ACL

ACL/Groups

This table contains ACL information.

XML structure

```
<ACL>
  <Groups>
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <CountClear></CountClear>
    </Group>
  </Groups>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type.	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—MAC. • **4**—User-defined.	N/A
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 5999.	The value range depends on the GroupType column. • 2000 to 5999 if GroupType is **1**. • 2000 to 3999 if GroupType is **2**.
CountClear	Resets counters.	N/A	This column must be empty.	N/A

ACL/NamedGroups

This table contains named ACL information.

XML structure

```
<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>
      <GroupIndex></GroupIndex>
      <CountClear></CountClear>
    </Group>
  </NamedGroups>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type.	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—MAC. • **4**—User-defined.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. The value range depends on the GroupType column. • 2000 to 3999 if GroupType is **1**. • 2000 to 3999 if GroupType is **2**. • 4000 to 4999 if GroupType is **3**. • 5000 to 5999 if GroupType is **4**.
CountClear	Resets counters.	N/A	This column must be empty.	N/A

ACL/PfilterApply

This table contains packet filter application information.

XML structure

```
<ACL>
  <PfilterApply>
    <Pfilter>
      <AppObjType></AppObjType>
      <AppObjIndex></AppObjIndex>
      <AppDirection></AppDirection>
      <AppAclType></AppAclType>
      <AppAclGroup></AppAclGroup>
      <CountClear></CountClear>
    </Pfilter>
  </PfilterApply>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppObjType	Type of the application object.	Index	Enumeration: • **1**—Interface. • **2**—VLAN. • **3**—Global.	N/A
AppObjIndex	Index of the application object.	Index	Unsigned integer. Value range: 0 to 4294967295.	The value depends on the AppObjType column. • Interface index if AppObjType is **1**. • VLAN ID in the range of 1 to 4094 if AppObjType is **2**. • The value is 0 if AppObjType is **3**.
AppDirection	Application direction.	Index	Enumeration: • **1**—Inbound. • **2**—Outbound.	N/A
AppAclType	ACL type.	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—Ethernet frame header ACL. • 4—User-defined ACL. • **5**—ACL with the default action.	• Type 5 is a special ACL.
AppAclGroup	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits valued 0 or in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. The value range depends on the AppAclType column. • 2000 to 3999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**. • 4000 to 4999 if AppAclType is **3**. • 5000 to 5999 if AppAclType is **4**. • 0 if AppAclType is **5**.
CountClear	Resets counters.	N/A	This column must be empty.	N/A

ACL/ClearZonePairPfilter

This table contains packet filter clearance information for zone-pair.

XML structure

```
<ACL>
  <ClearZonePairPfilter>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
      <Clear></Clear>
    </Pfilter>
  </ClearZonePairPfilter>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ClearZonePairPfilter
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
DestZone	Name of the destination zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
AclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—Ethernet frame header ACL.	Type 3 is not supported in the current software version, and is reserved for future support.
AclGroup	ACL name or number.	Index	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number**: An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be all. The value range depends on the AppAclType column. • 2000 to 5999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**.

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Resets counters.	N/A	This column must be empty.	N/A

ACL

ACL/Groups

This table contains ACL information.

XML structure

```
<ACL>
  <Groups>
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
    </Group>
  </Groups>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—MAC. • **4**—User-defined.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks

GroupID	ACL number	Index	Unsigned integer.
			Value range: 2000 to 5999.
				The value range depends on the GroupType column.
				• 2000 to 5999 if GroupType is **1**.
				  ○ IPv4 basic ACL: 2000 to 2999.
				  ○ IPv4 advanced ACL: 3000 to 3999.
				  ○ Ethernet frame header ACL: 4000 to 4999.
				  ○ User-defined ACL: 5000 to 5999.
				• 2000 to 3999 if GroupType is **2**.
				  ○ IPv6 basic ACL: 2000 to 2999.
				  ○ IPv6 advanced ACL: 3000 to 3999.

MatchOrder	Order in which the rules are sorted	N/A	Enumeration: • **1**—Config (default). In this order, rules are sorted in ascending order of rule ID. • **2**—Auto. In this order, rules are sorted in depth-first order.	The match order can only be modified for ACLs that do not contain any rules. The match order can only be **config** for user-defined ACLs.
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20. Default: 5.	The rule numbering step for user-defined ACLs can only be 5.
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	This column cannot be modified.
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.

ACL/NamedGroups

This table contains named ACL information.

XML structure

```
<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>
```

```
      <GroupCategory></GroupCategory>
      <GroupIndex></GroupIndex>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
    </Group>
  </NamedGroups>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—MAC. • **4**—User-defined.	N/A

GroupCategory	ACL Category	Index	Enumeration:
			• **0**—invalid.
			• **1**—basic.
			• **2**—advanced.
				The value range depends on the GroupType column.
				• 1 to 2 if GroupType is **1 or 2**.
				  ○ basic ACL: 1.
				  ○ advanced ACL: 2.
				• 0 if GroupType is 3 or 4.

GroupIndex	ACL name or number	Index	String.
			Length: 1 to 63 characters.
			• **ACL name:** Case-insensitive string of 1 to 63 characters.
			• **ACL number:** String of digits in the range of 2000 to 5999.
				An ACL name must start with an English letter and cannot be **all**.
				The GroupIndex cannot be specified as an ACL name in GET operations for an ACL created by specifying both a number and a name.
				The value range depends on the GroupType column.
				• 2000 to 3999 if GroupType is **1**.
				  ○ IPv4 basic ACL: 2000 to 2999.
				  ○ IPv4 advanced ACL: 3000 to 3999.

Column name	Column description	Column type	Data type and restrictions	Remarks

				• 2000 to 3999 if GroupType is **2**.
				  ○ IPv6 basic ACL: 2000 to 2999.
				  ○ IPv6 advanced ACL: 3000 to 3999.
				• 4000 to 4999 if GroupType is **3**.
				  ○ Ethernet frame header ACL: 4000 to 4999.
				• 5000 to 5999 if GroupType is **4**.
				User-defined ACL: 5000 to 5999.

MatchOrder	Order in which the rules are sorted	N/A	Enumeration: • **1**—Config (default). In this order, rules are sorted in ascending order of rule ID. • **2**—Auto. In this order, rules are sorted in depth-first order.	The match order can only be modified for ACLs that do not contain any rules. The match order can only be **config** for user-defined ACLs.
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20. Default: 5.	The rule numbering step for user-defined ACLs can only be 5.
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	This column cannot be modified.
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.

ACL/Intervals

This table contains ACL interval information.

XML structure

```
<ACL>
  <Intervals>
    <Interval>
      <IntervalType></IntervalType>
      <IntervalValue></IntervalValue>
    </Interval>
  </Intervals>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Intervals
Table type	Multi-instance table
Row name	Interval
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IntervalType	The type of the interval	Index	Enumeration: • **1**—logging. • **2**—trap.	The type of the interval specified for generating packet filtering logs or traps. You cannot create, merge, or replace an interval when there is an effective interval of a different type.
IntervalValue	The value of the interval	N/A	Unsigned integer. Value range: 5 to 1440.	It must be a multiple of 5.

ACL/IPv4BasicRules

This table contains information about IPv4 basic ACL rules.

XML structure

```
<ACL>
  <IPv4BasicRules>
    <Rule>
      <GroupID></GroupID>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>
        <SrcIPv4Wildcard></SrcIPv4Wildcard>
      </SrcIPv4>
      <SrcObjectGroup></SrcObjectGroup>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
```

```
      <VRF></VRF>
      <Counting></Counting>
      <Logging></Logging>
      <Comment></Comment>
    </Rule>
  </IPv4BasicRules>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	IPv4BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	This column must be configured together with the **SrcIPv4** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/IPv4NamedBasicRules

This table contains information about namd IPv4 basic ACL rules.

XML structure

```
<ACL>
  <IPv4NamedBasicRules>
    <Rule>
      <GroupIndex></GroupIndex>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>
        <SrcIPv4Wildcard></SrcIPv4Wildcard>
      </SrcIPv4>
      <SrcObjectGroup></SrcObjectGroup>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
      <VRF></VRF>
      <Counting></Counting>
      <Logging></Logging>
      <Comment></Comment>
    </Rule>
  </IPv4NamedBasicRules>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedBasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	This column must be configured together with the **SrcIPv4** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/IPv6BasicRules

This table contains information about IPv6 basic ACL rules.

XML structure

```
<ACL>
  <IPv6BasicRules>
    <Rule>
      <GroupID></GroupID>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv6>
        <SrcIPv6Addr></SrcIPv6Addr>
        <SrcIPv6Prefix></SrcIPv6Prefix>
      </SrcIPv6>
      <SrcObjectGroup></SrcObjectGroup>
      <RoutingTypeAny></RoutingTypeAny>
      <RoutingTypeValue></RoutingTypeValue>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
      <VRF></VRF>
      <Counting></Counting>
      <Logging></Logging>
      <Comment></Comment>
    </Rule>
  </IPv6BasicRules>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	IPv6BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	This column must be configured together with the **SrcIPv6** column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header (default).	This column and the **RoutingTypeValue** column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the **RoutingTypeAny** column cannot both be configured.
Fragment	Whether a rule matches only	N/A	Boolean: • **true**—Matches only non-first	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	non-first fragments.		fragments. • **false**—Matches both fragments and non-fragments (default).	
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/IPv6NamedBasicRules

This table contains information about named IPv6 basic ACL rules.

```

Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedBasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	This column must be configured together with the **SrcIPv6** column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header (default).	This column and the **RoutingTypeValue** column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the **RoutingTypeAny** column cannot both be configured.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			rule matches (default).	
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/IPv4AdvanceRules

This table contains information about IPv4 advanced ACL rules.

XML structure

Table description

Item	Description
Feature name	ACL
Table name	IPv4AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type or an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default).	The VXLAN encapsulation supports this column. This column must be

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Matches the specified source IP address.	configured together with the **SrcIPv4** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses (default). • **false**—Matches the specified destination IP address.	The VXLAN encapsulation supports this column. This column must be configured together with the **DstIPv4** column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	This column must be configured together with the **DstAny**

Column name	Column description	Column type	Data type and restrictions	Remarks
				column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the DstAny column cannot both be configured.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot both be configured.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: • StartDSCP • EndDSCP	DSCP and DSCPRange cannot both be configured.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The DSCP priority and the IP precedence cannot both be configured.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The DSCP priority and the ToS precedence cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols and the VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination port.		Value range: 0 to 65535.	
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—URG flag is set.	
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ICMP	ICMP messages.	N/A	Members include: • ICMPType. • ICMPCode.	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1**—VXLAN encapsulation. • **2**—GRE encapsulation.	You cannot specify an encapsulation type when you remove or delete a rule. If you specify an

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—IPINIP encapsulation.	encapsulation type you must specify an inner protocol when you replace a rule, or when you merge or create a rule that does not exist.
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify an inner protocol type when you remove or delete a rule. If you specify an inner protocol type,you must specify an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: • **true**—Matches any inner source IP addresses (default). • **false**—Matches the specified inner source IP address.	This column must be configured together with the **InSrcIPv4** column.
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: • InSrcIPv4Addr. • InSrcIPv4Wildcard.	Only the VXLAN encapsulation supports this column. This column must be configured together with the **InSrcAny** column. The two members must both be specified.
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InSrcIPv4Wildcard	Wildcard mask	N/A	String, dotted decimal	Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
	for the inner source IPv4 address.		notation.	255.255.255.0. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: • **true**—Matches any inner destination IP addresses (default). • **false**—Matches the specified inner destination IP address.	This column must be configured together with the **InDstIPv4** column.
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: • InDstIPv4Addr. • InDstIPv4Wildcard.	Only the VXLAN encapsulation supports this column. This column must be configured together with the **InDstAny** column. The two members must both be specified.
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp.	Only the TCP and UDP inner protocols support this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• InSrcPortValue1. • InSrcPortValue2.	The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
InTcpFlag	Inner TCP flags.	Data structure	Members include: • InACK. • InFIN. • InPSH. • InRST. • InSYN • InURG.	N/A
InACK	ACK flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP inner protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	InECN and InTOS cannot both be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
InPrecedence	Inner IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The inner DSCP priority and the inner IP precedence cannot both be configured.
InTOS	Inner ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The inner DSCP priority and the inner ToS precedence cannot both be configured.
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	This column and the FlowLogging column cannot both be configured.
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **UserGroupAny** column is **false**.
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32	This column is available when the

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	**SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any source user group. • **false**—Matches the specified user source group (default).	N/A
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any destination user group. • **false**—Matches the specified destination user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is **5**, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/IPv4NamedAdvanceRules

This table contains information about named IPv4 advanced ACL rules.

Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535.	If you set this column to 65535, the system automatically assigns a

Column name	Column description	Column type	Data type and restrictions	Remarks
			The value 65535 is an invalid rule ID.	new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type or an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	The VXLAN encapsulation supports this column. This column must be configured together with the **SrcIPv4** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when

Column name	Column description	Column type	Data type and restrictions	Remarks
				the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses (default). • **false**—Matches the specified destination IP address.	The VXLAN encapsulation supports this column. This column must be configured together with the **DstIPv4** column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the DstAny column cannot both be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot both be configured.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: • StartDSCP • EndDSCP	DSCP and DSCPRange cannot both be configured.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The DSCP priority and the IP precedence cannot both be configured.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The DSCP priority and the ToS precedence cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols and the VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **0**—ACK flag is not set. • **1**—ACK flag is set.	
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ICMP	ICMP messages.	N/A	Members include: • ICMPType. • ICMPCode.	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP	N/A	Unsigned integer.	Only the ICMP protocol

Column name	Column description	Column type	Data type and restrictions	Remarks
	messages.		Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1**—VXLAN encapsulation. • **2**—GRE encapsulation. • **3**—IPINIP encapsulation.	You cannot specify an encapsulation type when you remove or delete a rule. If you specify an encapsulation type,you must specify an inner protocol when you replace a rule, or when you merge or create a rule that does not exist.
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify an inner protocol type when you remove or delete a rule. If you specify an inner protocol type,you must specify an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: • **true**—Matches any inner source IP addresses (default). • **false**—Matches the specified inner source IP address.	This column must be configured together with the **InSrcIPv4** column.
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: • InSrcIPv4Addr. • InSrcIPv4Wildcard.	Only the VXLAN encapsulation supports this column. This column must be configured together with the **InSrcAny** column. The two members must both be specified.
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InSrcIPv4Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: • **true**—Matches any inner destination IP addresses (default). • **false**—Matches the specified inner destination IP address.	This column must be configured together with the **InDstIPv4** column.
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: • InDstIPv4Addr. • InDstIPv4Wildcard.	Only the VXLAN encapsulation supports this column. This column must be

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured together with the **InDstAny** column. The two members must both be specified.
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. InSrcPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end

Column name	Column description	Column type	Data type and restrictions	Remarks
				inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.
InTcpFlag	Inner TCP flags.	Data structure	Members include: • InACK. • InFIN. • InPSH. • InRST. • InSYN • InURG.	N/A
InACK	ACK flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
			set. • **1**—PSH flag is set.	
InRST	RST flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP inner protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	InECN and InTOS cannot both be configured.
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
InPrecedence	Inner IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The inner DSCP priority and the inner IP precedence cannot both be configured.
InTOS	Inner ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The inner DSCP priority and the inner ToS precedence cannot both be configured.
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match	N/A	Boolean: • **true**—Logs rule	This column and the FlowLogging column

Column name	Column description	Column type	Data type and restrictions	Remarks
	events.		match events. • **false**—Does not log rule match events (default).	cannot both be configured.
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **UserGroupAny** column is **false**.
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any source user group. • **false**—Matches the specified source user group (default).	N/A
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any destination user group. • **false**—Matches the specified destination user group (default).	N/A
GreValue	Config a gre	N/A	Hexadecimal string.	Only the GRE protocol

Column name	Column description	Column type	Data type and restrictions	Remarks
	value.		Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			range).	
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/IPv6AdvanceRules

This table contains information about IPv6 advanced ACL rules.

Table description

Item	Description
Feature name	ACL

Table name	IPv6AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	The IPv6 VXLAN encapsulation supports this column. This column must be configured together with the **SrcIPv6** column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses (default). • **false**—Matches the specified destination IPv6 address.	The IPv6 VXLAN encapsulation supports this column. This column must be configured together with the **DstIPv6** column.
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when

Column name	Column description	Column type	Data type and restrictions	Remarks
				the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the DstAny column cannot both be configured.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header (default).	This column and the **RoutingTypeValue** column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the **RoutingTypeAny** column cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols and the IPv6 VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ICMP6	ICMPv6 messages.	N/A	Members include: • ICMP6Type. • ICMP6Code.	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: • **true**—Matches any types of Hop-by-Hop Options header. • **false**—Matches the specified type of Hop-by-Hop Options header (default).	This column and the **HopTypeValue** column cannot both be configured.
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the **HopTypeAny** column cannot both be configured.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1—**VXLAN**.** • **4—**VXLAN-IPv6**.**	You cannot specify an encapsulation type when you remove or delete a rule. If you specify an encapsulation type, you must specify an inner protocol when you replace a rule, or when you merge or create a rule that does not exist.
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a	N/A	Boolean:	This column must be

Column name	Column description	Column type	Data type and restrictions	Remarks
	rule matches any inner source IPv6 addresses.		• **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	configured together with the **InSrcIPv6** column.
InSrcIPv6	Inner source IPv6 information.	Data structure	Members include: • InSrcIPv6Addr. • InSrcIPv6Prefix.	This column must be configured together with the **InSrcAny** column. The two members must both be specified.
InSrcIPv6Addr	Inner source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the In **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InSrcIPv6Prefix	Length of the inner source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InDstAny	Whether a rule matches any inner destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses (default). • **false**—Matches the specified destination IPv6 address.	This column must be configured together with the **InDstIPv6** column.
InDstIPv6	Inner destination IPv6 information.	Data structure	Members include: • InDstIPv6Addr. • InDstIPv6Prefix.	This column must be configured together with the **InDstAny** column. The two members must both be specified.
InDstIPv6Addr	Inner destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port	Data	Members include:	Only the TCP and UDP protocols support this

Column name	Column description	Column type	Data type and restrictions	Remarks
	information.	structure	• InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	column. The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
InDstPortOp	Inner Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Inner start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
InTcpFlag	Inner TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InACK	ACK flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the established status of an inner TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the **InTcpFlag** column cannot both be configured.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	This column and the FlowLogging column cannot both be configured.
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **UserGroupAny** column is **false**.
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
DUserGroup	Destination user group	N/A	String, case-insensitive.	This column is available when the

Column name	Column description	Column type	Data type and restrictions	Remarks
	name.		Length: 1 to 32 characters.	**DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/IPv6NamedAdvanceRules

This table contains information about named IPv6 advanced ACL rules.

Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a	N/A	Boolean:	The IPv6 VXLAN

Column name	Column description	Column type	Data type and restrictions	Remarks
	rule matches any source IPv6 addresses.		• **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	encapsulation supports this column. This column must be configured together with the **SrcIPv6** column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the SrcAny column cannot both be configured.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses (default). • **false**—Matches the specified destination IPv6 address.	The IPv6 VXLAN encapsulation supports this column. This column must be configured together with the **DstIPv6** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column and the DstAny column cannot both be configured.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header (default).	This column and the **RoutingTypeValue** column cannot both be configured.
RoutingTypeValue	Routing	N/A	Unsigned integer.	This column and the

Column name	Column description	Column type	Data type and restrictions	Remarks
	header type.		Value range: 0 to 255.	**RoutingTypeAny** column cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols and the IPv6 VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of

Column name	Column description	Column type	Data type and restrictions	Remarks
				this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ICMP6	ICMPv6 messages.	N/A	Members include: • ICMP6Type. • ICMP6Code.	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments (default).	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: • **true**—Matches any types of Hop-by-Hop Options header. • **false**—Matches the specified type of Hop-by-Hop Options header (default).	This column and the **HopTypeValue** column cannot both be configured.
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the **HopTypeAny** column cannot both be configured.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1—**VXLAN**.** • **4—**VXLAN-IPv6**.**	You cannot specify an encapsulation type when you remove or delete a rule. If you specify an encapsulation type you must specify an inner

Column name	Column description	Column type	Data type and restrictions	Remarks
				protocol when you replace a rule, or when you merge or create a rule that does not exist.
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses (default). • **false**—Matches the specified source IPv6 address.	This column must be configured together with the **InSrcIPv6** column.
InSrcIPv6	Inner source IPv6 information.	Data structure	Members include: • InSrcIPv6Addr. • InSrcIPv6Prefix.	This column must be configured together with the **InSrcAny** column. The two members must both be specified.
InSrcIPv6Addr	Inner source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the In **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InSrcIPv6Prefix	Length of the inner source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InDstAny	Whether a rule matches any inner destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses (default). • **false**—Matches the specified destination IPv6 address.	This column must be configured together with the **InDstIPv6** column.
InDstIPv6	Inner destination IPv6 information.	Data structure	Members include: • InDstIPv6Addr. • InDstIPv6Prefix.	This column must be configured together with the **InDstAny** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The two members must both be specified.
InDstIPv6Addr	Inner destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
InDstPortOp	Inner Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Inner start	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination port.		Value range: 0 to 65535.	
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
InTcpFlag	Inner TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
InACK	ACK flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags	N/A	Boolean: • **true**—Matches the	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
	indicating the established status of an inner TCP connection.		flags. • **false**—Ignores the flags.	On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the **InTcpFlag** column cannot both be configured.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events (default).	This column and the FlowLogging column cannot both be configured.
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **UserGroupAny** column is **false**.
UserGroupAny	Whether a rule matches	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	any user group.		• **true**—Matches any user group. • **false**—Matches the specified user group (default).	
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			to). • **5**—range (inclusive range).	
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/MACRules

This table contains information about Ethernet frame header ACL rules.

Table description

Item	Description
Feature name	ACL
Table name	MACRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 4000 to 4999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: • SrcMACAddress. • SrcMACMask.	The VXLAN encapsulation supports this column. The members must both be specified.
SrcMACAddress	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: • DstMACAddress. • DstMACMask.	The VXLAN encapsulation supports this column. The members must both be specified.
DstMACAddress	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Protocol	Link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	The VXLAN encapsulation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The members must both be specified. This column and the **LSAP** column cannot both be configured.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of link layer protocol types are assigned by IANA.
ProtocolType Mask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAP	LSAP.	Data structure	Members include: • LSAPType. • LSAPTypeMask.	The members must both be specified. This column and the **Protocol** column cannot both be configured.
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMa sk	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: • VXLAN encapsulation. • GRE encapsulation. • IPINIP encapsulation.	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcMACAd dr	Information about the inner source MAC address.	Data structure	Members include: • InSrcMACAddress. • InSrcMACMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InSrcMACAd dress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMa sk	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InDstMACAd dr	Information about the inner destination MAC address.	Data structure	Members include: • InDstMACAddress. • InDstMACMask.	Only the VXLAN encapsulation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of inner link layer protocol types are assigned by IANA.
InProtocolTypeMask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/MACNamedRules

This table contains information about Named Ethernet frame header ACL rules.

XML structure

Table description

Item	Description
Feature name	ACL
Table name	MACNamedRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 4000 to 4999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: • SrcMACAddress. • SrcMACMask.	The VXLAN encapsulation supports this column. The members must both be specified.
SrcMACAddress	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC	N/A	Six groups of two hexadecimal digits,	Example: ff-ff-ff-ff-ff-ff.

Column name	Column description	Column type	Data type and restrictions	Remarks
	address.		hyphen-separated.	
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: • DstMACAddress. • DstMACMask.	The VXLAN encapsulation supports this column. The members must both be specified.
DstMACAddress	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Protocol	Link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	The VXLAN encapsulation supports this column. The members must both be specified. This column and the **LSAP** column cannot both be configured.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of link layer protocol types are assigned by IANA.
ProtocolTypeMask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAP	LSAP.	Data structure	Members include: • LSAPType. • LSAPTypeMask.	The members must both be specified. This column and the **Protocol** column cannot both be configured.
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: • VXLAN encapsulation. • GRE encapsulation. • IPINIP encapsulation.	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer	Only the VXLAN encapsulation supports

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 16777215	this column.
InSrcMACAddr	Information about the inner source MAC address.	Data structure	Members include: • InSrcMACAddress. • InSrcMACMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InSrcMACAddress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: • InDstMACAddress. • InDstMACMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of inner link layer protocol types are assigned by IANA.
InProtocolTypeMask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive.	It cannot be the word **all**.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters. The string must start with an English letter.	
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule. When the **MatchOrder** column is **2**, you can modify only the comment for a rule.

ACL/PfilterIgnoreAction

This table contains information about the ignoring packet filter permit action.

XML structure

```
<ACL>
  <PfilterIgnoreAction>
    <IgnoreAction></IgnoreAction>
  </PfilterIgnoreAction>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterIgnoreAction
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreAction	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ignore the packet filter permit action.		• **true**—Ignore the packet filter permit action. • **false**—Not ignore the packet filter permit action (default).	

ACL/PfilterDefAction

This table contains information about the default global packet filter actions.

XML structure

```
<ACL>
  <PfilterDefAction>
    <DefaultAction></DefaultAction>
  </PfilterDefAction>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterDefAction
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
DefaultAction	Default packet filter action	N/A	Enumeration: • **1**—Permit (default). • **2**—Deny.

ACL/PfilterApply

This table contains information about packet filter application.

XML structure

```
<ACL>
  <PfilterApply>
    <Pfilter>
      <AppObjType></AppObjType>
      <AppObjIndex></AppObjIndex>
      <AppDirection></AppDirection>
      <AppAclType></AppAclType>
      <AppAclGroup></AppAclGroup>
      <HardCount></HardCount>
      <InnerEncap></InnerEncap>
      <ShareMode></ShareMode>
      <ShareModeBoth></ShareModeBoth>
    </Pfilter>
  </PfilterApply>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppObjType	Type of the application object.	Index	Enumeration: • **1**—Interface. • **2**—VLAN. • **3**—Global.	Support for the specified type depends on the device model.
AppObjIndex	Index of the application object.	Index	Unsigned integer. Value range: 0 to 4294967295.	The value depends on the AppObjType column. • Interface index if AppObjType is **1**. • VLAN ID in the range of 1 to 4094 if AppObjType is **2**. • The value is 0 if AppObjType is **3**.
AppDirection	Application	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	direction.		• **1**—Inbound. • **2**—Outbound.	
AppAclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—MAC ACL. • 4—User-defined ACL. • **5**—ACL with the default action.	• Type 5 is a special ACL.
AppAclGroup	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits valued 0 or in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. The value range depends on the AppAclType column. • 2000 to 3999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**. • 4000 to 4999 if AppAclType is **3**. • 5000 to 5999 if AppAclType is **4**. • 0 if AppAclType is **5**.
HardCount	Whether to count rule matches in hardware for the ACL.	N/A	Enumeration: • **1**—enable. • **2**—disable.	Support for this function depends on the device model. Global default action and VLAN default action do not support this function.
InnerEncap	Match the inner packet information of encapsulation packets.	N/A	Enumeration: • **0**—None (default). • **1**—VXLAN.	Support for this function depends on the device model. This column cannot be modified.
ShareMode	Whether to apply the ACL in sharing mode.	N/A	Boolean: • **true**—Apply the ACL in sharing mode. • **false**—Do not apply the ACL in sharing mode (default).	Support for this function depends on the device model. This column cannot be modified.
ShareModeBoth	Whether to apply the ACL in sharing mode for both direction.	N/A	Boolean: • **true**—Apply the ACL in sharing mode for both direction. • **false**—Do not apply the ACL in sharing mode for both direction (default).	Support for this function depends on the device model. This column cannot be modified.

ACL/UserRules

This table contains information about user-defined ACL rules.

Table description

Item	Description
Feature name	ACL
Table name	UserRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 5000 to 5999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: • L2RuleString. • L2RuleMask. • L2Offset.	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L2Offset	Offset in bytes after which the	N/A	Unsigned integer. Value range: 0 to the	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	match operation begins.		device-specific upper limit.	
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: • IPv4RuleString. • IPv4RuleMask. • IPv4Offset.	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: • IPv6RuleString. • IPv6RuleMask. • IPv6Offset.	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: • L4RuleString. • L4RuleMask. • L4Offset.	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: • L5RuleString. • L5RuleMask. • L5Offset.	This column is available when the ProtocolType is specified. The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet fortmat.	N/A	Enumeration: • **1**—IFA packet. • **2**—Raw ip packet. • **3**—VXLAN packet. • **4**—GRE-C1R0K1 packet. • **5**—GRE-C0R0K1 packet. • **6**—GRE-K1R1 packet. • **7**—4-byte GRE packet. • **8**—8-byte GRE packet. • **9**—12-byte GRE packet. • **10**—16-byte GRE packet. • **11**—20-byte GRE packet.	This column is available when the ProtocolType is specified.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule.
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule.
DualStackProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.	You cannot specify a protocol type when you remove or delete a rule. The value can only be 6 or 17 when you creat, merge or replace a rule. When the DualStackProtocolType is configured, only the

Column name	Column description	Column type	Data type and restrictions	Remarks
				following fields can be configured: GroupID, RuleID, Action, SrcMicsegGroup, SrcMicsegMaskLength, DstMicsegGroup, DstMicsegMaskLength、SrcPort, DstPort, TimeRange, Counting, VRF, TcpFlag.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	This column is available when the ProtocolType is specified. This column must be configured together with the **SrcIPv4 or SrcIPv6** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**.

Column name	Column description	Column type	Data type and restrictions	Remarks
				It must be empty when the **SrcAny** column is **true**.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses (default). • **false**—Matches the specified destination IP address.	This column is available when the ProtocolType is specified. This column must be configured together with the **DstIPv4 or DstIPv6** column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. DstIPv6Prefix.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. The availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	This column is available when the ProtocolType is specified.
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	Only the IPv4 type supports this column. The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	Only the IPv4 type supports this column. The DSCP priority and the ToS precedence cannot both be specified.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

ACL/UserNamedRules

Table description

Item	Description
Feature name	ACL
Table name	UserNamedRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 5000 to 5999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: • L2RuleString. • L2RuleMask. • L2Offset.	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: • IPv4RuleString. • IPv4RuleMask. • IPv4Offset.	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: • IPv6RuleString. • IPv6RuleMask. • IPv6Offset.	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: • L4RuleString. • L4RuleMask. • L4Offset.	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: • L5RuleString. • L5RuleMask. • L5Offset.	This column is available when the ProtocolType is specified. The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the	The length must be an even number.

Column name	Column description	Column type	Data type and restrictions	Remarks
			device-specific upper limit.	
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet fortmat.	N/A	Enumeration: • **1**—IFA packet. • **2**—Raw ip packet. • **3**—VXLAN packet. • **4**—GRE-C1R0K1 packet. • **5**—GRE-C0R0K1 packet. • **6**—GRE-K1R1 packet. • **7**—4-byte GRE packet. • **8**—8-byte GRE packet. • **9**—12-byte GRE packet. • **10**—16-byte GRE packet. • **11**—20-byte GRE packet.	This column is available when the ProtocolType is specified.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule.
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule.
DualStackProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.	You cannot specify a protocol type when you remove or delete a rule. The value can only be 6 or 17 when you creat, merge or replace a rule. When the DualStackProtocolType is configured, only the following fields can be

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured: GroupID, RuleID, Action, SrcMicsegGroup, SrcMicsegMaskLength, DstMicsegGroup, DstMicsegMaskLength、SrcPort, DstPort, TimeRange, Counting, VRF, TcpFlag.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	This column is available when the ProtocolType is specified. This column must be configured together with the **SrcIPv4 or SrcIPv6** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. SrcIPv6Prefix.	This column must be configured together with the **SrcAny** column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses (default). • **false**—Matches the specified destination IP address.	This column is available when the ProtocolType is specified. This column must be configured together with the **DstIPv4 or DstIPv6** column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4	N/A	String, dotted decimal notation.	Example: 255.255.255.0.

Column name	Column description	Column type	Data type and restrictions	Remarks
	address.			This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. DstIPv6Prefix.	This column must be configured together with the **DstAny** column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—neq (not equal to). • **5**—range (inclusive range).	
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. The availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	This column is available when the ProtocolType is specified.
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	Only the IPv4 type supports this column. The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	Only the IPv4 type supports this column. The DSCP priority and the ToS precedence cannot both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches (default).	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

ACL/ZonePairPfilter

This table contains information about packet filter application for zone-pair.

XML structure

```
<ACL>
  <ZonePairPfilter>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
    </Pfilter>
  </ZonePairPfilter>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ZonePairPfilter
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. Length: 1 to 31 characters.	Cannot contain midline(-).
DestZone	Name of the destination zone.	Index	String, case insensitive. Length: 1 to 31 characters.	Cannot contain midline(-).
AclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—Ethernet frame header ACL.	Type 3 is not supported in the current software version, and is reserved for future support.
AclGroup	ACL name or number.	Index	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number**: An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be all. The value range depends on the AppAclType column. • 2000 to 5999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**.

ACL/PfilterFilterOption

This table contains information about the applicable scope of packet filtering on a VLAN interface.

XML structure

```
<ACL>
  <PfilterFilterOption>
    <Pfilter>
      <VlanIfName></VlanIfName>
      <FilterOption></FilterOption>
    </Pfilter>
  </PfilterFilterOption>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterFilterOption
Table type	Multi-instance table
Row name	Pfilter

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanIfName	Name of the VLAN interface.	Index	String. Length: 1 to 47 characters. Example: Vlan-interface1	N/A
FilterOption	Filter Option Type.	N/A	Enumeration: • **1**—Filters all packets. • **2**—Filters packets forwarded at Layer 3 by the VLAN interface.	N/A

ACL/ExactMatchs

This table contains information about an exact-match template.

XML structure

```
<ACL>
  <ExactMatchs>
    <ExactMatch>
      <TemplateID></TemplateID>
      <IPMatch>
        <Type></Type>
        <SrcIP></SrcIP>
        <DstIP></DstIP>
        <SrcPort></SrcPort>
        <DstPort></DstPort>
        <Protocol></Protocol>
        <TcpFlag></TcpFlag>
        <DstMAC></DstMAC>
        <SrcMAC></SrcMAC>
      </IPMatch>
      <MACMatch>
        <DstMAC></DstMAC>
        <SrcMAC></SrcMAC>
      </MACMatch>
    </ExactMatch>
  </ExactMatchs>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ExactMatchs
Table type	Multi-instance table
Row name	ExactMatch
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateID	Template ID.	Index	Unsigned integer.	N/A
IPMatch	IP match type	N/A	Members include: • **Type** • **SrcIP** • **DstIP** • **SrcPort** • **DstPort** • **Protocol** • **TcpFlag** • **DstMac** • **SrcMAC**	IPMatch and MACMatch cannot be specified together
Type	IP version	N/A	Enumeration: • ipv4. • ipv6.	You must specify the Type when you replace an IPMatch, or when you merge or create an IPMatch that does not exist.
SrcIP	Source address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstIP	Destination address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcPort	Source port	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstPort	Destination port	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **true**—Conform. • **false**—Not conform.	
Protocol	Protocol	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
TcpFlag	TCP flag	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstMAC	Destination MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcMAC	Source MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
MACMatch	MAC match type	N/A	Members include: • **DstMac** • **SrcMAC**	N/A
DstMAC	Destination MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcMAC	Source MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

ACL

ACL/Base

This table contains ACL base table.

XML structure

```
<ACL>
  <Base>
    <ProcessingStatus></ProcessingStatus>
  </Base>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
ProcessingStatus	ACL processing status	N/A	Enumeration: • **1**—Processing. • **2**—Idle.

ACL/Capability

This table contains ACL capability information, and it is used to obtain custom ACL parameters.

XML structure

```
<ACL>
  <Capability>
    <UserAclL2>
      <L2MaxOffset></L2MaxOffset>
      <L2MaxLen></L2MaxLen>
    </UserAclL2>
```

```
    <UserAclL4>
      <L4MaxOffset></L4MaxOffset>
      <L4MaxLen></L4MaxLen>
    </UserAclL4>
    <UserAclL5>
      <L5MaxOffset></L5MaxOffset>
      <L5MaxLen></L5MaxLen>
    </UserAclL5>
    <UserAclIPv4>
      <IPv4MaxOffset></IPv4MaxOffset>
      <IPv4MaxLen></IPv4MaxLen>
    </UserAclIPv4>
    <UserAclIPv6>
      <IPv6MaxOffset></IPv6MaxOffset>
      <IPv6MaxLen></IPv6MaxLen>
    </UserAclIPv6>
    <AclMaxRuleNumPerGroup></AclMaxRuleNumPerGroup>
    <MicsegIPv6Enable></MicsegIPv6Enable>
  </Capability>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Capability
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
UserAclL2	Custom Layer 2 frame header parameters for user-defined ACL rules	Data structure	Members include: • L2MaxOffset. • L2MaxLen.
L2MaxOffset	Maximum offset relative to the beginning of the Layer 2 frame header	N/A	Unsigned integer. Value range: 0 to 254.
L2MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclL4	Custom Layer 4 header parameters for user-defined ACL rules	Data structure	Members include: • L4MaxOffse. • L4MaxLen.

Column name	Column description	Column type	Data type and restrictions
L4MaxOffset	Maximum offset relative to the beginning of the Layer 4 header	N/A	Unsigned integer. Value range: 0 to 254.
L4MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclL5	Custom Layer 5 header parameters for user-defined ACL rules	Data structure	Members include: • L5MaxOffset. • L5MaxLen.
L5MaxOffset	Maximum offset relative to the beginning of the Layer 5 header	N/A	Unsigned integer. Value range: 0 to 254.
L5MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclIPv4	Custom IPv4 header parameters for user-defined ACL rules	Data structure	Members include: • IPv4MaxOffset. • IPv4MaxLen.
IPv4MaxOffset	Maximum offset relative to the beginning of the IPv4 header	N/A	Unsigned integer. Value range: 0 to 254.
IPv4MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclIPv6	Custom IPv6 header parameters for user-defined ACL rules	Data structure	Members include: • IPv6MaxOffset. • IPv6MaxLen.
IPv6MaxOffset	Maximum offset relative to the beginning of the IPv6 header	N/A	Unsigned integer. Value range: 0 to 254.
IPv6MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
AclMaxRuleNumPerGroup	Maximum number of rules in an ACL	N/A	Unsigned integer. Value range: 0 to 65535.
MicsegIPv6Enable	Whether to configure the resource mode for microsegmentation	N/A	Members include: Enable

ACL/Groups

This table displays ACL information.

XML structure

```
<ACL>
  <Groups>
```

```
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
      <RuleNum></RuleNum>
    </Group>
  </Groups>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. **3**—MAC. • **4**—User-defined.	N/A

GroupID	ACL number	Index	Unsigned integer.
			Value range: 2000 to 5999.
				The value range depends on the GroupType column.
				• 2000 to 5999 if GroupType is **1**.
				  ○ IPv4 basic ACL: 2000 to 2999.
				  ○ IPv4 advanced ACL: 3000 to 3999.
				  ○ Ethernet frame header ACL: 4000 to 4999.
				  ○ User-defined ACL: 5000 to 5999.
				• 2000 to 3999 if GroupType is **2**.
				  ○ IPv6 basic ACL: 2000 to 2999.
				  ○ IPv6 advanced ACL: 3000 to 3999.

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchOrder	Order in which the rules are sorted	N/A	Enumeration: • **1**—Config. In this order, rules are sorted in ascending order of rule ID. • **2**—Auto. In this order, rules are sorted in depth-first order.	N/A
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20.	N/A
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.
RuleNum	Number of rules in the ACL	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

ACL/NamedGroups

This table displays named ACL information.

XML structure

```
<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>
      <GroupCategory></GroupCategory>
      <GroupIndex></GroupIndex>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
      <RuleNum></RuleNum>
      <GroupNum></GroupNum>
    </Group>
  </NamedGroups>
</ACL>
```

Table description

Item	Description
Feature name	ACL

Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—MAC. • **4**—User-defined.	N/A

GroupCategory	ACL Category	Index	Enumeration:
			• **0**—invalid.
			• **1**—basic.
			• **2**—advanced.
				The value range depends on the GroupType column.
				• 1 to 2 if GroupType is **1 or 2**.
				  ○ basic ACL: 1.
				  ○ advanced ACL: 2.
				• 0 if GroupType is 3 or 4.

Column name	Column description	Column type	Data type and restrictions	Remarks

GroupIndex	ACL name or number	Index	String.
			Length: 1 to 63 characters.
			• **ACL name:** Case-insensitive string of 1 to 63 characters.
			• **ACL number:** String of digits in the range of 2000 to 5999.
				The GroupIndex cannot be specified as an ACL name in GET operations for an ACL created by specifying both a number and a name.
				The value range depends on the GroupType column.
				• 2000 to 3999 if GroupType is **1**.
				  ○ IPv4 basic ACL: 2000 to 2999.
				  ○ IPv4 advanced ACL: 3000 to 3999.
				• 2000 to 3999 if GroupType is **2**.
				  ○ IPv6 basic ACL: 2000 to 2999.
				  ○ IPv6 advanced ACL: 3000 to 3999.
				• 4000 to 4999 if GroupType is **3**.
				  ○ Ethernet frame header ACL: 4000 to 4999.
				• 5000 to 5999 if GroupType is **4**.
				User-defined ACL: 5000 to 5999.

MatchOrder	Order in which the rules are sorted	N/A	Enumeration: • **1**—Config. In this order, rules are sorted in ascending order of rule ID. • **2**—Auto. In this order, rules are sorted in depth-first order.	N/A
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20.	N/A
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.
RuleNum	Number of rules in the ACL	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	Number of ACLs.	N/A	Unsigned integer.	N/A

ACL/Intervals

This table contains ACL interval information.

XML structure

```
<ACL>
  <Intervals>
    <Interval>
      <IntervalType></IntervalType>
      <IntervalValue></IntervalValue>
    </Interval>
  </Intervals>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	Intervals
Table type	Multi-instance table
Row name	Interval
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IntervalType	The type of the interval	Index	Enumeration: • **1**—logging. • **2**—trap.	The type of the interval specified for generating packet filtering logs or traps.
IntervalValue	The value of the interval	N/A	Unsigned integer. Value range: 5 to 1440.	It must be a multiple of 5.

ACL/IPv4BasicRules

This table contains IPv4 basic ACL rule information.

XML structure

```
<ACL>
  <IPv4BasicRules>
    <Rule>
      <GroupID></GroupID>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>
        <SrcIPv4Wildcard></SrcIPv4Wildcard>
      </SrcIPv4>
      <SrcObjectGroup></SrcObjectGroup>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
      <VRF></VRF>
      <Counting></Counting>
      <Logging></Logging>
      <Comment></Comment>
      <Status></Status>
      <Count></Count>
      <MatchIndex></MatchIndex>
    </Rule>
  </IPv4BasicRules>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	IPv4BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses. • **false**—Matches the specified source IP address.	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

ACL/IPv4NamedBasicRules

This table contains named IPv4 basic ACL rule information.

XML structure

```
<ACL>
  <IPv4NamedBasicRules>
    <Rule>
      <GroupIndex></GroupIndex>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>

Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedBasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 2000 to 2999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses. • **false**—Matches the specified source IP address.	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

ACL/IPv6BasicRules

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses. • **false**—Matches the specified source IPv6 address.	N/A
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Address. • SrcIPv6Prefix.	The members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header.	N/A
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

Table description

Item	Description
Feature name	ACL
Table name	IPv4AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses. • **false**—Matches the specified source IP address.	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses (default). • **false**—Matches the specified destination IP address.	The VXLAN encapsulation supports this column. This column must be configured together with the **DstIPv4** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot both be configured.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: • StartDSCP • EndDSCP	DSCP and DSCPRange cannot both be configured.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP	ICMP messages.	Data structure	Members include: • ICMPType. • ICMPCode.	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1**—VXLAN encapsulation. • **2**—GRE encapsulation. • **3**—IPINIP encapsulation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	Only the VXLAN encapsulation supports this column.
VxlanID	VXLAN ID	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: • **true**—Matches any inner source IP addresses. • **false**—Matches the specified inner source IP address.	N/A
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: • InSrcIPv4Addr. • InSrcIPv4Wildcard.	Only the VXLAN encapsulation supports this column. The two members must both be specified.
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InSrcIPv4Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.

Column name	Column description	Column type	Data type and restrictions	Remarks
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: • **true**—Matches any inner destination IP addresses. • **false**—Matches the specified inner destination IP address.	N/A
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: • InDstIPv4Addr. • InDstIPv4Wildcard.	Only the VXLAN encapsulation supports this column. The two members must both be specified.
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.
InTcpFlag	Inner TCP flags.	Data structure	Members include: • InACK. • InFIN. • InPSH. • InRST. • InSYN • InURG.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InACK	ACK flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP inner protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
InPrecedence	Inner IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InTOS	Inner ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group.	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any source user group. • **false**—Matches the specified source user group (default).	N/A
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.

Column name	Column description	Column type	Data type and restrictions	Remarks
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any destination user group. • **false**—Matches the specified destination user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/IPv4NamedAdvanceRules

This table contains named IPv4 advanced ACL rule information.

Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses. • **false**—Matches the specified source IP address.	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses. • **false**—Matches the specified destination IP address.	N/A
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.

Column name	Column description	Column type	Data type and restrictions	Remarks
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot both be configured.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: • StartDSCP • EndDSCP	DSCP and DSCPRange cannot both be configured.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP	ICMP messages.	Data structure	Members include: • ICMPType. • ICMPCode.	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1**—VXLAN encapsulation. • **2**—GRE encapsulation. • **3**—IPINIP encapsulation.	N/A
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	Only the VXLAN encapsulation supports this column.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: • **true**—Matches any inner source IP addresses. • **false**—Matches the specified inner source IP address.	N/A
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: • InSrcIPv4Addr. • InSrcIPv4Wildcard.	Only the VXLAN encapsulation supports this column. The two members must both be specified.
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcIPv4Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InSrcAny** column is **false**. It must be empty when the **InSrcAny** column is **true**.
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: • **true**—Matches any inner destination IP addresses. • **false**—Matches the specified inner destination IP address.	N/A
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: • InDstIPv4Addr. • InDstIPv4Wildcard.	Only the VXLAN encapsulation supports this column. The two members must both be specified.
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **InDstAny** column is **false**. It must be empty when the **InDstAny** column is **true**.
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP inner protocols support this column. The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
InTcpFlag	Inner TCP flags.	Data structure	Members include: • InACK. • InFIN. • InPSH. • InRST. • InSYN • InURG.	N/A
InACK	ACK flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP header.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP inner protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
InPrecedence	Inner IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
InTOS	Inner ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group.	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any source user group. • **false**—Matches the specified source user group (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any destination user group. • **false**—Matches the specified destination user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			than). • **4**—neq (not equal to). • **5**—range (inclusive range).	
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/IPv6AdvanceRules

This table contains IPv6 advanced ACL rule information.

Table description

Item	Description
Feature name	ACL
Table name	IPv6AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses. • **false**—Matches the specified source IPv6 address.	N/A
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses. • **false**—Matches the specified destination IPv6 address.	N/A
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header.	N/A
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP6	ICMPv6 messages.	Data structure	Members include: • ICMP6Type. • ICMP6Code.	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: • **true**—Matches any types of Hop-by-Hop Options header. • **false**—Matches the specified type of Hop-by-Hop Options header.	N/A
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF.	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1—**VXLAN**.** • **4—**VXLAN-IPv6**.**	N/A
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses. • **false**—Matches the specified source IPv6 address.	N/A.
InSrcIPv6	Inner source IPv6 information.	Data structure	Members include: • InSrcIPv6Addr. • InSrcIPv6Prefix.	N/A
InSrcIPv6Addr	Inner source IPv6 address.	N/A	Hexadecimal string, colon-separated.	N/A
InSrcIPv6Prefix	Length of the inner source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
InDstAny	Whether a rule matches any inner destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses. • **false**—Matches the specified destination IPv6 address.	N/A
InDstIPv6	Inner destination IPv6 information.	Data structure	Members include: • InDstIPv6Addr. • InDstIPv6Prefix.	N/A
InDstIPv6Addr	Inner destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDstIPv6Prefix	Length of the inner destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	Only the TCP and UDP protocols support this column.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	N/A
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP protocols support this column.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InTcpFlag	Inner TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
InACK	ACK flag in an nner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the established status of an inner TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group.	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536.The value 65536 indicates that the packet length value is not available.

ACL/IPv6NamedAdvanceRules

This table contains named IPv6 advanced ACL rule information.

Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses. • **false**—Matches the specified source IPv6 address.	N/A
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column or SrcObjectGroup column.
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses. • **false**—Matches the specified destination IPv6 address.	N/A
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column or DstObjectGroup column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: • **true**—Matches any types of routing header. • **false**—Matches the specified type of routing header.	N/A
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
SrcPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DstPortObjectGroup	Source port object group name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TcpFlag	TCP flags.	Data structure	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP6	ICMPv6 messages.	Data structure	Members include: • ICMP6Type. • ICMP6Code.	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: • **true**—Matches only non-first fragments. • **false**—Matches both fragments and non-fragments.	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: • **true**—Matches any types of Hop-by-Hop Options header. • **false**—Matches the specified type of Hop-by-Hop Options header.	N/A
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF.	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
EncapType	Encapsulation type.	N/A	Enumeration: • **1—**VXLAN**.** • **4—**VXLAN-IPv6**.**	N/A
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IPv6 addresses.	N/A	Boolean: • **true**—Matches any source IPv6 addresses. • **false**—Matches the specified source IPv6 address.	N/A.
InSrcIPv6	Inner source IPv6 information.	Data structure	Members include: • InSrcIPv6Addr. • InSrcIPv6Prefix.	N/A
InSrcIPv6Addr	Inner source IPv6 address.	N/A	Hexadecimal string, colon-separated.	N/A
InSrcIPv6Prefix	Length of the inner source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
InDstAny	Whether a rule matches any inner destination IPv6 addresses.	N/A	Boolean: • **true**—Matches any destination IPv6 addresses. • **false**—Matches the specified destination IPv6 address.	N/A
InDstIPv6	Inner destination IPv6 information.	Data structure	Members include: • InDstIPv6Addr. • InDstIPv6Prefix.	N/A
InDstIPv6Addr	Inner destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDstIPv6Prefix	Length of the inner destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
InSrcPort	Inner source port information.	Data structure	Members include: • InSrcPortOp. • InSrcPortValue1. • InSrcPortValue2.	Only the TCP and UDP protocols support this column.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	N/A
InDstPort	Inner destination port information.	Data structure	Members include: • InDstPortOp. • InDstPortValue1. • InDstPortValue2.	Only the TCP and UDP protocols support this column.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InTcpFlag	Inner TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A
InACK	ACK flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
InFIN	FIN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
InPSH	PSH flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
InRST	RST flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
InSYN	SYN flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
InURG	URG flag in an inner TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
InEstablished	Whether a rule matches flags indicating the established status of a inner TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column.
InECN	Inner ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDSCP	Inner DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Logging	Whether to log rule match events.	N/A	Boolean: • **true**—Logs rule match events. • **false**—Does not log rule match events.	N/A
FlowLogging	Whether to log matching packets on a per-flow basis.	N/A	Boolean: • **true**—Logs matching packets on a per-flow basis. • **false**—Does not log matching packets on a per-flow basis.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
UserGroup	User group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserGroupAny	Whether a rule matches any user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group.	N/A
SUserGroup	Source user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **SUserGroupAny** column is **false**.
SUserGroupAny	Whether a rule matches any source user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DUserGroup	Destination user group name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	This column is available when the **DUserGroupAny** column is **false**.
DUserGroupAny	Whether a rule matches any destination user group.	N/A	Boolean: • **true**—Matches any user group. • **false**—Matches the specified user group (default).	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: • **true**—Options. • **false**—Not options, default.	Only when the ProtocolType value is 256,and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. • **0**—First-fragment. • **1**—Non-fragment. • **2**—Non-or-first-fragment. • **3**—Any-fragment.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: • TtlOp. • TtlValue1. • TtlValue2.	N/A
TtlOp	TTL operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—neq (not equal to). • **5**—range (inclusive range).	
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: • PktLengthOp. • PktLengthValue1. • PktLengthValue2.	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

ACL/MACRules

This table contains Ethernet frame header ACL rule information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 4000 to 4999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: • SrcMACAddress. • SrcMACMask.	The members must both be specified.
SrcMACAddress	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: • DstMACAddress. • DstMACMask.	The members must both be specified.
DstMACAddress	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Protocol	Link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	The members must both be specified.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
ProtocolTypeMask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAP	LSAP.	Data structure	Members include: • LSAPType. • LSAPTypeMask.	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: • VXLAN encapsulation. • GRE encapsulation. • IPINIP encapsulation.	N/A
VxlanID	VXLAN ID	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcMACAddr	Information about the inner source MAC address.	Data structure	Members include: • InSrcMACAddress. • InSrcMACMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InSrcMACAddr ess	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: • InDstMACAddress. • InDstMACMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.
InDstMACAddr ess	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: • ProtocolType. • ProtocolTypeMask.	Only the VXLAN encapsulation supports this column. The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
InProtocolType Mask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

ACL/MACNamedRules

This table contains named Ethernet frame header ACL rule information.

      <IfName></IfName>
    </Pfilter>
  </PfilterApply>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppObjType	Type of the application object.	Index	Enumeration: • **1**—Interface. • **2**—VLAN. • **3**—Global.	N/A
AppObjIndex	Index of the application object.	Index	Unsigned integer. Value range: 0 to 4294967295.	The value depends on the AppObjType column. • Interface index if AppObjType is **1**. • VLAN ID in the range of 1 to 4094 if AppObjType is **2**. • The value is 0 if AppObjType is **3**.
AppDirection	Application direction.	Index	Enumeration: • **1**—Inbound. • **2**—Outbound.	N/A
AppAclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—MAC ACL. • 4—User-defined ACL. • **5**—ACL with the default action.	• Type 5 is a special ACL.
AppAclGroup	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits valued 0 or in the range of 2000 to 5999.	The value range depends on the AppAclType column. • 2000 to 3999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**. • 4000 to 4999 if AppAclType is **3**. • 5000 to 5999 if AppAclType is **4**. • 0 if AppAclType is **5**.
HardCount	Whether to count rule matches in hardware for the ACL.	N/A	Enumeration: • **1**—enable. • **2**—disable.	N/A
InnerEncap	Match the inner packet information of encapsulation packets.	N/A	Enumeration: • **0**—None. • **1**—VXLAN.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ShareMode	Whether to apply the ACL in sharing mode.	N/A	Boolean: • **true**—Apply the ACL in sharing mode. • **false**—Do not apply the ACL in sharing mode.	N/A
ShareModeBoth	Whether to apply the ACL in sharing mode for both direction.	N/A	Boolean: • **true**—Apply the ACL in sharing mode for both direction. • **false**—Do not apply the ACL in sharing mode for both direction.	Support for this function depends on the device model. This column cannot be modified.
AppSequence	ACL application sequence.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

ACL/PfilterGroupRunInfo

This table contains running information about packet filter ACLs on application objects.

XML structure

```
<ACL>
  <PfilterGroupRunInfo>
    <GroupRunInfo>
      <AppObjType></AppObjType>

Table description

Item	Description
Feature name	ACL
Table name	UserRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 5000 to 5999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: • L2RuleString. • L2RuleMask. • L2Offset.	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: • IPv4RuleString. • IPv4RuleMask. • IPv4Offset.	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: • IPv6RuleString. • IPv6RuleMask. • IPv6Offset.	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: • L4RuleString. • L4RuleMask. • L4Offset.	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: • L5RuleString. • L5RuleMask. • L5Offset.	The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UdfFormat	User-defined packet fortmat.	N/A	Enumeration: • **1**—IFA packet. • **2**—Raw ip packet. • **3**—VXLAN packet. • **4**—GRE-C1R0K1 packet. • **5**—GRE-C0R0K1 packet. • **6**—GRE-K1R1 packet. • **7**—4-byte GRE packet. • **8**—8-byte GRE packet. • **9**—12-byte GRE packet. • **10**—16-byte GRE packet. • **11**—20-byte GRE packet.	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DualStackProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.	You cannot specify a protocol type when you remove or delete a rule. The value can only be 6 or 17 when you creat, merge or replace a rule. When the DualStackProtocolType is configured, only the following fields can be configured: GroupID, RuleID, Action, SrcMicsegGroup, SrcMicsegMaskLength, DstMicsegGroup, DstMicsegMaskLength、SrcPort, DstPort, TimeRange, Counting, VRF, TcpFlag.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses (default). • **false**—Matches the specified source IP address.	This column is available when the ProtocolType is specified. This column must be configured together with the **SrcIPv4 or SrcIPv6** column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses. • **false**—Matches the specified destination IP address.	N/A
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. The availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	Only the IPv4 type supports this column. The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	Only the IPv4 type supports this column. The DSCP priority and the ToS precedence cannot both be specified.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

ACL/UserNamedRules

This table contains information about named user-defined ACL rules.

Table description

Item	Description
Feature name	ACL
Table name	UserNamedRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 5000 to 5999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: • L2RuleString. • L2RuleMask. • L2Offset.	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: • IPv4RuleString. • IPv4RuleMask. • IPv4Offset.	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: • IPv6RuleString. • IPv6RuleMask. • IPv6Offset.	The members must all be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: • L4RuleString. • L4RuleMask. • L4Offset.	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: • L5RuleString. • L5RuleMask. • L5Offset.	The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UdfFormat	User-defined packet fortmat.	N/A	Enumeration: • **1**—IFA packet. • **2**—Raw ip packet. • **3**—VXLAN packet. • **4**—GRE-C1R0K1 packet. • **5**—GRE-C0R0K1 packet. • **6**—GRE-K1R1 packet. • **7**—4-byte GRE packet. • **8**—8-byte GRE packet. • **9**—12-byte GRE packet. • **10**—16-byte GRE packet. • **11**—20-byte GRE packet.	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DualStackProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.	You cannot specify a protocol type when you remove or delete a rule. The value can only be 6 or 17 when you creat, merge or replace a rule. When the DualStackProtocolType is configured, only the following fields can be configured: GroupID, RuleID, Action, SrcMicsegGroup, SrcMicsegMaskLength, DstMicsegGroup, DstMicsegMaskLength、SrcPort, DstPort, TimeRange, Counting, VRF, TcpFlag.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: • **true**—Matches any source IP addresses. • **false**—Matches the specified source IP address.	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: • SrcIPv4Addr. • SrcIPv4Wildcard.	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6	Source IPv6 information.	Data structure	Members include: • SrcIPv6Addr. • SrcIPv6Prefix.	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **SrcAny** column is **false**. It must be empty when the **SrcAny** column is **true**.
SrcMicsegGroup	Source micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the SrcAny column.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of SrcMicsegGroup. Example: GroupID is 16, the SrcMicsegMaskLength can be 1,2,3,4.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: • **true**—Matches any destination IP addresses. • **false**—Matches the specified destination IP address.	N/A
DstIPv4	Destination IPv4 information.	Data structure	Members include: • DstIPv4Addr. • DstIPv4Wildcard.	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6	Destination IPv6 information.	Data structure	Members include: • DstIPv6Addr. • DstIPv6Prefix.	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the **DstAny** column is **false**. It must be empty when the **DstAny** column is **true**.
DstMicsegGroup	Destination micseg group number.	N/A	Unsigned integer. Value range: 0 to 65535.	This column cannot be configured together with the DstAny column.
DstMicsegMaskLength	Wildcard low-order n bits	N/A	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of DstMicsegGroup. Example: GroupID is 16, the DstMicsegMaskLength can be 1,2,3,4.
SrcPort	Source port information.	Data structure	Members include: • SrcPortOp. • SrcPortValue1. • SrcPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: • DstPortOp. • DstPortValue1. • DstPortValue2.	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: • **1**—lt (lower than). • **2**—eq (equal to). • **3**—gt (greater than). • **4**—neq (not equal to). • **5**—range (inclusive range).	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is **5**, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: • ACK. • FIN. • PSH. • RST. • SYN. • URG.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—ACK flag is not set. • **1**—ACK flag is set.	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—FIN flag is not set. • **1**—FIN flag is set.	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—PSH flag is not set. • **1**—PSH flag is set.	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—RST flag is not set. • **1**—RST flag is set.	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—SYN flag is not set. • **1**—SYN flag is set.	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. • **0**—URG flag is not set. • **1**—URG flag is set.	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: • **true**—Matches the flags. • **false**—Ignores the flags.	Only the TCP protocol supports this column. The availability and usage of this column depend on the device model. This column and the **TcpFlag** column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	Only the IPv4 type supports this column. The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	Only the IPv4 type supports this column. The DSCP priority and the ToS precedence cannot both be specified.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: • **true**—Counts the rule matches. • **false**—Does not count the rule matches.	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

ACL/ZonePairPfilter

This table contains information about packet filter application for zone pair.

XML structure

```
<ACL>
  <ZonePairPfilter>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
      <AppSequence></AppSequence>
```

```
    </Pfilter>
  </ZonePairPfilter>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ZonePairPfilter
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
DestZone	Name of the destination zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
AclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—Ethernet frame header ACL.	Type 3 is not supported in the current software version, and is reserved for future support.
AclGroup	ACL name or number.	Index	• ACL name: Case-insensitive string of 1 to 63 characters. • ACL number: An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. The value range depends on the AppAclType column. • 2000 to 5999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**.
AppSequence	ACL application sequence.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

ACL/ZonePairPfilterRules

This table contains running information about packet filter ACL rules for zone pair.

XML structure

```
<ACL>
  <ZonePairPfilterRules>
    <Rule>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
      <AclRuleID></AclRuleID>
      <RuleMatchPkts></RuleMatchPkts>
      <RuleMatchBytes></RuleMatchBytes>
    </Rule>
  </ZonePairPfilterRules>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ZonePairPfilterRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
DestZone	Name of the destination zone.	Index	String, case insensitive. • Length: 1 to 31 characters.	Cannot contain midline(-).
AclType	ACL type.	Index	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL. • **3**—Ethernet frame header ACL.	Type 3 is not supported in the current software version, and is reserved for future support.

Column name	Column description	Column type	Data type and restrictions	Remarks
AclGroup	ACL name or number.	Index	• ACL name: Case-insensitive string of 1 to 63 characters. • ACL number: An unsigned integer in the range of 2000 to 5999.	An ACL name must start with an English letter and cannot be **all**. The value range depends on the AppAclType column. • 2000 to 5999 if AppAclType is **1**. • 2000 to 3999 if AppAclType is **2**.
AclRuleID	Index of the ACL rules.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
RuleMatchPkts	Number of matched packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support match counting for packet filter, 0×FFFFFFFFFFFFFFFF is returned.
RuleMatchBytes	Number of matched bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the device does not support match counting for packet filter, 0×FFFFFFFFFFFFFFFF is returned.

ACL/PfilterFilterOption

This table contains information about the applicable scope of packet filtering on a VLAN interface.

XML structure

```
<ACL>
  <PfilterFilterOption>
    <Pfilter>
      <VlanIfName></VlanIfName>
      <FilterOption></FilterOption>
    </Pfilter>
  </PfilterFilterOption>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	PfilterFilterOption
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanIfName	Name of the VLAN interface.	Index	String. Length: 1 to 47 characters. Example: Vlan-interface1	N/A
FilterOption	Filter Option Type.	N/A	Enumeration: • **1**—Filters all packets. • **2**—Filters packets forwarded at Layer 3 by the VLAN interface.	N/A

ACL/ExactMatchs

This table contains information about an exact-match template.

XML structure

```
<ACL>
  <ExactMatchs>
    <ExactMatch>
      <TemplateID></TemplateID>
      <IPMatch>
        <Type></Type>
        <SrcIP></SrcIP>
        <DstIP></DstIP>
        <SrcPort></SrcPort>
        <DstPort></DstPort>
        <Protocol></Protocol>
        <TcpFlag></TcpFlag>
        <DstMAC></DstMAC>
        <SrcMAC></SrcMAC>
      </IPMatch>
      <MACMatch>
        <DstMAC></DstMAC>
        <SrcMAC></SrcMAC>
      </MACMatch>
    </ExactMatch>
  </ExactMatchs>
</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	ExactMatchs
Table type	Multi-instance table
Row name	ExactMatch
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateID	Template ID.	Index	Unsigned integer.	The ranges for this column are customized by the product.
IPMatch	IP match type	N/A	Members include: • **Type** • **SrcIP** • **DstIP** • **SrcPort** • **DstPort** • **Protocol** • **TcpFlag** • **DstMac** • **SrcMAC**	N/A
Type	IP version	N/A	Enumeration: • ipv4. • ipv6.	N/A
SrcIP	Source address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstIP	Destination address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcPort	Source port	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstPort	Destination port	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Protocol	Protocol	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **true**—Conform. • **false**—Not conform.	
TcpFlag	TCP flag	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstMAC	Destination MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcMAC	Source MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
MACMatch	MAC match type	N/A	Members include: • **DstMac** • **SrcMAC**	N/A
DstMAC	Destination MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcMAC	Source MAC	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

ACL 1
ACL 1

ACL

ACL

Message	Explanation
Can't edit rules for an ACL when the match order is auto. 当规则匹配顺序为自动排序时，不能修改规则。	The ACL group created in auto mode cannot modify rules. 以 auto 形式创建的 ACL 组不能修改规则。
The rule doesn't exist. Please create the rule first. 规则不存在，请在添加描述信息前先添加规则。	Cannot add rule comment information when the rule does not exist. 规则不存在时不能添加规则评论信息。
Can’t name or rename an existing ACL. 不能命名或重命名一个已存在的ACL。	Cannot modify the name as an existing ACL. 不能修改名字为已存在的ACL。
Can't change the match order for an ACL that contains rules. 不能修改一个包含规则的ACL的匹配顺序。	When an ACL is configured with rules, the matching order cannot be modified. 当ACL已经配置了规则，不能修改匹配顺序。
The rule already exists. 规则已存在。	The newly created rule content is the same as other existing rules. 新建的规则内容与其他已存在的规则内容相同。
The rule ID is out of range. 规则编号超出范围。	Automatically assigned rule number is out of range. 自动分配的规则编码超出了范围。
The step is too large to generate sufficient rule IDs. 步长过大，可分配的规则编号不足。	The modified step size is too large, and the number of rules that can be assigned is insufficient. 修改后的步长过大，可分配的规则编号不足。
The name is already used by another ACL. 该名字已被另一个ACL使用。	The newly created ACL name is occupied by other existing ACLs. 新建的ACL名称被其他已经存在的ACL占用。
Maximum number of rules in the ACL already is reached. 此ACL的规则数已达上限。	The number of rules has reached the upper limit when a new ACL rule is created. 新建ACL规则时规则个数已达到上限。
Resources are insufficient for processing the request. 系统资源不足，请求无法完成。	Insufficient memory. 设备内存不足。
The ACL doesn't exist. 指定的ACL不存在。	Add a rule to an ACL group that does not exist. 向不存在的ACL组下添加规则。
The source IPv4 address object group doesn't exist. 指定的源IPv4地址对象组不存在。	The object-group referenced by the source address of the IPv4 type ACL rule does not exist. IPv4类型ACL规则源地址引用的对象组不存在。
The source IPv6 address object group doesn't exist. 指定的源IPv6地址对象组不存在。	The object-group referenced by the source address of the IPv6 type ACL rule does not exist. IPv6类型ACL规则源地址引用的对象组不存在。
The destination IPv4 address object group doesn't exist. 指定的目的IPv4地址对象组不存在。	The object-group referenced by the destination address of the IPv4 type ACL rule does not exist. IPv4类型ACL规则目的地址引用的对象组不存在。

The destination IPv6 address object group doesn't exist. 指定的目的IPv6地址对象组不存在。	The object-group referenced by the destination address of the IPv6 type ACL rule does not exist. IPv6类型ACL规则目的地址引用的对象组不存在。
Illegal source IPv4 address object group type. 指定的源IPv4地址对象组类型不正确。	The object-group type referenced by the source address of the IPv4 type ACL is not the IPv4 type. IPv4类型ACL规则源地址引用的对象组类型不是IPv4类型。
Illegal source IPv6 address object group type. 指定的源IPv6地址对象组类型不正确。	The object-group type referenced by the source address of the IPv6 type ACL is not the IPv6 type. IPv6类型ACL规则源地址引用的对象组类型不是IPv6类型。
Illegal destination IPv4 address object group type. 指定的目的IPv4地址对象组类型不正确。	The object-group type referenced by the destination address of the IPv4 type ACL is not the IPv4 type. IPv4类型ACL规则目的地址引用的对象组类型不是IPv4类型。
Illegal destination IPv6 address object group type. 指定的目的IPv6地址对象组类型不正确。	The object-group type referenced by the destination address of the IPv6 type ACL is not the IPv6 type. IPv6类型ACL规则目的地址引用的对象组类型不是IPv6类型。
Can't delete the ACL because it is being used. 该ACL正被引用，无法删除。	The ACL specified to be deleted is referenced by other modules and cannot be deleted. 指定要删除的ACL被其他模块引用，不能被删除。

</ADVPN>
```

Table description

Item	Description
Feature name	ADVPN
Table name	TunnelAdvpnCfg
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
IPv4Client	Name of the VAM client bounded to an IPv4 ADVPN tunnel interface	N/A	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Compatible	Compatibility configuration	N/A	Enumeration: • 0—Incompatible • 1—Compatible • 2—Invalid	The value of “2” means not specifying the IPv4 VAM client config.
IPv6Client	Name of the VAM client bounded to an IPv6 ADVPN tunnel interface	N/A	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).
DumbTime	Dumb time for an ADVPN session	N/A	Unsigned integer Value range: 10 to 600 The default value is 120 seconds	N/A
IdleTime	Idle timeout time for a spoke-spoke ADVPN tunnel	N/A	Unsigned integer. Value range:60 to 65535. The default value is 600 seconds	N/A
SourcePort	Source UDP port number	N/A	Unsigned integer Value range: 1025 to 65535 The default value is 18001	Only supports tunnel in the following modes: • 9—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • 11—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.

IPv4Networks

This table is used to configure the IPv4 subnets under the specified tunnel which is ADVPN node.

XML structure

```
<ADVPN>
  <IPv4Networks>
    <IPv4Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>
```

```
    </IPv4Network>
  </IPv4Networks>
</ADVPN>
```

Table description

Item	Description
Feature name	ADVPN
Table name	IPv4Networks
Table type	Multi-instance table
Row name	IPv4Network
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A.
Address	Private IPv4 network address	Index	IPv4 address	N/A.
MaskLength	Mask of the private IPv4 network address	Index	Unsigned integer Value range: 0 to 32	Example: 24
Preference	Preference for the route to the private network	N/A	Unsigned integer Value range: 1 to 255 The default value is 8	N/A.

IPv6Networks

This table is used to configure the IPv6 subnets under the specified tunnel which is ADVPN node.

XML structure

```
<ADVPN>
  <IPv6Networks>
    <IPv6Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>

Column name	Column description	Column type	Data type and restrictions	Remarks
	IPv4 ADVPN tunnel interface			
Compatible	Compatibility configuration	N/A	Enumeration: • 0—Incompatible • 1—Compatible • 2—Invalid	The value of “2” means not specifying the IPv4 VAM client config.
IPv6Client	Name of the VAM client bounded to an IPv6 ADVPN tunnel interface	N/A	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).
DumbTime	Dumb time for an ADVPN session	N/A	Unsigned integer Value range: 10 to 600 The default value is 120 seconds	N/A
IdleTime	Idle timeout time for a spoke-spoke ADVPN tunnel	N/A	Unsigned integer. Value range:60 to 65535. The default value is 600 seconds	N/A
SourcePort	Source UDP port number	N/A	Unsigned integer Value range: 1025 to 65535 The default value is 18001	Only supports tunnel in the following modes: • 9—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • 11—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.

IPv4Networks

This table displays the IPv4 subnets configuration under an ADVPN node.

XML structure

```
<ADVPN>
  <IPv4Networks>
    <IPv4Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>
    </IPv4Network>
  </IPv4Networks>
</ADVPN>
```

Table description

Item	Description
Feature name	ADVPN
Table name	IPv4Networks
Table type	Multi-instance table
Row name	IPv4Network
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A.
Address	Private IPv4 network address	Index	IPv4 address	N/A.
MaskLength	Mask of the private IPv4 network address	Index	Unsigned integer Value range: 0 to 32	Example: 24
Preference	Preference for the route to the private network	N/A	Unsigned integer Value range: 1 to 255 The default value is 8	N/A.

IPv6Networks

This table displays the IPv6 subnets configuration under an ADVPN node.

XML structure

```
<ADVPN>
  <IPv6Networks>
    <IPv6Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>
    </IPv6Network>
  </IPv6Networks>
</ADVPN>
```

Table description

Item	Description
Feature name	ADVPN

</ADVPN>
```

Table description

Item	Description
Feature name	ADVPN
Table name	IPv4TunnelAdvpnSession
Table type	Multi-instance table
Row name	IPv4AdvpnSession
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
PrivateAddress	Private address of the ADVPN tunnel peer	Index	Ipv4Address	IPv4 address
PublicAddress	Public address of the ADVPN tunnel peer	N/A	String	IPv4 address. IPv6 address.
AdvpnPort	UDP port number for the ADVPN tunnel	N/A	Unsigned integer Value range: 1025 to 65535	Only supported when the link layer protocol is UDP or IPsec-UDP.
SPI	SP index for the inbound and outbound SAs	Data structure	Members include: • AhInbound • AhOutbound • EspInbound • EspOutbound	Only supported when link layer protocol is **IPsec-UDP** or **IPsec-GRE**.
AhInbound	Inbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$.	N/A
AhOutbound	Outbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$.	N/A
EspInbound	Inbound ESP SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$.	N/A
EspOutbound	Outbound ESP	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	SP index		Value range: 0 to $2^{32}-1$.	
BehindNAT	Whether the NAT peer node is behind NAT	N/A	Boolean: • true • False	N/A
SessionType	ADVPN tunnel type	N/A	Enumeration: • 0—Unknown • 1—Hub-Hub • 2—Hub-Spoke • 3—Spoke-Hub • 4—Spoke-Spoke	N/A
TunnelState	ADVPN tunnel state	N/A	Enumeration: • 0—Establishing • 1—Dumb • 2—Success	N/A
HoldingTime	Duration that the tunnel has been in the current state	N/A	Unsigned integer	Unit: seconds
Input	Statistics for incoming packets	Data structure	Members include: • TotalPackets • DataPackets • ControlPackets • Multicasts • Errors	N/A
TotalPackets	The number of all incoming packets	N/A	Unsigned Integer64	N/A
DataPackets	The number of incoming data packets	N/A	Unsigned Integer64	N/A
ControlPackets	The number of incoming control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of incoming multicast packets	N/A	Unsigned integer 64	N/A
Errors	The number of	N/A	Unsigned integer 64	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	incoming erroneous packets			
Output	Statistics for outgoing packets	Data structure	Members include: • TotalPackets • DataPackets • ControlPackets • Multicasts • Errors	N/A
TotalPackets	The number of all outgoing packets	N/A	Unsigned integer	N/A
DataPackets	The number of outgoing data packets	N/A	Unsigned integer 64	N/A
ControlPackets	The number of outgoing control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of outgoing multicast packets	N/A	Unsigned integer 64.	N/A
Errors	The number of outgoing erroneous packets	N/A	Unsigned integer 64	N/A
IPsecTunnelID	IPsec tunnel index	N/A	Unsigned integer 32	N/A
SAIndex	IPsec SA index information	Data structure	Members include: • AhInbound • AhOutbound • EspInbound • EspOutbound	N/A
AhInbound	Inbound IPsec AH SA index	N/A	Unsigned integer 32	N/A
AhOutbound	Outbound IPsec AH SA index	N/A	Unsigned integer 32	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EspInbound	Inbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A
EspOutbound	Outbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A

IPv6TunnelAdvpnSession

This table is used to display IPv6 ADVPN tunnel session information.

XML structure

SessionDeleted event

This event is used to report ADVPN tunnel information when the ADVPN tunnel is deleted.

XML structure for event subscription

```
<SessionDeletedEvent>
  <Tunnel>
    <TunnelID></TunnelID>
  </Tunnel>
</SessionDeletedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ADVPN</stream>
    <filter type="subtree">
      <SessionDeletedEvent xmlns="http://www.h3c.com/netconf/event:1.0/advpn:1.0">
        <Tunnel>
          <TunnelID>1</TunnelID>
        </Tunnel>
      </SessionDeletedEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

AFT

AFT/AftEnable

This table contains informations about AFT enabling switch on the interface.

XML structure

```
<AFT>
  <AftEnable>
    <Interface>
      <IfIndex></IfIndex>
      <EnableSwitch></EnableSwitch>
    </Interface>
  </AftEnable>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftEnable
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can see the XSD document of your product. For more information about IfIndex, you can reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
EnableSwitch	Whether enable AFT on the	N/A	Boolean:	N/A

	inerface		• true—YES • false—NO(default).	

AFT/AftLogEnable

This table contains information about AFT logging switch

XML structure

```
<AFT>
  <AftLogEnable>
    <EnableSwitch></EnableSwitch>
  </AftLogEnable>
</AFT>
```

Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT flow-end logging	N/A	Boolean: • true—YES • false—NO(default).

AFT/AftPrefixNat64

This table contains information about AFT NAT64 prefix

XML structure

```
<AFT>
  <AftPrefixNat64>
    <PrefixNat64>
      <Ipv6Prefix></Ipv6Prefix>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </PrefixNat64>
  </AftPrefixNat64>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftPrefixNat64
Table type	Multi-instance table
Row name	PrefixNat64

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Prefix	IPv6 NAT64 prefix	Index	IPv6: Hexadecimal string, colon-separated.	Example: 1000::
Ipv6PrefixLength	IPv6 NAT64 prefix length	Index	Unsigned integer. Value range:32,40,48,56,64,96.	N/A

AFT/AftAddressGroup

This table contains information about AFT address groups.

XML structure

```
<AFT>
  <AftAddressGroup>
    <GroupNumbers>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
    </GroupNumbers>
  </AftAddressGroup>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroup
Table type	Muti-instance table
Row name	GroupNumbers
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks	
GroupNumber	AFT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A	
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	• Master/backup mode: No VRRP keyword is required. • Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and AFT address pool address, so that traffic is transmitted on the active device in the backup group. When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the flow of traffic and enable traffic to be transmitted on the active device in the specified VRRP backup group.	

AFT/AftAddressGroupMember

This table contains information about AFT address group members.

XML structure

```
<AFT>
  <AftAddressGroupMember>
    <GroupMembers>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupMembers>
  </AftAddressGroupMember>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroupMember
Table type	Multi-instance table
Row name	GroupMembers
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	N/A

AFT/AftV6toV4SrcDynamicAcl

This table contains information about AFT IPv6 to IPv4 source dynamic acl rules.

XML structure

```
<AFT>
  <AftV6toV4SrcDynamicAcl>
    <RuleNumbers>
```

```
      <Ipv6Acl></Ipv6Acl>
      <Type></Type>
      <AddressGroup></AddressGroup>
      <IfIndex></IfIndex>
      <AddrGrpType></AddrGrpType>
      <PortBlockSize></PortBlockSize>
      <Ipv4VpnName></Ipv4VpnName>
      <PortRangeStart></PortRangeStart>
      <PortRangeEnd></PortRangeEnd>
      <ExtendedBlockNum></ExtendedBlockNum>
    </RuleNumbers>
  </AftV6toV4SrcDynamicAcl>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftV6toV4SrcDynamicAcl
Table type	Multi-instance table
Row name	RuleNumbers
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Acl	Ipv6Acl name or number	Index	String, case-insensitive. Must start with a-z or A-Z, the word “all” can not be used as name. or the acl number Value range: 2000 to 3999. Length: 1 to 63 characters..	N/A
Type	Address group or easy ip	N/A	Enumeration: • 0—address group. • 1—easy ip.	N/A
AddressGroup	Address group number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can reference the XSD document of your product. For more information about IfIndex, you can

				reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
AddrGrpType	Address group type:pat, nopat or port block	N/A	Enumeration: • 0—NPt. • 1—PT • 2—port block	N/A
PortBlockSize	Whether to use port block	N/A	Unsigned integer. Value range: 100 to 64512.	Can be empty
Ipv4VpnName	Whether to use vpn	N/A	String. Length:1 to 31 characters	Can be empty
PortRangeStart	Start port of the port block	N/A	Unsigned integer. Value range: 1024 to 65535.	Can be empty
PortRangeEnd	End port of the port block	N/A	Unsigned integer. Value range: 1024 to 65535	Can be empty
ExtendedBlockNum	The number of the extend port block	N/A	Unsigned integer. Value range: 1 to 5.	Can be empty

AFT/V4V6

This table contains information about IPv4 address translate to IPv6 address or IPv6 address translate to IPv4 address.

XML structure

```
<AFT>
  <V4V6>
    <Static>
      <TransMode></TransMode>
      <Ipv4Address></Ipv4Address>
      <Vpn4Name></Vpn4Name>
      <Ipv6Address></Ipv6Address>
      <Vpn6Name></Vpn6Name>
    </Static>
  </V4V6>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	V4V6

Item	Description
Table type	Multi-instance table
Row name	Static
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TransMode	Static Mode	Index	Unsigned integer • **0**—V4V6. • **1**—V6V4**.**	This column can only be the index of V4V6 or V6V4.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Vpn4Name	VRF to which the IPv4 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv4 address members do not belong to any VPN.
Ipv6Address	IPv6 address	Index	String, dotted decimal notation.	Example: 1235::1.
Vpn6Name	VRF to which the IPv6 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv6 address members do not belong to any VPN.

AFT /ALG

This table contains the protocols for which NAT64 with ALG is enabled.

XML structure

```
<AFT>
  <ALG>
    <ALGInfo>
      <AppID></AppID>
      <EnableALG></EnableALG>
    </ALGInfo>
  </ALG>
</AFT>
```

Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT64 with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 6. • 0—DNS • 1—FTP. • 2—ICMP-ERROR • 3—HTTP • 4—SIP • 5—RTSP • 6—H323	Use ALG with AFT to translate the payload information to ensure the establishment of data connections. AFT translates IP address and port information in packet headers, and ALG processes the fields in application layer payloads. The packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.
EnableALG	Whether enable NAT64 with ALG.	N/A	Boolean: • true—YES • false—NO.	N/A

AFT/PortBlockGroupIpv6Members

This table contains information about IPv6 address members in AFT port block groups.

XML structure

```
<AFT>
  <PortBlockGroupIpv6Members>
    <Ipv6Member>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv6Address></StartIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </Ipv6Member>
  </PortBlockGroupIpv6Members>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroupIpv6Members
Table type	Multi-instance table
Row name	Ipv6Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple IPv6 address members in a port block group, but they cannot overlap. IPv6 address members in different port block groups can overlap.
VRF	VRF to which the IPv6 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv6 address members do not belong to any VPN.
StartIpv6Address	Start IPv6 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1235::1.
EndIpv6Address	End IPv6 address of the public IP	Index	String, dotted decimal notation.	Example: 1235::1. The end IP address cannot be smaller than

Column name	Column description	Column type	Data type and restrictions	Remarks
	address range			the start IP address. If the start and end IP addresses are the same, only one public IP address is specified.
Ipv6PrefixLength	IPv6 NAT64 prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A

AFT/PortBlockGroupIpv4Members

This table contains information about public IPv4 address members in AFT port block groups.

XML structure

```
<AFT>
  <PortBlockGroupIpv4Members>
    <Ipv4Member>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </Ipv4Member>
  </PortBlockGroupIpv4Members>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroupIpv4Members
Table type	Multi-instance table
Row name	Ipv4Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple public IP address members in a

Column name	Column description	Column type	Data type and restrictions	Remarks
				port block group, but they cannot overlap. Public IP address members in different port block groups can overlap, but. the port ranges for overlapped members in different port block groups cannot overlap. The number of port blocks that a public IP address can assign is determined by dividing the number of ports in its port range by the port block size.
VRF	VRF to which the IPv4 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv4 address members do not belong to any VPN.
StartIpv4Address	Start IPv4 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, only one public IP address is specified.

AFT/PortBlockGroups

This table contains information about AFT port block groups.

XML structure

```
<AFT>
  <PortBlockGroups>
    <Group>
      <GroupNumber></GroupNumber>
      <PortBlockSize></PortBlockSize>
      <GlobalStartPort></GlobalStartPort>
      <GlobalEndPort></GlobalEndPort>
    </Group>
  </PortBlockGroups>
```

```
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
PortBlockSize	The number of ports included in a port block	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	To define a default port range, set *GlobalStartPort* and *GlobalEndPort* to their default values. The *GlobalStartPort* value cannot be greater than the *GlobalEndPort* value. The port range must include all ports that the public IP addresses used for address translation. The number of ports in a port range cannot be smaller than the port block size.
GlobalEndPort	End port of the port range	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A

AFT/AftV6toV4PortBlock

This table contains information about AFT port block group-based IPv6-to-IPv4 source rules.

XML structure

```
<AFT>
  <AftV6toV4PortBlock>

Row name	GroupMembers
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the	Index	IPv4: String, dotted decimal notation.	The *StartIpv4Address* cannot be greater than

	address group member			the *EndIpv4Address*. If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	N/A

AFT/AftV6toV4SrcDynamicAcl

This table contains the aft ipv6 to ipv4 source dynamic acl rules.

XML structure

```
<AFT>
  <AftV6toV4SrcDynamicAcl>
    <RuleNumbers>
      <Ipv6Acl></Ipv6Acl>
      <Type></Type>
      <AddressGroup></AddressGroup>
      <IfIndex></IfIndex>
      <AddrGrpType></AddrGrpType>
      <PortBlockSize></PortBlockSize>
      <Ipv4VpnName></Ipv4VpnName>
      <PortRangeStart></PortRangeStart>
      <PortRangeEnd></PortRangeEnd>
      <ExtendedBlockNum></ExtendedBlockNum>
    </RuleNumbers>
  </AftV6toV4SrcDynamicAcl>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftV6toV4SrcDynamicAcl

Table type	Multi-instance table
Row name	RuleNumbers
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Acl	Ipv6Acl name or number	Index	String, case-insensitive. Must start with a-z or A-Z, the word “all” can not be used as name. or the acl number Value range: 2000 to 3999. Length: 1 to 63 characters..	N/A
Type	Address group or easy ip	N/A	Enumeration: • 0—address group. • 1—easy ip.	N/A
AddressGroup	Address group number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can reference the XSD document of your product. For more information about IfIndex, you can reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
AddrGrpType	Address group type:pat, nopat or port block	N/A	Enumeration: • 0—NPt. • 1—PT • 2—port block	N/A
PortBlockSize	Whether to use port block	N/A	Unsigned integer. Value range: 100 to 64512.	Can be empty
Ipv4VpnName	Whether to use vpn	N/A	String. Length:1 to 31 characters	Can be empty
PortRangeStart	Start port of the port block	N/A	Unsigned integer. Value range: 1024 to 65535.	Can be empty
PortRangeEnd	End port of the port block	N/A	Unsigned integer. Value range: 1024 to 65535	Can be empty
ExtendedBlockNum	The number of the extend port block	N/A	Unsigned integer. Value range: 1 to 5.	Can be empty

AFT/V4V6

This table contains information about IPv4 address translate to IPv6 address or IPv6 address translate to IPv4 address.

XML structure

```
<AFT>
  <V4V6>
    <Static>
      <TransMode></TransMode>
      <Ipv4Address></Ipv4Address>
      <Vpn4Name></Vpn4Name>
      <Ipv6Address></Ipv6Address>
      <Vpn6Name></Vpn6Name>
    </Static>
  </V4V6>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	V4V6
Table type	Multi-instance table
Row name	Static
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TransMode	Static Mode	Index	Unsigned integer • **0**—V4V6. • **1**—V6V4**.**	This column can only be the index of V4V6 or V6V4.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Vpn4Name	VRF to which the IPv4 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv4 address members do not belong to any VPN.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address	Index	String, dotted decimal notation.	Example: 1235::1.
Vpn6Name	VRF to which the IPv6 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv6 address members do not belong to any VPN.

