Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroupName	User group name.	Index	String. Length: 1 to 32 characters.	N/A
DeviceType	Device type.	Index	String. Length: 1 to 127 characters.	N/A
Authorization Data	Authorization information.	Data structure	Members include: • AclNumber. • CallbackNumber. • FTPHomeDir. • IdleTimeout. • PrimaryDNSServer. • SecondaryDNSServer. • URL. • UserProfile. • VLANID. • VRF. • IpPool. • Ipv6Pool.	N/A
AclNumber	ACL number.	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number.	N/A	String. Length: 1 to 64 characters.	N/A
SessTimeout	Session timeout.	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
IdleTimeout	Idle timeout timer.	N/A	Unsigned integer. Value range: 1 to 120, in	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			minutes.	
PrimaryDNSServer	Primary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	
SecondaryDNSServer	Secondary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information.	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	User profile name.	N/A	String. Length: 1 to 32 characters.	The name can contain digits, letters, and underscores (_), but the name can't start with a digit.
VLANID	ID of the authorization VLAN.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the authorization VPN instance.	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Available IP pool name.	N/A	String. Length: 1 to 31 characters.	N/A
Ipv6Pool	Available IPv6 pool name.	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
AuthorizationIpv6PrefixInfo	Available IPv6 prefix.	Data structure	Members include: • Ipv6Address. • Ipv6PrefixLength.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1. This column is effective only when the Ipv6PrefixLength column is set.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	This column is effective only when the Ipv6Address column is set.

Table description

Item	Description
Feature name	CAR
Table name	CarLists
Table type	Multi-instance table
Row name	List
Restrictions	Only one match column can be configured once.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CarlID	CAR list number	Index	Unsigned integer. Value range: 1 to 199.	N/A
Mac	Match the MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 **Dscp** for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **Exp** for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **IPPrecedence** for a rule
DestIPRange	Match destination IP by range.	Data structure	Members include: • **DestIPStart** • **DestIPEnd**	The two members must both be specified.
DestIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
DestIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. **DestIPEnd** must be bigger than **DestIPStart**.
SrcIPRange	Match source IP by range.	Data structure	Members include: • **SrcIPStart** • **SrcIPEnd**	The two members must both be specified.
SrcIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. **SrcIPEnd** must be bigger than **SrcIPStart**.

DestIPSubnet	Match destination IP by subnet.	Data structure	Members include: • **DestSubnetIP** • **DestMaskLength**	The two members must both be specified.
DestSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DestMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPSubnet	Match source IP by subnet.	Data structure	Members include: • **SrcSubnetIP** • **SrcMaskLength**	The two members must both be specified.
SrcSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
SrcMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPObjGroup	Match source IP by object group.	N/A	String case insensitive. Length: 1 to 63 characters.	The object group name can't contain '?'. The character '\r\n' in object group name can't be treated as escape character.
DestIPObjGroup	Match destination IP by object group.	N/A	String case insensitive. Length: 1 to 63 characters.	The object group name can't contain '?'. The character '\r\n' in object group name can't be treated as escape character.
Mode	Match Mode.	N/A	Enumeration: • **1**—PerAddress. • **2**—SharedBandwidth.	It can be specified when **SrcIPSubnet** or **DestIPSubnet** or **SrcIPRange** or **DestIPRange** is specified. When the **Mode** column is 1, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment doesn't share the remaining bandwidth. When the **Mode** column is 2, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment shares the remaining bandwidth.
Trange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 63 characters.	The time range name cannot be **all** and the '**?**' should not be used. The character '\r\n' in time range name can't be

				treated as escape character.

CAR/CarPolicies

This table contains information about CAR policies.

XML structure

```

Table description

Item	Description
Feature name	CAR
Table name	CarPolicies
Table type	Multi-instance table
Row name	Policy

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
Type	Match type	Index	Enumeration : • **1—IPv4Acl** • **2—IPv6Acl** • **3—Carl** • **4—Any**	N/A
Value	Match type value	Index	Unsigned integer.	When **Type** is **1**, the value range is 2000 to 5999. When **Type** is **2**, the value range is 2000 to 3999. When **Type** is **3**, the value range is 1 to 199. When **Type** is **4**, this column only can be configured as 0.
BandwithUnit	Specify the bandwidth unit	N/A	Enumeration: • **2—kbps** • **3—percent**.	If this column is not configured, the default bandwith unit is kbps.
Name	Aggregate CAR policy name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	This column cannot be configured together with the other column. This column support only when BandwithUnit is 3.
CIR	Committed information rate	N/A	Unsigned integer.	Required when the **Name** is not specified. When BandwithUnit is 3, the value range is 1 to 100.
CBS	Committed burst size	N/A	Unsigned integer.	When BandwithUnit is 3, the value range is 50 to 2000.
EBS	Excess burst size	N/A	Unsigned integer.	If **CBS** or PIR is not configured, **EBS** cannot be configured. When BandwithUnit is 3, the value range is 0 to

Column name	Column description	Column type	Data type and restrictions	Remarks
				2000.
PIR	Peak information rate	N/A	Unsigned integer.	When BandwithUnit is 3, the value range is 1 to 100.
GreenAction	Specify behavior for green packets	Data structure	Members include: • **GreenActionType** • **GreenActionValue**	GreenActionValue is required when GreenActionType is not 1, 10 or 19.
GreenActionType	Action type	N/A	Enumeration: • **1**—pass. • **2**—remark-dscp-pass • **3**—remark-precedence-pass • **4**—remark-mpls-exp-pass • **5**—remark-dot1p-pass • **6**—remark-atm-clp-pass • **7**—remark-fr-de-pass • **8**—remark-local-prec-pass • **10**—discard • **11**—remark-dscp-continue • **12**—remark-precedence-continue • **13**—remark-mpls-exp-continue • **14**—remark-dot1p-continue • **15**—remark-atm-clp-continue. • **16**—remark-fr-de-continue. • **17**—remark-local-prec-continue. • **19**—continue.	The default GreenActionType is pass. When **GreenActionType** is **1**, send the packet. When **GreenActionType** is **2**, remark DSCP value of the packet and send it. When **GreenActionType** is **3**, remark IP precedence of the packet and send it. When **GreenActionType** is **4**, remark EXP of the MPLS packet and send it. When **GreenActionType** is **5**, remark 802.1p priority value of the packet and send it. When **GreenActionType** is **6**, remark CLP bit of the ATM packet and send it. When **GreenActionType** is **7**, remark DE bit of the FR packet and send it. When **GreenActionType** is **8**, drop the packet. Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CarlID	CAR list number	Index	Unsigned integer. Value range: 1 to 199.	N/A
Mac	Match the MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 **Dscp** for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **Exp** for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 **IPPrecedence** for a rule
DestIPRange	Match destination IP by range.	Data structure	Members include: • **DestIPStart** • **DestIPEnd**	The two members must both be specified.
DestIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
DestIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. **DestIPEnd** must be bigger than **DestIPStart**.
SrcIPRange	Match source IP by range.	Data structure	Members include: • **SrcIPStart** • **SrcIPEnd**	The two members must both be specified.
SrcIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. **SrcIPEnd** must be bigger than **SrcIPStart**.
DestIPSubnet	Match destination IP by	Data structure	Members include: • DestSubnetIP	The two members must both be specified.

	subnet.		• DestMaskLength	
DestSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DestMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPSubnet	Match source IP by subnet.	Data structure	Members include: • SrcSubnetIP • SrcMaskLength	The two members must both be specified.
SrcSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
SrcMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPObjGroup	Match source IP by object group.	N/A	String case insensitive. Length: 1 to 63 characters.	The object group name cannot contain '?'. The character '\r\n' in object group name can't be treated as escape character.
DestIPObjGroup	Match destination IP by object group.	N/A	String case insensitive. Length: 1 to 63 characters.	The object group name can't contain '?'. The character '\r\n' in object group name can't be treated as escape character.
Mode	Match Mode.	N/A	Enumeration: • **1**—PerAddress. • **2**—SharedBandwidth.	When the **Mode** column is 1, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment doesn't share the remaining bandwidth. When the **Mode** column is 2, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment shares the remaining bandwidth.
Trange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 63 characters.	The time range name cannot be **all** and the '**?' should not be used.** The character '\r\n' in time range name can't be treated as escape character.

CAR 1
CAR 1

CAR

CAR

Message	Explanation
PIR can't be smaller than CIR. PIR的值不能小于CIR。	Configure a CAR action, PIR can't be smaller than CIR. 配置流量监管动作，峰值速率不能小于承诺信息速率。
The end address should be larger than the start address. 结束地址值应该大于起始地址值。	Configure a CAR list, The end address should be larger than the start address. 配置CAR列表，IP地址段终止地址必须大于IP地址段起始地址。
The number of IP addresses in the IP address range exceeds %u. IP地址的数量超出了个数为%u的限制。	Configure a CAR list, The number of IP addresses in the IP address range has max number. 配置CAR列表，IP地址段数量存在上限。
Total UNI bandwidth can't be greater than NNI bandwidth. 下行接口总带宽不能超过上行接口带宽。	Total UNI bandwidth can't be greater than NNI bandwidth. 配置带宽保证组，下行接口总带宽不能超过上行接口带宽。
Please remove UNI configuration of this interface first. 请先删除下行接口配置。	Del if CAR, remove UNI configuration of this interface first. 删除接口CAR配置时需要保证此接口不是带宽保证组的下行口。
The maximum number of CAR policies that can be configured has been reached. CAR策略的数目已经达到最大值。	The maximum number of CAR policies that can be configured has been reached. 接口下配置流量监管的数量存在上限。
CIR or PIR must be configured in the same unit (percentage or kbps) as it was previously configured. 必须与之前配置的CIR或者PIR配置相同单位（percentage or kbps）	CIR or PIR must be configured in the same unit (percentage or kbps) as it was previously configured. 接口下配置流量监管的单位需要保持一致。
Percentage-based CAR can be only used on interface. 百分比CAR只能被应用到接口。	Percentage-based CAR can be only used on interface. 百分比CAR只能被应用到接口。

      <IfIndex></IfIndex>
      <ModeType></ModeType>
    </Mode>
  </CellularMode>
</Cellular>
```

Table description

Item	Description
Feature name	Cellular
Table name	CellularMode
Table type	Multi-instance table
Row name	Mode
Restrictions	This table supports interface types: Cellular interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
ModeType	network connection mode	N/A	Enumeration: • 1—1XRTT. • 2—EVDO. • 3—HYBRID. • 4—GSMONLY. • 5—GSMPREFER. • 6—WCDMAONLY. • 7—WCDMAPREFER. • 8—TDONLY. • 9—TDPREFER. • 10—LTEONLY. • 11—AUTO. • 12—NRONLY.	Which mode is supported depends on the device. The default ModeType depends on the modem model.

CELLULAR/CellularApnProfile

This table contains the information about network cellular apn-profile.

XML structure

```
<Cellular>
  <CellularApnProfile>
    <ApnProfile>
      <ProfileName></ProfileName>
      <ProfileType></ProfileType>
      <Apn></Apn>
      <AuthType></AuthType>
      <UserName></UserName>
      <PassWord></PassWord>
    </ApnProfile>
  </CellularApnProfile>
</Cellular>
```

Table description

Item	Description
Feature name	Cellular
Table name	CellularApnProfile
Table type	Multi-instance table
Row name	ApnProfile
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Profile name	Index	String. case-sensitive. Length: 1 to 31 characters.	N/A
ProfileType	Access point type	N/A	Enumeration: • **0**—dynamic. • **1**—static.	When the ProfileType is dynamic, apn is not needed, otherwise apn is required.
Apn	Access point name	N/A	String. case-sensitive. Length: 1 to 100 characters.	Only when the ProfileType is static, the Apn is required.
AuthType	Specifies the authentication mode	N/A	Enumeration: • **1**—pap. • **2**—chap. • **3**—pap and chap	When choosing the AuthType, UserName and PassWord is required.
UserName	User name	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A
PassWord	Password string	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A

CELLULAR/CellularApplyProfile

This table contains the information about cellular apply profile to an interface.

XML structure

```
<Cellular>
  <CellularApplyProfile>
    <ApplyProfile>
      <IfIndex></IfIndex>
      <MainProfile></MainProfile>
      <BackupProfile></BackupProfile>
    </ApplyProfile>
  </CellularApplyProfile>
</Cellular>
```

Table description

Item	Description
Feature name	Cellular
Table name	CellularApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
MainProfile	Main parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	Configure the main apn profile first.
BackupProfile	Backup parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	N/A

CELLULAR/CellularProfile

This table contains the information about network cellular profile.

XML structure

```
<Cellular>
  <CellularProfile>
    <Profile>
      <IfIndex></IfIndex>
      <ProfileNum></ProfileNum>
      <ProfileType></ProfileType>
      <Apn></Apn>
```

```
      <AuthType></AuthType>
      <UserName></UserName>
      <PassWord></PassWord>
    </Profile>
  </CellularProfile>
</Cellular>
```

Table description

Item	Description
Feature name	Cellular
Table name	CellularProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	This table supports interface types: Cellular interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ProfileNum	Modem parameter number	Index	Unsigned integer Value range:1 to 255.	N/A
ProfileType	Access point type	N/A	Enumeration: • **0**—dynamic. • **1**—static.	When the ProfileType is dynamic, apn is not needed, otherwise apn is required.
Apn	Access point name	N/A	String. case-sensitive. Length: 1 to 100 characters.	Only when the ProfileType is static, the Apn is required.

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthType	Specifies the authentication mode	N/A	Enumeration: • **0**—none. • **1**—pap. • **2**— chap • **3**— pap and chap	When AuthType is none, UserName is not required, otherwise UserName is required.
UserName	User name	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A
PassWord	Password string	N/A	String. case-sensitive. Length: 1 to 32 characters.	PassWord can not be returned when you get data.

Comware 7 Cellular NETCONF XML API Error Message Reference

Cellular/CellularVerify

Message	Explanation
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。
CELLULAR is not configured. CELLULAR口未配置。	The cellular need to be configured. 需要配置cellular接口。
UIM card has been locked. Please verify PIN first. UIM卡锁定，请先解锁。	UIM card has been locked. UIM卡被锁定。
SIM card has been locked. Please verify PIN first. SIM卡锁定，请先解锁。	SIM card has been locked. SIM卡被锁定。
Please enable PIN verification first. 请先使能PIN认证功能	Need to be enable PIN verification. 需要使能PIN认证。
Failed to change the PIN, and the number of retries remaining is x. 改变PIN码失败剩余次数x次。	The SIM card will be locked after a certain number of failed to change the PIN 更改PIN失败x次后SIM卡会被锁定。
Failed to change the PIN. 改变PIN码失败。	Failed to change the PIN. 改变PIN码失败。
PIN has been locked. Please use PUK to unlock PIN. PIN锁定，请先使用PUK解锁。	PIN has been locked. PIN被锁定。
3G Modem has no PIN verification requirement. 3G上网卡没有PIN认证需求。	It does not need to be enable PIN verification. 不需要PIN认证。
Failed to verify PIN, and the number of retries remaining is x. 认证PIN失败剩余次数x次。	The SIM card will be locked after a certain number of failed to verify PIN 认证PIN失败x次后SIM卡会被锁定。
Failed to verify PIN. 认证PIN失败。	PIN Code is error. PIN码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	No 3G/4G modem on this interface. 3G/4G Modem不存在。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。

3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。

Cellular/UnLock

Message	Explanation
Operation failed because there is no PIN unlocking requirement. 操作失败，没有PIN码解锁请求。	3G modem has no PIN unlocking requirement. 3G Modem没有PIN码解锁要求。
Failed to unlock the PIN, and the number of retries remaining is x. 解锁失败，剩余解锁次数x。.	The SIM card will be locked after a certain number of failed to unlock the PIN 解锁PIN失败x次后SIM卡会被锁定。
Failed to unlock the PIN. PIN码解锁失败。	PIN Code is error. PIN码错误。
PIN Code is invalid. PIN码不合法。	PIN Code is error. PIN码错误。
PUK Code is invalid. PUK码不合法。	PUK Code is error. PUK码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be userd on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

Cellular/CellularVerificationEnable

Message	Explanation
UIM card has been locked. Please verify PIN first. UIM卡锁定，请先解锁。	UIM card has been locked. UIM卡被锁定。
SIM card has been locked. Please verify PIN first. SIM卡锁定，请先解锁。	SIM card has been locked. SIM卡锁定。
PIN has been locked. Please use PUK to unlock PIN.	PIN has been locked.

PIN锁定，请先使用PUK解锁。	PIN码被锁定。
PIN is not required. 不需要PIN码。	No need to enter a PIN. 不需要输入PIN码。
PIN is required. 需要PIN码。	need to enter a PIN. 需要输入PIN码。
Failed to enable PIN verification, and the number of retries remaining is x. 开启PIN认证失败，剩余次数：x次。	The SIM card will be locked after a certain number of failed to enable PIN verification. 开启认证PIN失败x次后，SIM卡会被锁定。
Failed to disable PIN verification, and the number of retries remaining is x. 关闭PIN认证失败，剩余次数：x次。	The SIM card will be locked after a certain number of failed to disable PIN verification. 关闭认证PIN失败x次后，SIM卡会被锁定。
Failed to enable PIN verification. 开启PIN认证失败。	Failed to enable PIN verification. 开启PIN认证失败。
Failed to disable PIN verification. 关闭PIN认证失败。	Failed to disable PIN verification. 关闭PIN认证失败。
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
PIN Code is invalid. PIN码不合法。	PIN Code is error. PIN码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can’t be userd on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

Cellular/CellularMode

Message	Explanation
Failed to get the network connection mode. 获取网络连接模式失败。	Failed to get the network connection mode. 获取网络连接模式失败。
Don't support the mode. 不支持此连接模式。	Don't support the mode. 不支持此连接模式。
No 3G/4G modem on this interface.	The operation can’t be userd on the interface which has not a

3G/4G Modem不存在。	3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

Cellular/CellularVerificationDis

Message	Explanation
Failed to get pin verification. 获取PIN认证失败。	Failed to get pin verification. 获取PIN认证失败。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can’t be userd on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

Cellular/CellularProfile

Message	Explanation
Failed to create a parameter profile of 3G/4G Modem. 创建3G/4G Modem参数模板失败。	Failed to create a parameter profile of 3G/4G Modem. 创建3G/4G Modem参数模板失败。
Failed to delete a parameter profile of 3G/4G Modem. 删除3G/4G Modem参数模板失败。	Failed to delete a parameter profile of 3G/4G Modem. 删除3G/4G Modem参数模板失败。
The configuration doesn't meet the requirements.	The configuration parameter is incomplete.

