGroupMemberStats
Table type	Multi-instance table
Row name	ClearLinkGroupMemberStat
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkGroup	Name of the link group.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Link	Name of the link group member.	N/A	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Clear	Action of clearing the specified link group member.	N/A	This column must be empty.	N/A

LB/ClearDNSServerPoolMemberStats

This table is used to clear the statistics of the DNS server pool member.

XML structure

```
<LB>
```

```
  <ClearDNSServerPoolMemberStats>
    <ClearDNSServerPoolMemberStat>
      <DNSServerPool></DNSServerPool>
      <DNSServer></DNSServer>
      <PortNumber></PortNumber>
      <Clear></Clear>
    </ClearDNSServerPoolMemberStat>
  </ClearDNSServerPoolMemberStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearDNSServerPoolMemberStats
Table type	Multi-instance table
Row name	ClearDNSServerPoolMemberStat
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServerPool	Name of the DNS server pool.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
DNSServer	Name of the DNS server pool member.	N/A	String, case-insensitive. • Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Clear	Action of clearing the specified DNS server pool member.	N/A	This column must be empty.	N/A

LB/ReloadHTTPResponses

This table is used to reload an HTTP response file.

XML structure

```
<LB>
  <ReloadHTTPResponses>
    <ReloadHTTPResponse>
      <FileName></FileName>
```

```
      <Reload></Reload>
    </ReloadHTTPResponse>
  </ReloadHTTPResponses>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ReloadHTTPResponses
Table type	Multi-instance table
Row name	ReloadHTTPResponse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the file for the response.	Index	String, case-insensitive. • Length: 1 to 255 characters.	
Reload	Action of reloading the response file.	N/A	This column must be empty.	N/A

LB/ReloadAllHTTPResponses

This table is used to reload all HTTP response files.

XML structure

```
<LB>
  <ReloadAllHTTPResponses>
    <ReloadAllHTTPResponse>
      <Reload></Reload>
    </ReloadAllHTTPResponse>
  </ReloadAllHTTPResponses>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ReloadAllHTTPResponses
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reload	Reload all response files.	N/A	This column must be empty.	• N/A

LB/ResetSNATPools

This table is used to reset the dynamic allocation of IP address of the SNAT pool.

XML structure

```
<LB>
  <ResetSNATPools >
    <ResetSNATPool>
      <Name></Name>
      <Reset></Reset>
    </ResetSNATPool>
  </ResetSNATPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ResetSNATPools
Table type	Multi-instance table
Row name	ResetSNATPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT pool.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Reset	Action of reseting the dynamic allocation of IP address of the specified SNAT pool .	N/A	This column must be empty.	N/A

LB/ClearServerFarmMemberAutoShutdown

This table is used to recover the state of the server farm member from auto-shutdown.

XML structure

```
<LB>
  <ClearServerFarmMemberAutoShutdowns>
    <ClearServerFarmMemberAutoShutdown>
      <ServerFarm></ServerFarm>
      <RealServer></RealServer>
      <PortNumber></PortNumber>
      <Clear></Clear>
    </ClearServerFarmMemberAutoShutdown>
  </ClearServerFarmMemberAutoShutdowns>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClearServerFarmMemberAutoShutdowns
Table type	Multi-instance table
Row name	ClearServerFarmMemberAutoShutdown
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	server farm.		• Length: 1 to 63 characters.	
RealServer	Name of the server farm member.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Clear	Action of recovering the specified server farm member.	N/A	This column must be empty.	N/A

LB/ClearAllFiveMinVirtualServerStats

This table clears statistics about all virtual servers.

XML structure

```
<LB>
  <ClearAllFiveMinVirtualServerStats>
     <Clear></Clear>
  </ClearAllFiveMinVirtualServerStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	VirtualServerStats
Table type	Multi-instance table
Row name	VirtualServerStat
Restrictions	Only stats of virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Action of clearing statistics.	N/A	This column must be empty.	N/A

Table description

Item	Description
Feature name	LB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP and FASTHTTP virtual servers can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—HTTP. • 1—FASTHTTP	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual	N/A	String. Length: 0 to 127	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.		characters.	
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses, and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 80.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
BackupStickyGroup	Name of the backup sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm and sticky group are not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameterClientSide/TCPParameterServerSide colume,they cannot be confirgured both
CookieSticky	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be configured only when the type is HTTP (0).
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
HTTPStatsParameter	Parameter whose type is HTTP statistics for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
SSLServerP	Name of the	N/A	String,	This column can be configured only

Column name	Column description	Column type	Data type and restrictions	Remarks
olicy	SSL server policy.		case-insensitive. Length: 0 to 31 characters.	when the type is HTTP (0).
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can only be configured when the type is HTTP (0).
RedirectRelocation	Redirection URL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the type is HTTP (0). The column which has two special usages, analyses host and URL from requests. Only three symbols such as ‘p’, ’h’ and ‘%’ can be put behind ‘%’. Two ‘%’ are regarded as one ‘%’, process can handle, so the number of ‘%’ must be even. They input below, except ‘%%%p’ and ’%%%h’. ’%p’ and ‘%h’ only have one occurrence in the messages.
RedirectReturnCode	Redirection condition code.	N/A	Enumeration: • 301—The requested resource has been permanently moved. • 302—The requested resource has been temporarily moved (default). • 307—The requested resource has been provisory moved.	This column can only be configured when the type of the virtual server is HTTP (0).
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 0 KB/s, which indicates no outbound limit.	
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth statistics.	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column can only be configured when the Type is FASTHTTP (1).
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.			
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
HttpLogFormat	Specified the format of LB http log.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the type is HTTP (0).
CachePolicy	Name of the cache policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
ExtLinkRewriteEnable	Enable skylight external link rewrite	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column can only be configured when the Type is HTTP (0)
ExtLinkInjectURI	Skylight external link proxy URI	N/A	String, case-insensitive. Length: 1 to 63 characters.	Example: proxy The string can contain letters, numbers, hyphens (-), and underscores (_). This column can only be configured when the Type is HTTP (0)
ExtLinkDomainSuffix	Skylight external link proxy domain suffix	N/A	String, case-insensitive. Length: 1 to 253 characters.	Example: b.com The string can contain letters, numbers, hyphens (-), underscores (_), and dot (.). This column can only be configured when the Type is HTTP (0)
ExtLinkSNATPool	Skylight external link SNAT pool	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
TrustedAccessController	Name of the trusted access controller.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TrustedAcce	Type of the	N/A	Enumeration:	When a trusted access controller is

Column name	Column description	Column type	Data type and restrictions	Remarks
ssController Type	trusted access controller		• 0—None(default) • 1—IAM	created, the column must be specified. Once created, this column cannot be changed.
TrustedAccessAction	Action type for the trusted access controller	N/A	Enumeration: • 0—None(default) • 1—APP-AUTH 2—API-AUTH	When a action for trusted access controller is created, the column must be specified. Once created, this column cannot be changed.

LB/GenericVirtualServers

Table description

Item	Description
Feature name	LB
Table name	GenericVirtualServers
Table type	Multi-instance table
Row name	GenericVirtualServer
Restrictions	Only IP, TCP , UDP and LINK-IP virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—UDP. • 3—LINK-IP.	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31	The null string indicates a public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters. By default, no VRF is specified.	
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A
PortNumberList	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535. By default, the value is 0. Items range: 1 to 32.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit.
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive.	This column cannot be configured if the default server farm is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
DefaultLinkGroup	Name of the default link group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupLinkGroup	Name of the backup link group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default link group is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is TCP (1).
TCPParameterClientSide	Client-side TCP parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured with the TCPParameter column at the same time.
TCPParameterServerSide	Server-side TCP parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured with the TCPParameter column at the same time.
TCPAppParameter	Parameter profile whose type is TCPApplication for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is TCP (1).
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can be configured only when the Type is TCP (1).
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			no limit.	
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column can only be configured when the Type is UDP (2).
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			statistics.	
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	N/A

DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63	This column cannot be configured if the default server farm is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
BackupStickyGroup	Name of the backup sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm and sticky group are not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column can only be configured when the Type is UDP (2).
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: cps. By default, the value is 0, which indicates no inbound limit.	
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth statistics.	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default). • 1—Enable.	
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A

LB/SIPVirtualServers

Table description

Item	Description
Feature name	LB
Table name	SIPVirtualServers
Table type	Multi-instance table
Row name	SIPVirtualServer
Restrictions	Only SIP-UDP and SIP-TCP virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—SIP-UDP • 1—SIP-TCP	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 1 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 5060.	
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable the UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column can only be configured when the Type is UDP (2).
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default). • 1—Enable.	
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics which is used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth statistics.	N/A
ConnSynEnable	Enable the connection synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySynEnable	Enable the sticky synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them

Column name	Column description	Column type	Data type and restrictions	Remarks
				should be set in a single message.
VrrpIfIndex	Interface index of VRRP..	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

Table description

Item	Description
Feature name	LB
Table name	MySQLVirtualServers
Table type	Multi-instance table
Row name	MySQLVirtualServer
Restrictions	Only MySQL virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 3306.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
MySQLParameter	Parameter profile whose type is MySQL for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default). • 1—Enable.	
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth statistics.	N/A
StickySynEnable	Enable sticky entry synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Version	MySQL version info.	N/A	Enumeration: • 0—5.0. • 1—5.1. • 2—5.5. • 3—5.6. • 4—5.7. By default, 3 is configured.	N/A
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
				VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
UserList	MySQL database user list.	Data structure	Members include: • UserName. • Password.	Max user count is 100.
UserName	MySQL database login username.	N/A	String, Length: 1 to 63 characters.	N/A
PassWord	MySQL database login password.	N/A	String, Length: 1 to 127 characters.	This column cannot be configured if the username is not configured or the password is obtained from the CLI.
Type	Password type.	N/A	Enumeration: • 0—Simple. • 1—No password.	This column cannot be configured if the password is obtained from the CLI.
ReadServer Farm	MySQL read server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReadSticky Group	Name of the sticky group for read server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the read server farm is not configured.
WriteServer Farm	MySQL write server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
WriteSticky Group	Name of the sticky group for write server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the write server farm is not configured.

Table description

Item	Description
Feature name	LB
Table name	RealServers
Table type	Multi-instance table
Row name	RealServer
Restrictions	Only Real server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the	Index	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	real server.		case-insensitive. Length: 1 to 63 characters.	
Description	Description of the real server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no Ipv4Address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no Ipv6Address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A
Weight	Weight of the real server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the real server.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
ServerFarm	Name of the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no server farm is specified.	N/A
Shutdown	Shutdown state for the real server.	N/A	Enumeration: • 0—Not configured (default). • 1—Shutdown. • 2—Slow-shutdown.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s which indicates no preset limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s which indicate no preset inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s which indicate no preset outbound limit.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recoverv rate.	N/A
BandwidthBusyRecoverRatio	Total bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recoverv rate.	N/A
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240. By default, the value is 0 which indicates that cost factor can be ignore when calculate proximities.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBan	Max outbound	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
dwidth	bandwidth.		Value range: 0 to 2^{32}-1. Unit: KB/s.	
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
InheritVPN	Inherit the VPN of virtual server	N/A	Enumeration: • 0—Disable inherit the VPN (default). • 1—Enable inherit the VPN.	N/A
ProbeLog	Enable logging for health monitoring	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A

LB/RealServerProbes

This table contains information about Real Server Probe that only uses NQA template.

XML structure

```

Table description

Item	Description
Feature name	LB
Table name	ServerFarms
Table type	Multi-instance table
Row name	ServerFarm
Restrictions	Only server farm can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the server farm.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a real server to serve a client request.	N/A	Enumeration: • 0—Round-robin (default). • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 9—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max outbound bandwidth. • 12—Least time. • 13—Dynamic round-robin. • 14—Hash HTTP. • 15—CARP HTTP. • 16—CARP source address. • 17—CARP source port. • 18—CARP destination address. • 19—Least-connection member. • 20—Least time member.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when the Predictor is hash or CARP source address (3/16), hash source port (4/17) and hash destination address (5/18).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column can only be configured when the Predictor hash or CARP source address (3/16), hash source port (4/17) and hash destination address (5/18).
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SelectServerMaxNumber	Maximum number of the active real server in the	N/A	Unsigned integer. Value range: 1 to 1000.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of

Column name	Column description	Column type	Data type and restrictions	Remarks
	server farm.		By default, the column is not configured.	SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SlowOnline Enable	Enable the server farm slow online.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	If the column is 0, SlowOnlineStandbyTime and SlowOnlineRampUpTime cannot be configured without default value.
SlowOnline StandbyTim e	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second. By default, the value is 5.	N/A
SlowOnline RampUpTim e	Ramp up time of the slow online.	N/A	Unsigned integer. Value range:3 to 600. Unit: second. By default, the value is 5.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ActivateLow er	The status of main server farm will be changed from in use to backup when the ratio of the available real servers in main server farm becomes smaller than this value.	N/A	Unsigned integer. Value range: 1 to 99. By default, the column is not configured which indicates if one real server is active, the server farm is active.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
ActivateUpp er	The status of main server farm will be changed from backup to in use when the ratio of the available real servers in main server farm reaches or over this value.		Unsigned integer. Value range: 1 to 99. By default, the column is not configured.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FailAction	Specify the action that the	N/A	Enumeration: • 0—Keep	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	LB takes with respect to connections if any real server fails in a server farm.		(default). • 1—Reset. • 2—Reschedule.	
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0.	By default, indicates that when real server is available, all results of probes must be success.
ProximityEnable	Enable the proximity.	N/A	Enumeration: • 0—disable (default). • 1—enable.	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	The column can only be configured when the Predictor hash source address (14/15).
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	The column can only be configured when the Predictor hash source address (14/15).If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	The column can only be configured when the Predictor hash source address (14/15).The null string indicates the label is not configured.
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127 characters.	The column can only be configured when the Predictor hash source address (14/15).The null string indicates the label is not configured.
BusyAction	Busy protection policies for server nodes	N/A	Enumeration: • 0—Drop(default). • 1—Enqueue. • 2—Force.	N/A
QueueLength	Queue length for aging	N/A	Unsigned integer. Value range: 1 to 100000. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
QueueTimeout	Node aging time	N/A	Unsigned integer. Value range: 0 to 60. Unit: second. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
RSTProbe	RST type probe	N/A	String, case-insensitive.	Only one template can be configured for each type.

Column name	Column description	Column type	Data type and restrictions	Remarks
	template.		Length: 1 to 32 characters.	
ZeroWindowProbe	Zero-Window type probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each type.
RecoverTimeInterval	Auto recover time interval	N/A	Unsigned integer. Value range: 0 to 15300. Unit:minute. By default, the value is 0.	N/A
HTTPPassiveProbe	HTTP passive probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each probe type.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None(default). • 1—Snat-pool. • 2—Auto-map. • 3—Tcp-option.	N/A
AllServiceDownAction	Specify the action taken when all server farm members become unavailable	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ExternalMonitorList	External monitor list for the server farm.	Data structure	Members include: ExterrnalMonitor.	N/A
ExternalMonitor	External monitor for the server farm.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

LB/ServerFarmProbes

This table contains information about Server Farm Probe that only uses NQA template.

XML structure

```
<LB>
  <ServerFarmProbes>
    <ServerFarmProbe>
      <ServerFarm></ServerFarm>
      <Probe></Probe>
```

```
      <NQADefaultPortEnable></NQADefaultPortEnable>
    </ServerFarmProbe>
  </ServerFarmProbes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ServerFarmProbes
Table type	Multi-instance table
Row name	ServerFarmProbe
Restrictions	Only server farm probe can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the server farm.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

LB/SNATPools

This table contains information about SNAT pool.

XML structure

```
<LB>
  <SNATPools>
    <SNATPool>
      <Name></Name>
      <Description></Description>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6AddressStart></Ipv6AddressStart>
```

```
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SNATPool>
  </SNATPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPools
Table type	Multi-instance table
Row name	SNATPool
Restrictions	Only SNAT pool can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT Pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the SNAT Pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4AddressStart	Start IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation. By default, no IPv4 addressStart is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	End IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation. By default, no IPv4 addressEnd is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 255.
Ipv6AddressStart	Start IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 addressStart is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 addressEnd is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.

LB/NewSNATPools

This table contains LB SNAT pool information.

XML structure

```
<LB>
  <NewSNATPools>
    <NewSNATPool>
      <SNATPoolName></SNATPoolName>
      <Description></Description>

Restrictions	Only TCP parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ExceedMSS	Processing method when segments exceed the maximum segment size of TCP segment.	N/A	Enumeration: • 0—Permit (default). • 1—Drop.	N/A
WindowSize	Starting value of the receive window size.	N/A	Unsigned integer. Value range: 8192 to 65535. By default, 65535 is configured.	N/A
TimeWaitTime	The time of TCP time-wait	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 2 is configured.	N/A
IdleTimeout	Timeout time of idle connections.	N/A	Unsigned integer. Value range: 10 to 86400. Unit: second.	The 0 indicates the label is not configured.
MSS	Maximum segment size of TCP segments.	N/A	Unsigned integer. Value range: 128 to 1460.	The 0 indicates the label is not configured.
SynRetransTime	Timeout time for syn retransmission	N/A	Unsigned integer. Value range: 1 to 75. Unit: second. By default, 10 is configured.	N/A
KeepAliveTime	Timeout time of keep-alive	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 1800 is configured.	N/A
KeepAliveInterval	Interval time of keep-alive retransmission	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 10 is configured.	N/A
KeepAliveC	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ount	times of keep-alive retransmission		Value range: 1 to 65535. By default, 3 is configured.	
FinWait1Time	Timeout time of FIN-WAIT1	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A
FinWait2Time	Timeout time of FIN-WAIT2	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A
SrcAddrOptionNum	The option num for Source ip addresses	N/A	Unsigned integer. Value range: 6 to 254.	N/A
EncodeType	The encode for tcp option.	N/A	Enumeration: • 0—**binary.** (default). • 1—**string.**	N/A

LB/TCPAppParameters

This table contains information about TCP Application parameter profile.

XML structure

```

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPCompressionParameters
Table type	Multi-instance table
Row name	HTTPCompressionParameter
Restrictions	Only HTTP compression parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9 By default, 1 is configured.	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip (default). • 2—Deflate.	N/A
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, 1024 is configured.	N/A
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
RequestVersion	Enable compress the HTTP response of version 1.0.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DeleteAccept Encoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB(default). • 16—16KB. • 32—32KB. • 64—64KB.	N/A
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB(default). • 32—32KB.	N/A

LB/HTTPStatisticsParameters

This table contains information about HTTP statistics parameter profile.

XML structure

```
<LB>

Table description

Item	Description
Feature name	LB
Table name	SSLStickyGroups
Table type	Multi-instance table
Row name	SSLStickyGroup
Restrictions	Only SSL sticky groups can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second. By default, the value is 60s. 0 indicates the sticky entry will nerver age out.	N/A
Type	Sticky method of SSL sticky group.	N/A	Enumeration: • 0—None (default). • 1—SSL Session-ID stickiness.	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

LB/SIPStickyGroups

This table contains information about SIP sticky groups.

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPPassiveStickyMethodGroups
Table type	Multi-instance table
Row name	HTTPPassiveStickyMethodGroup
Restrictions	Only HTTP passive sticky group method can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky method group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PktActionType	Action type of.	Index	Enumeration: • 0—None. • 1—Get. • 2—Match.	N/A
ID	ID of method.	Index	Unsigned integer. Value range:0 to 3.	N/A
MethodType	Sticky method of HTTP passive sticky group.	N/A	Enumeration: • 0—None (default). • 1—Header method. • 2—Content method.	Only when the MethodType is Header method (1), configurations of HeaderType,HeaderName can be configured.
HeaderType	Header type of HTTP passive sticky group.	N/A	Enumeration: • 0—None (default). • 1—URL stickiness. • 2—Name stickiness.	Only when the MethodType is Header method (1), HeaderType and, HeaderName can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When the PktActionType(2),this column can be 1.
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When MethodType is header method, this column must be configured. Characters 0~31and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" "," ";" ":" "\" """" "/" "[" "]" "?" "=" "{" "}" SP HT are not supported either.
Length	Length of the HTTP header or content value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is configured, the other cannot be configured.
Start	Beginning pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

LB/UDPPassiveStickyGroups

This table contains information about UDP passive sticky groups.

XML structure

```
<LB>
  <UDPPassiveStickyGroups>

Row name	UDPPassiveStickyGroup
Restrictions	Only UDP passive sticky groups can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 0 to 31536000. Unit: second. By default, the value is 86400s.	N/A
Get	Action type.	N/A	Enumeration: • 0—None (default). • 1—Get.	Only when the Get is not None, configurations of GetOffset,GetLength, GetStart and GetEnd can be configured
GetOffset	Offset to the first byte of the UDP payload.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	N/A
GetLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	If one of Length and End is configured, the other cannot be configured.
GetStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
GetEnd	Ending pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Match	Action type of packet direction.	N/A	Enumeration: • 0—None (default). • 1—Match.	Only when the Match is not None, configurations of MatchOffset, MatchLength, MatchStart and MatchEnd can be configured
MatchOffset	Offset to the first byte of the UDP payload.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	N/A
MatchLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	If one of Length and End is configured, the other cannot be configured.
MatchStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchEnd	Ending pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A
PriorBusyEnable	Stickiness-over-busyness.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

LB/TCPPayloadStickyGroups

This table contains information about TCP payload sticky groups.

XML structure

```
<LB>
  <TCPPayloadStickyGroups>
    <TCPPayloadStickyGroup>

Row name	Policy
Restrictions	Only policy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type for the policy.	N/A	Enumeration: • 0—Generic. • 1—HTTP. • 2—Link-generic. • 3—DNS. • 4—RADIUS. • 5—MySQL.	When this column is configured, the value of this column cannot be modified.
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
DefaultClassAction	Action for the default class of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

LB/ClassActions

This table contains information about policy rules.

XML structure

```
<LB>
  <ClassActions>
    <ClassAction>
      <Policy></Policy>
      <Class></Class>
      <Action></Action>
      <BeforeClass></BeforeClass>
    </ClassAction>
  </ClassActions>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ClassActions
Table type	Multi-instance table
Row name	ClassAction

Restrictions	Only policy rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Name of the action for the class.	N/A	String, case-insensitive. Length: 1 to 63 characters.	When a row is created, the column must be configured.
BeforeClass	Name of the class that the row will be inserted before.	N/A	String, case-insensitive. Length: 0 to 63 characters.	BeforeClass must be an existing class. By default, indicates the row will be inserted at last.

LB/GenericActions

This table contains information about IP, TCP and UDP action.

XML structure

```
<LB>
  <GenericActions>
    <GenericAction>
      <Name></Name>
      <Description></Description>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	N/A
ForwardType	Forward mode of the action.	N/A	Enumeration: • 1—Drop (default). • 3—Server farm. • 8—Redirect • 9—Response.	When ForwardType changes from server farm (3) to drop (1) or redirect (8) or response (9), ServerFarm and BackupServerFarm become default value.
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When the column is configured, ForwardType becomes server farm (3).
BackupServer Farm	Name of the backup sever	N/A	String, case-insensitive.	The column cannot be configured when

Column name	Column description	Column type	Data type and restrictions	Remarks
	farm for the action.		Length: 0 to 63 characters.	ServerFarm is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column cannot be configured when ServerFarm is not configured.
BackupStickyGroup	Name of the backup sticky group for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column cannot be configured when the ServerFarm and StickyGroup are not configured. The null string indicates the label is not configured.
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
Fallback	Fallback action when real server select failed.	N/A	Enumeration: • 0—None (default). • 1—Match next class. • 2—Response. • 3—Fin close. • 4—Rst close.	N/A
RewriteValue	Content value need to be replaced in response.	N/A	String. Length: 1 to 127 characters.	This column and the column of ReplaceValue must be configured together.
ReplaceValue	New content value after replaced in response.	N/A	String. Length: 1 to 127 characters.	Some special applications and constraints as below: %is: insert source IPv4 address or source IPv6 address into header of the message. %ps: insert source port into header of the message. %id: insert destination IPv4 address or IPv6 address into header of the message. %pd: insert destination port into header of the message. To the above-mentioned applications, some situations, like only %, ps, id, pd can behind %, must be constrained unless those serial % are not odd number.

Column name	Column description	Column type	Data type and restrictions	Remarks
Redirect	Redirection URL.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column has two special usages, analyzes host and URL from requests. Only three symbols such as ‘p’, ’h’ and ‘%’ can be put behind ‘%’. Two ‘%’ are regarded as one ‘%’. Process can handle, so the number of ‘%’ must be even. They input below, except ‘%%%p’ and ’%%%h’. ’%p’ and ‘%h’ only have one occurrence in the messages.
ReturnCode	Status code in the returned redirection packets.	N/A	Enumeration: • 301—The requested resource has been permanently deleted. • 302—The requested resource has been temporarily deleted (default). • 307—The requested resource has been provisory deleted.	N/A
ZipFileWorkpath	Work path of the zip file for the response.	N/A	String. Length: 1 to 255 characters.	If the column is not ‘/’, it must start with /, and cannot end with /. The null string indicates the label is not configured.
ResponseZipFile	Full path and name of the zip file for the response. Example: • flash:/lb/1.html • chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9). The column cannot be configured when ZipFileWorkpath is not configured.
FallbackResponseRawFile	Full path and name of the raw file for the fallback action response. Example: • flash:/lb/1.html • chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPDropType	Type of closing TCP connection	N/A	Enumeration: • 0—Fin close(default). • 1—Rst close	N/A

LB/HTTPActionResponseFiles

This table contains information about HTTP action response file.

When this table is configured the ForwardType of http action becomes response(9).

XML structure

```
<LB>
  <HTTPActionResponseFiles>
    <HTTPActionResponseFile>
      <Action></Action>
      <URL></URL>
      <FileName></FileName>
    </HTTPActionResponseFile>
  </HTTPActionResponseFiles>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionResponseFiles
Table type	Multi-instance table
Row name	HTTPActionHeader
Restrictions	Only HTTP action response file can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
URL	URL of file for the action response.	Index	String. Length: 1 to 255 characters.	The column must start with /. When the column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured, ForwardType becomes Resposne (9).
FileName	Full path and name of the file for the action response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column must start witch device name.

LB/HTTPActionRewriteURLs

This table contains information about HTTP action rewrite URL.

XML structure

```
<LB>
  <HTTPActionRewriteURLs>
    <HTTPActionRewriteURL>
      <ActionName></ActionName>
      <LocationURL></LocationURL>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionRewriteURL>
  </HTTPActionRewriteURLs>
</LB>
```

Table description

Table name	HTTPActionRewriteURLs
Table type	Multi-instance table
Row name	HTTPActionURL
Restrictions	Only HTTP action rewrite URL can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionName	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocationURL	URL of location	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	value for the HTTP request line.		Length: 0 to 127 characters.	
Replace	Replaced string that method of URL rewrite process.	N/A	String. Length: 0 to 127 characters.	This column only can be configured when LocationURL is configured. Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address %pd: destination port. %sis: source IPv4 address or source IPv6 address of server. %sps: source port of server. %sid: destination IPv4 address or IPv6 address of server. %spd: destination port of server. %{x509v}: the version of certificate %{x509issuer}: the issuer of certificate %{x509before}: the vaild time of certificate(invaild before this time) %{x509after}: the vaild time of certificate(invaild after this time) %{x509hash}: the MD5 hash of certificate %{x509snum}: the serial number of certificate %{x509sigalgo}: the signature algorithm of certificate %{x509sub}: the subject of certificate %{x509spktype}: the subject public key type of certificate %{x509spk}: the subject public key of certificate %{x509spkRSA}: the number of subject public key bits of certificate %{dncn}: common name

Column name	Column description	Column type	Data type and restrictions	Remarks
				%{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. • 2—Base64	

LB/HTTPActionSSLURLs

This table contains information about HTTP action SSLURL.

XML structure

```
<LB>
  <HTTPActionSSLURLs>
    <HTTPActionSSLURL>
      <Name></Name>
      <LocationURL></LocationURL>
      <ClearPort></ClearPort>
      <SSLPort></SSLPort>
    </HTTPActionSSLURL>
  </HTTPActionSSLURLs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionSSLURLs
Table type	Multi-instance table
Row name	HTTPActionSSLURL
Restrictions	Only HTTP action SSL URL can be configured by this table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP header.	Index	String. Length: 1 to 63 characters.	N/A
ClearPort	HTTP port of Location for rewriting redirection message.	Index	Unsigned integer. Value range: 1 to 65535.	This column can only be configured when LocationURL is configured.
SSLPort	SSL port of the LB device.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 443.	This column can only be configured when LocationURL is configured.

LB/HTTPActionHeaders

This table contains information about HTTP action header.

XML structure

```
<LB>
  <HTTPActionHeaders>
    <HTTPActionHeader>
      <Action></Action>
      <Type></Type>
      <Direction></Direction>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>
      <HeaderExpress></HeaderExpress>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionHeader>
  </HTTPActionHeaders>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionHeaders
Table type	Multi-instance table
Row name	HTTPActionHeader
Restrictions	Only HTTP action header can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the header process.	Index	Enumeration: • 0—Header Delete. • 1—Header Insert. • 2—Header Rewrite.	N/A
Direction	Process direction.	Index	Enumeration: • 0—Request and Response. • 1—Request. • 2—Response.	N/A
HeaderName	Name of the header.	Index	String, case-insensitive. Length: 1 to 63 characters.	HeaderName cannot contain any one of characters following: 0 to 31 and 127 to 255 in the ASCII table, character as "(" ")" "<" ">" "@" "," ";" ":" "\" """ "/" "[" "]" "?" "=" "{" "}" SP HT.
HeaderValue	Header value that method of Header Insert process.	N/A	String. Length: 0 to 255 characters.	This column has validity in Header Insert process. You cannot configure this column if the type is not Header Insert. Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address. %pd: destination port.

Column name	Column description	Column type	Data type and restrictions	Remarks
				%sis: source IPv4 address or source IPv6 address of server. %sps: source port of server. %sid: destination IPv4 address or IPv6 address of server. %spd: destination port of server. %{x509v}: the version of certificate %{x509issuer}: the issuer of certificate %{x509before}: the vaild time of certificate(invaild before this time) %{x509after}: the vaild time of certificate(invaild after this time) %{x509hash}: the MD5 hash of certificate %{x509snum}: the serial number of certificate %{x509sigalgo}: the signature algorithm of certificate %{x509sub}: the subject of certificate %{x509spktype}: the subject public key type of certificate %{x509spk}: the subject public key of certificate %{x509spkRSA}: the number of subject public key bits of certificate %{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.

Column name	Column description	Column type	Data type and restrictions	Remarks
HeaderExpress	Header value that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	This column can only be configured when the type is Header Rewrite (2).
Replace	Replaced string that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	This column can only be configured when the type is Header Rewrite (2). Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address %pd: destination port. %sis: source IPv4 address or source IPv6 address of server. %sps: source port of server. %sid: destination IPv4 address or IPv6 address of server. %spd: destination port of server. %{x509v}: the version of certificate %{x509issuer}: the issuer of certificate %{x509before}: the vaild time of certificate(invaild before this time) %{x509after}: the vaild time of certificate(invaild after this time) %{x509hash}: the MD5 hash of certificate %{x509snum}: the serial number of certificate %{x509sigalgo}: the signature algorithm of certificate %{x509sub}: the subject of certificate %{x509spktype}: the subject public key type of certificate %{x509spk}: the subject public key of certificate %{x509spkRSA}: the number of subject public key bits of certificate

Column name	Column description	Column type	Data type and restrictions	Remarks
				%{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. • 2—Base64	Encode

LB/Classes

This table contains information about classes.

XML structure

```
<LB>
  <Classes>
    <Class>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—IPv4 ACL. • 4—IPv6 ACL. • 5—ISP. • 6—User. • 7—User group. • 8—Interface. • 9—payload.	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6 (1).
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configuredonly when the type is **Class** (2).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can only be configured when the type is IPv4 ACL (3) or IPv6 ACL (4).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (3) or IPv6 ACL (4).
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ISP name is specified.	This column can be configured only when the type is ISP (5).
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no username is specified.	This column can be configured only when the type is user (6).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (7).
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (6 or 7). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters.	This column can be configured only when the

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, no interface name is specified.	type is interface (8).
PayloadExpression	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	This column can be configured only when the type is payload (9).
CaseInsensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case sensitive (default) • 1—Case insensitive	This column can be configured only when the type is payload(9).
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	This column can be configured only when the type is payload(9).

Row name	LinkGenericMatchRule
Restrictions	Only link generic match rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—IPv4 ACL. • 4—IPv6 ACL. • 5—ISP. • 6—Application group. • 7—Destination IPv4. • 8—Destination IPv6. • 9—Destination domain. • 10—User. • 11—User group. • 12—Interface.	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).
SrcIpv4Prefix	Mask length of	N/A	Unsigned integer.	This column can be

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	the source IPv4 address.		Value range: 0 to 32. By default, the value is 32.	configured only when IPv4 address is configured.
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6 (1).
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be configured only when the type is Class (2).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (3) or IPv6 ACL (4).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (3) or IPv6 ACL (4).
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ISP name is specified.	This column can be configured only when the type is ISP (5).
AppGroup	Name of the application group.	N/A	String. Length: 1 to 63 characters. By default, no application group name is specified.	This column can be configured only when the type is application group (6).
DstIpv4Address	Match rule of destination IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is destination IPv4(7).
DstIpv4PrefixLength	Mask length of the destination IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when destination IPv4 address is configured.
DstIpv6Address	Match rule of destination IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is destination IPv6 (8).
DstIpv6PrefixLength	Prefix length of the destination	N/A	Unsigned integer.	This column can be configured only when

Column name	Column description	Column type	Data type and restrictions	Remarks
	IPv6 address.		Value range: 0 to 128. By default, the value is 128.	destination IPv6 address is configured.
DstDomain	Match rule of destination domain	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time.
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no user name is specified.	This column can be configured only when the type is user (10).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (11).
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (10 or 11). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (12).

LB/DNSMatchRules

This table contains information about DNS match rule.

XML structure

```

Table description

Item	Description
Feature name	LB
Table name	DNSMatchRules
Table type	Multi-instance table
Row name	DNSMatchRule
Restrictions	Only DNS match rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Destination IPv4. • 3—Destination IPv6. • 4—Class. • 5—IPv4 ACL. • 6—IPv6 ACL. • 7—Domain name. • 8—User. • 9—User group. • 10—Interface.	N/A
SrcIpv4Address	Match rule of source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6 (1).
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
DstIpv4Address	Match rule of destination IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is destination IPv4(2).
DstIpv4PrefixLength	Mask length of the destination IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when destination IPv4 address is configured.
DstIpv6Address	Match rule of destination IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is destination IPv6 (3).
DstIpv6PrefixLength	Prefix length of the destination IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when destination IPv6 address is configured.
ReferClass	Name of the	N/A	String, case-insensitive.	This column can be

Column name	Column description referenced class.	Column type	Data type and restrictions Length: 1 to 63 characters.	Remarks configured only when the type is Class (4).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (5) or IPv6 ACL (6).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (5) or IPv6 ACL (6).
Domain	Domain for the DNS match rule	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time.
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no user name is specified.	This column can be configured only when the type is user (8).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (9).

Column name	Column description	Column type	Data type and restrictions	Remarks
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (8 or 9). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (10).

LB/HTTPMatchRules

This table contains information about HTTP match rule.

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range:1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—Cookie. • 4—HTTP Header. • 5—Method. • 6—URL. • 7—Content. • 8—IPv4 ACL. • 9—IPv6 ACL. • 11—User. • 12—User group. • 13—Interface. • 14—version.	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6(1).
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is **Class** (2).
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Cookie (3).
CookieValue	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Cookie (3) and the CookieName has been configured.
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is HTTP Header (4).
HeaderValue	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is HTTP Header (4) and the HeaderName has been configured.
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Method (5).When the ExtType is Nonuser-defined (0), Method can only be configured one of these methods: GET, CONNECT, DELETE, HEAD, OPTIONS, TRACE, PUT, AND POST.
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • 0—Nonuser-defined (default). • 1—User-defined.	N/A
URL	Regular expression matched the URL.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is URL (6).
ContentOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	This column can be configured only when the type is Content (7).
ContentExpre	Regular	N/A	String.	This column can be

Column name	Column description	Column type	Data type and restrictions	Remarks
ssion	expression matched the content.		Length: 0 to 255 characters.	configured only when the type is Content (7).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutuallyexclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (8) or IPv6 ACL (9).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (8) or IPv6 ACL (9).
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no user name is specified.	This column can be configured only when the type is user (11).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (12).
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (11 or 12). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (13).
Version	The version of HTTP.	N/A	Enumeration: • 0—1.0. • 1—1.1.	N/A

LB/RADIUSMatchRules

This table contains information about RADIUS match rule.

VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range:0 to 32. By default, the value is 24.	Zero means nature mask.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range:1 to 128. By default, the value is 96.	N/A
Timeout	The life time of proximity.	N/A	Unsigned integer. Value range:60 to 3600. By default, the value is 60.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
MaxNumber	Proximity entries upper	N/A	Unsigned integer. Value range:0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	limit number.		10000000. By default, the value is 0 which indicates the number of proximity entries is unlimited.	
DefaultProbeMode	Default probe mode for the proximity.	N/A	Enumeration: • 0—NQA (default). • 1—LB.	N/A
DefaultProbe	Default probe method for the proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters. By default, no default probe is specified.	N/A
PacketLossRateWeight	The weight of packet loss rate.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 0.	N/A

LB/ProximityProbeRules

This table contains information about probe of the proximity.

XML structure

```
<LB>
  <ProximityProbeRules>
    <ProximityProbeRule>

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LimitRules
Table type	Multi-instance table
Row name	LimitRule
Restrictions	Only limit policy rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the limit policy rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AclVersion	Version of ACL	N/A	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message.
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message.
PerDestination	Enable the per-destination connection limit.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
PerSource	Enable the per-source connection limit.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
PerService	Enable the per-service connection limit.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

Column name	Column description	Column type	Data type and restrictions	Remarks
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

LB/Links

This table contains information about link.

XML structure

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Links
Table type	Multi-instance table
Row name	Link
Restrictions	Only link can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RouterType	The type of router.	N/A	Enumeration: • 0—Configure. • 1—Auto.	N/A
RouterInterface	Name of the router interface.	N/A	String. case-insensitive. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is Auto (1).
RouterIpv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. This column can be configured only when the type is Configure (0).
RouterIpv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported. This column can be configured only when the type is Configure (0).
Weight	Weight of the link.	N/A	Unsigned integer. Value range: 1 to 255.	A larger value means a higher weight.

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 100.	
Priority	Priority of the link.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240. By default, the value is 0 which indicates that cost factor can be ignore when calculate proximities.	N/A
LinkGroup	Name of the link group.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no link group is specified.	N/A
Shutdown	Shutdown state for the link.	N/A	Enumeration: • 0—Not configured (default). • 1—Shutdown. • 2—Slow-shutdown.	N/A
ProbeSuccessCriteria	Probe success criteria for the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 0 KB/s which indicates no preset limit.	
InRateLimitBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s which indicate no preset inbound limit.	N/A
OutRateLimitBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s which indicate no preset outbound limit.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRecoverRatio	Total bound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyReco	Outbandwidth busy recovery	N/A	Unsigned integer. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
verRatio	ratio.		By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
InheritVPN	Inherit the VPN.	N/A	Enumeration: • 0—Disable inherit the VPN. • 1—Enable inherit the VPN (default).	N/A

LB/LinkProbes

This table contains information about link probe that only uses NQA template..

XML structure

```
<LB>
  <LinkProbes>

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LinkGroups
Table type	Multi-instance table
Row name	LinkGroup
Restrictions	Only link group can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a link to forward packet.	N/A	Enumeration: • 0—Round-robin (default). • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 9—Max bandwidth. • 10—Max inbound	The Link-quality predictor and ProximityEnable are mutually exclusive

Column name	Column description	Column type	Data type and restrictions	Remarks
			bandwidth. • 11—Max outbound bandwidth. • 21—Link-quality.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when the Predictor is hash source address (3), hash source port (4) and hash destination address (5).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column can only be configured when the Predictor hash source address (3), hash source port (4) and hash destination address (5).
SelectLinkMinNumber	Minimum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectLinkMinNumber and SelectLinkMaxNumber is not configured, the other cannot be configured. The value of SelectinkMaxNumber must be greater or equal than SelectLinkMinNumber.
SelectLinkMaxNumber	Maximum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured.	If one of SelectLinkMinNumber and SelectLinkMaxNumber is not configured, the other cannot be configured. The value of SelectinkMaxNumber must be greater or equal than SelectLinkMinNumber.
SlowOnlineEnable	Enable the link group slow online.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	If the column is 0, SlowOnlineStandbyTime and SlowOnlineRampUpTime cannot be configured without default value.
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second. By default, the value is 5.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second. By default, the value is 5.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ActivateLower	The status of main link group will be	N/A	Unsigned integer. Value range: 1 to 99.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The

Column name	Column description	Column type	Data type and restrictions	Remarks
	changed from in use to backup when the ratio of the available links in main link group becomes smaller than this value.		By default, the column is not configured which indicates if one real server is active, the server farm is active.	value of ActivateUpper must be greater or equal than ActivateLower.
ActivateUpper	The status of main server farm will be changed from backup to in use when the ratio of the available links in main link group reaches or over this value.		Unsigned integer. Value range: 1 to 99. By default, the column is not configured.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
SNATPool	SNAT pool for the link group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any link fails in a link group.	N/A	Enumeration: • 0—Keep (default). • 1—Reset. • 2—Reschedule.	N/A
ProbeSuccessCriteria	The condition that link is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0.	By default, indicates that when real server is available, all results of probes must be success.
ProximityEnable	Enable the proximity.	N/A	Enumeration: • 0—disable (default). • 1—enable.	N/A

LB/LinkGroupProbes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topolgy region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Weight	Weight of the topolgy region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/TopolgyRegionIPv4s

This table contains information about an IPv4 topolgy region.

XML structure

```
<LB>
  <TopolgyRegionIPv4s>
    <TopolgyRegionIPv4>
      <RegionName></RegionName>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Weight></Weight>
    </TopolgyRegionIPv4>
  </TopolgyRegionIPv4s>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TopolgyRegionIPv4s

Row name	TopolgyRegionIPv4
Restrictions	Only TopolgyRegionIPv4 can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topolgy region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
IPv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Weight	Weight of the topolgy region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/TopolgyRegionIPv6s

This table contains information about an IPv6 topolgy region.

XML structure

```
<LB>
  <TopolgyRegionIPv6s>
    <TopolgyRegionIPv6>
      <RegionName></RegionName>
      <IPv6Address></IPv6Address>
      <IPv6PrefixLength></IPv6PrefixLength>
      <Weight></Weight>
```

```
    </TopolgyRegionIPv6>
  </TopolgyRegionIPv6s>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TopolgyRegion IPv6s
Table type	Multi-instance table
Row name	TopolgyRegion IPv6
Restrictions	Only TopolgyRegion IPv6 can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topolgy region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses, and link local addresses are not supported.
IPv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Weight	Weight of the topolgy region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/DNSListeners

This table contains information about a DNS listener.

XML structure

```
<LB>
  <DNSListeners>
    <DNSListener>
      <Name></Name>
```

```
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <IPv6PortNumber></IPv6PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </DNSListener>
  </DNSListeners>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSListeners
Table type	Multi-instance table
Row name	DNSListener
Restrictions	Only DNS Listener can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 53.	
IPv6PortNumber	Number of IPv6 port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A
ServiceEnable	Enable the DNS listener.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Fallback	Fallback action.	N/A	Enumeration: • 0—No-response. • 1—Reject(default). • 2—Dns proxy.	N/A

LB/DNSProxies

This table contains information about DNS proxies.

XML structure

```
<LB>
  <DNSProxies>
    <DNSProxy>
      <Name></Name>
      <Type></Type>
      <VRF></VRF>
      <PortNumber></PortNumber>
      <ServiceEnable></ServiceEnable>
      <DefaultDNSServerPool></DefaultDNSServerPool>
      <Policy></Policy>
      <BusyProtectEnable></BusyProtectEnable>
      <ConnSynEnable></ConnSynEnable>
      <StickySynEnable></StickySynEnable>
      <StickySyncType></StickySyncType>
      <StickyGroup></StickyGroup>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </DNSProxy>
  </DNSProxies>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSProxies
Table type	Multi-instance table
Row name	DNSProxy
Restrictions	Only DNS proxy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS proxy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Type	Type of the DNS proxy	N/A	Enumeration: • 0—UDP	When a DNS proxy is created, the column must be specified. Once created, this column cannot be changed.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A
ServiceEnable	Enable the DNS proxy.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
DefaultDNSServerPool	Name of the default DNS server pool.	N/A	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Enable.	
ConnSynEnable	Enable the connection synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
StickySynEnable	Enable the sticky synchronization.	N/A	Enumeration: • 0—Disable (default). 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the DefaultDNSServerPool is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link-local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.

LB/DNSServers

This table contains information about DNS server.

XML structure

```
<LB>
  <DNSServers>
    <DNSServer>
      <Name></Name>
```

```
      <Description></Description>
      <AutoAllocAddress></AutoAllocAddress>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <DNSServerPool></DNSServerPool>
      <Link></Link>
      <Weight></Weight>
      <Priority></Priority>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <VRF></VRF>
    </DNSServer>
  </DNSServers>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSServers
Table type	Multi-instance table
Row name	DNSServer
Restrictions	Only DNS server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
AutoAllocAddress	Automatic allocable address for DNS server. Include IPv4 address and IPv6 address.	N/A	numeration: • 0—Disable. • 1—Enable.	This column cannot be configured with Ipv4Address or Ipv6Address at the same time.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This column cannot be configured with AutoAllocAddress at the same time.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. This column cannot be configured with AutoAllocAddress at the same time.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A
DNSServer Pool	Name of the DNS server pool.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no DNS server pool is specified.	N/A
Link	Name of the Link.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the DNS server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the DNS server.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A aarger value means a higher priority.
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
VRF	VPN instance name..	N/A	String, Length: 0 to 31 characters. By default, no VPN instance is specified.	The null string indicates public network.

LB/DNSServerProbes

This table contains information about DNS server probe that only uses NQA template.

XML structure

```
<LB>
  <DNSServerProbes>
    <DNSServerProbe>
      <DNSServer></DNSServer>
      <Probe></Probe>
    </DNSServerProbe>
  </DNSServerProbes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSServerProbes
Table type	Multi-instance table
Row name	DNSServerProbe
Restrictions	Only DNS server probe can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServer	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the DNS server.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

LB/DNSServerPools

This table contains information about DNS server pool.

XML structure

```
<LB>
  <DNSServerPools>
    <DNSServerPool>
```

```
      <Name></Name>
      <Description></Description>
      <Predictor></Predictor>
      <HashIpv4PrefixLength></HashIpv4PrefixLength>
      <HashIpv6PrefixLength></HashIpv6PrefixLength>
      <SelectServerMinNumber></SelectServerMinNumber>
      <SelectServerMaxNumber></SelectServerMaxNumber>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
    </DNSServerPool>
  </DNSServerPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSServerPools
Table type	Multi-instance table
Row name	DNSServerPool
Restrictions	Only DNS server pool can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server pool.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a DNS server to a DNS request.	N/A	Enumeration: • 0—Round-robin (default). • 1—Random. • 2—Bandwidth. • 3—Inbound bandwidth. • 4—Outbound bandwidth. • 5—Max bandwidth. • 6—Max inbound bandwidth. • 7—Max outbound	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			bandwidth. • 8—Hash source address. • 9—Hash source port. • 10—Hash destination address.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when the Predictor is hash source address (3), hash source port (4) and hash destination address (5).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column can only be configured when the Predictor hash source address (3), hash source port (4) and hash destination address (5).
SelectServerMinNumber	Minimum number of the active DNS server in the DNS server pool.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SelectServerMaxNumber	Maximum number of the active DNS server in the DNS server pool.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
ProbeSuccessCriteria	The condition that DNS server is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0.	By default, indicates that when DNS server is available, all results of probes must be success.

LB/DNSServerPoolProbes

This table contains information about DNS server pool probe that only uses NQA template.

XML structure

```
<LB>

Item	Description
Feature name	LB
Table name	ServerFarmMembers
Table type	Multi-instance table
Row name	ServerFarmMember
Restrictions	Only server farm member can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 1 to 63 characters.	The server farm member must also be created in real server view.
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the server farm member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
Weight	Weight of the server farm member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the server farm member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
Shutdown	Shutdown state for the server farm member.	N/A	Enumeration: • 0—Not configured (default). • 1—Shutdown. • 2—Slow-shutdown.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
ProbeLog	Enable logging for health monitoring	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
ProbeList	Probe method list for the server farm	Data structure	Members include: • Probe.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	member.			
Probe	Probe method for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ExternalMonitorList	External monitor list for the server farm member.	Data structure	Members include: • ExternalMonitor.	N/A
ExternalMonitor	External monitor for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
VariableList	Variable list for the server farm member.	Data structure	Members include: • VariableName. • VariableValue.	Members in VariableList can be configured repeatedly by group.
VariableName	Variable name associated with the server farm member.	N/A	String. Length: 1 to 63 characters.	N/A
VariableValue	Variable value associated with the server farm member.	N/A	String. Length: 1 to 127 characters.	This column cannot be configured if the variable name is not configured.

LB/LinkGroupMembers

This table contains information about link group member.

XML structure

```

      <Weight></Weight>
      <Priority></Priority>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <ProbeList>
        <Probe></Probe>
```

```
      </ProbeList>
    </DNSServerPoolMember>
  </DNSServerPoolMembers>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSServerPoolMembers
Table type	Multi-instance table
Row name	DNSServerPoolMember
Restrictions	Only DNS server pool member can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServer Pool	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DNSServer	Name of the DNS server pool member.	Index	String, case-insensitive. Length: 1 to 63 characters.	The DNS server pool member must also be created in DNS server view.
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the DNS server pool member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
ProbeSuccessCriteria	Probe success criteria for the DNS server pool member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 0 which indicates that probe success criteria is all.	
ProbeList	Probe method list for the DNS server pool member.	Data structure	Members include: • Probe.	N/A
Probe	Probe method for the DNS server pool member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

LB/SnatArpInterfaces

This table contains information about SNAT interfaces.

XML structure

```
<LB>
  <SnatArpInterfaces>
    <SnatArpInterface>
      <SnatName></SnatName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </SnatArpInterface>
  </SnatArpInterfaces>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SnatArpInterfaces
Table type	Multi-instance table
Row name	SnatArpInterface
Restrictions	Only SNAT interfaces can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SnatName	Name of the SNAT pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: • IfIndex.	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

LB/VServerArpInterfaces

This table contains information about virtual server interfaces.

XML structure

```
<LB>
  <VServerArpInterfaces>
    <VServerArpInterface>
      <VServerName></VServerName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </VServerArpInterface>
  </VServerArpInterfaces>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	VServerArpInterfaces
Table type	Multi-instance table
Row name	VServerArpInterface
Restrictions	Only virtual server interfaces can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: • IfIndex.	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

LB/ISPWhoisMntners

This table contains information about ISP whois-mntner.

XML structure

```
<LB>
  <ISPWhoisMntners>
    <ISPWhoisMntner>
      <ISPName></ISPName>
      <WhoisMntner></WhoisMntner>
    </ISPWhoisMntner>
  </ISPWhoisMntners>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPWhoisMntner
Table type	Multi-instance table
Row name	ISPWhoisMntner
Restrictions	Only ISP whois-mntner can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ISPName	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhoisMntner	Name of the whois-mntner.	Index	String, case-sensitive. Length: 1 to 63 characters.	Number of mntner objects in the ISP cannot exceed the limit 10. A whois-mntner object only can be configured by one ISP.

LB/ISPUpdate

This table contains information about ISP update.

XML structure

```
<LB>
  <ISPUpdate>
    <Enable></Enable>
    <Frequency></Frequency>
    <Type></Type>
    <Domain></Domain>
    <Ipv4Address></Ipv4Address>
  </ISPUpdate>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPUpdate
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP update can be configured by this table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the ISP update.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Frequency	Frequency of ISP update.	N/A	Enumeration: • 0—Per-day. • 1—Per-week (default). • 2—Per-month.	N/A
Type	Type of the whois server.	N/A	Enumeration: • 0—Domain. • 1—IPv4 address.	N/A
Domain	Domain of the maintainer.	N/A	String, case-insensitive. Length: 1 to 253 characters. By default, no domain is specified.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). This column can be configured only when the type is Domain(0).
Ipv4Address	Address of the maintainer.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x are not supported. This column can be configured only when the type is IPv4 address(1).

LB/DNSCachesGlobalCfg

This table contains information about DNS global configuration.

XML structure

```
<LB>
  <DNSCachesGlobalCfg>
     <Timeout></Timeout>
  </DNSCachesGlobalCfg>
</LB>
```

Table description

Item	Description
Feature name	LB

Table name	DNSCachesCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Aging time of DNS cache.	Index	Unsigned integer. Value range: 1 to 1440. Unit: minute	N/A

LB/RSTProbeTemplate

This table contains information about RST probe template.

XML structure

```
<LB>
  <RSTProbeTemplates>
    <RSTProbeTemplate>
      <Name></Name>
      <Description></Description>
      <TimeInterval></TimeInterval>
      <PacketLimit></PacketLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </RSTProbeTemplate>
  </RSTProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	RSTProbeTemplates
Table type	Multi-instance table
Row name	RSTProbeTemplate
Restrictions	Only RST probe template can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the RST probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
PacketLimit	Packet limit of RST probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 1000000.	N/A.
ProtectAction	Protection action of RST probe template.	N/A	Enumeration: • 0—Busy (default). • 1—Auto-shutdown.	N/A
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	The busy type protection action is valid.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0	The busy type protection action is valid and value 0 means keep retrying.

LB/ZeroWindowProbeTemplate

This table contains information about Zero Window probe template.

XML structure

```
<LB>
  <ZeroWindowProbeTemplates>
    <ZeroWindowProbeTemplate>
      <Name></Name>
```

```
      <Description></Description>
      <TimeInterval></TimeInterval>
      <RatioLimit></RatioLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </ZeroWindowProbeTemplate>
  </ZeroWindowProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ZeroWindowProbeTemplates
Table type	Multi-instance table
Row name	ZeroWindowProbeTemplate
Restrictions	Only zero window probe template can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the zero window probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the zero window probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
RatioLimit	Ratio limit of zero window probe template.	N/A	Unsigned integer: Value range: 1 to 100. By default, the value is 40. Unit: %	N/A.
ProtectAction	Protection action of zero window probe.	N/A	Enumeration: • 0—Busy (default). • 1—Auto-shutdo	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
			wn.	
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	The busy type protection action is valid.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0	The busy type protection action is valid and value 0 means keep retrying.

LB/ProbeTemplate

This table contains information about probe template that is used for proximity.

XML structure

```
<LB>
  <ProbeTemplates>
    <ProbeTemplate>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Frequency></Frequency>
      <Timeout></Timeout>
    </ProbeTemplate>
  </ProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ProbeTemplate
Table type	Multi-instance table
Row name	N/A
Restrictions	Only probe template can be gotten by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template.	N/A	Enumeration: • 0—ICMP.	When a probe template is created, the column must be specified.
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 1 to 604800. Unit: second. By default, the value is 300s.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second. By default, the value is 3s.	N/A

LB/HTTPPassiveProbeTemplate

This table contains information about an HTTP passive probe template.

XML structure

```
<LB>
  <HTTPPassiveProbeTemplates>
    <HTTPPassiveProbeTemplate>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <URLThreshold></URLThreshold>
      <Timeout></Timeout>
      <URLList>
        <CheckUrl></CheckUrl>
      </URLList>
      <StatusCodeList>
        <StatusCode></StatusCode>
      </StatusCodeList>
    </HTTPPassiveProbeTemplate>
```

```
  </HTTPPassiveProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPPassiveProbeTemplates
Table type	Multi-instance table
Row name	HTTPPassiveProbeTemplate
Restrictions	Only HTTP passive probe template can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the HTTP passive probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description for the HTTP passive probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 1 to 5. By default, the value is 1. Unit: second.	N/A
URLThreshold	URL threshold of the HTTP passive probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 10000.	N/A.
Timeout	Response timeout of the HTTP passive probe template.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 5. Unit: second.	N/A
URLList	URL list for the HTTP passive probe template.	Data structure	Members include: URL.	N/A
CheckUrl	URL for the HTTP passive probe	N/A	String, Length: 1 to 255	A URL list can contain a maximum of 10 URLs.

Column name	Column description	Column type	Data type and restrictions	Remarks
	template.		characters.	
StatusCodeList	Status code list for the HTTP passive probe template.	Data structure	Members include: StatusCode.	N/A
StatusCode	Status code for the HTTP passive probe template.	N/A	Unsigned integer.	A status code list can contain a maximum of 10 status codes.

LB/ExternalScript

This table contains information about external monitor script files.

XML structure

```
<LB>
  <ExternalScripts>
    <ExternalScript>
      <FileName></FileName>
    </ExternalScript>
  </ExternalScripts>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ExternalScripts
Table type	Multi-instance table
Row name	ExternalScript
Restrictions	Only external monitor script file can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the external monitor script file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

LB/ExternalMonitor

This table contains information about an external monitor.

XML structure

```
<LB>
  <ExternalMonitors>
    <ExternalMonitor>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <Timeout></Timeout>
      <ExternalScript></ExternalScript>
      <Argument></Argument>
      <EnvVariablesList>
        <VariableName></VariableName>
        <VariableValue></VariableValue>
      </EnvVariablesList>
    </ExternalMonitor>
  </ExternalMonitors>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ExternalMonitors
Table type	Multi-instance table
Row name	ExternalMonitor
Restrictions	Only external monitor can be gotten by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the external monitor.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description for the external monitor.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInter	Monitor time	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
val	interval.		Value range: 1 to 86400. By default, the value is 5. Unit: second.	
Timeout	Response timeout of the external monitor.	N/A	Unsigned integer. Value range: 1 to 86400. By default, the value is 3. Unit: second.	N/A
ExternalScript	External monitor script of the external monitor.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
Argument	Argument for the external monitor	N/A	String, Length: 1 to 255 characters.	N/A
EnvVariablesList	Environment variable list	Data structure	Members include: • VariableName • VariableValue	N/A
VariableName	Environment variable name for external monitor.	N/A	String. Length: 1 to 63 characters.	N/A
VariableValue	Environment variable value for external monitor.	N/A	String, Length: 1 to 255 characters.	N/A

LB/ExternalMonitorProcessParameter

This table contains information about the external monitor process parameter.

XML structure

```
<LB>
  <ExternalMonitorProcessParameter>
    <ProcessLimit></ProcessLimit>
  </ExternalMonitorProcessParameter>
</LB>
```

Table description

Item	Description
Feature name	LB

Table name	ExternalMonitorProcessParameter
Table type	Single-instance table
Row name	N/A
Restrictions	Only external monitor process parameter can be gotten by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessLimit	Maximum number of processes.	N/A	Unsigned integer, Value range:10 to 1000. By default, the value is 100.	N/A

LB/HTTPStatsParameterObjectGroups

This table contains information about object group of HTTP statistics parameter.

XML structure

```
<LB>
  <HTTPStatsParameterObjectGroups>
    <HTTPStatsParameterObjectGroup>
      <ParameterName></ParameterName>
      <ObjectGroupName></ObjectGroupName>
    </HTTPStatsParameterObjectGroup>
  </HTTPStatsParameterObjectGroups>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterObjectGroups
Table type	Multi-instance table
Row name	HTTPStatsParameterObjectGroup
Restrictions	Only object group of HTTP statistics parameter can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ObjectGroupName	Name of the object group.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

LB/HTTPStatsParameterNodes

This table contains information about HTTP statistics parameter node.

XML structure

```
<LB>
  <HTTPStatsParameterNodes>
    <HTTPStatsParameterNode>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <Description></Description>
    </HTTPStatsParameterNode>
  </HTTPStatsParameterNodes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodes
Table type	Multi-instance table
Row name	HTTPStatsParameterNode
Restrictions	Only HTTP statistics parameter node can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
Description	Description of the node profile.	N/A	String. Length: 0 to 127 characters.	N/A

LB/HTTPStatsParameterNodeRules

This table contains information about match rule of HTTP statistics parameter node.

XML structure

```
<LB>
  <HTTPStatsParameterNodeRules>
    <HTTPStatsParameterNodeRule>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <ID></ID>
      <Type></Type>
      <URL></URL>
    </HTTPStatsParameterNodeRule>
  </HTTPStatsParameterNodeRules>
</LB>
```

Table description

Row name	HTTPStatsParameterNodeRule
Restrictions	Only rule of HTTP statistics parameter node can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the statistics match rule.	Index	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: • 0—URL.	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the Type is URL(0).

LB/HTTPStatsParameterNodeRuleLists

This table contains batching information about match rules of HTTP statistics parameter node.