AFT /ALG

This table contains the protocols for which NAT64 with ALG is enabled.

XML structure

```
<AFT>
  <ALG>
    <ALGInfo>
      <AppID></AppID>
      <AppName></AppName>
      <EnableALG></EnableALG>
    </ALGInfo>
  </ALG>
</AFT>
```

Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT64 with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 6. • 0—DNS • 1—FTP. • 2—ICMP-ERROR	Use ALG with AFT to translate the payload information to ensure the establishment of data connections. AFT translates IP address

			• 3—HTTP • 4—SIP • 5—RTSP • 6—H323	and port information in packet headers, and ALG processes the fields in application layer payloads. The packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.
AppName	Protocol name for which NAT64 with ALG is enabled.	N/A	String, Case-insensitive. Length: 1 to 63 characters.	N/A
EnableALG	Whether enable NAT64 with ALG.	N/A	Boolean: • true—YES • false—NO.	N/A

AFT/PortBlockGroupIpv6Members

This table contains information about IPv6 address members in AFT port block groups.

XML structure

```
<AFT>
  <PortBlockGroupIpv6Members>
    <Ipv6Member>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv6Address></StartIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </Ipv6Member>
  </PortBlockGroupIpv6Members>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroupIpv6Members
Table type	Multi-instance table
Row name	Ipv6Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple IPv6 address members in a port block group, but they cannot overlap. IPv6 address members in different port block groups can overlap.
VRF	VRF to which the IPv6 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv6 address members do not belong to any VPN.
StartIpv6Address	Start IPv6 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1235::1.
EndIpv6Address	End IPv6 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1235::1. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, only one public IP address is specified.
Ipv6PrefixLength	IPv6 NAT64 prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A

AFT/PortBlockGroupIpv4Members

This table contains information about public IPv4 address members in AFT port block groups.

XML structure

```
<AFT>
```

```
  <PortBlockGroupIpv4Members>
    <Ipv4Member>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </Ipv4Member>
  </PortBlockGroupIpv4Members>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroupIpv4Members
Table type	Multi-instance table
Row name	Ipv4Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple public IP address members in a port block group, but they cannot overlap. Public IP address members in different port block groups can overlap, but. the port ranges for overlapped members in different port block groups cannot overlap. The number of port blocks that a public IP address can assign is determined by dividing the number of ports in its port range by the port block size.
VRF	VRF to which the IPv4 address members belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IPv4 address members do not belong to any VPN.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIpv4Address	Start IPv4 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address range	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, only one public IP address is specified.

AFT/PortBlockGroups

This table contains information about AFT port block groups.

XML structure

```
<AFT>
  <PortBlockGroups>
    <Group>
      <GroupNumber></GroupNumber>
      <PortBlockSize></PortBlockSize>
      <GlobalStartPort></GlobalStartPort>
      <GlobalEndPort></GlobalEndPort>
    </Group>
  </PortBlockGroups>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	PortBlockGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
PortBlockSize	The number of ports included in a port block	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	To define a default port range, set *GlobalStartPort* and *GlobalEndPort* to their default values. The *GlobalStartPort* value cannot be greater than the *GlobalEndPort* value. The port range must include all ports that the public IP addresses used for address translation. The number of ports in a port range cannot be smaller than the port block size.
GlobalEndPort	End port of the port range	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A

AFT/AftV6toV4PortBlock

This table contains information about AFT port block group-based IPv6-to-IPv4 source rules.

XML structure

```
<AFT>
  <AftV6toV4PortBlock>
    <RuleNumbers>
      <AddressGroup></AddressGroup>
    </RuleNumbers>
  </AftV6toV4PortBlock>
</AFT>
```

Table description

Item	Description

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
AddressGroup	AFT port block group number	Index	Unsigned integer. Value range: 0 to 65535.

AFT/AftPortBlockSynEnable

This table contains information about AFT port-block

XML structure

```
<AFT>
  <AftPortBlockSynEnable>
    <EnableSwitch></EnableSwitch>
  </AftPortBlockSynEnable>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftPortBlockSynEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableSwitch	Whether enable AFT port-block synchrinize	N/A	Boolean: • true—YES • false—NO(default).	N/A

AFT/AftLogPortBlock

This table contains information about AFT port-block logging switch

XML structure

```
<AFT>
  <AftLogPortBlock>
    <AssignEnableSwitch></AssignEnableSwitch>
    <WithdrawEnableSwitch ></WithdrawEnableSwitch>
    <AlarmEnableSwitch></AlarmEnableSwitch>
  </AftLogPortBlock>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftLogPortBlock
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AssignEnableSwitch	Whether enable AFT port-block-assign logging	N/A	Boolean: • true—YES • false—NO(default).	N/A
WithdrawEnableSwitch	Whether enable AFT port-block-withdraw logging	N/A	Boolean: • true—YES • false—NO(default).	N/A
AlarmEnable	Whether	N/A	Boolean:	N/A

Switch	enable AFT port-block-alarm logging		• true—YES • false—NO(default).	

AFT/AftVrrpList

This table contains AFT VRRP information.

XML structure

```
<AFT>
  <AftVrrpList>
    <VrrpInfo>
      <VrrpType></VrrpType>
      <VrrpId></VrrpId>
      <IfIndex></IfIndex>
      <Status></Status>
    </VrrpInfo>
  </AftVrrpList>
</AFT>
```

Table description

Item	Description
Feature name	AFT
Table name	AftVrrpList
Table type	Muti-instance table
Row name	GroupNumbers
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrrpType	Type of the virtual router	N/A	Unsigned integer. Value range: 0 to 1. • 0—IPv4 • 1—IPv6.	N/A
VrrpId	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	• Master/backup mode: No VRRP group is required. • Load sharing method: Under normal circumstances, there is no need to specify a VRRP group. The system automatically binds the VRRP group with the smallest VRID on the same

				network segment as the virtual IP address and AFT address pool address, so that traffic is transmitted on the active device in the VRRP group. When multiple VRRP groups exist, you can specify a VRRP group ID to explicitly direct the traffic to the active device in the specified VRRP group.
IfIndex	Interface index or interface name	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For more information about interface name, see the XSD document of your product. For more information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration document
Status	Status of the virtual router	N/A	Unsigned integer. Value range: 0 to 1. • 0—standby • 1—active.	N/A

IfName	Redirect interface	N/A	String, case-sensitive. Length: 2 to 47 characters.	N/A
UserNetworks	User networks info	Sublist	N/A	For more information, see the UserNetworks table

ALR/RedirectTunnels/UserNetworks

This table contains RedirectTunnels/UserNetworks information.

XML structure

Please refer to the XML structure of RedirectTunnels.

Table description

Item	Description
Feature name	ALR
Table name	UserNetworks
Table type	Multi-instance table
Row name	UserNetwork
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the NetworkIpAddress does not belong to any VPN.
NetworkIpAddress	User ip network address for UP	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address:For example, 1.0.0.1. IPv6 address, For example, 2001:12::1:2.
NetworkIpMaskLen	User ip network address mask len for UP	Index	IPv4: Unsigned integer, Value range: 1 to 32 IPv6: Unsigned integer, Value range: 1 to 128	if NetworkIpAddress is IPv4, this parameter's Value range is 1 to 32 if NetworkIpAddress is IPv6, this parameter's Value range is 1 to 128

Column name	Column description	Column type	Data type and restrictions	Remarks
Upid	UP id	N/A	Unsigned integer, Value range: 1024 to ~	Refence to: RedirectTunnels/Upid

ALR/ServiceFeatures

This table contains service feature information.

XML structure

```
<ALR>
  <ServiceFeatures>
    <ServiceFeature>
      <ServiceType></ServiceType>
      <DestPort></DestPort>
      <SourceIps>
        <SourceIp>
          <VRF></VRF>
          <IpAddress></IpAddress>
        </SourceIp>
      </SourceIps>
    </ServiceFeature>
  </ServiceFeatures>
</ALR>
```

Table description

Item	Description
Feature name	ALR
Table name	ServiceFeatures
Table type	Multi-instance table
Row name	ServiceFeature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Config service type	Index	• 0—DHCPV4. • 1—DHCPV6. • 2—PORTAL. • 3—RADIUS-DAE.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DestPort	Destination port of receiving packet	N/A	Non-negative integer. Value range: 1 to 65535.	Example: 2000.
SourceIps	Source ip info	Sublist	N/A	For more information, see the SourceIps table.

ALR/ServiceFeatures/SourceIps

This table contains source ip address for receiving Service packets.

XML structure

Please refer to the XML structure of ServiceFeatures.

Table description

Item	Description
Feature name	ALR
Table name	ServiceSourceIps
Table type	Multi-instance table
Row name	ServiceSourceIp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Config service type	Index	• 0—DHCPV4. • 1—DHCPV6. • 2—PORTAL. • 3—RADIUS-DAE.	Refence to: ServiceFeatures/Service Type
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IpAddress does not belong to any VPN.
IpAddress	Source ip of service packet	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address:For example, 1.0.0.1. IPv6 address, For example, 2001:12::1:2.

ALR/GlobalRedirects

This table contains the distribution of global redirection matching information.

XML structure

```
<ALR>
  <GlobalRedirects>
    <GlobalRedirect>
      <MatchVRF></MatchVRF>
      <MatchDestIpAddress></MatchDestIpAddress>
      <RedirectIfName></RedirectIfName>
      <RedirectVRFId></RedirectVRFId>
    </GlobalRedirect>
  </GlobalRedirects>
</ALR>
```

Table description

Item	Description
Feature name	ALR
Table name	GlobalRedirects
Table type	Multi-instance table
Row name	GlobalRedirect
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchVRF	Match VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the IpAddress does not belong to any VPN.
MatchDestIpAddress	Match destination IP	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address:For example, 1.0.0.1. IPv6 address, For example, 2001:12::1:2.
RedirectIfName	Redirect interface	N/A	String, case-sensitive. Length: 2 to 47 characters.	N/A
RedirectVRFId	Redirect vpn id	N/A	Unsigned integer, Value range: 0 ~ 65535.	public vpn:0 invalid value:65535

AntiVirus/SignatureManualUpgrading

This table contains the information of AntiVirus signatures manual upgrade.

XML structure

```
<AntiVirus>
  <SignatureManualUpgrading>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrading>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL the upgrade signature file.	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 character.	N/A
Location	The Location of the file.	N/A	Enumeration: • 0—Local • 1—remote	If Location is set to 0, the device deletes the signature file after the signature library update is complete.

AntiVirus/SignatureAutoUpgradeNow

This table contains the information of AntiVirus signatures upgrade at once.

XML structure

```
<AntiVirus>
  <SignatureAutoUpgradeNow>
    <UpgradeNow></UpgradeNow>
  </SignatureAutoUpgradeNow>
</AntiVirus>
```

Table description

Item	Description

        <AppName></AppName>
        <Action></Action>
      </Application>
    </Policy>
  </RuleInPolicy>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicy
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Protocol	Protocol configuration	DataStructure	Members include: • ProtocolName • Direction • Action	N/A
ProtocolName	Protocol name	N/A	String: case-insensitive • HTTP • FTP • SMTP • POP3	N/A

			• IMAP • NFS • SMB	
Direction	Direction of protocol traffic	N/A	Enumeration: • **0**—Upload • **1**—Download • **2**—Both	N/A
Action	Actions for the specified protocol's traffic	N/A	Enumeration: • **1**—Alert • **2**—Block • **3**—Redirect	N/A
FileSize	File Size	N/A	Unsigned integer. Value range: 1 to 24	The unit is MB，and default value is 1MB.
Application	Application configuration	Data Structure	Members include: • AppName • Action	N/A
AppName	Application name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Actions for the specified application	N/A	Enumeration: • **1**—Alert • **2**—Block • **3**—Permit	N/A

AntiVirus/SignatureAutoUpgrading

This table contains the information of AntiVirus signatures auto upgrading.

XML structure

```
<AntiVirus>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 03:01:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: • **0**—Week • **1**—Periodic	Default is 1
Day	Days	N/A	Unsigned integer. Value range: 0 to 15.	When Type is **0**, the value range is 0 to 6. Otherwise, the value range is 1 to 15. The default is 3.

AntiVirus/ActionDefaultParameters

This table contains Antivirus action default parameter information.

XML structure

```
<AntiVirus>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	action	Index	Enumeration: • **1**—Block • **2**—Capture • **3**—Logging • **4**—Redirect • **5**—Mail	N/A
ParameterName	Parameter-Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is from DIM table. E.g. If Action is block, the ParameterName's value is from DIM/BlockParameters.

AntiVirus/RuleInPolicySigID

This table contains the Exception sigs information of an AntiVirus policy.

XML structure

```
<AntiVirus>
  <RuleInPolicySigID>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionSigID></ExceptionSigID>
    </Policy>
  </RuleInPolicySigID>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicySigID
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionSigID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	N/A

AntiVirus/CloudQueryConfig

This table contains cloud query configuration.

XML structure

```
<AntiVirus>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 100000 to 200000.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

AntiVirus/RuleInPolicyMd5

This table contains the MD5 exception information of an AntiVirus policy.

XML structure

```
<AntiVirus>
  <RuleInPolicyMd5>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionMd5></ExceptionMd5>
    </Policy>
  </RuleInPolicyMd5>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicyMd5
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionMd5	Value of the MD5	Index	String: case-insensitive. Length: 32 characters.	N/A

AntiVirus/EnhancedInspectConfig

This table contains deep inspect configuration. The HostAddr config have been moved to the DIM module.

XML structure

```
<AntiVirus>
  <EnhancedInspectConfig>
```

```
    <HostAddr></HostAddr>
    <FileSizeMax></FileSizeMax>
    <Enabled></Enabled>
  </EnhancedInspectConfig>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	EnhancedInpectConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostAddr	Address of the host	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FileSizeMax	Max size of the file	N/A	Unsigned integer. Value range: 1 to 10	The unit is MB，and default value is 1MB.
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Protocol	Protocol configuration	DataStructure	Members include: • ProtocolName • Direction • Action	N/A
ProtocolName	Protocol name	N/A	String: case-insensitive. • HTTP • FTP • SMTP • POP3 • IMAP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• NFS • SMB	
Direction	Direction of protocol traffic	N/A	Enumeration: • **0**—Upload • **1**—Download • **2**—Both	N/A
Action	Actions for the specified protocol's traffic	N/A	Enumeration: • **1**—Alert • **2**—Block • **3**—Redirect	N/A
FileSize	File Size	N/A	Unsigned integer. Value range: 1 to 24.	The unit is MB，and default value is 1MB.
Application	Application configuration	Data Structure	Members include: • AppName • Action	N/A
AppName	Application name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Actions for the specified application	N/A	Enumeration: • **1**—Alert • **2**—Block • **3**—Permit	N/A

AntiVirus/Signatures

This table contains the pre-defined rules information of an AntiVirus policy.

XML structure

```
<AntiVirus>
  <Signatures>
    <Signature>
      <SignatureID></SignatureID>
      <Severity></Severity>
      <SignatureName></SignatureName>
      <FamilyName></FamilyName>
    </Signature>
  </Signatures>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus

Table name	Signatures
Table type	Multi-instance table
Row name	Signature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SignatureID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	From signature file.
Severity	Severity of the virus	N/A	Enumeration: • **1**—Critical • **2**—High • **3**—Minor • **4**—Low	From signature file.
SignatureName	Name of the virus	N/A	String: case-insensitive. Length: 1 to 127 characters.	From signature file.
FamilyName	Name of the virus family	N/A	String: case-insensitive Length: 1 to 127 characters	From signature file.

AntiVirus/SignatureFileInfos

This table contains AntiVirus policy.

XML structure

```
<AntiVirus>
  <SignatureFileInfos>
    <FileInfo>
      <Version></Version>
      <FileName></FileName>
      <PublishedTime></PublishedTime>
      <Updates></Updates>
    </FileInfo>
  </SignatureFileInfos>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureFileInfos

Table type	Multi-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Version	signature file version	Index	Enumeration: • **1**—Current • **2**—Latest • **3**—Factory	N/A
FileName	Name of the signature file	N/A	String: case-insensitive. Length: 1 to 31 characters.	v.v(2.1)
PublishedTime	The time when the signature is published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Consider time-zone
Updates	Updating Information	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A

AntiVirus/UpdatePercentage

This table contains the percentage of update.

XML structure

```
<AntiVirus>
  <UpdatePercentage>
    <Percentage></Percentage>
    <ErrorCode></ErrorCode>
  </UpdatePercentage>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	UpdatePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Percentage of update	N/A	Unsigned integer. Value range: 0 to 100.	When the value range is 0 to 100, it means in upgrading, Otherwise, it means error
ErrorCode	Error Code of update	N/A	Enumeration: 0—Success 1—Invaild_License 2—Invaild Sigfile 3—Unable connect to Service 4—No Enough flash space 5—No Enough memory	N/A

AntiVirus/SignatureAutoUpgrading

This table contains the information of AntiVirus signatures auto upgrading.

XML structure

```
<AntiVirus>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 03:01:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: • **0**—Week • **1**—Periodic	Default is 1
Day	Days	N/A	Unsigned integer. Value range: 0 to 15.	When Type is **0**, the value range is 0 to 6. Otherwise, the value range is 1 to 15. The default is 3.

AntiVirus/ActionDefaultParameters

This table contains Antivirus action default parameter information.

XML structure

```
<AntiVirus>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	action	Index	Enumeration: • **1**—Block • **2**—Capture • **3**—Logging • **4**—Redirect • **5**—Mail	N/A
ParameterName	Parameter-Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is from DIM table. E.g. If Action is block, the ParameterName's value is from DIM/BlockParameters.

AntiVirus/RuleInPolicySigID

This table contains the Exception sigs information of an AntiVirus policy.

XML structure

```
<AntiVirus>
  <RuleInPolicySigID>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionSigID></ExceptionSigID>
    </Policy>
  </RuleInPolicySigID>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicySigID
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionSigID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	N/A

AntiVirus/FamilyInfos

This table contains information about virus families displayed on paginated lists.

XML structure

```
<AntiVirus>
  <FamilyInfos>
     <FamilyInfo>
       <UserID></UserID>
       <Position></Position>
       <TotalCount></TotalCount>
       <FamilyID></FamilyID>
       <FamilyName></FamilyName>
    </FamilyInfo>
  </FamilyInfos>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	FamilyInfos
Table type	Multi-instance table
Row name	FamilyInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of the current virtual user.	Index	Unsigned integer.	The value is used to identify each query results in back end, and send to fore-end

Column name	Column description	Column type	Data type and restrictions	Remarks
				to get other paginated results when query results is more than one page.
Position	Position of the family on the entire virus families list.	Index	Unsigned integer.	N/Az
TotalCount	Total number of virus families.	N/A	Unsigned integer.	If the query function is used, the total number of virus families in the query results is displayed.
FamilyID	ID of the family.	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the anti-virus signature file.
FamilyName	Name of the family.	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the anti-virus signature file.

AntiVirus/CloudQueryConfig

This table contains cloud query configure information.

XML structure

```
<AntiVirus>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 100000 to 200000.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

AntiVirus/CloudQueryState

This table contains cloud query status information.

XML structure

```
<AntiVirus>
  <CloudQueryState>
    <HostName></HostName>
    <HostState></HostState>
    <HostStateErrCode></HostStateErrCode>
  </CloudQueryState>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryState
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
HostState	Status of the host	N/A	Enumeration: • **0**—Available • **1**—Unavailable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HostStateErrCode	Error code of cloud query	N/A	Unsigned integer. Value range: 0 to 3.	N/A

AntiVirus/RuleInPolicyMd5

This table contains the MD5 exception information of an AntiVirus policy.

XML structure

```
<AntiVirus>
  <RuleInPolicyMd5>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionMd5></ExceptionMd5>
    </Policy>
  </RuleInPolicyMd5>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicyMd5
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionMd5	Value of the MD5	Index	String: case-insensitive. Length: 32 characters.	N/A

AntiVirus/EnhancedInspectConfig

This table contains deep inspect configuration.

XML structure

```
<AntiVirus>
  <EnhancedInspectConfig>
    <HostAddr></HostAddr>
    <FileSizeMax></FileSizeMax>
    <Enabled></Enabled>
  </EnhancedInspectConfig>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	EnhancedInspectConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostAddr	Address of the host	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FileSizeMax	Max size of the file	N/A	Unsigned integer. Value range: 1 to 10	The unit is MB，and default value is 1MB.
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false

AntiVirus/EnhancedInspectState

This table contains C3000 server connection status information.

XML structure

```
<AntiVirus>
  <EnhancedInspectState>
    <HostAddr></HostAddr>
    <HostState></HostState>
    <Supported></Supported>
  </EnhancedInspectState>
</AntiVirus>
```

Table description

Item	Description
Feature name	AntiVirus
Table name	EnhancedInspectState
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostAddr	IP address of the host	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
HostState	Status of the host	N/A	Enumeration: • **0**—Disconnected. • **1**—Connecting. • **2**—Connected.	N/A
Supported	Support for enhanced anti-virus inspection	N/A	Boolean: • true—Supported. • false—Not supported.	N/A

Contents

AntiVirus/SignatureManualUpgrading

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	Please install a valid license. 请安装正确的license。

AntiVirus/SignatureAutoUpgradeNow

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	Please install a valid license. 请安装正确的license。
The signature file is updating. Please try again later. 特征库正在升级，请稍后再试。	Please try later. 正在升级，稍后再试。
Operation failed because a connection to the signature library server could not be established. 操作失败: 连接特征库服务器失败。	Please examine your network or server. 请检查网络和服务器是否正常。
Cannot execute this operation because of memory alert. 由于内存门限不能执行此操作。	Please try later. 待设备内存门限解除后再试。
The signature version is up to date. No update is needed. 特征库已是最新版本，不需要进行升级。	No update is needed because the version is up to date. 不需要升级，已经是最新版本。
Cannot update the signature library because the required service card cannot be found. 未检测到业务板，特征库升级失败。	Cannot update the signature library because the required service card cannot be found. 特征库升级操作需要有业务板。

AntiVirus/RuleInPolicy

Message	Explanation
The maximum number of 100 application exceptions already reached. 最多可配置100个应用例外。	A maximum of 100 application exceptions can be configured. 最多可配置100个应用例外。

AntiVirus/RuleInPolicySigID

Message	Explanation
The maximum number of 512 signature exceptions already reached. 最多可配置512个病毒例外。	A maximum of 512 signature exceptions can be configured. 最多可配置512个病毒例外。

AP

AP/ResetAP

This table contains information of AP resetting.

XML structure

```
<AP>
  <ResetAP>
    <AP>
      <ApName></ApName>
    </AP>
  </ResetAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ResetAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

AP/ResetAllAP

This table contains information of resetting all APs.

XML structure

```
<AP>
  <ResetAllAP>
    <Global>
      <ResetType></ResetType>
    </Global>
```

```
  </ResetAllAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ResetAllAP
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ResetType	Which type of APs will be reset.	Index	Enumeration: • **1**—All. • **2—Unauthenticated.**

AP/PersistentAP

This table contains information of AP persistence.

XML structure

```
<AP>
  <PersistentAP>
    <AP>
      <ApName></ApName>
    </AP>
  </PersistentAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	PersistentAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

AP/RegroupAPByName

This table contains information of AP regrouping.

XML structure

```
<AP>
  <RegroupAPByName>
    <AP>
      <ApName></ApName>
      <GroupName></GroupName>
    </AP>
  </RegroupAPByName>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RegroupAPByName
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

AP/RegroupAPByMac

This table contains information of AP regrouping by MAC address.

XML structure

```
<AP>
  <RegroupAPByMac>
    <MAC>
      <MacAddress></MacAddress>
      <GroupName></GroupName>
    </MAC>
  </RegroupAPByMac>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RegroupAPByMac
Table type	Multi-instance table
Row name	MAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	AP MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

AP/RegroupAPBySerialID

This table contains information of AP regrouping by serial ID.

XML structure

```
<AP>
  <RegroupAPBySerialID>
    <SerialID>
      <SerialID></SerialID>
      <GroupName></GroupName>
    </SerialID>
  </RegroupAPBySerialID>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RegroupAPBySerialID
Table type	Multi-instance table
Row name	SerialID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SerialID	AP serial ID	Index	String, uppercase. Length: 1 to 127 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

AP/AuthenticateAP

This table contains information of authenticating APs.

XML structure

```
<AP>
  <AuthenticateAP>
    <AP>
      <ApName></ApName>
      <Action></Action>
    </AP>
  </AuthenticateAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	AuthenticateAP
Table type	Multi-instance table
Row name	AP

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Action	The authenticating action type.	N/A	Enumeration: • **1**—Accept. • **2—Reject.**	N/A

AP/AuthenticateAllAP

This table contains information of authenticating all APs.

XML structure

```
<AP>
  <AuthenticateAllAP>
    <Global>
      <Action></Action>
    </Global>
  </AuthenticateAllAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	AuthenticateAllAP
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Action	The authenticating action type.	N/A	Enumeration: • **1**—Accept. • **2—Reject.**

AP/ImportAuthenticateFile

This table contains information of importing authenticating file.

XML structure

```
<AP>
  <ImportAuthenticateFile>
    <FileName></FileName>
  </ImportAuthenticateFile>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ImportAuthenticateFile
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	The TXT file name with full path which will be imported as the AP ACL rules for AP authentication.	N/A	String, case-insensitive. Length: 1 to 255 characters.	Should end with “.txt” and specify the authentication ACL first.

AP/ProvisionAP

This table contains information of provisioning APs.

XML structure

```
<AP>
  <ProvisionAP>
    <AP>
      <ApName></ApName>
      <Action></Action>
    </AP>
  </ProvisionAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ProvisionAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Action	The authenticating action type.	N/A	Enumeration: • **1**—Provision. • **2—Reset provisioning.**	N/A

AP/RenameAP

This table contains information about renaming APs.

XML structure

```
<AP>
  <RenameAP>
    <AP>
      <ApName></ApName>
      <NewApName></NewApName>
    </AP>
  </RenameAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RenameAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
NewApName	New AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

AP/ SetRadioRun

This table contains radio information of run data.

XML structure

```
<AP>
  <SetRadioRun>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Channel></Channel>
      <Power></Power>
    </Radio>
  </SetRadioRun>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	SetRadioRun
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Channel	Working channel	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The value range depends on the AP/ChannelDB/SupportedChannelList” column.	
Power	Transmit power	N/A	Unsigned short. Value range: 1 to “AP/PowerDB/ValidMaxPower” .Unit: dBm	N/A

AP/ImageDeploy

This table contains information of ap image deploy.

XML structure

```
<AP>
  <ImageDeploy>
    <Global>
      <ImageDeployType></ImageDeployType>
    </Global>
  </ImageDeploy >
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ImageDeploy
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ImageDeploy Type	Which type of APs will be image deploy	Index	Enumeration: • **1**—All. • **2—**Unauthenticated**.**	ImageDeployType

AP/DenyConnect

This table contains information of deny ap connect.

XML structure

```
<AP>
  <DenyConnect>
    <Global>
      <DenyConnectType></DenyConnectType>
    </Global>
  </DenyConnect>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	DenyConnect
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DenyConnect Type	The deny connnect action type.	Index	Enumeration: • **1**—Disable. • **2**—Enable.	DenyConnectType

AP/APGroupRemoteCfgSyn

This table contains information of AP group remote configuration synchronization action.

XML structure

```
<AP>
  <APGroupRemoteCfgSyn>
    <Syn>
      <GroupName></GroupName>
    </Syn>
  </APGroupRemoteCfgSyn>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRemoteCfgSyn
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A

AP/APRemoteCfgSyn

This table contains information of AP remote configuration synchronization action.

XML structure

```
<AP>
  <APRemoteCfgSyn>
    <Syn>
      <APName></APName>
    </Syn>
  </APRemoteCfgSyn>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APRemoteCfgSyn
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
APName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

AP/LedBlinkAP

This table contains AP LED flashing information.

XML structure

```
<AP>
  <LedBlinkAP>
    <AP>
      <ApName></ApName>
      <Time></Time>
    </AP>
  </LedBlinkAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	LedBlinkAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Time	LED flashing duration	Index	Unsigned short. Value range: 1 to 60. Unit: seconds	N/A.

</AP>
```

Table description

Item	Description
Feature name	AP
Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoAp	Whether an AP can connect the AC without creating a manual AP.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
AutoPersistent	When an auto AP connects the AC , whether convert the AP to manual AP automatically.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 standard.
RegionLock	Whether the region code of the AC is locked	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch Default value is false.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable Default value is true.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
Gps	Whether to open the Gps report switch.	N/A	Boolean: • true—Enable • false—Disable	Only for FatAP Type
LocalAC	Whether to enable Local ac.	N/A	Boolean: • true—Enable • false—Disable	Only for Local-ac Type
CentralACIPv4	The IPv4 Central AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only for Local-ac Type
CentralACIPv6	The IPv6 Central AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Only for Local-ac Type
ControlAddress	CAPWAP control address configuration	N/A	Boolean: • true—Enable • false—Disable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
VirtualAp	Whether an AP can creat a virtual AP.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A

AP/ManualAP

This table contains manual AP information.

Table description

Item	Description
Feature name	AP
Table name	ManualAP
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Characters will be automatically convert case. Refer to AP/APDB. This column is mandatory when the row is being created. This column is not writable when the row is being deleted, removed. This column should not be changed when the row is being replaced or merged.
CfgSerialID	Configured AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
CfgMacAddress	Configured AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 stantard.

RegionLock	Whether the region code of the AP is locked.	N/A	Boolean: • true—Support. • false—Not support.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messages which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 3 to 255.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8. Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of AP.	N/A	String, Length: 1 to 499 characters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
ControlAddress	CAPWAP control address configuration.	N/A	Boolean:	N/A

			• true—Enable. • false—Disable.	
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
LedMode	LED mode	N/A	Enumeration: • 0—Normal • 1—Quiet • 2—Awake • 3—Always-on • 4— Inherit	N/A
MapConfiguration	deploy a configuration file to an AP.	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
VirtualAC	VirtualAC info	Data structure	Members include: • VirtualACIPv4 • VirtualACIPv6 • Vlan	N/A
VirtualACIPv4	The IPv4 virtual AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
VirtualACIPv6	The IPv6 virtual AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Vlan	VLAN	N/A	Unsinged integer. Value range: 1 to 4094.	N/A

Table description

Item	Description
Feature name	AP
Table name	RadioOfManualAP
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) • 9—802.11ax(5GHz)	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
Status	Radio status	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A
RateMulticast	Multicast rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto If this column is not configured, the multicast rate will be calculated automatically.	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateSupported	Supported rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
Preamble	Preamble.	N/A	Boolean: • true—Short. • false—Long. The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration tim.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	Protection threshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	Short retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgChannel	Configured channel number.	N/A	Unsigned short. The value range conforms to “AP/ChannelDB/SupportedChannelList” column. If this column is not configured, the channel number will be calculated automatically.	If you set the value to 15, the radio automatically selects an optimal channel, and then locks the channel. If you set the value to 16, the radio selects an optimal channel but does not lock the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power	N/A	Unsigned short. Value range: 0 to “AP/PowerDB/ValidMaxPower”. Unit: dBm	Setting this field to 0 indicates using the default maximum power.
CfgMaxPowerPercent	Configured maximum power in percentage	N/A	Unsigned short. Value range: 1 to 10. Unit: null.	• When both CfgMaxPower and CfgMaxPowerPercent are configured, CfgMaxPowerPercent has higher priority. • Value 1 represents 10%, 2 represents 20%, etc. The Remove operation will set the value of this parameter to 10 by default.
TimeRangeName	The name of time range.	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
ProtectionMode	Protection Mode	N/A	Enumeration: • 1—rts-cts • 2—cts-to-self	N/A
CfgAntennaType	Configured Antenna Type	N/A	String, case-sensitive. Length: 1 to 64 characters	N/A

Table description

Item	Description
Feature name	AP
Table name	PrvsOfManualAP
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
ACHostNam e	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.

Column name	Column description	Column type	Data type and restrictions	Remarks
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1,1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
GatewayIPv4	Specify a gateway by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
GatewayIPv6	Specify a gateway by its IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
IPv4Address	Specify an IP address that the AP uses to establish a CAPWAP tunnel.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
IPv6Address	Specify an IPv6 address that the AP uses to establish a CAPWAP tunnel.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Dot1xSupplAnonyIdent	Specify an anonymous identifier for the supplicant.	N/A	String. Length: 1 to 253 characters.	N/A
Dot1xSupplEapMethod	Specify an EAP authentication method.	N/A	Enumeration: • 1—md5 • 2—peap-gtc • 3—peap-mschapv2 • 4—ttls-gtc • 5—ttls-mschapv2	N/A
Dot1xSupplEnable	Enable the 802.1X supplicant feature.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Dot1xSupplPasswdCipher	Specify a ciphertext password for the 802.1X supplicant.	N/A	String. Length: 1 to 201 characters.	N/A
Dot1xSupplPasswdSimple	Specify a plaintext password for the 802.1X supplicant.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1xSuppl Username	Specify a username for the 802.1X supplicant.	N/A	String. Length: 1 to 253 characters.	N/A

AP/PrvsOfManualAPACIPv4

This table contains provision information of manual AP of IPv4 address.

XML structure

</AP>
```

Table description

Item	Description
Feature name	AP
Table name	EdcaRadio
Table type	Multi-instance table
Row name	EdcaPara
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned short. Value range: 1 to 31.	N/A
AccessCategory	A label for the common set of enhanced distributed channel access parameters that are used by a WMM STA to conten d for the channel in order to transmit MSDUs with certain priorities.	Index	Enumeration: • 0—BE. • 1—BK. • 2—VI. • 3—VO.	N/A
Noack	Whehter acknowledgement is required.	N/A	Boolean: • true—Not required. • false—Required. The default value is false.	N/A
CfgAifsn	ArbitrationInter Frame Spacing Number.	N/A	The value range conforms to “AP/RadioIDB/Aifsn” column.	N/A
CfgEcwmin	Exponent form of CWmin.	N/A	The value range conforms to “AP/RadioIDB/Ecwmin” column.	N/A
CfgEcwmax	Exponent form of CWmax.	N/A	The value range conforms to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			“AP/RadioIDB/Ecwmax” column.	
CfgTxOpLimit	Transmission oppurtunity limit.	N/A	The value range conforms to “AP/RadioIDB/TxOpLimit” column.	N/A

AP/RadioWmm

This table contains radio WMM information.

XML structure

Table description

Item	Description
Feature name	AP
Table name	Radio11n
Table type	Multi-instance table
Row name	Dot11n
Restrictions	The table is only for 802.11n and 802.11ac radio mode.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
Ampdu	A-mpdu function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
Amsdu	A-msdu function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
ShortGI	Short GI function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
Stbc	STBC function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
Ldpc	LDPC function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
MimoMode	MIMO mode.	N/A	Enumeration: • 0—Inherit • 17—1×1. • 34—2×2. • 51—3×3. • 68—4×4. • 85—5×5. • 102—6×6. • 119—7×7. • 136—8×8.	N/A
Greenap	Green AP function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SmartAntenna	Smart antenna function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit.	N/A
SmartAntennaPolicy	Smart antenna policy.	N/A	Enumeration: • 1—Auto • 2—High-availability • 3—High-throughput	Effective only when SmartAntenna is enabled.
Client11nOnly	Client dot11n only function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Inherit .	N/A
BandwidthAutoswitch	Bandwidth autoswitch function.	N/A	Boolean: • true—Enable. • false—Disable. The column is only for 2.4GHz radio mode, and AP/RadioOfManualAP/Bandwidth must be 2.	N/A

AP/RadioMCS

This table contains MCS information of AP radios.

XML structure

```
<AP>
  <RadioMCS>
    <MCS>
      <ApName></ApName>
      <RadioID></RadioID>
      <MCSMulticast></MCSMulticast>
      <MCSMandatory></MCSMandatory>
      <MCSSupported></MCSSupported>
    <MCS>
  </RadioMCS >
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	WlanEnable
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255.	The MCSSupported must be greater than or equal to the MCSMandatory.

AP/Radio11ac

This table contains radio 802.11ac information.

XML structure

```
<AP>
  <Radio11ac>
    <Dot11ac>
      <ApName></ApName>
      <RadioID></RadioID>
      <Client11acOnly></Client11acOnly>
    </Dot11ac>
  </Radio11ac>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	Radio11ac
Table type	Multi-instance table
Row name	Dot11ac
Restrictions	The table is only for 802.11ac radio mode.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
Client11acOnly	Client dot11ac only function.	N/A	Boolean: • true—Enable. • false—Disable.	N/A

AP/RadioVHTMCS

This table contains radio VHTMCS information.

XML structure

```
<AP>
  <RadioVHTMCS>
    <VHTMCS>
      <ApName></ApName>
      <RadioID></RadioID>
      <VHTNSSMulticast></VHTNSSMulticast>
      <VHTMCSIndex></VHTMCSIndex>
      <VHTNSSMandatory></VHTNSSMandatory>
      <VHTNSSSupported></VHTNSSSupported>
    </VHTMCS>
  </RadioVHTMCS>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RadioVHTMCS
Table type	Multi-instance table
Row name	VHTMCS
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
VHTNSSMulticast	The NSS for multicast VHT-MCS	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMulticast must be smaller than or equal to the VHTNSSMandatory.
VHTMCSIndex	The index for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 9, 255. Default value is 255.	N/A
VHTNSSMandatory	The maximum NSS for mandatory VHT-MCS	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMandatory must be smaller than or equal to the VHTNSSSupported, and the VHTNSSMandatory must be greater than or equal to the VHTNSSMulticast.
VHTNSSSupported	The maximum NSS for supported VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSSupported must be greater than or equal to the VHTNSSMandatory.

AP/APGroup

This table contains information of AP groups.

XML structure

```
<AP>
  <APGroup>
    <Group>
      <Name></Name>
```

```
      <RegionCode></RegionCode>
      <RegionLock></RegionLock>
      <Priority></Priority>
      <Preempt></Preempt>
      <EchoInterval></EchoInterval>
      <EchoCount></EchoCount>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <StatisInterval></StatisInterval>
      <FirmwareUpgrade></FirmwareUpgrade>
      <BackupACIPv4></BackupACIPv4>
      <BackupACIPv6></BackupACIPv6>
      <LocationName></LocationName>
      <Description></Description>
      <TunnelEncryption></TunnelEncryption>
      <ProvisionAutoUpgrade></ProvisionAutoUpgrade>
      <ProvisionAutoRecover></ProvisionAutoRecover>
      <LedMode></LedMode>
      <VirtualAC>
        <VirtualACIPv4></VirtualACIPv4>
        <VirtualACIPv6></VirtualACIPv6>
        <Vlan></Vlan>
      </VirtualAC>
    </Group>
  </APGroup>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 stantard.

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionLock	Whether the region code of the AP group is locked.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch Default value is false.	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds Default value is 10 seconds.	N/A
EchoCount	The allowed maximum number of echo messges which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 3 to 255. Default value is 3.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8. Unit: seconds Default value is 5 seconds.	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds Default value is 3.	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable Default value is true.	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: • true—Enable • false—Disable	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: • true—Enable • false—Disable	N/A
LedMode	LED mode	N/A	Enumeration: • 0—Normal • 1—Quiet • 2—Awake • 3—Always-on	N/A
MapConfiguration	AP Configuration file name	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
VirtualAC	VirtualAC info	Data structure	Members include: • VirtualACIPv4 • VirtualACIPv6 • Vlan	N/A
VirtualACIPv4	The IPv4 virtual AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
VirtualACIPv6	The IPv6 virtual AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Vlan	VLAN	N/A	Unsinged integer. Value range: 1 to 4094.	N/A

AP/APGroupMACRule

This table contains information of AP groups' rules of MAC address.

XML structure

```
<AP>
  <APGroupMACRule>
    <Rule>
      <GroupName></GroupName>
```

```
      <MacAddress></MacAddress>
    </Rule>
  </APGroupMACRule>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupMACRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
MacAddress	AP MAC address.	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

AP/APGroupSerialIDRule

This table contains information of AP groups' rules of serial ID.

XML structure

```
<AP>
  <APGroupSerialIDRule>
    <Rule>
      <GroupName></GroupName>
      <SerialID></SerialID>
    <Rule>
  </APGroupSerialIDRule>
</AP>
```

Table description

Item	Description
Feature name	AP

Item	Description
Table name	APGroupSerialIDRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
SerialID	AP serial ID	Index	String, uppercase. Length: 1 to 127 characters.	N/A

AP/APGroupNameRule

This table contains information of AP groups' rules of AP name.

XML structure

```
<AP>
  <APGroupNameRule>
    <Rule>
      <GroupName></GroupName>
      <APName></APName>
    <Rule>
  </APGroupNameRule>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupNameRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
APName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

AP/APGroupIPv4Rule

This table contains information of AP groups' rules of IPv4 address range.

XML structure

```
<AP>
  <APGroupIPv4Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv4Addr></IPv4Addr>
      <IPv4Wildcard></IPv4Wildcard>
    <Rule>
  </APGroupIPv4Rule>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupIPv4Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv4Addr	IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Wildcard	Wildcard mask for the IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 255.255.255.0.

AP/APGroupIPv6Rule

This table contains information of AP groups' rules of IPv6 address range.

XML structure

```
<AP>
  <APGroupIPv6Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv6Addr></IPv6Addr>
      <IPv6Wildcard></IPv6Wildcard>
    <Rule>
  </APGroupIPv6Rule>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupIPv6Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv6Addr	Source IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.
IPv6Wildcard	Length of the source IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	This column is available when the SrcAny column is false.

AP/APGroupModel

This table contains information of AP group models.

XML structure

```
<AP>
  <APGroupModel>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
    </Model>
  </APGroupModel>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupModel
Table type	Multi-instance table
Row name	Model
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

AP/APGroupRadio

This table contains information of AP group radios.

XML structure

```
<AP>
  <APGroupRadio>
    <Radio>
```

```
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <Mode></Mode>

      <FragmentThreshold></FragmentThreshold>
      <LongRetryThreshold></LongRetryThreshold>
      <ProtectionThreshold></ProtectionThreshold>
      <ShortRetryThreshold></ShortRetryThreshold>
      <CfgChannel></CfgChannel>
      <CfgMaxPower></CfgMaxPower>
      <ProtectionMode></ProtectionMode>
      <CfgAntennaType></CfgAntennaType>
    </Radio>
  </APGroupRadio>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRadio
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) • 9—802.11ax(5GHz)	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: • **1—**20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M Default value is 1 when the Mode is 1、2、3、4、6. Default value is 2 when the Mode is 5. Defautl value is 3 when the Mode is 7.	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: • 1—Support both 5GHz and 2.4GHz • 2—Support 5GHz only • 3—Support 2.4GHz only	N/A
Status	Radio status.	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMulticast	Multicast rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto If this column is not configured, the multicast rate will be calculated automatically. Default value: auto	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateMandatory	Mandatory rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps Default value: A. 1, 2Mbps(802.11b). B. 6, 12, 24Mbps(802.11a/802.11an) C. 1, 2, 5.5, 11Mbps(802.11g/802.11gn)	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateSupported	Supported rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps Default value: A. 5.5, 11Mbps(802.11b) B. 9, 18, 24, 36, 48, 54Mbps(802.11a/802.11an) C. 6, 9, 12, 18, 24, 36, 54Mbps(802.11g/802.11gn)	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps Default value: null.	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
Preamble	Preamble.	N/A	Boolean: • true—Short. • false—Long. The column is only for 2.4GHz radio mode. Default value: short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms Default value: 100	N/A
PowerLock	Lock the power.	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre). Default value: 1	N/A
MaxRxDuration	Max Reveived frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms. Default value: 2000	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte. Default value: 2346	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null. Default value: 4	N/A
ProtectionThreshold	Protection threshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte. Default value: 2346	N/A
ShortRetryThreshold	Short retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null. Default value: 7	N/A
CfgChannel	Configured channel number.	N/A	Unsigned short. The value range conforms to “AP/ChannelDB/SupportedChannelList” column. If this column is set to zero, the channel number will be calculated automatically.	If you set the value to 15, the radio automatically selects an optimal channel, and then locks the channel. If you set the value to 16, the radio selects an optimal channel but does not lock the channel.

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 0 to “AP/PowerDB/ValidMaxPower”. Unit: dBm	Setting this field to 0 indicates inheriting the setting.
ProtectionMode	Protection Mode	N/A	Enumeration: • 1—rts-cts • 2—cts-to-self	N/A
CfgAntennaType	Configured Antenna Type	N/A	String, case-sensitive. Length: 1 to 64 characters	N/A

AP/APGroupRadio11n

ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
Ampdu	A-mpdu function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
Amsdu	A-msdu function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
ShortGI	Short GI function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
Stbc	STBC function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
Ldpc	LDPC function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MimoMode	MIMO mode.	N/A	Enumeration: • 0—Undo. • 17—1×1. • 34—2×2. • 51—3×3. • 68—4×4. • 85—5×5. • 102—6×6. • 119—7×7. • 136—8×8.	N/A
Greenap	Green ap function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
SmartAntenna	Smart antenna function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
SmartAntennaPolicy	Smart antenna policy.	N/A	Enumeration: • 1: Auto • 2: High-availability • 3: High-throughput	Effective only when SmartAntenna is enabled.
Client11nOnly	Client dot11n only function.	N/A	Enumeration: • 0—Disable. • 1—Enable. • 2—Undo.	N/A
BandwidthAutoswitch	Bandwidth autoswitch function.	N/A	Boolean: • true—Enable. • false—Disable. The column is only for 2.4GHz radio mode, and AP/APGroupRadio/Bandwidth must be 2.	N/A

AP/APGroupRadioMCS

This table contains MCS information of AP Group radios.

XML structure

```
<AP>
  <APGroupRadioMCS>
    <RadioMCS>
      <GroupName></GroupName>
      <ModelName></ModelName>
```

```
      <RadioID></RadioID>
      <MCSMulticast></MCSMulticast>
      <MCSMandatory></MCSMandatory>
      <MCSSupported></MCSSupported>
    <RadioMCS>
  </APGroupRadioMCS>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	WlanEnable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Group name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.

Column name	Column description	Column type	Data type and restrictions	Remarks
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 76.	The MCSSupported must be greater than or equal to the MCSMandatory.

AP/APGroupRadio11ac

This table contains 802.11ac information of AP group radios.

XML structure

```
<AP>
  <APGroupRadio11ac>
    <Radio11ac>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <Client11acOnly></Client11acOnly>
    </Radio11ac>
  </APGroupRadio11ac>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRadio11ac
Table type	Multi-instance table
Row name	Radio11ac
Restrictions	The table is only for 802.11ac radio mode.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
Client11acOnly	Client dot11ac only function.	N/A	Boolean: • true—Enable. • false—Disable.	N/A

AP/APGroupRadioVHTMCS

This table contains radio VHTMCS information.

XML structure

```
<AP>
  <APGroupRadioVHTMCS>
    <RadioVHTMCS>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <VHTNSSMulticast></VHTNSSMulticast>
      <VHTMCSIndex></VHTMCSIndex>
      <VHTNSSMandatory></VHTNSSMandatory>
      <VHTNSSSupported></VHTNSSSupported>
    </RadioVHTMCS>
  </APGroupRadioVHTMCS>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRadioVHTMCS
Table type	Multi-instance table
Row name	RadioVHTMCS
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
VHTNSSMulticast	The NSS for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMulticast must be smaller than or equal to the VHTNSSMandatory.
VHTMCSIndex	The index for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 9, 255. Default value is 255.	N/A
VHTNSSMandatory	The maximum NSS for mandatory VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMandatory must be smaller than or equal to the VHTNSSSupported, and the VHTNSSMandatory must be greater than or equal to the VHTNSSMulticast.
VHTNSSSupported	The maximum NSS for supported VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 8.	The VHTNSSSupported must be greater than or equal to the VHTNSSMandatory.

AP/APGroupPrvs

This table contains provision information of AP Group.

XML structure

```
<AP>
  <APGroupPrvs>
    <Prvs>
      <GroupName></GroupName>
      <ACHostName></ACHostName>
      <ACIPv4></ACIPv4>
      <ACIPv6></ACIPv6>
      <DnsDomain></DnsDomain>
      <DnsServerIPv4></DnsServerIPv4>
      <DnsServerIPv6></DnsServerIPv6>
    </Prvs>
  </APGroupPrvs>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupPrvs
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GroupName.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1,1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

AP/APGroupPrvsACIPv4

This table contains provision information of AP Group of IPv4 address.

XML structure

```
<AP>
  <APGroupPrvsACIPv4>
    <Prvs>
      <GroupName></GroupName>
```

```
      <ACIPv4></ACIPv4>
    </Prvs>
  </APGroupPrvsACIPv4>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv4
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

AP/APGroupPrvsACIPv6

This table contains provision information of AP group of IPv6 address.

XML structure

```
<AP>
  <APGroupPrvsACIPv6>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv6></ACIPv6>
    </Prvs>
  </APGroupPrvsACIPv6>
</AP>
```

Table description

Item	Description
Feature name	AP

Item	Description
Table name	APGroupPrvsACIPv6
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GroupName.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv6	Specify an AC by its IPv6 address.	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.

AP/Location

This table contains the informations of locations.

XML structure

```
<AP>
  <Location>
    <Location>
      <LocationName></LocationName>
    </Location>
  </Location>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	Location
Table type	Multi-instance table
Row name	Location
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Location name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A

AP/APAuthentication

This table contains the informations of AP authentication.

XML structure

```
<AP>
  <APAuthentication>
    <Status></Status>
    <Method></Method>
    <PermitUnauth></PermitUnauth>
    <AuthDomain></AuthDomain>
    <AclNumber></AclNumber>
    <AclName></AclName>
  </APAuthentication>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APAuthentication
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	The status of AP authentication.	N/A	Boolean: • true—Enable. • false—Disable. Default value is disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Method	The authentication method.	N/A	Enumeration: • 1—MAC address. • 2—Serial ID. Default value is MAC address.	N/A
PermitUnauth	Whether the un-authenticated AP is allowed to join the AC.	N/A	Boolean: • true—Allowed. • false—Not allowed. Default value is allowed.	N/A
AuthDomain	The ISP domain of remote AP authentication.	N/A	String, case-insensitive. Length: 1 to 24 characters.	N/A
AclNumber	The ACL number of local AP authentication.	N/A	Unsigned short. Value range: 200 to 299.	This column is unavailable when the AC uses an ACL name.
AclName	The ACL name of local AP authentication.	N/A	String, case-sensitive. Length: 1 to 64 characters.	This column is unavailable when the AC uses an ACL number. The ACL name should not be “all”.

AP/LocalAC

This table contains local-ac information.

XML structure

```
<AP>
  <LocalAC>
    <AC>
      <Name></Name>
      <Model></Model>
      <CfgSerialID></CfgSerialID>
      <EchoInterval></EchoInterval>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <FirmwareUpgrade></FirmwareUpgrade>
    </AC>
  </LocalAC>
</AP>
```

Table description

Item	Description
Feature name	AP

Item	Description
Table name	LocalAC
Table type	Multi-instance table
Row name	AC
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local-ac name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Model	Local-ac model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Characters will be automatically convert case. Refer to AP/ACDB. This column is mandatory when the row is being created. This column is not writable when the row is being deleted, removed. This column should not be changed when the row is being replaced or merged.
CfgSerialID	Configured Local-ac serial ID.	N/A	String, uppercase. Length: 1 to 63 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8 Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable. • false—Disable.	N/A

AP/ContainerTopology

This table contains information about all PoE ports on the container (such as SPM and WT).

XML structure

```
<AP>
  <ContainerTopology>
    <Container>
      <ContainerName></ContainerName>
      <PoePort></PoePort>
      <PoeStatus></PoeStatus>
    </Container>
  </ContainerTopology>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ContainerTopology
Table type	Multi-instance table
Row name	Container
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContainerName	Container name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
PoePort	Port on the container	Index	Unsigned short.	See AP/APDB/.
PoeStatus	PoE port status	N/A	Boolean: • true—Enable • false—Disable	N/A

AP/Container

This table contains information about containers.

XML structure

```
<AP>
  <Container>
    <AP>
      <Name></Name>
      <Model></Model>
      <CfgMacAddress></CfgMacAddress>
    </AP>
  </Container>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	Container
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgMacAddr ess	Configured AP MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

AP/WlanEnable

This table contains information about wlan enable.

XML structure

```
<AP>
  <WlanEnable>
    <Status></Status>
  </WlanEnable>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	WlanEnable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wlan status	N/A	Boolean: • true—Enable • false—Disable	N/A

AP/APGroupModelCfg

This table contains information of AP group models configurations.

XML structure

```
<AP>
  <APGroupModelCfg>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <MapConfiguration></MapConfiguration>
    </Model>
  </APGroupModelCfg>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupModelCfg
Table type	Multi-instance table
Row name	Model
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
MapConfiguration	deploy a configuration file to an AP.	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A

AP/VirtualManualAP

This table contains virtual manual AP information.

XML structure

```
<AP>
  <VirtualManualAP>
    <AP>
      <Name></Name>
      <Model></Model>
      <CfgSerialID></CfgSerialID>
      <CfgMacAddress></CfgMacAddress>
      <EchoInterval></EchoInterval>
      <StatisInterval></StatisInterval>
      <FirmwareUpgrade></FirmwareUpgrade>
      <Description></Description>
      <TunnelEncryption></TunnelEncryption>
    </AP>
  </VirtualManualAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	VirtualManualAP
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Characters will be automatically convert case. Refer to AP/APDB. This column is mandatory when the row is being created. This column is not writable when the row is being deleted, removed. This column should not be changed when the row is being replaced or merged.
CfgSerialID	Configured AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
CfgMacAddress	Configured AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A

Description	The description of AP.	N/A	String, Length: 1 to 499 characters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A

AP/RadioOfVirtualManualAP

This table contains radio information of virtual manual AP.

XML structure

```
<AP>
  <RadioOfVirtualManualAP>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Mode></Mode>
      <Bandwidth></Bandwidth>
      <RateMulticast></RateMulticast>
      <RateMandatory></RateMandatory>
      <RateSupported></RateSupported>
      <RateDisabled></RateDisabled>
      <CfgChannel></CfgChannel>
    </Radio>
  </RadioOfVirtualManualAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RadioOfVirtualManualAP
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) • 9—802.11ax(5GHz)	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
RateMulticast	Multicast rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto If this column is not configured, the multicast rate will be calculated automatically.	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateSupported	Supported rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgChannel	Configured channel number.	N/A	Unsigned short. The value range conforms to “AP/ChannelDB/Supported ChannelList” column. If this column is not configured, the channel number will be calculated automatically.	When the value is true, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.

AP/VirtualAPGroup

This table contains information of virtual AP groups.

XML structure

```
<AP>
  <VirtualAPGroup>
    <Group>
      <Name></Name>
      <EchoInterval></EchoInterval>
      <StatisInterval></StatisInterval>
      <FirmwareUpgrade></FirmwareUpgrade>
      <Description></Description>
      <TunnelEncryption></TunnelEncryption>
    </Group>
  </VirtualAPGroup>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	VirtualAPGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds Default value is 10 seconds.	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable Default value is disable.	N/A
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable false—Disable	N/A

AP/VirtualAPGroupModel

This table contains information of virtual AP group models.

XML structure

```
<AP>
  <VirtualAPGroupModel>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
    </Model>
  </VirtualAPGroupModel>
</AP>
```

AP/SpmIfCfg

This table contains interface information for an SPM.

XML structure

```
<AP>
  <SpmIfCfg>
    <IfCfg>
      <SpmName></SpmName>
      <IfName></IfName>
      <AdminStatus></AdminStatus>

Table description

Item	Description
Feature name	AP
Table name	SpmIfCfg
Table type	Multi-instance table
Row name	IfCfg
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpmName	SPM name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
IfName	Interface name.	Index	String. Length: 1 to 47 characters. Example: GE 1 XGE 26	N/A
AdminStatus	Interface administration status.	N/A	Enumeration: • **1**—Up (default). • **2**—Down.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkType	Link type of the interface.	N/A	Enumeration: • **1**—Access. • **2**—Trunk. • **3**—Hybrid.	N/A
AccessVlan	Access VLAN.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
TrunkPvidVlan	Trunk port PVID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
TrunkVlanList	Trunk VLAN list.	N/A	VLAN range.	Example: 1,2,3,5-8,10-20
HybridPvidVlan	Hybrid port PVID.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
HybridVlanListTag	Hybrid tagged VLAN list.	N/A	VLAN range.	Example: 1,2,3,5-8,10-20
HybridVlanListUnTag	Hybrid untagged VLAN list.	N/A	VLAN range.	Example: 1,2,3,5-8,10-20
Description	Interface description.	N/A	String. Length: 1 to 128 characters.	N/A.

AP/SpmPortPoe

This table contains PoE information for an SPM.

XML structure

```
<AP>
  <SpmPortPoe>
    <PortPoe>
      <SpmName></SpmName>
      <IfName></IfName>
      <Enable></Enable>
    </PortPoe>
  </SpmPortPoe>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	SpmPortPoe

Item	Description
Table type	Multi-instance table
Row name	PortPoe
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpmName	SPM name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
IfName	Interface name.	Index	String. Length: 1 to 47 characters. Example: GE 1 XGE 26	N/A
Enable	PoE enabling status.	N/A	Boolean: • true—Enable. • false—Disable.	N/A.

AP/SpmPortIsolate

This table contains port isolation information for an SPM.

XML structure

```
<AP>
  <SpmPortIsolate>
    <PortIsolate>
      <SpmName></SpmName>
      <IfName></IfName>
      <IsolatedGroupID></IsolatedGroupID>
    </PortIsolate>
  </SpmPortIsolate>
</AP>
```

Table description

Item	Description
Feature name	AP

Item	Description
Table name	SpmPortIsolate
Table type	Multi-instance table
Row name	PortIsolate
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpmName	SPM name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
IfName	Interface name.	Index	String. Length: 1 to 47 characters. Example: GE 1 XGE 26	N/A
IsolatedGroupID	Port isolation group ID.	N/A	Unsigned integer. Value: 1	Only one group ID is supported.

AP/SpmVlan

This table contains VLAN information for an SPM.

XML structure

```
<AP>
  <SpmVlan>
    <Vlan>
      <SpmName></SpmName>
      <ID></ID>
      <Description></Description>    </Vlan>
  </SpmVlan>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	SpmVlan

Item	Description
Table type	Multi-instance table
Row name	Vlan
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpmName	SPM name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
ID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Description	Vlan description	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A

AP/APGroupIfRemoteCfg

This table contains information of AP group interface remote configuration.

XML structure

```
<AP>
  <APGroupIfRemoteCfg>
    <IfRemoteCfg>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <Type></Type>
      <Num></Num>
      <LinkType></LinkType>
      <AccessVlan></AccessVlan>
      <TrunkPvidVlan></TrunkPvidVlan>
      <TrunkVlanList></TrunkVlanList>
      <HybridPvidVlan></HybridPvidVlan>
      <HybridVlanListTag ></HybridVlanListTag>
      <HybridVlanListUnTag ></HybridVlanListUnTag>
      <Isolate></Isolate>
      <QosTrust></QosTrust>
      <QosPriority ></QosPriority>
      <LinkAggGroupId></LinkAggGroupId>
      <IfManagement></IfManagement>
    </IfRemoteCfg>
```

```
  </APGroupIfRemoteCfg>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupIfRemoteCfg
Table type	Multi-instance table
Row name	IfRemoteCfg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Interface type.	Index	Enumeration: • 1—ethernet. • 2—gigabitethernet. • 3—ten-gigabitethernet • 4—smartrate-ethernet • 5—bridge-aggregation	
Num	Interface number.	Index	Unsigned integer.	N/A
LinkType	VLAN type of an interface.	N/A	Enumeration: • 1—Access. • 2—Trunk. • 3—Hybrid.	N/A
AccessVlan	Access vlan.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
TrunkPvidVlan	Trunk port PVID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
TrunkVlanList	Trunk VLAN list.	N/A	VlanRange	Example: 1,2,3,5-8,10-20
HybridPvidVlan	Hybrid port PVID.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
HybridVlanListTag	Hybrid tagged VLAN list.	N/A	VlanRange	Example: 1,2,3,5-8,10-20
HybridVlanListUnTag	Hybrid untagged VLAN list.	N/A	VlanRange	Example: 1,2,3,5-8,10-20
Isolate	Port isolation.	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• true—Enable • false—Disable.	
QosTrust	Quality of service module trust mode.	• N/A	Enumeration. • 2 : dot1p • 4 : dscp	N/A
QosPriority	Quality of service module Priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
LinkAggGroupId	Link aggregation group ID.	N/A	Unsigned integer. Value range: 1.	N/A
IfManagement	Interface management.	N/A	Boolean: • true—Up • false—Down.	N/A

AP/APGroupRemoteCfg

This table contains information of AP group remote configuration.

XML structure

```
<AP>
  <APGroupRemoteCfg>
    <RemoteCfg>
      <GroupName></GroupName>
      <VlanList></VlanList>
      <Enable></Enable>
    </RemoteCfg>
  </APGroupRemoteCfg>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRemoteCfg
Table type	Multi-instance table
Row name	RemoteCfg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
VlanLiist	VLAN list.	N/A	VlanRange	Example: 1,2,3,5-8,10-20
Enable	Status of remote configuration synchronization.	N/A	Boolean: • true—Enable • false—Disable.	N/A

AP/APGroupAggRemoteCfg

This table contains information of AP group bridge aggregation remote configuration.

XML structure

```
<AP>
  <APGroupBridgeAggRemoteCfg>
    <AggRemoteCfg>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <Num></Num>

Table description

Item	Description
Feature name	AP
Table name	APSummary
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ManualApNum	Number of manual APs	N/A	Unsigned integer. Value range: 0 to 65535.
RunApNum	Number of running APs	N/A	Unsigned integer. Value range: 0 to 65535.
OfflineApNum	Number of offline APs	N/A	Unsigned integer. Value range: 0 to 65535.
UnhealthyApNum	Number of Unhealthy APs	N/A	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
ApGroupNum	Number of AP groups	N/A	Unsigned integer. Value range: 0 to 65535.
LocationNum	Number of locations	N/A	Unsigned integer. Value range: 0 to 65535.
NorthIfOutPkt	Packets count of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfOutByte	Throughput statistics of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfInPkt	Packets count of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfInByte	Throughput statistics of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
Is5gRadioNum	Number of radios which is 5GHz.	N/A	Unsigned integer. Value range: 0 to 4294967295.
Is2.4gRadioNum	Number of radios which is 2.4GHz.	N/A	Unsigned integer. Value range: 0 to 4294967295.
AccessModeNum	Number of radios in access mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
SensorModeNum	Number of radios in sensor mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
HybirdModeNum	Number of radios in hybird mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusyLower10PctNum	Number of radios which channel busy is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy10PctNum	Number of radios which channel busy is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy20PctNum	Number of radios which channel busy is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy30PctNum	Number of radios which channel busy is between 30% and	N/A	Unsigned integer. Value range: 0 to 4294967295.

Column name	Column description	Column type	Data type and restrictions
	40%		
ChannelBusy40PctNum	Number of radios which channel busy is between 40% and 50%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy50PctNum	Number of radios which channel busy is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy60PctNum	Number of radios which channel busy is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy70PctNum	Number of radios which channel busy is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy80PctNum	Number of radios which channel busy is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy90PctNum	Number of radios which channel busy is upper than 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloorLower105Num	Number of radios which noise floor is lower than 105dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor100Num	Number of radios which noise floor is between 100dbm and 105dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor95Num	Number of radios which noise floor is between 95dbm and 100dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor90Num	Number of radios which noise floor is between 90dbm and 95dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor85Num	Number of radios which noise floor is between 85dbm and 90dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor80Num	Number of radios which noise floor is between 80dbm and 85dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor75Num	Number of radios which noise floor is between 75dbm and 80dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.

Column name	Column description	Column type	Data type and restrictions
NoiseFloor70Num	Number of radios which noise floor is between 70dbm and 75dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloorUpper70Num	Number of radios which noise floor is upper than 70dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11InterfLower10PctNum	Number of radios which 802.11 interference is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf10PctNum	Number of radios which 802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf20PctNum	Number of radios which 802.11 interference is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf30PctNum	Number of radios which 802.11 interference is between 30% and 40%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf40PctNum	Number of radios which 802.11 interference is between 40% and 50%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf50PctNum	Number of radios which 802.11 interference is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf60PctNum	Number of radios which802.11 interference is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf70PctNum	Number of radios which802.11 interference is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf80PctNum	Number of radios which802.11 interference is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf90PctNum	Number of radios which802.11 interference is upper	N/A	Unsigned integer. Value range: 0 to

Column name	Column description	Column type	Data type and restrictions
	than 90%		4294967295.
NonDot11InterfLower10PctNum	Number of radios which non-802.11 interference is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf10PctNum	Number of radios which non-802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf20PctNum	Number of radios which non-802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf30PctNum	Number of radios which non-802.11 interference is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf40PctNum	Number of radios which non-802.11 interference is between 30% and 40%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf50PctNum	Number of radios which non-802.11 interference is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf60PctNum	Number of radios which non-802.11 interference is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf70PctNum	Number of radios which non-802.11 interference is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf80PctNum	Number of radios which non-802.11 interference is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf90PctNum	Number of radios which non-802.11 interference is upper than 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
RunSPMNum	Number of running SPMs	N/A	Unsigned integer. Value range: 0 to 65535.
OfflineSPMNum	Number of offline SPMs	N/A	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
MaxRunApNum	Max number of running APs	N/A	Unsigned integer. Value range: 0 to 65535.
MaxPersistentApNum	Max number of persistent APs	N/A	Unsigned integer. Value range: 0 to 65535.

Table description

Item	Description
Feature name	AP

Item	Description
Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoAp	Whether an AP can connect the AC without creating a manual AP.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
AutoPersistent	When an auto AP connects the AC , whether convert the AP to manual AP automatically.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 stantard.
RegionLock	Whether the region code of the AC is locked.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messges which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds.	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true: Enable • false: Disable	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
MainAPName	AP name.	N/A	String, case-sensitive. Length: 1 to 64 characters.	Only for FatAP Type.
Gps	Gps.	N/A	Boolean: • true—Support. • false—Not support.	Only for FatAP Type
LocalAC	Whether to enable Local ac.	N/A	Boolean: • true—Enable. • false—Disable.	Only for Local-ac Type
CentralACIPv4	The IPv4 Central AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only for Local-ac Type
CentralACIPv6	The IPv6 Central AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Only for Local-ac Type
ControlAddress	CAPWAP control address configuration.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualAp	Whether an AP can creat a virtual AP.	N/A	Boolean: • true—Support. • false—Not support. Default value is false.	N/A

Table description

Item	Description
Feature name	AP
Table name	ManualAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgSerialID	Configured AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	N/A
CfgMacAddress	Configured AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
RadioNum	Number of the radio.	N/A	Unsigned short. Value range: 1 to 4.	N/A
Status	AP associated status.	N/A	Enumeration: • 1—Online • 2—Offline • 3—Image downloading	N/A
GroupName	The name of AP group which the AP belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 stantard.

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionLock	Whether the region code of the AP is locked.	N/A	Boolean: • true—Support. • false—Not support.	N/A
Priority	AP connection priority.	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messges which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 3 to 255.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8. Unit: seconds.	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds.	N/A
StatisInterval	RetransCount	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	The description of AP.	N/A	String, Length: 1 to 499 cahracters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
OfflineTime	The time since the AP online.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A
OfflineMoment	The time of the AP offline in last time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	Example: 2014-05-07T09:35:07
ControlAddress	CAPWAP control address configuration	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ModelType	Model type	N/A	Enumeration: • 1—Normal. • 2—WT. • 3—WTU.	When the value is 3, some commands can not be configurated.
LedMode	LED mode	N/A	Enumeration: • 0—Normal. • 1—Quiet. • 2—Awake. • 3—Always-on.	N/A
MapConfiguration	AP Configuration file name	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
VirtualAC	VirtualAC info	Data structure	Members include: • VirtualACIPv4 • VirtualACIPv6 Vlan	N/A
VirtualACIP	The IPv4 virtual	N/A	String, dotted decimal	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
v4	AC address.		notation.	
VirtualACIPv6	The IPv6 virtual AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Vlan	VLAN	N/A	Unsinged integer. Value range: 1 to 4094.	N/A

RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds.	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of AP.	N/A	String, Length: 1 to 499 cahracters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A

AP/RunAP

Table description

Item	Description
Feature name	AP
Table name	RunAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SerialID	AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	N/A
Type	AP type.	N/A	Enumeration: • 1—auto • 2—manual	N/A
MacAddress	AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioNum	Number of the radio.	N/A	Unsigned short. Value range: 1 to 4.	N/A
Status	AP associated status.	N/A	Enumeration: • 1—Online • 3—Image downloading	N/A
Ipv4Address	AP IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
Ipv6Address	AP IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
Ipv4WildMask	Wildcard mask for the IPv4 address of AP.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.
Ipv6Wildcard	Length of the source AP IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	
GateWayIpv4	AP gateway IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
GateWayIpv6	AP gateway IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
PortNumber	AP port number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
GroupName	The name of AP group which the AP belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
OnlineTime	AP online duration.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A
HWVer	The version of AP hardware.	N/A	Enumeration: • 1—Ver.A • 2—Ver.B • 3—Ver.C • 4—Ver.D • 5—Ver.E	N/A
SWVer	The version of AP software.	N/A	String. Length: 1 to 31 characters.	N/A
BWVer	The version of AP	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	bootrom.		Length: 1 to 31 characters.	
TransCtrlPkt	Count of transmitted control packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RecvCtrlPkt	Count of received control packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
TransDataPkt	Count of transmitted data packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RecvDataPkt	Count of received data packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
EchoReqCnt	Count of echo request packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
EchoRespLossCnt	Count of lost echo response packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
DiscoveryType	By which type the AP find the AC.	N/A	Enumeration: • 1—Unknown • 2—DHCP • 3—Static Configuration • 4—DNS	N/A
ConfigFailCnt	Count of failed Configuration.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
LastFailReason	The cause of synchronizing configurations to the AP failed in last time.	N/A	String. Length: 1 to 31 characters.	N/A
LastRebootReason	The cause of the AP rebooting in last time.	N/A	String. Length: 1 to 31 characters.	N/A
TunnelDownReason	The cause of the tunnel down in last time.	N/A	String. Length: 1 to 31 characters.	N/A
ConnectionType	The connection type of tunnel.	N/A	Enumeration: • 1—Active • 2—Standby	N/A
PeerACIPv4Address	The IPv4 address of peer AC that AP is connecting to.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerACIPv6 Address	The IPv6 address of peer AC that AP is connecting to.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
AuthenticatedFlag	Whether the auto-ap is authenticated.	N/A	Boolean: • Enable • Disable	When AP type is manual AP, this column is invalid.
LocalACName	Local-ac name.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
CtrlTunnelCurrSec	Control tunnel current security	N/A	Enumeration: • 1—Cleartxt • 2—Dtls	N/A
DataTunnelCurrSec	Data tunnel current security	N/A	Enumeration: • 1—Cleartxt • 2—Dtls	N/A
CtrlTunnelUpTimeTicks	Control tunnel uptime ticks	N/A	Unsigned integer.	N/A

Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) • 9—802.11ax(5GHz)	N/A
SupportDot11B	Whether a radio supports 802.11b radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11A	Whether a radio supports 802.11a radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11G	Whether a radio supports 802.11g radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11GAC	Whether a radio supports 802.11ac(2.4GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AX	Whether a radio supports 802.11ax(5GHz) radio mode	N/A	Boolean: • true—Support. false—Not support.	N/A
SupportDot11GAX	Whether a radio supports 802.11ax(2.4GHz) radio mode	N/A	Boolean: • true—Support. false—Not support.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Radio bandwidth.	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: • 1—Support both 5GHz and 2.4GHz • 2—Support 5GHz only • 3—Support 2.4GHz only	N/A
Status	Radio status.	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A
RateMulticast	Multicast.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto If this column is not configured, the multicast rate will be calculated automatically.	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateSupported	Supported rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
Preamble	Preamble.	N/A	Boolean: • true—Short. • false—Long. The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346.And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	ProtectionThreshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	ShortRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number.	N/A	The value range conforms to AP/ChannelDB/Supported ChannelList” column. And 15 –auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 1 to “AP/PowerDB/ValidMaxPower”. Unit: dBm	N/A
ProtectionMode	Protection mode.	N/A	Enumeration: • 1—Rts/Cts. • 2—Cts To Self	N/A
ValidChannelNum	Number of the valid channels	N/A	Unsigned integer. Value range: 0 to 32.	N/A
ValidChannelList	a list of the valid channels.	N/A	Number string. It is a comma-separated list of valid channels. The string must not end with a comma or hyphen, or include any whitespace	Example: 1,2,3,4,5,6,7,8,9,10,11
TimeRangeName	The name of time range.	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
CfgAntennaType	Configured Antenna Type	N/A	String, case-sensitive. Length: 1 to 64 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Preamble	Preamble.	N/A	Boolean: • true—Short. • false—Long. The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: • Disable • Enable	N/A
	~~Lock the channel~~		~~Boolean:~~ ~~• true—ChanneAutoLock.~~ ~~• false—ChanneAutoUnLock.~~ ~~The default value is true.~~	~~When the value is true, the radio automatically selects an optimal channel, and then locks the channel.~~ ~~When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.~~
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LongRetryThreshold	LongRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	ProtectionThreshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	ShortRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number.	N/A	The value range conforms to AP/ChannelDB/Supported ChannelList" column. And 15 －auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A

AP/Radio11n

This table contains radio 802.11n information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1,1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
GatewayIPv4	Specify a gateway by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
GatewayIPv6	Specify a gateway by its IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
IPv4Address	Specify an IP address that the AP uses to establish a CAPWAP tunnel.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
IPv6Address	Specify an IPv6 address that the AP uses to establish a CAPWAP tunnel.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Dot1xSupplAnonyIdent	Specify an anonymous identifier for the supplicant.	N/A	String. Length: 1 to 253 characters.	N/A
Dot1xSupplEapMethod	Specify an EAP authentication method.	N/A	Enumeration: • 1—md5 • 2—peap-gtc • 3—peap-mschapv2 • 4—ttls-gtc • 5—ttls-mschapv2	N/A
Dot1xSupplEnable	Enable the 802.1X supplicant feature.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Dot1xSupplPasswdCipher	Specify a ciphertext password for the 802.1X supplicant.	N/A	String. Length: 1 to 201 characters.	N/A
Dot1xSupplPasswdSimple	Specify a plaintext password for the 802.1X supplicant.	N/A	String. Length: 1 to 127 characters.	N/A
Dot1xSupplUsername	Specify a username for the 802.1X supplicant.	N/A	String. Length: 1 to 253 characters.	N/A

AP/PrvsOfManualAPACIPv4

Table name	APDBVersion
Table type	Multi-instance table
Row name	Model

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name.	Index	String, uppercase. Length: 1 to 63 characters.	Refer to APDB/ModelName.
HardwareVersion	The version of Hardware.	Index	Enumeration: • 1—Ver.A • 2—Ver.B • 3—Ver.C • 4—Ver.D • 5—Ver.E • 6—Ver.F	N/A
SoftwareVersion	The version of Software.	N/A	String Length:1 to 31.	N/A

AP/RadioDB

This table contains radio information of AP model.

XML structure

```

Table description

Item	Description
Feature name	AP
Table name	RadioDB
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name.	Index	String, uppercase. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
DefaultRadioMode	Default radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDot11B	Whether a radio supports 802.11b radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11A	Whether a radio supports 802.11a radio mode.	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11G	Whether a radio supports 802.11g radio mode.	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11GAC	Whether a radio supports 802.11ac(2.4GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: • 1—Support both 5GHz and 2.4GHz • 2—Support 5GHz only • 3—Support 2.4GHz only	N/A
DefaultAnteannaType	Default antenna type of radio.	N/A	String, case-insensitive. Length: 1 to 80 characters.	N/A
Aifsn	ArbitrationInter Frame Spacing Number	N/A	Unsigned integer. Value range is 1 to 15, and is restricted by chipset.	N/A
Ecwmin	Exponent form of CWmin	N/A	Unsigned integer. Value range is 0 to 10, and is restricted by chipset.	N/A
Ecwmax	Exponent form of CWmax	N/A	Unsigned integer. Value range is 1 to 10, and is restricted by chipset.	N/A
TxOpLimit	Transmission oppurtunity limit	N/A	Unsigned integer. Value range is 0 to 32767 and is restricted by chipset. Unit is millisecond.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportBandwidth	Supported channel bandwidth	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
SupportMCS	Supported MCS	N/A	Unsigned short. Value range: 0 to 76.	N/A
SupportVHTMCS	Supported VHT-MCS	N/A	Unsigned short. Value range: 1 to 8.	N/A
ShortGI20M	Supported short GI for 20MHz	N/A	Boolean: • true—Support. • false—Not support.	N/A
ShortGI40M	Supported short GI for 40MHz	N/A	Boolean: • true—Support. • false—Not support.	N/A
ShortGI80M	Supported short GI for 80MHz	N/A	Boolean: • true—Support. • false—Not support.	N/A
ShortGI160M	Supported short GI for 160MHz	N/A	Boolean: • true—Support. • false—Not support.	N/A
SUBeamformer	Supported SU-Beamformer	N/A	Boolean: • true—Support. • false—Not support.	N/A
MUBeamformer	Supported MU-Beamformer	N/A	Boolean: • true—Support. • false—Not support.	N/A
Ldpc	Supported ldpc	N/A	Boolean: • true—Support. • false—Not support.	N/A
TxStbc	Supported TxStbc	N/A	Boolean: • true—Support. • false—Not support.	N/A
RxStbc	Supported RxStbc	N/A	Boolean: • true—Support. • false—Not support.	N/A
VHTLdpc	Supported VHT ldpc	N/A	Boolean: • true—Support. • false—Not support.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VHTTxStbc	Supported VHT TxStbc	N/A	Boolean: • true—Support. • false—Not support.	N/A
VHTRxStbc	Supported VHT RxStbc	N/A	Boolean: • true—Support. • false—Not support.	N/A

AP/RegionDB

This table contains valid region list of AP models.

XML structure

```
<AP>
  <RegionDB>
    <Region>
      <ModelName></ModelName>
      <RegionCode></RegionCode>
      <SupportedRadioList></SupportedRadioList>
    </Region>
  </RegionDB>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RegionDB
Table type	Multi-instance table
Row name	Region
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 stantard.

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportedRadioList	Supported radio list of current region.	N/A	Number string. It is a comma-separated list of supported radio IDs. The string must not end with a comma or hyphen, or include any whitespace	Example: 1,2

AP/AntennaDB

This table contains valid antenna types of AP models.

XML structure

```
<AP>
  <AntennaDB>
    <Antenna>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <AntennaType></AntennaType>
    </Antenna>
  </AntennaDB>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	AntennaDB
Table type	Multi-instance table
Row name	Antenna
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
AntennaType	Antenna type of radio	Index	String, case-insensitive. Length: 1 to 80 characters.	N/A

AP/ChannelTypeMap

This table contains channel type of radios.

XML structure

```
<AP>
  <ChannelTypeMap>
    <ChannelMap>
      <RadioMode></RadioMode>
      <Bandwidth></Bandwidth>
      <Channel></Channel>
      <ChannelType></ChannelType>
    </ChannelMap>
  </ChannelTypeMap>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	ChannelTypeMap
Table type	Multi-instance table
Row name	ChannelMap
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioMode	Radio mode	Index	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Radio bandwidth	Index	Enumeration: • **1**—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
Channel	Legal channel number.	Index	Unsigned short.	Conform to IEEE 802.11 protocol , ISO 3166 stantard and the related national and regional laws and regulations.

Column name	Column description	Column type	Data type and restrictions	Remarks
ChannelType	Type of spectrum, bandwidth and channel range.	N/A	Enumeration: • 1—802.11b • 2—802.11g • 3—802.11n(2.4GHz) in 20M mode • 4—802.11n(2.4GHz) in 40M mode • 5—802.11gac(2.4GHz) in 20M mode • 6—802.11gac(2.4GHz) in 40M mode • 7—802.11a(36 to 64) • 8—802.11a(100 to 144) • 9—802.11a(149 to 165) • 10—802.11n(5GHz) (36 to 64) in 20M mode • 11—802.11n(5GHz) (100 to 144) in 20M mode • 12—802.11n(5GHz) (149 to 165) in 20M mode • 13—802.11n(5GHz) (36 to 64) in 40M mode • 14—802.11n(5GHz) (100 to 144) in 40M mode • 15—802.11n(5GHz) (149 to 165) in 40M mode • 16—802.11ac (36 to 64) in 20M mode • 17—802. 11ac (100 to 144) in 20M mode • 18—802. 11ac (149 to 165) in 20M mode • 19—802.11ac (36 to 64) in 40M mode • 20—802. 11ac (100 to 144) in 40M mode • 21—802. 11ac (149 to 165) in 40M mode • 22—802.11ac (36 to 64) in 80M mode • 23—802. 11ac (100 to 144) in 80M mode • 24—802. 11ac (149 to 165) in 80M mode • 25—802.11ac (36 to 64) in 160M mode	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 26—802. 11ac (100 to 144) in 160M mode • 27—802. 11ac (149 to 165) in 160M mode • 28—802. 11ac (36 to 64) in 8080M mode • 29—802. 11ac (100 to 144) in 8080M mode • 30—802. 11ac (149 to 165) in 8080M mode	

AP/PowerIndex

This table contains valid power index of AP models.

XML structure

```
<AP>
  <PowerIndex>
    <Index>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <RadioMode></RadioMode>
      <AntennaType></AntennaType>
      <RegionCode></RegionCode>
      <ChannelType></ChannelType>
      <PowerIndex></PowerIndex>
      <PowerSubIndex></PowerSubIndex>
    </Index>
  </PowerIndex>
</AP>
```

ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Channel	Legal channel number.	Index	Unsigned short.	Refer to AP/ChannelDB/SupportedChannelList.
NeighborCount	Neighbour number of the legal channels.	N/A	Unsigned integer.	N/A
Load	Percentage of the time for transmitting all packets on the channel to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
Utilization	Percentage of the time for transmitting packets of the BSS to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
Interference	Percentage of the time for transmitting packets of other BSSs to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErr	Packet error rate of the legal channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Retry	Retransmission rate of the legal channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
RadarStatus	Radar detection status at the legal channel.	N/A	Boolean: • true—Radar is detected. • false—Radar is not detected.	N/A

AP/NeighborAPReport

This table contains the fileds which carry the information of the Ap's current neighbors.

XML structure

```
<AP>
  <NeighborAPReport>
    <Neighbor>
      <ApName></ApName>
      <RadioID></RadioID>
      <MacAddress></MacAddress>
      <Channel></Channel>
      <Interference></Interference>
      <SignalStrength></SignalStrength>
      <NeighborType></NeighborType>
    </Neighbor>
  </NeighborAPReport>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	NeighborAPReport
Table type	Multi-instance table
Row name	Neighbor
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	If the neighbor is unmanaged AP, this column is MAC address; or if the neighbor is managed AP, it is basic BSSID. Example: 00-0c-af-e3-5d-c0.
Channel	Channel number where the neighbor is discovered.	N/A	Unsigned short. The value range is related to AP model, radio mode, antenna type and country code.	N/A
Interference	Percentage of the time for transmitting packets of the neighbor to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
SignalStrength	Strength of signal received.	N/A	Unsigned integer. Unit: dBm.	An indication of the total channel power (signal, noise, and interference) of a received frame measured on the channel and at the antenna connector used to receive the frame.
NeighborType	Management status of the neighbor.	N/A	Boolean: • true—Managed neighbor. • false—UnManaged neighbor.	N/A

AP/EdcaRadio

This table contains radio EDCA information.

XML structure

```
<AP>
  <EdcaRadio>
```

```
    <EdcaPara>
      <ApName></ApName>
      <RadioID></RadioID>
      <AccessCategory></AccessCategory>

      <CfgAifsn></CfgAifsn>
      <CfgEcwmin></CfgEcwmin>
      <CfgEcwmax></CfgEcwmax>
      <CfgTxOpLimit></CfgTxOpLimit>
    </EdcaPara>
  </EdcaRadio>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	EdcaRadio
Table type	Multi-instance table
Row name	EdcaPara
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length:1to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
AccessCategory	A label for the common set of enhanced distributed channel access parameters that are used by a WMM STA to conten d for the channel in order to transmit MSDUs with certain priorities..	Index	Enumeration: • 0—BE. • 1—BK. • 2—VI. • 3—VO.	N/A
Noack	Whehter acknowledgement is required.	N/A	Boolean: • true—Not required. • false—Required.	N/A
CfgAifsn	ArbitrationInter Frame Spacing Number.	N/A	The value range conforms to “AP/RadioIDB/Aifsn” column.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgEcwmin	Exponent form of CWmin.	N/A	The value range conforms to “AP/RadioIDB/Ecwmin” column.	N/A
CfgEcwmax	Exponent form of CWmax.	N/A	The value range conforms to “AP/RadioIDB/Ecwmax” column.	N/A
CfgTxOpLimit	Transmission oppurtunity limit.	N/A	The value range conforms to “AP/RadioIDB/TxOpLimit” column.	N/A

AP/RadioWmm

This table contains radio WMM information.

XML structure

```
<AP>
  <RadioWmm>
    <Wmm>
      <ApName></ApName>
      <RadioID></RadioID>
      <Status></Status>
    </Wmm>
  </RadioWmm>
</AP>

Table description

Item	Description
Feature name	AP
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
AP group name	Number of rules in the AP group	N/A	Unsigned short. Value range: 0 to 5.	N/A
ModelNum	Number of models in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
APNum	Number of APs in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 stantard.
RegionLock	Whether the region code of the AP group is locked.	N/A	Boolean: • true—Support. • false—Not support.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: • true: Switch • false: Not switch.	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EchoCount	The allowed maximum number of echo messges which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 3 to 255.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8. Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: • true—Enable. • false—Disable.	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: • true—Enable. • false—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LedMode	LED mode	N/A	Enumeration: • 0—Normal • 1—Quiet • 2—Awake • 3—Always-on	N/A
MapConfiguration	AP Configuration file name	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
VirtualAC	VirtualAC info	Data structure	Members include: • VirtualACIPv4 • VirtualACIPv6 Vlan	N/A
VirtualACIPv4	The IPv4 virtual AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
VirtualACIPv6	The IPv6 virtual AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Vlan	VLAN	N/A	Unsinged integer. Value range: 1 to 4094.	N/A

AP/APGroupMACRule

This table contains information of AP groups' rules of MAC address.

XML structure

```
<AP>
  <APGroupMACRule>
    <Rule>
      <GroupName></GroupName>
      <MacAddress></MacAddress>
    </Rule>
  </APGroupMACRule>
</AP>
```

GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz)	N/A
SupportDot11B	Whether a radio supports 802.11b radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDot11A	Whether a radio supports 802.11a radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11G	Whether a radio supports 802.11g radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: • true—Support. • false—Not support.	N/A
Bandwidth	Radio bandwidth	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
Spectrum	Supported radio spectrum	N/A	Enumeration: • 1—Support both 5GHz and 2.4GHz • 2—Support 5GHz only • 3—Support 2.4GHz only	N/A
Status	Radio status	N/A	Enumeration: • 0—Disable • 1—Enable • 2—Inherit	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMulticast	Multicast rate	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto The value range conforms to “AP/RadioOfManualAP/CfgRateMandatory” column. If this column is not configured, the multicast rate will be calculated automatically.	N/A
RateMandatory	Mandatory rate	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps Default value: A. 1, 2Mbps(802.11b). B. 6, 12, 24Mbps(802.11a/802.11an) C. 1, 2, 5.5, 11Mbps(802.11g/802.11gn)	The value can have multi-selections.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateSupported	Supported rate	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps Default value: A. 5.5, 11Mbps(802.11b) B. 9, 18, 24, 36, 48, 54Mbps(802.11a/802.11an) C. 6, 9, 12, 18, 24, 36, 54Mbps(802.11g/802.11gn)	The value can have multi-selections, exclude the one which multicast rate uses.
RateDisabled	Disabled rate	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses.
Preamble	Preamble	N/A	Boolean: • true—Short. • false—Long. The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PowerLock	Lock the power	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Distance	The distance that Radio can cover	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration time	N/A	Unsigned integer. The value range is 500~250000. Unit: ms.	N/A
FragmentThreshold	Fragment threshold	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	Protection threshold	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	Short retry threshold	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number	N/A	The value range conforms to AP/ChannelDB/Supported ChannelList" column. And 15 –auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A
ProtectionMode	Protection Mode	N/A	Enumeration: • 1—rts-cts • 2—cts-to-self	N/A
CfgAntennaType	Configured Antenna Type	N/A	String, case-sensitive. Length: 1 to 64 characters	N/A

AP/APGroupRadio11n

ShortGI	Short GI function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Stbc	STBC function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Ldpc	LDPC function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
MimoMode	MIMO mode.	N/A	Enumeration: • 17—1×1. • 34—2×2. • 51—3×3. • 68—4×4. • 85—5×5. • 102—6×6. • 119—7×7. • 136—8×8.	N/A
Greenap	Green AP function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SmartAntenna	Smart antenna function	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SmartAntennaPolicy	Smart antenna policy	N/A	Enumeration: • 1: Auto • 2: High-availability • 3: High-throughput	Effective only when SmartAntenna is enabled.
Client11nOnly	Client dot11n only function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BandwidthAutoswitch	Bandwidth autoswitch function	N/A	Boolean: • true—Enable. • false—Disable. The column is only for 2.4GHz radio mode, and AP/APGroupRadio/Bandwidth must be 2.	N/A

AP/APGroupRadioMCS

This table contains MCS information of AP Group radios.

XML structure

```
<AP>
  <APGroupRadioMCS>
    <RadioMCS>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <MCSMulticast></MCSMulticast>
      <MCSMandatory></MCSMandatory>
      <MCSSupported></MCSSupported>
    <RadioMCS>
  </APGroupRadioMCS>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	WlanEnable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Group name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 76.	The MCSSupported must be greater than or equal to the MCSMandatory.