不符合配置要求。	配置参数不全。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be userd on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Anther command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

Cellular/CellularApnProfile

Message	Explanation
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
The apn profile has been applied by interface, delete the applying first. 该参数模板已被接口应用，请先删除应用。	The apn profile has been applied by interface. 模板已在其他接口上使用。

Cellular/CellularApplyProfile

Message	Explanation
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
Please configure the apn profile first. 请先配置参数模板。	This message means apn profile not be configured. apn profile模板不存在。

Cellular/CellularModemReboot

Message	Explanation
Cellular feature is not enabled. CELLULAR特性未启动。	This message means cellular not be configured. 没有cellular特性。
Failed to reboot 3G/4G Modem. 3G/4G Modem重启失败。	3G/4G Modem reboot failed. 3G/4G Modem重启失败。

Cmtnlmgr/CloudDomainName

This table contains information about cloud domains.

XML structure

```
<Cmtnlmgr>
  <CloudDomainName>
    <DomainName></DomainName>
    <Port></Port>
    <VrfName></VrfName>
    <SrcIPAddr></SrcIPAddr>
    <AddressType></AddressType>
  </CloudDomainName>
</Cmtnlmgr>
```

Table description

Item	Description
Feature name	Cmtnlmgr
Table name	CloudDomainName
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Name of the cloud domain	N/A	String, case-insensitive. Length: 1 to 253 characters.	If domain name is an address, the type of the address must be consistent with the AddressType field.
Port	Cloud server port	N/A	Unsigned integer. Value range: 0 to 65535.	If you set the port to 0, the device will use Cmtnlmgr/Cloud Port or default port as the cloud

				server port.
VrfName	Name of the VPN	N/A	String. Length: 1 to 31 characters.	N/A
SrcIPAddr	Source IPv4 or IPv6 address	N/A	String. IPv4: dotted decimal notation. IPv6: colon-separated notation.	The type of the source address must be consistent with the AddressType field.
AddressType	Cloud server address type	N/A	Enumeration: • **0**—IPv4 address type • **1**—IPv6 address type	The default value is 0.

CmtnImgr/CloudBackupDomain

This table contains information about cloud backup domains. This table will become obsolete. As a best practice, use the new table CloudBackupDomainExt.

XML structure

```
<Cmtnlmgr>
  <CloudBackupDomain>
    <Domain>
      <DomainName></DomainName>

DomainName	Name of the backup cloud domain	Index	String, case-insensitive. Length: 1 to 253 characters.	If domain name is an address, the type of the address must be consistent with the AddressType field. If the value for this field is 0.0.0.0 or ::, the source address is automatically selected by the system.
Port	Cloud server port	Index	Unsigned integer. Value range: 0 to 65535.	In the get operation, 0 means that the server uses Cmtnlmgr/Cloud Port if the Cmtnlmgr/Cloud Port is configured. If Cmtnlmgr/Cloud Port is not configured, the server uses the default port.
VrfName	Name of the VPN	N/A	String. Length: 0 to 31 characters.	0 represents the public VRF.
SrcIPAddr	Source IPv4 or IPv6 address	N/A	String. IPv4: dotted decimal notation. IPv6: colon-separated notation.	The type of the source address must be consistent with the AddressType field.

AddressType	Cloud server address type	N/A	Enumeration: • **0**—IPv4 address type • **1**—IPv6 address type	The default value is 0.

Cmtnlmgr/CloudPassword

This table contains cloud server password information.

XML structure

```
<Cmtnlmgr>
  <CloudPassword>
    <PasswordType></PasswordType>
  </CloudPassword>
</Cmtnlmgr>
```

Table description

Item	Description
Feature name	Cmtnlmgr
Table name	CloudPassword
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PasswordType	Password type	N/A	Enumeration. • 1—Plaintext. • 2—Ciphertext.	N/A

Cmtnlmgr/CloudToken

This table contains cloud server token information.

XML structure

```
<Cmtnlmgr>
  <CloudToken>
    <TokenType></TokenType>
  </CloudToken>
```

```
</Cmtnlmgr>
```

Table description

Item	Description
Feature name	Cmtnlmgr
Table name	CloudToken
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TokenType	Token type	N/A	Enumeration. • 2—Ciphertext.	N/A

CmtnImgr/KeepAlive

This table contains cloud server keepalive configuration information.

XML structure

```
<Cmtnlmgr>
  <KeepAlive>
    <KeepAliveInterval></KeepAliveInterval>
    <KeepAliveCount></KeepAliveCount>
  </KeepAlive>
</Cmtnlmgr>
```

Table description

Item	Description
Feature name	Cmtnlmgr
Table name	KeepAlive
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeepAliveInterval	Keepalive sending interval	N/A	Unsigned integer. Value range: 10 to 600.	N/A
KeepAliveCount	Number of keepalive packets that can be sent to the cloud server	N/A	Unsigned integer. Value range: 2 to 100.	N/A

</Collaboration>
```

Table description

Item	Description
Feature name	Collaboration
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether Collaboration group is enabled globally.	N/A	Boolean: • **true**—Enabled. (default). • **false**—Disabled.

Collaboration/Groups

This table contains information about Collaboration group.

XML structure

```
<Collaboration>
  <Groups>
    <Group>
```

```
      <ID></ID>
      <UpDelay></UpDelay>
    </Group>
  </Groups>
</Collaboration>
```

Table description

Item	Description
Feature name	Collaboration
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	The maximum collaboration group ID varies by device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Collaboration group ID.	Index	Unsigned integer `Length: 32 bits.`	The maximum collaboration group ID varies by device model.
UpDelay	Updelay timer in seconds	N/A	Unsigned integer. • **Value range:** 0 to 3600. • Default: 0.	The up delay is the time that the interfaces in the collaboration group wait before they come up when the device restarts.

Collaboration/Interfaces

This table contains information about port of Collaboration group.

XML structure

```
<Collaboration>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <ID></ID>
    </Interface>
  </Interfaces>
</Collaboration>
```

Table description

Item	Description

Configuration/Files

This table contains configuration file information.

XML structure

```
<Configuration>
  <Files>
    <File>
      <Name></Name>
      <NextMain></NextMain>
      <NextBackup></NextBackup>
    </File>
  </Files>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	Configuration file must have the suffix .cfg, and must already exist in the root directory of storage medium.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Full path and filename	Index	String. Length: 1 to 255 characters.	Examples: • flash:/startup.cfg • chassis3#slot1#flash:/main.cfg
NextMain	Whether the configuration file is the main next-startup configuration file	N/A	Boolean: • true. • false.	N/A
NextBackup	Whether the configuration file is the backup next-startup	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	configuration file			

Configuration/MDCOrContextFiles

This table contains information about an MDC or a context.

XML structure

```
<Configuration>
  <MDCOrContextFiles>
    <MDCOrContextFile>
      <MDCOrContextID></MDCOrContextID>
      <Name></Name>
      <Save></Save>
      <Overwrite></Overwrite>
    </MDCOrContextFile>
  </MDCOrContextFiles>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	MDCOrContextFiles
Table type	Multi-instance table
Row name	MDCOrContextFile
Restrictions	On the default MDC or context, all MDCs or contexts can be operated. On a non-default MDC or context, only the current MDC or context can be operated.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCOrContextID	MDC or context index	Index	Unsigned integer.	N/A
Name	Full path and filename	Index	String. Length: 1 to 300 characters. This directory must be the root directory of the active MPU.	Example: • chassis3#slot1#flash:/main.cfg • flash:/startup.cfg • main.cfg

Column name	Column description	Column type	Data type and restrictions	Remarks
			The filename (without the chassiN#slotN# field) cannot exceed 255 characters.	
Save	Save configuration	N/A	This column must be empty.	N/A
Overwrite	Whether to overwrite the configuration file if it has already existed	N/A	Boolean: • true. • false.	This column must coexist with the **Save** column.

Configuration/ManualBackups

This table archives the running configuration to a configuration file.

XML structure

```
<Configuration>
  <ManualBackups>
    <ManualBackup></ManualBackup>
  </ManualBackups>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ManualBackups
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ManualBackup	Archive the running configuration to a configuration file	N/A	This column must be empty.

Configuration/ManualRollbacks

This table replaces the running configuration with a configuration file.

XML structure

```
<Configuration>
  <ManualRollbacks>
    <ManualRollback></ManualRollback>
    <RollbackName></RollbackName>
    <Time></Time>
    <Date></Date>
  </ManualRollbacks>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ManualRollbacks
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ManualRollback	Replace the running configuration with a configuration file	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
RollbackName	Replacement configuration file name	N/A	String. Length: 1 to 255 characters.
Time	Replacement time	N/A	Format: hh:mm. Value range: 00:00 to 23:59.
Date	Replacement date	N/A	Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.

Configuration/ResetSavedConfiguration

This table resets the next-startup configuration, which can be the main next-startup configuration, backup next-startup configuration, or both.

XML structure

```
<Configuration>
  <ResetSavedConfiguration>
    <ConfigurationType></ConfigurationType>
```

```
    <KeepConfigurationFile></KeepConfigurationFile>
  </ResetSavedConfiguration>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ResetSavedConfiguration
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ConfigurationType	Next-startup configuration file type	N/A	Enumeration string: • All. • Main. • Backup.
KeepConfiguration File	Whether the next-startup configuration file is retained or deleted	N/A	Boolean: • **true**—Retained. • **false**—Deleted.

```

Table description

Item	Description
Feature name	Configuration
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	Configuration file must have the suffix .cfg, and must already exist in the root directory of storage medium.

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Full path and filename. Example: • flash:/startup.cfg • chassis3#slot1#flash:/main.cfg	Index	String. Length: 1 to 255 characters.
Running	Whether the configuration file is the current startup configuration file.	N/A	Boolean: • true • false
NextMain	Whether the configuration file is the main next-startup configuration file.	N/A	Boolean: • true • false
NextBackup	Whether the configuration file is the backup next-startup configuration file.	N/A	Boolean: • true • false

Configuration/MDCOrContextFiles

This table contains configuration file information for an MDC or a context.

XML structure

```
<Configuration>
  <MDCOrContextFiles>
    <MDCOrContextFile>
      <MDCOrContextID></MDCOrContextID>
      <Name></Name>
```

```
      <Running></Running>
      <NextMain></NextMain>
      <NextBackup></NextBackup>
    </MDCOrContextFile>
  </MDCOrContextFiles>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	MDCOrContextFiles
Table type	Multi-instance table
Row name	MDCOrContextFile
Restrictions	On the default MDC or context, information about all MDCs or contexts can be queried. On a non-default MDC or context, only information about the current MDC or context can be queried.

Columns

Column name	Column description	Column type	Data type and restrictions
MDCOrContextID	MDC or context index	Index	Unsigned integer.
Name	Full path and filename. Example: • flash:/startup.cfg • chassis3#slot1#flash:/main.cfg	Index	String. Length: 1 to 300 characters.
Running	Whether the configuration file is the current startup configuration file.	N/A	Boolean: • true • false
NextMain	Whether the configuration file is the main next-startup configuration file.	N/A	Boolean: • true • false
NextBackup	Whether the configuration file is the backup next-startup configuration file.	N/A	Boolean: • true • false

Configuration/ArchiveLocal

This table contains configuration local archivel information.

XML structure

```
<Configuration>
  <ArchiveLocal>
    <Interval></Interval>
    <Count></Count>
    <DirPath></DirPath>
    <Prefix></Prefix>
  </ArchiveLocal>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ArchiveLocal
Table type	Single-instance
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Time interval to automatic backup.	N/A	Unsigned integer. Value range: 0、10 to 525600.
Count	Save the maximum number of backup files locally.	N/A	Unsigned integer. Value range: 1 to 10.
DirPath	Local save path.	N/A	String. Length: 1 to 63 characters.
Prefix	Local save file prefix.	N/A	String. Length: 1 to 30 characters.

Configuration/ArchiveServer

This table contains configuration server archive information.

XML structure

```
<Configuration>
  <ArchiveServer>
    <ArchiveHost>
      <ServerType></ServerType>
      <AddressType></AddressType>
      <Address></Address>
```

```
      <VRF></VRF>
      <Interval></Interval>
      <UserName></UserName>
      <Password></Password>
      <Port></Port>
      <DirPath></DirPath>
      <Prefix></Prefix>
    </ArchiveHost>
  </ArchiveServer>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ArchiveServer
Table type	Multi-instance table
Row name	ArchiveHost
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	Type of the server.	Index	Enumeration: • 1—FTP • 2—TFTP • 3—SCP	N/A
AddressType	Type of the address.	N/A	Enumeration: • 1—IPV4 • 2—IPV6	N/A
Address	Address of the remote manage.	Index	String. Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	N/A
Interval	Time interval to automatic backup.	N/A	Unsigned integer. Value range: 0、10 to 525600.	N/A
UserName	User name.	N/A	String. Length: 1 to 63 characters.	N/A
Password	Password.	N/A	String. Length: 1 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
Port	Port Number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DirPath	Server save path.	N/A	String. Length: 1 to 63 characters.	N/A
Prefix	Server save file prefix.	N/A	String. Length: 1 to 30 characters.	N/A

Configuration/ReplaceServer

This table contains configuration server replace information.

XML structure

```
<Configuration>
  <ReplaceServer>
    <ReplaceHost>
      <ServerType></ServerType>
      <AddressType></AddressType>
      <Address></Address>
      <VRF></VRF>
      <UserName></UserName>
      <Password></Password>
      <Port></Port>
      <DirPath></DirPath>
      <RollbackName></RollbackName>
    </ReplaceHost>
  </ReplaceServer>
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ReplaceServer
Table type	Multi-instance table
Row name	ReplaceHost
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	Type of the server.	Index	Enumeration: • 1—FTP • 2—TFTP	N/A
AddressType	Type of the address.	N/A	Enumeration: • 1—IPV4 • 2—IPV6	N/A
Address	Address of the remote manage.	Index	String. Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	N/A
UserName	User name.	N/A	String. Length: 1 to 63 characters.	N/A
Password	Password.	N/A	String. Length: 1 to 63 characters.	N/A
Port	Port Number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DirPath	Server save path.	N/A	String. Length: 1 to 63 characters.	N/A
RollbackName	Server Rollback.	N/A	String. Length: 1 to 255 characters.	N/A

Configuration/ExclusiveLock

This table contains system configuration exclusive lock information.

XML structure

```
<Configuration>
  <ExclusiveLock>
    <LockInfo>
      <LockType></LockType>
      <LockUser></LockUser>
      <LockTime></LockTime>
      <UnlockTime></UnlockTime>
    </LockInfo>
  </ExclusiveLock>
```

```
</Configuration>
```

Table description

Item	Description
Feature name	Configuration
Table name	ExclusiveLock
Table type	Multi-instance table
Row name	LockInfo
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LockType	Type of the lock	Index	Enumeration: • **0**—Session. • **1**—User.	The session type is not supported.
LockUser	Username of the lock	N/A	String. Length: 1 to 55 characters.	N/A
LockTime	Time when the configuration was locked	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	If the configuration is not locked, this column is not returned.
UnlockTime	Time when the configuration was unlocked	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	If the configuration is locked, this column is not returned.

Configuration event stream

SaveEvent event

This event is used to report configuration saving operations.

XML structure for event subscription

```
<SaveEvent>
</SaveEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Configuration</stream>
    <filter type="subtree">
      <SaveEvent xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
      </SaveEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Configuration
Event name	SaveEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Configuration:1.0
Support for extended query	No

XML structure for event report

```
<SaveEvent>
  <FileName>
  </FileName>
</SaveEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <SaveEvent xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
    <FileName>flash:/123.cfg</FileName>
  </SaveEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
FileName	File path and name	String. Length: 1 to 511 characters.

ConfigurationEvent event

This event is used to report configuration change information.

XML structure for event subscription

```
<ConfigurationEvent>
</ConfigurationEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Configuration</stream>
    <filter type="subtree">
      <ConfigurationEvent
xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
      </ConfigurationEvent >
    </filter>
  </create-subscription>
</rpc>
```

      <Belongto></Belongto>
      <BladeControllerTeam></BladeControllerTeam>
    </ContextInformation>
  </ContextInformations>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	ContextInformations
Table type	Multi-instance table
Row name	ContextInformation
Restrictions	firewall card:to start or stop a context should act in mdc the context belongedto ;Other actions only support default MDC. centralized firewall and packaging firewall:Only support default Context.
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	0 means the system assigns the lowest ID number

Column name	Column description	Column type	Data type and restrictions	Remarks
				among the available IDs to the Context.
Name	Full name of an context	N/A	String. Length: 1 to 15 characters.	firewall card: There is no default context. centralized firewall and packaging firewall:The name of default context is Admin
State	State of the MDC	N/A	Enumeration: 1: start 2: stop	start—Start the context. stop—Stop the context.
Description	Description of context	N/A	String. Length: 1 to 255 characters.	N/A
Belongto	Name of context's parentMDC	N/A	String. Length: 1 to 15 characters.	firewall card: Name of context's parentMDC. centralized firewall and packaging firewall:not support
Mode	Vlan mode of a context.	N/A	Enumeration: 1: VLAN shared 2: VLAN unshared	VLAN shared:Vlans can be allocated to different context sharely. VLAN unshared:4k vlans belongto the context unsharely. Default : mode is VLAN SHARED, firewall card and centralized firewall: the mode can't be customized packaging firewall: the mode can be customized.
BladeControllerTeam	BladeControllerTeam ID	N/A	Unsigned integer. Value range: 1 to 256.	Location: Authorize the context to use the resource of BladeControllerTeams.

Context/Resources/Disks

This table contains disk infomation.