XML structure

```
<LB>
  <HTTPStatsParameterNodeRuleLists>
    <HTTPStatsParameterNodeRuleList>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <IsIncrement></IsIncrement>
      <RuleList>
        <ID></ID>
        <Type></Type>
        <URL></URL>
      </RuleList>
    </HTTPStatsParameterNodeRuleList>
  </HTTPStatsParameterNodeRuleLists>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodeRuleLists
Table type	Multi-instance table
Row name	HTTPStatsParameterNodeRuleList
Restrictions	Only rule of HTTP statistics parameter node can be configured by this table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
IsIncrement	Whether to increment the data.	N/A	Boolean: • true—Yes. • false—No (default).	N/A
RuleList	List of rule.	Data structure	Members include: • ID • Type • URL	N/A
ID	ID of the statistics match rule.	N/A	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: • 0—URL.	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the Type is URL(0).

LB/TCPParameterOptions

This table contains information about TCP options.

XML structure

```
<LB>
  <TCPParameterOptions>
    <TCPParameterOption>
      <Parameter></Parameter>
      <Number></Number>
      <Type></Type>
      <ValueType></ValueType>
      <EncodeType></EncodeType>
    </TCPParameterOption>
  </TCPParameterOptions>
```

```
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TCPParameterOptions
Table type	Multi-instance table
Row name	TCPParameterOption
Restrictions	Only TCP parameter option can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Parameter	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Number	Number of the TCP option.	Index	Unsigned integer. Value range: 2 to 254.	Value range is 6、7、9-18、22-254,when the Type is Option Insert.
Type	Type of the option process.	Index	Enumeration: • 0—Option Remove. • 1—Option Insert.	N/A
ValueType	Type of the insert value.	N/A	Enumeration: • 1—Src addr.	This column has validity in Option Insert process. You cannot configure this column if the type is not Option Insert.
EncodeType	The encode for tcp option.	N/A	Enumeration: • **0—binary**. (default). • **1—string**.	N/A

LB/GlobalSNATs

This table contains information about Global SNAT

XML structure

```
<LB>
  <GlobalSNATs>
    <GlobalSNAT>
      <Name></Name>
```

```
      <Description></Description>
      <VRF></VRF>

      <SnatPoolName></SnatPoolName>
      <TranslationEnable></TranslationEnable>
    </GlobalSNAT>
  </GlobalSNATs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	GlobalSnats
Table type	Multi-instance table
Row name	GlobalSnat
Restrictions	Only GlobalSnat can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT global policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the SNAT global policy	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Priority	Priority of the SNAT global policy.	N/A	Unsigned integer. Value range: 0 to 65535. By default, priority is 0.	N/A
SourceipObj Group	The source-ip object group of SNAT global	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy for matching source IP addresses		Length: 1 to 31 characters.	
DestinationipObjGroup	The destination-ip object group of SNAT global policy for matching destination IP addresses	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ServiceObjGroup	The service object group of SNAT global policy for matching service of traiff	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Translation Mode	Translation mode of SNAT global policy	N/A	Enumeration: • 0—None(default). • 1—Snat-pool. • 2—Auto-map.	N/A
SnatPoolName	Name of snat-pool	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
TranslationEnable	Whether enable the SNAT global policy	N/A	Enumeration: • 0—disable (default). • 1—enable.	N/A

Table description

Item	Description
Feature name	LB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP and FASTHTTP virtual servers can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—HTTP. • 1—FASTHTTP	N/A
Description	Description for	N/A	String.	The null string indicates the label is

Column name	Column description	Column type	Data type and restrictions	Remarks
	the virtual server.		Length: 0 to 127 characters.	not configured.
VRF	VRF name.	N/A	String. Length: 0 to 31 characters.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of the port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupStickyGroup	Name of the backup sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
TCPParame	Client-side tcp	N/A	String,	The null string indicates the label is

Column name	Column description	Column type	Data type and restrictions	Remarks
terClientSide	parameter		case-insensitive. Length: 1 to 63 characters.	not configured.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPStatsParameter	Parameter whose type is HTTP statistics for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
CookieSticky	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
RedirectRelocation	Redirection URL.	N/A	String. Length: 0 to 63 characters.	The null string indicates the label is not configured.
RedirectReturnCode	Redirection condition code.	N/A	Enumeration: • 301—The requested resource has	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			been permanently moved. • 302—The requested resource has been temporarily moved. • 307—The requested resource has been provisory moved.	
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Disable.	N/A
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: • 0—Default sever farm. • 1—Backup server farm. • 2—No server farm.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics. • 1—Using interface bandwidth statistics.	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StickySynEnable	Enable sticky synchronization.	N/A	• Enumeration: • 0—Disable. • 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be configured only when the Type is HTTP (0).
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
HttpLogFormat	Specified the format of LB http log.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the type is HTTP (0).
CachePolicy	Name of the cache policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPProtec	Name of the	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
tionPolicy	HTTP protection policy		case-insensitive. Length: 1 to 63 characters.	
ExtLinkRewriteEnable	Enable skylight external link rewrite	N/A	Enumeration: • 0—Disable • 1—Enable.	This column can only be configured when the Type is HTTP (0)
ExtLinkInjectURI	Skylight external link proxy URI	N/A	String, case-insensitive. Length: 1 to 63 characters.	Example:proxy This column can only be configured when the Type is HTTP (0)
ExtLinkDomainSuffix	Skylight external link proxy domain suffix	N/A	String, case-insensitive. Length: 1 to 253 characters.	Example:b.com This column can only be configured when the Type is HTTP (0)
ExtLinkSNATPool	Skylight external link SNAT pool	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
TrustedAccessController	Name of the trusted access controller.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TrustedAccessControllerType	Type of the trusted access controller	N/A	Enumeration: • 0—None • 1—IAM	When a trusted access controller is created, the column must be specified. Once created, this column cannot be changed.
TrustedAccessAction	Action type for the trusted access controller	N/A	Enumeration: • 0—None • 1—APP-AUTH • 2—API-AUTH	When a action for trusted access controller is created, the column must be specified. Once created, this column cannot be changed.

LB/GenericVirtualServers

This table contains information about IP, TCP and UDP virtual servers.

Table description

Item	Description
Feature name	LB

Table name	GenericVirtualServers
Table type	Multi-instance table
Row name	GenericVirtualServer
Restrictions	Only IP, TCP , UDP and LINK-IP virtual servers can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—UDP. • 3—LINK-IP.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range:0 to 128.	N/A
PortNumber	Number of the port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PortNumberList	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			hyphen, or include any whitespace characters.	
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
DefaultLinkGroup	Name of the default link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupLinkGroup	Name of the backup link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPParameterClientSide	Client-side TCP parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured with the TCPParameter column at the same time.
TCPParameterServerSide	Server-side TCP parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured with the TCPParameter column at the same time.
TCPAppParameter	Parameter profile whose type is TCP-Application for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ServiceEnable	Enable the service of the virtual server.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s	N/A
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Disable.	N/A
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: • 0—Default sever farm. • 1—Backup server farm. • 2—No server farm.	N/A
LinkGroupInUse	Name of the in use link group.	N/A	Enumeration: • 0—Default link group. • 1—Backup link group. • 2—No link	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			group.	
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics. • 1—Using interface bandwidth.	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Application Mode	Enable TCP layer7 load balancing.	N/A	Enumeration: • 0—TCP layer4 (default). • 1—TCP layer7.	N/A
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	The null string indicates the label is not configured.

Restrictions	Only MySQL virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 3306.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
MySQLParameter	Parameter profile whose type is MySQL for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnect	Maximum	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ionLimit	connection limit.		Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: • 0—Using LB bandwidth statistics (default). • 1—Using interface bandwidth	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			statistics.	
StickySynEnable	Enable sticky entry synchronization.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Version	MySQL version info.	N/A	Enumeration: • 0—5.0. • 1—5.1. • 2—5.5. • 3—5.6. • 4—5.7. • By default, 3 is configured.	N/A
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Disable.	N/A
ServerFarmI	Name of the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
nUse	server farm in use.		• 0—Default sever farm. • 1—Backup server farm. • 2—Read/Write server farm. • 3—No server farm.	
UserList	MySQL database user list.	Data structure	Members include: • UserName. • Password.	Max user info count is 100.
UserName	MySQL database login username.	N/A	String, Length: 1 to 63 characters.	N/A
ReadServer Farm	MySQL read server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReadSticky Group	Name of the sticky group for read server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the read server farm is not configured.
WriteServer Farm	MySQL write server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
WriteSticky Group	Name of the sticky group for write server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the write server farm is not configured.

LB/VirtualServerSummaries

This table contains summary information about virtual server.

      <PortNumber></PortNumber>
      <ServiceEnable></ServiceEnable>
      <State></State>
      <BusyProtectEnable></BusyProtectEnable>
      <RSBandwidthProtectOrigin></RSBandwidthProtectOrigin>
    </VirtualServerSummary>
  </VirtualServerSummaries>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	VirtualServerSummaries
Table type	Multi-instance table
Row name	VirtualServerSummary
Restrictions	Only summaries of virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—UDP. • 3—HTTP. • 4—FASTHTTP. • 5—LINK-IP. • 8—SIP-UDP. • 9—SIP-TCP. • 10—MySQL.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
BusyProtectEnable	State of the busy protect.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
RSBandwidthProtectOrigin	Source of the virtual server bandwidth	N/A	Enumeration: • 0—LB. • 0—interface.	N/A

Table description

Item	Description
Feature name	LB
Table name	RealServers
Table type	Multi-instance table
Row name	RealServer
Restrictions	Only Real server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the real server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of the real server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Weight	Weight of the real server.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the real server.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
ServerFarm	Name of the server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Shutdown	Shutdown state for the real server.	N/A	Enumeration: • 0—Not configured. • 1—Shutdown. • 2—Slow-shutdown.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the real server.	N/A	Enumeration: • 0—Unavailable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Available. • 2—Slow-shutdown. • 3—Shutdown. • 4—Probe-failed. • 5—Standby. • 6—Ramp. • 8—Busy. • 9—Unknown.	
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
BandwidthBusyRecoverRatio	Total bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			rate.	
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
InheritVPN	Inherit the VPN of virtual server	N/A	Enumeration: • 0—Disable inherit the VPN. • 1—Enable inherit the VPN.	N/A
ProbeLog	Enable logging for health monitoring	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

LB/RealServerProbes

Bandwidth	Bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the real server received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the real server dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the real server sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the real server dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
InBandwidth	Inbound Bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxInBandwidth	Inbound Max bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxOutBandwidth	Outbound Max bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxConnectionsTime	Time when the real server	N/A	DateTime.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received the maximum number of connections.		Format: YYYY-MM-DDTHH:MM:SS.	
MaxConnectionPerSeTime	Time when the real server received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxBandwidthTime	Maximum bandwidth time of the real server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the real server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OutMaxBandwidthTime	Outbound maximum bandwidth time of the real server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ServerSidePKTsPerSecIn	Number of packets per second that the real server received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
ServerSidePKTsPerSecOut	Number of packets per second that the real server sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A

LB/ServerFarms

This table contains information about server farm.

Table description

Item	Description
Feature name	LB
Table name	ServerFarms
Table type	Multi-instance table
Row name	ServerFarm
Restrictions	Only server farm can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the server farm.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a real server to serve a client request.	N/A	Enumeration: • 0—Round-robin. • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 7—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max Outbound bandwidth. • 12—Least time. • 13—Dynamic round-robin. • 14—Hash HTTP. • 15—CARP HTTP. • 16—CARP source address. • 17—CARP source port. • 18—CARP destination address. • 19—Least-connection member. • 20—Least time member.	N/A
HashIpv4Pr	Length of IPv4	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
efixLength	address mask for hash or CARP algorithm.		Value range: 0 to 32.	
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to128.	N/A
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectServerMaxNumber	Maximum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the server farm slow online.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: • 0—Disable. • 1—Enable	N/A
ActivateLower	The status of main server farm will be changed from in use to backup when the ratio of the available real servers in main server farm becomes smaller than this value.	N/A	Unsigned integer. Value range: 1 to 99.	N/A
ActivateUpper	The status of main server farm will be changed from backup to in use when the ratio of the available real servers in		Unsigned integer. Value range: 1 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	main server farm reaches or over this value.			
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any real server fails in a server farm.	N/A	Enumeration: • 0—Keep. • 1—Reset. • 2—Reschedule.	N/A
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
TotalRealServer	Total number of real servers in the server farm.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ActiveRealServer	Active number of real servers in the server farm.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the server farm.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
ProximityEnable	Enable the proximity.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
BusyAction	Busy protection policies for	N/A	Enumeration: • 0—Drop(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	server nodes		• 1—Enqueue. • 2—Force.	
QueueLength	Queue length for aging	N/A	Unsigned integer. Value range: 1 to 100000. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
QueueTimeout	Node aging time	N/A	Unsigned integer. Value range: 0 to 60. Unit: second. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
RSTProbe	RST type probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each type.
ZeroWindowProbe	Zero-Window type probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each type.
RecoverTimeInterval	Auto recover time interval	N/A	Unsigned integer. Value range: 0 to 15300. Unit:minute. By default, the value is 0.	N/A
HTTPPassiveProbe	HTTP passive probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each probe type.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None. • 1—Snat-pool. • 2—Auto-map. • 3—Tcp-option.	N/A
AllServiceD	Specify the	N/A	Enumeration: • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ownAction	action taken when all server farm members become unavailable		• 1—Enable.	
ExternalMonitorList	External monitor list for the server farm.	Data structure	Members include: • ExterrnalMonitor.	N/A
ExternalMonitor	External monitor for the server farm.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

LB/ServerFarmProbes

This table contains information about Server Farm Probe that only uses NQA template.

XML structure

```
<LB>
  <ServerFarmProbes>
    <ServerFarmProbe>
      <ServerFarm></ServerFarm>
      <Probe></Probe>
      <NQADefaultPortEnable></NQADefaultPortEnable>
    </ServerFarmProbe>
  </ServerFarmProbes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ServerFarmProbes
Table type	Multi-instance table
Row name	ServerFarmProbe
Restrictions	Only server farm probe can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Probe	Probe method for the server farm.	Index	String, case-insensitive. Length: 0 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

LB/ServerFarmStats

This table contains stat information about server farm.

XML structure

```
<LB>
  <ServerFarmStats>
    <ServerFarmStat>
      <Name></Name>
      <ChassisID></ChassisID>

      <ServerSideBytesOut></ServerSideBytesOut>
      <Bandwidth></Bandwidth>
      <ReceivedRequests></ReceivedRequests>
      <DroppedRequests></DroppedRequests>
      <SentResponses></SentResponses>
      <DroppedResponses></DroppedResponses>
    </ServerFarmStat>
  </ServerFarmStats>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	RealServerStats
Table type	Multi-instance table
Row name	RealServerStat
Restrictions	Only stats of real server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the server farm received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the server farm received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the server farm received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSidePKTsOut	Number of packets that the server farm sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPac	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
kets	packets that the server farm dropped.		Value range: 0 to 2^{64}-1.	
ServerSideBytesIn	Number of bytes that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
ServerSideBytesOut	Number of bytes that the server farm sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the server farm dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the server farm sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the server farm dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

LB/SNATPools

This table contains information about SNAT pool.

XML structure

```
<LB>
  <SNATPools>
    <SNATPool>
      <Name></Name>
      <Description></Description>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
```

```
    </SNATPool>
  </SNATPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPools
Table type	Multi-instance table
Row name	SNATPool
Restrictions	Only SNAT pool can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT Pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the SNAT Pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address Start	Start IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4Address End	End IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address Start	Start IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6Address End	End IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.

LB/NewSNATPools

This table contains LB SNAT pool information.

XML structure

```
<LB>
  <NewSNATPools>
    <NewSNATPool>
```

```
      <SNATPoolName></SNATPoolName>
      <Description></Description>
      <SNATType></SNATType>
      <VRF></VRF>
    </NewSNATPool>
  </NewSNATPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	NewSNATPools
Table type	Multi-instance table
Row name	NewSNATPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SNATPoolName	Name of SNAT pool.	Index	String. Case-insensitive. Length: 1 to 63 characters.	N/A.
Description	SNAT pool description.	N/A	String: Case-sensitive Length: No more than 127 characters	N/A
SNATType	Type of SNAT pool	N/A	Enumeration: • 0—addr-split (default). • 1—port-split • 2—failover group	When a snat-pool is created, the column must be specified. Once created, this column cannot be changed.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates public network.

LB/SNATPoolsIpv4Infos

This table contains information about IPv4 addresses in an LB SNAT pool.

XML structure

```
<LB>
  <SNATPoolsIpv4Infos>
    <SNATPoolsIpv4Info>
```

```
      <Name></Name>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <FailoverGroupName></FailoverGroupName>
      <Channel></Channel>
    </SNATPoolsIpv4Info>
  </SNATPoolsIpv4Infos>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPoolsIpv4Infos
Table type	Multi-instance table
Row name	SNATPoolsIpv4Info
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of SNAT pool	Index	String.Case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4AddressStart	Start IP address	Index	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4AddressEnd	End IP address	Index	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
FailoverGroupName	Name of failover-group	N/A	String. Length: 0 to 63 characters.	N/A
Channel	Channel of the failover group	N/A	Enumeration: • 0—None • 1—Channel 0 • 2—Channel 1	N/A

LB/SNATPoolsIpv6Infos

This table contains information about IPv6 addresses in an LB SNAT pool.

XML structure

```
<LB>
  <SNATPoolsIpv6Infos>
```

```
    <SNATPoolsIpv6Info>

      <SrcAddrOptionNum></SrcAddrOptionNum>
      <EncodeType></EncodeType>
    </TCPParameter>
  </TCPParameters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TCPParameters
Table type	Multi-instance table
Row name	TCPParameter
Restrictions	Only TCP parameter profile information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ExceedMSS	Processing method when segments exceed the maximum segment size of TCP segment.	N/A	Enumeration: • 0—Permit. • 1—Drop.	N/A
WindowSize	Starting value of the receive	N/A	Unsigned integer. Value range: 8192 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	window size.		65535.	
TimeWaitTime	The time of TCP time-wait	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second.	N/A
IdleTimeout	Timeout time of idle connections.	N/A	Unsigned integer. Value range: 10 to 86400. Unit: second.	The 0 indicates the label is not configured.
MSS	Maximum segment size of TCP segments.	N/A	Unsigned integer. Value range: 128 to 1460.	The 0 indicates the label is not configured.
SynRetransTime	Timeout time for syn retransmission	N/A	Unsigned integer. Value range: 1 to 75. Unit: second.	N/A
KeepAliveTime	Timeout time of keep-alive	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second.	N/A
KeepAliveInterval	Interval time of keep-alive retransmission	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second.	N/A
KeepAliveCount	Number of times of keep-alive retransmission	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
FinWait1Time	Timeout time of FIN-WAIT1	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second.	N/A
FinWait2Time	Timeout time of FIN-WAIT2	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second.	N/A
SrcAddrOptionNum	The option num for Source ip addresses	N/A	Unsigned integer. Value range: 6 to 254.	N/A
EncodeType	The encode for tcp option.	N/A	Enumeration: • 0—**binary**. • **1**—string.	N/A

LB/TCPAppParameters

This table contains information about TCP Application parameter profile.

XML structure

```
<LB>
  <TCPAppParameters>
    <TCPAppParameter>
      <Name></Name>
      <Description></Description>
      <MatchBufferSize></MatchBufferSize>
      <MatchBufferEnd></MatchBufferEnd>
      <MatchBufferTime></MatchBufferTime>
    </TCPAppParameter>
  </TCPAppParameters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TCPAppParameters

Table description

Item	Description
Feature name	LB
Table name	HTTPParameters
Table type	Multi-instance table
Row name	HTTPParameter
Restrictions	Only HTTP parameter profile information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ServerConnectionReuse	Enable connections to persist and be reused by multiple client connections.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
CaseInsensitive	Disable case-sensitivity matching for HTTP.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
HeaderModifyPerRequest	Enable modify the HTTP header of every HTTP request or response.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
HeaderMaxParseLength	Maximum number of bytes to parse for cookies, HTTP headers, and URL.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ContentMaxParseLength	Maximum number of bytes to parse for HTTP content.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
SecondaryCookieDelimiters	The delimiters used to separate secondary cookies.	N/A	String. Length: 1 to 4 characters.	Delimiter characters are defined to be one of the following: "!" """" "#" ";" "<" ">" "?" " [" "\" "]" "^" "`" "|" ":" "@" "&" "$" "+" "*" "'" "(" ")" "," "/" can be used for secondary cookies delimiters. And < should be transferred meaning by <, > should be transferred meaning by &rt;, ' should be

Column name	Column description	Column type	Data type and restrictions	Remarks
				transferred meaning by ', " should be transferred meaning by ".
SecondaryCookieStart	Starting character of secondary cookies.	N/A	String. Length: 1 to 2 characters.	Delimiter characters are defined to be one of the following: "!" "$" "#" ";" "<" ">" "?" " " [" "\" "]" "^" "`"| can be used for secondary cookies delimiters. And < should be transferred meaning by <, > should be transferred meaning by &rt;, ' should be transferred meaning by ', " should be transferred meaning by ".
CookieEncryptName	Name of the cookie that excepted to be encrypted.	N/A	String.Length: 1 to 63 characters.	CookieEncryptName and CookiePassword are mutually dependent and both of them should be set in a single message.
CookieCipherPassword	Specify an cookie key in encrypted form.	N/A	String. Length: 1 to 73 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or CookieSimplePassword, but not both.
CookieSimplePassword	Specify an cookie key in plaintext form.	N/A	String. Length: 1 to 31 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or CookieSimplePassword, but not both.
ExceedLength	Processing method for HTTP requests or responses that exceed the maximum parse length.	N/A	Enumeration: • 0—Keep. • 1—Drop.	N/A

LB/HTTPCompressionParameters

This table contains information about HTTP compression parameter profile.

XML structure

```
<LB>
  <HTTPCompressionParameters>
    <HTTPCompressionParameter>
      <Name></Name>
      <Level></Level>
      <Description></Description>
      <PreferMethod></PreferMethod>
      <ContentLengthThreshold></ContentLengthThreshold>
      <InsertVary></InsertVary>
      <RequestVersion></RequestVersion>
      <DeleteAcceptEncoding></DeleteAcceptEncoding>
      <MemorySize></MemorySize>
      <WindowSize></WindowSize>
    </HTTPCompressionParameter>
  </HTTPCompressionParameters>
</LB>
```

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Deflate	
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1.	N/A
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RequestVersion	Enable compress the HTTP response of version 1.0.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
DeleteAcceptEncoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB. • 32—32KB. • 64—64KB.	N/A
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB. • 32—32KB.	N/A

LB/HTTPStatisticsParameter

This table contains information about HTTP statistics parameter profile.

XML structure

```
<LB>
  <HTTPStatisticsParameters>
    <HTTPStatisticsParameter>
      <Name></Name>
      <Description></Description>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

LB/OneConnectParameters

This table contains information about the OneConnect parameter profile.

XML structure

```
<LB>
  <OneConnectParameters>
    <OneConnectParameter>
      <Name></Name>
      <Description></Description>
      <MaxReuse></MaxReuse>
      <IdleTime></IdleTime>
      <IPv4SourceMask></IPv4SourceMask>
      <IPv6SourcePrefix></IPv6SourcePrefix>
    </OneConnectParameter>
  </OneConnectParameters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	OneConnectParameters
Table type	Multi-instance table
Row name	OneConnectParameter
Restrictions	Only OneConnect parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	N/A
MaxReuse	Maximum reuse number	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the number is 1000.	N/A
IdleTime	Idle connection expiration time	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the time length is 86400.	N/A
IPv4Source Mask	IPV4 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 0.	N/A
IPv6Source Prefix	IPV6 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 0.	N/A

LB/MySQLParameters

This table contains information about a MySQL parameter profile.

XML structure

```
<LB>
  <MySQLParameters>
    <MySQLParameter>
      <Name></Name>
      <Description></Description>
      <PoolSize></PoolSize>

      <MaxReuse></MaxReuse>
      <IdleTime></IdleTime>
      <IPv4SourceMask></IPv4SourceMask>
      <IPv6SourcePrefix></IPv6SourcePrefix>
    </MySQLParameter>
  </MySQLParameters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	MySQLParameters
Table type	Multi-instance table
Row name	MySQLParameter
Restrictions	Only MySQL parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	N/A
PoolSize	Max cache connection count.	N/A	Unsigned integer. Value range: 1 to 64000. By default, the count is 1024.	N/A
ServerConn	Enable connections to	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ectionReuse	persist and be reused by multiple client connections.		• 0—Disable (default). • 1—Enable.	
MaxReuse	Maximum reuse number	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the number is 1000.	N/A
IdleTime	Idle connection expiration time	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the time length is 86400.	N/A
IPv4Source Mask	IPV4 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 0.	N/A
IPv6Source Prefix	IPV6 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 0.	N/A

LB/HTTPCompressionParameterRules

This table contains information about HTTP compression parameter rule.

XML structure

```
<LB>
  <HTTPCompressionParameterRules>
    <HTTPCompressionParameterRule>
      <Name></Name>
      <ID></ID>
      <Type></Type>
      <FilterType></FilterType>
      <Expression></Expression>
    </HTTPCompressionParameterRule>
  </HTTPCompressionParameterRules>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPCompressionParameterRules
Table type	Multi-instance table
Row name	HTTPCompressionParameterRule
Restrictions	Only HTTP compression parameter rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range:1 to 65535.	N/A
Type	Type of the rule.	N/A	Enumeration: • 0—Permit. • 1—Deny.	N/A
FilterType	Filter type of the rule.	N/A	Enumeration: • 0—URL. • 1—Content.	N/A.
Expression	Regular expression matched the filter type.	N/A	String. Length: 0 to 255 characters.	N/A

LB/ParameterSummaries

This table contains summary information about parameter profile.

XML structure

```
<LB>
  <ParameterSummaries>
    <ParameterSummary>
      <Name></Name>
```

```
      <Type></Type>
      <Description></Description>
    </ParameterSummary>
  </ParameterSummaries>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ParameterSummaries
Table type	Multi-instance table
Row name	ParameterSummary
Restrictions	Only parameter profile summary information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of parameter profile.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—HTTP. • 3—HTTP Compression Parameter. • 4—oneconnect. • 5—HTTP-Statistics. • 6—TCP-Application. • 7—MySQL.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

LB/AddressPortStickyGroups

This table contains information about address-port sticky groups.

XML structure

```
<LB>
  <AddressPortStickyGroups>
    <AddressPortStickyGroup>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>

Table type	Multi-instance table
Row name	AddressPortStickyGroup
Restrictions	Only address-port sticky groups information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second	N/A
Ipv4MethodType	IPv4 sticky method of the address-port sticky group.	N/A	Enumeration: • 0—None. • 1—Source IP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			stickiness. • 2—Source IP port stickiness. • 3—Destination IP stickiness. • 4—Destination IP port stickiness. • 5—Source IP and destination IP stickiness. • 6—Source IP port and destination IP port stickiness.	
Ipv4PrefixLength	IPv4 mask for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6MethodType	IPv6 sticky method of the address-port sticky group.	N/A	Enumeration: • 0—None. • 1—Source IPv6 stickiness. • 2—Source IPv6 port stickiness. • 3—Destination IPv6 stickiness. • 4—Destination IPv6 port stickiness. • 5—Source IPv6 and destination IPv6 stickiness. • 6—Source IPv6 port and destination IPv6 port stickiness.	N/A
Ipv6PrefixLength	IPv6 prefix for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

LB/RADIUSStickyGroups

This table contains information about RADIUS sticky groups.

XML structure

```
<LB>
```

```
  <RADIUSStickyGroups>
    <RADIUSStickyGroup>

Name	Name of the sticky group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description information for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second	N/A
Type	Sticky method of the HTTP header sticky group.	N/A	Enumeration: • 0—None. • 1—URL stickiness. • 2—Host stickiness • 3—Method stickiness • 4—Version stickiness • 5—Name stickiness	N/A
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Offset	Offset to the first byte of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

LB/SSLStickyGroups

This table contains information about SSL sticky groups.

XML structure

```
<LB>
  <SSLStickyGroups>
    <SSLStickyGroup>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <Type></Type>
      <OverrideLimit></OverrideLimit>
      <PriorBusyEnable></PriorBusyEnable>
    </SSLStickyGroup>
  </SSLStickyGroups>
</LB>
```

Table description

Table description

Item	Description
Feature name	LB
Table name	HTTPActions
Table type	Multi-instance table
Row name	HTTPAction
Restrictions	Only action of HTTP type can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the action.	N/A	Enumeration: • 1—Drop. • 3—Server farm. • 8—Redirect • 9—Response	N/A
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServer Farm	Name of the backup sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupSticky Group	Name of the backup sticky group for the action	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
SSLClientPoli cy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
IPToS	ToS number of IP packet for the action sent to server.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
ServerFarmIn	Name of the in	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Use	use sever farm for the action.		• 0—Default sever farm. • 1—Backup server farm. • 2—No server farm.	
Fallback	Fallback action when real server select failed.	N/A	Enumeration: • 0—None. • 1—Match next class. • 2—Response. • 3—Fin close. • 4—Rst close.	N/A
RewriteValue	Content value need to be replaced in response.	N/A	String. Length: 1 to 127 characters.	This column and the column of ReplaceValue must be configured together.
ReplaceValue	New content value after replaced in response.	N/A	String. Length: 1 to 127 characters.	Some special applications and constraints as below: %is: insert source IPv4 address or source IPv6 address into header of the message. %ps: insert source port into header of the message. %id: insert destination IPv4 address or IPv6 address into header of the message. %pd: insert destination port into header of the message. To the above-mentioned applications, some situations, like only %, ps, id, pd can behind %, must be constrained unless those serial % are not odd number.
Redirect	Redirection URL.	N/A	String. Length: 0 to 255 characters.	A null string indicates the label is not configured.
ReturnCode	Status code in the returned redirection packets.	N/A	Enumeration: • 301—The requested resource has been permanently deleted. • 302—The requested resource has been temporarily deleted. • 307—The requested resource has been provisory deleted.	N/A
ZipFileWorkpath	Work path of zip file for the response	N/A	String. Length: 1 to 255 characters.	If the column is not ‘/’, it must start with /, and cannot end with /. The null string indicates

Column name	Column description	Column type	Data type and restrictions	Remarks
				the label is not configured.
ResponseZipFile	Full path and name of the zip file for the response. Example: • flash:/lb/1.html • chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9). The column cannot be configured when ZipFileWorkpath is not configured.
FallbackResponseRawFile	Full path and name of the raw file for the fallback action response. Example: • flash:/lb/1.html • chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
TCPDropType	Type of closing TCP connection	N/A	Enumeration: • 0—Fin close(default). • 1—Rst close	N/A

LB/HTTPActionResponseFiles

This table contains information about HTTP action response file.

XML structure

```
<LB>
  <HTTPActionResponseFiles>
    <HTTPActionResponseFile>
      <Action></Action>
      <URL></URL>
      <FileName></FileName>
    </HTTPActionResponseFile>
  </HTTPActionResponseFiles>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionResponseFiles
Table type	Multi-instance table
Row name	HTTPActionResponseFile
Restrictions	Only HTTP action response file can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
URL	URL of file for the action response.	Index	String. Length: 1 to 255 characters.	The column must start with /. When the column is configured, ForwardType becomes Resposne (9).
FileName	Full path and name of the file for the action response. Example: • flash:/lb/1.html • chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column must start witch device name.

LB/HTTPActionRewriteURLs

This table contains information about HTTP action rewrite URL.

XML structure

```
<LB>
  <HTTPActionRewriteURLs>
    <HTTPActionRewriteURL>
      <ActionName></ActionName>
      <LocationURL></LocationURL>
      <Replace></Replace>
```

```
    <Encode></Encode>
  </HTTPActionRewriteURL>
</HTTPActionRewriteURLs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionRewriteURLs
Table type	Multi-instance table
Row name	HTTPActionURL
Restrictions	Only HTTP action rewrite URL can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionName	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP request line.	Index	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Replace	Replaced string that method of URL rewrite process.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. • 2—Base64	

LB/HTTPActionSSLURLs

This table contains information about HTTP action SSLURL.

XML structure

```
<LB>
  <HTTPActionSSLURLs>
    <HTTPActionSSLURL>
```

```
      <Name></Name>
      <LocationURL></LocationURL>
      <ClearPort></ClearPort>
      <SSLPort></SSLPort>
    </HTTPActionSSLURL>
  </HTTPActionSSLURLs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionSSLURLs
Table type	Multi-instance table
Row name	HTTPActionSSLURL
Restrictions	Only HTTP action SSL URL can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP header.	Index	String. Length: 0 to 63 characters.	N/A
ClearPort	HTTP port of Location for rewriting redirection message.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SSLPort	SSL port of the LB device.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

LB/HTTPActionHeaders

This table contains information about HTTP action header.

XML structure

```
<LB>
  <HTTPActionHeaders>
    <HTTPActionHeader>
      <Action></Action>
      <Type></Type>
```

```
      <Direction></Direction>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>
      <HeaderExpress></HeaderExpress>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionHeader>
  </HTTPActionHeaders>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPActionHeaders
Table type	Multi-instance table
Row name	HTTPActionHeader
Restrictions	Only HTTP action header can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the header process.	Index	Enumeration: • 0—Header Delete. • 1—Header Insert. • 2—Header Rewrite.	N/A
Direction	Process direction.	Index	Enumeration: • 0—Request and Response. • 1—Request. • 2—Response.	N/A
HeaderName	Name of the header.	Index	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
HeaderValue	Header value that method of Header Insert process.	N/A	String. Length: 0 to 255 characters.	The null string indicates the label is not configured.
HeaderExpress	Header value that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Replace	Replaced	N/A	String.	The null string indicates

Column name	Column description	Column type	Data type and restrictions	Remarks
	string that method of Header Rewrite process.		Length: 0 to 127 characters.	the label is not configured.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. • 2—Base64	Encode

LB/ActionSummaries

This table contains information about action summary.

XML structure

```
<LB>
  <ActionSummaries>
    <ActionSummary>
      <Name></Name>
      <Type></Type>
      <Description></Description>
    </ActionSummary>
  </ActionSummaries>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ActionSummaries
Table type	Multi-instance table
Row name	ActionSummary
Restrictions	Only action summary can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the action.	N/A	Enumeration: • 0—Generic.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—HTTP.	
Description	Description of the action.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

LB/Classes

This table contains information about classes.

XML structure

```
<LB>
  <Classes>
    <Class>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <MatchCondition></MatchCondition>
    </Class>
  </Classes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Classes
Table type	Multi-instance table
Row name	Class
Restrictions	Only class can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the class.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the class.	N/A	Enumeration: • 0—Generic. • 1—HTTP. • 2—Link-generic. • 3—DNS. • 4—RADIUS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—MySQL.	
Description	Description of the class.	N/A	String. Length: 0 to 127 characters.	N/A
MatchCondition	The rule matched class.	N/A	Enumeration: • 0—Match any. • 1—Match all.	N/A

LB/GenericMatchRules

This table contains information about generic match rule.

XML structure

```
<LB>
  <GenericMatchRules>
    <GenericMatchRule>
      <Class></Class>
      <ID></ID>
      <Type></Type>
      <SrcIpv4Address></SrcIpv4Address>
      <SrcIpv4PrefixLength></SrcIpv4PrefixLength>
      <SrcIpv6Address></SrcIpv6Address>
      <SrcIpv6PrefixLength></SrcIpv6PrefixLength>
      <ReferClass></ReferClass>
      <AclNum></AclNum>
      <AclName></AclName>
      <ISP></ISP>
      <User></User>
      <UserGroup></UserGroup>
      <IdentityDomain></IdentityDomain>
      <InterfaceName></InterfaceName>
      <PayloadExpression></PayloadExpression>
      <CaseInsensitive></CaseInsensitive>
      <Not></Not>
    </GenericMatchRule>
  </GenericMatchRules>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	GenericMatchRules

Table type	Multi-instance table
Row name	GenericMatchRule
Restrictions	Only generic match rule can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—IPv4 ACL. • 4—IPv6 ACL. • 5—ISP. • 6—User. • 7—User group. • 8—Interface.	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
User	Name of the user.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroup	Name of the user group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The null string indicates the label is not configured.
InterfaceName	Name of the interface.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
PayloadExpression	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	This column can be configured only when the type is payload (9).
CaseInsensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case sensitive (default) • 1—Case insensitive	This column can be configured only when the type is payload(9).
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	This column can be configured only when the type is payload(9).

LB/LinkGenericMatchRules

This table contains information about link generic match rule.

XML structure

```
<LB>
  <LinkGenericMatchRules>
    <LinkGenericMatchRule>
      <Class></Class>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—Cookie. • 4—HTTP Header. • 5—Method. • 6—URL. • 7—Content. • 8—IPv4 ACL. • 9—IPv6 ACL.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 11—User. • 12—User group. • 13—Interface. • 14—version.	
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	The null string indicates the label is not configured.
CookieValue	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	N/A
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
HeaderValue	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	N/A
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	N/A
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • 0—Nonuser-defined. • 1—User-defined.	N/A
URL	Regular expression matched the URL.	N/A	String. Length: 0 to 255 characters.	N/A
ContentOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
ContentExpression	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	N/A
AclNum	ACL number.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 2000 to 3999.	
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
User	Name of the user.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
UserGroup	Name of the user group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The null string indicates the label is not configured.
InterfaceName	Name of the interface.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
Version	The version of HTTP.	N/A	Enumeration: • 0—1.0. • 1—1.1	N/A

LB/RADIUSMatchRules

This table contains information about RADIUS match rule.

XML structure

```
<LB>
  <RADIUSMatchRules>
    <RADIUSMatchRule>
      <Class></Class>
      <ID></ID>
      <Type></Type>
      <SrcIpv4Address></SrcIpv4Address>
      <SrcIpv4PrefixLength></SrcIpv4PrefixLength>
      <SrcIpv6Address></SrcIpv6Address>
      <SrcIpv6PrefixLength></SrcIpv6PrefixLength>
      <ReferClass></ReferClass>
      <AclNum></AclNum>
      <AclName></AclName>
      <AttributeType></AttributeType>
      <AttributeExpression></AttributeExpression>
    </RADIUSMatchRule>
  </RADIUSMatchRules>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	RADIUSMatchRules
Table type	Multi-instance table
Row name	RADIUSMatchRule
Restrictions	Only RADIUS match rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—IPv4 ACL. • 4—IPv6 ACL. • 5—RADIUS.	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
AttributeType	Type of attribute	N/A	Unsigned integer. Value range: 1 to 255. By default, no AttributeType is specified.	N/A
AttributeExpression	Regular expression matched the attribute.	N/A	String. Length: 1 to 255 characters.	N/A

LB/MySQLMatchRules

This table contains information about MySQL match rules.

XML structure

```
<LB>
  <MySQLMatchRules>
    <MySQLMatchRule>
      <Class></Class>
      <ID></ID>
      <Type></Type>

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	MySQLMatchRules
Table type	Multi-instance table

Row name	MySQLMatchRule
Restrictions	Only MySQL match rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source IPv6. • 2—Class. • 3—IPv4 ACL. • 4—IPv6 ACL. • 5—SQL.	N/A
SrcIpv4Address	Source IPv4 address to match.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Source IPv6 address to match.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configuredonly when the type is Class (2).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can only be configured when the type is IPv4 ACL (3) or IPv6 ACL (4).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured only when the type is IPv4 ACL (3) or IPv6 ACL (4).
SqlExpression	Regular expression used to match the SQL content.	N/A	String. Length: 1 to 255 characters	This column can be configured only when the type is sql(5).
CaseInsensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case sensitive (default) • 1—Case insensitive	This column can be configured only when the type is sql(5).
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	This column can be configured only when the type is sql(5).

LB/ISPs

This table contains information about ISP.

XML structure

```
<LB>
  <ISPs>
    <ISP>
      <Name></Name>
      <Description></Description>
      <Origin></Origin>
    </ISP>
  </ISPs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPs
Table type	Multi-instance table
Row name	ISP
Restrictions	Only ISP can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the ISP.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Origin	Origin of the ISP.	N/A	Enumeration: • 1—Import. • 2—Manual. • 3—Import and manual.	N/A

LB/ISPFile

This table contains information about ISP file.

XML structure

```
<LB>
  <ISPFile>
    <FileName></FileName>
  </ISPFile>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPFile
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP file can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ISP file.		case-insensitive. Length: 1 to 255 characters.	

LB/FlowMode

This table contains information about flow mode.

XML structure

```
<LB>
  <FlowMode>
    <ModeType></ModeType>
  </FlowMode>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	FlowMode
Table type	Single-instance table
Row name	N/A
Restrictions	Only flow mode can be configured by this table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModeType	Type of flow mode.	N/A	Enumeration: • 0—Disable. • 1—One failover-group. • 2—Share failover-group	N/A

LB/Ipv4ISPAddressGroups

This table contains information about IPv4 ISP address groups.

XML structure

```
<LB>
  <Ipv4ISPAddressGroups>
    <Ipv4ISPAddressGroup>
      <Name></Name>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Origin></Origin>
    </Ipv4ISPAddressGroup>
  </Ipv4ISPAddressGroups>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Ipv4ISPAddressGroups
Table type	Multi-instance table
Row name	Ipv4ISPAddressGroup
Restrictions	Only IPv4 ISP can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String, Dotted decimal notation.	The value must be equal to the summation of the address and the mask. Example:1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length	Index	Unsigned integer. Value range: 1to 32.	N/A
Origin	Origin of IPv4 address.	N/A	Each bit represents a origin. Values: • 1—Import. • 2—Manual. • 4—Update.	N/A

LB/Ipv6ISPAddressGroups

This table contains information about IPv6 ISP address groups.

XML structure

```
<LB>
  <Ipv6ISPAddressGroups>
    <Ipv6ISPAddressGroup>
      <Name></Name>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Origin></Origin>
    </Ipv6ISPAddressGroup>
  </Ipv6ISPAddressGroups>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Ipv6ISPAddressGroups
Table type	Multi-instance table
Row name	Ipv6ISPAddressGroup
Restrictions	Only IPv6 ISP can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	The value must be equal to the summation of the address and the prefix. Example:195::/64.
Ipv6PrefixLength	IPv6 prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A
Origin	Origin of IPv6 address.	N/A	Each bit represents a origin. Values: • 1—Import.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Manual. • • 4—Update.	

LB/ProximityParameters

This table contains information about proximity parameter.

XML structure

```
<LB>
  <ProximityParameters>
    <Ipv4PrefixLength></Ipv4PrefixLength>
    <Ipv6PrefixLength></Ipv6PrefixLength>
    <Timeout></Timeout>
    <RTTWeight></RTTWeight>
    <TTLWeight></TTLWeight>
    <InBandwidthWeight></InBandwidthWeight>
    <OutBandwidthWeight></OutBandwidthWeight>
    <CostWeight></CostWeight>
    <MaxNumber></MaxNumber>
    <DefaultProbeMode></DefaultProbeMode>
    <DefaultProbe></DefaultProbe>
    <PacketLossRateWeight></PacketLossRateWeight>
  </ProximityParameters>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ProximityParameters
Table type	Single-instance table
Row name	N/A
Restrictions	Only proximity parameter can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	Zero means nature mask.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Timeout	The life time of proximity.	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MaxNumber	Proximity entries upper limit number.	N/A	Unsigned integer. Value range: 0 to 10000000.	N/A
DefaultProbeMode	Default probe mode for the proximity.	N/A	Enumeration: • 0—NQA. • 1—LB.	N/A
DefaultProbe	Default probe method for the proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
PacketLossRateWeight	The weight of packet loss rate.	N/A	Unsigned integer. Value range: 0 to 255.	N/A

LB/VRFProximityParameters

This table contains information about proximity parameter.

XML structure

```
<LB>
  <VRFProximityParameters>
    <VRFProximityParameter>
      <VRF></VRF>
      <Ipv4PrefixLength></Ipv4PrefixLength>

Table description

Item	Description
Feature name	LB
Table name	Ipv4ProximityPageTables
Table type	Multi-instance table
Row name	Ipv4ProximityPageTable
Restrictions	Only IPv4 proximity items can be gotten by this table, Only support get-bulk.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Lifetime	Lifetime of proximity entries.	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BestLinkTyp	Type of the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
e	best link.		• 0—None. • 1—Real server. • 2—Link.	
BestRealServer	The best real server name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BestLink	The best link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TotalCount	Total number of LB proximity entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RTT	Roundtrip time of the proximity probe.	N/A	Unsigned integer. Value range: 0 to 65535. Unit: millisecond	N/A

LB/Ipv6ProximityPageTables

This table contains information about IPv6 proximity entries.

Table type	Multi-instance table
Row name	LimitPolicy
Restrictions	Only limit policy can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

LB/LimitRules

This table contains information about limit policy rules.

XML structure

```
<LB>
  <LimitRules>
    <LimitRule>
      <Name></Name>
      <ID></ID>
      <AclVersion></AclVersion>
      <AclNum></AclNum>
      <AclName></AclName>
      <PerDestination></PerDestination>
      <PerSource></PerSource>
      <PerService></PerService>
      <ThresholdHigh></ThresholdHigh>
      <ThresholdLow></ThresholdLow>
    </LimitRule>
  </LimitRules>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LimitRules
Table type	Multi-instance table

Row name	LimitRule
Restrictions	Only limit policy rule can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the limit policy rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AclVersion	Version of ACL	N/A	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
PerDestination	Enable the per-destination connection limit.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
PerSource	Enable the per-source connection limit.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
PerService	Enable the per-service connection limit.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1.	ThresholdHigh must be greater or equal than ThresholdLow.
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1.	ThresholdHigh must be greater or equal than ThresholdLow.

LB/Links

This table contains information about link.

XML structure

```
<LB>

    </Link>
  </Links>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Links
Table type	Multi-instance table
Row name	Link
Restrictions	Only link can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RouterType	The type of router.	N/A	Enumeration: • 0—Configure. • 1—Auto.	N/A
RouterInterface	Name of the router interface.	N/A	String. Case insensitive. Length: 1 to 47 characters.	N/A
RouterIpv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either.
RouterIpv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Weight	Weight of the link.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the link.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240.	N/A
LinkGroup	Name of the link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Shutdown	Shutdown state for the link.	N/A	Enumeration: • 0—Not configured. • 1—Shutdown. • 2—Slow-shutdown.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 232-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 232-1.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
InRateLimitBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
OutRateLimitBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRecoverRatio	Total bound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 232-1. Unit: KB/s.	N/A
State	State of the link.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Slow-shutdown. • 3—Shutdown. • 4—Probe-failed. • 5—Standby. • 6—Ramp. • 8—Busy. • 9—Unknown.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
InheritVPN	Inherit the VPN.	N/A	Enumeration: • 0—Disable inherit the VPN	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1—Enable inherit the VPN.	

LB/LinkProbes

This table contains information about link probe that only uses NQA template.

XML structure

```
<LB>
  <LinkProbes>
    <LinkProbe>
      <Link></Link>
      <Probe></Probe>
      <State></State>
    </LinkProbe>
  </LinkProbes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LinkProbes
Table type	Multi-instance table
Row name	LinkProbe
Restrictions	Only Link probe can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Link	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the link.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
State	State of the real server probe.	N/A	Enumeration: • 0—Not exist. • 1—Success.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Failed. • 3—In the process.	

LB/LinkStats

This table contains stat information about link.

XML structure

```
<LB>
  <LinkStats>
    <LinkStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>

Table description

Item	Description
Feature name	LB
Table name	LinkStats
Table type	Multi-instance table
Row name	LinkStat
Restrictions	Only stats of link can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the link received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the link received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnections	Max connections that the link received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the link received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the link received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
Downstream	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PKTs	packets that the link received from device.		Value range: 0 to 2^{64}-1.	
UpstreamPKTs	Number of packets that the link sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPackets	Number of packets that the link dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Downstream Traffic	Number of bytes that the link received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
UpstreamTraffic	Number of bytes that the link sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InBandwidth	Inbound Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
PacketLoss Rate	Packet loss rate of the link.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
MaxConnect	Time when the	N/A	DateTime.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ionsTime	link received the maximum number of connections.		Format: YYYY-MM-DDTHH:MM:SS.	
MaxConnectionPerSeTime	Time when the link received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxBandwidthTime	Maximum bandwidth time of the link.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the link.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OutMaxBandwidthTime	Outbound maximum bandwidth time of the link.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
DownstreamPKTsPerSec	Number of packets per second that the link received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
UpstreamPKTsPerSec	Number of packets per second that the link sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A

LB/LinkOutInterfaces

This table contains out-interface rate stat information about link.

XML structure

```
<LB>
  <LinkOutInterfaces>
    <LinkOutInterface>
      <Name></Name>
      <InputRate></InputRate>
      <OutputRate></OutputRate>
    </LinkOutInterface>
  </LinkOutInterfaces>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LinkOutInterfaces
Table type	Multi-instance table
Row name	LinkOutInterface
Restrictions	Only out-interface rate stats of link can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
InputRate	Input rate of the link out interface.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Bytes/s.	N/A
OutputRate	Output rate of the link out interface.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Bytes/s.	N/A

LB/LinkGroups

This table contains information about link group.

XML structure

```
<LB>
  <LinkGroups>
    <LinkGroup>
      <Name></Name>
      <Description></Description>
      <Predictor></Predictor>

      <FailAction></FailAction>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <TotalLink></TotalLink>
      <ActiveLink></ActiveLink>
      <State></State>
      <ProximityEnable></ProximityEnable>
    </LinkGroup>
  </LinkGroups>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LinkGroups
Table type	Multi-instance table
Row name	LinkGroup
Restrictions	Only link group can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the link group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a link to forward packet.	N/A	Enumeration: • 0—Round-robin. • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 7—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max Outbound bandwidth. • 21—Link-quality.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to128.	N/A
SelectLinkMinNumber	Minimum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectLinkMaxNumber	Maximum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the link group slow online.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ActivateLower	The status of main link group will be changed from in use to backup when the ratio of the available links in main link	N/A	Unsigned integer. Value range: 1 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	group becomes smaller than this value.			
ActivateUpper	The status of main link group will be changed from backup to in use when the ratio of the available links in main link group reaches or over this value.		Unsigned integer. Value range: 1 to 99.	N/A
SNATPool	SNAT pool for the link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any link fails in a link group.	N/A	Enumeration: • 0—Keep. • 1—Reset. • 2—Reschedule.	N/A
ProbeSuccessCriteria	The condition that link is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
TotalLink	Total number of links in the link group.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ActiveLink	Active number of links in the link group.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the link group.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
ProximityEnable	Enable the proximity.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

LB/LinkGroupProbes

This table contains information about Link Group Probe that only uses NQA template.

XML structure

```
<LB>
  <LinkGroupProbes>
    <LinkGroupProbe>
      <LinkGroup></LinkGroup>
      <Probe></Probe>
    </LinkGroupProbe>
  </LinkGroupProbes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	LinkGroupProbes
Table type	Multi-instance table
Row name	LinkGroupProbe
Restrictions	Only link group probe can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkGroup	Name of the link group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Probe	Probe method for the link group.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

LB/LinkGroupStats

This table contains stat information about link group.

XML structure

```
<LB>
  <LinkGroupStats>
    <LinkGroupStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>

Row name	Region
Restrictions	Only region can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

LB/RegionISPs

This table contains information about region ISP.

XML structure

```
<LB>
  <RegionISPs>
    <RegionISP>
      <Region></Region>
      <ISP></ISP>
    </RegionISP>
  </RegionISPs>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	RegionISPs
Table type	Multi-instance table
Row name	RegionISP
Restrictions	Only Region ISP can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Region	Name of the region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ISP	ISP for the region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

LB/TopologyRegions

This table contains information about topology region.

XML structure

```
<LB>
  <TopologyRegions>
    <TopologyRegion>
      <RegionName></RegionName>
      <Ipv4Address></Ipv4Address>
      <Ipv4MaskLength></Ipv4MaskLength>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Weight></Weight>
    </TopologyRegion>
  </TopologyRegions>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TopologyRegions
Table type	Multi-instance table
Row name	TopologyRegion
Restrictions	Only TopologyRegion can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1.
Ipv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/TopologyRegionIPv4s

This table contains information about an IPv4 topology region.

XML structure

```
<LB>
  <TopologyRegionIPv4s>
    <TopologyRegionIPv4>
      <RegionName></RegionName>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Weight></Weight>
    </TopologyRegionIPv4>
  </TopologyRegionIPv4s>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TopologyRegionIPv4s
Table type	Multi-instance table
Row name	TopologyRegion
Restrictions	Only TopologyRegionIPv4 can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1.
IPv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/TopologyRegionIPv6s

This table contains information about an IPv6 topology region.

XML structure

```
<LB>
  <TopologyRegionIPv6s>
    <TopologyRegionIPv6>
      <RegionName></RegionName>
      <IPv6Address></IPv6Address>
      <IPv6PrefixLength></IPv6PrefixLength>
      <Weight></Weight>
    </TopologyRegionIPv6>
```

```
  </TopologyRegionIPv6s>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	TopologyRegionIPv6s
Table type	Multi-instance table
Row name	TopologyRegion
Restrictions	Only TopologyRegionIPv6 can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2.
IPv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LB/DNSListeners

This table contains information about a DNS listener.

XML structure

```
<LB>
  <DNSListeners>
    <DNSListener>
      <Name></Name>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
```

```
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <IPv6PortNumber></IPv6PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </DNSListener>
  </DNSListeners>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSListeners
Table type	Multi-instance table
Row name	DNSListener
Restrictions	Only DNS Listener can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6PortNumber	Number of IPv6 port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ServiceEnable	Enable the DNS listener.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Fallback	Fallback action.	N/A	Enumeration: • 0—No-response. • 1—Reject. • 2—Dns proxy.	N/A

LB/DNSListenerStats

This table contains stat information about DNS listener.

XML structure

```
<LB>
  <DNSListenerStats>
    <DNSListenerStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>

Table description

Item	Description
Feature name	LB
Table name	DNSProxies
Table type	Multi-instance table
Row name	DNSProxy
Restrictions	Only DNS proxy can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS proxy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the DNS proxy.	N/A	Enumeration: • 0—UDP	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters	The null string indicates public network.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535	N/A
ServiceEnable	Enable the DNS proxy.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
DefaultDNSServerPool	Name of the default DNS server pool.	N/A	String, case-insensitive. Length: 1 to 63	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ConnSynEnable	Enable the connection synchronization.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
State	State of the DNS proxy.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Disable.	N/A
StickySynEnable	Enable the sticky synchronization.	N/A	Enumeration: • 0—Disable. 1—Enable.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: • 0—Synchronize in failover group (default). • 1—Synchronize global.	This column can only be configured when the StickySynEnable is Enable (1).
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128.	N/A

LB/DNSProxyStats

This table contains stat information about DNS proxy.

XML structure

```

```

Table description

Item	Description
Feature name	LB
Table name	DNSServers
Table type	Multi-instance table
Row name	DNSServer
Restrictions	Only DNS server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the real server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
AutoAllocAddress	Automatic allocable address for DNS server. Include IPv4 address and IPv6 address.	N/A	Numeration: • 0—Disable. • 1—Enable.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DNSServerPool	Name of the DNS server pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
Link	Name of the link.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
Weight	Weight of the DNS server.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DNS server.		Value range: 1 to 8.	
ProbeSuccessCriteria	Probe success criteria for the DNS server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the DNS server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Probe-failed. • 3—Busy. • 4—Unknow.	N/A
VRF	VPN instance name.	N/A	String, Length: 0 to 31 characters. By default, no VPN instance is specified.	The null string indicates public network.

LB/DNSServerProbes

This table contains information about DNS server probe that only uses NQA template.

XML structure

```
<LB>
  <DNSServerProbes>

  </DNSServerPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSServerPools
Table type	Multi-instance table
Row name	DNSServerPool
Restrictions	Only DNS server pool can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server pool.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a DNS server to serve a DNS request.	N/A	Enumeration: • 0—Round-robin (default). • 1—Random. • 2—Bandwidth.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—Inbound bandwidth. • 4—Outbound bandwidth. • 5—Max bandwidth. • 6—Max inbound bandwidth. • 7—Max outbound bandwidth. • 8—Hash source address. • 9—Hash source port. • 10—Hash destination address.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to128.	N/A
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectServerMaxNumber	Maximum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
TotalDNSServer	Total number of DNS servers in the DNS server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ActiveDNSServer	Active number of DNS servers in the DNS server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the DNS server pool.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A

LB/DNSServerPoolProbes

Restrictions	Only server farm member can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the server farm member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the server farm member.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the server farm	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	member.		Value range: 1 to 8.	
Shutdown	Shutdown state for the server farm member.	N/A	Enumeration: • 0—Not configured. • 1—Shutdown. • 2—Slow-shutdown.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps.	N/A
ProbeSuccessCriteria	Probe success criteria for the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
State	State of the server farm member.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Slow-shutdown. • 3—Shutdown. • 4—Probe-failed. • 5—Standby. • 6—Ramp. • 8—Busy. • 9—Unknown. • 10—Auto-shutdown	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates public network.
ProbeLog	Enable logging for health monitoring	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeList	Probe method list for the server farm member.	Data structure	Members include: • Probe. • ProbeState.	N/A
Probe	Probe method for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
ProbeState	State of the server farm member probe.	N/A	Enumeration: • 0—Not exist. • 1—Success. • 2—Failed. • 3—In the process.	N/A
ExternalMonitorList	External monitor list for the server farm member.	Data structure	Members include: • ExternalMonitor.	N/A
ExternalMonitor	External monitor for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ExMonitorState	State of the server farm member external-monitor.	N/A	Enumeration: • 0—Not exist. • 1—Success. • 2—Failed. • 3—In the process.	N/A
VariableList	Variable list for the server farm member.	Data structure	Members include: • VariableName. • VariableValue.	Members in VariableList can be configured repeatedly by group.
VariableName	Variable name associated with the server farm member.	N/A	String. Length: 1 to 63 characters.	N/A
VariableValue	Variable value associated with the server farm member.	N/A	String. Length: 1 to 127 characters.	N/A

Table description

Item	Description
Feature name	LB
Table name	LinkGroupMembers
Table type	Multi-instance table
Row name	LinkGroupMember
Restrictions	Only link group member can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkGroup	Name of the link group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Link	Name of the link group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link group member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the link group member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	N/A
Priority	Priority of the link group member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	N/A
Shutdown	Shutdown state for the link group member.	N/A	Enumeration: • 0—Not configured (default). • 1—Shutdown. • 2—Slow-shutdown.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the link group member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
State	State of the link group member.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Slow-shutdown. • 3—Shutdown.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4—Probe-failed. • 5—Standby. • 6—Ramp. • 8—Busy. • 9—Unknown.	
RouterType	Type of router	N/A	Enumeration: • 0—Configure • 1—Auto	N/A
RouterInterface	Name of the interface	N/A	String. case-insensitive. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is Auto (1).
RouterIpv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. If the router interface is configured,the IPV4 is not supported.
RouterIpv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported. If the router interface is configured,the IPV6 is not supported.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
ProbeList	Probe method list for the link group member.	Data structure	Members include: • Probe. • ProbeState.	N/A
Probe	Probe method for the link group member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProbeState	State of the link group member probe.	N/A	Enumeration: • 0—Not exist. • 1—Success.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Failed. • 3—In the process.	

LB/DNSServerPoolMembers

This table contains information about DNS server pool member.

XML structure

```

```

Table description

Item	Description
Feature name	LB
Table name	DNSServerPoolMembers
Table type	Multi-instance table
Row name	DNSServerPoolMember
Restrictions	Only DNS server pool member can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServerPool	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DNSServer	Name of the DNS server pool member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the DNS server pool member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	N/A
Priority	Priority of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	N/A
ProbeSuccessCriteria	Probe success criteria for the DNS server pool member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
State	State of the DNS server pool member.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Probe-failed. • 3—Busy. • 4—Unknown.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
ProbeList	Probe method list for the DNS server pool member.	Data structure	Members include: • Probe. • ProbeState.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Probe	Probe method for the DNS server pool member.s	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProbeState	State of the DNS server pool member probe.	N/A	Enumeration: • 0—Not exist. • 1—Success. • 2—Failed. • 3—In the process.	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnections	Max connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSidePKTsOut	Number of packets that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPackets	Number of packets that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSideBytesIn	Number of bytes that the server farm member	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received from device.		Unit: Byte.	
ServerSideBytesOut	Number of bytes that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the server farm member sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
InBandwidth	Inbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the server farm	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	member.		2^{32}-1. Unit: KB/s.	
RstPackets	RST packets	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxRstPackets	Maximum number of RST packets	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RstProtectRetryTimes	RST protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxRstProtectRetryTimes	Maximum RST protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ZeroWindowPackets	Zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
MaxZeroWindowPackets	Maximum number of zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
ZeroWindowProtectRetryTimes	Zero-window protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxZeroWindowProtectRetryTimes	Maximum zero-window protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
AbnormalURLTimes	Times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxAbnormalURLTimes	Maximum times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnectionsTime	Time when the server farm member received the maximum number of connections.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxConnectionPerSeTime	Time when the server farm member received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBandwidthTime	Maximum bandwidth time of the server farm member.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the server farm member.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OutMaxBandwidthTime	Outbound maximum bandwidth time of the server farm member.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ServerSidePKTsPerSecIn	Number of packets per second that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
ServerSidePKTsPerSecOut	Number of packets per second that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A

Slot	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
Handle	Session index	Index	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PerChassis	ID of the device that holds the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerSlot	Member ID of the card on device.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerCPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerHandle	Session index	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CSClientIpv4Addr	Client side IPv4 address of client.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
CSClientIpv6Addr	Client side IPv6 address of client.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
CSClientPort	Client side port number of client.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CSServerIpv4Addr	Client side IPv4 address of server.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
CSServerIpv6Addr	Client side IPv6 address of server.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
CSServerPort	Client side port number of server.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CSState	Connection state of the client side.	N/A	Enumeration: • 0—CLOSED • 1—LISTEN • 2—SYN_SENT • 3—SYN_RECEIVED • 4—ESTABLISHED • 5—CLOSE_WAIT • 6—FIN_WAIT_1 • 7—CLOSING • 8—LAST_ACK • 9—FIN_WAIT_2 • 10—TIME_WAIT	N/A
CSVRF	VRF instance name of the client side.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SSClientIpv4Addr	Server side IPv4 address of client.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SSClientIpv6Addr	Server side IPv6 address of client.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SSClientPort	Server side port number of client.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SSServerIpv4Addr	Server side IPv4 address	N/A	String. Dotted decimal	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	of server.		notation.	
SSServerIpv6Addr	Server side IPv6 address of server.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SSServerPort	Server side port number of server.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SSState	Connection state of the server side.	N/A	Enumeration: • 0—CLOSED • 1—LISTEN • 2—SYN_SENT • 3—SYN_RECEIVED • 4—ESTABLISHED • 5—CLOSE_WAIT • 6—FIN_WAIT_1 • 7—CLOSING • 8—LAST_ACK • 9—FIN_WAIT_2 • 10—TIME_WAIT	N/A
SSVRF	VRF instance name of the server side.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessionNum	Numbers of sessions to get in one time	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TotalCount	Total number of LB connetcions.	Index	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
IdleTime	Time that a connection has been idle	N/A	Unsigned integer. Value range: 0 to 232 - 1.	N/A
IdleTimeOut	Length of time that a connection is idle (has no traffic) before the connection is eligible for deletion	N/A	Unsigned integer. Value range: 0 to 232 - 1.	0 indicates the idletimeout is not configured.
StartTime	Creation time of a connection	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

LB/ISPWhoisMntners

This table contains information about ISP maintainer objects.

XML structure

```
<LB>
  <ISPWhoisMntners>
    <ISPWhoisMntner>
      <ISPName></ISPName>
      <WhoisMntner></WhoisMntner>
      <Origin></Origin>
    </ISPWhoisMntner>
  </ISPWhoisMntners>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPWhoisMntners
Table type	Multi-instance table
Row name	ISPWhoisMntner
Restrictions	Only ISP whois maintainer objects can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ISPName	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhoisMntner	Name of the whois maintainer object.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Origin	Origin of ISP whois maintainer object.	N/A	Enumeration: • 1—Import. • 2—Manual. • 3—Manual and import.	N/A

LB/ISPUpdate

This table contains information about ISP update.

XML structure

```
<LB>
  <ISPUpdate>
    <Enable></Enable>
    <Frequency></Frequency>
    <Type></Type>
    <Domain></Domain>
    <Ipv4Address></Ipv4Address>
    <SuccessUpdateTime></SuccessUpdateTime>
    <UpdateTime></UpdateTime>
    <UpdateCount></UpdateCount>
    <UpdateResult></UpdateResult>
  </ISPUpdate>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ISPUpdate
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP update can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable ISP update.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Frequency	Frequency of ISP update.	N/A	Enumeration: • 0—Per-day. • 1—Per-week. • 2—Per-month.	N/A
Type	Type of the whois server.	N/A	Enumeration: • 0—Domain. • 1—IPv4 address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Domain of the maintainer object.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The null string indicates the label is not configured.
Ipv4Address	Address of the maintainer object.	N/A	String. Dotted decimal notation.	The null string indicates the label is not configured.
SuccessUpdateTime	Last successful update time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UpdateTime	Last update time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UpdateCount	Update count.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
UpdateResult	Result of ISP update.	N/A	Enumeration: • 0—Success. • 1—Connection error. • 2—Connection abort. • 3—DNS error. • 4—Initial.	N/A

LB/DNSCachesGlobalCfg

This table contains information about DNS global configuration.

XML structure

```
<LB>
  <DNSCachesGlobalCfg>
     <Timeout></Timeout>
  </DNSCachesGlobalCfg>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	DNSCachesCfg

Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Aging time of DNS cache.	Index	Unsigned integer. Value range: 1 to 1440. Unit: minute	N/A

LB/RSTProbeTemplate

This table contains information about RST probe template.

XML structure

```
<LB>
  <RSTProbeTemplates>
    <RSTProbeTemplate>
      <Name></Name>
      <Description></Description>
      <TimeInterval></TimeInterval>
      <PacketLimit></PacketLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </RSTProbeTemplate>
  </RSTProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	RSTProbeTemplates
Table type	Multi-instance table
Row name	RSTProbeTemplate
Restrictions	Only RST probe template can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the RST probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
PacketLimit	Packe limit of RST probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 1000000.	N/A.
ProtectAction	Protect action of RST probe template.	N/A	Enumeration: • 0—Busy (default). • 1—Auto-shutdown.	N/A.
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	N/A.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0.	N/A.

LB/ZeroWindowProbeTemplate

This table contains information about Zero Window probe template.

XML structure

```
<LB>
  <ZeroWindowProbeTemplates>
    <ZeroWindowProbeTemplate>
      <Name></Name>
      <Description></Description>
```

```
      <TimeInterval></TimeInterval>
      <RatioLimit></RatioLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </ZeroWindowProbeTemplate>
  </ZeroWindowProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ZeroWindowProbeTemplates
Table type	Multi-instance table
Row name	ZeroWindowProbeTemplate
Restrictions	Only zero window probe template can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the zero window probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the zero window probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
RatioLimit	Ratio limit of zero window probe template.	N/A	Unsigned integer: Value range: 1 to100. By default, the value is 40. Unit: %.	N/A.
ProtectAction	Protection action of zero window probe.	N/A	Enumeration: • 0—Busy (default). • 1—Auto-shutdown.	N/A.
BusyTimeou	Busy time of	N/A	Unsigned integer.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
t	real server.		Value range: 5 to 3600. By default, the value is 30. Unit: second.	
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0.	N/A.

LB/ProbeTemplateSummaries

This table contains summary information about probe template.

XML structure

```
<LB>
  <ProbeTemplateSummaries>
    <ProbeTemplateSummary>
      <Name></Name>
      <Type></Type>
    </ProbeTemplateSummary>
  </ProbeTemplateSummaries>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ProbeTemplateSummaries
Table type	Multi-instance table
Row name	ProbeTemplateSummary
Restrictions	Only probe template summary information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of probe template.	N/A	Enumeration: • 0—ICMP. • 1—RST. • 2—ZEROWINDOW. • 3—HTTPPASSIVE • 4—EXTERNALMONITOR.	N/A

LB/ProbeTemplate

This table contains information about probe template that is used for proximity.

XML structure

```
<LB>
  <ProbeTemplates>
    <ProbeTemplate>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Frequency></Frequency>
      <Timeout></Timeout>
    </ProbeTemplate>
  </ProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ProbeTemplate
Table type	Multi-instance table
Row name	N/A
Restrictions	Only probe template can be gotten by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the	Index	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	probe template.		case-insensitive. Length: 1 to 32 characters.	
Description	Description information for the probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template.	N/A	Enumeration: • 0—ICMP.	When a probe template is created, the column must be specified.
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 1 to 604800. Unit: second. By default, the value is 300s.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second. By default, the value is 3s.	N/A

LB/HTTPPassiveProbeTemplate

This table contains information about an HTTP passive probe template.

XML structure

```
<LB>
  <HTTPPassiveProbeTemplates>
    <HTTPPassiveProbeTemplate>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <URLThreshold></URLThreshold>
      <Timeout></Timeout>
      <URLList>
        <CheckUrl></CheckUrl>
      </URLList>
      <StatusCodeList>
        <StatusCode></StatusCode>
      </StatusCodeList>
    </HTTPPassiveProbeTemplate>
  </HTTPPassiveProbeTemplates>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPPassiveProbeTemplates
Table type	Multi-instance table
Row name	HTTPPassiveProbeTemplate
Restrictions	Only HTTP passive probe template can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the HTTP passive probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the HTTP passive probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 1 to 5. By default, the value is 1. Unit: second.	N/A
URLThreshold	URL threshold of the HTTP passive probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 10000.	N/A.
Timeout	Response timeout of the HTTP passive probe template.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 5. Unit: second.	N/A
URLList	URL list for the HTTP passive probe template.	Data structure	Members include: URL.	N/A
CheckUrl	URL for the HTTP passive probe template.	N/A	String. Length: 1 to 255 characters.	A URL list can contain a maximum of 10 URLs.

Column name	Column description	Column type	Data type and restrictions	Remarks
StatusCodeList	Status code list for the HTTP passive probe template.	Data structure	Members include: StatusCode.	N/A
StatusCode	Status code for the HTTP passive probe template.	N/A	Unsigned integer.	A status code list can contain a maximum of 10 status codes.

LB/ExternalScript

This table contains information about external monitor script files.

XML structure

```
<LB>
  <ExternalScripts>
    <ExternalScript>
      <FileName></FileName>
    </ExternalScript>
  </ExternalScripts>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ExternalScripts
Table type	Multi-instance table
Row name	ExternalScript
Restrictions	Only external monitor script file can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the external monitor script file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

LB/ExternalMonitor

This table contains information about an external monitor.

XML structure

```
<LB>
  <ExternalMonitors>
    <ExternalMonitor>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <Timeout></Timeout>
      <ExternalScript></ExternalScript>

      <EnvVariablesList>
        <VariableName></VariableName>
        <VariableValue></VariableValue>
      </EnvVariablesList>
    </ExternalMonitor>
  </ExternalMonitors>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ExternalMonitors
Table type	Multi-instance table
Row name	ExternalMonitor
Restrictions	Only external monitor can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the external monitor.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description for the external monitor.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			86400. Unit: second.	
Timeout	Response timeout of the external monitor.	N/A	Unsigned integer. Value range: 1 to 86400.Unit: second.	N/A
ExternalScript	External monitor script of the external monitor.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Argument	Argument for the external monitor	N/A	String, Length: 1 to 255 characters.	N/A
EnvVariablesList	Environment variable list	Data structure	Members include: • VariableName • VariableValue	N/A
VariableName	Environment variable name for external monitor.	N/A	String. Length: 1 to 255 characters.	N/A
VariableValue	Environment variable value for external monitor.	N/A	String, Length: 1 to 255 characters.	N/A

LB/ExternalMonitorProcessParameter

This table contains information about the external monitor process parameter.

XML structure

```
<LB>
  <ExternalMonitorProcessParameter>
    <ProcessLimit></ProcessLimit>
    <MinProcessLimit></MinProcessLimit>
    <MaxProcessLimit></MaxProcessLimit >
  </ExternalMonitorProcessParameter>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	ExternalMonitorProcessParameter
Table type	Single-instance table

Row name	N/A
Restrictions	Only external monitor process parameter can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessLimit	Maximum number of processes.	N/A	Unsigned integer. Value range:10 to 1000.	N/A
MinProcessLimit	Minimum number of processes allowed to be configured.	N/A	Unsigned integer. Value:10.	N/A
MaxProcessLimit	Maximum number of processes allowed to be configured.	N/A	Unsigned integer. Value :1000.	N/A

LB/HTTPStatsParameterObjectGroups

This table contains information about object group of HTTP statistics parameter.

XML structure

```
<LB>
  <HTTPStatsParameterObjectGroups>
    <HTTPStatsParameterObjectGroup>
      <ParameterName></ParameterName>
      <ObjectGroupName></ObjectGroupName>
    </HTTPStatsParameterObjectGroup>
  </HTTPStatsParameterObjectGroups>
</LB>
```

Table description

Item	Description

Table name	HTTPStatsParameterObjectGroups
Table type	Multi-instance table
Row name	HTTPStatsParameterObjectGroup
Restrictions	Only object group of HTTP statistics parameter can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ObjectGroupName	Name of the object group.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

LB/HTTPStatsParameterNodes

This table contains information about HTTP statistics parameter node.