AP/APGroupRadio11ac

This table contains 802.11ac information of AP group radios.

XML structure

```
<AP>
  <APGroupRadio11ac>
    <Radio11ac>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <Client11acOnly></Client11acOnly>
    </Radio11ac>
  </APGroupRadio11ac>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRadio11ac
Table type	Multi-instance table
Row name	Radio11ac

Item	Description
Restrictions	The table is only for 802.11ac radio mode.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Client11acOnly	Client dot11ac only function.	N/A	Boolean: • true—Enable. • false—Disable.	N/A

AP/APGroupRadioVHTMCS

This table contains VHTMCS information of AP group radios.

XML structure

```
<AP>
  <APGroupRadioVHTMCS>
    <RadioVHTMCS>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <VHTNSSMulticast></VHTNSSMulticast>
      <VHTMCSIndex></VHTMCSIndex>
      <VHTNSSMandatory></VHTNSSMandatory>
      <VHTNSSSupported></VHTNSSSupported>
    </RadioVHTMCS>
  </APGroupRadioVHTMCS>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupRadioVHTMCS

Item	Description
Table type	Multi-instance table
Row name	RadioVHTMCS
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
VHTNSSMulticast	The NSS for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMulticast must be smaller than or equal to the VHTNSSMandatory.
VHTMCSIndex	The index for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 9, 255. Default value is 255.	N/A
VHTNSSMandatory	The maximum NSS for mandatory VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMandatory must be smaller than or equal to the VHTNSSSupported, and the VHTNSSMandatory must be greater than or equal to the VHTNSSMulticast.
VHTNSSSupported	The maximum NSS for supported VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 8.	The VHTNSSSupported must be greater than or equal to the VHTNSSMandatory.

AP/APGroupPrvs

This table contains provision information of AP Group.

XML structure

```
<AP>
  <APGroupPrvs>
    <Prvs>
      <GroupName></GroupName>
      <ACHostName></ACHostName>
      <ACIPv4></ACIPv4>
      <ACIPv6></ACIPv6>
```

```
      <DnsDomain></DnsDomain>
      <DnsServerIPv4></DnsServerIPv4>
      <DnsServerIPv6></DnsServerIPv6>
    </Prvs>
  </APGroupPrvs>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupPrvs
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1,1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

AP/APGroupPrvsACIPv4

This table contains provision information of AP Group of IPv4 address.

XML structure

```
<AP>
  <APGroupPrvsACIPv4>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv4></ACIPv4>
    </Prvs>
  </APGroupPrvsACIPv4>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv4
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, dotted decimal notation.	Example: 1.1.1.1.
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.

AP/APGroupPrvsACIPv6

This table contains provision information of AP group of IPv6 address.

XML structure

```
<AP>
  <APGroupPrvsACIPv6>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv6></ACIPv6>
    </Prvs>
  </APGroupPrvsACIPv6>
```

```
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv6
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv6	Specify an AC by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.

AP/APListOfGroup

This table contains the AP list of AP groups.

XML structure

```
<AP>
  <APListOfGroup>
    <AP>
      <GroupName></GroupName>
      <ApName></ApName>
    </AP>
  </APListOfGroup>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APListOfGroup

Item	Description
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

AP/Location

This table contains the informations of locations.

XML structure

```
<AP>
  <Location>
    <Location>
      <LocationName></LocationName>
    </Location>
  </Location>
<AP>
```

Table description

Item	Description
Feature name	AP
Table name	Location
Table type	Multi-instance table
Row name	Location
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Location name	Index	String, lowercase. Length: 1 to 31 characters.	N/A

AP/APAuthentication

This table contains the informations of AP authentication.

XML structure

```
<AP>
  <APAuthentication>
    <Status></Status>
    <Method></Method>
    <PermitUnauth></PermitUnauth>
    <AuthDomain></AuthDomain>
    <AclNumber></AclNumber>
    <AclName></AclName>
  </APAuthentication>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	APAuthentication
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	The status of AP authentication.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Method	The authentication method	N/A	Enumeration: • 1—MAC address. • 2—Serial ID.	N/A
PermitUnauth	Whether the un-authenticated AP is allowed to join the AC.	N/A	Boolean: • true—Allowed. • false—Not allowed.	N/A
AuthDomain	The ISP domain of remote AP authentication.	N/A	String, case-insensitive. Length: 1 to 24 characters.	N/A
AclNumber	The ACL number of local AP authentication.	N/A	Unsigned short. Value range: 200 to 299.	This column is unavailable when the AC uses an ACL name.

Column name	Column description	Column type	Data type and restrictions	Remarks
AclName	The ACL name of local AP authentication.	N/A	String, case-sensitive. Length: 1 to 64 characters.	This column is unavailable when the AC uses an ACL number. The ACL name should not be “all”.

AP/HistorySummary

This table contains information of history summary.

XML structure

```
<AP>
  <HistorySummary>
    <Record>
      <Date></Date>
      <Time></Time>
      <ManualApNum></ManualApNum>
      <RunApNum></RunApNum>
      <OfflineApNum></OfflineApNum>
      <UnhealthyApNum></UnhealthyApNum>
      <ApGroupNum></ApGroupNum>
      <LocationNum></LocationNum>
      <NorthIfOutPkt></NorthIfOutPkt>
      <NorthIfOutByte></NorthIfOutByte>
      <NorthIfInPkt></NorthIfInPkt>
      <NorthIfInByte></NorthIfInByte>
    </Record>
  </HistorySummary>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	HistorySummary
Table type	Multi-instance table
Row name	Record
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Date	The date of the record,	Index	Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A
Time	The time of the record.	Index	Format: hh:mm. Value range: 00:00 to 23:59.	N/A
ManualApNum	Number of manual APs	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Index	Number of running APs	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
OfflineApNum	Number of offline APs	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
UnhealthyApNum	Number of Unhealthy APs	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ApGroupNum	Number of AP groups	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
LocationNum	Number of locations	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
NorthIfOutPkt	Packets count of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
NorthIfOutByte	Throughput statistics of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
NorthIfInPkt	Packets count of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
NorthIfInByte	Throughput statistics of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

AP/AllAP

This table contains the information of all APs.

XML structure

```
<AP>
  <AllAP>
    <AP>
      <LocationName></LocationName>
      <Name></Name>
      <Type></Type>
      <Status></Status>
      <GroupName></GroupName>
      <SerialID></SerialID>
      <MacAddress></MacAddress>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <OnlineTime></OnlineTime>
      <ModelType></ModelType>
      <APID></APID>
    </AP>
  </AllAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	AllAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Which location the AP belongs to.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
Name	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Status	AP associated status	N/A	Enumeration: • 1—Online • 2—Offline • 3—Image downloading	N/A
Type	AP type	N/A	Enumeration:	N/A

			• 1—auto • 2—manual	
GroupName	The name of AP group which the AP belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
SerialID	AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	N/A
MacAddress	AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Ipv4Address	AP IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
Ipv6Address	AP IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
OnlineTime	AP online duration.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A
ModelType	AP model type.	N/A	Enumeration: • 1—Normal ap • 2—WT • 3—WTU • 4—WTU_DIRECT • 5—SPM	N/A
APID	AP ID.	N/A	Unsigned integer.	N/A

AP/LocalACDB

This table contains local-ac model information.

XML structure

```
<AP>
  <LocalACDB>
    <Model>
      <ModelName></ModelName>
      <HardwareVersion></HardwareVersion>
      <SoftwareVersion></SoftwareVersion>
    </Model>
  </LocalACDB>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	LocalACDB
Table type	Multi-instance table
Row name	Model
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	Local-ac model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
HardwareVersion	The version of Hardware.	Index	Enumeration: • 1—Ver.A • 2—Ver.B • 3—Ver.C • 4—Ver.D • 5—Ver.E • 6—Ver.F	N/A
SoftwareVersion	The version of Software.	N/A	String Length:1 to 31.	N/A

AP/LocalAC

This table contains information of local-ac.

XML structure

```
<AP>
  <LocalAC>
    <AC>
      <Name></Name>
      <Model></Model>
      <CfgSerialID></CfgSerialID>
      <Status></Status>
      <EchoInterval></EchoInterval>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <FirmwareUpgrade></FirmwareUpgrade>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
```

```
    </AC>
  </LocalAC>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	LocalAC
Table type	Multi-instance table
Row name	AC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local-ac name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	Local-ac model name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgSerialID	Configured Local-ac serial ID	N/A	String, uppercase. Length: 1 to 63 characters.	N/A
Status	Local-ac associated status	N/A	Enumeration: • 1—Online • 2—Offline • 3—Image downloading	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8 Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable. • false—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	Local AC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AC uses an IPv6 address.
Ipv6Address	Local AC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the ACuses an IPv4 address.

AP/ContainerTopology

This table contains information about all PoE ports on the container and units (such as WAP and WTU) connected to the container (such as SPM and WT).

XML structure

```
<AP>
  <ContainerTopology>
    <Container>
      <ContainerName></ContainerName>
      <PoePort></PoePort>
      <PoeStatus></PoeStatus>
      <UnitName></UnitName>
    </Container>
  </ContainerTopology>
</AP>
```

Table description

Item	Description

Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	AP type.	N/A	Enumeration: • 1—auto • 2—manual	N/A
SID	AP serial ID.	N/A	String, uppercase. Length: 1 to 63 characters.	N/A
Mac	AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
GN	Name of AP group to which the AP belongs.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Sta	AP association status.	N/A	Enumeration: • 1—Online • 2—Offline • 3—Image downloading	N/A
SUM	Time when AP status was updated.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OnT	AP online duration.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
UpT	AP system uptime.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SV	AP software version.	N/A	String. Length: 1 to 31 characters.	N/A
IPv4	IPv4 address of the backup AC.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Des	Description of the AP.	N/A	String. Length: 1 to 499 characters.	N/A
RegT	AP registration	N/A	Unsigned integer. Value	N/A

	time.		range: 0 to 4294967295.	
AuFlag	AP authentication flag.	N/A	Enumeration: • 1—Unknown • 2—Permit • 3—Deny	N/A
InFlag	Inside AP flag.	N/A	Boolean: • true • false	N/A
Radio	Radio on the AP.	Data Structure	Members include: • ID • Mode • CB • Retry	N/A
ID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) 9—802.11ax(5GHz)	N/A
CB	Channel usage.	N/A	Unsigned short.	N/A
Retry	Frame retry ratio.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

AP/VirtualManualAP

This table contains information of virtual manual AP.

XML structure

```
<AP>
  <VirtualManualAP>
    <AP>

      <RateMandatory></RateMandatory>
      <RateSupported></RateSupported>
      <RateDisabled></RateDisabled>
      <CfgChannel></CfgChannel>
    </Radio>
  </RadioOfVirtualManualAP>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	RadioOfVirtualManualAP
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: • 1—802.11b • 2—802.11a • 3—802.11g • 4—802.11n(2.4GHz) • 5—802.11n(5GHz) • 6—802.11ac(2.4GHz) • 7—802.11ac(5GHz) • 8—802.11ax(2.4GHz) • 9—802.11ax(5GHz)	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMulticast	Multicast.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps • 13—auto If this column is not configured, the multicast rate will be calculated automatically.	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateMandatory	Mandatory rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateSupported	Supported rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: • 1—1Mbps • 2—2Mbps • 3—5.5Mbps • 4—6Mbps • 5—9Mbps • 6—11Mbps • 7—12Mbps • 8—18Mbps • 9—24Mbps • 10—36Mbps • 11—48Mbps • 12—54Mbps	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
CfgChannel	Configured channel number.	N/A	The value range conforms to AP/ChannelDB/Supported ChannelList" column. And 15 －auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.

AP/VirtualAPGroup

This table contains information of virtual AP groups.

XML structure

<AP>

```
  <VirtualAPGroup>
    <Group>
      <Name></Name>
      <ModelNum></ModelNum>
      <APNum></APNum>
      <EchoInterval></EchoInterval>
      <StatisInterval></StatisInterval>
      <FirmwareUpgrade></FirmwareUpgrade>
      <Description></Description>
      <TunnelEncryption></TunnelEncryption>
    </Group>
  </VirtualAPGroup>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	VirtualAPGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelNum	Number of models in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
APNum	Number of APs in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: • true—Enable • false—Disable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: • true—Enable • false—Disable	N/A

AP/VirtualAPGroupModel

This table contains information of virtual AP group models.

XML structure

```
<AP>
  <VirtualAPGroupModel>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioNum></RadioNum>
    </Model>
  </VirtualAPGroupModel>
</AP>
```

Table description

Item	Description

      <LastClear></LastClear>
    </IfStatistics>
  </SpmIfStatistics>
</AP>
```

Table description

Item	Description
Feature name	AP
Table name	SpmIfStatistics
Table type	Multi-instance table
Row name	IfStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpmName	SPM name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
IfName	Interface name.	Index	String. Length: 1 to 47 characters. Example: ge 1	N/A
IfType	Interface type.	N/A	Enumeration: • **1**—Physics. • **2**—Virtual.	N/A
LinkStatus	Interface status.	N/A	Enumeration: • **1**—Up.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Down.	
InRate	Rate of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutRate	Rate of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InOctets	Number of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutOctets	Number of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InUcastPkts	Number of inbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutUcastPkts	Number of outbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InNUcastPkts	Number of inbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutNUcastPkts	Number of outbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InErrors	Number of inbound error packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutErrors	Number of outbound error packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
LastClear	Local time when the statistics on an interface were cleared most recently.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

AP/APGroupIfRemoteCfg

This table contains information of AP group interface remote configuration.

XML structure

Table name	RuleSrcAddrs
Table type	Multi-instance table
Row name	SrcAddr
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
NameList	Object group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the source address object group	N/A	String, case-insensitive. Length: 0 to 63 characters.	The value cannot be “any”.

AppProxy/RuleDestAddrs

This table contains destination address object group information for an existing app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleDestAddrs>
    <DestAddr>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestAddr>
  </RuleDestAddrs>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleDestAddrs
Table type	Multi-instance table
Row name	DestAddr
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
NameList	Object group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the destination address object group	N/A	String, case-insensitive. Length: 0 to 63 characters.	The value cannot be “any”.

AppProxy/RuleSrcSecZones

This table contains source security zone information for an existing app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleSrcSecZones>
    <SrcSecZone>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </RuleSrcSecZones>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleSrcSecZones

      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestSecZone>
  </RuleDestSecZones>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleDestSecZones
Table type	Multi-instance table
Row name	DestSecZone
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
ZoneList	Zone list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the destination security zone	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be “any”.

AppProxy/RuleUsers

This table contains user information for an existing app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleUsers>
    <User>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserList>
        <UserName></UserName>
        <DomainName></DomainName>
      </UserList>
    </User>
  </RuleUsers>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleUsers
Table type	Multi-instance table
Row name	User
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
UserList	User list	Data structure	Members include: • UserName • DomainName	N/A
UserName	Name of the user	N/A	String, case-sensitive. Length: 1 to 55 characters.	The user name cannot be a, al, or all, and it cannot contain any of the following characters: \ | / : * ? < > @.
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \ | / ?: * ? < > @, and it cannot be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.

AppProxy/RuleUserGrps

This table contains user group information for an existing app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleUserGrps>
    <UserGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserGrpList>
        <UserGrpName></UserGrpName>
        <DomainName></DomainName>
      </UserGrpList>
    </UserGrp>
  </RuleUserGrps>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy

Row name	UserGrp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
UserGrpList	User group list	Data structure	Members include: • UserGrpName • DomainName	N/A
UserGrpName	Name of the user group	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \ | / ?: * ? < > @, and it cannot be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.

AppProxy/RuleServGrps

This table contains service object group information for an existing app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleServGrps>
    <ServGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
```

```
      <NameItem></NameItem>
    </NameList>
  </ServGrp>
</RuleServGrps>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleServGrps
Table type	Multi-instance table
Row name	ServGrp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
NameList	Service group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the service object group	N/A	String, case-insensitive. Length: 0 to 63 characters.	The value cannot be “any”.

AppProxy/WhiteListHostNames

This table contains information of user-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListHostNames>
    <HostName>
      <Name></Name>
    </HostName>
  </WhiteListHostNames>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListHostNames
Table type	Multi-instance table
Row name	HostName
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	The host name may contain space.

AppProxy/WhiteListPredefine

This table contains information of pre-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListPredefine>
    <HostName>
      <Type></Type>
      <Name></Name>
      <Enable></Enable>
    </HostName>
  </WhiteListPredefine>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefine
Table type	Multi-instance table
Row name	HostName
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the host name belongs to the pre-define chrome-HSTS list	Index	Enumeration: • **1**—Not in chrome-HSTS. • **2**—in chrome-HSTS.	N/A
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	The host name may contain spaces.
Enable	Enabling status of the host name	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A

AppProxy/WhiteListPredefineChromeHsts

This table contains the state information of chrome-HSTS in pre-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListPredefineChromeHsts>
    <Enable></Enable>
  </WhiteListPredefineChromeHsts>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefineChromeHsts
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of host names in chrome-HSTS whitelist	N/A	Boolean: • **true**—Enabled • **false**—Disabled	N/A

AppProxy/TrustCertificate

This table contains credibility information of certificates.

XML structure

```
<AppProxy>
  <TrustCertificates>
    <TrustCertificate>
      <FileName></FileName>
      <Trust></Trust>
    </TrustCertificate>
  </TrustCertificates>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	TrustCertificates
Table type	Multi-instance table
Row name	TrustCertificate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	File name of the certificate	Index	String, case-insensitive. Length: 1 to 63 characters	N/A
Trust	Credibility type of the certificate	N/A	Enumeration: • **0**—untrust. • **1**—trust. • **2**—trust&untrust.	N/A

IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	This value is always false.
NameList	Zone list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the destination security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value cannot be “any”.

AppProxy/RuleUsers

This table contains user information for an app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleUsers>
    <User>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserList>
        <UserName></UserName>
        <DomainName></DomainName>
      </UserList>
    </User>
  </RuleUsers>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleUsers
Table type	Multi-instance table
Row name	User

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	This value is always false.
UserList	User list	Data structure	Members include: • UserName • DomainName	N/A
UserName	Name of the user	N/A	String, case-sensitive. Length: 1 to 55 characters.	The user name cannot be a, al, or all, and it cannot contain any of the following characters: \ | / : * ? < > @.
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \ | / ?: * ? < > @, and it cannot be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.

AppProxy/RuleUserGrps

This table contains user group information for an app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleUserGrps>
    <UserGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserGrpList>
        <UserGrpName></UserGrpName>
        <DomainName></DomainName>
      </UserGrpList>
    </UserGrp>
  </RuleUserGrps>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleUserGrps
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	This value is always false.
UserGrpList	UserGrp list	Data structure	Members include: • UserGrpName • DomainName	N/A
UserGrpName	Name of the user group	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \ | / ?: * ? < > @, and it cannot be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.

AppProxy/RuleServGrps

This table contains service object group information for an app-proxy policy rule.

XML structure

```
<AppProxy>
  <RuleServGrps>
    <ServGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
```

```
      </NameList>
    </ServGrp>
  </RuleServGrps>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	RuleServGrps
Table type	Multi-instance table
Row name	ServGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false**—No.	This value is always false.
NameList	Service group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the service object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be “any”.

AppProxy/WhiteListHostNames

This table contains information of user-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListHostNames>
    <HostName>
      <Name></Name>
      <RowCount></RowCount>
    </HostName>
  </WhiteListHostNames>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListHostNames
Table type	Multi-instance table
Row name	HostName
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RowCount	Number of host name items	N/A	Unsigned integer.	N/A

AppProxy/WhiteListPredefine

This table contains information of pre-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListPredefine>
    <HostName>
      <Type></Type>
      <Name></Name>
      <Enable></Enable>
      <RowCount></RowCount>
    </HostName>
  </WhiteListPredefine>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefine
Table type	Multi-instance table
Row name	HostName

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the host name belongs to the pre-define chrome-HSTS list	Index	Enumeration: • **1**—Not in chrome-HSTS. • **2**—In chrome-HSTS.	N/A
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Enable	Enabling status of the host name	N/A	Enumeration: • **0**—Disabled. • **1**—Enabled.	N/A
RowCount	Number of the host name items	N/A	Unsigned integer.	N/A

AppProxy/WhiteListPredefineChromeHsts

This table contains the state information of chrome-HSTS in pre-defined host name whitelist.

XML structure

```
<AppProxy>
  <WhiteListPredefineChromeHsts>
    <Enable></Enable>
  </WhiteListPredefineChromeHsts>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefineChromeHsts
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of host names in chrome-HSTS whitelist	N/A	Boolean: • **true**—Enabled • **false**—Disabled	N/A

AppProxy/TrustCertificate

This table contains credibility information of certificates.

XML structure

```
<AppProxy>
  <TrustCertificates>
    <TrustCertificate>
      <FileName></FileName>
      <Trust></Trust>
    </TrustCertificate>
  </TrustCertificates>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	TrustCertificates
Table type	Multi-instance table
Row name	TrustCertificate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	File name of certificate	Index	String, case-insensitive. Length: 1 to 63 characters	N/A
Trust	Credibility type of the certificate	N/A	Enumeration: • **0**—untrust. • **1**—trust. • **2**—untrust&trust.	N/A

AppProxy/Certificates

This table contains certificates information.

XML structure

```
<AppProxy>
  <Certificates>
    <Certificate>
      <Name></Name>
      <Trust></Trust>
      <Issuer></Issuer>
      <Subject></Subject>
      <StartDate></StartDate>
      <EndDate></EndDate>
      <Version></Version>
      <Serialnumber></Serialnumber>
      <Extend></Extend>
    </Certificate>
  </Certificates>
</AppProxy>
```

Table description

Item	Description
Feature name	AppProxy
Table name	Certificates
Table type	Multi-instance table
Row name	Certificate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	File name of CA certificate.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
Trust	Credibility type of the certificate.	N/A	Enumeration: • **0**—untrust. • **1**—trust. • **2**—untrust&trust.	N/A
Issuer	Publisher of the certificate	N/A	String	N/A
Subject	Holder of the certificate	N/A	String	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartDate	The effective date of certificate	N/A	String	N/A
EndDate	Expiration date of the certificate	N/A	String	N/A
Version	Version of the certificate	N/A	Unsigned integer	N/A
Serialnumber	Serial number of the certificate	N/A	String	N/A
Extend	Extended information of the certificate	N/A	String	N/A

AppProxy/Specifications

This table contains specification information.

XML structure

```
<Specifications>
    <RuleSrcAddrLimit></RuleSrcAddrLimit>
    <RuleDestAddrLimit></RuleDestAddrLimit>
    <RuleServGrpsLimit></RuleServGrpLimit>
    <RuleSrcSecZonesLimit></RuleSrcSecZonesLimit>

AppProxy

AppProxy/MoveBeforeRules

Message	Explanation
The default rule cannot be moved. 默认规则不能移动。	The default rule cannot be moved before any user-defined rules. 默认规则不能被移动到任何自定义规则之前。
The rule to be removed or the target rule doesn't exist. 要移动的规则或目标规则不存在。	The rule to be moved or the target rule does not exist and processing fails. 将要移动的规则或目标规则不存在，处理失败。
The two rule IDs cannot be the same. 要移动的规则与目标规则是同一个规则。	The rule to be moved and the target rule cannot be the same rule. 要移动的规则和目标规则不能是同一个规则

AppProxy/ImportCertificates

Message	Explanation
Certificate file does not exist. 证书文件不存在。	The certificate file to import does not exist. 要导入的证书文件不存在。
Invalid password. 无效密码。	The input password does not match the imported certificate. 输入的密码与导入的证书不匹配。
The column Trust cannot be empty. Trust列不能为空。	Trust column must be specified when importing a certificate. 导入证书时必须制定trust列。
Failed to parse the certificate. 导入的证书解析失败。	Imported certificate is invalid and the parsing fails. 导入的证书不合法，导致解析失败
Failed to verify the certificate. 导入的证书验证失败。	The certificate verification fails because the imported certificate expires or other reasons. 导入的证书过期或由于其他原因导致验证失败。
The certificate file does not have a key pair. 导入的证书不含密钥对。	The imported certificate must contain a key pair. 导入的证书必须包含密钥对。
The certificate file does not have a root certificate. 导入的证书不包含根证书。	The imported certificate must contain the root certificate. 导入的证书必须包含根证书。
The certificate and the public key do not match. 导入的证书公钥不匹配。	The imported certificate and public key do not match. 导入的证书和公钥不匹配。
An SSL decryption certificate with the same name already exists. 该证书已存在。	Certificate cannot be imported if it has the same name with a certificate on the device. 不能导入文件名同名的证书。

AppProxy/CommitWhiteLists

Message	Explanation
Failed to submit the SSL whitelist settings. 提交白名单失败。	Failure to compile the whitelist due to insufficient memory or other reasons. 由于内存不足或其他原因导致编译白名单失败，。
Activating the SSL whitelist settings. Please wait... 正在提交白名单，请稍等。	A whitelist is being submitted. The next submission can be processed only after the submission is completed. 正在提交白名单，需要等提交完之后，才可以处理下一次提交。

AppProxy/RuleSrcAddrs

Message	Explanation
Object group type not supported. 对象组类型不支持。	The specified object group must be of the address type. 引用的对象组必须是地址类型的。
Maximum number of source IP address object groups in the rule already reached. 引用的源地址对象组已达上限。	A maximum of 64 source address object groups can be used in one rule. 规则下最多引用64个源地址对象组。
The object group does not exist. 对象组不存在。	The specified address object group does not exist. Please create the address object group before using it. 引用的地址对象组不存在，需要先创建地址对象组才可以引用。

AppProxy/RuleDestAddrs

Message	Explanation
Object group type not supported. 对象组类型不支持。	The specified object group must be of the address type. 引用的对象组必须是地址类型的。
Maximum number of destination IP address object groups in the rule already reached. 引用的目的地址对象组已达上限。	A maximum of 64 destination address object groups can be used in one rule. 规则下最多引用64个目的地址对象组。
The object group does exist. 对象组不存在。	The specified address object group does not exist. Please create the address object group before using it. 引用的地址对象组不存在，需要先创建地址对象组才可以引用。

AppProxy/RuleSrcSecZones

Message	Explanation
Maximum number of source security zones in the rule already reached. 引用的源安全域已达上限。	A maximum of 16 source security zones can be used in one rule. 规则下最多引用16个源安全域。
Configuration succeeded but the source security zone does not exist. 引用的源安全域不存在。	Configuration succeeded, but it does not take effect because the source security zone does not exist. 配置成功了，但是源安全域不存在，配置不生效。

AppProxy/RuleDestSecZones

Message	Explanation
Maximum number of destination security zones in the rule already reached. 引用的源安全域已达上限。	Maximum 16 destination security zones referenced under rules. 规则下最多引用16个目的安全域。
Configuration succeeded but the destination security zone does not exist. 引用的源安全域不存在。	Configuration succeeded, but it does not take effect because the destination security zone does not exist. 配置成功了，但是源安全域不存在，配置不生效。

AppProxy/RuleUsers

Message	Explanation
Configuration succeeded but the user doesn't exist. 引用的用户不存在。	Configuration succeeded, but it does not take effect because the user does not exist. 配置成功了，但是用户不存在，配置不生效。
Maximum number of users in the rule already reached. 引用的用户已达上限。	A maximum of 64 users can be specified in a rule. 规则下最多引用64个用户。
The user name cannot be a, al, or all and cannot contain the following special characters:\r\n\\ | / : * ? < > @. 用户名不能包含 \\, |, /, :, *, ?, <, >, @,且不能为a、al、和all。	Input username is not valid. Please enter a new one according to the prompt message. 输入的用户名不合法，按照提示输入。
The domain name cannot contain the following characters: \r\n\\ | / : * ? < > @. 域名不能包含 /, \\, |, :, *, ?, <, >, @。	Input domain name is not valid. Please enter a new one according to the prompt message. 输入的域名不合法，按照提示输入。

AppProxy/RuleUserGrps

Message	Explanation
Configuration succeeded but the user groups do not exist. 引用的用户组不存在。	Configuration succeeded, but it does not take effect because the user groups do not exist. 配置成功了，但是用户组不存在，配置不生效。
Maximum number of user groups in the rule already reached. 引用的用户组已达上限。	A maximum of 64 user groups can be specified by a under rule. 规则下最多引用64个用户组。
The domain name cannot contain the following characters: \r\n\\ | / : * ? < > @.	Input domain name is not valid. Please enter a new one according to the prompt message.

域名不能包含 /, \\, |, :, *, ?, <, >, @。	输入的域名不合法，按照提示输入。

AppProxy/RuleServGrps

Message	Explanation
Incorrect object group type. 对象组类型不支持。	The specified object group must be of the service type. 引用的对象组必须是服务类型的。
Maximum number of service object groups in the rule already reached. 引用的服务已达上限。	A maximum of 64 service object groups can be specified in a rule. 规则下最多引用64个服务对象组。
The object group does not exist. 对象组不存在。	The specified service object group does not exist. Please create the service object group before using it. 引用的服务对象组不存在，需要先创建服务对象组才可以引用。

AppProxy/WhiteListHostNames

Message	Explanation
Maximum number of user-defined hostnames on the SSL hostname whitelist already reached. 域名白名单已达上限。	A maximum of 1000 items can be created in user-defined hostname whitelist. 自定义域名白名单最多1000个。

AppProxy/WhiteListPredefine

Message	Explanation
The hostname is not on the pre-defined SSL hostname whitelist. 预定义白名单中不存在指定的域名。	The specified domain name is not on the pre-defined whitelist. 指定的域名不在预定义白名单里。
To disable the Chrome-HSTS whitelist entry, you must first turn on the Chrome-HSTS whitelist by using the app-proxy ssl whitelist predefined-hostname chrome-hsts enable command. Chrome HSTS列表已经禁用。	Chrome HSTS whitelist is already disabled. Chrome HSTS列表已经去使能了，不需要再去使能。

AppProxy/WhiteListPredefineChromeHsts

Message	Explanation
To activate the setting, execute app-proxy ssl	After modifying the whitelist, please submit the whitelist

whitelist activate. 白名单列表已修改，请提交。	to make it take effect. 修改白名单列表之后，需要提交白名单才能生效。

AppProxy/PolicyRules

Message	Explanation
The rule ID is already used by another application proxy policy rule. 规则已经存在。	When creating a rule, the specified ID is already used. A new ID can be manually specified or automatically assigned without specifying an ID at the time of creation. 创建规则时，指定的ID已经被占用了，需要换一个ID或者创建时不指定ID，自动分配。
The rule name is already used by another application proxy policy rule. 规则名称已存在。	When creating a rule, a rule with the specified name already exists, but the ID is inconsistent with the ID of an existing rule. 创建规则时，已有指定名称的规则，但是ID跟已存在的规则的ID不一致。
Maximum number of application proxy policy rules already reached. 规则个数已达上限。	A maximum of 1024 rules can be created. 最多只能创建1024个代理策略规则。
Invalid name. 无效的规则名称。	Rule name cannot be default. 规则名称不能是default。
The default rule cannot delete. 默认策略不能删除。	The default rule is automatically created at startup and cannot be deleted. 默认策略在进程启动时自动创建，不能删除。
The default rule cannot be disabled. 默认策略不能禁用。	The default rule cannot be enabled. It can only be modified. 默认策略不能去使能，只能修改动作。

APR

APR/GeneralPortMappings

This table contains information about port mappings.

XML structure

```
<APR>
  <GeneralPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </GeneralPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	GeneralPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of a packet matches a general port mapping, APR recognizes the packet as the specified application protocol's packet. If two port mappings are configured with the same port number and transport layer protocol, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer protocol ID	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protoconame can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.
Support for row creation and deletion			Yes	

APR/Ipv4PortMappings

This table contains information about IPv4 address-based host-port mappings.

XML structure

```
<APR>
  <Ipv4PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <AppName></AppName>
    </PortMapping>
  </Ipv4PortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv4PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6—**TCP. • **17—**UDP. • **33—**DCCP. • **132—**SCTP. • **136—**UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1. To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address. No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Ipv6PortMappings

This table contains information about IPv6 address-based host-port mappings.

XML structure

```
<APR>
  <Ipv6PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
```

```
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <StartIpv6Address></StartIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <AppName></AppName>
    </PortMapping>
  </Ipv6PortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv6PortMappings

PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.

Column name	Column description	Column type	Data type and restrictions	Remarks
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6—**TCP. • **17—**UDP. • **33—**DCCP. • **132—**SCTP. • **136—**UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
StartIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address. No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated..	Example: 1:1::1:6. This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Ipv4SubnetPortMappings

This table contains information about IPv4 subnet-based host-port mappings.

XML structure

```
<APR>
  <Ipv4SubnetPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <AppName></AppName>
    </PortMapping>
  </Ipv4SubnetPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv4SubnetPortMappings
Table type	Multi-instance table

Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets destined for the specified subnet, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and subnet, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1. APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.
Ipv4PrefixLength	Length of the IPv4 address mask.	Index	Unsigned integer. Value range: 1 to 32.	N/A
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Ipv6SubnetPortMappings

This table contains information about IPv6 subnet-based host-port mappings.

XML structure

```
<APR>
  <Ipv6SubnetPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
```

```
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <AppName></AppName>
    </PortMapping>
  </Ipv6SubnetPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv6SubnetPortMappings

L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.
Ipv6PrefixLength	Length of the IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/ Ipv4ACLPortMappings

This table contains information about IPv4 ACL-based host-port mappings.

XML structure

```
<APR>
  <Ipv4ACLPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <ACLNumber></ACLNumber>
      <AppName></AppName>
    </PortMapping>
  </Ipv4ACLPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv4ACLPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID specified to the application layer protocol	Index	Enumeration: • **6—**TCP. • **17—**UDP. • **33—**DCCP. • **132—**SCTP. • **136—**UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/ Ipv6ACLPortMappings

This table contains information about IPv6 ACL-based host-port mappings.

XML structure

```
<APR>
  <Ipv6ACLPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <ACLNumber></ACLNumber>
      <AppName></AppName>
    </PortMapping>
  </Ipv6ACLPortMappings>
</APR>
```

Table description

Row name	PortMapping
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID specified to the application layer protocol	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Applications

This table contains information about predefined and user-defined applications.

XML structure

```
<APR>
  <Applications>
    <Application>
      <Type></Type>
      <AppName></AppName>
      <SecRisk></SecRisk>
    </Application>
  </Applications>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Applications
Table type	Multi-instance table
Row name	Application
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the application layer protocol	Index	Enumeration: • 0—predefined. • 1—user-defined.	N/A
AppName	Application layer protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment.
SecRisk	Application layer protocol security risk	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

APR/AppGroups

This table contains information about the user-defined application groups.

XML structure

```
<APR>
  <AppGroups>
    <GroupInfo>
      <GroupName></GroupName>
      <Description></Description>
    </GroupInfo>
  </AppGroups>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	AppGroups
Table type	Multi-instance table
Row name	GroupInfo

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.
Description	Description for the application group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank spaces can be included in a description. The default description of the user-defined application group is "User defined group".

APR/AppGroupMembers

This table contains the application protocols included in a user-defined application group.

XML structure

```
<APR>
  <AppGroupMembers>
    <GroupMember>
      <GroupName></GroupName>
      <AppName></AppName>
    </GroupMember>
  </AppGroupMembers>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	AppGroupMembers
Table type	Multi-instance table
Row name	GroupMember

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	User-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.
AppName	Predefined or user-defined application protocol name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. A maximum of 65535 user-defined application protocols can be added to an application group. If you add a nonexistent application protocol to the application group, the system first creates the protocol before adding it to the application group. Whether the device can recognize the packets of this protocol depends on your configuration.

APR/AppGroupMembersIncGrp

This table contains the application groups included in an application group.

XML structure

```
<APR>
  <AppGroupMembersIncGrp>
```

```
    <GroupMember>
      <GroupName></GroupName>
      <IncGrpName></IncGrpName>
    </GroupMember>
  </AppGroupMembersIncGrp>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	`AppGroupMembersIncGrp`
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.
`IncGrpName`	Application group name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.

APR/StatisticOnInterfaces

This table contains the interfaces where statistic is enabled.

XML structure

```
<APR>
  <StatisticOnInterfaces>
```

```
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <EnableStatistic></EnableStatistic>
    </Interface>
  </StatisticOnInterfaces>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	StatisticOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	The direction of the interface	Index	• Enumeration: • 0—Inbound. • 1—Outbound.	**N/A**
EnableStatistic	Whether enable statistic for the interface	N/A	• Boolean: • true—YES. • false—NO (default).	N/A

APR/TerminalGroups

This table contains information about terminal groups.

XML structure

```
<APR>
  <TerminalGroups>
    <GroupInfo>
      <GroupName></GroupName>
      <GroupID></GroupID>
```

```
      <Type></Type>
      <Description></Description>
    </GroupInfo>
  </TerminalGroups>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	TerminalGroups
Table type	Multi-instance table
Row name	GroupInfo
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined terminal group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal name can't be "invalid" or "other". You can create up to 65536 terminal groups on the device.
GroupID	Terminal group ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Type	Terminal group type	N/A	Enumeration: • 0—predefined. • 1—user-defined.	N/A
Description	Description for the terminal group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank spaces can be included in a description. The default description of the user-defined terminal group is "User defined group".

APR/TerminalGroupMembersJson

This table contains terminals included in a terminal group.

XML structure

```
<APR>
  <TerminalGroupMembers>
    <GroupMember>
      <GroupName></GroupName>
      <TerminalValJson></TerminalValJson>
      <LastTerminal></LastTerminal>
    </GroupMember>
  </TerminalGroupMembers>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	TerminalGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined terminal name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal name can't be "invalid" or "other". You can create up to 65536 terminal groups on the device.

Column name	Column description	Column type	Data type and restrictions	Remarks
TerminalValJson	Predefined or user-defined terminal names in the terminal group	Index	String, case-insensitive. Length: 1 to 65535 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal name can't be "invalid" or "other". The terminal name must be standard and can be identified by the device. A maximum of 65535 user-defined terminals can be added to a terminal group. If you add a nonexistent terminal to the terminal group, the system first creates the terminal before adding it to the terminal group. Whether the device can recognize the packets of this terminal depends on your configuration.
LastTerminal	The last terminal in the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

APR/TerminalExtractEnable

This table contains information about whether the terminal extraction function is enabled.

XML structure

```
<APR>
  <TerminalExtractEnable>
    <ExtractEnable></ExtractEnable>
  </TerminalExtractEnable>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	TerminalExtractEnable
Table type	Single-instance table
Row name	None
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ExtractEnable	Whether the terminal extraction function is enabled	Index	Boolean: • true—YES • false—NO

APR/PredefinedPortMappings

This table contains information about predefined port mappings.

XML structure

```
<APR>
  <PredefinedPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </PredefinedPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	PredefinedPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
L4ProtocolID	Transport layer protocol ID.	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name using the port mapping.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment.

APR/GeneralPortMappings

This table contains information about port mappings.

XML structure

```
<APR>
  <GeneralPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </GeneralPortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	GeneralPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of a packet matches a general port mapping, APR recognizes the packet as the specified application protocol's packet. If two port mappings are configured with the same port number and transport layer protocol, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6**—TCP. • **17**—UDP. • **33**—DCCP. • **132**—SCTP. • **136**—UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Ipv4PortMappings

This table contains information about IPv4 address-based host-port mappings.

XML structure

```
<APR>
  <Ipv4PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <AppName></AppName>
    </PortMapping>
  </Ipv4PortMappings>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	Ipv4PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets. If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: • **6—**TCP. • **17—**UDP. • **33—**DCCP. • **132—**SCTP. • **136—**UDP-Lite.	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1. To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address. No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

APR/Ipv6PortMappings

This table contains information about IPv6 address-based host-port mappings.

XML structure

```
<APR>
  <Ipv6PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
```

```
      <L4ProtocolID></L4ProtocolID>

Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the application layer protocol	Index	Enumeration: • 0—predefined. • 1—user-defined.	N/A
AppName	Application layer protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment.
AppID	Application layer protocol ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
L5AppID	Application layer 5 protocol ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
AppSubCategoryID	Identify a subcategory	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A
IsTunnel	Whether or not the protocol is a tunnel protocol	N/A	Boolean: • true—YES • false—NO (default).	N/A
IsEncrypted	Whether or not the protocol is a cryptographic protocol	N/A	Boolean: • true—YES • false—NO (default).	N/A
SecRisk	Application layer protocol security risk	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RiskLevel	Application layer protocol risk level	N/A	Unsigned integer. Value range: 1 to 2^{16} - 1.	N/A

APR/AppGroups

This table contains information about the application groups.

XML structure

```
<APR>
  <AppGroups>
    <GroupInfo>
      <GroupName></GroupName>
      <GroupID></GroupID>
      <Type></Type>
      <Description></Description>
    </GroupInfo>
  </AppGroups>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	AppGroups
Table type	Multi-instance table
Row name	GroupInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Application group ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Type	Application group type	N/A	• Enumeration: • 0—predefined. • 1—user-defined.	N/A
Description	Description for the application group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank spaces can be included in a description. The default description of the user-defined application group is "User defined group".

APR/AppGroupMembers

This table contains the application protocols included in an application group.

XML structure

```
<APR>
  <AppGroupMembers>
    <GroupMember>
      <GroupName></GroupName>
      <AppName></AppName>
    </GroupMember>
  </AppGroupMembers>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	AppGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application group name can't be "invalid" or "other". You can create up to 65536 application groups on the device.
AppName	Predefined or user-defined application protocol name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application layer protocol name can't be "invalid" or "other". The application layer protocol name must be standard and can be identified by the equipment. A maximum of 65535 user-defined application protocols can be added to an application group. If you add a nonexistent application protocol to the application group, the system first creates the protocol before adding it to the application group. Whether the device can recognize the packets of this protocol depends on your configuration.

APR/StatisticOnInterfaces

This table contains the interfaces where statistic is enabled.

XML structure

```
<APR>
  <StatisticOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <EnableStatistic></EnableStatistic>
    </Interface>
  </StatisticOnInterfaces>
```

```
</APR>

GroupName	Predefined or user-defined terminal group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal group name can't be "invalid" or "other". You can create up to 65536 terminal groups on the device.
GroupID	Terminal group ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Type	Terminal group type	N/A	Enumeration: • 0—predefined. • 1—user-defined.	N/A
Description	Description for the terminal group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank spaces can be included in a description. The default description of the user-defined terminal group is "User defined group".

APR/TerminalGroupMembersJson

This table contains terminals included in a terminal group.

XML structure

```
<APR>
  <TerminalGroupMembers>
    <GroupMember>
      <GroupName></GroupName>
      <TerminalValJson></TerminalValJson>
      <LastTerminal></LastTerminal>
    </GroupMember>
  </TerminalGroupMembers>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	TerminalGroupMembers

Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined terminal name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal group name can't be "invalid" or "other". You can create up to 65536 terminal groups on the device.
TerminalValJson	Predefined or user-defined terminal names in the terminal group	Index	String, case-insensitive. Length: 1 to 65535 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The terminal name can't be "invalid" or "other". The terminal name must be standard and can be identified by the device. A maximum of 65535 user-defined terminals can be added to a terminal group. If you add a nonexistent terminal to the terminal group, the system first creates the terminal before adding it to the terminal group. Whether the device can recognize the packets of this terminal depends on your configuration.
LastTerminal	The last terminal in the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

APR/TerminalExtractEnable

This table contains information about whether the terminal extraction function is enabled.

XML structure

```
<APR>
  <TerminalExtractEnable>
```

```
    <ExtractEnable></ExtractEnable>
  </TerminalExtractEnable>
</APR>
```

Table description

Item	Description
Feature name	APR

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ExtractEnable	Whether the terminal extraction function is enabled	Index	Boolean: • true—YES • false—NO	

APR/VideoTerminalHeatMap

This table contains the terminal heat map.

XML structure

```
<APR>
  <VideoTerminalHeatMap>
    <HeatMap>
      <Count></Count>
      <AddrType></AddrType>
      <AddrSeg></AddrSeg>
      <TerminalState></TerminalState>
      <DeviceType></DeviceType>
      <TerminalJsonVal></TerminalJsonVal>
    </HeatMap>
  </VideoTerminalHeatMap>
</APR>
```

Table description

Item	Description
Feature name	APR
Table name	VideoTerminalHeatMap
Table type	Multi-instance table
Row name	HeatMap
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Count	The number of IP addresses obtained	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
AddrType	The type of the address	Index	Enumeration: • 1—ipv4. • 2—ipv6.	N/A
AddrSeg	The address segment of the terminal	Index	String, case-insensitive. Length:1 to 45 characters.	IPv4 or IPv6.
TerminalState	The state of the terminal	N/A	Enumeration: • 1—Normal. • 2—Unreachable. • 3—Abnormal.	N/A
DeviceType	The type of the terminal	N/A	Enumeration: • 1—IPC. • 2—Others.	N/A
TerminalJson Val	Json values of information about the terminal	N/A	String, case-insensitive. Length: 0 to 65000 characters.	N/A

APR/VideoIPSeg

This table contains information about terminal IPv4 segments.

XML structure

```
<APR>
  <VideoIPSeg>
    <VideoSeg>
      <IPCount></IPCount>
      <IPJsonVal></IPJsonVal>
```

```
    </VideoSeg>

ARP

ARP/ArpScan

This table is used to enable ARP automatic scanning in a specific Ipv4 address range.

XML structure

```
<ARP>
  <ArpScan>
    <Scan>
      <IfIndex></IfIndex>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
    </Scan>
  </ArpScan>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpScan
Table type	Multi-instance table
Row name	Scan
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address Start	The start IPv4 address of the scanning range	N/A	String, dotted decimal notation.	If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides. The start IP address and end IP address must be on the same network as the primary IP address or manually configured secondary IP addresses of the interface.
Ipv4Address End	The end IPv4 address of the scanning range	N/A	String, dotted decimal notation.	Must be specified if the Ipv4AddressStart column is specified.

ARP/ArpFixup

This table is used to change the existing dynamic ARP entries into static ARP entries.

XML structure

```
<ARP>
  <ArpFixup>
    <Fixup>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </Fixup>
  </ArpFixup>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpFixup

Table type	Multi-instance table
Row name	Fixup
Restrictions	Only Layer 3 interface is supported.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

ARP/ArpClearByType

This table is used to clear ARP entries according to ARP entry type.

XML structure

```
<ARP>
  <ArpClearByType>
    <ArpType></ArpType>
  </ArpClearByType>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpClearByType
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ArpType	ARP entry type	N/A	Enumeration: • **0**—Dynamic. • **1**—Static. • **2**—Multiport. • **3**—All.

ARP/ArpClearByIfIndex

This table is used to clear dynamic ARP entries according to interface index.

XML structure

```
<ARP>
  <ArpClearByIfIndex>
    <ClearByIfIndex>
      <IfIndex></IfIndex>
    </ClearByIfIndex>
  </ArpClearByIfIndex>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpClearByIfIndex
Table type	Multi-instance table
Row name	ClearByIfIndex
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface view Layer 3 Ethernet interface/subinterface view Layer 3 aggregate interface/aggregate subinterface view S-channel interface/S-channel aggregate interface view

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.

ARP/ArpClearTable

This table is used to clear ARP entries by an IP address and an interface index.

XML structure

```
<ARP>
  <ArpClearTable>
    <ClearEntry>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </ClearEntry>
  </ArpClearTable>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpClearTable
Table type	Multi-instance table
Row name	ClearEntry
Restrictions	Only Layer 3 interface is supported.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

ARP/ArpSnoopingClearByVLAN

This table is used to clear dynamic ARP Snnoping entries according to VLAN..

XML structure

```
<ARP>
  <ArpSnoopingClearByVLAN>
    <ClearByVLAN>
      <VLANID></VLANID>
    </ClearByVLAN>
  </ArpSnoopingClearByVLAN>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingClearByVLAN
Table type	Multi-instance table
Row name	ClearByVLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer.

ARP/ArpSnoopingClearByIP

This table is used to clear dynamic ARP Snnoping entries according to Ipv4 address.

XML structure

```
<ARP>
  <ArpSnoopingClearByIP>
```

```
    <ClearByIP>
      <Ipv4Address></Ipv4Address>
    </ClearByIP>
  </ArpSnoopingClearByIP>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingClearByIP
Table type	Multi-instance table
Row name	ClearByIP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

ARP/ArpRateLimitAllIf

This table is used to config ARP rate limit on all layer 2 physical interface and layer 2 aggregate interface.

XML structure

```
<ARP>
  <ArpRateLimitAllIf>
    <RateLimitAllIf>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
    </RateLimitAllIf>
  </ArpRateLimitAllIf>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimitAllIf
Table type	Multi-instance table
Row name	RateLimitAllIf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	
RateLimitEnable	Whether the rate limit function is enable.	N/A	Boolean: • **true** (default) • **false**	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model. The default value of RateLimitNum depends on the device model. RateLimitNum can be configured only when RateLimitEnable is true.

ARP/ArpClearSuppressionByVsi

This table is used to clear ARP suppression entries by VSI.

XML structure

<ARP>

```
  <ArpClearSuppressionByVsi>
    <ClearSuppressionByVsi>
      <VsiName></VsiName>
    </ClearSuppressionByVsi>
  </ArpClearSuppressionByVsi>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpClearSuppressionByVsi
Table type	Multi-instance table
Row name	ClearSuppressionByVsi
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VsiName	VSI name	Index	String. Length: 1 to 31 characters.

ARP/ExportArpConfig

This table is used to export ARP configuration.

XML structure

```
<ARP>
  <ExportArpConfig>
    <ExportArp>
      <FileName></FileName>
    </ExportArp>
  </ExportArpConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ExportArpConfig
Table type	Single-instance table
Row name	ExportArp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FileName	The file for saving ARP configuration	N/A	String. Length: 1 to 255 characters.

ARP/ImportArpConfig

This table is used to import ARP configuration.

XML structure

```
<ARP>
  <ImportArpConfig>
    <ImportArp>
      <FileName></FileName>
      <StartLine></StartLine>
    </ImportArp>
  </ImportArpConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ImportArpConfig

Item	Description
Table type	Multi-instance table
Row name	ImportArp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Configuration file	N/A	String. Length: 1 to 255 characters.
StartLine	Start line of ARP configuration in the configuration file	N/A	Unsigned integer.

ARP

ARP/ArpScanAutoRate

This table contains the information about ARP auto scanning.

XML structure

```
<ARP>
  <ArpScanAutoRate>
    <SendRatePPM></SendRatePPM>
    <SendRatePPS></SendRatePPS>
  </ArpScanAutoRate>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpScanAutoRate
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SendRatePPM	Number of ARP request packets to be sent per minute.	N/A	Unsigned integer. Value range: 10 to 600.	This value must be a multiple of 10. SendRatePPM or SendRatePPS can only have one of them .

Column name	Column description	Column type	Data type and restrictions	Remarks
SendRatePPS	Number of ARP request packets to be sent per second.	N/A	Unsigned integer. Value range: 10 to 1000.	This value must be a multiple of 10.

ARP/ArpIfScanAuto

This table contains interface-specific information about ARP auto scanning.

XML structure

```
<ARP>
  <ArpIfScanAuto>
    <IfScanAuto>
      <IfIndex></IfIndex>
      <AutoEnable></AutoEnable>
      <StartIP></StartIP>
      <EndIP></EndIP>
    </IfScanAuto>
  </ArpIfScanAuto>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpIfScanAuto
Table type	Multi-instance table
Row name	IfScanAuto
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
AutoEnable	Whether ARP auto scanning is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
StartIP	Start IPv4 address of the scanning range	N/A	String, dotted decimal notation.	If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides. StartIP and EndIP can be configured only when ARP auto scan on the interface is enabled.s
EndIP	End IPv4 address of the scanning range	N/A	String, dotted decimal notation.	You must specify the end IPv4 address if the start IPv4 address is specified.

ARP/ArpConfig

This table contains ARP configuration information.

XML structure

```
<ARP>
  <ArpConfig>
    <Config>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <ArpType></ArpType>
      <Description></Description>
    </Config>
  </ArpConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpConfig
Table type	Multi-instance table
Row name	Config
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	It must be configured together with the PortIndex column when ArpType is static. It must be specified when ArpType is multiport.
PortIndex	Port index	N/A	Unsigned integer.	It must be configured together with the VLANID column when ArpType is static. It must not be specified when ArpType is multiport.
ArpType	ARP entry type	N/A	Enumeration: • **1**—Static. • **2**—Multiport.	Required. If the multiport type is supported depends on the device model.
Description	Description of the static ARP entry	N/A	String Length:1 to 255 characters.	N/A

ARP/ArpGratuitous

This table contains gratuitous ARP packets enable information.

XML structure

```
<ARP>
  <ArpGratuitous>
    <LearnEnable></LearnEnable>
    <SendEnable></SendEnable>
  </ArpGratuitous>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitous
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
LearnEnable	Whether the learning of gratuitous ARP packets function is enabled	N/A	Boolean: • **true** (default) • **false**
SendEnable	Whether the function of sending gratuitous ARP packets upon receiving ARP requests whose target IP address is on a different subnet is enabled.	N/A	Boolean: • **true** • **false** (default)

ARP/ArpLearnLimit

This table contains the information of maximum number of dynamic ARP entries that an interface can learn.

XML structure

```
<ARP>
  <ArpLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <LearnAlarmThreshold></LearnAlarmThreshold>
    </LearnLimit>
  </ArpLearnLimit>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface VLAN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of dynamic ARP entries that an interface can learn	N/A	Unsigned integer. Value range: 0 to LearnMaxNumLimit.	0 means the interface is disabled from learning dynamic ARP entries. The value of LearnMaxNumLimit depends on the device model. The default setting varies with device models.
LearnAlarmThreshold	Alarm threshold in percentage	N/A	Unsigned integer. Value range: 0 to 100.	To disable the threashold alarming, set the value to 0. The default setting is 0.

ARP/ArpGratuitousInterval

This table contains the information of periodic sending of gratuitous ARP packets and set the sending interval on an interface.

XML structure

```
<ARP>
  <ArpGratuitousInterval>
    <GratuitousInterval>
      <IfIndex></IfIndex>
      <Interval></Interval>
    </GratuitousInterval>
  </ArpGratuitousInterval>
```

```
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitousInterval
Table type	Multi-instance table
Row name	GratuitousInterval
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VLAN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Interval	The interval at which gratuitous ARP packets are sent	N/A	Unsigned integer. Value range: 0, 200 to 200000 ms. Default: 0.	0 means disable the interface from periodically sending gratuitous ARP packets.

ARP/ArpProxy

This table contains ARP proxy enable and local ARP proxy enable information.

XML structure

```
<ARP>
  <ArpProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
      <LocalStartIpv4Address></LocalStartIpv4Address>
      <LocalEndIpv4Address></LocalEndIpv4Address>
    </Proxy>
  </ArpProxy>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpProxy
Table type	Single-instance table
Row name	Proxy
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ProxyEnable	Whether proxy ARP is enabled on the interface	N/A	Boolean: • **true** • **false** (default)	N/A
LocalProxyEnable	Whether local proxy ARP is enabled on the interface	N/A	Boolean: • **true** • **false** (default)	N/A
LocalStartIpv4Address	Start IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	LocalStartIpv4Address and LocalEndIpv4Address must be configured together. LocalStartIpv4Address and LocalEndIpv4Address can be configured only when local proxy ARP on the interface is enabled.
LocalEndIpv4Address	End IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A

ARP/ArpAttackProtect

This table contains ARP attack protect information.

XML structure

```
<ARP>
  <ArpAttackProtect>
    <ResolvingRouteEnable></ResolvingRouteEnable>
    <SourceSuppressionEnable></SourceSuppressionEnable>
    <SourceSuppressionLimitNum></SourceSuppressionLimitNum>
    <SourceMACDetectType></SourceMACDetectType>
    <SourceMACAgeTime></SourceMACAgeTime>
    <SourceMACThresholdValue></SourceMACThresholdValue>
    <ValidCheckEnable></ValidCheckEnable>
    <ActiveACKType></ActiveACKType>
    <DetectionValidateSrcMAC></DetectionValidateSrcMAC>
    <DetectionValidateDstMAC></DetectionValidateDstMAC>
    <DetectionValidateIP></DetectionValidateIP>
    <CheckLogEnable></CheckLogEnable>
  </ArpAttackProtect>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResolvingRouteEnable	Whether the resolving route	N/A	Boolean: • **true**	The default value of ResolvingRouteEnable

	function is enabled		• **false**	depends on the device model.
SourceSuppressionEnable	Whether the ARP suppression original address function is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
SourceSuppressionLimitNum	Set the source suppression limit number	N/A	Unsigned integer. Value range: 2 to 1024. Default: 10.	N/A
SourceMACDetectType	Set the attack detection function of fixed source MAC address and select the mode	N/A	Unsigned integer. • **0—Disabled** (default)**.** • **1—Filter.** • **2—Monitor.**	N/A
SourceMACAgeTime	Set the fixed source mac address aging time of arp attack detection entries	N/A	Unsigned integer. Value range: 60 to 6000. Default: 300.	N/A
SourceMACThresholdValue	Set the fixed source mac address threshold of ARP attack detection entries	N/A	Unsigned integer. Unsigned integer. Value range: uiSourceMinThreshold to uiSourceMaxThreshold.	The value of uiSourceMinThreshold and uiSourceMaxThreshold depend on the device model. The default value of SourceMACThresholdValue depends on the device model.
ValidCheckEnable	Whether the source mac address consistency check function is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
ActiveACKType	Enable ARP active acknowledgement	N/A	Unsigned integer. • **0—Disabled** (default)**.** • **1—Loose.**	N/A

			• **2—Strict.**	
DetectionValidateSrcMAC	Whether the effective checks on the source mac address function is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
DetectionValidateDstMAC	Whether the effective checks on the destination mac address function is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
DetectionValidateIP	Whether the effective checks on the IP address is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
CheckLogEnable	Whether ARP logging is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

ARP/ArpRateLimit

This table contains ARP rate limit information.

XML structure

```
<ARP>
  <ArpRateLimit>
    <RateLimit>
      <IfIndex></IfIndex>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
    </RateLimit>
  </ArpRateLimit>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model. The default value of RateLimitNum depends

				on the device model. RateLimitNum can be configured only when RateLimitEnable is true.

ARP/ArpRateLimitLog

This table contains ARP rate limit log information.

XML structure

```
<ARP>
  <ArpRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </ArpRateLimitLog>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
LogInterval	Set the interval of sending report or	N/A	Unsigned integer.	N/A

	log		Value range: 1 to 86400. Default: 60.	

ARP/ArpSourceMACExclude

This table contains protective source mac address information.

XML structure

```
<ARP>
  <ArpSourceMACExclude>
    <SourceMACExclude>
      <MacAddress></MacAddress>
    </SourceMACExclude>
  </ArpSourceMACExclude>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACExclude
Table type	Multi-instance table
Row name	SourceMACExclude
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	The maximum number of protective source mac address that can be configured depends on the device model.

ARP/ArpAuthorized

This table contains the authorized ARP information.

XML structure

```
<ARP>
  <ArpAuthorized>
    <Authorized>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Authorized>
  </ArpAuthorized>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAuthorized
Table type	Single-instance table
Row name	Authorized
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface

				VLAN interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Enable	Whether authorized ARP is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

ARP/ArpDetection

This table contains configuration information about ARP attack detection.

XML structure

```
<ARP>
  <ArpDetection>
    <Detect>
      <VLANID></VLANID>
      <DetectionEnable></DetectionEnable>
      <RestrictedForwardingEnable></RestrictedForwardingEnable>
    </Detect>
  </ArpDetection>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetection
Table type	Multi-instance table
Row name	Detect
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
DetectionEnable	Whether ARP attack detection is enabled	N/A	Boolean: • **true** • **false** (default)
RestrictedForwardingEnable	Whether ARP restricted forwarding is enabled	N/A	Boolean: • **true** • **false** (default)

ARP/ArpDetectionTrust

This table contains information about ARP trusted interfaces.

XML structure

```
<ARP>
  <ArpDetectionTrust>
    <Interface>
      <IfIndex></IfIndex>
      <TrustEnable></TrustEnable>
    </Interface>
  </ArpDetectionTrust>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionTrust
Table type	Multi-instance table
Row name	Interface

Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
TrustEnable	Whether the interface is configured as an ARP trusted interface	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpFilterSource

This table contains information about ARP gateway protection and the protected gateway IP address.

XML structure

```
<ARP>
  <ArpFilterSource>
    <FilterSource>
```

```
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </FilterSource>
  </ArpFilterSource>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpFilterSource
Table type	Multi-instance table
Row name	FilterSource
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv4Address	The protected	Index	String, dotted decimal	N/A

	gateway IP address		notation.	

ARP/ArpFilterBinding

This table contains the information about restricting arp packet by source IP address and source mac address.

XML structure

```
<ARP>
  <ArpFilterBinding>
    <FilterBinding>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
    </FilterBinding>
  </ArpFilterBinding>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpFilterBinding
Table type	Multi-instance table
Row name	FilterBinding
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	Yes

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet

				interface. Layer 2 aggregate interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv4Address	The permitted IP address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	You cannot specify a MAC address when you remove or delete a rule.

ARP/ArpSnooping

This table contains information about ARP snooping.

XML structure

```
<ARP>
  <ArpSnooping>
    <Snooping>
      <VLANID></VLANID>
      <SnoopingEnable></SnoopingEnable>
    </Snooping>
  </ArpSnooping>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSnooping

Table type	Multi-instance table
Row name	Snooping
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
SnoopingEnable	Whether ARP snooping is enabled	N/A	Boolean: • **true** • **false** (default)

ARP/ArpInterface

This table contains ARP interface information.

XML structure

```
<ARP>
  <ArpInterface>
    <Interface>
      <IfIndex></IfIndex>
      <ModeUNI></ModeUNI>
    </Interface>
  </ArpInterface>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpInterface
Table type	Multi-instance table

Row name	Interface
Restrictions	VLAN interfaces
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only VLAN interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ModeUNI	Configure a port as a customer-side port	N/A	Boolean: • **true**—Customer-side port. • **false**—Network-side port (default).	Whether the ModeUNI is supported depends on the device model.

ARP/ArpVsiConfig

This table contains ARP VSI configuration information.

XML structure

```
<ARP>
  <ArpVsiConfig>
    <VsiConfig>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
```

```
      <VsiIfIndex></VsiIfIndex>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <Description></Description>
    </VsiConfig>
  </ArpVsiConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VsiIfIndex	VSI interface index	N/A	Unsigned integer.	The VSI interface must be bound to the VSI.

Column name	Column description	Column type	Data type and restrictions	Remarks
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field must be configured when the port is a Layer 2 Ethernet interface. It must be deleted when the port is a Tunnel interface.
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ARPs.
Description	Description of the static ARP entry	N/A	String Length:1 to 255 characters.	N/A

ARP/ArpRouteAdvertise

This table contains the information about ARP direct route advertisement.

XML structure

```
<ARP>
  <ArpRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <DelayTime></DelayTime>
      <Preference></Preference>
      <Tag></Tag>
    </RouteAdvertise>
  </ArpRouteAdvertise>
</ARP>
```

Table description

Item	Description
Feature name	ARP

Table name	ArpRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VE-L3VPN interface VSI interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	VE-L3VPN interface VSI interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
Enable	Whether ARP direct route advertisement is enabled	N/A	Boolean: • **true** • **false (default)**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DelayTime	Delay for ARP direct route advertisement	N/A	Unsigned integer. Value range: 0 to 3600, in seconds. Default: 0.	N/A
Preference	Preference of the direct routes	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	Preference and Tag can be configured only when ARP direct route advertisement on the interface is enabled.
Tag	Route tag for the direct routes	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	Preference and Tag can be configured only when ARP direct route advertisement on the interface is enabled.

ARP/ArpVsiFeature

This table contains ARP configuration information for VSIs.

XML structure

```
<ARP>
  <ArpVsiFeature>
    <VsiFeature>
      <VsiName></VsiName>
      <SnoopingEnable></SnoopingEnable>
      <DetectionEnable></DetectionEnable>
      <SuppressionEnable></SuppressionEnable>
      <SuppressionMode></SuppressionMode>
      <SuppressionMismatchDiscard></SuppressionMismatchDiscard>
      <NoBroadCast></NoBroadCast>
    </VsiFeature>
  </ArpVsiFeature>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiFeature
Table type	Multi-instance table
Row name	VsiFeature
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	N/A
SnoopingEnable	Whether ARP snooping is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DetectionEnable	Whether ARP attack detection is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled. **(default)**	N/A
SuppressionEnable	Whether ARP suppression is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
SuppressionMode	ARP suppression mode	N/A	Enumeration: • **1**—**`proxy-reply`** (default). • **2**—**`unicast-forward`**.	N/A
SuppressionMismatchDiscar	ARP suppression mismatch discard	N/A	Boolean: • **true**—Enabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
d	mode		• **false**—Disabled (default).	
NoBroadCast	Whether ARP stateless broadcast is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

ARP/ArpVsiDetectionTrust

This table contains ARP trusted AC configuration information for Ethernet service instances.

XML structure

```
<ARP>
  <ArpVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </ArpVsiDetectionTrust>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ARP trusted AC	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

ARP/ArpForwardConverseLearn

This table contains configuration information about ARP conversational learning for remote ARP entries.

XML structure

```
<ARP>
  <ArpForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
    <AgingTime></AgingTime>
  </ArpForwardConverseLearn>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpForwardConverseLearn
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverseLearnEnable	Whether ARP conversational learning is enabled for remote ARP entries	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
AgingTime	Aging time for remote ARP entries	N/A	Unsigned integer. Value range: 60 to 1440, in minutes. Default: 60.	N/A

ARP/ArpDetectionInterface

This table contains ARP detection settings on interfaces.

XML structure

```
<ARP>
  <ArpDetectionInterface>
    <Detection>
      <IfIndex></IfIndex>
      <DetectionEnable></DetectionEnable>
    </Detection>
  </ArpDetectionInterface>
```

```
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionInterface
Table type	Multi-instance table
Row name	Detection
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
DetectionEnable	Whether ARP detection is enabled on the interface	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpAgingIfConfig

This table contains information about the ARP aging configuration on interfaces.

XML structure

```
<ARP>
  <ArpAgingIfConfig>
    <AgingIfConfig>
      <IfName></IfName>
      <AgingSecond></AgingSecond>
      <AgingMinute></AgingMinute>
      <AgingProbeCount></AgingProbeCount>
      <AgingProbeInterval></AgingProbeInterval>
    </AgingIfConfig>
  </ArpAgingIfConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAgingIfConfig
Table type	Multi-instance table
Row name	AgingIfConfig
Restrictions	This table supports the following interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VSI interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	index	String, case sensitive. Length: 1 to 48 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingSecond	Aging seconds for ARP entries	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	It must be configured without the AgingMinute column. By default, the aging time set in system view is used.
AgingMinute	Aging minutes for ARP entries	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	It must be configured without the AgingSecond column. By default, the aging time set in system view is used.
AgingProbeCount	Maximum number of aging probe counts for ARP entries	N/A	Unsigned integer. Value range: 0 to 10.	By default, the maximum number set in system view is used.
AgingProbeInterval	Aging probe intervals for ARP entries	N/A	Unsigned integer. Value range: 1 to 60, in seconds.	By default, the probe interval set in system view is used.

ARP/ArpIfScanAutoWithMultiIP

This table contains interface-specific information about ARP auto scanning in an adress range.

XML structure

```
<ARP>
  <ArpIfScanAutoWithMultiIP>
    <IfScanAutoWithMultiIP>
      <IfName></IfName>
      <StartIP></StartIP>
      <EndIP></EndIP>
      <SourceIP></SourceIP>
    </IfScanAutoWithMultiIP>
  </ArpIfScanAutoWithMultiIP>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpIfScanAutoWithMultiIP
Table type	Multi-instance table
Row name	IfScanAutoWithMultiIP
Restrictions	This table supports the following interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VSI interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	index	String, case sensitive. Length: 1 to 48 characters.	N/A
StartIP	Start IPv4 address of the scanning range	index	String, dotted decimal notation.	If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides. StartIP and EndIP can be configured only when ARP auto scan on the interface is enabled.
EndIP	End IPv4 address of the scanning range	index	String, dotted decimal notation.	You must specify the end IPv4 address if the start IPv4 address is specified.
SourceIP	Source IPv4	N/A	String, dotted decimal	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address of ARP requests		notation.	

ARP/ArpScanKeepalive

This table contains interface-specific information about ARP scan keepalive

XML structure

```
<ARP>
  <ArpScanKeepalive>
    <IfScanKeepalive>
      <IfIndex></IfIndex>
      <ScanEnable></ScanEnable>
      <AgingTime></AgingTime>
    </IfScanKeepalive>
  </ArpScanKeepalive>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpScanKeepalive
Table type	Multi-instance table
Row name	IfScanKeepalive
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface
Support for row creation and deletion	No

ARP/ArpVsrpPort

This table contains ARP VSRP port information

XML structure

```
<ARP>
  <ArpVsrpPort>
    <PortNum></PortNum>
  </ArpVsrpPort>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsrpPort
Table type	Single-instance table
Row name	VsrpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNum	Port number of ARP VSRP instance	N/A	Unsigned integer. Value range: 1 to 65535.	60043 means not configured.

ARP/ArpConsistencyTable

This table contains the information about ARP consistency check.

XML structure

```
<ARP>
  <ArpConsistencyTable>
```

```
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </ArpConsistencyTable>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConsistencyCheckEnable	Whether ARP consistency check is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

ARP

ARP/ArpScanAutoRate

This table contains the information about ARP auto scanning.

XML structure

```
<ARP>
  <ArpScanAutoRate>
    <SendRatePPM></SendRatePPM>
    <SendRatePPS></SendRatePPS>
  </ArpScanAutoRate>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpScanAutoRate
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SendRatePPM	Number of ARP request packets to be sent per minute.	N/A	Unsigned integer. Value range: 10 to 600.	This value must be a multiple of 10.
SendRatePPS	**N**umber of ARP request packets to be sent per second.	N/A	Unsigned integer. Value range: 10 to 1000.	This value must be a multiple of 10.

ARP/ArpIfScanAuto

This table contains interface-specific information about ARP auto scanning.

XML structure

```
<ARP>
  <ArpIfScanAuto>
    <IfScanAuto>
      <IfIndex></IfIndex>
      <AutoEnable></AutoEnable>
      <StartIP></StartIP>
      <EndIP></EndIP>
    </IfScanAuto>
  </ArpIfScanAuto>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpIfScanAuto
Table type	Multi-instance table
Row name	IfScanAuto
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
AutoEnable	Whether ARP auto scanning is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
StartIP	Start IPv4 address of the scanning range	N/A	String, dotted decimal notation.	If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides.
EndIP	End IPv4 address of the scanning range	N/A	String, dotted decimal notation.	You must specify the end IPv4 address if the start IPv4 address is specified.

ARP/ArpTable

This table contains ARP table information.

XML structure

```
<ARP>
  <ArpTable>
    <ArpEntry>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
```

```
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
      <ArpType></ArpType>
    </ArpEntry>
  </ArpTable>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpTable
Table type	Multi-instance table
Row name	ArpEntry
Restrictions	Only Layer 3 interface is supported.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.
PortIndex	Port index	N/A	Unsigned integer.
VrfIndex	Index of the VRF	N/A	Unsigned integer.
ArpType	ARP entry type	N/A	Enumeration: • **0**—Dynamic. • **1**—Static. • **2**—Multiport. • **3**—Rule.

Column name	Column description	Column type	Data type and restrictions
			• **4**—Openflow. • **5**—VSI Static.

ARP/ArpConfig

This table contains ARP configuration information.

XML structure

```
<ARP>
  <ArpConfig>
    <Config>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <ArpType></ArpType>
      <Description></Description>
    </Config>
  </ArpConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpConfig
Table type	Multi-instance table
Row name	Config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VrfIndex	Index of the VRF	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.
PortIndex	Port index	N/A	Unsigned integer.
ArpType	ARP entry type	N/A	Enumeration: • **1**—Static. • **2**—Multiport.
Description	Description of the static ARP entry	String Length:1 to 255 characters.	N/A

ARP/ArpGratuitous

This table contains gratuitous ARP packets enable information.

XML structure

```
<ARP>
  <ArpGratuitous>
    <LearnEnable></LearnEnable>
    <SendEnable></SendEnable>
  </ArpGratuitous>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitous
Table type	Single-instance table
Row name	None

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LearnEnable	Whether the learning of gratuitous ARP packets function is enable.	N/A	Boolean: • **true** • **false**
SendEnable	Whether the function of sending gratuitous ARP packets upon receiving ARP requests whose target IP address is on a different subnet is enable.	N/A	Boolean: • **true** • **false**

ARP/ArpLearnLimit

This table contains the information of maximum number of dynamic ARP entries that an interface can learn.

XML structure

```
<ARP>
  <ArpLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <LearnAlarmThreshold></LearnAlarmThreshold>
    </LearnLimit>
  </ArpLearnLimit>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of dynamic ARP entries that an interface can learn	N/A	Unsigned integer. Value range: 0 to LearnMaxNumLimit.	0 means the interface is disabled from learning dynamic ARP entries. The value of LearnMaxNumLimit depends on the device model.
LearnAlarmThreshold	Alarm threshold in percentage	N/A	Unsigned integer. Value range: 0 to 100.	To disable the threashold alarming, set the value to 0.

ARP/ArpGratuitousInterval

This table contains the information of periodic sending of gratuitous ARP packets and set the sending interval on an interface.

XML structure

```
<ARP>
  <ArpGratuitousInterval>
    <GratuitousInterval>
      <IfIndex></IfIndex>
      <Interval></Interval>
    </GratuitousInterval>
  </ArpGratuitousInterval>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitousInterval
Table type	Multi-instance table
Row name	GratuitousInterval
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
Interval	The interval at which gratuitous ARP packets are sent	N/A	Unsigned integer. Value range: 0, 200 to 200000ms.	0 means disable the interface from periodically sending gratuitous ARP packets.

ARP/ArpProxy

This table contains ARP proxy enable and local ARP proxy enable information.

XML structure

```
<ARP>
  <ArpProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
      <LocalStartIpv4Address></LocalStartIpv4Address>
      <LocalEndIpv4Address></LocalEndIpv4Address>
    </Proxy>
  </ArpProxy>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpProxy
Table type	Single-instance table
Row name	Proxy
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
ProxyEnable	Whether proxy ARP is enabled on the interface	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalProxyEnable	Whether local proxy ARP is enabled on the interface	N/A	Boolean: • **true** • **false**	N/A
LocalStartIpv4Address	Start IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A
LocalEndIpv4Address	End IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A

ARP/ArpAttackProtect

This table contains ARP attack protect information.

XML structure

```
<ARP>
  <ArpAttackProtect>
    <ResolvingRouteEnable></ResolvingRouteEnable>
    <SourceSuppressionEnable></SourceSuppressionEnable>
    <SourceSuppressionLimitNum></SourceSuppressionLimitNum>
    <SourceMACDetectType></SourceMACDetectType>
    <SourceMACAgeTime></SourceMACAgeTime>
    <SourceMACThresholdValue></SourceMACThresholdValue>
    <ValidCheckEnable></ValidCheckEnable>
    <ActiveACKType></ActiveACKType>
    <DetectionValidateSrcMAC></DetectionValidateSrcMAC>
    <DetectionValidateDstMAC></DetectionValidateDstMAC>
    <DetectionValidateIP></DetectionValidateIP>
    <CheckLogEnable></CheckLogEnable>
  </ArpAttackProtect>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResolvingRouteEnable	Whether the resolving route function is enabled	N/A	Boolean: • **true** • **false**	N/A
SourceSuppressionEnable	Whether the ARP suppression original address function is enabled	N/A	Boolean: • **true** • **false**	N/A
SourceSuppressionLimitNum	Set the source suppression limit number	N/A	Unsigned integer. Value range: 2 to 1024.	N/A
SourceMACDetectType	Set the attack detection function of fixed source mac address and select the mode	N/A	Unsigned integer. • **0—Disabled**. • **1—Filter.** • **2—Monitor.**	N/A
SourceMACAgeTime	Set the fixed source mac address aging time of ARP attack detection entries	N/A	Unsigned integer. Value range: 60 to 6000.	N/A
SourceMAC	Set the fixed	N/A	Unsigned integer.	N/A

ThresholdValue	source mac address threshold of ARP attack detection entries			
ValidCheckEnable	Whether the source mac address consistency check function is enabled	N/A	Boolean: • **true** • **false**	N/A
ActiveACKType	Enable ARP active acknowledgement	N/A	Unsigned integer. • **0—Disabled.** • **1—Loose.** • **2—Strict.**	N/A
DetectionValidateSrcMAC	Whether the effective checks on the source mac address function is enabled	N/A	Boolean: • **true** • **false**	N/A
DetectionValidateDstMAC	Whether the effective checks on the destination mac address function is enabled	N/A	Boolean: • **true** • **false**	N/A
DetectionValidateIP	Whether the effective checks on the IP address function is enabled	N/A	Boolean: • **true** • **false**	N/A
CheckLogEnable	Whether ARP logging is enabled	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpRateLimit

This table contains ARP rate limit information.

XML structure

```
<ARP>
  <ArpRateLimit>
    <RateLimit>
      <IfIndex></IfIndex>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
    </RateLimit>
  </ArpRateLimit>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: • **true** • **false**	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model.

ARP/ArpRateLimitLog

This table contains ARP rate limit log information.

XML structure

```
<ARP>
  <ArpRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </ArpRateLimitLog>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: • **true** • **false**	N/A
LogInterval	Set the interval of sending report or log	N/A	Unsigned integer. Value range: 1 to 86400.	N/A

ARP/ArpSourceMACExclude

This table contains protective source mac address information.

XML structure

```
<ARP>
  <ArpSourceMACExclude>
    <SourceMACExclude>
      <MacAddress></MacAddress>
    </SourceMACExclude>
  </ArpSourceMACExclude>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACExclude
Table type	Multi-instance table
Row name	SourceMACExclude
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	The MAX number of protective source mac address that can be configured depends on the device model.

ARP/ArpSourceMACAttackEntry

This table contains the information about the ARP attack detection entries of fixed source MAC address in slot-based attack detection mode.

XML structure

```
<ARP>
```

```
  <ArpSourceMACAttackEntry>
    <Entry>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <IfIndex></IfIndex>
      <AgeTime></AgeTime>
    </Entry>
  </ArpSourceMACAttackEntry>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACAttackEntry
Table type	Multi-instance table
Row name	Entry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	The information of Device Node	Data structure	Members include: • Chassis • Slot • CPUID	N/A
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A

VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094,65535.	65535 means the interface is layer 3 Ethernet interface
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IfIndex	Interface index.	N/A	Unsigned integer.	N/A
AgeTime	The remaining aging time of ARP attack defense policy entry	N/A	AgeTime	N/A

ARP/ArpSourceMACAttackEntryBasedOnIf

This table contains the information about the ARP attack detection entries of fixed source MAC address in interface-based attack detection mode.

XML structure

```
<ARP>
  <ArpSourceMACAttackEntryBasedOnIf>
    <Entry>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <IfName></IfName>
      <AgeTime></AgeTime>
    </Entry>
  </ArpSourceMACAttackEntryBasedOnIf>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACAttackEntryBasedOnIf
Table type	Multi-instance table

Row name	Entry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094,65535.	65535 means the interface is layer 3 Ethernet interface
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters.	N/A
AgeTime	The remaining aging time of ARP attack defense policy entry	N/A	AgeTime	N/A

ARP/ArpAuthorized

This table contains the authorized ARP information.

XML structure

```
<ARP>
  <ArpAuthorized>
    <Authorized>
```

```
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Authorized>
  </ArpAuthorized>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAuthorized
Table type	Single-instance table
Row name	Authorized
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface
Enable	Whether authorized ARP is enabled	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpDetection

This table contains information about ARP attack detection.

XML structure

```
<ARP>
  <ArpDetection>
    <Detect>
      <VLANID></VLANID>
      <DetectionEnable></DetectionEnable>
      <RestrictedForwardingEnable></RestrictedForwardingEnable>
    </Detect>
  </ArpDetection>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetection
Table type	Multi-instance table
Row name	Detect
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
DetectionEnable	Whether ARP attack detection is enabled	N/A	Boolean: • **true** • **false**
RestrictedForwardingEnable	Whether ARP restricted forwarding is enabled	N/A	Boolean: • **true** • **false**

ARP/ArpDetectionTrust

This table contains information about ARP trusted interfaces.

XML structure

```
<ARP>
  <ArpDetectionTrust>
    <Interface>
      <IfIndex></IfIndex>
      <TrustEnable></TrustEnable>
    </Interface>
  </ArpDetectionTrust>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionTrust
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface
TrustEnable	Whether the interface is configured as an ARP trusted interface	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpFilterSource

This table contains information about ARP gateway protection and the protected gateway IP address.

XML structure

```
<ARP>
  <ArpFilterSource>
    <FilterSource>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </FilterSource>
  </ArpFilterSource>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpFilterSource
Table type	Multi-instance table
Row name	FilterSource
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface. Layer 2 aggregate interface.
Ipv4Address	The protected gateway IP	Index	String, dotted decimal notation.	N/A

	address			

ARP/ArpFilterBinding

This table contains the information about restricting ARP packet by source IP address and source MAC address.

XML structure

```
<ARP>
  <ArpFilterBinding>
    <FilterBinding>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
    </FilterBinding>
  </ArpFilterBinding>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpFilterBinding
Table type	Multi-instance table
Row name	FilterBinding
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
Ipv4Address	The permitted IP address	Index	String, dotted decimal notation.

MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.

ARP/ArpSpecification

This table contains ARP specification information.

XML structure

```
<ARP>
  <ArpSpecification>
    <SupportMultiport></SupportMultiport>
    <RateLimitDefault></RateLimitDefault>
    <RateLimitLowerLimit></RateLimitLowerLimit>
    <RateLimitUpperLimit></RateLimitUpperLimit>
    <SMACDefaultThreshold></SMACDefaultThreshold>
    <SMACMinThreshold></SMACMinThreshold>
    <SMACMaxThreshold></SMACMaxThreshold>
    <SupportDetection></SupportDetection>
    <SupportFilter></SupportFilter>
    <SupportSnooping></SupportSnooping>
    <IntervalDefault></IntervalDefault>
    <LearnMaxNumLimit></LearnMaxNumLimit>
    <LearnMaxNumDefault></LearnMaxNumDefault>
    <SupportModeUNI></SupportModeUNI>
  </ArpSpecification>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSpecification
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportMultiport	Whether the multiport ARP entry is supported	N/A	Boolean: • **true** • false	N/A
RateLimitDefault	The default limit of rate	N/A	Unsigned integer.	N/A
RateLimitLowerLimit	The lower limit of rate	N/A	Unsigned integer.	0 means that ARP rate limit isn't supported.
RateLimitUpperLimit	The upper limit of rate	N/A	Unsigned integer.	0 means that ARP rate limit isn't supported.
SMACDefaultThreshold	The default of threshold	N/A	Unsigned integer.	N/A
SMACMinThreshold	The minimum of threshold.	N/A	Unsigned integer.	N/A
SMACMaxThreshold	The maximum of threshold	N/A	Unsigned integer.	N/A
SupportDetection	Whether ARP detection is supported	N/A	Boolean: • **true** • false	N/A
SupportFilter	Whether ARP filter is supported	N/A	Boolean: • **true** • false	N/A
SupportSnooping	Whether ARP snooping is supported	N/A	Boolean: • **true** • **false**	N/A
IntervalDefault	The default of interval	N/A	Unsigned integer. Value range: 0 to 200000.	N/A
LearnMaxNumLimit	The limit of max learn number	N/A	Unsigned integer.	N/A

LearnMaxNumDefault	The default of max learn number	N/A	Unsigned integer.	N/A
SupportModeUNI	Whether the ARP customer-side port feature is supported	N/A	Boolean: • true • false	N/A

ARP/ ArpSnoopingEntry

This table contains information about ARP snooping entries.

XML structure

```
<ARP>
  <ArpSnoopingEntry>
    <SnoopingEntry>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <Status></Status>
      <AgeTime></AgeTime>
    </SnoopingEntry>
  </ArpSnoopingEntry>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingEntry
Table type	Multi-instance table
Row name	SnoopingEntry

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	The information of Device Node	Data structure	Members include: • Chassis • Slot • CPUID	N/A
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Status	State of an entry	N/A	Enumeration: • **0**—Valid. • **1**—Invalid. • **2**—Collision.	N/A
AgeTime	The remaining aging time of ARP attack defense policy entry	N/A	AgeTime	N/A

ARP/ArpSnooping

This table contains information about ARP snooping.

XML structure

```
<ARP>
  <ArpSnooping>
    <Snooping>
      <VLANID></VLANID>
      <SnoopingEnable></SnoopingEnable>
    </Snooping>
  </ArpSnooping>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpSnooping
Table type	Multi-instance table
Row name	Snooping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
SnoopingEnable	Whether ARP snooping is enabled	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpInterface

This table contains ARP interface information.

XML structure

```
<ARP>
  <ArpInterface>
    <Interface>
      <IfIndex></IfIndex>
      <ModeUNI></ModeUNI>
    </Interface>
  </ArpInterface>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	VLAN interfaces

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only VLAN interfaces are supported.
ModeUNI	Configure a port as a customer-side port	N/A	Boolean: • **true**—Customer-side port. • **false**—Network-side port.	N/A

ARP/ArpVsiConfig

This table contains ARP VSI configuration information.