XML structure

```
<Context>
  <Resources>
    <Disks>
      <Disk>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Disk>
    </Disks>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	firewall card: Only can be configurated in default MDC. centralized firewall and packaging firewall:Disk resource of user contexts can be configurated by the default context, while disk resource of default context can't be configurated.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedR	reserve resources of	N/A	Unsigned integer.	Not support yet.

Column name	Column description	Column type	Data type and restrictions	Remarks
atio	disk(%)		Value range: 0 to 100.	
QuotaRatio	The total limit resources of disk.(%)	N/A	Positive integer. Value range: 1 to 100.	The default value is 100.

Context/Resources/Memories

This table contains memory infomation.

XML structure

```
<Context>
  <Resources>
    <Memories>
      <Memory>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Memory>
    </Memories>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	firewall card: Only can be configurated in default MDC. centralized firewall and packaging firewall:Memory resource of user contexts can be configurated by the default context, while memory resource of default context can’t be configurated.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	The default value is 100.

Context/Resources/CPUs

This table contains cpu infomation.

XML structure

```
<Context>
  <Resources>
    <CPUs>
      <CPU>
        <ContextID></ContextID>
        <Weight></Weight>
      </CPU>
    </CPUs>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	firewall card: Only can be configurated in default MDC.

	centralized firewall and packaging firewall:CPU resource of user contexts can be configurated by the default context, while CPU resource of default context can't be configurated.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Weight	CPU weight-maximum of available resources of CPU. UNITS : weight	N/A	Positive integer. Value range:1-10	Limit maxmum of cpu resource. Default:Each context has a CPU weight of 10.

Context/Resource/Throughputs

This table contains infomation of throughputs.

XML structure

```
<Context>
 <Resources>
   <Throughputs>
     <Throughput>
      <ContextID></ContextID>
       <ThroughputValue>
         <Unit></Unit>
         <Value></Value>
       </ThroughputValue>
     </Throughput>
   </Throughputs>
 </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Throughputs
Table type	Multi-instance table
Row name	Throughput
Restrictions	Only the default context supports.

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
ThroughputValue	Throughputs value	Data structure	Members include: • Unit. • Value.	“Unit” should be configed together with “value”
Unit	Unit of throughput	N/A	Enumeration: • 1: Kbps • 2: pps • 3: Mbps • 4: Gbps	N/A
Value	Value of throughput	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A

Context/Resource/ObjectPolicyRules

This table contains infomation of Object Policy Rules.

XML structure

```
<Context>
  <Resources>
    <ObjectPolicyRules>
      <ObjectPolicyRule>
        <ContextID></ContextID>
        <Max></Max>
      </ObjectPolicyRule>
    </ObjectPolicyRules>
</Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	ObjectPolicyRules
Table type	Multi-instance table
Row name	ObjectPolicyRule
Restrictions	Only the default context supports.

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
Max	Maxnum of ObjectPolicyRules	N/A	Positive integer.	The value range depends on the device model.

Context/Resource/Sessions

This table contains infomation of sessions.

XML structure

```
<Context>
  <Resources>
    <Sessions>
      <Session>
        <ContextID></ContextID>
        <MaxNum></MaxNum>
        <MaxRate></MaxRate>
      </Session>
    </Sessions>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	Only the default context supports.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxNum	Maxnum of sessions	N/A	Positive integer.	N/A
MaxRate	Maxnum of transfer rate:1/s	N/A	Positive integer.	N/A

Context/Allocations

This table contains physical interface.

XML structure

```
<Context>
  <Allocations>
    <Allocation>
      <ContextID></ContextID>
      <UnsharedInterfaceList></UnsharedInterfaceList>
      <SharedInterfaceList></SharedInterfaceList>
      <VLAN></VLAN>
    </Allocation>
  </Allocations>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Allocations
Table type	Multi-instance table
Row name	Allocation
Restrictions	firewall card : only support MDC. centralized firewall and packaging firewall:Only support default Context.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context ID	N/A	Unsigned integer.	N/A
UnsharedInterfaceList	List of unshared interfaces	N/A	String.	firewall card :not support centralized firewall and packaging firewall:allocate unshared interfaces. Different interfaces combinations(a sigle interface or interface list)are separated by comma‘,’,interface lists are separated by ‘to ‘(There is a apace on both sides of the word ‘to’). reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48
SharedInterfaceList	List of shared interfaces	N/A	String.	firewall card :not support centralized firewall and packaging firewall:allocate shared interfaces. Different interfaces combinations(a sigle interface or interface list)are separated by comma‘,’,interface lists are separated by ‘ to’(There is a apace on both sides of the word ‘to’). reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48
VLAN	Vlan list	N/A	Numeric string separated by comma and minus,end of which can’t be comma or minux,can’t contain blank. Such as: 1,2,3,5-8,10-20	N/A

Context/LocationBladeControllerTeams(discard)

This table contains location state of a BladeControllerTeam.

XML structure

```
<Context>
  <LocationBladeControllerTeams>
    <LocationBCT>
```

```
      <ContextID></ContextID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBCT>
  </LocationBladeControllerTeams>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBCT
Restrictions	firewall card: query all contexts' infomation in the default MDC. centralized firewall and packaging firewall:query all contexts' infomation in the default Context.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1to 256.	
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the context to use the resource of BladeControllerTeams. the default context is authorized to use resource of all the bladecontrollerteams

Context/Resource/SSLVPNs

This table contains infomation about SSL VPNs.

XML structure

```
<Context>
  <Resources>
    <SSLVPNs>
      <SSLVPN>
        <ContextID></ContextID>
```

```
      <MaxUserNum></MaxUserNum>

Context

Context/ContextInformations

This table is used to configure contexts for a device and show context's state.

XML structure

```
<Context>
  <ContextInformations>
    <ContextInformation>
      <ContextID></ContextID>
      <Name></Name>
      <Description></Description>
      <Belongto></Belongto>
      <Mode></Mode>
      <Status></Status>
      <BladeControllerTeam></BladeControllerTeam>
    </ContextInformation>
  </ContextInformations>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	ContextInformations
Table type	Multi-instance table
Row name	ContextInformation
Restrictions	firewall card:query contexts' infomation in mdc the context belongedto ; query all contexts' information in the default MDC. centralized firewall and packaging firewall:query all contexts' information in the default Context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Name	Full name of an Context	N/A	String. Length: 1 to 15 characters.	firewall card:There is no default context.

Column name	Column description	Column type	Data type and restrictions	Remarks
				centralized firewall and packaging firewall:The name of default context is Admin
Description	Description of context	N/A	String. Length: 1 to 255 characters.	N/A
Belongto	Name of context's parentMDC	N/A	String. Length: 1 to 15 characters.	firewall card: Name of context's parentMDC. centralized firewall and packaging firewall:blank
Mode	Vlan mode of a context.	N/A	Enumeration: 1: VLAN shared 2: VLAN unshared	VLAN shared:Vlans can be allocated to different context sharely. VLAN unshared:4k vlans belongto the context unsharely. Default : mode is VLAN SHARED, firewall card and centralized firewall: the mode can't be customized packaging firewall: the mode can be customized.
Status	Status of the context	N/A	Enumeration: • 1: inactive • 2: starting • 3: active • 4: stopping • 5: updating	• inactive—The context is stopped or not started yet. • starting—The device is executing the context start command to start the context. • active—The context is operating correctly. • stopping—The device is executing the undo context start command to stop the context. • updating—The context is updating.
BladeControll	BladeControllerT	N/A	Unsigned integer.	Location: Authorize

Column name	Column description	Column type	Data type and restrictions	Remarks
erTeam	eam ID		Value range: 0 to 256.	the context to use the resource of BladeControllerTeams. 0 means the context dose not location bladecontrollerteam

Context/Resources/Disks

This table contains disk infomation.

XML structure

```
<Context>
  <Resources>
    <Disks>
      <Disk>
        <ContextID></ContextID>
        <Chassis></Chassis>

      </Disk>
    </Disks>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	firewall card:query contexts'disk resource in mdc the context belonged to ; query all contexts' disk resource in the default MDC.

	centralized firewall and packaging firewall:query all contexts' disk resource in the default Context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Partition	Instance name of disk resource	Index	String. Length: 1 to 31 characters.	N/A
Quota	The total limit resources of disk(KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maxmum of disk resource.
Reserved	reserve resources of disk(KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the context doesn't have reserve resource of disk.
Used	Current usage of disk resources(KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of disk(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used)and idle resource of disk.

Context/Resources/Memories

This table contains memory infomation.

XML structure

```
<Context>
  <Resources>
    <Memories>
      <Memory>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Quota></Quota>
        <Reserved></Reserved>
```

```
      <Used></Used>
      <Available></Available>

  </Memories>
 </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	firewall card:query contexts' memory resource in mdc the context belonged to ; query all contexts' memory resource in the default MDC. centralized firewall and packaging firewall:query all contexts' memory resource in the default Context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Quota	The total limit resources of memory(KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maxmum of memory resource.
Reserved	reserve resources of memory(KB)	N/A	Unsigned integer.	Limit minimum of memory resource. 0 means the context doesn't have reserve resource of memory.
Used	Current usage of memory resources(KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of memory(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used)and idle resource of memory.

Context/Resources/CPUs

This table contains cpu infomation.

XML structure

```
<Context>
  <Resources>
    <CPUs>
      <CPU>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Weight></Weight>
        <Usage></Usage>
      </CPU>
    </CPUs>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	firewall card:query contexts' cpu resource in mdc the context belonged to ; query all contexts' cpu resource in the default MDC. centralized firewall and packaging firewall:query all contexts' cpu resource in the default Context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	resource		Value range: 0 to 65535.	
Weight	CPU weight-maximum of available resources of CPU(weight)	N/A	Positive integer. Value range:1-10	Limit maxmum of cpu resource. Default:Each context has a CPU weight of 10.
Usage	Current usage of CPUresources(%)	N/A	Unsigned integer. Value range: 0 to 100.	N/A

Context/Resource/Throughputs

This table contains infomation of throughputs.

XML structure

```
<Context>
<Resources>
   <Throughputs>
     <Throughput>
       <ContextID></ContextID>
       <ThroughputValue>
         <Unit></Unit>
         <Value></Value>
       </ThroughputValue>
     </Throughput>
   </Throughputs>
</Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Throughputs
Table type	Multi-instance table
Row name	Throughput
Restrictions	Only the default context supports.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
ThroughputValue	Throughputs value	Data structure	Members include: • Unit. • Value.	N/A
Unit	Unit of throughput	N/A	Enumeration: • 1: Kbps • 2: pps • 3: Mbps • 4: Gbps	N/A
Value	Value of throughput	N/A	Unsigned integer. Value range: 1000 to 100000000.	0 means no restrictions

Context/Resource/ObjectPolicyRules

This table contains infomation of Object Policy Rules.

XML structure

```
<Context>
<Resources>
   <ObjectPolicyRules>
     <ObjectPolicyRule>
       <ContextID></ContextID>
       <Max></Max>
     </ObjectPolicyRule>
   </ObjectPolicyRules>
</Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	ObjectPolicyRules
Table type	Multi-instance table
Row name	ObjectPolicyRule
Restrictions	Only the default context supports.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
Max	Maxnum of ObjectPolicyRules	N/A	Positive integer.	The value range depends on the device model. 0 means no restrictions

Context/Resource/Sessions

This table contains infomation of sessions.

XML structure

```
<Context>
<Resources>
   <Sessions>
     <Session>
       <ContextID></ContextID>
       <MaxNum></MaxNum>
       <MaxRate></MaxRate>
     </Session>
   </Sessions>
</Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	Only the default context supports.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxNum	Maxnum of sessions	N/A	Positive integer.	0 means no restrictions
MaxRate	Maxnum of	N/A	Positive integer.	0 means no restrictions

Column name	Column description	Column type	Data type and restrictions	Remarks
	transfer rate:1/s			

Context/InterfaceAllocations

This table contains physical interface.

XML structure

```
<Context>
  <InterfaceAllocations>
    <InterfaceAllocation>
      <IfName></IfName>
      <ContextID></ContextID>
      <AllocType></AllocType>
    </InterfaceAllocation>
  </InterfaceAllocations>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	InterfaceAllocations
Table type	Multi-instance table
Row name	Interface
Restrictions	Default Context can query thel contexts' information of all te interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters.	N/A
ContextID	Context ID	Index	Unsigned integer.	N/A
AllocType	Interface assignment type	N/A	Enumeration: • 0: Invalid • 1: The interface has not been allocated. • 2: The allocation type is shared.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3: The allocation type is exclusive.	

Context/VLANAllocations

This table contains informations of vlans.

XML structure

```
<Context>
  <VLANAllocations>
    <VLANAllocation>
      <VLANID></VLANID>
      <ContextID></ContextID>
      <ContextIDList></ContextIDList>
    </VLANAllocation>
  </VLANAllocations>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	VLANAllocations
Table type	Multi-instance table
Row name	VLANAllocation
Restrictions	Default Context can query thel contexts' information of all te vlans.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	Vlan Index	Index	Positive integer.	firewall card :There is not default context. centralized firewall and packaging firewall:the default Context's ID is 1.
ContextID	Context ID	N/A	Unsigned integer.	The minimal Context ID of the VLAN
ContextIDList	Context ID List	N/A	String. Length: 1to 65535	Example: 2,3,5-8,10-20. Available Context IDs are in the ContextID column in

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters. It is a comma-separated list of Context ID items. An item can be an individual Context ID or a Context ID range. Use a hyphen (-) to separate the start and end Context IDs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	the Context/ContextInformations table.

Context/Capabilities

This table contains capability information of context.

XML structure

```
<Context>
   <Capabilitys>
      <BelongtoSupport></BelongtoSupport>
      <ModeSupport></ModeSupport>
   </Capabilitys>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	Capabilities
Table type	Multi-instance table
Row name	N/A
Restrictions	Only support the default context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BelongtoSupport	Check whether belongto can be configured.	N/A	Boolean: • true • false	N/A
ModeSupport	Check whether vlan mode can be configured.	N/A	Boolean: • true • false	N/A

Context/LocationBladeControllerTeams(discard)

This table contains location state of a BladeControllerTeam.

XML structure

```
<Context>
  <LocationBladeControllerTeams>
    <LocationBCT>
      <ContextID></ContextID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBCT>
  </LocationBladeControllerTeams>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBCT
Restrictions	firewall card: query all contexts' infomation in the default MDC. centralized firewall and packaging firewall:query all contexts' infomation in the default Context.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
BladeControllerTeam	BladeControllerTeam ID	N/A	Unsigned integer. Value range: 1to 256.	
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the context to use the resource of BladeControllerTeams. the default context is authorized to use resource of all the bladecontrollerteams

Context/Resource/SSLVPNs

This table contains infomation about SSL VPNs.

XML structure

```
<Context>
  <Resources>
    <SSLVPNs>
      <SSLVPN>
        <ContextID></ContextID>
        <MaxUserNum></MaxUserNum>
      </SSLVPN>
    </SSLVPNs>
  </Resources>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	SSLVPNs
Table type	Multi-instance table
Row name	SSLVPN
Restrictions	Only the default context supports SSL VPN.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxUserNum	Maximum number of SSL VPN users	N/A	Unsigned integer. Value range: 1 to 1048575.	0 means no limit on the number of SSL VPN users.

Context/RebootInfos

This table contains reboot information of Context.

XML structure

```
<Context>
  <RebootInfos>
    <RebootInfo>
```

```
    <ContextID></ContextID>
    <Index></Index>
    <Time></Time>
    <Reason></Reason>
    <Detail></Detail>
   </RebootInfo>
  </RebootInfos>
</Context>
```

Table description

Item	Description
Feature name	Context
Table name	RebootInfos
Table type	Multi-instance table
Row name	RebootInfo
Restrictions	Default Context can query information of all Context. Non-default Context can only query the current Context's information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	The value range depends on the device model.
`Index`	Index of reboot information	Index	Unsigned integer. Value range: 1 to 20.	N/A
`Time`	Time of reboot information	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
`Reason`	Time of reboot information	N/A	String. Length: 1 to 256 characters.	N/A
Detail	Detail of reboot information	N/A	String. Length: 1 to 256 characters.	N/A

CPDR event stream

CPDR event

This event is used to report CPDR group role switchover information.

XML structure for event subscription

```
<CPDREvent>
</CPDREvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>CPDR</stream>
    <filter type="subtree">
      <CPDREvent xmlns="http://www.h3c.com/netconf/event:1.0/CPDR:1.0">
      </CPDREvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	CPDR
Event name	CPDREvent
Event namespace	http://www.h3c.com/netconf/event:1.0/CPDR:1.0
Support for extended query	No

XML structure for event report

```
<CPDREvent>
  <GroupName></GroupName>
  <Event></Event>
  <sequence></sequence>
</CPDREvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <CPDREvent xmlns="http://www.h3c.com/netconf/event:1.0/CPDR:1.0">
    <GroupName>aaa</GroupName>
    <Event>1</Event>
    <sequence>1</sequence>
  </CPDREvent>
```

```
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
GroupName	Name of the CPDR group.	String,case-sensitive. Length: 1 to 31 characters.	No
Event	Switchover event.	Enumeration: • 0—completed. • 1—CPDR group does not exist. • 2—not enough resource.	No
Sequence	Sequence number of the response message.	Unsigned integer.	The sequence number is the same as that of the role action.

CUConnect event

This event is used to report CU connection information.

XML structure for event subscription

```
<CUConnectEvent>
</CUConnectEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address on the control plane of CUSP	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value.
VRF	Name of the VRF instance on the control plane	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
SSLPolicyNa	SSL policy name on the control	N/A	String, case insensitive.	Case insensitive.

Column name	Column description	Column type	Data type and restrictions	Remarks
me	plane of CUSP		Length: 1 to 31 characters.	
BFDTemplate	BFD session template name on the control plane of CUSP	N/A	String. Length: 0 to 63 characters.	If using the default template, the length of characters is 0.
EchoInterval	CUSP connections heartbeat interval	N/A	Unsigned integer. Value range: 0 to 120, in seconds. Default: 30.	The value of 0 means that the heartbeat keep-alive is turned off.
TimeoutCount	CUSP connections heartbeat timeout count	N/A	Unsigned integer. Value range: 4 to 10. Default: 4.	N/A
KeychainName	Keychain authentication name on the control plane of CUSP	N/A	String, case insensitive. Length: 1 to 63 characters.	case sensitive.
DisconnectionEntryAgingTime	UCM and DHCP entries age after the cusp connection is disconnected	N/A	Unsigned integer. Value range: 5 to 1440, in minutes.	N/A

CUSP/Controller/PermitAgents

This table contains information about the agents that the control plane permits.