XML structure

```
<LB>
  <HTTPStatsParameterNodes>
    <HTTPStatsParameterNode>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <Description></Description>
      <RuleCount></RuleCount>
    </HTTPStatsParameterNode>
  </HTTPStatsParameterNodes>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodes
Table type	Multi-instance table
Row name	HTTPStatsParameterNode
Restrictions	Only HTTP statistics parameter node can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
Description	Description of the node profile.	N/A	String. Length: 0 to 127 characters.	N/A
RuleCount	Rule counts of the node.	N/A	Unsigned integer. Value range: 0 to 256.	N/A

LB/HTTPStatsParameterNodeRules

This table contains information about rule of HTTP statistics parameter node.

XML structure

```
<LB>
  <HTTPStatsParameterNodeRules>
    <HTTPStatsParameterNodeRule>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <ID></ID>
      <Type></Type>
      <URL></URL>

Restrictions	Only GlobalSnat can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT global policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the SNAT global policy	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Priority	Priority of the SNAT global policy .	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SourceipObjGroup	The source-ip object group of SNAT global policy for matching source IP addresses	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DestinationipObjGroup	The destination-ip object group of SNAT global policy for matching	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination IP addresses			
ServiceObjGroup	The service object group of SNAT global policy for matching service of traiff	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
TranslationMode	Translation mode of SNAT global policy	N/A	Enumeration: • 0—None. • 1—Snat-pool. • 2—Auto-map.	N/A
SnatPoolName	Name of snat-pool	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
TranslationEnable	Whether enable the SNAT global policy	N/A	Enumeration: • 0—disable • 1—enable.	N/A

LB/VRRPInfo

This table contains information about VRRP configuration.

XML structure

```
<LB>
  <VRRPInfos>
    <VRRPInfo>
      <VrrpID></VrrpID>
      <IfIndex></IfIndex>
      <Status></Status>
    </VRRPInfo>
  </VRRPInfos>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	VRRPInfos
Table type	Multi-instance table
Row name	VRRPInfo
Restrictions	Only VRRP information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrrpID	Identifier of the virtual router.	Index	Unsigned integer. Value range: 1 to 255.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Status	Status of the VRRP.	N/A	Enumeration: • 0—Standby. • 1—Active.	N/A

LB/Connections

This table contains connection information about LB sessions.

XML structure

```
<LB>
  <Connections>
    <Connection>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Handle></Handle>

```

```
      <SessionNum></SessionNum>
      <TotalCount></TotalCount>
      <IdleTime></IdleTime>
      <IdleTimeOut></IdleTimeOut>
      <StartTime></StartTime>
    </Connection>
  </Connections>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Connections
Table type	Multi-instance table
Row name	Connection
Restrictions	Only connections of lb session can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
Slot	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
Handle	Session index	Index	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PerChassis	ID of the device that holds the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerSlot	Member ID of the card on device.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerCPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PerHandle	Session index	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CSClientIpv4Addr	Client side IPv4 address of client.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
CSClientIpv6Addr	Client side IPv6 address of client.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
CSClientPort	Client side port number of client.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CSServerIpv4Addr	Client side IPv4 address of server.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
CSServerIpv6Addr	Client side IPv6 address of server.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
CSServerPort	Client side port number of server.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CSState	Connection state of the client side.	N/A	Enumeration: • 0—CLOSED • 1—LISTEN • 2—SYN_SENT • 3—SYN_RECEIVED • 4—ESTABLISHED • 5—CLOSE_WAIT • 6—FIN_WAIT_1 • 7—CLOSING • 8—LAST_ACK • 9—FIN_WAIT_2 • 10—TIME_WAIT	N/A
CSVRF	VRF instance name of the client side.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SSClientIpv4Addr	Server side IPv4 address of client.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SSClientIpv6Addr	Server side IPv6 address of client.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SSClientPort	Server side port number of client.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SSServerIpv4Addr	Server side IPv4 address	N/A	String. Dotted decimal	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	of server.		notation.	
SSServerIpv6Addr	Server side IPv6 address of server.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SSServerPort	Server side port number of server.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SSState	Connection state of the server side.	N/A	Enumeration: • 0—CLOSED • 1—LISTEN • 2—SYN_SENT • 3—SYN_RECEIVED • 4—ESTABLISHED • 5—CLOSE_WAIT • 6—FIN_WAIT_1 • 7—CLOSING • 8—LAST_ACK • 9—FIN_WAIT_2 • 10—TIME_WAIT	N/A
SSVRF	VRF instance name of the server side.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessionNum	Numbers of sessions to get in one time	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TotalCount	Total number of LB connetcions.	Index	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
IdleTime	Time that a connection has been idle	N/A	Unsigned integer. Value range: 0 to 232 - 1.	N/A
IdleTimeOut	Length of time that a connection is idle (has no traffic) before the connection is eligible for deletion	N/A	Unsigned integer. Value range: 0 to 232 - 1.	0 indicates the idletimeout is not configured.
StartTime	Creation time of a connection	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

ServerFarmMemberStatus event

This event is used to report server farm member status information.

XML structure for event subscription

```
<ServerFarmMemberStatusEvent>
  <ServerFarmMember>
    <ServerFarm></ServerFarm>
    <RealServer></RealServer>
    <PortNumber></PortNumber>
  </ServerFarmMember>
</ServerFarmMemberStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LB</stream>
    <filter type="subtree">
      <ServerFarmMemberStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">
        <ServerFarmMember>
          <ServerFarm></ServerFarm>
          <RealServer></RealServer>
          <PortNumber></PortNumber>
        </ServerFarmMember>
      </ServerFarmMemberStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MemberStatus
Event name	ServerFarmMemberStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LB:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
ServerFarm	Name of the server farm.	String, case insensitive. Length: 1 to 63 characters.	No

Column name	Column description	Data type and restrictions	Support for extended queries
RealServer	Name of the server farm member.	String, case insensitive. Length: 1 to 63 characters.	No
PortNumber	Number of the port.	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```

EndTime	End time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	• EndTime must be specified. • EndTime must be later than the StartTime.

LBSTATS/URLStatsTrends

This table contains URL visit count information during a time period for an HTTP virtual server.

XML structure

```
<LBSTATS>
  <URLStatsTrends>
    <URLStatsTrend>
      <UserID></UserID>
      <RowNum></RowNum>
      <FilterType></FilterType>
      <VirtualServerName></VirtualServerName>
      <NodeName></NodeName>
      <Visitor></Visitor>
      <VisitCounts></VisitCounts>
      <TotalCounts></TotalCounts>
      <Time></Time>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </URLStatsTrend>
  </URLStatsTrends>
</LBSTATS>
```

Table description

Item	Description
Feature name	LBSTATS
Table name	URLStatsTrends
Table type	Multi-instance table
Row name	URLStatsTrend

Restrictions	Only URL statistics with time can be gotten by this table, and this table only supports get-bulk operation.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of user who gets the information by this table.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	The first time you get data, you must specify user ID 0. A user ID other than 0 is returned and can be used in consequent get-bulk operation before it expires.
RowNum	The sequence number of current row in all rows that exist.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
FilterType	The kind of statistical information required.	N/A	Enumeration: • 0—information of specified virtual server. • 1—information of specified node and virtual server. • 2—information of specified visitor, node and virtual server.	N/A
VirtualServerName	Name of virtual server.	N/A	String. Length: 0 to 63 characters.	VirtualServerName must be specified.
NodeName	Representation of the URL visited.	N/A	String. Length: 0 to 63 characters.	NodeName must be specified when FilterType value is 1 or 2.
Visitor	Representation of the URL visitor address.	N/A	String. Length: 0 to 46 characters.	• Visitor must be null when FilterType value is 0 or 1. • Visitor must be specified when FilterType value is 2.
VisitCounts	Visit counts of the current row.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TotalCounts	Total visit counts of the whole table.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Time	Time when the statistics information generated.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TimeFilter	The time range within which	Data structure	Members include: Interval.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the statistical information is gotten.			
StartTime	Start time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	StartTime must be specified.
EndTime	End time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	• End time must be specified. • EndTime must be later than the StartTime.

Table description

Item	Description
Feature name	Ldap
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	A maximum of 16 LDAP servers are supported.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	LDAP server name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
VRF	The VPN to which the LDAP server belongs	N/A	String, case-sensitive. Length: 1 to 31 characters.	The value in this column is valid when both the IpType and Host values are available. If either the IpType value or the Host value is unavailable, the system reports an error. If this column is empty, the LDAP server is on the public network.
IpType	Type of the LDAP server address	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—FQDN.	The value 2 for IpType is not supported currently. The value in this column is valid only when the Host value is available. If either the IpType value or the Host value is unavailable, the system reports an error.

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	LDAP server	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	TCP port number of the LDAP server	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 389. The value in this column is valid when both the IpType and Host values are available. If either the IpType value or the Host value is unavailable, the system reports an error.
TimeOut	LDAP server timeout period, the maximum time that the device waits for an LDAP response	N/A	Unsigned integer. Value range: 5 to 20, in seconds.	Default: 10 seconds.
ProtocolVersion	LDAP protocol version	N/A	Enumeration: • **2**—LDAPv2. • **3**—LDAPv3.	Default: 3.
LoginDn	Administrator DN	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
LoginPassword	Administrator password	N/A	String. Length: 1 to 128 characters. The login password is in plain t ext.	N/A
SearchScope	User search scope	N/A	Enumeration: • **0**—All subdirectories of the base DN. • **1**—Next lower level of subdirectories under the base DN.	Default: 0.
SearchBaseDn	User search base DN	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UserParas	LDAP user attributes	Data structure	Members include: • NameType.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• NameFormat. • NameAttribute. • ObjClassName.	
NameType	User name attribute type	N/A	Enumeration: • **1**—The value in the NameAttribute column. • **2**—The common name. • **3**—The user ID.	Default: 2.
NameFormat	Format of user names to be sent to LDAP servers	N/A	Enumeration: • **0**—with-domain. • **1**—without-domain.	Default: 1
NameAttribute	The value that represents a type of user name attribute	N/A	String, case-insensitive. Length: 1 to 64 characters.	This column is created only when the value of the NameType column is 1. If this column doesn't appear when the NameType value is 1, the system reports an error. The NameAttribute column must be deleted together with the NameType column. However, the NameType column can be deleted without the NameAttribute column.
ObjClassName	User object class	N/A	String, case-insensitive. Length: 1 to 64 characters.	N/A
GroupFilter	Filter condition for exporting user groups	N/A	String, case-sensitive. Length: 1 to 127 characters.	Default: "(objectclass=group)"
EncodingFormat	Chinese character encoding format used by the device to communicate with the LDAP server	N/A	Enumeration: • **0**—Not configured. • **1**—GB18030. • **2**—UTF-8.	The value of 0 in this column indicates that the device does not change the Chinese character encoding format used by it to communicate with the LDAP server.
SourceIpv4Address	Source IPv4 address for outgoing LDAP packets	N/A	String, dotted decimal notation.	For example, 10.1.1.1.
SourceIpv6Address	Source IPv6 address for outgoing LDAP packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
SourceIfIndex	Source interface index for outgoing LDAP packets	N/A	Unsigned integer.	For example, 24.

Ldap/AttributeMaps

    <Dscp></Dscp>
  </Base>
</LDP>
```

Table description

Item	Description
Feature name	LDP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations. You must enable LDP first before other LDP configuration.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether LDP feature is enabled globally	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LSPTrigger	Egress LSP trigger policy	N/A	Enumeration: • 1—Default policy(default).	LDP/Instances/Instance/LSPTrigger

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—ALL. • 3—Mapping.	and LSPTriggerPreName are recommended.
PropagateMapping	Policy for triggering LDP mapping propagation	N/A	Enumeration: • 1—Default policy (default). • 2—Prefix-list. • 3—None. • 4—All	LDP/Instances/Instance/PropagateMapping and PropagateMappingPrefixName are recommended.
PropagateMappingPrefixName	Name of the IPv4 prefix list for filtering LDP mappings	N/A	String. Length: 1 to 63 characters.	N/A
NSR	Nonstop routing	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	Some versions support NSR and some versions support NonStopRouting. For relevant information, see the XSD document of your product.
GracefulRestart	LDP graceful restart	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
GRForwardingHoldTime	The forwarding state hold time	N/A	Unsigned short. Value range: 60 to 6000s. Default:180s.	N/A
GRReconnectTime	The reconnect time	N/A	Unsigned short. Value range: 60 to 300s. Default:120s.	N/A
NonStopRouting	Non Stop Routing	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	Some versions support NSR and some versions support NonStopRouting. For relevant information, see the XSD document of your product.
Dscp	The DSCP value for LDP packets	N/A	Unsigned short. Value range: 0 to 63. Default:48.	N/A

LDP/Interfaces

This table contains LDP interface information.

XML structure

BackOffInitTime	Initial backoff time in seconds	N/A	Unsigned short. Value range: 15 to 50331s. Default:15s.	N/A
BackOffMaxTime	Maximum backoff time in seconds	N/A	Unsigned short. Value range: 120 to 50331s. Default:120s	N/A
BgpImport	Import BGP IPv4 unicast routes in the specified AS to LDP	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
BgpImportAs	AS number. Import BGP IPv4 unicast routes to LDP	N/A	Unsigned short. Value range: 1 to 4294967295.	N/A
IPv6BgpImport	Import BGP IPv6 unicast routes to LDP	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
IPv6BgpImpo	AS number.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
rtAs	Import BGP IPv6 unicast routes in the specified AS to LDP		Value range: 1 to 4294967295.	
PvLimit	The maximum length of path vector	N/A	Unsigned short. Value range: 1 to 32. Default:32.	N/A
Maxhops	The maximum number of hops	N/A	Unsigned short. Value range: 1 to 32. Default:32.	N/A
IgpSyncDelayTime	The delay time after which LDP notifies IGP of the completion of LDP convergence	N/A	Unsigned short. Value range: 5 to 300s.	N/A
IgpSyncDelayOnRestart	The notification delay time after an LDP switchover or restart	N/A	Unsigned short. Value range: 60 to 600s. Default:90.	N/A
LSPTrigger	Egress LSP trigger policy	N/A	Enumeration: • 1—Default policy(default). • 2—ALL. • 3—Prefix-list. • 4—Mapping.	N/A
LSPTriggerPreName	Name of the prefix list for filtering FECs for LSP triggering	N/A	String. Length: 1 to 63 characters.	N/A
IPv6LSPTrigger	IPv6 egress LSP trigger policy	N/A	Enumeration: • 1—Default policy (default). • 2—ALL. • 3—Prefix-list. • 4—Mapping.	N/A
IPv6LSPTriggerPreName	Name of the prefix list for filtering IPv6 FECs for LSP triggering	N/A	String. Length: 1 to 63 characters.	N/A
PropagateMapping	Policy for triggering LDP mapping propagation	N/A	Enumeration: • 1—Default policy (default) • 2—All • 3—Prefix-list • 4—None	N/A
PropagateMappingPrefixName	Name of the IPv4 prefix list for filtering LDP mappings	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvtiseLabels	Name of the prefix list for filtering FECs for label advertisement	Sublist	N/A	N/A
IPv6AdvtiseLabels	Name of the prefix list for filtering IPv6 FECs for label advertisement	Sublist	N/A	N/A
TargertedPeers	Peer's IPv4 address	Sublist	N/A	N/A
IPv6TargertedPeers	Peer's IPv6 address	Sublist	N/A	N/A
AcceptTargetHello	The Targeted Hellos to accept	Sublist	N/A	N/A
NewInterfaces	LDP interfaces	Sublist	N/A	N/A
SessionProtection	LDP sessions	Sublist	N/A	N/A
Peers	Peer sessions	Sublist	N/A	N/A

LDP/Instances/Instance/AdvtiseLabels

This table contains LDP label advertisement information.

XML structure

```
<LDP>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	Name of the VPN instance where LDP is enabled	Index	String. Length: 1 to 31 characters	N/A
LsrId	LDP Label Switching Router ID	N/A	String, dotted decimal notation.	You can not get detail information when the type is Prefix-list.
LoopDetect	Loop detection	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A
LabelDistribution	Label distribution control	N/A	Enumeration: • **0**—Ordered(default). • **1**—Independent.	N/A
BackOffInitTime	Initial backoff time in seconds	N/A	Unsigned short. Value range: 15 to 50331s. Default:15s.	N/A
BackOffMaxTime	Maximum backoff time in seconds	N/A	Unsigned short. Value range: 120 to 50331s. Default:120s	N/A
BgpImport	Import BGP IPv4 unicast routes to LDP	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A
BgpImportAs	AS number. Import BGP IPv4 unicast routes in the specified AS to LDP	N/A	Unsigned short. Value range: 1 to 4294967295.	N/A
IPv6BgpImport	Import BGP IPv6 unicast routes to LDP	N/A	Boolean: • **true**—Enabled. **false—**Disabled.	N/A
IPv6BgpImportAs	AS number.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Import BGP IPv6 unicast routes in the specified AS to LDP		Value range: 1 to 4294967295.	
PvLimit	The maximum length of path vector	N/A	Unsigned short. Value range: 1 to 32. Default:32.	N/A
Maxhops	The maximum number of hops	N/A	Unsigned short. Value range: 1 to 32. Default:32.	N/A
IgpSyncDelayTime	The delay time after which LDP notifies IGP of the completion of LDP convergence	N/A	Unsigned short. Value range: 5 to 300s.	N/A
IgpSyncDelayOnRestart	The notification delay time after an LDP switchover or restart	N/A	Unsigned short. Value range: 60 to 600s. Default:90.	N/A
LSPTrigger	Egress LSP trigger policy	N/A	Enumeration: • 1—Default policy(default). • 2—ALL. • 3—Prefix-list.	You can not get detail information when the type is Prefix-list.
LSPTriggerPreName	The prefix list for filtering FECs	N/A	String. Length: 1 to 63 characters.	N/A
AdvtiseLabels	Name of the prefix list for filtering FECs	Sublist	N/A	N/A
TargertedPeers	Peer's IPv4 address	Sublist	N/A	N/A
AcceptTargetHello	The Targeted Hellos to accept	Sublist	N/A	N/A
NewInterfaces	Bind the interface with a VPN instance	Sublist	N/A	N/A
SessionProtection	LDP sessions	Sublist	N/A	N/A
Peers	Peer sessions	Sublist	N/A	N/A
PropagateMapping	Policy for triggering LDP mapping propagation	N/A	Enumeration: • 1—Default policy (default) • 2—All • 3—Prefix-list • 4—None	N/A
PropagateMappingPrefixName	Name of the IPv4 prefix list for filtering LDP	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	mappings			

LDP/Instances/Instance/AdvtiseLabels

This table contains LDP instance information.

XML structure

```
<LDP>
  <Instances>
    <Instance>
      <AdvtiseLabels>
        <AdvtiseLabel>
          <AdvLabelPreName></AdvLabelPreName>
          <AdvLabelPeerPreName></AdvLabelPeerPreName>
        </AdvtiseLabel>
      </AdvtiseLabels>
    </Instance>
  </Instances>
</LDP>
```

Table description

Item	Description
Feature name	LDP
Table name	AdvtiseLabels
Table type	Multi-instance table
Row name	AdvtiseLabel
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvLabelPreName	Name of the prefix list for filtering FECs	Index	String. Length: 1 to 63 characters	N/A
AdvLabelPeerPreName	Name of the prefix list for filtering peers	N/A	String. Length: 1 to 63 characters	N/A

LDP/Instances/Instance/TargetedPeers

This table contains LDP targeted peers.

XML structure

```
<LDP>
  <Instances>
    <Instance>
      <TargetedPeers>
        <TargetedPeer>
          <TargetedPeerName></TargetedPeerName>
          <PeerAddress></PeerAddress>
          <TransportAddress></TransportAddress>
          <HelloHoldTime></HelloHoldTime>
          <HelloInterval></HelloInterval>
          <KAHoldTime></KAHoldTime>
          <KAInterval></KAInterval>
        </TargetedPeer>
      </TargetedPeers>
    </Instance>
  </Instances>
</LDP>
```

Table description

Item	Description
Feature name	LDP
Table name	TargetedPeers
Table type	Multi-instance table
Row name	TargetedPeer
Restrictions	When "not(../vrfName!='_public_')".
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetedPeerName	Name of the targetedpeer neighbor	Index	String Length:1 to 32characters.	N/A
PeerAddress	Peer Address	N/A	String, dotted decimal notation.	N/A
TransportAddress	Transport Address	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HelloHoldTime	The Hello hold time	N/A	Unsigned short. Value range: 1 to 2^{16} - 1s.	second
HelloInterval	The Hello interval time	N/A	Unsigned short. Value range: 1 to 2^{16} - 1s.	second
KAHoldTime	The Keepalive session hold time	N/A	Unsigned short. Value range: 15 to 2^{16} – 1s.	Second
KAInterval	The Keepalive interval time	N/A	Unsigned short. Value range: 1 to 2^{16} – 1s.	Second

LDP/Instances/Instance/AcceptTargetHello

This table contains LDP session protection.

XML structure

```
<LDP>
  <Instances>
    <Instance>
      <AcceptTargetHello>
        <AcceptMode></AcceptMode>
        <PrefixName></PrefixName>
      </AcceptTargetHello>

        </NewInterface>
      </NewInterfaces>
    </Instance>
  </Instances>
</LDP>
```

Table description

Item	Description
Feature name	LDP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces and ldp is enable.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Enable	Enable LDP for the interface	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A
TimerHelloHold	The Hello hold time	N/A	Unsigned short. Value range: 1 to 65535s.	N/A
TimerHelloInterval	The Hello interval time	N/A	Unsigned short. Value range: 1 to 65535s.	N/A
TimerKAHold	The Keepalive session hold time	N/A	Unsigned short. Value range: 15 to 65535s.	N/A
TimerKAInterval	The Keepalive interval time	N/A	Unsigned short. Value range: 1 to 65535s.	N/A
TransportAddrInterface	The transport address in TCP connection	N/A	Boolean: • **true**—Enabled. • **false—**Disable(default).	N/A
TransprotAddress	The transport address in TCP connection	N/A	String, dotted decimal notation.	N/A
IgpSyncDisable	IGP-related LDP parameters	N/A	Boolean: • **true—**Enabled**.** • **false—**Disabled(default)**.**	N/A

LDP/Instances/Instance/SessionProtection

This table contains LDP session protection.

XML structure

```
<LDP>
  <Instances>
```

```
    <Instance>
      <SessionProtection>
        <Enable></Enable>
        <PrefixName></PrefixName>
        <Duration></Duration>
      </SessionProtection>
    </Instance>
  </Instances>
</LDP>
```

Table description

Item	Description
Feature name	LDP
Table name	SessionProtection

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	Username for logging in to the license server	N/A	String. Length: 1 to 31 characters.	N/A.
Password	Password for logging in to the license server	N/A	String. Length: 1 to 31 characters.	N/A.

LicenseClient/InstallStandard

This table contains information about standard license type.

XML structure

```
<LicenseClient>
  <InstallStandard>
    <LicenseType></LicenseType>
  </InstallStandard>
</LicenseClient>
```

Table description

Item	Description
Feature name	LicenseClient
Table name	InstallStandard
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LicenseType	Standard license type	N/A	String, case-sensitive. Length: 1 to 31 characters.	You can assign the standard license type. The license type must exist and be available on the license server. The standard license types vary by product family. For example: • **1cpu**—Permanent license for 1 CPU. • **1vcpu-1year**—License for 1 vCPU with a validity period of 1 year. • **1vcpu-3year**—License for 1 vCPU with a validity period of 3 years. • **1vcpu-permanent**—Permanent license for 1 vCPU. • **2cpu**—Permanent license for 2 CPUs. • **256cpu-permanent**—Permanent license for 256 CPUs. • **256vcpu-permanent**—Permanent license for 256 vCPUs. • **4cpu**—Permanent license for 4 CPUs. • **4vcpu-1year**—License for 4 vCPUs with a validity period of 1 year. • **4vcpu-3year**—License for 4 vCPUs with a validity period of 3 years. • **4vcpu-permanent**—Permanent license for 4 vCPUs. • **8vcpu-1year**—License for 8 vCPUs with a validity period of 1 year. • **8vcpu-3year**—License for 8 vCPUs with a validity period of

Column name	Column description	Column type	Data type and restrictions	Remarks
				3 years. • **8vcpu-permanent**—Permanent license for 8 vCPUs. • **`l3vpn-unlimited`**—License for 256 vCPUs and unlimited vpn users with a validity period of 1 year.

LicenseClient/InstallFeatures

This table contains information about feature license types.

XML structure

```
<LicenseClient>
  <InstallFeatures>
    <InstallFeature>
      <LicenseType></LicenseType>
      <LicenseCount></LicenseCount>
    </InstallFeature>
  </InstallFeatures>
</LicenseClient>

Table description

Item	Description
Feature name	LicenseClient
Table name	InstallLicenseInfos
Table type	Multi-instance table
Row name	InstallLicenseInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Position information of the device node	Data structure	Members include: • Chassis. • Slot. • CPUID.	N/A
Chassis	ID of the member	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	where the entity resides		Value range: 0 to 65535.	
Slot	Slot number of the entity	Index	Unsigned integer. Value range: 0 to 65535.	Optional. If no slot number is specified, the system shows license status for each slot.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 65535.	If there is no CPU number, the system returns 65535
LicenseName	License name.	N/A	String, case-sensitive. Length: 1 to 255 characters.	After the compression operation, the uninstalled license index will be deleted; and the installed license index will remain unchanged.
LicenseType	License type	N/A	String, case-sensitive. Length: 1 to 31 characters.	The license type name include standard and feature. Standard types included: • **1cpu**—Permanent license for 1 CPU. • **1vcpu-1year**—License for 1 vCPU with a validity period of 1 year. • **1vcpu-3year**—License for 1 vCPU with a validity period of 3 years. • **1vcpu-permanent**—Permanent license for 1 vCPU. • **2cpu**—Permanent license for 2 CPUs. • **256cpu-permanent**—Permanent license for 256 CPUs. • **256vcpu-permanent**—Permanent license for 256 vCPUs. • **4cpu**—Permanent license for 4 CPUs. • **4vcpu-1year**—License for 4 vCPUs with a validity period of 1 year. • **4vcpu-3year**—License for 4 vCPUs with a validity period of 3 years. • **4vcpu-permanent**—Permanent license for 4 vCPUs. • **8vcpu-1year**—License for 8 vCPUs with a validity period of 1 year. • **8vcpu-3year**—License for 8 vCPUs with a validity period of 3 years. • **8vcpu-permanent**—Permanent license for 8 vCPUs. • **`l3vpn-unlimited`**—License for 256 vCPUs and unlimited vpn users with a

Column name	Column description	Column type	Data type and restrictions	Remarks
				validity period of 1 year. • Feature license types include: • **bras-user-1k**—License for 1000 concurrent online BRAS users. • **advanced-service**—Advanced service package license. • **sslvpn-100**—License for 100 SSL VPN sessions. • **sslvpn-1000**—License for 1000 SSL VPN sessions. • **sslvpn-25**—License for 25 SSL VPN sessions. • **sslvpn-500**—License for 500 SSL VPN sessions. • **ipsec-acc-2g**—License for IPsec with 2 Gbps bandwidth. • **dpi-1year**—License for using IPS, anti-virus, application recognition, URL filtering, WAF, IP reputation, domain reputation, and URL reputation and updating the corresponding signature libraries for 1 year. • **url-filter-1year**—License for using URL filtering and updating the URL filtering signature library for 1 year. • **url-filter-3year**—License for using URL filtering and updating the URL filtering signature library for 3 years. • **threat-intelligence-1year**—License for using IP reputation, domain reputation, and URL reputation and updating the corresponding signature libraries for 1 year. • **threat-intelligence-3year**—License for using IP reputation, domain reputation, and URL reputation and updating the corresponding signature libraries for 3 years. • **waf-1year**—License for using WAF and updating the WAF signature library for 1 year. • **waf-3year**—License for using WAF and updating the WAF signature library for 3 years. • **srv6-waas-sdwan-webcache**—Permanent license for SRV6, WAAS, SDWAN and WEBCACHE signature libraries.

Column name	Column description	Column type	Data type and restrictions	Remarks
LicenseGroup	Group of license	N/A	Enumeration: • **0**—Standard. • **1**—Feature.	N/A
LicenseDescr	Description of the license	N/A	String. Length: 1 to 127 characters.	N/A
GetTime	Time when the license was Obtained	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AuthState	State of the license	N/A	Enumeration: • **0**—Unusable. • **1**—Inuse. • **2**—Reserved. • **3**—Expired.	N/A
ExpiredDays	Number of days that will expire after the license client is disconnected from the license server or days remaining after license expiration	N/A	Unsigned integer.	Only when the value of AuthState is Reserved or Expired, this column is meaningful.

Table description

Item	Description
Feature name	License
Table name	Summaries
Table type	Multi-instance table
Row name	Summary
Restrictions	Installed group and uninstalled group are related with license state, and the members in installed group are mutual exclusion.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Position information of the device Node.	Data structure	Members include: • **Chassis.** • **Slot.** • **CPUID.**	N/A
Chassis	ID of the member where the entity resides. Specifies the member ID of an IRF member device. (Distributed devices–In IRF mode.)	Index	Unsigned integer. Value range: 0 to 65535.	N/A.
Slot	Slot number of the entity. Specifies the slot number of an MPU. (Distributed devices–In	Index	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535.When the InstallType of License/Systems is 2, the Slot is the member of local active MPU.

Column name	Column description	Column type	Data type and restrictions	Remarks
	standalone mode.) Specifies the member ID of an IRF member device. (Centralized IRF devices.)			
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	If there is no CPU number, return 65535. When the InstallType of License/systems is 2 or 3, the CPUID is 65535.
Index	License index.	Index	Unsigned integer.	After the compression operation, the uninstalled license index will be deleted; and the installed license index will remain unchanged.
Feature	The name of feature which have licensed.	N/A	String. Length: 0 to 1024 characters.	Here multiple feature names can be displayed with spaces as delimiters.
ProductDescr	The description of product BOM in activation file.	N/A	String. Length: 1 to 1024 characters.	N/A
FileDescr	The description of file in a license.	N/A	String. Length: 1 to 1024 characters.	N/A
State	The state of an installed license.	N/A	Enumeration: • **1**—invalid. • **2**—inuse. • **3**—usable. • **4**—expired. • **5**—uninstalled. • **6**—unusable.	N/A
Installed	N/A	Data structure	Members include: • ActivationFile**.** • ActivationKey**.** • LicenseKey.	N/A
ActivationFile	Name of an installed activation file, with device name and file name.	N/A	String. Length: 1 to 255 characters.	N/A
ActivationKey	The activation key which has been installed.	N/A	String. Length: 1 to 254 characters. Format: XXXX-XXXX-...-XXXX.	N/A
LicenseKey	The license key which has been installed.	N/A	String. Length: 1 to 255 characters. Format: Every group is made	Due to historical reasons, the length of the authorization code for each group is not

Column name	Column description	Column type	Data type and restrictions	Remarks
			up of several characters, and during the groups use “-” as a delimiter.,	uniform.
Uninstalled	N/A	Data structure	Members include: • UninstActivationFile**.** • UninstActivationKey**.**	Only after uninstalling, the membership information in this group can be read.
UninstActivationFile	Name of an uninstalled activation file, with device name and file name.	N/A	String. Length: 1 to 255 characters.	N/A
UninstActivationKey	The activation key which has been uninstalled.	N/A	String. Length: 1 to 254 characters. Format: XXXX-XXXX-...-XXXX.	N/A
Type	License type by validity period.	N/A	Enumeration: • **1**—unknown. • **2**—permanent. • **3**—daysRestricted. • **4**—trialDaysRestricted. • **5**—dateRestricted. • **6**—trialDateRestricted. • **7**—countRestricted. • **8**—trialCountRestricted.	N/A
InstalledTime	Time when the license was installed.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UninstalledTime	The time when the license was uninstalled.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Only after uninstalling, it can be read.
DaysLeft	Remaining days of the license.	N/A	Unsigned integer.	When the value of Type is 3 or 4, this column is effective.
DaysLeftWarning	Whether the license will be expired.	N/A	Boolean: • **True** • **false**	When the left days are below 10%, the value of this column is true.
ValidityStart	Start date for a date restricted license.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	When the value of Type is 5 or 6, this column is effective.
ValidityEnd	End date for a date restricted license.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	When the value of Type is 5 or 6, this column is effective. But if there is no time limit authorization, this column does not exist value.
ExpiredDays	The number of passed days after a license has been	N/A	Unsigned integer.	Only when the value of state is 4, this column is meaningful.

Column name	Column description	Column type	Data type and restrictions	Remarks
	expired.			
Count	The effective number of License.	N/A	Unsigned integer.	When the value of Type is 7 or 8, this column is effective.

License/Features

This table contains information about the features.

XML structure

    <Timer>
      <ConnectionID></ConnectionID>
      <KeepAlive></KeepAlive>
      <Normal></Normal>
      <Retry></Retry>
    </Timer>
  </X3Timer>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Timer

Item	Description
Table type	Multi-instance table
Row name	Timer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.
Retry	Retry timer	N/A	Unsigned integer. Value range: 1 to 1000, in seconds.

LICMGR/X3Service

This table contains X3 service chassis and slot information. This table depends on customize.

XML structure

```
<LICMGR>
  <X3Service>
    <Chassis></Chassis>
    <Slot></Slot>
  </X3Service>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Service
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65534.
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65534.

LICMGR/X1Connection

This table contains information about the X1 connection.

XML structure

```
<LICMGR>
  <X1Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
  </X1Connection>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X1Connection
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.

Column name	Column description	Column type	Data type and restrictions	Remarks
LICIPv6Address	LIC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LocalIPv6Address column.
LocalIPv6Address	Local IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LocalIPAddress column.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.

LICMGR/X2Connection

This table contains information about the X2 connection.

XML structure

```
<LICMGR>
  <X2Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LICPort></LICPort>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
  </X2Connection>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X2Connection
Table type	Single-instance table
Row name	None
Restrictions	None

    </Connection>
  </X3Connection>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Connection
Table type	Multi-instance table
Row name	Connection
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.	N/A
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.
LICIPv6Address	LIC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.
LICPort	LIC port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LocalIPv6Address column.
LocalIPv6Address	Local IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LocalIPAddress column.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.

LICMGR/RandLength

This table contains RandLength information, depends on customize.

XML structure

```
<LICMGR>
```

```
  <RandLength>
    <RandLength></RandLength>
  </RandLength>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	RandLength
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RandLength	The effective length of random number.	N/A	Unsigned integer. Value range: 7 to 10. The default value is 10.

LICMGR/EnhancedX1X2Security

This table contains information about securtiy algorithm used by X1 and X2 connection, depends on customize.

XML structure

```
<LICMGR>
  <EnhancedX1X2Security>
    <EnhancedX1X2Security></EnhancedX1X2Security>
  </EnhancedX1X2Security>
</LICMGR>
```

LICMGR

LICMGR/Switch

This table contains state information about the lawful interception feature.

XML structure

```
<LICMGR>
  <Switch>
    <Switch></Switch>
  </Switch>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	Switch
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Switch	State of the lawful interception feature	N/A	Boolean: • **true**—Enable. • **false**—Disabled.

LICMGR/INEID

This table contains the INE ID.

XML structure

```
<LICMGR>
  <INEID>
    <ID></ID>
  </INEID>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	INEID
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	INE ID	N/A	String, case sensitive. Length: 1 to 32 characters.

LICMGR/LICID

This table contains the LIC ID.

XML structure

```
<LICMGR>
  <LICID>
    <ID></ID>
  </LICID>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	LICID
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	LIC ID	N/A	String, case sensitive. Length: 1 to 32 characters.

LICMGR/Bandwidth

This table contains X3 interface bandwidth information.

XML structure

```
<LICMGR>
  <Bandwidth>
    <Bandwidth></Bandwidth>
  </Bandwidth>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	Bandwidth
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Bandwidth	X3 interface bandwidth	N/A	Unsigned integer. Value range: 8 to 1000000, in kbps.

LICMGR/Key

This table contains lawful interception key information.

XML structure

```
<LICMGR>
  <Key>
    <Key>
      <Type></Type>
      <KI></KI>
      <Password></Password>
      <SqnGroup></SqnGroup>
    </Key>
  </Key>
```

```
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	Key
Table type	Multi-instance table
Row name	Key
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Interface type	Index	Enumeration: • **1**—X1. • **2**—X2. • **3**—X3 Type X3 depends on customize
KI	Key ID	N/A	String, case sensitive. Length: 16 characters.
KIConfig	Whether the key ID is configured	N/A	Enumeration: • **true**—Key ID is configured. • **false**—Key ID is not configured.
Password	Password	N/A	String, case sensitive. Length: 16 characters. This column can NOT be configured together with X3 type of interface.
PasswordConfig	Whether the password is configured	N/A	Boolean: • **true**—Password is configured. • **false**—Password is not cinfigured. This column can NOT be configured together with X3 type of interface.
ListK1	ListK1 ID	N/A	String, case sensitive. Length: 16 characters. This column can be configured together with X1 type of interface only, depends on customize.

Column name	Column description	Column type	Data type and restrictions
ListK1Config	Whether the key ID is configured	N/A	Enumeration: • **true**—Key ID is configured. • **false**—Key ID is not configured. This column can be configured together with X1 type of interface only, depends on customize.
SqnGroup	Sequence number group	N/A	Unsigned integer. Value range: 2 to 4294967295.

LICMGR/X1Timer

This table contains information about the X1 no-message timer.

XML structure

```
<LICMGR>
  <X1Timer>
    <NoMessage></NoMessage>
  </X1Timer>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
NoMessage	No-message timer.	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.

LICMGR/X2Timer

This table contains information about X2 timers.

XML structure

```
<LICMGR>
  <X2Timer>
    <KeepAlive></KeepAlive>
    <Normal></Normal>
  </X2Timer>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X2Timer
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.

LICMGR/X3Timer

This table contains information about X3 timers.

XML structure

```
<LICMGR>
  <X3Timer>
    <Timer>
      <ConnectionID></ConnectionID>
      <KeepAlive></KeepAlive>
      <Normal></Normal>
      <Retry></Retry>
    </Timer>
  </X3Timer>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Timer
Table type	Mutil-instance table
Row name	Timer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.
Retry	Retry timer	N/A	Unsigned integer. Value range: 1 to 1000, in seconds.

LICMGR/X3Service

This table contains X3 service chassis and slot information.

XML structure

```
<LICMGR>
  <X3Service>
    <Chassis></Chassis>
    <Slot></Slot>
  </X3Service>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Service
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65534.
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65534.

LICMGR/X1Connection

This table contains information about the X1 connection.

XML structure

```
<LICMGR>
  <X1Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
    <ConnectState></ConnectState>
  </X1Connection>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X1Connection
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.
LICIPv6Address	LIC IPv6 address	N/A	String, hexadecimal notation.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address	N/A	String, hexadecimal notation.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.
ConnectState	State of the TCP connection.	N/A	Boolean: • **true**—Connected. • **false**—No connected.

LICMGR/X2Connection

This table contains information about the X2 connection.

XML structure

```
<LICMGR>
  <X2Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LICPort></LICPort>
    <LocalIPAddress></LocalIPAddress>

      <LocalPort></LocalPort>
    </Connection>
  </X3Connection>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	X3Connection
Table type	Multi-instance table
Row name	Connection
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation
LICIPv6Address	LIC IPv6 address	N/A	String, hexadecimal notation.
LICPort	LIC port	N/A	Unsigned integer. Value range: 1 to 65535.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address	N/A	String, hexadecimal notation.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.

LICMGR/PacketsStatistics

This table contains lawful interception packet statistics.

XML structure

```
<LICMGR>
  <PacketsStatistics>
    <Statistic>
      <Type></Type>
      <PacketsIn></PacketsIn>
      <PacketsOut></PacketsOut>
      <BytesIn></BytesIn>
      <BytesOut></BytesOut>
    </Statistic>
  </PacketsStatistics>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	PacketsStatistics
Table type	Multi-instance table
Row name	Statistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Interface type	Index	Enumeration: • **1**—X1. • **2**—X2. • **3**—X3.
PacketsIn	Incoming packet count	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.
PacketsOut	Outgoing packet count	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.
BytesIn	Incoming byte count	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.
BytesOut	Outgoing byte count	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.

LICMGR/X3PacketsStatistics

This table contains X3 packet statistics.

XML structure

```
<LICMGR>
  <X3PacketsStatistics>
    <Statistic>
      <ConnectionID></ConnectionID>
      <PacketsIn></PacketsIn>

Row name	Target
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	ID of intercepted target	Index	Unsigned integer.
Type	Type of information that identifies the target	N/A	Enumeration: • **1**—IP. • **2**—IP_SUBNET. • **7**—IP_PORT • **8**—VRF. • **9**—VRF_PORT.
TargetIP	Target IPv4 address	N/A	String, dotted decimal notation.
TargetIPv6	Target IPv6 address	N/A	String, hexadecimal notation.
TargetMask	Target subnet mask	N/A	String, dotted decimal notation.
TargetMaskSubnet	Target subnet mask length	N/A	Unsigned integer.
TargetPort	Target port	N/A	Unsigned integer.
TargetVRF	Target VRF	N/A	String.
TargetVRFPort	Target VRF and port	N/A	Unsigned integer.
VisitedIP	Visited IPv4 address	N/A	String, dotted decimal notation.
VisitedIPv6	Visited IPv6 address	N/A	String, hexadecimal notation.
VisitedMask	Subnet mask of the visited IP address	N/A	String, dotted decimal notation.
VisitedMaskSubnet	Subnet mask length of the visited IP address	N/A	Unsigned integer.
VisitedPort	Visited port	N/A	Unsigned integer.
TransportPro	Transport protocol	N/A	Enumeration: • **1**—All. • **2**—TCP. • **3**—UDP.
ApplicationType	Application type	N/A	Unsigned integer.
TargetMaskID	Target MaskID	N/A	String. This column depends on customize.

LICMGR/RandLength

This table contains RandLength information, depends on customize.

XML structure

```
<LICMGR>
  <RandLength>
    <RandLength></RandLength>
  </RandLength>
```

```
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	RandLength
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RandLength	The effective length of random number.	N/A	Unsigned integer. Value range: 7 to 10. The default value is 10.

LICMGR/EnhancedX1X2Security

This table contains information about securtiy algorithm used by X1 and X2 connection, depends on customize.

XML structure

```
<LICMGR>
  <EnhancedX1X2Security>
    <EnhancedX1X2Security></ EnhancedX1X2Security>
  </EnhancedX1X2Security>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	EnhancedX1X2Security
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
EnhancedX1X2Security	The effective algorithm used by X1 and X2 connection.	N/A	Enumeration: • **0**—3DS/sha1 • **1**—AES/sha512 The default value is 0.

LICMGR/EnhancedX3Security

This table contains information about securtiy algorithm used by X3 connection, depends on customize.

XML structure

```
<LICMGR>
  <EnhancedX3Security>
    <EnhancedX3Security></EnhancedX3Security>
  </EnhancedX3Security>
</LICMGR>
```

Table description

Item	Description
Feature name	LICMGR
Table name	EnhancedX3Security
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
EnhancedX3Security	The effective algorithm used by X3 connection.	N/A	Enumeration: • **0**—None • **1**—AES/sha512 The default value is 0.

    <GlobalPortIdType>
      <Subtype></Subtype>
      <Enable></Enable>
    </GlobalPortIdType>
  </GlobalStatus>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	GlobalStatus
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable LLDP globally.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	
CDP	Whether to enable CDP.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	
TxInterval	Transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 32768. Unit: second.	The minimum member ID varies by device model.
FastInterval	Fast transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 3600. Unit: second.	
ReInitDelay	Re-initialization delay.	N/A	Unsigned integer. Value range: 1 to 10. Unit: second.	
NofityInterval	Notification interval for traps.	N/A	Unsigned integer. Value range: 5 to 3600. Unit: second.	
Mode	Bridge mode.	N/A	Enumeration: • **0**—Customer bridge mode. • **1—**Service bridge mode.	
MaxCredit	Token bucket size for sending LLDP frames.	N/A	Unsigned integer. Value range: 1 to 100.	
HoldMult	TTL multiplier.	N/A	Unsigned integer. Value range: 2 to 10.	
FastCount	Number of LLDP frames transmitted within a fast transmission interval.	N/A	Unsigned integer. Value range: 1 to 8.	
RxTimeout	Set the timeout for receiving LLDPDUs.	N/A	Unsigned integer. Value range: 0, 30 to 32768. Unit: second.	
ShowAllIFLocalInfo	Whether to display all local information	N/A	Boolean: • **true**—Enable**.** • **false—**Disable.	
GlobalPortIdType	Global port ID type.	Data structure	Members include: Subtype. Enable.	

Column name	Column description	Column type	Data type and restrictions	Remarks
Subtype	PortId type.	N/A	Enumeration: 5—Interface name.	The port ID type can only be interface name.
Enable	Whether to enable the port ID type.	N/A	Boolean: • **true**—Enable. • **false—**Disable.	

LLDP/Interfaces

This table contains LLDP interface information.

XML structure

```

</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	Interfaces
Table type	Multi-instance table

Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. Se e the product xsd before use. See Table 1 for the format.
Enable	Whether to enable the interface.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	
CDP	Whether to enable CDP compatibility.	N/A	Boolean: • **true**—Enable. CDP packets can be transmitted and received. • **false**—Disable.	
MEDTopoChange	Whether to enable LLDP-MED trapping.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	
PortIdType	Interface-specific port ID type.	Data structure	Members include: Subtype. Enable.	
Subtype	PortId type.	N/A	Enumeration: 5—Interface name.	The port ID type can only be interface name.
Enable	Whether to enable the port ID type.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	
SourceMacVlan	source mac of LLDP send packet	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ARPManagementAddressLearning	ARP management address learning configuration	Data structure	Members include: • State. • VlanID.	N/A
State	ARP management address state.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
VlanID	ARP management address vlan id	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
NDManagementAddressLearning	ND management address learning configuration	Data structure	Members include: • State. • VlanID.	N/A
State	ND management address state.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
VlanID	ND management address vlan id	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

Table 1 Interface operation status

Value	Operation status	Remarks
1	Single interface index	<IfIndex>1</IfIndex>
2	Single interface name	<IfIndex>GigabitEthernet 0/0/2</IfIndex>
3	Multiple interface names	<IfIndex>GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serail0/0/2</IfIndex>
4	Interface range name	<IfIndex>RangeName</IfIndex>
5	Mixture of interface range name and interface names	<IfIndex>RangeName ,GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serail0/0/2</IfIndex>

LLDP/IfAgents

This table contains LLDP interface agent information.

XML structure

```
<LLDP>
  <IfAgents>
```

```
    <IfAgent>
      <IfIndex></IfIndex>
      <AgentID></AgentID>
      <AdminStatus>
        <Tx></Tx>
        <Rx></Rx>
      </AdminStatus>
      <CheckChangeInterval></CheckChangeInterval>
      <Encap></Encap>
      <AddressFormat></AddressFormat>
      <RemoteChange></RemoteChange>
    </IfAgent>
  </IfAgents>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	IfAgents
Table type	Multi-instance table
Row name	IfAgent
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
IfIndex	Interface index.	Index	Unsigned integer.
AgentID	LLDP agent ID.	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
AdminStatus	LLDP operating mode of the interface.	Data structure	Members include: Tx. Rx.
Tx	Whether to enable the LLDP agent to only send LLDP frames.	N/A	Boolean: • **true**—Enable. • **false**—Disable.
Rx	Whether to enable the LLDP agent to only receive LLDP frames.	N/A	Boolean: • **true**—Enable. • **false**—Disable.

Column name	Column description	Column type	Data type and restrictions
CheckChangeInterval	LLDP polling interval.	N/A	Unsigned integer. Value range: 1 to 30. Unit: second.
Encap	LLDP frame format.	N/A	Enumeration: • **0**—Ethernet II encapsulation. • **1**—SNAP encapsulation.
AddressFormat	Management address format.	N/A	Enumeration: • **0**—Number. • **1**—String.
RemoteChange	Whether to enable LLDP trapping.	N/A	Boolean: • **true**—Enable. • **false**—Disable.

LLDP/TLVSelects

This table contains LLDP TLV transmitting status information.

XML structure

```
<LLDP>
  <TLVSelects>
    <TLV>
      <IfIndex></IfIndex>
      <AgentID></AgentID>

      <Inventory></Inventory>
      <PrivateTLV>
        <ActualPower></ActualPower>
      </PrivateTLV>
    </TLV>
  </TLVSelects>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	TLVSelects
Table type	Multi-instance table
Row name	TLV
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
AgentID	LLDP agent ID.	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
PortDesc	Whether to transmit port description TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.

Column name	Column description	Column type	Data type and restrictions
SysName	Whether to transmit system name TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
SysDesc	Whether to transmit system description TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
SysCap	Whether to transmit system capability TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
ManageAddress	Management address TLV information.	Data structure	Members include: SubType. AddressValue. Enable.
SubType	SubType of the management address.	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.
Address	Management address.	N/A	Base64 Binary. Length: 1 to 31 octets. The format of data depends on the management address subtype.
AddressIfName	Management address if name	N/A	String Length: 2 to 47 characters
Enable	Whether to transmit management address TLVs.		Boolean: • **true**—Yes. • **false**—No.
PVID	Whether to transmit port VLAN ID TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
ProtocolVLAN	Port and protocol VLAN ID TLV information.	Data structure	Members include: VLANID. Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether to transmit port and protocol VLAN ID TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
VLANName	VLAN name TLV information.	Data structure	Members include: VLANID. Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to transmit VLAN name TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
DCBX	Whether to transmit DCBX TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
LinkAgg	Whether to transmit link aggregation TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
ManageVLAN	Management VLAN TLV information.	Data structure	Members include: VLANID. Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether to transmit management VLAN TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
EVB	Whether to transmit EVB TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
QCN	Whether to transmit QCN TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
MACPHY	Whether to transmit MAC/PHY configuration/status TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
Power	Whether to transmit power via MDI TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
MaxFrame	Whether to transmit max frame size TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
MEDCapability	Whether to transmit MED capability TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
NetworkPolicy	Whether to transmit network policy TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
ExtPower	Whether to transmit extended power via MDI TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.
Inventory	Whether to transmit inventory TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.

Column name	Column description	Column type	Data type and restrictions
PrivateTLV	H3C-proprietary TLV.	Data structure	Members include: • ActualPower.
ActualPower	Actual power.	N/A	Boolean: • **true**—Yes. • **false**—No.

LLDP/ELINumbers

This table contains information about LLDP emergency location identification numbers.

XML structure

```
<LLDP>
  <ELINumbers>
    <ELIN>
      <IfIndex></IfIndex>
      <ELINumber></ELINumber>
      <Enable></Enable>
    </ELIN>
  </ELINumbers>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	ELINumbers
Table type	Multi-instance table
Row name	ELIN
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
ELINumber	Emergency location identification number.	N/A	Numberic String. Length: 10 to 25 characters.	
Enable	Whether to transmit location ID TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.	

LLDP/CivicAddresses

This table contains information about LLDP civic addresses.

XML structure

```
<LLDP>
  <CivicAddresses>
    <CivicAddress>
      <IfIndex></IfIndex>
      <DeviceType></DeviceType>
      <CountryCode></CountryCode>
      <CA>            <!-- Repeatable -->
        <Type></Type>
        <Value></Value>
      </CA>
      <Enable></Enable>
    </CivicAddress>
  </CivicAddresses>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	CivicAddresses
Table type	Multi-instance table
Row name	CivicAddress

Restrictions	The sequence of column attributes must be consistent with the table's definition.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
DeviceType	Device type.	N/A	Enumeration: • **0**—DHCP Server. • **1**—Network device. • **2**—MED endpoint.	
CountryCode	Country code.	N/A	String. Length: 2 characters. Letters in the string should be uppercased.	
CA	Civic address information.	Data structure	Members include: Type. Value.	
Type	Civic address type.	N/A	Unsigned integer. Value range: 0 to 255.	
Value	Civic address.	N/A	String. Length: 1 to 250 characters.	
Enable	Whether to transmit location ID TLVs.	N/A	Boolean: • **true**—Yes. • **false**—No.

```

Table description

Item	Description
Feature name	LLDP
Table name	GlobalStatus
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether LLDP is enabled globally.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	

Column name	Column description	Column type	Data type and restrictions	Remarks
CDP	Whether CDP is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	
TxInterval	Transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 32768. Unit: second.	The minimum member ID varies by device model.
FastInterval	Fast transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 3600. Unit: second.	
ReInitDelay	Re-initialization delay.	N/A	Unsigned integer. Value range: 1 to 10. Unit: second.	
NofityInterval	Notification interval for traps.	N/A	Unsigned integer. Value range: 5 to 3600. Unit: second.	
Mode	Bridge mode.	N/A	Enumeration: • **0**—Customer bridge mode. • **1**—Service bridge mode.	
MaxCredit	Token bucket size for sending LLDP frames.	N/A	Unsigned integer. Value range: 1 to 100.	
HoldMult	TTL multiplier.	N/A	Unsigned integer. Value range: 2 to 10.	
FastCount	Number of fast transmitted LLDP frames.	N/A	Unsigned integer. Value range: 1 to 8.	
RxTimeout	Set the timeout for receiving LLDPDUs.	N/A	Unsigned integer. Value range: 0, 30 to 32768. Unit: second.	
ShowAllIFLocalInfo	Whether to display all local information	N/A	Boolean: • **true**—Enable. • **false—Disable.**	
GlobalPortIdType	Global port ID type.	Data structure	Members include: • Subtype. • **Enable.**	
Subtype	PortId type.	N/A	Enumeration: • **5—Interface name.**	The port ID type can only be interface name.
Enable	Whether to enable the port ID type.	N/A	Boolean: • **true**—Enable. • **false—Disable.**	

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	Chassis identifier information.	Data structure	Members include: • SubType. • ID. • IDValue.	
SubType	Chassis ID subtype.	N/A	Enumeration: • **0**—Reserved. • **1**—Chassis component. • **2**—Interface alias. • **3**—Port component. • **4**—MAC address. • **5**—Network address. • **6**—Interface name. • **7**—Locally assigned.	
ID	Chassis ID.	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the chassis ID subtype.	
IDValue	Chassis ID value.	N/A	String. Length: 0 to 255 characters.	Chassis ID string.
SystemName	System name.	N/A	String. Length: 0 to 255 characters.	
SystemDesc	System description.	N/A	String. Length: 0 to 255 characters.	
DeviceClass	MED device class.	N/A	Enumeration: • **1**—Class I. • **2**—Class II. • **3**—Class III. • **4**—Connectivity device.	

LLDP/SysCaps

This table contains LLDP system capability information.

XML structure

```
<LLDP>
  <SysCaps>
    <Support>
      <Other></Other>
      <Repeater></Repeater>
      <Bridge></Bridge>

```

Table description

Item	Description
Feature name	LLDP
Table name	SysCaps
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
Support	Supported capabilities.	Data structure	Members include: • Other. • Repeater. • Bridge. • WlanAccessPoint. • Router. • Telephone. • DocsisCableDevice. • StationOnly. • Customer Bridge. • Service Bridge. • TPMR.

Column name	Column description	Column type	Data type and restrictions
Other	Whether capabilities out of the list are supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Repeater	Whether repeater is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Bridge	Whether bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
WLANAccessPoint	Whether WLAN AP is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Router	Whether router is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Telephone	Whether telephone is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
DocsisCableDevice	Whether docsis cable device is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
StationOnly	Whether station only is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
CustomerBridge	Whether customer bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
ServiceBridge	Whether service bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
TPMR	Whether TPMR is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Enable	Enabled capabilities.	Data structure	Members include: • Other. • Repeater. • Bridge. • WlanAccessPoint. • Router. • Telephone. • DocsisCableDevice. • StationOnly. • Customer Bridge. • Service Bridge. • TPMR.

LLDP/Inventory

This table contains LLDP inventory information.

XML structure

```
<LLDP>
  <Inventory>
    <HardwareRev></HardwareRev>
    <FirmwareRev></FirmwareRev>
    <SoftwareRev></SoftwareRev>

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
HardwareRev	Hardware revision	N/A	String. Length: 0 to 255 characters.
FirmwareRev	Firmware revision	N/A	String. Length: 0 to 255 characters.
SoftwareRev	Software revision	N/A	String. Length: 0 to 255 characters.
SerialNum	Serial number	N/A	String. Length: 0 to 255 characters.
Manufacturer	Manufacturer name	N/A	String. Length: 0 to 255 characters.

Column name	Column description	Column type	Data type and restrictions
ModelName	Model name	N/A	String. Length: 0 to 255 characters.
AssetID	Asset identifier	N/A	String. Length: 0 to 255 characters.

LLDP/GlobalStatistics

This table contains LLDP global statistics information.

XML structure

```
<LLDP>
  <GlobalStatistics>
    <LastUpdate></LastUpdate>
    <NbAdd></NbAdd>
    <NbDelete></NbDelete>
    <NbDrop></NbDrop>
    <NbAged></NbAged>
  </GlobalStatistics>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	GlobalStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LastUpdate	Time when the most recent neighbor was updated	N/A	Unsigned integer. Length: 32 bits. Unit: second.
NbAdd	Total number of added neighbors	N/A	Unsigned integer. Length: 32 bits.
NbDelete	Total number of deleted neighbors	N/A	Unsigned integer. Length: 32 bits.

Column name	Column description	Column type	Data type and restrictions
NbDrop	Total number of dropped neighbors	N/A	Unsigned integer. Length: 32 bits.
NbAged	Total number of aged-out neighbors	N/A	Unsigned integer. Length: 32 bits.

LLDP/Interfaces

This table contains LLDP interface information.

XML structure

```
<LLDP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>

      <IfName></IfName>
    </Interface>
  </Interfaces>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
Enable	Whether the interface is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
CDP	Whether CDP compatibility is enabled.	N/A	Boolean: • **true**—Enabled. CDP packets can be transmitted and received. • **false**—Disabled.
MEDTopoChange	Whether LLDP-MED trapping is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
PortIdType	Interface-specific port ID type.	Data structure	Members include: • Subtype. • Enable.
Subtype	PortId type.	N/A	Enumeration: • 5—Interface name.
Enable	Whether to enable the port ID type.	N/A	Boolean: • **true**—Enable. • false—Disable.
SourceMacVlan	source mac of LLDP send packet	N/A	Unsigned integer. Value range: 1 to 4094.
ARPManagementAddressLearning	ARP management address learning configuration	Data structure	Members include: • State. • VlanID.
State	ARP management address state.	N/A	Boolean: • **true**—Enable. • **false**—Disable.
VlanID	ARP management address vlan id	N/A	Unsigned integer. Value range: 1 to 4094.
NDManagementAddressLearning	ND management address learning configuration	Data structure	Members include: • State. • VlanID.
State	ND management address state.	N/A	Boolean: • **true**—Enable. • **false**—Disable.

Column name	Column description	Column type	Data type and restrictions
VlanID	ND management address vlan id	N/A	Unsigned integer. Value range: 1 to 4094.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/IfAgents

This table contains LLDP interface agent information.

XML structure

```
<LLDP>
  <IfAgents>
    <IfAgent>
      <IfIndex></IfIndex>

      <MEDNbNum></MEDNbNum>
      <OptionalTLVNum></OptionalTLVNum>
      <UnknownTLVNum></UnknownTLVNum>
      <IfName></IfName>
    </IfAgent>
  </IfAgents>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	IfAgents
Table type	Multi-instance table
Row name	IfAgent
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID.	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
AdminStatus	LLDP operating mode of the interface.	Data structure	Members include: • Tx. • Rx.
Tx	Whether an LLDP interface agent can only send LLDP frames.	N/A	Boolean: • **true**—Yes. • **false**—No.
Rx	Whether an LLDP interface agent can only receive LLDP frames.	N/A	Boolean: • **true**—Yes. • **false**—No.
CheckChangeInterval	LLDP polling interval.	N/A	Unsigned integer. Value range: 0 to 30. Unit: second.
Encap	LLDP frame format.	N/A	Enumeration: • **0**—Ethernet II encapsulation. • **1**—SNAP encapsulation.
AddressFormat	Management address format.	N/A	Enumeration: • **0**—Number. • **1**—String.
RemoteChange	Whether LLDP trapping is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
LLDPNbNum	Total number of LLDP neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.
CDPNbNum	Total number of CDP neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.
MEDNbNum	Total number of MED neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.
OptionalTLVNum	Total number of optional TLVs in the most recently transmitted LLDP frame.	N/A	Unsigned integer. Length: 32 bits.

Column name	Column description	Column type	Data type and restrictions
UnknownTLVNum	Total number of unknown TLVs received in all LLDP frames.	N/A	Unsigned integer. Length: 32 bits.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/TLVSelects

This table contains LLDP TLV transmitting status information.

```

Table description

Item	Description
Feature name	LLDP
Table name	TLVSelects
Table type	Multi-instance table
Row name	TLV
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID.	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
PortDesc	Whether the transmission of port description TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
SysName	Whether the transmission of system name TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
SysDesc	Whether the transmission of system description TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
SysCap	Whether the transmission of system capability TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ManageAddress	Management address TLV information.	Data structure	Members include: • SubType. • Address. • AddressValue. • Enable.
SubType	Subtype of the management address.	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.
Address	Management address.	N/A	Base64 Binary. Length: 1 to 31 octets. The format of data depends on the management address subtype.
AddressIfName	Management address if name	N/A	String Length: 2 to 47 characters
AddressValue	Management address value.	N/A	String. Length: 0 to 64 characters.
Enable	Whether the transmission of management address TLVs is enabled.		Boolean: • **true**—Enabled. • **false**—Disabled.
PVID	Whether the transmission of port VLAN ID TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ProtocolVLAN	Port and protocol VLAN ID TLV information.	Data structure	Members include: • VLANID. • Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of port and protocol VLAN ID TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
VLANName	VLAN name TLV information.	Data structure	Members include: • VLANID. • Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of VLAN name TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
DCBX	Whether the transmission of DCBX TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
LinkAgg	Whether the transmission of link aggregation TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ManageVLAN	Management VLAN TLV information.	Data structure	Members include: • VLANID. • Enable.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of management VLAN TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
EVB	Whether the transmission of EVB TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
QCN	Whether the transmission of QCN TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
MACPHY	Whether the transmission of MAC/PHY configuration/status TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
Power	Whether the transmission of power via MDI TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
MaxFrame	Whether the transmission of max frame size TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
MEDCapability	Whether the transmission of MED capability TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
NetworkPolicy	Whether the transmission of network policy TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ExtPower	Whether the transmission of extended power via MDI TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
Inventory	Whether the transmission of inventory TLVs is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.
PrivateTLV	H3C-proprietary TLV.	Data structure	Members include: • ActualPower.
ActualPower	Actual power.	N/A	Boolean: • true. • false.

LLDP/ELINumbers

This table contains information about LLDP emergency location identification numbers.

XML structure

```
<LLDP>
  <ELINumbers>
    <ELIN>
      <IfIndex></IfIndex>

DiscardFrameNum	The number of discarded LLDP frames	N/A	Unsigned integer. Length: 32 bits.
ErrorFrameNum	The number of LLDP error frames	N/A	Unsigned integer. Length: 32 bits.
DiscardTLVNum	The number of discarded LLDP TLVs	N/A	Unsigned integer. Length: 32 bits.

Column name	Column description	Column type	Data type and restrictions
UnknownTLVNum	The number of unknown LLDP TLVs	N/A	Unsigned integer. Length: 32 bits.
AgedNbNum	The number of aged-out LLDP neighbors	N/A	Unsigned integer. Length: 32 bits.
TxCDPFrameNum	The number of transmitted CDP frames	N/A	Unsigned integer. Length: 32 bits.
RxCDPFrameNum	The number of received CDP frames	N/A	Unsigned integer. Length: 32 bits.
DiscardCDPFrameNum	The number of discarded CDP frames	N/A	Unsigned integer. Length: 32 bits.
ErrorCDPFrameNum	The number of CDP error frames	N/A	Unsigned integer. Length: 32 bits.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/NbBasicInfos

This table contains basic information about LLDP neighbors.

XML structure

```

Table description

Item	Description
Feature name	LLDP
Table name	NbBasicInfos
Table type	Multi-instance table
Row name	BasicInfo
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
TimeMark	Time mark	Index	Unsigned integer. Length: 32 bits.
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
NeighborIndex	Neighbor index	Index	Unsigned integer. Length: 32 bits.
ChassisID	Chassis identifier information	Data structure	Members include: • SubType. • ID. • IDValue.
SubType	Subtype of the chassis ID	N/A	Enumeration: • **0**—Reserved. • **1**—Chassis component. • **2**—Interface alias. • **3**—Port component. • **4**—MAC address. • **5**—Network address. • **6**—Interface name. • **7**—Locally assigned.

Column name	Column description	Column type	Data type and restrictions
ID	Chassis ID	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the chassis ID subtype.
IDValue	Chassis ID value	N/A	String. Length: 0 to 255 characters.
PortID	Port identifier information	Data structure	Members include: • SubType. • ID. • IDValue.
SubType	Subtype of the port ID	N/A	Enumeration: • **0**—Reserved. • **1**—Interface alias. • **2**—Port component. • **3**—MAC address. • **4**—Network address. • **5**—Interface name. • **6**—Agent circuit ID. • **7**—Locally assigned.
ID	Port ID	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the port ID subtype.
IDValue	Port ID value	N/A	String. Length: 0 to 255 characters.
TTL	Time to Live	N/A	Unsigned integer. Length: 32 bits.
PortDesc	Port description	N/A	String. Length: 0 to 255 characters.
SystemName	System name	N/A	String. Length: 0 to 255 characters.
SystemDesc	System description	N/A	String. Length: 0 to 255 characters.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/NbSysCaps

This table contains information about the system capabilities of LLDP neighbors.

XML structure

```
<LLDP>
```

```
  <NbSysCaps>
    <SysCap>
      <TimeMark></TimeMark>

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TimeMark	Time mark.	Index	Unsigned integer. Length: 32 bits.
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID.	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
NeighborIndex	Neighbor index.	Index	Unsigned integer. Length: 32 bits.
Support	Supported capabilities.	Data structure	Members include: • Other. • Repeater. • Bridge. • WlanAccessPoint. • Router. • Telephone. • DocsisCableDevice. • StationOnly. • Customer Bridge. • Service Bridge. • TPMR.
Other	Whether capabilities out of the list are supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Repeater	Whether repeater is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Bridge	Whether bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
WLANAccessPoint	Whether WLAN AP is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Router	Whether router is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Telephone	Whether telephone is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.

Column name	Column description	Column type	Data type and restrictions
DocsisCableDevice	Whether docsis cable device is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
StationOnly	Whether station only is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
CustomerBridge	Whether customer bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
ServiceBridge	Whether service bridge is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
TPMR	Whether TPMR is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Enable	Enabled capabilities.	Data structure	Members include: • Other. • Repeater. • Bridge. • WlanAccessPoint. • Router. • Telephone. • DocsisCableDevice. • StationOnly. • Customer Bridge. • Service Bridge. • TPMR.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/NbManageAddresses

This table contains information about the management addresses of LLDP neighbors.

XML structure

```
<LLDP>
  <NbManageAddresses>

Column name	Column description	Column type	Data type and restrictions
Application	Application information.	Data structure	Members include: • AppType. • UnknownFlag. • TagFlag. • VLANID. • L2priority • Dscp.
AppType	Application type.	N/A	Enumeration: • **1**—Voice. • **2**—Voice Signaling. • **3**—Guest Voice. • **4**—Guest Voice Signaling. • **5**—Softphone Voice. • **6**—Video Conferencing. • **7**—Streaming Video. • **8**—Video Signaling.
UnknownFlag	Whether the application is unknown.	N/A	Boolean: • **true**—Yes. • **false**—No.
TagFlag	Whether the VLAN tag is used.	N/A	Boolean: • **true**—Yes. • **false**—No.
VLANID	Network policy VLAN ID.	N/A	Unsigned integer. Value range: 0 to 4095.
L2priority	Layer 2 priority	N/A	Unsigned integer. Value range: 0 to 7.
DSCP	DSCP value.	N/A	Unsigned integer. Value range: 0 to 63.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/NbUnknownBasicTLVs

This table contains information about the unknown basic TLVs of LLDP neighbors.