XML structure

```
<ARP>
  <ArpVsiConfig>
    <VsiConfig>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VsiIfIndex></VsiIfIndex>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <Description></Description>
    </VsiConfig>
  </ArpVsiConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits,	N/A

			hyphen-separated.	
VsiIfIndex	VSI interface index	N/A	Unsigned integer.	N/A
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field cannot be displayed when the port is a Tunnel interface. It is displayed when the port is a Layer 2 Ethernet interface.
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	N/A
Description	Description of the static ARP entry	N/A	String Length:1 to 255 characters.	N/A

ARP/ArpRouteAdvertise

This table contains the information about ARP direct route advertisement.

XML structure

```
<ARP>
  <ArpRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <DelayTime></DelayTime>
      <Preference></Preference>
      <Tag></Tag>
    </RouteAdvertise>
  </ArpRouteAdvertise>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VE-L3VPN interface VSI interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	VE-L3VPN interface VSI interface
Enable	Whether ARP direct route advertisement is enabled	N/A	Boolean: • **true** • **false(defult)**	N/A
DelayTime	Delay for ARP direct route advertisement	N/A	Unsigned integer. Value range: 0 to 3600, in seconds. Default: 0.	N/A
Preference	Preference of the direct routes	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Tag	Route tag for the direct routes	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ARP/ArpVsiFeature

This table contains ARP configuration information for VSIs.

XML structure

```
<ARP>
  <ArpVsiFeature>
    <VsiFeature>
      <VsiName></VsiName>
      <SnoopingEnable></SnoopingEnable>
      <DetectionEnable></DetectionEnable>
      <SuppressionMode></SuppressionMode>
      <SuppressionMismatchDiscard></SuppressionMismatchDiscard>
      <NoBroadCast></NoBroadCast>
    </VsiFeature>
  </ArpVsiFeature>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiFeature
Table type	Multi-instance table
Row name	VsiFeature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	N/A
SnoopingEnable	Whether ARP snooping is enabled for the	N/A	Boolean: • **true**—Enabled.	N/A

	VSI		• **false**—Disabled (default).	
DetectionEnable	Whether ARP attack detection is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
SuppressionEnable	Whether ARP suppression is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
SuppressionMode	ARP suppression mode	N/A	Enumeration: • **`1`**—**`proxy-reply`** (default). • **`2`**—**`unicast-forward`**.	N/A
SuppressionMismatchDiscard	ARP suppression mismatch discard mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
NoBroadCast	Whether ARP stateless broadcast is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

ARP/ArpVsiDetectionTrust

This table contains ARP trusted AC configuration information for Ethernet service instances.

XML structure

```
<ARP>
  <ArpVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
```

```
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </ArpVsiDetectionTrust>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ARP trusted AC	N/A	Boolean: • **true**—Yes. • **false**—No (Default).	N/A

ARP/ArpForwardConverseLearn

This table contains configuration information about ARP conversational learning for remote ARP entries.

XML structure

```
<ARP>
  <ArpForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
    <AgingTime></AgingTime>
  </ArpForwardConverseLearn>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpForwardConverseLearn
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverseLearnEnable	Whether ARP conversational learning is enabled for remote ARP entries	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
AgingTime	Aging time for remote ARP entries	N/A	Unsigned integer. Value range: 60 to 1440, in minutes.	N/A

ARP/ArpDetectionInterface

This table contains ARP detection settings on interfaces.

XML structure

```
<ARP>
  <ArpDetectionInterface>
    <Detection>
      <IfIndex></IfIndex>
      <DetectionEnable></DetectionEnable>
    </Detection>
  </ArpDetectionInterface>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	index	Unsigned integer.	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML

				API Configuration Reference.
DetectionEnable	Whether ARP detection is enabled on the interface	N/A	Boolean: • **true** • **false**	N/A

ARP/ArpAgingIfConfig

This table contains information about the ARP aging configuration on interfaces.

XML structure

```
<ARP>
  <ArpAgingIfConfig>
    <AgingIfConfig>
      <IfName></IfName>
      <AgingSecond></AgingSecond>
      <AgingMinute></AgingMinute>
      <AgingProbeCount></AgingProbeCount>
      <AgingProbeInterval></AgingProbeInterval>
    </AgingIfConfig>
  </ArpAgingIfConfig>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpAgingIfConfig
Table type	Multi-instance table
Row name	AgingIfConfig
Restrictions	This table supports the following interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VSI interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	index	String, case sensitive. Length: 1 to 48 characters.	N/A
AgingSecond	Aging seconds for ARP entriesarp	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	N/A
AgingMinute	Aging minutes for ARP entries	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
AgingProbeCount	Maximum number of aging probes for ARP entries	N/A	Unsigned integer. Value range: 0 to 10.	N/A
AgingProbeInterval	Aging probe interval for ARP entries	N/A	Unsigned integer. Value range: 1 to 60, in seconds.	N/A

ARP/ArpIfScanAutoWithMultiIP

This table contains interface-specific information about ARP auto scanning in an address range.

XML structure

```
<ARP>
  <ArpIfScanAutoWithMultiIP>
    <IfScanAutoWithMultiIP>
      <IfName></IfName>
      <StartIP></StartIP>
      <EndIP></EndIP>
      <SourceIP></SourceIP>
    </IfScanAutoWithMultiIP>
  </ArpIfScanAutoWithMultiIP>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpIfScanAutoWithMultiIP
Table type	Multi-instance table
Row name	IfScanAutoWithMultiIP
Restrictions	This table supports the following interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface VSI interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	index	String, case sensitive. Length: 1 to 48 characters.	N/A
StartIP	Start IPv4 address of the scanning range	index	String, dotted decimal notation.	If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides. StartIP and EndIP can be configured only when ARP auto scan on the interface is enabled.
EndIP	End IPv4 address of the scanning range	index	String, dotted decimal notation.	You must specify the end IPv4 address if the start IPv4 address is specified.
SourceIP	Source IPv4 address of the	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ARP requests			

ARP/ArpScanKeepalive

This table contains interface-specific information about ARP scan keepalive

XML structure

```
<ARP>
  <ArpScanKeepalive>
    <IfScanKeepalive>
      <IfIndex></IfIndex>
      <ScanEnable></ScanEnable>
      <AgingTime></AgingTime>
    </IfScanKeepalive>
  </ArpScanKeepalive>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpScanKeepalive
Table type	Multi-instance table
Row name	IfScanKeepalive
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
ScanEnable	Whether ARP keepalive scanning is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
AgingTime	Aging time of ARP keepalive entries	N/A	Unsigned integer. Value range: 0 to 1440.	0 means not configured.

ARP/ArpVsrpPort

This table contains ARP VSRP port information

XML structure

```
<ARP>
  <ArpVsrpPort>
    <PortNum></PortNum>
  </ArpVsrpPort>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpVsrpPort

Table type	Single-instance table
Row name	VsrpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNum	Port number of ARP VSRP instance	N/A	Unsigned integer. Value range: 1 to 65535.	60043 means not configured.

ARP/ArpConsistencyTable

This table contains the information about ARP consistency check.

XML structure

```
<ARP>
  <ArpConsistencyTable>
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </ArpConsistencyTable>
</ARP>
```

Table description

Item	Description
Feature name	ARP
Table name	ArpConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConsistencyCheckEnable	Whether ARP consistency check is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ARP

ARP/ArpTable

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置

ARP/ArpConfig

Message	Explanation
VPN-Instance does not exist. 该VPN不存在。	The VPN-Instance does not exist when set the configuration. 配置时对应 VPN 不存在
Invalid MAC address. 非法的MAC地址。	Invalid MAC address configuration. 非法的 MAC 地址配置。
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在
Please create the VLAN interface first. 请先创建相应的VLAN接口。	The VLAN interface does not exist when set the configuration. 配置时 VLAN 接口不存在
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置
Can't set S-channel subinterface as the output interface. 不支持S通道子接口。	Do not support set S-channel subinterface as the output interface. 不支持 S 通道子接口。
The port doesn't belong to the VLAN, or the VLAN is not permitted on the port. 端口不属于指定VLAN或Trunk类型的端口不允许指定VLAN内的报文通过。	The port doesn't belong to the VLAN, or the VLAN is not permitted on the port. 端口不属于指定 VLAN 或 Trunk 类型的端口不允许指定 VLAN 内的报文通过。
The VPN instance of the configured entry is different from that of the interface. 配置表项的VRF与接口的VRF不相同。	The VPN instance of the configured entry is different from that of the interface. 配置表项的 VRF 与接口的 VRF 不相同。

The multiport ARP entry contains invalid parameters. 多端口参数非法。	The ARP entry does not have vlans or have port interfaces. 没有配置 VLAN 或者接口
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Maximum number of ARP entries already reached. 已到达ARP表项的上限。	Maximum number of ARP entries already reached,p Please check configuration or specifications 已到达 ARP 表项的上限,请检查配置或者设备规格
The Ethernet service instance doesn't exist. 以太网服务实例不存在。	The Ethernet service instance doesn't exist,when set the configuration. 以太网服务实例不存在。
The Ethernet interface and Ethernet service instance are not mapped to the VSI. 以太接口和以太网服务实例与VSI未关联。	The Ethernet interface and Ethernet service instance are not mapped to the VSI,please check configuration. 以太接口和以太网服务实例与VSI未关联,请检查配置
Failed to configure the static ARP entry because it has the same IP address and output interface as an existing remote static ARP entry. 不能配置该静态ARP，因为它与远端已存在的静态ARP表项有相同IP地址和出接口。	Failed to configure the static ARP entry because it has the same IP address and output interface as an existing remote static ARP entry. 不能配置该静态ARP，因为它与远端已存在的静态ARP表项有相同IP地址和出接口。

ARP/ArpLearnLimit

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改

ARP/ArpGratuitousInterval

Message	Explanation
Maximum number of interfaces enabled with the feature already reached. 可用接口个数超过上限。	Maximum number of interfaces enabled with the feature already reached, please modify configuration under guidance. 可用接口个数超过上限,请按照配置说明修改

ARP/ArpProxy

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Invalid start IPv4 address. 非法的IPv4开始地址。	Invalid start IPv4 address. 非法的IPv4开始地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	Invalid end IPv4 address. 非法的IPv4结束地址。
Start IPv4 address must be lower than or equal to end IPv4 address. IPv4开始地址必须低于或者等于IPv4结束地址。	Start IPv4 address must be lower than or equal to end IPv4 address, please modify configuration under guidance. IPv4开始地址必须低于或者等于IPv4结束地址。，请按照配置说明修改

ARP/ArpAttackProtect

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改

ARP/ArpRateLimit

Message	Explanation
Failed to set the maximum number of dynamic ARP entries. 指定ARP最大动态表项数失败。	The device returned failed when set the maximun number of dynamic ARP entries. 指定 ARP 最大动态表项数失败。
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
The value is out of range. 参数值超出范围。	Invalid configuration, please modify configuration under guidance.

	无效配置，请按照配置说明修改

ARP/ArpSourceMACExclude

Message	Explanation
Maximum number of protected MAC addresses already reached. 受保护的MAC的个数达到上限。	Maximum number of protected MAC addresses already reached,please check configuration or specifications 受保护的MAC的个数达到上限,请检查配置或者设备规格

ARP/ArpDetection

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在

ARP/ArpFilterSource

Message	Explanation
Maximum number of protected gateway IP addresses already reached. 可配置的被保护网关IP地址超过上限。	Maximum number of protected gateway IP addresses already reached, Please check configuration or specifications 可配置的被保护网关IP地址超过上限,请检查配置或者设备规格
Configuration failed. Please disable ARP filtering first. 配置ARP网关保护功能失败。需要先关闭ARP过滤保护功能。	Please disable ARP filtering first. 配置ARP网关保护功能需要先关闭ARP过滤保护功能。

ARP/ArpFilterBinding

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Maximum number of permitted IP-to-MAC	Maximum number of permitted IP-to-MAC bindings already reached, please modify configuration under

bindings already reached. 可配置的IP地址和MAC地址超过上限。	guidance. 可配置的IP地址和MAC地址超过上限,请按照配置说明修改
Configuration failed. Please disable ARP gateway protection first. 配置ARP过滤保护功能失败。需要先关闭ARP网关保护功能。	Please disable ARP gateway protection first, please modify configuration under guidance. 配置ARP过滤保护需要先关闭ARP网关保护功能,请按照配置说明修改

ARP/ArpSnooping

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在

ARP/ArpVsiConfig

Message	Explanation
VPN-Instance does not exist. 该VRF不存在。	The VPN-Instance does not exist when set the configuration. 配置时对应 VPN 不存在
Invalid MAC address. 非法的MAC地址。	Invalid MAC address configuration. 非法的 MAC 地址配置。
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置
The VPN instance of the configured entry is different from that of the interface. 配置表项的VRF与接口的VRF不相同。	The VPN instance of the configured entry is different from that of the interface., please modify configuration under guidance. 配置表项的VRF与接口的VRF不相同。请按照配置说明修改
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Maximum number of ARP entries already reached. 已到达ARP表项的上限。	Maximum number of ARP entries already reached,please check configuration or specifications. 已到达 ARP 表项的上限,请检查配置或者设备规格
The VSI doesn't exist. 指定的VSI不存在。	The VSI does not exist when set the configuration. 配置时VSI不存在

The VSI interface is not associated with the VSI. 指定的VSI虚接口与VSI未绑定。	The VSI interface is not associated with the VSI, please check configuration . 指定的VSI虚接口与VSI未绑定。请检查配置。
The Ethernet service instance doesn't exist. 以太网服务实例不存在。	The Ethernet service instance doesn't exist, please check configuration. 以太网服务实例不存在,请检查配置
The Ethernet interface and Ethernet service instance are not mapped to the VSI. 以太接口和以太网服务实例与VSI未关联。	The Ethernet interface and Ethernet service instance are not mapped to the VSI, please check configuration. 以太接口和以太网服务实例与VSI未关联，请检查配置

ARP/ArpScan

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration. 非法的 IP 地址配置。
Start IP address must be lower than or equal to end IP address. 起始IP地址必须低于或者等于终止IP地址。	Start IP address must be lower than or equal to end IP address, please modify configuration under guidance. 起始IP地址必须低于或者等于终止IP地址,请按照配置说明修改
The interface is down or has no IP address configured. 扫描接口处于关闭状态或者未配置IP地址。	The interface is down or has no IP address configured, please modify configuration under guidance. 扫描接口处于关闭状态或者未配置 IP 地址，请按照配置说明修改
The start and end IP addresses must be on the same subnet as the interface IP address. 起始IP地址和终止IP地址必须与扫描接口IP地址在相同的网段。	The start and end IP addresses must be on the same subnet as the interface IP address, please modify configuration under guidance. 起始 IP 地址和终止 IP 地址必须与扫描接口 IP 地址在相同的网段,请按照配置说明修改
ARP scanning is interrupted. 扫描表项过程中断。	ARP scanning is interrupted,please try again. 扫描表项过程中断,请再试一次

ARP/ArpIfScanAuto

Message	Explanation
Invalid start IPv4 address.	The start IP address must be a valid IP address. <StartIP>列必须是合法的 IP 地址。

非法的IPv4开始地址。	
Invalid end IPv4 address. 非法的IPv4结束地址。	The end IP address must be a valid IP address. <EndIP>列必须是合法的 IP 地址。
Start IP address must be lower than or equal to end IP address. 起始IP地址必须低于或者等于终止IP地址。	The start IP address must be lower than or equal to the end IP address. 起始IP地址必须低于或者等于终止IP地址,请按照配置说明修改
Total number of IP addresses in this range exceeds 65535. 该IP范围内IP地址个数已达上限。	The total number of IP addresses in this range exceeds 65535. 该IP范围内IP地址个数已达上限。

ARP/ArpFixup

Message	Explanation
Maximum number of ARP entries already reached. 已到达ARP表项的上限。	Maximum number of ARP entries already reached，please modify configuration under guidance. 已到达 ARP 表项的上限，请检查配置或者设备规格

ARP/ArpClearTable

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置

ARP/ArpForwardConverseLearn

Message	Explanation
When ARP conversational learning for remote ARP entries is disabled, the aging time of entries must be the default value. 报文转发时下发远端ARP表项功能处于关闭状态，表项的老化时间必须是默认值。	When ARP conversational learning for remote ARP entries is disabled, the aging time of entries must be the default value. 报文转发时下发远端 ARP 表项功能处于关闭状态，表项的老化时间必须是默认值。

ARP/ArpIfScanAutoWithMultiIP

Message	Explanation
Invalid start IPv4 address. 非法的IPv4开始地址。	The start IP address must be a valid IP address. <StartIP>列必须是合法的 IP 地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	The end IP address must be a valid IP address. <EndIP>列必须是合法的 IP 地址。
Start IP address must be lower than or equal to end IP address. 起始IP地址必须低于或者等于终止IP地址。	The start IP address must be lower than or equal to the end IP address. 起始IP地址必须低于或者等于终止IP地址,请按照配置说明修改
Total number of IP addresses in this range exceeds 65535. 该IP范围内IP地址个数已达上限。	The total number of IP addresses in this range exceeds 65535. 该IP范围内IP地址个数已达上限。
The number of IP address ranges on the interface reached the maximum of 16. 该接口下配置的扫描网段范围个数达到最大值。	Configuration failed. The number of scanning ranges configured on the interface has reached the maximum. 该接口下配置的IP网段范围个数已达上限。
Please check the existing scanning ranges on the interface. 请检查当前接口下已存在的扫描网段范围。	配置的网段范围与当前已配置的网段范围有交集，请检查当前接口下已存在的扫描网段范围。 The scanning range overlaps with an existing scanning range. Please check the existing scanning ranges on the interface.

arp_event event stream

This event stream is used to report ARP event information.

ArpTable event

This event is used to report ARP change information.

XML structure for event subscription

```
<ArpTableEvent>
</ArpTableEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>arp_event</stream>
    <filter type="subtree">
      <ArpTableEvent xmlns="http://www.h3c.com/netconf/event:1.0/arp_event:1.0">
      </ArpTableEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	arp_event
Event name	ArpTableEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/arp_event:1.0
Support for extended query	No

XML structure for event report

```

Table description

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration: • **1**—Add. • **2**—Delete. • **3**—Update. • **4**—Batch start. • **5**—Batch. • **6**—Batch end.	The event type specifies an operation that ARP performs.
IfIndex	Interface index	Unsigned integer.	N/A
Ipv4Address	IPv4 address	String, dotted decimal notation.	N/A
MacAddress	MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VLANID	VLAN ID	Unsigned integer. Value range: 1 to 4094.	N/A
VXLANID	VXLAN ID	Unsigned integer.	-1 indicates the invalid value
PortIndex	Port index	Unsigned integer.	N/A
VrfIndex	VRF index	Unsigned integer.	0 indicates the public network.
ArpType	ARP entry type	Enumeration: • **0**—Dynamic. • **1**—Static. • **2**—Multiport. • **3**—Rule. • **4**—OpenFlow.	N/A

Column name	Column description	Data type and restrictions	Remarks
Sequence	Sequence	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

ARP detection event

This event is used to report ARP detection information

XML structure for event subscription

```
<ArpAttackEventInfo>
  <ArpAttackInfo>
  </ArpAttackInfo>
</ArpAttackEventInfo>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ARP</stream>
    <filter type="subtree">
      <ArpAttackEventInfo xmlns="http://www.h3c.com/netconf/event:1.0/arp_event:1.0">
      </ArpAttackEventInfo>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event name	ArpAttackEventInfo
Event namespace	http://www.h3c.com/netconf/event:1.0/arp_event:1.0
Support for extended query	No

XML structure for event report

```
<ArpAttackEventInfo>
  <ArpAttackInfo>
    <IfName></IfName>
    <Ipv4Address></Ipv4Address>
    <MAC></MAC>
    <VLANID></VLANID>
  </ArpAttackInfo>
</ArpAttackEventInfo>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <ArpAttackEventInfo> xmlns="http://www.h3c.com/netconf/event:1.0/arp_event:1.0">
    <ArpAttackInfo>
      <IfName>GigabitEthernet2/0/1</IfName>
      <Ipv4Address>1.1.1.1</Ipv4Address>
      <MAC>00:00:00:00:00:AA</MAC>
      <VLANID>1</VLANID>
    </ArpAttackInfo>
  </ArpAttackEventInfo>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
IfName	Interface name	String. Length: 1 to 47 characters.	No
Ipv4Address	IPv4 address	String, dotted decimal notation.	No
MAC	MAC address	String. Six groups of two hexadecimal digits, hyphen-separated	No
VLANID	VLAN ID	Unsigned integer. Value range: 1 to 4094	No

ARP conflict event

This event is used to report ARP ip address conflict information

XML structure for event subscription

```
<ArpConflictEventInfo>
  <ArpConflictInfo>
    <Name></Name>
  </ArpConflictInfo>
</ArpConflictEventInfo>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>arp_event</stream>
    <filter type="subtree">
      < ArpConflictEventInfo xmlns="http://www.h3c.com/netconf/event:1.0/arp_event:1.0">
```

```
      </ArpConflictEventInfo>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

ASPF

ASPF/Policies

This table contains ASPF policy configurations.

XML structure

```
<ASPF>
  <Policies>
    <Policy>
      <PolicyNumber></PolicyNumber>
      <ICMPErrDrop></ICMPErrDrop>
      <TCPSynCheck></TCPSynCheck>
    </Policy>
  </Policies>
</ASPF>
```

Table description

Item	Description
Feature name	ASPF
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	ASPF policy number.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ICMPErrDrop	Whether enable ICMP error message check and drop faked messages.	N/A	Boolean: • **true**—YES. • **false—**NO(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPSynCheck	Whether enable TCP SYN check.	N/A	Boolean: • **true**—YES • **false—**NO(default).	TCP SYN check checks the first packet to establish a TCP connection whether it is a SYN packet. If the first packet is not a SYN packet, ASPF drops the packet.

ASPF/DetectL4Protocols

This table contains the transport layer protocols inspected by ASPF policies.

XML structure

```
<ASPF>
  <DetectL4Protocols>
    <Protocol>
      <PolicyNumber></PolicyNumber>
      <ProtocolID></ProtocolID>
      <EnableDetect></EnableDetect>

PolicyNumber	ASPF policy	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number.		Value range: 1 to 256.	
ProtocolID	The detected application layer protocol ID.	Index	Unsigned integer. Value range: 1 to 17.	• **1—**FTP. • **2—**GTP. • **3—**H323. • **4—**RTSP. • **5—**SIP**.** • **6—**TFTP. • **7—**ILS. • **8—**MGCP. • **9—**NBT. • **10—**PPTP. • **11—**RSH. • **12—**SCCP. • **13—**SQLNET. • **14—**XDMCP. • **15—**HTTP. • **16—**SMTP. • **17—**DNS. Support for HTTP，SMTP and DNS depends on the device model.
EnableDetect	Whether enable detection.	N/A	Boolean: • **true**—YES • **false—**NO(default).	N/A
IllegalPacket Action	Action for illegal packets.	N/A	Enumeration: • **0—**None**.** • **1—**Drop illegal packets. • **2—**Log illegal packets. • **3—**Drop and log illegal packets.	Only the following application support the configuration: • **1—**FTP. • **3—**H323. • **5—**SIP**.** • **12—**SCCP. • **15—**HTTP. • **16—**SMTP. • **17—**DNS. Support for this column depends on the device model.

ASPF/AspfOnInterfaces

This table contains ASPF policies applied to the interfaces.

XML structure

```
<ASPF>
  <AspfOnInterfaces>
    <Interface>
```

```
      <IfIndex></IfIndex>
      <InPolicyNumber></InPolicyNumber>
      <OutPolicyNumber></OutPolicyNumber>
    </Interface>
  </AspfOnInterfaces>
</ASPF>
```

Table description

Item	Description
Feature name	ASPF
Table name	AspfOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	**Interface index**	Index	**Unsigned integer.**	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface. To inspect the traffic through an interface, you must apply a configured ASPF policy to that interface. Make sure a connection initiation packet and the response packet pass through the same interface, because an ASPF stores and maintains the application layer protocol status based on interfaces.
InPolicyNumber	ASPF policy applied to the inbound direction of the interface.	N/A	Unsigned integer. Value range: 1 to 256.	Up to one ASPF policy can be applied to the inbound direction of an interface.
OutPolicyNumber	ASPF policy applied to the outbound direction of the interface.	N/A	Unsigned integer. Value range: 1 to 256.	Up to one ASPF policy can be applied to the outbound direction of an interface.

ASPF/AspfOnInterZones

This table contains ASPF policies applied to the inter-Zones.

XML structure

```
<ASPF>
  <AspfOnInterZones>
    <InterZone>
      <ZonePair>
        <SourceZone></SourceZone>
        <DestinationZone></DestinationZone>
      </ZonePair>
      <PolicyNumber></PolicyNumber>
    </InterZone>
  </AspfOnInterZones>
</ASPF>
```

Table description

ASPF

ASPF/Policies

This table contains ASPF policy configurations.

XML structure

```
<ASPF>
  <Policies>
    <Policy>
      <PolicyNumber></PolicyNumber>
      <ICMPErrDrop></ICMPErrDrop>
      <TCPSynCheck></TCPSynCheck>
    </Policy>
  </Policies>
</ASPF>
```

Table description

Item	Description
Feature name	ASPF
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	ASPF policy number.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ICMPErrDrop	Whether enable ICMP error message check and drop faked messages.	N/A	Boolean: • **true**—YES. • **false—**NO(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPSynCheck	Whether enable TCP SYN check.	N/A	Boolean: • **true**—YES • **false—**NO(default).	TCP SYN check checks the first packet to establish a TCP connection whether it is a SYN packet. If the first packet is not a SYN packet, ASPF drops the packet.

ASPF/DetectL4Protocols

This table contains the transport layer protocols inspected by ASPF policies.

XML structure

```
<ASPF>
  <DetectL4Protocols>
    <Protocol>
      <PolicyNumber></PolicyNumber>
      <ProtocolID></ProtocolID>
      <ProtocolName></ProtocolName>

</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ClearProtectHostStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
VerifyType	Verification type	Index	Enumeration: • **0**—TCP proxy • **1**—DNS client verification. • **2**—HTTP client verification. • **3**—DNS reply verification. • **4**—SIP client verification. • **5**—HTTPS client verification.
AddrFamily	Address familly	Index	Enumeration: • **2**—IPv4. • **10**—IPv6.
Clear	Clear protected hosts' statistics	N/A	This column must be empty.

ATK/ClientVerify/ClearTrustClients

This table is used to clear client verification authenticated clients.

XML structure

```
<ATK>
  <ClientVerify>
    <ClearTrustClients>
      <Client>
        <VerifyType></VerifyType>
        <AddrFamily></AddrFamily>
        <Clear></Clear>
      </Client>
```

```
    </ClearTrustClients>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ClearTrustClients
Table type	Multi-instance table
Row name	Client
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
VerifyType	Verification type	Index	Enumeration: • **0**—TCP proxy • **1**—DNS client verification. • **2**—HTTP client verification. • **3**—DNS reply verification. • **4**—SIP client verification. • **5**—HTTPS client verification.
AddrFamily	Address familly	Index	Enumeration: • **2**—IPv4. • **10**—IPv6.
Clear	Clear trust clients	N/A	This column must be empty.

ATK/Blacklist/ClearObjItemsStat

This table is used to clear IP object-group blacklist statistics.

XML structure

```
<ATK>
  <Blacklist>
    <ClearObjItemsStat>
        <Clear></Clear>
    </ClearObjItemsStat>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ClearObjItemsStat
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear IP object-group blacklist statistics	N/A	This column must be empty.

ATK/Whitelist/ClearObjItemsStat

This table is used to clear IP object-group whitelist statistics.

XML structure

```
<ATK>
  <Whitelist>
    <ClearObjItemsStat>
        <Clear></Clear>
    </ClearObjItemsStat>
  </Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ClearObjItemsStat
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear IP object-group whitelist statistics	N/A	This column must be empty.

ATK/ImportBlacklists

This table contains information about importing IP blacklist entryies.

XML structure

```
<ATK>
  <ImportBlacklists>
    <FileName></FileName>
    <VrfIndex></VrfIndex>
    <BlacklistType></BlacklistType>
  </ImportBlacklists>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ImportBlacklists
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the to be uploaded	N/A	String: Length: 1 to 255 characters.	N/A
VrfIndex	VRF index	N/A	Unsigned integer.	Some versions support VRF name. For more information, see the XSD document of your product. For information about VrfIndex, see the appendix in *L3VPN NETCONF XML API Data Reference*.

BlacklistType	Type of the blacklist	N/A	Enumeration: • Source. • Destination.	N/A

ATK/ExportBlacklistsTemplate

This table contains information about exporting the blacklist template.

XML structure

```
<ATK>
  <ExportBlacklistsTemplate>
    <FileName></FileName>
  </ExportBlacklistsTemplate>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ExportBlacklistsTemplate
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the export file	N/A	String Length: 1 to 255 characters.	N/A

ATK

ATK/Policies

This table is used to operate ATK policies.

XML structure

```
<ATK>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
    </Policy>
  </Policies>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive

ATK/PolicyInterfaces

This table is used to operate ATK policy appliances on interfaces.

XML structure

```
<ATK>
  <PolicyInterfaces>
    <Apply>
```

```
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyInterfaces>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyInterfaces
Table type	Multi-instance table
Row name	Apply
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

ATK/PolicyZones

This table is used to apply an attack defense policy to a security zone.

XML structure

```
<ATK>
  <PolicyZones>
    <Apply>
      <ZoneID></ZoneID>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyZones>
</ATK>
```

Table description

Item	Description
Feature name	ATK

Item	Description
Table name	PolicyZones
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
PolicyName	Attack defense policy name	N/A	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).

ATK/PolicyLocal

This table is used to operate local ATK policy appliance.

XML structure

```
<ATK>
  <PolicyLocal>
    <PolicyName></PolicyName>
  </PolicyLocal>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyLocal
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

ATK/IPv4Exempts

This table contains IPv4 exemption information

XML structure

```
<ATK>
  <IPv4Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv4Exempts>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set

Column name	Column description	Column type	Data type and restrictions	Remarks
				in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

ATK/IPv6Exempts

This table contains IPv6 exemption information

XML structure

```
<ATK>
  <IPv6Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv6Exempts>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer.	AclNum and

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 2000 to 3999	AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

ATK/Scan/Policies

This table contains scan policy information.

XML structure

```
<ATK>
  <Scan>
    <Policies>
      <Policy>
        <PolicyName></PolicyName>
        <Level></Level>
        <UserDefinedCfg>
          <PortScanEnable></PortScanEnable>
          <PortScanThreshold></PortScanThreshold>
          <IPSweepEnable></IPSweepEnable>
          <IPSweepThreshold></IPSweepThreshold>
          <Period></Period>
        </UserDefinedCfg>
        <Log></Log>
        <Drop></Drop>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>
      </Policy>
    </Policies>
  </Scan>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String,case-insensitive. Length: 1 to 31 characters.	N/A
Level	Scan detect level	N/A	Enumeration: • **0**—Don't detect. • **1**—Low sensibility. • **2**—Middle sensibility. • **3**—High sensibility. • **4**—User defined sensibility.	UserDefinedCfg and its members are available only in scan detect level 4.
UserDefinedCfg	Custom scan detection configuration.	Data struct	Members include: • PortScanEnable • PortScanThreshold • IPSweepEnable • IPSweepThreshold • Period	N/A
PortScanEnable	Port scan detection switch.	N/A	Boolean: • true. • false.	Default is false.
PortScanThreshold	Port scan detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if PortScanEnable is true.
IPSweepEnable	IP sweep detection switch.	N/A	Boolean: • true. • false.	Default is false.
IPSweepThreshold	IP sweep detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if IPSweepEnable is true.
Period	Detection cycle.	N/A	Signed integer. Value range: 1 to 1000000000 seconds.	Default detection cycle is 10 seconds.

Column name	Column description	Column type	Data type and restrictions	Remarks
Log	Log switch	N/A	Boolean: • true • false	Default is false.
Drop	Drop packet switch	N/A	Boolean: • true • false	Default is false. Drop and BlockSource are mutually exclusive and only one of them can be set in a single message.
BlockSource	Block source configs	Data struct	Members include: • Enable • BlockTime	Drop and BlockSource are mutually exclusive and only one of them can be set in a single message.
Enable	Block source switch.	N/A	Boolean: • true • false	Default is false.
BlockTime	Source block duration.	N/A	Unsigned integer, value range 1 to 1000 minutes.	Default is 10 minutes. When and only when Enable is true, this column is useful.

ATK/Flood/DefaultConfigs

This table contains flood default configurations.

XML structure

```
<ATK>
  <Flood>
    <DefaultConfigs>
      <Config>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <Log></Log>
        <Drop></Drop>
        <ClientVerify></ClientVerify>
        <Threshold></Threshold>
        <SourceThreshold></SourceThreshold>
        <MonitorPort></MonitorPort>
        <NonSpecificSwitch></NonSpecificSwitch>
      </Config>
```

```
    </DefaultConfigs>
  </Flood>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	DefaultConfigs
Table type	Multi-instance table
Row name	Config
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Maintype	Main flood type	Index	Enumeration: • **0**—Transport layer flood. • **1**—Application layer flood.	N/A
SubType	Sub flood type	Index	Enumeration, value range varies according to MainType. For transport layer flood: • **0**—SYN flood. • **1**—ACK flood. • **2**—SYN-ACK flood. • **3**—RESET flood. • **4**—FIN flood. • **5**—UDP flood. • **6**—ICMP flood. • **7**—ICMPv6 flood. For application layer flood: • **0**—DNS flood. • **1**—HTTP flood. • **2**—DNS reply flood. • **3**—SIP flood. • **4**—HTTPS flood.	N/A
Log	Log switch	N/A	Boolean:	Default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• true • false	
Drop	Drop packet switch	N/A	Boolean: • true • false	Default is false.
ClientVerify	Client verification switch	N/A	Boolean: • true • false	Default is false.
Threshold	Flood threshold based on destination IP	N/A	Signed integer, value range: 0 to 1000000 pps.	For ACK flood, default value is 40000. For other flood, default value is 10000.
Source Threshold	Flood threshold b ased on source IP	N/A	Signed integer, value range: 0 to 1000000 pps.	N/A
MonitorPort	Monitor service port range	N/A	Port range string, port value range: 1 to 65535.	Support Application layer only for now. For http flood, default monitored port is 80. For DNS flood, default monitored port is 53. For DNS reply flood, default monitored port is 53. For SIP flood, default monitored port is 5060. For HTTPS flood, default monitored port is 443. For example, "80,8000-8080" can be set as default monitored ports for http flood detecting. At most specify a maximum of 32 port items.
NonSpecificSwitch	Non specific protect hosts detect switch	N/A	Boolean: • true • false	Default value is false which means only detect protect hosts.

ATK/Flood/IPv4ProtectHosts

This table contains IPv4 flood protect hosts information.

XML structure

```
<ATK>
  <Flood>
    <IPv4ProtectHosts>
      <Host>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <VrfName></VrfName>
        <Ipv4Address></Ipv4Address>
        <Threshold></Threshold>
        <Log></Log>
        <Drop></Drop>
        <ClientVerify></ClientVerify>
        <MonitorPort></MonitorPort>
      </Host>
    </IPv4ProtectHosts>
  </Flood>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Learning switch	N/A	Boolean: • true • false	Default is false.
TimeValue	Time value	N/A	Unsigned integer. Value range: 1 to 1200000 minutes.	Default is 1440 minutes.
Mode	Learning mode	N/A	Enumeration: • 0—Single. • 1—Cycle.	N/A
IntervalValue	Interval value for cycle mode	N/A	Unsigned integer, value range: 1 to 1200000 minutes.	When and only when mode is cycle, this column is useful. Default is 1440 minutes.
AutoApply	Auto application switch	N/A	Boolean: • true • false	Default is false.
Scope	Deviation of study result	N/A	Unsigned integer. Value range: 0 to 4000.	Only when AutoApply is true, this column is useful. Default is 50.

ATK/Signature/Detects

This table contains signature detects' information.

XML structure

```
<ATK>
  <Signature>
    <Detects>
      <Detect>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <Log></Log>
        <Drop></Drop>
      </Detect>
    </Detects>
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Detects
Table type	Multi-instance table
Row name	Detect
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Maintype	Main signature type	Index	Enumeration: • 0—Named single packet attack. • 1—IP option single packet attack. • 2—ICMP single packet attack. • 3—ICMPv6 single packet attack. • 4—IPv6 extend header attack. • 5—IPv6 extend header abnormal attack. • 6—IPv6 extend header exceed attack.	N/A
SubType	Sub signature type	Index	Enumeration, value range varies according to MainType. For named single packet attack: • **0**—IP fragment. • 1—IP impossible. • 2—Teardrop • 3—Tiny fragment • 4—Abnormal • 5—Smurf • 6—Trace route • 7—Ping of death • 8—Large ICMP • 9—Large ICMPv6	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 10—TCP invalid flags • 11—TCP null flag • 12—TCP all flags • 13—TCP SYN FIN flags • 14—TCP FIN only • 15—Land • 16—Winnuke • 17—UDP bomb • 18—Snork • 19—Fraggle For IP option single packet attack, SubType is the IP option value, range: 0 to 255. • 7—Record route option. • 68—Timestamp option. • 130—Security option. • 131—Loose source routing option. • 136—Stream identifier option. • 137—Strict source route option. • 148—Route alert option. For ICMP single packet attack, SubType is the ICMP type value, range: 0 to 255. • 8—ICMP echo request. • 0—ICMP echo reply. • 4—ICMP source quench. • 3—ICMP destination unreachable. • 5—ICMP redirect. • 11—ICMP time exceeded. • 12—ICMP parameter problem. • 13—ICMP timestamp request. • 14—ICMP timestamp reply. • 15—ICMP information request. • 16—ICMP information reply.	

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 17—ICMP address mask request. • 18—ICMP address mask reply. For ICMPv6 single packet attack, SubType is the ICMPv6 type value, range: 0 to 255. • 128—ICMPv6 echo request. • 129—ICMPv6 echo reply. • 130—ICMPv6 group query. • 131—ICMPv6 group report. • 132—ICMPv6 group reduction. • 1—ICMPv6 destination unreachable. • 3—ICMPv6 time exceeded. • 4—ICMPv6 parameter problem. • 2—ICMPv6 packet too big. For IPv6 extend header single packet attack, SubType is the header type value, range: 0 to 255. For IPv6 extend header abnormal attack, SubType is not needed. For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.	
Log	Log switch	N/A	Boolean: • **true** • false	Default is false.
Drop	Drop packet switch	N/A	Boolean: • **true** • false	Default is false.

ATK/Signature/LargeICMPLength

This table contains large ICMP and ICMPv6 signature information.

XML structure

```
<ATK>
  <Signature>
    <LargeICMPLength>
      <Policy>
        <PolicyName></PolicyName>
        <IPv4Threshold></IPv4Threshold>
        <IPv6Threshold></IPv6Threshold>
      </Policy>
    </LargeICMPLength>
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	LargeICMPLength
Table type	Multi-instance table
Row name	Policy
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
IPv4Threshold	ICMP packet length threshold	N/A	Unsigned integer, value range: 28 to 65534 bytes.	Default is 4000 bytes.
IPv6Threshold	ICMPv6 packet length threshold	N/A	Unsigned integer, value range: 48 to 65534 bytes.	Default is 4000 bytes.

ATK/Signature/LevelActions

This table contains signature level action information.

XML structure

```
<ATK>
  <Signature>
    <LevelActions>
      <LevelAction>
        <PolicyName></PolicyName>
        <Level></Level>
        <Log></Log>
        <Drop></Drop>
      </LevelAction>
    </LevelActions>
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	LevelActions
Table type	Multi-instance table
Row name	LevelAction
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Level	Severity level	Index	Enumeration: • 0—Information. • 1—Low. • 2—Medium. • 3—High.	N/A
Log	Log switch	N/A	Boolean: • **true** • false	Default value is true
Drop	Drop packet switch	N/A	Boolean: • **true** • false	The default value varies by severity level. For information level or low level, default value is false. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				medium level or high level default value is true.

ATK/Signature/LogAggregate

This table contains signature log aggregation information.

XML structure

```
<ATK>
  <Signature>
    <LogAggregate>
      <Enable></Enable>
    </LogAggregate>
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	LogAggregate
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Log aggregate switch.	N/A	Boolean: • **true** • false	Default is true.

ATK/Blacklist/IPv4Blacklists

This table contains IPv4 blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv4Blacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <DSLitePeer></DSLitePeer>
        <TTL></TTL>
      </Item>
    </IPv4Blacklists>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv4Address	IPv4 blacklist address	Index	IPv4 address.	N/A
DSLitePeer	DS-Lite tunnel peer address	Index	IPv6 address.	In DS-Lite network, this parameter refers to B4 addresses. Leave it empty in other circumstances.
TTL	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			second.	

ATK/Blacklist/IPv6Blacklists

This table contains IPv6 blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv6Blacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <TTL></TTL>
      </Item>
    </IPv6Blacklists>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 blacklist address	Index	IPv6 address.	N/A
TTL	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800 second.	N/A

ATK/Blacklist/IPv4DstBlacklists

This table contains IPv4 destination blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv4DstBlacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <AgingTime></AgingTime>
      </Item>
    </IPv4DstBlacklists>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4DstBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vpn index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv4Address	IPv4 blacklist address	Index	IPv4 address.	N/A
AgingTime	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800 second.	N/A

ATK/Blacklist/IPv6DstBlacklists

This table contains IPv6 destination blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv6DstBlacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <AgingTime></AgingTime>
      </Item>
    </IPv6DstBlacklists>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6DstBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vpn index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv6Address	IPv6 blacklist address	Index	IPv6 address.	N/A
AgingTime	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800 second.	N/A

ATK/Blacklist/InterfaceSwitches

This table contains blacklist interface switch information.

XML structure

```
<ATK>
  <Blacklist>
    <InterfaceSwitches>
      <Switch>
        <IfIndex></IfIndex>
        <Enable></Enable>
      </Switch>
    </InterfaceSwitches>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	InterfaceSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
Enable	Blacklist switch.	N/A	Boolean: • **true** • false	Default is false.

ATK/Blacklist/ZoneSwitches

This table is used to configure the blacklist for a security zone.

XML structure

```
<ATK>
  <Blacklist>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <Enable></Enable>
      </Switch>
    </ZoneSwitches>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ZoneSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable the blacklist	N/A	Boolean: • **true**—Enables the blacklist. • false—Disables the blacklist (default).

ATK/Blacklist/GlobalConfigs

This table contains blacklist global configuration information.

XML structure

```
<ATK>
  <Blacklist>
    <GlobalConfigs>
      <Enable></Enable>
      <Log></Log>
    </GlobalConfigs>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	GlobalConfigs
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Global switch.	N/A	Boolean: • **true** • false	Default is false.
Log	Log switch	N/A	Boolean: • **true** • false	Default is false.

ATK/Whitelist/IPv4ObjItems

This table contains IPv4 whitelist information.

XML structure

```
<ATK>
  <Whitelist>
    <IPv4ObjItems>
      <Item>
        <ObjGrpName></ObjGrpName>
      </Item>
    </IPv4ObjItems>
  </Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ObjItems
Table type	Multi-instance table
Row name	Item
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjGrpName	Object group IP Name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

ATK/Whitelist/IPv6ObjItems

This table contains IPv6 whitelist information.

XML structure

```
<ATK>
  <Whitelist>
    <IPv6ObjItems>
      <Item>
```

```
      <ObjGrpName></ObjGrpName>
    </Item>
  </IPv6ObjItems>
</Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6ObjItems
Table type	Multi-instance table
Row name	Item
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjGrpName	Object group IPv6 Name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

ATK/Whitelist/InterfaceSwitches

This table is used to configure the whitelist for an interface.

XML structure

```
<ATK>
  <Whitelist>
    <InterfaceSwitches>
      <Switch>
        <IfIndex></IfIndex>
        <Enable></Enable>
      </Switch>
    </InterfaceSwitches>
  </Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	InterfaceSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable or disable the whitelist function	N/A	Boolean: • true • false	Default is false.

ATK/Whitelist/ZoneSwitches

This table is used to configure the whitelist for a security zone.

XML structure

```
<ATK>
  <Whitelist>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <Enable></Enable>
      </Switch>
    </ZoneSwitches>
```

```
  </Whitelist>
</ATK>
```

Table description

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
Enable	Enable or disable the whitelist	N/A	Boolean: • true • false	Default is false.

ATK/Whitelist/GlobalSwitches

This table contains whitelist global switch information.

XML structure

```
<ATK>
  <Whitelist>
    <GlobalSwitches>
      <Enable></Enable>
    </GlobalSwitches>
  </Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	GlobalSwitches
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the global configuration.	N/A	Boolean: • true • false	Default is false.

ATK/ClientVerify/Switches

This table contains client verification switch information.

XML structure

```
<ATK>
  <ClientVerify>
    <Switches>
      <Switch>
        <IfIndex></IfIndex>
        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
      </Switch>
    </Switches>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Switches
Table type	Multi-instance table
Row name	Switch
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy • 1—DNS client verification. • 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.
VerifyMode	Verification mode	N/A	Enumeration, value range varies according to MainType. For TCP proxy: • 0—Shutdown. • 1—SYN cookie. • 2—Safe reset. For DNS client verification: • 0—Shutdown. • 1—Truncate. For HTTP client verification: • 0—Shutdown. • 1—Redirection. For DNS reply verification: • 0—DNS request. For SIP client verification: • 0—Shutdown. • 1—Redirection. For HTTPS client verification: • 0—Shutdown. • 1—Verification.

ATK/ClientVerify/ZoneSwitches

This table is used to configure client verification for a security zone.

XML structure

```
<ATK>
  <ClientVerify>
```

```
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
      </Switch>
    </ZoneSwitches>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ZoneSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy. • 1—DNS client verification. • 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.
VerifyMode	Verification mode	N/A	Enumeration: For TCP proxy: • 0—Shutdown. • 1—SYN cookie. • 2—Safe reset. For DNS client verification: • 0—Shutdown. • 1—Truncation. For HTTP client verification: • 0—Shutdown. • 1—Redirection. For DNS reply verification: • 0—DNS request.

Column name	Column description	Column type	Data type and restrictions
			For SIP client verification: • 0—Shutdown. • 1—Redirection. For HTTPS client verification: • 0—Shutdown. • 1—Verification.

ATK/ClientVerify/IPv4ProtectHosts

This table contains IPv4 client verification protect hosts information.

XML structure

```
<ATK>
  <ClientVerify>
    <IPv4ProtectHosts>
      <Host>
        <VerifyType></VerifyType>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <PortNumber></PortNumber>
      </Host>
    </IPv4ProtectHosts>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy • 1—DNS client verification. • 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv4Address	Host address	Index	IPv4 address.	N/A
PortNumber	Port number	Index	Unsigned integer. The value range varies by verification type. For TCP proxy: 0-65535 For DNS, HTTP, DNS reply, SIP, and HTTPS client verification: 1-65535	For TCP proxy, port number 0 is available which means that any hosts connected to any service port will be monitored. For DNS, HTTP, DNS reply, SIP, and HTTPS client verification, port number 0 is unavailable.

ATK/ClientVerify/IPv6ProtectHosts

This table contains IPv6 client verification protect hosts information.

XML structure

```
<ATK>
```

```
  <ClientVerify>
    <IPv6ProtectHosts>
      <Host>
        <VerifyType></VerifyType>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <PortNumber></PortNumber>
      </Host>
    </IPv6ProtectHosts>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6ProtectHosts

    </DefaultConfigs>
  </HttpSlowAttackCheck>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	DefaultConfigs
Table type	Multi-instance table
Row name	Config
Restrictions	None
Support for row creation and deletion	No

Columns

	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of attack defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive.
AlertSessionNum	HTTP connection alert session number	N/A	Unsigned integer. Value range: 1 to 1200000.	Default value is 5000.
ContentLength	Value of Content-Length	N/A	Unsigned integer. Value range: 100 to 100000000.	Default value is 10000.
PayloadLength	HTTP body length	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 50.
PacketNumber	Abnormity packet number	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 10.
Period	Check cycle	N/A	Unsigned integer. Value range: 1 to 1200 second.	default is 60 second.
Log	Log switch	N/A	Boolean: • true • false	Default is false.
BlockSource	Blocking source IP configuration	Data structure	Members include: • Enable • BlockTime	BlockSource are exclusive.
Enable	Blocking source switch	N/A	Boolean: • true • false	Default is false.
BlockTime	Blocking source duration	N/A	Unsigned integer. Value range: 1 to 1000 minutes.	Default is 10 minutes. When and only when Enable is true, this column is useful.
MonitorPort	Monitor service port range	N/A	Port range string. Port value range: 1 to 65535.	Support only application layer. For http slow attack flood, default monitored port is 80.
NonSpecificSwitch	Non-specific protected host detection switch	N/A	Boolean: • true • false	Default value is false which means only detect protect hosts.

ATK/HttpSlowAttackCheck/IPv4ProtectHosts

This table contains HTTP slow attack configurations for IPv4 protected hosts.

XML structure

```
<ATK>
  <HttpSlowAttackCheck>
    <IPv4ProtectHosts>
      <Host>
        <PolicyName></PolicyName>
        <VrfName></VrfName>
        <Address></Address>
        <AlertSessionNum></AlertSessionNum>
        <ContentLength></ContentLength>
        <PayloadLength></PayloadLength>
        <PacketNumber></PacketNumber>
        <Period><Period>
        <Log></Log>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>
        <MonitorPort></MonitorPort>
      </Host>
    </IPv4ProtectHosts>
  </HttpSlowAttackCheck>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of attack defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive.
VrfName	VRF name	Index	String. Length: 0 to 31 characters.	Case sensitive, empty represents public VRF.
Address	Protected host address	Index	Ipv4 address.	N/A
AlertSessionNum	HTTP connection alert session number	N/A	Unsigned integer. Value range: 1 to 1200000.	Default value is 5000.
ContentLength	Value of Content-Length	N/A	Unsigned integer. Value range: 100 to 100000000.	Default value is 10000.
PayloadLength	HTTP body length	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 50.
PacketNumber	Abnormity packet number	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 10.
Period	Check cycle	N/A	Unsigned integer. Value range: 1 to 1200 second.	default is 60 second.
Log	Log switch	N/A	Boolean: • true • false	Default is false.
BlockSource	Blocking source ip configration	Data structure	Members include: • Enable • BlockTime	BlockSource are exclusive.
Enable	Blocking source switch	N/A	Boolean: • true • false	Default is false.
BlockTime	Blocking source duration	N/A	Unsigned integer, Value range: 1 to 1000 minutes.	Default is 10 minutes. When and only when Enable is true, this column is useful.
MonitorPort	Monitor service port range	N/A	Port range string. Port value range: 1 to 65535.	Support Application layer only for now.

ATK/HttpSlowAttackCheck/IPv6ProtectHosts

This table contains HTTP slow attack configurations for IPv6 protected hosts.

XML structure

```
<ATK>
```

```
  <HttpSlowAttackCheck>
    <IPv6ProtectHosts>
      <Host>
        <PolicyName></PolicyName>
        <VrfName></VrfName>

ATK

ATK/Policies

This table is used to operate ATK policies.

XML structure

```
<ATK>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
    </Policy>
  </Policies>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive

ATK/PolicyInterfaces

This table is used to operate ATK policy appliances on interfaces.

XML structure

```
<ATK>
  <PolicyInterfaces>
    <Apply>
```

```
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyInterfaces>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyInterfaces
Table type	Multi-instance table
Row name	Apply
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

ATK/PolicyZoneApplies

This table contains information about the application of an attack defense policy to security zones.

XML structure

```
<ATK>
  <PolicyZoneApplies>
    <Apply>
      <PolicyName></PolicyName>
      <ZoneID></ZoneID>
    </Apply>
  </PolicyZoneApplies>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyZoneApplies

Item	Description
Table type	Multi-instance table
Row name	Apply
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Attack defense policy name	Index	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).
ZoneID	Security zone ID	Index	Unsigned integer.	N/A

ATK/PolicyZones

This table contains information about the attack defense policy applied to a security zone.

XML structure

```
<ATK>
  <PolicyZones>
    <Apply>
      <ZoneID></ZoneID>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyZones>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyZones
Table type	Multi-instance table
Row name	Apply
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
PolicyName	Attack defense policy name	N/A	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).

ATK/PolicyApplies

This table is used to operate ATK policy appliances on interfaces.

XML structure

```
<ATK>
  <PolicyApplies>
    <Entity>
      <PolicyName></PolicyName>
      <IfIndex></IfIndex>
    </Entity>
  </PolicyApplies>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyApplies
Table type	Multi-instance table
Row name	Entity
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
IfIndex	Interface index	Index	Unsigned integer.	N/A

ATK/PolicyLocal

This table is used to operate local ATK policy appliance.

XML structure

```
<ATK>
  <PolicyLocal>
    <PolicyName></PolicyName>
  </PolicyLocal>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	PolicyLocal
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

ATK/IPv4Exempts

This table contains IPv4 exemption information

XML structure

```
<ATK>
  <IPv4Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
```

```
    </Exempt>
  </IPv4Exempts>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

ATK/IPv6Exempts

This table contains IPv6 exemption information

XML structure

```
<ATK>
  <IPv6Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
```

```
    </Exempt>
  </IPv6Exempts>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv6Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

ATK/InterfaceAttackStatistics

This table contains interface attack statistics.

XML structure

```
<ATK>
  <InterfaceAttackStatistics>
    <Statistics>
      <IfIndex></IfIndex>
      <Chassis></Chassis>
      <Slot></Slot>
```

```
      <CPUID></CPUID>
      <MainType></MainType>
      <SubType></SubType>
      <AtkTimes></AtkTimes>
      <DropCnt></DropCnt>
    </Statistics>
  </InterfaceAttackStatistics>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	InterfaceAttackStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
Maintype	Main attack type	Index	Enumeration: • **0**—Scan. • 1—Transport layer flood. • 2—Application layer flood. • 3—Named single packet attack. • 4—IP option single packet attack. • 5—ICMP single packet attack. • 6—ICMPv6 single packet attack. • 7—IPv6 extend header attack. • 8—HTTP slow attack. • 9—IPv6 extend header abnormal attack.

Column name	Column description	Column type	Data type and restrictions
			• 10—IPv6 extend header exceed attack.
SubType	Sub attack type	Index	Enumeration, value range varies according to MainType. For scan: • **0**—Port scan. • 1—IP sweep. • 2—Distributed IP sweep. For transport layer flood: • **0**—SYN flood. • 1—ACK flood. • 2—SYN-ACK flood. • 3—RESET flood. • 4—FIN flood. • 5—UDP flood. • 6—ICMP flood. • 7—ICMPv6 flood. For application layer flood: • **0**—DNS flood. • 1—HTTP flood. • 2—DNS reply flood. • 3—SIP flood. • 4—HTTPS flood. For named single packet attack: • **0**—IP fragment. • 1—IP impossible. • 2—Teardrop • 3—Tiny fragment • 4—Abnormal • 5—Smurf • 6—Trace route • 7—Ping of death • 8—Large ICMP • 9—Large ICMPv6 • 10—TCP invalid flags • 11—TCP null flag • 12—TCP all flags • 13—TCP SYN FIN flags • 14—TCP FIN only • 15—Land • 16—Winnuke • 17—UDP bomb • 18—Snork • 19—Fraggle

Column name	Column description	Column type	Data type and restrictions
			For IP option single packet attack, SubType is the IP option value, range: 0 to 255. For ICMP single packet attack, SubType is the ICMP type value, range: 0 to 255. For ICMPv6 single packet attack, SubType is the ICMPv6 type value, range: 0 to 255. For IPv6 extend header single packet attack, SubType is the header type value, range: 0 to 255. For HTTP slow attack, the SubType value is 0. For IPv6 extend header abnormal attack, SubType is not needed. For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.
AtkTimes	Attack times	N/A	Unsigned integer.
DropCnt	Dropped packet count	N/A	Unsigned integer.

ATK/ZoneAttackStatistics

This table contains attack statistics for a security zone.

XML structure

```
<ATK>
  <ZoneAttackStatistics>
    <Statistics>
      <ZoneID></ZoneID>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <MainType></MainType>
      <SubType></SubType>
      <AtkTimes></AtkTimes>
      <DropCnt></DropCnt>
    </Statistics>
```

```
  </ZoneAttackStatistics>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	ZoneAttackStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
Maintype	Main attack type	Index	Enumeration: • 0—Scan attack. • 1—Transport layer flood. • 2—Application layer flood. • 3—Named single-packet attack. • 4—IP option single-packet attack. • 5—ICMP single-packet attack. • 6—ICMPv6 single-packet attack. • 7—IPv6 extension header single-packet attack. • 8—HTTP slow attack. • 9—IPv6 extend header abnormal attack. • 10—IPv6 extend header exceed attack.

SubType	Attack subtype	Index	Enumeration:
			• For scan attacks:
			  ○ 0—Port scan.
			  ○ 1—IP sweep.
			  ○ 2—Distributed IP sweep.
			• For transport layer floods:
			  ○ 0—SYN flood.
			  ○ 1—ACK flood.
			  ○ 2—SYN-ACK flood.
			  ○ 3—RST flood.

Column name	Column description	Column type	Data type and restrictions
			○ 4—FIN flood. ○ 5—UDP flood. ○ 6—ICMP flood. ○ 7—ICMPv6 flood. • For application layer floods: ○ 0—DNS flood. ○ 1—HTTP flood. ○ 2—DNS reply flood. ○ 3—SIP flood. ○ 4—HTTPS flood. • For named single-packet attacks: ○ 0—IP fragment attack. ○ 1—IP impossible attack. ○ 2—Teardrop attack. ○ 3—Tiny fragment attack. ○ 4—IP-option-abnormal attack. ○ 5—Smurf attack. ○ 6—Traceroute attack. ○ 7—Ping-of-death attack. ○ 8—Large ICMP attack. ○ 9—Large ICMPv6 attack. ○ 10—TCP-invalid-flags attack. ○ 11—TCP-null-flag attack. ○ 12—TCP-all-flags attack. ○ 13—TCP-SYN-FIN attack. ○ 14—TCP-FIN-only attack. ○ 15—Land attack. ○ 16—WinNuke attack. ○ 17—UDP bomb attack. ○ 18—Snork attack. ○ 19—Fraggle attack. • For IP option single-packet attacks, a subtype is an IP option value in the range of 0 to 255. • For ICMP single-packet attacks, a subtype is an ICMP type value in the range of 0 to 255. • For ICMPv6 single-packet attacks, a subtype is an ICMPv6 type value in the range of 0 to 255. • For HTTP slow attack, the SubType value is 0. • For IPv6 extension header single-packet attacks, a subtype is an IPv6 extension header type value in the range of 0 to 255. • For IPv6 extend header abnormal attack, SubType is not needed. • For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.
AtkTimes	Number of times that the attack occurred	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
DropCnt	Number of dropped packets	N/A	Unsigned integer.

ATK/LocalAttackStatistics

This table contains local attack statistics.

XML structure

```
<ATK>
  <LocalAttackStatistics>
    <Statistics>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <MainType></MainType>
      <SubType></SubType>
      <AtkTimes></AtkTimes>
      <DropCnt></DropCnt>
    </Statistics>
  </LocalAttackStatistics>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	LocalAttackStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
Maintype	Main attack type	Index	Enumeration: • 0—Scan. • 1—Transport layer flood. • 2—Application layer flood. • 3—Named single packet attack. • 4—IP option single packet attack. • 5—ICMP single packet attack. • 6—ICMPv6 single packet attack. • 7—IPv6 extend header attack. • 8—HTTP slow attack. • 9—IPv6 extend header abnormal attack. • 10—IPv6 extend header exceed attack.
SubType	Sub attack type	Index	Enumeration, value range varies according to MainType. For scan: • 0—Port scan. • 1—IP sweep. • 2—Distributed IP sweep. For transport layer flood: • 0—SYN flood. • 1—ACK flood. • 2—SYN-ACK flood. • 3—RESET flood. • 4—FIN flood. • 5—UDP flood. • 6—ICMP flood. • 7—ICMPv6 flood. For application layer flood: • 0—DNS flood. • 1—HTTP flood. • 2—DNS reply flood. • 3—SIP flood. • 4—HTTP flood. For named single packet attack: • 0—IP fragment. • 1—IP impossible.

Column name	Column description	Column type	Data type and restrictions
			• 2—Teardrop • 3—Tiny fragment • 4—Abnormal • 5—Smurf • 6—Trace route • 7—Ping of death • 8—Large ICMP • 9—Large ICMPv6 • 10—TCP invalid flags • 11—TCP null flag • 12—TCP all flags • 13—TCP SYN FIN flags • 14—TCP FIN only • 15—Land • 16—Winnuke • 17—UDP bomb • 18—Snork • 19—Fraggle For IP option single packet attack, SubType is the IP option value, range: 0 to 255. For ICMP single packet attack, SubType is the ICMP type value, range: 0 to 255. For ICMPv6 single packet attack, SubType is the ICMPv6 type value, range: 0 to 255. For IPv6 extend header single packet attack, SubType is the header type value, range: 0 to 255. For HTTP slow attack, the SubType value is 0. For IPv6 extend header abnormal attack, SubType is not needed. For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.
AtkTimes	Attack times	N/A	Unsigned integer.
DropCnt	Dropped packet count	N/A	Unsigned integer.

ATK/Scan/Policies

This table contains scan policy information.

XML structure

```
<ATK>
  <Scan>
    <Policies>

          <PortScanThreshold></PortScanThreshold>
          <IPSweepEnable></IPSweepEnable>
          <IPSweepThreshold></IPSweepThreshold>
          <Period></Period>
        </UserDefinedCfg>
        <Log></Log>
        <Drop></Drop>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>
      </Policy>
    </Policies>
  </Scan>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String,case-insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Level	Scan detect level	N/A	Enumeration: • **0**—Don't detect. • 1—Low sensibility. • 2—Middle sensibility. • 3—High sensibility. • 4—User defined sensibility.	UserDefinedCfg and its members are available only in scan detect level 4.
UserDefinedCfg	Custom scan detection configuration.	Data struct	Members include: • PortScanEnable • PortScanThreshold • IPSweepEnable • IPSweepThreshold • Period	N/A
PortScanEnable	Port scan detection switch.	N/A	Boolean: • true. • false.	N/A
PortScanThreshold	Port scan detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if PortScanEnable is true.
IPSweepEnable	IP sweep detection switch.	N/A	Boolean: • true. • false.	N/A
IPSweepThreshold	IP sweep detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if IPSweepEnable is true.
Period	Detection cycle	N/A	Signed integer. Value range: 1 to 1000000000 seconds.	N/A
Log	Log switch	N/A	Boolean: • **true** • false	N/A
Drop	Drop packet switch	N/A	Boolean: • **true** • false	Drop and BlockSource are mutually exclusive and only one of them can be set in a single message.
BlockSource	Block source configs	Data struct	Members include: • **Enable** • BlockTime	Drop and BlockSource are mutually exclusive and only one of them

Column name	Column description	Column type	Data type and restrictions	Remarks
				can be set in a single message.
Enable	Block source switch.	N/A	Boolean: • **true** • false	N/A
BlockTime	Source block duration.	N/A	Unsigned integer, value range 1 to 1000 minutes.	When and only when Enable is true, this column is useful.

ATK/Flood/DefaultConfigs

This table contains flood default configurations.

XML structure

```
<ATK>
  <Flood>
    <DefaultConfigs>
      <Config>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <Log></Log>
        <Drop></Drop>
        <ClientVerify></ClientVerify>
        <Threshold></Threshold>
        <SourceThreshold></SourceThreshold>
        <MonitorPort></MonitorPort>
        <NonSpecificSwitch></NonSpecificSwitch>
      </Config>
    </DefaultConfigs>
  </Flood>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	DefaultConfigs
Table type	Multi-instance table
Row name	Config
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Maintype	Main flood type	Index	Enumeration: • 0—Transport layer flood. • 1—Application layer flood.	N/A
SubType	Sub flood type	Index	Enumeration, value range varies according to MainType. For transport layer flood: • 0—SYN flood. • 1—ACK flood. • 2—SYN-ACK flood. • 3—RESET flood. • 4—FIN flood. • 5—UDP flood. • 6—ICMP flood. • 7—ICMPv6 flood. For application layer flood: • 0—DNS flood. • 1—HTTP flood. • 2—DNS reply flood. • 3—SIP flood. • 4—HTTPS flood.	N/A
Log	Log switch	N/A	Boolean: • true • false	Default is false.
Drop	Drop packet switch	N/A	Boolean: • true • false	Default is false.
ClientVerify	Client verification switch	N/A	Boolean: • true • false	Default is false.
Threshold	Flood threshold based on destination IP	N/A	Signed integer, value range: 0 to 1000000 pps.	N/A
Source Threshold	Flood threshold b ased on source IP	N/A	Signed integer, value range: 0 to 1000000 pps.	N/A
MonitorPort	Monitor service port range	N/A	Port range string, port value range: 1 to 65535.	Support Application layer only for now. For http flood,

Column name	Column description	Column type	Data type and restrictions	Remarks
				default monitored port is 80. For DNS flood, default monitored port is 53. For DNS reply flood, default monitored port is 53. For SIP flood, default monitored port is 5060. For HTTPS flood, default monitored port is 443. At most specify a maximum of 32 port items.
NonSpecificSwitch	Non specific protect hosts detect switch	N/A	Boolean: • true • false	Default value is false which means only detect protect hosts.

ATK/Flood/IPv4ProtectHosts

This table contains IPv4 flood protect hosts information.

XML structure

```
<ATK>
  <Flood>
    <IPv4ProtectHosts>
      <Host>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <VrfName></VrfName>
        <Ipv4Address></Ipv4Address>
        <Threshold></Threshold>
        <Log></Log>
        <Drop></Drop>
        <ClientVerify></ClientVerify>
        <MonitorPort></MonitorPort>
      </Host>
    </IPv4ProtectHosts>
  </Flood>
```

```
</ATK>
```

Table description

Item	Description
Feature name	ATK

        <Log></Log>
        <Drop></Drop>
        <level></level>
      </Detect>
    </Detects>
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Detects
Table type	Multi-instance table
Row name	Detect
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Maintype	Main signature	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	type		• 0—Named single packet attack. • 1—IP option single packet attack. • 2—ICMP single packet attack. • 3—ICMPv6 single packet attack. • 4—IPv6 extend header attack. • 5—IPv6 extend header abnormal attack. • 6—IPv6 extend header exceed attack.	
SubType	Sub signature type	Index	Enumeration, value range varies according to MainType. For named single packet attack: • **0**—IP fragment. • 1—IP impossible. • 2—Teardrop • 3—Tiny fragment • 4—Abnormal • 5—Smurf • 6—Trace route • 7—Ping of death • 8—Large ICMP • 9—Large ICMPv6 • 10—TCP invalid flags • 11—TCP null flag • 12—TCP all flags • 13—TCP SYN FIN flags • 14—TCP FIN only • 15—Land • 16—Winnuke • 17—UDP bomb • 18—Snork • 19—Fraggle For IP option single packet attack, SubType is the IP option value, range: 0 to 255. • 7—Record route option. • 68—Timestamp option. • 130—Security option.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 131—Loose source routing option. • 136—Stream identifier option. • 137—Strict source route option. • 148—Route alert option. For ICMP single packet attack, SubType is the ICMP type value, range: 0 to 255. • 8—ICMP echo request. • 0—ICMP echo reply. • 4—ICMP source quench. • 3—ICMP destination unreachable. • 5—ICMP redirect. • 11—ICMP time exceeded. • 12—ICMP parameter problem. • 13—ICMP timestamp request. • 14—ICMP timestamp reply. • 15—ICMP information request. • 16—ICMP information reply. • 17—ICMP address mask request. • 18—ICMP address mask reply. For ICMPv6 single packet attack, SubType is the ICMPv6 type value, range: 0 to 255. • 128—ICMPv6 echo request. • 129—ICMPv6 echo reply. • 130—ICMPv6 group query. • 131—ICMPv6 group report. • 132—ICMPv6 group reduction. • 1—ICMPv6 destination unreachable.	

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—ICMPv6 time exceeded. • 4—ICMPv6 parameter problem. • 2—ICMPv6 packet too big. For IPv6 extend header single packet attack, SubType is the header type value, range: 0 to 255. For IPv6 extend header abnormal attack, SubType is not needed. For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.	
Log	Log switch	N/A	Boolean: • **true** • false	Default is false.
Drop	Drop packet switch	N/A	Boolean: • **true** • false	Default is false.
Level	Severity level	N/A	Enumeration: • 0—Information. • 1—Low. • 2—Medium. • 3—High.	N/A

ATK/Signature/LargeICMPLength

This table contains large ICMP and ICMPv6 signature information.

XML structure

```
<ATK>
  <Signature>
    <LargeICMPLength>
      <Policy>
        <PolicyName></PolicyName>

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Level	Severity level	Index	Enumeration: • 0—Information. • 1—Low. • 2—Medium. • 3—High.	N/A
Log	Log switch	N/A	Boolean: • **true** • false	Default value is true
Drop	Drop packet switch	N/A	Boolean: • **true** • false	The default value varies by severity level. For information level or low level, default value is false. For medium level or high level default value is true.

ATK/Signature/LogAggregate

This table contains signature log aggregation information.

XML structure

```
<ATK>
  <Signature>
    <LogAggregate>
      <Enable></Enable>
    </LogAggregate>
```

```
  </Signature>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	LogAggregate
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Log aggregate switch.	N/A	Boolean: • **true** • false	Default is true.

ATK/Blacklist/IPv4Blacklists

This table contains IPv4 blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv4Blacklists>
      <Item>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <DSLitePeer></DSLitePeer>
        <AddType></AddType>
        <TTL></TTL>
        <DropCnt></DropCnt>
      </Item>
    </IPv4Blacklists>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the blacklist resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the blacklist	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv4Address	IPv4 blacklist address	Index	IPv4 address.	N/A
DSLitePeer	DS-Lite tunnel peer address	Index	IPv6 address.	In DS-Lite network, this parameter refers to B4 addresses. Leave it empty in other circumstances.
AddType	Add type	N/A	Enumeration: • 0—Manual add. • 1—Automatic add.	N/A
TTL	Time to live	N/A	Unsigned integer, unit second.	N/A
DropCnt	Dropped packet count	N/A	Unsigned integer.	N/A

ATK/Blacklist/IPv6Blacklists

This table contains IPv6 blacklist information.

XML structure

```
<ATK>
  <Blacklist>
    <IPv6Blacklists>
      <Item>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <AddType></AddType>
        <TTL></TTL>
        <DropCnt></DropCnt>
      </Item>
    </IPv6Blacklists>
  </Blacklist>
</ATK>
```

Table type	Multi-instance table
Row name	Switch
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
Enable	Whether the blacklist is enabled or not	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).

ATK/Blacklist/GlobalConfigs

This table contains blacklist global configuration information.

XML structure

```
<ATK>
  <Blacklist>
```

```
    <GlobalConfigs>
      <Enable></Enable>
      <Log></Log>
    </GlobalConfigs>
  </Blacklist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	GlobalConfigs
Table type	Single-instance table
Row name	N/A
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Global switch.	N/A	Boolean: • **true** • false	Default is false.
Log	Log switch	N/A	Boolean: • **true** • false	Default is false.

ATK/Whitelist/IPv4ObjItems

This table contains IPv4 whitelist information.

XML structure

```
<ATK>
  <Whitelist>
    <IPv4ObjItems>
      <Item>
        <ObjGrpName></ObjGrpName>
      </Item>
    </IPv4ObjItems>
  </Whitelist>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ObjItems
Table type	Multi-instance table

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of the global configuration.	N/A	Boolean: • true • false	N/A

ATK/ClientVerify/Switches

This table contains client verification switch information.

XML structure

```
<ATK>
  <ClientVerify>
    <Switches>
      <Switch>
        <IfIndex></IfIndex>
        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
      </Switch>
    </Switches>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	Switches
Table type	Multi-instance table
Row name	Switch
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy • 1—DNS client verification. • 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.
VerifyMode	Verification mode	N/A	Enumeration, value range varies according to MainType. For TCP proxy: • 0—Shutdown. • 1—SYN cookie.

Column name	Column description	Column type	Data type and restrictions
			• 2—Safe reset. For DNS client verification: • 0—Shutdown. • 1—Truncate. For HTTP client verification: • 0—Shutdown. • 1—Redirection. For DNS reply verification: • 0—DNS request. For SIP client verification: • 0—Shutdown. • 1—Option. For HTTPS client verification: • 0—Shutdown. • 1—Verification.

ATK/ClientVerify/ZoneSwitches

This table contains the client verification configuration for a security zone.

XML structure

```
<ATK>
  <ClientVerify>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
      </Switch>
    </ZoneSwitches>
  </ClientVerify>
</ATK>
```

Table description

Item	Description

Item	Description
Row name	Switch
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy. • 1—DNS client verification. • 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.
VerifyMode	Verification mode	N/A	Enumeration: For TCP proxy: • 0—Shutdown. • 1—SYN cookie. • 2—Safe reset. For DNS client verification: • 0—Shutdown. • 1—Truncation. For HTTP client verification: • 0—Shutdown. • 1—Redirection. For DNS reply verification: • 0—DNS request. For SIP client verification: • 0—Shutdown. • 1—Option. For HTTPS client verification: • 0—Shutdown. • 1—Verification.

ATK/ClientVerify/IPv4ProtectHosts

This table contains IPv4 client verification protect hosts information.

XML structure

```
<ATK>
  <ClientVerify>
    <IPv4ProtectHosts>
      <Host>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <VerifyType></VerifyType>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <PortNumber></PortNumber>
        <AddType></AddType>
        <ReqCnt></ReqCnt>
        <AuthCnt></AuthCnt>
      </Host>
    </IPv4ProtectHosts>
  </ClientVerify>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the host resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the host	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VerifyType	Verification type	Index	Enumeration: • 0—TCP proxy • 1—DNS client verification.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—HTTP client verification. • 3—DNS reply verification. • 4—SIP client verification. • 5—HTTPS client verification.	
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
Ipv4Address	Host address	Index	IPv4 address.	N/A
PortNumber	Port number	Index	Unsigned integer. The value range varies by the verification type. For TCP proxy: 0-65535 For DNS, DNS reply, SIP, HTTP, and HTTPS client verification: 1-65535	For TCP proxy, port number 0 is available which means that any hosts connected to any service port will be monitored. For DNS, DNS reply, SIP, HTTP, and HTTPS client verification, port number 0 is unavailable.
AddType	Add type	N/A	Enumeration: • 0—Manual add. • 1—Automatic add.	N/A
ReqCnt	Request count	N/A	Unsigned integer.	N/A
AuthCnt	Authenticated request count	N/A	Unsigned integer.	N/A

ATK/ClientVerify/IPv6ProtectHosts

This table contains IPv6 client verification protect hosts information.

XML structure

```
<ATK>
  <ClientVerify>
    <IPv6ProtectHosts>

Column name	Column description	Column type	Data type and restrictions	Remarks
	ATK top statistics function		• true • false	

ATK/TopStatisticsSampleTime

This table contains sample time for the top statistics in a period.

XML structure

```
<ATK>
  <TopStatisticsSampleTime>
    <Item>
      <Type></Type>
      <Period></Period>
      <SampleTime></SampleTime>
    </Item>
  </TopStatisticsSampleTime>
</ATK>
```

Table description

Item	Description
Feature name	Session
Table name	TopStatisticsSampleTime
Table type	Multi-instance table
Row name	Item
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Type	Type of top statistics	Index	Enumeration: • **0**—Top statistics by source address. • **1**—Top statistics by destination address.	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. • **0**—1 hour. • **1**—1 day. • **2**—30 days.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SampleTime	Sample time in a period	N/A	String. Length: 1 to 32 characters.	Example: 2000-04-25 21:23:23.

ATK/TopAttackStatisticsByIP

This table contains top statistics for attack.

XML structure

```
<ATK>
  <TopAttackStatisticsByIP>
    <Statistics>
      <Type></Type>
      <Period></Period>
      <Sequence></Sequence>
      <Address>
        <IPv4Addr></IPv4Addr>
        <IPv6Addr></IPv6Addr>
      </Address>
      <VRF></VRF>
      <AttackType></AttackType>
      <AttackTimes></AttackTimes>
      <SampleCount></SampleCount>
    </Statistics>
  </TopAttackStatisticsByIP>
</ATK>
```

Table description

Item	Description
Feature name	Session
Table name	TopAttackStatisticsByIP
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	statistics		• 0—Top statistics by source address. • 1—Top statistics by destination address.	
Period	Period of history attack statistics	Index	Enumeration: • 0—1 hour. • 1—1 day. • 2—30 days.	N/A
Sequence	Sequence number of top statistics	Index	Unsigned integer. Value range: 1 to 10.	N/A
Address	Source or destination network layer address	Data structure	Members include: • IPv4Addr. • IPv6Addr.	N/A
IPv4Addr	IPv4 address	N/A	IPv4 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
IPv6Addr	IPv6 address	N/A	IPv6 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
VRF	Name of the VRF instance associated with the SSL VPN gateway	N/A	String. Length: 0 to 31 characters.	If the gateway is on the public network, the length of characters is 0.
AttackType	AttackType	N/A	Unsigned integer. Value range: 0 to 2^{32} – 1.	N/A
AttackTimes	Attack times	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
SampleCount	SampleCount	N/A	Unsigned integer. Value range: 0 to 2^{32}– 1.	N/A

ATK/TopAttackStatisticsByType

This table contains top statistics for attack.

XML structure

```
<ATK>
  <TopAttackStatisticsByType>
    <Statistics>
      <Period></Period>
      <AttackType></AttackType>
      <AttackTimes></AttackTimes>
    </Statistics>
  </TopAttackStatisticsByType>

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 2^{64} – 1.	

ATK/HttpSlowAttackCheck/DefaultConfigs

This table contains HTTP slow attack check default configurations.

XML structure

```
<ATK>
  <HttpSlowAttackCheck>
    <DefaultConfigs>
      <Config>
        <PolicyName></PolicyName>
        <AlertSessionNum></AlertSessionNum>
        <ContentLength></ContentLength>
        <PayloadLength></PayloadLength>
        <PacketNumber></PacketNumber>
        <Period></Period>
        <Log></Log>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>
        <MonitorPort></MonitorPort>
        <NonSpecificSwitch></NonSpecificSwitch>
      </Config>
    </DefaultConfigs>
  </HttpSlowAttackCheck>
</ATK>
```

Table description

Item	Description
Feature name	ATK
Table name	DefaultConfigs
Table type	Multi-instance table
Row name	Config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of attack defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive.
AlertSessionNum	HTTP connection alert session number	N/A	Unsigned integer. Value range: 1 to 1200000.	Default value is 5000.
ContentLength	Value of Content-Length	N/A	Unsigned integer. Value range: 100 to 100000000.	Default value is 10000.
PayloadLength	HTTP body length	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 50.
PacketNumber	Abnormity packet number	N/A	Unsigned integer. Value range: 1 to 1000.	Default value is 10.
Period	Check cycle	N/A	Unsigned integer. Value range: 1 to 1200 seconds.	Default is 60 seconds.
Log	Log switch	N/A	Boolean: • true • false	Default is false.
BlockSource	Blocking source IP configuration	Data structure	Members include: • Enable. • BlockTime.	BlockSource are exclusive.
Enable	Blocking source switch	N/A	Boolean: • true • false	Default is false.
BlockTime	Blocking source duration	N/A	Unsigned integer. Value range: 1 to 1000 minutes.	Default is 10 minutes. When and only when Enable is true, this column is useful.
MonitorPort	Monitor service port range	N/A	Port range string. Port value range: 1 to 65535.	Support Application layer only for now. For http slow attack flood, default monitored port is 80.
NonSpecificSwitch	Non-specific protected host detection switch	N/A	Boolean: • true • false	Default value is false which means only detect protect hosts.

ATK/HttpSlowAttackCheck/IPv4ProtectHosts

This table contains HTTP slow attack configurations for IPv4 protected hosts.

XML structure

```
<ATK>
  <HttpSlowAttackCheck>
    <IPv4ProtectHosts>
      <Host>
        <PolicyName></PolicyName>
        <VrfName></VrfName>
        <Address></Address>
        <AlertSessionNum></AlertSessionNum>
        <ContentLength></ContentLength>
        <PayloadLength></PayloadLength>
        <PacketNumber></PacketNumber>
        <Period><Period>
        <Log></Log>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>

```

Table description

Item	Description
Feature name	ATK
Table name	GetBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	Type of IP address	Index	Enumeration: • IPv4. • IPv6.	This table can be used to add or filter blacklist entryies. The meaning of each parameter is as follows: 1) Location is used to specify where to get or query data. 2) SimpleQuery is used to search general match. 3) AdvanceQuery is used to search information by using more information. 4) IPType is the type of IP address. 5) IPDirection means the direction of IP address to be controlled. 6) IpAddress means blacklisted IP address. 7) DSLitePeer is used to set dslite tunnel peer address. For example: 1) Location 1 SimpleQuery String ***; 2) Location 1 AdvanceQuery IPType IPv4 IPDirection Source vrf 2 IpAddress 1.1.1.1 DSLitePeer 1::1
ObjectType	Type of the object	Index	Enumeration: • Host. • Subnet. • Range.	N/A
IPDirection	Direction of IP address	Index	Enumeration: • Source. • Destination.	N/A
VrfIndex	VRF index	Index	Unsigned integer 0 represents public VRF.	Some versions support VRF name. For more information, see the XSD document of your product. For information about VrfIndex, see the

Column name	Column description	Column type	Data type and restrictions	Remarks
				appendix in *L3VPN NETCONF XML API Data Reference*.
IpAddress	IPv4 or IPv6 address	Index	String. Length: 1 to 39 characters.	N/A
DSLitePeer	DS-Lite tunnel peer address	Index	IPv6 address.	In a DS-Lite network, this parameter refers to a B4 addresses. Leave it empty in other circumstances.
TTL	Time to live	N/A	Unsigned integer, unit second.	N/A
DropCnt	Number of dropped packets	N/A	Unsigned integer.	N/A
AllBlacklistsCount	Number of IP address blacklist entries	N/A	Unsigned integer.	N/A
AddType	Add type	N/A	Enumeration: • Manual. • Automatic.	N/A

Invalid IP address. 指定的地址不合法。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the IP address must be valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

ATK/Flood/IPv6ProtectHosts

Message	Explanation
The operation is not supported on the device. 设备不支持此操作。	During executing create, merge or replace operation, the client verification operation must be supported on the device. 当执行create、merge和release操作时，请确保设备支持客户端验证功能。

The flood attack type doesn't exist. 该泛洪攻击防范类型不存在。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the flood attack type must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，请确保相应的泛洪攻击防范类型必须存在。
Client verification is not an available defense action for this flood attack. 该类型的泛洪攻击防范的处理行为不能设置为客户端验证。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, client verification is not an available defense action for this flood attack. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，该类型的泛洪攻击防范的处理行为不能设置为客户端验证。
Only HTTP HTTPS DNS DNS-REPLY and SIP flood attack defense supports port configuration. 仅HTTP泛洪攻击防范、HTTPS泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP范洪攻击防范支持设置检测端口。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, only HTTP HTTPS DNS DNS-REPLY and SIP flood attack defense supports port configuration. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，仅HTTP泛洪攻击防范、HTTPS泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP范洪攻击防范支持设置检测端口。
The number of detection ports exceeds the upper limit. 检测端口数量超过上限。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the number of detection ports must not exceeds the upper limit. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，请确保检测端口数量不能超过上限。
Invalid IP address. 指定的地址不合法。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the IP address must be valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

ATK/Signature/Detects

Message	Explanation
The single-packet attack type doesn't exist. 该单包攻击防范类型不存在。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the single-packet attack type must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，单包攻击防范类型必须存在。

ATK/Blacklist/ZoneSwitches

Message	Explanation
The operation is not supported on Local zone. Local域上不支持该操作。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, The operation is not supported on Local zone. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，Local域上不支持该操作。

ATK/Blacklist/IPv4Blacklists

Message	Explanation
The VRF instance does not exist. 指定的VRF不存在。	During executing create, merge or replace operation, the specified VPN instance must exist. 当执行create、merge和release操作时，指定的VRF必须存在。

ATK/Blacklist/IPv6Blacklists

Message	Explanation
The VRF instance does not exist. 指定的VRF不存在。	During executing create, merge or replace operation, the specified VPN instance must exist. 当执行create、merge和release操作时，指定的VRF必须存在。

ATK/Whitelist/ZoneSwitches

Message	Explanation
The operation is not supported on Local zone. Local域上不支持该操作。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, The operation is not supported on Local zone. 当执行create、merge和release操作时，指定的VRF必须存在。

ATK/Whitelist/IPv4ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation (create, merge, replace, delete or remove), the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的地址对象组必须存在。
The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation (create, merge, replace, delete or remove), the object group must be an IP address object group. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

ATK/Whitelist/IPv6ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation (create, merge, replace, delete or remove), the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的地址对象组必须存在。

The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation (create, merge, replace, delete or remove), the object group must be an IP address object group. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

ATK/ClientVerify/IPv4ProtectHosts

Message	Explanation
The VRF instance does not exist. 指定的VRF不存在。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the specified VPN instance must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的VRF必须存在。
Invalid IP address. 指定的地址不合法。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the IP address must be valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

ATK/ClientVerify/IPv6ProtectHosts

Message	Explanation
The VRF instance does not exist. 指定的VRF不存在。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the specified VPN instance must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的VRF必须存在。
Invalid IP address. 指定的地址不合法。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the IP address must be valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

ATK/ClientVerify/Switches

Message	Explanation
The verification mode is not supported. 该类型客户端验证不支持指定的工作模式。	During executing create, merge or replace operation, the verification mode must be supported. 当执行create、merge和release操作时，客户端验证需要支持指定的工作模式。

ATK/ClientVerify/ZoneSwitches

Message	Explanation
The verification mode is not supported. 该类型客户端验证不支持指定的工作模式。	During executing create, merge, or replace operation, the verification mode must be supported. 当执行create、merge和release操作时，客户端验证需要支持指定的工作模式。
The operation is not supported on Local zone. Local域上不支持该操作。	During executing configuration operation (create, merge, replace, delete or remove) or get operation, the operation is not supported on Local zone. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，Local域上不支持该操作。

ATK/TopStatisticsSwitch

Message	Explanation
The stop process is running. Please try it later. 关闭操作尚未执行完毕，请稍后重试。	During executing create, merge, replace, or action operation, The close operation must be completed. 当执行create、merge、release及action操作时，需要等到关闭操作执行完毕。

ATK/Blacklist/IPv4ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation (create, merge, replace, delete, or remove), the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的地址对象组必须存在。
The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation (create, merge, replace, delete, or remove), the object group must be an IP address object group. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

ATK/Blacklist/IPv6ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation (create, merge, replace, delete, or remove), the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的地址对象组必须存在。
The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation (create, merge, replace, delete or remove), the object group must be an IP address object group.

	当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

ATK/ImportBlacklists

Message	Explanation
The VRF instance does not exist. 指定的VRF不存在。	During executing action operation, the specified VPN instance must exist. 当执行action操作时，指定的VRF必须存在。
The import file format is not as required. 导入文件的格式不符合要求。	During import file operation, the file must meet the requirements. 当执行导入文件操作时，文件必须符合要求。
The size of the file to be imported exceeds the upper limit. 黑名单文件大小超过上限。	The size of blacklist file cannot exceed the upper limit for action operation. 当执行action操作时，导入的文件的大小不能超过上限。
Invalid format of *ip-address*. *ip-addresses*格式错误。	The IP blacklist address is wrong format for action operation. 当执行action操作时，IP黑名单地址格式错误。
Another import task is in progress. Please try again later. 存在其他导入任务正在执行，请稍后执行此任务。	When an import task is being executed, you cannot start another import task. 当有导入任务正在执行时，不允许再新增导入任务。
The number of blacklisted addresses has reached the limit. 黑名单数量超过规格上限。	When you perform a file import task, the number of blacklisted addresses cannot exceed the upper limit. 当执行导入文件操作时，添加黑名单时不能超过黑名单规格上限数量。

AUDIT/SignatureManualUpgrade

This table contains the information of AUDIT signatures manual upgrading.