Table description

Item	Description
Feature name	CUSP
Table name	PermitAgents
Table type	Multi-instance table
Row name	PermitAgent
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CPAgentName	Name of the permitted agent on the control	Index	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	plane			
IpAddress	IP address of the permitted agent on the control plane	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. 0.0.0.0 is an invalid value.

CUSP/ConnectAgents

This table contains information about the agents that the control plane connects.

XML structure

```

CUSP

CUSP/Controller/Base

Message	Explanation
CUSP controller is disable. 未开启CUSP控制器功能。	Please enable CUSP controller first. 请先开启CUSP控制器功能。
BFD not supported. 不支持BFD功能。	
Invalid IP address. 配置无效的IP地址。	Please configure IPv4 or IPv6 unicast address. 请配置 IPv4 或 IPv6 单播地址。
Can’t set VPN instance name only. 不支持单独修改VPN实例名。	Please set IP address together. 请和IP地址一同修改。

CUSP/Controller/PermitAgents

Message	Explanation
CUSP controller is disable. 未开启CUSP控制器功能。	Please enable CUSP controller first. 请先开启CUSP控制器功能。
Maximum number of agents already reached. CUSP代理配置数量已经达到最大规格限制。	Please delete some CUSP agent. 请先删除部分CUSP代理，再下发新配置。
Invalid IP address. 配置无效的IP地址。	Please configure IPv4 or IPv6 unicast address. 请配置 IPv4 或 IPv6 单播地址。
This IP address overlaps with another CUSP agent. CUSP代理IP地址已经存在。	Please assign other IP address. 请指定其它的IP地址。

CUSP/ConnectAgents/ConnectAgent

Message	Explanation
The specified CUSP agent doesn`t exist. 指定的CUSP代理不存在。	Please create the specified CUSP agent. 请先配置CUSP代理。
Not configure IP address of CUSP agent. 未配置CUSP代理的IP地址。	Please specify the agent IP address first. 请先配置CUSP代理的IP地址。
The specified UP supports only one CUSP agent. 指定的UP仅支持一个CUSP代理。	Please release old CUSP agent. 请先去绑定原有的CUSP代理。

CUSP/ClearAgents

Message	Explanation
The specified CUSP agent doesn`t exist. 指定的CUSP代理不存在。	Please create the specified CUSP agent. 请先配置CUSP代理。

Table description

Item	Description
Feature name	CustomLog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	The device supports up to four log hosts.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Host name: Case-insensitive string. Host name length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www. example.com
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	Index	Unsigned integer. Value range: 1 to 65535. Default: 514.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputLog	Type of logs to be sent to the log host	Data structure	Members include: • CmccSessionlog • CmccUserlog • TelecomSessionlog • TelecomUserlog • UnicomSessionlog • UnicomUserlog • Sessionlog • PacketFilterlog • ATKlog • AFTlog • DPIAuditlog • DPIUfltlog • DPINetSharelog • SCDlog • DPIIPReputationlog • DPIWAFlog • DPISandboxlog • DPIAVClog • DPITerminallog • DPIAVlog • LBDNSProxylog • LBOutboundlog	N/A
CmccSessionlog	Enabling status of outputting session-based custom NAT444 logs in CMCC format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
CmccUserlog	Enabling status of outputting user-based custom NAT444 logs in CMCC format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TelecomSessionlog	Enabling status of outputting session-based custom NAT444 logs in Telecom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TelecomUserlog	Enabling status of outputting user-based custom NAT444 logs in Telecom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UnicomSessionlog	Enabling status of outputting session-based custom NAT444 logs in Unicom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
UnicomUserlog	Enabling status of outputting user-based custom NAT444 logs in Unicom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Sessionlog	Enabling status of outputting session logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
PacketFilterlog	Enabling status of outputting packet filter logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
ATKlog	Enabling status of outputting ATK logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
AFTlog	Enabling status of outputting AFT logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAuditlog	Enabling status of outputting DPI audit logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIUfltlog	Enabling status of outputting DPI URL filter logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPINetShareLog	Enabling status of outputting DPI netshare control logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SCDlog	Enabling status of outputting server connection detection logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIIPSlog	Enabling status of outputting DPI IPS logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIIPReputati	Enabling status	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
onlog	of outputting DPI IPReputation logs to the log host		• **true**—Enabled. • **false**—Disabled.	
DPIWAFlog	Enabling status of outputting DPI WAF logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPISandboxlog	Enabling status of outputting DPI Sandbox logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAVClog	Enabling status of outputting DPI AVC logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPITerminallog	Enabling status of outputting DPI terminal logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAVlog	Enabling status of outputting DPI anti-virus logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (Default).	N/A
TACCSAPlog	Enabling status of outputting CSAP TAC logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (Default).	N/A
DPIDGAlog	Enabling status of outputting DPI DGA logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (Default).	N/A

Table description

Item	Description
Feature name	CustomLog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	The device supports up to four log hosts.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Host name: Case-insensitive string. Host name length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www. example.com
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	Index	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputLog	Type of logs to be sent to the log host	Data structure	Members include: • CmccSessionlog • CmccUserlog • TelecomSessionlog • TelecomUserlog • UnicomSessionlog • UnicomUserlog • Sessionlog • PacketFilterlog • ATKlog • AFTlog • DPIAuditlog • DPIUfltlog • DPINetSharelog • SCDlog • DPIIPReputationlog • DPIWAFlog • DPISandboxlog • DPIAVClog • DPITerminallog • DPIAVlog • LBDNSProxylog • LBOutboundlog	N/A
CmccSessionlog	Enabling status of outputting session-based custom NAT444 logs in CMCC format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
CmccUserlog	Enabling status of outputting user-based custom NAT444 logs in CMCC format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TelecomSessionlog	Enabling status of outputting session-based custom NAT444 logs in Telecom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TelecomUserlog	Enabling status of outputting user-based custom NAT444 logs in Telecom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UnicomSessionlog	Enabling status of outputting session-based custom NAT444 logs in Unicom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
UnicomUserlog	Enabling status of outputting user-based custom NAT444 logs in Unicom format to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Sessionlog	Enabling status of outputting session logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
PacketFilterlog	Enabling status of outputting packet filter logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
ATKlog	Enabling status of outputting attack defense logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
AFTlog	Enabling status of outputting AFT logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAuditlog	Enabling status of outputting DPI audit logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIUfltlog	Enabling status of outputting DPI URL filter logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPINetSharelog	Enabling status of outputting DPI netshare control logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SCDlog	Enabling status of outputting server connection detection logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIIPSlog	Enabling status of outputting DPI IPS logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DPIIPReputationlog	Enabling status of outputting DPI IPReputation logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIWAFlog	Enabling status of outputting DPI WAF logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPISandboxlog	Enabling status of outputting DPI Sandbox logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAVClog	Enabling status of outputting DPI AVC logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPITerminallog	Enabling status of outputting DPI terminal logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIAVlog	Enabling status of outputting DPI anti-virus logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TACCSAPlog	Enabling status of outputting CSAP TAC logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
DPIDGAlog	Enabling status of outputting DPI DGA logs to the log host	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Table description

Item	Description
Feature name	CustomLog
Table name	LogAttribute
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogFormat	The format for outputting NAT444 custom logs	N/A	Enumeration: • 0—Output NAT444 logs with Unicom format. • 1—Output NAT444 logs with Telecom format. • 2—Output NAT444 logs with CMCC format. • 3—Do not output NAT444 logs.	N/A
Timestamp	The timestamp type of NAT444 custom log	N/A	Enumeration: • 0—Greenwich Mean Time (GMT). • 1—Local time of device.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceInterface	The name of source Interface for output custom NAT444 logs	N/A	String Length: 2 to 47 characters.	Example: Ethernet0/0/0 Only interfaces that support IP address configuration can be specified.
SessionLogFormat	Format for outputting session custom logs	N/A	Enumeration: • 0—Output standard H3C format session logs. • 1—Do not output session logs.	N/A
PacketFilterLogFormat	Format for outputting packet filter custom logs	N/A	Enumeration: • 0—Output standard H3C format packet filter logs. • 1—Do not output packet filter logs.	N/A
ATKLogFormat	Format for outputting ATK custom logs	N/A	Enumeration: • 0—Output standard H3C format ATK logs. • 1—Do not output ATK logs.	N/A
AFTLogFormat	Format for outputting AFT custom logs	N/A	Enumeration: • 0—Output standard H3C format AFT logs. • 1—Do not output AFT logs.	N/A
DPIAuditLogFormat	Format for outputting DPI audit custom logs	N/A	Enumeration: • 0—Output standard H3C format DPI audit logs. • 1—Do not output DPI audit logs.	N/A
DPIUfltLogFormat	Format for outputting DPI URL filter custom logs	N/A	Enumeration: • 0—Output standard H3C format DPI URL filter logs. • 1—Do not output DPI url filter logs.	N/A
DPINetShareLogFormat	Format for outputting DPI netshare control logs	N/A	Enumeration: • 0—Output standard H3C format DPI netshare control logs. • 1—Do not output DPI netshare control logs.	N/A
SCDLogFormat	Format for outputting server connection detection logs	N/A	Enumeration: • 0—Output standard H3C format server connection detection logs. • 1—Do not output server connection detection logs.	N/A
DPIIPSLogFormat	Format for outputting DPI IPS custom logs	N/A	Enumeration: • 0—Output standard H3C format DPI IPS logs.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Do not output DPI IPS logs. • 2—Output SGCC format DPI IPS logs.	
DPIIPSUpdateLogFormat	Format for outputting DPI IPS signature update logs	N/A	Enumeration: • 0—Output SGCC format DPI IPS signature update logs. • 1—Do not output DPI IPS signature update logs.	N/A
DPIIPReputationLogFormat	Format for outputting DPI IPReputation logs	N/A	Enumeration: • 0—Output standard H3C format DPI IPReputation logs. • 1—Do not output DPI IPReputation logs.	N/A
DPIWAFLogFormat	Format for outputting DPI WAF logs	N/A	Enumeration: • 0—Output standard H3C format DPI WAF logs. • 1—Do not output DPI WAF logs (default).	N/A
DPISandboxLogFormat	Format for outputting DPI Sandbox logs	N/A	Enumeration: • 0—Output standard H3C format DPI Sandbox logs. • 1—Do not output DPI Sandbox logs (default).	N/A
DPIAVCLogFormat	Format for outputting DPI AVC custom logs	N/A	Enumeration: • 0—Output standard H3C format DPI bandwidth management logs. • 1—Do not output DPI bandwidth management logs (default).	N/A
DPITerminalLogFormat	Format for outputting DPI terminal logs	N/A	Enumeration: • 0—Output standard H3C format DPI terminal logs. • 1—Do not output DPI terminal logs (default).	N/A
DPIAVLogFormat	Format for outputting DPI anti-virus custom logs	N/A	Enumeration: • 0—Output standard H3C format DPI anti-virus logs. • 1—Do not output DPI anti-virus logs.	N/A
TACCSAPFormat	Format for outputting CSAP TAC logs	N/A	Enumeration: • 0—Output standard H3C format CSAP TAC logs. • 1—Do not output CSAP TAC logs (default).	N/A
LBDNSProxyLogFormat	Format for outputting load	N/A	Enumeration: • 0—Output standard H3C	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	balance dns proxy logs		format load balance dns proxy logs. 1—Do not output load balance dns proxy logs (default).	
LBOutboundLogFormat	Format for outputting load balance outbound logs	N/A	Enumeration: • 0—Output standard H3C format load balance outbound logs. 1—Do not output load balance outbound logs (default).	N/A
DPIDGALogFormat	Format for outputting DPI DGA logs	N/A	Enumeration: • 0—Output standard H3C format DPI DGA logs. • 1—Do not output DPI DGA logs.	N/A

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Status	Status of the CWMP	N/A	Enumeration: • **enable**. • **disable**(default).

Column name	Column description	Column type	Data type and restrictions
ACS	ACS Settings	Data structure	Members include: • URL. • UserName. • Password.
URL	Status of the log buffer	N/A	String. Length: 8 to 255 characters. Must match the following formats: http://*host*[:*port*]/*path* or https://*host*[:*port*]/*path*
UserName	User name to access ACS	N/A	String. Length: 1 to 255 characters.
Password	Password to access ACS	N/A	String. Length: 1 to 255 characters. Only support password in plain text.
CPE	CPE Settings	Data structure	Members include: • UserName. • Password. • ConnectInterface. • InformPeriodicStatus. • InformPeriodicInterval.
UserName	User name to access CPE	N/A	String. Length: 1 to 255 characters. Case-sensitive and contains no comma(,),equal(=),double quotation marks(“) ,
Password	Password to access CPE	N/A	String. Length: 1 to 255 characters. Only support password in plain text.
ConnectInterface	CPE use this interface to send packets	N/A	String. Length: 2 to 47 characters.
InformPeriodicStatus	Enable or disable the periodic Inform feature of the CPE.	N/A	Enumeration: • **enable**. • **disable**(default).
InformPeriodicInterval	Configure the periodic Inform interval of the CPE.	N/A	Unsigned integer. Value range: 10 to 86400.

DDNS/DDNSPolicy

This table contains DNS policy configuration information.

XML structure

```
<DDNS>
  <DDNSPolicy>
    <Policy>
      <PolicyName></PolicyName>
      <URL></URL>
      <IntervalDay></IntervalDay>
      <IntervalHour></IntervalHour>
      <IntervalMinute></IntervalMinute>
      <Username></Username>
      <Password></Password>
      <Method></Method>
      <SSLClientPolicy></SSLClientPolicy>
    </Policy>
  </DDNSPolicy>
</DDNS>
```

Table description

Item	Description
Feature name	DDNS
Table name	DDNSPolicy
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	DDNS policy name	Index	String, case insensitive. Length: 1 to 32 characters.	N/A
URL	URL address	N/A	String, case	The URL addresses configured for update requests depend

Column name	Column description	Column type	Data type and restrictions	Remarks
	for DDNS update requests		sensitive. Length: 1 to 240 characters.	on the DDNS servers. Common DDNS server URL address format are shown in following table. DDNS server: URL addresses for DDNS update requests www.3322.org: http://members.3322.org/dyndns/update?system=dyndns&hostname=<h>&myip=<a> DYNDNS: http://members.dyndns.org/nic/update?system=dyndns&hostname=<h>&myip=<a> DYNS: http://www.dyns.cx/postscript.php?host=<h>&ip=<a> ZONEEDIT: http://dynamic.zoneedit.com/auth/dynamic.html?host=<h>&dnsto=<a> TZO: http://cgi.tzo.com/webclient/signedon.html?TZOName=<h>IPAddress=<a> EASYDNS: http://members.easydns.com/dyn/ez-ipupdate.php?action=edit&myip=<a>&host_id=<h> HEIPV6TB: http://dyn.dns.he.net/nic/update?hostname=<h>&myip=<a> CHANGE-IP: http://nic.changeip.com/nic/update?hostname=<h>&offline=1 NO-IP: http://dynupdate.no-ip.com/nic/update?hostname=<h>&myip=<a> DHS: http://members.dhs.org/nic/hosts?domain=dyn.dhs.org&hostname=<h>&hostscmd=edit&hostscmdstage=2&type=1&ip=<a> HP: https://*server-name*/nic/update?group=*group-name*&myip=<a> ODS: ods://update.ods.org GNUDIP: gnudip://*server-name* PeanutHull: oray://phservice2.oray.net No username or password is included in the URL address. To configure the username and password, use the username command and the password command. HP and GNUDIP are common DDNS update protocols. The *server-name* parameter is the domain name or IP address of the service provider's server using one of the update protocols. The URL address for an update request can start with: http://—The HTTP-based DDNS server. https://—The HTTPS-based DDNS server. ods://—The TCP-based ODS server. gnudip://—The TCP-based GNUDIP server. oray://—The TCP-based DDNS server. members.3322.org and phservice2.oray.net are the domain names of DDNS servers. The domain names of PeanutHull DDNS servers can be phservice2.oray.net,

Column name	Column description	Column type	Data type and restrictions	Remarks
				phddns60.oray.net, client.oray.net, ph031.oray.net, and so on. Determine the domain name in the URL according to the actual situation. The port number in the URL address is optional. If no port number is specified, the default port number is used. HTTP uses port 80, HTTPS uses port 443, and the PeanutHull server uses port 6060. The system automatically performs the following operations: Fills <h> with the FQDN that is specified when the DDNS policy is applied to the interface. Fills <a> with the primary IP address of the interface to which the DDNS policy is applied. You might also manually specify an FQDN and an IP address in <h> and <a>, respectively. After that, the FQDN that is specified when the DDNS policy is applied becomes ineffective. However, manual configuration of <h> and <a> is not recommended. You cannot specify an FQDN and IP address in the URL address for contacting the PeanutHull server. Alternatively, you can specify an FQDN when applying the DDNS policy to an interface. The system automatically uses the primary IP address of the interface to which the DDNS policy is applied as the IP address for DDNS update. To avoid misinterpretation, do not include colons (:), at signs (@), and question marks (?) in your login ID or password, even if you can do so. If you use the url command multiple times with different URL addresses, the most recent configuration takes effect.
IntervalDay	Interval for sending DDNS update requests after DDNS update is enabled (Day)	N/A	Unsigned integer. Value range: 0 to 365 days. Default: 0.	It must be configured together with the IntervalHour column and IntervalMinute column. If you set the interval to 0, the device does not periodically initiate DDNS update request. However, it initiates a DDNS update request in either of the following situations: • When the primary IP address of the interface changes. • When the link state of the interface changes from down to up.
IntervalHour	Interval for sending DDNS update requests after DDNS update is enabled (Hour)	N/A	Unsigned integer. Value range: 0 to 23 hours. Default: 1.	It must be configured together with the IntervalDay column and IntervalMinute column.
IntervalMinute	Interval for sending DDNS update requests after DDNS update is enabled (minute)	N/A	Unsigned integer. Value range: 0 to 59 minutes. Default: 0.	It must be configured together with the IntervalDay column and IntervalHour column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Username	Username to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Password	Password to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	Support for configuring in plain text only.
Method	Transmission method for sending DDNS update requests to HTTP/HTTPS-based DDNS servers	N/A	Enumeration: • **0**—Http-get (default). • **1**—Http-post.	N/A
SSLClient Policy	Associate a specific SSL client policy with a DDNS policy	N/A	String, case insensitive. Length: 1 to 31 characters.	The SSL client policy is effective only for HTTPS-based DDNS update requests.

DDNS/DDNSIfApply

This table contains DDNS policy applying configuration information.

XML structure