XML structure

```
<LLDP>
  <NbUnknownBasicTLVs>
    <UnknownBasicTLV>
      <TimeMark></TimeMark>
      <IfIndex></IfIndex>
      <AgentID></AgentID>
      <NeighborIndex></NeighborIndex>
```

```
      <TLV>  <!-- Repeatable -->
        <Type></Type>
        <Value></Value>
      </TLV>
      <IfName></IfName>
    </UnknownBasicTLV>
  </NbUnknownBasicTLVs>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	NbUnknownBasicTLVs
Table type	Multi-instance table
Row name	UnknownBasicTLV
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**
TimeMark	Time mark	Index	Unsigned integer. Length: 32 bits.
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID	Index	Enumeration: • **1**—Nearest bridge agent. • **2**—Nearest non-TPMR agent. • **3**—Nearest customer agent.
NeighborIndex	Neighbor index	Index	Unsigned integer. Length: 32 bits.
TLV	TLV information	Data structure	Member Include: • Type • Value
Type	TLV type	N/A	Unsigned integer. Length: 8 bits. Value range: 0 to 126.
Value	TLV value	N/A	Base64 Binary. Length: 0 to 511 octets.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/NbUnknownOrgTLVs

This table contains information about the unknown organizationally specific TLVs of LLDP neighbors.

XML structure

```
<LLDP>
  <NbUnknownOrgTLVs>
    <UnknownOrgTLV>
      <TimeMark></TimeMark>
      <IfIndex></IfIndex>
      <AgentID></AgentID>

Table type	Multi-instance table
Row name	Dot1Info
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
PVID	Neighbor interface PVID.	N/A	Unsigned integer. Value range: 1 to 4094.
PortProtocolVLAN	Protocol VLAN information.	Data structure	Members include: • VLANID. • Support. • Enable.
VLANID	Protocol VLAN ID.	N/A	Unsigned integer. Value range: 0 to 4094.
Support	Whether protocol VLAN is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Enable	Whether protocol VLAN is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
VLANName	VLAN name information.	Data structure	Members include: • VLANID. • Name.
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Name	VLAN name.	N/A	String. Length: 0 to 32 characters.
ManageVLAN	Management VLAN ID.	N/A	Unsigned integer. Value range: 0 to 4094.
ProtocolID	Protocol ID.	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the protocol.
LinkAgg	Link aggregation information.	Data structure	Members include: • Support. • Enable. • PortIndex.
Support	Whether link aggregation is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.

Column name	Column description	Column type	Data type and restrictions
Enable	Whether link aggregation is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
PortIndex	Member port ID.	N/A	Unsigned integer. Length: 32 bits.
VIDUsage	VID usage digest.	N/A	Base64 Binary. Length: 4 octets.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/LocalDot3Infos

This table contains the IEEE 802.3 organizationally specific information about local interfaces.

XML structure

```
<LLDP>
  <LocalDot3Infos>

  </LocalDot3Infos>
</LLDP>
```

Table description

Item	Description
Feature name	LLDP

Table name	LocalDot3Infos
Table type	Multi-instance table
Row name	Dot3Info
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
MACPHY	MAC/PHY configuration/status information.	Data structure	Members include: • AutoNegSupport. • AutoNegEnable. • MAU.
AutoNegSupport	Whether autonegotiation is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
AutoNegEnable	Whether autonegotiation is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
MAU	Operational media attachment unit type.	N/A	Unsigned integer. Length: 32 bits.
MaxFrameSize	Maximum frame size.	N/A	Unsigned integer. Length: 32 bits.
Power	Power over MDI information.	Data structure	Members include: • PortClass. • Support. • Enable. • Pairs. • PairsCtrlAbility. • Classification.
PortClass	Port class.	N/A	Enumeration: • **0**—PD. • **1**—PSE.
Support	Whether PSE MDI power is supported.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.
Enable	Whether PSE MDI power is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
Pairs	Power supply mode.	N/A	Enumeration: • **1**—Over signal wires. • **2**—Over spare wires.

Column name	Column description	Column type	Data type and restrictions
PairsCtrlAbility	Whether the PSE-PD pair control is available.	N/A	Boolean: • **true**—Yes. • **false**—No.
Classification	Power class.	N/A	Enumeration: • **1**—Class0. • **2**—Class1. • **3**—Class2. • **4**—Class3. • **5**—Class4.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/LocalMEDInfos

This table contains the MED organizationally specific information about local interfaces.

XML structure

```
<LLDP>
  <LocalMEDInfos>
    <MEDInfo>
      <IfIndex></IfIndex>
      <NetworkPolicy>  <!-- Repeatable -->

</LLDP>
```

Table description

Item	Description
Feature name	LLDP

Table name	LocalMEDInfos
Table type	Multi-instance table
Row name	MEDInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
NetworkPolicy	Network policy information.	N/A	Members include: • AppType. • UnknownFlag. • TagFlag. • VLANID. • L2priority • Dscp.
AppType	Application type.	N/A	Enumeration: • **1**—Voice. • **2**—Voice Signaling. • **3**—Guest Voice. • **4**—Guest Voice Signaling. • **5**—Softphone Voice. • **6**—Video Conferencing. • **7**—Streaming Video. • **8**—Video Signaling.
UnknownFlag	Whether the application is unknown.	N/A	Boolean: • **true**—Yes. • **false**—No.
TagFlag	Whether the VLAN tag is used.	N/A	Boolean: • **true**—Yes. • **false**—No.
VLANID	Network policy VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
L2priority	Layer 2 priority	N/A	Unsigned integer. Value range: 0 to 7.
Dscp	DSCP value.	N/A	Unsigned integer. Value range: 0 to 63.
ExtPower	Extended power via MDI information.	Data structure	Members include: • Source. • Priority. • Value.

Column name	Column description	Column type	Data type and restrictions
Source	PSE power source.	N/A	Enumeration: • **0**—Unknown. • **1**—Primary. • **2**—Backup.
Priority	Power priority.	N/A	Enumeration: • **1**—Critical. • **2**—High. • **3**—Low.
Value	Power value.	N/A	Unsigned integer. Length: 32 bits. Unit: milliwatt.
IfName	Interface name	N/A	String. Length: 0 to 47 characters.

LLDP/CustomizedFeature

This table contains LLDP customized feature information.

XML structure

```
<LLDP>
  <CustomizedFeature>
    <DCBX></DCBX>
    <QCN></QCN>
    <EVB></EVB>
    <NetworkPolicy></NetworkPolicy>

</LLDP>
```

Table description

Item	Description
Feature name	LLDP
Table name	CustomizedFeature
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
DCBX	Whether DCBX feature is customized.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
QCN	Whether QCN feature is customized..	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
EVB	Whether EVB feature is customized..	N/A	Boolean: • **true**—Enabled. • **false**—**Disabled**.
NetworkPolicy	Whether NetworkPolicy feature is customized.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Contents

LLDP 1
LLDP/Interfaces 1
LLDP/TLVSelects 1

LLDP

LLDP/Interfaces

Message	Explanation
"On a Layer 2 interface, the VLAN ID must be specified when configuring the TLV to advertise the management address." "二层接口下，配置发布管理地址TLV必须指定VLAN ID。"	二层接口无法配置 IP 地址，只能指定管理地址接口的 VLAN ID。

LLDP/TLVSelects

Message	Explanation
"The management address cannot specify the Address tag and the AddressIfName tag at the same time." "管理地址不能同时指定Address标签和AddressIfName标签。"	多次配置管理地址，最后一次执行的命令生效。NETCONF同时下发两个配置项，否则无法区分哪个配置项会生效。

Table description

Column name	Column description	Data type and restrictions	Remarks
IfName	Interface name	String. Length: 0 to 47 characters.	N/A
AgentID	LLDP agent type	Enumeration ● 1 – Nearest bridge agent ● 2 – Nearest non-TPMR agent ● 3 – Nearest customer agent	N/A
NeighborIndex	Neighbor index	Unsigned integer. Length: 32 bits.	Index
NeighborChassisId SubType	Subtype of the chassis ID	Enumeration ● 0 – Reserved. ● 1 – Chassis component. ● 2 – Interface alias. ● 3 – Port component. ● 4 – MAC address. ● 5 – Network address. ● 6 – Interface name. ● 7 – Locally assigned.	N/A
NeighborChassisId	Neighbor chassis ID	String. Length: 0 to 255 characters.	If the value of Neighborevent is 3, this column

Column name	Column description	Data type and restrictions	Remarks
			does not exist.
NeighborPortId SubType	Subtype of the port ID	Enumeration ● 0 – Reserved. ● 1 – Interface alias. ● 2 – Port component. ● 3 – MAC address. ● 4 – Network address. ● 5 – Interface name. ● 6 – Agent circuit ID. ● 7 – Locally assigned.	N/A
NeighborPortId	Neighbor port ID	String. Length: 0 to 255 characters.	If the value of Neighborevent is 3, this column does not exist.
TTL	Time to Live	Unsigned integer. Length: 32 bits.	N/A
PortDesc	Port description	String. Length: 0 to 255 characters.	N/A
Neighborevent	Neighbor event type	Enumeration ● 1 – LLDP neighbor creation ● 2 – LLDP neighbor deletion ● 3 – No LLDP neighbor creation. ● 4 – LLDP neighbor modification.	N/A
SystemName	System name	String. Length: 0 to 255 characters.	N/A
SystemCapability	System capability set	Unsigned integer. Length: 16 bits. The system capability depends on the value represented by each bit. The bits are from low to high and have the following meanings: ● 1 – Other. ● 2 – Repeater. ● 3 – MAC bridge. ● 4 – WLAN access point. ● 5 – Router. ● 6 – Telephone. ● 7 – DOCSIS cable device. ● 8 – Station only. ● 9 – C-VLAN component of a VLAN bridge. ● 10 – S-VLAN component of a VLAN bridge. ● 11 – Two-port MAC relay (TPMR).	N/A

Column name	Column description	Data type and restrictions	Remarks
		● 12-16 – Reserved.	
SystemEnableCapability	Enable system capabilities	Unsigned integer. Length: 16 bits. The system enable capability depends on the value represented by each bit. The bits are from low to high and have the following meanings: ● 1 – Other. ● 2 – Repeater. ● 3 – MAC bridge. ● 4 – WLAN access point. ● 5 – Router. ● 6 – Telephone. ● 7 – DOCSIS cable device. ● 8 – Station only. ● 9 – C-VLAN component of a VLAN bridge. ● 10 – S-VLAN component of a VLAN bridge. ● 11 – Two-port MAC relay (TPMR). ● 12-16 – Reserved.	N/A
SystemDescription	System description	String. Length: 0 to 255 characters.	N/A

Feature name	LocalBill
Table name	Bills
Table type	Multi-instance table
Row name	Bill

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BillNo	Bill number	Index	Unsigned integer.	N/A
SessionID	Session ID, which uniquely identifies an accounting session of a user	N/A	String, case-insensitive.	N/A
UserName	Username	N/A	String, case-insensitive. Length: 1 to 253 characters.	N/A
StartTime	Time from which the accounting session starts	N/A	Date Time. Format: YYYY-MM-DDTHH:MM:SS.	Example: 2020-05-21T18:14:15
StopTime	Time at which the accounting session stops	N/A	Date Time. Format: YYYY-MM-DDTHH:MM:SS	Example: 2020-05-21T18:15:35
Duration	Online duration of the user	N/A	Time. Format: HH:MM:SS	Example: 18:15:35
Ipv4Address	IPv4 address of the user	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
MacAddress	MAC address of the user	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-16-ec-b7-a8-79
Ipv6Address	IPv6 address of the user	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
ServiceType	Types of services used by the user	N/A	Enumeration: • **0**—Login. • **1**—Super**.** • **2**—Command. • **3**—LAN access. • **4**—PPP. • **5**—Default. • **6**—Portal. • **7**—IKE. • **8**—IPoE. • **9**—SSL VPN. • **13—**SSH.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AccessType	Access type of the user	N/A	Enumeration: • 1—DVPN. • **2**—FTP. • **3**—LANaccess. • **4**—PAD. • **5**—SSH. • **6**—Telnet. • **7**—Terminal. • **8**—Portal. • **9**—PPP. • **10**—HTTP. • **11**—HTTPS. • **12**—IKE. • **13**—IPoE. • **14**—SSL VPN. • **15**—L2TP. • **17**—Command.	N/A
Interface	Interface through which the user is connected to the device	N/A	String, case-insensitive.	Example: GigabitEthernet1/0/1
SVLAN	Service provider VLAN in which the user is connected to the device	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVLAN	Customer network VLAN in which the user is connected to the device	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Status	Accounting bill type	N/A	Enumeration: • **0**—Invalid • **1**—Readtime. • **2**—Offline • **3**—CRC Failed.	Only supports Offline.
ReasonCode	Reason that the accounting session was terminated	N/A	Unsigned integer.	N/A
Ref	Code that represents supplementary information for the session termination	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserTraffic	User traffic statistics	Data structure	Members include: • RecvByte. • RecvPacket • SentByte • SentPacket	N/A
RecvByte	Number of bytes received by the user	N/A	Unsigned integer64.	N/A
RecvPacket	Number of packets received by the user	N/A	Unsigned integer64.	N/A
SentByte	Number of bytes sent by the user	N/A	Unsigned integer64.	N/A
SentPacket	Number of packets sent by the user	N/A	Unsigned integer64.	N/A

LocalBill/GlobalConfig

This table is used to configure global local bill cache parameters.

XML structure

```
<LocalBill>
  <GlobalConfig>
    <Enable></Enable>
    <ExportInterval></ExportInierval>
    <ExportURL></ExportURL>
  </GlobalConfig>
</LocalBill>
```

Table description

Item	Description
Feature name	LocalBill
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Column name
Enable	Whether to enable the local bill cache feature	N/A	Boolean: • **true**—Enable. • **false—**Disable**.**	N/A
ExportInterval	Set an interval at which the device automatically exports accounting bills	N/A	Unsigned integer. Value range: 1 to 65535, in minutes.	N/A
ExportURL	URL for automatic bill export	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A

LocalBill event stream

LocalBill event stream description.

LocalBill event

This event is used to report that the number of local-cached accounting bills on BRAS-VM has reached the threshold.

XML structure for event subscription

```
<LBillThresholdState>
</LBillThresholdState>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LocalBill</stream>
    <filter type="subtree">
      <LBillThresholdState xmlns="http://www.h3c.com/netconf/event:1.0/LocalBill:1.0">
      </LBillThresholdState>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	LocalBill
Event name	LBillThresholdState
Event namespace	http://www.h3c.com/netconf/event:1.0/ LocalBill:1.0
Support for extended query	No

XML structure for event report

```
<LBillThresholdState>
  <ThresholdState>
    <Reached></Reached>
  </ThresholdState>
</LBillThresholdState>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-07-05T10:24:36</eventTime>
  <LBillThresholdState xmlns="http://www.h3c.com/netconf/event:1.0/LocalBill:1.0">
  <ThresholdState>
    <Reached>false</Reached>
```

```
  </ThresholdState>
</LBillThresholdState>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
Reached	The number of local-cached accounting bills has reached the threshold	Boolean: • **true**—Threshold reached. • **false**—Threshold not reached.	No	N/A

GEO/Location/GeoLocations

This table is used to configure locations.

XML structure

```
<GEO>
  <Location>
    <GeoLocations>
      <GeoLocation>
        <LocationName></LocationName>
        <Description></Description>
        <Longitude></Longitude>
        <Latitude></Latitude>
      </GeoLocation>
    </GeoLocations>
  </Location>
</GEO>
```

Table description

Item	Description
Feature name	GEO
Table name	GeoLocations
Table type	Multi-instance table
Row name	GeoLocation
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Name of the location	Index	String, case insensitive. Length: 1 to 63 characters.	It can not include -.
Description	Description of the location	N/A	String, case sensitive. Length: 1 to 127 characters.	Optional.
Longitude	Longitude	N/A	String. Length: 1 to 7 characters.	Value range: –180.00 to 180.00
Latitude	Latitude	N/A	String.	Value range: –90.00 to 90.00

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 6 characters.	

GEO/Location/LocationAddresses

This table is used to configure location addresses.

XML structure

```
<GEO>
  <Location>
    <LocationAddresses>
      <Item>
        <LocationName></LocationName>
        <SeqNum></SeqNum>
        <IsIncrement></IsIncrement>
        <IPv4AddressList>
          <IPv4Address></IPv4Address>
        </IPv4AddressList>
      </Item>
    </LocationAddresses>
  </Location>
</GEO>
```

Table description

Item	Description
Feature name	GEO
Table name	LocationAddresses
Table type	Multi-instance table
Row name	Item
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Name of the location	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4AddressList	IPv4 address list	Data structure	Members include: • IPv4Address	N/A
IPv4Address	IPv4 address or address range	N/A	String, Format: Dotted decimal notation.	For an IP address, you must specify the mask. For an address range, specify the range in the X.X.X.X/Y.Y.Y.Y or X.X.X.X-Y.Y.Y.Y. or X.X.X.X/YY format.

GEO/LocationGroup/Groups

This table is used to configure location groups.

XML structure

```
<GEO>
  <LocationGroup>
    <Groups>
      <Group>
        <LocationGroupName></LocationGroupName>
        <Description></Description>
      </Group>
    </Groups>
  </LocationGroup>
</GEO>
```

Table description

Item	Description
Feature name	GEO
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationGroupName	Name of the location group	Index	String, case insensitive. Length: 1 to 63 characters.	It can not include -.

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of the location group	N/A	String, case sensitive. Length: 1 to 127 characters.	Optional.

GEO/LocationGroup/LocationGroupMembers

This table is used to configure the members of a location group.

XML structure

```
<GEO>
  <LocationGroup>
    <LocationGroupMembers>
      <LocationGroupMember>
        <LocationGroupName></LocationGroupName>
        <IsIncrement></IsIncrement>
        <MemberItem>
          <Member></Member>
          <Type></Type>
        </MemberItem>
      </LocationGroupMember>
    </LocationGroupMembers>
  </LocationGroup>
</GEO>
```

Table description

Item	Description
Feature name	GEO
Table name	LocationGroupMembers
Table type	Multi-instance table
Row name	LocationGroupMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

GEO

GEO/Location/GeoLocations

Message	Explanation
The name is the same as a predefined location. 创建的自定义地区与预定义地区重名。	The name of a user-defined location cannot be the same as a predefined location for a create operation. 当执行create操作时，自定义地区名称不能与预定义地区名称重复。
The pre-defined location cannot be deleted. 不能删除预定义地区。	You cannot delete or remove a predefined location. 当执行delete或者remove操作时，不能删除预定义地区。
The number of user-defined locations exceeds the upper limit. 自定义地区数量超过上限。	The number of user-defined locations cannot exceed the upper limit for a create, merge, or replace operation. 当执行create、merge和replace操作时，自定义地区的数量不能超过上限。
This geographic location is in use. 该地区被引用中。	When the location is in use，it can not be delete or remove. 当执行delete、remove操作时，若地区被引用，则禁止删除。
Pre-defined location cannot modify longitude and latitude. 预定义地区禁止修改经纬度。	Pre-defined location cannot modify for a merge, or replace operation. 当执行merge、replace操作时，预定义地区禁止修改经纬度。

GEO/LocationGroup/Groups

Message	Explanation
The number of location groups exceeds the upper limit. 地区组数量超过上限。	The number of location groups cannot exceed the upper limit for a create, merge, or replace operation. 当执行create、merge和replace操作时，地区组的数量不能超过上限。
This geographic location group is in use. 该地区组被引用中。	When the location group is in use，it can not be delete or remove. 当执行delete、remove操作时，若地区组被引用，则禁止删除。

GEO/Location/LocationAddresses

Message	Explanation
ip-addresses1 overlaps with address *ip-addresses2* that has been added to location *location-name*. *x.x.x.x*与location-name地区已添加的*y.y.y.y*重叠	The new IP addresses cannot conflict with user configurations of the predefined locations and existing user-defined locations for a create, merge, or replace operation. 当执行create、merge和replace操作时，新增IP地址不能与预定义和自定义地区中用户的配置冲突。
The IP address of the library cannot be deleted. 禁止删除库IP地址。	You cannot delete or remove the library IP address of a predefined location. 当执行delete或者remove操作时，不能删除预定义地区中库IP地

	址。
The number of IP addresses and subnet addresses configured by users exceeds the upper limit. 用户配置的IP地址数量超过上限。	The number of IP addresses and subnet addresses configured by users cannot exceed the upper limit for a create, merge, or replace operation. 当执行create、merge和replace操作时，用户配置的IP地址数量不能超过上限。
ip-addresses1 overlaps with address *ip-addresses2* that will be added to location location-name. 预添加到location-name地区的*ip-addresses1*与*ip-addresses2*重叠	The new IP addresses cannot conflict with each other for a create, merge, or replace operation. 当执行create、merge和replace操作时，地区下用户输入的新增IP地址之间配置冲突。

GEO/LocationGroup/LocationGroupMembers

Message	Explanation
The number of members in a location group exceeds the upper limit. 地区组引用成员数量超过上限。	The number of members in a location group cannot exceed the upper limit for a create, merge, or replace operation. 当执行create、merge和replace操作时，地区组引用的成员数量不能超过上限。
The location group reference relationship forms a circle. 地区组引用形成循环。	The location group reference relationship cannot form a circle for a create, merge, or replace operation. 当执行create、merge和replace操作时，地区组引用关系不能形成循环。
Maximum nesting level 3 exceeded. 超过了最大嵌套级别3。	The maximum nesting level of a location group cannot exceed 3 for a create, merge, or replace operation. 当执行create、merge和replace操作时，地区组最大嵌套级别不能超过3。

Row name	Class
Restrictions	None
Support for row creation and	No

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassType	User line class type.	Index	Enumeration: • **1**—Console. • **2**—TTY. • **3**—AUX. • **4**—VTY.	The supported line class type depends on the device model.

AuthMode	Authentication mode.	N/A	Enumeration:
			• **0**—None.
			• **1**—Password.
			• **2**—Scheme.
				In FIPS mode, the authentication mode must be scheme.
				The following default settings apply:
				• In non-FIPS mode:
				  ○ Password authentication is enabled for AUX and VTY lines.
				  ○ Authentication is disabled for console and TTY lines.
				  ○ If the device has an AUX port and does not have a console port, authentication is disabled for the AUX line.
				• In FIPS mode, scheme authentication is enabled.
				IMPORTANT:
				If the ProtocolIn value is 0, do not remove, delete, or replace this column. A violation will cause the system to report an error.

Password	Password for password authentication.	N/A	String, case-sensitive. Length: 4 to 16 characters.	Available only in non-FIPS mode.
ProtocolIn	Supported protocols.	N/A	Enumeration: • **0**—SSH. • **1**—Telnet. • **2**—PAD. • **5**—All.	The following default settings apply: • In non-FIPS mode, all protocols are supported. • In FIPS mode, SSH is supported. This column is effective only when the ClassType value is 4 (VTY). If the ProtocolIn value is 0 (SSH), the AuthMode value must be 2 (scheme). Support for PAD depends on the device model.

Login/Class/Roles

The user role information for users on each type of line class.

XML structure

```
<Login>
  <Class>
    <Roles>
      <Role>
        <ClassType></ClassType>
        <RoleName></RoleName>
      </Role>
    </Roles>
  </Class>
</Login>
```

Table description

Item	Description

LOGUPLOAD

LOGUPLOAD/GlobalLogUpload

This table contains configurations for uploading logs to the cloud platform.

XML structure

```
<LOGUPLOAD>
  <GlobalLogUpload>
    <URL></URL>
    <LogType></LogType>
    <UploadTime></UploadTime>
    <UploadSize></UploadSize>
    <Enable></Enable>
  </GlobalLogUpload>
</LOGUPLOAD>
```

Table description

Item	Description
Feature name	LOGUPLOAD
Table name	GlobalLogUpload
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the cloud platform	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
LogType	Type of logs to be uploaded to the cloud platform	N/A	String, case insensitive. Length: 1 to 2047 characters. The string can contain only letters, digits, comma, and underscores (_).	Log types are separated by commas. The type name is same as the ntop log file name. For more imformation, refer to *xxxxx* document. Example: SSLVPN_ACCESS, SSLVPNK_RESOURCE
UploadTime	Period of time for uploading logs	N/A	Unsigned integer. Value range: 1 to 60, in	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			minutes.	
UploadSize	Number of logs to be uploaded	N/A	Unsigned integer. Value range: 200 to 3000.	N/A
Enable	Enable uploading logs	N/A	Boolean: • true—Enabled. • false—Disabled	N/A

LPDT

LPDT/SetPortLoopMode

This table provides configuration of the loop protection action on a port of a PEX in an IRF 3.1 system. This table is for internal users only.

XML structure

```
<LPDT>
  <SetPortLoopMode>
    <IfIndex></IfIndex>
    <Block></Block>
    <NoLearning></NoLearning>
    <Confirm></Confirm>
  </SetPortLoopMode>
</LPDT>
```

Table description

Item	Description
Feature name	LPDT
Table name	SetPortLoopMode
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Block	Whether to block the looped port	N/A	Enumeration: • **0**—Unblock. • **1**—Block.	N/A
NoLearning	Action to take when a frame with an unknown source MAC address is received	N/A	Enumeration: • **0**—Forward. • **1**—Disable MAC address learning. • **2**—Drop.	N/A
Confirm	Check code	N/A	String. Length: 1 to 20 characters.	Fixed at **lpdt action for 1br**.

Table description

Item	Description
Feature name	LPDT
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectVlanList	VLANs to be enabled with loop detection	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “< DetectVlanList base:incremental="true ">”. If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.
DetectedAction	Action to take on an interface where a loop is detected	N/A	Enumeration: • **0**—No action. • **1**—Shut down.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectInterval	Detection interval in seconds	N/A	Unsigned integer. • Value range:1 to 300. • Default: 30.	N/A

LPDT/VSIs

This table provides VSI loop detection configuration.

XML structure

```
<LPDT>

IfVsiLoopbackedEvent event

This event is used to report VSI loop detection events.

XML structure for event subscription

```
<IfVsiLoopbackedEvent>
</IfVsiLoopbackedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LPDT</stream>
    <filter type="subtree">
      <IfVsiLoopbackedEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
      </IfVsiLoopbackedEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	LPDT
Event name	IfVsiLoopbackedEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LPDT:1.0
Support for extended query	No

XML structure for event report

```
<IfVsiLoopbackedEvent>
  <IfVsiLoopbacked>
    <VsiName></VsiName>
    <IfName></IfName>
    <Srv></Srv>
    <LoopStatus></LoopStatus>
  </IfVsiLoopbacked>
</IfVsiLoopbackedEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-11-13T14:22:21</eventTime>
  <IfVsiLoopbackedEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
    <IfVsiLoopbacked>
      <VsiName>Vsi</VsiName>
      <IfName>GigabitEthernet0/0/3</IfName>
```

```
      <Srv>1</Srv>
      <LoopStatus>2</LoopStatus>
    </IfVsiLoopbacked>
  </IfVsiLoopbackedEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
VsiName	VSI name	String. Length: 0 to 31 characters.	N/A
IfName	Interface name	String. Length: 0 to 47 characters.	N/A
Srv	Service instance ID	Unsigned integer. Value range: 1 to 4096.	N/A
LoopStatus	Loop recovery status	Enumeration: • **1**—A loop exists. • **2**—A loop has been removed.	N/A

IfVsiBlockEvent event

This event is used to report VSI loop detection block events.

XML structure for event subscription

```
<IfVsiBlockEvent>
</IfVsiBlockEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LPDT</stream>
    <filter type="subtree">
      <IfVsiBlockEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
      </IfVsiBlockEvent>
    </filter>
  </create-subscription>
</rpc>
```

MAC

MAC/MacUnicastTable

This table contains unicast MAC address table information.

XML structure

```
<MAC>
  <MacUnicastTable>
    <Unicast>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <Status></Status>
    </Unicast>
  </MacUnicastTable>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacUnicastTable
Table type	Multi-instance table
Row name	Unicast
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
PortIndex	Port index	N/A	Unsigned integer.	Required when Status is Learned or Static. It must not be specified when Status is Blackhole.

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	N/A	Enumeration: • **2**—Learned. • **3**—Static. • **4**—Blackhole.	N/A

MAC/MacGroupTable

This table contains multiport MAC address table information.

XML structure

```
<MAC>
  <MacGroupTable>
    <Group>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <Status></Status>
      <PortList></PortList>
    </Group>
  </MacGroupTable>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacGroupTable
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	N/A	Enumeration: • **5**—Multiport. • **6**—Multicast.	N/A
PortList	Port list of the MAC address	N/A	Base64 string.	Bitmap of ports. the string length depends on the device port number. Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface. Each bit represents a port. The left-most bit represents the port with the smallest port index 1 and the right-most bit represents the port with the biggest port index. If a bit is set, the port represented by the bit is included in the port set. Otherwise, the port isn't included.

MAC/MacAging

This table contains the information of aging time for dynamic MAC address entries.

XML structure

```
<MAC>
  <MacAging>
    <AgingTime></AgingTime>
  </MacAging>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacAging
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Aging time for dynamic MAC address entries	N/A	Unsigned integer. Value range: 0, AgingTimeMin to AgingTimeMax seconds.	The default is 300 seconds. 0 means not aging dynamic MAC address entries. Values of AgingTimeMin and AgingTimeMax depend on the device model.

MAC/MacPort

This table contains the information of MAC learning on an interface.

XML structure

```
<MAC>
  <MacPort>
    <PortLearn>
      <PortIndex></PortIndex>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <PortForwardingEnable></PortForwardingEnable>
    </PortLearn>
  </MacPort>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacPort
Table type	Multi-instance table
Row name	PortLearn
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortIndex	Port index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
LearnEnable	Whether the MAC address learning function is enable	N/A	Boolean: • **true**(default) • **false**	N/A
LearnMaxNum	MAC learning limit on an interface	N/A	Unsigned integer. Value range: 0 to PortLearnMaxNumLimit.	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface. 0 means the interface is disabled from learning MAC address. The value of PortLearnMaxNumLimit depends on the device model. The default setting varies by device model.
PortForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit. Whether the PortForwarding function is enable	N/A	Boolean: • **true** (default) • **false**	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface.

MAC/MacVLAN

This table contains the information of MAC learning for a VLAN.

XML structure

```
<MAC>
  <MacVLAN>
    <VLANLearn>
      <VLANID></VLANID>
```

```
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <VLANForwardingEnable></VLANForwardingEnable>
    </VLANLearn>
  </MacVLAN>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacVLAN
Table type	Multi-instance table
Row name	VLANLearn
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
LearnEnable	Whether the MAC address learning function is enable	N/A	Boolean: • **true**(default) • **false**	N/A
LearnMaxNum	MAC learning limit for a VLAN	N/A	Unsigned integer. Value range: 0 to VLANLearnMaxNumLimit.	0 means the VLAN is not allowed to learn MAC addresses. The value of VLANLearnMaxNumLimit depends on the device model. The default setting varies by device model.
VLANForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit. Whether the PortForwarding function is enable	N/A	Boolean: • **true**(default) • **false**	N/A

MAC/MacFwdSrcCheck

This table contains the information of source-mac check.

XML structure

```
<MAC>
  <MacFwdSrcCheck>
    <FwdSrcCheck>
      <IfIndex></IfIndex>
      <FwdSrcCheckEnable></FwdSrcCheckEnable>
    </FwdSrcCheck>
  </MacFwdSrcCheck>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacFwdSrcCheck
Table type	Multi-instance table
Row name	FwdSrcCheck
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface/subinterface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex ID	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
FwdSrcCheckEnable	Source MAC address checking	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	N/A

MAC/MacPortConfig

This table contains the information of MAC config on an interface.

XML structure

```
<MAC>
  <MacPortConfig>
    <PortConfig>
      <IfIndex></IfIndex>
      <PortBridgeEnable></PortBridgeEnable>
      </PortConfig>
  </MacPortConfig>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacPortConfig
Table type	Multi-instance table
Row name	PortConfig
Restrictions	This table supports interface types: Layer 2 Ethernet interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Port index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
PortBridgeEnable	Whether the MAC address bridge function is enable	N/A	Boolean: • **false** (default) • **true**	N/A

MAC/SRVs

This table contains information about service instances of Layer 2 Ethernet interfaces and Layer 3 Ethernet interfaces.

XML structure

```
<MAC>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <LrnPriority></LrnPriority>
    </SRV>
  </SRVs>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	SRVs
Table type	Multi-instance table
Row name	SRV
Restrictions	This table supports Layer 2 Ethernet interfaces and Layer 3 Ethernet interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 0 to 4096.	For a Layer 3 interface, the value must be 0. For a Layer 2 interface, the value range is 1 to 4096.

Column name	Column description	Column type	Data type and restrictions	Remarks
LrnPriority	Priority type of MAC address learning	N/A	Enumeration: • **1**—high • **2**—low	N/A

MAC/MacForwardConverseLearn

This table contains configuration of MAC conversational learning.

XML structure

```
<MAC>
  <MacForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
  </MacForwardConverseLearn>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacForwardConverseLearn
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverseLearnEnable	Whether MAC conversational learning is enabled	N/A	Boolean: • **true**. • **false** (default).	N/A

MAC/MacGblConfig

This table contains global configuration of MAC.

XML structure

```
<MAC>
  <MacGblConfig>
```

```
    <FwdSrcCheckSwitch></FwdSrcCheckSwitch>
    <HardwareLearningMode></HardwareLearningMode>
  </MacGblConfig>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacGblConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FwdSrcCheckSwitch	Global source MAC address checking	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	N/A
HardwareLearningMode	Mac Learning hardware mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A

MAC/VsiMultiportMacs

This table contains information about the local multi-port unicast MAC address entry configuration.

XML structure

```
<MAC>
  <VsiMultiportMacs>
    <VsiMultiportMac>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <MacType></MacType>
      <Port>
          <IfIndex></IfIndex>
          <SrvID></SrvID>
          <PortType></PortType>
      </Port>
    </VsiMultiportMac>
  </VsiMultiportMacs>
```

```
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	VsiMultiportMacs
Table type	Multi-instance table
Row name	VsiMultiportMac
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
MacType	Type of the MAC address entry	N/A	Enumeration: • **1**—Multiport • **2**—Multicast	N/A
Port	Port attributes	Data structure	Members include: • IfIndex • SrvID • PortType	N/A
IfIndex	Port index	N/A	• Unsigned integer.	N/A
SrvID	Service instance ID	N/A	Unsigned integer. • Value range: 0 to 4096.	0 is an invalid value and is required if the interface is a tunnel or peer link.
PortType	Port type	N/A	Enumeration: • **1**—Tunnel • **2**—AC • **3**—Peer link	N/A

MAC/VsiAcSrcMacCheck

This table contains information about the source MAC address check table item of AC entry configuration.

XML structure

```
<MAC>
  <VsiAcSrcMacCheck>
    <AcSrcMacCheck>
      <VsiName></VsiName>
      <MacAddress></MacAddress>
      <MacAddressMask></MacAddressMask>
    </AcSrcMacCheck>
  </VsiAcSrcMacCheck>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	VsiAcSrcMacCheck
Table type	Multi-instance table
Row name	AcSrcMacCheck
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. For the get/get-confg operation,get/get-config the data same as the index column. For the create/merge/repleace operation,the MacAddress's data after configuration is the result of MacAddress & MacAddressMask. For the delete operation,the MacAddress must be the result of the MacAddress & MacAddressMask.

				For the remove operation,remove the configuration of MacAddress & MacAddressMask.
MacAddressMask	MAC address mask	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-00

MAC

MAC/MacUnicastTable

This table contains unicast MAC address table information.

XML structure

```
<MAC>
  <MacUnicastTable>
    <Unicast>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <PortName></PortName>
      <NickName></NickName>
      <Status></Status>
      <Aging></Aging>
    </Unicast>
  </MacUnicastTable>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacUnicastTable
Table type	Multi-instance table
Row name	Unicast
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
PortIndex	Port index	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PortName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
NickName	RB through which packets leave the TRILL network	N/A	Hexadecimal string of 16-bit number	N/A
Status	Status of the MAC address entry	N/A	Enumeration: • **0**—Other. • **1**—Security. • **2**—Learned. • **3**—Static. • **4**—Blackhole.	N/A
Aging	Aging time	N/A	Boolean: • **true**—The entry is aging. • **false**—The entry does not age.	N/A

MAC/MacGroupTable

This table contains multiport MAC address table information.

XML structure

```
<MAC>
  <MacGroupTable>
    <Group>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <Status></Status>
      <PortList></PortList>
    </Group>
  </MacGroupTable>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacGroupTable
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Status	Status of the MAC address entry	N/A	Enumeration: • **5**—Multiport. • **6**—Multicast.	N/A
PortList	Port list of the MAC address	N/A	Base64 string.	Bitmap of ports.

MAC/MacAging

This table contains the information of aging time for dynamic MAC address entries.

XML structure

```
<MAC>
  <MacAging>
    <AgingTimeMin></AgingTimeMin>
    <AgingTimeMax></AgingTimeMax>
    <AgingTime></AgingTime>
  </MacAging>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacAging
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTimeMin	Lower limit of the aging time	N/A	Unsigned integer.	**N/A**
AgingTimeMax	Upper limit of the aging time	N/A	Unsigned integer.	N/A
AgingTime	Aging time for dynamic MAC address entries	N/A	Unsigned integer. Value range: 0, AgingTimeMin to AgingTimeMax seconds.	The default is 300 seconds. 0 means not aging dynamic MAC address entries. Values of AgingTimeMin and AgingTimeMax depend on the device model.

MAC/MacPort

This table contains the information of MAC learning on an interface.

XML structure

```
<MAC>
  <MacPort>
    <PortLearn>
      <PortIndex></PortIndex>
      <PortName></PortName>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <PortForwardingEnable></PortForwardingEnable>
    </PortLearn>
  </MacPort>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacPort
Table type	Multi-instance table
Row name	PortLearn
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface S-channel interface/S-channel aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortIndex	Port index	Index	Unsigned integer.	N/A
PortName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
LearnEnable	MAC address learning	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	N/A
LearnMaxNum	MAC learning limit on an interface	N/A	Unsigned integer. Value range: 0 to PortLearnMaxNumLimit.	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface. 0 means the interface is disabled from learning MAC address. The value of PortLearnMaxNumLimit depends on the device model. The default setting varies by device model.
PortForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface.

MAC/MacVLAN

This table contains the information of MAC learning for a VLAN.

XML structure

```
<MAC>
  <MacVLAN>
    <VLANLearn>
      <VLANID></VLANID>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <VLANForwardingEnable></VLANForwardingEnable>
    </VLANLearn>
```

```
  </MacVLAN>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacVLAN
Table type	Multi-instance table
Row name	VLANLearn
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
LearnEnable	MAC address learning	N/A	Boolean: • **true**—Enabled(default). • **false**—Disabled.	N/A
LearnMaxNum	MAC learning limit for a VLAN	N/A	Unsigned integer. Value range: 0 to VLANLearnMaxNumLimit.	0 means the VLAN is not allowed to learn MAC addresses. The value of VLANLearnMaxNumLimit depends on the device model. The default setting varies by device model.
VLANForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit	N/A	Boolean: • **true**—Enabled(default). • **false**—Disabled.	N/A

MAC/MacSpecification

This table contains MAC specifications information.

XML structure

```
<MAC>
```

```
  <MacSpecification>
    <SupportMacGroup></SupportMacGroup>
    <SupportMacVLANLearnLimit></SupportMacVLANLearnLimit>
    <PortLearnMaxNumLimit></PortLearnMaxNumLimit>
    <VLANLearnMaxNumLimit></VLANLearnMaxNumLimit>
    <SupportPortBridgeEnable></SupportPortBridgeEnable>
    <SupportGblSrcCheckSwitch></SupportGblSrcCheckSwitch>
  </MacSpecification>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SupportMacGroup	Supports for multiport MAC addresses.	N/A	Boolean: • **true**—Support. • **false**—Not support.
SupportMacVLANLearnLimit	Supports for configuring the MAC learning limit for a VLAN.	N/A	Boolean: • **true**—Support. • **false**—Not support.
PortLearnMaxNumLimit	Upper limit of the maximum number for the MAC learning limit on an interface.	N/A	Unsigned integer.
VLANLearnMaxNumLimit	Upper limit of the maximum number for the MAC learning limit for a VLAN.	N/A	Unsigned integer.
SupportPortBridgeEnable	Supports for bridge function.	N/A	Boolean: • **true**—Support. • **false**—Not support.
SupportGblSrcCheckSwitch	Supports for global source MAC check switch.	N/A	Boolean: • **true**—Support. • **false**—Not support.

MAC/MacFwdSrcCheck

This table contains the information of source-mac check.

XML structure

```
<MAC>
  <MacFwdSrcCheck>
    <FwdSrcCheck>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <FwdSrcCheckEnable></FwdSrcCheckEnable>
    </FwdSrcCheck>
  </MacFwdSrcCheck>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	MacFwdSrcCheck
Table type	Multi-instance table
Row name	FwdSrcCheck
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface/subinterface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex ID	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
FwdSrcCheckEnable	Source MAC address checking	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	N/A

MAC/MacPortConfig

This table contains the information of MAC config on an interface.

XML structure

```
<MAC>
  <MacPortConfig>
    <PortConfig>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PortBridgeEnable></PortBridgeEnable>
    </PortConfig>
  </MacPortConfig>
</MAC>
```

Table description

Item	Description

Table name	MacPortConfig
Table type	Multi-instance table
Row name	PortConfig
Restrictions	This table supports interface types: Layer 2 Ethernet interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Port index	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
PortBridgeEnable	Whether the MAC address bridge function is enable	N/A	Boolean: • **false** (default) • **true**	N/A

MAC/SRVs

This table contains information about service instances of Layer 2 Ethernet interfaces and Layer 3 Ethernet interfaces..

XML structure

```
<MAC>
```

```
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <IfName></IfName>
      <LrnPriority></LrnPriority>
    </SRV>
  </SRVs>
</MAC>
```

Table description

Item	Description
Feature name	MAC
Table name	SRVs
Table type	Multi-instance table
Row name	SRV
Restrictions	This table supports Layer 2 Ethernet interfaces and Layer 3 Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 0 to 4096.	For a Layer 3 interface, the value must be 0. For a Layer 2 interface, the value range is 1 to 4096.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
LrnPriority	Priority type of MAC address learning	N/A	Enumeration: • **1—high** • **2—low**	N/A

MAC/MacForwardConverseLearn

This table contains configuration of MAC conversational learning.

XML structure

```
<MAC>
  <MacForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
  </MacForwardConverseLearn>
</MAC>
```

Maximum number of multicast and multiport MAC addresses already reached. 多播和多端口MAC地址个数超过上限。	Maximum number of multicast and multiport MAC addresses already reached,please check configuration or specifications 多播和多端口MAC地址个数超过上限，请检查配置或者设备规格
Maximum number of static MAC addresses already reached. 静态MAC地址个数超过上限。	Maximum number of static MAC addresses already reached,please check configuration or specifications 静态MAC地址个数超过上限，请检查配置或者设备规格
The MAC address already exists. 该MAC地址已经存在。	The MAC address already exists,please check MAC entry 该MAC地址已经存在,请检查MAC表
Some configured ports are not in the VLAN. 一些配置端口与VLAN不匹配。	Some configured ports are not in the VLAN,please check configuration. 一些配置端口与VLAN不匹配。
The MAC address conflicts with another. 与其他MAC地址冲突。	The MAC address conflicts with another, please check configuration. 与其他MAC地址冲突,请检查配置
The value is out of range. 参数值超出范围。	The value is out of range, please modify configuration under guidance. 参数值超出范围，请按照配置说明修改

MAC/MacVLAN

Message	Explanation
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改

Maximum number of ports that can be configured with a multiport MAC address already reached. 可配多端口MAC地址的端口个数超过上限。	Maximum number of ports that can be configured with a multiport MAC address already reached, please check configuration or specifications 可配多端口MAC地址的端口个数超过上限，请检查配置或者设备规格
Maximum number of multicast and multiport MAC addresses already reached. 多播和多端口MAC地址个数超过上限。	Maximum number of multicast and multiport MAC addresses already reached, please check configuration or specifications 多播和多端口MAC地址个数超过上限，请检查配置或者设备规格
Maximum number of static MAC addresses already reached. 静态MAC地址个数超过上限。	Maximum number of static MAC addresses already reached, please check configuration or specifications 静态MAC地址个数超过上限，请检查配置或者设备规格
The MAC address already exists. 该MAC地址已经存在。	The MAC address already exists, please check configuration. 该MAC地址已经存在,请检查配置
Some configured ports are not in the VLAN. 一些配置端口与VLAN不匹配。	Some configured ports are not in the VLAN, please modify configuration under guidance. 一些配置端口与VLAN不匹配，请按照配置说明修改
The MAC address conflicts with another. 与其他MAC地址冲突。	The MAC address conflicts with another, please check configuration. 与其他MAC地址冲突,请检查配置
The VLAN doesn't exist. 该VLAN不存在。	The VLAN doesn't exist，please check vlan configuration 该VLAN不存在，请检查vlan配置
The value is out of range. 参数值超出范围。	The value is out of range, please modify configuration under guidance. 参数值超出范围，请按照配置说明修改

MAC/MacFwdSrcCheck

Message	Explanation
Maximum number of ports that can be configured with a multiport MAC address already reached. 可配多端口MAC地址的端口个数超过上限。	Maximum number of ports that can be configured with a multiport MAC address already reached, please check configuration or specifications 可配多端口MAC地址的端口个数超过上限，请检查配置或者设备规格
Maximum number of multicast and multiport MAC addresses already reached. 多播和多端口MAC地址个数超过上限。	Maximum number of multicast and multiport MAC addresses already reached, please check configuration or specifications 多播和多端口MAC地址个数超过上限，请检查配置或者设备规格
Maximum number of static MAC addresses already reached. 静态MAC地址个数超过上限。	Maximum number of static MAC addresses already reached, please check configuration or specifications 静态MAC地址个数超过上限，请检查配置或者设备规格

The MAC address already exists. 该MAC地址已经存在。	The MAC address already exists, please check configuration. 该MAC地址已经存在,请检查配置
Some configured ports are not in the VLAN. 一些配置端口与VLAN不匹配。	Some configured ports are not in the VLAN, please modify configuration under guidance. 一些配置端口与VLAN不匹配，请按照配置说明修改
The MAC address conflicts with another. 与其他MAC地址冲突。	The MAC address conflicts with another, please check configuration. 与其他MAC地址冲突,请检查配置

MAC/MacPortConfig

Message	Explanation
Maximum number of ports that can be configured with a multiport MAC address already reached. 可配多端口MAC地址的端口个数超过上限。	Maximum number of ports that can be configured with a multiport MAC address already reached, please check configuration or specifications 可配多端口MAC地址的端口个数超过上限，请检查配置或者设备规格
Maximum number of multicast and multiport MAC addresses already reached. 多播和多端口MAC地址个数超过上限。	Maximum number of multicast and multiport MAC addresses already reached, please check configuration or specifications 多播和多端口MAC地址个数超过上限，请检查配置或者设备规格
Maximum number of static MAC addresses already reached. 静态MAC地址个数超过上限。	Maximum number of static MAC addresses already reached, please check configuration or specifications 静态MAC地址个数超过上限，请检查配置或者设备规格
The MAC address already exists. 该MAC地址已经存在。	The MAC address already exists, please check configuration. 该MAC地址已经存在,请检查配置
Some configured ports are not in the VLAN. 一些配置端口与VLAN不匹配。	Some configured ports are not in the VLAN, please modify configuration under guidance. 一些配置端口与VLAN不匹配，请按照配置说明修改
The MAC address conflicts with another. 与其他MAC地址冲突。	The MAC address conflicts with another, please check configuration. 与其他MAC地址冲突,请检查配置

MAC/MacClearByVLAN

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	The VLAN doesn't exist，please check vlan configuration 该VLAN不存在，请检查vlan配置

MAC/MacGblConfig

Message	Explanation
This operation is not supported. 不支持此操作。	This operation is not supported. 不支持此操作
There is no enough resource. 系统资源不足。	Insufficient resources (ACL resource, for example) exist to complete the operation. 系统资源不足，比如ACL资源不足等

MAC/VsiMultiportMacs

Message	Explanation
The specified service instance doesn't exist. 指定的服务实例不存在。	The specified service instance doesn't exist, please modify the configuration under guidance. 指定的服务实例不存在，请按照配置说明修改。
The tunnel interface doesn't belong to the VSI. 隧道接口不属于该VSI。	The tunnel interface doesn't belong to the VSI, please modify the configuration under guidance. 隧道接口不属于该VSI，请按照配置说明修改。
The service interface doesn't belong to the VSI. 服务实例不属于该VSI。	The service interface doesn't belong to the VSI, please modify the configuration under guidance. 服务实例不属于该VSI，请按照配置说明修改。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	Invalid configuration, please modify the configuration under guidance. 无效配置，请按照配置说明修改。
No port exists. 无端口存在。	No port exists, please modify the configuration under guidance. 无端口存在，请按照配置说明修改。
Maximum number of ports that can be configured at a time already reached. 一次性可配端口个数超过上限。	Maximum number of ports that can be configured at a time already reached, please check configuration or specifications. 一次性可配端口个数超过上限，请检查配置或者设备规格。
Invalid MAC address. 非法的MAC地址。	Invalid MAC address. 非法的MAC地址。
The specified VSI doesn't exist. 指定的VSI不存在。	The specified VSI doesn't exist, please modify the configuration under guidance. 指定的VSI不存在，请按照配置说明修改。
The MAC address already exists. 该MAC地址已经存在。	The MAC address already exists,please check MAC entry 该MAC地址已经存在， 请检查MAC 表
Maximum number of ports that can be configured with a multiport MAC address	Maximum number of ports that can be configured with a multiport MAC address already reached ,please check

already reached. 可配多端口MAC地址的端口个数超过上限。	configuration or specifications 可配多端口MAC地址的端口个数超过上限，请检查配置或者设备规格
Maximum number of multicast and multiport MAC addresses already reached. 多播和多端口MAC地址个数超过上限。	Maximum number of multicast and multiport MAC addresses already reached, please check configuration or specifications. 多播和多端口MAC地址个数超过上限，请检查配置或者设备规格
The specified interface is a peer-link interface, Please select the peer-link type. 指定的接口是pee-link接口，请使用peer-link接口类型	The specified interface is a peer-link interface, Please select the peer-link type. 指定的接口是pee-link接口，请使用peer-link接口类型
The peer-link interface does not exist. Peer-link接口不存在	The peer-link interface does not exist. Peer-link接口不存在

MAC/VsiAcSrcMacCheck

Message	Explanation
Illegal MAC address. 非法MAC地址。	Illegal MAC address configuration, please modify configuration under guidance. 非法的MAC地址，请按照配置说明修改
Can't specify the broadcast MAC address. 无法指定广播MAC地址。	Broadcast MAC address is not supported, please modify configuration under guidance. 不支持广播MAC地址，请按照配置说明修改
Can't specify a multicast MAC address. 无法指定多播MAC地址。	Multicast MAC address is not supported, please modify configuration under guidance. 不支持多播MAC地址，请按照配置说明修改
Invalid MAC address mask 无效的MAC地址掩码	Invalid MAC address Mask configuration, please modify configuration under guidance. 非法的MAC地址掩码，请按照配置说明修改
The specified VSI doesn't exist. 指定的 VSI 不存在。	The specified VSI doesn't exist, please modify the configuration under guidance. 指定的VSI不存在，请按照配置说明修改。
This source MAC check entry already exists. 此源MAC检查已存在。	This source MAC check entry already exists, please check source MAC check entry configuration. 一些配置端口与VLAN不匹配，请检查源MAC检查配置。
The MAC address range cannot overlap with the MAC address range of another source MAC check entry. MAC地址范围不能与另一个源MAC检查条目的MAC地址范围重叠。	The MAC address range cannot overlap with the MAC address range of another source MAC check entry, please check source MAC check entry configuration. MAC地址范围不能与另一个源MAC检查条目的MAC地址范围重叠，请检查源MAC检查配置。
Too many entries. 表项过多。	Maximum number of source MAC check entry already reached, please check configuration or specifications

	静态MAC地址个数超过上限，请检查配置或者设备规格

Underlay MAC event stream

Underlay MAC stream description.

Underlay MAC Event

This event is used to report underlay MAC change information.

XML structure for event subscription

```
<UnderlayMacEvent>
</UnderlayMacEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MAC</stream>
    <filter type="subtree">
      <UnderlayMacEvent xmlns="http://www.h3c.com/netconf/event:1.0/MAC:1.0">
      </UnderlayMacEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MAC
Event name	UnderlayMacEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MAC:1.0
Support for extended query	No

XML structure for event report

```
<UnderlayMacEvent>
 <UnderlayMacs>
    <EventType></EventType>
    <Sequence></Sequence>
    <VlanID></VlanID>
    <MacAddr></MacAddr>
```

```
    <IfIndex></IfIndex>
    <MacType></MacType>
    <Aging></Aging>
  </UnderlayMacs>
</UnderlayMacEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2020-08-29T09:10:51</eventTime>
  <UnderlayMacEvent xmlns="http://www.h3c.com/netconf/event:1.0/MAC:1.0">
    <UnderlayMacs>
      <EventType>1</EventType>
      <Sequence>1</Sequence>
      <VlanID>100</VlanID>
      <MacAddr>00-0c-af-e3-5d-c0</MacAddr>
      <IfIndex>10</IfIndex>
      <MacType>1</MacType>
      <Aging>true</Aging>
    </UnderlayMacs>
  </UnderlayMacEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration 1 – Add 2 – Delete 3 – Update 4 –BatchBegin 5 –BatchAdd 6 - BatchEnd	The operation type specifies the operation that MAC should perform.
Sequence	Periodic sequence of the MAC messages.	Unsigned integer. Value range: 1 to 4294967295.	N/A
VlanID	VLAN ID	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddr	MAC address.	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
IfIndex	Output interface index.	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. It must not be specified when MacType is Blackhole.
MacType	Type of the MAC address entry.	Enumeration: • **0**—Other. • **1**—Static. • **2**—Blackhole. • **3**—Dynamic. • **4**—Security. • **5**—8021x.	N/A

Column name	Column description	Data type and restrictions	Remarks
		• **6**—Macauth. • **7**—Voicevlan. • **8**—Openflow.	
Aging	Aging time	Boolean: • **true**—The entry is aging. • **false**—The entry does not age.	N/A

Overlay MAC Event

This event is used to report overlay MAC change information.

XML structure for event subscription

```
<OverlayMacEvent>
</OverlayMacEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MAC</stream>
    <filter type="subtree">
      <OverlayMacEvent xmlns="http://www.h3c.com/netconf/event:1.0/MAC:1.0">
      </OverlayMacEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

      <MacType>1</MacType>
```

```
    </OverlayMacs>
  </OverlayMacEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration 1 – Add 2 – Delete 3 – Update 4 –BatchBegin 5 –BatchAdd 6 - BatchEnd	The operation type specifies the operation that MAC should perform.
Sequence	Periodic sequence of the MAC messages.	Unsigned integer. Value range: 1 to 4294967295.	N/A
L2VifType	L2VPN Logical port type	Enumeration: • **0**—MAC_L2VIF_INVALID_TYPE • **1**—MAC_L2VIF_AC_TYPE • **2**—MAC_L2VIF_TUNNEL_TYPE.	N/A
VsiName	VSI name	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address.	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
TunnelID	Tunnel ID	Unsigned integer.	Required when L2VifType is MAC_L2VIF_ TUNNEL _TYPE.
IfIndex	Interface index.	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. Required when L2VifType

			is MAC_L2VIF_AC_TYPE.
SrvID	Service instance ID	Unsigned integer. Value range: 1 to 4096.	Required when L2VifType is MAC_L2VIF_AC_TYPE.
MacType	Type of the MAC address entry.	Enumeration: • **0**—Other. • **1**—Static. • **2**—Dynamic. • **3**—Evpn. • **4**—Ovsdb. • **5**—Openflow.	N/A
Aging	Aging time	Boolean: • **true**—The entry is aging. • **false**—The entry does not age.	N/A

MACA

MACA/ClearAllStatistics

This table clears MAC authentication statistics for all interfaces.

XML structure

```
<MACA>
  <ClearAllStatistics>
    <Clear></Clear>
  </ClearAllStatistics>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	ClearAllStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears MAC authentication statistics for all interfaces.	N/A	This column must be empty.

MACA/ClearInterStatistics

This table clears MAC authentication statistics for an interface.

XML structure

```
<MACA>
  <ClearInterStatistics>
    <Interface>
      <IfIndex></IfIndex>
```

```
      <Clear></Clear>
    </Interface>
  </ClearInterStatistics>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	ClearInterStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Resets the interface's statistics .	Index	Unsigned integer.
Clear	Clears the interface's statistics.	N/A	This column must be empty.

MACA/ResetGVLANUser

This table removes all MAC authentication users from the guest VLAN on an interface.

XML structure

```
<MACA>
  <ResetGVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <ResetAll></ResetAll>
    </Interface>
  </ResetGVLANUser>
</MACA>

Table description

Item	Description
Feature name	MACA
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global MAC authentication status	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).
Domain	Authentication domain	N/A	String. Length: 1 to 255 characters. Default: No authentication domain is specified for MAC authentication users. The system default authentication domain is used.
UserNameFormat	User account format	N/A	Enumeration: • **1**—Fixed. • **2**—Individual MAC address(default).
Section	MAC address format	N/A	Enumeration: • **1**—Six sections. • **2**—Without hyphen (default). • **3**—Three sections.
LowerCase	Letters in lower case	N/A	Enumeration: • **1**—Lower case (default). • **2**—Upper case.
UserName	Fixed username of the device	N/A	String. Length: 1 to 55 characters. Default value is “mac”.
UserPassword	Password for the fixed user name	N/A	String. Length: 1 to 63 characters. Default is not configured. The user password is in plain text.
IdleInterval	Value for the offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. Default: 300 seconds.
QuietInterval	Value for the quiet timer	N/A	Unsigned integer. Value range: 1 to 3600 seconds. Default: 60 seconds.
ServerInterval	Value for the server timeout timer	N/A	Unsigned integer. Value range: 100 to 300 seconds. Default: 100 seconds.
CVlanInterval	User aging timer value for MAC authentication critical	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	VLANs		Value range: 60 to 2147483647 seconds.
CVsiInterval	User aging timer value for MAC authentication critical VSIs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
GVlanInterval	User aging timer value for MAC authentication guest VLANs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
GVsiInterval	User aging timer value for MAC authentication guest VSIs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
CSegInterval	User aging timer value for MAC authentication critical microsegments	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
MaxSilentMac	Maximum number of silent MACs on every device	N/A	Unsigned integer. Value range: 1000 to product customization. Default: 1024.
TempUserInterval	Value for the temporary user aging timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. Default: 60 seconds.
AuthenMethod	Authentication method of MAC authentication	N/A	Enumeration: • PAP—The Authentication method is PAP(default). • CHAP—The Authentication method is CHAP.

MACA/Interfaces

This table contains MAC authentication information on interfaces.

XML structure

Table description

Item	Description
Feature name	MACA
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Status of MAC authentication	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).
AuthDelayInterval	Value for MAC authentication delay timer	N/A	Unsigned integer. Value range: 1 to 180 seconds.

Column name	Column description	Column type	Data type and restrictions
			Default: Not configured.
MaxUser	Maximum number of users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295. Default: 4294967295.
MaxPreAuthUser	Maximum number of preauth-domain users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295. Default: 4294967295.
MaxAuthFailUser	Maximum number of auth-fail-domain users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295. Default: 4294967295.
ReauthUnreachableMode	Status of users when the AAA server is not available for MAC reauthentication	N/A	Enumeration: • **1**—Offline(default). • **2**—Online.
MultiVLAN	Allows authenticated users in multiple VLANs on this interface	N/A	Enumeration: • **0**—Single VLAN(default). • **1**—Multiple VLAN.
CriticalVLAN	VLAN for users that have failed MAC authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094. Default: Not configured.
GuestVLAN	VLAN for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094. Default: Not configured.
CriticalVSI	VSI for users that have failed MAC authentication because of unreachable servers	Data structure	Members include: • VSIName. • UrlUserLogoff.
VSIName	Critical VSI name	N/A	String. Length: 1 to 31 characters.
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical VSI	N/A	Enumeration: • **0**—Keeps the users online (default). • **1**—Logs off the users.
GuestVSI	VSI for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
Carry	Settings for the feature of including user IP addresses in MAC authentication requests	Data structure	Members include: • UserIP. ACLNumber.
UserIP	Whether to include user IP addresses in MAC authentication requests	N/A	Boolean: • **true**—Include. **false**—Exclude.

Column name	Column description	Column type	Data type and restrictions
ACLNumber	ACL used to filter source IP addresses that can or cannot trigger MAC authentication	N/A	Unsigned integer. Value range: 2000 to 2999 and 5000 to 5999. Default: 0 (no ACL is specified to filter source IP addresses).
Domain	Authentication domain of users on the interface	N/A	String. Length: 1 to 255 characters. Default: No authentication domain is specified for MAC authentication users. The system default authentication domain is used.
AuthOrder	Whether to process MAC authentication immediately after 802.1X authentication is triggered	N/A	Boolean: • **true** • **false**
CriticalMicroSegment	Micro-segment for users that have failed MAC authentication because of unreachable servers	Data structure	N/A
CriticalMicroSegmentID	Critical microsegmen ID	N/A	Unsigned integer. Value range: 1 to 65535
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical microsegment Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical segment	N/A	Enumeration: • **0**—Keeps the users online (default) • **1**—Logs off the users..
CriticalProfile	Critical profile for users that have failed MAC authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0**—Disables online users to bypass offline detection when all authentication servers are unavailable. **1**—Enables online users to bypass offline detection and stay online when all authentication servers are unavailable.

MACA/OfflineDetectTimers

This table contains the parameters for configuring MAC authentication offline detection on a per-user basis.

XML structure

```
<MACA>
  <OfflineDetectTimers>
    <OfflineDetectTimer>
      <MacAddr></MacAddr>
      <Timer></Timer>
      <CheckSnooping></CheckSnooping>
    </OfflineDetectTimer>
  </OfflineDetectTimers>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	OfflineDetectTimers
Table type	Multi-instance table
Row name	OfflineDetectTimer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	User MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Timer	User offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. 0: Skips offline detection for the specified user.	N/A
CheckSnooping	Whether to use the ARP snooping or ND snooping table to determine the offline state of	N/A	Boolean: • **true**. • **false**	• If the ARP snooping or ND snooping table is used, the device searches the ARP snooping or ND snooping table before it checks for traffic from the user within the detection interval. If a matching ARP

Column name	Column description	Column type	Data type and restrictions	Remarks
	the user			snooping or ND snooping entry is found, the device resets the offline detect timer and the user stays online. If the offline detect timer expires because the device has not found a matching snooping entry for the user or received traffic from the user, the device disconnects the user. • If the ARP or ND snooping table is not used, the device disconnects the user if it has not received traffic from that user before the offline detect timer expires.

MACA/AccessUserLog

This table controls the enabling status of logging about MAC authentication users.

XML structure

```
<MACA>
  <AccessUserLog>
    <FailedLogin></FailedLogin>
    <Logoff></Logoff>
    <SuccessfulLogin></SuccessfulLogin>
  </AccessUserLog>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	AccessUserLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
FailedLogin	Whether to enable logging about MAC authentication	N/A	Boolean: • **true**—Enable.

Column name	Column description	Column type	Data type and restrictions
	user login failures		• **false**—Disable(default).
Logoff	Whether to enable logging about MAC authentication user logoffs	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).
SuccessfulLogin	Whether to enable logging about successful MAC authentication user logins	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).

MACA/ProxyPorts

This table contains proxy port infomation of mac-auth.

XML structure

```
<MACA>
  <ProxyPorts>
    <ProxyPort>
      <PortNumber></PortNumber>
      <ProxyType></ProxyType>
    </ProxyPort>
  </ProxyPorts>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	ProxyPorts
Table type	Multi-instance table
Row name	ProxyPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
PortNumber	Port number of TCP	Index	Unsigned integer. Value range: 1-65535. except 80,443
ProxyType	Type of proxy	N/A	Enumeration: • **0**—HTTP • **1**—HTTPS.

MACA/UserRecoveryProfiles

This table contains information for requesting user information from restful server.

XML structure

```
<MACA>
  <UserRecoveryProfiles>
    <UserRecoveryProfile>
      <ProfileName></ProfileName>
      <Server>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <Port></Port>
        <VRF></VRF>
        <URI></URI>
      </Server>
      <LoginName>
        <UserName></UserName>
        <UserPassword></UserPassword>
      </LoginName>
      <NasIp>
        <NasIpType></NasIpType>
        <NasIpAddress></NasIpAddress>
      </NasIp>
    </UserRecoveryProfile>
  </UserRecoveryProfiles>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	UserRecoveryProfiles
Table type	Multi-instance table
Row name	UserRecoveryProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileName	Profile name.	Index	String, case-insensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 31 characters.
Server	Server information.	Data structure	Members include: • IpType. • Host. • Port. • VRF • URI
IpType	IP version of the restful server IP address	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.
IpAddress	IP address of the restful server.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.
Port	Port number of the restful server.	N/A	Unsigned integer. Value range: 1 to 65535. The default value is 80.
VRF	VPN instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.
URI	URI for requesting user information form the restful server.	N/A	String. Length: 1 to 255 characters.
LoginName	Login name for connecting to the restful server.	Data structure	Members include: • UserName. • UserPassword.
UserName	Login user name.	N/A	String. Length: 1 to 55 characters.
UserPassword	Login password.	N/A	String. Length: 1 to 63 characters. Default is not configured. The user password is in plain text.
NasIp	NAS IP	Data structure	Members include: • NasIpType. • NasIpAddress.
NasIpType	IP version of the NAS IP address.	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.
NasIpAddress	NAS IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.

MACA/AutoRecoverUser

This table specifies profiles for requesting user information.

XML structure

```
<MACA>
  <AutoRecoverUsers>
    <AutoRecoverUser>
      <ProfileName></ProfileName>
    </AutoRecoverUser>
  </AutoRecoverUsers>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	AutoRecoverUsers
Table type	Multi-instance table
Row name	AutoRecoverUser
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileName	Profile name.	Index	String, case-insensitive. Length: 1 to 31 characters.

MACA/RedirectUrls

This table specifies URLs of Web servers to be tracked for reachability changes.

XML structure

```
<MACA>
  <RedirectUrls>
    <RedirectUrl>
      <Url></Url>
      <TrackId></TrackId>
    </RedirectUrl>
  </RedirectUrls>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	RedirectUrls
Table type	Multi-instance table
Row name	RedirectUrl
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Url	URL of a Web server	N/A	String. Length: 1 to 255 characters. Default is not configured.
TrackId	Track ID associated with the URL	N/A	Unsigned integer. Value range: 1 to 1024.

Table description

Item	Description
Feature name	MACA
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Status of MAC authentication	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
AuthDelayEnable	Status of MAC authentication delay	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
AuthDelayInterval	Value for MAC authentication delay timer	N/A	Unsigned integer Value range: 1 to 180 seconds.
MaxUser	Maximum number of users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295.
MaxPreAuthUser	Maximum number of preauth-domain users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295.
MaxAuthFailUser	Maximum number of auth-fail-domain users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295.
ReauthUnreachableMode	Status of users when the AAA server is not available for MAC reauthentication	N/A	Enumeration: • **1**—Offline. • **2**—Online.
MultiVLAN	Allows authenticated users in multiple VLANs on this interface	N/A	Enumeration: • **0**—Single VLAN. • 1—Multiple VLAN.
CriticalVLAN	VLAN for users that have failed MAC authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.
GuestVLAN	VLAN for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.