XML structure

```
<AUDIT>
  <SignatureManualUpgrade>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrade>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	SignatureManualUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the impored rule file	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	N/A
Location	The Location of the file	N/A	Enumeration: • 0—local. • 1—remote.	N/A

AUDIT/SignatureAutoUpgradeNow

This table contains the information of AUDIT signatures auto upgrading at once.

XML structure

```
<AUDIT>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgrade Now	Auto upgrade at once	N/A	This column must be empty.	N/A

AUDIT/SignatureRollback

This table contains the information of AUDIT signatures rollback.

XML structure

```
<AUDIT>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	SignatureRollback
Table type	Single-instance table
Row name	None

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	rollback	N/A	Boolean: • true: rollback last version. • false: rollback original version.	N/A

AUDIT/PolicyMove

This table contains information about the AUDIT's policy move.

XML structure

```
<AUDIT>
  <PolicyMove>
    <Move>
      <SrcPolicyName></SrcPolicyName>
      <DesPolicyName></DesPolicyName>
      <MoveType></MoveType>

AUDIT

AUDIT/ Policies

This table contains information about the AUDIT's policy.

XML structure

```
<AUDIT>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <Disable></Disable>
      <TimeRangeName></TimeRangeName>
      <DefaultRuleAction></DefaultRuleAction>
      <PolicyType></PolicyType>
      <RuleMatchType></RuleMatchType>
    </Policy>
  </Policies>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Disable	Set this value to true to disable the policy	N/A	Boolean: • true. • false.	N/A
TimeRangeName	Time Range Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A
PolicyType	Policy Type	N/A	Enumeration: • 0—NoAudit.	The policy type must be set when policy is

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Audit. • 2—Deny.	created.
DefaultRuleAction	Default Rule Action	N/A	Enumeration: • 0—Permit. • 1—Deny.	N/A
RuleMatchType	Rule Matching Type	N/A	Enumeration: • 0—Order. • 1—Full.	N/A

AUDIT/PolicyOptions

This table contains some multiple information about the AUDIT's policy.

XML structure

```
<AUDIT>
  <PolicyOptions>
    <Option>
      <PolicyName></PolicyName>
      <OptionType></OptionType>
      <OptionValue></OptionValue>
    </Option>
  </PolicyOptions>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	PolicyOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	Name can not be same with its siblings. It is Mandatory

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionType	Type of the option in the policy	Index	Enumeration: • 1—SourceZones. • 2—DestZones. • 3—SourceIPv4AddressSets. • 4—SourceIPv6AddressSets. • 5—DestIPv4AddressSets • 6—DestIPv6AddressSets • 7—Users. • 8—User Groups. • 9—Applications. • 10—AppGroups. • 11—Service.	N/A
OptionValue	Value of the special option type in the policy	Index	String: case-insensitive. Length: 1 to 63 characters (for OptionTypes 9 and 10). Length: 1 to 31 characters (for OptionTypes1 through 6, and OptionType11). Length: 1 to 480 characters (for OptionTypes 7 and 8).	Values of OptionTypes 7 and 8 are in Json format.

AUDIT/DefaultPolicyAction

This table contains information about the AUDIT's default policy action.

XML structure

```
<AUDIT>
  <DefaultPolicyAction>
    <DefaultAction>
      <Action></Action>
    </DefaultAction>
  </DefaultPolicyAction>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	DefaultPolicyAction
Table type	Multi-instance table
Row name	DefaultAction
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Packet Action which not match any Audit's policy	N/A	Enumeration: • 0—Permit. • 1—Deny.	N/A

AUDIT/AppPolicyKeywordGroups

This table contains information about the AUDIT's keywordgroup.

XML structure

```
<AUDIT>
  <AppPolicyKeywordGroups>
    <KeywordGroup>
      <KeywordGroupName></KeywordGroupName>
      <Description></Description>
      <RefCnt></RefCnt>
    </KeywordGroup>
  </AppPolicyKeywordGroups>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	AppPolicyKeywordGroups
Table type	Multi-instance table
Row name	KeywordGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroupName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description about keyword group	N/A	String: case-insensitive. Length: 1 to 256 characters.	N/A
RefCnt	Refer count about keyword	N/A	Unsigned integer: Value range: 0 to 2^{16} – 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	group			

AUDIT/Keywords

This table contains information about the keywords of keywordgroup.

XML structure

```
<AUDIT>
  <Keywords>
    <Keyword>
      <KeywordGroupName></KeywordGroupName>
      <Keyword></Keyword>
    </Keyword>
  </Keywords>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	Keywords
Table type	Multi-instance table
Row name	Keyword
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroupName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Keyword	Keyword of matching the application behavior content	Index	String: case-sensitive. Length: 1 to 63 characters.	N/A

AUDIT/PolicyRules

This table contains the information of a Audit Rule in specify policy.

XML structure

```
<AUDIT>
  <PolicyRules>
    <Rule>
      <PolicyName></PolicyName>
      <RuleID></RuleID>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentID></BhContentID>
      <FilterType></FilterType>
      <MatchType></MatchType>
      <KeywordGroupName></KeywordGroupName>
      <Number></Number>
      <PktAction></PktAction>
      <AuditLogging></AuditLogging>
    </Rule>
  </PolicyRules>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 64.	N/A
AppCategoryID	App Category ID	N/A	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppID	Application layer protocol ID	N/A	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BehaviorID	Application Behavior ID	N/A	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BhContentID	Application behavior content ID	N/A	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
FilterType	Filter type the application behavior content	N/A	Enumeration: • 0—Keyword Filter. • 1—Number Filter.	N/A
KeywordGroupName	Keyword Group Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	Contain the keyword for mathing application behavior content.
Number	Number	N/A	Unsigned integer: Value range: 0 to 2^{32} – 1.	Number for matching the application behavior content.
MatchType	Match Type	N/A	Enumeration: • 0—Equal. • 1—Greater. • 2—Less. • 3—Include. • 4—Greater or Equal. • 5—Less or Equal. • 6—Unequal. • 7—Exclude.	N/A
PktAction	Packet Action	N/A	Enumeration: • 0—Permit. • 1—Deny.	N/A
AuditLogging	Whether or not send the Audit Logging	N/A	Enumeration: • 0—Don’t Send Audit log. • 1—Send Audit log.	N/A

AUDIT/AppBehaviors

This table contains the behavior of the application or application category.

XML structure

```
<AUDIT>
  <AppBehaviors>
    <AppBehavior>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorIDs>
        <BehaviorID></BehaviorID>
      </BehaviorIDs>
    </AppBehavior>
  </AppBehaviors>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	AppBehaviors
Table type	Multi-instance table
Row name	AppBehavior
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BehaviorIDs	Behavior ID list	Data structure	Members include: • BehaviorID.	N/A
BehaviorID	Behavior ID	N/A	Unsigned integer: Value range: 0 to 2^{32} - 1.	Contains Multiple BehaviorID in the application or application category.

AUDIT/AppBehaviorContents

This table contains the behavior Content of the application or application category.

XML structure

```
<AUDIT>
  <AppBehaviorContents>
    <BhContent>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentIDs>
        <BhContentID></BhContentID>
      </BhContentIDs>
    </BhContent>
  </AppBehaviorContents>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	AppBehaviorContents
Table type	Multi-instance table
Row name	BhContent
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BehaviorID	Behavior ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BhContentIDs	Behavior content ID list	Data structure	Members include: • BhContentID.	N/A
BhContentID	Behavior content ID	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	Contains Multiple BhContentID in the application or application category.

AUDIT/AppBhContentsFilterType

This table contains the behavior content filter type of the application or application category.

XML structure

```
<AUDIT>
  <AppBhContentFilterType>
    <BhContentFilterType>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentID></BhContentID>
      <FilterType></FilterType>
    </BhContentFilterType>
  </AppBhContentFilterType>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	AppBhContentFilterType
Table type	Multi-instance table
Row name	BhContentFilterType
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BehaviorID	Behavior ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BhContentID	Behavior content ID	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
FilterType	Filter type the application behavior content	N/A	Enumeration: • 0—Keyword Filter. • 1—Number Filter.	N/A

AUDIT/AppCategories

This table contains informations about the Audit's application categories.

XML structure

```
<AUDIT>
  <AppCategories>
    <AppCategory>
      <AppCategoryID></AppCategoryID>
      <AppCategoryName></AppCategoryName>
    </AppCategory>
  </AppCategories>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	AppCategories
Table type	Multi-instance table
Row name	AppCategory
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppCategory Name	App Category Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

AUDIT/AppCategoryMembers

This table contains the Audit's application protocols included in an application category.

XML structure

```
<AUDIT>
  <AppCategoryMembers>
    <AppCategoryMember>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <AppName></AppName>
    </AppCategoryMember>
  </AppCategoryMembers>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	AppCategoryMembers
Table type	Multi-instance table
Row name	AppCategoryMember

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
AppName	Application layer protocol name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

AUDIT/Behaviors

This table contains informations about the Audit's application behaviors

XML structure

```
<AUDIT>
  <Behaviors>
    <Behavior>
      <BehaviorID></BehaviorID>
      <BehaviorName></BehaviorName>
    </Behavior>
  </Behaviors>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	Behaviors
Table type	Multi-instance table
Row name	Behavior
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorID	App Behavior ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	App Behavior Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

AUDIT/BehaviorContents

This table contains informations about the Audit's application behavior contents.

XML structure

```
<AUDIT>
  <BehaviorContents>
    <BehaviorContent>
      <BhContentID></BhContentID>
      <BhContentName></BhContentName>
    </BehaviorContnet>
  </BehaviorContents>
</AUDIT>
```

Table description

Item	Description
Feature name	Audit
Table name	BehaviorContents
Table type	Multi-instance table
Row name	BehaviorContent
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BhContentID	App Behavior Content ID	Index	Unsigned integer: Value range: 0 to 2^{32} - 1.	N/A
BhContentName	App Behavior Content Name	N/A	String, case-insensitive: Length: 1 to 63 characters.	N/A

AUDIT/SignatureAutoUpgrading

This table contains the information of AUDIT signatures auto upgrading.

XML structure

```
<AUDIT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true. • false.	N/A
StartTime	The time that the system auto upgrading	N/A	Date Time. Format: HH:MM:SS.	N/A
Type	Type of the system auto upgrading	N/A	Enumeration: • 0—Week. • 1—periodic.	N/A
Day	Days	N/A	Unsigned integer: Value range: 0-6.	When Type is 0, the value range is 0 to 6. Otherwise, the value is invalid.

AUDIT/SignatureFileInfos

This table contains the signature file information.

XML structure

```
<AUDIT>
  <SignatureFileInfos>
    <FileInfo>
      <FileStatus></FileStatus>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Description></Description>
    </FileInfo>
  </SignatureFileInfos>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	SignatureFileInfos
Table type	MultiSingle-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileStatus	signature file Status	Index	Enumeration: • 1—current. • 2—last. • 3—factory.	N/A
Version	Version of the signature file	N/A	String: case-insensitive. Length: 1 to 31 characters.	v.v(2.1)
PublishedTime	The time when the signature is published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Consider time-zone.
Description	DescriptionInformation	N/A	String: case-insensitive Length: 1 to 255 characters.	N/A

AUDIT/UpdatePercentage

This table contains the percentage of update.

XML structure

```
<AUDIT>
  <UpdatePercentage>
    <Percentage></Percentage>
  </UpdatePercentage>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	UpdatePercentage
Table Type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	the percentage of update.	N/A	Unsigned integer:	When the value range is 0 to 100,it means in upgrading, Otherwise, means error.

AUDIT/KeywordGroupReferences

This table contains the information about the relationship between AUDIT's policys and keywordgroups.

XML structure

```
<AUDIT>
  <KeywordGroupReferences>
    <KeywordGroupReference>
      <KeywordGroupName></KeywordGroupName>
      <PolicyName></PolicyName>
      <RuleID></RuleID>
    </KeywordGroupReference>
  </KeywordGroupReferences>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	KeywordGroupReferences
Table type	Multi-instance table
Row name	KeywordGroupReference
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroupName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 64.	N/A

AUDIT/AUDITSpecification

This table contains the AUDIT specification information.

XML structure

```
<AUDIT>
  <AUDITSpecification>
    <SupportDomain></SupportDomain>
  </AUDITSpecification>
</AUDIT>
```

Table description

Item	Description
Feature name	AUDIT
Table name	AUDITSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDomain	Whether the function of AUDIT domain is supported.	N/A	Boolean: • true. • false.	N/A

Contents

</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	GlobalServiceTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name	Index	String, letter, number or '-', '[',']','/','-'. The length is 1 to 63.
SSID	Identifier of service set.	N/A	String, the length is 1 to 32.
DefaultVlan	DefaultVlan.	N/A	Unsinged integer. Value range: 1 to 4094. The default value is 1.
HideSsid	Hiding status of SSID	N/A	Boolean: • true—enabled.

Column name	Column description	Column type	Data type and restrictions
			• false—disabled, default value.
Enable	Status of service template.	N/A	Boolean: true or 1 : enabled. false or 0 : disabled. The default value is false.
PskPassPhrase Key	Pre-shared key.	N/A	String.

AUTONET/GlobalVlan

This table contains global vlan information.

XML structure

```
<AUTONET>
  <GlobalVlan>
    <Vlan>
      <ID></ID>
      <Description></Description>
   </Vlan>

Table type	Single-instance table
Row name	Cfg
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

AUTONET/GlobalGateway

This table contains global gateway information.

XML structure

```
<AUTONET>
  <GlobalGateway>
    <Cfg>
      <VlanID></VlanID>
      <Ipv4>
        <Ipv4Address></Ipv4Address>
        <Ipv4Mask></Ipv4Mask>
      </Ipv4>
      <IpPool>
        <NetworkIpv4Address></NetworkIpv4Address>
        <NetworkIpv4Mask></NetworkIpv4Mask>
        <GatewayIpv4Address></GatewayIpv4Address>
        <DNSIpv4Address></DNSIpv4Address>
        <LeaseDay></LeaseDay>
        <LeaseHour></LeaseHour>
        <LeaseMinute></LeaseMinute>
        <LeaseSecond></LeaseSecond>
        <StartIpv4Address></StartIpv4Address>
        <EndIpv4Address></EndIpv4Address>
```

```
      </IpPool>
    </Cfg>
  </GlobalGateway>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	GlobalGateway
Table type	Multi-instance table
Row name	Cfg
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: • Ipv4Address. • Ipv4Mask.	You must configure both the IP address and mask if the operation is **merge**, **create**, or **replace**. You can configure only the IP address if the operation is **delete** or **remove**.
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the **merge**, **create**, or **replace** operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 255.255.255.0.
IpPool	DHCP server IP pool	Data structure	Members include: • NetworkIpv4Address • NetworkIpv4Mask • GatewayIpv4Address • DNSIpv4Address • StartIpv4Address • EndIpv4Address	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• LeaseDay • LeaseHour • LeaseMinute • LeaseSecond	
NetworkIpv4Address	Primary subnet for dynamic allocation	N/A	String, dotted decimal notation.	Modifying or removing the network configuration deletes the assigned addresses from the current address pool.
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
GatewayIpv4Address	Gateway address	N/A	String, dotted decimal notation.	Example: 1.1.1.1
DNSIpv4Address	DNS server address	N/A	String, dotted decimal notation	Example: 1.1.1.1.
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	The address range specified must be within the subnet. The addresses out of the address range cannot be assigned. It must be configured together with the EndIpv4Address column.
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	It must be configured together with the StartIpv4Address column.
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365. Default: 1.	LeaseDay, LeaseHour, LeaseMinute, LeaseSecond must be configured together. Cannot be configured together with LeaseUnlimit.
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23. Default: 0.	N/A
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A

AUTONET

AUTONET/GlobalServiceTemplates

This table contains global service template information.

XML structure

```
<AUTONET>
  <GlobalServiceTemplates>
    <Template>
      <Name></Name>
      <SSID></SSID>
      <DefaultVlan></DefaultVlan>
      <HideSsid></HideSsid>
      <Enable></Enable>
      <PskSelected></PskSelected>
    </Template>
  </GlobalServiceTemplates>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	GlobalServiceTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Service template name	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.	
SSID	Identifier of service set.	N/A	String, the length is 1 to 32.	
DefaultVlan	DefaultVlan.	N/A	Unsinged integer. Value range: 1 to 4094. The default value is 1.	

Column name	Column description	Column type	Data type and restrictions	Remarks
HideSsid	Hiding status of SSID	N/A	Boolean: • true—enabled. • false—disabled, default value.	
Enable	Status of service template.	N/A	Boolean: true or 1 : enabled. false or 0 : disabled. The default value is false.	
PskSelected	Whether the psk is selected	N/A	Boolean: • true. • false, default value.	

AUTONET/GlobalVlan

This table contains global vlan information.

XML structure

```
<AUTONET>
  <GlobalVlan>
    <Vlan>
      <ID></ID>
      <Description></Description>
   </Vlan>
  </GlobalVlan>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	GlobalVlan
Table type	Multi-instance table
Row name	Vlan
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	VLAN description	N/A	String. Length: 1 to 255 characters.	Example: VLAN 0001.

AUTONET/GlobalCfg

This table contains global configuration.

XML structure

```
<AUTONET>
  <GlobalCfg>
    <Cfg>
      <IgnoreUpgradeNotes></IgnoreUpgradeNotes>
      <GatewaySerialID></GatewaySerialID>
      <IntelligentOptimization></IntelligentOptimization>
      <RegionCode></RegionCode>
   </Cfg>
  </GlobalCfg>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	GlobalCfg
Table type	Single-instance table
Row name	Cfg
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreUpgrade Notes	Ignore version upgrade notes	N/A	Boolean: • **true** • **false**	N/A
GatewaySerialI D	Gateway serial ID.	N/A	String, uppercase. Length: 1 to 63 characters.	N/A
IntelligentOptimi	Intelligent	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
zation	optimization		• **true** • **false**	
RegionCode	Region code	N/A	Unsigned short.	Conform to ISO 3166 standard.

AUTONET/NetworkConnectionStatus

This table contains device connect network status information.

XML structure

```
<AUTONET>
  <NetworkConnectionStatus>
    <Status></Status>
  </NetworkConnectionStatus>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	NetworkConnectionStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	whether the device connected to the network	N/A	Boolean: • **true** • **false**	N/A

AUTONET/CloudConnectionStatus

This table contains device connect cloud status information.

XML structure

```
<AUTONET>
  <CloudConnectionStatus>
```

```
    <Status></Status>
  </CloudConnectionStatus>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	CloudConnectionStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	whether the device connected to the cloud	N/A	Boolean: • **true** • **false**	N/A

AUTONET/PanelInformation

This table contains panel information.

XML structure

```
<AUTONET>
  <PanelInformation>
    <Panel>
      <Information></Information>
   </Panel>
  </PanelInformation>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	PanelInformation
Table type	Single-instance table
Row name	Panel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Information	Board information	N/A	String.	Document content

AUTONET/AllStations

This table contains all station information.

XML structure

```
<AUTONET>
  <AllStations>
    <Station>
      <MacAddress></MacAddress>
      <Status></Status>
      <Ipv4Address></Ipv4Address>
      <OnlineMoment></OnlineMoment>
      <OfflineMoment></OfflineMoment>
      <ApName></ApName>
      <TCID></TCID>
      <SSID></SSID>
      <ClassifyDeviceType></ClassifyDeviceType>
      <WirelessMode></WirelessMode>
      <TotalOnlineCnt></TotalOnlineCnt>
      <TotalOnlineTime></TotalOnlineTime>
    </Station>
  </AllStations>
</AUTONET>
```

Table description

Item	Description
Feature name	AUTONET
Table name	AllStations
Table type	Multi-instance table
Row name	Station
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	
Status	Station status	N/A	Enumeration: 0: Online. 1: Offline.	
Ipv4Address	IPv4 address	N/A	Ipv4Address	
OnlineMoment	The time of the station online in last time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	Example: 2022-05-07T09:35:07
OfflineMoment	The time of the station offline in last time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	Example: 2022-05-08T09:35:07
ApName	AP name.	N/A	String, case-sensitive. Length: 1 to 64 characters.	
TCID	Member device ID	N/A	Unsigned integer Value range: 0 to 255	
SSID	Identifier of service set.	N/A	String, the length is 1 to 32.	
ClassifyDeviceType	Classify device type		String, the length is 1 to 16.	
WirelessMode	Wireless mode	N/A	Enumeration. 1 : 802.11b 2 : 802.11a 4 : 802.11g 8 : 802.11gn 16 : 802.11an 32 : 802.11gac 64 : 802.11ac 128：802.11gax 256：802.11ax	• 802.11a(5GHz) • 802.11an(5GHz) • 802.11ac(5GHz) • 802.11ax(5GHz) • 其他为2.4GHz
TotalOnlineCnt	The station total online count	N/A	Unsigned integer	
TotalOnlineTime	The station total online duration.	N/A	Unsigned integer	

AUTONET/OnlineStations

This table contains online station information.

XML structure

```
<AUTONET>
  <OnlineStations>
    <Station>
      <MacAddress></MacAddress>
      <SSID></SSID>
      <Ipv4Address></Ipv4Address>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: • Ipv4Address. • Ipv4Mask.	You must configure both the IP address and mask if the operation is **merge**, **create**, or **replace**. You can configure only the IP address if the operation is **delete** or **remove**.
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the **merge**, **create**, or **replace** operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 255.255.255.0.
IpPool	DHCP server IP pool	Data structure	Members include: • NetworkIpv4Address • NetworkIpv4Mask • GatewayIpv4Address • DNSIpv4Address • StartIpv4Address • EndIpv4Address • LeaseDay • LeaseHour • LeaseMinute • LeaseSecond	N/A
NetworkIpv4Ad	Primary	N/A	String, dotted decimal	Modifying or removing

Column name	Column description	Column type	Data type and restrictions	Remarks
dress	subnet for dynamic allocation		notation.	the network configuration deletes the assigned addresses from the current address pool.
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
GatewayIpv4Address	Gateway address	N/A	String, dotted decimal notation.	Example: 1.1.1.1
DNSIpv4Address	DNS server address	N/A	String, dotted decimal notation	Example: 1.1.1.1.
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	The address range specified must be within the subnet. The addresses out of the address range cannot be assigned. It must be configured together with the EndIpv4Address column.
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	It must be configured together with the StartIpv4Address column.
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365. Default: 1.	LeaseDay, LeaseHour, LeaseMinute, LeaseSecond must be configured together. Cannot be configured together with LeaseUnlimit.
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23. Default: 0.	N/A
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A

AVC/MoveTrafficPolicyRule

This table contains information about the AVC's rule number information.

XML structure

```
<AVC>
  <MoveTrafficPolicyRule>
    <Move>
      <RuleNumber></RuleNumber>
      <NextRuleNumber></NextRuleNumber>
    </Move>
  </MoveTrafficPolicyRule>
</AVC>
```

Table description

Item	Description
Feature name	AVC
Table name	MoveTrafficPolicyRule
Table type	Multi-instance table
Row name	Move
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: 1 to 4294967295	Rule number is the match order.
NextRuleNumber	Next rule's rule number	N/A	Unsigned integer: 0 to 4294967295	Single value

AVC/BTResetLearn

This table contains information about the AVC traffic policy's Control profile and IP address.

XML structure

```
<AVC>
  <BTResetLearn>
```

```
    <ResetLearn>
      <Chassis></Chassis>
      <Slot></Slot>
      <CpuID></CpuID>
      <IpAddr></IpAddr>
      <RuleName></RuleName>
      <ProName></ProName>
      <IpType></IpType>
    </ResetLearn>
  </BTResetLearn>
</AVC>
```

Table description

Item	Description
Feature name	AVC
Table name	BTResetLearn
Table type	Multi-instance table
Row name	ResetLearn
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	index	Unsigned integer: Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface	Index	Unsigned integer: Value range: 0 to 65535.	N/A
CpuID	Cpu ID	Index	Unsigned integer: Value range: 0 to 7.	N/A
IpAddr	IPv4 or IPv6 address	index	String, case-insensitive. Length: 1 to 45 characters.	N/A
RuleName	Rule Name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProName	Profile Name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IpType	IP type	N/A	Enumeration: • 1—IPv4. • 2—IPv6.	N/A

AVC/CommitAccelerate

This table contains information about manually activating rule matching acceleration.

XML structure

```
<AVC>
   <CommitAccelerate>
     <Commit>
     </Commit>
   </CommitAccelerate>
</AVC>
```

```

Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
ParentRuleNumber	Parent Rule‘s rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional
RuleName	name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Name cannot be same with its siblings. Mandatory
Enable	Set this value to true to disable the rule	N/A	Boolean: • true. • false.	Optional
TimeRange	Time Range Name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional, Single value
Ipv6FlowLabelValue	IPv6 header’s flow label value	N/A	Unsigned integer: Value range: 0 to 2.	Optional
Ipv6ExtensionHeader	IPv6 extension headers	N/A	Unsigned integer: Value range: 0 to 63.	Optional
VRF	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.
ProfileName	TrafficPolify profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional
ModelId	Model rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional
RuleAction	Rule action	N/A	Unsigned integer: Value range: 1 to 3.	Optional

AVC/RuleOptions

This table contains some multiple information about the AVC’s rule option.

XML structure

```
<AVC>
  <RuleOptions>
    <Option>
      <RuleNumber></RuleNumber>
      <OptionType></OptionType>
      <OptionVal></OptionVal>
    </Option>
  </RuleOptions>
</AVC>
```

Table description

Item	Description
Feature name	AVC
Table name	RuleOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
OptionType	Type of the configuration	Index	Enumeration: • 1—SourceZones. • 2—DestZones. • 3—SourceAddressSets. • 4—DestAddressSets. • 5—Users. • 6—UserGroups. • 7—Applications. • 8—AppGroups. • 9—Services. • 10—Dscp.	N/A
OptionVal	Value of the special type configuration	Index	String, case-insensitive. Length: 1 to 63characters (for OptionTypes 7 and 8). Length: 1 to 31 characters (for OptionTypes 1 through 4, and OptionType 9). Length: 1 to 100 characters (for OptionType 10). Length: 1 to 480 characters (for OptionTypess 5 and 6).	Values of OptionTypes 5 and 6 are in Json format.

AVC/TrafficPolicyProfiles

This table contains information about the AVC traffic policy's Control profiles.

XML structure

```
<AVC>

DnGuaranteedKbpsPerUser	Down guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	N/A
UpGuaranteedKbpsPerUse	Up guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
r				
DnGuaranteedKbps	Downstream Guaranteed bandwidth	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
UpGuaranteedKbps	Upstream guaranteed Kbps	N/A	Unsigned integer: Value range:8 to 1,000,000,000.	Optional
DnMaxKbps	Downstream Max Kbps	N/A	Unsigned integer: Value range:8 to 1,000,000,000.	Optional
UpMaxKbps	Upstream Max Kbps	N/A	Unsigned integer: Value range:8 to 1,000,000,000.	Optional
DnMaxKbpsPerIP	Downstream Max Kbps per iP	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
UpMaxKbpsPerIP	Upstream Max Kbps Per IP	N/A	Unsigned integer: Value range:8 to 1,000,000,000.	Optional. Per-IP and Per-User are exclusive.
DnMaxKbpsPerUser	Downstream Max Kbps per User	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
UpMaxKbpsPerUser	Upstream Max Kbps PerUser	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
Priority	Stream Priority leve	N/A	Unsigned integer: Value range: 1 to 7.	When the outbound bandwidth is limited, the priority of the stream is higher, the stream is prior to pass the interface.
BandwidthThresholdEnable	Per-ip bandwidth threshold detect function switch	N/A	Boolean: • true. • false.	Default is false.
BandwidthThresholdMinValue	Downstream Max Kbps threshold	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
BandwidthThresholdMaxValue	Upstream Max Kbps threshold	N/A	Unsigned integer: Value range: 8 to 1,000,000,000.	Optional
BTLearningEnable	Learn funtion switch	N/A	Boolean: • true. • false.	Default is false.
BTLearningTime	Learn time minutes	N/A	Unsigned integer: Value range: 1 to 10080.	Default is 1440.
BTLearningtoleranceLowValue	Downstream Max learn tolerance	N/A	Unsigned integer: Value range: 0 to 4,000.	Optional
BTLearningtoleranceUpValue	Upstream Max learn tolerance	N/A	Unsigned integer: Value range: 0 to 4,000.	Optional
RemarkDSC	Dscp value	N/A	Unsigned integer:	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
P			Value range: 0 to 63.	
MaxConnNum	Max up connections	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnNumPerIP	Max up connections per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional Per-IP and Per-User are exclusive.
MaxConnNumPerUser	Max up connections per User	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnRate	Max up connections rate	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional
MaxConnRatePerIP	Max up connections rate per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional Per-IP and Per-User are exclusive.
MaxConnRatePerUser	Max up connections rate per user	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional
TCPMSS	TCP MSS value	N/A	Unsigned integer: Value range: 128 to 9158.	Optional
MonthLimitValue	Per-IP monthly rate limit value	N/A	Unsigned integer: Value range: 1 to 1000000000	Optional

AVC/ RuleJsonOptions

This table contains information about the AVC's rule options information.

XML structure

```
<AVC>
  <RuleJsonOptions>
    </OptionJson>
      <RuleJsonNumber></RuleJsonNumber>
      <OptionJsonType></OptionJsonType>
      <OptionJsonVal></OptionJsonVal>

```

Table description

Item	Description
Feature name	AVC
Table name	TrafficParentRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Position	Record the Number	Index	Unsigned integer: Value range: 0 to 200.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to65535 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
TotalCount	Total number of rules	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: • true. • false.	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Ipv6FlowLabelValue	IPv6 header's flow label value	N/A	Unsigned integer: Value range: 0 to 2.	N/A
Ipv6ExtensionHeader	IPv6 extension headers	N/A	Unsigned integer: Value range: 0 to 63.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleAction	Rule action	N/A	Unsigned integer: Value range: 0 to 3.	N/A
VRF	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

AVC/TrafficPolicyChildRules

This table contains information about child traffic rules.

XML structure

```

Column name	Column description	Column type	Data type and restrictions	Remarks
	enable the rule		• false.	
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Ipv6FlowLabelValue	IPv6 header's flow label value	N/A	Unsigned integer: Value range: 0 to 2.	N/A
Ipv6ExtensionHeader	IPv6 extension headers	N/A	Unsigned integer: Value range: 0 to 63.	N/A
VRF	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
RuleAction	Rule action	N/A	Unsigned integer: Value range: 0 to 3.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 10240. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.

AVC/AvcRuleOptions

This table contains match criterion types.

XML structure

```
<AVC>
  <AvcRuleOptions>
    <AvcOption>
      <AvcRuleNumber></AvcRuleNumber>
      <AvcSeqNum></AvcSeqNum>
      <AvcOptionType></AvcOptionType>
      <AvcOptionVal></AvcOptionVal>
    </AvcOption>
  </AvcRuleOptions>
</AVC>
```

AVC

AVC/TrafficPolicyRules

Message	Explanation
Operation failed. The parent rule and the child rule cannot use the same traffic profile. 操作失败：父策略与子策略不能引用同一个带宽通道。	The parent rule and the child rule cannot use the same traffic profile. 配置父子策略时，父子策略不能引用同一个带宽通道。
Operation failed. The parent rule's guaranteed bandwidth must be greater than or equal to the child rule's guaranteed bandwidth. 操作失败：父策略的保证带宽要大于等于子策略的保证带宽。	The parent rule's guaranteed bandwidth must be greater than or equal to the child rule's guaranteed bandwidth. 配置父子策略时，父策略的保证带宽要大于等于子策略的保证带宽。
Operation failed. The maximum bandwidth of a child rule cannot be greater than that of the parent rule. 操作失败：子策略的最大带宽不能大于父策略的最大带宽。	The maximum bandwidth of a child rule cannot be greater than that of the parent rule. 配置父子策略时，子策略的最大带宽不能大于父策略的最大带宽。
Operation failed. The child rule's guaranteed bandwidth cannot be greater than parent rule's maximum bandwidth. 操作失败：子策略的保证带宽不能大于父策略的最大限制带宽。	The child rule's guaranteed bandwidth cannot be greater than parent rule's maximum bandwidth. 配置父子策略时，子策略的保证带宽不能大于父策略的最大限制带宽。
The rule name already exists. 策略名称已存在。	The rule name already exists. 配置带宽策略时，策略名称不能相同。
A level-4 rule cannot act as a parent rule. 该父策略是一个四级策略。	A level-4 rule cannot act as a parent rule. 配置子带宽策略时，不能指定一个四级策略作为父策略。
The traffic profile reference mode for the parent and child traffic rules must be the same. 父子策略引用的带宽通道的限流方式必须一致。	The traffic profile reference mode for the parent and child traffic rules must be the same. 配置子带宽策略时，父子策略引用的带宽通道的限流方式必须一致。
The guaranteed bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 父策略引用带宽通道的的保证带宽不能小于子策略引用带宽通道的保证带宽。	The guaranteed bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的保证带宽不能小于子策略引用带宽通道的保证带宽。
The maximum bandwidth for the parent traffic rule must be greater than or equal to the maximum bandwidth for its child traffic rule. 父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的最大带宽。	When configuring the child rule, the maximum bandwidth for the parent traffic rule must be greater than or equal to the maximum bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的最大带宽。
The maximum bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的保证带宽。	When configuring the child rule, the maximum bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的最大带宽不能小于子

	策略引用带宽通道的保证带宽。
The guaranteed bandwidth for a child traffic rule must be smaller than the guaranteed bandwidth for its parent traffic rule. 子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的保证带宽。	When configuring the child rule, the guaranteed bandwidth for a child traffic rule must be smaller than the guaranteed bandwidth for its parent traffic rule. 配置子带宽策略时，子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的保证带宽。
The guaranteed bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule. 子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的最大带宽。	When configuring the child rule, the guaranteed bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule. 配置子带宽策略时，子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的最大带宽。
The maximum bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule. 子策略引用带宽通道的的最大带宽不能大于父策略引用带宽通道的最大带宽。	When configuring the child rule, the maximum bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule. 配置子带宽策略时，子策略引用带宽通道的的最大带宽不能大于父策略引用带宽通道的最大带宽。

AVC/TrafficPolicyProfiles

Message	Explanation
Operation failed. The profile has been used by a rule. 操作失败：无法删除已经被引用的带宽通道。	Can't delete a profile that has been used by a rule. 删除带宽通道时，无法删除已经被策略引用的带宽通道。
The profile name already exists. 带宽通道名称已存在。	The profile name already exists. 新建带宽通道时，通道名称不能相同。
The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the per-IP/per-user maximum bandwidth. 每IP或每用户的保证带宽不能大于每IP或每用户的最大带宽。	The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the per-IP/per-user maximum bandwidth. 配置带宽通道时，每IP或每用户的保证带宽要小于等于最大带宽。
The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total guaranteed bandwidth. 每IP或每用户的保证带宽不能大于整体的保证带宽。	The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total guaranteed bandwidth. 配置带宽通道时，每IP或每用户的保证带宽不能大于整体的保证带宽。
The total guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth. 整体保证带宽不能大于整体最大带宽。	The total guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth. 配置带宽通道时，整体保证带宽不能大于整体最大带宽。
The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth. 每IP或每用户的保证带宽不能大于整体最大带宽。	The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth. 配置带宽通道时，每IP或每用户的保证带宽不能大于整体最大带宽。

Table description

Item	Description
Feature name	BFD
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MultihopMinTransmitInterval	Minimum interval for transmitting multihop BFD control packet.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopMinReceiveInterval	Minimum interval for receiving multihop BFD control packet.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopDetectMultiplier	Multihop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
EchoSourceIp	Specify source IP address for BFD echo packet.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
EchoSourceIpv6	Specify source IPv6 address for BFD echo packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
MultihopAuthentication	Multihop Authentication.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key.	N/A	String, case-sensitive.	If KeyType is cipher,the length are 33 to 53

Column name	Column description	Column type	Data type and restrictions	Remarks
				characters. If KeyType is plain,the length are 1 to 16 characters.
IpRouterAlert	Set the Router Alert option in BFD control packets for MPLS.	N/A	Boolean: • **true.** • **false.**	When set the ip router alert option，set the value to **true**. Otherwise, set the value to **false**.
InitMode	Specify mode before creating BFD session.	N/A	Enumeration: • 0—Active. • 1—Passive.	N/A
MultihopMinControlInterval	Minimum interval for transmitting and receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model. It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.
MultihopMinEchoReceiveInterval	Minimum interval for receiving multihop BFD echo packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
SbfdSourceIpv6	Specify source IPv6 address for SBFD packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
SbfdInitAcceptDown	Enable the sbfd initiator to accept down packet.	N/A	Boolean: • **true.** • **false**	N/A

BFD/Interfaces

This table contains BFD interface information.

XML structure

```
<BFD>
  <Interfaces>
    <Interface>
```

```
      <IfIndex></IfIndex>
      <MinTransmitInterval></MinTransmitInterval>
      <MinReceiveInterval></MinReceiveInterval>
      <DetectMultiplier></DetectMultiplier>
      <MinEchoReceiveInterval></MinEchoReceiveInterval>
      <Authentication>
        <AuthType></AuthType>
        <KeyID></KeyID>
        <KeyType></KeyType>
        <Key></Key>
        </Authentication>
      <Demand></Demand>
      <Echo></Echo>
      <MinControlInterval></MinControlInterval>
    </Interface>
  </Interfaces>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	none
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API* Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinTransmitInterval	Minimum interval for transmitting single-hop BFD control.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving single-hop BFD control.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Single-hop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher,the length are 33 to 53 characters. If Key Type is plain,the length are 1 to 16 characters.

Column name	Column description	Column type	Data type and restrictions	Remarks
Demand	Specify BFD session mode.	N/A	Boolean: • **true.** • **false.**	When set the BFD Demand mode，set the value to **true**. Otherwise, set the value to **false**.
Echo	BFD echo function.	N/A	Enumeration: • 0—Not enable echo function. • 1—enable echo receive function. • 2—enable echo send function. • 3—enable echo receive and send function.	N/A
MinControlInterval	Minimum interval for transmitting and receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model. It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.

BFD/SBFD/ReflectorNumbers

This table contains the integer used as the SBFD reflector local discriminator.

XML structure

```
<BFD>
  <SBFD>
    <ReflectorNumbers>
       <ReflectorNumber>
        <LocalDiscrNumber></LocalDiscrNumber>
       </ReflectorNumber>
    </ReflectorNumbers>
  </SBFD>
</BFD>
```

Table description

Item	Description

Row name	DestAddrRemoteDiscr
Restrictions	none
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrType	The type of address	Index	Enumeration: • IPV4 • IPV6	Required when create a new row, can not be modified.
DestinationAddress	The address of the route to the destination	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value. Can not be modified.
RemoteDiscriminator	Remote discriminator number for the SBFD session.	N/A	Unsigned integer.	The parameter has no default value.
RemoteDiscrIpv4Addr	Remote discriminator IPv4 address for the SBFD session.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value. The parameter has no default value.

BFD/Templates

This table contains BFD template information.

XML structure

```
<BFD>
  <Templates>
    <Template>
      <TemplateName></TemplateName>
      <MinTransmitInterval></MinTransmitInterval>
      <MinReceiveInterval></MinReceiveInterval>
      <DetectMultiplier></DetectMultiplier>
      <MinEchoReceiveInterval></MinEchoReceiveInterval>
      <Authentication>
        <AuthType></AuthType>
        <KeyID></KeyID>
        <KeyType></KeyType>
        <Key></Key>
      </Authentication>
    </Template>
  </Templates>
```

```
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	Templates
Table type	Multi-instance table
Row name	Template
Restrictions	none
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	Template name	Index	String. Length: 1 to 63 characters.	N/A
MinTransmitInterval	Minimum interval for transmitting BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo packets	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication information.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key value.	N/A	String, case-sensitive.	If KeyType is cipher, the key length is 33 to 53 characters. If KeyType is plain, the key length is 1 to 16 characters.

BFD/StaticSessions

This table contains static BFD information.

XML structure

      <SecondarySlot></SecondarySlot>
      <SecondaryCPUID></SecondaryCPUID>
      <TrackInterface></TrackInterface>
    </StaticSession>
   </StaticSessions>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	CfgSessions
Table type	Multi-instance table
Row name	Cfgsession
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
SessionName	Name of a BFD session	Index	String. Length: 1 to 64 characters.	Required when creating a new row, and cannot be modified.
AddrType	The type of address	N/A	Enumeration: • IPV4 • IPV6	Required when create a new row, can not be modified.
IfName	Name of the outbound interface of a BFD session.	N/A	String. Length: 2 to 47 characters.	Can not be modified.
VrfName	Name of the VPN to which a BFD session belongs	N/A	String. Length: 0 to 31 characters.	If the BFD session belongs to the public network, the length of characters is 0. Can not be modified.

SrcAddr	Source IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Can not be modified.
PeerAddr	PeerAddr IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. String: default-ip.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Value **default-ip** represents IP address 224.0.0.184. Can not be modified.
DestAddr	The address of the route to the destination	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value. Can not be modified.
LocalDiscriminator	Local discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 32768.	Can not be modified.
RemoteDiscriminator	Remote discriminator of a BFD session	N/A	Unsigned integer. • Value range: 1 to 4294967295.	Can not be modified.
Auto	Obtain BFD session discriminators through autonegotiation	N/A	Boolean: • True • false	Can not be modified.
OneArmEcho	Echo session in one-arm-echo mode, which must be configured for echo session type.	N/A	Boolean: • true • false	Can not be modified.
EchoSrcAddr	Specify source IP address for BFD echo packets.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value. Can not be modified.
MinTransmitInterval	Minimum interval for sending	N/A	Unsigned integer.	The value is expressed in milliseconds. The

	packets			value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving packets	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model.
DetectMultiplier	Number of times that a BFD session continuously detects that packets are sent but no response is returned, based on which the system considers the BFD session Down.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving one-arm echo session packets.	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model. This parameter is available only when the mode of the BFD is one-arm-echo.
Authentication	Authentication.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

KeyType	Key type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher, the key is a string of 33 to 53 characters. If Key Type is plain, the key is a string of 1 to 16 characters.
PrimaryChassis	Chassis ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
PrimarySlot	Slot ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
PrimaryCPUID	CPU ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondaryChassis	Chassis ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondarySlot	Slot ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondaryCPUID	CPU ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
TrackInterface	Interface monitored by the static BFD session.	N/A	String. Length: 2 to 47 characters.	This value can be set only in creating a new row. This value cannot be modified or deleted.

BFD/ForwardingMatchRDs

This table contains information about remote discriminators used to forward matching BFD echo packets.

XML structure

```
<BFD>
  <ForwardingMatchRDs>
    <ForwardingMatchRD></ForwardingMatchRD>
  </ForwardingMatchRDs>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	ForwardingMatchRDs
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardingMatchRD	Remote discriminators used to forward matching BFD echo packets.	N/A	String, case-sensitive. Length: 1 to 14 characters.	Specify up to 100 items of remote discriminators or discriminator ranges, for example, 1 or 3 to 5.

BFD/MadDetects

This table contains BFD MAD information.

XML structure

```
<BFD>
  <MadDetects>
    <MadDetect>
      <IfName></IfName>
      <MadBfdEnable></MadBfdEnable>
      <MadIpv4Addresses>
        <MadIpv4Address>
          <MadIpv4Address></MadIpv4Address>
          <MadIpv4Mask></MadIpv4Mask>
          <MemberID></MemberID>
        </MadIpv4Address>
      </MadIpv4Addresses>
    <MadDetect>
  </MadDetects>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	MadDetects
Table type	Multi-instance table
Row name	None
Restrictions	none
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name.	Index	String Value range: 2 to 47.	Only VLAN interfaces except VLAN-interface 1, Layer 3 aggregate interfaces, and Management Ethernet interfaces are supported.
MadBfdEnable	BFD MAD function.	N/A	Enumeration. • disable—Disable MAD BFD detect. • enable—Enable MAD BFD detect.	N/A
MadIpv4Addresses	MAD IPv4 addresses information	Subtable	N/A	For more information, see the BFD/MadDetects/MadDetect/MadIpv4Addresses table.

BFD/MadDetects/MadDetect/MadIpv4Addresses

This table contains MAD IPv4 addresses information.

XML structure

Please refer to the XML structure of BFD/MadDetects.

Table description

Item	Description
Feature name	BFD
Table name	MadIpv4Addresses
Table type	Multi-instance table
Row name	None
Restrictions	none
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MadIpv4Address	MAD IPv4 address information	Sublist	N/A	For more information, see the BFD/MadDetects/MadDetect/MadIpv4Addresses/MadIpv4Address table.

BFD/MadDetects/MadDetect/MadIpv4Addresses/MadIpv4Address

This table contains MAD IPv4 address information.

XML structure

Please refer to the XML structure of BFD/MadDetects.

Table description

Item	Description
Feature name	BFD
Table name	MadIpv4Address
Table type	Multi-instance table
Row name	MadIpv4Address
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MadIpv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A
MadIpv4Mask	IPv4 address mask.	Index	String, dotted decimal notation.	N/A
MemberID	Specifies the ID of an IRF member.	Index	Unsigned integer. Value range: 0 to 32. Stack mode: 1 to 32. **Stand-alone mode: 0.**	The current member ID of the device. The maximum member ID is variant between products.

Item	Description
Feature name	BFD
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MultihopMinTransmitInterval	Minimum interval for transmitting multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopMinReceiveInterval	Minimum interval for receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopDetectMultiplier	Multihop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
EchoSourceIp	Specify source IP address for BFD echo packet.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
EchoSourceIpv6	Specify source IPv6 address for BFD echo packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
MultihopAuthentication	Multihop Authentication.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: • 1—cipher.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—plain.	
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher,the length are 33 to 53 characters. If Key Type is plain,the length are 1 to 16 characters.
IpRouterAlert	Set the Router Alert option in BFD control packets for MPLS.	N/A	Boolean: • true. • false.	When set the ip router alert option，set the value to **true**. Otherwise, set the value to **false**.
InitMode	Specify mode before creating BFD session.	N/A	Enumeration: • 0—Active. • 1—Passive.	N/A
MultihopMinControlInterval	Minimum interval for transmitting and receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model. It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.
MultihopMinEchoReceiveInterval	Minimum interval for receiving multihop BFD echo packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
SbfdSourceIpv6	Specify source IPv6 address for SBFD packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
SbfdInitAcceptDown	Enable the sbfd initiator to accept down packet.	N/A	Boolean: • **true.** • **false**	N/A

BFD/Interfaces

This table contains BFD interface information.

XML structure

```
<BFD>
  <Interfaces>
    <Interface>

      <Demand></Demand>
      <Echo></Echo>
      <MinControlInterval></MinControlInterval>
      <IfName></IfName>
    </Interface>
  </Interfaces>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API* Configuration Reference.
MinTransmitInterval	Minimum interval for transmitting single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Single-hop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo packets	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher,the length are 33 to 53 characters. If Key Type is plain,the length are 1 to 16 characters.
Demand	Specify BFD session mode.	N/A	Boolean: • true. • false.	When set the BFD Demand mode，set the value to **true**. Otherwise, set the value to **false**.
Echo	BFD echo function.	N/A	Enumeration: • 0—Not enable echo function. • 1—enable echo receive function. • 2—enable echo send function. • 3—enable echo receive and send function.	N/A
MinControlInterval	Minimum interval for transmitting and receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model. It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time

Column name	Column description	Column type	Data type and restrictions	Remarks
				on these special devices.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

Table description

Item	Description
Feature name	BFD
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	none
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalDiscr	The local discriminator for this BFD session.	Index	Unsigned integer.	N/A
RemoteDiscr	The discriminator received from the corresponding remote system.	N/A	Unsigned integer.	N/A
SourceAddr	Source IP address of the session.	N/A	String.	An IPv4 or IPv6 address.
DestAddr	Destination IP address of the session.	N/A	String.	An IPv4 or IPv6 address.
DestinationPort	Destination UDP port.	N/A	Unsigned short.	N/A
SessionState	Session state.	N/A	Enumeration: • 0—admindown. • 1—down. • 2—init. • 3—up.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Name of the interface of the session.	N/A	String.	The value is N/A for multihop session.
ProtocolType	Name of the protocol.	N/A	String.	N/A
SessionType	Session Type: Control or Echo.	N/A	String.	N/A
DetectMult	Detection time multiplier.	N/A	Unsigned integer.	N/A
DesiredMinTxInterval	The minimum interval that the local system uses when transmitting BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.
RequiredMinRxInterval	The minimum interval between received BFD control packets that this system is capable of supporting.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.
RemoteMinTxInterval	The minimum interval that the remote system uses when transmitting BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.
RemoteMinRxInterval	The minimum interval between received BFD control packets that the remote system is capable of supporting.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.
NegotiatedTxInterval	Negotiated transmit interval.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.

Column name	Column description	Column type	Data type and restrictions	Remarks
NegotiatedRxInterval	Negotiated receive interval.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Control.
DetectionTime	Detection time.	N/A	Unsigned integer Units: microseconds.	Display when session type is Control.
RxCount	Count of received packets in this session.	N/A	Unsigned integer.	Display when session type is Control.
TxCount	Count of sent packets in this session.	N/A	Unsigned integer.	Display when session type is Control.
MinEchoRxInterval	The minimum interval between received BFD Echo packets that this system is capable of supporting.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Echo.
EchoDetectionTime	Echo Detection time.	N/A	Unsigned integer. Units: microseconds.	Display when session type is Echo.
ActEchoRxInterval	Actual Echo receive interval.	N/A	Unsigned integer. Unit: millisecond.	Display when session type is Echo.
EchoRxCount	Count of received Echo packets in this session.	N/A	Unsigned integer.	Display when session type is Echo.
EchoTxCount	Count of sent Echo packets in this session.	N/A	Unsigned integer.	Display when session type is Echo.
ConnectionType	Connection type of the interface.	N/A	Boolean: • 0—direct. • 1—indirect.	N/A
UpDuration	Time period for which the session has been up.	N/A	Unsigned integer. Unit: second.	N/A
HoldTime	Length of time before session detection timer expires.	N/A	Unsigned integer. Unit: millisecond.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthMode	Session authentication mode.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
DetectionMode	Detection mode.	N/A	Enumeration: • 1—Async with echo. • 2—Async without echo. • 3—Demand with echo. • 4—Demand without echo.	N/A
Version	The version of BFD protocol.	N/A	Enumeration: • 0—version 0. • 1—version 1.	N/A
DiagInfo	Diagnostic information about the session.	N/A	Enumeration: Value range: 1 to 31.	N/A
DemandMode	Whether demand mode is enabled for this system.	N/A	Boolean: • **true.** • **false.**	N/A
RemoteDemand Mode	Whether demand mode is enabled for remote system.	N/A	Boolean: • **true.** • **false.**	N/A

BFD/SBFD/ReflectorNumbers

This table contains BFD SBFD ReflectorNumber information.

XML structure

```
<BFD>
  <SBFD>
    <ReflectorNumbers>
      <ReflectorNumber>
```

```
        <LocalDiscrNumber></LocalDiscrNumber>
      </ReflectorNumber>
    </ReflectorNumbers>
  </SBFD>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	SBFD
Table type	Multi-instance table
Row name	ReflectorNumber
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalDiscrNumber	Local discriminator number for the SBFD session.	Index	Unsigned integer.	N/A

BFD/SBFD/ReflectorIpv4Addrs

This table contains the IPv4 address used as the SBFD reflector local discriminator.

XML structure

```
<BFD>
  <SBFD>
    <ReflectorIpv4Addrs>
      <ReflectorIpv4Address>
        <LocalDiscrIpv4Address></LocalDiscrIpv4Address>
      </ReflectorIpv4Address>
    </ReflectorIpv4Addrs>
  </SBFD>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	SBFD
Table type	Multi-instance table
Row name	ReflectorIpv4Address
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalDiscrIpv4 Address	Local discriminator IPv4 address for the SBFD session.	Index	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.

BFD/SBFD/DestAddrRemoteDiscrs

This table contains destination address and remote discriminator information.

XML structure

```
<BFD>
  <SBFD>
    <DestAddrRemoteDiscrs>
      <DestAddrRemoteDiscr>
        <AddrType></AddrType>
        <DestinationAddress></DestinationAddress>
        <RemoteDiscriminator></RemoteDiscriminator>
        <RemoteDiscrIpv4Addr></RemoteDiscrIpv4Addr>
      </DestAddrRemoteDiscr>
    </DestAddrRemoteDiscrs>
  </SBFD>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	SBFD
Table type	Multi-instance table
Row name	DestAddrRemoteDiscr

Item	Description
Restrictions	none
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrType	The type of address	Index	Enumeration: • IPV4 • IPV6	Required when create a new row, can not be modified.
DestinationAddress	The address of the route to the destination	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value. Can not be modified.
RemoteDiscriminator	Remote discriminator number for the SBFD session.	N/A	Unsigned integer.	The parameter has no default value.
RemoteDiscrIpv4Addr	Remote discriminator IPv4 address for the SBFD session.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value. The parameter has no default value.

BFD/Templates

This table contains BFD template information.

XML structure

```
<BFD>
  <Templates>
    <Template>
      <TemplateName></TemplateName>
      <MinTransmitInterval></MinTransmitInterval>
      <MinReceiveInterval></MinReceiveInterval>
      <DetectMultiplier></DetectMultiplier>
      <MinEchoReceiveInterval></MinEchoReceiveInterval>
      <Authentication>
        <AuthType></AuthType>
```

```
        <KeyID></KeyID>
        <KeyType></KeyType>
        <Key></Key>
        </Authentication>
    </Template>
  </Templates>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	Templates
Table type	Multi-instance table
Row name	Template
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	Template name	Index	String. Length: 1 to 63 characters.	N/A
MinTransmitInterval	Minimum interval for transmitting BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo packets	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication information.	Data structure	Members include: • AuthenticationType. • KeyID. • KeyType. • Key.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthType	Authentication type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key value.	N/A	String, case-sensitive.	If KeyType is cipher, the key length is 33 to 53 characters. If KeyType is plain, the key length is 1 to 16 characters.

BFD/StaticSessions

This table contains static BFD information.

XML structure

```
<BFD>
  <StaticSessions>
    <StaticSession>
      <SessionName></SessionName>
      <AddrType></AddrType>
      <IfName></IfName>
      <VrfName></VrfName>

      <PeerAddr></PeerAddr>
      <DestAddr></DestAddr>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Auto></Auto>
      <OneArmEcho></OneArmEcho>
      <EchoSrcAddr></EchoSrcAddr>
```

```
      <MinTransmitInterval></MinTransmitInterval>
      <MinReceiveInterval></MinReceiveInterval>
      <DetectMultiplier></DetectMultiplier>
      <MinEchoReceiveInterval></MinEchoReceiveInterval>
      <Authentication>
        <AuthType></AuthType>
        <KeyID></KeyID>
        <KeyType></KeyType>
        <Key></Key>
      </Authentication>
      <PrimaryChassis></PrimaryChassis>
      <PrimarySlot></PrimarySlot>
      <PrimaryCPUID></PrimaryCPUID>
      <SecondaryChassis></SecondaryChassis>
      <SecondarySlot></SecondarySlot>
      <SecondaryCPUID></SecondaryCPUID>
      <TrackInterface></TrackInterface>
    </StaticSession>
   </StaticSessions>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	CfgSessions
Table type	Multi-instance table
Row name	Cfgsession
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
SessionName	Name of a BFD session	Index	String. Length: 1 to 64 characters.	Required when creating a new row, and cannot be modified.
AddrType	The type of address	N/A	Enumeration: • IPV4 • IPV6	Required when create a new row, can not be modified.
IfName	Name of the outbound interface of a BFD session.	N/A	String. Length: 2 to 47 characters.	Can not be modified.

VrfName	Name of the VPN to which a BFD session belongs	N/A	String. Length: 0 to 31 characters.	If the BFD session belongs to the public network, the length of characters is 0. Can not be modified.
SrcAddr	Source IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Can not be modified.
PeerAddr	PeerAddr IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. String: default-ip.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Value **default-ip** represents IP address 224.0.0.184. Can not be modified.
DestAddr	The address of the route to the destination	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an nvalid value. Can not be modified.
LocalDiscriminator	Local discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 32768.	Can not be modified.
RemoteDiscriminator	Remote discriminator of a BFD session	N/A	Unsigned integer. • Value range: 1 to 4294967295.	Can not be modified.
Auto	Obtain BFD session discriminators through autonegotiation	N/A	Boolean: • True • false	Can not be modified.
OneArmEcho	Echo session in one-arm-echo mode, which must be configured for echo session type.	N/A	Boolean: • true • false	Can not be modified.

EchoSrcAddr	Specify source IP address for BFD echo packets.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value. Can not be modified.
MinTransmitInterval	Minimum interval for sending packets	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving packets	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model.
DetectMultiplier	Number of times that a BFD session continuously detects that packets are sent but no response is returned, based on which the system considers the BFD session Down.	N/A	Unsigned integer.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving one-arm echo session packets.	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model. This parameter is available only when the mode of the BFD is one-arm-echo.
Authentication	Authentication.	Data structure	Members include: • AuthenticationType. • KeyID.	N/A

			• KeyType. • Key.	
AuthType	Authentication Type.	N/A	Enumeration: • 1—simple. • 2—md5. • 3—m-md5. • 4—sha1. • 5—m-sha1. • 6—hmac-md5. • 7—hmac-m-md5. • 8—hmac-sha1. • 9—hmac-m-sha1.	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key type.	N/A	Enumeration: • 1—cipher. • 2—plain.	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher, the key is a string of 33 to 53 characters. If Key Type is plain, the key is a string of 1 to 16 characters.
PrimaryChassis	Chassis ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
PrimarySlot	Slot ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
PrimaryCPUID	CPU ID of the primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondaryChassis	Chassis ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondarySlot	Slot ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
SecondaryCPUID	CPU ID of the secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	This value cannot be modified.
TrackInterface	Interface monitored by the static BFD session.	N/A	String. Length: 2 to 47 characters.	This value can be set only in creating a new row. This value cannot be modified or deleted.

BFD/ForwardingMatchRDs

This table contains information about remote discriminators used to forward matching BFD echo packets.

XML structure

```
<BFD>
  <ForwardingMatchRDs>
    <ForwardingMatchRD></ForwardingMatchRD>
  </ForwardingMatchRDs>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	ForwardingMatchRDs
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardingMatchRD	Remote discriminators used to forward matching BFD echo packets.	N/A	String, case-sensitive. Length: 1 to 14 characters.	Specify up to 100 items of remote discriminators or discriminator ranges, for example, 1 or 3 to 5.

BFD/MadDetects

This table contains BFD MAD information.

XML structure

```
<BFD>
  <MadDetects>
    <MadDetect>
```

```
      <IfName></IfName>
      <MadBfdEnable></MadBfdEnable>
      <MadIpv4Addresses>
        <MadIpv4Address>
          <MadIpv4Address></MadIpv4Address>
          <MadIpv4Mask></MadIpv4Mask>
          <MemberID></MemberID>
        </MadIpv4Address>
      </MadIpv4Addresses>
    <MadDetect>
  </MadDetects>
</BFD>
```

Table description

Item	Description
Feature name	BFD
Table name	MadDetect
Table type	Multi-instance table
Row name	None
Restrictions	none
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name.	Index	String Value range: 2 to 47.	Only VLAN interfaces except VLAN-interface 1, Layer 3 aggregate interfaces, and Management Ethernet interfaces are supported.
MadBfdEnable	BFD MAD function.	N/A	Enumeration. • disable—Disable MAD BFD detect. • enable—Enable MAD BFD detect.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MadIpv4Addresses	MAD IPv4 addresses information	Subtable	N/A	For more information, see the BFD/MadDetects/MadDetect/MadIpv4Addresses table.

BFD/MadDetects/MadDetect/MadIpv4Addresses

This table contains MAD IPv4 addresses information.

XML structure

Please refer to the XML structure of BFD/MadDetects.

Table description

Item	Description

BFD event stream

BFD stream description.

Bfd Session State event

This event is used to report BFD session state.

XML structure for event subscription

```
<BfdSessionStateEvent>
</BfdSessionStateEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>BFD_STREAM</stream>
    <filter type="subtree">
      <BfdSessionStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/BFD:1.0">
      </BfdSessionStateEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	BFD
Event name	BfdSessionStateEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/BFD:1.0
Support for extended query	No

XML structure for event report

```
<BfdSessionStateEvent>
  <ReportSessionState>
    <SessionName></SessionName>
    <LocalDiscriminator></LocalDiscriminator>
    <RemoteDiscriminator></RemoteDiscriminator>
    <CurrentState></CurrentState>
    <StateChangeReason></StateChangeReason>
    <SourceAddress></SourceAddress>
    <DestAddress></DestAddress>
    <IPv6SourceAddress></IPv6SourceAddress>
    <IPv6DestAddress></IPv6DestAddress>
    <Interface></Interface>
    <PathType></PathType>
```

```
  </ReportSessionState>
</BfdSessionStateEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-08-16T09:10:51</eventTime>
  <BfdSessionStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/BFD:1.0">
    <ReportSessionState>
      <SessionName>aaa</SessionName>
      <LocalDiscriminator>1000</LocalDiscriminator>
      <RemoteDiscriminator>2000</RemoteDiscriminator>
      <CurrentState>1</CurrentState>
      <StateChangeReason>5</StateChangeReason>
      <SourceAddress>1.1.1.1</SourceAddress>
      <DestAddress>2.2.2.2</DestAddress>
      <IPv6SourceAddress>::</IPv6SourceAddress>
      <IPv6DestAddress>::</IPv6DestAddress>
      <Interface>GigabitEthernet2/0/1</Interface>
      <PathType>0</PathType>
    </ReportSessionState>
  </BfdSessionStateEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
SessionName	Name of static BFD session	String. Length: 1 to 64 characters.	The value is NULL for dynamic BFD sessions.
LocalDiscriminator	Local discriminator	Unsigned integer.	N/A
RemoteDiscriminator	Remote discriminator	Unsigned integer.	N/A
CurrentState	Current BFD state	Enumeration: • 0—AdminDown • 1—Down • 2—Init • 3—Up	N/A
StateChangeReason	BFD state change reason	Enumeration: • 0—None • 1—Control timer expiry • 2—Echo failure • 3—Neighbor down • 4—Forwarding reset • 5—Path down • 6—Concatenated path down • 7—Admin down • 8—Reverse concatenated path down • 9—Mis-connectivity defect	Value range: 1 to 31.
SourceAddress	Local address	String.	An IPv4 address.
DestAddress	Peer address	String.	An IPv4 address.
IPv6SourceAddress	Local IPv6 address	String.	An IPv6 address.
IPv6DestAddress	Peer IPv6 address	String.	An IPv6 address.
Interface	Interface to which this BFD session belongs	String.	The value is NULL for multihop sessions.
PathType	The type of path on which BFD is running	Identity： • 0—BFD on IP single hop • 1—BFD on IP multicast hop • 2—BFD on MPLS Traffic Engineering • 3—BFD on MPLS Label Switched Path • 4—Micro-BFD on LAG member links	N/A

BGP

BGP/Operations

This table is a description of BGP protocol actions.

XML structure

```
<BGP>
  <Operations>
    <Operation>
      <OperationType></OperationType>
      <Name></Name>
    </Operation>
  </Operations>
</BGP>
```

Responsed XML structure

```
N/A
```

Table description

Item	Description
Feature name	BGP
Table name	Operations
Table type	Multi-instance table
Row name	Operation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OperationType	Operation type	Index	Enumeration 1 – Send update message immediately 2 – Notice BGP protocol smooth start 3 –Notice BGP protocol smooth end 4 – Notice BGP protocol to execute route smoothing	The operation type specify the operation which BGP protocol should perform.
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.

Responsed columns

N/A

BGP/FlushRoutes

This table flush routes to BGP protocol.

XML structure

```
<BGP>
  <FlushRoutes>
    <FlushRoute>
      <Name></Name>
      <VRF></VRF>
      <OperationType></OperationType>
      <RouteType></RouteType>
      <RouteKey></RouteKey>
      <RouteSegment></RouteSegment>
      <RouteAttr></RouteAttr>
    </FlushRoute>
  </FlushRoutes>
</BGP>
```

Responsed XML structure

```
N/A
```

Table description

Item	Description
Feature name	BGP
Table name	FlushRoutes
Table type	Multi-instance table
Row name	Operation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OperationType	Operation type	Index	Enumeration 1 – Add 2 – Delete	The operation type specify the operation that BGP should perform.
RouteType	Type of route	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—EVPN • 10—Link-State • 11—EVPN with pathid	
RouteKey	Key of route	Index	Binary. Length: 0 to 128 characters.	An empty string indicates there is no key of the route.
RouteSegment	Route information	Index	Binary. Length: 1 to 4096 characters.	
RouteAttr	Attribute of route		Binary. Length: 1 to 4096 characters.	

Responsed columns

N/A

BGP/Resets

This table resets data for the BGP protocol.

XML structure

```
<BGP>
  <Resets>
    <Reset>
      <Name></Name>
      <Type></Type>
      <Family></Family>
      <ASNumber></ASNumber>
      <IpAddress></IpAddress>
      <Mask></Mask>
      <GroupName></GroupName>
      <VRF></VRF>
    </Reset>
  </Resets>
</BGP>
```

Responsed XML structure

```
N/A
```

Table description

Item	Description
Feature name	BGP
Table name	Resets
Table type	Multi-instance table
Row name	Operation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
Type	Type	Index	Enumeration • 1 – As Number • 2 – Ipv4 Address • 3 – Ipv6 Address • 4 – all • 5 – external • 6 – Group Name • 7 – Internal	N/A
Family	Address family identifier	Index	Enumeration: • 1—IPv4 Unicast. • 2—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn.	N/A
ASNumber	Autonomous system number		Unsigned integer. Value range: 1 to 4294967295	N/A
IpAddress	Address of network		String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of network address		Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
GroupName	Group name		String. Length: 1 to 47 characters.	N/A
VRF	VRF name		String. Length: 0 to 31 characters.	An empty string indicates the public network.

Responsed columns

N/A

BGP/Refreshs

This table manually resets the BGP session softly.

XML structure

```
<BGP>
  <Refreshs>
    <Refresh>
      <Name></Name>
      <Type></Type>
      <TriggerDirection></TriggerDirection>
      <Family></Family>
      <IpAddress></IpAddress>
      <Mask></Mask>
      <GroupName></GroupName>
      <VpnInstanceName></VpnInstanceName>
    </Refresh>
  </Refreshs>
</BGP>
```

Responsed XML structure