```
<DDNS>
  <DDNSIfApply>
    <IfApply>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <FQDN></FQDN>
    </IfApply>
  </DDNSIfApply>
</DDNS>
```

Table description

Item	Description
Feature name	DDNS

Table name	DDNSIfApply
Table type	Multi-instance table
Row name	IfApply
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	DDNS policy name	Index	String, case insensitive. Length: 1 to 32 characters.	N/A
FQDN	Type of the DNS server IP address	N/A	String, case insensitive. Length: 1 to 253 characters.	Specifies the FQDN to replace <h> in the URL for DDNS update. It can include letters, digits, hyphens (-), underscores (_), and dots (.).

CHANGE-IP	http://nic.changeip.com/nic/update?hostname=<h>&offline=1
NO-IP	http://dynupdate.no-ip.com/nic/update?hostname=<h>&myip=<a>
DHS	http://members.dhs.org/nic/hosts?domain=dyn.dhs.org&hostname=<h>&hostscmd=edit&hostscmdstage=2&type=1&ip=<a>
HP	https://*server-name*/nic/update?group=*group-name*&myip=<a>
ODS	ods://update.ods.org
GNUDIP	gnudip://*server-name*
PeanutHull	oray://phservice2.oray.net

No username or password is included in the URL address. To configure the username and password, use the username command and the password command.

HP and GNUDIP are common DDNS update protocols. The *server-name* parameter is the domain name or IP address of the service provider's server using one of the update protocols.

The URL address for an update request can start with:

http://—The HTTP-based DDNS server.

https://—The HTTPS-based DDNS server.

ods://—The TCP-based ODS server.

gnudip://—The TCP-based GNUDIP server.

oray://—The TCP-based DDNS server.

members.3322.org and phservice2.oray.net are the domain names of DDNS servers. The domain names of PeanutHull DDNS servers can be phservice2.oray.net, phddns60.oray.net, client.oray.net, ph031.oray.net, and so on. Determine the domain name in the URL according to the

Column name	Column description	Column type	Data type and restrictions	Remarks
				actual situation. The port number in the URL address is optional. If no port number is specified, the default port number is used. HTTP uses port 80, HTTPS uses port 443, and the PeanutHull server uses port 6060. The system automatically performs the following operations: Fills <h> with the FQDN that is specified when the DDNS policy is applied to the interface. Fills <a> with the primary IP address of the interface to which the DDNS policy is applied. You might also manually specify an FQDN and an IP address in <h> and <a>, respectively. After that, the FQDN that is specified when the DDNS policy is applied becomes ineffective. However, manual configuration of <h> and <a> is not recommended. You cannot specify an FQDN and IP address in the URL address for contacting the PeanutHull server. Alternatively, you can specify an FQDN when applying the DDNS policy to an interface. The system automatically uses the primary IP address of the interface to which the DDNS policy is applied as the IP address for DDNS update. To avoid misinterpretation, do not include colons (:), at signs (@), and question marks (?) in your login ID or password, even if you can do so. If you use the url command multiple times with different URL addresses, the most recent configuration takes effect.
IntervalDay	Interval for sending DDNS update requests after DDNS update is enabled (Day)	N/A	Unsigned integer. Value range: 0 to 365 days.	It must be configured together with the IntervalHour column and IntervalMinute column. If you set the interval to 0, the device does not periodically initiate DDNS update request. However, it initiates a DDNS update request in either of the following situations: • When the primary IP address of the interface changes. • When the link state of the interface changes from down to up.
IntervalHour	Interval for sending DDNS update requests after DDNS update is enabled (Hour)	N/A	Unsigned integer. Value range: 0 to 23 hours.	It must be configured together with the IntervalDay column and IntervalMinute column.
IntervalMinute	Interval for sending DDNS update requests after DDNS update is enabled (minute)	N/A	Unsigned integer. Value range: 0 to 59 minutes.	It must be configured together with the IntervalDay column and IntervalHour column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Username	Username to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Password	Password to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Method	Transmission method for sending DDNS update requests to HTTP/HTTPS-based DDNS servers	N/A	Enumeration: • **0**—Http-get • **1**—Http-post.	N/A
SSLClient Policy	Associate a specific SSL client policy with a DDNS policy	N/A	String, case insensitive. Length: 1 to 31 characters.	The SSL client policy is effective only for HTTPS-based DDNS update requests.

DDNS/DDNSIfApply

This table contains DDNS policy applying configuration information.

XML structure

```
<DDNS>
  <DDNSIfApply>
    <IfApply>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <IfName></IfName>
      <FQDN></FQDN>
    </IfApply>
  </DDNSIfApply>
</DDNS>
```

Table description

Item	Description
Feature name	DDNS
Table name	DDNSIfApply
Table type	Multi-instance table
Row name	IfApply
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
PolicyName	DDNS policy name	Index	String, case insensitive. Length: 1 to 32 characters.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
FQDN	Type of the DNS server IP address	N/A	String, case insensitive. Length: 1 to 253 characters.	Specifies the FQDN to replace <h> in the URL for DDNS update. It can include letters, digits, hyphens (-), underscores (_), and dots (.).

DDR/DiaGroupRule

This table contains dialer-group rule information.

XML structure

```
<DDR>
  <DiaGroupRule>
    <GroupRule>
      <GroupNumber></GroupNumber>
      <IpProtocol></IpProtocol>
      <IpPermit></IpPermit>
      <AclNum></AclNum>
      <AclName></AclName>
    </GroupRule>
  </DiaGroupRule>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	DiaGroupRule
Table type	Multi-instance table
Row name	GroupRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Dialer-group rule *group-number*	Index	Unsigned integer. Value range: 1 to 255	N/A
IpProtocol	Dialer-group rule ip protocol	Index	Enumeration: • **0**—IPv4 protocol • **1**—IPv6 protocol	N/A
IpPermit	Denies or permits	N/A	Boolean:	IpPermit AclNum

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets of the specified protocol		• **false** • true	AclName are mutually exclusive relationship. When executing the create, merge, replace operation must and only be use one of IpPermit, AclNum, AclName. When performing the delete, remove operation, one of IpPermit, AclNum or AclName don't need.
AclNum	Specifies an ACL by its number	N/A	Unsigned integer. Value range: 2000 to 3999	N/A
AclName	Specifies an ACL by its name	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter *a* to *z* or *A* to *Z*. The ACL name cannot be **all** in any combination of upper- and lower-case letters.

DDR/Bundle

This table contains the dialer bundle enable of DDR information.

XML structure

```
<DDR>
  <Bundle>
    <DiaBundle>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </DiaBundle>
  </Bundle>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	Bundle
Table type	Multi-instance table

Row name	DiaBundle
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Before using bundle DDR, use it to enable bundle DDR on a dialer interface.	N/A	Boolean: • **true** • **false (default)**	N/A

DDR/IfDiaGroup

This table contains the dialer group of DDR information.

XML structure

```
<DDR>
  <IfDiaGroup>
    <DiaGroup>
      <IfIndex></IfIndex>
      <Num></Num>
    </DiaGroup>
  </IfDiaGroup>
</DDR>
```

Table description

Item	Description
Feature name	DDR

Table name	IfDiaGroup
Table type	Multi-instance table
Row name	DiaGroup
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Num	Specifies a dialer groupby its number in the range of 1 to 255. Before the assignment, you must enable bundle DDR or traditional DDR.	N/A	Unsigned interger. Value range:1 to 255.	N/A

DDR/DDRAutodial

This table contains the information about using **dialer timer autodial** to set the auto-dial timer.

XML structure

```
<DDR>
  <DDRAutodial>
    <Autodial>
      <IfIndex></IfIndex>
      <Time></Time>
    </Autodial>
  </DDRAutodial>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	DDRAutodial
Table type	Multi-instance table
Row name	Autodial
Restrictions	This table supports interface types: am interface bri interface/subinterface asy interface aux interface serial interface dialer interface ethchannel interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Time	Time of auto-dial	N/A	Unsigned integer. Value range: 1 to 604800. Default: 300.	Specifies the interval between auto-dial attempts.

DDR/DDRIdle

This table contains the information about using **dialer timer idle** to set the link idle-timeout timer.

XML structure

```
<DDR>
```

```
  <DDRIdle>
    <Idle>
      <IfIndex></IfIndex>
      <Time></Time>
      <Direct></Direct>
   </Idle>
  </DDRIdle>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	DDRIdle
Table type	Multi-instance table
Row name	Idle
Restrictions	This table supports interface types: am interface bri interface/subinterface asy interface aux interface serial interface dialer interface ethchannel interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Time	link idle-timeout timer	N/A	Unsigned integer. Value range: 0 to 65535. Default: 120.	Specifies the link idle-timeout timer value.

Column name	Column description	Column type	Data type and restrictions	Remarks
Direct	Direct of interesting packets timer	N/A	Unsigned integer. • 1—OUT. • 2—IN. • 3—INOUT.	Specifies the Direct of interesting packets timer.

DDR/DDRCircularEnable

This table contains the information about using **dialer circular enable** to enable traditional DDR on a dialup interface.

XML structure

```
<DDR>
  <DDRCircularEnable>
    <CircularEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </CircularEnable>
  </DDRCircularEnable>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	DDRCircularEnable
Table type	Multi-instance table
Row name	CircularEnable
Restrictions	This table supports interface types: Dialup interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Before using traditional DDR, use it to enable traditional DDR on the dialup interface.	N/A	Boolean: • **true** • **false (default)**	N/A

DDR/DDRDialNumber

This table contains the information about using **dialer number** to configure a dial string for placing calls to a single remote site.

XML structure

```
<DDR>
  <DDRDialNumber>
    <DialNumber>
      <IfIndex></IfIndex>
      <Num></Num>
      <AutoDial></AutoDial>
    </DialNumber>
  </DDRDialNumber>
</DDR>
```

Table description

Item	Description
Feature name	DDR
Table name	DDRDialNumber
Table type	Multi-instance table
Row name	DialNumber
Restrictions	This table supports interface types: Dialup interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Num	A dial string for calling a remote site	N/A	String,case-insensitiv. Length: 1 to 30 characters.	Specifies a dial string for calling a remote site, a case-insensitive string of 1 to 30 characters.
AutoDial	Automatically dial the remote site	N/A	Unsigned integer. • **0**—NOTAUTO**(default)**. • **1**—AUTO	Enables the interface to automatically dial the remote site by using the specified dial string at specified intervals. The interval is set in the dialer timer autodial command and defaults to 300 seconds.

Deception

Deception/Switch

This table contains deception switch configuration.

XML structure

```
<Deception>
  <Switch>
    <Enable></Enable>
  </Switch>
</Deception>
```

Table description

Item	Description
Feature name	Deception
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Deception switch.	N/A	Boolean: • true. • false (default).	N/A

Deception/Decoy

This table contains decoy server configuration.

XML structure

```
<Deception>
  <Decoy>
    <RemoteIP></RemoteIP>
    <RemotePort></RemotePort>
```

```
    <LocalIP></LocalIP>
    <VrfName></VrfName>
  </Decoy>
</Deception>
```

Table description

Item	Description
Feature name	Deception
Table name	Decoy
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RemoteIP	IP address of the decoy server	N/A	String, dotted decimal notation.	Required.
RemotePort	Service port number of the decoy server	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LocalIP	IP address of the device to communicate with the decoy server	N/A	String, dotted decimal notation.	N/A
VrfName	VRF name	N/A	String, case sensitive. Length: 0 to 31 characters.	An empty string represents the public network.

Deception/GlobalCfg

This table contains global deception configuration.

XML structure

```
<Deception>
  <GlobalCfg>
    <StrictMode></StrictMode>
    <IPDetectRate></IPDetectRate>
    <ARPReqThreshold></ARPReqThreshold>
  </GlobalCfg>
</Deception>
```

Table description

Item	Description

Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeceptionMode	Strict deception mode	N/A	Boolean: • true—Enable. • false—Disable(default).	N/A
IPDetectRate	Rate of scanning online IPs	N/A	Unsigned integer. Value range: 10 to 512.	Default: 30 packets per second.
ARPReqThreshold	ARP scan threshold	N/A	Unsigned integer. Value range: 1 to 20000.	Default: 10 packets per 10 seconds.

Deception/AllowListIPv4Objs

This table contains IPv4 deception allowlist object configuration.

XML structure

```
<Deception>
  <AllowListIPv4Objs>
    <IPv4Obj>
     <ID></ID>
     <Type></Type>
     <IPv4Addr></IPv4Addr>
     <IPv4Mask></IPv4Mask>
     <VrfName></VrfName>
    </IPv4Obj>
  </AllowListIPv4Objs>
</Deception>
```

Table description

Item	Description
Feature name	Deception
Table name	WhiteListIPv4Objs
Table type	Multi-instance table
Row name	IPv4Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of an IPv4 allowlist object	Index	Unsigned integer. Value range: 0 to 50.	Value 0 indicates an automatically assigned ID.
Type	Object type	N/A	• **0**—Source (default). • **1**—Destination.	N/A
IPv4Addr	IPv4 subnet address	N/A	String, dotted decimal notation.	N/A
IPv4Mask	IPv4 subnet mask	N/A	String, dotted decimal notation.	N/A
VrfName	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

Deception/DecoyIPv4Objs

This table contains IPv4 decoy object configuration.

XML structure

```
<Deception>
  <DecoyIPv4Objs>
    <IPv4Obj>
     <ID></ID>
     <IPv4Addr></IPv4Addr>
     <IPv4Mask></IPv4Mask>
     <VrfName></VrfName>
    </IPv4Obj>
  </DecoyIPv4Objs>
</Deception>
```

FlowId	Flow number	Index	Unsigned integer.	N/A

DetNetIp/Paths/TimeSlotLists

This table provides DetNetIp/Paths/TimeSlotLists information.

XML structure

See the XML structure of DetNetIp/Paths/Path/TimeSlotLists

Table description

Item	Description
Feature name	DetNetIp
Table name	TimeSlotLists
Table type	Multi-instance table, multi-level table
Row name	TimeSlotList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Hop	Hop number	Index	Unsigned short.	N/A
TimeSlot	TimeSlot value	N/A	Unsigned int.	N/A

DetNetIp/IfCapbilitys

This table contains DetNetIp capability information.

XML structure

```
<DetNetIp>
  <IfCapbilitys>
    <IfCapbility>
      <IfName></IfName>
      <DetBandwidth></DetBandwidth>
      <QueueNumber></QueueNumber>
```

```
      <QueueDuration></QueueDuration>
    </IfCapbility>
  </IfCapbilitys>
</DetNetIp>
```

Table description

Item	Description
Feature name	DetnetIp
Table name	IfCapbilitys
Table type	Multi-instance table
Row name	IfCapbility
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface.	Index	String • Length: 2 to 47 characters	N/A
DetBandwidth	Bandwidth of Deterministic flow.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
QueueNumber	Deterministic queue number of an interface.	NA	Unsigned integer.	N/A
QueueDuration	Duration of an queue	NA	Unsigned integer. Value range: 0 to 1000, in microseconds	N/A

XML structure for event report 1

MeasureReports event

This event is used to report DetNetOAM measure information when the measure information is updated.

XML structure for event subscription

```
<MeasureReports>
  <MeasureReport>
    <PathID></PathID>
  </MeasureReport>
</MeasureReports>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DetNetOAM</stream>
    <filter type="subtree">
      <MeasureReports xmlns="http://www.h3c.com/netconf/event:1.0/DetNetOAM:1.0">
        <MeasureReport>
          <PathID>10</PathID>
        </MeasureReport>
      </MeasureReports>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DetNetOAM
Event name	MeasureReports
Event namespace	http://www.h3c.com/netconf/event:1.0/DetNetOAM:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
PathID	Path ID	Unsigned integer.	N/A

XML structure for event report

```
<MeasureReports>
```

```
  <MeasureReport>
    <PathID></PathID>
    <PathHop></PathHop>
    <PeriodID></PeriodID>
    <MaxOffset></MaxOffset>
    <MinOffset></MinOffset>
    <AvgOffset></AvgOffset>
  </MeasureReport>
</MeasureReports>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2022-05-07T09:30:11</eventTime>
  <MeasureReports xmlns="http://www.h3c.com/netconf/event:1.0/DetNetOAM:1.0">

Columns

Column name	Column description	Data type and restrictions
LocalTime	System time on the device.	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
RestoreFactoryDefault	Restore the factory-default configuration for the device.	This column must be empty.

Device/Transceivers

This table contains information about ITU channels supported on the transceiver that is connected to this interface.

XML structure

```
<Device>
  <Transceivers>
    <Interface>
```

```
      <IfIndex></IfIndex>
      <ActiveITUChannel></ActiveITUChannel>
    </Interface>
  </Transceivers>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TransceiversITUChannels
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
ActiveITUChannel	The index of the specified ITU channel	N/A	Unsigned integer. Value range:1 to 4294967295.	The value depends on the device model.

Device/RebootDev

This table contains device reboot information.

XML structure

```
<Device>
  <RebootDev>
    <Reboot></Reboot>
    <Chassises>
      <Chassis>
        <ChassisID></ChassisID>

Table name	RebootDev
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reboot	Device reboot operation	N/A	N/A	This column must be empty.

Device/RebootDev/Chassises

This table contains chassis reboot information.

XML structure

See the XML structure of RebootDev.

Table description

Item	Description
Feature name	Device
Table name	Chassises
Table type	Multi-instance table
Row name	Chassis
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the member device	Index	Unsigned integer. Value range:0 to 65535.	N/A
Reboot	Reboot operation	N/A	N/A	This column must be empty.