Column name	Column description	Column type	Data type and restrictions
CriticalVSI	VSI for users that have failed MAC authentication because of unreachable servers	Data structure	Members include: • VSIName. • UrlUserLogoff.
VSIName	Critical VSI name	N/A	String. Length: 1 to 31 characters.
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical VSI	N/A	Enumeration: • **0**—Keeps the users online. • **1**—Logs off the users.
GuestVSI	VSI for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
Carry	Settings for the feature of including user IP addresses in MAC authentication requests	Data structure	Members include: • UserIP. • ACLNumber.
UserIP	Whether to include user IP addresses in MAC authentication requests	N/A	Boolean: • **true**—Include. • **false**—Exclude.
ACLNumber	ACL used to filter source IP addresses that can or cannot trigger MAC authentication	N/A	Unsigned integer. Value range: 2000 to 2999 and 5000 to 5999. Default: 0 (no ACL is specified to filter source IP addresses).
OnlineUserNum	Current online user count on the interface	N/A	Unsigned integer.
Domain	Authentication domain of users on the interface	N/A	String. Length: 1 to 255 characters. Default: No authentication domain is specified for MAC authentication users. The system default authentication domain is used.
AuthOrder	Whether to process MAC authentication immediately after 802.1X authentication is triggered	N/A	Boolean: • **true** • **false**
CriticalMicroSegment	Micro-segment for users that have failed MAC authentication because of unreachable servers	Data structure	N/A
CriticalMicroSegmentID	Critical microsegment ID	N/A	Unsigned integer. Value range: 1 to 65535
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical microsegment	N/A	Enumeration: • **0**—Keeps the users online • **1**—Logs off the users..
CriticalProfile	Critical profile for users that have failed MAC authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0**—Disables online users to bypass offline detection when all authentication servers are unavailable. • **1**—Enables online users to bypass offline detection and stay online when all authentication servers are unavailable.

MACA/InterfaceUsers

This table displays MAC authentication user information.

XML structure

```
<MACA>
  <InterfaceUsers>
    <InterfaceUser>
      <IfIndex></IfIndex>
      <UserMAC></UserMAC>
      <Name></Name>
      <Domain></Domain>
      <InitialVLAN></InitialVLAN>
      <AuthzVLAN></AuthzVLAN>
      <AuthzACLGroup></AuthzACLGroup>
      <AuthzUserProfile></AuthzUserProfile>
      <TermAction></TermAction>
      <TimeoutPeriod></TimeoutPeriod>
      <LogonTime></LogonTime>
      <OnlineDuration></OnlineDuration>
      <AuthzVSI></AuthzVSI>
      <AuthzMicroSegmentID></AuthzMicroSegmentID>
      <AuthzURL></AuthzURL>
      <AuthzIPv6URL></AuthzIPv6URL>
      <DrniNasIpType></DrniNasIpType>
      <DrniUserState></DrniUserState>
```

```
      <MLagNasIpType></MLagNasIpType>
      <MLagUserState></MLagUserState>
      <OnlineType></OnlineType>
    </InterfaceUser>
  </InterfaceUsers>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	InterfaceUsers
Table type	Multi-instance table
Row name	InterfaceUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
UserMAC	MAC address of the user on the interface	Index	MAC address.
Name	Username of the user	N/A	String. Length: 1 to 253 characters.
Domain	ISP domain used for MAC authentication	N/A	String. Length: 1 to 255 characters.
InitialVLAN	VLAN to which the user belongs before MAC authentication	N/A	Unsigned integer. Value range: 1 to 4094.
AuthzVLAN	VLAN authorized to the authenticated user	N/A	Unsigned integer. Value range: 1 to 4094.
AuthzACLGroup	ACL authorized to the authenticated user	N/A	Unsigned integer.
AuthzUserProfile	User profile authorized to the authenticated user	N/A	String.
TermAction	Action attribute assigned by the AAA server when the session timeout timer expires	N/A	Enumeration: • **0**—Default. • **1—**Radius-request.
TimeoutPeriod	Value for the AAA server-assigned session timeout timer	N/A	Unsigned integer

Column name	Column description	Column type	Data type and restrictions
LogonTime	Time at which the user logs into the device	N/A	String. Format: YYYY-MM-DD HH:MM:SS.
OnlineDuration	Online duration of the user	N/A	Unsigned integer.
AuthzVSI	VSI name allocated for authenticated user by the AAA server	N/A	String. Length: 1 to 31 characters.
AuthzMicroSegmentID	Microsegment ID authorized to the authenticated user	N/A	Unsigned integer. Value range: 1 to 65535
AuthzURL	URL assigned to the user after the user passes authentication	N/A	String. Length: 1 to 255 characters.
AuthzIPv6URL	IPv6 URL assigned to the user after the user passes authentication	N/A	String. Length: 1 to 255 characters.
DrniNasIpType	In DRNI networking, the nas ip address type used for user authentication on DR interface	N/A	Enumeration: • **1**—Local. • **2**—Peer.
DrniUserState	User status on DR interface in DRNI network	N/A	Enumeration: • **0**—Inactive. • **1**—Active.
MLagNasIpType	In MLAG networking, the nas ip address type used for user authentication on MLAG interface	N/A	Enumeration: • “Local”. • “Peer**”.**
MLagUserState	User status on MLAG interface in MLAG network	N/A	Enumeration: • “Inactive”. • “Active**”.**
OnlineType	Type of online users	N/A	Enumeration: • **1**—Successful. • **2**—Preauth domain. • **3**—Auth-Fail domain. • **4**—Critical domain.

MACA/OfflineDetectTimers

This table contains the parameters for configuring MAC authentication offline detection on a per-user basis.

XML structure

```
<MACA>
  <OfflineDetectTimers>
    <OfflineDetectTimer>
      <MacAddr></MacAddr>
```

```
    <Timer></Timer>
    <CheckSnooping></CheckSnooping>
  </OfflineDetectTimer>
 </OfflineDetectTimers>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	OfflineDetectTimers
Table type	Multi-instance table
Row name	OfflineDetectTimer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	User MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Timer	User offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. 0: Skips offline detection for the specified user.	N/A
CheckSnooping	Whether to use the ARP snooping or ND snooping table to determine the offline state of the user	N/A	Boolean: • **true**. • **false**	• If the ARP snooping or ND snooping table is used, the device searches the ARP snooping or ND snooping table before it checks for traffic from the user within the detection interval. If a matching ARP snooping or ND snooping entry is found, the device resets the offline detect timer and the user stays online. If the offline detect timer expires because the device has not found a matching snooping entry for the user or received traffic from the user, the device disconnects the user. • If the ARP or ND snooping table is not used, the device disconnects the user if it has not received traffic from that user before the offline detect timer expires.

MACA/AccessUserLog

This table controls the enabling status of logging about MAC authentication users.

XML structure

```
<MACA>
  <AccessUserLog>
    <FailedLogin></FailedLogin>
    <Logoff></Logoff>
    <SuccessfulLogin></SuccessfulLogin>
  </AccessUserLog>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	AccessUserLog
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FailedLogin	Whether logging about MAC authentication user login failures is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
Logoff	Whether logging about MAC authentication user logoffs is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
SuccessfulLogin	Whether logging about successful MAC authentication user logins is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

MACA/InterfaceUsersCount

This table contains the number of current online MAC authentication users.

XML structure

```
<MACA>
```

```
  <InterfaceUsersCount>
    <Count></Count>
  </InterfaceUsersCount>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	InterfaceUsersCount
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Count	Number of current online users	N/A	Unsigned integer.

MACA/ProxyPorts

This table contains proxy port infomation of mac-auth.

XML structure

```
<MACA>
  <ProxyPorts>
    <ProxyPort>
      <PortNumber></PortNumber>
      <ProxyType></ProxyType>
    </ProxyPort>
  </ProxyPorts>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	ProxyPorts
Table type	Multi-instance table
Row name	ProxyPort

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PortNumber	Port number of TCP	Index	Unsigned integer. Value range: 1-65535. except 80,443
ProxyType	Type of proxy	N/A	Enumeration: • **0**—HTTP • **1**—HTTPS.

MACA/UserMACs

This table displays MAC authentication MAC-Address information.

XML structure

```
<MACA>
  <UserMACs>
    <UserMAC>
      <Type></Type>
      <IfIndex></IfIndex>
      <MAC></MAC>
    </UserMAC>
  </UserMACs>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	UserMACs
Table type	Multi-instance table
Row name	UserMAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Where are the users in	index	Enumeration: • **1**—Critical VLAN. • **2**—Critical VSI. • **3**—Guest VLAN. • **4**—Guest VSI. • **5**—Critical microsegment.
IfIndex	Interface index	index	Unsigned integer.
MAC	Mac-address of the users	index	MAC address.

MACA/UserRecoveryProfiles

This table contains information for requesting user information from restful server.

XML structure

```
<MACA>
  <UserRecoveryProfiles>
    <UserRecoveryProfile>
      <ProfileName></ProfileName>
      <Server>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <Port></Port>
        <VRF></VRF>
        <URI></URI>
      </Server>
      <LoginName>
        <UserName></UserName>
      </LoginName>
      <NasIp>
        <NasIpType></NasIpType>
        <NasIpAddress></NasIpAddress>
      </NasIp>
    </UserRecoveryProfile>
  </UserRecoveryProfiles>
</MACA>
```

Table description

Item	Description
Feature name	MACA

Table name	UserRecoveryProfiles
Table type	Multi-instance table
Row name	UserRecoveryProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileName	Profile name.	Index	String, case-insensitive. Length: 1 to 31 characters.
Server	Server information.	Data structure	Members include: • IpType. • Host. • Port. • VRF • URI
IpType	IP version of the restful server IP address	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.
IpAddress	IP address of the restful server.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.
Port	Port number of the restful server.	N/A	Unsigned integer. Value range: 1 to 65535. The default value is 80.
VRF	VPN instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.
URI	URI for requesting user information form the restful server.	N/A	String. Length: 1 to 255 characters.
LoginName	Login name for connecting to the restful server.	Data structure	Members include: • UserName.
UserName	Login user name.	N/A	String. Length: 1 to 55 characters.
NasIp	NAS IP	Data structure	Members include: • NasIpType. • NasIpAddress.
NasIpType	IP version of the NAS IP address.	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.
NasIpAddress	NAS IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.

MACA/AutoRecoverUser

This table specifies profiles for requesting user information.

XML structure

```
<MACA>
  <AutoRecoverUsers>
    <AutoRecoverUser>
      <ProfileName></ProfileName>
    </AutoRecoverUser>
  </AutoRecoverUsers>
</MACA>
```

Table description

Item	Description

Table name	AutoRecoverUsers
Table type	Multi-instance table
Row name	AutoRecoverUser
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileName	Profile name.	Index	String, case-insensitive. Length: 1 to 31 characters.

MACA/RedirectUrls

This table specifies URLs of Web servers to be tracked for reachability changes.

XML structure

```
<MACA>
  <RedirectUrls>
    <RedirectUrl>
      <Url></Url>
      <TrackId></TrackId>
    </RedirectUrl>
```

```
  </RedirectUrls>
</MACA>
```

Table description

Item	Description
Feature name	MACA
Table name	RedirectUrls
Table type	Multi-instance table
Row name	RedirectUrl
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Url	URL of a Web server	N/A	String. Length: 1 to 255 characters. Default is not configured.
TrackId	Track ID associated with the URL	N/A	Unsigned integer. Value range: 1 to 1024.

MACA event stream

MAC authentication event stream description.

MACA event

This event is used to report MAC authentication information, including user login time and logoff time, or authentication failure time and reason.

XML structure for event subscription

```
<MACAuthTrace>
</MACAuthTrace>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MACA</stream>
    <filter type="subtree">
      <MACAuthTrace xmlns="http://www.h3c.com/netconf/event:1.0/MACA:1.0">
      </MACAuthTrace>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MACA
Event name	MACAuthTrace
Event namespace	http://www.h3c.com/netconf/event:1.0/ MACA:1.0
Support for extended query	No

XML structure for event report

```
<MACAuthTrace>
  <User>
    <UserMAC></UserMAC>
    <SN></SN>
    <UserName></UserName>
    <IfName></IfName>
    <AuthorVLAN></AuthorVLAN>
    <Type></Type>
    <StartTime></StartTime>
    <LoginTime></LoginTime>
    <AuthFailTime></AuthFailTime>
```

```
    <AuthFailReason></AuthFailReason>
    <LogoffTime></LogoffTime>
    <LogoffReason></LogoffReason>
    <ErrorCode></ErrorCode>
  </User>
</MACAuthTrace>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-07-05T10:24:36</eventTime>
  <MACAuthTrace xmlns="http://www.h3c.com/netconf/event:1.0/MACA:1.0">

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
UserMAC	User MAC address	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	No	Example: 00-01-00-01-00-01.
SN	Device serial number	String. Length: 1 to 32 characters.	No	N/A
UserName	Username	String. Length: 1 to 55 characters.	No	N/A
IfName	Name of the interface through which the user accesses the device	String. Length: 2 to 47 characters.	No	Example: GigabitEthernet2/0/2.

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
AuthorVLAN	ID of the authorization VLAN	Unsigned short. Value range: 1 to 4094.	No	This column is empty when the event type is 3.
Type	Authentication event type	Enumeration: • **1**—User login. • **2**—User logoff. • **3**—User authentication failure.	No	N/A
StartTime	Time when the authentication started	Unsigned integer64. Unit: microsecond.	No	N/A
LoginTime	Time when the user logged in	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 3.
AuthFailTime	Time when the user failed authentication	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 1 or 2.
AuthFailReason	Authentication failure reason	String. Length: 1 to 253 characters.	No	This column is empty when the event type is 1 or 2.
LogoffTime	Time when the user logged off	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 1 or 3.
LogoffReason	User logoff reason	String. Length: 1 to 253 characters.	No	This column is empty when the event type is 1 or 3. Logoff reasons: • Supplicant logoff. • Supplicant restart. • Reauthentication failure. • Port went down and then came up again. • The port was administratively down. • Online handshake failure. • Idle timeout. • Session timeout. • Real-time accounting failure. • Port status error. • Deauthorization by the device. • The server logged the user off. • Unknown reason.
ErrorCode	Error code	Unsigned integer.	No	Error codes: • **0**—Authentication success code.

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
				• **1 to 19999**—Authentication failure codes. • **20000 to 39999**—User logoff reason codes. • **50000**—Unknown reason code. Authentication failure codes: • **1 to 1999**—Supplicant reasons. • **2000 to 3999**—Device reasons. • **4000 to 5999**—Authentication server reasons. User logoff reason codes: • **20000 to 21999**—Supplicant reasons. • **22000 to 23999**—Device reasons. • **24000 to 25999**—Authentication server reasons.

			HostName: Case-insensitive string, Length: 1 to 253 characters.	
HostType	Host Address type.	N/A	• Enumeration: 1— Domain. 2— IPv4. 3— IPv6	Use with the column of Address.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 25.	
UserName	E-mail server login username.	N/A	String. Length: 1 to 63 characters.	String cannot include special characters as follows: (&|'",:%<>/\).
Password	E-mail server login password in encrypted form or plaintext form.	N/A	String, case-sensitive. Length: 1 to 117 characters.	Configure CipherKey or SimpleKey, but not both. This column cannot be configured if the username is not configured.
PasswordType	E-mail server login password type, encrypted form or plaintext form.	N/A	Enumeration: 1— plaintext form. 2— encrypted form.	Password type of CipherKey or SimpleKey. This column cannot be configured if the password is not configured.
VPN	Name of the VPN instance associated with the VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
SSLClientPolicy	Name of the SSL client policy used by the SSL	N/A	String, case insensitive. Length: 1 to 31 characters.	New feature, not compatible with the old table.

Table description

Item	Description
Feature name	MAIL
Table name	EmailServers
Table type	Multi-instance table
Row name	EmailServer
Restrictions	Only e-mail server can be configured by this table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the e-mail server.	Index	String. Length: 1 to 63 characters.	String cannot include special characters as follows: (&|"',:%<>/\).
Address	Address of the mail host	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	1. IPv4 example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported. 2. IPv6 example: 1:2:3:4:5:6:7:8. 3. HostName example: www. example.com. The string can contain letters, numbers, hyphens(-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can

Column name	Column description	Column type	Data type and restrictions	Remarks
				appear in the domain name. Question marks and asterisks can appear in the domain name at the same time. Domain separated by dot (.), each segment shall not exceed 63 characters. This column cannot be configured if the Type is not configured.
HostType	Host Address type.	N/A	Enumeration: 1— Domain. 2— IPv4. 3— IPv6	Use with the column of Address.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 25.	N/A
UserName	E-mail server login username.	N/A	String. Length: 1 to 63 characters.	String cannot include special characters as follows: (&|'",:%<>/\).?
Password	E-mail server login password in encrypted form or plaintext form.	N/A	String, case-sensitive. Length: 1 to 117 characters.	Configure CipherKey or SimpleKey, but not both. This column cannot be configured if the username is not configured.
PasswordType	E-mail server login password type, encrypted form or plaintext form.	N/A	Enumeration: 1— plaintext form. 2— encrypted form.	Password type of CipherKey or SimpleKey. This column cannot be configured if the password is not configured.
EmailSubject	Subject for e-mail.	N/A	String. Length: 1 to 255 characters.	String cannot include special characters as follows:

Column name	Column description	Column type	Data type and restrictions	Remarks
				(&|"',:%<>/\).
EmailSender	E-mail sender address.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Only one e-mail sender can be configured.
EmailRecipients	E-mail receiver address.	Subtable	N/A	EmailRecipients tables. For more information, see the Mail/EmailServers/EmailRecipients table.
EmailCopytos	E-mail copyto recipients address.	Subtable	N/A	EmailCopytos tables. For more information, see the Mail/EmailServers/EmailCopytos table.
VPN	Name of the VPN instance associated with the VPN context.	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
SSLClientPolicy	Name of the SSL client policy used by the SSL context.	N/A	String, case insensitive. Length: 1 to 31 characters.	The SSL client policy is effective only for SMTPS protocol.

Mail/EmailServers/EmailRecipients

Row name	Memory

Restrictions	Only support default MDC.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	The default value is 100.

MDC/Resources/CPUs

This table contains cpu infomation.

XML structure

```
<MDC>
  <Resources>
    <CPUs>
      <CPU>
        <MDCID></MDCID>
        <Weight></Weight>
      </CPU>
    </CPUs>
  </Resources>
</MDC>
```

Table description

Item	Description
Feature name	MDC

Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Only support default MDC.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Weight	CPU weight-maximum of available resources of CPU(weight)	N/A	Positive integer. Value range:1-10	Limit maxmum of cpu resource. Default:Each MDC has a CPU weight of 10.

MDC/LocationEntitys

This table contains location state.

XML structure

```
<MDC>
  <Locations>
    <Location>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <State></State>
    </Location>
  </Locations>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	Locations
Table type	Multi-instance table
Row name	Location
Restrictions	Only support default MDC.Blade controllers must be locationed by

	BladeControllerTeam table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the interface cards. Default: All interface cards of the device belong to the default MDC.

MDC/LocationBladeControllerTeam

This table contains location state of BladeControllerTeam.

XML structure

```
<MDC>
  <LocationBladeControllerTeams>
    <LocationBladeControllerTeam>
      <MDCID></MDCID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBladeControllerTeam>
  </LocationBladeControllerTeams>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBladeControllerTeam
Restrictions	Only support default MDC.

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1 to 256.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the resource of BladeControllerTeams. Default: All BladeControllerTeams of the device belong to the default MDC.

MDC/AllocationIdentities

This table contains physical interface.

XML structure

```
<MDC>
  <Allocations>
    <Allocation>
      <MDCID></MDCID>
      <InterfaceList></InterfaceList>
    </Allocation>
  </Allocations>
</MDC>
```

Table description

CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Reserved	reserve resources of memory (KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the MDC doesn't have reserve resource of memory.
Quota	The total limit resources of memory (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maxmum of disk resource.
Used	Current usage of memory resources (KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of memory(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used)and idle resource of disk.
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	N/A

MDC/Resources/CPUs

This table contains cpu infomation.

XML structure

```
<MDC>
  <Resources>
    <CPUs>
      <CPU>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Weight></Weight>
        <Usage></Usage>
      </CPU>
    </CPUs>
  </Resources>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Default MDC can query infomation of all MDCs. Non-default MDC can only query the current MDC's information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Weight	CPU weight-maximum of available resources of CPU (weight)	N/A	Positive integer.	Limit maxmum of cpu resource. Default:Each MDC has a CPU weight of 10.
Usage	Current usage of CPUresources (%)	N/A	Unsigned integer. Value range: 0 to 100.	N/A

MDC/LocationEntitys

This table contains location state.

XML structure

```
<MDC>
  <LocationEntitys>
    <LocationEntity>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <State></State>
```

```
    </LocationEntity>
  </LocationEntitys>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	LocationEntitys
Table type	Multi-instance table
Row name	LocationEntity
Restrictions	Information of BladeControllerTeam table will be changed to c-s-c and display in LocationEntitys table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location:Authorize the MDC to use the interface cards. Default: All interface cards of the device belong to the default MDC.

MDC/AllocationIdentities

This table contains physical interface.

XML structure

```
<MDC>
  <AllocationIdentities>
    <AllocationIdentity>
      <PhysicalIndex></PhysicalIndex>
```

```
      <IfName></IfName>
      <AllocationIdentity></AllocationIdentity>
    </AllocationIdentity>
  </AllocationIdentities>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	AllocationIdentities
Table type	Multi-instance table
Row name	AllocationIdentity
Restrictions	Default MDC can query infomation of all interface group. Non-default MDC can only query the current MDC's interface group.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhysicalIndex	Entity index of an interface	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
AllocationIdentity	Group Identifier	N/A	String. Length: 1 to 255 characters.	The interfaces in a group must be assigned to the same MDC at the same time or removed from an MDC at the same time.

MDC/InterfaceAllocations

This table contains MDC of interface.

XML structure

```
<MDC>
  <InterfaceAllocations>
    <InterfaceAllocation>
      <PhysicalIndex></PhysicalIndex>
      <IfName></IfName>
      <MDCID></MDCID>
    </InterfaceAllocation>
  </InterfaceAllocations>
```

```
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	InterfaceAllocations
Table type	Multi-instance table
Row name	InterfaceAllocation
Restrictions	Default MDC can query infomation of all interface. Non-default MDC can only query the current MDC's interface.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhysicalIndex	Entity index of an interface	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
MDCID	MDC ID of interface	N/A	Unsigned integer.	The value range depends on the device model.

MDC/Allocations

This table contains physical interface.

XML structure

```
<MDC>
  <Allocations>
    <Allocation>
      <MDCID></MDCID>
      <InterfaceList></InterfaceList>
    </Allocation>
  </Allocations>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	Allocations

Table type	Multi-instance table
Row name	Allocation
Restrictions	Only support default MDC.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC ID of interface	N/A	Unsigned integer.	The value range depends on the device model.
InterfaceList	List of interfaces	N/A	String. Length: 1 to 32767 characters.	Different interfaces combinations(a sigle interface or interface list)are separated by comma‘,’,interface lists are separated by ‘ to ’(There is a apace on both sides of the word ‘to’). reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48

MDC/Locations

This table contains location state.

XML structure

```
<MDC>
  <Locations>
    <Location>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <State></State>
    </Location>
  </Locations>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	Locations
Table type	Multi-instance table

Row name	Location
Restrictions	Only support default MDC.Blade controllers must be locationed by BladeControllerTeam table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the interface cards.

MDC/LocationBladeControllerTeam

This table contains location state of BladeControllerTeam.

XML structure

```
<MDC>
  <LocationBladeControllerTeams>
    <LocationBladeControllerTeam>
      <MDCID></MDCID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBladeControllerTeam>
  </LocationBladeControllerTeams>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBladeControllerTeam
Restrictions	Only support default MDC.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1 to 256.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the resource of BladeControllerTeams.

MDC/RebootInfos

This table contains reboot information of MDC.

XML structure

```
<MDC>
  <RebootInfos>
    <RebootInfo>
      <MDCID></MDCID>
      <Index></Index>
      <Time></Time>
      <Reason></Reason>
      <Detail></Detail>
    </RebootInfo>
  </RebootInfos>
</MDC>
```

Table description

Item	Description
Feature name	MDC
Table name	RebootInfos
Table type	Multi-instance table
Row name	RebootInfo
Restrictions	Default MDC can query information of all MDC. Non-default MDC can only query the current MDC's information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
`Index`	Index of reboot information	Index	Unsigned integer. Value range: 1 to 20.	N/A
`Time`	Time of reboot information	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
`Reason`	Time of reboot information	N/A	String. Length: 1 to 256 characters.	N/A
Detail	Detail of reboot information	N/A	String. Length: 1 to 256 characters.	N/A

MDC

MDC/Contexts

Message	Explanation
Please install the license for the MDC feature first. MDC特性没有可用的license。	The license is invalid during executing create or start MDC operations. Please check the license's validity and install. 创建 MDC 或者启动 MDC 时没有安装 license，或者 license 无效。
Number of MDCs exceeded the limit. 操作失败，MDC个数超过最大限额。	During executing MDC creation, The MDC numbers exceeded the limit. 创建MDC时，MDC个数已经超过系统限制个数，不能继续创建了。
The MDC is not authorized to use this slot. MDC没有进驻该板。	The MDC is not authorized to use this slot, so that it cannot set or require this slot memory resource. MDC 没有进驻改板，无法设置和查询 memory 资源
Not enough resources available. 资源不足导致操作失败。	Memory space is not enough to operating start a MDC. 启动MDC时，各资源申请内存资源不足导致失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。
The MDC is busy. Please try again later. MDC正在忙，请稍后重试。	It cannot start or stop the MDC, due to the MDC is starting or stopping. 该MDC正在启动或者停止，不能再进行启动或者停止操作。
The MDC name and ID must identify the same MDC. 输入的MDC名称有误，请输入与ID对应的名称。	The MDC name and ID must identify the same MDC. 输入MDC名称错误，与MDC id不匹配。
Invalid MDC ID or MDC name. 输入的MDC ID或者名称无效。	Invalid MDC ID or MDC name. 输入的MDC ID或者名称无效。
The default MDC can't be deleted. 不允许删除缺省MDC。	The default MDC can't be deleted. 不允许删除缺省MDC。
Not enough resources available. 资源不足，创建MDC失败。	Not enough resources available. 资源不足，创建MDC失败。

MDC/Resources/Disks

Message	Explanation
Not enough disk space available. 磁盘资源不足。	It has not enough disk space, please check the disk space. 限制MDC磁盘使用率时，磁盘空间不足，请检查。
The MDC is not authorized to use this slot. MDC没有进驻该板。	The MDC is not authorized to use this slot, so that it cannot set or require this slot disk resource. MDC没有进驻改板，无法设置和查询disk资源

Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

MDC/Resources/Memories

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

MDC/Resources/CPUs

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

MDC/Locations

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	During executing location operation, it may fail and return error message: ” Not enough resources available. ”. The reasons may be exceeding the mdc number limit, lack of memory space or disk space in this slot,. Location单板失败时会返回资源不足，包括当前单板mdc个数，内存不足和磁盘资源不足等情况。
Operation failed. There are IRF physical ports. 存在IRF物理端口，不允许MDC退出接口板。	The IRF devices will be devided, If MDC exiting the IO board which has IRF physics ports. 当MDC在接口板上存在IRF的物理端口，不允许该MDC undo location接口板，否则会导致堆叠分裂。
Restoring MDC configuration. Please try again	Set operations is forbidden, when MDC is not start over.

later. MDC正在恢复配置，请稍后重试。	当MDC还没有配置恢复完成是，不允许设置相关的操作。
The MDC is busy. Please try again later. MDC正在忙，请稍后重试。	It cannot location the MDC, due to the MDC is starting or stopping. 该MDC正在启动或者停止，不能再进行location操作。
Not enough hardware resources available. 硬件资源不足导致操作失败。	This slot is lack of hardware resources. 单板的内存不足或者其他问题。

MDC/AllocationIdentities

Message	Explanation
Some interfaces group have not include all of its interface. 接口组未包含全部的接口，分配失败。	Some interfaces group have not include all of its interface. 接口组未包含全部的接口，分配失败。
Some type of interfaces can not be allocated to an MDC exclusively. 接口列表中包含不能独占分配的接口。	Some type of interfaces can not be allocated to an MDC exclusively. 接口列表中包含不能独占分配的接口。
Some interfaces are duplicated. 接口列表中包含重复的接口名。	The MDC alloc interfaces failed. MDC 分配接口失败
Some interfaces are invalid. 存在不合法接口。	Some interfaces are invalid. 存在不合法接口。

MGROUP

MGROUP/Groups

This table contains information about mirroring groups.

XML structure

```
<MGROUP>
  <Groups>
    <Group>
      <ID></ID>
      <Type></Type>
      <KeepLinkHeader></KeepLinkHeader>
      <Sampler></Sampler>
    </Group>
  </Groups>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256	The range of mirroring group ID depends on the device model.
Type	Mirroring group type.	N/A	Enumeration: • **1**—Local. • **2**—Remote-source. • **3**—Remote-destination.	Required. Can not change the type if the mirroring group has been created.
KeepLinkHeader	Keep source or destination MAC unchanged.	N/A	Boolean: • **true**—Keep source or destination MAC	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			unchanged. • **false**—Do nothing.	
Sampler	References the sampler to limit the volume of traffic to be mirrored.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Can not change this item if the mirroring group has been created. Support for this option depends on the device model.

MGROUP/MonitorPort

This table contains information about monitor port of mirroring groups.

XML structure

```
<MGROUP>
  <MonitorPort>
    <Group>
      <ID></ID>
      <Port></Port>
      <IP>
        <DestIP></DestIP>
        <SrcIP></SrcIP>
        <DSCP></DSCP>
        <VLAN></VLAN>
        <VRF></VRF>
        <ReflectorPort></ReflectorPort>
        <ProbeVlan></ProbeVlan>
      </IP>
      <Mac></Mac>
    </Group>
  </MonitorPort>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	MonitorPort
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is local or remote destination, monitor port can be configured.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of monitor port.	N/A	Unsigned integer.	Required. Can not change the port if the monitor port has been created.
IP	Specify IP for mirroring to interface	Data structure	Members include: • **DestIP.** • **SrcIP.** • **DSCP.** • **VLAN.** • **VRF.**	DestIP and SrcIP must both be specified. DSCP, VLAN and VRF can be optionally specified when DestIP and SrcIP are configured.
DestIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
ReflectorPort	Index of reflector port	N/A	Unsigned integer.	ReflectorPort and ProbeVlan must both be specified. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ProbeVlan	Probe VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

MGROUP/ReflectorPort

This table contains information about reflector port of mirroring groups.

XML structure

```
<MGROUP>
  <ReflectorPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </ReflectorPort>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	ReflectorPort
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source, reflector port can be configured.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of reflector port.	N/A	Unsigned integer.	Required. Can not change the port if the reflector port has been created.

MGROUP/EgressPort

This table contains information about egress port of mirroring groups.

XML structure

```
<MGROUP>
  <EgressPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </EgressPort>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	EgressPort
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source, egress port can be configured.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of egress port.	N/A	Unsigned integer.	Required. Can not change the port if the egress port has been created.

MGROUP/ProbeVlan

This table contains information about remote probe VLAN of mirroring groups.

XML structure

```
<MGROUP>
  <ProbeVlan>
    <Group>
      <ID></ID>
```

```
      <VlanID></VlanID>
    </Group>
  </ProbeVlan>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	ProbeVlan
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source or remote destination, remote probe VLAN can be configured.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
VlanID	Probe VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	Required. Can not change the vlan if the probe vlan has been created.

MGROUP/SourcePorts

This table contains information about source ports of the mirroring group.

XML structure

```
<MGROUP>
  <SourcePorts>
    <SourcePort>
      <ID></ID>
      <IfIndex></IfIndex>
      <Direction></Direction>
    </SourcePort>
  </SourcePorts>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	SourcePorts
Table type	Multi-instance table
Row name	SourcePort
Restrictions	When the type of mirroring group is remote source or local, source port can be configured.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Direction of source port.	N/A	Enumeration: • **1**—Inbound. • **2**—Outbound. • **3**—Both.	Required

For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ReflectorPort Name	Name of reflector port	N/A	String. Length: 1 to 47 characters.	N/A
ProbeVlan	Probe VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Mac	Specify destination MAC	N/A	Six groups of two hexadecimal digits,	Example: 00-0c-af-e3-5d-c0.

Column name	Column description	Column type	Data type and restrictions	Remarks
	for mirroring to interface		hyphen-separated.	

MGROUP/ReflectorPort

This table contains information about reflector port of mirroring groups.

XML structure

```
<MGROUP>
  <ReflectorPort>
    <Group>
      <ID></ID>
      <Port></Port>
      <IfName></IfName>
    </Group>
  </ReflectorPort>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	ReflectorPort
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of reflector port.	N/A	Unsigned integer.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MGROUP/EgressPort

This table contains information about egress port of mirroring groups.

XML structure

```
<MGROUP>
  <EgressPort>
    <Group>
      <ID></ID>
      <Port></Port>
      <IfName></IfName>
    </Group>
  </EgressPort>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	EgressPort
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of egress port.	N/A	Unsigned integer.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MGROUP/ProbeVlan

This table contains information about remote probe VLAN of mirroring groups.

XML structure

```
<MGROUP>
  <ProbeVlan>
    <Group>
      <ID></ID>
      <VlanID></VlanID>
    </Group>
```

```
  </ProbeVlan>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	ProbeVlan
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
VlanID	Probe VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

MGROUP/SourcePorts

This table contains information about source ports of the mirroring group.

XML structure

```
<MGROUP>
  <SourcePorts>
    <SourcePort>
      <ID></ID>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <IfName></IfName>
    </SourcePort>
  </SourcePorts>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP

Table name	SourcePorts
Table type	Multi-instance table
Row name	SourcePort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Direction of source port.	N/A	Enumeration: • **1**—Inbound. • **2**—Outbound. • **3**—Both.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MGROUP/Capabilities

This table contains capability information about mirroring group.

XML structure

```
<MGROUP>
  <Capabilities>
    <MaxGroupNum></MaxGroupNum>
    <SourceType></SourceType>
    <VlanTagMode></VlanTagMode>
    <MultiMonitor></MultiMonitor>
    <Sampler></Sampler>
    <MultiMonitorInOneGroup></MultiMonitorInOneGroup>
  </Capabilities>
</MGROUP>
```

Table description

Item	Description
Feature name	MGROUP
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupNum	Max mirroring group number.	N/A	Unsigned integer	The range of mirroring group ID depends on the device model.
SourceType	Mirroring group source type.	N/A	Each bit represents a type as follows: 1—VLAN inbound 2—VLAN outbound 4—CPU inbound 8—CPU outbound	N/A
VlanTagMode	The VLAN tag on the message of the remote source mirroring group.	N/A	Each bit represents a type as follows: 1—Reflector 2—Egress 4—Reflector inner	N/A
MultiMonitor	Whether one port can be the source port of multiple mirroring groups.	N/A	Boolean: true—Support false—Not support	N/A
Sampler	The mirroring group type which support sampler.	N/A	Each bit represents a type as follows: 1—Local 2—Source 4—Remote destination	N/A
MultiMonitorInOneGroup	Whether one mirroring group supports multiple monitor ports.	N/A	Boolean: true—Support • false—Not support	N/A

MLAG

MLAG/Base

This table contains M-LAG Base information.

XML structure

```
<MLAG>
  <Base>
    <SystemMAC></SystemMAC>
    <SystemPriority></SystemPriority>
    <SystemNumber></SystemNumber>
    <RestoreDelay></RestoreDelay>
    <AutoRecoveryReloadDelay></AutoRecoveryReloadDelay>
    <AuthenticationKey></AuthenticationKey>
    <SequenceCheckEnable></SequenceCheckEnable>
    <StandaloneDelay></StandaloneDelay>
    <ReservedVlanList></ReservedVlanList>
  </Base>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	M-LAG system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same M-LAG MAC address for the M-LAG member devices in an M-LAG system.
SystemPriority	M-LAG system priority	N/A	Unsigned integer. Value range: 0 to 65535.	Configure the same M-LAG system priority for the M-LAG member

			Default: 32768.	devices in an M-LAG system.
SystemNumber	M-LAG system number	N/A	Unsigned integer. Value range: 1 or 2.	Assign different M-LAG system numbers to the M-LAG member devices in an M-LAG system.
RestoreDelay	Data restoration interval in seconds	N/A	Unsigned integer. Value range: 1 to 3600. Default: 30.	N/A
AutoRecoveryReloadDelay	Reload delay timer in seconds for M-LAG system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A
AuthenticationKey	Encrypted authentication key of packets.	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form.
SequenceCheckEnable	Whether the sequence number check on packets is enabled	N/A	Boolean: • true • false(default)	N/A
StandaloneDelay	Delay that the device must wait before changing to M-LAG standalone mode, in seconds	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
ReservedVlanList	Reserved VLANs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. When the VLAN does not exist, the delivery fails.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “< ReservedVlanList base:incremental="true ">”. If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.

MLAG/Role

This table contains M-LAG Role information.

XML structure

```
<MLAG>
  <Role>
    <LocalRolePriority></LocalRolePriority>
```

```
  </Role>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	M-LAG role priority of the local M-LAG member device	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	The lower the value, the higher the priority.

MLAG/Keepalive

This table contains M-LAG Keepalive information.

XML structure

```
<MLAG>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
    <KeepaliveHoldTime></KeepaliveHoldTime>
    <VRF></VRF>
```

```
  </Keepalive>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV4. • KeepaliveSourceIPV4.	N/A
KeepaliveDestinationIPV4	Destination IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPV4	Source IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.2 This column must be with the KeepaliveDestinationIPV4 column.
IPV6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV6. • KeepaliveSourceIPV6.	N/A
KeepaliveDestinationIPV6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPV6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:2 This column must be with the KeepaliveDestinationIPV6 column.
KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535. Default: 6400	The KeepaliveUDPPort must be with the IP address and KeepaliveUDPPort will be deleted when you delete IP address.
KeepaliveInte	Keepalive	N/A	Unsigned integer	N/A

rval	interval in milliseconds		Value range: 100 to 10000. Default: 1000.	
KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20 Default: 5.	The M-ALG keepalive timeout timer must be two times the M-LAG keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10. Default: 3.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.

MLAG/PeerLinkTable

This table contains information about M-LAG peer-link interface

XML structure

```
<MLAG>
  <PeerLinkTable>
    <PeerLink>
      <PeerLinkNumber></PeerLinkNumber>
      <IfIndex></IfIndex>
    </PeerLink>
  </PeerLinkTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	PeerLinkTable
Table type	Multi-instance table
Row name	PeerLink
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerLinkNumber	M-LAG Peer-link interface ID	Index	Unsigned integer.	The peer-link interface ID must be fixed at 1.

IfIndex	Interface index	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MLAG/MLagPortTable

This table contains information about M-LAG interfacess.

XML structure

```
<MLAG>
  <MLagPortTable>
    <MLagPort>
      <MLagGroupId></MLagGroupId>
      <IfIndex></IfIndex>
      <AllowSingleMember></AllowSingleMember>
    </MLagPort>
  </MLagPortTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	MLagPortTable
Table type	Multi-instance table
Row name	MLagPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MLagGroupId	M-Lag group ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A

IfIndex	IfIndex value of the Layer 2 aggregate interface.	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllowSingleMember	Whether allow the aggregate interface to be the single member in the M-LAG group	N/A	Boolean: • true • false(default)	N/A

MLAG/MLagAllPortTable

This table contains port information about M-LAG.

XML structure

```
<MLAG>
  <MLagAllPortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrcpShortPeriodEnable></DrcpShortPeriodEnable>
      <PortSystemPriority></PortSystemPriority>
      <PortSystemMAC></PortSystemMAC>
    </Port>
  </MLagAllPortTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	MLagAllPortTable
Table type	Multi-instance table
Row name	Port
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DrcpShortPeriodEnable	Whether enable the short DRCP timeout timer.	N/A	Boolean: • true • false(default)	N/A
PortSystemPriority	M-LAG interface system priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	Configure the same M-LAG system priority on the M-LAG interfaces in the same M-LAG group
PortSystemMAC	M-LAG interface system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same M-LAG MAC address on the M-LAG interfaces in the same M-LAG group

MLAG/MAD/MADTable

This table contains information about M-LAG MAD.

XML structure

```
<MLAG>
  <MAD>
    <MADTable>
      <MADDefaultAction></MADDefaultAction>
      <MADPersistent></MADPersistent>
      <ExcludeLogicalInterfaces></ExcludeLogicalInterfaces>
    </MADTable>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG

Item	Description
Table name	MADTable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MADDefaultAction	The default action of M-LAG MAD.	N/A	Enumeration: • down(Default). • none.	• Down. Interfaces will be set to M-LAG MAD SHUTDOWN state when the peer link goes down except excluded interfaces. • None: Interfaces will not be set to M-LAG MAD SHUTDOWN state when the peer link goes down except included interfaces.
`MADPersistent`	M-LAG MAD DOWN state persistence	N/A	Boolean: • true • false(default)	N/A
`ExcludeLogicalInterfaces`	Whether all logical interfaces are excluded from the shutdown action by M-LAG MAD	N/A	Boolean: • true • false(default)	N/A

MLAG/MAD/UserIncludeInterfaces

This table contains interfaces manually included in the M-LAG MAD shutdown action.

XML structure

```
<MLAG>
  <MAD>
    <UserIncludeInterfaces>
      <UserIncludeInterface>
        <IfIndex></IfIndex>
      </UserIncludeInterface>
```

```
    </UserIncludeInterfaces>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	UserIncludeInterfaces
Table type	Multi-instance table
Row name	UserIncludeInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MLAG/MAD/UserExcludeInterfaces

This table contains interfaces manually excluded from the M-LAG MAD shutdown action.

XML structure

```
<MLAG>
  <MAD>
    <UserExcludeInterfaces>
      <UserExcludeInterface>
        <IfIndex></IfIndex>
      </UserExcludeInterface>
    </UserExcludeInterfaces>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	UserExcludeInterfaces
Table type	Multi-instance table
Row name	UserExcludeInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MLAG/GlobalConsistencyTable

This table contains M-LAG global consistency information.

XML structure

```
<MLAG>
  <GlobalConsistencyTable>
    <LocalConsistencyEnable></LocalConsistencyEnable>
    <LocalConsistencyMode></LocalConsistencyMode>
  </GlobalConsistencyTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	GlobalConsistencyTable
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
LocalConsistencyEnable	Whether the local consistency check function is enabled.	N/A	Boolean: • true(Default) • false
LocalConsistencyMode	Local consistency check mode.	N/A	Enumeration: • strict(Default). • loose.

MLAG/IfVirtualIpAddressTable

This table contains information about virtual IP addresses on interfaces.

XML structure

```
<MLAG>
  <IfVirtualIpAddressTable>
    <IfVirtualIpAddress>
      <IfIndex></IfIndex>
      <VirtualIpAddressTable>
        <VirtualIpAddress>
          <IpAddress></IpAddress>
          <PrefixLength></PrefixLength>
          <MacAddress></MacAddress>
          <ActiveMode></ActiveMode>
        </VirtualIpAddress>
      </VirtualIpAddressTable>
    </IfVirtualIpAddress>
  </IfVirtualIpAddressTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	IfVirtualIpAddressTable
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfVirtualIpAddress	Virtual IP address list	Sublist	N/A	For more information, see the MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress

This table contains information about virtual IP addresses on all interfaces.

Table description

Item	Description
Feature name	MLAG
Table name	IfVirtualIpAddress
Table type	Multi-instance table
Row name	IfVirtualIpAddress
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
VirtualIpAddressTable	Virtual IP address list	Subtable	N/A	For more information, see the MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/Virtu

Column name	Column description	Column type	Data type and restrictions	Remarks
				allpAddressTable table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable

This table contains information about all virtual IP addresses on an interface.

Table description

Item	Description
Feature name	MLAG
Table name	VirtualIpAddressTable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualIpAddress	Virtual IP address list	Sublist	N/A	For more information, see the MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress

This table contains information about a virtual IP address on an interface.

Table description

Item	Description
Feature name	MLAG
Table name	VirtualIpAddress
Table type	Multi-instance table
Row name	VirtualIpAddress

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	M-LAG virtual IP address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
PrefixLengh	Length of the address prefix	N/A	Unsigned integer	Value range: 1 to 128 for IPv6 1 to 32 for IPv4
MacAddress	MAC address of the M-LAG virtual IP address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1
ActiveMode	Whether the virtual IP address is effective on the local device.	N/A	Enumeration: • primary (Default). • active. • standby.	N/A

Item	Description
Feature name	MLAG
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	M-LAG system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1. Configure the same M-LAG MAC address for the M-LAG member devices in an M-LAG system.
SystemPriority	M-LAG system priority	N/A	Unsigned integer. Value range: 0 to 65535.	Configure the same M-LAG system priority for the M-LAG member devices in an M-LAG system.

SystemNumber	M-LAG system number	N/A	Unsigned integer. Value range: 1 to.2.	Assign different M-LAG system numbers to the M-LAG member devices in an M-LAG system.
RestoreDelay	Data restoration interval in seconds	N/A	Unsigned integer. Value range: 1 to 3600.	N/A
AutoRecoveryReloadDelay	Reload delay timer in seconds for M-LAG system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A
AuthenticationKey	Encrypted authentication key of packets	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form.
SequenceCheckEnable	Whether the sequence number check on packets is enabled	N/A	Boolean: • true • false	N/A
StandaloneDelay	Delay that the device must wait before changing to M-LAG standalone mode, in seconds	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
ReservedVlanList	Reserved VLANs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. When the VLAN does not exist, the delivery fails.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “< ReservedVlanList base:incremental="true ">”. If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.

MLAG/Role

This table contains M-LAG Role information.

XML structure

```
<MLAG>
  <Role>
    <LocalRolePriority></LocalRolePriority>
    <PeerRolePriority></PeerRolePriority>
    <LocalBridgeMAC></LocalBridgeMAC>
```

```
    <PeerBridgeMAC></PeerBridgeMAC>
    <LocalConfiguredRole></LocalConfiguredRole>
    <PeerConfiguredRole></PeerConfiguredRole>
    <LocalEffectiveRole></LocalEffectiveRole>
    <PeerEffectiveRole></PeerEffectiveRole>
    <LocalRoleTrigger></LocalRoleTrigger>
  </Role>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	M-LAG role priority of the local M-LAG member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
PeerRolePriority	M-LAG role priority of the peer M-LAG member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
LocalBridgeMAC	Bridge MAC address of the local M-LAG member device	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
PeerBridgeMAC	Bridge MAC address of the peer M-LAG member device	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
LocalConfiguredRole	M-LAG role calculated based on the role priority and bridge MAC address of the local M-LAG member device	N/A	Enumeration: • none. • primary. • secondary.	N/A
PeerConfiguredRole	M-LAG role calculated based on the role priority and	N/A	Enumeration: • none. • primary. • secondary.	N/A

	bridge MAC address of the peer M-LAG member device			
LocalEffective Role	Current role of the local M-LAG member device	N/A	Enumeration: • none. • primary. • secondary.	N/A
PeerEffective Role	Current role of the peer M-LAG member device	N/A	Enumeration: • none. • primary. • secondary.	N/A
LocalRoleTrigger	The trigger for the current role	N/A	String: • M-LAG system initialization. • Peer link down and all M-LAG interfaces down. • Peer link and keepalive link down. • Peer link calculation. • Peer link down and role calculation based on keepalive link. • Local role is None and peer role is Primary before peer link comes up. • Local role is Primary and peer role is None before peer link comes up. • Peer down and all peer M-LAG interfaces down • Peer link and Keepalive link down. All local M-LAG interfaces down	N/A

MLAG/Keepalive

This table contains M-LAG Keepalive information.

XML structure

```
<MLAG>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
```

```
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
    <KeepaliveHoldTime></KeepaliveHoldTime>
    <KeepaliveLinkStatus></KeepaliveLinkStatus>
    <VRF></VRF>
    <LastDropCausation></LastDropCausation>
  </Keepalive>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV4. • KeepaliveSourceIPV4.	N/A
KeepaliveDestinationIPV4	Destination IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPV4	Source IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.2 This column must be with the **KeepaliveDestinationIPV4** column.
IPV6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV6. • KeepaliveSourceIPV6.	N/A
KeepaliveDestinationIPV6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPV6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:2 This column must be with the **KeepaliveDestinationIPV6** column.

KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535.	The **KeepaliveUDPPort** must be with the IP address and **KeepaliveUDPPort** will be deleted when you delete IP address.
KeepaliveInterval	Keepalive Interval in milliseconds	N/A	Unsigned integer. Value range: 100 to 10000.	N/A
KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20.	The M-LAG keepalive timeout timer must be two times the M-LAG keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10.	N/A
KeepaliveLinkStatus	Keepalive link status	N/A	Enumeration: • unknown. • up. • down.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.
LastDropCausation	Cause for keepalive packet drop	N/A	String: • None. • Invalid packet type. • The local role is none. • Incorrect packet length. • System MAC inconsistency. • System priority inconsistency. • Incorrect system number. • Invalid packet interval. • Sequence number check failed. • Failed authentication.	If an incoming keepalive packet is not dropped, the cause is None.

MLAG/PeerLinkTable

This table contains M-LAG peer-link interface information.

XML structure

```
<MLAG>
  <PeerLinkTable>
    <PeerLink>
      <PeerLinkNumber></PeerLinkNumber>
      <IfIndex></IfIndex>
    </PeerLink>
```

```
  </PeerLinkTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	PeerLinkTable
Table type	Multi -instance table
Row name	PeerLink
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerLinkNumber	M-LAG peer-link interface ID	Index	Unsigned integer. Value range: 1.	The peer-link inteface ID must be fixed at 1.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MLAG/MLagPortTable

This table contains information about M-LAG interfaces.

XML structure

```
<MLAG>
  <MLagPortTable>
    <MLagPort>
      <MLagGroupId></MLagGroupId>
      <IfIndex></IfIndex>
      <AllowSingleMember></AllowSingleMember>
    </MLagPort>
  </MLagPortTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	MLagPortTable
Table type	Multi-instance table
Row name	MLagPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MLagGroupId	M-Lag group ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
IfIndex	IfIndex value of the Layer 2 aggregate interface	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
`AllowSingleMember`	Whether allow the aggregate interface to be the single member in the M-Lag group	N/A	Boolean: • true • false	N/A

MLAG/MLagAllPortTable

This table contains port information about M-LAG.

XML structure

```
<MLAG>
```

```
  <MLagAllPortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrcpShortPeriodEnable></DrcpShortPeriodEnable>
      <PortStatus></PortStatus>
      <LocalDRCPState></LocalDRCPState>
      <PeerDRCPState></PeerDRCPState>
      <LocalSelectedMemberList></LocalSelectedMemberList>
      <PeerSelectedMemberList></PeerSelectedMemberList>
      <PortStatusCausation></PortStatusCausation>
      <PortSystemMAC></PortSystemMAC>
      <PortSystemPriority></PortSystemPriority>
    </Port>
  </MLagAllPortTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	MLagAllPortTable
Table type	Multi-instance table
Row name	Port
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DrcpShortPeriodEnable	Whether the short DRCP timeout timer is enable	N/A	Boolean: • true • false	N/A
PortStatus	Port status	N/A	Enumeration: • down. • up.	N/A
LocalDRCPState	DRCP state on the local port	N/A	DRCP state flags. The flag field is one byte long, represented by ABCDEFGH	N/A

			from the lowest bit to the highest bit. A letter is displayed when its bit is 1 and is not displayed when its bit is 0. • A—Indicates whether DRCP is enabled on the local device.1 indicates enabled.0 indicates disabled. • B—Indicates whether DRCP is enabled on the M-LAG peer member device.1 indicates enabled.0 indicates disabled. • C—Indicates whether DRCP is enabled on a third M-LAG member device. 1 indicates enabled.0 indicates disabled. • D—Indicates whether the local peer-link interface has determined that DRCP is enabled on the M-LAG peer member device.1 indicates yes.0 indicates no. • E—Indicates the DRCP timeout timer.1 indicates the short timeout timer.0 indicates the long timeout timer. • F—Indicates whether the local peer-link interface permits the packets that contain the negotiated gateway conversation IDs.1 indicates yes.0 indicates no. • G—Indicates whether the local peer-link interface permits the packets that contain the negotiated port conversation IDs.1 indicates yes.0 indicates no. • H—Indicates whether the local DRCPDU receive machine is in default or expired state.1 indicates yes.0 indicates no.	
PeerDRCPState	DRCP state on the peer port	N/A	This column has the same data type and restrictions as **LocalDRCPState**.	N/A
LocalSelectedMemberList	Local M-LAG member device's selected aggregate member ports in a distributed	N/A	Bitmap. No length restrictions. Each octet within this value specifies a set of eight ports, with the first octet specifying ports 1 through 8,the second octet specifying ports 9	N/A

	relay group		through 16,and so on. Within each octet, the most significant bit represents the lowest numbered port, and the least significant bit represents the highest numbered port. Each port of the bridge is represented by a single bit within the value of this object If a bit has a value of 1 then the port is included in the set of ports; a port is not included if its bit has a value of 0.	
PeerSelected MemberList	Peer M-ALG member device's selected aggregate member ports in a distributed relay group	N/A	This column has the same data type and restrictions as **LocalSelectedMemberList**.	N/A
PortStatusCa usation	The cause for the port status change	N/A	String: • None. • Aggregate interface down. • No correct DRCPDUs received. • Tunnel interface down. • The device role was None. • No peer M-LAG interface configured. • M-LAG MAD check. • Configuration consistency check failed. • Removed from an M-LAG group	N/A
PortSystemM AC	M-LAG interfae system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same M-LAG MAC address on the M-LAG interfaces in the same M-LAG group
PortSystemPri ority	M-LAG interface system priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	Configure the same M-LAG system priority on the M-LAG interfaces in the same M-LAG group

MLAG/MAD/MADTable

This table contains information about M-LAG MAD.

XML structure

```
<MLAG>
```

```
  <MAD>
    <MADTable>
      <MADDefaultAction></MADDefaultAction>
      <MADState></MADState>
      <MADPersistent></MADPersistent>
      <ExcludeLogicalInterfaces></ExcludeLogicalInterfaces>
    </MADTable>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	MADTable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MADDefaultAction	The default action of M-LAG MAD	N/A	Enumeration: • down. • none.	• Down. Interfaces will be set to M-LAG MAD SHUTDOWN state when the peer link goes down except excluded interfaces. • None: Interfaces will not be set to M-LAG MAD SHUTDOWN state when the peer link goes down except included interfaces.
MADState	Whether the M-LAG system is on MAD state	N/A	Boolean: • true • false	N/A
`MADPersistent`	M-LAG MAD DOWN state persistence	N/A	Boolean: • true • false	N/A
`ExcludeLogicalInterfaces`	Whether all logical interfaces are excluded from the shutdown action	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	by M-LAG MAD			

MLAG/MAD/UserIncludeInterfaces

This table contains interfaces manually included in the M-LAG MAD shutdown action.

XML structure

```
<MLAG>
  <MAD>
    <UserIncludeInterfaces>
      <UserIncludeInterface>
        <IfIndex></IfIndex>
        <Active></Active>
      </UserIncludeInterface>
    </UserIncludeInterfaces>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	UserIncludeInterfaces
Table type	Multi-instance table
Row name	UserIncludeInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Active	Whether the manual configuration is	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	effective			

MLAG/MAD/SystemIncludeInterfaces

This table contains interfaces included in the M-LAG MAD shutdown action by the system.

XML structure

```
<MLAG>
  <MAD>
    <SystemIncludeInterfaces>
      <SystemIncludeInterface>
        <IfIndex></IfIndex>
      </SystemIncludeInterface>
    </SystemIncludeInterfaces>
  </MAD>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	SystemIncludeInterfaces
Table type	Multi-instance table
Row name	SystemIncludeInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MLAG/GlobalConsistencyTable

This table contains information about M-LAG global consistency check.

XML structure

```
<MLAG>
```

```
  <GlobalConsistencyTable>
    <LocalConsistencyEnable></LocalConsistencyEnable>
    <PeerConsistencyEnable></PeerConsistencyEnable>
    <LocalConsistencyMode></LocalConsistencyMode>
    <PeerConsistencyMode></PeerConsistencyMode>
    <Type1Result></Type1Result>
    <Type1InConsistency></Type1InConsistency>
    <Type2Result></Type2Result>
    <Type2InConsistency></Type2InConsistency>
  </GlobalConsistencyTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG
Table name	GlobalConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LocalConsistencyEnable	Whether local consistency check function is enabled	N/A	Boolean: • true • false
PeerConsistencyEnable	Whether peer consistency check function is enabled	N/A	Boolean: • true • false
LocalConsistencyMode	Local consistency check mode	N/A	Enumeration: • strict. • loose.
PeerConsistencyMode	Peer consistency check mode	N/A	Enumeration: • strict. • loose.
Type1Result	The result of type1 consistency check	N/A	Enumeration: • none. • success. • failed.
Type1InConsistency	The module that failed type1 consistency check	N/A	String.

Column name	Column description	Column type	Data type and restrictions
Type2Result	The result of type2 consistency check	N/A	Enumeration: • none. • success. • failed.
Type2InConsistency	The module that failed type2 consistency check	N/A	String.

MLAG/InterfaceConsistencyTable

This table contains information about M-LAG interface consistency check.

XML structure

```
<MLAG>
  <InterfaceConsistencyTable>
    <InterfaceConsistency>
      <IfIndex></IfIndex>
      <Type1Result></Type1Result>
      <Type1InConsistency></Type1InConsistency>
      <Type2Result></Type2Result>
      <Type2InConsistency></Type2InConsistency>
    </InterfaceConsistency>
  </InterfaceConsistencyTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG

Table type	Multi-instance table
Row name	InterfaceConsistency
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Type1Result	The result of type1 consistency check	N/A	Enumeration: • none. • success. • failed.	N/A
Type1InConsistency	The module that failed type1 consistency check	N/A	String.	N/A
Type2Result	The result of type2 consistency check	N/A	Enumeration: • none. • success. • failed.	N/A
Type2InConsistency	The module that failed type2 consistency check	N/A	String.	N/A

MLAG/DrcpStatisticsTable

This table contains information about DRCPDU statistics.

XML structure

```
<MLAG>
  <DrcpStatisticsTable>
    <DrcpStatistics>
      <IfIndex></IfIndex>
      <SendPackets></SendPackets>
      <RcvNormalPackets></RcvNormalPackets>
      <RcvErrPackets></RcvErrPackets>
      <RcvUnKnownPackets></RcvUnKnownPackets>
      <LastRcvFailedReason></LastRcvFailedReason>
      <LastRcvSrcMAC></LastRcvSrcMAC>
    </DrcpStatistics>
  </DrcpStatisticsTable>
</MLAG>
```

Table description

Item	Description
Feature name	MLAG

Item	Description
Table name	DrcpStatisticsTable
Table type	Multi-instance table
Row name	DrcpStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SendPackets	The count of sent packets	N/A	Unsigned integer.	N/A
RcvNormalPackets	The count of received normal packets	N/A	Unsigned integer.	N/A
RcvErrPackets	The count of received error packets	N/A	Unsigned integer.	N/A
RcvUnKnownPackets	The count of received unknown packets	N/A	Unsigned integer.	N/A
LastRcvFailedReason	Last dropped packet reason	N/A	String: • None. • Incorrect port. • Incorrect packet type. • Incorrect packet version. • Incorrect packet length. • Received packets of oneself. • Local M-LAG interface not configured. • System MAC inconsistency. • System priority inconsistency. • Incorrect system number. • ncorrect sequence number. • Failed authentication. • Other error.	If receive packet successful, the reason is none.

Column name	Column description	Column type	Data type and restrictions	Remarks
LastRcvSrcMAC	The source MAC address of last received packet.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-01-00-01-00-01.

MLAG/IfVirtualIpAddressTable

This table contains information about virtual IP addresses on interfaces.

XML structure

```
<MLAG>
  <IfVirtualIpAddressTable>
    <IfVirtualIpAddress>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <VirtualIpAddressTable>
        <VirtualIpAddress>
          <IpAddress></IpAddress>
          <PrefixLength></PrefixLength>
          <MacAddress></MacAddress>
          <ActiveMode></ActiveMode>
        </VirtualIpAddress>
      </VirtualIpAddressTable>
    </IfVirtualIpAddress>
  </IfVirtualIpAddressTable>
</MLAG>
```

Table description

Item	Description

Table name	IfVirtualIpAddressTable
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfVirtualIpAddress	Virtual IP address list	Sublist	N/A	For more information, see the MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress

Column name	Column description	Column type	Data type and restrictions	Remarks
				table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress

This table contains information about virtual IP addresses on all interface.

Table description

Item	Description
Feature name	MLAG
Table name	IfVirtualIpAddress
Table type	Multi-instance table
Row name	IfVirtualIpAddress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
VirtualIpAddressTable	Virtual IP address list	Subtable	N/A	For more information, see the MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable

This table contains information about all virtual IP addresses on an interface.

Table description

Item	Description
Feature name	MLAG
Table name	VirtualIpAddressTable
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualIpAddr ess	Virtual IP address list	Sublist	N/A	For more information, see the MLAG/ IfVirtualIpAddressTable /IfVirtualIpAddress/Virtu alIpAddressTable/Virtu alIpAddress table.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress /VirtualIpAddressTable/VirtualIpAddress

This table contains information about a virtual IP address on an interface.

Table description

Item	Description
Feature name	MLAG
Table name	VirtualIpAddress
Table type	Multi-instance table
Row name	VirtualIpAddress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	M-LAG virtual IP address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
PrefixLengh	Length of the address prefix	N/A	Unsigned integer	Value range:

Column name	Column description	Column type	Data type and restrictions	Remarks
				1 to 128 for IPv6 1 to 32 for IPv4
MacAddress	MAC address of the M-LAG virtual IP address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1
ActiveMode	Whether the virtual IP address is effective on the local device	N/A	Enumeration: • primary. • active. • standby.	N/A

MLAG

MLAG/Base

Message	Explanation
The MAC address cannot be an all-zero address, a multicast address, or a broadcast address. 不允许配置MAC地址为全零MAC地址、组播MAC地址或广播MAC地址。	The system MAC address cannot be an all-zero address, a multicast address, or a broadcast address.

MLAG/Role

Message	Explanation
None. 无。	None.

MLAG/Keepalive

Message	Explanation
Please specify the destination IP addresses of keepalive packets. 指定Keepalive报文的目的IP地址。	Specify the destination IP address of the keepalive link.
The destination and source IP addresses cannot be the same. 目的IP地址和源IP地址不能相同。	The destination address must be different from the source address.
You cannot specify both IPv4 and IPv6 addresses for keepalive packets. Keepalive报文参数不能同时指定IPv4地址和IPv6地址。	The destination and source addresses of the keepalive link must both be IPv4 or IPv6.
Invalid destination or source IP address. 无效的源/目的IP地址。	The IP address is invalid. You must specify a valid destination or source IP address for the keepalive link.
Please delete all parameters of keepalive configuration. 请删除所有的keepalive配置参数。	You need to delete all parameters.
The source and destination IP addresses of keepalive packets must have the same Internet protocol version. Keepalive报文的源IP地址和目的IP地址必须使用相同的IP地址协议。	The Internet protocol version of destination and source address must be the same.

MLAG/PeerLinkTable

Message	Explanation
The interface is already configured as an M-LAG interface. 该接口已经是M-LAG接口。	The interface is an M-LAG interface. You cannot configure it as a peer-link interface.
The device already has a peer-link interface. 设备已经存在一个peer-link接口。	A device can have only one peer-link interface.
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.
The tunnel interface must be in VXLAN mode. Tunnel接口想要配置为peer-link接口，该Tunnel接口必须处于VXLAN模式。	If you want to configure a tunnel interface as the peer-link interface, it must be in VXLAN mode. 如果想要指定一个Tunnel接口为peer-link接口，该Tunnel接口必须处于VXLAN模式。
Operation failed. The VXLAN tunnel has been assigned to a VXLAN, or the VXLAN tunnel interface is automatically created. 操作失败，该Tunnel已经与VXLAN关联，或者该Tunnel接口是自动生成的Tunnel接口。	The VXLAN tunnel interface that you want to configure as a peer-link interface has already been assigned to a VXLAN, or it is automatically created. 想要配置为peer-link口的Tunnel接口不能与VXLAN关联，或者Tunnel接口不能是自动生成的Tunnel接口。
The interface cannot act as a peer-link inteface. 该类型的接口不支持配置为peer-link接口。	The peer-link interface must be a Layer 2 aggregate interface or tunnel interface.仅支持将二层聚合接口和Tunnel接口配置为peer-link接口。
`Can't configure the interface as a peer-link interface because of a driver error.` 不能配置为peer-link接口，因为驱动错误	An error occurred in assigning the peer-link interface role to an interface. 绑定peer-link接口时，驱动发生错误

MLAG/MLagPortTable

Message	Explanation
The interface is already configured as a peer-link interface. 该接口已经是peer-link接口。	The interface is already a peer-link interface. You cannot configure it as an M-LAG interface.
The interface must be a Layer 2 aggregate interface. 该接口必须是二层聚合接口。	You must specify a Layer 2 aggregate interface.
The M-LAG group with the specified ID is already configured on another interface. 该MLAG组ID已经存在。	A device cannot have two M-LAG groups with the same ID.
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.
The interface is already an M-LAG interface in another M-LAG group.	The interface is an M-LAG interface in another M-LAG group. You must specify another interface.

接口已经是另外一个M-LAG组中的成员接口了。	接口已经是另外一个M-LAG组中的成员接口，可以尝试更换为另一个接口。
The interface is a member of an S-MLAG group. 接口是一个S-MLAG组的成员接口。	Can't assign the interface to the M-LAG groupe because the interface is a member of an S-MLAG group. 接口无法加入该M-LAG组，因为它已经是一个S-MLAG组的成员接口。
Can't configure the interface as an M-LAG interface because of a driver error. 不能配置为M-LAG成员接口，因为驱动错误。	An error occurred in assigning the M-LAG interface role to an interface. 绑定M-LAG成员接口时，驱动发生错误。
Please first remove the aggregate interface from the M-LAG group. 请先将该聚合接口从M-LAG组中移除。	The interface is already in the M-LAG group. You can enable an aggregate interface to be the single member in an M-LAG group only when you assign the aggregate interface to the M-LAG group. 已经存在该M-LAG组，且与当前配置冲突。

MLAG/MLagAllPortTable

Message	Explanation
Can’t change the system MAC address. Please first assign the interface to an M-LAG group. 只有聚合接口配置为M-LAG接口后，才允许在该聚合接口视图下配置系统MAC地址。	The interface must be an M-LAG interface. 该接口必须是M-LAG成员接口。
Can’t change the system priority. Please first assign the interface to an M-LAG group. 只有聚合接口配置为M-LAG成员接口后，才允许在该聚合接口视图下配置系统优先级。	The interface must be an M-LAG interface.. 该接口必须是M-LAG接口。

MLAG/MAD/MADTable

Message	Explanation
None. 无。	None.

MLAG/MAD/UserIncludeInterfaces

Message	Explanation
The interface is already excluded from the MAD shutdown action by M-LAG. 该接口已经配置为M-LAG保留接口。	The interface has been excluded from Mad shutdown action, you must undo the operation first. 该接口已经配置为M-LAG保留接口，请先删除该配置。

MLAG/MAD/SystemIncludeInterfaces

Message	Explanation
None. 无。	None.