```
N/A
```

Table description

Item	Description
Feature name	BGP
Table name	Refreshs
Table type	Multi-instance table
Row name	Operation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
Type	Session type	Index	Enumeration: • **1**—IPAddr • **2**—All • 3—External • 4—Group • 5—Internal	N/A
TriggerDirection	Triggering the soft reset of the direction	Index	Enumeration. • **1**—Export. • **2**—Import.	N/A
Family	Address family identifier of refresh	Index	Enumeration: • **1**—IPv4 Multicast. • **2**—IPv4 MVPN. • 3—IPv4 Rtfilter • 4—IPv4 Unicast • 5—IPv6 Multicast • 6—IPv6 Unicast. • 7—Link-State • 8—VPNv4 • 9—VPNv6 • 10—L2VPN • 11—L2VPN EVPN	N/A
IpAddress	Address of refresh		IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of refresh address		Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
GroupName	Group name		String. Length: 1 to 47 characters.	N/A
VpnInstanceName	VPN instance name		String. Length: 1 to 31 characters.	An empty string indicates the public network.

Table description

Item	Description
Feature name	BGP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates all BGP processes. When execute get bulk operation, you can only get the data of the specified BGP instance.

Column name	Column description	Column type	Data type and restrictions	Remarks
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
NSR	Nonstop Routing		Enumeration. • **0**—Disable.(default) • **1—Enable.**	N/A
SendDelayTime	Send delay time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker never send the update message. SendLowPriorityPeerupDelayTime, SendLowPriorityOnStartupTime and SendDelayTime cannot be configured at the same time.
SendDelayPrefix	Send delay using IPv4 prefix list		String. Length: 1 to 63 characters.	N/A
SendDelayIPv6Prefix	Send delay using IPv6 prefix list		String. Length: 1 to 63 characters.	N/A
SendLowPriorityPeerupDelayTime	Modify priority of routes to lowest-priority when the neighbors change from down to up		Unsigned integer. Value range: 1 to 864000	The value 0 indicates that lowest-priority routes is sent always. SendLowPriorityPeerupDelayTime, SendLowPriorityOnStartupTime and SendDelayTime cannot be configured at the same time.
SendLowPriorityOnStartupTime	Modify priority of routes to lowest-priority when the device is restarted		Unsigned integer. Value range: 1 to 3600	The value 0 indicates that lowest-priority routes is sent always; SendLowPriorityPeerupDelayTime, SendLowPriorityOnStartupTime and SendDelayTime cannot be configured at the same time. SendLowPriorityOnStartupTime and

Column name	Column description	Column type	Data type and restrictions	Remarks
				SendDelayTime cover each other.
SendStartupTime	Send startup time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker always send the update message with the startup policy.
StartupPolicyMed	Satrtup policy MED		Unsigned integer. Value range: 0 to 4294967295	N/A
FlushSuboptimalRoute	Flush suboptimal route to RIB		Enumeration. • 0—Disable. • 1—Enable.	N/A
RouteReplicateEnable	Enable mutual route replication between public and private networks		Enumeration. • 0—Disable. • 1—Enable.	N/A
DefaultRouteUpdateFirst	Enable BGP to send withdrawal messages of the default route prior to other routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
EbgpInterfaceSensitive	Immediate re-establishment of direct EBGP sessions		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulRestartEnable	Enabling graceful restart		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulRestartTimerPurgeTime	Graceful restart purge time in seconds		Unsigned integer. Value range: 1 to 6000	Graceful restart must be enabled first.
GracefulRestartTimerRestart	Graceful restart restart time in seconds		Unsigned integer. Value range: 3 to 600	Graceful restart must be enabled first.
GracefulRestartTimerWaitForRib	Graceful restart time to wait for the End-of-RIP marker in seconds		Unsigned integer. Value range: 3 to 3600	Graceful restart must be enabled first.
IgnoreAllPeers	Ignore all peers	Data Structure	Include: • IgnoreAllPeersEnable • GracefulTime • CommunityNumber	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• LocalPreference • Med	

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreAllPeersEnable	Ignore all peers enable		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulTime	Graceful time in seconds		Unsigned integer. Value range: 60 to 65535	Ignore all peers must be enabled first. Community, LocalPreference and Med should be set on at least GracefulTime.
CommunityNumber	Community number		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>	Ignore all peers must be enabled first. Example: 10 or 1:65535 Repeat supported for 32 times a with CommunityAttr. Only supported for basic community list.
LocalPreference	Local preference		Unsigned integer. Value range: 0 to 4294967295	Ignore all peers must be enabled first.
Med	MED of route		Unsigned integer. Value range: 0 to 4294967295	Ignore all peers must be enabled first.
SRPolicySteering	Control SR Policy steering.		Enumeration. • 1—SRPolicySteeringColor(default) • 2—SRPolicySteeringDisable • 3—SRPolicySteeringPolicy	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable. • 1—Enable.	N/A
LabelAllocationMode	Label allocation mode		Enumeration. • 0—per-hop. • 1—per-prefix • 2- per-vrf.	N/A
LabeledRouteIgnoreNoTunnel	Ignore labeled routes with no tunnel information		Enumeration. • 0—Disable. • 1—Enable.	N/A
LogPeerChange	Log peer change		Enumeration. • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryPathDetectBfdEcho	Detect primary path using BFD echo.		Enumeration. • 0—Disable. (default) • 1—Enable.	In PrimaryPathDetectBfdEcho and PrimaryPathDetectBfdCtrl, The latest configuration takes effect.
RetainLocalLabel	Update delay for local MPLS labels in seconds		Unsigned integer. Value range: 1 to 21845	N/A
RouteRateLimit	Route rate limit		Unsigned integer. Value range:0 to 4294967295	N/A
RouteUpdateIntervalWithdrawnEnable	Apply route update interval setting to withdrawn routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
SnmpContextName	SNMP context name		String. Length: 1 to 32 characters.	N/A
VpnPopgo	VPN POPGO		Enumeration. • 0—Disable. • 1—Enable.	N/A
ConfederationId	Confederation ID		Unsigned integer. Value range: 1 to 4294967295	N/A
ConfederationNonstandard	Enable compatibility with routers not compliant with RFC 3065 in the confederation		Enumeration. • 0—Disable. • 1—Enable.	N/A
ConfederationPeerAs	Confederation peer sub-AS number.		Unsigned integer. Value range: 1 to 4294967295	N/A
GracefulRestartPeerReset	Reset peer sessions gracefully		Enumeration. • 1—no-all. • 2—all.	Graceful restart must be enabled first.
IgnoreReflectDifferentVrf	Clear CLUSTER_LIST and ORIGINATOR_ID attributes before advertising routes to other VPN instances		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
AsPathLimit	Set the AS path		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	length limit		Value range: 1 to 2000	
BestRouteAsPathNegleictAllInstance	Ignore the AS-PATH attribute during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteCompareMEDAllInstance	Consider MED value during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteConfederationMEDAllInstance	Compare the MEDs of routes from confederation peers during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteIgpMetricIgnoreAllInstance	Ignore IGP metrics during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteRouterIdIgnoreAllInstance	Ignore router ID during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpdateDelayWaitOtherProtocol	Set the time to wait for other protocols to complete GR or NSR		Unsigned integer. Value range: 60 to 1200	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VpnRouteCrossMultipath	Redistribute multiple routes with the same prefix and RD to the VPN routing table		Enumeration. • 0—Disable.(default) 1—Enable.	N/A
KeepAllRoutes	Save original routing information		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
RouteUpdateDelay	Set the delay to send updates to peers		Unsigned integer. Value range: 1 to 600	N/A
BmpPrefixListName4	Specify BGP route filtering policy based on an ipv4 prefix list		String. Length: 1 to 63 characters.	N/A
BmpRdListNum4	Specify BGP route filtering policy based on a route distinguisher list		Unsigned integer. Value range: 1 to 65535.	BmpPrefixListName4 must be configured first.
BmpPrefixListName6	Specify BGP route filtering policy based on an ipv6 prefix list		String. Length: 1 to 63 characters.	N/A
BmpRdListNum6	Specify BGP route filtering policy based on a route distinguisher list		Unsigned integer. Value range: 1 to 65535.	BmpPrefixListName6 must be configured first.
Isolate	Isolate BGP from the current network		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EPEPeerSet	Site containing the EPEPeerSet information	Subtable	N/A	For more information, see the BGP/Instance/EPEPeerSets
EPESRv6Locator	Specify an EVESRV6 locator		String. Length: 1 to 31 characters.	N/A
EPESRv6AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • 1—auto-normal(default). • 2—auto-sid-coc32. • 3—auto-sid-cocboth-coc32. • 4—auto-sid-cocboth-coc32-none.	EPESRv6Locator is configured, then EPESRv6AutoSidMode can be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—auto-disable	

Column name	Column description	Column type	Data type and restrictions	Remarks
EPESRv6PeerSets	Site containing the EPE PeerSets information	Sublist	• N/A	For more information, see the BGP/EPESRv6PeerSets
UpdateIntervalIntelligent	Calculation parameters of the suppression interval for sending the same route update to the peer or peer group	Data structure	Members include: • MinInterval • MaxInterval • IgnoreCount • IncrementalInterval.	The MaxInterval must be longer than the MinInterval
MinInterval	Minimum suppression interval		Unsigned integer. Value range: 0 to 600. • Default is 5.	N/A
MaxInterval	Maximum suppression interval		Unsigned integer. Value range: 0 to 600. • Default is 30.	N/A
IgnoreCount	Maximum number of times that BGP can send the same route update to the peer or peer group		Unsigned integer. Value range: 0 to 200. • Default is 3.	N/A
IncrementalInterval	Time of penalty increment.		Unsigned integer. Value range: 1 to 10. • Default is 1.	N/A
PathMtuDiscovery	TCP path MTU discovery configuration		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Shutdown	Administratively shutdown BGP protocol		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteSameRd	Enabling bestroute same-rd		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EPEMetricDelayAdvertisement	Advertise link delay metric information in LS-route	N/A	Boolean: • true—Enable BGP to advertise link delay metric information in LS-route. • false—Disable BGP to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			advertise link delay metric information in LS-route (default).	

Column name	Column description	Column type	Data type and restrictions	Remarks
EPEMetricDelaySuppression	enable a device to suppress advertisement of link delay information.	Data structure	Members include: • Time. • ThresholdPercent. • ThresholdAbsolute.	configure suppression timer.
Time	Specifies the link delay information timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
ThresholdPercent	Specifies the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 100. Default: 10 seconds.	N/A
ThresholdAbsolute	Specifies the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 10000. Default: 1000 seconds.	N/A
EPEMetricBandwidthAdvertiseMent	Advertise link bandwidth metric information in LS-route	N/A	Boolean: • true—Enable BGP to advertise link bandwidth metric information in LS-route. • false—Disable BGP to advertise link bandwidth metric information in LS-route (default).	N/A
EPEMetricBandwidthSuppression	enable a device to suppress link bandwidth information advertisement.	Data structure	Members include: • Time.	Configure suppression timer
Time	Specifies the suppression timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
Interfaces	Site containing the Interfaces information	Sublist	N/A	For more information, see the BGP/Instance/Interfaces
PrimaryPathDetectBfdCtrl	Detect primary path using BFD ctrl.		Enumeration. • 0—Disable.(default) • 1—Enable.	In PrimaryPathDetectBfdEcho and PrimaryPathDetectBfdCtrl, The latest configuration takes effect.
EPEMetricLinkLossAdvertisement	Advertise link loss metric information in LS routes	N/A	Enumeration. • Disable.(default) • Enable.	N/A
EPEMetricLinkLossSuppre	Suppress	Data	Members include:	Configure the advertisement

Column name	Column description	Column type	Data type and restrictions	Remarks
ssion	advertisement of link loss metric information.	structure	• Time. • ThresholdPercent. • ThresholdAbsolute.	delay timer.
Time	Specify the delay timer for link loss metric information advertisement.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
ThresholdPercent	Specify the link loss variation rate threshold	N/A	Unsigned integer. Value range: 0 to 100. Default: 10	N/A
ThresholdAbsolute	Specify the absolute link loss variation threshold	N/A	Unsigned integer. Value range: 0 to 10000. Default: 1000	N/A
EvpnReOriginated	Re-originated MAC routes		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
DynamicPeerLimit	Maximum number of dynamic peers that can be established	N/A	Unsigned integer. Value range: 1 to 16000 Default: unlimited	N/A
PeerFormatLimit	The maximum number for formating updates		Unsigned integer. Value rang e: 1 to 1000	N/A
PeerSendLimit	The maximum number for sending updates		Unsigned integer. Value range: 1 to 100	N/A
SendBufferSize	The TCP send buffer size		Unsigned integer. Value range: 2048 to 327680	N/A
AdvertiseRouteUpdates	Configure sending BGP route updates	Data Structure	Include: • AdvertiseInterval. • AdvertiseCount.	N/A
AdvertiseInterval	The interval for sending BGP route updates		Unsigned integer. Value range: 100 to 10000	The interval for sending BGP route update must be 100 integer times
AdvertiseCount	The count for sending BGP route updates		Unsigned integer. Value range: 1 to 40960	

BGP/Instance/ EPEPeerSets

This table contains BGP Instance EPE PeerSet information.

XML structure

Please refer to the XML structure of BGP/Instances.

Table description

Item	Description
Feature name	BGP
Table name	EPEPeerSets
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SetName	PeerSet name	Index	String. Length: 1 to 63 characters.	N/A
SetLabel	Routing policy used to filter specific routes to be advertised		NA	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
LinkDown	LinkDownType		Enumeration. • 0—Disable.(Default). • 1—Relate BFD state.	N/A

BGP/Instance/EPESRv6PeerSets

This table contains BGP Instances information.

XML structure

Please refer to the XML structure of BGP/Instances

Table description

Item	Description
Feature name	BGP
Table name	EPESRv6PeerSets

Table type	Multi-instance table
Row name	EPESRv6PeerSet
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SetName	Instance set name	Index	String. Length: 1 to 63 characters.	N/A
Psp	peer-set peer type static End.X SID	N/A	String, IPv6 address string.	N/A
NoPspUsp	End.X SID(-NO-FLAVOR)	N/A	String IPv6 address string.	N/A
PspUspUsd	End.X SID(PSP USP USD)	N/A	String IPv6 address string.	N/A
StaticSidMode	Static Sid Mode.	N/A	Enumeration: • **1**—normal(default). • **2**—coc32. • **3**—cocboth-coc32. • **4**—cocboth-coc-none.	StaticSidMode and AutoSidMode cannot be configured at the same time.
AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • **1**—auto-normal(default). • **2**—auto-sid-coc32. • **3**—auto-sid-cocboth-coc32. • **4**—auto-sid-cocboth-coc32-none.	StaticSidMode and AutoSidMode cannot be configured at the same time.

BGP/Instance/Interfaces

This table contains BGP Instances information.

XML structure

Please refer to the XML structure of BGP/Instances

Table description

Item	Description
Feature name	BGP

Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface Name	Index	String. Length: 1 to 47 characters.	N/A
LinkDelay	configure link delay parameters on an interface.	Data structure	Members include: • Average. • Minimal. • Maximal. • Variation.	A property column must exist.
Average	Specifie the average link	N/A	Unsigned integer. • Value range:1 to 16777215.	N/A
Minimal	Specifie the minimum link.	N/A	Unsigned integer. • Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously
Maximal	Specifie the maximum link.	N/A	Unsigned integer. • Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously.
Variation	Set the acceptable delay variation.	N/A	Unsigned integer. • Value range: 1 to 16777215.	N/A
LinkLoss	Configure the link loss value on an interface.	Data structure	Members include: Loss.	N/A
Loss	Specify the link loss value.	N/A	Unsigned integer. Value range:1 to 16777214.	N/A

BGP/VRFs

This table contains BGP VRF information.

Table description

Item	Description
Feature name	BGP
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterId	BGP Router Id		IPv4 address string	N/A
Timer	Keepalive and Holdtime	Data Structure	Include: • KeepAlive • HoldTime	N/A
KeepAlive	Keepalive Interval in Seconds		Unsigned integer. Value range: 0 to 21845	N/A
HoldTime	Holdtime in Seconds		Unsigned integer. Value range: 0 to 65535	N/A
BestRouteIgpMetricIgnore	Ignore IGP metrics during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteAsPathNeglect	Ignore the AS-PATH attribute during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteCompareMED	Consider MED value during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteConfederationMED	Compare the MEDs of routes from confederation peers during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteRouterIdIgnore	Ignore router ID during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
CompareDifferentAsMED	Compare the MEDs of routes from different ASs during optimal route selection		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
TimerConnectRetry	Session retry timer in seconds		Unsigned integer. Value range: 1 to 65535	N/A
BestRouteEncapType	Specify the SRv6 (MPLS) encapsulated route as the best route.		Enumeration. • 0—Disable.(default) • 1—SRv6. • 2—MPLS. • 3—SRv6 preferred. • 4—MPLS preferred.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BestRouteNexthopType	Perform optimal route selection based on the next hop type.		Enumeration. • 0—Disable. • 1—Tunnel. • 2—IP.	N/A
BestRouteNexthopResolved	Configure next hop type-based optimal route selection.		Enumeration. • 0—Disable. • 1—Tunnel. • 2—None	N/A
MedPlusIgp	Use the sum of the calculated MED and IGP metric values to perform optimal route selection.	Data Structure	Include: • IgpMultiplier. • MedMultiplier.	N/A
IgpMultiplier	Specify an IGP metric multiplier.		Unsigned integer. Value range: 1 to 1000	N/A
MedMultiplier	Specify an MED value multiplier.		Unsigned integer. Value range: 1 to 1000	N/A
NexthopRecursiveRestrain	Time interval of next hop recursive lookup restraint.	Data structure	Members include: • Maximum. • Minimum. • Incremental. • Millisecond.	N/A
Maximum	The maximum restraint time for next hop recursive lookup in seconds.		Unsigned integer. Value range: 1 to 60.	When configuring Minimum and Incremental, Maximum must be set; Maximum cannot be set at the same time as Fixed.
Minimum	The minimum restraint time for next hop recursive lookup in milliseconds.		Unsigned integer. Value range: 10 to 60000.	When configuring Incremental, Minimum must be set; Minimum cannot be set at the same time as Fixed.When only configuring Maximum without Minimum, the default value of Minimum is 50.
Incremental	The incremental restraint time for next hop recursive lookup		Unsigned integer. Value range:	Incremental cannot be set at the same time as Fixed. When configuring Maximum and

Column name	Column description	Column type	Data type and restrictions	Remarks
	in milliseconds.		10 to 60000.	Minimum without Incremental, the default value of Incremental is 200.
Millisecond	The fixed restraint time for next hop recursive lookup in milliseconds.		Unsigned integer. Value range: 10 to 10000.	Fixed cannot be set at the same time as Maximum ,Minimum and Incremental.
NexthopRecursiveRestrain	Time interval of next hop recursive lookup restraint.	Data structure	Members include: • Maximum. • Minimum. • Incremental. • Millisecond.	N/A
Maximum	The maximum restraint time for next hop recursive lookup in seconds.		Unsigned integer. Value range: 1 to 60.	When configuring Minimum and Incremental, Maximum must be set; Maximum cannot be set at the same time as Fixed.
Minimum	The minimum restraint time for next hop recursive lookup in milliseconds.		Unsigned integer. Value range: 10 to 60000.	When configuring Incremental, Minimum must be set; Minimum cannot be set at the same time as Fixed.When only configuring Maximum without Minimum, the default value of Minimum is 50.
Incremental	The incremental restraint time for next hop recursive lookup in milliseconds.		Unsigned integer. Value range: 10 to 60000.	Incremental cannot be set at the same time as Fixed. When configuring Maximum and Minimum without Incremental, the default value of Incremental is 200.
Millisecond	The fixed restraint time for next hop recursive lookup in milliseconds.		Unsigned integer. Value range: 10 to 10000.	Fixed cannot be set at the same time as Maximum ,Minimum and Incremental.

BGP/CfgSessionGroups

Table description

Item	Description
Feature name	BGP
Table name	`CfgSessionGroups`
Table type	Multi-instance table
Row name	`CfgSessionGroup`
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
Type	Internal or External		Enumeration. • 0—Internal.(default) • 1—External.	N/A
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		Enumeration. • 1—Ciphertext. • 2—Plaintext.	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
BfdType	Bfd type		• Enumeration. • 0—default type • 1—single-hop • 2—multi-hop • 3—echo • 4—compatible • 5—single-hop compatible • 6—multi-hop compatible	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different situations. Some versions not support. For relevant information, see the XSD document of your product.
EbgpMaxHop	EBGP multihop		Unsigned integer. Value range: 1 to 255	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer group relationship establishment		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.
Dscp	Set the DSCP priority of BGP packets		Unsigned integer. Value range: 0 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Ipv4SourceAddr	IPv4 Source Address		IPv4 address string .	Example: 1.1.1.1.
Ipv6SourceAddr	IPv6 Source Address		IPv6 address string.	Example: 1::1.
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		**Unsigned integer.** **Value range:** **0 to 21845**	N/A
HoldTime	Holdtime in seconds		**Unsigned integer.** **Value range:** **0 , 3 to 65535**	N/A
TtlSecurity	Enable BGP GTSM fuction for a peer or peer group		**Unsigned integer.** **Value range:** **1 to 254**	N/A
CapSupAs4	Enable 4-byte AS number suppression function		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapOrfNonStandard	Enable non-standard ORF capability for BGP neighbor		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	negotiation			
CapConventional	Disable the BGP route refresh,multiprotocol extension, and 4-byte AS number function of the local router and the specified peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapExtendedMsg	Enable the BGP extended message capability		Enumeration. • Disable.(default) Enable.	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.
ClusterId	Configure the cluster ID for a peer or peer group		Unsigned integer. Value range: 1 to 4294967295. IPv4 address string	N/A
MplsLocalIfnetDisable	Disable MPLS local IFNET tunnel establishment to the specified peer or peer group		Enumeration. • 0—Disable.(default) 1—Enable.	N/A
FlapDampen	Configure the peer flap dampening feature		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
SendBufferSize	Set the buffer size to send updates to peers		Unsigned integer. Value range: 2048 to 327680.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvertiseRouteUpdates	BGP Advertise updates	Data structure	Members include: • AdvertiseInterval • AdvertiseCount	N/A
AdvertiseInterval	Set the interval to send updates to peers		Unsigned integer. Value range: 100 to 10000.	N/A
AdvertiseCount	Set the count to send updates to peers		Unsigned integer. Value range: 1 to 40960.	N/A
EgressEngineering	Configure egress peer engineering		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EgressEngineeringType	BGP peering segment type		Enumeration. • 0—Node. • 1—Adjacency. • 2—Set. • 3—Node-Adjacency.	N/A
EgressEngineeringPolicyName	Routing policy specified for the EPE peer set.		String. Length: 1 to 63 characters.	N/A
EgressEngineeringStaticLabel	SID label for the EPE peer set		N/A	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
EgressEngineeringLinkDown	Configure EPE SID label link down type		Enumeration. • 0—Disable.(default). • 1—Relate BFD state.	N/A
PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A
EPESRv6	Configure EPESRv6		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
UpdateIntervalIntelligent	Whether to control the route update interval with intelligent timer		Enumeration. • 0—Disable.(default) • 1—Enable.	If you configure this column, the UpdateInterval column will restore the default. The UpdateInterval and UpdateIntervalIntelligent can not be configured together.

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdParameters	Configure BFD parameters	Data structure	Members include: • DetectMultiplier • MinReceiveInterval. MinTransmitInterval	N/A
DetectMultiplier	Detection time multiplier		Unsigned integer. Value range: 1 to 4294967295	The value range for this argument varies by device model.
MinReceiveInterval	Minimum receiving interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
MinTransmitInterval	Minimum transmitting interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
TcpMss	Set the maximum TCP segment size		Unsigned integer. Value range: 176 to 4096.	N/A
IgnoreEbgpNextHopCheck	Ignore the next hops check of routes received from ebgp peers		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Tracking	Fast detect the unreachable destined for the peer and reset the session		Enumeration. • 0—Disable. • 1—Enable.	N/A
TrackingDelayTime	Specify the delay to reset the session, in seconds		Unsigned integer. Value range: 0 to 65535	The object does not exist if Tracking is not configured. If you configure Tracking but not TrackingDelayTime, the value for TrackingDelayTime is 0.
MonitorLinkGroup	Configure a monitor link group to monitor the state of the specified BGP peer session		Unsigned integer. Value range: 1 to 65535.	The value range for this column varies by device model.
LocalGREnable	Configure local Graceful Restart		Enumeration. • Disable.(default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	(GR) capability		• Enable.	
LocalGRTimerRestart	Configure the restart timer for local GR		Unsigned integer. Value range: 3 to 86400	Default: 150
LocalGRTimerWaitForRib	Configure the wait-for-rib timer for local GR		Unsigned integer. Value range: 3 to 3000	Default: 600

BGP/CfgSessions

This table contains configure information of BGP session.

Table description

Item	Description
Feature name	BGP
Table name	`CfgSessions`
Table type	Multi-instance table
Row name	`CfgSession`
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
GroupName	Group Name		String. Length: 1 to 47 characters.	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		**Enumeration.** • **1—Ciphertext.** • **2—Plaintext.**	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
BfdType	Bfd type		**Enumeration.** • **0**—default type • **1**—single-hop • **2**—multi-hop • **3**—echo	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different situations.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—echo • 4—compatible • 5—single-hop compatible 6—multi-hop compatible	Some versions not support. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
EbgpMaxHop	EBGP multihop		**Unsigned integer.** **Value range:** **1 to 255**	N/A
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer relationship establishment		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dscp	Set the DSCP priority of BGP packets		**Unsigned integer.** **Value range:** **0 to 63**	N/A
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
SourceAddress	Source Address		**IPv4 address string or IPv6 address string.**	Example: 1.1.1.1 or 1::1.
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		**Unsigned integer.** **Value range:** **0 to 21845**	N/A
HoldTime	Holdtime in seconds		**Unsigned integer.** **Value range:** **0 ,3 to 65535**	N/A
TtlSecurity	Enable BGP GTSM fuction for a peer or peer group		**Unsigned integer.** **Value range:** **1 to 254**	N/A
CapSupAs4	Enable 4-byte AS number suppression function		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapOrfNonStandard	Enable non-standard ORF capability		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for BGP neighbor negotiation			
CapConventional	Disable the BGP route refresh,multiprotocol extension, and 4-byte AS number function of the local router and the specified peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapExtendedMsg	Enable the BGP extended message capability		Enumeration. • Disable.(default) • Enable.	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.
ClusterId	Configure the cluster ID for a peer or peer group		Unsigned integer. Value range: 1 to 4294967295. IPv4 address string	N/A
MplsLocalIfnetDisable	Disable MPLS local IFNET tunnel establishment to the specified peer or peer group		Enumeration. • 0—Disable.(default) 1—Enable.	N/A
FlapDampen	Configure the peer flap dampening feature		Enumeration. • 0—Disable.(default) 1—Enable.	N/A
SendBufferSize	Set the buffer size to send updates to peers		Unsigned integer. Value range: 2048 to 327680.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvertiseRouteUpdates	BGP Advertise updates	Data structure	Members include: • AdvertiseInterval • AdvertiseCount	N/A
AdvertiseInterval	Set the interval to send updates to peers		Unsigned integer. Value range: 100 to 10000.	N/A
AdvertiseCount	Set the count to send updates to peers		Unsigned integer. Value range: 1 to 40960.	N/A
EgressEngineering	Configure egress peer engineering		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EgressEngineeringType	BGP peering segment type		Enumeration. • 0—Node. • 1—Adjacency. • 2—Set. • 3—Node-Adjacency.	N/A
EgressEngineeringPolicyName	Routing policy specified for the EPE peer set.		String. Length: 1 to 63 characters.	N/A
EgressEngineeringStaticLabel	SID label for the EPE peer set		N/A	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
EgressEngineeringLinkDown	EPE SID linkdown type		Enumeration. • 0—Disable.(default). • 1—Relate BFD state.	N/A
PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A
EPESRv6	Configure EPESRv6		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EPESRv6Locator	Specify an SID locator		String. Length: 1 to 31 characters.	N/A
EPESRv6AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • **1**—auto-normal(default). • **2**—auto-sid-coc32. • **3**—auto-sid-cocboth-coc32. • **4**—auto-sid-cocboth-coc32-none.	EPESRv6Locator is configured, then EPESRv6AutoSidMode can be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
EPESRv6StaticSID	Psp and NoPspUsp	Data structure	Members include: • Psp • NoPspUsp. • PspUspUsd • StaticSidMode	N/A
Psp	End.X SID with PSP		String IPv6 address	N/A
NoPspUsp	End.X SID (-NO-FLAVOR)		String IPv6 address	N/A
PspUspUsd	End.X SID (PSP, USP,USD)		String IPv6 address	N/A
StaticSidMode	Static Sid Mode.	N/A	Enumeration: • **1**—normal(default). • **2**—coc32. • **3**—cocboth-coc32. • **4**—cocboth-coc-none.	Configured StaticSidMode, Psp or NoPspUsp must be configured
EPESRv6PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A
UpdateIntervalIntelligent	Whether to control the route update interval with intelligent timer		Enumeration. • 0—Disable.(default) • 1—Enable.	If you configure this column, the UpdateInterval column will restore the default. The UpdateInterval and UpdateIntervalIntelligent can not be configured together.
BfdParameters	Configure BFD parameters	Data structure	Members include: • DetectMultiplier • MinReceiveInterval. MinTransmitInterval	N/A
DetectMultiplier	Detection time multiplier		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum receiving interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinTransmitInterval	Minimum transmitting interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
PathMtuDiscovery	TCP path MTU discovery configuration		Enumeration. • **0**—Disable(default) • 1—Enable.	N/A
TcpMss	Set the maximum TCP segment size		Unsigned integer. Value range: 176 to 4096.	N/A
IgnoreEbgpNextHopCheck	Ignore the next hops check of routes received from ebgp peers		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Tracking	Fast detect the unreachable destined for the peer and reset the session		Enumeration. • 0—Disable. • 1—Enable.	N/A
TrackingDelayTime	Specify the delay to reset the session, in seconds		Unsigned integer. Value range: 0 to 65535	The object does not exist if Tracking is not configured. If you configure Tracking but not TrackingDelayTime, the value for TrackingDelayTime is 0.
MonitorLinkGroup	Configure a monitor link group to monitor the state of the specified BGP peer session		Unsigned integer. Value range: 1 to 65535.	The value range for this column varies by device model.
LocalGREnable	Configure local Graceful Restart (GR) capability		Enumeration. • Disable.(default) • Enable.	N/A
LocalGRTimerRestart	Configure the restart timer for local GR		Unsigned integer. Value range: 3 to 86400	Default: 150
LocalGRTimerWaitForRib	Configure the wait-for-rib timer for local GR		Unsigned integer. Value range: 3 to 3000	Default: 600

Item	Description
Feature name	BGP
Table name	`Family`
Table type	Multi-instance table
Row name	`Family`
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Type	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated • 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	N/A
Preference	Preference for BGP Routes	Data Structure	Include: • Ebgp • Ibgp • Local	N/A
Ebgp	Preference for eBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Ibgp	Preference for iBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Local	Preference for Local Routes		Unsigned integer. Value range: 1 to 255	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BalanceAsPathNeglect	Ignore the AS_PATH attribute when implementing load balancing		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
BalanceAsPathRelax	Load balancing for routes that have different AS_PATH attributes of the same length		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
Balance	number of BGP ECMP routes for load balancing	Data Structure	Include: • MaxBalance • MaxEBGPBalance • MaxIBGPBalance • MaxEIBGPBalance	N/A
MaxBalance	maximum number of BGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	N/A
BalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
MaxEBGPBalance	Maximum number of EBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
EBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
MaxIBGPBalance	Maximum number of IBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
IBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEIBGPBalance	Maximum number of ECMP routes between EBGP and IBGP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
EIBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
PolicyVpnTarget	Filter VPN routes with VPN-Target attribute		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
ReflectBtwClients	Route reflection between clients		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
ReflectorClusterID	cluster ID of the route reflector		String,IPv4 address string or Unsigned integer. Value range: 1 to 4294967295	N/A
RrFilter	Number or name of the extended community list in the route filtering policy specified for the route reflector	N/A	RR-filter number: Unsigned integer. Value range: 1 to 199. RR-filter name: String. Length: 1 to 63 characters.	Only IBGP routes whose extended community attribute matches the specified extended community list are reflected.
DefaultRtImport	Import default route		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
DomainDistinguisher	A globally unique identifier for LS domain		String. Length: 9 to 26 characters. The format is AS<1-4294967295>:routerID <X.X.X.X>.	Example: 100:13.14.23.22
PIC	Enable Prefix Independent Convergence		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
VpnCrossMultipath	Redistribute multiple routes with the same prefix and RD to the VPN		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routing table			
RouteSelectDelay	Optimal route calculation delay time		Unsigned integer. Value range: 0 to 600 seconds.	N/A
AdvertiseEvpnRoute	Advertise BGP EVPN routes through the current address family	Data Structure	Include: • AdvertiseEvpnEnable • AdvertiseEvpnPolicy • AdvertiseEvpnReplaceRt	N/A
AdvertiseEvpnEnable	Enable advertise BGP EVPN routes through the current address family		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
AdvertiseEvpnPolicy	Filter BGP EVPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseEvpnReplaceRt	Replace the route targets of BGP EVPN routes with those of VPN instances		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
AdvertiseL2vpnEvpnRoute	Advertise BGP EVPN route to the local site		**Enumeration:** • **0—Disable** • **1—Enable.** (default)	N/A
AdvertiseL3vpnRoute	Advertise BGP L3VPN routes through the BGP EVPN address family	Data Structure	Include: • AdvertiseL3vpnEnable • AdvertiseL3vpnPolicy • AdvertiseL3vpnReplaceRt	N/A
AdvertiseL3vpnEnable	Enable advertise BGP L3VPN routes through the BGP EVPN address family		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
AdvertiseL3vpnPolicy	Filter BGP L3VPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvertiseL3vpnReplaceRt	Replace the route targets of BGP L3VPN routes with those of EVPN instances		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
ImportEvpnMacIp	Redistribute MAC/IP advertisement routes		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
MappingVniRmVpnTarget	Remove route targets of VPN instances from EVPN routes when mapping VXLANs		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
DefaultLocalPreference	Configure default local preference		Unsigned integer. Value range: 0 to 4294967295	The default local preference is supported only by IPv4 unicast, IPv4 multicast, IPv4 labeled-unicast, IPv6 unicast, and IPv6 multicast routes.
AddPathsSelectBestNum	Set the maximum number of Add-Path optimal routes that can be advertised to all peers.		Unsigned integer. Value range: 1 to 64	N/A
DefaultMedValue	Configure default MED value.		Unsigned integer. Value range: 0 to 4294967295	N/A
FrrRtPolicyName	Configure the route policy name of FRR.		String. Length: 1 to 63 characters.	N/A
MvpnAdvRtImport	Enable MVPN advertisement RT import		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
UpdateFirstRtPolicyName	Routing policy used to match routes whose withdrawal messages are sent prior to other routes.		String. Length: 1 to 63 characters.	N/A
AdvRibActive	Enable to advertise the		**Enumeration:**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	best routes of IP routing table..		• **0—Disable.** (default) • **1—Enable.**	
BestRtOriAsValidation	Configure BGP RPKI authentication results to participate in route optimization.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
BestRtAllowInvalid	Allow routes with Invalid authentication results to participate in route optimization		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	BestRtAllowInvalid must be set with BestRtOriAsValidation.
NestingVpn	Enable nested VPN function		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
SummaryAutomatic	Automatic route summarization for redistributed IGP subnet routes		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
ImportRouteMultipath	Redistribute IGP multipath routes with the same prefix to the BGP routing table		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
ImportRouteSRPolicy	Import routes form SR Policy.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
AdvEbgpEnable	Advertise ebgp enable		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
RouterIdFilter	Router-id filter		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
FilterPolicyImport	Filter received BGP routes	Data Structure	Include: • AclNumImp • AclNameImp • PrefixListNameImp	N/A
AclNumImp	Filter BGP routes by an ACL number.		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families	N/A
AclNameImp	Filter BGP routes		String.	ACL name (start with[a-z,A-Z]).Can't

Column name	Column description	Column type	Data type and restrictions	Remarks
	by an ACL name.		Length: 1 to 63 characters.	use “all” as ACL name.

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListNameImp	Filter BGP routes by a prefix-list name.		String. Length: 1 to 63 characters.	N/A
LogRouteFlap	Logging for BGP route flapping	Data Structure	Include: • MonitorTime • MonitorCount • LogCountLimit • RtPolicyName	N/A
MonitorTime	Monitoring interval for route flapping		Unsigned integer. Value range: 1 to 600	Units are minutes.
MonitorCount	Number of route flaps for triggering a log		Unsigned integer. Value range: 2 to 8	N/A
LogCountLimit	Maximum number of logs allowed to be generated in a minute		Unsigned integer. Value range: 1 to 600	N/A
RtPolicyName	Filter BGP routes to monitor the route flaps.		String. Length: 1 to 63 characters.	N/A
Dampening	Configure dampening.	Data Structure	Include: • DampeningEnable • HalfLifeReach • HalfLifeUnReach • Reuse • Suppress • Ceiling • DampRtPolicyName	N/A
DampeningEnable	Enable dampening.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A.
HalfLifeReach	Specify the half-life of the reachable route that oscillates.		Unsigned integer. Value range: 1 to 45	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
HalfLifeUnReach	Specify the half-life of an unreachable route that oscillates.		Unsigned integer. Value range: 1 to 45	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
Reuse	Specify the route reuse threshold.		Unsigned integer. Value range: 1 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set

Column name	Column description	Column type	Data type and restrictions	Remarks
				none of them.

Column name	Column description	Column type	Data type and restrictions	Remarks
Suppress	Specify the route suppression threshold.		Unsigned integer. Value range: 1 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them..
Ceiling	Specify the upper limit of penalty value.		Unsigned integer. Value range: 1001 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
DampRtPolicyName	Specify the route policy name that routes are routed to be attenuated by.		String. Length: 1 to 63 characters.	N/A
RedirectToTunnel	Configure redirect IP relay tunnel capability		String. Length: 0 to 40 characters.	The default local preference is supported only by IPv4 flowspec, IPv6 flowspec.
RoutingtableBgpRibOnly	Control BGP route adding to the IP routing table.	Data Structure	Include: • RoutingtableBgpRibOnlyEnable • RoutingtableBgpRibOnlyPolicy	N/A
RoutingtableBgpRibOnlyEnable	Do not add BGP routes matching the specified routing policy to the IP routing table.		**Enumeration:** • **0—Disable.(default)** • **1—Enable.** • **2—Enable all bgp routes.**	N/A
RoutingtableBgpRibOnlyPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	N/A
UsermoveFastupdate	Enable fast route update upon user migration.		**Enumeration:** • **0—Disable.(default)** • **1—Enable.**	N/A
ForwardConverLearning	Generate FIB entries of host routes upon forwarding BGP public network routes.	Data Structure	Include: • ForwardConverLearningEnable • ForwardConverLearningPolicy	N/A
ForwardConverLearningEnable	Enable generate FIB entries of host routes upon forwarding BGP public network routes.		**Enumeration:** • **0—Disable.(default)** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverLearningPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	N/A
Aigp	Specify a tunnel selector		String. Length: 1 to 40 characters.	N/A
SegmentRoutingMpls	Enable MPLS SR		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
NexthopRecursiveLookupDelay	Set the delay time for responding to next hop recursion result changes		Unsigned integer. Value range: 1 to 240	N/A
SegmentRouting	SR configuration	Data Structure	Include: • Ipv6SidRouteRecursion Ipv6Locator	N/A
Ipv6SidRouteRecursion	Perform private network route recursion based on SIDs		Enumeration. • 0—Disable.(default) • 1—Best effort forwarding. • 2—Traffic engineering forwarding. • 3—Traffic engineering and best effort traffic. • 4—Traffic engineering and best effort backup. • 5—Traffic engineering and best effort multilevel backup • 6—Traffic engineering and best effort multilevel backup local-prefer	N/A
Ipv6Locator	Specify an SID locator		String. Length: 1 to 31 characters	N/A
Ipv6LocatorAnycast	Specify a SID locator for anycast		String. Length: 9 to 26 characters	N/A
Ipv6AutoSidDisable	Cancel SID automatic allocation ability		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Ipv6SidAllocMode	Apply a SID for all nexthop		Enumeration. • 0—per-vrf（default） • 1—per-ce	N/A
ApplyLabelPopgo	Forward labeled packets		**Enumeration:** • **0—Disable.(default)** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received from the peer through matching output interfaces in the ILM table.			
SegmentRoutingEvpn	SR EVPN configuration		Include: Ipv6SidRouteRecursionEvpn Ipv6LocatorEvpn	N/A
Ipv6SidRouteRecursionEvpn	EVPN forwarding type		• Enumeration • 0—Disable • 1 –Best effort forwarding • 2 – Traffic engineering forwarding • 3 –Traffic engineering and best effort traffic • 4—Traffic engineering and best effort backup. • 5—Traffic engineering and best effort multilevel backup • 6—Traffic engineering and best effort multilevel backup local-prefer	N/A
Ipv6LocatorEvpn	Specify an EVPN SID locator		String. • Length: 1 to 31 characters.	N/A
Ipv6LocatorEvpnAnycast	Specify an EVPN SID locator for anycast		String. Length: 1 to 31 characters.	N/A
Ipv6AutoSidDisableEvpn	Cancel SID automatic allocation ability		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Ipv6SidAllocModeEvpn	Apply a SID for all nexthop		Enumeration. • 0—per-vrf（default） • 1—per-ce	N/A
AdvRtReoriginate	Advertise the redist VRF routes to the VPNV4/VPNV6/EVPN peers.		Enumeration • 0—Disable. (default) • 1—Enable. • 2—Replace the RT.	N/A
AdvRtReoriginatePolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	AdvRtReoriginatePolicy must be set with AdvRtReoriginate.

Column name	Column description	Column type	Data type and restrictions	Remarks
SRv6MplsInterwork	Configure SRv6 and MPLS interwordking		Enumeration • 0—Disable(default). • 1 –Enable	N/A
NexthopEvpnDrniGp	Specify the virtual VTEP address of EVPN distributed relay as the next hop address.		**Enumeration:** • **0—Disable.(default)** • **1—Enable.**	N/A
NexthopEvpnMlagGp	Specify the virtual VTEP address of EVPN distributed relay as the next hop address.		**Enumeration:** • **disable.(default)** • **enable.**	N/A
NexthopRecursiveLongestMatch	Select the route with the longest matching prefix for next hop recursive lookup.	Data Structure	Include: • NexthopRecursiveLongestMatchEnable • NexthopRecursiveLongestMatchPolicy	N/A
NexthopRecursiveLongestMatchEnable	Enable selection of the route with the longest matching prefix for next hop recursive lookup.		Enumeration: • 0—Disable. (Default.) • 1—Enable.	N/A
NexthopRecursiveLongestMatchPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	This column cannot be specified when the value for the NexthopRecursiveLongestMatchEnable column is Disable.
NexthopOnlyGlobalAddress	Nexthop only global address.		Enumeration: 0—Disable. (default) 1—Enable.	N/A
ReflectChangePathAttribute	Enable the route reflector to change the path attributes of outgoing routes.		Enumeration: • 0—Disable. • 1—Enable.	N/A
RouteMatchDestination	Enable flowspec		Enumeration: • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination match route prefix policy		• 1—Enable.	
RouteValidationMode	Enable simplify flowspec destination validity check by as number		Enumeration: • 0—Check by route.(default) • 1—Check by AS_PATH	N/A
PeerAsCheckEnable	Enable checking peer of AS-number while advertising.		Enumeration: • 0—Disable. • 1—Enable.	N/A
BalanceIGPMetricIgnore	Ignore the IGP Metric of the next hop when selecting load balancing routes.		Enumeration: • 0—Disable. • 1—Enable.	N/A
IGPMetricInherit	Inherit the IGP Metric of the next hop when generate vpn routes from evpn.		Enumeration: • 0—Disable. • 1—Enable.	N/A
BierEnable	Enable BIER function for BGP		Enumeration: • 0—Disable.(default) • 1—Enable.	N/A
BierBfrPrefixProxy	Enable BIER routes proxy		Enumeration: • 0—Disable.(default) • 1—Enable.	N/A
ValidationCheckEnable	Enable Validation Check		Enumeration: • 0—Disable. • 1—Enable.	N/A
BestRouteIPv6Nexthop	Let the route with IPv6 nexthop be the best route.		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
UcastRouteRecursiveTunnel	Non-label public routing recursive lookup LSP tunnel.	Data Structure		N/A
RecursiveEnable	Allow non-label public routing recursive lookup LSP tunnel.		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
PrefixList	Specify a IP prefix list		String.	This column cannot be

Column name	Column description	Column type	Data type and restrictions	Remarks
	name.		Length: 1 to 63 characters.	specified when the value for the RecursiveEnable column is Disable.
TunnelPolicy	Specify a Tunnel policy name.		String. Length: 1 to 126 characters.	This column cannot be specified when the value for the RecursiveEnable column is Disable.
InofRole	Inof role		Enumeration. • 0—Disable.(default) • 1—Reflect-client. • 2—Reflector.	N/A
SendLowPriorityPeerupDelayTime	Modify priority of routes to lowest-priority when the neighbors change from down to up		Unsigned integer. Value range: 1 to 864000	The value 0 indicates that lowest-priority routes is sent always; SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime and cannot be configured at the same time.
SendLowPriorityOnStartupTime	Modify priority of routes to lowest-priority when the device is restarted		Unsigned integer. Value range: 1 to 3600	The value 0 indicates that lowest-priority routes is sent always; SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime cannot be configured at the same time.
NexthopRecursiveDefRt	Configure default-route lookup for next hop iteration	Data Structure	Include: • Ignore • IgnoreRtPolicyName	N/A
Ignore	Ignore the default route during next hop iteration		Enumeration: • 0—Allow next hop iteration to the default route. (default) • 1—Ignore the default route during next hop iteration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreRtPolicyName	Specify a routing policy.		String. Length: 1 to 63 characters.	This column cannot be specified when the Ignore column is the default value.
NexthopRecursiveTunnelBackup	Perform nexthop recursive lookup tunnel backup process		Enumeration. 0—Disable 1—Tunnel backup. 2—Tunnel backup EVPN. 3---Tunnel backup and tunnel backup EVPN	N/A
NexthopRecursiveRtPolicy	Specify a Route-Policy for nexthop recursion		String. Length: 1 to 63 characters.	N/A
NexthopEvpnSDWANColor	Control nexthop rely for evpn routes of sdwan packet type		Enumeration: • 0—Disable.(default) • 1—Enable	N/A
RouteSelectSuppressOnPeerUP	Delay optimal route calculation when the peer state changes from DOWN to UP		Unsigned integer. Value range: 100 to 600000 milliseconds.	N/A

BGP/Familys/AdvertiseLocators

This table contains BGP locator advertisement information.

XML structure

Please refer to the XML structure of BGP/Familys

Table description

Item	Description
Feature name	BGP
Table name	AdvertiseLocators
Table type	Multi-instance table
Row name	AdvertiseLocator
Restrictions	No

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocatorName	Name of the locator to be advertised	Index	String. Length: 1 to 31 characters.	N/A
RoutePolicy	Name of the routing policy		String. Length: 1 to 63 characters.	N/A

BGP/Networks

This table contains BGP network information.

XML structure

```
<BGP>
  <Networks>
    <Network>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>

Table description

Item	Description
Feature name	BGP
Table name	NeighborGroups
Table type	Multi-instance table
Row name	NeighborGroup
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of NeighborGroup	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated • 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	N/A
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Import Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a		**Enumeration.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	route reflector and specify a peer or peer group as a client		• 0—Disable. • 1—Enable.	
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflict with next-hop-invariable.
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable. • 2—DCI Enable.	Next-hop-local conflict with next-hop-invariable
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
ReOriginated	Re-originate EVPN IP prefix advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable. • 2--- Replace the RT. • 3—Stitch to L3vpn.	To re-originate EVPN IP prefix routes to VPNv4/VPNv6 routes without modifying the RT and RD, set the value to 3.
ReOriginatedMac	Re-originate EVPN MAC/IP advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable(default). • 1—Enable. • 2—Replace the RT.	N/A
ReOriginatedMacOnly	Re-originate EVPN MAC routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable(default). • 1—Enable. • 2—Replace the RT.	N/A
ReOriginatedImet	Re-originate EVPN inclusive multicast		Enumeration. • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Ethernet tag routes received from the peers by modifying the L3 VXLAN ID and RD		• 1—Enable. • 2—Replace the RT.	
ReOriginated Smet	Re-originate EVPN SMET advertisement routes received from the peers by modifying the RT and RD		Enumeration. • 0-Disable(default). • 1-Enable. • 2-Replace the RT.	N/A
ReOriginated Spmsi	Re-originate EVPN S-PMSI advertisement Routes received From the peers By modifying the L3 VXLAN ID and RD		Enumeration. • 0-Disable(default). • 1-Enable. • 2-Replace the RT.	N/A
AdvOriginalRoute	Advertise original EVPN routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
SuppressReOrigPrefix	Suppress advertisement of re-originated EVPN IP prefix advertisement routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
SuppressReOrigMac	Suppress advertisement of re-originated EVPN MAC/IP advertisement routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
SuppressReOrigImet	Suppress advertisement of re-originated EVPN inclusive multicast Ethernet tag routes to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvEvpnRouteSuppressPr	Advertise EVPN routes to the peer excluding IP		Enumeration. • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
efix	prefix advertisement routes		• **1—Enable.**	
SuppressOriginalAD	Suppress advertisement of original EVPN ethernet auto-discovery routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalImet	Suppress advertisement of original EVPN inclusive multicast ethernet tag routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalEs	Suppress advertisement of original EVPN ethernet segment routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	in seconds		Value range: 1 to 65535	
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 or VPNv6 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsRcv	Specify additional path receiving ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsSend	Specify additional path sending ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvAddPathsBest	Specify the maximum number of Add-Path optimal routes that can be advertised to a peer or peer group		Unsigned integer. Value range: 2 to 64. Default is 1	N/A
RouteAdv	Set default route info to peer or peer group	Data Structure	Include: • DefRouteAdv • RoutePlcy • ConditionalPolicy	N/A
DefRouteAdv	Specify default route advertisement info to peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
RoutePlcy	Specify a route policy		String. Length: 1 to 63 characters.	N/A
ConditionalPolicy	Specify a routing policy to control the default route advertisement.		String. Length: 1 to 63 characters.	N/A
KeepAllRoutes	Save original route update info from all peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
LblRouteCapability	Specify labeled route exchange ability for peer or peer groups		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListExp	Specify a prefix list to filter routes advertised to a peer or peer group		String. Length: 1 to 63 characters.	N/A
PrefixListImp	Specify a prefix list to filter routes received from a peer or peer group		String. Length: 1 to 63 characters.	N/A
PublicAsOnly	Remove private AS numbers in BGP updates sent to an EBGP peer or peer group		Enumeration. • 0—Disable.(default) • 1—Normal. • 2—Force. • 3—ForceReplace. • 4—ForceIncludePeerAs. • 5—ForceReplaceIncludePeerAs. • 6—Limited. • 7—LimitedReplace. • 8—LimitedIncludePeerAs. • 9—LimitedReplaceIncludePeerAs. • 10—NormalKeepLocalAs. • 11—ForceKeepLocalAs. • 12—ForceIncludePeerAsKeepLocalAs.	N/A
SooSiteOfOrigin	Configure SoO info for peer or peer groups		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 65535:1..
FlPlcyAclNoOrNameExp	Specify an ACL to filter routes advertised to peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
FlPlcyAclNoOrNameImp	Specify an ACL to filter routes received from peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families	

Column name	Column description	Column type	Data type and restrictions	Remarks
			String. Length: 1 to 63 characters.	
AdvOrigAsVld	Send BGP RPKI validation results to peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
CapOrf	Specify BGP neighbor ORF capabilities negotiation		Enumeration: • 0—Disable.(default) • 1—Receive. • 2—Send. • 3—Both	N/A
Signaling	Set MPLS L2VPN tag block info exchange ability between local route and specified peer or peer groups	Data Structure	Include: • SigEnable • SigNonStd	N/A
SigEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
SigNonStd	Specify non-stand format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeEnable	Set UPE as HoVPN for routes received from peers or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
UpeRoutePlcy	Configure specified UPE route info filtered by route policy		String. Length: 1 to 63 characters.	N/A
AutoDisc	Set VPLS PE tag block info exchange ability between local route and specified peer or peers groups	Data Structure	Include: • DiscEnable • DiscNonStd	N/A
DiscEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
DiscNonStd	Specify non-standard format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
ValidationDisable	Disable validation for BGP flowspec		**Enumeration.** • **0—Disable.** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes		• **1—Enable.**	
ValidationRedirectDisable	Disable validation for BGP flowspec redirect nexthop		**Enumeration.** • **0—Disable.** (default) • **1—Enable.**	Only EBGP neighbors support.
ASPathAclImport	AS path list used for filtering incoming routes.		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
ASPathAclExport	AS path list used for filtering outgoing routes.		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
Aigp	Enable sending and receiving of the accumulated interior gateway protocol metric attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
AigpSendMed	Replace the MED value with AIGP value in routes advertised to the peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Bandwidth	Specify the link bandwidth extended community attribute for the		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BandwidthValue	Link bandwidth attribute value		Unsigned integer. Value range: • 1 to 4294967295	N/A
AdvertiseEbgpBandwidth	Advertise the link bandwidth extended community attribute to EBGP peers		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
BandwidthTransitive	Convert the type of the link bandwidth attribute carried in BGP routes from optional		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	non-transitive to optional transitive			
Policy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
NonExistPolicy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy • ExistPolicy	N/A
Policy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistPolicy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
PrefixSid	Exchange prefix segment IDs with specified peers		Enumeration. • 0—Disable.(default) • 1—Enable • 2—AnycastEnable.	N/A
SRv6Compatible	Configuring VPN routing with SID attribute compatibility		Enumeration. • 0—Disable.(default) • 1—Enable. • 2--Transposition Scheme	N/A
SupReoriginate	Suppress advertisement of re-originated VPNV4 or VPNv6 advertisement routes to the peers		• **Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
ReOriginatedVpn	Re-originate VPNV4 or VPNV6 advertisement routes received from the peers by modifying the RT and RD		**Enumeration.** • **0—Disable.** • **1—Enable.** • **2—Replace the RT.** • 3—Stitch to EVPN.	To re-originate VPNv4/VPNv6 routes to EVPN IP prefix routes without modifying the RT and RD, set the value to 3.
AdvVpnReorigIbgp	Advertise Vpn Reoriginate EVPN routes to IBGP peer..		Enumeration. • 0—Disable.(default) • 1—Enable	N/A
RedirectNex	Enable peer		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
thop	redirected to nexthop capability		• 0—Disable. • 1—Enable(default)	
RoutePriorityTrack	Track entry ID.		Unsigned integer. Value range: 1 to 1024.	N/A
RouteServerClient	Configure the device as a route server and specify a peer or peer group as a client		Enumeration. • 0—Disable.(default) • 1—Enable • 2—External.	N/A
PeerBier	Enable peer to send and receive BIER attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
MacIpRouteLimit	Configure the maximum number of MAC/IP advertisement routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Maximum number of MAC/IP advertisement routes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
EvpnIpv6PrefixListExp	Specify an ipv6 prefix list to filter routes advertised to an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
EvpnIpv6PrefixListImp	Specify an ipv6 prefix list to filter routes received		String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	from an EVPN peer or peer group			
HighPriority	Assign the routes learned from specified peers with higher priority		Enumeration. • 0—Disable.(default) • 1—Enable	N/A

Table description

Item	Description
Feature name	BGP
Table name	Neighbors
Table type	Multi-instance table
Row name	Neighbor
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Neighbor	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated • 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	N/A
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
RtPolicyImport	Import Route-Policy for		String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Neighbor		Length: 1 to 63 characters.	
RtPolicyExport	Export Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
NexthopInvariable	Send original next hop for routes advertised to the peer		**Enumeration.** • **0—Disable.** • **1—Enable.**	Next-hop-local conflict with next-hop-invariable
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	Next-hop-local conflict with next-hop-invariable
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		**Enumeration.** • **0—Disable.** • **1—Enable.** • **2—DCI Enable.**	N/A
AdvertiseCommunity	Send community attribute to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		**Enumeration.** • **0—Disable.** **1—Enable.**	N/A
ReOriginated	Re-originate EVPN IP prefix advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		**Enumeration.** • **0—Disable.** • **1—Enable.** • **2--- Replace the RT.** • **3—Stitch to L3vpn.**	To re-originate EVPN IP prefix routes to VPNv4/VPNv6 routes without modifying the RT and RD, set the value to 3.
ReOriginatedMac	Re-originate EVPN MAC/IP advertisement routes received from the peers by modifying the L3 VXLAN ID		**Enumeration.** • **0—Disable(default).** • **1—Enable.** • **2—Replace the RT.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	and RD			
ReOriginated MacOnly	Re-originate EVPN MAC routes received from the peers by modifying the RT and RD		**Enumeration.** • **0—Disable(default).** • **1—Enable.** • **2—Replace the RT.**	N/A
ReOriginatedImet	Re-originate EVPN inclusive multicast Ethernet tag routes received from the peers by modifying the L3 VXLAN ID and RD		**Enumeration.** • **0—Disable.** • **1—Enable.** • **2—Replace the RT.**	N/A
ReOriginated Smet	Re-originate EVPN SMET advertisement routes received from the peers by modifying the RT and RD		**Enumeration.** • **0-Disable(default).** • **1-Enable.** • **2-Replace the RT.**	N/A
ReOriginated Spmsi	Re-originate EVPN S-PMSI advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		**Enumeration.** • **0-Disable(default).** • **1-Enable.** • **2-Replace the RT.**	N/A
AdvOriginalRoute	Advertise original EVPN routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressReOrigPrefix	Suppress advertisement of re-originated EVPN IP prefix advertisement routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressReOrigMac	Suppress advertisement of re-originated EVPN MAC/IP advertisement routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressReOrigImet	Suppress advertisement of re-originated EVPN inclusive		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	multicast Ethernet tag routes to the peers			
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable**	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable**	N/A
SuppressOriginalAD	Suppress advertisement of original EVPN ethernet auto-discovery routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalImet	Suppress advertisement of original EVPN inclusive multicast ethernet tag routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalEs	Suppress advertisement of original EVPN ethernet segment routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		• **Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1 to 4294967295	
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsRcv	Specify additional path receiving ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsSend	Specify additional path sending ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvAddPathsBest	Specify the maximum number of Add-Path optimal routes that can be advertised to a peer or peer group		Unsigned integer. Value range: 2 to 64. Default is 1	N/A
RouteAdv	Set default route info to peer or peer group	Data Structure	Include: • DefRouteAdv • RoutePlcy • ConditionalPolicy	N/A
DefRouteAdv	Specify default route advertisement info to peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
RoutePlcy	Specify a route		String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy		Length: 1 to 63 characters.	
ConditionalPolicy	Specify a routing policy to control the default route advertisement.		String. Length: 1 to 63 characters.	N/A
KeepAllRoutes	Save original route update info from all peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
LblRouteCapability	Specify labeled route exchange ability for peer or peer groups		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
PrefixListExp	Specify a prefix list to filter routes advertised to a peer or peer group		String. Length: 1 to 63 characters.	N/A
PrefixListImp	Specify a prefix list to filter routes received from a peer or peer group		String. Length: 1 to 63 characters.	N/A
PublicAsOnly	Remove private AS numbers in BGP updates sent to an EBGP peer or peer group		Enumeration. • 0—Disable.(default) • 1—Normal. • 2—Force. • 3—ForceReplace. • 4—ForceIncludePeerAs. • 5—ForceReplaceIncludePeerAs. • 6—Limited. • 7—LimitedReplace. • 8—LimitedIncludePeerAs. • 9—LimitedReplaceIncludePeerAs. • 10—NormalKeepLocalAs. • 11—ForceKeepLocalAs. • 12—ForceIncludePeerAsKeepLocalAs.	N/A
SooSiteOfOrigin	Configure SoO info for peer or peer groups		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 65535:1..
FlPlcyAclNoO	Specify an ACL		Unsigned integer.	

Column name	Column description	Column type	Data type and restrictions	Remarks
rNameExp	to filter routes advertised to peers or peer groups		Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
FlPlcyAclNoOrNameImp	Specify an ACL to filter routes received from peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
AdvOrigAsVld	Send BGP RPKI validation results to peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
CapOrf	Specify BGP neighbor ORF capabilities negotiation		Enumeration: • 1—Receive. • 2—Send. • 3—Both	N/A
Signaling	Set MPLS L2VPN tag block info exchange ability between local route and specified peer or peer groups	Data Structure	Include: • SigEnable • SigNonStd	N/A
SigEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
SigNonStd	Specify non-stand format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeEnable	Set UPE as HoVPN for routes received from peers or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
UpeRoutePlcy	Configure specified UPE route info filtered by route policy		String. Length: 1 to 63 characters.	N/A
AutoDisc	Set VPLS PE tag block info exchange ability between local route and specified peer or	Data Structure	Include: • DiscEnable • DiscNonStd	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	peers groups			
DiscEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
DiscNonStd	Specify non-standard format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
ValidationDisable	Disable validation for BGP flowspec routes		**Enumeration.** • **0—Disable.** (default) • **1—Enable.**	N/A
ValidationRedirectDisable	Disable validation for BGP flowspec redirect nexthop		**Enumeration.** • **0—Disable.** (default) • **1—Enable.**	Only EBGP neighbors support.
ASPathAclImport	AS path list used for filtering incoming routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
ASPathAclExport	AS path list used for filtering outgoing routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
Aigp	Enable sending and receiving of the accumulated interior gateway protocol metric attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
AigpSendMed	Replace the MED value with AIGP value in routes advertised to the peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Bandwidth	Specify the link bandwidth extended community attribute for the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BandwidthValue	Link bandwidth attribute value		Unsigned integer. Value range: 1 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvertiseEbgpBandwidth	Advertise the link bandwidth extended community attribute to EBGP peers		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
BandwidthTransitive	Convert the type of the link bandwidth attribute carried in BGP routes from optional non-transitive to optional transitive		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
AdvertiseEncapTypeMpls	MPLS encapsulation		Enumeration. • 0—Disable.(default) • 1—MPLS. • 2—SRv6. • 3—SDWAN. • 4—Anycast.	N/A
ReflectNearbyGroup	Specify the peers as clients of the nearby cluster		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
NonExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy NonExistPolicy	N/A
Policy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
NonExistPolicy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy • ExistPolicy	N/A
Policy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistPolicy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
PrefixSid	Exchange prefix segment IDs with specified peers		Enumeration. • 0—Disable.(default) • 1—Enable • 2—AnycastEnable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SRv6Compatible	Configuring VPN routing with SID attribute compatibility		Enumeration. • 0—Disable.(default) • 1—Enable. • 2--Transposition Scheme	
SupReoriginate	Suppress advertisement of re-originated VPNV4 or VPNv6 advertisement routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
ReOriginatedVpn	Re-originate VPNV4 or VPNV6 advertisement routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT. • 3—Stitch to EVPN.	To re-originate VPNv4/VPNv6 routes to EVPN IP prefix routes without modifying the RT and RD, set the value to 3.
AdvVpnReorigIbgp	Advertise Vpn Reoriginate EVPN routes to IBGP peer..		Enumeration. • 0—Disable.(default) • 1—Enable	N/A
RedirectNexthop	Enable peer redirected to nexthop capability		Enumeration. • 0—Disable. • 1—Enable(default)	N/A
RoutePriorityTrack	Track entry ID.		Unsigned integer. Value range: 1 to 1024.	N/A
RouteServerClient	Configure the device as a route server and specify a peer or peer group as a client		Enumeration. • 0—Disable.(default) • 1—Enable • 2—External.	N/A
PeerBier	Enable peer to send and receive BIER attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
MacIpRouteLimit	Configure the maximum number of MAC/IP advertisement routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Maximum number of MAC/IP		Unsigned integer. Value range:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	advertisement routes		1 to 4294967295	
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
EvpnIpv6PrefixListExp	Specify an ipv6 prefix list to filter routes advertised to an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
EvpnIpv6PrefixListImp	Specify an ipv6 prefix list to filter routes received from an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
HighPriority	Assign the routes learned from specified peers with higher priority		Enumeration. • 0—Disable.(default) • 1—Enable	N/A

BGP/Redistributes

This table contains BGP redistribute information.

XML structure

```

Table description

Item	Description
Feature name	BGP
Table name	BMPs
Table type	Multi-instance table
Row name	BMP
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerNum	BMP server number	Index	Unsigned integer. Value range: 1 to 8	N/A
ServerAddr	Specify the address of BMP server		String,IPv4 address string or IPv6 address string.	You must set both ServerAddr and ServerPortNum, or set neither of them.
ServerPortNum	Specify the port number of BMP server		Unsigned integer. Value range: 1 to 65535	You must set both ServerAddr and ServerPortNum, or set neither of them.
StatisInterValue	Specify the statistics interval value number of BMP server		Unsigned integer. Value range: 1 to 3600	Unit is seconds.
ConnectInterfaceName	Specify the source interface of TCP connections to the BMP server		String. Length: 0 to 47 characters.	Example: • M-GigabitEthernet0/0/0
RouteModeAdjRibIn	Enable BGP to send routes advertised to the monitored peers or peer groups to the BMP server		Enumeration: • 1—Post-policy • 2—Pre-policy(default) • 3—Both	After you specify a BMP server, the pre-policy option takes effect by default.
RouteModeAdjRibOut	Enable BGP to send routes advertised to the monitored peer or peer group to the BMP server		Enumeration: • 0—Disable.(default) • 1—Post-policy • 2—Pre-policy • 3—Both	N/A
RouteModeLocRib	Enable BGP to send the optimal routes in the routing table to the BMP server		Enumeration: • 0—Disable.(default) • 1—Enable • 2—add-path	N/A
SourceAddress	Specify the source address of TCP connections to the BMP server		String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
SSLClientPolicy	Configure SSL policy for TCP connections to the BMP server		String. Length: 1 to 31 characters.	N/A

BGP/RouteModeLocRibFilters

Send the specify routes in the routing table to the BMP server.

XML structure

```
<BGP>
  <RouteModeLocRibFilters>
    <RouteModeLocRibFilter>
     <ServerNum></ServerNum>
     <ModeType></ModeType>
     <Name></Name>
     <Family></Family>
     <AdditionalPaths><AdditionalPaths>
    </RouteModeLocRibFilter>
  </RouteModeLocRibFilters>
</BGP>
```

</BGP>Table description

Item	Description
Feature name	BGP
Table name	RouteModeLocRibFilters
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerNum	BMP server number	Index	Unsigned integer. Value range: 1 to 8	N/A
ModeType	VPN-type	Index	Enumeration: • 0—public. • 1—vpn-instance • 2—all-vpn-instacne	N/A
Name	VPN-instance name	Index	String. Length: 1 to 31 characters.	When the modetype parameter is 0 or 2, the parameter must be empty.
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 labeled-Unicast . • 3—IPv6 Unicast • 4—VPNv4 • 5—VPNV6 • 6—L2VPN EVPN	When the modetype parameter is 1 or 2, the parameter 5 and 6 are not allowed to be configured.
`Additional paths`	Additional path configuration		Enumeration: • 0—Disable. • 1—Enable	N/A

BGP/Rpkis

This table contains BGP RPKI information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
CheckOriginValidation	Check origin validation		Enumeration. • 0—Disable. • 1—Enable.	N/A
Servers	Site containing the rpki server information	Subtable	N/A	For more information, see the BGP/Rpkis/Rpki/Servers

BGP/Rpkis/Rpki/Servers

This table contains BGP RPKI server information.

XML structure

Please refer to the XML structure of BGP/Rpkis.

Table description

Item	Description
Feature name	BGP
Table name	Servers
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier	Index	Enumeration: • 1—IPv4. • 2—IPv6	N/A
IpAddress	Summary address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Port	Port		Unsigned integer. Value range: 1 to 65535	N/A
PasswordType	Password type.		Enumeration. • 1—Ciphertext. • 2—Plaintext.	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
RefreshTime	Refresh time in seconds		Unsigned integer. Value range: 15 to 3600	N/A
ResponseTime	Response time in seconds		Unsigned integer. Value range: 15 to 3600	N/A
PurgeTime	Purge time in seconds		Unsigned integer. Value range: 30 to 360	N/A
RpkiLimit	Configure the maximum number of ROAs that can be received from the connection	Data Structure	Include: • Number • ExceedAction ReconnectTime	N/A
Number	Number of ROAs		Unsigned integer. Value range: 1 to 4294967295	N/A
ExceedAction	Action type when the rpki limit is exceeded		Enumeration. • 0—disconnect • 1—alert only • 2—discard	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			3—disconnect and reconnect	
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 86400	N/A

BGP/FilterPolicyExports

Table type	Multi-instance table
Row name	FilterPolicyExport
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 9—L2VPN EVPN	N/A
ProtocolExp	Specify where the BGP routes are imported.	Index	Enumeration: • **1**—direct • **2**—isis. • 3—isisv6 • 4—ospf • 5—ospfv3 • 6—rip. • 7—ripng • 8—static	The Protocol can be empty. The Protocol can be set to direct, isis, ospf, rip or static only when the Type had been set to IPv4 Unicast, IPv4 Multicast, or VPNv4. The Protocol can be set to direct, isisv6, ospfv3, ripng or static only when the Type had been set to IPv6 Unicast, IPv6 Multicast, or VPNv6.
ProcessIDExp	Specify the process ID of routing protocol.	Index	Unsigned integer. Value range: 1 to 65535	It must be empty when the Protocol column is Direct, Static or empty.
AclNumExp	Filter BGP routes by an ACL number.		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families	You can only set one of AclNumExp, AclNameExp and PrefixListNameExp at the same time.
AclNameExp	Filter BGP routes by an ACL name.		String. Length: 1 to 63 characters.	ACL name (start with[a-z,A-Z]).Can't use "all" as ACL name. You can only set one of AclNumExp, AclNameExp and PrefixListNameExp

Column name	Column description	Column type	Data type and restrictions	Remarks
				at the same time.
PrefixListNameExp	Filter BGP routes by a prefix-list name.		String. Length: 1 to 63 characters.	You can only set one of AclNumExp, AclNameExp and PrefixListNameExp at the same time.

BGP/PeerGpDefRtAdvVpnInsts

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier of neighbor	Index	Enumeration: **1**—IPv4 Unicast. **2**—IPv4 Multicast. 3—MDT 4—VPNv4 5—IPv6 Unicast 6—IPv6 Multicast. 7—VPNv6 8—L2VPN 9—L2VPN EVPN 10—Link-State	N/A
SessAF	Address family of session	Index	Enumeration: **1**—IPv4. **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv6 linklocal address string..	Example: fe80::1.
Mask	Mask length or prefix length of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, the value is 255. For IPv4 dynamic peers, the value is in the range of 0 to 32. For IPv6 dynamic peers, the value is in the range of 0 to 128.
LinkLocalInterface	Source interface	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Route policy applied to routes incoming from peers		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Route policy applied to routes outgoing to peers		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	Allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	device as a route reflector and specify a peer or peer group as a client		• 0—Disable. • 1—Enable.	
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflicts with next-hop-invariable
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflicts with next-hop-invariable
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. • 0—Disable. 1—Enable.	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community		• Enumeration. • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	attribute			
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: **1**—IPv4. **2**—IPv6.	An empty value indicates IPv6.
Interface	Source interface	Index	String. Length: 1 to 47 characters.	N/A
ASNumber	Autonomous system number		Unsigned integer. Value range: 1 to 4294967295	N/A
GroupName	Group name		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route update interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		Enumeration. 1—Ciphertext. 2—Plaintext.	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
BfdType	BFD type		Enumeration. • 0—default type • 1—single-hop • 2—multi-hop	The default type indicates that actual BFD type (single-hop or multi-hop) depends on different situations.
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Description	Peer description		String. Length: 1 to 79 characters.	Case sensitive

Column name	Column description	Column type	Data type and restrictions	Remarks
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
Dscp	Set the DSCP priority of BGP packets		Unsigned integer. Value range: 0 to 63	N/A
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		Unsigned integer. Value range: 0 to 21845	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HoldTime	Holdtime in seconds		Unsigned integer. Value range: 0 , 3 to 65535	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.

ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. • 0—Disable. • 1—Enable.	N/A
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflicts with next-hop-invariable
AdvertiseCommunity	Send community attribute to the		Enumeration. • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	peers		• 1—Enable.	
AdvertiseExt Community	Send extended community attribute to the peers		Enumeration. • 0—Disable. 1—Enable.	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValu e	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
AdditionalPat hsRcv	Specify additional path receiving ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPat hsSend	Specify additional path sending ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvAddPaths Best	Specify the maximum number of Add-Path optimal routes that can be advertised to a peer or peer group		Unsigned integer. Value range: 2 to 32. Default is 1	N/A
RouteAdv	Set default route info to peer or	Data Structure	Include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	peer group		• DefRouteAdv • RoutePlcy	
DefRouteAdv	Specify default route advertisement info to peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
RoutePlcy	Specify a route policy		String. Length: 1 to 63 characters.	N/A
KeepAllRoutes	Save original route update info from all peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
PrefixListExp	Specify a prefix list to filter routes advertised to a peer or peer group		String. Length: 1 to 63 characters.	N/A
PrefixListImp	Specify a prefix list to filter routes received from a peer or peer group		String. Length: 1 to 63 characters.	N/A
PublicAsOnly	Remove private AS numbers in BGP updates sent to an EBGP peer or peer group		Enumeration. • 0—Disable.(default) • 1—Normal. • 2—Force • 3—ForceReplace • 4—ForceIncludePeerAs • 5—ForceReplaceIncluedePeerAs • 6—Limited • 7—LimitedReplace • 8—LimitedIncludePeerAs • 9—LimitedReplaceIncluedePeerAs	N/A
SooSiteOfOrigin	Configure SoO info for peer or peer groups		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 65535:1..
FlPlcyAclNoOrNameExp	Specify an ACL to filter routes advertised to peers or peer groups		Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	N/A
FlPlcyAclNoO	Specify an ACL		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
rNameImp	to filter routes received from peers or peer groups		Value range: 2000 to 3999. String. Length: 1 to 63 characters.	
AdvOrigAsVld	Send BGP RPKI validation results to peer or peer groups		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
CapOrf	Specify BGP neighbor ORF capabilities negotiation		Enumeration: • 1—Receive. • 2—Send. • 3—Both	N/A
ASPathAclImport	AS path list used for filtering incoming routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
ASPathAclExport	AS path list used for filtering outgoing routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.

BGP/RedistributesBier

This table contains BGP redistribution information for BIER route.

XML structure

```
<BGP>
  <RedistributesBier>
    <RedistBier>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <Protocol></Protocol>
      <RedistName></RedistName>
    </RedistBier>
  </RedistributesBier>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	RedistributesBier
Table type	Multi-instance table
Row name	RedistBier
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier	Index	Enumeration: • 5—IPv6 Unicast	N/A
Protocol	Protocol name	Index	Enumeration: • 5—ISIS/ISISv6	N/A
RedistName	Redistributed process name	Index	String. Length: 0 to 31 characters.	N/A

BGP/ImportRibs

This table contains BGP Import Rib information.

XML structure

```

      <ValidRouteEnable></ValidRouteEnable>
```

```
      <ImRibRtPolicyName></ImRibRtPolicyName>
      <ImRibFtPolicyPreName></ImRibFtPolicyPreName>
      <ImRibFtPolicyAclNum></ImRibFtPolicyAclNum>
      <ImRibFtPolicyAclName></ImRibFtPolicyAclName>
    </ImportRib>
  </ImportRibs>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	ImportRibs
Table type	Multi-instance table
Row name	ImportRib
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Import Rib	Index	Enumeration: • **1**—IPv4 Unicast • 23—IPv4 Labeled-unicast	N/A
SrcVRF	Source VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SrcFamily	Source Address Family Identifier of Import Rib	Index	Enumeration: • **1**—IPv4 Unicast • 23—IPv4 Labeled-unicast	N/A
ValidRouteEnable	Specify the valid route of the corresponding route type to be imported		Enumeration: • 0—Disable. • 1—Enable.	N/A
ImRibRtPolicyName	Configure the route policy name of Import Rib.		String. Length: 1 to 63 characters.	You can only set one of ImRibRtPolicyName, ImRibFtPolicyPreName, ImRibFtPolicyAclNum and ImRibFtPolicyAclName at the same time.
ImRibFtPolicyPreName	Filter BGP routes by a prefix-list name of Import Rib.		String. Length: 1 to 63 characters.	You can only set one of ImRibRtPolicyName, ImRibFtPolicyPreName, ImRibFtPolicyAclNum and ImRibFtPolicyAclName at the same time.
ImRibFtPolicyAclNum	Filter BGP routes by an ACL number of Import Rib.		Unsigned integer. Value range: 2000 to 3999	You can only set one of ImRibRtPolicyName, ImRibFtPolicyPreName, ImRibFtPolicyAclNum and ImRibFtPolicyAclN

Column name	Column description	Column type	Data type and restrictions	Remarks
				ame at the same time.
ImRibFtPolicyAclName	Filter BGP routes by an ACL name of Import Rib.		String. Length: 1 to 63 characters.	ACL name (start with[a-z,A-Z]).Can't use "all" as ACL name. You can only set one of ImRibRtPolicyName, ImRibFtPolicyPreName, ImRibFtPolicyAclNum and ImRibFtPolicyAclName at the same time.

Table description

Item	Description
Feature name	BGP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates all BGP processes. When execute get bulk operation, you can only get the data of the specified BGP instance.

Column name	Column description	Column type	Data type and restrictions	Remarks
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
NSR	Nonstop Routing		Enumeration. • **0**—Disable. • **1—Enable.**	N/A
SendDelayTime	Send delay time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker never send the update message. SendLowPriorityPeerupDelayTime, SendLowPriorityOnStartupTime and SendDelayTime cannot be configured at the same time.
SendDelayPrefix	Send delay using IPv4 prefix list		String. Length: 1 to 63 characters.	N/A
SendDelayIPv6Prefix	Send delay using IPv6 prefix list		String. Length: 1 to 63 characters.	N/A
SendStartupTime	Send startup time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker always send the update message with the startup policy.
SendLowPriorityPeerupDelayTime	Modify priority of routes to lowest-priority when the neighbors change from down to up		Unsigned integer. Value range: 1 to 864000	The value 0 indicates that lowest-priority routes is sent always. SendLowPriorityPeerupDelayTime, SendLowPriorityOnStartupTime and SendDelayTime cannot be configured at the same time.
SendLowPriorityOnStartupTime	Modify priority of routes to lowest-priority when the device is restarted		Unsigned integer. Value range: 1 to 3600	The value 0 indicates that lowest-priority routes is sent always. SendLowPriorityPeerupDelayTime, SendLowPriorityOn

Column name	Column description	Column type	Data type and restrictions	Remarks
				StartupTime and SendDelayTime cannot be configured at the same time. SendLowPriorityOn StartupTime and SendDelayTime cover each other.
StartupPolicyMed	Satrtup policy MED		Unsigned integer. Value range: 0 to 4294967295	N/A
FlushSuboptimalRoute	Flush suboptimal route to RIB		Enumeration. • 0—Disable. • 1—Enable.	N/A
RouteReplicateEnable	Enable mutual route replication between public and private networks		Enumeration. • 0—Disable. • 1—Enable.	N/A
DefaultRouteUpdateFirst	Enable BGP to send withdrawal messages of the default route prior to other routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
EbgpInterfaceSensitive	Immediate re-establishment of direct EBGP sessions		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulRestartEnable	Enabling graceful restart		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulRestartTimerPurgeTime	Graceful restart purge time in seconds		Unsigned integer. Value range: 1 to 6000	Graceful restart must be enabled first.
GracefulRestartTimerRestart	Graceful restart restart time in seconds		Unsigned integer. Value range: 3 to 600	Graceful restart must be enabled first.
GracefulRestartTimerWaitForRib	Graceful restart time to wait for the End-of-RIP marker in seconds		Unsigned integer. Value range: 3 to 3600	Graceful restart must be enabled first.
IgnoreAllPeers	Ignore all peers	Data Structure	Include: • IgnoreAllPeersEnable • GracefulTime • CommunityNumber	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• LocalPreference • Med	

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreAllPeersEnable	Ignore all peers enable		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulTime	Graceful time in seconds		Unsigned integer. Value range: 60 to 65535	Ignore all peers must be enabled first. Community, LocalPreference and Med should be set on at least GracefulTime.
CommunityNumber	Community number		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>	Ignore all peers must be enabled first. Example: 10 or 1:65535 Repeat supported for 32 times along with CommunityAttr. Only supported for basic community list.
LocalPreference	Local preference		Unsigned integer. Value range: 0 to 4294967295	Ignore all peers must be enabled first.
Med	MED of route		Unsigned integer. Value range: 0 to 4294967295	Ignore all peers must be enabled first.
SRPolicySteering	Control SR Policy steering.		Enumeration. • 1—SRPolicySteeringColor(default) • 2—SRPolicySteeringDisable • 3—SRPolicySteeringPolicy	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable. • 1—Enable.	N/A
LabelAllocationMode	Label allocation mode		Enumeration. • 0—per-hop. • 1—per-prefix • 2- per-vrf.	N/A
LabeledRouteIgnoreNoTunnel	Ignore labeled routes with no tunnel information		Enumeration. • 0—Disable. • 1—Enable.	N/A
LogPeerChange	Log peer change		Enumeration. • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Enable.	

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryPathDetectBfdEcho	Detect primary path using BFD echo.		Enumeration. • 0—Disable. • 1—Enable.	In PrimaryPathDetectBfdEcho and PrimaryPathDetectBfdCtrl, The latest configuration takes effect.
RetainLocalLabel	Update delay for local MPLS labels in seconds		Unsigned integer. Value range: 1 to 21845	N/A
RouteRateLimit	Route rate limit		Unsigned integer. Value range:0 to 4294967295	N/A
RouteUpdateIntervalWithdrawnEnable	Apply route update interval setting to withdrawn routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
SnmpContextName	SNMP context name		String. Length: 1 to 32 characters.	N/A
VpnPopgo	VPN POPGO		Enumeration. • 0—Disable. • 1—Enable.	N/A
ConfederationId	Confederation ID		Unsigned integer. Value range: 1 to 4294967295	N/A
ConfederationNonstandard	Enable compatibility with routers not compliant with RFC 3065 in the confederation		Enumeration. • 0—Disable. • 1—Enable.	N/A
GracefulRestartPeerReset	Reset peer sessions gracefully		Enumeration. • 1—no-all. • 2—all.	Graceful restart must be enabled first.
IgnoreReflectDifferentVrf	Clear CLUSTER_LIST and ORIGINATOR_ID attributes before advertising routes to other VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
ConfederationPeerAs	Confederation peer sub-AS number.		Unsigned integer. Value range: 1 to 4294967295	N/A
AsPathLimit	Set the AS path length limit		Unsigned integer. Value range: 1 to 2000	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BestRouteAsPathNegleictAllInstance	Ignore the AS-PATH attribute during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteCompareMEDAllInstance	Consider MED value during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteConfederationMEDAllInstance	Compare the MEDs of routes from confederation peers during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteIgpMetricIgnoreAllInstance	Ignore IGP metrics during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteRouterIdIgnoreAllInstance	Ignore router ID during optimal route selection in the BGP instance and all its BGP-VPN instances		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpdateDelayWaitOtherProtocol	Set the time to wait for other protocols to complete GR or NSR		Unsigned integer. Value range: 60 to 1200	N/A
VpnRouteCrossMultipath	Redistribute multiple routes with the same		Enumeration. • 0—Disable.(default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefix and RD to the VPN routing table		• 1—Enable.	
KeepAllRoutes	Save original routing information		Enumeration. • 0—Disable. • 1—Enable.	N/A
RouteUpdateDelay	Set the delay to send updates to peers		Unsigned integer. Value range: 1 to 600	N/A
BmpPrefixListName4	Specify BGP route filtering policy based on an ipv4 prefix list		String. Length: 1 to 63 characters.	N/A
BmpRdListNum4	Specify BGP route filtering policy based on a route distinguisher list		Unsigned integer. Value range: 1 to 65535.	BmpPrefixListName4 must be configured first.
BmpPrefixListName6	Specify BGP route filtering policy based on an ipv6 prefix list		String. Length: 1 to 63 characters.	N/A
BmpRdListNum6	Specify BGP route filtering policy based on a route distinguisher list		Unsigned integer. Value range: 1 to 65535.	BmpPrefixListName6 must be configured first.
Isolate	Isolate BGP from the current network		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
SRLabelRange	Segment routing label range	Data Structure	Include: • Type • Lowerbound • Upperbound	You can specify multiple SR label ranges.
Type	Label service type		Enumeration: • 0—Static. • 1—Egress. • 2—Dynamic.	N/A
Lowerbound	Minimum label value		Unsigned integer.	N/A
Upperbound	Maximum label value		Unsigned integer.	N/A
PrefixLabelRange	Prefix label range	Data Structure	Include: • PrefixLabelLowerbound • PrefixLabelUpperbound	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixLabelLowerbound	Minimum prefix label value		Unsigned integer.	N/A
PrefixLabelUpperbound	Maximum prefix label value		Unsigned integer.	N/A
EPEPeerSet	Site containing the EPEPeerSet information	Subtable	N/A	For more information, see the BGP/Instance/EPEPeerSets
EPESRv6Locator	Specify an EVESRV6 locator		String. Length: 1 to 31 characters.	N/A
EPESRv6AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • 1—auto-normal. • 2—auto-sid-coc32. • 3—auto-sid-cocboth-coc32. • 4—auto-sid-cocboth-coc32-none. • 5—auto-disable	EPESRv6Locator is configured, then EPESRv6AutoSidMode can be configured
EPESRv6PeerSets	Site containing the EPE PeerSets information	Sublist	• N/A	For more information, see the BGP/EPESRv6PeerSets
PathMtuDiscovery	TCP path MTU discovery configuration		Enumeration. • **0**—Disable. • 1—Enable.	N/A
Shutdown	Administratively shutdown BGP protocol		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BestRouteSameRd	Enabling bestroute same-rd		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
UpdateIntervalIntelligent	Calculation parameters of the suppression interval for sending the same route update to the peer or peer group	Data structure	Members include: • MinInterval • MaxInterval • IgnoreCount • IncrementalInterval.	The MaxInterval must be longer than the MinInterval
MinInterval	Minimum suppression interval		Unsigned integer. Value range: 0 to 600.	N/A
MaxInterval	Maximum suppression interval		Unsigned integer. Value range: 0 to 600.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreCount	Maximum number of times that BGP can send the same route update to the peer or peer group		Unsigned integer. Value range: 0 to 200.	N/A
IncrementalInterval	Time of penalty increment.		Unsigned integer. Value range: 1 to 10.	N/A
EPEMetricDelayAdvertisement	Advertise link delay metric information in LS-route	N/A	Boolean: • true—Enable BGP to advertise link delay metric information in LS-route. • false—Disable BGP to advertise link delay metric information in LS-route (default).	N/A
EPEMetricDelaySuppression	enable a device to suppress advertisement of link delay information.	Data structure	Members include: • Time. • ThresholdPercent. • ThresholdAbsolute.	configure suppression timer.
Time	Specifies the link delay information timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
ThresholdPercent	Specifies the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 100. Default: 10 seconds.	N/A
ThresholdAbsolute	Specifies the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 10000. Default: 1000 seconds.	N/A
EPEMetricBandwidthAdvertiseMent	Advertise link bandwidth metric information in LS-route	N/A	Boolean: • true—Enable BGP to advertise link bandwidth metric information in LS-route. • false—Disable BGP to advertise link bandwidth metric information in LS-route (default).	N/A
EPEMetricBandwidthSuppression	enable a device to suppress link bandwidth information advertisement.	Data structure	Members include: • Time.	Configure suppression timer
Time	Specifies the suppression timer.	N/A	Unsigned integer. Value range: 0 to 600.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 120 seconds.	

Column name	Column description	Column type	Data type and restrictions	Remarks
Interfaces	Site containing the Interfaces information	Sublist	N/A	For more information, see the BGP/Instance/Interfaces
PrimaryPathDetectBfdCtrl	Detect primary path using BFD ctrl.		Enumeration. • 0—Disable. • 1—Enable.	In PrimaryPathDetectBfdEcho and PrimaryPathDetectBfdCtrl, The latest configuration takes effect.
EPEMetricLinkLossAdvertisement	Advertise link loss metric information in LS routes	N/A	Enumeration. • Disable. • Enable.	N/A
EPEMetricLinkLossSuppression	Suppress advertisement of link loss metric information.	Data structure	Members include: • Time. • ThresholdPercent. • ThresholdAbsolute.	Configure the advertisement delay timer.
Time	Specify the delay timer for link loss metric information advertisement.	N/A	Unsigned integer. Value range: 0 to 600.	N/A
ThresholdPercent	Specify the link loss variation rate threshold	N/A	Unsigned integer. Value range: 0 to 100.	N/A
ThresholdAbsolute	Specify the absolute link loss variation threshold	N/A	Unsigned integer. Value range: 0 to 10000.	N/A
EvpnReOriginated	Re-originated MAC routes		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
PeerDownStatistics	Statistics about peer down events	N/A	Unsigned integer.	N/A
DynamicPeerLimit	Maximum number of dynamic peers that can be established	N/A	Unsigned integer. Value range: 1 to 16000	N/A
PeerFormatLimit	The maximum number for formating updates		Unsigned integer. Value rang e: 1 to 1000	N/A
PeerSendLimit	The maximum number for sending updates		Unsigned integer. Value range: 1 to 100	N/A
SendBufferSi	The TCP send		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ze	buffer size		Value range: 2048 to 327680	
AdvertiseRouteUpdates	Configure sending BGP route updates	Data Structure	Include: • AdvertiseInterval. • AdvertiseCount.	N/A
AdvertiseInterval	The interval for sending BGP route updates		Unsigned integer. Value range: 100 to 10000	The interval for sending BGP route update must be 100 integer times
AdvertiseCount	The count for sending BGP route updates		Unsigned integer. Value range: 1 to 40960	

BGP/Instance/ EPEPeerSets

This table contains BGP Instance EPE PeerSet information.

XML structure

Please refer to the XML structure of BGP/Instances.

Table description

Item	Description
Feature name	BGP
Table name	EPEPeerSets
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SetName	PeerSet name	Index	String. Length: 1 to 63 characters.	N/A
SetLabel	Routing policy used to filter specific routes to be advertised		NA	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
LinkDown	LinkDownType		Enumeration. • 0—Disable.(Default). • 1—Relate BFD state.	N/A

BGP/Instances/EPESRv6PeerSets

This table contains BGP Instance information.

XML structure

Please refer to the XML structure of BGP/Instances

Table description

Item	Description
Feature name	BGP
Table name	EPESRv6PeerSets
Table type	Multi-instance table
Row name	EPESRv6PeerSet
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SetName	Instance set name	Index	String. Length: 1 to 63 characters.	N/A
Psp	peer-set peer type static End.X SID	N/A	String, IPv6 address string.	N/A
NoPspUsp	End.X SID(-NO-FLAVOR)	N/A	String	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			IPv6 address string.	
PspUspUsd	End.X SID(PSP USP USD)	N/A	String IPv6 address string.	N/A
StaticSidMode	Static Sid Mode.	N/A	Enumeration: • **1**—normal. • **2**—coc32. • **3**—cocboth-coc32. • **4**—cocboth-coc-none.	StaticSidMode and AutoSidMode cannot be configured at the same time.
AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • **1**—auto-normal. • **2**—auto-sid-coc32. • **3**—auto-sid-cocboth-coc32. • **4**—auto-sid-cocboth-coc32-none.	StaticSidMode and AutoSidMode cannot be configured at the same time.

BGP/Instance/Interfaces

This table contains BGP Instances information.

XML structure

Please refer to the XML structure of BGP/Instances

Table description

Item	Description
Feature name	BGP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface Name	Index	String. Length: 1 to 47 characters.	N/A
LinkDelay	configure link delay parameters on an interface.	Data structure	Members include: • Average. • Minimal. • Maximal. • Variation.	A property column must exist.
Average	Specifies the average link	N/A	Unsigned integer. • Value range:1 to 16777215.	N/A
Minimal	Specifies the minimum link.	N/A	Unsigned integer. • Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously
Maximal	Specifies the maximum link.	N/A	Unsigned integer. • Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously.
Variation	Sets the acceptable delay variation.	N/A	Unsigned integer. • Value range: 1 to 16777215.	N/A
LinkLoss	Configure the link loss value on an interface.	Data structure	Members include: Loss.	N/A
Loss	Specify the link loss value.	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A

BGP/VRFs

This table contains BGP VRF information.

XML structure