Device/Reboot/Chassises/Slots

This table contains slot reboot information.

XML structure

See the XML structure of RebootDev.

Table description

Item	Description
Feature name	Device
Table name	Slots
Table type	Multi-instance table
Row name	Slot
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlotID	Slot ID	Index	Unsigned integer. Value range:0 to 65535.	N/A
Reboot	Reboot operation	N/A	N/A	This column must be empty.

Device/PowerSupplyOnOffs

This table contains information about power supply on/off.

XML structure

```
<Device>
```

```
  <PowerSupplyOnOffs>
    <PowerSupplyOnOff>
      <Chassis></Chassis>
      <Slot></Slot>
      <SubSlot></SubSlot>
      <Operate></Operate>
    </PowerSupplyOnOff>
  </PowerSupplyOnOffs>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	PowerSupplyOnOffs
Table type	Multi-instance table
Row name	PowerSupplyOnOff
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member device	Index	Unsigned integer. Value range: 0 to 65535	N/A
Slot	Slot ID	Index	Unsigned integer. Value range:0 to 65535.	N/A
SubSlot	Subslot ID	Index	Unsigned integer	N/A

Operate	Power supply on/off	N/A	• Boolean:
			  • true.
			  • false.
				N/A

Device/SwitchCardModes

This table describes the actions that can be performed to the card mode.

XML structure

```
<Device>
  <SwitchCardModes>
    <SwitchCardMode>
      <Chassis></Chassis>
      <Slot></Slot>
      <SubSlot></SubSlot>
```

```
      <Mode></Mode>
    </SwitchCardMode>
  </SwitchCardModes>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	SwitchCardModes
Table type	Single-instance table
Row name	SwitchCardMode
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	Subslot number of the entity	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	The operating mode for the specified interface card	N/A	String. Length: 1 to 16 characters.	Available operating modes depend on the interface card type, accoding to Device/Subcards table in data namespace. This operation is supported only on the default MDC. Whether the new operating mode takes effect immediately depends on the device model. If the new operating mode does not take effect immediately, you must perform one of the following tasks to activate

Column name	Column description	Column type	Data type and restrictions	Remarks
				the new operating mode: ● Hot swap the interface card if the interface card supports hot swapping. ● Restart the device.

Table description

Item	Description
Feature name	Device
Table name	SummerTime
Table type	Single-instance table
Row name	N/A
Restrictions	Group DateBased and WeekBased are two configuration ways. Only one way can take effect at the same time. All the members of one group should be included when tack configuration action. New configuration will replace the existing one.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name for the daylight saving. time.	N/A	String. Length: 1 to 32 characters.	N/A
AddTime	The time to be added to the standard time.	N/A	String. Format: • HH:MM:SS	Value ranges: • **HH**—0 to 23. • **MM**—0 to 59. • **SS**—0 to 59.

Column name	Column description	Column type	Data type and restrictions	Remarks
DateBased	Daylight saving time configuration based on date.	Data Structure	Members include: • BeginMonth • BeginDay • BeginHour • BeginMinute • BeginSecond • EndMonth • EndDay • EndHour • EndMinute • EndSecond	N/A
BeginMonth	Begin month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
BeginDay	Begin day.	N/A	Unsigned integer. • Value range: 1 to 31.	N/A
BeginHour	Begin hour.	N/A	Unsigned integer. • Value range: 0 to 23.	N/A
BeginMinute	Begin minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
BeginSecond	Begin second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndMonth	End month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
EndDay	End day.	N/A	Unsigned integer. Value range: 1 to 31.	N/A
EndHour	End hour.	N/A	Unsigned integer. Value range: 0 to 23.	N/A
EndMinute	End minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndSecond	End second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
WeekBased	Daylight saving time configuration based on week.	Data Structure	Members include: • BeginMonth • BeginWeek • BeginWeekDay • BeginHour • BeginMinute • BeginSecond • EndMonth • EndWeek • EndWeekDay • EndHour • EndMinute • EndSecond	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BeginMonth	Begin month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
BeginWeek	Begin week of the month.	N/A	Enumeration: • **1**—The first week • **2**—The second week • **3**—The third week • **4**—The fourth week • 5—The fifth week • 6—The last week	Non-existent weeks of the month are treated as the last week.
BeginWeekDay	Begin day of week.	N/A	Enumeration: • 0—Sunday • **1**—Monday • **2**—Tuesday • **3**—Wednesday • **4**—Thursday • **5**—Friday • **6**—Saturday	N/A
BeginHour	Begin hour .	N/A	Unsigned integer. Value range: 0 to 23.	N/A
BeginMinute	Begin minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
BeginSecond	Begin second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndMonth	End month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
EndWeek	End week of the month.	N/A	Enumeration: • **1**—The first week • **2**—The second week • **3**—The third week • **4**—The fourth week • 5—The fifth week • 6—The last week	Non-existent weeks of the month are treated as the last week.
EndWeekDay	End day of week.	N/A	Enumeration: • 0—Sunday • **1**—Monday • **2**—Tuesday • **3**—Wednesday • **4**—Thursday • **5**—Friday • **6**—Saturday	N/A
EndHour	End hour .	N/A	Unsigned integer. Value range: 0 to 23.	N/A
EndMinute	End minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndSecond	End second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A

Device/FailoverGroups

This table contains failover group information.

XML structure

```
<Device>
  <FailoverGroups>
    <FailoverGroup>
      <ID></ID>
      <Name></Name>
      <PrimaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </PrimaryNode>
      <SecondaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </SecondaryNode>
    </FailoverGroup>
  </FailoverGroups>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	FailoverGroups
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Failover group id	index	Unsigned integer. Value range: 0 to 31.	N/A
Name	Failover group name	N/A	String. Length: 1 to 63 characters.	N/A
PrimaryNode	Primary node of the failover group.	Data structure	Members include: • Chassis • Slot • CPUID	N/A
Chassis	Chassis ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SecondaryNode	Secondarynode of the failover group.	Data structure	Members include: • Chassis • Slot • CPUID	N/A
Chassis	Chassis ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Device/TemperatureSensors

This table contains temperature sensor alarm settings.

XML structure

```
<Device>
  <TemperatureSensors>
    <Sensor>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SensorType></SensorType>
```

```
      <SensorIndex></SensorIndex>
      <LowerLimit></LowerLimit>
      <WarningLimit></WarningLimit>
      <AlarmLimit></AlarmLimit>
    </Sensor>
  </TemperatureSensors>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TemperatureSensors
Table type	Multi-instance table
Row name	Sensor
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SensorType	Type of the temperature sensor	Index	Enumeration: • 0-Inflow • 1-Outflow • 2- Hotspot	N/A
SensorIndex	Resource ID of the temperature sensor.	Index	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LowerLimit	Low-temperature threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set
WarningLimit	High-temperature warning threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set
AlarmLimit	High-temperature alarming threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set

Device/FanDirections

This table contains fan directions settings.

XML structure

```
<Device>
  <FanDirections>
    <Fan>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Direction></Direction>
    </Fan>
  </FanDirections>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	FanDirections
Table type	Multi-instance table

Item	Description
Row name	Fan
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Direction	Direction of the fan	N/A	Enumeration: • 1-power-to-port • 2-port-to-power	N/A

Device/TransceiverMonitor

This table contains transceiver monitoring information.

XML structure

```
<Device>
  <TransceiverMonitor>
    <State></State>
    <Interval></Interval>
  </TransceiverMonitor>
</Device>
```

Table description

Item	**Description**
Feature name	Device
Table name	TransceiverMonitor
Table type	Single-instance table
Row name	N/A

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Transceiver monitoring enabling status	N/A	Enumeration: • **enable**—Transceiver monitoring is enabled**.** • **disable**—Transceiver monitoring is disabled.	N/A
Interval	Monitoring interval in seconds	N/A	Unsigned integer. Value range: 300 to 3600. The default is 600.	N/A

Device/PowerSupplyPolicys

This table contains information about power supply policies.

XML structure

```
<Device>
  <PowerSupplyPolicys>
    <PowerSupplyPolicy>
      <Chassis></Chassis>
      <Enable></Enable>
    </PowerSupplyPolicy>
  </PowerSupplyPolicys>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	PowerSupplyPolicys
Table type	Multi-instance table
Row name	PowerSupplyPolicy
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member device	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Enable	Power supply policy enabling status	N/A	Boolean: • true. • false.	N/A

Device/SwitchFabricIsolates

This table contains switching fabric module isolation information.

XML structure

```
<Device>
  <SwitchFabricIsolates>
    <SwitchFabricIsolate>
      <Chassis></Chassis>
      <Slot></Slot>
      <Isolate></Isolate>
    </SwitchFabricIsolate>
  </SwitchFabricIsolates>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	SwitchFabricIsolates
Table type	Multi-instance table
Row name	SwitchFabricIsolate
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member device	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535.	
Isolate	Isolation state	N/A	Boolean: • true. • false.	N/A

Device/NetworkClockLPUPortStatus

This table contains line clock input port status information.

XML structure

```
<Device>
  <NetworkClockLPUPortStatus>
    <LPUPortStatus>
      <Port></Port>
      <Priority></Priority>
      <SSMLevel></SSMLevel>
      <ForceSSM></ForceSSM>
    </LPUPortStatus>
  </NetworkClockLPUPortStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	NetworkClockLPUPortStatus
Table type	Multi-instance table
Row name	LPUPortStatus
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Interface index	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Priority	Assign a priority to a network clock source	N/A	Unsigned integer. Value range: 0 to 255	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default is 255).	
SSMLevel	Specify the clock source quality level in the SSM	N/A	Enumeration: • PRC • SSU-A • SSU-B • SEC • DNU • Unknown (default).	N/A
ForceSSM	Set network-clock source SSM extract flag	N/A	Enumeration: • On(default) • Off.	N/A

Table description

Item	Description
Feature name	Device
Table name	Base
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Uptime	Time that elapsed after the device started up, in seconds	N/A	Unsigned integer.	N/A
HostName	Device name	N/A	String. Length: 1 to 64 characters.	N/A
HostDescription	Device description	N/A	String. Length: 0 to 255 characters.	N/A
HostOid	System object ID (OID)of the Device	N/A	String, dotted decimal notation.	N/A
MinChassisNum	Minimum number of the chassis	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxChassisNum	Maximum number of the chassis	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MinSlotNum	Minimum number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxSlotNum	Maximum number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MinCPUIDNum	Minimum ID of the CPU	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxCPUIDNum	Maximum ID of the CPU	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ClockProtocol	System time source	Data structure	Members include: • Protocol. • MDCID.	This data structure is supported only on the default MDC.
Protocol	Time protocol	N/A	Enumeration: • **2**-None. • **3**-NTP. • **4**-PTP. • **5**-Interface. • **6**-GNSS.	Required. Those methods that are supported depend on the device model.
MDCID	ID of the MDC used as the time source	N/A	Unsigned integer. Value range: 1 to 65535.	Supported and required on an MDC-supported device that uses NTP or PTP.

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalTime	System time on the device	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TimeZone	Time zone and its name	Data structure	Members include: • Zone. • ZoneName.	N/A
Zone	Time zone.	N/A	String. Use one of the following formats: • **Z** for the UTC. • +HH:MM:SS for east time zone. • –HH:MM:SS for west time zone. Value ranges: • **HH**-0 to 23. • **MM**-0 to 59. • **SS**-0 to 59.	MM and SS are optional.
ZoneName	Time zone name	N/A	String. Length: 0 to 32 characters.	If the value of this column is null, the zone name is the default zone name **UTC**.
BridgeMAC	Bridge MAC Address	N/A	MacAddress	N/A
LocalBridgeMAC	Local Bridge MAC Address	N/A	MacAddress	N/A
VendorName	Vendor name	N/A	String. Length: 1 to 256 characters.	N/A
HardwareArchitecture	Hardware Architecture	N/A	Enumeration: • **1**-Modular. **2**-Fixed-port.	N/A
DeviceType	Device Type	N/A	Enumeration: • **0**-Other. • **1**-Switch. **2**-Router.	N/A
SystemPower	Total system power, in watts.	N/A	Unsigned integer.	Value 0 is invalid.

Device/PhysicalEntities

This table contains basic information about an entity.

XML structure

```
<Device>
```

```
  <PhysicalEntities>
    <Entity>
      <PhysicalIndex></PhysicalIndex>
      <Chassis></Chassis>

      <Model></Model>
      <Alias></Alias>
      <AssetID></AssetID>
      <FRU></FRU>
      <MfgDate></MfgDate>
      <Uris></Uris>
      <ChassisName></ChassisName>
    </Entity>
  </PhysicalEntities>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	PhysicalEntities
Table type	Multi-instance table
Row name	Entity
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhysicalIndex	Entity index	Index	Unsigned integer.	
Chassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Slot	Slot number of the entity	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535.
SubSlot	Subslot number of the entity	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535.
Description	Entity description	N/A	String. Length: 0 to 255 characters.	N/A
VendorType	Vendor type (OID)of the entity	N/A	String, dotted decimal notation.	N/A
ContainedIn	Position of the entity	N/A	Unsigned integer.	N/A
Class	Entity type	N/A	Enumeration. • **1**-Others. • **2**-Unknown. • **3**-Frame. • **4**-Backplane. • **5**-Slot or subslot. • **6**-Power supply. • **7**-Fan. • **8**-Sensor. • **9**-Module. It might indicates a card, a subcard, or, for example, a flash memory. • **10**-Port. • **11**-IRF fabric. • **12**-CPU.	N/A
ParentRelPos	Position of the entity's parent node	N/A	Signed integer. Minimum: –1.	N/A
Name	Entity name	N/A	String. Length: 0 to 255 characters.	N/A
HardwareRev	Hardware version of the entity	N/A	String. Length: 0 to 255 characters.	N/A
FirmwareRev	Firmware version of the entity	N/A	String. Length: 0 to 255 characters.	N/A
SoftwareRev	Software version of the entity	N/A	String. Length: 0 to 255 characters.	N/A
SerialNumber	Serial number of the entity	N/A	String. Length: 0 to 32 characters.	N/A
MfgName	Manufacturer name of the entity	N/A	String. Length: 0 to 32 characters.	N/A
Model	Entity model	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 255 characters.	
Alias	Alias of the entity	N/A	String. Length: 0 to 32 characters.	N/A
AssetID	Asset ID of the entity	N/A	String. Length: 0 to 32 characters.	N/A
FRU	Whether the entity is a field replaceable unit	N/A	Enumeration: • **True**-Supports. • **False**-Does not support.	N/A
MfgDate	Manufacture time of the entity	N/A	Format: YYYY-MM-DDTHH:MM:SS.	N/A
Uris	CLEI code	N/A	String. Length: 0 to 32 characters.	N/A
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.	Only fcc and lcc are supported.

Device/ExtPhysicalEntities

This table contains extended information about an entity.

Columns

Column name	Column description	Column type	Data type and restrictions
PhysicalIndex	Entity index	Index	Unsigned integer.
AdminState	Management status	N/A	Enumeration: • **1**-Unsupported. • **2**-Disabled. • **3**-Shut down. • **4**-Enabled.
OperState	Operation status	N/A	Enumeration: • **1**-Unsupported. • **2**-Unusable. • **3**-Usable. • **4**-Dangerous, cannot be used.
StandbyState	Standby status	N/A	Enumeration: • **1**-Unsupported. • **2**-Hot standby. • **3**-Cold standby. • **4**-In service.
AlarmLight	Alarm LED status	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
CpuUsage	CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100
CpuUsageThreshold	CPU usage threshold (%)	N/A	Unsigned integer. Value range: 0 to 100
MemUsage	Memory usage (%)	N/A	Unsigned integer. Value range: 0 to 100
MemUsageThreshold	Memory usage threshold (%)	N/A	Unsigned integer. Value range: 0 to 100
MemSize	Memory size (bytes)	N/A	Unsigned integer.
Uptime	Time that elapsed after the entity started up (seconds)	N/A	Unsigned integer.
Temperature	Temperature of the entity (°C)	N/A	Signed integer.
TemperatureThreshold	High-temperature threshold (°C)	N/A	Signed integer.
Voltage	Voltage of the entity (V)	N/A	Unsigned integer.
VoltageLowThreshold	Low-voltage threshold (V)	N/A	Unsigned integer.
VoltageHighThreshold	High-voltage threshold (V)	N/A	Unsigned integer.
TemperatureCriticalThreshold	Critical high-voltage threshold (°C)	N/A	Signed integer.
MAC	MAC address of the entity	N/A	String. Format: HH-HH-HH-HH-HH-HH

Column name	Column description	Column type	Data type and restrictions
ErrorStatus	Error status of the entity	N/A	Unsigned integer, greater than 0. Commonly used states: • **1**-Not supported. • **2**-Normal. • **3**-Power-on self test failure. • **4**-The entity is absent. • **11**-POE error. • **21**-Stack error. • **22**-IRF port is blocked. • **23**-IRF port failed. • **31**-SFP receiving error. • **32**-SFP sending error. • **33**-SFP error in both direction. • **41**-Fan error. • **51**-PSU error. • **61**-RPS error. • **71**-Module is faulty. • **81**-Sensor error. • **91**-Hardware is faulty.
CpuMaxUsage	Maximum CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100
TemperatureLowThreshold	Low temperature threshold (°C)	N/A	Signed integer.
TemperatureShutdownThreshold	Shutdown temperature threshold (°C)	N/A	Signed integer.
PhyMemSize	Physical memory size (bytes)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1
CpuFrequency	CPU frequency (Hz)	N/A	Unsigned integer.
FristUsedDate	Time when the entity was used for the first time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
CpuAvgUsage	Average CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100
MemAvgUsage	Average memory usage (%)	N/A	Unsigned integer. Value range: 0 to 100
MemType	Memory type	N/A	String. Length: 0 to 32 characters.
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Device/Transceivers

This table contains power information about a transceiver module.

Table description

Item	Description
Feature name	Device
Table name	Transceiver
Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for interfaces that support a transceiver

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *Ifmgr NETCONF XML API Configuration Reference*.
Name	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
HardwareType	Hardware type	N/A	String. Length: 0 to 63 characters.	For example, SM indicates single mode.
TransceiverType	Transceiver	N/A	String.	For example, SFP,

Column name	Column description	Column type	Data type and restrictions	Remarks
	type		Length: 0 to 63 characters.	XFP, and GBIC.
WaveLength	Wave length (nm)	N/A	Integer.	N/A
VendorName	Vendor name	N/A	String. Length: 0 to 63 characters.	N/A
SerialNumber	Serial number	N/A	String. Length: 0 to 63 characters.	N/A
FiberDiameterType	Fiber diameter type	N/A	Unsigned integer. Commonly used values: • **1**-Fiber, 9 µm. • **2**-Fiber, 50 µm. • **3**-Fiber, 62.5 µm. • **4**-Copper. • **65535**-Unknown.	N/A
TransferDistance	Maximum transmission distance (meters)	N/A	Integer.	N/A
Diagnostic	Diagnostic function	N/A	Unsigned integer: • **1**-Enabled. • **2**-Disabled.	N/A
CurRxPower	Current received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MaxRxPower	Maximum received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MinRxPower	Minimum received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
CurTxPower	Current transmitted optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MaxTxPower	Maximum transmitted optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MinTxPower	Minimum transmitted optical power (hundredths	N/A	Integer.	2147483647 means the device doesn't support this feature.

Column name	Column description	Column type	Data type and restrictions	Remarks
	of dBm)			
Temperature	Temperature (°C)	N/A	Integer.	N/A
Voltage	Voltage (one hundredth of a volt)	N/A	Integer.	N/A
BiasCurrent	Current (one hundredth of an mA)	N/A	Integer.	N/A
TemperatureHiAlarm	Transceiver temperature high alarm threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureLoAlarm	Transceiver temperature low alarm threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureHiWarn	Transceiver temperature high warning threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureLoWarn	Transceiver temperature low warning threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
VccHiAlarm	Transceiver VCC high alarm threshold (hundreds of microvolts)	N/A	Integer.	N/A
VccLoAlarm	Transceiver VCC low alarm threshold (hundreds of microvolts)	N/A	Integer.	N/A
VccHiWarn	Transceiver VCC high warning threshold (hundreds of microvolts)	N/A	Integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VccLoWarn	Transceiver VCC low warning threshold (hundreds of microvolts)	N/A	Integer.	N/A

	the interface		Length: 6 characters. For example, 78a714.	
RevisionNumber	Revision number of the interface	N/A	String. Length: 0 to 63 characters.	N/A
Frequency	Frequency(hundredths of THz)	N/A	Integer.	N/A
ActiveITUChannel	Index of the current ITU channel	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
CurWaveErr	Current wave length error(thousandths of nm)	N/A	Integer.	N/A
WaveErrHiAlarm	High wave length error alarm threshold (thousandths of nm)	N/A	Integer.	N/A
WaveErrLoAlarm	Low wave length error alarm threshold (thousandths of nm)	N/A	Integer.	N/A
CurFreqErr	Current frequency error(tenths of GHz)	N/A	Integer.	N/A
FreqErrHiAlarm	High frequency error alarm threshold (tenths of GHz)	N/A	Integer.	N/A
FreqErrLoAlarm	Low frequency error alarm threshold (tenths of GHz)	N/A	Integer.	N/A
PartNumber	Part number	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
ProductCode	Product code	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
TransceiverSpeed	The transceiver speed info(MB)	N/A	Integer.	N/A

Device/TransceiversChannels

This table provides statistics for transceiver modules with multiple channels.

XML structure