MLAG/MAD/UserExcludeInterfaces

Message	Explanation
The interface is already included in the MAD shutdown action by M-LAG. 该接口已经配置为需要被置为M-LAG MAD DOWN状态。	The interface has been included in Mad shutdown action, you must undo the operation first. 该接口已经配置为需要被置为M-LAG MAD DOWN状态，请先删除该配置。

MLAG/MAD/SystemExcludeInterfaces

Message	Explanation
None. 无。	None.

MLAG/GlobalConsistencyTable

Message	Explanation
None. 无。	None.

MLAG/InterfaceConsistencyTable

Message	Explanation
None. 无。	None.

MLAG/DrcpStatisticsTable

Message	Explanation
None. 无。	None.

MLAG/ResetDrcpStatisticsTable

Message	Explanation
None. 无。	None.

MLAG/IfVirtualIpAddressTable

Message	Explanation
None. 无。	None.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress

Message	Explanation
None. 无。	None.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable

Message	Explanation
None. 无。	None.

MLAG/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress

Message	Explanation
Invalid IP address or subnet mask. 无效的IP地址或子网掩码长度。	Invalid IP address or subnet mask. 无效的IP地址或子网掩码长度。
The number of virtual IP addresses assigned to the interface has reached the upper limit. 虚拟IP地址的数量已达到上限。	Maximum number of virtual IP addresses is already reached. 接口下已配置的虚拟IP地址数已达到上限。
The subnet overlaps with another interface. 虚拟IP地址的网段与其他接口下IP地址的网段重复。	The subnet of the IP address overlaps with the subnet of another interface on the device. 接口IP地址配置所在网段与本设备其他接口网段重复。
The IPv6 address overlaps with another interface.	The IPv6 address is used by another interface on the device.

虚拟IPv6地址与其他接口上的IPv6地址重复。	本接口的IPv6地址与本设备其他接口的IPv6地址冲突。
Invalid IPv6 address. You must enter an IPv6 global unicast address. 无效的IPv6地址。仅支持IPv6单播地址。	The IPv6 address is not a valid IPv6 global unicast address. 该IPv6地址不是一个有效的单播地址。
The MAC address has been associated with another IPv4 address. 该MAC地址已经被其他虚拟IPv4地址使用。	The MAC address is used by another IP address. MAC地址已经被其他IP地址使用。
The MAC address has been associated with another IPv6 address. 该MAC地址已经被其他虚拟IPv6地址使用。	The MAC address is used by another IPv6 address. MAC地址已经被其他IPv6地址使用。
Make sure the IP addresses associated with this MAC address are in the same state. 对于同一MAC地址，虚拟IPv4地址和虚拟IPv6地址在M-LAG设备上的状态必须一致。	All IP addresses associated with this MAC address must be in the same state. MAC地址对应的所有IP地址必须处于相同的状态。
The MAC address cannot be an all-zero address, a multicast address, or a broadcast address. 不允许配置MAC地址为全零MAC地址、组播MAC地址或广播MAC地址。	The system MAC address cannot be an all-zero address, a multicast address, or a broadcast address.

MLAG event stream

BaseInfoEvent event

This event is used to report M-LAG BaseInfo.

XML structure for event subscription

```
<BaseInfoEvent>
</BaseInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MLAG</stream>
    <filter type="subtree">
      <BaseInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
      </BaseInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MLAG
Event name	BaseInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MLAG:1.0
Support for extended query	No

XML structure for event report

```
<BaseInfoEvent>
  <BaseInfo>
    <SystemMAC></SystemMAC>
    <OperationType></OperationType>
  </BaseInfo>
</BaseInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <BaseInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
    <BaseInfo>
      <SystemMAC>00-01-00-01-00-01</SystemMAC>
      <OperationType>create</OperationType>
```

```
    </BaseInfo>
  </BaseInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
SystemMAC	M-LAG system MAC address	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No	You must configure the same M-LAG system MAC address for the M-LAG member devices in an M-LAG system.
OperationType	Operation type	Enumeration: • create. • modify. • delete.	No	The operation type specifies the operation that M-LAG BaseInfo should perform.

RoleInfoEvent event

This event is used to report M-LAG RoleInfo.

XML structure for event subscription

```
<RoleInfoEvent>
</RoleInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MLAG</stream>
    <filter type="subtree">
      <RoleInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
      </RoleInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MLAG
Event name	RoleInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MLAG:1.0
Support for extended query	No

XML structure for event report

```
<RoleInfoEvent>
  <LocalBridgeMAC></LocalBridgeMAC>
  <PeerBridgeMAC></PeerBridgeMAC>
</RoleInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <RoleInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
    <RoleInfo>
      <LocalBridgeMAC>00-01-00-01-00-01</LocalBridgeMAC>
      <PeerBridgeMAC>00-01-00-01-00-03</PeerBridgeMAC>
    </RoleInfo>
  </RoleInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query
LocalBridgeMAC	Bridge MAC address of the local device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No
PeerBridgeMAC	Bridge MAC address of the peer device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No

PortInfoEvent event

This event is used to report M-LAG PortInfo.

XML structure for event subscription

```
<PortInfoEvent>
</PortInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MLAG</stream>
    <filter type="subtree">
      <PortInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
      </PortInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MLAG
Event name	PortInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MLAG:1.0
Support for extended query	No

XML structure for event report

```
<PortInfoEvent>
  <PortInfo>
    <IfIndex></IfIndex>
    <MLAGGroupId></MLAGGroupId>
    <OperationType></OperationType>
  </PortInfo>
</PortInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PortInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
    <PortInfo>
      <IfIndex>66</IfIndex>
      <MLAGGroupId>66</MLAGGroupId>
      <OperationType>create</OperationType>
    </PortInfo>
  </PortInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Aggregation interface ifIndex	Unsigned integer.	No	Interface name is not supported.
MLAGGroupId	M-LAG group ID	Unsigned integer. Value range: 1 to 1024.	No	N/A
OperationType	Operation type	Enumeration: • create. • modify. • delete.	No	The operation type specifies the operation that DNRI PortInfo should perform.

KeepaliveInfoEvent event

This event is used to report M-LAG keepalive information.

XML structure for event subscription

```
<KeepaliveInfoEvent>
</KeepaliveInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MLAG</stream>
    <filter type="subtree">
      <KeepaliveInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
      </KeepaliveInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MLAG
Event name	KeepaliveInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MLAG:1.0
Support for extended query	No

XML structure for event report

```
<KeepaliveInfoEvent>
  <KeepaliveLinkStatus></KeepaliveLinkStatus>
</KeepaliveInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <KeepaliveInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
    <KeepaliveInfo>
      <KeepaliveLinkStatus>down</KeepaliveLinkStatus>
    </KeepaliveInfo>
  </KeepaliveInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query
KeepaliveLink Status	Keepalive link status	Enumeration: • up. • down.	No

PortStatusEvent event

This event is used to report peer-link interface andM-LAG interfacestatus.

XML structure for event subscription

```
<PortStatusEvent>
</PortStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MLAG</stream>
    <filter type="subtree">
      <PortStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
      </PortStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	MLAG
Event name	PortStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/MLAG:1.0
Support for extended query	No

XML structure for event report

```
<PortStatusEvent>
  <PortStatusInfo>
    <IfIndex></IfIndex>
    <IfName></IfName>
    <PortStatus></PortStatus>
    <PortStatusCausation></PortStatusCausation>
  </PortStatusInfo>
</PortStatusEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PortStatusEvent     xmlns="http://www.h3c.com/netconf/event:1.0/MLAG:1.0">
    <PortStatusInfo>
      <IfIndex>66</IfIndex>
      <IfName>Bridge-Aggregation1</IfName>
      <PortStatus>down</PortStatus>
      <PortStatusCausation>Aggregate interface down</PortStatusCausation>
```

```
    </PortStatusInfo>
  </PortStatusEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Interface index	Unsigned integer.	No	Interface name is not supported.
IfName	Interface name	String Length: 1 to 47 characters.	No	N/A
PortStatus	Port status	Enumeration: • down. • up.	No	N/A
PortStatusCausation	The cause for the port status change	String: • None. • Aggregate interface down. • No correct DRCPDUs received. • Tunnel interface down. • Peer no correct DRCPDUs received. • Removed from a peer-link interface group. • The device role was None. • No peer M-LAG interface configured. • MLAG MAD check. • Configuration consistency check failed. • Removed from an M-LAG group.	No	N/A

```

Table description

Item	Description
Feature name	MLD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*
Enabled	MLD enabling status	N/A	Boolean: • **true**—Enabled • **false**—Disabled (default)	N/A
Version	MLD version	N/A	Enumeration: • **1**—MLD version 1 (default) • **2**—MLD version 2	N/A
AuthEnabled	MLD authorization enabling status	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
JoinBySession	Per-session multicast forwarding status	N/A	Enumeration: • **1**—Per-session multicast forwarding is enabled for BRAS access users. • **2**—Per-session multicast forwarding is enabled for non-BRAS access users. • **3**—Per-session multicast forwarding is enabled for both BRAS and non-BRAS access users.	N/A
UserAggOuterVlan	Outer VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
UserAggInnerVlan	Inner VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
DynamicVlan	Status of user-VLAN-based dynamic VLAN tagging on multicast packets	N/A	Enumeration: • **0**—Disabled (default). • **1**—Enabled.	N/A
QueryInterval	Specify a general query interval.	N/A	Unsigned integer. Value range: 1 to 31744, in seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RobustCount	Specify a robustness count.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
LastMemberQueryInterval	Specify a lLast member query interval.	N/A	Unsigned integer. Value range: 1 to 25, in seconds.	N/A
MaxResponseTime	Specify a maximum response time.	N/A	Unsigned integer. Value range: 1 to 3174, in seconds.	N/A
OtherQuerierPresentInterval	Specify an other querier present interval.	N/A	Unsigned integer. Value range: 1 to 31744, in seconds.	N/A
GroupPolicy	Multicast group policy	Data structure	Members include: • Acl MLDVersion	N/A
Acl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: • 2000 to 3999. ACL name: • String. Length: 1 to 63.	If the ACL does not exist or does not have valid rules, hosts cannot join any multicast groups.
MldVersion	Version number.	N/A	Unsigned integer. Value range: 1 to 2.	By default, this commanda multicast group policy takes effect on MLD reports of all versions.

MLD/UserProfiles

This table contains MLD user profile information.

XML structure

```
<MLD>
  <UserProfiles>
    <UserProfile>
      <UserProfileName></UserProfileName>
      <AccessPolicy></AccessPolicy>
    </UserProfile>
  </UserProfiles>
</MLD>
```

Table description

Item	Description
Feature name	MLD
Table name	UserProfiles
Table type	Multi-instance table
Row name	UserProfile
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain letters, digits, underscores (_), minus signs (-), and dots (.). The name can start with a letter or digit, and cannot contain only digits. The name must be unique globally.
AccessPolicy	IPv6 ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A

MLD/Instances

This table contains MLD instance information.

XML structure

```
<MLD>
  <Instances>
    <Instance>
      <VRF></VRF>
      <QueryInterval></QueryInterval>
      <RobustCount></RobustCount>
      <LastListenerQueryInterval></LastListenerQueryInterval>
      <MaxResponseTime></MaxResponseTime>
      <OtherQuerierPresentInterval></OtherQuerierPresentInterval>
    </Instance>
  </Instances>
</MLD>
```

Table description

Item	Description
Feature name	MLD
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
QueryInterval	Query interval	N/A	Unsigned integer. Value range: 1 to 31744, in seconds. Default: 125.	N/A
RobustCount	Robustness count	N/A	Unsigned integer. Value range: 1 to 255. Default: 2.	N/A
LastListenerQueryInterval	Last listener query interval	N/A	Unsigned integer. Value range: 1 to 25 , in seconds. Default: 1.	N/A
MaxResponseTime	Maximum response time	N/A	Unsigned integer. Value range: 1 to 3174, in seconds. Default: 10.	N/A
OtherQuerierPresentInterval	Other querier present interval	N/A	Unsigned integer. Value range: 1 to 31744, in seconds. Default: 255	N/A

MLD/SsmMappings

This table contains MLD SSM mapping information.

XML structure

```
<MLD>
  <SsmMappings>
    <SsmMapping>
```

```
      <VRF></VRF>
      <SourceAddr></SourceAddr>
      <Policy></Policy>
    </SsmMapping>
  </SsmMappings>

Table description

Item	Description
Feature name	MLD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*
Enabled	MLD enabling status	N/A	Boolean: • **true**—Enabled • **false**—Disabled	N/A
Version	MLD version	N/A	Enumeration: • **1**—MLD version 1 • **2**—MLD version 2	N/A
AuthEnabled	MLD authorization enabling status	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
JoinBySession	Per-session multicast forwarding status	N/A	Enumeration: • **1**—Per-session multicast forwarding is enabled for BRAS access users. • **2**—Per-session multicast forwarding is enabled for non-BRAS access users. • **3**—Per-session multicast forwarding is enabled for both BRAS and non-BRAS access users.	N/A
UserAggOuterVlan	Outer VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
UserAggInnerVlan	Inner VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
DynamicVlan	Status of user-VLAN-based dynamic VLAN tagging on multicast packets	N/A	Enumeration: • **0**—Disabled (default). • **1**—Enabled.	N/A
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
QueryInterval	Specify a general query	N/A	Unsigned integer. Value range: 1 to 31744, in	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval.		seconds.	
RobustCount	Specify a robustness count.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
LastMemberQueryInterval	Specify a lLast member query interval.	N/A	Unsigned integer. Value range: 1 to 25, in seconds.	N/A
MaxResponseTime	Specify a maximum response time.	N/A	Unsigned integer. Value range: 1 to 3174, in seconds.	N/A
OtherQuerierPresentInterval	Specify an other querier present interval.	N/A	Unsigned integer. Value range: 1 to 31744, in seconds.	N/A
GroupPolicy	Multicast group policy	Data structure	Members include: • Acl • MLDVersion	N/A
Acl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: • 2000 to 3999. ACL name: • String. • Length: 1 to 63.	If the ACL does not exist or does not have valid rules, hosts cannot join any multicast groups.
MldVersion	Version number.	N/A	Unsigned integer. Value range: 1 to 2.	By default, this commanda multicast group policy takes effect on Mld reports of all versions.

MLD/Groups

This table contains MLD group information.

XML structure

```
<MLD>
  <Groups>
    <Group>
      <IfIndex></IfIndex>
      <GroupAddr></GroupAddr>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </Group>
  </Groups>
</MLD>
```

Table description

Item	Description
Feature name	MLD

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
GroupAddr	IPv6 multicast group address	Index	Hexadecimal string, colon-separated	Example: FF1E::1
SourceAddr	IPv6 multicast source address	Index	Hexadecimal string, colon-separated	Example: 2100::1
Uptime	Length of time since the multicast source was reported	N/A	Unsigned integer (in seconds)	N/A
Expires	Remaining time of the multicast source	N/A	Unsigned integer (in seconds)	A value of 0xFFFFFFFF indicates that the multicast group will not expire
IfName	Interface name	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 2 to 47 characters.	

MLD/UserProfiles

This table contains MLD user profile information.

XML structure

```
<MLD>
  <UserProfiles>
    <UserProfile>
      <UserProfileName></UserProfileName>
      <AccessPolicy></AccessPolicy>
    </UserProfile>
  </UserProfiles>
</MLD>
```

Table description

Item	Description
Feature name	MLD
Table name	UserProfiles
Table type	Multi-instance table
Row name	UserProfile
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain letters, digits, underscores (_), minus signs (-), and dots (.). The name can start with a letter or digit, and cannot contain only digits. The name must be unique globally.
AccessPolicy	IPv6 ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A

MLD/Instances

This table contains MLD instance information.

XML structure

```
<MLD>
  <Instances>
    <Instance>
      <VRF></VRF>
      <QueryInterval></QueryInterval>
      <RobustCount></RobustCount>
      <LastListenerQueryInterval></LastListenerQueryInterval>
      <MaxResponseTime></MaxResponseTime>
      <OtherQuerierPresentInterval></OtherQuerierPresentInterval>
    </Instance>
  </Instances>
</MLD>
```

MLD

MLD/Interfaces

Message	Explanation
MLD is not configured. MLD尚未配置。	During executing set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	During executing set operation, MLD is not complete startup. 对该表进行配置时，MLD还未完全启动。
Can’t specify an inner VLAN ID if no outer VLAN ID is specified. 若需要配置内层VLAN，则必须先配置外层VLAN。	During executing set operation, you must specify an outer VLAN ID before you can specify an inner VLAN ID. 对该表进行配置时，若需要配置内层VLAN，则必须先配置外层VLAN。
VLAN tagging for multicast packets and per-session multicast forwarding are mutually exclusive on a subinterface. 对组播报文进行VLAN封装与按会话记录用户加入的组播组，这两种配置互斥，不允许在同一个子接口上配置。	During executing set operation, you cannot configure both VLAN tagging for multicast packets and per-session multicast forwarding on a subinterface. 对该表进行SET操作时，对组播报文进行VLAN封装与按会话记录用户加入的组播组，这两种配置互斥，不允许在同一个子接口上配置。
Static VLAN tagging and user-VLAN-based dynamic VLAN tagging for multicast packets are mutually exclusive on a subinterface. 对组播报文的静态VLAN封装与基于用户VLAN的动态VLAN封装，这两种配置互斥，不允许在同一个子接口上配置。	During executing set operation, you cannot configure both static VLAN tagging and user-VLAN-based dynamic VLAN tagging for multicast packets on a subinterface. 对该表进行SET操作时，对组播报文的静态VLAN封装与基于用户VLAN的动态VLAN封装，这两种配置互斥，不允许在同一个子接口上配置。
User-VLAN-based dynamic VLAN tagging for multicast cannot be configured or de-configured while users are online. 当有用户在线时，不能对基于用户VLAN的动态VLAN封装进行配置或者去配置。	During executing set operation, User-VLAN-based dynamic VLAN tagging for multicast cannot be configured or de-configured while users are online. 对该表进行SET操作时，当有用户在线时，不能对基于用户VLAN的动态VLAN封装进行配置或者去配置。
The column of MldVersion can’t exist alone without Acl. MLD Version属性列不能脱离Acl而单独存在。	The set operation is forbidden if only MldVersion is configured. 对该表进行配置时，将导致MLD Version单独存在的操作禁止下发。
The ACL is invalid. ACL输入不合法。	In a set operation, the ACLis invalid. 对该表进行配置时，ACL输入不合法。
The MldVersion and Acl columns must be both configured. MLD版本和ACL必须同时配置。	The MldVersion and Acl columns must be both configured. 对该表进行配置时，MLD版本和ACL必须同时配置。
The UserAggInnerVlan and UserAggOuterVlan columns must be both configured. 组播报文封装的内外层VLAN Tag必须同时配置。	The UserAggInnerVlan and UserAggOuterVlan columns must be both configured. 对该表进行配置时，组播报文封装的内外层VLAN Tag必须同时配置。
The JoinBySession column can only be configured as 3. 按会话记录用户加入的组播组只可配置为3。	The JoinBySession column can only be configured as 3. 对该表进行配置时，按会话记录用户加入的组播组只可配置为3。

MLD/Groups

Message	Explanation
MLD is not configured. MLD尚未配置。	During executing set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	During executing set operation, MLD is not complete startup. 对该表进行配置时，MLD还未完全启动。

MLD/SrcList

Message	Explanation
MLD is not configured. MLD尚未配置。	During executing set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	During executing set operation, MLD is not complete startup. 对该表进行配置时，MLD还未完全启动。

MLD/UserProfiles

Message	Explanation
MLD is not configured. MLD尚未配置。	During executing set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	During executing set operation, MLD does not completely start up. 对该表进行配置时，MLD还未完全启动。

MLD/Instances

Message	Explanation
MLD is not configured. MLD尚未配置。	During executing set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	During executing set operation, MLD is not complete startup. 对该表进行配置时，MLD还未完全启动。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the VPN instance does not exist. 对该表进行配置时，VPN实例不存在。

MLD/SsmMappings

Message	Explanation
MLD is not configured. MLD尚未配置。	In a set operation, MLD is not configured. 对该表进行配置时，MLD 还未配置。
MLD is not ready. MLD尚未就绪。	In a set operation, MLD is not completely started. 对该表进行配置时，MLD还未完全启动。
The VPN instance does not exist. VPN实例不存在。	In a set operation, the VPN instance does not exist. 对该表进行配置时，VPN实例不存在。
The ACL must be set with an index. ACL必须同索引一起下发。	In a set operation, The ACL must be set with an index. 对该表进行配置时，ACL必须同索引一起下发。
The ACL must be deleted with configuration objects. ACL必须同配置对象一起删除。	In a set operation, the ACL must be deleted with configuration objects. 对该表进行配置时，ACL必须同配置对象一起删除。
The ACL is invalid. ACL输入不合法。	In a set operation, the ACL is invalid. 对该表进行配置时，ACL输入不合法。
The specified MLD vpn-instance view does not exist. 指定的VPN实例的MLD视图不存在。	In a set operation, the specified MLD vpn-instance view does not existd. 对该表进行配置时，指定VPN实例的MLD视图不存在。

Item	Description
Feature name	MLDSnooping
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enabled	Set MLD snooping state for specified VLAN.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
Version	Specify the MLD snooping version for specified VLAN.	N/A	Enumeration: • **1**(default) • **2**	N/A
DropUnknown	Set MLD snooping dropping unknown for specified VLAN.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
Querier	Set MLD	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	snooping querier for specified VLAN.		• **disable**(default) • **enable**	
QueryInterval	Specify MLD snooping general query interval for specified VLAN.	N/A	Unsigned integer. Value range: 2 to31744.	N/A
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD group-specific queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VLAN.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
QuerierElection	Enable MLD snooping querier election for the specified VLAN.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
TriggeredQueryPortDown	MLD snooping query triggered by port-down events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A
TriggeredQueryPortUp	IGMP snooping query triggered by port-up events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A

MLDSnooping/VSIs

This table contains the MLD snooping information for VSIs.

XML structure

```
<MLDSnooping>
  <VSIs>
    <VSI>
      <VsiName></VsiName>
      <Enabled></Enabled>
      <Version></Version>

      <Proxy></Proxy>
      <QuerierElection></QuerierElection>
    </VSI>
  </VSIs>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable MLD snooping for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
Version	Specify the MLD snooping version for the specified VSI.	N/A	Enumeration: • **1**(default) • **2**	N/A
DropUnknow	Enable MLD	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
n	snooping dropping unknown IPv6 multicast data for the specified VSI.		• **disable**(default) • **enable**	
Querier	Enable the MLD snooping querier for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
QueryInterval	Set the MLD snooping general query interval for the specified VSI.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD multicast-address-specific queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
QuerierElection	Enable MLD snooping querier election for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A

MLDSnooping/FastLeavePorts

This table contains the MLD snooping fast leave information on ports.

XML structure

```
<MLDSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
    </Interface>
  </FastLeavePorts>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
FastLeaveVlanList	Set MLD snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

MLDSnooping/GroupLimitPorts

This table contains the MLD snooping group limit information on ports.

XML structure

```
<MLDSnooping>
```

```
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList></GroupLimitVlanList>
    </Interface>
  </GroupLimitPorts>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set MLD snooping group limit for VLANs on a port.	N/A	VLAN list.	You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove. Example: 1,2,3,5-8,10-20.

MLDSnooping/StaticGroupPorts

This table contains the MLD snooping group information of ports based on service-instance.

XML structure

```
<MLDSnooping>
  <StaticGroupPorts>
    <StaticGroupPort>
      <IfIndex></IfIndex>
      <VSIStaticGroups>
        <VSIStaticGroup>
          <SrvID></SrvID>
          <GroupAddr></GroupAddr>
          <SourceAddr></SourceAddr>
        </VSIStaticGroup>
      </VSIStaticGroups>
    </StaticGroupPort>
  </StaticGroupPorts>
</MLDSnooping>
```

Table description

Item	Description

      <TriggeredQueryPortUp></TriggeredQueryPortUp>
    </VLAN>
  </VLANs>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enabled	Set MLD snooping state for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A
Version	Specify the MLD snooping version for specified VLAN.	N/A	Enumeration: • **1** • **2**	N/A
DropUnknown	Set MLD snooping dropping unknown for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A
Querier	Set MLD snooping querier for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QueryInterval	Specify MLD snooping general query interval for specified VLAN.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD group-specific queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VLAN.	N/A	Enumeration: • **disable** • **enable**	N/A
QuerierElection	Enable MLD snooping querier election for the specified VLAN.	N/A	Enumeration: • **disable** • **enable**	N/A
TriggeredQueryPortDown	IGMP snooping query triggered by port-down events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A
TriggeredQueryPortUp	IGMP snooping query triggered by port-up events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A

MLDSnooping/VSIs

This table contains the MLD snooping information for VSIs.

XML structure

```
<MLDSnooping>
```

```
  <VSIs>
    <VSI>
      <VsiName></VsiName>

      <SpecialQuerySourceAddr></SpecialQuerySourceAddr>
      <ReportSourceAddr></ReportSourceAddr>
      <DoneSourceAddr></DoneSourceAddr>
      <Proxy></Proxy>
      <QuerierElection></QuerierElection>
    </VSI>
  </VSIs>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable MLD snooping for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
Version	Specify the MLD snooping version for the specified VSI.	N/A	Enumeration: • **1** • **2**	N/A
DropUnknown	Enable MLD snooping dropping unknown IPv6 multicast data for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Querier	Enable the MLD snooping querier for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
QueryInterval	Set the MLD snooping general query interval for the specified VSI.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD multicast-address-specific queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
QuerierElection	Enable MLD snooping querier election for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A

MLDSnooping/FastLeavePorts

This table contains the MLD snooping fast leave information on ports.

XML structure

```
<MLDSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
```

```
      <FastLeaveVlanList></FastLeaveVlanList>
      <IfName></IfName>
    </Interface>
  </FastLeavePorts>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
FastLeaveVlanList	Set MLD snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

MLDSnooping/GroupLimitPorts

This table contains the MLD snooping group limit information on ports.

XML structure

```
<MLDSnooping>
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
```

```
      <GroupLimitVlanList></GroupLimitVlanList>
      <IfName></IfName>
    </Interface>
  </GroupLimitPorts>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set MLD snooping group limit for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

MLDSnooping/IPv6Layer2MulticastGroups

This table contains information about Layer 2 IPv6 multicast groups for VLANs.

XML structure

```
<MLDSnooping>
  <IPv6Layer2MulticastGroups>
    <VLAN>
      <VLANID></VLANID>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <IfIndex></IfIndex>
      <PortAttribute></PortAttribute>
      <IfName></IfName>
    </VLAN>
  </IPv6Layer2MulticastGroups>
</MLDSnooping>
```

Table description

Item	Description
Feature name	MLDSnooping
Table name	IPv6Layer2MulticastGroups
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
GroupIpAddr	IPv6 multicast address.	Index	Hexadecimal string, colon-separated.	N/A
SourceIpAddr	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
IfIndex	Interface IfIndex.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
PortAttribute	Port attribute.	N/A	Each bit represents a port attribute. Values: • 1—Learned from MLD packets.	Examples: • 129—means a port learned from MLD packets and processed successfully. • 136—means a port

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Learned from MLD packets with Exclude filter mode. • 4—Configured statically. • 8—Learned from IPv6 PIM packets. • 16—Obtained from the kernel. • 32—Learned from (*, *) entries. • 64—Learned from (*, G) entries. • 128—Processed successfully. • 256—Failed to being processed. • 512—TRILL port that floods IPv6 multicast data after the topology changes in VLAN.	learned from IPv6 PIM packets and processed successfully.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

MLDSnooping/VsiIPv6Layer2MulticastGroups

This table contains information about Layer 2 IPv6 multicast groups for VSIs.

XML structure

```
<MLDSnooping>
  <VsiIPv6Layer2MulticastGroups>
    <VSI>
      <VsiName></VsiName>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <LinkID></LinkID>
      <PortAttribute></PortAttribute>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <IfName></IfName>
    </VSI>

MLDSnooping

MLDSnooping/Configuration

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping is disabling globally. 全局MLD snooping正在去使能。	During executing set operation to enable global MLD snooping, MLD snooping is disabling globally. 使能全局MLD snooping时，全局MLD snooping正在去使能。

MLDSnooping/VLANs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping drop-unknown is enabled globally. 全局MLD snooping已配置drop-unknown。	During executing set operation to enable drop-unkown for this VLAN, MLD snooping drop-unknown is enabled globally. 使能VLAN内drop-unknown时，全局drop-unkown已经使能。
MLD snooping is disabled on the VLAN. VLAN未使能MLD snooping。	During executing set operation for this VLAN, MLD snooping is disabled on the VLAN. 对该VLAN进行设置时，VLAN未使能MLD snooping。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation for this VLAN, MLD snooping is disabled globally. 对该VLAN进行设置时，全局MLD snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VLAN, the value of GeneralQuerySourceAddr is invalid. 对该VLAN内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VLAN, the value of SpecialQuerySourceAddr is invalid. 对该VLAN内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VLAN, the value of ReportSourceAddr is invalid. 对该VLAN内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of done messages. Done报文源IP地址错误。	During executing set operation for DoneSourceAddr of this VLAN, the value of DoneSourceAddr is invalid. 对该VLAN内DoneSourceAddr进行设置时，DoneSourceAddr值错误。

MLDSnooping/VSIs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping drop-unknown is enabled globally. 全局MLD snooping已配置drop-unknown。	During executing set operation to enable drop-unkown for this VSI, MLD snooping drop-unknown is enabled globally. 使能VSI内drop-unknown时，全局drop-unkown已经使能。
MLD snooping is disabled on the VSI. VSI未使能MLD snooping。	During executing set operation for this VSI, MLD snooping is disabled on the VSI. 对该VSI进行设置时，VSI未使能MLD snooping。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation for this VSI, MLD snooping is disabled globally. 对该VSI进行设置时，全局MLD snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VSI, the value of GeneralQuerySourceAddr is invalid. 对该VSI内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VSI, the value of SpecialQuerySourceAddr is invalid. 对该VSI内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VSI, the value of ReportSourceAddr is invalid. 对该VSI内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of done messages. Done报文源IP地址错误。	During executing set operation for DoneSourceAddr of this VSI, the value of DoneSourceAddr is invalid. 对该VSI内DoneSourceAddr进行设置时，DoneSourceAddr值错误。

MLDSnooping/FastLeavePorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation,daemon receives invalid message type. Get或者set操作时，守护进程收到了错误的消息类型。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation, MLD snooping is disabled globally. 对该表进行配置时，全局 MLD snooping 未使能。

MLDSnooping/GroupLimitPorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation, MLD snooping is disabled globally. 对该表进行配置时，全局 MLD snooping 未使能。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	GroupLimitVLANList can’t be removed alone, and should be removed together with Limit. GroupLimitVLANList不能单独删除，需要和Limit一起删除。

MLDSnooping/Ipv6Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

MLDSnooping/ VSIIPv6Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

Name	Schedule name.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
JobName	Job name.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
TimeString	Time String.	N/A	String, case-insensitive. Length: 1 to 512 characters.	N/A

ModuleProxy/DeleteJob

This table delete job information.

XML structure

```
<ModuleProxy>
  <DeleteJob>
    <Name></Name>
  </DeleteJob>
</ModuleProxy>
```

Table description

Item	Description
Feature name	ModuleProxy
Table name	DeleteJob
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Job name.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A

ModuleProxy/DeleteSchedule

This table delete Schedule information.

XML structure

```
<ModuleProxy>
  <DeleteSchedule>
    <Name></Name>
  </DeleteSchedule>
</ModuleProxy>
```

Table description

Item	Description
Feature name	ModuleProxy
Table name	DeleteSchedule
Table type	Single-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Schedule name.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A

ModuleProxy/WolMacs

This table contains information.of WOL MAC address.

XML structure

```
<ModuleProxy>
  <WolMacs>
    <WolMac>
      <MacAddress></MacAddress>
    </WolMac>
  </WolMacs>
</ModuleProxy>
```

Table description

Item	Description
Feature name	ModuleProxy
Table name	WolMacs
Table type	Single-instance table
Row name	WolMac
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	N/A	MAC address. Example: 00-0c-af-e3-5d-c0..	N/A

Table description

Item	Description
Event stream name	LSPVPING
Event name	IPv4PingEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/lspvping:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	LSPV Ping test name.	String. Length: 1 to 64 characters.	No
SourceAddr	Source IPv4 address of echo requests.	IPv4: String, dotted decimal notation.	No
PacketsCount	Number of echo requests.	Unsigned integer. Value range: 1 to 4294967295.	No
ExpValue	EXP value of echo request.	Unsigned integer. Value range: 0 to 7	No
TTLValue	Time to live.	Unsigned integer. Value range: 1 to 255.	No
WaitTime	The interval time to send a LSP Ping echo request.	Unsigned integer. Value range: 1 to 10000 milliseconds.	No
ReplyMode	Reply mode.	Enumeration: • 1—Do not reply. • 2—Reply via an IPV4 UDP packet. • 3—Reply via an IPV4 UDP packet with router alert.	No

Column name	Column description	Data type and restrictions	Support for extended queries
		• 4—Reply via a VCCV control channel.	
TosValue	ToS value of echo reply.	Unsigned integer. Value range: 0 to 7.	No
PacketSize	Payload length.	Unsigned integer. Value range: 65 to 8100 bytes.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
Verbose	Detailed information of reply.	Boolean: • **true**—Reply packet has detailed information • **false—**Reply packet has no detailed information	No
FecType	LSP FEC type.	Enumeration: • 1—LDP IPv4 LSP. • 2—Generic IPv4 LSP. • 3—ISIS IPv4 LSP • 4—OSPF IPv4 LSP • 5—BGP IPv4 LSP	No
FecIPAddr	LSP FEC IPv4 address.	IPv4: String, dotted decimal notation.	No
FecIPAddrMaskLen	LSP FEC IPv4 address mask length.	Unsigned integer. Value range: 0 to 32.	No
LoopDestAddrStart	Destination address of IP header in echo request of first test packet.	IPv4: String, dotted decimal notation.	No
LoopDestAddrEnd	Destination address of IP header in echo request of last test packet.	IPv4: String, dotted decimal notation.	No
LoopDestAddrIncr	Incremental value of destination address.	Unsigned integer. Value range: 1 to 16777215.	No

    <AvgReplyTime></AvgReplyTime>
    </PingInfo>
  </IPv4PingEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	LSPV Ping test name.	String. Length: 1 to 64 characters.	No
FecIPAddr	LSP FEC type.	IPv4: String, dotted decimal notation.	No
FecIPAddrMaskLen	LSP FEC IPv4 address.	Unsigned integer.	No
TestResult	Test result	Enumeration: • **0**—Successful. • **1**—Error Stop. • **1**—User Stop.	No
TotalTransmitPacket	Number of sent ICMP echo requests	Unsigned integer. Value range: 1 to 4294967295.	No
TotalReceivePacket	Number of received ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No
RepeatPacket	Number of repeat ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No
TimeoutPacket	Number of timeout ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No
LossRate	Percentage of unacknowledged packets to the total sent packets	Unsigned integer. Value range: 0 to 100.	No
MinReplyTime	Minimum response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
MaxReplyTime	Maximum response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
AvgReplyTime	Average response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
SummaryErrorReason	Error reason of Summary packet.	Enumeration: • 0— The packet test succeeded. • other—The packet test failed.	No

TEv4Ping event

This table is used to report ping information for an IPv4 TE tunnel ping operation.

XML structure for event subscription

```
<TEv4PingEvent>
  <PingInfo>
    <TestName></TestName>
    <SourceAddr></SourceAddr>
    <PacketsCount></PacketsCount>
    <ExpValue></ExpValue>

Table description

Item	Description
Event stream name	LSPVPing
Event name	SRPolicyv4PingEvent

Item	Description
Event namespace	http://www.h3c.com/netconf/event:1.0/lspvping:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	LSPV Ping test name.	String. Length: 1 to 64 characters.	No
SourceAddr	Source IPv4 address of echo requests.	IPv4: String, dotted decimal notation.	No
PacketsCount	Number of echo requests.	Unsigned integer. Value range: 1 to 4294967295.	No
ExpValue	EXP value of echo request.	Unsigned integer. Value range: 0 to 7	No
TTLValue	Time to live.	Unsigned integer. Value range: 1 to 255.	No
WaitTime	The interval time to send a LSP Ping echo request.	Unsigned integer. Value range: 1 to 10000 milliseconds.	No
ReplyMode	Reply mode.	Enumeration: • 1—Do not reply. • 2—Reply via an IPV4 UDP packet. • 3—Reply via an IPV4 UDP packet with router alert. • 4—Reply via a VCCV control channel.	No
TosValue	ToS value of echo reply.	Unsigned integer. Value range: 0 to 7.	No
PacketSize	Payload length.	Unsigned integer. Value range: 65 to 8100 bytes.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
Verbose	Detailed information of reply.	Boolean: • **true**—Reply packet has detailed information • **false—**Reply packet has no detailed information	No
SRPolicyName	SR-TE policy name.	String. Length: 1 to 59 characters.	No

Column name	Column description	Data type and restrictions	Support for extended queries
EndPointAddr	SR-TE policy endpoint IPv4 address.	IPv4: String, dotted decimal notation.	No
Color	SR-TE policy color attribute.	Unsigned integer. Value range: 0 to 4294967295.	No
BindingSID	SR-TE policy binding SID.	Unsigned integer. Value range: 16 to 1048575.	No

LSPV

LspvEvent

Message	Explanation
The specified test name already exists. 指定的检测对象已存在。	The test name must be unique. 对象名称必须唯一。
The specified test name doesn't exist. 指定的检测对象不存在。	Please enter the correct test name. 请输入正确的对象名称。
The destination address must be in subnet 127.0.0.0/8. 指定的目的地址必须是127.0.0.0网段的地址。	Please use an address in 127.0.0.0 network segment. 请使用 127.0.0.0 网段的地址
End address must be higher than start address. 结束地址必须大于起始地址。	The start address cannot be higher than the end address. 起始地址不能大于结束地址。
The specified tunnel interface doesn't exist. 指定的Tunnel接口不存在。	Please enter the correct tunnel interface. 请输入正确的Tunnel接口。
The tunnel must be an MPLS TE tunnel. 必须是MPLS TE隧道。	You must specify an MPLS TE tunnel. 此处隧道必须是MPLS TE隧道。
The specified out label is invalid. 指定的出标签值无效。	Please enter a valid out label value. 请输入有效的出标签值。
The null label must be the outermost (top) label in the stack. 空标签必须在标签栈最外层。	The implicit null label 3 and explicit null label 0 must be configured on the outermost layer. 隐式空标签3和显示空标签0必须配置在最外层。
The specified nexthop address is invalid. 指定的下一跳地址值无效。	Please enter a valid nexthop address. 请输入一个有效的下一跳地址。
The specified out interface is invalid. 指定的出接口无效。	Please enter a valid out interface. 请输入一个有效的出接口。
The outgoing interface is a P2P interface, which cannot be specified with a next hop address. 出接口是P2P类型接口，不能指定下一跳地址。	When the outgoing interface is P2P, the next hop address cannot be entered. 当出接口是P2P时，不能输入下一跳地址。
The outgoing interface must be specified with the next hop address. 请同时指定出接口和下一跳地址。	Specifying an interface must also specify the next hop address. 指定出接口必须同时指定下一跳地址。

The specified IPv4 LSP doesn't exist. 指定的IPv4地址前缀类型的MPLS LSP不存在。	Please use the existing IPv4 LSP. 请使用已存在的 IPv4 LSP。
IPv4 LSP and FEC type mismatch. 指定的IPv4地址前缀类型的MPLS LSP与指定的FEC类型不匹配。	The specified IPv4 LSP should use the matching FEC type. 指定的 IPv4 LSP 应使用匹配的 FEC 类型。
IPv4 over IPv6 not supported. 不支持IPv4 over IPv6。	Detection of connectivity for MPLS LSP of IPv4 address prefix type: Nexthop address cannot be an IPv6 address. 检测 IPv4 地址前缀类型的 MPLS LSP 的连通性时下一跳地址不能为 IPv6 地址。
The specified TE tunnel doesn't exist. 指定的TE Tunnel不存在。	The MPLS TE tunnel information could not be obtained. 无法获取到 MPLS TE 的信息。
The specified TE Hot Standby LSP doesn't exist. 指定的TE热备LSP不存在。	The backup LSP created by the MPLS TE hot backup function does not exist. 由 MPLS TE 热备份功能创建的备份 LSP 不存在。
The specified PW doesn't exist. 指定的PW不存在。	Please enter the existing PW LSP. 请输入存在的 PW LSP。
LSP ping for the PW is not supported. PW不支持LSP ping功能。	The device must support PW LSP PING first. 设备须首先支持 PW LSP ping。
No suitable control channel for the PW. PW没有合适的控制通道。	The suitable control channel for PW was not found. 没有找到适合 PW 的控制通道。
Please configure pseudowire control-word for control channel. 请配置控制字使能因为PW控制通道为控制字方式。	Please specify the VCCV control channel type as the control word type, because the PW control channel is the control word mode. 请指定 VCCV 控制通道类型为控制字类型，因为 PW 控制通道为控制字方式。
The specified SR-TE policy doesn't exist. 指定的SR-TE Policy不存在。	Please enter an existing SR-TE policy. 请输入存在的 SR-TE Policy。
The payload length of echo requests is too small. 指定的MPLS echo request报文长度过小。	Please enter a reasonable message length. 请输入合理的报文长度。
TEv4 table not supported. 不支持指定TEv4表。	The device must support TEv4 table first before you can specify it. 设备须首先支持 TEv4 表。
PW Table not supported. 不支持指定PW表。	The device must support PW table first before you can specify it. 设备须首先支持 PW 表。

SRPOLICYv4 Table not supported. 不支持指定SRPolicyv4表。	The device must support SRPOLICYv4 table first before you can specify it. 设备须首先支持 SRPolicyv4 表。
BSID value must be smaller than max label value. SRPolicy的BSID值应小于最大的标签值。	The BSID must be in the specified range. SRPolcy 的 BSID 值必须在设备的定制范围内。

Table description

Item	Description
Event stream name	LSPVTracert
Event name	IPv4TracertEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/lspvtracert:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	LSPV Tracert test name.	String. Length: 1 to 64 characters.	No
SourceAddr	Source IPv4 address of echo requests.	IPv4: String, dotted decimal notation.	No
ExpValue	EXP value of echo request.	Unsigned integer. Value range: 0 to 7	No
TTLValue	Time to live.	Unsigned integer. Value range: 1 to 255.	No
ReplyMode	Reply mode.	Enumeration: • 2—Reply via an IPv4 UDP packet. • 3—Reply via an IPv4 UDP packet with router alert.	No
TosValue	ToS value of echo reply.	Unsigned integer. Value range: 0 to 7.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
Verbose	Detailed information of reply.	Boolean: • **true**—The reply packet has detailed information.	No

Column name	Column description	Data type and restrictions	Support for extended queries
		• **false—**The reply packet has no detailed information.	
DDMap	Encapsulates the Downstream Detailed Mapping (DDMAP) TLV in MPLS echo reply and MPLS echo request packets.	Boolean: • **true**—The reply packet has Downstream Detailed Mapping information • **false—**The reply packet has no Downstream Detailed Mapping information	No
FecCheck	Checks the FEC stack at transit nodes.	Boolean: • **true**—Checks the FEC stack at transit nodes. • **false—**Not checks the FEC stack at transit nodes.	No
FecType	LSP FEC type.	Enumeration: • 1—LDP IPv4 LSP. • 2—Generic IPv4 LSP. • 3—ISIS IPv4 LSP • 4—OSPF IPv4 LSP • 5—BGP IPv4 LSP	No
FecIPAddr	LSP FEC IPv4 address.	IPv4: String, dotted decimal notation.	No
FecIPAddrMaskLen	LSP FEC IPv4 address mask length.	Unsigned integer. Value range: 0 to 32.	No
LoopDestAddrStart	Destination address of IP header in echo request of first test packet.	IPv4: String, dotted decimal notation.	No
LoopDestAddrEnd	Destination address of IP header in echo request of last test packet.	IPv4: String, dotted decimal notation.	No
LoopDestAddrIncr	Incremental value of destination address.	Unsigned integer. Value range: 1 to 16777215.	No

XML structure for event report

Table description

Item	Description
Event stream name	LSPVTracert
Event name	TEv4TracertEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/lspvtracert:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	LSPV Tracert test name.	String. Length: 1 to 64 characters.	No
SourceAddr	Source IPv4 address of echo requests.	IPv4: String, dotted decimal notation.	No
ExpValue	EXP value of echo request.	Unsigned integer. Value range: 0 to 7	No
TTLValue	Time to live.	Unsigned integer. Value range: 1 to 255.	No

Column name	Column description	Data type and restrictions	Support for extended queries
ReplyMode	Reply mode.	Enumeration: • 2—Reply via an IPV4 UDP packet. • 3—Reply via an IPV4 UDP packet with router alert.	No
TosValue	ToS value of echo reply.	Unsigned integer. Value range: 0 to 7.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
Verbose	Detailed information of reply.	Boolean: • **true**—The reply packet has detailed information. • **false—**The reply packet has no detailed information.	No
FecCheck	Checks the FEC stack at transit nodes.	Boolean: • **true**—Checks the FEC stack at transit nodes. • **false—**Not checks the FEC stack at transit nodes.	No
TunnelName	Tunnel name.	String. Length: 1 to 47 characters.	No
TunnelNum	Tunnel num.	String. Length: 1 to 27 characters.	No
HotStandby	Hot Standby	Boolean: • **true**—Hot standby LSP TE tunnel • **false—**Main LSP of TE tunnel	No

XML structure for event report

```
<TEv4TracertEvent>

MPLS

MPLS/ResetStatistics

This table is used to reset mpls statistics.

XML structure

```
<MPLS>
  <ResetStatistics>
    <All></All>
    <Static></Static>
  </ResetStatistics>
 </MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	ResetStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
All	Specify all LSPs.	N/A	• This column must be empty.	N/A
Static	Specify static LSPs.	N/A	• This column must be empty.	N/A

MPLS/ResetVrfStatistics

This table is used to reset vrf MPLS statistics information.

XML structure

```
<MPLS>
  <ResetVrfStatistics>
    <ResetVrfStatistic>
      <VrfName></VrfName>
```

```
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLenth></Ipv4PrefixLenth>
    </ResetVrfStatistic>
  </ResetVrfStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	ResetVrfStatistics
Table type	Multi-instance table
Row name	ResetVrfStatistic
Restrictions	Enable MPLS statistics collection.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	The name of Vpn Instance.	Index	String. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 LSP prefix address	Index	String, dotted decimal notation.	N/A
Ipv4PrefixLenth	IPv4 LSP prefix length	Index	Unsigned integer. Value range: 0 to 32.	N/A

MPLS/ResetTETunnelStatistics

This table is used to reset TE tunnel statistics.

XML structure

```
<MPLS>
  <ResetTETunnelStatistics>
   <ResetTETunnelStatistic>
      <TunnelID></TunnelID>
   </ResetTETunnelStatistic>
  </ResetTETunnelStatistics>
</MPLS>

MPLS

MPLS/Base

This table contains global MPLS information.

XML structure

```
<MPLS>
  <Base>
    <LSRID></LSRID>
    <CBTSStatInterval></CBTSStatInterval>
    <MPLSBFD></MPLSBFD>
    <FwdSplitHorizon></FwdSplitHorizon>
    <LabelAdvertise></LabelAdvertise>
    <TtlExpiration></TtlExpiration>
    <TtlPropagatePub></TtlPropagatePub>
    <TtlPropagateVPN></TtlPropagateVPN>
    <MbfdEnable></MbfdEnable>
    <BandwidthBasedSharing></BandwidthBasedSharing>
  </Base>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSRID	The LSR ID.	N/A	String, dotted decimal notation.	N/A
CBTSStatInterval	CBTS statistics collection interval in seconds	N/A	Unsigned short. Value range: 5~65535. The default value is 5.	N/A
MPLSBFD	MPLS BFD global enable.	N/A	Boolean: • **true**—Enabled.	Some versions support MPLSBFD and

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false—**Disabled(default)	some versions support MbfdEnable. For relevant information, see the XSD document of your product.
FwdSplitHorizon	Whether is enabled mpls forwarding split-horizon	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
LabelAdvertise	Specify the type of labels advertised by egress	N/A	Enumeration: • 0—Implicit-null. • 1—Explicit-null. • 2—Non-null.	N/A
TtlExpiration	Enable sending of ICMP time exceeded messages	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TtlPropagatePub	Propagate the Public TTL to and from the MPLS header	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TtlPropagateVPN	Propagate the VPN TTL to and from the MPLS header	N/A	Boolean: • **true**—Enabled. • **false—Disabled.**	N/A
MbfdEnable	Enable MPLS BFD	N/A	Boolean: • **true**—Enabled. • **false—Disabled.**	Some versions support MPLSBFD and some versions support MbfdEnable. For relevant information, see the XSD document of your product.
BandwidthBasedSharing	Enable MPLS bandwidth based sharing	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Support for this column depends on the device model.

MPLS/Interfaces

This table contains MPLS interface information.

XML structure

```
<MPLS>
  <Interfaces>
    <Interface>
```

```
      <IfIndex></IfIndex>
      <Enable></Enable>
      <Mtu></Mtu>
    </Interface>
  </Interfaces>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable MPLS	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A
Mtu	Specify the MPLS Maximum Transmission Unit (MTU)	N/A	Unsigned integer. Value range: 46 to 65535.	N/A

MPLS/LabelSegments

This table contains MPLS label segments information.

XML structure

```
<MPLS>
  <LabelSegments>
    <LabelSegment>
      <ProtocolType></ProtocolType>
      <MinLabel></MinLabel>
      <MaxLabel></MaxLabel>
    </LabelSegment>
  </LabelSegments>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	LabelSegments
Table type	Multi-instance table
Row name	LabelSegment
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol Type.	Index	Enumeration: • 8—VPN	N/A
MinLabel	The minimum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A
MaxLabel	The maximum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A

MPLS/SegmentRouting

This table contains segment routing label block infomation.

XML structure

```
<MPLS>
  <SegmentRouting>
    <GlobalSRGB>
```

```
      <Lowerbound></Lowerbound>
      <Upperbound></Upperbound>
    </GlobalSRGB>
    <SRLB>
      <Lowerbound></Lowerbound>
      <Upperbound></Upperbound>
    </SRLB>
  </SegmentRouting>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	SegmentRouting
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalSRGB	Global SRGB configuration.	N/A	Members include: • Lowerbound • Upperbound	N/A
SRLB	SR Local Block configuration.	N/A	Members include: • Lowerbound • Upperbound	N/A
Lowerbound	Lower bound of the label block.	N/A	Unsigned integer. The value range varies by device model. The label must be greater than or equal to16.	N/A
Upperbound	Upper bound of the label block.	N/A	Unsigned integer. The value range varies by device model. The label must be greater than or equal to17.	N/A

MPLS/TunnelPolicies

This table contains Tunnel policy information.

XML structure

```
<MPLS>
  <TunnelPolicies>
    <TunnelPolicy>
      <PolicyName></PolicyName>
      <Default></Default>
      <Sequence>
        <Strict></Strict>
        <PrefLspType></PrefLspType>
        <LoadBalancingNum></LoadBalancingNum>
      </Sequence>
    </TunnelPolicy>
  </TunnelPolicies>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelPolicies
Table type	Multi-instance table
Row name	TunnelPolicy
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the tunnel policy	Index	String. Length: 1 to 19 characters.	Some product 1 to 126 characters.
Default	The default tunnel policy	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
Sequence	Tunnel selection setting	N/A	Members include: • PrefLspType. • LoadBalancingNum.	The members of PrefLspType and LoadBalancingNum must be specified.
Strict	Using only one type of tunnels for load balancing	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
PrefLspType	Preferred tunnel type	N/A	Enumeration: • 0—LSP.	Up to 4 repeats are allowed for PrefLspType.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—GRE. • 2—CR-LSP. • 3—SR-LSP.	Support for GRE depends on the device model.
LoadBalancingNum	Number of tunnels for load balancing	N/A	Unsigned integer. The value range varies by device model.	N/A

MPLS/PreferredTunnelPolicies

This table contains preferred tunnel information in a tunnel policy.

XML structure

```
<MPLS>
  <PreferredTunnelPolicies>
    <PreferredTunnelPolicy>
      <PolicyName></PolicyName>
      <TunnelType></TunnelType>
      <TunnelID></TunnelID>
    </PreferredTunnelPolicy>
  </PreferredTunnelPolicies>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	PreferredTunnelPolicies
Table type	Multi-instance table
Row name	PreferredTunnelPolicy
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of tunnel policy	Index	String. Length: 1 to 19 characters.	Some product 1 to 126 characters.
TunnelType	Preferred tunnel type.	Index	Enumeration: • 0—TUNNEL. • 1—TUNNEL-BUNDLE.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A

MPLS/TunnelMbfds

This table contains MBFD tunnel LSP information.

XML structure

```
<MPLS>
  <TunnelMbfds>
    <TunnelMbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Echo></Echo>
      <Template></Template>
      <Backup></Backup>
      <BackupTemplate></BackupTemplate>
      <Seamless></Seamless>
      <ReverseLabel></ReverseLabel>
      <SourceIP></SourceIP>
    </TunnelMbfd>
  </TunnelMbfds>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelMbfds
Table type	Multi-instance table
Row name	TunnelMbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean:	This column is

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **true**—BFD and SBFD enabled. • **false—**BFD and SBFD disabled (default).	used to enable or disable BFD and SBFD.
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	If Remote discriminator is not configured for SBFD, SBFD uses the destination of the tunnel.
Echo	Echo style of MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Template	The MBFD parameter of main LSP	N/A	String. Length: 1 to 63 characters.	When has no BackupTemplate,the tempate also apply to backup LSP.
Backup	Enable MBFD for backup LSP	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
BackupTemplate	The MBFD parameter of backup LSP	N/A	String. Length: 1 to 63 characters.	N/A
Seamless	Enable SBFD	N/A	Boolean: • **true**—SBFD enabled. • **false—**SBFD disabled, BFD enabled (default).	If this column is configured, the table configures SBFD for the tunnel. If this column is not available, the table configures BFD for the tunnel.
ReverseLabel	Reverse Label	N/A	Unsigned integer. Value range: 16 to 1048575	
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/Tunnelbfds

This table contains BFD tunnel interface information.

XML structure

```
<MPLS>
  <Tunnelbfds>
    <Tunnelbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Echo></Echo>
      <Template></Template>

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default).	N/A
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	this column must be specified if SBFD set be true.
Template	The MBFD parameter of main LSP	N/A	String. Length: 1 to 63 characters.	When has no BackupTemplate,the tempate also apply to backup LSP.
BackupTemplate	The MBFD parameter of backup LSP	N/A	String. Length: 1 to 63 characters.	N/A
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/TunnelBfdPara

This table contains the BFD and SBFD configuration on a tunnel interface.

XML structure

```
<MPLS>
  <TunnelBfdParas>
    <TunnelBfdPara>
      <TunnelID></TunnelID>
      <BfdMinTx></BfdMinTx>
```

```
      <BfdMinRx></BfdMinRx>
      <BfdDetectMultiplier></BfdDetectMultiplier>
    </TunnelBfdPara>
  </TunnelBfdParas>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelMbfds
Table type	Multi-instance table
Row name	TunnelMbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
BfdMinTx	The minimum interval for transmitting BFD packets	N/A	Unsigned integer. Value range: 1 to 4294967295.	The value range varies by device model.
BfdMinRx	The minimum interval for receiving BFD packets	N/A	Unsigned integer. Value range: 1 to 4294967295.	The value range varies by device model.
BfdDetectMultiplier	The detection time multiplier	N/A	Unsigned integer. Value range: 1 to 4294967295.	The value range varies by device model.

MPLS/TunnelTBfdPara

This table contains the Tunnel-BFD and Tunnel-SBFD configuration on a tunnel interface.

XML structure

```
<MPLS>
  <TunnelTBfdParas>
    <TunnelTBfdPara>
      <TunnelID></TunnelID>
      <BfdMinTx></BfdMinTx>
      <BfdMinRx></BfdMinRx>
      <BfdDetectMultiplier></BfdDetectMultiplier>

Table description

Item	Description
Feature name	MPLS
Table name	Mbfds
Table type	Multi-instance table
Row name	Mbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Ipv4Address	FEC destination address	Index	String, dotted decimal notation.	N/A
Ipv4PrefixLen th	Mask length of the FEC destination address	Index	Unsigned integer. Value range: 0 to 32.	N/A
Nexthop	Nexthop address	Index	String, dotted decimal notation.	N/A
LocalDiscrimi nator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscri minator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	The remote discriminator must be configured together with the local discriminator.
Template	MBFD session parameter template for the primary LSP	N/A	String. Length: 1 to 63 characters.	N/A
NilFec	Support MPLS echo packets with Nil FEC type	N/A	Boolean: • **true**—Enabled. • **false—**Disabled (default).	It cannot be configured together with LdpFec, Echo, LocalDiscriminator,

Column name	Column description	Column type	Data type and restrictions	Remarks
				RemoteDiscriminator, or lspType.
LdpFec	Support MPLS echo packets with LDP IPv4 Prefix	N/A	Boolean: • **true**—Enabled. • **false—**Disabled (default).	It cannot be configured together with NilFec, Echo, LocalDiscriminator, RemoteDiscriminator, or LspType.
Echo	Echo mode of MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled (default).	It cannot be configured together with NilFec, LdpFec, LocalDiscriminator, RemoteDiscriminator, or LspType.
Seamleass	Enable seamless BFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled (default).	Represents whether it is sbfd or not. When it is false, it is BFD
LspType	LSP type	N/A	Enumeration: • 0—Static. • 1—LDP. • 2—BGP. • 3—OSPF. • 4—ISIS.	It cannot be configured NilFec, LdpFec, or Echo. It can only be configured together with LocalDiscriminator and RemoteDiscriminator.
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/LspTbfds

This table contains LSP tunnel BFD information.

XML structure

```
<MPLS>
  <LspTbfds>
    <LspTbfd>
     <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLenth></Ipv4PrefixLenth>

LspType	LSP type	N/A	Enumeration: • 0—Static • 1—LDP • 2—BGP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—OSPF • 4—ISIS	
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/Statistics

This table contains MPLS statistics information.

XML structure

```
<MPLS>
  <Statistics>
    <All></All>
    <Interval></Interval>
    <Static></Static>
  </Statistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Statistics
Table type	Single-instance table
Row name	None
Restrictions	Enable MPLS statistics collection.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
All	Specify all LSPs.	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Interval	Set the statistics collection interval.	N/A	Unsigned integer. Value range: 30 to 65535.	N/A
Static	Specify static LSPs.	N/A	Boolean: • **true**—Enabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Disabled.	

MPLS/VrfStatistics

This table contains MPLS statistics information.

XML structure

```
<MPLS>
  <VrfStatistics>
    <VrfStatistic>
      <VrfName></VrfName>
      <Ipv4Prefixs></Ipv4Prefixs>
    </VrfStatistic>
  </VrfStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	VrfStatistics
Table type	Multi-instance table
Row name	VrfStatistic
Restrictions	Enable MPLS statistics collection.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	The name of Vpn Instance.	Index	String. Length: 1 to 31 characters.	N/A
Ipv4Prefixs	The ipv4 statistics information.	Sublist	NA	NA

MPLS/VrfStatistics/VrfStatistic/Ipv4Prefixs

This table contains MPLS ipv4 statistics information.

XML structure

```
<Ipv4Prefixs>
  <Ipv4Prefix>
    <Ipv4Address></Ipv4Address>
    <Ipv4PrefixLenth></Ipv4PrefixLenth>
  </Ipv4Prefix>
</Ipv4Prefixs>
```

Table description

Item	Description
Feature name	MPLS
Table name	Ipv4Prefixs
Table type	Multi-instance table
Row name	Ipv4Prefix
Restrictions	Enable MPLS statistics collection.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 LSP prefix address	Index	String, dotted decimal notation.	N/A
Ipv4PrefixLenth	IPv4 LSP prefix length	Index	Unsigned integer. Value range: 0 to 32.	N/A

MPLS/TeStatistics

This table contains tunnel statistics information.

XML structure

```
<MPLS>
  <TeStatistics>
    <TeStatistic>
      <LsrID></LsrID>
      <TunnelID></TunnelID>
    </TeStatistic>
  </TeStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TeStatistics
Table type	Multi-instance table
Row name	TeStatistic
Restrictions	Enable Tunnel statistics collection.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LsrID	Ingress LSR ID of the tunnel..	Index	String, dotted decimal notation.	N/A
TunnelID	MPLS TE tunnel ID.	Index	Unsigned integer.	N/A

MPLS/StaticEgressLSPs

This table contains static egress LSP information.

XML structure

```
<MPLS>
  <StaticEgressLSPs>
    <StaticEgressLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
    </StaticEgressLSP>
  </StaticEgressLSPs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticEgressLSPs
Table type	Multi-instance table
Row name	StaticEgressLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer. The value range varies by device model.	No modification.

MPLS/StaticIngressLSPs

This table contains static ingress LSP information.

XML structure

```
<MPLS>
  <StaticIngressLSPs>
    <StaticIngressLSP>
      <LSPName></LSPName>
      <OutLabel></OutLabel>
      <DestAddress></DestAddress>
      <DestWildcardMask></DestWildcardMask>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticIngressLSP>
  </StaticIngressLSPs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticIngressLSPs
Table type	Multi-instance table
Row name	StaticIngressLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified.
DestAddress	IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestWildcardMask must also be specified.
DestWildcard Mask	Mask of the IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestAddress must also be specified.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	One and only one of this column or NextHop must be specified. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MPLS/StaticTransitLSPs

This table contains static transit LSP information.

XML structure

```
<MPLS>
  <StaticTransitLSPs>
    <StaticTransitLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
      <OutLabel></OutLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
```

```
    </StaticTransitLSP>
  </StaticTransitLSPs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticTransitLSPs
Table type	Multi-instance table
Row name	StaticTransitLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	This column must be specified.
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MPLS/StaticSRLSPs

This table contains static segment routing LSP information.

XML structure

```
<MPLS>
  <StaticSRLSPs>
    <StaticSRLSP>
      <LSPName></LSPName>
      <OutLabel></OutLabel>
    </StaticSRLSP>
  </StaticSRLSPs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticSRLSPs
Table type	Multi-instance table
Row name	StaticSRLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static segment routing LSP.	Index	String. Length: 1 to 15 characters.	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified, and allow repeat.

MPLS/StaticSRAdjacencies

This table contains static segment routing adjacency information.

XML structure

```
<MPLS>
  <StaticSRAdjacencies>
    <StaticSRAdjacency>
      <AdjName></AdjName>
      <InLabel></InLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
```

```
    </StaticSRAdjacency>
  </StaticSRAdjacencies>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticSRAdjacencies
Table type	Multi-instance table
Row name	StaticSRAdjacency
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdjName	Name of static segment routing adjacency.	Index	String. Length: 1 to 15 characters.	N/A
InLabel	Adjacency incoming label	N/A	Unsigned integer.	This column must be specified.
NextHop	Adjacency next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	Adjacency outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

MPLS/StaticSRPrefixs

This table contains static segment routing prefix information.

XML structure

```
<MPLS>
  <StaticSRPrefixs>
   <StaticSRPrefix>
      <PrefixName></PrefixName>
      <DestAddress></DestAddress>
      <DestMask></DestMask>
      <InLabel></InLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
      <OutLabel></OutLabel>
    </StaticSRPrefix>
  </StaticSRPrefixs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	StaticSRPrefixs
Table type	Multi-instance table
Row name	StaticSRPrefix
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixName	Name of static segment routing prefix.	Index	String. Length: 1 to 15 characters.	N/A
DestAddress	IPv4 prefix destination address	Index	String, dotted decimal notation.	N/A
DestMask	Prefix destination address mask	Index	Unsigned integer.	N/A
InLabel	Prefix incoming label	Index	Unsigned integer.	N/A
NextHop	Prefix next hop address	Index	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	Prefix outgoing interface index	Index	Unsigned integer.	One and only one of this column and NextHop must be specified. Some versions

Column name	Column description	Column type	Data type and restrictions	Remarks
				support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
OutLabel	Prefix outgoing label	N/A	Unsigned integer.	This column must be specified, and repetitions are not allowed for this column.

MPLS/MPLSVRFs

This table contains MPLS VRF information.

XML structure

```
<MPLS>
  <MPLSVRFs>
    <MPLSVRF>
      <VRF></VRF>
      <Statistics></Statistics>
    </MPLSVRF>
  </MPLSVRFs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	MPLSVRFs
Table type	Multi-instance table
Row name	MPLSVRF
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Statistics	Whether statistics is enabled for the VRF	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this column depends on the device model.

    <TtlPropagateVPN></TtlPropagateVPN>
    <MbfdEnable></MbfdEnable>
    <TPNameMaxLen></TPNameMaxLen>
    <BandwidthBasedSharing></BandwidthBasedSharing>
  </Base>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSRID	The LSR ID	N/A	String, dotted decimal notation.	N/A
StaticLabelM	The max label	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ax	value for static lsp			
SupportGRE	Whether GRE feature is supported	N/A	Boolean: • **true**—Supported. • **false**—**Not supported**.	N/A
SupportStaticSR	Whether static segment routing with MPLS feature is supported	N/A	Boolean: • **true**—Supported. • **false**—**Not supported**.	N/A
SRMaxLabelDepth	The max. label stack depths for segment routing with MPLS	N/A	• Unsigned integer	N/A
CBTSStat Interval	The CBTS statistics collection interval in seconds	N/A	Unsigned short. Value range: 5~65535	Unit of time is second.
MPLSBFD	MPLS BFD global enable.	N/A	Boolean: • **true**—Enabled. • **false—**Disabled	Some versions support MPLSBFD and some versions support MbfdEnable. For relevant information, see the XSD document of your product.
FwdSplitHorizon	Whether is enabled mpls forwarding split-horizon	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
LabelAdvertise	Specify the type of labels advertised by egress	N/A	Enumeration: • 0—Implicit-null. • 1—Explicit-null. • 2—Non-null.	N/A
TtlExpiration	Enable sending of ICMP time exceeded messages	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TtlPropagatePub	Propagate the Public TTL to and from the MPLS header	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TtlPropagateVPN	Propagate the VPN TTL to and from the MPLS header	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MbfdEnable	Enable MPLS BFD	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Some versions support MPLSBFD and some versions support MbfdEnable. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product.
TPNameMaxLen	Tunnel Policy Name Max Length	N/A	Unsigned integer	N/A
BandwidthBasedSharing	Enable MPLS bandwidth based sharing	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Support for this column depends on the device model.

MPLS/Interfaces

This table contains MPLS interface information.

XML structure

```
<MPLS>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Enable></Enable>
      <Status></Status>
      <Mtu></Mtu>
    </Interface>
  </Interfaces>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Enable	Enable MPLS	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Status	Interface status	N/A	Enumeration: • 0—up. • 1—down.	N/A
Mtu	Specify the MPLS Maximum Transmission Unit (MTU)	N/A	Unsigned integer. Value range: 46 to 65535.	N/A

MPLS/TunnelPolicies

This table contains Tunnel policy information.