```
<BGP>

```

Table description

Item	Description
Feature name	BGP
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterId	BGP Router Id		String,IPv4 address string	N/A
Timer	Keepalive and Holdtime	Data Structure	Include: • KeepAlive • HoldTime	N/A
KeepAlive	Keepalive Interval in Seconds		Unsigned integer. Value range: 0 to 21845	N/A
HoldTime	Holdtime in Seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
BestRouteIgpMetricIgnore	Ignore IGP metrics during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteAsPathNeglect	Ignore the AS-PATH attribute during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteCompareMED	Consider MED value during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteConfederationMED	Compare the MEDs of routes from confederation peers during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
BestRouteRouterIdIgnore	Ignore router ID during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
CompareDifferentAsMED	Compare the MEDs of routes from different ASs during optimal route selection		Enumeration. • 0—Disable. • 1—Enable.	N/A
TimerConnectRetry	Timer connect retry in seconds		Unsigned integer. Value range: 1 to 65535	N/A
BestRouteEncapType	Specify the SRv6 (MPLS) encapsulated route as the best route.		Enumeration. • 0—Disable. • 1—SRv6. • 2—MPLS. • 3—SRv6 preferred. • 4—MPLS preferred.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BestRouteNexthopType	Perform optimal route selection based on the next hop type.		Enumeration. • 0—Disable. • 1—Tunnel. • 2—IP.	N/A
BestRouteNexthopResolved	Configure next hop type-based optimal route selection.		Enumeration. • 0—Disable. • 1—Tunnel. • 2—None.	N/A
MedPlusIgp	Use the sum of the calculated MED and IGP metric values to perform optimal route selection.	Data Structure	Include: • IgpMultiplier. • MedMultiplier.	N/A
IgpMultiplier	Specify an IGP metric multiplier.		Unsigned integer. Value range: 1 to 1000	N/A
MedMultiplier	Specify an MED value multiplier.		Unsigned integer. Value range: 1 to 1000	N/A

BGP/CfgSessionGroups

This table contains configure information of BGP session group.

XML structure

Table description

Item	Description
Feature name	BGP
Table name	`CfgSessionGroups`
Table type	Multi-instance table
Row name	`CfgSessionGroup`
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
Type	Internal or External		Enumeration. • **0**—Internal. • **1—External.**	N/A
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	• If you configure this column, the UpdateInterval Intelligent column will restore the default. • The UpdateInterval and UpdateInterval Intelligent can not be configured together.
PasswordType	Password type.		**Enumeration.** • **1—Ciphertext.** • **2—Plaintext.**	The password can only be displayed in ciper text.
BfdType	Bfd type		**Enumeration.** • 0—default type • 1—single-hop • 2—multi-hop • 3—echo • 4—compatible • 5—single-hop compatible • 6—multi-hop compatible	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different situations. Some versions not support. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
EbgpMaxHop	EBGP multihop		**Unsigned integer.** **Value range:** **1 to 255**	N/A
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer group relationship establishment		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dscp	Set the DSCP priority of BGP packets		**Unsigned integer.** **Value range:** **0 to 63**	N/A
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Ipv4SourceAddr	IPv4 Source Address		IPv4 address string .	Example: 1.1.1.1.
Ipv6SourceAddr	IPv6 Source Address		IPv6 address string.	Example: 1::1.
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		**Unsigned integer.** **Value range:** **0 to 21845**	N/A
HoldTime	Holdtime in seconds		**Unsigned integer.** **Value range:** **0 , 3 to 65535**	N/A
TtlSecurity	Enable BGP GTSM fuction for a peer or peer group		**Unsigned integer.** **Value range:** **1 to 254**	N/A
CapSupAs4	Enable 4-byte AS number suppression function		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CapOrfNonStandard	Enable non-standard ORF capability for BGP neighbor negotiation		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapConventional	Disable the BGP route refresh,multiprotocol extension, and 4-byte AS number function of the local router and the specified peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapExtendedMsg	Enable the BGP extended message capability		Enumeration. • Disable Enable.	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.
ClusterId	Configure the cluster ID for a peer or peer group		Unsigned integer. Value range: 1 to 4294967295. IPv4 address string	N/A
MplsLocalIfnetDisable	Disable MPLS local IFNET tunnel establishment to the specified peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
FlapDampen	Configure the peer flap dampening feature		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SendBufferSize	Set the buffer size to send updates to peers		Unsigned integer. Value range: 2048 to 327680.	N/A
AdvertiseRouteUpdates	BGP Advertise updates	Data structure	Members include: • AdvertiseInterval • AdvertiseCount	N/A
AdvertiseInterval	Set the interval to send updates to peers		Unsigned integer. Value range: 100 to 10000.	N/A
AdvertiseCount	Set the count to send updates to peers		Unsigned integer. Value range: 1 to 40960.	N/A
EgressEngineering	Configure egress peer engineering		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EgressEngineeringType	BGP peering segment type		Enumeration. • 0—Node. • 1—Adjacency. • 2—Set. • 3—Node-Adjacency.	N/A
EgressEngineeringPolicyName	Routing policy specified for the EPE peer set.		String. Length: 1 to 63 characters.	N/A
EgressEngineeringStaticLabel	SID label for the EPE peer set		N/A	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
EgressEngineeringLinkDown	Configure EPE SID label link down type		Enumeration. • 0—Disable.(Default). • 1—Relate BFD state.	N/A
PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A
EPESRv6	Configure EPESRv6		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BfdParameters	Configure BFD parameters	Data structure	Members include: • DetectMultiplier • MinReceiveInterval. MinTransmitInterval	N/A
DetectMultiplier	Detection time multiplier		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinReceiveInterval	Minimum receiving interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
MinTransmitInterval	Minimum transmitting interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
TcpMss	Set the maximum TCP segment size		Unsigned integer. Value range: 176 to 4096.	N/A
IgnoreEbgpNextHopCheck	Ignore the next hops check of routes received from ebgp peers		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpdateIntervalIntelligent	Whether to control the route update interval with intelligent timer		Enumeration. • 0—Disable. • 1—Enable.	• If you configure this column, the UpdateInterval column will restore the default. • The UpdateInterval and UpdateInterval Intelligent can not be configured together.
Tracking	Fast detect the unreachable destined for the peer and reset the session		Enumeration. • 0—Disable. • 1—Enable.	N/A
TrackingDelayTime	Specify the delay to reset the session, in seconds		Unsigned integer. Value range: 0 to 65535	The object does not exist if Tracking is not configured. If you configure Tracking but not TrackingDelayTime, the value for TrackingDelayTime is 0.
MonitorLinkGroup	Configure a monitor link group to monitor the		Unsigned integer. Value range:	The value range for this column varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
	state of the specified BGP peer session		1 to 65535.	
LocalGREnable	Configure local Graceful Restart (GR) capability		Enumeration. • Disable. • Enable.	N/A
LocalGRTimerRestart	Configure the restart timer for local GR		Unsigned integer. Value range: 3 to 86400	N/A
LocalGRTimerWaitForRib	Configure the wait-for-rib timer for local GR		Unsigned integer. Value range: 3 to 3000	N/A

BGP/CfgSessions

Table description

Item	Description
Feature name	BGP
Table name	`CfgSessions`
Table type	Multi-instance table
Row name	`CfgSession`
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
GroupName	Group Name		String. Length: 1 to 47 characters.	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	• If you configure this column, the UpdateIntervalIntelligent column will restore the default. • The UpdateInterval and UpdateIntervalIntelligent can not be configured together.
PasswordType	Password type.		**Enumeration.** • **1—Ciphertext.** • **2—Plaintext.**	The password can only be displayed in ciper text.

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdType	Bfd type		**Enumeration.** • **0**—default type • **1**—single-hop • **2**—multi-hop • **3**—echo • 4—compatible • 5—single-hop compatible • 6—multi-hop compatible	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different situations. Some versions not support. For relevant information, see the XSD document of your product.
EbgpMaxHop	EBGP multihop		**Unsigned integer.** **Value range:** **1 to 255**	N/A
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable • 1—Enable.	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer relationship establishment		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not

Column name	Column description	Column type	Data type and restrictions	Remarks
				PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. • 0—Disable. • 1—Enable.	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.
Dscp	Set the DSCP priority of BGP packets		**Unsigned integer.** **Value range:** **0 to 63**	N/A
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
SourceAddress	Source Address		**IPv4 address string or IPv6 address string.**	Example: 1.1.1.1 or 1::1.
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		**Unsigned integer.** **Value range:** **0 to 21845**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HoldTime	Holdtime in seconds		**Unsigned integer.** **Value range:** **0 ,3 to 65535**	N/A
TtlSecurity	Enable BGP GTSM fuction for a peer or peer group		**Unsigned integer.** **Value range:** **1 to 254**	N/A
CapSupAs4	Enable 4-byte AS number suppression function		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapOrfNonStandard	Enable non-standard ORF capability for BGP neighbor negotiation		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapConventional	Disable the BGP route refresh,multiprotocol extension, and 4-byte AS number function of the local router and the specified peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
CapExtendedMsg	Enable the BGP extended message capability		Enumeration. • Disable. Enable.	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.
ClusterId	Configure the cluster ID for a peer or peer group		Unsigned integer. Value range: 1 to 4294967295. IPv4 address string	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MplsLocalIfnetDisable	Disable MPLS local IFNET tunnel establishment to the specified peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
FlapDampen	Configure the peer flap dampening feature		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
SendBufferSize	Set the buffer size to send updates to peers		Unsigned integer. Value range: 2048 to 327680.	N/A
AdvertiseRouteUpdates	BGP Advertise updates	Data structure	Members include: • AdvertiseInterval • AdvertiseCount	N/A
AdvertiseInterval	Set the interval to send updates to peers		Unsigned integer. Value range: 100 to 10000.	N/A
AdvertiseCount	Set the count to send updates to peers		Unsigned integer. Value range: 1 to 40960.	N/A
EgressEngineering	Configure egress peer engineering		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
EgressEngineeringType	BGP peering segment type		Enumeration. • 0—Node. • 1—Adjacency. • 2—Set. • 3—Node-Adjacency.	N/A
EgressEngineeringPolicyName	Routing policy specified for the EPE peer set.		String. Length: 1 to 63 characters.	N/A
EgressEngineeringStaticLabel	SID label for the EPE peer set		N/A	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment
EgressEngineeringLinkDown	EPE SID linkdown type		Enumeration. • 0—Disable.(default). • 1—Relate BFD state.	N/A
PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EPESRv6	Configure EPESRv6		Enumeration. • 0—Disable • 1—Enable.	N/A
EPESRv6Locator	Specify an SID locator		String. Length: 1 to 31 characters.	N/A
EPESRv6AutoSidMode	Auto Sid Mode.	N/A	Enumeration: • **1**—auto-normal. • **2**—auto-sid-coc32. • **3**—auto-sid-cocboth-coc32. • **4**—auto-sid-cocboth-coc32-none.	EPESRv6Locator is configured, then EPESRv6AutoSidMode can be configured
EPESRv6StaticSID	Psp and NoPspUsp	Data structure	Members include: • Psp • NoPspUsp. • PspUspUsdStaticSidMode.	N/A
Psp	End.X SID with PSP		String IPv6 address	N/A
NoPspUsp	End.X SID (-NO-FLAVOR)		String IPv6 address	N/A
PspUspUsd	End.X SID (PSP, USP,USD)		String IPv6 address	N/A
StaticSidMode	Static Sid Mode.	N/A	Enumeration: • **1**—normal. • **2**—coc32. • **3**—cocboth-coc32. • **4**—cocboth-coc-none.	Configured StaticSidMode, Psp or NoPspUsp must be configured
EPESRv6PeerSet	EPE peer set name		String. Length: 1 to 63 characters.	N/A
BfdParameters	Configure BFD parameters	Data structure	Members include: • DetectMultiplier • MinReceiveInterval. • MinTransmitInterval	N/A
DetectMultiplier	Detection time multiplier		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum receiving interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinTransmitInterval	Minimum transmitting interval of BFD control packets		Unsigned integer. Value range: 1 to 4294967295.	The value range for this argument varies by device model.
PathMtuDiscovery	TCP path MTU discovery configuration		Enumeration. • **0**—Disable. • 1—Enable.	N/A
TcpMss	Set the maximum TCP segment size		Unsigned integer. Value range: 176 to 4096.	N/A
IgnoreEbgpNextHopCheck	Ignore the next hops check of routes received from ebgp peers		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
IgnoreFirstAs	Ignore the first AS		Enumeration. • 0—Disable. • 1—Enable.	N/A
Tracking	Fast detect the unreachable destined for the peer and reset the session		Enumeration. • 0—Disable. • 1—Enable.	N/A
TrackingDelayTime	Specify the delay to reset the session, in seconds		Unsigned integer. Value range: 0 to 65535	The object does not exist if Tracking is not configured. If you configure Tracking but not TrackingDelayTime, the value for TrackingDelayTime is 0.
MonitorLinkGroup	Configure a monitor link group to monitor the state of the specified BGP peer session		Unsigned integer. Value range: 1 to 65535.	• The value range for this column varies by device model.
UpdateIntervalIntelligent	Whether to control the route update interval with intelligent timer		Enumeration. • 0—Disable. • 1—Enable.	• If you configure this column, the UpdateInterval column will restore the default. • The UpdateInterval and UpdateIntervalIntelligent can

Column name	Column description	Column type	Data type and restrictions	Remarks
				not be configured together.
LocalGREnable	Configure local Graceful Restart (GR) capability		Enumeration. • Disable. • Enable.	• N/A
LocalGRTimerRestart	Configure the restart timer for local GR		Unsigned integer. Value range: 3 to 86400	• Default: 150
LocalGRTimerWaitForRib	Configure the wait-for-rib timer for local GR		Unsigned integer. Value range: 3 to 3000	• Default: 600

Table description

Item	Description
Feature name	BGP
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
AF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
State	Session state		Enumeration: • **0—Idle** • **1—Connect** • **2—Active** • **3—Opensent** • **4—Openconfirm** • **5—Established**	Established state means that the BGP session is established, but whether the address families are negociated is unknown.
Version	BGP version		Unsigned integer. Value range:4	N/A
LocalRouterID	Local router ID		String,IPv4 address string	N/A
Type	Internal or External		Enumeration. • **0**—Internal. • **1—External.**	N/A
RemoteRouterID	Router ID of the peer		String,IPv4 address string	N/A
RcvdMsgCnt	Number of messages received		Unsigned integer. Value range: 0 to 4294967295	N/A
SentMsgCnt	Number of messages sent		Unsigned integer. Value range: 0 to 4294967295	N/A
Time	Lasting time of the current BGP session state		Unsigned integer. Value range: 0 to 4294967295. Unit is second.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicallyPeer	Whether the peer is a dynamic peer		Boolean: • **true**. • **false.**	N/A
CurrentEvent	Current event of the BGP session between the local router and the peer		Enumeration: • **0—Start** • **1—Stop** • **2—CRTimerExpired** • **3—KATimerExpired** • **4—HoldTimerExpired** • **5—CR ACKED** • **6—ConnConfirmed** • **7—ConnFailed** • **8—RecvOpen** • **9—HeadErr** • **10—OpenMsgErr** • **11—RecvVerNotification** • **12—RecvNotification** • **13—RecvKeepalive** • **14—RecvUpdate** • **15—UpdateMsgErr** • **16—RecvRouteRefresh** • **17—Unknown**	N/A
LastState	Previous state of the BGP session		Enumeration: • **0—Idle** • **1—Connect** • **2—Active** • **3—Opensent** • **4—Openconfirm** • **5—Established**	Established state means that the BGP session is established, but whether the address families are negociated is unknown.
LocalPort	Local TCP port numbers of the local router and its peer		Unsigned integer. Value range: 179, 1025 to 65535	When the address family is not enabled, the value of locate port is 0
RemotePort	Remote TCP port numbers of the local router and its peer		Unsigned integer. Value range: 179, 1025 to 65535	When the address family is not enabled, the value of remote port is 0
ConfiguredHoldTime	Configured holdtime in seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
ConfiguredKeepaliveTime	Configured keepalive time in seconds		Unsigned integer. Value range: 0 to 21845	N/A
ReceivedHoldTime	Received holdtime in		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	seconds		Value range: 0, or 3 to 65535	
NegotiatedHoldTime	Negotiated holdtime in seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
NegotiatedKeepaliveTime	Negotiated keepalive time in seconds		Unsigned integer. Value range: 0 to 21845	N/A
MultiProtocolExtensionCapability	Support for multiprotocol extension capability		Boolean: • **true.** • **false.**	N/A
RouteRefreshCapability	Support for route refresh capability		Boolean: • **true.** • **false.**	N/A
GracefulRestartCapability	Support for GR capability		Boolean: • **true.** • **false.**	N/A
AS4Capability	Support for 4-byte AS capability		Boolean: • **true.** • **false.**	N/A
AddressfamilyCapability	Support for address family capability	Data Structure	Include: • Family • Advertised • Received	N/A
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	
Advertised	Advertised address family identifier		Boolean: • **true.** • **false.**	N/A
Received	Received address family identifier		Boolean: • **true.** • **false.**	N/A
InQUpdates	Number of received updates to be processed.		Unsigned integer. Value range: 0 to 4294967295	N/A
OutQUpdates	Number of updates to be sent to the peer.		Unsigned integer. Value range: 0 to 4294967295	N/A
UpdateInterval	Route update interval		Unsigned integer. Value range: • 0 to 600	N/A

Table description

Item	Description
Feature name	BGP
Table name	Family
Table type	Multi-instance table
Row name	Family
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Type	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated • 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	N/A
Preference	Preference for BGP Routes	Data Structure	Include: • Ebgp • Ibgp • Local	N/A
Ebgp	Preference for eBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Ibgp	Preference for iBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Local	Preference for Local Routes		Unsigned integer. Value range: 1 to 255	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BalanceAsPathNeglect	Ignore the AS_PATH attribute when implementing load balancing		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
BalanceAsPathRelax	Load balancing for routes that have different AS_PATH attributes of the same length		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
Balance	number of BGP ECMP routes for load balancing	Data Structure	Include: • MaxBalance • MaxEBGPBalance • MaxIBGPBalance • MaxEIBGPBalance	N/A
MaxBalance	maximum number of BGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	N/A
BalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
MaxEBGPBalance	Maximum number of EBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
EBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
MaxIBGPBalance	Maximum number of IBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
IBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEIBGPBalance	Maximum number of ECMP routes between EBGP and IBGP routes for load balancing		Unsigned integer. Value range: 1 to 512	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
EIBGPBalanceNexthop	Specify next hop of ECMP routes.		**Enumeration.** • **0—ECMP next hop not specified.(default)** • **1—ECMP next hop local.** • **2—ECMP next hop unchanged**	N/A
PolicyVpnTarget	Filter VPN routes with VPN-Target attribute		Enumeration: • 0—Disable. • 1—Enable.	N/A
ReflectBtwClients	Route reflection between clients		Enumeration: • 0—Disable. • 1—Enable.	N/A
ReflectorClusterID	cluster ID of the route reflector		String,IPv4 address string or Unsigned integer. Value range: 1 to 4294967295	N/A
RrFilter	Number or name of the extended community list in the route filtering policy specified for the route reflector	N/A	RR-filter number: Unsigned integer. Value range: 1 to 199. RR-filter name: String. Length: 1 to 63 characters.	Only IBGP routes whose extended community attribute matches the specified extended community list are reflected.
DefaultRtImport	Import default route		Enumeration: • 0—Disable • 1—Enable.	N/A
DomainDistinguisher	A globally unique identifier for LS domain		String. Length: 9 to 26 characters. The format is AS<1-4294967295>:routerID <X.X.X.X>.	Example: 100:13.14.23.22
PIC	Enable Prefix Independent Convergence		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
VpnCrossMultipath	Redistribute multiple routes with the same prefix and RD to the VPN routing table		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RouteSelectDelay	Optimal route calculation delay time		Unsigned integer. Value range: 0 to 600 seconds.	N/A
AdvertiseEvpnRoute	Advertise BGP EVPN routes through the current address family	Data Structure	Include: • AdvertiseEvpnEnable • AdvertiseEvpnPolicy • AdvertiseEvpnReplaceRt	N/A
AdvertiseEvpnEnable	Enable advertisement of BGP EVPN routes through the current address family		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
AdvertiseEvpnPolicy	Filter BGP EVPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseEvpnReplaceRt	Replace the route targets of BGP EVPN routes with those of VPN instances		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
AdvertiseL2vpnEvpnRoute	Advertise BGP EVPN route to the local site		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
AdvertiseL3vpnRoute	Advertise BGP L3VPN routes through the BGP EVPN address family	Data Structure	Include: • AdvertiseL3vpnEnable • AdvertiseL3vpnPolicy • AdvertiseL3vpnReplaceRt	N/A
AdvertiseL3vpnEnable	Enable advertise BGP L3VPN routes through the BGP EVPN address family		**Enumeration:** • **0—Disable** • **1—Enable.**	N/A
AdvertiseL3vpnPolicy	Filter BGP L3VPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseL3	Replace the		**Enumeration:**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
vpnReplaceRt	route targets of BGP L3VPN routes with those of EVPN instances		• **0—Disable.** • **1—Enable.**	
ImportEvpnMacIp	Redistribute MAC/IP advertisement routes		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
MappingVniRmVpnTarget	Remove route targets of VPN instances from EVPN routes when mapping VXLANs		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
DefaultLocalPreference	Configure default local preference		Unsigned integer. Value range: 0 to 4294967295	The default local preference is supported only by IPv4 unicast, IPv4 multicast, IPv4 labeled-unicast,IPv6 unicast, and IPv6 multicast routes.
AddPathsSelectBestNum	Set the maximum number of Add-Path optimal routes that can be advertised to all peers.		Unsigned integer. Value range: 1 to 64	N/A
DefaultMedValue	Configure default MED value.		Unsigned integer. Value range: 0 to 4294967295	N/A
FrrRtPolicyName	Configure the route policy name of FRR.		String. Length: 1 to 63 characters.	N/A
MvpnAdvRtImport	Enable MVPN advertisement RT import		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
UpdateFirstRtPolicyName	Routing policy used to match routes whose withdrawal messages are sent prior to other routes.		String. Length: 1 to 63 characters.	N/A
AdvRibActive	Enable to		**Enumeration:**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	advertise the best routes of IP routing table..		• **0—Disable.** (default) • **1—Enable.**	
BestRtOriAsValidation	Configure BGP RPKI authentication results to participate in route optimization.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
BestRtAllowInvalid	Allow routes with Invalid authentication results to participate in route optimization		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	BestRtAllowInvalid must be set with BestRtOriAsValidation.
NestingVpn	Enable nested VPN function		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
SummaryAutomatic	Automatic route summarization for redistributed IGP subnet routes		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
ImportRouteMultipath	Redistribute IGP multipath routes with the same prefix to the BGP routing table		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
ImportRouteSRPolicy	Import routes form SR Policy.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
AdvEbgpEnable	Advertise ebgp enable		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A
RouterIdFilter	Router-id filter		**Enumeration:** • **0—Disable.** (default) • **1—Enable.** • **2—No distribution srpolicy**	N/A
FilterPolicyImport	Filter received BGP routes	Data Structure	Include: • AclNumImp • AclNameImp • PrefixListNameImp	N/A
AclNumImp	Filter BGP routes by an ACL number.		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			address families	

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNameImp	Filter BGP routes by an ACL name.		String. Length: 1 to 63 characters.	ACL name (start with[a-z,A-Z]).Can't use "all" as ACL name.
PrefixListNameImp	Filter BGP routes by a prefix-list name.		String. Length: 1 to 63 characters.	N/A
LogRouteFlap	Logging for BGP route flapping	Data Structure	Include: • MonitorTime • MonitorCount • LogCountLimit • RtPolicyName	N/A
MonitorTime	Monitoring interval for route flapping		Unsigned integer. Value range: 1 to 600	Units are minutes.
MonitorCount	Number of route flaps for triggering a log		Unsigned integer. Value range: 2 to 8	N/A
LogCountLimit	Maximum number of logs allowed to be generated in a minute		Unsigned integer. Value range: 1 to 600	N/A
RtPolicyName	Filter BGP routes to monitor the route flaps.		String. Length: 1 to 63 characters.	N/A
Dampening	Configure dampening.	Data Structure	Include: • DampeningEnable • HalfLifeReach • HalfLifeUnReach • Reuse • Suppress • Ceiling • DampRtPolicyName	N/A
DampeningEnable	Enable dampening.		**Enumeration:** • **0—Disable.** (default) • **1—Enable.**	N/A.
HalfLifeReach	Specify the half-life of the reachable route that oscillates.		Unsigned integer. Value range: 1 to 45	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
HalfLifeUnReach	Specify the half-life of an unreachable route that oscillates.		Unsigned integer. Value range: 1 to 45	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.

Column name	Column description	Column type	Data type and restrictions	Remarks
Reuse	Specify the route reuse threshold.		Unsigned integer. Value range: 1 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
Suppress	Specify the route suppression threshold.		Unsigned integer. Value range: 1 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them..
Ceiling	Specify the upper limit of penalty value.		Unsigned integer. Value range: 1001 to 20000	You must set all of HalfLifeReach, HalfLifeUnReach, Reuse, Suppress and Ceiling, or set none of them.
DampRtPolicyName	Specify the route policy name that routes are routed to be attenuated by.		String. Length: 1 to 63 characters.	N/A
RedirectToTunnel	Configure redirect IP relay tunnel capability		String. Length: 0 to 40 characters.	The default local preference is supported only by IPv4 flowspec, IPv6 flowspec.
RoutingtableBgpRibOnly	Control BGP route adding to the IP routing table.	Data Structure	Include: • RoutingtableBgpRibOnlyEnable • RoutingtableBgpRibOnlyPolicy	N/A
RoutingtableBgpRibOnlyEnable	Do not add BGP routes matching the specified routing policy to the IP routing table.		**Enumeration:** • **0—Disable.(default)** • **1—Enable.** • **2—Enable all bgp routes.**	N/A
RoutingtableBgpRibOnlyPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	An empty string indicates that no BGP routes will be added to the IP routing table.
UsermoveFastupdate	Enable fast route update upon user migration.		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
ForwardConverLearning	Generate FIB entries of host routes upon forwarding BGP	Data Structure	Include: • ForwardConverLearningEnable • ForwardConverLearningP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	public network routes.		olicy	

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverLearningEnable	Enable generate FIB entries of host routes upon forwarding BGP public network routes.		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
ForwardConverLearningPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	N/A
ApplyTunnelSelector	Specify a tunnel selector		String. Length: 1 to 40 characters.	N/A
SegmentRoutingMpls	Enable MPLS SR		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
NexthopRecursiveLookupDelay	Set the delay time for responding to next hop recursion result changes		Unsigned integer. Value range: 1 to 240	N/A
SegmentRouting	SR configuration	Data Structure	Include: Ipv6SidRouteRecursion Ipv6Locator	N/A
Ipv6SidRouteRecursion	Perform private network route recursion based on SIDs		Enumeration. • 0—Disable.(default) • 1—Enable. • 2–Traffic engineering forwarding. • 3–Traffic engineering and best effort traffic. • 4–Traffic engineering and best effort backup. • 5—Traffic engineering and best effort multilevel backup • 6—Traffic engineering and best effort multilevel backup local-prefer	N/A
Ipv6Locator	Specify a SID locator		String. Length: 9 to 26 characters	N/A
Ipv6LocatorAnycast	Specify a SID locator for anycast		String. Length: 1 to 31 characters	N/A
Ipv6AutoSidDisable	Cancel SID automatic allocation ability		Enumeration. • 0—Disable.(Default) 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6SidAllocMode	Apply a SID for all nexthop		Enumeration. • 0—per-vrf（default） 1—per-ce	N/A
ApplyLabelPopgo	Forward labeled packets received from the peer through matching output interfaces in the ILM table.		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
SegmentRoutingEvpn	SR EVPN configuration		Include: Ipv6SidRouteRecursionEvpn Ipv6LocatorEvpn	N/A
Ipv6SidRouteRecursionEvpn	EVPN forwarding type		• Enumeration • 0—Disable. • 1 –Best effort forwarding • 2 – Traffic engineering forwarding • 3 –Traffic engineering and best effort traffic • 4–Traffic engineering and best effort backup. • 5—Traffic engineering and best effort multilevel backup • 6—Traffic engineering and best effort multilevel backup local-prefer	N/A
Ipv6LocatorEvpn	Specify an EVPN SID locator		String. Length: 1 to 31 characters.	N/A
Ipv6LocatorEvpnAnycast	Specify an EVPN SID locator for anycast		String. Length: 1 to 31 characters.	N/A
Ipv6AutoSidDisableEvpn	Cancel SID automatic allocation ability		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
Ipv6SidAllocModeEvpn	Apply a SID for all nexthop		Enumeration. • 0—per-vrf（default） • 1—per-ce	N/A
AdvRtReoriginate	Advertise the redist VRF routes to the VPNV4/VPNV6/EVPN peers.		Enumeration • 0—Disable. (Default) • 1 –Enable • 2—Replace the RT.	N/A
AdvRtReoriginatePolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	AdvRtReoriginatePolicy must be

Column name	Column description	Column type	Data type and restrictions	Remarks
				set with AdvRtReoriginate.
SRv6MplsInterwork	Configure SRv6 and MPLS interwordking		Enumeration • 0—Disable. • 1 –Enable	N/A
NexthopEvpnDrniGp	Specify the virtual VTEP address of EVPN distributed relay as the next hop address.		**Enumeration:** • 0—Disable. • 1—Enable.	N/A
NexthopEvpnMlagGp	Specify the virtual VTEP address of EVPN distributed relay as the next hop address.		**Enumeration:** • **disable.** • **enable.**	N/A
NexthopRecursiveLongestMatch	Select the route with the longest matching prefix for next hop recursive lookup.	Data Structure	Include: • NexthopRecursiveLongestMatchEnable • NexthopRecursiveLongestMatchPolicy	N/A
NexthopRecursiveLongestMatchEnable	Enable selection of the route with the longest matching prefix for next hop recursive lookup.		Enumeration: • 0—Disable. • 1—Enable.	N/A
NexthopRecursiveLongestMatchPolicy	Specify a routing policy.		String. Length: 1 to 63 characters.	N/A
NexthopOnlyGlobalAddress	Nexthop only global address.		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
ReflectChangePathAttribute	Enable the route reflector to change the path attributes of outgoing routes.		Enumeration: • 0—Disable. • 1—Enable.	N/A
RouteMatchDestination	Enable flowspec destination match route prefix policy		Enumeration: • 0—Disable. • 1—Enable.	N/A
RouteValidationMode	Enable simplify flowspec destination validity check by as number		Enumeration: • 0—Check by route.(default) • 1—Check by AS_PATH	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerAsCheckEnable	Enable checking peer of AS-number while advertising		Enumeration: • 0—Disable. (default) • 1—Enable.	N/A
BalanceIGPMetricIgnore	Ignore the IGP Metric of the next hop when selecting load balancing routes.		**Enumeration:** • **0—Disable.** • **1—Enable.**	N/A
IGPMetricInherit	Inherit the IGP Metric of the next hop when generate vpn routes from evpn.		**Enumeration:** • 0—Disable. • 1—Enable.	N/A
BierEnable	Enable BIER function for BGP		Enumeration: • 0—Disable.(default) • 1—Enable.	N/A
BierBfrPrefixProxy	Enable BIER routes proxy		Enumeration: • 0—Disable.(default) • 1—Enable.	N/A
ValidationCheckEnable	Enable Validation Check		Enumeration: • 0—Disable. • 1—Enable.	N/A
BestRouteIPv6Nexthop	Let the route with IPv6 nexthop be the best route.		Enumeration: • 0—Disable. • 1—Enable.	N/A
UcastRouteRecursiveTunnel	Non-label public routing recursive lookup LSP tunnel.	Data Structure		N/A
RecursiveEnable	Allow non-label public routing recursive lookup LSP tunnel.		Enumeration: • 0—Disable. • 1—Enable.	N/A
PrefixList	Specify a IP prefix list name.		String. Length: 1 to 63 characters.	This column cannot be specified when the value for the RecursiveEnable column is Disable.
TunnelPolicy	Specify a Tunnel policy name.		String. Length: 1 to 126 characters.	This column cannot be specified when the value for the RecursiveEnable column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				Disable.
InofRole	Inof role		Enumeration. • 0—Disable.(Default) • 1—Reflect-client. • 2—Reflector.	N/A
SendLowPriorityPeerupDelayTime	Modify priority of routes to lowest-priority when the neighbors change from down to up		Unsigned integer. Value range: 1 to 864000	The value 0 indicates that lowest-priority routes is sent always. SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime and cannot be configured at the same time.
SendLowPriorityOnStartupTime	Modify priority of routes to lowest-priority when the device is restarted		Unsigned integer. Value range: 1 to 3600	The value 0 indicates that lowest-priority routes is sent always. SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime cannot be configured at the same time.
NexthopRecursiveDefRt	Configure default-route lookup for next hop iteration	Data Structure	Include: • Ignore • IgnoreRtPolicyName	N/A
Ignore	Ignore the default route during next hop iteration		Enumeration: • 0—Allow next hop iteration to the default route. (Default) • 1—Ignore the default route during next hop iteration.	N/A
IgnoreRtPolicyName	Specify a routing policy.		String. Length: 1 to 63 characters.	This column cannot be specified when the Ignore column is the default value.
NexthopRecursiveTunnelBackup	Perform nexthop recursive lookup tunnel		Enumeration. 0—Disable 1—Tunnel backup.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	backup process		2—Tunnel backup EVPN. 3---Tunnel backup and tunnel backup EVPN	
NexthopRecursiveRtPolicy	Specify a Route-Policy for nexthop recursion		String. Length: 1 to 63 characters.	N/A
NexthopEvpnSDWANColor	Control nexthop rely for evpn routes of sdwan packet type		Enumeration: • 0—Disable.(default) • 1—Enable	N/A
RouteSelectSuppressOnPeerUP	Delay optimal route calculation when the peer state changes from DOWN to UP		Unsigned integer. Value range: 100 to 600000 milliseconds.	N/A

BGP/Familys/AdvertiseLocators

This table contains BGP locator advertisement information.

XML structure

Please refer to the XML structure of BGP/Familys

Table description

Item	Description
Feature name	BGP
Table name	AdvertiseLocators
Table type	Multi-instance table
Row name	AdvertiseLocator
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocatorName	Name of the locator to be advertised	Index	String. Length: 1 to 31 characters.	N/A
RoutePolicy	Name of the routing policy		String. Length: 1 to 63 characters.	N/A

BGP/Networks

This table contains BGP network information.

XML structure

```
<BGP>
   <Networks>
    <Network>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <IpAddress></IpAddress>
      <Mask></Mask>
      <RoutePolicy></RoutePolicy>
    </Network>
  </Networks>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Aggregate	Index	Enumeration: • **1**—IPv4 Unicast • **2**—IPv4 Multicast • 5—IPv6 Unicast • 6—IPv6 Multicast • 23—IPv4 Labeled-unicast	N/A
IpAddress	Address of Network	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of Network address	Index	Unsigned integer. Value range: 0 to 128	For IPv4,this is 0 to 32.For IPv6, this is 0 to 128.
RoutePolicy	Name of the routing policy		String. Length: 1 to 63 characters.	N/A

BGP/Aggregates

This table contains BGP aggregate information.

XML structure

```
<BGP>
  <Aggregates>
     <Aggregate>

      <AsSet></AsSet>
      <AttributePolicy></AttributePolicy>
      <OriginPolicy></OriginPolicy>
      <SuppressPolicy></SuppressPolicy>
```

```
    </Aggregate>
  </Aggregates>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	Aggregates
Table type	Multi-instance table
Row name	Aggregate
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Aggregate	Index	Enumeration: • **1**—IPv4 Unicast • **2**—IPv4 Multicast • 5—IPv6 Unicast • 6—IPv6 Multicast	N/A
IpAddress	Address of aggregate	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of aggregate address	Index	Unsigned integer. Value range: 0 to 128.	For IPv4,this is 0 to 32.For IPv6, this is 0 to 128.
DetailSuppressed	Detail Suppressed		Enumeration. • **0**—Disable. • **1—Enable.**	N/A
AsSet	Creating a summary route with AS set path		Enumeration. • 0—Disable. • 1—Enable.	N/A
AttributePolicy	Routing policy used to set the attributes of the summary route		String. Length: 1 to 63 characters.	N/A
OriginPolicy	Routing policy used to filter original specific routes to be summarized		String. Length: 1 to 63 characters.	N/A
SuppressPolicy	Routing policy used to filter specific routes to be advertised		String. Length: 1 to 63 characters.	N/A

Table description

Item	Description
Feature name	BGP
Table name	NeighborGroups
Table type	Multi-instance table
Row name	NeighborGroup
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of NeighborGroup	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT. • 4—VPNv4. • 5—IPv6 Unicast. • 6—IPv6 Multicast. • 7—VPNv6. • 8—L2VPN. • 9—L2VPN EVPN. • 10—Link-State. • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec. • 14—VPNv4 Flowspec. • 15—IPv6 Flowspec. • 16—VPNv6 Flowspec. • 17—Dedicated. • 18—SR Policy. • 19—SRv6 SRPolicy. • 20—IPv6 mvpn. • 21—Link-State VPN. • 22—IPv4 tnl-encap-ext. • 23—IPv4 Labeled-unicast • 24—Inof	N/A
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Import Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	reflector and specify a peer or peer group as a client		• 0—Disable. • 1—Enable.	
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflict with next-hop-invariable
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflict with next-hop-invariable.
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. • 0—Disable. • 1—Enable. • 2—DCI Enable.	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable. • 2--- Replace the RT. • 3—Stitch to L3vpn.	To re-originate EVPN IP prefix routes to VPNv4/VPNv6 routes without modifying the RT and RD, set the value to 3.
ReOriginatedMac	Re-originate EVPN IP prefix advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT.	N/A
ReOriginatedMacOnly	Re-originate EVPN MAC routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable(default). • 1—Enable. • 2—Replace the RT.	N/A
ReOriginatedImet	Re-originate EVPN inclusive multicast Ethernet tag routes received from the peers		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	by modifying the L3 VXLAN ID and RD			
ReOriginated Smet	Re-originate EVPN Smet advertisement routes received from the peers by modifying the RT and RD		**Enumeration.** • **0-Disable.** • **1-Enable.** • **2-Replace the RT.**	N/A
ReOriginated Spmsi	Re-originate EVPN S-PMSI advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		**Enumeration.** • **0-Disable.** • **1-Enable.** • **2-Replace the RT.**	N/A
AdvOriginalRoute	Advertise original EVPN routes to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
SuppressReOrigPrefix	Suppress advertisement of re-originated EVPN IP prefix advertisement routes to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
SuppressReOrigMac	Suppress advertisement of re-originated EVPN MAC/IP advertisement routes to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
SuppressReOrigImet	Suppress advertisement of re-originated EVPN inclusive multicast Ethernet tag routes to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SuppressOriginalAD	Suppress advertisement of original EVPN ethernet auto-discovery routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalImet	Suppress advertisement of original EVPN inclusive multicast ethernet tag routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
SuppressOriginalEs	Suppress advertisement of original EVPN ethernet segment routes to the peers		**Enumeration.** • **0—Disable(default).** • **1—Enable.**	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 or VPNv6 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsRcv	Specify additional path receiving ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsSend	Specify additional path sending ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvAddPathsBest	Specify the maximum number of Add-Path optimal routes that can be advertised to a peer or peer group		Unsigned integer. Value range: 2 to 64. Default is 1	N/A
RouteAdv	Set default route info to peer or peer group	Data Structure	Include: • DefRouteAdv • RoutePlcy • ConditionalPolicy	N/A
DefRouteAdv	Specify default route advertisement info to peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
RoutePlcy	Specify a route policy		String. Length: 1 to 63 characters.	N/A
ConditionalPolicy	Specify a routing policy to control the default route advertisement		String. Length: 1 to 63 characters.	N/A
KeepAllRoutes	Save original route update info from all peer or peer groups		Enumeration. • 0—Disable. • 1—Enable.	N/A
LblRouteCapability	Specify labeled route exchange ability for peer or peer groups		Enumeration. • 0—Disable. • 1—Enable.	N/A
PrefixListExp	Specify a prefix list to filter routes		String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	advertised to a peer or peer group			
PrefixListImp	Specify a prefix list to filter routes received from a peer or peer group		String. Length: 1 to 63 characters.	N/A
PublicAsOnly	Remove private AS numbers in BGP updates sent to an EBGP peer or peer group		Enumeration. • 0—Disable. • 1—Normal. • 2—Force. • 3—ForceReplace. • 4—ForceIncludePeerAs. • 5—ForceReplaceIncludePeerAs. • 6—Limited. • 7—LimitedReplace. • 8—LimitedIncludePeerAs. • 9—LimitedReplaceIncludePeerAs. • 10—NormalKeepLocalAs. • 11—ForceKeepLocalAs. • 12—ForceIncludePeerAsKeepLocalAs.	N/A
SooSiteOfOrigin	Configure SoO info for peer or peer groups		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 65535:1..
FlPlcyAclNoOrNameExp	Specify an ACL to filter routes advertised to peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
FlPlcyAclNoOrNameImp	Specify an ACL to filter routes received from peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvOrigAsVld	Send BGP RPKI validation results to peer or peer groups		Enumeration. • 0—Disable • 1—Enable.	N/A
CapOrf	Specify BGP neighbor ORF capabilities negotiation		Enumeration: • 1—Receive. • 2—Send. • 3—Both	N/A
Signaling	Set MPLS L2VPN tag block info exchange ability between local route and specified peer or peer groups	Data Structure	Include: • SigEnable • SigNonStd	N/A
SigEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable.	N/A
SigNonStd	Specify non-stand format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeEnable	Set UPE as HoVPN for routes received from peers or peer groups		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeRoutePlcy	Configure specified UPE route info filtered by route policy		String. Length: 1 to 63 characters.	N/A
AutoDisc	Set VPLS PE tag block info exchange ability between local route and specified peer or peers groups	Data Structure	Include: • DiscEnable • DiscNonStd	N/A
DiscEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable.	N/A
DiscNonStd	Specify non-standard format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
ValidationDisable	Disable validation for BGP flowspec routes		Enumeration. • 0—Disable. • 1—Enable.	N/A
ValidationRedirectDisabl	Disable validation for		Enumeration. • 0—Disable.	Only EBGP neighbors support.

Column name	Column description	Column type	Data type and restrictions	Remarks
e	BGP flowspec redirect nexthop		• **1—Enable.**	
ASPathAclImport	AS path list used for filtering incoming routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
ASPathAclExport	AS path list used for filtering outgoing routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
Aigp	Enable sending and receiving of the accumulated interior gateway protocol metric attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
AigpSendMed	Replace the MED value with AIGP value in routes advertised to the peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Bandwidth	Specify the link bandwidth extended community attribute for the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BandwidthValue	Link bandwidth attribute value		Unsigned integer. Value range: 1 to 4294967295	N/A
AdvertiseEbgpBandwidth	Advertise the link bandwidth extended community attribute to EBGP peers		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
BandwidthTransitive	Convert the type of the link bandwidth attribute carried in BGP routes from optional non-transitive		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	to optional transitive			
BandwidthValue	Link bandwidth attribute value		Unsigned integer. Value range: 1 to 4294967295	N/A
AdvertiseEncapTypeMpls	MPLS encapsulation		Enumeration. • 0—Disable.(default) • 1—MPLS. • 2—SRv6. • 3—SDWAN • 4—Anycast.	N/A
ReflectNearbyGroup	Specify the peers as clients of the nearby cluster		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
NonExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy • NonExistPolicy	N/A
Policy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
NonExistPolicy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy • ExistPolicy	N/A
Policy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistPolicy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
PrefixSid	Exchange prefix segment IDs with specified peers		Enumeration. • 0—Disable.(default) • 1—Enable • 2—AnycastEnable.	N/A
SRv6Compatible	Configuring VPN routing with SID attribute compatibility		Enumeration. • 0—Disable. • 1—Enable. • 2--Transposition Scheme	N/A
SupReoriginate	Suppress advertisement of re-originated		Enumeration. • 0—Disable(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	VPNV4 or VPNv6 advertisement routes to the peers		• 1—Enable.	
ReOriginatedVpn	Re-originate VPNV4 or VPNV6 advertisement routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT. • **3—Stitch to EVPN.**	To re-originate VPNv4/VPNv6 routes to EVPN IP prefix routes without modifying the RT and RD, set the value to 3.
AdvVpnReorigIbgp	Advertise Vpn Reoriginate EVPN routes to IBGP peer..		Enumeration. • 0—Disable.(Default) • 1—Enable	N/A
RedirectNexthop	Enable peer redirected to nexthop capability		Enumeration. • 0—Disable. • 1—Enable(default)	N/A
RoutePriorityTrack	Track entry ID.		Unsigned integer. Value range: 1 to 1024.	N/A
RouteServerClient	Configure the device as a route server and specify a peer or peer group as a client		Enumeration. • 0—Disable. • 1—Enable • 2—External.	N/A
PeerBier	Enable peer to send and receive BIER attribute		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
MacIpRouteLimit	Configure the maximum number of MAC/IP advertisement routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Maximum number of MAC/IP advertisement routes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is		Enumeration. • 0—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	exceeded		• 1—Enable.	
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
EvpnIpv6PrefixListExp	Specify an ipv6 prefix list to filter routes advertised to an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
EvpnIpv6PrefixListImp	Specify an ipv6 prefix list to filter routes received from an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
HighPriority	Assign the routes learned from specified peers with higher priority		Enumeration. • 0—Disable.(default) • 1—Enable	N/A

Table type	Multi-instance table
Row name	Neighbor
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Neighbor	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec • 17—Dedicated • 18—SR Policy • 19—SRv6 SRPolicy • 20—IPv6 mvpn • 21—Link-State VPN • 22—IPv4 tnl-encap-ext • 23—IPv4 Labeled-unicast • 24—Inof	N/A
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128.
RtPolicyImport	Import Route-Policy for		String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Neighbor		Length: 1 to 63 characters.	
RtPolicyExport	Export Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. • 0—Disable. • 1—Enable.	N/A
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	N/A
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflict with next-hop-invariable.
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. • 0—Disable. • 1—Enable. • 2—DCI Enable.	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
ReOriginated	Re-originate EVPN IP prefix advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable. • 2--- Replace the RT. • 3—Stitch to L3vpn.	To re-originate EVPN IP prefix routes to VPNv4/VPNv6 routes without modifying the RT and RD, set the value to 3.
ReOriginatedMac	Re-originate EVPN MAC/IP advertisement routes received from the peers by modifying the L3 VXLAN ID		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	and RD			
ReOriginated MacOnly	Re-originate EVPN MAC routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable(default). • 1—Enable. • 2—Replace the RT.	N/A
ReOriginatedImet	Re-originate EVPN inclusive multicast Ethernet tag routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT.	N/A
ReOriginated Smet	Re-originate EVPN SMET advertisement routes received from the peers by modifying the RT and RD		Enumeration. • 0-Disable. • 1-Enable. • 2-Replace the RT.	N/A
ReOriginated Spmsi	Re-originate EVPN S-PMSI advertisement routes received from the peers by modifying the L3 VXLAN ID and RD		Enumeration. • 0-Disable. • 1-Enable. • 2-Replace the RT.	N/A
AdvOriginalRoute	Advertise original EVPN routes to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
SuppressReOrigImet	Suppress advertisement of re-originated EVPN inclusive multicast Ethernet tag routes to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
SuppressReOrigPrefix	Suppress advertisement of re-originated EVPN IP prefix advertisement routes to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
SuppressReOrigMac	Suppress advertisement of re-originated EVPN MAC/IP advertisement routes to the		Enumeration. • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	peers			
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
SuppressOriginalAD	Suppress advertisement of original EVPN ethernet auto-discovery routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
SuppressOriginalImet	Suppress advertisement of original EVPN inclusive multicast ethernet tag routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
SuppressOriginalEs	Suppress advertisement of original EVPN ethernet segment routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		• Enumeration. • 0—Disable. • 1—Enable.	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a		Unsigned integer. Value range:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	warning message		1 to 100. Default is 75	
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 or VPNv6 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsRcv	Specify additional path receiving ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdditionalPathsSend	Specify additional path sending ability for the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvAddPathsBest	Specify the maximum number of Add-Path optimal routes that can be advertised to a peer or peer group		Unsigned integer. Value range: 2 to 64. Default is 1	N/A
RouteAdv	Set default route info to peer or peer group	Data Structure	Include: • DefRouteAdv • RoutePlcy • ConditionalPolicy	N/A
DefRouteAdv	Specify default route advertisement info to peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
RoutePlcy	Specify a route policy		String. Length: 1 to 63 characters.	N/A
ConditionalPo	Specify a		String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
licy	routing policy to control the default route advertisement		Length: 1 to 63 characters.	
KeepAllRoutes	Save original route update info from all peer or peer groups		Enumeration. • 0—Disable • 1—Enable.	N/A
LblRouteCapability	Specify labeled route exchange ability for peer or peer groups		Enumeration. • 0—Disable. • 1—Enable.	N/A
PrefixListExp	Specify a prefix list to filter routes advertised to a peer or peer group		String. Length: 1 to 63 characters.	N/A
PrefixListImp	Specify a prefix list to filter routes received from a peer or peer group		String. Length: 1 to 63 characters.	N/A
PublicAsOnly	Remove private AS numbers in BGP updates sent to an EBGP peer or peer group		Enumeration. • 0—Disable. • 1—Normal. • 2—Force. • 3—ForceReplace. • 4—ForceIncludePeerAs. • 5—ForceReplaceIncludePeerAs. • 6—Limited. • 7—LimitedReplace. • 8—LimitedIncludePeerAs. • 9—LimitedReplaceIncludePeerAs. • 10—NormalKeepLocalAs. • 11—ForceKeepLocalAs. • 12—ForceIncludePeerAsKeepLocalAs.	N/A
SooSiteOfOrigin	Configure SoO info for peer or peer groups		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 65535:1..
FlPlcyAclNoOrNameExp	Specify an ACL to filter routes advertised to peers or peer		Unsigned integer. Value range: • 4000 to 4999 for L2VPN	

Column name	Column description	Column type	Data type and restrictions	Remarks
	groups		EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
FlPlcyAclNoOrNameImp	Specify an ACL to filter routes received from peers or peer groups		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families String. Length: 1 to 63 characters.	
AdvOrigAsVld	Send BGP RPKI validation results to peer or peer groups		Enumeration. • 0—Disable • 1—Enable.	N/A
CapOrf	Specify BGP neighbor ORF capabilities negotiation		Enumeration: • 1—Receive. • 2—Send. • 3—Both	N/A
Signaling	Set MPLS L2VPN tag block info exchange ability between local route and specified peer or peer groups	Data Structure	Include: • SigEnable • SigNonStd	N/A
SigEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable.	N/A
SigNonStd	Specify non-stand format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeEnable	Set UPE as HoVPN for routes received from peers or peer groups		Enumeration. • 0—Disable. • 1—Enable.	N/A
UpeRoutePlcy	Configure specified UPE route info filtered by route policy		String. Length: 1 to 63 characters.	N/A
AutoDisc	Set VPLS PE tag block info exchange ability between local route and specified peer or peers groups	Data Structure	Include: • DiscEnable • DiscNonStd	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DiscEnable	Specify default tag block info exchange ability		Enumeration. • 0—Disable. • 1—Enable.	N/A
DiscNonStd	Specify non-standard format to exchange tag block info		Enumeration. • 0—Disable. • 1—Enable.	N/A
ValidationDisable	Disable validation for BGP flowspec routes		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
ValidationRedirectDisable	Disable validation for BGP flowspec redirect nexthop		**Enumeration.** • **0—Disable.** • **1—Enable.**	Only EBGP neighbors support.
ASPathAclImport	AS path list used for filtering incoming routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
ASPathAclExport	AS path list used for filtering outgoing routes		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	AN AS path list name cannot be all made up of numbers.
Aigp	Enable sending and receiving of the accumulated interior gateway protocol metric attribute		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
AigpSendMed	Replace the MED value with AIGP value in routes advertised to the peer or peer group		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Bandwidth	Specify the link bandwidth extended community attribute for the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
BandwidthValue	Link bandwidth attribute value		Unsigned integer. Value range: 1 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdvertiseEbgpBandwidth	Advertise the link bandwidth extended community attribute to EBGP peers		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
BandwidthTransitive	Convert the type of the link bandwidth attribute carried in BGP routes from optional non-transitive to optional transitive		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
AdvertiseEncapTypeMpls	MPLS encapsulation		Enumeration. • 0—Disable.(default) • 1—MPLS. • 2—SRv6. • 3—SDWAN. • 4—Anycast.	N/A
ReflectNearbyGroup	Specify the peers as clients of the nearby cluster		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
NonExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy • NonExistPolicy	N/A
Policy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
NonExistPolicy	Nonexistent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistAdvertisePolicy	Specify a routing policy for conditional route advertisement	Data Structure	Include: • Policy ExistPolicy	N/A
Policy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
ExistPolicy	Existent policy used to control route advertisement		String. Length: 1 to 63 characters	N/A
PrefixSid	Exchange prefix segment IDs with specified peers		Enumeration. • 0—Disable.(Default) • 1—Enable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—AnycastEnable.	

Column name	Column description	Column type	Data type and restrictions	Remarks
SRv6Compatible	Configuring VPN routing with SID attribute compatibility		• EEnumeration. • 0—Disable. • 1—Enable. • 2--Transposition Scheme	N/A
SupReoriginate	Suppress advertisement of re-originated VPNV4 or VPNv6 advertisement routes to the peers		Enumeration. • 0—Disable(default). • 1—Enable.	N/A
ReOriginatedVpn	Re-originate VPNV4 or VPNV6 advertisement routes received from the peers by modifying the RT and RD		Enumeration. • 0—Disable. • 1—Enable. • 2—Replace the RT. 3—Stitch to EVPN.	To re-originate VPNv4/VPNv6 routes to EVPN IP prefix routes without modifying the RT and RD, set the value to 3.
AdvVpnReorigIbgp	Advertise Vpn Reoriginate EVPN routes to IBGP peer..		Enumeration. • 0—Disable. (Default) • 1—Enable	N/A
RedirectNexthop	Enable peer redirected to nexthop capability		Enumeration. • 0—Disable. • 1—Enable(default)	N/A
RoutePriorityTrack	Track entry ID.		Unsigned integer. Value range: 1 to 1024.	N/A
RouteServerClient	Configure the device as a route server and specify a peer or peer group as a client		Enumeration. • 0—Disable. • 1—Enable • 2—External.	N/A
PeerBier	Enable peer to send and receive BIER attribute		Enumeration. • 0—Disable.(Default) • 1—Enable.	N/A
MacIpRouteLimit	Configure the maximum number of MAC/IP advertisement routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Maximum number of MAC/IP advertisement		Unsigned integer. Value range: 1 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes			
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
EvpnIpv6PrefixListExp	Specify an ipv6 prefix list to filter routes advertised to an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
EvpnIpv6PrefixListImp	Specify an ipv6 prefix list to filter routes received from an EVPN peer or peer group		String. Length: 1 to 63 characters.	N/A
HighPriority	Assign the routes learned from specified peers with higher priority		Enumeration. • 0—Disable.(default) • 1—Enable	N/A

BGP/Redistributes

This table contains BGP redistribute information.

XML structure

```

    </Redist>
  </Redistributes>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 5—IPv6 Unicast • 6—IPv6 Multicast.	N/A
Protocol	Protocol name	Index	Enumeration: • **1**—Direct. • **2**—Static. • 3—RIP/RIPng • 4—OSPF/OSPFv3 • 5—ISIS/ISISv6 • 6—EIGRP • 7—UNR • 8—Guard • 9—Local-aggregate	N/A
RedistName	Redistributed pocess name	Index	String. Length: 0 to 31 characters.	It must be empty when the Protocol column is Direct, Static, UNR or Local-aggregate.
AllowDirect	Include direct routes.		Enumeration: • 0—Disable. • 1—Enable.	N/A
Med	Value of the MED.		Unsigned integer. Value range: 0 to 4294967295	N/A
RoutePolicy	Name of the routing policy.		String. Length: 1 to 63 characters.	N/A

BGP/SessionCounts

This table contains session statistics.

XML structure

```
<BGP>
```

```
  <SessionCounts>
    <SessionCount>
      <Name></Name>
      <VRF></VRF>
      <State></State>
      <Count></Count>
    </SessionCount>
  </SessionCounts>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	SessionCounts
Table type	Multi-instance table
Row name	SessionCount
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
State	Session state	Index	Enumeration: • **0—Idle** • **1—Connect** • **2—Active** • **3—Opensent** • **4—Openconfirm** • **5—Established**	Established state means that the BGP session is established, but whether the address families are negociated is unknown.
Count	Total number of sessions		Unsigned integer. Value range: 0 to 4294967295	N/A

BGP/NeighborInformations

Table description

Item	Description
Feature name	BGP
Table name	NeighborInformations
Table type	Multi-instance table
Row name	NeighborInformation
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of neighbor	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn.	N/A
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
OutQPrefixCnt	Number of prefixes to be sent		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdPrefixCnt	Number of prefixes that have been received from the peer and added into the local BGP routing table		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdUnReachNLRI	Number of the unreachable routes received from the peer after the BGP session is established		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdReachNLRI	Number of the reachable routes received from the peer after the		Unsigned integer. Value range: • 0 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	BGP session is established			
SentUnReachNLRI	Number of the unreachable routes sent to the peer after the BGP session is established		Unsigned integer. Value range: • 0 to 4294967295	N/A
SentReachNLRI	Number of the reachable routes sent to the peer after the BGP session is established		Unsigned integer. Value range: • 0 to 4294967295	N/A
RouteLimitNumber	Number of prefixes		Unsigned integer. Value range: • 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: • 1 to 100. Default is 75	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflict with next-hop-invariable
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	Next-hop-local conflict with next-hop-invariable.
AdvertiseCommunity	Send community attribute to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. • 0—Disable. • 1—Enable.	N/A
RtPolicyImport	Import routing policy for peer group		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export routing policy for peer		String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	group			
AllowAsLoop	Allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		**Enumeration.** • **0—Disable.** • **1—Enable.**	N/A

BGP/RedistributesAppend

This table contains BGP redistribution appended information.

Table description

Item	Description
Feature name	BGP
Table name	BMPs
Table type	Multi-instance table
Row name	BMP
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerNum	BMP server number	Index	Unsigned integer. Value range: 1 to 8	N/A
ServerAddr	Specify the address of BMP server		String,IPv4 address string or IPv6 address string.	You must set both and ServerPortNum, or set neither of them.
ServerPortNum	Specify the port number of BMP server		Unsigned integer. Value range: 1 to 65535	You must set both ServerAddr and ServerPortNum, or set neither of them.
StatisInterValue	Specify the statistics interval value number of BMP server		Unsigned integer. Value range: 1 to 3600	Units are seconds.
ConnectInterfaceName	Specify the source interface of TCP connections to the BMP server		String. Length: 0 to 47 characters.	Example: • M-GigabitEthernet0/0/0
RouteModeAdjRibIn	Enable BGP to send routes advertised to the monitored peers or peer groups to the BMP server		Enumeration: • 1—Post-policy • 2—Pre-policy • 3—Both	After you specify a BMP server, the pre-policy option takes effect by default.
RouteModeAdjRibOut	Enable BGP to send routes advertised to the monitored peer or peer group to the BMP server		Enumeration: • 0—Disable. • 1—Post-policy • 2—Pre-policy • 3—Both	N/A
RouteModeLocRib	Enable BGP to send the optimal routes in the routing table to the BMP server		Enumeration: • 0—Disable. • 1—Enable • 2—add-path	N/A
SourceAddress	Specify the source address of TCP connections to the BMP server		String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
SSLClientPolicy	Configure SSL policy for TCP connections to the BMP server		String. Length: 1 to 31 characters.	N/A

BGP/BMPRouteModeLocRibFilters

Send the specify routes in the routing table to the BMP server.

XML structure

```
<BGP>
  <BMPRouteModeLocRibFilters>
    <BMPRouteModeLocRibFilter>
     <ServerNum></ServerNum>
     <ModeType></ModeType>
     <VRF></VRF>
     <Family></Family>
     <AdditionalPaths><AdditionalPaths>
    </BMPRouteModeLocRibFilter>
  </BMPRouteModeLocRibFilters>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	RouteModeLocRibFilters
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerNum	BMP server number	Index	Unsigned integer. Value range: 1 to 8	N/A
ModeType	VPN-type	Index	Enumeration: • 0—public. • 1—vpn-instance • 2—all-vpn-instacne	N/A
Name	VPN-instance name	Index	String. Length: 1 to 31 characters.	When the modetype parameter is 0 or 2, the parameter must be empty.
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 labeled-Unicast . • 3—IPv6 Unicast • 4—VPNv4 • 5—VPNV6 • 6—L2VPN EVPN	When the modetype parameter is 1 or 2, the parameter 5 and 6 are not allowed to be configured.
`Additional paths`	Additional path configuration		Enumeration: • 0—Disable. • 1—Enable	N/A

BGP/Rpkis

This table contains BGP RPKI information.

XML structure

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
CheckOriginValidation	Check origin validation		Enumeration. • 0—Disable. • 1—Enable.	N/A
Servers	Site containing the rpki server information	Subtable	N/A	For more information, see the BGP/Rpkis/Rpki/Servers

BGP/Rpkis/Rpki/Servers

This table contains BGP RPKI server information.

XML structure

Please refer to the XML structure of BGP/Rpkis.

Table description

Item	Description
Feature name	BGP
Table name	Servers
Table type	Multi-instance table
Row name	N/A
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier	Index	Enumeration: • 1—IPv4. • 2—IPv6	N/A
IpAddress	Summary address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Port	Port		Unsigned integer. Value range: 1 to 65535	N/A
PasswordType	Password type.		Enumeration. • 1—Ciphertext. • 2—Plaintext.	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
RefreshTime	Refresh time in seconds		Unsigned integer. Value range: 15 to 3600	N/A
ResponseTime	Response time in seconds		Unsigned integer. Value range: 15 to 3600	N/A
PurgeTime	Purge time in seconds		Unsigned integer. Value range: 30 to 360	N/A
RpkiLimit	Configure the maximum number of ROAs that can be received from the connection	Data Structure	Include: • Number • ExceedAction ReconnectTime	N/A
Number	Number of ROAs		Unsigned integer. Value range: 1 to 4294967295	N/A
ExceedAction	Action type when the rpki limit is exceeded		Enumeration. • 0—disconnect • 1—alert only • 2—discard	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			3—disconnect and reconnect	
ReconnectTime	Reconnect time in seconds		Unsigned integer. Value range: 1 to 86400	N/A

BGP/FilterPolicyExports

This table contains BGP filter-policy export information.

XML structure

```
<BGP>
  <FilterPolicyExports>
    <FilterPolicyExport>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <ProtocolExp></ProtocolExp>

      <AclNameExp></AclNameExp>
      <PrefixListNameExp></PrefixListNameExp>
    </FilterPolicyExport>
  </FilterPolicyExports>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	FilterPolicyExports
Table type	Multi-instance table
Row name	FilterPolicyExport
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier	Index	Enumeration: • **1**—IPv4 Unicast. • **2**—IPv4 Multicast. • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 9—L2VPN EVPN • 23—IPv4 Labeled-unicast	N/A
ProtocolExp	Specify where the BGP routes are imported.	Index	Enumeration: • **1**—direct • **2**—isis. • 3—isisv6 • 4—ospf • 5—ospfv3 • 6—rip. • 7—ripng • 8—static	The Protocol can be empty. The Protocol can be set to direct, isis, ospf, rip or static only when the Type had been set to IPv4 Unicast, IPv4 Multicast, or VPNv4. The Protocol can be set to direct, isisv6, ospfv3, ripng or static only when the Type had been set to IPv6 Unicast, IPv6 Multicast, or VPNv6.
ProcessIDExp	Specify the process ID of routing protocol.	Index	Unsigned integer. Value range: 1 to 65535	It must be empty when the Protocol column is Direct, Static or empty.
AclNumExp	Filter BGP routes by an ACL number.		Unsigned integer. Value range: • 4000 to 4999 for L2VPN EVPN address family • 2000 to 3999 for other address families	You can only set one of AclNumExp, AclNameExp and PrefixListNameExp at the same time.
AclNameExp	Filter BGP routes by an ACL name.		String. Length: 1 to 63 characters.	ACL name (start with[a-z,A-Z]).Can't use "all" as ACL name. You can only set one of AclNumExp,

Column name	Column description	Column type	Data type and restrictions	Remarks
				AclNameExp and PrefixListNameExp at the same time.
PrefixListNameExp	Filter BGP routes by a prefix-list name.		String. Length: 1 to 63 characters.	You can only set one of AclNumExp, AclNameExp and PrefixListNameExp at the same time.

BGP/PeerGpDefRtAdvVpnInsts

This table contains BGP peer group-name default-route-advertise vpn-instance vpn-instance-name information.

Mask	Mask length or prefix length of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, the value is 255. For IPv4 dynamic peers, the value is in the range of 0 to 32. For IPv6 dynamic peers, the value is in the range of 0 to 128.
LinkLocalInterface	Source interface	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Route policy applied to routes incoming from peers		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Route policy applied to routes outgoing to peers		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	Allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	device as a route reflector and specify a peer or peer group as a client		• 0—Disable. • 1—Enable.	
NexthopInvariable	Send original next hop for routes advertised to the peer		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflicts with next-hop-invariable
NexthopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. • 0—Disable. • 1—Enable.	Next-hop-local conflicts with next-hop-invariable
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. • 0—Disable. 1—Enable.	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. • 0—Disable. • 1—Enable.	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. • 0—Disable. • 1—Enable	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community		• Enumeration. • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	attribute			
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: • Number • Percentage • AlertOnly • Discard • Reconnect	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NexthopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. • 0—Disable. • 1—Enable.	N/A

BGP/InterfaceCfgSessions

This table contains configuration information of BGP interface sessions.

XML structure

```
<BGP>
  <InterfaceCfgSessions>
    <CfgSession>
      <Name></Name>

        <KeepAlive></KeepAlive>
        <HoldTime></HoldTime>
      </Timer>
      <IpsecProfile></IpsecProfile>
      <Keychain></Keychain>
      <GracefulRestartExtra></GracefulRestartExtra>
    </CfgSession>
  </InterfaceCfgSessions>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	InterfaceCfgSessions
Table type	Multi-instance table
Row name	CfgSession
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: **1**—IPv4. **2**—IPv6.	N/A
Interface	Source interface	Index	String. Length: 1 to 47 characters.	N/A
ASNumber	Autonomous system number		Unsigned integer. Value range: 1 to 4294967295	N/A
GroupName	Group name		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route update interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		Enumeration. 1—Ciphertext. 2—Plaintext.	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
BfdType	BFD type		Enumeration. • 0—default type • 1—single-hop • 2—multi-hop	The default type indicates that actual BFD type (single-hop or multi-hop) depends on different situations.
Ignore	Disable session establishment to the peers		Enumeration. • 0—Disable.(default) • 1—Enable.	N/A
Description	Peer description		String. Length: 1 to 79 characters.	Case sensitive

Column name	Column description	Column type	Data type and restrictions	Remarks
NexthopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable.	N/A
BmpServer	Configure the BMP server peer or peer group		**Unsigned integer.** **Value range:** **1 to 8**	Up to 8 BGP monitoring servers can be configured in the same command.
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
Dscp	Set the DSCP priority of BGP packets		Unsigned integer. Value range: 0 to 63	N/A
IgnoreOriginatorid	Ignore the ORIGINATOR_ID attribute of a BGP route		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
LogChange	Enable the logging function of the BGP session with the specified peer or peer group		Enumeration. • 0—Disable. • 1—Enable. (default)	N/A
LowMemoryExempt	Do not disconnect the session with the specified EBGP peer or peer group		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
SubstituteAs	Replace the AS number of the specified peer or peer group in the AS_PATH attribute with the local AS number		Enumeration. • 0—Disable. (default) • 1—Enable.	N/A
Timer	Keepalive and holdtime	Data structure	Members include: • KeepAlive • HoldTime.	The hold time must be greater than or equal to three times the keepalive time.
KeepAlive	Keepalive interval in seconds		**Unsigned integer.** **Value range:** **0 to 21845**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HoldTime	Holdtime in seconds		**Unsigned integer.** **Value range:** **0 , 3 to 65535**	N/A
IpsecProfile	Apply the IPsec security framework to IPv6 BGP peer or peer group		String. Length: 1 to 63 characters.	N/A
Keychain	Configure keychain authentication when a BGP peer or peer group establishes a TCP connection		String. Length: 1 to 63 characters.	N/A
GracefulRestartExtra	Extra time of GR timer.		String. Length: 1 to 8 characters.	“no-limit” sets an unlimited time to wait for BGP session re-establishment.

BGP/InterfaceNeighbors

This table contains BGP interface peer information.

XML structure

        <IpAddress></IpAddress>
      </Members>
    </Group>
  </Groups>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier of the neighbor	Index	Enumeration: • 1—IPv4 Unicast. • 2—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec	N/A
GroupName	Group name	Index	String. Length: 1 to 47 characters.	N/A
ASNumber	Autonomous system number		Unsigned integer. Value range: 1 to 4294967295	N/A
AuthenticationType	Authentication type configured		Enumeration. • 0—None. • 1—MD5. • 2—Keychain	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Internal or external		Enumeration. • 0—Internal. • 1—External.	N/A
Members	Members of the peers	Data structure	Members include: IpAddress.	You can specify multiple IP addresses.
IpAddress	IP address of the session		String, IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.

BGP/Paths

This table contains BGP route attribute information.

XML structure

```
<BGP>
  <Paths>
    <Path>
      <Name></Name>
      <AttrCount></AttrCount>
      <AsPathCount></AsPathCount>
      <ExtCommCount></ExtCommCount>
      <CommCount></CommCount>
      <Attributes>
        <RefCount></RefCount>
        <MED></MED>
        <AsPath></AsPath>
        <Origin></Origin>
      </Attributes>
    </Path>
  </Paths>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	Paths
Table type	Multi-instance table
Row name	Path
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates all BGP processes. When executing get bulk operation, you can only get the data of the specified BGP instance.
AttrCount	Type of BGP route attributes		Unsigned integer. Value range: 1 to 4294967295	N/A
AsPathCount	Number of AS_PATH attributes		Unsigned integer. Value range: 1 to 4294967295	N/A
ExtCommCount	Number of Extcommunity attributes		Unsigned integer. Value range: 1 to 4294967295	N/A
CommCount	Number of Community attributes		Unsigned integer. Value range: 1 to 4294967295	N/A
Attributes	Path attribute	Data structure	Members include: • RefCount. • MED. • Path • Origin	N/A
RefCount	Number of BGP routes with identical path attributes.		Unsigned integer. Value range: 1 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MED	MULTI_EXIT_DISC attribute value of the routes.		Unsigned integer. Value range: 1 to 4294967295	N/A
AsPath	AS_PATH attribute regular expression		String. Length: 0 to 4000 characters.	N/A
Origin	Identifies the origin of the routes		Enumeration. • 0—Originated in the AS. • 1—Learned through EGP. • 2—Unknown origin. The origin of routes redistributed from IGPs is INCOMPLETE.	N/A

BGP/RouteStatistics

This table contains BGP route statistics information.

XML structure

```
<BGP>
  <RouteStatistics>
    <Statistics>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <TotalRoutes></TotalRoutes>
    </Statistics >
  </RouteStatistics>
</BGP>
```

Table description

Item	Description
Feature name	BGP
Table name	RouteStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier	Index	Enumeration: • 1—IPv4 Unicast. • 2—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec	Only IPv4 Unicast and VPNv4 support.
TotalRoutes	Total number of routes.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

BGP/PeerRouteStatistics

This table contains BGP peer route statistics information.

XML structure

```
<BGP>
  <PeerRouteStatistics>
    <PeerStatistics>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <SessAF></SessAF>
      <IpAddress></IpAddress>
      <AdvertisedTotalRoutes></AdvertisedTotalRoutes>

Table description

Item	Description
Feature name	BGP
Table name	PeerRoutes
Table type	Multi-instance table
Row name	PeerRoute
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address family identifier	Index	Enumeration: • 1—IPv4 Unicast. • 2—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—L2VPN EVPN • 10—Link-State • 11—IPv4 rtfilter. • 12—IPv4 mvpn. • 13—IPv4 Flowspec • 14—VPNv4 Flowspec • 15—IPv6 Flowspec • 16—VPNv6 Flowspec	Only IPv4 Unicast and VPNv4 support.
SessAF	Address family of the session	Index	Enumeration: • **1**—IPv4. • **2—IPv6.**	N/A
RoutesDirection	Direction of routes	Index	Enumeration. • 0—advertised-routes. • 1—received-routes.	N/A
IpAddress	IP address of the session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
IpPrefix	Destination IP	Data	Members include:	The two

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefix.	structure	• DestIPAF. • DestIpAddress. • DestIpPrefixLength.	members must both be specified. Supports filter configuration. For more information, see **错误!未找到引用源。**
DestIPAF	Address family of the destination IP address	index	Enumeration: • 1—IPv4. • 2—IPv6.	
DestIpAddress	Destination IP address.	index	String, IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
DestIpPrefixLength	Length of the destination IP address prefix.	index	Unsigned integer. Value range: 0 to 32. or 0 to 128	N/A
Nexthop	IP address of the next hop	Data structure	Members include: • NexthopAF. • NexthopAddress.	
NexthopAF	Address family of the next hop		Enumeration: • 1—IPv4. • 2—IPv6.	
NexthopAddress	Next hop address		String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
MED	MULTI_EXIT_DISC attribute		Unsigned integer. Value range: 1 to 4294967295	N/A
LocPrf	Local preference value.		Unsigned integer. Value range: 1 to 4294967295	N/A
PrefVal	Preferred value of the route.		Unsigned integer. Value range: 1 to 4294967295	N/A
Path	AS_PATH attribute regular expression		String. Length: 0 to 4000 characters.	N/A
Origin	Identifies the origin of the routes		Enumeration. • 0—Originated in the AS. • 1—Learned through EGP. • 2—Unknown origin. The origin of routes redistributed from IGPs	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is INCOMPLETE.	

BGP/SREPEPeerSets

This table contains BGP SR EPE peer set information.

XML structure

```
<BGP>
  <SREpePeerSets>
    <SREpePeerSet>
      <Name></Name>

Table description

Item	Description
Feature name	BGP
Table name	SREpes
Table type	Multi-instance table
Row name	SREpe
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	BGP instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: • **1**—IPv4.	
IpAddress	Address of session	Index	String,IPv4 address string .	Example: 1.1.1.1
Mask	Mask length or prefix length of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, the value is 255. For IPv4 dynamic peers, the value is in the range of 0 to 32. For IPv6 dynamic peers, the value is in the range of 0 to 128.
LocalAsNumber	Local AS number		Unsigned integer. Value range: 1 to 4294967295	N/A
RemoteAsNumber	Remote AS number		Unsigned integer. Value range: 1 to 4294967295	N/A
LocalRouterID	Local router ID		String, IPv4 address string	Example: 1.1.1.1
RemoteRouterID	Peer router ID		String, IPv4 address string	Example: 1.1.1.1
EPENode	Configure EPENode parameters	Data structure	Members include: • LocalAddr • PeerAddr • Label.	N/A
LocalAddr	Node local interface address		String, IPv4 address string	Example: 1.1.1.1
PeerAddr	Node remote interface address		String, IPv4 address string	Example: 1.1.1.1
Label	Node label		Unsigned integer.	N/A
EPEAdjs	Site containing the EPE adjancency information	Subtable	N/A	For more information, see the BGP/SREpes/EPEAdjs

BGP/SREpes/EPEAdjs

This table contains BGP link-local interface adjancency information.

BGP/Instances

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
BGP is disabling NSR. BGP进程正在处理NSR删除，请稍后再进行配置。	The NSR configuration is being deleted when you replace or delete it.
Can't enable NSR because the address family that does not support NSR has been configured. 地址族配置与NSR配置冲突，不能配置NSR。	Invalid configuration, please modify configuration under the guidance.
Centralized devices don't support NSR. 集中式设备，无法支持NSR。	Invalid configuration, please modify configuration under the guidance.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
Enable IgnoreAllPeers and configure GracefulTime first. 需先禁止所有对等体、对等体组建立对话、配置GracefulTime。	Invalid configuration, please modify configuration under the guidance.
GracefulTime and Conmmunity/LocalPreference/Med must be performed together with IgnoreAllPeers. GracefulTime必须与Conmmunity或LocalPreference或Med同时配置，且需和IgnoreAllPeersEnable一起。	Invalid configuration, please modify configuration under the guidance.
The label of per-VPN conflicts with VPN popgo. 为每个实例申请标签方式与vpn popgo命令互斥。	Invalid configuration, please modify configuration under the guidance.
Configure the confederation ID first. 请先配置ConfederationId。	Invalid configuration, please modify configuration under the guidance.
Please enable Graceful Restart (GR) capability first. 请先使能Graceful-restart	Invalid configuration, please modify configuration under the guidance.
Please remove confederationpeers first. 请先删除该联盟子地址族。	Invalid configuration, please modify configuration under the guidance.
Confederation peer sub-AS number cannot be the same as local AS number. 子地址族与本地AS Number冲突。	Invalid configuration, please modify configuration under the guidance.
The total count of confederation peers must not be greater than 32. 子地址族总数不能超过32。	Invalid configuration, please modify configuration under the guidance.
Confederation peer sub-AS number cannot be the	Invalid configuration, please modify configuration under the

same as the AS number of VPN instance peers. 子地址族与VPN实例的AS Number冲突。	guidance.
AS number is conflicted with peer group or peer session configured with fake AS number. 子地址族与会话或会话组的虚拟AS Number冲突。	Invalid configuration, please modify configuration under the guidance.
Community sequence number must be in the range of 1 to 4294967295. 团体序号的取值范围为1~4294967295。	Invalid configuration, please modify configuration under the guidance.
Community number must be in the format of aa(0-65535):nn(0-65535). 团体号的格式为aa(0-65535):nn(0-65535)。	Invalid configuration, please modify configuration under the guidance.
Cannot configure same AS number in confederation. 不能在联盟中配置相同的AS号。	Invalid configuration, please modify configuration under the guidance.
The BGP process doesn’t exist or the TCP connection failed. BGP进程不存在或者TCP连接失败。	The BGP process doesn’t exist or the TCP connection failed.
Configure the confederation ID first. 请先配置ConfederationId。	Invalid configuration, please modify configuration under the guidance.
Cannot delete the specified peer-set because the peer-set is not empty. 不能删除指定的Peer-set组因为该Peer-set组非空。	Invalid configuration, please modify configuration under the guidance.
The SRv6 SID has been used by another peer or peer set. SRv6 SID已经被其它的Peer或者Peer-set组使用。	Invalid configuration, please modify configuration under the guidance.
Can't configure the same value for the SRv6 SID of the PSP type and the SRv6 SID of the no-PSP and no-USP type. PSP的SRv6 SID不能和No PSP -的SRv6 SID值相同。	Invalid configuration, please modify configuration under the guidance.
Can't configure the same value for the SRv6 SID of the PSPUSPUSD type , the SRv6 SID of the PSP type and the SRv6 SID of the no-PSP type. PSPUSPUSD 的SRv6 SID 不能和 PSP的SRv6 SID或No PSP的SRv6 SID值相同。	Invalid configuration, please modify configuration under the guidance.
When configuring STATIC,PSP or NOPSPUSP must be configured at the same time. 配置static的时候必须配置psp或者nopspusp	Invalid configuration, please modify configuration under the guidance.
When configuring STATIC,PSP , NOPSPUSP or PSPUSPUSD must be configured at the same time. 配置static的时候必须配置psp或者nopspusp 或者pspuspusd。	Invalid configuration, please modify configuration under the guidance.
The configuration confilict. 配置冲突	Invalid configuration, please modify configuration under the guidance.
The MinInterval cannot be longer than the MaxInterval. MinInterval 不能大于MaxInterval。	Invalid configuration, please modify configuration under the guidance.

The maximum value must be greater than the minimum value. 时延参数的最大值必须大于最小值。	The maximum value must be greater than the minimum value. 时延参数的最大值必须大于最小值。
Maximum value and minimum value must be issued simultaneously minimum value. 时延参数的最大值和最小值必须同时下发。	Maximum value and minimum value must be issued simultaneously minimum value. 时延参数的最大值和最小值必须同时下发。
The SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime can not be configured together. SendLowPriorityPeerupDelayTime和SendLowPriorityOnStartupTime不能一起配置。	Invalid configuration, please modify configuration under the guidance.
The SendLowPriorityPeerupDelayTime and SendDelayTime can not be configured together. SendLowPriorityPeerupDelayTime和SendDelayTime不能一起配置。	Invalid configuration, please modify configuration under the guidance.
The SendLowPriorityOnStartupTime and SendDelayTime can not be configured together. SendLowPriorityOnStartupTime和SendDelayTime不能一起配置。	Invalid configuration, please modify configuration under the guidance.
The advertise lowest-priority peer-up delay command is mutually exclusive with the bgp update-delay on-startup command. advertise lowest-priority peer-up delay命令与bgp update-delay on-startup命令互斥。	Invalid configuration, please modify configuration under the guidance.
The advertise lowest-priority peer-up delay command is mutually exclusive with the advertise lowest-priority on-startup command. advertise lowest-priority peer-up delay命令与advertise lowest-priority on-startup命令互斥。	Invalid configuration, please modify configuration under the guidance.
To configure EPESRv6AutoSidMode, you must set EPESRv6Locator first. 在配置EPESRv6AutoSidMode之前必须先配置EPESRv6Locator。	To configure EPESRv6AutoSidMode, you must set EPESRv6Locator first. 在配置EPESRv6AutoSidMode之前必须先配置EPESRv6Locator。
The static SID mode is coc32 or coc-both coc32,can't configure static PSP-USP-USD SID. 静态SID类型为coc32或者coc-both coc32，不能配置静态PSP-USP-USD SID。	The static SID mode is coc32 or coc-both coc32,can't configure static PSP-USP-USD SID. 静态SID类型为coc32或者coc-both coc32，不能配置静态PSP-USP-USD SID。
PspUspUsd is not supported. 不支持PSUSPUSD配置	PspUspUsd is not supported. 不支持PSUSPUSD配置

BGP/VRFs

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist.	Invalid configuration, please modify configuration under the

该VPN不存在。	guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted when you replace or delete it.
The VPN instance RD is not configured. 该VPN没有配置RD。	Invalid configuration, please modify configuration under the guidance.
The public VPN instance can't be deleted. 公网VPN实例不允许删除。	Invalid configuration, please modify configuration under the guidance.
Invalid hold or keepalive time value. Keepalive定时器或Hold定时器取值错误。	Invalid configuration, please modify configuration under the guidance.
Invalid router ID. 无效的RouterID。	Invalid configuration, please modify configuration under the guidance.
The VPN already exists in another BGP instance. 该VPN已存在于其他BGP实例中。	The VPN can’t exist in two or more BGP instances.
The BGP instance view doesn't support the bestroute encap-type command. BGP实例视图不支持bestroute encap-type命令。	Invalid configuration, please modify configuration under the guidance.
The maximum restraint time interval should not be less than the minimum restraint time interval. 最大抑制时间应当不小于最小抑制时间。	Minimum interval of next hop recursive lookup restraint should be not greater than maximum interval. 下一跳迭代的最小抑制时间不应当大于最大抑制时间。
The maximum restraint time interval should not be less than the penalty restraint time interval. 最大抑制时间应当不小于抑制惩罚时间。	Incremental interval of next hop recursive lookup restraint should be not greater than maximum interval. 下一跳迭代的惩罚抑制时间不应当大于最大抑制时间。
The fixed restraint time interval cannot be configured at the same time as the maximum time interval, minimum time interval, and penalty time. 固定抑制时间不能和最大抑制时间、最小抑制时间，及抑制惩罚时间同时配置。	Fixed interval of next hop recursive lookup restraint and maximum, minimum, incremental are mutually exclusive. 下一跳迭代的固定抑制时间和最大时间间隔，最小时间间隔，惩罚时间不能同时配置。
Need to be configured in the order of the maximum, the minimum and the penalty restraint time interval. 需要依照最大抑制时间、最小抑制时间、抑制惩罚时间顺序配置。	Need to be configured in the order of the maximum, the minimum and the penalty restraint time interval. 需要依照最大抑制时间、最小抑制时间、抑制惩罚时间顺序配置。

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted.	The specified VPN instance is being deleted when you replace or delete it.

该VPN正在删除中。	
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The interface does not belong to the VPN instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
When the operation is create, merge or replace, the group type must not be null. Create、merge、replace操作时，对等体组类型不能为空。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the group type can’t be specified. Delete、remove操作时，不能指定对等体组类型。	Invalid configuration, please modify configuration under the guidance.
No need to configure AS number for an IBGP group. 不能配置或者删除IBGP组的AS号。	Invalid configuration, please modify configuration under the guidance.
Can't change or delete AS number for a peer group that contains peers. 对等体组中存在会话，不能变更或者删除对等体组AS号。	Invalid configuration, please modify configuration under the guidance.
Invalid peer group name. 组名称不合法。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist. 指定的对等体组不存在。	Invalid configuration, please modify configuration under the guidance.
The interface does not belong to the VPN instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
PasswordType and Password must both be configured. PasswordType和Password必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password. 密文密码不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid plaintext password length. 明文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password length. 密文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
BFD not supported. 不支持BFD	BFD service has not been started.
When enabling dual-as, prepend-global-as, or prepend-fake-as, you must specify the fake AS number. 配置dual-as、prepend-global-as、prepend-fake-as使能时，fake-as不能为空。	Invalid configuration, please modify configuration under the guidance.
Invalid fake AS number. 指定的fake-as无效。	Invalid configuration, please modify configuration under the guidance.
EBGP peer groups don’t exist.	Invalid configuration, please modify configuration under the

EBGP对等体组不存在。	guidance.
The ORIGINATOR_ID attribute is not supported for EBGP peer groups. ORIGINATOR_ID属性不适用于EBGP对等体组。	Invalid configuration, please modify configuration under the guidance.
Invalid hold or keepalive time value. Keepalive定时器或Hold定时器取值错误。	Invalid configuration, please modify configuration under the guidance.
Extra time of GR timer is in the range of 0 to 86400. Graceful Restart timer restart extra命令的time的取值范围为0~86400。	Invalid configuration, please modify configuration under the guidance.
Extra time of GR timer is invalid. Graceful Restart timer restart extra命令的参数错误。	Invalid configuration, please modify configuration under the guidance.
Egress peer-set are being deleted. Try it later. 正在删除egress对等集,稍后再试。	Invalid configuration, please modify configuration under the guidance.
Cannot delete the specified peer-set because the peer-set is not empty. 无法删除指定的对等集，因为对等集不为空。	Invalid configuration, please modify configuration under the guidance.
The SID label has already been configured for another peer. 已经为另一个对等集配置了SID标签。	Invalid configuration, please modify configuration under the guidance.
The SID label has already been configured for another peer-set. 已为另一对等集配置SID标签。	Invalid configuration, please modify configuration under the guidance.
A peer group does not support configuring both IPv4 and SRv6 EPE capabilities. 同一对等体组上不允许同时配置IPv4 BGP-EPE功能和SRv6 BGP-EPE功能。	Invalid configuration, please modify configuration under the guidance.
Keychain and password configuration conflicted. Keychain和password配置冲突.	Invalid configuration, please modify configuration under the guidance.
The UpdateInterval and UpdateIntervalIntelligent columns cannot be configured together. UpdateInterval 和 UpdateIntervalIntelligent不能一起配置。	Invalid configuration, please modify configuration under the guidance.
Enable Tracking first. 需要先使能Tracking。	Invalid configuration, please modify configuration under the guidance.
Cannot configure EgressEngineeringLinkDown, when the value of egress-engineering type is two. 指定EgressEngineeringType为2时，不支持配置EgressEngineeringLinkDown。	Invalid configuration, please modify configuration under the guidance.
The value for the MonitorLinkGroup parameter is out of the value range for this product. MonitorLinkGroup参数的取值超出产品允许配置的范围。	Invalid configuration, please modify configuration under the guidance.

BGP/CfgSessions

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN is being deleted when you replace or delete it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The interface does not belong to the VPN instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
The session already exists. The AS number can't be changed. 会话已存在，不允许修改会话的AS号。	Configuration already exists, when you set new configuration.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
Interface name is invalid, or interface failed RBAC check. 接口名称非法或者无法通过RBAC检查。	Invalid configuration, please modify configuration under the guidance.
When the operation is create, merge, or replace, the AS number can’t be specified. Create、merge、replace操作时，AS号不能为空。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, you cannot set the ASNumber column. Delete、remove操作时，不能指定AS号。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist. 指定的对等体组不存在。	Invalid configuration, please modify configuration under the guidance.
The interface does not belong to the VPN instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
PasswordType and Password must both be configured. PasswordType和Password必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password. 密文密码不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid plaintext password length. 明文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password length.	Invalid configuration, please modify configuration under the

密文密码长度不合法。	guidance.
BFD not supported. 不支持BFD	BFD service has not been started.
Only EBGP peers support the configuration. 仅EBGP邻居支持本配置。	Only EBGP peers support the configuration.
When enabling dual-as, prepend-global-as, or prepend-fake-as, you must specify the fake AS number. 配置dual-as、prepend-global-as、prepend-fake-as使能时，fake-as不能为空。	Invalid configuration, please modify configuration under the guidance.
Invalid fake AS number. 指定的fake-as无效。	Invalid configuration, please modify configuration under the guidance.
The peers belong to another peer group. 指定对等体已经加入其它对等体组。	Invalid configuration, please modify configuration under the guidance.
EBGP peers don’t exist. EBGP对等体不存在。	Invalid configuration, please modify configuration under the guidance.
The ORIGINATOR_ID attribute is not supported for EBGP peers. ORIGINATOR_ID属性不适用于EBGP对等体。	Invalid configuration, please modify configuration under the guidance.
IPv4 does not support the use of IPsec-policy. IPv4不支持使用Psec策略。	Invalid configuration, please modify configuration under the guidance.
Invalid hold or keepalive time value. Keepalive定时器或Hold定时器取值错误。	Invalid configuration, please modify configuration under the guidance.
The AS number of the peer must be the same as that of the peer group. 对等体的AS号应该和对等体组相同。	Invalid configuration, please modify configuration under the guidance.
Extra time of GR timer is in the range of 0 to 86400. Graceful Restart timer restart extra命令的time的取值范围为0~86400。	Invalid configuration, please modify configuration under the guidance.
Extra time of GR timer is invalid. Graceful Restart timer restart extra命令的参数错误。	Invalid configuration, please modify configuration under the guidance.
Egress peer-set are being deleted. Try it later. 正在删除egress对等集,稍后再试。	Invalid configuration, please modify configuration under the guidance.
Cannot delete the specified peer-set because the peer-set is not empty. 无法删除指定的对等集，因为对等集不为空。	Invalid configuration, please modify configuration under the guidance.
The SID label has already been configured for another peer. 已经为另一个对等集配置了SID标签。	Invalid configuration, please modify configuration under the guidance.
The SID label has already been configured for another peer-set. 已为另一对等集配置SID标签。	Invalid configuration, please modify configuration under the guidance.
The Peer-set to which the specified Peer is added	Invalid configuration, please modify configuration under the

cannot be modified repeatedly, it must be deleted first and then reconfigured. 不能重复修改指定对等体加入的Peer-set组，必须先删除再重新配置。	guidance.
Peers cannot be added to the Peer-set that does not exist. 不能将对等体加入不存在的Peer-set组。	Invalid configuration, please modify configuration under the guidance.
When the BGP-EPE function of a specified peer is enabled, dynamic SRv6 SID and static SRv6 SID cannot be allocated at the same time. 开启指定对等体的BGP-EPE功能时，不能同时分配动态SRv6 SID和静态SRv6 SID。	Invalid configuration, please modify configuration under the guidance.
The specified peer is not enabled with BGP EPE. 没有使能BGP-EPE功能的对等体不能加入到BGP-EPE SRv6 Peer Set组。	Invalid configuration, please modify configuration under the guidance.
Cannot disable BGP EPE for the peer because the peer has joined a peer set. 不能删除BGP-EPE功能，因为指定对等体已经加入了Peer-set组。	Invalid configuration, please modify configuration under the guidance.
Static sid is not allowed when global locator is not configured. 为Peer-set组或者指定对等体配置静态SRv6 SID前，必须配置BGP-EPE引用Locator。	Invalid configuration, please modify configuration under the guidance.
The SRv6 SID has been used by another peer or peer set. SRv6 SID已经被其它的Peer或者Peer-set组使用。	Invalid configuration, please modify configuration under the guidance.
Can't configure the same value for the SRv6 SID of the PSP type and the SRv6 SID of the no-PSP and no-USP type. PSP的SRv6 SID不能和No PSP-的SRv6 SID值相同。	Invalid configuration, please modify configuration under the guidance.
Can't configure the same value for the SRv6 SID of the PSPUSPUSD type, the SRv6 SID of the PSP type and the SRv6 SID of the no-PSP type. PSPUSPUSD 的SRv6 SID 不能和 PSP的SRv6 SID或No PSP的SRv6 SID值相同。	Invalid configuration, please modify configuration under the guidance.
The peer range overlaps with an existing one. 对等体范围与已存在的重叠。	Invalid configuration, please modify configuration under the guidance.
The locator is not set. 没有配置locator。	Invalid configuration, please modify configuration under the guidance.
The static sid is not set. 没有配置static sid	Invalid configuration, please modify configuration under the guidance.
Keychain and password configuration conflicted. Keychain和password配置冲突.	Invalid configuration, please modify configuration under the guidance.
Keychain and password configuration conflicted between peer and peer group. Keychain和password在对等体和对等体组之间存在配置冲突.	Invalid configuration, please modify configuration under the guidance.
Enable Tracking first.	Invalid configuration, please modify configuration under the

需要先使能Tracking。	guidance.
The static SID mode is coc32 or coc-both coc32,can't configure static PSP-USP-USD SID. 静态SID类型为coc32或者coc-both coc32，不能配置静态PSP-USP-USD SID。	The static SID mode is coc32 or coc-both coc32,can't configure static PSP-USP-USD SID. 静态SID类型为coc32或者coc-both coc32，不能配置静态PSP-USP-USD SID。
PspUspUsd is not supported. 不支持配置PspUspUsd。	PspUspUsd is not supported. 不支持配置PspUspUsd。
Cannot configure EgressEngineeringLinkDown, when the value of egress-engineering type is two. 指定EgressEngineeringType为2时，不支持配置EgressEngineeringLinkDown。	Invalid configuration, please modify configuration under the guidance.
The value for the MonitorLinkGroup parameter is out of the value range for this product. MonitorLinkGroup参数的取值超出产品允许配置的范围。	Invalid configuration, please modify configuration under the guidance.

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN is being deleted when you replace or delete it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
This address family doesn't support NSR. Please disable NSR first. 当前地址族不支持NSR，请先将NSR配置删除。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't exist. 指定的地址族不存在。	Invalid configuration, please modify configuration under the guidance.
Can't configure both EIBGP load balancing and EBGP/IBGP load balancing at the same time. EIBGP等价不能和EBGP等价、IBGP等价同时配置。	Invalid configuration, please modify configuration under the guidance.
Address family not supported. 不支持该地址族。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the preference command. 指定地址族不支持preference命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration, please modify configuration under the

balance command. 指定地址族不支持balance命令。	guidance.
Number of BGP ECMP routes exceeded theupper limit. 配置的等价条数超过产品所能配置的最大值。	Invalid configuration, please modify configuration under the guidance.
You must set all of the EBGP preference, IBGP preference, and LOCAL preference, or set none of them. EBGP preference、IBGP preference、LOCAL preference必须同时进行配置或取消配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support policy vpn-target command. 指定地址族不支持policy vpn-target命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support rr-filter command. 指定地址族不支持rr-filter命令。	Invalid configuration, please modify configuration under the guidance.
Cluster ID must be an IPv4 address or a number between 1 to 0xFFFFFFFF (notice that it must not be 0.0.0.0). Cluster ID必须是一个合法的IPv4地址或者32位无符号正整数(注意不能是0.0.0.0或者数字0)。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support default-route imported command. 指定的地址族不支持default-route imported命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the pic command. 指定的地址族不支持pic命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance as-path-neglect command. 指定的地址族不支持balance as-path-neglect命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance as-path-relax command. 指定的地址族不支持balance as-path-relax命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise l3vpn route command. 指定的地址族不支持advertise l3vpn route命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise l2vpn evpn command. 指定的地址族不支持advertise l2vpn evpn命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the import evpn mac-ip command. 指定的地址族不支持import evpn mac-ip命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the mapping-vni remove vpn-target command. 指定的地址族不支持mapping-vni remove vpn-target命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support	Invalid configuration, please modify configuration under the

advertise evpn route command. 指定的地址族不支持advertise evpn route命令。	guidance.
To configure replace-rt or advertise-policy, you must enable EVPN route advertisement for the VPNv4 or VPNv6 address family. 配置修改路由的RT或通过路由策略过滤BGP EVPN路由时需要配置允许BGP EVPN路由通过VPNv4或VPNv6地址族发布给邻居	Invalid configuration, please modify configuration under the guidance.
To configure replace-rt or advertise-policy, you must enable VPNv4 or VPNv6 route advertisement for the EVPN address family. 配置修改路由的RT或通过路由策略过滤BGP VPNv4或VPNv6路由时需要配置允许VPNv4或VPNv6路由通过EVPN地址族发布给邻居	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the additional-paths select-best command. 指定的地址族不支持additional-paths select-best命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-rib-active command. 指定的地址族不支持advertise-rib-active命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the bestroute origin-as-validation command. 指定的地址族不支持bestroute origin-as-validation命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the dampening command. 指定的地址族不支持dampening命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the default med command. 指定的地址族不支持default med命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the fast-reroute route-policy command. 指定的地址族不支持fast-reroute route-policy命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the filter-policy export command. 指定的地址族不支持filter-policy export命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the filter-policy import command. 指定的地址族不支持filter-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the log-route-flap command. 指定的地址族不支持log-route-flap命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the mvpn-advertise-rt-import command. 指定的地址族不支持mvpn-advertise-rt-import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the nesting-vpn command.	Invalid configuration, please modify configuration under the guidance.

指定的地址族不支持nesting-vpn命令。	
The specified address family doesn't support the summary automatic command. 指定的地址族不支持summary automatic命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the update-first route-policy command. 指定的地址族不支持update-first route-policy命令。	Invalid configuration, please modify configuration under the guidance.
ACL name must start with a letter and can not be 'all'. ACL名称必须以英文字母开头，且不允许使用英文单词all。	Invalid configuration, please modify configuration under the guidance.
The value of Ceiling must be greater than the value of Suppress. Ceiling的值必须比Suppress的值大。	Invalid configuration, please modify configuration under the guidance.
The value of Suppress must be greater than the value of Reuse. Suppress的值必须比Reuse的值大。	Invalid configuration, please modify configuration under the guidance.
Before you set the HalfLifeReach, HalfLifeUnReach, Reuse, Suppresss, Ceiling or DampRtPolicyName, DampeningEnable must be enabled first. 配置HalfLifeReach、HalfLifeUnReach、Reuse、Suppresss、Ceiling和DampRtPolicyName时，DampeningEnable必须先使能。	Invalid configuration, please modify configuration under the guidance.
The value of Suppress must be greater than the value of Reuse. Suppress的值必须比Reuse的值大。	Invalid configuration, please modify configuration under the guidance.
The value of Ceiling must be greater than the value of Suppress. Ceiling的值必须比Suppress的值大。	Invalid configuration, please modify configuration under the guidance.
You must set all of the HalfLifeReach, HalfLifeUnReach, Reuse, Suppresss, and Ceiling, or set none of them. HalfLifeReach、HalfLifeUnReach、Reuse、Suppresss和Ceiling必须同时配置或者不配置。	Invalid configuration, please modify configuration under the guidance.
The routing-table bgp-rib-only and advertise-rib-active commands are mutually exclusive. routing-table bgp-rib-only命令和advertise-rib-active命令不能同时配置	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the routing-table bgp-rib-only command. 指定的地址族不支持routing-table bgp-rib-only命令	Invalid configuration, please modify configuration under the guidance.
Cannot specify the RoutingtableBgpRibOnlyPolicy field when the feature is disabled. 关闭功能时，不允许指定RoutingtableBgpRibOnlyPolicy字段	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the	Invalid configuration, please modify configuration under the

user-move fast-update command. 指定的地址族不支持user-move fast-update命令。	guidance.
The specified address family does not support the forwarding-conversational-learning command. 指定的地址族不支持forwarding-conversational-learning命令。	Invalid configuration, please modify configuration under the guidance.
Before you set the ForwardConverLearningPolicy, ForwardConverLearningEnable must be enabled first. 配置ForwardConverLearningPolicy时，ForwardConverLearningEnable必须先使能。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance as-path-relax command. 指定的地址族不支持balance as-path-relax命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the default med command. 指定地址族不支持default med命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the apply-label per-route pop-go command. 指定的地址族不支持apply-label per-route pop-go命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the nexthop recursive-lookup longest-match command. 指定的地址族不支持nexthop recursive-lookup longest-match命令。	Invalid configuration. Please edit the configuration based on the guide.
The NexthopRecursiveLongestMatchPolicy attribute column cannot be specified when the NexthopRecursiveLongestMatchEnable attribute is 0. 当NexthopRecursiveLongestMatchEnable属性值为0时，不能指定NexthopRecursiveLongestMatchPolicy属性列。	Invalid configuration. Please edit the configuration based on the guide.
The specified address family doesn't support the nexthop exclude link-local address command. 指定地址族不支持nexthop exclude link-local address命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the advertise route-reoriginate command. 指定的地址族不支持advertise route-reoriginate命令。	Invalid configuration, please modify configuration under the guidance.
AdvRtReoriginatePolicy can not be configured before you enable AdvRtReoriginate. AdvRtReoriginate未使能，不允许配置AdvRtReoriginatePolicy。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the srv6-mpls-interworking enable command. 指定的地址族不支持srv6-mpls-interworking enable命令。	Invalid configuration, please modify configuration under the guidance.

The specified address family doesn't support the balance igp-metric-ignore command. 指定地址族不支持balance igp-metric-ignore命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the igp-metric inherit command. 指定地址族不支持igp-metric inherit命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the bier enable command. 指定地址族不支持bier enable命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the bier bfr-prefix proxy command. 指定地址族不支持bier bfr-prefix proxy命令。	Invalid configuration, please modify configuration under the guidance.
BIER is not enabled in the current address family, the configuration will not take effect. 当前地址族未使能BIER能力，配置不会生效。	Invalid configuration, please enable BIER before current configuration.
The import-bier is configured and bier cannot be undo enable. 已配置import-bier命令，不能去使能BIER能力.	Invalid configuration, please delete the *import-bier* configuration before current configuration.
The peer capability bier is configured and bier cannot be undo enable. 已配置peer capability bier命令，不能去使能BIER能力.	Invalid configuration, please delete the *peer capability bier* configuration before current configuration.
The bier bfr-prefix proxy is configured and bier cannot be undo enable. 已配置bier bfr-prefix proxy命令，不能去使能BIER能力.	Invalid configuration, please delete the *bier bfr-prefix proxy* configuration before current configuration.
The specified address family doesn't support the segment-routing ipv6 locator command. 指定地址族不支持segment-routing ipv6 locator命令.	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the segment-routing ipv6 TE/BE command. 指定地址族不支持segment-routing ipv6 TE/BE命令.	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the segment-routing ipv6 locator evpn command. 指定地址族不支持segment-routing ipv6 locator evpn命令.	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the segment-routing ipv6 TE/BE evpn command. 指定地址族不支持segment-routing ipv6 TE/BE evpn命令.	Invalid configuration, please modify configuration under the guidance.
Can't configure both segment-routing ipv6 best-effort and segment-routing ipv6 traffic-engineering at the same time. segment-routing ipv6 best-effort命令和segment-routing ipv6 traffic-engineering命令不能同时配置.	Invalid configuration, please modify configuration under the guidance.

The UpdateInterval and UpdateIntervalIntelligent columns cannot be configured together. UpdateInterval 和 UpdateIntervalIntelligent不能一起配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support role reflect-client or role reflector command. 指定地址族不支持role reflect-client、role reflector命令。	Invalid configuration, please modify configuration under the guidance.
The peer reflect-client command is mutually exclusive with role reflect-client command. Peer reflect-client命令和role reflect-client命令存在冲突，不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the bestroute ipv6-nexthop. 指定地址族不支持bestroute ipv6-nexthop。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the unicast-route recursive-lookup tunnel. 指定地址族不支持unicast-route recursive-lookup tunnel。	Invalid configuration, please modify configuration under the guidance.
If PrefixList and TunnelPolicy is specified, RecursiveEnable must be ‘1’. 如果指定PrefixList或TunnelPolicy，RecursiveEnable必须为’1’。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, PrefixList and TunnelPolicy cannot be specified. 当操作类型是delete或remove时，不能指定PrefixList或TunnelPolicy。	Invalid configuration, please modify configuration under the guidance.
The SendLowPriorityPeerupDelayTime and SendLowPriorityOnStartupTime can not be configured together. SendLowPriorityPeerupDelayTime和SendLowPriorityOnStartupTime不能一起配置。	Invalid configuration, please modify configuration under the guidance.s
The specified address family doesn't support the advertise lowest-priority peer-up delay command. 指定地址族不支持advertise lowest-priority peer-up delay命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise lowest-priority on-startup command. 指定地址族不支持advertise lowest-priority on-startup命令。	Invalid configuration, please modify configuration under the guidance.
The advertise lowest-priority peer-up delay command is mutually exclusive with the advertise lowest-priority on-startup command. advertise lowest-priority peer-up delay命令与advertise lowest-priority on-startup命令互斥。	Invalid configuration, please modify configuration under the guidance.
The Layer 2 ACL number range is 4000 to 4999. 二层ACL编号取值范围为4000-4999。	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the nexthop recursive-lookup default-route ignore	Invalid configuration. Please edit the configuration based on the guide.

command. 指定的地址族不支持nexthop recursive-lookup default-route ignore命令。	
The IgnoreRtPolicyName attribute column cannot be specified when the Ignore attribute is 0. 当Ignore属性值为0时，不能指定IgnoreRtPolicyName属性列。	Invalid configuration. Please edit the configuration based on the guide.
The specified address family doesn’t support the nexthop recursive-lookup tunnel-backup command. 指定地址族不支持nexthop recursive-lookup tunnel-backup命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the nexthop recursive-lookup tunnel-backup evpn command. 指定地址族不支持nexthop recursive-lookup tunnel-backup evpn命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family does not support the evpn-sdwan nexthop-recursive priority-color-only command. 指定的地址族不支持evpn-sdwan nexthop-recursive priority-color-only命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support nexthop recursive-lookup route-policy command. 指定地址族不支持nexthop recursive-lookup route-policy命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise srv6 locator command. 指定地址族不支持advertise srv6 locator命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the route-select suppress on-peer-up command. 指定地址族不支持route-select suppress on-peer-up命令。	Invalid configuration, please modify configuration under the guidance.
The route calculation delay time specified with the route-select suppress on-peer-up command must be in the range of 100 to 600000 milliseconds. The specified value must be an integer multiple of 100, for example, 200 or 1000. 邻居建立的延迟优选时间必须在100毫秒到600000毫秒之间，并且必须是100的整数倍，例如200或者1000。	Invalid configuration, please modify configuration under the guidance.

BGP/Networks

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.

AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted, when replacing or deleting it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
IPv4 address mask length can't be greater than 32. IPv4地址的掩码长度不能超过32。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the network command. 指定地址族不支持network命令。	Invalid configuration, please modify configuration under the guidance.

BGP/Aggregates

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted, when replacing or deleting it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
IPv4 address mask length can't be greater than 32. IPv4地址的掩码长度不能超过32。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the aggregate command. 指定地址族不支持aggregate命令。	Invalid configuration, please modify configuration under the guidance.

BGP/NeighborGroups

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted, when replacing or deleting it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy import command. 指定地址族不支持route-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy export command. 指定地址族不支持route-policy export命令。	Invalid configuration, please modify configuration under the guidance.
EBGP peergroups do not support reflection configuration. EBGP对等体组不能配置反射	Invalid configuration, please modify configuration under the guidance.
Next-hop-local conflicts with next-hop-invariable. Next-hop-local命令和next-hop-invariable命令存在冲突，不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-invariable command. 指定地址族不支持next-hop-invariable命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect between-clients command. 指定地址族不支持reflect between-clients命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflector cluster-id command. 指定地址族不支持reflector cluster-id命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect-client command. 指定地址族不支持reflect-client命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-local command。 指定地址族不支持next-hop-local命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the router-mac-local command. 指定地址族不支持router-mac-local命令。	Invalid configuration, please modify configuration under the guidance.

The specified address family doesn't support the advertise-community command. 指定地址族不支持advertise-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the allow-as-loop command. 指定地址族不支持allow-as-loop命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-limit command. 指定地址族不支持route-limit命令。	Invalid configuration, please modify configuration under the guidance.
Invalid prefix count. 前缀数目配置错误。	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect can't be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid peer group name. 组名称不合法。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist. 指定的对等体组不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-vpn command. 指定地址族不支持next-hop-vpn命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-ext-community command. 指定地址族不支持advertise-ext-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the additional-paths receive command. 指定地址族不支持additional-paths receive命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the additional-paths send command. 指定地址族不支持additional-paths send命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the advertise additional-paths best command. 指定地址族不支持additional-paths best命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the default-route-advertise command. 指定地址族不支持default-route-advertise命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the default-route-advertise conditional-policy command. 指定地址族不支持default-route-advertise conditional-policy命令。	Invalid configuration, please modify configuration under the guidance.
Before You set the RoutePlcy, DefRouteAdv must be enable first. 配置RoutePlcy时，DefRouteAdv必须使能。	Invalid configuration, please modify configuration under the guidance.
Before You set the ConditionalPolicy, DefRouteAdv must be enable first.	Invalid configuration, please modify configuration under the guidance.

配置ConditioanalPolicy时，DefRouteAdv必须使能。	
When the operation is delete or remove, the route-policy is not allowed to be set. 当执行delete或remove操作时，不允许指定route-policy。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the conditional-policy is not allowed to be set. 当执行delete或remove操作时，不允许指定conditional-policy。	Invalid configuration, please modify configuration under the guidance.
Route policy name and VPN instance name can't be configured at the same time. Route policy name和vpn instance name不能同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid default-route-advertise value. 指定的default-route-advertise值不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the keep-all-routes command. 指定地址族不支持keep-all-routes命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the label-route-capability command. 指定地址族不支持label-route-capability命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the prefix-list export command. 指定地址族不支持prefix-list export命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the prefix-list import command. 指定地址族不支持prefix-list import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the public-as-only command. 指定地址族不支持public-as-only命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the soo command. 指定地址族不支持soo命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the filter-policy export command. 指定地址族不支持filter-policy export命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the filter-policy import command. 指定地址族不支持filter-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise origin-as-validation command. 指定地址族不支持advertise origin-as-validation命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the capability-advertise orf prefix-list command. 指定地址族不支持capability-advertise orf prefix-list命令。	Invalid configuration, please modify configuration under the guidance.

The specified address family doesn’t support the signaling command. 指定地址族不支持signaling命令。	Invalid configuration, please modify configuration under the guidance.
Invalid signaling non-standard value. 指定的signaling non-standard值不存在。	Invalid configuration, please modify configuration under the guidance.
Invalid signaling value. 指定的signaling值不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the upe command. 指定地址族不支持upe命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the upe route-policy command. 指定地址族不支持upe route-policy命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the auto-discovery command. 指定地址族不支持auto-discovery命令。	Invalid configuration, please modify configuration under the guidance.
Invalid auto-discovery non-standard value. 指定的auto-discovery non-standard值不存在。	Invalid configuration, please modify configuration under the guidance.
Invalid auto-discovery value. 指定的auto-discovery值不存在。	Invalid configuration, please modify configuration under the guidance.
Invalid site-of-origin. site-of-origin格式不合法。	Invalid configuration, please modify configuration under the guidance.
AdvAddPathsBest must be in the range of 2 to 64. AdvAddPathsBest的取值范围为2~64。	Invalid configuration, please modify configuration under the guidance.
To configure DiscNonStd, you must set DiscEnable first. 在配置SigNonStd之前必须先配置SigEnable。	Invalid configuration, please modify configuration under the guidance.
DiscNonStd can be 1 only when DiscEnable is 1. 只有在DiscEnable为1时，DiscNonStd才能为1。	Invalid configuration, please modify configuration under the guidance.
SigNonStd can be 1 only when SigEnable is 1. 只有在SigEnable为1时，SigNonStd才能为1。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the re-originate command. 指定地址族不支持re-originate命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-mac command. 指定地址族不支持re-originate-mac命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the adv-original-route command. 指定地址族不支持adv-original-route命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress-re-orig-prefix command. 指定地址族不支持suppress-re-orig-prefix命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration. Please modify configuration under the

suppress-re-orig-mac command. 指定地址族不支持suppress-re-orig-mac命令。	guidance.
The specified address family doesn't support the re-originate-smet command. 指定地址族不支持re-originate-smet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-spmsi command. 指定地址族不支持re-originate-spmsi命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress-re-orig-imet command. 指定地址族不支持suppress-re-orig-imet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originated vpn command. 指定地址族不支持re-originated vpn命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress re-originated command. 指定地址族不支持suppress re-originated命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family does not support the advertise encap-type sd-wan command. 指定地址族不支持advertise encap-type sd-wan命令。	Invalid configuration. Please edit the configuration by following the guidance.
The specified address family doesn't support the suppress route-server-client command. 指定地址族不支持route-server-client命令。	Invalid configuration. Please modify configuration under the guidance.
Route-server-client conflicts with label-route-capability. Route-server-client命令和label-route-capability命令存在冲突，不能同时配置。	Invalid configuration. Please modify configuration under the guidance.
Route-server-client conflicts with confederation id, confederation peer-as, confederation nonstandard. Route-server-client命令和confederation id、confederation peer-as及 confederation nonstandard命令存在冲突，不能同时配。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the peer capability bier command. 指定地址族不支持peer capability bier命令。	Invalid configuration. Please edit the configuration by following the guidance.
BIER is not enabled in the current address family, the configuration will not take effect. 当前地址族未使能BIER能力，配置不会生效。	Invalid configuration, please enable BIER before current configuration.
The specified address family doesn't support the default-route-advertise route-policy command. 指定地址族不支持default-route-advertise route-policy命令。	Invalid configuration, please enable BIER before current configuration.
The number range of Layer 2 ACL is 4000 to 4999. 二层ACL编号取值范围为4000-4999。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the macip-route-limit command.	Invalid configuration, please modify configuration under the guidance.

指定地址族不支持macip-route-limit命令。	
Invalid MAC/IP advertisement route count limit. MAC/IP路由数目配置错误。	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect cannot be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
Route-limit, Macip-route-limit cannot be configured at the same time. Route-limit、 Macip-route-limit 不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the srv6-vpn compatible command. 指定地址族不支持srv6-vpn compatible命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originated mac command. 指定地址族不支持re-originated mac命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route auto-discovery command. 指定地址族不支持suppress original-route auto-discovery命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route imet command. 指定地址族不支持suppress original-route imet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route es command. 指定地址族不支持suppress original-route es命令。	Invalid configuration. Please modify configuration under the guidance.
Before you set BandwidthValue, Bandwidth must be enabled first. 配置BandwidthValue时，Bandwidth必须使能。	Invalid configuration. Please modify configuration under the guidance.

BGP/Neighbors

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted, when replacing or deleting it.
The VPN instance is not configured.	Invalid configuration, please modify configuration under the

该VPN没有配置。	guidance.
The specified neighbor can't be enabled in the current address family. 指定的会话在该实例下不能使能。	Invalid configuration, please modify configuration under the guidance.
The specified peer doesn't exist. 指定的对等体会话不存在。	Invalid configuration, please modify configuration under the guidance.
EBGP peers do not support reflection configuration. EBGP邻居不能配置反射	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy import command. 指定地址族不支持route-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy export command. 指定地址族不支持route-policy export命令。	Invalid configuration, please modify configuration under the guidance.
Next-hop-local conflicts with next-hop-invariable. Next-hop-local命令和next-hop-invariable命令存在冲突，不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-invariable command. 指定地址族不支持next-hop-invariable命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect between-clients command. 指定地址族不支持reflect between-clients命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflector cluster-id command. 指定地址族不支持reflector cluster-id命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect-client command. 指定地址族不支持reflect-client命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-local command。 指定地址族不支持next-hop-local命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the router-mac-local command. 指定地址族不支持router-mac-local命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-community command. 指定地址族不支持advertise-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the allow-as-loop command. 指定地址族不支持allow-as-loop命令。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration, please modify configuration under the

route-limit command. 指定地址族不支持route-limit命令。	guidance.
Invalid prefix count. 前缀数目配置错误。	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect can't be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-vpn command. 指定地址族不支持next-hop-vpn命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-ext-community command. 指定地址族不支持advertise-ext-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the additional-paths receive command. 指定地址族不支持additional-paths receive命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the additional-paths send command. 指定地址族不支持additional-paths send命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the advertise additional-paths best command. 指定地址族不支持additional-paths best命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the default-route-advertise command. 指定地址族不支持default-route-advertise命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the default-route-advertise conditional-policy command. 指定地址族不支持default-route-advertise conditional-policy命令。	Invalid configuration, please modify configuration under the guidance.
Before You set the RoutePlcy, DefRouteAdv must be enable first. 配置RoutePlcy时，DefRouteAdv必须使能。	Invalid configuration, please modify configuration under the guidance.
Before You set the ConditionalPolicy, DefRouteAdv must be enable first. 配置ConditioanalPolicy时，DefRouteAdv必须使能。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the route-policy is not allowed to be set. 当执行delete或remove操作时，不允许指定route-policy。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the conditional-policy is not allowed to be set. 当执行delete或remove操作时，不允许指定conditional-policy。	Invalid configuration, please modify configuration under the guidance.
Route policy name and VPN instance name can’t be configured at the same time. Route policy name和VPN instance name不能同时	Invalid configuration, please modify configuration under the guidance.

配置。	
Invalid default-route-advertise value. 指定的default-route-advertise值不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the keep-all-routes command. 指定地址族不支持keep-all-routes命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the label-route-capability command. 指定地址族不支持label-route-capability命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the prefix-list export command. 指定地址族不支持prefix-list export命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the prefix-list import command. 指定地址族不支持prefix-list import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the public-as-only command. 指定地址族不支持public-as-only命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the soo command. 指定地址族不支持soo命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the filter-policy export command. 指定地址族不支持filter-policy export命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the filter-policy import command. 指定地址族不支持filter-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the advertise origin-as-validation command. 指定地址族不支持advertise origin-as-validation命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the capability-advertise orf prefix-list command. 指定地址族不支持capability-advertise orf prefix-list命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the signaling command. 指定地址族不支持signaling命令。	Invalid configuration, please modify configuration under the guidance.
Invalid signaling non-standard value. 指定的signaling non-standard值不存在。	Invalid configuration, please modify configuration under the guidance.
Invalid signaling value. 指定的signaling值不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the upe command. 指定地址族不支持upe命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn’t support the	Invalid configuration, please modify configuration under the

upe route-policy command. 指定地址族不支持upe route-policy命令。	guidance.
The specified address family doesn’t support the auto-discovery command. 指定地址族不支持auto-discovery命令。	Invalid configuration, please modify configuration under the guidance.
Invalid auto-discovery non-standard value. 指定的auto-discovery non-standard值不存在。	Invalid configuration, please modify configuration under the guidance.
Invalid auto-discovery value. 指定的auto-discovery值不存在。	Invalid configuration, please modify configuration under the guidance.
The specified peers don't exist. 指定的对等体不存在。	The specified peers don't exist.
When the operation is delete or remove, the RoutePlcy is not allowed to be set. 当delete或remove操作时，不允许指定RoutePlcy。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the re-originate command. 指定地址族不支持re-originate命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-mac command. 指定地址族不支持re-originate-mac命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-imet command. 指定地址族不支持re-originate-imet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the adv-original-route command. 指定地址族不支持adv-original-route命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress-re-orig-prefix command. 指定地址族不支持suppress-re-orig-prefix命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress-re-orig-mac command. 指定地址族不支持suppress-re-orig-mac命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress-re-orig-imet command. 指定地址族不支持suppress-re-orig-imet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-smet command. 指定地址族不支持re-originate-smet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originate-spmsi command. 指定地址族不支持re-originate-spmsi命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the re-originated vpn command. 指定地址族不支持re-originated vpn命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration. Please modify configuration under the

suppress re-originated command. 指定地址族不支持suppress re-originated命令。	guidance.
The specified address family does not support the advertise encap-type sd-wan command. 指定地址族不支持advertise encap-type sd-wan命令。	Invalid configuration. Please edit the configuration by following the guidance.
The specified address family doesn't support the suppress route-server-client command. 指定地址族不支持route-server-client命令。	Invalid configuration. Please modify configuration under the guidance.
Route-server-client conflicts with label-route-capability. Route-server-client命令和label-route-capability命令存在冲突，不能同时配置。	Invalid configuration. Please modify configuration under the guidance.
Route-server-client conflicts with confederation id, confederation peer-as, confederation nonstandard. Route-server-client命令和confederation id、confederation peer-as及confederation nonstandard命令存在冲突，不能同时配。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the peer capability bier command. 指定地址族不支持peer capability bier命令。	Invalid configuration. Please edit the configuration by following the guidance.
BIER is not enabled in the current address family, the configuration will not take effect. 当前地址族未使能BIER能力，配置不会生效。	Invalid configuration, please enable BIER before current configuration.
IPv4 peers don't support the srv6-vpn compatible command. IPv4对等体不支持srv6-vpn compatible命令。	Invalid configuration, please enable BIER before current configuration.
The specified address family doesn't support the default-route-advertise route-policy command. 指定地址族不支持default-route-advertise route-policy命令。	Invalid configuration, please enable BIER before current configuration.
The number range of Layer 2 ACL is 4000 to 4999. 二层ACL编号取值范围为4000-4999。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the macip-route-limit command. 指定地址族不支持macip-route-limit命令。	Invalid configuration, please modify configuration under the guidance.
Invalid MAC/IP advertisement route count limit. MAC/IP路由数目配置错误	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect cannot be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
Route-limit, Macip-route-limit cannot be configured at the same time. Route-limit、 Macip-route-limit 不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the srv6-vpn compatible command. 指定地址族不支持srv6-vpn compatible命令。	Invalid configuration. Please modify configuration under the guidance.

The specified address family doesn't support the re-originated mac command. 指定地址族不支持re-originated mac命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route auto-discovery command. 指定地址族不支持suppress original-route auto-discovery命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route imet command. 指定地址族不支持suppress original-route imet命令。	Invalid configuration. Please modify configuration under the guidance.
The specified address family doesn't support the suppress original-route es command. 指定地址族不支持suppress original-route es命令。	Invalid configuration. Please modify configuration under the guidance.
Before you set BandwidthValue, Bandwidth must be enabled first. 配置BandwidthValue时，Bandwidth必须使能。	Invalid configuration. Please modify configuration under the guidance.

BGP/Redistributes

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists when you set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VPN instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VPN instance is being deleted. 该VPN正在删除中。	The specified VPN instance is being deleted, when replacing or deleting it.
The VPN instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the import-route command. 指定地址族不支持import-route命令。	Invalid configuration, please modify configuration under the guidance.
You cannot specify a process ID when you redistribute direct, static, UNR or Local-aggregate routes. 引入协议为直连 、静态、UNR或者Local-aggregate时，协议进程号必须为空。	Invalid configuration, please modify configuration under the guidance.
You cannot specify a process ID when you redistribute direct, static, or UNR routes. 引入协议为直连 、静态或者UNR时，协议进程号必须为空。	Invalid configuration, please modify configuration under the guidance.

Invalid RIP, OSPF, or IS-IS process ID. Please specify a process ID in the range of 1 to 65535, or specify the all-processes keyword to redistribute routes from all processes of the specified protocol. 非法的RIP、OSPF或ISIS路由协议进程号，请指定1~65535之间的协议进程号或指定all-processes参数来引入指定路由协议中所有进程的路由。	Invalid configuration, please modify configuration under the guidance.
Invalid EIGRP process ID. Please specify a process ID in the range of 1 to 65535, or specify the all-as keyword to redistribute routes from all EIGRP processes. EIGRP路由协议的进程号非法，请指定1~65535之间的协议进程号或指定all-as参数引入指定路由协议所有进程的路由。	Invalid configuration, please modify configuration under the guidance.
When the protocol is direct or static, allow-direct can not be configured. 引入协议为direct或者static时，不能配置allow-direct。	Invalid configuration, please modify configuration under the guidance.
When the protocol is Local-aggregate, allow-direct and med can not be configured. 引入协议为Local-aggregate时，不能配置allow-direct 和 med。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the import-route local-aggregate command. 指定地址族不支持import-route local-aggregate命令。	Invalid configuration, please modify configuration under the guidance.

BGP/RedistributesAppend

BGP event stream

BGP stream description.

bgp-operations-to-controller event

This event is used to notice to controller the operation event of BGP protocol.

XML structure for event subscription