```
<Device>
  <TransceiversChannels>
    <Interface>
      <IfIndex></IfIndex>
      <ChannelIndex></ChannelIndex>
      <ChannelCurTXPower></ChannelCurTXPower>
      <ChannelCurRXPower></ChannelCurRXPower>
      <ChannelTemperature></ChannelTemperature>
      <ChannelBiasCurrent></ChannelBiasCurrent>
    </Interface>
  </TransceiversChannels>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TransceiversChannels
Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for interfaces that support a transceiver module

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column is available in some versions. For more information, see the XSD document for your product. For information about IfIndex, see "Appendix" in *Ifmgr NETCONF XML API Configuration Reference*.
ChannelIndex	Optical channel index	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
ChannelCurT	Current	N/A	Integer.	2147483647

Column name	Column description	Column type	Data type and restrictions	Remarks
XPower	transmitted optical power of the channel (hundredths of dBm)			means the device doesn't support this feature.
ChannelCurRXPower	Current received optical power of the channel (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
ChannelTemperature	Temperature of the channel (°C)	N/A	Integer.	Some versions support current temperature. For relevant information, see the XSD document of your product.2147483647 means the device doesn't support this feature.
ChannelBiasCurrent	Current of the channel (one hundredth of an mA)	N/A	Integer.	2147483647 means the device doesn't support this feature.

Device/TransceiversITUChannels

This table contains information about ITU channels supported on the transceiver that is connected to this interface.

XML structure

```
<Device>
  <TransceiversITUChannels>
    <Interface>
      <IfIndex></IfIndex>
      <ITUChannelIndex></ITUChannelIndex>
      <ITUChannelFrequency></ITUChannelFrequency>
      <ITUChannelWaveLength></ITUChannelWaveLength>
    </Interface>
  </TransceiversITUChannels>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TransceiversITUChannels

Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for ITU channels supported on the transceiver that is connected to this interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
ITUChannelIndex	The index of the specified ITU channel	Index	Unsigned integer. Value range:1 to 4294967295.	N/A
ITUChannelFrequency	The frequency of the specified ITU channel (hundredths of THz)	N/A	Integer.	N/A
ITUChannelWaveLength	The wave length of the specified ITU channel (thousandths of nm)	N/A	Integer.	N/A

Device/CPUs

This table contains usage information about the logical CPUs.

XML structure

```
<Device>
  <CPUs>
    <CPU>
      <PhysicalIndex></PhysicalIndex>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <CPUUsage></CPUUsage>
      <ChassisName></ChassisName>
    </CPU>
  </CPUs>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Available only for logical CPUs

Columns

Column name	Column description	Column type	Data type and restrictions
PhysicalIndex	Entity index	Index	Unsigned integer.
Chassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.
CPUUsage	CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100.
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Device/SummerTime

This table contains summer-time information.

XML structure

```
<Device>
  <SummerTime>
    <Name></Name>
    <AddTime></AddTime>
    <DateBased>
      <BeginMonth></BeginMonth>
      <BeginDay></BeginDay>
      <BeginHour></BeginHour>
      <BeginMinute></BeginMinute>
      <BeginSecond></BeginSecond>
      <EndMonth></EndMonth>
```

```

      <BeginSecond></BeginSecond>
      <EndMonth></EndMonth>
      <EndWeek></EndWeek>
      <EndWeekDay></EndWeekDay>
      <EndHour></EndHour>
      <EndMinute></EndMinute>
      <EndSecond></EndSecond>
    </WeekBased>
  </SummerTime>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	SummerTime
Table type	Single-instance table
Row name	N/A
Restrictions	Group DateBased and WeekBased are two configuration ways. Only one way can take effect at the same time.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name for the daylight saving time.	N/A	String. Length: 1 to 32 characters.	N/A
AddTime	The time to be added to the standard time.	N/A	String. Formats: • HH:MM:SS	Value ranges: • **HH**-0 to 23. • **MM**-0 to 59. • **SS**-0 to 59.

Column name	Column description	Column type	Data type and restrictions	Remarks
DateBased	Daylight saving time configuration based on date.	Data Structure	Members include: • BeginMonth • BeginDay • BeginHour • BeginMinute • BeginSecond • EndMonth • EndDay • EndHour • EndMinute • EndSecond	N/A
BeginMonth	Begin month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
BeginDay	Begin day.	N/A	Unsigned integer. • Value range: 1 to 31.	N/A
BeginHour	Begin hour.	N/A	Unsigned integer. • Value range: 0 to 23.	N/A
BeginMinute	Begin minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
BeginSecond	Begin second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndMonth	End month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
EndDay	End day.	N/A	Unsigned integer. Value range: 1 to 31.	N/A
EndHour	End hour.	N/A	Unsigned integer. Value range: 0 to 23.	N/A
EndMinute	End minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndSecond	End second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
WeekBased	Daylight saving time configuration based on week.	Data Structure	Members include: • BeginMonth • BeginWeek • BeginWeekDay • BeginHour • BeginMinute • BeginSecond • EndMonth • EndWeek • EndWeekDay • EndHour • EndMinute • EndSecond	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BeginMonth	Begin month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
BeginWeek	Begin week of the month.	N/A	Enumeration: • **1**-The first week • **2**-The second week • **3**-The third week • **4**-The fourth week • 5-The fifth week • 6-The last week	Non-existent weeks of the month are treated as the last week.
BeginWeekDay	Begin day of week.	N/A	Enumeration: • 0-Sunday • **1**-Monday • **2**-Tuesday • **3**-Wednesday • **4**-Thursday • **5**-Friday • **6**-Saturday	N/A
BeginHour	Begin hour.	N/A	Unsigned integer. Value range: 0 to 23.	N/A
BeginMinute	Begin minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
BeginSecond	Begin second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A
EndMonth	End month.	N/A	Unsigned integer. Value range: 1 to 12.	N/A
EndWeek	End week of the month.	N/A	Enumeration: • **1**-The first week • **2**-The second week • **3**-The third week • **4**-The fourth week • 5-The fifth week • 6-The last week	Non-existent weeks of the month are treated as the last week.
EndWeekDay	End day of week.	N/A	Enumeration: • 0-Sunday • **1**-Monday • **2**-Tuesday • **3**-Wednesday • **4**-Thursday • **5**-Friday • **6**-Saturday	N/A
EndHour	End hour .	N/A	Unsigned integer. Value range: 0 to 23.	N/A
EndMinute	End minute.	N/A	Unsigned integer. Value range: 0 to 59.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndSecond	End second.	N/A	Unsigned integer. Value range: 0 to 59.	N/A

Device/Boards

This table contains board information.

XML structure

```
<Device>
  <Boards>
    <Board>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>

      <TotalPower></TotalPower>
      <NominalPower></NominalPower>
      <ResidualPower></ResidualPower>
      <ChassisName></ChassisName>
     </Board>
  </Boards>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	Boards
Table type	Multi-instance table
Row name	Board
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Position information of the device Node.	Data structure	Members include: • Chassis • Slot • CPUID	N/A
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	0 represent main CPU of current board.
PhysicalIndex	Entity index.	N/A	Unsigned integer.	The index is 0 when board is absent.
Status	Status of the device node.	N/A	Enumeration: • 1-Absent • **2**-Normal • **3**-Fault	N/A
Role	Role of the device node.	N/A	Enumeration: • 1-`Unknown` • **2**-`ActiveMPU` • **3**-`StandbyMPU` • **4**-`LPU`	Role is Unknown when status is Absent or Fault.
BelongtoCurMDC	Whether the device node belongs to the current MDC	N/A	Boolean: • true • false	An MPU belongs to all MDCs. If you reclaim an LPU from the default MDC, the LPU does not belong to the default MDC.
Uptime	Time that elapsed after the device started up, in seconds	N/A	Unsigned integer.	N/A
TotalPower	Total power of the card, in watts.	N/A	Unsigned integer.	Value 0 is invalid.
NominalPower	Nominal power of the card, in watts.	N/A	Unsigned integer.	N/A
Residual Power	Remaining power of the card, in watts.	N/A	Unsigned integer.	N/A
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.	Only fcc and lcc are supported.

Device/Blades

This table contains blade information.

XML structure

```
<Device>
  <Blades>
    <Blade>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <Model></Model>
    </Blade>
  </Blades>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	Blades
Table type	Multi-instance table
Row name	blade
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
DeviceNode	Position of the device Node.	Data structure	Members include: • Chassis • Slot • CPUID
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
Model	Device model of blade board.	N/A	String. Length: 1 to 63 characters.

Device/PEXes

This table contains PEX board information.

XML structure

```
<Device>
  <PEXes>
    <PEX>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <Model></Model>
    </PEX>
  </PEXes>
</Device>
```

Table description

Columns

Column name	Column description	Column type	Data type and restrictions
DeviceNode	Position of the device Node.	Data structure	Members include: • Chassis • Slot • CPUID
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
Model	Device model of PEX board.	N/A	String. Length: 1 to 63 characters.

Device/BladeCapabilities

This table contains capabilities of blade board.

XML structure

```
<Device>
  <BladeCapabilities>
    <Blade>
      <Model></Model>
    </Blade>
  </BladeCapabilities>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	BladeCapabilities
Table type	Multi-instance table
Row name	Blade
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Model	Device model of blade board.	Index	String. Length: 1 to 63 characters.

Device/PEXCapabilities

This table contains capabilities of PEX board.

XML structure

```
<Device>
  <PEXCapabilities>
    <PEX>
```

```
      <Model></Model>
    </PEX>
  </PEXCapabilities>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	PEXCapabilities
Table type	Multi-instance table
Row name	PEX
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Model	Device model of PEX board.	Index	String. Length: 1 to 63 characters.

Device/MDCs

XML structure

```
<Device>
  <MDCs>
    <MDCType></MDCType>
    <MDCID></MDCID>
  </MDCs>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	MDCs
Table type	Single -instance table
Row name	N/A

Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
MDCType	Type of Virtualization.	N/A	Enumeration: • **1**-MDC • **2**-Context
MDCID	MDC identifier.	N/A	Unsigned integer. Value range: 1 to 65535.

Device/FailoverGroupCapabilities

This table contains capabilities of failover group.

XML structure

```
<Device>
  <FailoverGroupCapabilities>
    <FailoverGroupSupport></FailoverGroupSupport>
  </FailoverGroupCapabilities>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	FailoverGroupCapabilities
Table type	Single -instance table
Row name	N/A
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
FailoverGroupSupport	Is support failover group.	N/A	Boolean: • true • false

Device/FailoverGroups

This table contains failover group information.

XML structure

```
<Device>
  <FailoverGroups>
    <FailoverGroup>
      <ID></ID>
      <Name></Name>
      <PrimaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </PrimaryNode>
      <SecondaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </SecondaryNode>
      <State></State>
    </FailoverGroup>
  </FailoverGroups>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	FailoverGroups
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Failover group id	index	Unsigned integer. Value range: 0 to 31.
Name	Failover group name	N/A	String. Length: 1 to 63 characters.
PrimaryNode	Primary node of the	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
	failover group.		• Chassis • Slot • CPUID
Chassis	Chassis ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
SecondaryNode	Secondarynode of the failover group.	Data structure	Members include: • Chassis • Slot • CPUID
Chassis	Chassis ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.
State	State of the failover group.	N/A	Enumeration: • 1-Initial • **2**-Primary • **3**-Secondary

Device/Subcards

This table contains subcard information.

XML structure

```
<Device>
  <Subcards>
    <Subcard>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SubSlot></SubSlot>
      <PhysicalIndex></PhysicalIndex>
      <Status></Status>
      <SupportModes></SupportModes>
    </Subcard>
  </Subcards>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	Subcards
Table type	Multi-instance table
Row name	Subcard
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
SubSlot	Subslot number of the entity	Index	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Physical index of the subslot	N/A	Unsigned integer. Value range: 0 to 65535.
Status	Status of the subcard	N/A	Enumeration: • SubcardRemoved-The subcard has been removed. • SubcardNormal-The subcard is operating correctly. • SubcardFault-The subcard is fault.
SupportModes	Available operating modes for the specified interface card	N/A	Available operating modes depend on the interface card type.Each mode is separated by comma “,”, such as [‘e1’,’t1’,’oc-3’].

Device/TemperatureSensors

This table contains the temperature sensor information.

XML structure

```
<Device>
  <TemperatureSensors>
    <Sensor>
```

```
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SensorType></SensorType>
      <SensorIndex></SensorIndex>
      <SensorStatus></SensorStatus>
      <CurrentTemperature></CurrentTemperature>
      <LowerLimit></LowerLimit >
      <WarningLimit></WarningLimit >
      <AlarmLimit></AlarmLimit>
      <ShutdownLimit></ShutdownLimit>
      <ChassisName></ChassisName>
    </Sensor>
  </TemperatureSensors>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TemperatureSensors
Table type	Multi-instance table
Row name	Sensor
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
SensorType	Type of the temperature sensor.	Index	Enumeration: • 0-inflow • 1-outflow • 2-Hotspot
SensorIndex	Resource ID of the temperature sensor.	Index	Unsigned integer. Value range: 0 to 65535.
SensorStatus	Status of the temperature sensor	N/A	Enumeration: • TemperatureNormal-The temperature is normal. • TemperatureLower-The temperature

Column name	Column description	Column type	Data type and restrictions
			dropped to or below the low-temperature threshold. • TemperatureWarnning-The temperature increased to or above the high-temperature warning threshold. • TemperatureAlarm-The temperature increased to or above the high-temperature alarming threshold. • TemperatureShutdown-The temperature increased to or above the high-temperature shutdown threshold.
CurrentTemperature	Current temperature (°C)	N/A	Short
LowerLimit	Lower limit temperature (°C)	N/A	Short
WarningLimit	Warnning limit temperature (°C)	N/A	Short
AlarmLimit	Alarm limit temperature (°C)	N/A	Short
ShutdownLimit	Shutdown limit temperature (°C)	N/A	Short
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Device/SystemStableStatus

This table contains system stability and status information.

XML structure

```
<Device>
  <SystemStableStatus>
    <SystemStatus></SystemStatus>
    <Redundancy></Redundancy>
  </SystemStableStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	SystemStableStatus
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
SystemStatus	System status	N/A	Enumeration: • Stable • Not ready
Redundancy	System redundancy status	N/A	Enumeration: • Stable • No redundancy • Not ready

Device/BoardStableStatus

This table contains stability and status information for cards or member devices

XML structure

```
<Device>
  <BoardStableStatus>
    <StableState>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPU></CPU>
      <Role></Role>
      <Status></Status>
      <ChassisName></ChassisName>
    </StableState>
  </BoardStableStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	BoardStableStatus
Table type	Multi-instance table
Row name	StableState
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPU	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
Role	Role of the card or member device	N/A	Enumeration: • Active • Standby • Other
Status	Status of the card or member device	N/A	Enumeration: • Stable • Board inserted • Kernel initiating • Service starting • Service stopping • HA Batch backup • Interface data batch backup • Service module data batch backup • MDC starting • MDC stopping • Context starting • Context stopping
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Device/NetworkClockChassisStatus

This table contains network clock monitoring module status information.