XML structure

```
<MPLS>
  <TunnelPolicies>
    <TunnelPolicy>
      <PolicyName></PolicyName>
      <Default></Default>
      <Sequence>
        <Strict></Strict>
        <PrefLspType></PrefLspType>
        <LoadBalancingNum></LoadBalancingNum>
      </Sequence>
    </TunnelPolicy>
  </TunnelPolicies>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelPolicies
Table type	Multi-instance table
Row name	TunnelPolicy
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the tunnel policy	Index	String. Length: 1 to 19 characters.	Some product 1 to 126 characters.
Default	The default tunnel policy	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Sequence	Tunnel selection setting	N/A	Member include: • PrefLspType. • LoadBalancingNum.	N/A
Strict	Using only one type of tunnels for load balancing	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
PrefLspType	Preferred tunnel type	N/A	Enumeration: • 0—LSP. • 1—GRE. • 2—CR-LSP. • 3—SR-LSP.	Up to 4 repeats are allowed for PrefLspType. Support for GRE depends on the device model.
LoadBalancingNum	Number of tunnels for Load balancing	N/A	Unsigned integer. The value range varies by device model.	N/A

MPLS/PreferredTunnelPolicies

This table contains preferred tunnel information in a tunnel policy.

XML structure

```
<MPLS>
  <PreferredTunnelPolicies>
    <PreferredTunnelPolicy>
      <PolicyName></PolicyName>
      <TunnelType></TunnelType>
```

```
      <TunnelID></TunnelID>
      <PriorityLevel></PriorityLevel>
    </PreferredTunnelPolicy>
  </PreferredTunnelPolicies>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	PreferredTunnelPolicies
Table type	Multi-instance table
Row name	PreferredTunnelPolicy
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of tunnel policy	Index	String. Length: 1 to 19 characters.	Some product 1 to 126 characters.
TunnelType	Preferred tunnel type.	Index	Enumeration: • 0—TUNNEL. • 1—TUNNEL-BUNDLE.	N/A
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
PriorityLevel	Priority level of preferred tunnel.	N/A	Unsigned integer.	A smaller number has a higher priority.

MPLS/LabelRanges

This table contains MPLS label ranges information.

XML structure

```
<MPLS>
  <LabelRanges>
    <ProtocolType></ProtocolType>
    <MinLabel></MinLabel>
    <MaxLabel></MaxLabel>
  </LabelRanges>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	LabelRanges
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol Type.	N/A	Enumeration: • 0—STATIC.	N/A
MinLabel	The minimum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A
MaxLabel	The maximum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A

MPLS/LabelSegments

This table contains MPLS label segments information.

XML structure

```
<MPLS>
  <LabelSegments>
    <LabelSegment>
      <ProtocolType></ProtocolType>
      <MinLabel></MinLabel>
      <MaxLabel></MaxLabel>
    </LabelSegment>
  </LabelSegments>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS

Table name	LabelSegments
Table type	Multi-instance table
Row name	LabelSegment
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol Type.	Index	Enumeration: • 0—STATIC. • 1—EGRESS. • 2—DYNAMIC • 3—L3VPN • 4—VPWS • 5—VPLS • 6—SRGB • 7—SRLB • 8—VPN	N/A
MinLabel	The minimum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A
MaxLabel	The maximum label of the range.	N/A	Unsigned integer. • The value range varies by device model.	N/A

MPLS/SegmentRouting

This table contains segment routing label block infomation.

XML structure

```
<MPLS>
  <SegmentRouting>
    <GlobalSRGB>
      <Lowerbound></Lowerbound>
      <Upperbound></Upperbound>
    </GlobalSRGB>
    <SRLB>
      <Lowerbound></Lowerbound>
      <Upperbound></Upperbound>
    </SRLB>
  </SegmentRouting>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	SegmentRouting
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalSRGB	Global SRGB configuration.	N/A	Members include: • Lowerbound • Upperbound	N/A
SRLB	SR Local Block configuration.	N/A	Members include: • Lowerbound • Upperbound	N/A
Lowerbound	Lower bound of the label block.	N/A	Unsigned integer. The value range varies by device model.	N/A
Upperbound	Upper bound of the label block.	N/A	Unsigned integer. The value range varies by device model.	N/A

MPLS/TunnelMbfds

This table contains MBFD tunnel LSP information.

XML structure

```
<MPLS>
  <TunnelMbfds>
    <TunnelMbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>

```

```
      <Seamless></Seamless>
      <ReverseLabel></ReverseLabel>
      <SourceIP></SourceIP>
    </TunnelMbfd>
  </TunnelMbfds>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelMbfds
Table type	Multi-instance table
Row name	TunnelMbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Echo	Echo style of MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Template	MBFD session parameter template for the primary LSP	N/A	String. Length: 1 to 63 characters.	This template also applies to the backup LSP if no template is specified for the backup LSP.
Backup	Enable MBFD for backup LSP	N/A	Boolean: • **true**—Enabled. **false—**Disabled.	N/A
BackupTemplate	MBFD session parameter tempate for the	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	backup LSP			
SRLspBfdState	MBFD session state for the primary SRLSP	N/A	Boolean: • **true**—Up. • **false—**Down.	N/A
BackupSRLspBfdState	MBFD session state for the backup SRLSP	N/A	Boolean: • **true**—Up. • **false—**Down.	N/A
Seamless	Enable SBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
ReverseLabel	Reverse Label	N/A	Unsigned integer. Value range: 16 to 1048575	
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/Tunnelbfds

This table contains BFD tunnel interface information.

XML structure

```
<MPLS>
  <Tunnelbfds>
    <Tunnelbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Echo></Echo>
      <Template></Template>
      <TunnelBfdState></TunnelBfdState>
      <Seamless></Seamless>
      <ReverseLabel></ReverseLabel>
      <SourceIP></SourceIP>
    </Tunnelbfd>
  </Tunnelbfds>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS

Table name	Tunnelbfds
Table type	Multi-instance table
Row name	Tunnelbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	
Echo	Echo style of MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Template	The MBFD parameter of main LSP	N/A	String. Length: 1 to 63 characters.	When has no BackupTemplate,the tempate also apply to backup LSP.
TunnelBfdState	The state of tunnel bfd	N/A	Boolean: • **true**—Up. • **false—**Down.	N/A
Seamless	Enable SBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
ReverseLabel	Reverse Label	N/A	Unsigned integer. Value range: 16 to 1048575	
SourceIP	Source IP address	N/A	String, dotted decimal notation.	If this column is not available, the table uses LSR ID as Source IP address.

MPLS/TunnelSbfds

This table contains SBFD Tunnel interface information.

XML structure

```
<MPLS>
  <TunnelSbfds>
    <TunnelSbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <RemoteDiscriminator></RemoteDiscriminator>

Protocol	IGP prefix protocol	N/A	Enumeration: • 0—Any. • 1—OSPF • 2—ISIS	N/A
SRADJ	Segment routing adjacent	N/A	Members include: • LocalIFIP • Protocol	N/A
LocalIFID	Local interface ID	N/A	Unsigned short.	N/A
Protocol	Segment routing adjacent Protocol	N/A	Unsigned char.	N/A
Ipv4Address	FEC destination address	N/A	String, dotted decimal notation.	N/A
Ipv4PrefixLenth	Mask length of the FEC destination address	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SRPolicy	Segment Routing policy information	N/A	Enumeration: • Name • Color	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• EndPoint	
Name	Policy name	N/A	String. Length: 1 to 59 characters.	N/A
Color	Color value	N/A	Unsigned integer.	N/A
EndPoint	Policy End-point address	N/A	String, dotted decimal notation	N/A
NHLFEID	NHLFE ID	N/A	Unsigned integer.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	NA
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
SourceIP	Source IP address of the BFD session	N/A	String, dotted decimal notation.	N/A
DestinationIP	Destination IP address of the BFD session	N/A	String, dotted decimal notation.	N/A
SessionState	State of the BFD session	N/A	Members include: • 0—Init • 1—Down • 2—Up	N/A
SessionRole	The role of the BFD session	N/A	Members include: • **true**—Active • **false—**Passive	N/A
Template	MBFD session parameter template for the primary LSP	N/A	String. Length: 1 to 63 characters.	N/A
Echo	Echo mode of MBFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Seamleass	Enable seamless BFD	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A

MPLS/Statistics

This table contains MPLS statistics information.

XML structure

```
<MPLS>
  <Statistics>
    <All></All>
    <Interval></Interval>
    <Static></Static>
  </Statistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Statistics
Table type	Single-instance table
Row name	None
Restrictions	Enable MPLS statistics collection.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
All	Specify all LSPs.	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
Interval	Set the statistics collection interval.	N/A	Unsigned integer. Value range: 30 to 65535.	N/A
Static	Specify static LSPs.	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A

MPLS/VrfStatistics

This table contains MPLS statistics information.

XML structure

```
<MPLS>
  <VrfStatistics>
    <VrfStatistic>
      <VrfName></VrfName>
      <Ipv4Prefixs></Ipv4Prefixs>
    </VrfStatistic>
```

```
  </VrfStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	VrfStatistics
Table type	Multi-instance table

Table description

Item	Description
Feature name	MPLS
Table name	StaticSRPrefixs
Table type	Multi-instance table
Row name	StaticSRPrefix
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixName	Name of static segment routing Prefix.	Index	String. Length: 1 to 15 characters.	N/A
DestAddress	IPv4 prefix destination address	Index	String, dotted decimal notation.	N/A
DestMask	Prefix destination address mask	Index	Unsigned integer.	N/A
InLabel	Prefix incoming label	Index	Unsigned integer.	N/A
NextHop	Prefix next hop address	Index	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	Prefix outgoing interface index	Index	Unsigned integer.	One and only one of this column or NextHop must be specified. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
OutIfName	Prefix outgoing interface name	N/A	String. Length: 2 to 47 characters.	N/A
OutLabel	Prefix outgoing label	N/A	Unsigned integer.	This column must be specified, and repetitions are not

Column name	Column description	Column type	Data type and restrictions	Remarks
				allowed for this column.

MPLS/IPv4LSP

This table contains IPv4 LSP information.

Table description

Item	Description
Feature name	MPLS
Table name	StaticLSP
Table type	Multi-instance table
Row name	LSP
Restrictions	This table contains LSP information on the transit node and egress

	node. Static LSP information on the ingress node is stored in the IPv4LSP table. Static CRLSP information on the ingress node is stored in the TEv4LSP table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	LSP protocol type	Index	Enumeration: • **0**—Unknown. • **1**—Static LSP.	N/A
LspIndex	Static LSP index	Index	Unsigned integer. Length: 32 bits.	Typically, this column represents static LSP incoming label.
LSRType	LSR type	Index	Enumeration: • **1**—Transit. • **2**—Egress.	Static LSP queries of the address type are no longer supported, IPv6 4lsp supports query.
ID	LSP ID	Index	Unsigned integer. Value range: 0 to 255.	An LSP can have one row for inbound information, and multiple rows for outbound information. Each row has an ID. • Inbound ID: 0. • Outbound ID: 1 to 255.
InfoType	LSP information type	N/A	Enumeration: • **0**—Inbound information. • **1**—Outbound information.	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	LSP inbound information contains this column.
OutLabel	LSP outgoing label	N/A	Unsigned integer.	LSP outbound information contains this column.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*. LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
OutIfName	LSP outgoing	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface name		Length: 2 to 47 characters.	
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
NHLFEID	NHLFE ID	N/A	Unsigned integer.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupOutLabel	Backup LSP outgoing label	N/A	Unsigned integer.	Backup LSP outbound information contains this column.
BackupOutIfIndex	Backup LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*. Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupOutIfName	Backup LSP outgoing interface name	N/A	String. Length: 2 to 47 characters.	N/A
BackupNextHop	Backup LSP next hop address	N/A	String, dotted decimal notation.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupNHLFEID	Backup NHLFE ID	N/A	Unsigned integer.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
Octets	Number of octets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	the statistics always return 0
HCOctets	Number of high order octets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Errors	Number of error packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Discards	Number of discarded packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

MPLS/MPLSVRFs

This table contains MPLS VRF information.

XML structure

```
<MPLS>
  <MPLSVRFs>
    <MPLSVRF>
      <VRF></VRF>
      <Statistics></Statistics>
    </MPLSVRF>
  </MPLSVRFs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	MPLSVRFs
Table type	Multi-instance table
Row name	MPLSVRF
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Statistics	Whether statistics is enabled for the VRF	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

MPLS/TETunnelStatistics

This table contains TE tunnel statistics information.

XML structure

```
<MPLS>
  <TETunnelStatistics>
    <TETunnelStatistic>
      <TunnelID></TunnelID>
      <ServiceClass></ServiceClass>
      <Octets></Octets>
      <HCOctets></HCOctets>
      <Packets></Packets>
      <Errors></Errors>
      <Discards></Discards>
      <Systime></Systime>
    </TETunnelStatistic>
  </TETunnelStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TETunnelStatistics
Table type	Multi-instance table
Row name	TETunnelStatistics
Restrictions	This table contains TE tunnel statistics information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	The tunnel interface number
ServiceClass	The service class statistics of the MPLS TE tunnel interface.	Index	Unsigned integer. The value range varies by device model.	When service class no set, get all statistics of the TE tunnel. Service class 255 means the lowest priority class, also the default class of the TE tunnel.
Octets	Number of octets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	The statistics return as server-class

Column name	Column description	Column type	Data type and restrictions	Remarks
HCOctets	Number of high order octets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	The statistics return as total
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Errors	Number of error packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Discards	Number of discarded packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Systime	Time that elapsed after the device started up, in milliseconds	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

MPLS/TunnelForwarding

This table contains tunnel forwarding information.

XML structure

```
<MPLS>
  <TunnelForwardings>
  <TunnelForwarding>
    <TunnelNum></TunnelNum>
    <OutInfo>
      <ID></ID>
      <OutIfName></OutIfName>
      <NextHop></NextHop>
      <OutLabel></OutLabel>
      <Active></Active>
    </OutInfo>
    <BackupOutIfName></BackupOutIfName>
    <BackupNextHop></BackupNextHop>
    <BackupOutLabel></BackupOutLabel>
    <BackupActive></BackupActive>
  </TunnelForwarding>
  </TunnelForwardings>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelForwardings
Table type	Multi-instance table
Row name	TunnelForwarding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelNum	Tunnel number	Index	Unsigned integer.	N/A
OutInfo	Outbound information	Data structure	Members include: • ID. • OutIfName. • NextHop. • OutLabel. • Active.	N/A
ID	Out information ID	N/A	Unsigned integer. Value range: 0 to 2.	N/A
OutIfName	Outgoing interface name	N/A	String.	Outbound information contains this column.
NextHop	Next hop address	N/A	String, dotted decimal notation.	Outbound information contains this column.
OutLabel	Outgoing label	N/A	Unsigned integer.	Outbound information contains this column.
Active	State of forwarding infomation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
BackupOutIfName	Backup outgoing interface name	N/A	String.	Backup outbound information contains this column.
BackupNextHop	Backup next hop address	N/A	String, dotted decimal notation.	Backup outbound information contains this column.
BackupOutLabel	Backup outgoing label	N/A	Unsigned integer.	Backup outbound information contains this column.
BackupActive	State of the backup forwarding infomation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

MPLS/ILMForwarding

This table contains ILM forwarding information.

XML structure

```
<MPLS>
  <ILMForwardings>
  <ILMForwarding>
    <Label></Label>
    <OutInfo>
      <ID></ID>
      <OutIfName></OutIfName>
      <NextHop></NextHop>
      <OutLabel></OutLabel>
      <Active></Active>
    </OutInfo>
    <BackupOutIfName></BackupOutIfName>
    <BackupNextHop></BackupNextHop>
    <BackupOutLabel></BackupOutLabel>
    <BackupActive></BackupActive>
    <Operation></Operation>
  </ILMForwarding>
  </ILMForwardings>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	ILMForwardings
Table type	Multi-instance table
Row name	ILMForwarding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Label	Label index	Index	Unsigned integer.	N/A
OutInfo	Outbound information	Data structure	Members include: • ID. • OutIfName. • NextHop. • OutLabel.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Active.	
ID	Out Information ID	N/A	Unsigned integer.	The value range varies by device model.
OutIfName	Outgoing interface name	N/A	String.	Outbound information contains this column.
NextHop	Next hop address	N/A	String, dotted decimal notation.	Outbound information contains this column.
OutLabel	Outgoing label	N/A	Unsigned integer.	Outbound information contains this column.
Active	State of forwarding infomation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
BackupOutIfName	Backup outgoing interface name	N/A	String.	Backup outbound information contains this column.
BackupNextHop	Backup next hop address	N/A	String, dotted decimal notation.	Backup outbound information contains this column.
BackupOutLabel	Backup outgoing label	N/A	Unsigned integer.	Backup outbound information contains this column.
BackupActive	State of the backup forwarding infomation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Operation	Operation type	N/A	Enumeration: • 0—POP. • 1—SWAP. • 2—INVALID.	N/A

MPLS/Labels

This table contains MPLS label information.

XML structure

```
<MPLS>
  <Labels>
    <Label>
      <LabelValue></LabelValue>
      <State></State>
      <Owner></Owner>
    </Label>
  </Labels>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	Labels
Table type	Multi-instance table
Row name	Label
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LabelValue	Label value	Index	Unsigned integer.	N/A
State	Label state	Index	Enumeration: • 0—Idle. • 1—Alloc. • 2—Pending. • 3—Inuse.	N/A
Owner	The owner of the label	N/A	Enumeration: • 0— -. • 1—Static. • 2—LDP. • 3—BGP. • 4—StaticCR. • 5—RSVP. • 6—L2VPN. • 7—SR. • 8—SRPolicy. • 9—OSPF. • 10—ISIS. • 11—SRTETunnel	The label is not allocated when the “Owner” is “-“.

MPLS/NHLFEForwardings

This table contains mpls NHLFE forwarding information.

XML structure

```
<MPLS>
  <NHLFEForwardings>
    <NHLFEForwarding>
      <NHLFEID></NHLFEID>
      <OutInfo>
        <ID></ID>
```

```
      <OutIfName></OutIfName>
      <NextHop></NextHop>
      <OutLabel></OutLabel>
      <Active></Active>
    </OutInfo>
    <BackupOutIfName></BackupOutIfName>
    <BackupNextHop></BackupNextHop>
    <BackupOutLabel></BackupOutLabel>
    <BackupActive></BackupActive>
  </NHLFEForwarding>
 </NHLFEForwardings>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	NHLFEForwardings
Table type	Multi-instance table
Row name	NHLFEForwarding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NHLFEID	NHLFE ID.	Index	Unsigned integer.	N/A
OutInfo	Outbound information	Data structure	Members include: • ID. • OutIfName. • NextHop. • OutLabel. • Active.	N/A
ID	Out information ID	N/A	Unsigned integer. Value range: 0 to 2.	N/A
OutIfName	Outgoing interface name	N/A	String. Length: 2 to 47 characters.	NHLFE outbound information contains outgoing interface and next hop.
NextHop	Next hop address	N/A	String, dotted decimal notation.	NHLFE outbound information contains outgoing interface and next hop.
OutLabel	Outgoing label	N/A	Unsigned integer.	This column allows repeat.

Active	Selected or unselected forwarding path	N/A	Boolean: • **true**—Selected path. • **false**—Unselected path.	N/A
BackupOutIfName	Backup outgoing interface name	N/A	String. • Length: 2 to 47 characters.	Backup outbound information contains outgoing interface and next hop.
BackupNextHop	Backup next hop address	N/A	String, dotted decimal notation.	Backup outbound information contains outgoing interface and next hop.
BackupOutLabel	Backup outgoing label	N/A	Unsigned integer.	This column allows repeat.
BackupActive	State of the backup forwarding infomation	N/A	Boolean: • **true**—Selected path. • **false**—Unselected path.	N/A

MPLS/LSPStatistics

This table contains MPLS LSP statistics information.

XML structure

```
<MPLS>
  <LSPStatistics>
    <LSPStatistic>
      <LSPType></LSPType>
      <IngressLSP></IngressLSP>
      <EgressLSP></EgressLSP>
      <TransitLSP></TransitLSP>
    </LSPStatistic>
  </LSPStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	LSPStatistics
Table type	Multi-instance table
Row name	LSPStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPType	LSP type	Index	Enumeration: • 0—Total LSP. • 1—Static LSP. • 2—Static CRLSP. • 3—LDP LSP. • 4—RSVP CRLSP. • 5—BGP LSP. • 6—Local LSP. • 7—ISIS LSP. • 8—OSPF LSP. • 9—SR LSP. • 10—SR Policy LSP	N/A
IngressLSP	Number of ingress LSP	N/A	Unsigned integer.	N/A
EgressLSP	Number of egressLSP	N/A	Unsigned integer.	N/A
TransitLSP	Number of transitLSP	N/A	Unsigned integer.	N/A

MPLS/NIBs

This table contains MPLS nexthop information.

XML structure

```
<MPLS>
  <NIBs>
    <NIB>
      <NIBID></NIBID>
      <UserCount></UserCount>
      <Status></Status>
      <ECMPNumber></ECMPNumber>
      <OutInfo>
          <ID></ID>
          <NHLFEID></NHLFEID>
          <BackupNHLFEID></BackupNHLFEID>
      </OutInfo>
    </NIB>
  </NIBs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	NIBs
Table type	Multi-instance table
Row name	NIB
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NIBID	MPLS nexthop index	Index	Hexadecimal string.	N/A
UserCount	The ILM item numbers which refer to the NIBID	N/A	Unsigned integer.	N/A
Status	MPLS nexthop status	N/A	Enumeration: • 0—Dummy. • 1—Active.	N/A
ECMPNumber	Number of MPLS nexthops	N/A	Unsigned integer.	N/A
OutInfo	Nexthop infomations	Data structure	Members include: • ID. • NHLFEID. • BackupNHLFEID.	N/A
ID	Outbound information ID	N/A	Unsigned integer. Value range: 0 to 255.	An NHLFE can have multiple rows for outbound information. Each row has an ID.
NHLFEID	NHLFE ID	N/A	Unsigned integer.	N/A
BackupNHLFEID	Backup NHLFE ID	N/A	Unsigned integer.	N/A

MPLS/NIDs

This table contains mpls nhlfe ID information.

XML structure

```
<MPLS>
```

```
  <NIDs>
    <NID>
      <NHLFEID></NHLFEID>
      <Status></Status>
    </NID>
  </NIDs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	NIDs
Table type	Multi-instance table
Row name	NID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NHLFEID	NHLFE ID.	Index	Unsigned integer.	N/A
Status	NHLFE status	N/A	Enumeration: • 0—Not used. • 1—Used.	N/A

MPLS/TunnelInfos

This table contains mpls tunnel information.

XML structure

```
<MPLS>
  <TunnelInfos>
    <TunnelInfo>
      <VrfName></VrfName>
      <Destination></Destination>
      <Tunnels>
        <Type></Type>
        <TunnelNHLFE></TunnelNHLFE>
      </Tunnels>
    </TunnelInfo>
  </TunnelInfos>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelInfos
Table type	Multi-instance table
Row name	TunnelInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	Vrf Name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Destination	Tunnel destination address.	Index	String, dotted decimal notation.	N/A
Type	Tunnel type.	N/A	Enumeration: • 0—LSP. • 1—GRE. • 2—CRLSP • 3—SRLSP • 4—DEFAULT • 5—SRPolicy • 6—SRPGroup	N/A
TunnelNHLFE	Tunnel ID or NHLFE ID.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

MPLS/TunnelStatistics

This table contains mpls tunnel statistics information.

XML structure

```
<MPLS>
  <TunnelStatistics>
    <LSP></LSP>
    <GRE></GRE>
    <CRLSP></CRLSP>
    <SRLSP></SRLSP>
    <SRPolicy></SRPolicy>
    <SRPGroup></SRPGroup>
```

```
  </TunnelStatistics>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	TunnelStatistics
Table type	Single-instance table
Row name	None
Restrictions	This table display mpls tunnel Statistics information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSP	LSP tunnel count.	N/A	Unsigned integer.	N/A
GRE	GRE tunnel count.	N/A	Unsigned integer.	N/A
CRLSP	CRLSP tunnel count.	N/A	Unsigned integer.	N/A
SRLSP	SRLSP tunnel count.	N/A	Unsigned integer.	N/A
SRPolicy	SRPolicy tunnel count.	N/A	Unsigned integer.	N/A
SRPGroup	SRPGroup tunnel count.	N/A	Unsigned integer.	N/A

MPLS/MPLSVRFs

This table contains MPLS VRF information.

XML structure

```
<MPLS>
  <MPLSVRFs>
    <MPLSVRF>
      <VRF></VRF>
      <Statistics></Statistics>
    </MPLSVRF>
  </MPLSVRFs>
</MPLS>
```

Table description

Item	Description
Feature name	MPLS
Table name	MPLSVRFs
Table type	Multi-instance table
Row name	MPLSVRF
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Statistics	Whether statistics is enabled for the VRF	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	Support for this column depends on the device model.

Comware 7 LSM NETCONF XML API Error Message Reference

MPLS/IPV4_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/IPV4_LSP table information. 请在获取IPV4_LSP表之前启动LSM进程。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。

MPLS/TEV4_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/TEV4_LSP table information. 请在获取TEV4_LSP表之前启动LSM进程。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

MPLS/STATIC_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Static_LSP table information. 请在获取Static_LSP表之前启动LSM进程。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

MPLS/Base

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Base table information. 请在获取Base表之前启动LSM进程。

MPLS/Interfaces

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Interfaces table information. 请在获取Interfaces表之前启动LSM进程。

MPLS /TunnelPolicies

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/TunnelPolicies table information. 请在获取TunnelPolicies表之前启动LSM进程。
Both the tunnel selection order and the number of tunnels for load balancing are required. 请配置配置隧道的选择顺序和负载分担的隧道数目。	Please configure the tunnel selection order and the number of tunnels for load balancing at the same time. 请同时配置隧道的选择顺序和负载分担的隧道数目。
Can't specify duplicate tunnel types for tunnel selection. 隧道类型的优先级顺序不允许出现重复类型。	Tunnel types for tunnel selection must be unique. 隧道类型的优先级顺序必须唯一。
无效的隧道/捆绑隧道 ID The TunnelID is invalid.	The tunnel that preferred path configured must be valid. 优选隧道引用的隧道必须是有效的。
The PolicyName is invalid. 无效的隧道/捆绑隧道 名称。	The PolicyName length must be between 0 to 20. 隧道名称有效长度范围必须在0-20。
The TunnelType is invalid.无效的隧道/捆绑隧道类型	The TunnelType must be tunnel or tunnel-bundle. 隧道类型必须是tunnel 或者tunnel-bundle。

MPLS/StaticEgressLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticEgressLSPs table information. 请在获取StaticEgressLSPs表之前启动SLSP进程。

The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

MPLS/StaticIngressLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticIngressLSPs table information. 请在获取StaticIngressLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

MPLS/StaticTransitLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticTransitLSPs table information. 请在获取StaticTransitLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

MPLS/StaticSRLSPs

Message	Explanation
Not support Static Segment Routing. 不支持Static Segment Routing。	The device must support Static Segment Routing first. 设备须首先支持Segment Routing Prefix。
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRLSPs table information. 请在获取StaticSRLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range.	The depth of the out label stack must be in the specified range.

标签栈深度超出规定范围。	标签栈的深度必须在设备定制范围内。
The null label must be configured on the outermost layer. 空标签只能配置在最外层。	The implicit null label 3 and explicit null label 0 must be configured on the outermost layer. 隐式空标签3和显示空标签0必须配置在最外层。

MPLS/StaticSRAdjacencies

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRAdjacencies table information. 请在获取StaticSRAdjacencies表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range. 标签栈深度超出规定范围。	The depth of the out label stack must be in the specified range. 标签栈的深度必须在设备定制范围内。

MPLS/StaticSRPrefixs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRPrefixs table information. 请在获取StaticSRPrefixs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range. 标签栈深度超出规定范围。	The depth of the out label stack must be in the specified range. 标签栈的深度必须在设备定制范围内。
Prefix segments that share the same name must be configured with the same destination IP address. 同名的配置必须配置相同的目的地址。	The destination of the same prefix segment must be unique. 相同静态Prefix Segment路径的目的地址必须唯一。
Can't create a prefix segment to both transit node and egress node. 同一静态Prefix Segment不能既是中间节点又是尾节点。	Can't create a prefix segment to both transit node and egress node. 不能配置同一静态Prefix Segment既是中间节点又是尾节点。

Prefix segments configured with the same destination IP address must use the same name. 相同目的地址必须配置相同的名字。	Prefix segments configured with the same destination IP address must use the same name. 相同的地址必须配置相同的名字。
Prefix segments that share the same name must be configured with the same incoming label. 同名的配置必须配置相同的入标签。	Prefix segments that use the same name must use the same incoming label. 配置静态Prefix Segment时，同名的配置必须配置相同的入标签
The destination IP address doesn't match the name of the prefix segment. 删除静态Prefix Segment时，如果携带目的地址必须同配置保持一致。	The destination address specified when you delete a prefix segment must be the same as the destination address specified when the prefix segment was created. 删除静态Prefix Segment时，如果携带目的地址必须同配置保持一致。
The incoming label doesn't match the name of the prefix segment. 删除静态Prefix Segment时，如果携带入标签必须同配置保持一致。	The incoming label specified when you delete a prefix path must be the same as the incoming label specified when the prefix segment was created. 删除静态Prefix Segment时，如果携带入标签必须同配置保持一致。
Not support Static Segment Routing. 不支持Static Segment Routing。	The device must support Static Segment Routing first. 设备须首先支持Static Segment Routing。
The null label must be configured on the outermost layer. 空标签只能配置在最外层。	The implicit null label 3 and explicit null label 0 must be configured on the outermost layer. 隐式空标签3和显示空标签0必须配置在最外层。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

MPLS/TunnelMbfds

Message	Explanation
Number of MPLS BFDs has reached the upper limit. BFD已经满规格了。	Number of MPLS BFDs must be smaller than or equal to the upper limit. MPLS BFD的数量必须小于或等于满规格的数量。
Not support MPLS BFD. 不支持MPLS BFD。	The product must support MPLS BFD first when getting MPLS/TunnelMbfds table information. 获取MPLS BFD表的信息时，产品必须首先支持MPLS BFD。
The MPLS BFD feature has not been enabled. MPLS BFD还没使能。	Please start MPLS BFD service before getting MPLS/TunnelMbfds table information. 请获取MPLS BFD表之前先启动MPLS BFD进程。

MPLS/PreferredTunnelPolicies

Message	Explanation
The TunnelID is invalid.	The tunnel configured as the preferred path must be valid.

无效的隧道/捆绑隧道 ID	优选隧道引用的隧道必须是有效的。
The PolicyName is invalid. 无效的隧道/捆绑隧道名称。	The PolicyName length must be between 0 to 20. 隧道名称有效长度范围必须在0-20。
The TunnelType is invalid. 无效的隧道/捆绑隧道类型	The TunnelType must be tunnel or tunnel-bundle. 隧道类型必须是tunnel或者tunnel-bundle。

MPLS/MPLSVRF

Message	Explanation
MPLS VPN statistics not supported. 不支持MPLS VPN统计功能。	To get MPLS/MPLS VRF table information of the product, the product must support MPLS VPN statistics. 获取MPLS VRF表的信息时，产品必须首先支持MPLS VPN统计功能。

MQC

MQC/ClearGlobalStatistic

This table is used to clear statistics of a global QoS policy.

XML structure

```
<MQC>
  <ClearGlobalStatistic>
    <Application>
      <Direction></Direction>
      <Clear></Clear>
      <PolicyType></PolicyType>
    </Application>
  </ClearGlobalStatistic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ClearGlobalStatistic
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	N/A	Enumeration: • **0**—Inbound. • **1**—Outbound.	If you do not specify this column, All directions are cleared.
Clear	Clear global policy statistics	N/A	This column must be empty	Required.
PolicyType	Policy type	N/A	Enumeration: • **0**—Common policy. • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy. • **6**—TCP ERSPAN policy.	If you do not specify this column, common policies are cleared.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **7**—Control-plane policy.	

MQC/ClearVlanStatistic

This table is used to clear statistics of the QoS policy applied in VLAN.

XML structure

```
<MQC>
  <ClearVlanStatistic>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>
      <Clear></Clear>
    </Application>
  </ClearVlanStatistic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ClearVlanStatistic
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	If you do not specify this column, All VLANs are cleared.
Direction	Application direction	N/A	Enumeration: • **0**—Inbound. • **1**—Outbound.	If you do not specify this column, All directions are cleared.
Clear	Clear VLAN policy statistics	N/A	This column must be empty	Required.

MQC/ClearACStatistic

This table is used to clear statistics of the QoS policy applied to AC interfaces.

XML structure

```
<MQC>
  <ClearACStatistic>
    <AC>
      <IfName></IfName>
      <SrvID></SrvID>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <Clear></Clear>
    </AC>
  </ClearACStatistic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ClearACStatistic
Table type	Multi-instance table
Row name	AC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 1 to 47 characters. Example: GigabitEthernet2/0/2	N/A
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
Direction	Application direction	N/A	Enumeration: • **0**—Inbound. • **1**—Outbound**.**	If you do not specify this column, All directions are cleared.
PolicyType	Policy type	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **0**—Common policy. • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy.	
Clear	Clear AC policy statistics	N/A	This column must be empty	Required.

MQC/ClearSrv6Statistic

This table is used to clear statistics of an SRv6 QoS policy.

XML structure

```
<MQC>
  <ClearSrv6Statistic>
    <Application>
      <Endpoint></Endpoint>
      <Color></Color>
      <Direction></Direction>
      <Clear></Clear>
    </Application>
  </ClearSrv6Statistic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ClearSrv6Statistic
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	Endpoint IPv6	N/A	String, semicolon hex notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address		Default is not configured.	
Color	Color	N/A	Unsigned integer	N/A
Direction	Application direction	N/A	Enumeration: • **0**—Inbound. • **1**—Outbound.	If you do not specify this column, statistics for both QoS policies are cleared.
Clear	Clear policy statistics	N/A	This column must be empty	Required.

MQC

MQC/Classifiers

This table contains information about classifiers.

XML structure

```
<MQC>
   <Classifiers>
     <Classifier>
       <Name></Name>
       <Operator></Operator>
       <Description></Description>
     </Classifier>
   </Classifiers>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Classifiers
Table type	Multi-instance table
Row name	Classifier
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
Operator	Match operator of the traffic classifier	N/A	Enumeration: • **1**—And. • **2**—Or.	When the **Operator** column is **1**, the traffic classifier matches the packets that match all its match criteria. When the **Operator** column is **2**, the traffic classifier matches the packets that match any of its match criteria. If this column is not

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured, the default value is **1**.
Description	Traffic classifier description.	N/A	String. Length: 1 to 127 characters.	N/A

MQC/Behaviors

This table contains information about behavior.

XML structure

```
<MQC>
   <Behaviors>
     <Behavior>
       <Name></Name>
     </Behavior>
   </Behaviors>
</MQC>
```

Table description

Table name	Behaviors
Table type	Multi-instance table
Row name	Behavior
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A

MQC/Policies

This table contains information about policy.

XML structure

```
<MQC>
   <Policies>
     <Policy>
       <Name></Name>
       <Type></Type>
     </Policy>
   </Policies>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Policy name	Index	String. Length: 1 to 31 characters.	N/A
Type	Policy type	N/A	Enumeration: • **0**—Common policy (default). • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy. • **6**—TCP ERSPAN policy. • **7**—Control-plane policy.	This column cannot be modified.

MQC/CBMaps

This table contains information about classifier-behavior association.

XML structure

```
<MQC>
    <CBMaps>
      <CBMap>
        <PolicyName></PolicyName>
        <ClassifierName></ClassifierName>
        <BehaviorName></BehaviorName>
        <Mode></Mode>
        <InsertBeforeClassifierName></InsertBeforeClassifierName>
      </CBMap>
    </CBMaps>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	CBMaps
Table type	Multi-instance table
Row name	CBMap
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
ClassifierName	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Traffic behavior name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of the classifier-behavior association	N/A	Enumeration: • **0**—None. • **2**—Qppb. • **16**—Dcbx. • **32**—Ciel. • **64**—Loose. • **128**—Division.	Required. When the **Mode** column is **0**, there is no restriction on the classifier-behavior association. When the **Mode** column is **2**, the classifier-behavior association applies only to QPPB. When the **Mode** column is **16**, the classifier-behavior association applies only to

Column name	Column description	Column type	Data type and restrictions	Remarks
				the Data Center Bridging Exchange Protocol (DCBX). When the **Mode** column is **32**, the classifier-behavior association applies only to Ciel. When the **Mode** column is **64**, the classifier-behavior association applies only to Loose. When the **Mode** column is **128**, the classifier-behavior association applies only to division.
InsertBeforeClassifierName	Insert the new traffic class before an existing traffic class.	N/A	String. Length: 1 to 31 characters	N/A

MQC/Rules

This table contains information about rule.

XML structure

Table description

Item	Description
Feature name	MQC
Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	Only one match column can be configured once, Rule cannot be modified by ID.

	The **delete/remove** operation can only carry the ClassName and RuleID columns.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
RuleID	ID of the rule	Index	Unsigned integer	When the operation type of the message is **create**, **RuleID** can be configured as 4294967295 or the **NextRuleID** of the **Classifiers** table.
Not	Whether the rule is used as an unsuccessful match criterion	N/A	Boolean: • **true**—Yes. • **false**—No.	Required.
PktType	Packet type to be matched.	N/A	Enumeration: • **1**—Any. • **2**—IP. • **3**—IPv6. • **4**—Arp. • **5**—Bt. • **6**—Bridge. • **7**—Route.	When the **PktType** column is **1**, the rule matches all packets. When the **PktType** column is **2**, the rule matches IPv4 packets. When the **PktType** column is **3**, the rule matches IPv6 packets. When the **PktType** column is **4**, the rule matches ARP packets. When the **PktType** column is **5**, the rule matches BitTorrent packets. When the **PktType** column is **6**, the rule matches Layer 2 forwarded packets. When the **PktType** column is **7**, the rule matches Layer 3 forwarded packets.
Acl	Match ACL	Data structure	Members include: • **IPv4Acl**. • **IPv6Acl**. • **Inner.** • **Mpls-inner.** • **raw-vpn**	IPv4Acl and IPv6Acl cannot be specified together. Inner and Mpls-inner cannot be specified together. For information about how to configure, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				"Appendix."
IPv4Acl	Match IPv4 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**.
IPv6Acl	Match IPv6 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**.
Inner	Match inner ACL.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	Matches the entries that describe the inner flags of a packet in an ACL.
Mpls-inner	Match the inner header information of MPLS packets.	N/A	Boolean: • **true**—Conform. • **false—**Not conform.	N/A
raw-vpn	Match the raw VRF index	N/A	Boolean: • **true**—Conform. • **false—**Not conform.	N/A
MACAcl	Match MAC ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 4000 to 4999.	An ACL name must start with an English letter and cannot be **all**.
UserAcl	Match User ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 5000 to 5999.	An ACL name must start with an English letter and cannot be **all**.
IPv4Acl	Match IPv4 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. This column and Acl cannot be specified together. For information about how to configure, see "Appendix."
IPv6Acl	Match IPv6 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in	An ACL name must start with an English letter and cannot be **all**. This column and Acl cannot be specified

Column name	Column description	Column type	Data type and restrictions	Remarks
			the range of 2000 to 3999.	together. For information about how to configure, see "Appendix."
SrcMac	Match a source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DestMac	Match a destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ServiceVLANID	Match the service provider VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. you can specify up to 10 VLAN IDs or VLAN ID ranges.
CustomerVLANID	Match the customer VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. you can specify up to 10 VLAN IDs or VLAN ID ranges.
ServiceDot1p	Match the 802.1p priority of the service provider network.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **ServiceDot1p** for a rule
CustomerDot1p	Match the 802.1p priority of the customer network.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **CustomerDot1p** for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **Exp** for a rule
InnerExp	Match inner MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **InnerExp** for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **IPPrecedence** for a rule
IPv6Preceden	Match IPv6	N/A	Unsigned integer.	You can specify up to 8 **IPv6Precedence** for a

Column name	Column description	Column type	Data type and restrictions	Remarks
ce	precedence.		Value range: 0 to 7.	rule
LocalPrecedence	Match local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **LocalPrecedence** for a rule
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 **Dscp** for a rule
IPv6Dscp	Match IPv6 DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 **IPv6Dscp** for a rule
DropPriority	Match drop precedence.	N/A	Unsigned integer. Value range: 0 to 2.	You can specify up to 3 **DropPriority** for a rule
QoSLocalID	Match local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
QoSLocalIDOut	Match the local QoS ID in the outbound direction.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
MplsLabel	Match MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	You can specify up to 8 **MplsLabel** for a rule
InnerMplsLabel	Match inner MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	You can specify up to 8 **InnerMplsLabel** for a rule
PktLength	Match packet length.	Data structure	Members include: • **Min**. • **Max**.	N/A
Min	The minimum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	**Min** cannot be bigger than **Max**.
Max	The maximum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MplsLabelRange	Match MPLS label range.	Data structure	Members include: • **LabelStart**. • **LabelEnd**.	The two members must both be specified.
LabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
LabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	**LabelEnd** must be bigger than **LabelStart**.
InnerMplsLabelRange	Match inner MPLS label range.	Data structure	Members include: • **InnerLabelStart**. • **InnerLabelEnd**.	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InnerLabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerLabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	**InnerLabelEnd** must be bigger than **InnerLabelStart**.
RTPPort	Match RTP protocol port range.	Data structure	Members include: • **PortStart**. • **PortEnd**.	The two members must both be specified.
PortStart	Start RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	**PortStart** cannot be bigger than **PortEnd**.
PortEnd	End RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
Application	Match application layer protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/Applications/Application/AppName.
ApplicationGroup	Match application group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/AppGroups/GroupInfo/GroupName.
Vxlan	Match vxlan ID.	N/A	Unsigned integer. Value range: 0 to 16777215.	It must be empty when the VxlanAny column is **true**.
VxlanAny	Match any vxlan ID.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	The Vxlan column must be specified when the VxlanAny column is **false**.
TunnelID	Match tunnel ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANTag	Match VLAN tagging mode	N/A	Enumeration: • **1**—None. • **2**—Single-tagged. • **4**—Double-tagged.	N/A
TunnelDscpList	Match tunnel DSCP values.	Data structure	Members include: • **TunnelDscp**.	N/A
TunnelDscp	Match tunnel DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 **Dscp** for a rule
IFA	Inband Flow Analyzer	N/A	Enumeration: • **1**—tcp. • **2**—udp.	N/A
OutBoundInterface	Match output interface	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Mpls	Mpls type	N/A	Enumeration: • **1**—l2. • **2**—l3.	N/A
Nvgre	Match NVGRE.	N/A	Hexadecimal string. Length: 4 to 6 characters. Value range: 1000 to FFFFFE.	N/A
NvgreAny	Match any NVGRE ID	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	The Nvgre column must be specified when the NvgreAny column is **false**.
RoCEv2	Match RoCEv2 packets	Data structure	Members include: • **PktType**. • **OpCode**. • **DstQpair**. • **SrcQpair**. • **Nack**.	N/A
PktType	Packet type to be matched.	N/A	Enumeration: • **0**—IPv4.	N/A
OpCode	OpCode in BTH to be matched.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
DstQpair	Destination QP in BTH to be matched.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
SrcQpair	Source QP in DETH to be matched.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
Nack	The lower 5 bits of Syndrome in NAK to be matched.	N/A	Unsigned integer. Value range: 0 to 31.	N/A
SdwanTte	Match SDWAN network TTE information.	Data structure	Members include: • **SiteID**. • **DeviceID**. • **InterfaceID**.	N/A
SiteID	Site ID in SDWAN network to be matched.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DeviceID	Device ID in SDWAN network to be matched.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfaceID	Interface ID of the SDWAN tunnel interface to be matched.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
VRF	VRF instance to be matched.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

MQC/Remark

This table contains information about marking action.

XML structure

```
<MQC>
    <Remark>
      <Action>
        <BehaviorName></BehaviorName>
        <Type></Type>
        <Color></Color>
        <Value></Value>
        <SrcMACAddr></SrcMACAddr>
        <DstMACAddr></DstMACAddr>
        <SrcIPv4Addr></SrcIPv4Addr>
        <DstIPv4Addr></DstIPv4Addr>
        <SrcIPv6Addr></SrcIPv6Addr>
        <DstIPv6Addr></DstIPv6Addr>
      </Action>
    </Remark>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Remark
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of remark	Index	Enumeration: • **0**—CDot1pTrust. • **1**—Dscp. • **2**—IPPre. • **3**—MplsExp. • **4**—Dot1p. • **5**—LocalID. • **6**—LocalPre. • **7**—DropPre. • **8**—CVlanID. • **9**—SVlanID. • **10**—ImpositionMplsExp. • **11**—ForwardingClass. • **12**—AtmClp. • **14**—SecondMplsExp. • **16**—ServiceClass. • **17**—TunnelDscp. • **18**—DstMACAddr. • **19**—FlowID. • **20**—DstIPv4Addr. • **21**—SrcIPv4Addr. • **22**—DstIPv6Addr. • **23**—SrcIPv6Addr. • **24**—LocalIDOut. • **26—**SrcMACAddr.	When the **Type** column is 0, configure an inner-to-outer tag priority copying action. When the **Type** column is **1**, configure a DSCP marking action. When the **Type** column is **2**, configure an IP precedence marking action. When the **Type** column is **3**, configure an EXP value marking action. When the **Type** column is **4**, configure an 802.1p priority marking action. When the **Type** column is **5**, configure the action of setting the specified local QoS ID for packets. When the **Type** column is **6**, configure a local precedence marking action. When the **Type** column is **7**, configure a drop priority marking action. When the **Type** column is **8**, configure a CVLAN marking action. When the **Type** column is **9**, configure a SVLAN marking action. When the **Type** column is **10**, configure an EXP value marking action for added labels. When the **Type** column is **11**, configure a forwarding-class marking action. When the **Type** column is **12**, configure the action of setting the CLP bit for ATM cells. When the **Type** column is **14**, configure a second MPLS EXP value marking action.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When the **Type** column is **16**, configure the action of setting the service-class of MPLS traffic engineering. When the **Type** column is **17**, configure a tunnel-DSCP marking action. When the **Type** column is **18**, configure a destination MAC address. When the **Type** column is **19**, configure a FlowID marking action. When the **Type** column is **20**, configure a destination IPv4 address. When the **Type** column is **21**, configure a source IPv4 address. When the **Type** column is **22**, configure a destination IPv6 address. When the **Type** column is **23**, configure a source IPv6 address. When the Type column is **24**, configure the action of setting the specified local QoS ID for packets. This local QoS ID can be matched in the outbound direction. When the **Type** column is **26**, configure a source MAC address.
Color	The color of affected packets	Index	Enumeration: • **0**—No color. • **1**—Green. • **2**—Yellow. • **3**—Red.	Specifies different color packets for the priority marking action. Support for the green, red and yellow keyword depends on the device model. When- the **Color** column is **0**, specifies all packets. When the **Color** column is **1**, specifies green packets. When the **Color** column is **2**, specifies yellow packets. When the **Color** column is **3**, specifies red packets.
Value	The value of	N/A	Unsigned integer.	Required when the **Type** column is **1**, **2**, **3**, **4**, 5, **6**,

Column name	Column description	Column type	Data type and restrictions	Remarks
	marking action			**7**, **8**, **9**, **10**, **11**, **12**, **16** or **17**. When the **Type** column is 0, the value is invalid. When the **Type** column is **8** or **9**, the value range is 1 to 4094. When the **Type** column is **7**, the value range is 0 to 2. When the **Type** column is **5**, the value range is 1 to 4095. When the **Type** column is **2**, **3**, **4**, **6** or **10**, the value range is 0 to 7. When the **Type** column is **11**, the value range is 0 to 3 or 0 to 7. When the **Type** column is **1**, the value range is 0 to 63. When the **Type** column is **12**, the value range is 0 to 1. When the **Type** column is **16**, the value range is 0 to 7 or a customized value. When the **Type** column is **17**, the value range is 0 to 63. When the **Type** column is **19**, the value range is 1 to 65535. When the **Type** column is **24**, the value range is 1 to 128.
SrcMACAddr	The source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required when the **Type** column is **26**
DstMACAddr	The destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required when the **Type** column is **18**
SrcIPv4Addr	The source IPv4 address.	N/A	String, dotted decimal notation.	Required when the **Type** column is 2**1**
DstIPv4Addr	The destination IPv4 address.	N/A	String, dotted decimal notation.	Required when the **Type** column is **20**
SrcIPv6Addr	The source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Required when the **Type** column is **23**
DstIPv6Addr	The destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Required when the **Type** column is **22**

Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of redirect	Index	Enumeration: • **1**—CPU. • **2**—Interface. • **3**—VSI. • **4**—FailoverGroup. • **6**—Nexthop • **7**—MonitorGroup • **8**—HTTP. • **9**—HTTPS. • **10**—NAT instance. • **12**—SR-policy. • **13**—SRv6-policy. • **14**—TunnelGroup. • **15**—Local. • **16**—Access-Vpn. • **17**—DHCP.	When the **Type** column is **1**, redirect traffic to CPU. When the **Type** column is **2**, redirect traffic to an interface. When the **Type** column is **3**, redirect traffic to a virtual station interface. When the **Type** column is **4**, redirect traffic to a failover group. When the **Type** column is **6**, redirect traffic to nexthop. When the **Type** column is **7**, redirect traffic to monitor group. When the **Type** column is **8**, redirect HTTP traffic to CPU. When the **Type** column is **9**, redirect HTTPS traffic to CPU. When the **Type** column is **10**, redirect traffic to NAT instance. When the **Type** column is **12**, redirect traffic to SR-policy. When the **Type** column is **13**, redirect traffic to SRv6-policy. . When the **Type** column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				14, redirect traffic to Tunnel group. When the **Type** column is **15**, redirect traffic to Local. When the **Type** column is **16**, redirect traffic to Access-Vpn. When the **Type** column is **17**, redirect DHCP traffic to CPU.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if **Type** is **2**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrackOap	Enable the traffic redirecting action to collaborate with OAP	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The value of this column is valid if **Type** is **2**.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if **Type** is **2**.
VSI	Name of VSI	N/A	String. Length: 1 to 31 characters.	Required when the **Type** column is **3**.
Nexthop	Nexthop	N/A	N/A	N/A
VRF	VRF instance name	N/A	String. Length: 0 to 31 characters.	The value of this column is valid if **Type** is **6**.
IPAddr	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **6**. For example, 1.1.1.1, or 1:1::1:1.
IPAddrBackup	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **6**. For example, 1.1.1.1, or 1:1::1:1.
Track	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is **6**.
TrackBackup	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is **6**.
NatInstance	Nat instance	N/A	String.	The value of this column

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 31 characters.	is valid if **Type** is **10**.
FailoverGroup	Failover group	Data structure	Members include: • GroupName. • AftGroupName. • Channel.	N/A
GroupName	Failover group name	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if **Type** is **4**.
AftGroupName	Aft failover group name	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if **Type** is **4**.
Channel	Channel	N/A	Unsigned integer. Value range: 0 to 1.	The value of this column is valid if **Type** is **4**. Some versions don't support this column. For relevant information, see the XSD document of your product.
MonitorGroupID	Monitor group ID.	N/A	Unsigned integer.	N/A
SRPolicy	SR policy	Data structure	Members include: • EndPoint. • Color. • SID. • VpnSID.	N/A
EndPoint	Endpoint address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **12** or **13**.
Color	Color value	N/A	Unsigned integer. Value range: 0 to 4294967295.	The value of this column is valid if **Type** is **12** or **13**.
SID	Public network SID	N/A	Hexadecimal string, colon-separated.	The value of this column is valid if **Type** is **13**. This column and VpnSID cannot be specified together.
VpnSID	Private network SID	N/A	Hexadecimal string, colon-separated.	The value of this column is valid if **Type** is **13**. This column and SID cannot be specified together.
TunnelGroupID	Tunnel group ID	N/A	Unsigned integer.	N/A
AccessVpn	VPN instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **16**.
AccessVpnTrack	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is 1**6**.

Column name	Column description	Column type	Data type and restrictions	Remarks
AccessVpnBackup	VPN instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **16**.
AccessVpnBackupTrack	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is 1**6**.
AccessCgnVpn	VPN instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **16**.

MQC/Filter

This table contains information about filtering action.

XML structure

```
<MQC>
   <Filter>
     <Action>
       <BehaviorName></BehaviorName>
       <Type></Type>
     </Action>
   </Filter>
</MQC>
```

Table description

Item	Description

Table description

Item	Description
Feature name	MQC
Table name	CAR
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
BandwidthUnit	Specify bandwidth Unit	N/A	Enumeration: • **1**—pps. • **2**—kbps. • **3**—percent.	If this column is not configured, the default bandwidth unit is kbps.
CIR	Committed information rate	N/A	Unsigned integer.	Required when the **AggregativeName** is not specified. When BandwidthUnit is 3, the value range is 1 to 100.
CBS	Committed burst size	N/A	Unsigned integer.	When BandwidthUnit is 3, the value range is 50 to 2000.
EBS	Excess burst size	N/A	Unsigned integer.	If both **CBS** and PIR are not configured, **EBS** cannot be configured. When BandwidthUnit is 3, the value range is 0 to 2000.
PIR	Peak information rate	N/A	Unsigned integer.	When BandwidthUnit is 3, the value range is 1 to 100.
GreenAction	Specify behavior for green packets	Data structure	Members include: • **GreenActionType**. • **GreenActionValue**.	GreenActionValue is required when GreenActionType is not 1, 10 or 19.
GreenActionType	Green Action Type	N/A	Enumeration: • **1**—pass.	When **GreenActionType** is **1**, send the packet. When **GreenActionType**

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—remark-dscp-pass. • **3**—remark -prec-pass. • **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	is **2**, remark DSCP value of the packet and send it. When **GreenActionType** is **3**, remark IP precedence of the packet and send it. When **GreenActionType** is **4**, remark EXP of the MPLS packet and send it. When **GreenActionType** is **5**, remark 802.1p priority value of the packet and send it. When **GreenActionType** is **6**, remark CLP bit of the ATM packet and send it. When **GreenActionType** is **7**, remark DE bit of the FR packet and send it. When **GreenActionType** is **8**, remark local precedence of the packet and send it. When **GreenActionType** is **10**, drop the packet. When GreenActionType is **19**, continue to process the packet. When **GreenActionType** is **20**, remark service class value of the packet and send it.
GreenActionValue	Green Action Value	N/A	Unsigned integer. Value range: 0 to 63.	When **GreenActionType** is **1, 10** or 19, **GreenActionValue** is ignored. When **GreenActionType** is 6 or 7, **GreenActionValue** is 0~1. When **GreenActionType** is **2**, **GreenActionValue** is 0~63. When **GreenActionType** is **3**, **4**, **5**, **8**, **20**, **GreenActionValue** is 0~7.
YellowAction	Specify behavior for yellow packets	Data structure	Members include: • **YellowActionType**. • **YellowActionValue**.	YellowActionValue is required when YellowActionType is not 1, 10 or 19.
YellowActionType	Yellow Action Type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass. • **3**—remark -prec-pass.	When **YellowActionType** is **1**, send the packet. When **YellowActionType** is **2**, remark DSCP value

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	of the packet and send it. When **YellowActionType** is **3**, remark IP precedence of the packet and send it. When **YellowActionType** is **4**, remark EXP of the MPLS packet and send it. When **YellowActionType** is **5**, remark 802.1p priority value of the packet and send it. When **YellowActionType** is **6**, remark CLP bit of the ATM packet and send it. When **YellowActionType** is **7**, remark DE bit of the FR packet and send it. When **YellowActionType** is **8**, remark local precedence of the packet and send it. When **YellowActionType** is **10**, drop the packet. When **YellowActionType** is **19**, continue to process the packet. When **YellowActionType** is **20**, remark service class value of the packet and send it.
YellowActionValue	Yellow Action Value	N/A	Unsigned integer. Value range: 0 to 63.	When **YellowActionType** is **1, 10** or 19, **YellowActionValue** is ignored. When **YellowActionType** is 6 or 7, **YellowActionValue** is 0~1. When **YellowActionType** is **2**, **YellowActionValue** is 0~63. When **YellowActionType** is **3**, **4**, **5**, **8**, **20**, **YellowActionValue** is 0~7.
RedAction	Specify behavior for red packets	Data structure	Members include: • **RedActionType**. • **RedActionValue**.	RedActionValue is required when RedActionType is not 1, 10 or 19.
RedActionType	Red Action Type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass. • **3**—remark -prec-pass.	When **RedActionType** is **1**, send the packet. When **RedActionType** is **2**, remark DSCP value of the packet and send it.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	When **RedActionType** is **3**, remark IP precedence of the packet and send it. When **RedActionType** is **4**, remark EXP of the MPLS packet and send it. When **RedActionType** is **5**, remark 802.1p priority value of the packet and send it. When **RedActionType** is **6**, remark CLP bit of the ATM packet and send it. When **RedActionType** is **7**, remark DE bit of the FR packet and send it. When **RedActionType** is **8**, remark local precedence of the packet and send it. When **RedActionType** is **10**, drop the packet. When **RedActionType** is **19**, continue to process the packet. When **RedActionType** is **20**, remark service class value of the packet and send it.
RedActionValue	Red Action Value	N/A	Unsigned integer. Value range: 0 to 63.	When **RedActionType** is **1, 10** or 19, **RedActionValue** is ignored. When **RedActionType** is 6 or 7, **RedActionValue** is 0~1. When **RedActionType** is **2**, **RedActionValue** is 0~63. When **RedActionType** is **3**, **4**, **5**, **8**, **20**, **RedActionValue** is 0~7.
AggregativeName	Aggregate CAR action name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	This column only can be configured together with **HierarchicalName** and **Mode**.
HierarchicalName	Hierarchical CAR action name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	N/A
Mode	Match operator	N/A	Enumeration: • **1**—And (default). • **2**—Or.	This column must be configured together with **HierarchicalName**.

MQC/GTS

This table contains information about GTS actions.

XML structure

```
<MQC>
  <GTS>
    <Action>
      <BehaviorName></BehaviorName>
      <BandwidthUnit></BandwidthUnit>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <QueueLength></QueueLength>
    </Action>
  </GTS>
</MQC>
```

Table description

Table description

Item	Description
Feature name	MQC
Table name	Mirror
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of mirror	Index	Enumeration: • **1**—Interface. • **2**—CPU. • **3**—VLAN. • **4**—Slot. • **5**—Local. • 6—GRPC.	When the **Type** column is **1**, mirror to an interface. When the **Type** column is **2**, mirror to CPU. When the **Type** column is **3**, mirror to VLAN. When the **Type** column is **4**, traffic is mirrored to a

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **7**—IFA. • **8**—**MonitorGroup**	board. When the **Type** column is **5**, traffic is mirrored to the board on which the mirrored traffic is received or sent out. When the **Type** column is **6**, traffic is mirrored to GRPC. When the **Type** column is **7**, traffic is mirrored to inband flow analyzer processor. When the **Type** column is **8**, traffic is mirrored to a monitoring-group.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if **Type** is 1. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if **Type** is **3**.
IP	Specify IP for mirroring to interface with GRE or VXLAN format	Data structure	Members include: • DestIP • SrcIP • DSCP • VLAN • VXLAN • VRF	DestIP and SrcIP must both be specified. DSCP, VLAN, VXLAN and VRF can be optionally specified when DestIP and SrcIP are configured. This structure is valid and optional if Type is 1.
DestIP	Destination IPv4 or IPv6 address	N/A	String, dotted decimal notation, Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.54.
SrcIP	Source IPv4 or IPv6 address	N/A	String, dotted decimal notation, Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VXLAN	VXLAN ID	N/A	Unsigned integer.	You must specify the SrcPort and DstPort when

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 16777215.	you specify the VXLAN.
DestPort	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
SrctPort	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
ErspanID	SPAN ID	N/A	Unsigned integer. Value range: 1 to 1023.	N/A
ErspanVer	ERSPAN version	N/A	Enumeration: • **3**—ERSPAN V3.	If this column is not configured, the default ERSPAN version is V2.
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of this column is valid and optional if **Type** is 1.
Board	Specify Board for mirroring to a board.	Data structure	Members include: • Chassis • Slot • BackupChassis • BackupSlot	If the device is a distributed device in standalone mode or a centralized IRF device, the slot must be specified. If the device supports mirroring packets to a backup slot, the BackupSlot can be specified. If the device is a distributed device in IRF mode, the chassis and slot must both be specified. If the device supports mirroring packets to a backup slot, the BackupChassis and BackupSlot can be specified. This structure is valid and optional if **Type** is 4.
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupChassis	Backup chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupSlot	Backup slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device

Column name	Column description	Column type	Data type and restrictions	Remarks
				model. The value of this column is valid and optional if **Type** is 1, 4, 5 or 7.
Truncation	Truncation packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	The value of this column is valid if **Type** is 1.
EncapType	Specify encapsulation type for mirrored packet	N/A	Enumeration: • **1**—VXLAN encapsulation.	The value of this column is valid if **Type** is 7.
MonitorGroup ID	Monitoring-group ID	N/A	Unsigned integer, Value range: 1 to 128.	The value of this column is valid if **Type** is 8.
L2Mirror	Specify L2Mirror for mirroring to L2 port interface.	Data structure	Members include: • ReflectIfName • VLAN	ReflectIfName and VLAN must both be specified. This structure is valid and optional if Type is 1.
ReflectIfNam e	Interface name	N/A	String. Length: 1 to 47 characters.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

MQC/MirrorDynamicIF

This table contains information about mirroring packets to a dynamic interface, which is found by IP address.

XML structure

```
<MQC>
  <MirrorDynamicIF>
    <Action>
      <BehaviorName></BehaviorName>
      <DestIP></DestIP>
      <SrcIP></SrcIP>
      <DSCP></DSCP>
      <VLAN></VLAN>
      <VXLAN></VXLAN>
      <DestPort></DestPort>
      <SrcPort></SrcPort>
      <VRF></VRF>
      <Mac></Mac>
      <SamplerName></SamplerName>
      <Truncation></Truncation>
      <ErspanID></ErspanID>
      <ErspanVer></ErspanVer>
```

```
    </Action>
  </MirrorDynamicIF>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MirrorDynamicIF
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
DestIP	Destination IPv4 or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.54.
SrcIP	Source IPv4 or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VXLAN	VXLAN ID	N/A	Unsigned integer. Value range: 0 to 16777215.	You must specify the SrcPort and DstPort when you specify the VXLAN.
DestPort	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
SrctPort	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify	N/A	Six groups of two	Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination MAC		hexadecimal digits, hyphen-separated.	00-0c-af-e3-5d-c0.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model.
Truncation	Truncation packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
ErspanID	SPAN ID	N/A	Unsigned integer. Value range: 1 to 1023.	N/A
ErspanVer	ERSPAN version	N/A	Enumeration: • **3**—ERSPAN V3.	If this column is not configured, the default ERSPAN version is V2.

MQC/MirroringLocalPrecedence

This table contains information about the local precedence for mirroring traffic.

XML structure

```
<MQC>
  <MirroringLocalPrecedence>
    <Precedence></Precedence>
  </MirroringLocalPrecedence>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MirroringLocalPrecedence
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	Local precedence	N/A	Unsigned integer. • Value range: 0 to 7.	N/A

MQC/GlobalPolicy

This table contains information about global QoS policies.

XML structure

```
<MQC>
  <GlobalPolicy>
    <Application>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </GlobalPolicy>
</MQC>
```

Table description

Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

MQC/SRv6Policy

This table contains information about SRv6 QoS policies.

XML structure

```
<MQC>
  <Srv6Policy>
    <Application>
```

```
      <Endpoint></Endpoint>
      <Color></Color>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </Srv6Policy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Srv6Policy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	Endpoint IPv6 address	Index	String, semicolon hex notation.	N/A
Color	Color	Index	Unsigned integer	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A

MQC/VlanPolicy

This table contains information about QoS policies applied to VLANs.

XML structure

```
<MQC>
  <VlanPolicy>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
```

```
  </VlanPolicy>
</MQC>
```

Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface Name	Index	String	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

MQC/GlobalPolicyEnhance

This table contains information about global QoS policies in enhanced mode.

XML structure

```
<MQC>
  <GlobalPolicyEnhance>
```

```
    <Application>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </GlobalPolicyEnhance>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	GlobalPolicyEnhance
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

MQC/Account

This table contains information about accounting action.

XML structure

```
<MQC>
  <Account>
    <Action>
      <BehaviorName></BehaviorName>
      <Byte></Byte>
      <Packet></Packet>
    </Action>
  </Account>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Account
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Byte	Accounting in bytes	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Packet	Accounting in packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

MQC/PacketRate

This table contains information about protocol packet rate limit actions

XML structure

```
<MQC>
  <PacketRate>
    <Action>
      <BehaviorName></BehaviorName>
      <PacketRate></PacketRate>
      <AttackDefenseThreshold></AttackDefenseThreshold>
    </Action>
  </PacketRate>
</MQC>
```

Table description

Item	Description
Feature name	MQC

Table name	PacketRate
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
PacketRate	Packet rate in pps	N/A	Unsigned integer.	N/A
AttackDefenseThreshold	Attack defense rate threshold in pps	N/A	Unsigned integer.	N/A

MQC/PostClassify

This table contains information about processing QoS after other modules in the outbound direction of an interface.

XML structure

```
<MQC>
  <PostClassify>
    <Application>
      <IfIndex></IfIndex>
      <enable></enable>
    </Application>
  </PostClassify>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	PostClassify
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some version support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
enable	Enable	column	Boolean • true—Conform. • false—Not conform.	N/A

MQC/GlobalCategoryPolicy

This table contains information about QoS policies of the specified types applied globally.

XML structure

```
<MQC>
  <GlobalCategoryPolicy>
    <Application>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
    </Application>
  </GlobalCategoryPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	GlobalCategoryPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyType	Policy type	Index	Enumeration: • **0**—Common policy (default). • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy. • **6**—TCP ERSPAN policy. • **7**—Control-plane policy.	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer. Default: 0.	A greater value indicates a higher matching priority. The value range can be customized for devices. This column cannot be modified.

MQC/InterfaceCategoryPolicy

This table contains information about QoS policies of the specified types applied to interfaces.

XML structure

```
<MQC>
  <InterfaceCategoryPolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
      <ShareMode></ShareMode>
      <ShareModeBoth></ShareModeBoth>
    </Application>
  </InterfaceCategoryPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	InterfaceCategoryPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyType	Policy type	Index	Enumeration: • **0**—Common policy (default). • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy. • **6**—TCP ERSPAN policy. • **7**—Control-plane policy.	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer. Default: 0.	A greater value indicates a higher matching priority. The value range can be customized for devices. This column cannot be modified.
ShareMode	Sharing Mode	N/A	Boolean: • **true**—Conform.(default). • **false**—Not conform.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ShareModeBoth	Sharing mode for both direction	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

MQC/Telemetry

This table contains information about inband telemetry.

XML structure

```
<MQC>
  <Telemetry>
    <DeviceID></DeviceID>
    <TSformat></TSformat>
    <Collector>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VLANID></VLANID>
    </Collector>
  </Telemetry>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Telemetry
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Device ID	N/A	• String,dotted decimal notation. • Unsigned integer.	The column supports configuring an IP address or numerical value. The numerical value range is

Column name	Column description	Column type	Data type and restrictions	Remarks
				customized by product. Example: 10.153.93.60.
TSformat	Timestamp format	N/A	Enumeration: • **0**—md. • **1**—ts.	N/A
Collector	Telemetry collector	N/A	Members include: • SrcIP • DstIP • SrcPort • DstPort • VLANID	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete the telemetry collector. You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the telemetry collector, or when you merge or create the telemetry collector that does not exist.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DstIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

MQC/TelemetryRoles

This table contains information about inband telemetry role.