```
<bgp-operations-to-controller>
</bgp-operations-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-operations-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
      </bgp-operations-to-controller>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	BGP stream
Event name	bgp-operations-to-controller
Event namespace	http://www.h3c.com/netconf/event:1.0/BGP:1.0
Support for extended query	No

XML structure for event report

```
<bgp-operations-to-controller>
  <Operation>
    <OperationType></OperationType>
    <Name></Name>
  </Operation>
</bgp-operations-to-controller>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <bgp-operations-to-controller xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
    <Operation>
      <OperationType>1</OperationType>
```

```
    <Name></Name>
   </Operation>
  </bgp-operations-to-controller>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
OperationType	Operation type	Enumeration 1 – Notice controller smooth start 2 – Notice controller smooth end 3 – Notice controller the lipc disconnect 4 – Notice controller the lipc connect successfully	The operation type specifies the operation that BGP protocol should perform.
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.

bgp-report-route-to-controller event

This event is used to report BGP route to controller.

XML structure for event subscription

```
<bgp-report-route-to-controller>
</bgp-report-route-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>

Table description

Column name	Column description	Data type and restrictions	Remarks
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OperationType	Operation type	Enumeration 1 – Add 2 – Delete	The operation type specifies the operation that BGP protocol should perform.
RouteType	Type of route	Enumeration: • 1—IPv4 Unicast. • 2—IPv4 Multicast. • 3—MDT • 4—VPNv4 • 5—IPv6 Unicast • 6—IPv6 Multicast. • 7—VPNv6 • 8—L2VPN • 9—EVPN • 10—Link-State • 11—EVPN with pathid	
RouteKey	Key of route	Binary. Length: 0 to 128 characters.	An empty string indicates there is no key of the route.
RouteSegment	Route information	Binary. Length: 1 to 4096 characters.	
RouteAttr	Attribute of route	Binary. Length: 1 to 4096 characters.	

bgp-report-sessionstate-to-controller event

This event is used to report BGP session state to controller.

XML structure for event subscription

```
<bgp-report-sessionstate-to-controller>
</bgp-report-sessionstate-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-report-sessionstate-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
      </bgp-report-sessionstate-to-controller>
```

```
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	BGP stream
Event name	bgp-report-sessionstate-to-controller
Event namespace	http://www.h3c.com/netconf/event:1.0/BGP:1.0
Support for extended query	No

XML structure for event report

```
<bgp-report-sessionstate-to-controller>
  <ReportSessionstate>
    <Name></Name>
    <VRF></VRF>
    <AF></AF>
    <IpAddress></IpAddress>
    <CurrentState></CurrentState>
    <LastState></LastState>
  </ReportSessionstate>
</bgp-report-sessionstate-to-controller>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-09-05T09:10:51</eventTime>
  <bgp-report-sessionstate-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
    <ReportSessionstate>
      <Name></Name>
      <VRF></VRF>
      <AF>1</AF>
      <IpAddress>1.1.1.1</IpAddress>
      <CurrentState>5</CurrentState>
      <LastState>4</LastState>
    </ReportSessionstate>
  </bgp-report-sessionstate-to-controller>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	String. Length: 0 to 31 characters.	An empty string indicates the public network.
AF	Address family of session	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.
IpAddress	Address of session	• Index	String,IPv4 address string or IPv6 address string.
CurrentState	Current state of the session		Enumeration: • **0—Idle** • **1—Connect** • **2—Active** • **3—Opensent** • **4—Openconfirm** • **5—Established**
LastState	Previous state of the session		Enumeration: • **0—Idle** • **1—Connect** • **2—Active** • **3—Opensent** • **4—Openconfirm** • **5—Established**

bgp-report-status-to-controller event

This event is used to report status of the BGP instance.

XML structure for event subscription

```
<bgp-report-status-to-controller>
</bgp-report-status-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-report-status-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
      </bgp-report-status-to-controller>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

Encap-type	Encapsulation type for packets forwarded by using BIER	N/A	Enumeration: • **0**—None. • **1**—G-BIER.	N/A
Encap-da	G-BIER multicast policy reserved address	N/A	String. IPv6 address in the X:X::X:X format.	N/A
Encap-bsls	BSLs of the sub-domain	Subtable	N/A	N/A

BIER/Sub-domains/Sub-domain/Encap/Encap-bsls

This table contains BSLs for a BIER encapsulation type.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Encap-bsls

Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Encap-bsl	BSLs of the sub-domain	Sublist	N/A	N/A

BIER/Sub-domains/Sub-domain/Encap/Encap-bsls/Encap-bsl

This table contains BSLs for a BIER encapsulation type.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Encap-bsl
Table type	Multi-instance table
Row name	Encap-bsl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Bsl	Bit string length	Index	Enumeration: • **1**—64. • **2**—128. • **3**—256.	N/A
Max-si	Maximum Set Identifier .	N/A	Unsigned integer. Value range: 0 to 255.	N/A

BIER/Sub-domains/Sub-domain/Bfr-neighbors

This table contains BFR neighbors.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Bfr-neighbors
Table type	Multi-instance table
Row name	Bfr-neighbor
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Bfr-neighbor	BFR neighbor	Subtable	N/A	N/A

BIER/Sub-domains/Sub-domain/Bfr-neighbors/Bfr-neighbor

This table contains BFR neighbor information.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Bfr-neighbors
Table type	Multi-instance table
Row name	Bfr-neighbor
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Encap-da	G-BIER multicast policy reserved address	Index	String. IPv6 address in the X:X::X:X format.	N/A
Bfr-id-ranges	BFR ID range	Subtable	N/A	N/A

BIER/Sub-domains/Sub-domain/Bfr-neighbors/Bfr-neighbor/Bfr-id-ranges

This table contains information about BFR ID ranges.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Bfr-id-ranges
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Bfr-id-range	BFR ID range	Sublist	N/A	N/A

BIER/Sub-domains/Sub-domain/Bfr-neighbors/Bfr-neighbor/Bfr-id-ranges/Bfr-id-range

This table contains information about BFR ID ranges.

XML structure

See the XML structure of BIER/Sub-domains.

Table description

Item	Description
Feature name	BIER
Table name	Bfr-id-range
Table type	Multi-instance table
Row name	Bfr-id-range
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Bfr-id-start	Start BFR ID.	Index	Unsigned integer Value range: 1 to 65535.	N/A
Bfr-id-end	End BFR ID.	N/A	Unsigned integer Value range: 1 to 65535.	N/A
Preference	Preference of the route to the BFR neighbor.	N/A	Unsigned integer Value range: 1 to 255. Default: 60.	The smaller the value, the higher the prference.

BIER/Birts

This table contains BIER routing table information.

BIER

BIER/Sub-domains

Message	Explanation
Maximum number of BIER sub-domains already reached. 配置BIER子域数量超出设备支持的最大值	Maximum number of BIER sub-domains already reached. 用户创建 BIER 子域数量不能超出设备支持的最大值。
BFR ID conflict. BFR ID冲突。	The BFR ID cannot be the same as that of a remote BFR in the sub-domain. 创建的 BFR ID 不能与相同子域的远端 BFR 的 BFR ID 冲突。
TTL mode conflicts with the TTL value. TTL模式和TTL的值冲突。	Uniform mode does not support configuring an TTL value. Uniform 模式下，不支持配置 TTL 值。
TTL is not supported by the sub-domain. 当前BIER子域不支持配置TTL值	The sub-domain does not support configuring TTL. 配置了 PHP 的 BIER 子域不支持配置 TTL 值
PHP is not supported by the sub-domain. PHP功能与当前BIER子域冲突	The sub-domain does not support configuring PHP. 已经存在的 BIER 子域不支持配置 PHP
PHP is not supported. 不支持PHP功能	A PHP sub-domain cannot be created if PHP is not customized. 如果设备没有定制支持 PHP 功能，则不允许创建 PHP 属性的子域
PHP cannot be modified. 不允许修改PHP属性	PHP cannot be modified in the sub-domain. 已创建的 BIER 子域不允许修改 PHP 属性
The underlay protocol cannot be modified. 不允许修改Underlay层路由协议	The underlay protocol cannot be modified in the sub-domain. 已创建的 BIER 子域不允许修改 Underlay 层路由协议
The address family cannot be modified. 不允许修改BIER子域所属的地址簇	The address family cannot be modified in the sub-domain. 已创建的 BIER 子域不允许修改所属的地址簇
Static neighbors are not supported in a sub-domain. 当前BIER子域不支持配置静态邻居。	A sub-domain does not support configuring static neighbors. 配置了 PHP 的 BIER 子域不支持配置静态邻居。

BIER/Sub-domains/Encap

Message	Explanation
G-BIER is not configured as the encapsulation type. 未先将BIER的封装的类型配置为G-BIER。	Before you configure the MPRA or BSL, first specify G-BIER as the encapsulation type. 在配置 MPRA 或者 BSL 时，需要先将 BIER 的封装类型配置为 G-BIER。
The encapsulation type must be configured with BSL. Encap-type需要和BSL一起配置。	You must configure the encapsulation type together with BSL. Encap-type 需要和 BSL 一起配置。
MPRA conflicts with the SRv6 prefix. MPRA 和 SRv6 前缀冲突。	The MPRA cannot be the same as the SRv6 prefix. 配置的 MPRA 不能 SRv6 前缀冲突。

MPRA conflicts with the IPv6 address of an interface on the device. MPRA和设备上的接口IPv6地址冲突。	The MPRA cannot be the same as the IPv6 address of an interface on the device. 配置的 MPRA 不能与设备上的接口 IPv6 地址冲突。

BIER/Sub-domains/Encap/Encap-bsls

Message	Explanation
G-BIER is not configured as the encapsulation type. 未先将BIER的封装的类型配置为G-BIER。	Before you configure the MPRA or BSL, specify G-BIER as the encapsulation type. 在配置 BSL 时，需要先将 BIER 的封装类型配置为 G-BIER。。
The maximum SI must be configured together with a BSL. 配置Max-SI的同时，需要配置BSL。	You must configure the maximum SI together with a BSL. 配置 Max-SI 的同时，需要配置 BSL。

BIER/Sub-domains/Bfr-neighbors

Message	Explanation
BFR neighbors cannot be issued separately. Bfr-neighbors不能单独下发	BFR neighbors should be issued simultaneously with BFR ID ranges. Bfr-neighbors 需要和 Bfr-id-ranges 同时下发。
G-BIER is not configured as the encapsulation type. 未先将BIER的封装的类型配置为G-BIER。	Before you configure the BFR neighbors, specify G-BIER as the encapsulation type. 在配置 BFR 邻居时，需要先将 BIER 的封装类型配置为 G-BIER。

BIER/Sub-domains/Bfr-neighbors/Bfr-id-ranges

Message	Explanation
G-BIER is not configured as the encapsulation type. 未先将BIER的封装的类型配置为G-BIER。	Before you configure the BFR ID ranges, specify G-BIER as the encapsulation type. 在配置BFR ID 范围时，需要先将BIER的封装类型配置为G-BIER。
The BFR ID is being used by other BFRs in sub-domain. 子域中的其他BFR正在使用此BFR ID。	The configured BFR ID cannot use the ID already used by other BFRs in the current sub-domain. 配置的 BFR ID 不能使用当前子域其他 BFR 已使用的 ID。
The BFR ID range conflicts with previous configuration. 范围内的BFR ID与以前的配置冲突。	The configured BFR ID range cannot conflict with the existing configuration. 配置的 BFR ID range 不能和当前已有配置冲突。
The total of BFR neighbors is out of limit. BFR邻居的总数超出配置限制。	Maximum number of BFR neighbors cannot be out of limit. BFR 邻居的最大个数不能超过配置限制。
The total number of BFR IDs in a BFR IDrange is out of limit. 范围内的BFR ID总数超出bfr邻居中的配置限制。	Maximum number of BFR IDS bound by BFR neighbors cannot be out of limit. BFR 邻居绑定的 BFR ID 的最大个数不能超过配置限制。
Maximum number BFR neighbors with the same preference already reached. 到达链路优先级相同的静态跨域BFR邻居的总数超	The number of BFR neighbors with the same preference cannot be out of limit. 链路优先级相同的静态跨域 BFR 邻居的最大个数不能超过配置限

出配置限制。	制。

Table description

Item	Description
Feature name	BRAS
Table name	BrasInterfaces
Table type	Multi-instance table
Row name	BrasInterface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfAccessLimit	Access limit on the interface.	Subtable	N/A	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfVlanAccessLimits	Access Limit number on the VLAN.	Sublist	N/A	N/A
IfQinqAccessLimits	Access Limit number on the QinQ VLAN.	Sublist	N/A	N/A
IPoEDhcpUserNameFormats	User name Format of DHCP.	Sublist	N/A	N/A
IPoEUserName	User name format of IPoE user.	Subtable	N/A	N/A
IPoEUserDetects	Online detect parameter.	Sublist	N/A	N/A
IPoEAuthFailurePolicy	Authentication failure policy of IPoE user.	Subtable	N/A	N/A
Ipv4Matchs	Trusted IPv4 addresses for IPoE authentication.	Sublist	N/A	N/A

BRAS/BrasInterfaces/IfAccessLimit

This table contains the information about bras/brasInterfaces/IfAccessLimit table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfAccessLimit
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfLimitNum	Limit number.	N/A	Unsigned integer.1~65536	different customization ranges for different products

BRAS/BrasInterfaces/IfVlanAccessLimits

This table contains the information about bras/brasInterfaces/IfVlanAccessLimits table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfVlanAccessLimits
Table type	Multi-instance table
Row name	IfVlanAccessLimit
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartVlanId	Start VLAN id.	Index	Unsigned integer. 1~4094	N/A
EndVlanId	End VLAN id.	Index	Unsigned integer. 1~4094	N/A
VlanLimitNum	VLAN limit number.	N/A	Unsigned integer.1~65536	different customization ranges for different products

BRAS/BrasInterfaces/IfQinqAccessLimits

This table contains the information about bras/brasInterfaces/IfQinqAccessLimits table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfQinqAccessLimits
Table type	Multi-instance table
Row name	IfQinqAccessLimit
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
QinqStartVlanId	Start of second-tier VLAN id.	Index	Unsigned integer. 1~4094	N/A
QinqEndVlanId	End of second-tier VLAN id.	Index	Unsigned integer. 1~4094	N/A
QinqVlanId	First Vlan id.	Index	Unsigned integer. 1~4094	N/A
QinqLimitNum	QinQ VLAN limit number.	N/A	Unsigned integer.1~65536	different customization ranges for different products

BRAS/BrasInterfaces/IPoEDhcpUserNameFormats

This table contains the information about bras/brasInterfaces/IPoEDhcpUserNameFormats table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEDhcpUserNameFormats
Table type	Multi-instance table
Row name	IPoEDhcpUserNameFormat
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SeqId	Format sequence Id of contexts.	Index	Unsigned integer.	N/A
ContextType	Type of context.	N/A	Enumeration: • 1—Circuit-id option. • 2—MAC in Circuit-id option. • 3—Client-id option. • 4—Host name option. • 5—Original host name option. • 6—NAS-PORT-Id. • 7—Port id. • 8—Remote-id option. • 9—Second VLAN id. • 10—Slot id. • 11—Source MAC. • 12—Specified string. • 13—Sub slot id. • 14—system name. • 15—Vendor-class option. • 16—Original Vendor-class option. • 17—Vendor-specific option. • 18—Vlan id.	N/A
Separator	Separator behind the context.	N/A	Char.	N/A
MacSeparator	Separator of the MAC address.	N/A	Char.	Used when the “ContextType” column is 11.
SpecifiedString	Specified string.	N/A	String. Length: 1 to 64 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	Used when the “ContextType” column is 12.

BRAS/BrasInterfaces/IPoEUserName

This table contains the information about bras/brasInterfaces/IPoEUserName table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEUserName
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserNameContext	Context of user name.	N/A	Enumeration: • 1—Undefined.(default) • 2—Use user's MAC address as user name. • 3—Use specified string as user name.	N/A
MacSeparator	Separator of MAC address.	N/A	Char.	Used when the "UserNameContext" column is 2.
MacIsLowcase	The MAC address is lowercase.	N/A	Enumeration: • 1—True. • 2—False. • 3—Undefined.(default)	Used when the "UserNameContext" column is 2.
UserNameString	Specified string for user name.	N/A	String. Length: 1 to 64 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	Used when the "UserNameContext" column is 3.

BRAS/BrasInterfaces/IPoEUserDetects

This table contains the information about bras/brasInterfaces/IPoEUserDetects table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS

Table name	IPoEUserDetects
Table type	Multi-instance table
Row name	IPoEUserDetect
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
DetectType	Detect type.	N/A	Enumeration: • 1—Disable user detect.(default) • 2—ICMP. • 3—ARP. • 4—ND.	N/A
RetryNum	Retry number.	N/A	Unsigned integer. 2 to 255.	N/A
Interval	Detect interval in second.	N/A	Unsigned integer. 20 to 1200.	N/A
NoDataCheck	No data check flag.	N/A	Enumeration: • 1—Enable. • 2—Disable(default)	N/A

BRAS/BrasInterfaces/IPoEAuthFailurePolicy

This table contains the information about bras/brasInterfaces/IPoEAuthFailurePolicy table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEAuthFailurePolicy
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChastenAuthFailedTimes	Allow times of authentication failure.	N/A	Unsigned integer. 1 to 10000.	N/A
ChastenPeriod	Detect period of authentication failure chasten in second.	N/A	Unsigned integer. 1 to 3600.	N/A
QuietTime	Quiet time of authentication in second.	N/A	Unsigned integer. 0,10 to 3600.	0 means the quiet function is disabled.

BRAS/BrasInterfaces/Ipv4Matchs

This table contains the information about bras/brasInterfaces/Ipv4Matchs table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	Ipv4Matchs
Table type	Multi-instance table
Row name	Ipv4Match
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4StartAddress	IPv4 address.	Index	String, dotted decimal notation.	N/A
IPv4EndAddress	IPv4 address.	Index	String, dotted decimal notation.	N/A

BRAS/AccessLog

This table contains the information about configuring Access Log.

XML structure

```
<BRAS>
 <AccessLog>
   <AbnormalLogout></AbnormalLogout>
   <FailedLogin></FailedLogin>
   <NormalLogout></NormalLogout>
   <SuccessfulLogin></SuccessfulLogin>
 </AccessLog>
</BRAS>
```

Table description

Item	Description
Feature name	BRAS
Table name	AccessLog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AbnormalLogout	Abnormal logout.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A
NormalLogout	Normal logout.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A
FailedLogin	Failed login.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A
SuccessfulLogin.	Successful login.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A

BRAS/UCMNatChangeMode

This table contains the information about using the UCM NAT info change updating mode.

XML structure

```
<BRAS>
  <UCMNatChangeMode>
    <AccoutingUpdateEnable></AccoutingUpdateEnable>
 </UCMNatChangeMode>
</BRAS>
```

Table description

Item	Description
Feature name	BRAS
Table name	UCMNATChangeMode
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AccoutingUpdateEnable	Whether the NAT info change trigger accouting update	N/A	String: • Enable. • Disable (default).	N/A

BRAS/UPSwitchAcctUpdateMode

This table contains the information about using the UP master/backup switchover to trigger accounting updates or accounting stop and accounting start.

XML structure

```
<BRAS>
  <UPSwitchAcctUpdateMode>
    <AccountingUpdateMode></AccountingUpdateMode>
 </UPSwitchAcctUpdateMode>
</BRAS>
```

Table description

Item	Description
Feature name	BRAS
Table name	UPSwitchAcctUpdateMode
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AccoutingUpdateMode	Whether the UP master/backup switchover triggers accounting updates or accounting stop and accounting start	N/A	String: • Send-Accounting-Update. • Send-Stop-start • Disable (default).	N/A

Table description

Item	Description
Feature name	BRAS
Table name	BrasInterfaces
Table type	Multi-instance table
Row name	BrasInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.

IfAccessLimit	Access limit on the interface.	Subtable	N/A	N/A
IfVlanAccessLimits	Access Limit number on the VLAN.	Sublist	N/A	N/A
IfQinqAccessLimits	Access Limit number on the QinQ VLAN.	Sublist	N/A	N/A
IPoEDhcpUserNameFormats	User name Format of DHCP.	Sublist	N/A	N/A
IPoEUserName	User name format of IPoE user.	Subtable	N/A	N/A
IPoEUserDetects	Online detect parameter.	Sublist	N/A	N/A
IPoEAuthFailurePolicy	Authentication failure policy of IPoE user.	Subtable	N/A	N/A
Ipv4Matchs	Trusted IPv4 addresses for IPoE authentication.	Sublist	N/A	N/A

BRAS/BrasInterfaces/IfAccessLimit

This table contains the information about bras/brasInterfaces/IfAccessLimit table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfAccessLimit
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfLimitNum	Limit number.	N/A	Unsigned integer.1~1024	When the IfLimitNum value is 65536, the value is illegal and not displayed.

BRAS/BrasInterfaces/IfVlanAccessLimits

This table contains the information about bras/brasInterfaces/IfVlanAccessLimits table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfVlanAccessLimits
Table type	Multi-instance table
Row name	IfVlanAccessLimit
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartVlanId	Start VLAN id.	Index	Unsigned integer. 1~4094	N/A
EndVlanId	End VLAN id.	Index	Unsigned integer. 1~4094	N/A
VlanLimitNum	VLAN limit number.	N/A	Unsigned integer. 1~1024	N/A

BRAS/BrasInterfaces/IfQinqAccessLimits

This table contains the information about bras/brasInterfaces/IfQinqAccessLimits table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IfQinqAccessLimits
Table type	Multi-instance table
Row name	IfQinqAccessLimit
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
QinqStartVlanId	Start of second-tier VLAN id.	Index	Unsigned integer. 1~4094	N/A
QinqEndVlanId	End of second-tier VLAN id.	Index	Unsigned integer. 1~4094	N/A
QinqVlanId	First Vlan id.	Index	Unsigned integer. 1~4094	N/A
QinqLimitNum	QinQ VLAN limit number.	N/A	Unsigned integer. 1~1024	N/A

BRAS/BrasInterfaces/IPoEDhcpUserNameFormats

This table contains the information about bras/brasInterfaces/IPoEDhcpUserNameFormats table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEDhcpUserNameFormats
Table type	Multi-instance table
Row name	IPoEDhcpUserNameFormat

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SeqId	Format sequence Id of contexts.	Index	Unsigned integer.	N/A
ContextType	Type of context.	N/A	Enumeration: • 1—Circuit-id option. • 2—MAC in Circuit-id option. • 3—Client-id option. • 4—Host name option. • 5—Original host name option. • 6—NAS-PORT-Id. • 7—Port id. • 8—Remote-id option. • 9—Second VLAN id. • 10—Slot id. • 11—Source MAC. • 12—Specified string. • 13—Sub slot id. • 14—system name. • 15—Vendor-class option. • 16—Original Vendor-class option. • 17—Vendor-specific option. • 18—Vlan id.	N/A
Separator	Separator behind the context.	N/A	Char.	N/A
MacSeparator	Separator of the MAC address.	N/A	Char.	Used when the “ContextType” column is 11.
SpecifiedString	Specified string.	N/A	String. Length: 1 to 64 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	Used when the “ContextType” column is 12.

BRAS/BrasInterfaces/IPoEUserName

This table contains the information about bras/brasInterfaces/IPoEUserName table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEUserName
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Column name	Column description	Column type	Data type and restrictions	Remarks
UserNameContext	Context of user name.	N/A	Enumeration: • 1—Undefined. • 2—Use user's MAC address as user name. • 3—Use specified string as user name.	N/A
MacSeparator	Separator of MAC address.	N/A	Char.	Used when the "UserNameContext" column is 2.
MacIsLowcase	The MAC address is lowercase.	N/A	Enumeration: • 1—True. • 2—False. • 3—Undefined.	Used when the "UserNameContext" column is 2.
UserNameString	Specified string for user name.	N/A	String. Length: 1 to 64 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	Used when the "UserNameContext" column is 3.

BRAS/BrasInterfaces/IPoEUserDetects

This table contains the information about bras/brasInterfaces/IPoEUserDetects table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS

Table name	IPoEUserDetects
Table type	Multi-instance table
Row name	IPoEUserDetect
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
DetectType	Detect type.	N/A	Enumeration: • 1—Disable user detection. • 2—ICMP. • 3—ARP. • 4—ND.	N/A
RetryNum	Retry number.	N/A	Unsigned integer. 2~255.	N/A
Interval	Detect interval in second.	N/A	Unsigned integer. 20~1200.	N/A
NoDataCheck	No data check flag	N/A	Enumeration: • 1—Enable. • 2—Disable	N/A

BRAS/BrasInterfaces/IPoEAuthFailurePolicy

This table contains the information about bras/brasInterfaces/IPoEAuthFailurePolicy table.

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	IPoEAuthFailurePolicy
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChastenAuthFailedTimes	Allow times of authentication failure.	N/A	Unsigned integer. 1~10000.	N/A
ChastenPeriod	Detect period of authentication failure chasten in second.	N/A	Unsigned integer. 1~3600.	N/A
QuietTime	Quiet time of authentication in second.	N/A	Unsigned integer. 0,10~3600.	0 means the quiet function is disabled.

BRAS/BrasInterfaces/Ipv4Matchs

This table contains the information about bras/brasInterfaces/Ipv4Matchs table.

XML structure

Please refer to the XML structure of BRAS/BrasInterfaces.

Table description

Item	Description
Feature name	BRAS
Table name	Ipv4Matchs
Table type	Multi-instance table
Row name	Ipv4Match
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4StartAddress	IPv4 address.	Index	String, dotted decimal notation.	N/A
IPv4EndAddress	IPv4 address.	Index	String, dotted decimal notation.	N/A

BRAS/AccessUserInfo

This table contains the information about configuring Access User Info.

Table description

Item	Description
Feature name	BRAS
Table name	AccessUserInfo
Table type	Multi-instance table
Row name	UserInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	User ID.	Index	Unsigned integer.	N/A
UPID	UP ID.	Index	Enumeration:	This field is obsolete.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 0—Default.	
ChassisId	Chassis ID.	N/A	Unsigned integer.	N/A
SlotId	Slot ID.	N/A	Unsigned integer.	N/A
UserName	User name.	N/A	String. Length: 1 to 31 characters.	N/A
AuthType	Authentication type.	N/A	Enumeration: • 1—Bind. • 2—Web. • 3—PPP. • 4—Admin. • 5—Dot1x. • 6—Portal. • 7—Pre-auth. • 8—Mac-auth. • 9—IKE. • 10—SSLVPN. • 11—DVPN.	N/A
Interface	Access Interface.	N/A	Unsigned integer.	N/A
IfName	Interface name.	N/A	String. Length: 1 to 47 characters.	N/A
MacAddr	MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IpAddr	Ip address.	N/A	String, dotted decimal notation.	N/A
IPv6Addr	IPv6 address.	N/A	Hexadecimal string, colon-separated.	N/A
VPNInstanceName	Authorized VPN instance name.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceVLAN	Service provider VLAN.	N/A	Unsigned short.	Used when the “Interface” column is sub-interface.
CustomerVLAN	Customer VLAN.	N/A	Unsigned short.	Used with “ServiceVLAN”
IPv4Pool	PPP IPCP address pool name.	N/A	String. Length: 1 to 63 characters.	N/A
IPv6Pool	PPP IPV6 address pool	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	name.		Length: 1 to 63 characters.	
DomainName	Domain name.	N/A	String. Length: 1 to 255 characters.	N/A
IPv4PoolGroup	IPv4 pool group.	N/A	String. Length: 1 to 63 characters	N/A
IPv6PoolGroup	IPv6 pool group.	N/A	String. Length: 1 to 63 characters	N/A
IPType	IP address Type.	N/A	Enumeration: • 0—IPv4 • 1—IPv6. • 2—Dual-stack.	N/A
IPv6Protocol	IPv6 address protocal.	N/A	Enumeration: • 0—ND • 1—DHCPv6	N/A
LACIPAddr	LAC IP address.	N/A	String, dotted decimal notation.	N/A
LNSIPAddr	LNS IP address.	N/A	String, dotted decimal notation.	N/A
RemoteName	LAC or LNS tunnel name.	N/A	String. Length: 1 to 31 characters	N/A
StartTime	User access start time.	N/A	DateTime.	Used with “EndTime”, Example: YYYY-MM-DD hh:mm:ss.
EndTime	User access end time.	N/A	DateTime.	Used with “StartTime”, Example: YYYY-MM-DD hh:mm:ss.
UserAddressType	User IP address type.	N/A	Enumeration: • 0—Public-IPv4. • 1—Private-IPv4. • 2—Public-DS. • 3—Private-DS. • 4—DS-lite. • 5—IPv6. • 6—NAT64.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroup	User group name.	N/A	String. Length: 1 to 32 characters	N/A
UserType	User type.	N/A	Enumeration: • 0—LAC. • 1—LNS. • 2—PPPoA. • 3—PPPoE.	N/A
StartVxlanID	Start vxlan ID.	N/A	Unsigned integer. 0~16777215.	N/A
EndVxlanID	End vxlan ID.	N/A	Unsigned integer. 0~16777215.	Used with “StartVxlanID”
Time	The time since user logon.	N/A	Unsigned integer. 1~7200.	Unit: seconds
PublicIPAddr	Public IP address of CGN users.	N/A	String, dotted decimal notation.	N/A
Description	Description of user.	N/A	String. Length: 1 to 31 characters	N/A
PPPIndex	PPP session index.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Only for PPPoE and L2TP users.
AuthenDomain	Domain name for authentication.	N/A	String. Length: 1 to 255 characters.	N/A
AuthorDomain	Domain name for authorization.	N/A	String. Length: 1 to 255 characters.	N/A
VxlanID	Vxlan ID.	N/A	Unsigned integer. 0~16777215.	N/A
IPv4PDNSServer	IPv4 primary DNS server.	N/A	String, dotted decimal notation.	N/A
IPv4SDNSServer	IPv4 secondary DNS server.	N/A	String, dotted decimal notation.	N/A
IPv6PDNSServer	IPv6 primary DNS server.	N/A	Hexadecimal string, colon-separated.	N/A
IPv6SDNSServer	IPv6 secondary DNS server.	N/A	Hexadecimal string, colon-separated.	N/A
IPv6NDPrefix	IPv6 ND prefix.	N/A	Hexadecimal string, colon-separated.	N/A
IPv6NDPrefixLen	Length of IPv6 ND prefix.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6PDPrefix	IPv6 PD prefix.	N/A	Hexadecimal string, colon-separated.	N/A
IPv6PDPrefixLen	Length of IPv6 PD prefix.	N/A	Unsigned integer.	N/A
AuthorIPv6Pool	IPv6 pool for authorization	N/A	String, Length: 1 to 63	N/A
IPv6PrefixPool	IPv6 prefix pool	N/A	String, Length: 1 to 63	N/A
IPv6NDPrefixPoolGroup	IPv6 ND prefix pool Group	N/A	String, Length: 1 to 63	N/A
DHCPv4LeaseTime	Lease time of DHCPv4.	N/A	Unsigned integer.	Unit: seconds
DHCPv4RemainLease	DHCP user remaining lease.	N/A	Unsigned integer.	Unit: seconds
DHCPv6LeaseTime	Lease time of DHCPv6.	N/A	Unsigned integer.	Unit: seconds
DHCPv6RemainLease	DHCPv6 user remaining lease.	N/A	Unsigned integer.	Unit: seconds
AccessType	Access type.	N/A	Enumeration: • 0—PPPoE users. • 1—PPPoA users. • 2—PPPoFR users. • 3—PPPoPhy users. • 4—VPPP users. • 5—LNS users. • 6—L2 IPoE dynamic users. • 7—L2IPoE static users. • 8—L2IPoE interface leased users. • 9—L2IPoE subnet leased users. • 10—L2IPoE leased subusers • 11—IPoE L2VPN	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			leased users • 12—L3 IPoE dynamic users. • 13—L3IPoE static users. • 14—L3IPoE interface leased users. • 15—L3IPoE subnet leased users. • 16—Web auth users • 17—Portal users • 18—Telnet users • 19—SSH users • 20—HTTP users • 21—HTTPS users • 22—FTP users • 23—Command users • 24—Super users • 25—PAD users • 26—Terminal users • 27—MAC auth users • 28—Dot1X users • 29—IKE users • 30—SSLVPN users • 31—DVPN users	
AgentCircuitI	DHCP circuit ID.	N/A	String. Length: 0 to 255 characters	N/A
AgentRemoteID	DHCP remote ID.	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 255 characters	
NASPortID	NAS port ID.	N/A	String. Length: 0 to 255 characters	N/A
IPv6CPIfID	IPv6 CP interface ID.	N/A	Hexadecimal string, colon-separated.	N/A
AuthenState	Authentication state.	N/A	Enumeration: • 0—Idle. • 1—Authenticating. • 2—Authenticated.	N/A
AuthorState	Authorization state.	N/A	Enumeration: • 0—Idle. • 1—Authorizing. • 2—Authorized.	N/A
RealtimeAcctSwith	Realtime accounting switch.	N/A	Enumeration: • 0—Closed. • 1—Open.	N/A
RealtimeAcctInterval	Realtime accounting interval.	N/A	Unsigned integer.	Unit: seconds
LoginTime	User login time.	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss
AccountStartTime	Accounting start time.	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss
OnlineTime	User online time.	N/A	DateTime.	Example: hh:mm:ss
AcctState	Accounting state.	N/A	Enumeration: • 0—Stop. • 1—Accounting.	N/A
AcctStartFailAct	The action when starting account failed.	N/A	Enumeration: • 0—Online. • 1—Offline.	N/A
AcctUpdateFailAct	The action when update account failed.	N/A	Enumeration: • 0—Online. • 1—Offline.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AcctQuotaOutAct	The action when quota out.	N/A	Enumeration: • 0—Online. • 1—Offline. • 2—Redirect.	N/A
DualStackAcctMode	Dual-stack accounting mode.	N/A	Enumeration: • 0—Separate. • 1—Merge.	N/A
IdleCutTime	The time limit of user idle.	N/A	Unsigned integer.	Unit: seconds
IdleCutFlow	The flow limit of user idle.	N/A	Unsigned integer.	Unit: bytes
IdleCutDirection	The direction of flow limit.	N/A	Enumeration: • 0—Both. • 1—Inbound. • 2—Outbound.	N/A
SessionTimeout	The authorized time of user online.	N/A	Unsigned integer.	Unit: seconds. 4294967295 means unlimited. 0 means timeout.
RemainTime	Session duration from AAA.	N/A	String. Length: 1 to 30 characters.	Unit: seconds
TrafficQuota	The authorized quota of user.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Unit: seconds. 2^{64}-1means unlimited.
RemainTraffi	The remain quota of user.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Unit: seconds. 2^{64}-1means unlimited.
IPv6CPIfIDAssign	IPv6CP interface ID assignment.	N/A	Enumeration: • 0—Disabled. • 1—Enabled.	N/A
RedirectWebURL	Redirect Web URL.	N/A	String. Length: 1 to 255 characters.	N/A
RedirectIPv6WebURL	Redirect IPv6 Web URL.	N/A	String. Length: 1 to 255 characters.	N/A
ITAPolicyName	ITA policy name.	N/A	String. Length: 1 to 31 characters.	N/A
MRU	MRU.	N/A	Unsigned integer.	Unit: bytes. Only for PPPoE and L2TP users.
IPv4MTU	IPv4 MTU.	N/A	Unsigned integer.	Unit: bytes. Only for PPPoE and L2TP users.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6MTU	IPv6 MTU.	N/A	Unsigned integer.	Unit: bytes. Only for PPPoE and L2TP users.
SubscriberID	Subscriber ID.	N/A	Unsigned integer.	N/A
UserSessionLimit	UserSessionLimit	N/A	Unsigned integer.	N/A
UserSessionCnt	UserSessionCnt	N/A	Unsigned integer.	N/A
NSInboundSampler	NetStream inbound sampler.	N/A	String. Length: 1 to 31 characters.	N/A
NSOutboundSampler	NetStream outbound sampler.	N/A	String. Length: 1 to 31 characters.	N/A
UserProfileName	Authorized User profile name from AAA.	N/A	String. Length: 1 to 31 characters.	N/A
UserProfileState	Authorized User profile state from AAA.	N/A	String. Length: 1 to 1024 characters.	active—The user profile is authorized successfully. inactive—User profile authorization failed or the user profile does not exist on the BRAS.
GroupUserProfileName	Authorized Group user profile name from AAA.	N/A	String. Length: 1 to 31 characters.	N/A
GroupUserProfileState	Authorized Group user profile state from AAA.	N/A	String. Length: 1 to 1024 characters.	active—The session group profile is authorized successfully. inactive—Session group profile authorization failed or the session group profile does not exist on the BRAS.
UserGroupACLName	User group acl name.	N/A	String. Length: 1 to 32.characters.	N/A
UserGroupACLState	User group acl state.	N/A	String. Length: 1 to 1024 characters.	active—The user group ACL is authorized successfully. inactive—User group ACL authorization failed or the user group ACL does not exist on the BRAS.
InboundCAR	Authorized inbound average rate value.	N/A	Unsigned integer.	Unit: kbps
InboundPIR	Authorized inbound peak rate value.	N/A	Unsigned integer.	Unit: kbps
InboundCBS	Inbound CBS.	N/A	Unsigned integer.	Unit: bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
InboundState	Inbound state.	N/A	String. Length: 1 to 1024 characters.	active—Inbound CAR is authorized successfully. inactive—Inbound CAR is not authorized successfully.
OutboundCAR	Authorized outbound average rate value.	N/A	Unsigned integer.	Unit: kbps
OutboundPIR	Authorized outbound peak rate value.	N/A	Unsigned integer.	Unit: kbps
OutboundCBS	Outbound CBS.	N/A	Unsigned integer.	Unit: bytes.
OutboundState	Outbound state.	N/A	String. Length: 1 to 1024 characters.	active—Outbound CAR is authorized successfully. inactive—Outbound CAR is not authorized successfully.
InboundPriLevel	User inbound priority level.	N/A	Unsigned integer.0~7, 15.	15 means no authorize
InboundPriState	User inbound priority state.	N/A	String. Length: 1 to 1024 characters.	active—Inbound user priority is authorized successfully. inactive—Inbound user priority is not authorized successfully.
OutboundPriLevel	User outbound priority level.	N/A	Unsigned integer.0~7, 15.	15 means no authorize
OutboundPriState	User outbound priority state.	N/A	String. Length: 1 to 1024 characters.	active—Outbound user priority is authorized successfully. inactive—Outbound user priority is not authorized successfully.
StartPort	Start port of port block.	N/A	Unsigned short.	N/A
EndPort	End port of port block.	N/A	Unsigned short.	EndPort must greater than StartPort
ExtendPortBlock	Extended port blocks.	N/A	String	N/A
IPv4FlowStat	IPv4 flow statistics.	N/A	String. Length: 1 to 80 characters.	Include uplink packets/bytes and downlink packets/bytes
IPv6FlowStat	IPv6 flow statistics.	N/A	String. Length: 1 to 80 characters.	Include uplink packets/bytes and downlink packets/bytes
SessionID	Session ID of PPP users.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LacGroupID	L2TP LAC group ID.	N/A	Unsigned short.	N/A
LacLocalTunnelID	L2TP LAC local tunnel ID.	N/A	Unsigned short.	N/A
LacRemoteTunnelID	L2TP LAC remote tunnel ID.	N/A	Unsigned short.	N/A
LacLocalSessionID	L2TP LAC local session ID.	N/A	Unsigned short.	N/A
LacRemoteSessionID	L2TP LAC remote session ID.	N/A	Unsigned short.	N/A
LacLocalIPAddr	L2TP LAC local IP address.	N/A	String, dotted decimal notation.	N/A
LacRemoteIPAddr	L2TP LAC remote IP address.	N/A	String, dotted decimal notation.	N/A
LacLocalPort	L2TP LAC local UDP port.	N/A	Unsigned short.	N/A
LacRemotePort	L2TP LAC remote UDP port.	N/A	Unsigned short.	N/A
LacVrfIndex	L2TP LAC vrf index.	N/A	Unsigned short.	N/A
LacCallingStation	L2Tp LAC call station.	N/A	String. Length: 1 to 64.	N/A
LnsGroupID	L2TP LNS group ID.	N/A	Unsigned short.	N/A
LnsLocalTunnelID	L2TP LNS local tunnel ID.	N/A	Unsigned short.	N/A
LnsRemoteTunnelID	L2TP LNS remote tunnel ID.	N/A	Unsigned short.	N/A
LnsLocalSessionID	L2TP LNS local session ID.	N/A	Unsigned short.	N/A
LnsRemoteSessionID	L2TP LNS remote session ID.	N/A	Unsigned short.	N/A
LnsLocalIPAddr	L2TP LNS local IP address.	N/A	String, dotted decimal notation.	N/A
LnsRemoteIPAddr	L2TP LNS remote IP address.	N/A	String, dotted decimal notation.	N/A
LnsLocalPort	L2TP LNS local UDP port.	N/A	Unsigned short.	N/A
LnsRemotePort	L2TP LNS remote UDP port.	N/A	Unsigned short.	N/A
LnsVrfIndex	L2TP LNS vrf index.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LnsCallingStation	L2Tp LNS call station.	N/A	String. Length: 1 to 64.	N/A
TotalSubUsers	Total subuser count.	N/A	Unsigned integer.	N/A
InterfaceName	Interface name of specified bras-vm	N/A	String. Length: 1 to 48 characters	N/A
BackUpStatus	BackUp Status	N/A	Enumeration: • 0—Master Status. • 1—Slave Status. • 2—Down Status. • 3—Invalid Status.	N/A
BackUp Interface	BackUp Interface name.	N/A	String. Length: 1 to 47 characters.	N/A
AccessUPID	Access UP ID.	N/A	Unsigned integer. 1024~8192.	Only for CP.
vpnInstance	VPN instances	N/A	Enumeration: • 0—Default. • 1—All VPN instances. • 2—All public network instances.	N/A
UserSwitchOverTime	User UP SwitchOver Time	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss
ITAInfos	ITA information.	Sublist	N/A	N/A
EDSGInfos	EDSG information.	Sublist	N/A	N/A
SubUserInfos	Sub-user information.	Sublist	N/A	N/A

Table description

Item	Description
Feature name	BRAS
Table name	AccessUserStatistics
Table type	Single-instance table
Row name	
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisId	Chassis ID.	N/A	Unsigned integer.	N/A
SlotId	Slot ID.	N/A	Unsigned integer.	N/A
UserName	User name.	N/A	String. Length: 1 to 31 characters.	N/A
AuthType	Authentication type.	N/A	Enumeration: • 1—Bind. • 2—Web. • 3—PPP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4—Admin. • 5—Dot1x. • 6—Portal. • 7—Pre-auth. • 8—Mac-auth. • 9—IKE. • 10—SSLVPN. • 11—DVPN.	
Interface	Access Interface.	N/A	Unsigned integer.	N/A
IfName	Interface name.	N/A	String. Length: 1 to 48 characters.	N/A
MacAddr	MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VPNInstanceName	Authorized VPN instance name.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceVLAN	Service provider VLAN.	N/A	Unsigned short.	Used when the “Interface” column is sub-interface.
CustomerVLAN	Customer VLAN.	N/A	Unsigned short.	Used with “ServiceVLAN”
IPv4Pool	PPP IPCP address pool name.	N/A	String. Length: 1 to 63 characters.	N/A
IPv6Pool	PPP IPV6 address pool name.	N/A	String, Length: 1 to 63 characters.	N/A
DomainName	Domain name.	N/A	String. Length: 1 to 255 characters.	N/A
IPv4PoolGroup	IPv4 pool group.	N/A	String. Length: 1 to 63 characters	N/A
IPv6PoolGroup	IPv6 pool group.	N/A	String. Length: 1 to 63 characters	N/A
IPType	IP address Type.	N/A	Enumeration: • 0—IPv4 • 1—IPv6. • 2—Dual-stack.	N/A
IPv6Protocol	IPv6 address protocal.	N/A	Enumeration: • 0—DHCPv6 • 1—ND	N/A
LACIPAddr	LAC IP address.	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LNSIPAddr	LNS IP address.	N/A	String, dotted decimal notation.	N/A
RemoteName	LAC or LNS tunnel name.	N/A	String. Length: 1 to 31 characters	N/A
StartTime	User access start time.	N/A	DateTime.	Used with “EndTime” Example: YYYY-MM-DD hh:mm:ss.
EndTime	User access end time.	N/A	DateTime.	Used with “StartTime” Example: YYYY-MM-DD hh:mm:ss.
UserAddressType	User IP address type.	N/A	Enumeration: • 0—DS-lite. • 1—IPv6. • 2—NAT64. • 3—Private-DS. • 4—Private-IPv4. • 5—Public-DS. • 6—Public-IPv4.	N/A
UserGroup	User group name.	N/A	String. Length: 1 to 32 characters	N/A
UserType	User type.	N/A	Enumeration: • 0—LAC. • 1—LNS. • 2—PPPoA. • 3—PPPoE.	N/A
StartVxlanID	Start vxlan ID.	N/A	Unsigned integer. 0~16777215.	N/A
EndVxlanID	End vxlan ID.	N/A	Unsigned integer. 0~16777215.	Used with “StartVxlanID”
Time	The time since user logon.	N/A	Unsigned integer. 1~7200.	Used with “ChassisId” and “SlotId”. Unit: seconds.
UPID	UP ID.	N/A	Unsigned integer. 1024~8192.	Only for CP
PPPoAUser	PPPoA user count.	N/A	Unsigned integer.	N/A
PPPoFRUser	PPPoFR user count.	N/A	Unsigned integer.	N/A
PPPoPhyUser	PPPoPhy user count.	N/A	Unsigned integer.	N/A
VPPPUser	VPPP user count.	N/A	Unsigned integer.	N/A
LNSUser	LNS user count.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LACUser	LAC user count.	N/A	Unsigned integer.	N/A
L2IPoEDynamicUser	L2 IPoE dynamic user count.	N/A	Unsigned integer.	N/A
L2IPoEStaticUser	L2IPoE static user count.	N/A	Unsigned integer.	N/A
L2IPoEIfLeasedUser	L2IPoE interface leased user count.	N/A	Unsigned integer.	N/A
L2IPoESubnetleasedUser	L2IPoE subnet leased user count.	N/A	Unsigned integer.	N/A
L2IPoELeasedSubusers	L2IPoE leased sub-user count.	N/A	Unsigned integer.	N/A
IPoEL2VPNLeasedUser	IPoE L2VPN leased user count.	N/A	Unsigned integer.	N/A
L3IPoEDynamicUser	L3 IPoE dynamic user count.	N/A	Unsigned integer.	N/A
L3IPoEStaticUser	L3IPoE static user count.	N/A	Unsigned integer.	N/A
L3IPoEIfLeasedUser	L3IPoE interface leased user count.	N/A	Unsigned integer.	N/A
L3IPoESubnetLeasedUser	L3IPoE subnet leased user count.	N/A	Unsigned integer.	N/A
WebAuthUser	Web authenticated user count.	N/A	Unsigned integer.	N/A
PortalUser	Portal user count.	N/A	Unsigned integer.	N/A
TelnetUser	Telnet user count.	N/A	Unsigned integer.	N/A
SSHUser	SSH user count.	N/A	Unsigned integer.	N/A
HTTPUser	HTTP user count.	N/A	Unsigned integer.	N/A
HTTPSUser	HTTPS user count.	N/A	Unsigned integer.	N/A
FTPUser	FTP user count.	N/A	Unsigned integer.	N/A
CommandUser	Command user count.	N/A	Unsigned integer.	N/A
PADUser	PAD user count.	N/A	Unsigned integer.	N/A
TerminalUser	Terminal user count.	N/A	Unsigned integer.	N/A
MACAuthUser	MAC authenticated user count.	N/A	Unsigned integer.	N/A
Dot1XUser	Dot1X user count.	N/A	Unsigned integer.	N/A
IKEUser	IKE user count.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SSLVPNUser	SSLVPN user count.	N/A	Unsigned integer.	N/A
DVPNUser	DVPN user count.	N/A	Unsigned integer.	N/A

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
UserName	User name.	String, Length: 1 to 31 characters.	No
AuthType	Authentication type.	Enumeration: • 1—Pre-auth. • 2—Beh-auth.	No
AccessType	IPoE user access type.	Enumeration: • 1—ARP. • 2—ND 3—DHCP.	No
Interface	Access Interface.	Unsigned integer.	No

Column name	Column description	Data type and restrictions	Support for extended queries
IfName	Interface name.	String. Length: 1 to 47 characters.	No
CVLAN	Customer VLAN.	Unsigned short.	No
SVLAN	Service provider VLAN.	Unsigned short.	No
IpAddr	IP address.	String, dotted decimal notation.	No
IPv6Addr	IPv6 address.	Hexadecimal string, colon-separated.	No
PreAuthRequestTime	Time when pre-auth send request packet	String, case-insensitive. Length: 1 to 19 characters.	No
PreAuthResponseTime	Time when pre-auth get response packet	String, case-insensitive. Length: 1 to 19 characters.	No
BehAuthRequestTime	Time when beh-auth send request packet	String, case-insensitive. Length: 1 to 19 characters.	No
BehAuthResponseTime	Time when beh-auth get response packet	String, case-insensitive. Length: 1 to 19 characters.	No
BehAccountTime	Beh-auth account start time.	String, case-insensitive. Length: 1 to 19 characters.	No

IPoEAuthOffline event

This event is used to report ipoe access user offline information.

XML structure for event subscription

```
<IPoEAuthOffline>
</IPoEAuthOffline>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>BRAS</stream>
    <filter type="subtree">
      <IPoEAuthOffline xmlns="http://www.h3c.com/netconf/event:1.0/BRAS:1.0">
      </IPoEAuthOffline>
```

```
    </filter>
  </create-subscription>
</rpc>
```

BrasUpBackup

BrasUpBackup/Service

Message	Explanation
Service failed to start. UpBackup进程未启动失败。	Invalid configuration, please modify configuration under the guidance.
Incorrect length of received data. 接受数据长度不正确。	Invalid configuration, please modify configuration under the guidance.

BrasUpBackup/Groups

Message	Explanation
When creating a group, you must specify the backup mode. 创建Group时没有携带Mode参数（Mode为创建Group必须配置参数）。	Invalid configuration, please modify configuration under the guidance.
Modifying backup mode is not allowed. 试图修改备份组Group的Mode（Group的Mode不能修改）。	Invalid configuration, please modify configuration under the guidance.
Online users exist. This group cannot be deleted. 删除有上线用户的Group。	Invalid configuration, please modify configuration under the guidance.
Failed to create the group. 创建Group失败。	Invalid configuration, please modify configuration under the guidance.
Cannot set ControlDownSwitchDelay when you disable ControlDownSwitch. 当去使能ControlDownSwitch时不能携带ControlDownSwitchDelay配置。	Invalid configuration, please modify configuration under the guidance.

BrasUpBackup/Groups/Interfaces

Message	Explanation
Online users exist. This backup relationship cannot be deleted. 删除有上线用户的备份关系。	Invalid configuration, please modify configuration under the guidance.
Cannot configure ControlDownSwitchDelay when ControlDownSwitch is false. 当ControlDownSwitch为去使能状态，不能配置ControlDownSwitchDelay。	Invalid configuration, please modify configuration under the guidance.
The standby interface must be configured when creating backup relationships. 当创建备份关系时，必须配置备接口。	Invalid configuration, please modify configuration under the guidance.

Remote interface not ready. 远程接口还未就绪。	Invalid configuration, please modify configuration under the guidance.
Backup relationship cannot be modified. 备份关系不能被修改。	Invalid configuration, please modify configuration under the guidance.
Cannot configure backup relationship on the same UP device. 不能在同一个UP上配置备份关系。	Invalid configuration, please modify configuration under the guidance.
The standby UP address must be configured when creating VSRP backup relationships. 当创建多机备份组时，必须配置备UP地址。	Invalid configuration, please modify configuration under the guidance.

Column name	Column description	Column type	Data type and restrictions
IngressAlarmEnable	Ingress threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
IngressAlarmInterval	Ingress threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.
EgressAlarmEnable	Egress threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
EgressAlarmInterval	Egress threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.
HeadroomAlarmEnable	Headroom threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
HeadroomAlarmInterval	Headroom threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.
BurstEnable	BurstEnable threshold alarm enable status	N/A	Boolean: • **true** • **false**

BufferMonitor/BoardConfigurations

This table is used to configure the node's configuration for buffer monitor.

XML structure

```
<BufferMonitor>
  <BoardConfigurations>
    <BoardConfiguration>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <BurstEnable></BurstEnable>
      <IngressThreshold></IngressThreshold>
      <EgressThreshold></EgressThreshold>
      <HeadroomThreshold></HeadroomThreshold>
    </BoardConfiguration>
  </BoardConfigurations>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardConfigurations
Table type	Multi-instance table
Row name	BoardConfiguration
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
BurstEnable	BurstEnable threshold alarm enable status	N/A	Boolean: • **true** • **false**
IngressThreshold	Ingress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
EgressThreshold	Egress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
HeadroomThreshold	Headroom threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.

BufferMonitor/BoardQueConfigurations

This table is used to configure the queue of node for buffer monitor.

XML structure

```
<BufferMonitor>
  <BoardQueConfigurations>
   <BoardQueConfiguration>
     <Chassis></Chassis>
     <Slot></Slot>
     <CPUID></CPUID>
```

```
    <QueIndex></QueIndex>
    <IngressThreshold></IngressThreshold>
    <EgressThreshold></EgressThreshold>
  </BoardQueConfiguration>
 </BoardQueConfigurations>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor

        <Slot></Slot>
        <CPUID></CPUID>
        <Direction></Direction>
        <Resource></Resource>
        <AreaType></AreaType>
        <Unit></Unit>
        <Value></Value>
      </TotalShared>
    </TotalShareds>
  </BufferApply>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	BufferApply
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Apply	Apply buffer configurations	N/A	Boolean: • **true**—Apply buffer configurations • **false**—Remove the application of buffer configurations
QueueBuffers	Queue buffer table	Subtable	N/A

Column name	Column description	Column type	Data type and restrictions
TotalShareds	Total shared table	Subtable	N/A

BufferMonitor/BufferApply/QueueBuffers

This table is used to configure the queue buffer configurations.

XML structure

```
See the XML structure of BufferMonitor/BufferApply
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	BufferApply/QueueBuffers
Table type	Multi-instance table
Row name	QueueBuffer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 means global configuration.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
Direction	Buffer direction	Index	Enumeration: • 0—Ingress • 1—Egress
Resource	Buffer resource	Index	Enumeration: • 0—Cell • 1—Packet
AreaType	Area type	Index	Enumeration: • 0—Guaranteed • 1—Shared

Column name	Column description	Column type	Data type and restrictions
QueIndex	Queue index	Index	Unsigned integer. Value range: 0 to 7.
Unit	Unit of the value	N/A	Enumeration: • 0—Absolute • 1—Percentage
Value	Value	N/A	Unsigned integer.

BufferMonitor/BufferApply/TotalShareds

This table is used to configure the total shared buffer configurations.

XML structure

```
See the XML structure of BufferMonitor/BufferApply
```

Table description

    </PortQueConfiguration>
  </PortQueConfigurations>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	PortQueConfigurations
Table type	Multi-instance table
Row name	PortQueConfiguration
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
QueIndex	Queue index	Index	Unsigned integer. Value range: 0 to 7.
IngressThreshold	Ingress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
EgressThreshold	Egress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
HeadroomThreshold	Headroom threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.

BufferMonitor/EgressDrops

This table is used to get the egress drops data for buffer monitor.

XML structure

```
<BufferMonitor>
  <EgressDrops>
    <EgressDrop>
      <IfIndex/>
      <IfName/>
      <UnicastDroppedPkts/>
```

```
      <UnicastDroppedBytes/>
      <MulticastDroppedPkts/>
      <MulticastDroppedBytes/>
      <DroppedPkts/>
      <DroppedBytes/>
    </EgressDrop>
  </EgressDrops>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	EgressDrops
Table type	Multi-instance table
Row name	EgressDrop
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
UnicastDroppedPkts	Number of packets lost in outgoing unicast queue	N/A	String
UnicastDroppedBytes	Number of bytes lost in outgoing unicast queue	N/A	String
MulticastDroppedPkts	Number of packets lost in outgoing Multicast queue	N/A	String
MulticastDroppedBytes	Number of bytes lost in outgoing Multicast queue	N/A	String
DroppedPkts	Number of packets lost in specific interface	N/A	String
DroppedBytes	Number of bytes lost in specific interface	N/A	String

BufferMonitor/EgressDetailDrops

This table is used to get the egress detail drops data for buffer monitor.

XML structure

```
<BufferMonitor>
  <EgressDetailDrops>
    <EgressDetailDrop>
      <IfIndex/>
      <IfName/>
      <UnicastNobufferDroppedPkts/>
      <UnicastNobufferDroppedBytes/>
      <MulticastNobufferDroppedPkts/>
      <MulticastNobufferDroppedBytes/>
      <UnicastOtherDroppedPkts/>
      <UnicastOtherDroppedBytes/>
      <MulticastOtherDroppedPkts/>
      <MulticastOtherDroppedBytes/>
    </EgressDetailDrop>
  </EgressDetailDrops>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	EgressDetailDrops
Table type	Multi-instance table
Row name	EgressDetailDrop
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
UnicastNobufferDroppedPkts	Number of packets lost in outgoing unicast queue due	N/A	String

Column name	Column description	Column type	Data type and restrictions
	to no buffer		
UnicasNobuffertDroppedBytes	Number of bytes lost in outgoing unicast queue due to no buffer	N/A	String
MulticastNobufferDroppedPkts	Number of packets lost in outgoing Multicast queue due to no buffer	N/A	String
MulticastNobufferDroppedBytes	Number of bytes lost in outgoing Multicast queue due to no buffer	N/A	String
UnicastOtherDroppedPkts	Number of packets lost in outgoing unicast queue due to others	N/A	String
UnicastOtherDroppedBytes	Number of bytes lost in outgoing unicast queue due to others	N/A	String
MulticastOtherDroppedPkts	Number of packets lost in outgoing Multicast queue due to others	N/A	String
MulticastOtherDroppedBytes	Number of bytes lost in outgoing Multicast queue due to others	N/A	String

BufferMonitor/BoardEgressDrops

This table is used to get the slot egress drops data for buffer monitor.

XML structure

```
<BufferMonitor>
  <BoardEgressDrops>
    <BoardEgressDrop>
     <Chassis/>
      <Slot/>
      <Cpu/>
      <DroppedPkts/>
      <DroppedBytes/>
    </BoardEgressDrop>
   </BoardEgressDrops>
 </BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardEgressDrops
Table type	Multi-instance table
Row name	BoardEgressDrop
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	Index	Unsigned integer.
Slot	Slot number	Index	Unsigned integer.
Cpu	Cpu number	Index	Unsigned integer.
DroppedPkts	Number of packets lost in Egress direction at whole slot	N/A	String
DroppedBytes	Number of bytes lost in Egress direction at whole slot	N/A	String

BufferMonitor/BoardEgressDropsSums

This table is used to get the slot egress drops data for buffer monitor without distinguishing queues.

XML structure

```
<BufferMonitor>
  <BoardEgressDropsSums>
    <BoardEgressDropsSum>
      <Chassis/>
      <Slot/>
      <Cpu/>
      <DroppedPkts/>
      <DroppedBytes/>
    </BoardEgressDropsSum>
  </BoardEgressDropsSums>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardEgressDropsSums
Table type	Multi-instance table
Row name	BoardEgressDropsSum
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.
Cpu	Cpu number	Index	Unsigned integer. Value range: 0 to 7.
DroppedPkts	Number of packets lost in Egress direction at whole slot	N/A	String.
DroppedBytes	Number of bytes lost in Egress direction at whole slot	N/A	String.

BufferMonitor/Capabilities

This table contains slot egress drops capability information.

XML structure

```
<BufferMonitor>
  <Capabilities>
    <BoardEgressDropsEnable/>
    <BoardEgressDropsSumEnable/>
  </Capabilities>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	Capabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
BoardEgressDrops Enable	Whether the slot support egress drops data for buffer monitor with distinguishing queues	N/A	Boolean: • **true** • **false**
BoardEgressDrops SumEnable	Whether the slot support egress drops data for buffer monitor without distinguishing queues	N/A	Boolean: • **true** • **false**

BufferMonitor/BufferApply

This table is used to configure the buffer configurations which become effective after being applied.

XML structure

```
<BufferMonitor>
  <BufferApply>
    <Apply></Apply>
    <QueueBuffers>
      <QueueBuffer>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Direction></Direction>
      <Resource></Resource>
      <AreaType></AreaType>
      <QueIndex></QueIndex>
      <Unit></Unit>
```

```
      <Value></Value>
      </QueueBuffer>
    </QueueBuffers>
    <TotalShareds>
      <TotalShared>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Direction></Direction>

Table description

Item	Description
Feature name	BufferMonitor
Table name	BufferApply/TotalShareds
Table type	Multi-instance table
Row name	TotalShareds
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
Direction	Buffer direction	Index	Enumeration: • 0—Ingress • 1—Egress
Resource	Buffer resource	Index	Enumeration: • 0—Cell • 1—Packet
Unit	Unit of the value	N/A	Enumeration: • 0—Absolute • 1—Percentage
Value	Value	N/A	Unsigned integer.

BufferMonitor/PFCStatistics

XML structure

```
<BufferMonitor>
  <PFCStatistics>
```

```
    <PFCStatistic>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PfcSend></PfcSend>
      <PfcRecv></PfcRecv>
      <PfcDeadlockCounters></PfcDeadlockCounters>
      <PfcDeadlockRecoverCounters></PfcDeadlockRecoverCounters>
    </PFCStatistic>
  </PFCStatistics>
</BufferMonitor>
```

Table description

Item	Description
Feature name	BufferMonitor
Table name	PFCStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	N/A	Unsigned integer.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
PfcSend	Number of sent PFC frames	N/A	String
PfcRecv	Number of received PFC frames	N/A	String
PfcDeadlockCounters	Number of deadlock monitoring frames	N/A	String
PfcDeadlockRecoverCounters	Number of deadlock recovery frames	N/A	String

BufferMonitor event stream

BoardOverrunEvent event

This event is used to report counters of board overrun threshold.

XML structure for event subscription

```
<BoardOverrunEvent>
  <BoardOverrun>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <AlarmType></AlarmType>
  </BoardOverrun>
</BoardOverrunEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns ="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>BufferMonitor</stream>
      <filter>
      <BoardOverrunEvent xmlns="http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0">
         <BoardOverrun>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
          <AlarmType>1</AlarmType>
        </BoardOverrun>
       </BoardOverrunEvent>
       </filter>
   </create-subscription>
</rpc>]]>]]>
```

Table description

Item	Description

Event name	BoardOverrunEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No	N/A
AlarmType	Alarm type.	Unsigned integer.	1—for Headroom overrun	Alarm type.

XML structure for event report

```
<BoardOverrunEvent>
  <BoardOverrun>
    <Chassis/>
    <Slot/>
    <CPUID/>
    <AlarmType/>
    <CurrentValue/>
    <CurrentRatio/>
    <Threshold/>
  </BoardOverrun>
<BoardOverrunEvent>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
AlarmType	Alarm type.	Unsigned integer.	1—for Headroom overrun
CurrentValue	Current value.	Unsigned integer. Value range: 0 to 65535.	
CurrentRatio	Current usage ratio.	Unsigned integer. Value range: 1 to 100.	

Column name	Column description	Data type and restrictions	Remarks
Threshold	Threshold usage ratio.	Unsigned integer. Value range: 1 to 100.	

PortQueOverrunEvent event

This event is used to report counters of interface's queue overrun threshold.

XML structure for event subscription

```
<PortQueOverrunEvent>
  <PortQueOverrun>
    <IfIndex></IfIndex>
    <QueIndex></QueIndex>
    <AlarmType></AlarmType>
    <IfName></IfName>
  </PortQueOverrun>
</PortQueOverrunEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns ="urn:ietf:params:xml:ns:netconf:notification:1.0">

      <DeviceOs></DeviceOs>
    </DhcpOption55Rule>
  </DhcpOption55Rules>
</BYOD>
```

Table description

Item	Description
Feature name	BYOD
Table name	DhcpOption55Rules
Table type	Multi-instance table
Row name	DhcpOption55Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
DhcpOption55Value	DHCP Option 55 value	Index	String. Length: 1 to 255 characters.
DeviceType	Device type	N/A	String. Length: 1 to 127 characters.
DeviceVendor	Device vendor	N/A	String. Length: 1 to 63 characters.
DeviceCategory	Device category	N/A	String. Length: 1 to 63 characters.

Column name	Column description	Column type	Data type and restrictions
DeviceOs	Device OS	N/A	String. Length: 1 to 63 characters.

BYOD/UserAgentRules

BYOD HTTP user agent rule table for endpoint identification.

XML structure

```
<BYOD>
  <UserAgentRules>
    <UserAgentRule>
      <UserAgentValue></UserAgentValue>
      <DeviceType></DeviceType>
      <DeviceVendor></DeviceVendor>
      <DeviceCategory></DeviceCategory>
      <DeviceOs></DeviceOs>
    </UserAgentRule>
  </UserAgentRules>
</BYOD>
```

Table description

Item	Description
Feature name	BYOD
Table name	UserAgentRules
Table type	Multi-instance table
Row name	UserAgentRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
UserAgentValue	HTTP user agent value	Index	String. Length: 1 to 255 characters.
DeviceType	Device type	N/A	String. Length: 1 to 127 characters.
DeviceVendor	Device vendor	N/A	String. Length: 1 to 63 characters.
DeviceCategory	Device category	N/A	String.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 63 characters.
DeviceOs	Device OS	N/A	String. Length: 1 to 63 characters.

BYOD/MacRules

BYOD MAC address rule table for endpoint identification.

XML structure

```
<BYOD>
  <MacRules>
    <MacRule>
      <MacAddr></MacAddr>
      <MacMask></MacMask>
      <DeviceType></DeviceType>
      <DeviceVendor></DeviceVendor>
      <DeviceCategory></DeviceCategory>
      <DeviceOs></DeviceOs>
    </MacRule>
  </MacRules>
</BYOD>
```

Table description

Item	Description
Feature name	BYOD
Table name	MacRules
Table type	Multi-instance table
Row name	MacRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	MAC address	Index	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	For example, 00-0c-af-e3-5d-c0.
MacMask	MAC address	Index	String, six groups of two hexadecimal digits,	The significant bits must be consecutive

Column name	Column description	Column type	Data type and restrictions	Remarks