XML structure

```
<MQC>
  <TelemetryRoles>
    <TelemetryRole>
      <IfIndex></IfIndex>
      <Role></Role>
    </TelemetryRole>
  </TelemetryRoles>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryRoles
Table type	Multi-instance table
Row name	TelemetryRole
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Role	Telemetry role	N/A	Enumeration: • **1**—Ingress. • **2**—Transit. • **3**—Egress	N/A

MQC/TelemetryLoopbacks

This table contains information about inband telemetry loopback interfaces.

XML structure

```
<MQC>
  <TelemetryLoopbacks>
    <TelemetryLoopback>
      <IfIndex></IfIndex>
      <Loopback></Loopback>
    </TelemetryLoopback>
  </TelemetryLoopbacks>
</MQC>
```

Table description

Item	Description
Feature name	MQC

Table name	TelemetryLoopbacks
Table type	Multi-instance table
Row name	TelemetryLoopback
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Loopback	Telemetry loopback	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

MQC/TelemetryGlobalEnable

This table contains information about inband telemetry status.

XML structure

```
<MQC>
  <TelemetryGlobalEnable>
    <Enable></Enable>
  </TelemetryGlobalEnable>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	no

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable IFA	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A

MQC/TelemetryGlobalPacketDrop

This table contains information about inband telemetry packet drop.

XML structure

```
<MQC>
  <TelemetryGlobalPacketDrop>
    <PacketDrop></PacketDrop>
  </TelemetryGlobalPacketDrop>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalPacketDrop
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	no

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PacketDrop	Discard the packet of inband telemetry.	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

MQC/TelemetryGlobalRole

This table contains information about the INT global role.

XML structure

```
<MQC>
  <TelemetryGlobalRole>
    <Role></Role>
  </TelemetryGlobalRole>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalRole
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	no

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Role	Sets the INT global role .	N/A	Enumeration: • **1**—transit-egress.	You must specify the global role.

MQC/TelemetryAction

This table contains information about inband telemetry actions.

XML structure

```
<MQC>
  <TelemetryActions>
    <TelemetryAction>
      <IfIndex></IfIndex>
      <IFAId></IFAId>
      <Match>
        <AclType></AclType>
        <Acl></Acl>
        <Loopback></Loopback>
      </Match>
      <Action>
        <Md></Md>
        <Mirror></Mirror>
```

```
      <SamplerName></SamplerName>
      <Drop></Drop>
    </Action>
  </TelemetryAction>
</TelemetryActions>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryActions
Table type	Multi-instance table
Row name	TelemetryAction
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IFAId	IFA action ID	Index	Unsigned integer. Value range: 1 to 32.	N/A
Match	Telemetry match	N/A	Members include: • AclType • Acl • Loopback	N/A
AclType	ACL type	N/A	Enumeration: • **1**—IPv4Acl. • **2**—IPv6Acl. • **3**—MACAcl. • **4**—UserAcl.	You must specify the Acl when you specify the AclType.
Acl	ACL name or ACL number.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range based on AclType.	An ACL name must start with an English letter and cannot be **all**. You must specify the AclType when you specify the

Column name	Column description	Column type	Data type and restrictions	Remarks
				Acl.
Loopback	Telemetry loopback	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	If this column is not configured, the default value is **false**.
Action	Telemetry action	N/A	Members include: • Md • Mirror • SamplerName • Drop	You must specify one member at least.
Md	Add metadata	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	If this column is not configured, the default value is **false**.
Mirror	Mirror packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	If this column is not configured, the default value is **false**.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	You must specify the Mirror when you specify the SamplerName.
Drop	Drop original packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	If this column is not configured, the default value is **false**.

MQC/OverheadLayer

This table contains information about processing QoS in which overhead layer type of packet considered.

XML structure

```
<MQC>
  <OverheadLayer>
    <Layer></Layer>
  </OverheadLayer>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	OverheadLayer
Table type	Single-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Layer	Type of overhead layer	column	Enumeration: • **1**—Link. • **2**—Physics.	N/A

MQC/SysTruncation

This table contains information about global truncation.

XML structure

```
<MQC>
  <SysTruncation>
    <TruncationLen></TruncationLen>
  </SysTruncation>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	SysTruncation
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TruncationLen	Truncation length.	column	Unsigned integer.	The value depends on device.

MQC/MonitorGroup

This table contains information about monitor group.

XML structure

```
<MQC>
  <MonitorGroup>
    <Group>
      <GroupID></GroupID>
      <SamplerName></SamplerName>
    </Group>
  </MonitorGroup>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MonitorGroup
Table type	Multi -instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	Support for this column depends on the device model.

MQC/MonitorPort

This table contains information about monitor groups applied to interfaces.

XML structure

```
<MQC>
  <MonitorPort>
    <MonitorPort>
```

```
      <GroupID></GroupID>
      <IfIndex></IfIndex>
      <IP>
        <DestIP></DestIP>
        <SrcIP></SrcIP>
        <DSCP></DSCP>
        <VLAN></VLAN>
        <VRF></VRF>
        <ErspanVer></ErspanVer>
      </IP>
      <Mac></Mac>
    </MonitorPort>
  </MonitorPort>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MonitorPort
Table type	Multi -instance table
Row name	MonitorPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitoring group id.	Index	Unsigned integer.	The value depends on device.
IfIndex	Interface index.	Index	Unsigned integer.	N/A
IP	Specify IP information for mirroring traffic to an interface in GRE format	Data structure	Members include: • DestIP • SrcIP • DSCP • VLAN • VRF	DestIP and SrcIP must both be specified. DSCP, VLAN, and VRF can be optionally specified when DestIP and SrcIP are configured.
DestIP	Destination IP address or IPv6 address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.54.
SrcIP	Source IP address or IPv6	N/A	String, dotted decimal notation.	Example: 10.153.93.60.

Column name	Column description	Column type	Data type and restrictions	Remarks
	address		Or hexadecimal string, colon-separated. Length: 1 to 46	
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
ErspanVer	ERSPAN version	N/A	Enumeration: **3**—ERSPAN V3.	N/A
Mac	Destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

MQC/MPortDynamic

This table contains information about dynamic monitoring ports, which are found by IP address.

XML structure

```
<MQC>
  <MPortDynamic>
    <Port>
      <GroupID></GroupID>
      <DestIP></DestIP>
      <SrcIP></SrcIP>
      <DSCP></DSCP>
      <VLAN></VLAN>
      <VRF></VRF>
      <Mac></Mac>
      <ErspanVer></ErspanVer>
    </Port>
  </MPortDynamic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MPortDynamic

Table type	Multi-instance table
Row name	Port
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitoring group ID	Index	Unsigned integer.	The value depends on device.
DestIP	Destination IP address or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.54.
SrcIP	Source IP address or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ErspanVer	ERSPAN version	N/A	Enumeration: **3**—ERSPAN V3.	N/A

MQC/Strip

This table contains information about strip.

XML structure

```
<MQC>
  <Strip>
    <Strip>
      <BehaviorName></BehaviorName>
      <Type></Type>
      <OffSetValue></OffSetValue>
      <HeadLength></HeadLength>
```

```
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
      <EthTypeID></EthTypeID>
    </Strip>
  </Strip>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Strip
Table type	Multi -instance table
Row name	Strip
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Type	Strip type.	column	Enumeration: • **0**—strip header. • **1**—top-most-vlan. • **2**—position l2. • **3**—position l3. • **4**—position l4. • **5**—vxlan. • **6**—nvgre. • 7—gre.	Required.
OffSetValue	Strip offset value.	column	Unsigned integer.	The value depends on device.
HeadLength	Length of a GRE header	column	Unsigned integer Value range: 4 to 16.	The value depends on user configuration. The value of this column is valid if the type is gre.
DstMACAddr	Destination MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				valid if the type is gre.
SrcMACAddr	Source MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
VlanID	VLAN tag ID	column	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if the type is gre.
Dot1p	802.1p CoS	column	Unsigned integer. Value range: 0 to 7.	The value of this column is valid if the type is gre.
EthTypeID	Ethernet type ID	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	The value of this column is valid if the type is gre.

MQC/Nest

This table contains information about nest.

XML structure

```
<MQC>
  <Nest>
    <Nest>
      <BehaviorName></BehaviorName>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
    </Nest>
  </Nest>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Nest
Table type	Multi -instance table
Row name	Nest
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
VlanID	Vlan id.	column	Unsigned integer. Value range: 1 to 4094.	Required.
Dot1p	802.1p COS.	column	Unsigned integer. Value range: 0 to 7.	N/A

MQC/BehaviorTruncation

This table contains information about truncation of behavior.

XML structure

```
<MQC>
  <BehaviorTruncation>
    <Truncation>
      <BehaviorName></BehaviorName>
      <Truncation></Truncation>
    </Truncation>
  </BehaviorTruncation>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	BehaviorTruncation
Table type	Multi -instance table
Row name	Truncation
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Truncation	Whether to truncation.	column	Boolean • true—Truncation. • false—Not truncation.	Required.

MQC/TimeStamp

This table contains information about time stamp.

XML structure

```
<MQC>
  <TimeStamp>
    <TimeStamp>
      <BehaviorName></BehaviorName>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <EthType></EthType>
    </TimeStamp>
  </TimeStamp>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TimeStamp
Table type	Multi -instance table
Row name	TimeStamp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
DstMACAddr	Destination MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	DstMACAddr, SrcMACAddr and EthType must be add together and required.
SrcMACAddr	Source MAC	column	Six groups of two	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
	address.		hexadecimal digits, hyphen-separated..	
EthType	Ethtype id of timestamp.	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF..	Required.

MQC/VSIPolicy

This table contains information about QoS policies applied to VSI.

XML structure

```
<MQC>
  <VSIPolicy>
    <Application>
      <VSI></VSI>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </VSIPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	VSIPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of VSI	index	String. Length: 1 to 31 characters.	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	

MQC/AccountInterfacePolicy

This table contains information about QoS accounting policies applied to interfaces.

XML structure

```
<MQC>
  <AccountInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
    </Application>
  </AccountInterfacePolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	AccountInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: • **1**—extension. • **2**—inner-match.	When the **Direction** column is **0**, configure the Mode.Mode cannot be modified .

MQC/RemarkInterfacePolicy

This table contains information about QoS remarking policies applied to interfaces.

XML structure

```
<MQC>
  <RemarkInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
    </Application>
  </RemarkInterfacePolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	RemarkInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: • **1**—extension. • **2**—inner-match.	When the **Direction** column is **0**, configure the Mode.Mode cannot be modified .

MQC/TapInterfacePolicy

This table contains information about QoS tap policies applied to interfaces.

XML structure

```
<MQC>
  <TapInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
    </Application>
  </TapInterfacePolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TapInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: • **1**—extension. • **2**—inner-match.	When the **Direction** column is **0**, configure the Mode.Mode cannot be modified .

MQC/TrafficRate

This table contains information about traffic rate threshold.

XML structure

```
<MQC>
  <TrafficRate>
    <Action>
      <BehaviorName></BehaviorName>
      <LowThresholdpps></LowThresholdpps>
      <HighThresholdpps></HighThresholdpps>
    </Action>
  </TrafficRate>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TrafficRate
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LowThresholdpps	The value of low threshold	column	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A
HighThresholdpps	The value of high threshold	column	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A

MQC/ACCategoryPolicy

This table contains information about QoS policies of the specified types applied to AC interfaces.

XML structure

```
<MQC>
  <ACCategoryPolicy>
    <AC>
      <IfName></IfName>
      <SrvID></SrvID>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
      <ShareMode></ShareMode>
    </AC>
  </ACCategoryPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ACCategoryPolicy
Table type	Multi-instance table
Row name	AC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters. Example: GigabitEthernet2/0/2	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyType	Policy type	Index	Enumeration: • **0**—Common policy. • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy.	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer.	N/A
ShareMode	Sharing Mode	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

MQC/TrafficPolicy

This table contains information about traffic policy of behavior.

XML structure

```
<MQC>
  <TrafficPolicy>
    <Action>
      <BehaviorName></BehaviorName>
      <PolicyName></PolicyName>
    </Action>
  </TrafficPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TrafficPolicy
Table type	Multi-instance table
Row name	Action
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
PolicyName	Traffic policy name	N/A	String. Length: 1 to 31 characters.	N/A

Appendix

This section describes how to configure an ACL rule and an inner ACL rule.

- There are two methods of configuring an ACL rule:
  - Use the ACL group method.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <Acl>
        <IPv4Acl>3000</IPv4Acl>
        <Inner>false</Inner>
      </Acl>
    </Rule>
  </Rules>
</MQC>
```

  - Use the IPv4 ACL node method.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <IPv4Acl>3000</IPv4Acl>
    </Rule>
  </Rules>
</MQC>
```

- Configure an inner ACL rule.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
```

```
        <Not>false</Not>
        <Acl>
          <IPv4Acl>3000</IPv4Acl>
          <Inner>true</Inner>
        </Acl>
      </Rule>
    </Rules>
  </MQC>
```

MQC/TunnelBandwidths

This table contains information about the tunnel bandwidth.

XML structure

```
<MQC>
  <TunnelBandwidths>
    <TunnelBandwidth>
      <IfName></IfName>
      <Direction></Direction>
      <BandwidthKbps></BandwidthKbps>
    </TunnelBandwidth>
  </TunnelBandwidths>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TunnelBandwidths
Table type	Multi-instance table
Row name	TunnelBandwidth
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Direction	Application direction.	Index	Enumeration: • **downstream**—The application direction is downstream**.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BandwidthKbps	Tunnel bandwidth in kbps.	N/A	Unsigned integer.	N/A

Appendix

This section describes how to configure an ACL rule and an inner ACL rule.

- There are two methods of configuring an ACL rule:
  - Use the ACL group method.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <Acl>
        <IPv4Acl>3000</IPv4Acl>
        <Inner>false</Inner>
      </Acl>
    </Rule>
  </Rules>
</MQC>
```

  - Use the IPv4 ACL node method.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <IPv4Acl>3000</IPv4Acl>
    </Rule>
  </Rules>
</MQC>
```

- Configure an inner ACL rule.

```
<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <Acl>
        <IPv4Acl>3000</IPv4Acl>
        <Inner>true</Inner>
      </Acl>
    </Rule>
```

```
    </Rules>
  </MQC>
```

MQC/Erspan

This table contains information about ERSPAN.

XML structure

```
<MQC>
  <Erspan>
    <SwitchID></SwitchID>
  </Erspan>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Erspan
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchID	Switch ID	N/A	Unsigned integer. Value range: 0 to 1023.	N/A

MQC

MQC/GlobalRunInfo

This table contains global operation status information.

XML structure

```
<MQC>
  <GlobalRunInfo>
    <ProcessingStatus></ProcessingStatus>
  </GlobalRunInfo>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	GlobalRunInfo
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessingStatus	Global operation status	N/A	Enumeration: • **1**—Idle. • **2**—Busy.	N/A

MQC/AppRunInfo

This table contains policy application information.

XML structure

```
<MQC>
  <AppRunInfo>
    <AppRunInfoEntry>
      <AppType></AppType>
      <AppMainIndex></AppMainIndex>
```

```
      <AppSubIndex></AppSubIndex>
      <AppDirection></AppDirection>
      <AppPolicyName></AppPolicyName>
      <ApplyStatus></ApplyStatus>
      <IfName></IfName>
    </AppRunInfoEntry>
  </AppRunInfo>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	AppRunInfo
Table type	Multi-instance table
Row name	AppRunInfoEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppType	Application type	Index	Enumeration: • **1**—Interface. • **2**—VLAN. • **3**—Global. • **4**—COPP.	N/A
AppMainIndex	Primary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Interface index if AppType is **1**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. • VLAN ID in the range of 1 to 4094 if AppType is **2**. • **0** if AppType is **3**. • Member ID (0 for a standalone device) if AppType is **4**.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppSubIndex	Secondary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Slot number of the card if AppType is **4**. • **0** is AppType is not **4**.
AppDirection	Application direction	Index	Enumeration: • **1**—Inbound. • **2**—Outbound.	N/A
AppPolicyName	Policy name	N/A	String. Length: 0 to 31 characters.	N/A
ApplyStatus	Application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Succeeded partly.	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is **2**.
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/CBRunInfo

This table contains class-behavior association operation information.

XML structure

```
<MQC>
  <CBRunInfo>
    <CBRunInfoEntry>
      <AppType></AppType>
      <AppMainIndex></AppMainIndex>
      <AppSubIndex></AppSubIndex>
      <AppDirection></AppDirection>
      <CBMapIndex></CBMapIndex>
      <ClassName></ClassName>
      <BehaviorName></BehaviorName>
      <CBApplyStatus></CBApplyStatus>
    </CBRunInfoEntry>
  </CBRunInfo>
</MQC>
```

AppMainIndex	Primary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Interface index if AppType is **1**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. • VLAN ID in the range of 1 to 4094 if AppType is **2**. • **0** if AppType is **3**. • Member ID (0 for a standalone device) if AppType is **4**.
AppSubIndex	Secondary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Slot number of the card if AppType is **4**. • **0** is AppType is not **4**.
AppDirection	Application direction	Index	Enumeration: • **1**—Inbound. • **2**—Outbound.	N/A
CBMapIndex	Class-behavior association index	Index	Unsigned integer.	N/A
ClassName	Traffic class	N/A	String.	

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 0 to 31 characters.	
BehaviorName	Traffic behavior name	N/A	String. Length: 0 to 31 characters.	
CBApplyStatus	Class-behavior association application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Failed. • **3**—Succeeded partly.	If a class-behavior association fails to applied on a card when the policy is applied globally or to a VLAN, the value of this field is **3**.

MQC/AccountRunInfo

This table contains traffic statistics information.

XML structure

Row name	CARRunInfoEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppType	Application type	Index	Enumeration: • **1**—Interface. • **2**—VLAN. • **3**—Global. • **4**—COPP.	N/A
AppMainIndex	Primary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Interface index if AppType is **1**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. • VLAN ID in the range of 1 to 4094 if AppType is **2**. • **0** if AppType is **3**. • Member ID (0 for a standalone device) if AppType is **4**.
AppSubIndex	Secondary index of the application	Index	Unsigned integer.	The value depends on the AppType column: • Slot number of the card if AppType is **4**. • **0** is AppType is not **4**.
AppDirection	Application direction	Index	Enumeration: • **1**—Inbound. • **2**—Outbound.	N/A
CBMapIndex	Class-behavior association index	Index	Unsigned integer.	N/A
CIR	Committed information rate	N/A	Unsigned integer.	The value of this column depends on the device model.
CBS	Committed burst size	N/A	Unsigned integer.	The value of this column depends on the device model.
EBS	Excess burst size	N/A	Unsigned integer.	The value of this column depends on the device model.
PIR	Peak information	N/A	Unsigned integer.	The value of this

Column name	Column description	Column type	Data type and restrictions	Remarks
	rate			column depends on the device model. If PIR is not configured, 0xFFFFFFFF is returned.
GreenPkts	Green packet statistic in packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.
GreenBytes	Green packet statistic in bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.
RedPkts	Red packet statistic in packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.
RedBytes	Red packet statistic in bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.
YellowPkts	Yellow packet statistic in packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.
YellowBytes	Yellow packet statistic in bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support this statistic, 0xFFFFFFFFFFFFFFFF is returned.

MQC/Classifiers

This table contains information about classifiers.

XML structure

```
<MQC>
    <Classifiers>
      <Classifier>
        <Name></Name>
        <Operator></Operator>
        <Description></Description>
        <RuleNum></RuleNum>
        <DefineMode></DefineMode>
        <NextRuleID></NextRuleID>
      </Classifier>
    </Classifiers>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Classifiers
Table type	Multi-instance table
Row name	Classifier
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Traffic Classifier name.	Index	String. Length: 1 to 31 characters.	N/A
Operator	Match operator of the traffic classifier	N/A	Enumeration: • **1**—And. • **2**—Or.	When the **Operator** column is **1**, the traffic classifier matches the packets that match all its match criteria. When the **Operator** column is **2**, the traffic classifier matches the packets that match any of its match criteria.
Description	Traffic classifier description.	N/A	String. Length: 1 to 127 characters.	N/A
RuleNum	Number of rules.	N/A	Unsigned integer.	N/A
DefineMode	Define Mode.	N/A	Enumeration: • **1**—System defined. • **2**—User defined.	N/A
NextRuleID	ID for create a new rule.	N/A	Unsigned integer.	N/A

MQC/Behaviors

This table contains information about behaviors.

XML structure

```
<MQC>
```

```
    <Behaviors>
      <Behavior>
        <Name></Name>
        <ActionMask></ActionMask>
        <DefineMode></DefineMode>
      </Behavior>
    </Behaviors>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Traffic class name	Index	String. Length: 1 to 31 characters.	N/A
RuleID	ID of the rule	Index	Unsigned integer	N/A
Not	Whether the rule is used as an unsuccessful match criterion	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
PktType	Packet type to be matched	N/A	Enumeration: • **1**—Any. • **2**—IP. • **3**—IPv6. • **4**—Arp. • **5**—Bt. • **6**—Bridge. • **7**—Route.	When the **PktType** column is **1**, the rule matches all packets. When the **PktType** column is **2**, the rule matches IPv4 packets. When the **PktType** column is **3**, the rule matches IPv6 packets. When the **PktType** column is **4**, the rule matches ARP packets. When the **PktType** column is **5**, the rule matches BitTorrent packets. When the **PktType** column is **6**, the rule

Column name	Column description	Column type	Data type and restrictions	Remarks
				matches Layer 2 forwarded packets. When the **PktType** column is **7**, the rule matches Layer 3 forwarded packets.
Acl	Match ACL	Data structure	Members include: • **IPv4Acl**. • **IPv6Acl**. • **Inner.** • **Mpls-inner** • **Raw-vpn**	IPv4Acl and IPv6Acl cannot be specified together. Inner and Mpls-inner cannot be specified together.
IPv4ACl	Match IPv4 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**.
IPv6ACl	Match IPv6 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**.
Inner	Match inner ACL.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Mpls-inner	Match the inner header information of MPLS packets.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Raw-vpn	Match the raw VRF index.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
MACAcl	Match MAC ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 4000 to 4999.	An ACL name must start with an English letter and cannot be **all**.
UserAcl	Match User ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 5000 to 5999.	An ACL name must start with an English letter and cannot be **all**.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4ACl	Match IPv4 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**.
IPv6ACl	Match IPv6 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**.
SrcMac	Match a source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
DestMac	Match a destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
ServiceVLANID	Match the service provider VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A
CustomerVLANID	Match the customer VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A
ServiceDot1p	Match the 802.1p priority of the service provider network.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
CustomerDot1p	Match the 802.1p priority of the customer network.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Exp	Match MPLS EXP	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	value.			
InnerExp	Match inner MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv6Precedence	Match IPv6 precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
LocalPrecedence	Match local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
IPv6Dscp	Match IPv6 DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DropPriority	Match drop precedence.	N/A	Unsigned integer. Value range: 0 to 2.	N/A
QoSLocalID	Match local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
QoSLocalIDOut	Match the local QoS ID in the outbound direction.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
MplsLabel	Match MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerMplsLabel	Match inner MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
PktLength	Match packet length.	Data structure	Members include: • **Min**. • **Max**.	N/A
Min	The minimum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
Max	The maximum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MplsLabelRange	Match MPLS label range.	Data structure	Members include: • **LabelStart**. • **LabelEnd**.	N/A
LabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
LabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InnerMplsLabelRange	Match inner MPLS label range.	Data structure	Members include: • **InnerLabelStart**. • **InnerLabelEnd**.	N/A
InnerLabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerLabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RTPPort	Match RTP protocol port range.	Data structure	Members include: • **PortStart**. • **PortEnd**.	N/A
PortStart	Start RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
PortEnd	End RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
Application	Match application layer protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/Applications/Application/AppName.
ApplicationGroup	Match application group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/AppGroups/GroupInfo/GroupName.
Vxlan	Match vxlan ID.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
VxlanAny	Match any vxlan ID.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
TunnelID	Match tunnel ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANTag	Match VLAN tagging mode	N/A	Enumeration: • **1**—None. • **2**—Single-tagged. • **4**—Double-tagged.	N/A
TunnelDscpList	Match Tunnel DSCP values.	Data structure	Members include: • **TunnelDscp**.	N/A
TunnelDscp	Match Tunnel DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
IFA	Inband Flow Analyzer	N/A	Enumeration: • **1**—tcp. • **2**—udp.	N/A
OutBoundInterface	Match output interface	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				“Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Mpls	Mpls type	N/A	Enumeration: • **1**—l2. • **2**—l3.	N/A
Nvgre	Match NVGRE.	N/A	Hexadecimal string. Length: 4 to 6 characters. Value range: 1000 to FFFFFE.	N/A
NvgreAny	Match any NVGRE ID	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	The Nvgre column must be specified when the NvgreAny column is **false**.
RoCEv2	Match RoCEv2 packets	Data structure	Members include: • **PktType**. • **OpCode**. • **DstQpair**. • **SrcQpair**. • **Nack**.	N/A
PktType	Packet type to be matched.	N/A	Enumeration: • **0**—IPv4.	N/A
OpCode	OpCode in BTH to be matched.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
DstQpair	Destination QP in BTH to be matched.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
SrcQpair	Source QP in DETH to be matched.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
Nack	The lower 5 bits of Syndrome in NAK to be matched.	N/A	Unsigned integer. Value range: 0 to 31.	N/A
SdwanTte	Match SDWAN network TTE information.	Data structure	Members include: • **SiteID**. • **DeviceID**. • **InterfaceID**.	N/A
SiteID	Site ID in SDWAN network to be matched.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DeviceID	Device ID in SDWAN network to be matched.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
InterfaceID	Interface ID of the SDWAN tunnel interface	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	to be matched.			
VRF	VRF instance to be matched.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
OutBoundIfName	Output interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/Remark

This table contains information about marking action.

XML structure

```
<MQC>
   <Remark>

       <BehaviorName></BehaviorName>
       <Type></Type>
       <Color></Color>
       <Value></Value>
       <SrcMACAddr></SrcMACAddr>
       <DstMACAddr></DstMACAddr>
       <SrcIPv4Addr></SrcIPv4Addr>
       <DstIPv4Addr></DstIPv4Addr>
       <SrcIPv6Addr></SrcIPv6Addr>
       <DstIPv6Addr></DstIPv6Addr>
     </Action>
   </Remark>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Remark
Table type	Multi-instance table
Row name	Action
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of remark	Index	Enumeration: • **0**—CDot1pTrust. • **1**—Dscp. • **2**—IPPre. • **3**—MplsExp. • **4**—Dot1p. • **5**—LocalID. • **6**—LocalPre. • **7**—DropPre. • **8**—CVlanID. • **9**—SVlanID. • **10**—ImpositionMplsExp. • **12**—AtmClp. • **14**—SecondMplsExp. • **16**—ServiceClass. • **17**—TunnelDscp. • **18**—DstMACAddr. • **19**—FlowID. • **20**—DstIPv4Addr. • **21**—SrcIPv4Addr. • **22**—DstIPv6Addr. • **23**—SrcIPv6Addr. • **24**—LocalIDOut. • **26—**SrcMACAddr.	When the **Type** column is 0, configure an inner-to-outer tag priority copying action. When the **Type** column is **1**, configure a DSCP marking action. When the **Type** column is **2**, configure an IP precedence marking action. When the **Type** column is **3**, configure an EXP value marking action. When the **Type** column is **4**, configure an 802.1p priority marking action. When the **Type** column is **5**, configure the action of setting the specified local QoS ID for packets. When the **Type** column is **6**, configure a local precedence marking action. When the **Type** column is **7**, configure a drop priority marking action. When the **Type** column is **8**, configure a CVLAN marking action. When the **Type** column is **9**, configure a SVLAN marking action. When the **Type** column is **10**, configure an EXP value marking action for added labels. When the **Type** column is **12**, configure the action of setting the CLP bit for ATM cells. When the **Type** column is **14**, configure a second MPLS EXP value marking action. When the **Type** column is **16**, configure the action of setting the service-class for MPLS traffic

Column name	Column description	Column type	Data type and restrictions	Remarks
				engineering. When the **Type** column is **17**, configure a tunnel-DSCP marking action. When the **Type** column is **18**, configure a destination MAC address. When the **Type** column is **19**, configure a FlowID marking action. When the **Type** column is **20**, configure a destination IPv4 address. When the **Type** column is **21**, configure a source IPv4 address. When the **Type** column is **22**, configure a destination IPv6 address. When the **Type** column is **23**, configure a source IPv6 address. When the Type column is **24**, configure the action of setting the specified local QoS ID for packets. This local QoS ID can be matched in the outbound direction. When the **Type** column is **26**, configure a source MAC address.
Color	The color of affected packets	Index	Enumeration: • **0**—No color. • **1**—Green. • **2**—Yellow. • **3**—Red.	Specify different color packets for the priority marking action. Support for the green, red and yellow keyword depends on the device model. When- the **Color** column is **0**, specifies all packets. When the **Color** column is **1**, specifies green packets. When the **Color** column is **2**, specifies yellow packets. When the **Color** column is **3**, specifies red packets.
Value	The value of marking action	N/A	Unsigned integer.	Required when the **Type** column is **1**, **2**, **3**, **4**, 5, **6**, **7**, **8**, **9**, **10**, **12**, **16** or **17**. When the **Type** column is 0, the value is invalid.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When the **Type** column is **8** or **9**, the value range is 1 to 4094. When the **Type** column is **7**, the value range is 0 to 2. When the **Type** column is **5**, the value range is 1 to 4095. When the **Type** column is **2**, **3**, **4**, **6** or **10**, the value range is 0 to 7. When the **Type** column is **1**, the value range is 0 to 63. When the **Type** column is **12**, the value range is 0 to 1. When the **Type** column is **16**, the value range is 0 to 7 or a customized value. When the **Type** column is **17**, the value range is 0 to 63. When the **Type** column is **19**, the value range is 1 to 65535. When the **Type** column is **24**, the value range is 1 to 128.
SrcMACAddr	The source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required when the **Type** column is **26**
DstMACAddr	The destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required when the **Type** column is **18**
SrcIPv4Addr	The source IPv4 address.	N/A	String, dotted decimal notation.	Required when the **Type** column is 2**1**
DstIPv4Addr	The destination IPv4 address.	N/A	String, dotted decimal notation.	Required when the **Type** column is **20**
SrcIPv6Addr	The source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Required when the **Type** column is **23**
DstIPv6Addr	The destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Required when the **Type** column is **22**

MQC/Redirect

This table contains information about redirect.

</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Redirect

Table type	Multi-instance table
Row name	Action
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of redirect	Index	Enumeration: • **1**—CPU. • **2**—Interface. • **3**—VSI. • **4**—FailoverGroup. • **6**—Nexthop • **7**—MonitorGroup • **8**—HTTP. • **9**—HTTPS. • **10**—NAT instance. • **12**—SR-policy. • **13**—SRv6-policy. • **14**—TunnelGroup. • **15**—Local. • **16**—Access-Vpn. • **17**—DHCP.	When the **Type** column is **1**, redirect traffic to CPU. When the **Type** column is **2**, redirect traffic to an interface. When the **Type** column is **3**, redirect traffic to a virtual station interface. When the **Type** column is **4**, redirect traffic to a failover group. When the **Type** column is **6**, redirect traffic to nexthop. When the **Type** column is **7**, redirect traffic to monitor group. When the **Type** column is **8**, redirect HTTP traffic to CPU. When the **Type** column is **9**, redirect HTTPS traffic to CPU. When the **Type** column is **10**, redirect traffic to NAT instance. When the **Type** column is **12**, redirect traffic to SR-policy. When the **Type** column is **13**, redirect traffic to SRv6-policy. When the **Type** column is **14**, redirect traffic to Tunnel group. When the **Type** column is **15**, redirect traffic to Local. When the **Type** column is **16**, redirect traffic to Access-Vpn. When the **Type** column is **17**, redirect DHCP traffic

Column name	Column description	Column type	Data type and restrictions	Remarks
				to CPU.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid only when the **Type** column is **2**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A
TrackOap	Enable the traffic redirecting action to collaborate with OAP	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The value of this column is valid only when the **Type** column is **2**.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid only when the **Type** column is **2**.
VSI	Name of VSI	N/A	String. Length: 1 to 31 characters.	Required and valid only when the **Type** column is **3**.
Nexthop	Nexthop	N/A	N/A	N/A
VRF	VRF instance name	N/A	String. Length: 0 to 31 characters.	The value of this column is valid if **Type** is **6**.
IPAddr	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **6**. For example, 1.1.1.1, or 1:1::1:1.
IPAddrBackup	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **6**. For example, 1.1.1.1, or 1:1::1:1.
Track	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is **6**.
TrackBackup	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is **6**.
NatInstance	Nat instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **10**.
FailoverGroup	Failover group	Data structure	Members include: • GroupName. • AftsGroupName. • Channel.	N/A
GroupName	Failover group	N/A	String.	The value of this column

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 63 characters.	is valid if **Type** is **4**.
AftGroupName	Aft failover group name	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if **Type** is **4**.
Channel	Channel	N/A	Unsigned integer. Value range: 0 to 1.	The value of this column is valid if **Type** is **4**. Some versions don't support this column. For relevant information, see the XSD document of your product.
MonitorGroupID	Monitor group ID.	N/A	Unsigned integer.	N/A
SRPolicy	SR policy	Data structure	Members include: • EndPoint. • Colort. • SID. • VpnSID.	N/A
EndPoint	Endpoint address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if **Type** is **12** or **13**.
Color	Color value	N/A	Unsigned integer. Value range: 0 to 4294967295.	The value of this column is valid if **Type** is **12** or **13**.
SID	Public network SID	N/A	Hexadecimal string, colon-separated.	The value of this column is valid if **Type** is **13**. This column and VpnSID cannot be specified together.
VpnSID	Private network SID	N/A	Hexadecimal string, colon-separated.	The value of this column is valid if **Type** is **13**. This column and SID cannot be specified together.
TunnelGroupID	Tunnel group ID	N/A	Unsigned integer.	N/A
AccessVpn	VPN instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **16**.
AccessVpnTrack	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is 1**6**.
AccessVpnBackup	VPN instance name	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if **Type** is **16**.
AccessVpnBackupTrack	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if **Type** is 1**6**.
AccessCgnVp	VPN instance	N/A	String.	The value of this column

Column name	Column description	Column type	Data type and restrictions	Remarks
n	name		Length: 1 to 31 characters.	is valid if **Type** is **16**.

MQC/Mirror

Table description

Item	Description
Feature name	MQC
Table name	Mirror
Table type	Multi-instance table
Row name	Action
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of mirror	Index	Enumeration: • **1**—Interface. • **2**—CPU. • **3**—VLAN. • **4**—Slot. • **5**—Local. • **6**—GRPC. • **7**—IFA. • **8**—MonitorGroup.	When the **Type** column is **1**, mirror to an interface. When the **Type** column is **2**, mirror to CPU. When the **Type** column is **3**, mirror to VLAN. When the **Type** column is **4**, traffic is mirrored to a board. When the **Type** column is **5**, traffic is mirrored to the board on which the mirrored traffic is received or sent out. When the **Type** column is **6**, traffic is mirrored to GRPC. When the **Type** column is **7**, traffic is mirrored to inband flow analyzer processor. When the **Type** column is **8**, traffic is mirrored to a monitoring-group.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if **Type** is **1**. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if **Type** is **3**.
IP	Specify IP for mirroring to interface with GRE or VXLAN format	Data structure	Members include: • DestIP • SrcIP • DSCP • VLAN • VXLAN • VRF	DestIP and SrcIP must both be specified. DSCP, VLAN, VXLAN and VRF can be optionally specified when DestIP and SrcIP are configured. This structure is valid and optional if Type is 1.
DestIP	Destination IPv4 or IPv6 address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.54.
SrcIP	Source IPv4 or IPv6 address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VXLAN	VXLAN ID	N/A	Unsigned integer. Value range: 0 to 16777215.	You must specify the SrcPort and DstPort when you specify the VXLAN.
DestPort	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
SrctPort	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
ErspanID	SPAN ID	N/A	Unsigned integer. Value range: 1 to 1023.	N/A
ErspanVer	ERSPAN version	N/A	Enumeration: • **3**—ERSPAN V3.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of this column is valid and optional if **Type** is **1.**
Board	Specify Board for mirroring to a board.	Data structure	Members include: • Chassis • Slot	If the device is a distributed device in standalone mode or a centralized IRF device,

Column name	Column description	Column type	Data type and restrictions	Remarks
			• BackupChassis • BackupSlot	the slot must be specified. If the device supports mirroring packets to a backup slot, the BackupSlot can be specified. If the device is a distributed device in IRF mode, the chassis and slot must both be specified. If the device supports mirroring packets to a backup slot, the BackupChassis and BackupSlot can be specified. This structure is valid and optional if **Type** is 4.
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupChassis	Backup chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupSlot	Backup slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model. The value of this column is valid and optional if **Type** is 1, 4, 5 or 7.
Truncation	Truncation packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	The value of this column is valid if **Type** is 1.
EncapType	Specify encapsulation type for mirrored packet	N/A	Enumeration: • **1**—VXLAN encapsulation.	The value of this column is valid if **Type** is 7.
MonitorGroupID	Monitoring-group ID	N/A	Unsigned integer. Value range : 1 to 128.	The value of this column is valid if **Type** is 8.
L2Mirror	Specify L2Mirror for mirroring to L2 port interface.	Data structure	Members include: • ReflectIfName • VLAN	ReflectIfName and VLAN must both be specified. This structure is valid and optional if Type is 1.
ReflectIfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/MirrorDynamicIF

This table contains information about mirroring packets to a dynamic interface, which is found by IP address.

XML structure

```
<MQC>
  <MirrorDynamicIF>
    <Action>
      <BehaviorName></BehaviorName>
      <DestIP></DestIP>
      <SrcIP></SrcIP>

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Kbps	Bandwidth value in kbps	N/A	Unsigned integer. Value range: 8 to 10,000,000.	When the configuration way of Bandwidth is Kbps, the others can't be configured at the same time.
Pct	Percentage of reserved bandwidth.	N/A	Unsigned integer. Value range: 1 to 100.	When the configuration way of Bandwidth is Pct, the others can't be configured at the same time.
RemainingPct	Percentage of remaining bandwidth.	N/A	Unsigned integer. Value range: 1 to 100.	When the configuration way of Bandwidth is RemainingPct, the others can't be configured at the same time.
PIR	Peak information rate	N/A	Unsigned integer. Value range: 8 to 10,000,000.	N/A

MQC/ExpeditedForwarding

This table contains information about expedited-forwarding queue.

XML structure

```
<MQC>
 <ExpeditedForwarding>
```

```
    <Action>
      <BehaviorName></BehaviorName>
      <Bandwidth>
        <Kbps></Kbps>
        <CBS></CBS>
        <PIR></PIR>
      </Bandwidth>
      <BandwidthPct>
        <Pct></Pct>
        <CBSRatio></CBSRatio>
      </BandwidthPct>
    </Action>
  </ExpeditedForwarding>
</MQC>
```

Table description

Item	Description

Table name	ExpeditedForwarding
Table type	Multi-instance table
Row name	Action
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Bandwidth	Specify the Bandwidth value in kbps	Data structure	Members include: • **Kbps**. • **CBS**.	When the configuration way of Bandwidth is Bandwidth, the **Kbps** must be specified, and another way can't be configured at the same time.
Kbps	value in kbps	N/A	Unsigned integer. Value range: 8 to 10,000,000.	N/A
CBS	Committed Burst Size	N/A	Unsigned integer. Value range: 32 to 1,000,000,000.	N/A
PIR	Peak information rate	N/A	Unsigned integer. Value range: 8 to 10,000,000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BandwidthPct	Specify the percentage of reserved bandwidth.	Data structure	Members include: • **Pct**. • **CBSRatio**.	When the configuration way of Bandwidth is BandwidthPct, the **Pct** must be specified, and another way can't be configured at the same time.
Pct	Percentage of reserved bandwidth.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
CBSRatio	CBS Ratio	N/A	Unsigned integer. Value range: 25 to 500.	N/A

MQC/StrictPriority

This table contains information about strict priority queuing.

XML structure

```
<MQC>
  <StrictPriority>
    <Action>
      <BehaviorName></BehaviorName>
      <Enable></Enable>
    </Action>
  </StrictPriority>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	StrictPriority
Table type	Multi-instance table

Table name	CAR
Table type	Multi-instance table
Row name	Action
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
BandwidthUnit	Specify bandwidth Unit	N/A	Enumeration: • **1**—pps. • **2**—kbps. • **3**—percent.	If this column is not configured, the default bandwidth unit is kbps.
CIR	Committed information rate	N/A	Unsigned integer.	N/A
CBS	Committed burst size	N/A	Unsigned integer.	N/A
EBS	Excess burst size	N/A	Unsigned integer.	N/A
PIR	Peak information rate	N/A	Unsigned integer.	N/A
GreenAction	Specify behavior for green packets	Data structure	Members include: • **GreenActionType**. • **GreenActionValue**.	
GreenActionType	Green Action Type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass. • **3**—remark-prec-pass. • **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	When **GreenActionType** is **1**, send the packet. When **GreenActionType** is **2**, remark DSCP value of the packet and send it. When **GreenActionType** is **3**, remark IP precedence of the packet and send it. When **GreenActionType** is **4**, remark EXP of the MPLS packet and send it. When **GreenActionType** is **5**, remark 802.1p priority value of the packet and send it. When **GreenActionType** is **6**, remark CLP bit of the ATM packet and send it. When **GreenActionType** is **7**, remark DE bit of the FR packet and send it. When **GreenActionType** is **8**, remark local precedence of the packet and send it. When **GreenActionType** is **10**, drop the packet. When **GreenActionType** is **19**, continue to process the packet.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When **GreenActionType** is **20**, remark service class value of the packet and send it.
GreenActionValue	Green Action Value	N/A	Unsigned integer.	When **GreenActionType** is **1, 10** or 19, **GreenActionValue** is invisible. When **GreenActionType** is 6 or 7, **GreenActionValue** is 0~1. When **GreenActionType** is **2**, **GreenActionValue** is 0~63. When **GreenActionType** is **3**, **4**, **5**, **8**, **20**, **GreenActionValue** is 0~7.
YellowAction	Specify behavior for yellow packets	Data structure	Members include: • **YellowActionType**. • **YellowActionValue**.	
YellowActionType	Yellow Action Type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass. • **3**—remark-prec-pass. • **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	When **YellowActionType** is **1**, send the packet. When **YellowActionType** is **2**, remark DSCP value of the packet and send it. When **YellowActionType** is **3**, remark IP precedence of the packet and send it. When **YellowActionType** is **4**, remark EXP of the MPLS packet and send it. When **YellowActionType** is **5**, remark 802.1p priority value of the packet and send it. When **YellowActionType** is **6**, remark CLP bit of the ATM packet and send it. When **YellowActionType** is **7**, remark DE bit of the FR packet and send it. When **YellowActionType** is **8**, remark local precedence of the packet and send it. When **YellowActionType** is **10**, drop the packet. When **YellowActionType** is **19**, continue to process the packet. When **YellowActionType**

Column name	Column description	Column type	Data type and restrictions	Remarks
				is **20**, remark service class value of the packet and send it.
YellowActionValue	Yellow Action Value	N/A	Unsigned integer.	When **YellowActionType** is **1, 10** or 19, **YellowActionValue** is invisible. When **YellowActionType** is 6 or 7, **YellowActionValue** is 0~1. When **YellowActionType** is **2**, **YellowActionValue** is 0~63. When **YellowActionType** is **3**, **4**, **5**, **8**, **20**, **YellowActionValue** is 0~7.
RedAction	Specify behavior for red packets	Data structure	Members include: • **RedActionType**. • **RedActionValue**.	
RedActionType	Red Action Type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass. • **3**—remark-prec-pass. • **4**—remark-mpls-exp-pass. • **5**—remark-dot1p-pass. • **6**—remark-atm-clp-pass. • **7**—remark-frde-pass. • **8**—remark-local-prec-pass. • **10**—discard. • **19**—continue. • **20**—remark-service-class-pass.	When **RedActionType** is **1**, send the packet. When **RedActionType** is **2**, remark DSCP value of the packet and send it. When **RedActionType** is **3**, remark IP precedence of the packet and send it. When **RedActionType** is **4**, remark EXP of the MPLS packet and send it. When **RedActionType** is **5**, remark 802.1p priority value of the packet and send it. When **RedActionType** is **6**, remark CLP bit of the ATM packet and send it. When **RedActionType** is **7**, remark DE bit of the FR packet and send it. When **RedActionType** is **8**, remark local precedence of the packet and send it. When **RedActionType** is **10**, drop the packet. When **RedActionType** is **19**, continue to process the packet. When **RedActionType** is **20**, remark service class value of the packet and

Column name	Column description	Column type	Data type and restrictions	Remarks
				send it.
RedActionValue	Red Action Value	N/A	Unsigned integer.	When **RedActionType** is **1, 10 or 19**, **RedActionValue** is invisible. When **RedActionType** is 6 or 7, **RedActionValue** is 0~1. When **RedActionType** is **2**, **RedActionValue** is 0~63. When **RedActionType** is **3**, **4**, **5**, **8**, **20**, **RedActionValue** is 0~7.
AggregativeName	Aggregate CAR action name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	N/A
HierarchicalName	Hierarchical CAR action name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	N/A
Mode	Match operator	N/A	Enumeration: • **1**—And. • **2**—Or.	N/A

MQC/GTS

This table contains information about GTS actions.

XML structure

```
<MQC>
  <GTS>
    <Action>
      <BehaviorName></BehaviorName>
      <BandwidthUnit></BandwidthUnit>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <QueueLength></QueueLength>
    </Action>
  </GTS>
</MQC>
```

Table description

Item	Description

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
BandwidthUnit	Bandwidth unit	N/A	Enumeration: • **2**—kbps. • **3**—percent.	N/A
CIR	Committed information rate	N/A	Unsigned integer.	N/A
CBS	Committed burst size	N/A	Unsigned integer.	N/A
EBS	Excess burst size	N/A	Unsigned integer.	N/A
PIR	Peak information rate	N/A	Unsigned integer.	N/A
QueueLength	Queue length	N/A	Unsigned integer.	N/A

MQC/ReservedBandwidth

This table contains information about the maximum reserved bandwidth as a percentage of available bandwidth.

XML structure

```
<MQC>
  <ReservedBandwidth>
    <Interface>
      <IfIndex></IfIndex>
      <Pct></Pct>
      <IfName></IfName>
    </Interface>
  </ReservedBandwidth>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ReservedBandwidth
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Pct	Specify the percentage of available bandwidth to be reserved	N/A	Unsigned integer	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/GlobalPolicy

This table contains information about global QoS policies.

XML structure

```
<MQC>
  <GlobalPolicy>
    <Application>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
    </Application>
  </GlobalPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	GlobalPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Failed. • **3**—Succeeded partly.	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is **3**.

MQC/VlanPolicy

This table contains information about QoS policies applied to VLANs.

XML structure

```
<MQC>
  <VlanPolicy>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>

Item	Description
Feature name	MQC
Table name	GlobalPolicyEnhanceCBMap
Table type	Multi-instance table
Row name	Global
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
ClassName	Classifier name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Behavior name	N/A	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Mode of the class-behavior association	N/A	Enumeration: • **0**—None. • 2—Qppb. • 16—Dcbx.	When the Mode column is 0, there is no restriction on the classifier-behavior association. When the Mode column is 2, the classifier-behavior association applies only to QPPB. When the Mode column is 16, the classifier-behavior association applies only to the Data Center Bridging Exchange Protocol (DCBX).
Status	Class-Behavior association application status	N/A	Enumeration: • 1—Succeeded. • 2—Failed.	N/A

MQC/Account

This table contains information about accounting action.

XML structure

```
<MQC>
  <Account>
    <Action>
      <BehaviorName></BehaviorName>
      <Byte></Byte>
      <Packet></Packet>
    </Action>
  </Account>
</MQC>
```

MQC/Telemetry

This table contains information about inband telemetry.

XML structure

```
<MQC>
  <Telemetry>
    <DeviceID></DeviceID>
    <TSformat></TSformat>
    <Collector>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VLANID></VLANID>
    </Collector>
  </Telemetry>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Telemetry
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Device ID	N/A	• String,dotted decimal notation • Unsigned integer	The column supports configuring an IP address or numerical value. The numerical value range is customized by product.

				Example: 10.153.93.60.
TSformat	Timestamp format	N/A	Enumeration: • **0**—md. • **1**—ts.	N/A
Collector	Telemetry collector	N/A	Members include: • SrcIP • DstIP • SrcPort • DstPort • VLANID	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete the telemetry collector. You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the telemetry collector, or when you merge or create the telemetry collector that does not exist.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DstIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

MQC/TelemetryRoles

This table contains information about inband telemetry roles.

XML structure

```
<MQC>
  <TelemetryRoles>
    <TelemetryRole>
      <IfIndex></IfIndex>
      <Role></Role>
      <IfName></IfName>
    </TelemetryRole>
  </TelemetryRoles>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryRoles
Table type	Multi-instance table
Row name	TelemetryRole
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Role	Telemetry role	N/A	Enumeration: • **1**—Ingress. • **2**—Transit. • **3**—Egress	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/TelemetryLoopbacks

This table contains information about inband telemetry loopback interfaces.

XML structure

```
<MQC>
  <TelemetryLoopbacks>
    <TelemetryLoopback>
      <IfIndex></IfIndex>
      <Loopback></Loopback>
      <IfName></IfName>
    </TelemetryLoopback>
  </TelemetryLoopbacks>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryLoopbacks
Table type	Multi-instance table
Row name	TelemetryLoopback
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	• Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Loopback	Telemetry loopback	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/TelemetryGlobalEnable

This table contains information about inband telemetry status.

XML structure

```
<MQC>
  <TelemetryGlobalEnable>
    <Enable></Enable>
  </TelemetryGlobalEnable>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalEnable

Row name	TelemetryAction
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IFAId	IFA action ID	Index	Unsigned integer. Value range: 1 to 32.	N/A
Match	Telemetry match	N/A	Members include: • AclType • Acl • Loopback	N/A
AclType	ACL type	N/A	Enumeration: • **1**—IPv4Acl. • **2**—IPv6Acl. • **3**—MACAcl. • **4**—UserAcl.	N/A
Acl	ACL name or ACL number	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range based on AclType.	N/A
Loopback	Telemetry loopback	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Telemetry action	N/A	Members include: • Md • Mirror • SamplerName • Drop	N/A
Md	Add metadata	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Mirror	Mirror packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	N/A
Drop	Drop original packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Status	Action application status	N/A	Enumeration: • **0**—Inactive. • **1**—Successful. • **2**—Failed.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/Capabilities

This table contains capability information about the MQC module.

XML structure

```
<MQC>
  <Capabilities>
    <InterfacePolicy></InterfacePolicy>
    <GlobalPolicy></GlobalPolicy>
    <VlanPolicy></VlanPolicy>
    <RemarkAction></RemarkAction>
    <HardwareAccount></HardwareAccount>
    <MirrorInterface></MirrorInterface>
    <MirrorCPU></MirrorCPU>
    <RedirectInterface></RedirectInterface>
    <RedirectCPU></RedirectCPU>
  </Capabilities>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfacePolicy	Interface policy	N/A	Unsigned integer	If one of the last 5 bits of this object is set to 1, it indicates that the interface policy is supported: • bit 0 stands for inbound. • bit 1 stands for outbound. • bit 2 stands for enhanced. • bit 3 stands for extension. • bit 4 stands for share mode.
GlobalPolicy	Global policy	N/A	Unsigned integer	If one of the last 5 bits of this object is set to 1, it indicates that the global policy is supported: • bit 0 stands for inbound. • bit 1 stands for outbound. • bit 2 stands for enhanced. • bit 3 stands for extension. • bit 4 stands for share mode.
VlanPolicy	VLAN policy	N/A	Unsigned integer	If one of the last 5 bits of this object is set to 1, it indicates that the VLAN policy is supported: • bit 0 stands for inbound. • bit 1 stands for outbound. • bit 2 stands for enhanced. • bit 3 stands for extension. • bit 4 stands for share mode.
RemarkAction	Remark action	N/A	Unsigned integer	If one of the last 18 bits of this object is set to 1, it indicates that the remark action is supported: • bit 0 stands for DSCP. • bit 1 stands for IP precedence. • bit 2 stands for MPLS-EXP. • bit 3 stands for dot1p. • bit 4 stands for local QoS ID. • bit 5 stands for local precedence. • bit 6 stands for drop

Column name	Column description	Column type	Data type and restrictions	Remarks
				precedence. • bit 7 stands for customer VLAN ID. • bit 8 stands for service VLAN ID. • bit 9 stands for customer dot1p trust. • bit 10 stands for imposition-mpls-exp. • bit 11 stands for FC. • bit 12 stands for atm-clp. • bit 13 stands for fr-de. • bit 14 stands for second-mpls-exp. • bit 15 stands for account level. • bit 16 stands for service class. • bit 17 stands for tunnel dscp.
HardwareAccount	Hardware accounting	N/A	Unsigned integer	0 indicates that the accounting action is supported. 1 indicates that accounting by the default method is supported. 2 indicates that accounting by one method of packet and byte is supported. 3 indicates that accounting by neither method or one of packet and byte is supported. 4 indicates that accounting by neither method or one or two of packet and byte is supported.
MirrorInterface	Mirror traffic to interface	N/A	Unsigned integer	If one of the last 23 bits of this object is set to 1, it indicates that mirroring traffic to an interface of the specified type is supported: • bit 0 stands for l2ethernet. • bit 1 stands for l2ge. • bit 2 stands for l2xge. • bit 3 stands for l2fge. • bit 4 stands for l2hge. • bit 5 stands for l3ethernet. • bit 6 stands for l3ge. • bit 7 stands for l3xge. • bit 8 stands for l3fge. • bit 9 stands for l3hge. • bit 10 stands for tunnel. • bit 11 stands for ragg. • bit 12 stands for bagg. • bit 13 stands for l2tge. • bit 14 stands for l3tge. • bit 15 stands for blade. • bit 16 stands for blagg.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• bit 17 stands for olt. • bit 18 stands for l2wge. • bit 19 stands for l3wge. • bit 20 stands for l2sge. • bit 21 stands for l3sge. • bit 22 stands for loopback.
MirrorCPU	Mirror traffic to CPU	N/A	Unsigned integer: • **0**—Not supported. • **1**—Supported.	N/A
RedirectInterface	Redirect traffic to interface	N/A	Unsigned integer	If one of the last 23 bits of this object is set to 1, it indicates that redirecting traffic to an interface of the specified type is supported, • bit 0 stands for l2ethernet. • bit 1 stands for l2ge. • bit 2 stands for l2xge. • bit 3 stands for l2fge. • bit 4 stands for l2hge. • bit 5 stands for l3ethernet. • bit 6 stands for l3ge. • bit 7 stands for l3xge. • bit 8 stands for l3fge. • bit 9 stands for l3hge. • bit 10 stands for tunnel. • bit 11 stands for ragg. • bit 12 stands for bagg. • bit 13 stands for l2tge. • bit 14 stands for l3tge. • bit 15 stands for blade. • bit 16 stands for blagg. • bit 17 stands for olt. • bit 18 stands for l2wge. • bit 19 stands for l3wge. • bit 20 stands for l2sge. • bit 21 stands for l3sge. • bit 22 stands for loopback.
RedirectCPU	Redirect traffic to CPU	N/A	Unsigned integer: • **0**—Not supported. • **1**—Supported.	N/A

MQC/OverheadLayer

This table contains information about processing QoS in which overhead layer type of packet considered.

XML structure

```
<MQC>
  <OverheadLayer>
    <Layer></Layer>
  </OverheadLayer>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	OverheadLayer
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Layer	Type of overhead layer	N/A	Enumeration: • **1**—Link. • **2**—Physics.	N/A

MQC/SysTruncation

This table contains information about global truncation.

XML structure

```
<MQC>
  <SysTruncation>
    <TruncationLen></TruncationLen>
  </SysTruncation>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	SysTruncation

Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TruncationLen	Truncation length.	column	Unsigned integer.	The value depends on device.

MQC/SysTruncationCapa

This table contains information about global truncation capability.

XML structure

```
<MQC>
  <SysTruncationCapa>
    <Min></Min>
    <Max></Max>
  </SysTruncationCapa>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	SysTruncationCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Min	Min truncation length.	column	Unsigned integer.	The value depends on device.
Max	Max truncation length.	column	Unsigned integer.	The value depends on device.

MQC/MonitorGroup

This table contains information about monitor group.

XML structure

```
<MQC>
  <MonitorGroup>
    <Group>
      <GroupID></GroupID>
      <SamplerName></SamplerName>
    </Group>
  </MonitorGroup>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MonitorGroup
Table type	Multi -instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	Support for this column depends on the device model.

MQC/MonitorGroupCapa

This table contains information about monitor group capability.

XML structure

```
<MQC>
  <MonitorGroupCapa>
    <MaxGroupID></MaxGroupID>
  </MonitorGroupCapa>
```

```
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MonitorGroupCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupID	Max monitor group id.	N/A	Unsigned integer.	The value depends on device.

MQC/MonitorPort

This table contains information about monitor groups applied to interfaces.

XML structure

```
<MQC>
  <MonitorPort>
    <MonitorPort>
      <GroupID></GroupID>
      <IfIndex></IfIndex>
      <IP>
        <DestIP></DestIP>
        <SrcIP></SrcIP>
        <DSCP></DSCP>
        <VLAN></VLAN>
        <VRF></VRF>
        <ErspanVer></ErspanVer>
      </IP>
      <Mac></Mac>
      <IfName></IfName>
    </MonitorPort>
  </MonitorPort>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MonitorPort
Table type	Multi -instance table
Row name	MonitorPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.
IfIndex	Interface index.	Index	Unsigned integer.	N/A
IP	Specify IP information for mirroring traffic to an interface in GRE format	Data structure	Members include: • DestIP • SrcIP • DSCP • VLAN • VRF	DestIP and SrcIP must both be specified. DSCP, VLAN, and VRF can be optionally specified when DestIP and SrcIP are configured.
DestIP	Destination IP address or IPv6 address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.54.
SrcIP	Source IP address or IPv6 address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
ErspanVer	ERSPAN version	N/A	Enumeration: **3**—ERSPAN V3.	N/A
Mac	Destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/MPortDynamic

This table contains information about dynamic monitoring ports, which are found by IP address.

XML structure

```
<MQC>
  <MPortDynamic>
    <Port>
      <GroupID></GroupID>
      <DestIP></DestIP>
      <SrcIP></SrcIP>
      <DSCP></DSCP>
      <VLAN></VLAN>
      <VRF></VRF>
      <Mac></Mac>
      <ErspanVer></ErspanVer>
    </Port>
  </MPortDynamic>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	MPortDynamic
Table type	Multi-instance table
Row name	Port
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitoring group ID	Index	Unsigned integer.	The value depends on device.
DestIP	Destination IP address or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string,	Example: 10.153.93.54.

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated. Length: 1 to 46	
SrcIP	Source IP address or IPv6 address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ErspanVer	ERSPAN version	N/A	Enumeration: **3**—ERSPAN V3.	N/A

MQC/Strip

This table contains information about strip.

XML structure

```
<MQC>
  <Strip>
    <Strip>
      <BehaviorName></BehaviorName>
      <Type></Type>
      <OffSetValue></OffSetValue>
      <HeadLength></HeadLength>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
      <EthTypeID></EthTypeID>
    </Strip>
  </Strip>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Strip
Table type	Multi -instance table
Row name	Strip
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Type	Strip type.	column	Enumeration: • **0**—strip header. • **1**—top-most-vlan. • **2**—position l2. • **3**—position l3. • **4**—position l4. • **5**—vxlan. • **6**—nvgre. • 7—gre.	Required.
OffSetValue	Strip offset value.	column	Unsigned integer.	The value depends on device.
HeadLength	Length of a GRE header	column	Unsigned integer. Value range: 4 to 16.	The value depends on user configuration. The value of this column is valid if the type is gre.
DstMACAddr	Destination MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
SrcMACAddr	Source MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
VlanID	VLAN tag ID	column	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if the type is gre.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1p	802.1p CoS	column	Unsigned integer. Value range: 0 to 7.	The value of this column is valid if the type is gre.
EthTypeID	Ethernet type ID	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	The value of this column is valid if the type is gre.

MQC/StripCapa

This table contains information about strip capability.

XML structure

```
<MQC>
  <StripCapa>
    <Min></Min>
    <Max></Max>
  </StripCapa>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	StripCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Min	Min strip offsetvalue.	column	Unsigned integer.	The value depends on device.
Max	Max strip offset value.	column	Unsigned integer.	The value depends on device.

MQC/Nest

This table contains information about nest.

XML structure

```
<MQC>
  <Nest>
    <Nest>
      <BehaviorName></BehaviorName>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
    </Nest>
  </Nest>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	Nest
Table type	Multi -instance table
Row name	Nest
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
VlanID	Vlan id.	column	Unsigned integer. Value range: 1 to 4094.	N/A
Dot1p	802.1p COS.	column	Unsigned integer. Value range: 0 to 7.	N/A

MQC/BehaviorTruncation

This table contains information about truncation of behavior.

XML structure

```
<MQC>
```

```
  <BehaviorTruncation>
    <Truncation>
      <BehaviorName></BehaviorName>
      <Truncation></Truncation>
    </Truncation>
  </BehaviorTruncation>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	BehaviorTruncation
Table type	Multi -instance table
Row name	Truncation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Truncation	Whether to truncation.	column	Boolean • true—Truncation. • false—Not truncation.	N/A

MQC/TimeStamp

This table contains information about time stamp.

XML structure

```
<MQC>
  <TimeStamp>
    <TimeStamp>
      <BehaviorName></BehaviorName>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <EthType></EthType>
    </TimeStamp>
  </TimeStamp>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TimeStamp
Table type	Multi -instance table
Row name	TimeStamp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
DstMACAddr	Destination MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	DstMACAddr, SrcMACAddr and EthType must be add together.
SrcMACAddr	Source MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	N/A
EthType	Ethtype id of timestamp.	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF..	N/A

MQC/VSIPolicy

This table contains information about QoS policies applied to VSIs.

XML structure

```
<MQC>
  <VSIPolicy>
    <Application>
      <VSI></VSI>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
    </Application>
  </VSIPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	VSIPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of a VSI	Index	String. Length: 1 to 31 characters.	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Failed. • **3**—Succeeded partly.	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is **3**.

MQC/VSIPolicyCBMap

This table contains information about class-behavior associations running information applied to VSIs.

XML structure

```
<MQC>
  <VSIPolicyCBMap>
    <VSI>
      <VSI></VSI>
      <Direction></Direction>
      <ClassName></ClassName>
      <BehaviorName></BehaviorName>
      <Mode></Mode>
      <Status></Status>
      <MatchedPackets></MatchedPackets>
      <MatchedBytes></MatchedBytes>
```

```
    </VSI>
  </VSIPolicyCBMap>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	VSIPolicyCBMap
Table type	Multi-instance table
Row name	VSI
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of a VSI	Index	String. Length: 1 to 31 characters.	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
ClassName	Traffic class name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Traffic behavior name	N/A	String. Length: 1 to 31 characters.	N/A
Mode	Mode of the class-behavior association	N/A	Enumeration: • **0**—None. • **2**—Qppb. • **16**—Dcbx.	When the **Mode** column is **0**, there is no restriction on the classifier-behavior association. When the **Mode** column is **2**, the classifier-behavior association applies only to QPPB. When the **Mode** column is **16**, the classifier-behavior association applies only to the Data Center Bridging Exchange Protocol (DCBX).

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Failed.	N/A
MatchedPackets	Matched packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	The soft switch device does not support.
MatchedBytes	Matched bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	The soft switch device does not support.

MQC/AccountInterfacePolicy

This table contains information about QoS accounting policies applied to interfaces.

XML structure

```
<MQC>
  <AccountInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
      <IfName></IfName>
    </Application>
  </AccountInterfacePolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	AccountInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: • **1**—extension. • **2**—inner-match.	When the **Direction** column is **0**, configure the Mode.
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/RemarkInterfacePolicy

This table contains information about QoS remarking policies applied to interfaces.

XML structure

```
<MQC>
  <RemarkInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
      <IfName></IfName>
    </Application>
  </RemarkInterfacePolicy>
</MQC>
```

Table description

Item	Description

Status	Class-Behavior association application status	N/A	Enumeration: • 1—Succeeded. • 2—Failed.	N/A
MatchedPackets	Matched Packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchedBytes	Matched Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/IfTapPolicyCBMap

This table contains information about class-behavior associations running information applied to interfaces.

XML structure

```
<MQC>
  <IfTapPolicyCBMap>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ClassName></ClassName>
      <BehaviorName></BehaviorName>
      <Mode></Mode>
      <Status></Status>
```

```
      <MatchedPackets></MatchedPackets>
      <MatchedBytes></MatchedBytes>
      <IfName></IfName>
    </Interface>
  </IfTapPolicyCBMap>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	IfTapPolicyCBMap
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
ClassName	Classifier name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Behavior name	N/A	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Mode of the class-behavior association	N/A	Enumeration: • **0**—None. • 2—Qppb. • 16—Dcbx.	When the Mode column is 0, there is no restriction on the classifier-behavior association. When the Mode column is 2, the classifier-behavior association applies only to QPPB. When the Mode column is 16, the classifier-behavior association applies only to the Data Center Bridging Exchange Protocol (DCBX).
Status	Class-Behavior association application status	N/A	Enumeration: • 1—Succeeded. • 2—Failed.	N/A
MatchedPackets	Matched Packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchedBytes	Matched Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

MQC/TrafficRate

This table contains information about traffic rate threshold.

XML structure

```
<MQC>
  <TrafficRate>
    <Action>
      <BehaviorName></BehaviorName>
      <LowThresholdpps></LowThresholdpps>
      <HighThresholdpps></HighThresholdpps>
    </Action>
  </TrafficRate>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	TrafficRate
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
LowThresholdpps	The value of low threshold	column	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A
HighThresholdpps	The value of high threshold	column	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A

MQC/ACCategoryPolicy

This table contains information about QoS policies of the specified types applied to AC interfaces.

XML structure

```
<MQC>
  <ACCategoryPolicy>
    <AC>
      <IfName></IfName>
      <SrvID></SrvID>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
      <Status></Status>
      <ShareMode></ShareMode>
    </AC>
  </ACCategoryPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	ACCategoryPolicy
Table type	Multi-instance table
Row name	AC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters. Example: GigabitEthernet2/0/2	N/A
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
PolicyType	Policy type	Index	Enumeration: • **0**—Common policy. • **1**—Remarking policy. • **2**—Accounting policy. • **3**—Mirroring policy. • **5**—IPv6-matching policy.	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer.	N/A
Status	Application status	N/A	Enumeration: • **1**—Succeeded. • **2**—Failed. • **3**—Succeeded partly.	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is **3**.
ShareMode	Sharing Mode	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

MQC/ACCategoryPolicyCar

This table contains information about car associations running information for QoS category policies applied to AC interfaces.

XML structure

```
<MQC>
  <ACCategoryPolicyCar>
    <AC>
      <IfName></IfName>
      <SrvID></SrvID>
      <Direction></Direction>