XML structure

```
<Device>
  <NetworkClockChassisStatus>
    <ChassisStatus>
      <Chassis></Chassis>
      <Mode></Mode>
      <LockMode></LockMode>
      <SSMOutputLevel></SSMOutputLevel>
      <ControlEnable></ControlEnable>
      <ReferenceType></ReferenceType>
      <ReferenceIndex></ReferenceIndex>
```

```
    </ChassisStatus>
  </NetworkClockChassisStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	NetworkClockChassisStatus
Table type	Multi-instance table
Row name	ChassisStatus
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Work mode	N/A	Enumeration: • Auto • Manual	N/A
LockMode	Phase lock status	N/A	Enumeration: • Freerun • Locked • Holdover • Pre-Locked • Pre-Locked2 • Lost • Unknown	N/A
SSMOutputLevel	Signal quality level of the clock source in the SSM	N/A	Enumeration: • PRC • SSU-A • SSU-B • SEC • DNU • Unknown	N/A
ControlEnable	SSM control enabling status	N/A	Enumeration: • On • Off	N/A
ReferenceType	Reference type	N/A	Enumeration: • SrcClkmIndex • InterfaceIndex	Used with ReferenceIndex When there is no selected clock source, this column is empty.
Referenc	Reference index	N/A	Unsigned integer.	When ReferenceType is

Column name	Column description	Column type	Data type and restrictions	Remarks
eIndex			Value range: 0 to 65535.	SrcClkmIndex, this field represents an enumeration, which might be: • BITS0 • BITS1 • PTP Otherwise it represents an interface index. When there is no selected clock source, this column is empty.

Device/NetworkClockSrcStatus

This table contains clock source status information.

XML structure

```
<Device>
  <NetworkClockSrcStatus>
    <SrcStatus>
      <Chassis></Chassis>
      <ClockSource></ClockSource>
      <State></State>
      <Priority></Priority>
      <SSMLevel></SSMLevel>
      <ForceSSM></ForceSSM>
      <SABit></SABit>
      <Frequency></Frequency>
    </SrcStatus>
  </NetworkClockSrcStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	NetworkClockSrcStatus
Table type	Multi-instance table
Row name	SrcStatus
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
ClockSource	Clock source	Index	Enumeration: • BITS0 • BITS1 • PTP
State	Clock state	N/A	Enumeration: • N/A • Normal • Lost
Priority	Clock priority	N/A	Unsigned integer. Value range: 0 to 255.
SSMLevel	Clock source quality level in the SSM	N/A	Enumeration: • PRC • SSU-A • SSU-B • SEC • DNU • Unknown
ForceSSM	Whether or not get the SSM level	N/A	Enumeration: • On • Off
SABit	Sa bit used by BITS to transmit the SSM	N/A	Enumeration: • N/A • sa4 • sa5 • sa6 • sa7 • sa8
Frequency	Frequency of the BITs clock	N/A	Enumeration: • N/A • 2Mbps • 2MHz

Device/NetworkClockLPUPortStatus

This table contains line clock input port status information.

XML structure

```
<Device>
  <NetworkClockLPUPortStatus>
    <LPUPortStatus>
```

```
      <Port></Port>
      <Chassis></Chassis>
      <State></State>
      <Priority></Priority>
      <SSMLevel></SSMLevel>
      <ForceSSM></ForceSSM>
      <LPUPort></LPUPort>
    </LPUPortStatus>
  </NetworkClockLPUPortStatus>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	NetworkClockLPUPortStatus
Table type	Multi-instance table
Row name	LPUPortStatus
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Port	Interface index	Index	Unsigned integer. Value range: 0 to 65535.
Chassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.
State	Clock state	N/A	Enumeration: • N/A • Normal • Lost
Priority	Clock priority	N/A	Unsigned integer. Value range: 0 to 255.
SSMLevel	Signal quality level of the line clock input port in the SSM	N/A	Enumeration: • PRC • SSU-A • SSU-B • SEC • DNU • Unknown
ForceSSM	Whether or not get the SSM level	N/A	Enumeration: • On • Off
LPUPort	Whether or not the line	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
	clock input port is up		• Yes • No • N/A

Device/FanDirections

This table contains fan directions settings.

XML structure

```
<Device>
  <FanDirections>
    <Fan>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Direction></Direction>
      <DefaultDirection></DefaultDirection>
    </Fan>
  </FanDirections>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	FanDirections
Table type	Multi-instance table
Row name	Fan
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
Direction	Direction of the fan	N/A	Enumeration: • 1-power-to-port • 2-port-to-power
DefaultDirection	Default direction of the fan	N/A	Enumeration: • 1-power-to-port • 2-port-to-power

Device/TransceiverMonitor

This table contains transceiver monitoring information.

XML structure

```
<Device>
  <TransceiverMonitor>
    <State></State>
    <Interval></Interval>
  </TransceiverMonitor>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	TransceiverMonitor
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Transceiver monitoring enabling status	N/A	Enumeration: • **enable**—Tansceiver monitoring is enabled**.** • **disable**—Transceiver monitoring is disabled.	N/A
Interval	Monitoring interval in seconds	N/A	Unsigned integer. Value range: 300 to 3600.	N/A

Device/Chassis

This table contains chassis information.

XML structure

```
<Device>
 <Chassis>
   <Chassis>
      <GlobalID></GlobalID>
      <Type></Type>
      <DisplayID></DisplayID>
      <Name></Name>
      <SlotNumber></SlotNumber>
      <AdminStatus></AdminStatus>
      <TotalPower></TotalPower>
      <NominalPower></NominalPower>
      <ResidualPower></ResidualPower>
   </Chassis>
 </Chassis>
</Device>
```

Table description

Item	Description
Feature name	Device
Table name	Chassis
Table type	Multi-instance table
Row name	Chassis
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Column name
GlobalID	Global chassis number.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	Chassis type.	N/A	Enumeration: • 1—None • 2—LCC • 3—FCC	In a cluster, this object indicates the chassis type, LCC or FCC. For cluster-incapa

				ble devices, this object returns 1 (None).
DisplayID	Numeric chassis number.	N/A	Unsigned integer. Value range: 0 to 65535.	LCCs and FCCs are numbered separately in a cluster. For cluster-incapable devices, this object returns the global chassis number.
Name	Chassis description.	N/A	String. Length: 0 to 63 characters.	For LCCs and cluster-incapable devices, this object equals the numeric chassis number. For FCCs, this object equals the chassis type plus the numeric chassis number.
SlotNumber	Number of slots in the chassis	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
AdminStatus	Chassis status.	N/A	Enumeration: • 1—Normal • 2—Faulty • 3—Other	N/A
TotalPower	Total power of the chassis, in watts.	N/A	Unsigned integer.	Value 0 is invalid.
NominalPower	Nominal power of the chassis, in watts.	N/A	Unsigned integer.	N/A
ResidualPower	Remaining power of the chassis, in watts.	N/A	Unsigned integer.	N/A

Device/Chassises

This table contains chassis information.

XML structure

```
<Device>
 <Chassises>
   <Chassis>
      <GlobalID></GlobalID>
      <Type></Type>
      <DisplayID></DisplayID>
      <Name></Name>
      <SlotNumber></SlotNumber>
      <AdminStatus></AdminStatus>
```

```
      <TotalPower></TotalPower>
      <NominalPower></NominalPower>

Message	Explanation
Unsupported parameter. 不支持此参数。	When modify the time protocol by netconf, check the parameters are not supported. 通过 netconf 配置时间协议时，检查到参数不支持。
Incomplete parameter. 参数输入不完整。	When modify the time protocol by netconf, check the parameters are incomplete. 通过netconf配置时间协议时，检查到参数不完整。
Please set clock protocol manual mode first. 请先将时间协议配置为手工模式。	If it’s not allowed to set system time, please set clock protocol manual mode first. 如果不被允许设置系统时间，需要先将时间协议配置为手工模式。
End time must be later than start time, and the time range determined can't be shorter than one day or longer than one year. 结束时间必须晚于起始时间，并且时间范围不得短于一天或长于一年。	The prompt when failed to set summer time. 设置夏令时失败时的提示。
Please choose either datebased or weekbased to configure the summertime. 请选择基于日期或者基于周的配置方式。	When setting summer time, date and week can only choose one, if both of them are not 0 , this prompt will be printed. 设置夏令时时，日期和周只能配置一个，如果日期和周的参数都不为0，则打印此提示。
The device does not support PTP. 当前设备不支持PTP协议。	When setting time source with PTP protocol, but the device doesn’t support PTP, this prompt will be printed. 设置设备通过PTP协议获取时间，但设备不支持PTP协议时，会打印此提示。
The device does not support GNSS. 当前设备不支持GNSS。	When setting time source with GNSS, but the device doesn’t support GNSS, this prompt will be printed. 设置设备通过GNSS获取时间，但设备不支持GNSS时，会打印此提示。
Invalid date 无效的日期	Setting summer time with begin time and end time, if check out that the begin time or the end time are not allowed, this prompt will be printed. 设置夏令时的起始和终止时间时，检查起始和终止时间不合法时，打印此提示。

Device/FailoverGroups

Message	Explanation
Failed to create the failover group. 创建备份组失败。	The prompt when failed to create the failover group. 创建备份组失败时的提示。
Number of failover groups exceeded the limit. 备份组个数达到最大值。	The prompt when the number of failover groups exceeded the limit. 创建备份组时，备份组个数达到最大值。

This member has been configured as the primary member for another failover group. Please specify another member. 这个节点已经指定为另一个备份组的主节点，请绑定其他节点。	When operate a member, if this member has been configured as the primary member for another failover group, this prompt will be printed. 对某一个节点进行操作时，如果这个节点已经被指定为另一个备份组的主节点，则打印此提示。
This member has been added with a different attribute to the group. To change the attribute, remove the member and add the member with the new attribute. 这个节点已配置为该备份组的另一属性。需要改变节点属性，请先移除该节点再以新的属性绑定。	When configuring attribute to a member, if this member has been added with a different attribute to the group, this prompt will be printed. 对某一节点配置属性时，如果已经配置为该备份组的另一属性，则打印此提示。
The attribute has been configured for another member in this failover group. 备份组的这个属性已经配置了另一节点。	When configuring attribute to a member, if this attribute has been added to a different member of the group, this prompt will be printed. 对某一节点配置属性时，如果该属性已经配置给了该备份组的另一节点，则打印此提示。
Main and Standby conflict. 主备节点冲突。	暂未使用
Operation failed. 操作失败。	When operate the failover group failed, and the reason is not clear, this prompt will be printed by default. 对备份组操作失败时，但又没有返回问题原因，则默认打印此提示。
The failovergroup name and ID must identify the same failovergroup. 输入的备份组名称有误，请输入与ID对应的名称。	When the name and ID is not matched to the failovergroup, this prompt will be printed. 如果获取的备份组名称和ID与备份组不匹配，则打印此提示。
Invalid failovergroup ID or Name. 输入的备份组ID或Name无效。	When the name and ID is invalid, this prompt will be printed. 创建备份组时，输入的备份组ID或Name无效，则打印此提示。

Device/Transceivers

The transceiver is absent. 可插拔光模块不在位。	When failed to set ITU channel num to the driver, the reason is the transceiver is absent. 设置ITU channel 通道号到驱动失败时，驱动返回失败原因为可插拔光模块不在位。
The transceiver does not support this function. 可插拔光模块不支持该功能。	When failed to set ITU channel num to the driver, the reason is the transceiver does not support this function. 设置ITU channel 通道号到驱动失败时，驱动返回失败原因为可插拔光模块不支持该功能。
The port has no transceiver information. 获取可插拔光模块信息失败。	When failed to set ITU channel num to the driver, the reason is the port has no transceiver information. 设置ITU channel 通道号到驱动失败时，驱动返回失败原因为获取可插拔光模块信息失败。
Operation failed. 操作失败。	When failed to set ITU channel num to the driver, and the reason does not given, this prompt will be printed by default. 设置ITU channel 通道号到驱动失败时，驱动没有返回失败原因，则默认打印此提示。

Device/ PowerSupplyOnOffs

Operation failed. 操作失败。	Operation failed. Reason: Power supply management is not enabled. 隔离单板需要先使能电源管理功能。

Device event stream

BoardEvent event

This event is used to report card or member device alarm information.

XML structure for event subscription

```
<BoardEvent>
  <Board>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </Board>
</BoardEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <BoardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Board>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
        </Board>
      </BoardEvent >
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	BoardEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity	Unsigned integer. Value range: 0 to	No

Column name	Column description	Data type and restrictions	Support for extended queries
	resides	65535.	
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```
<BoardEvent>
  <Board>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PhysicalIndex></PhysicalIndex>
    <BoardStatus></BoardStatus>
  </Board>
</BoardEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <BoardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
    <Board>
      <Chassis>0</Chassis>
      <Slot>0</Slot>
      <CPUID>0</CPUID>
      <PhysicalIndex>100</PhysicalIndex>
      <BoardStatus>BoardNormal</BoardStatus>
    </Board>
  </BoardEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index.	Unsigned integer.

Column name	Column description	Data type and restrictions
		Value range: 0 to 65535.
BoardStatus	Status of the card	Enumeration: • BoardRemoved-The card has been removed. • BoardNormal-The card is operating correctly. • BoardFault-The card is faulty.

SubcardEvent event

This event is used to report subcard alarm information.

XML structure for event subscription

```
<SubcardEvent>
  <Subcard>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <SubSlot></SubSlot>
  </Subcard>
</SubcardEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <SubcardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Subcard>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
          <SubSlot>1</SubSlot>
        </Subcard>
      </SubcardEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	SubcardEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0

Item	Description
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
SubSlot	Subslot number of the entity	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```
<SubcardEvent>
  <Subcard>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <SubSlot></SubSlot>
    <PhysicalIndex></PhysicalIndex>
    <SubcardStatus></SubcardStatus>
  </Subcard>
</SubcardEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <SubcardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
    <Subcard>
      <Chassis>0</Chassis>
      <Slot>0</Slot>
      <CPUID>0</CPUID>
      <SubSlot>1</SubSlot>
      <PhysicalIndex>100</PhysicalIndex>
      <SubcardStatus>SubcardRemoved</SubcardStatus>
    </Subcard>
  </SubcardEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
SubSlot	Subslot number of the entity	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index.	Unsigned integer. Value range: 0 to 65535.
SubcardStatus	Status of the subcard	Enumeration: • SubcardRemoved-The subcard has been removed. • SubcardNormal-The subcard is operating correctly. • SubcardFault-The subcard is fault.

TemperatureEvent event

This event is used to report temperature alarm information.

XML structure for event subscription

```
<TemperatureEvent>
  <Temperature>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </Temperature>
</TemperatureEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <TemperatureEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Temperature>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
```

```
      </Temperature>
    </TemperatureEvent>
  </filter>
 </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	TemperatureEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```
<TemperatureEvent>
  <Temperature>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PhysicalIndex></PhysicalIndex>
    <SensorType></SensorType>
    <Status></Status>
    <CurrentTemperature></CurrentTemperature>
    <LowerLimitTemperature></LowerLimitTemperature>
    <WarnningLimitTemperature></WarnningLimitTemperature>
    <AlarmLimitTemperature></AlarmLimitTemperature>
    <ShutdownLimitTemperature></ShutdownLimitTemperature>
  </Temperature>
</TemperatureEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <TemperatureEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
```

```
    <Temperature>
     <Chassis>0</Chassis>
     <Slot>0</Slot>
     <CPUID>0</CPUID>
     <PhysicalIndex>100</PhysicalIndex>
     <SensorType>Hotspot</SensorType>
     <Status>TemperatureWarnning</Status>
     <CurrentTemperature>73</CurrentTemperature>
     <LowerLimitTemperature>0</LowerLimitTemperature>
     <WarnningLimitTemperature>65</WarnningLimitTemperature>
     <AlarmLimitTemperature>75</AlarmLimitTemperature>
     <ShutdownLimitTemperature>90</ShutdownLimitTemperature>
    </Temperature>
  </TemperatureEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Physical index of the temperature sensor	Unsigned integer. Value range: 0 to 65535.
SensorType	Type of the temperature sensor	Enumeration: • inflow • outflow • Hotspot
Status	Status of the temperature sensor	Enumeration: • TemperatureNormal-The temperature is normal. • TemperatureLower-The temperature dropped to or below the low-temperature threshold. • TemperatureWarnning-The temperature increased to or above the high-temperature warning threshold. • TemperatureAlarm-The temperature increased to or above the high-temperature alarming threshold. TemperatureShutdown-The temperature increased to or above the high-temperature shutdown threshold
CurrentTemperature	Current Temperature(℃)	Short
LowerLimitTemperature	Lower Limit Temperature(℃)	Short
WarnningLimitTemperature	Warnning Limit	Short

Column name	Column description	Data type and restrictions
	Temperature(℃)	
AlarmLimitTemperature	Alarm Limit Temperature(℃)	Short
ShutdownLimitTemperature	Shutdown Limit Temperature(℃)	Short

SystemStableStatusEvent event

This event is used to report system stability and status information.

XML structure for event subscription

```
<SystemStableStatusEvent>
</SystemStableStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <SystemStableStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
      </SystemStableStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	SystemStableStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0
Support for extended query	No

Columns

None

XML structure for event report

```
<SystemStableStatusEvent>
  <SystemStatus></SystemStatus>
  <Redundancy></Redundancy>
</SystemStableStatusEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
```

```
  <eventTime>2016-07-21T09:10:51</eventTime>
  <SystemStableStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
    <SystemStatus>Stable</SystemStatus>
    <Redundancy>Stable</Redundancy>
  </SystemStableStatusEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
SystemStatus	System stable status	Enumeration: • Stable • Not ready
Redundancy	Status of active/standby	Enumeration: • Stable • No redundance • Not ready

BoardStableStatusEvent event

This event is used to report card stability and status information.

XML structure for event subscription

```
<BoardStableStatusEvent>
  <BoardStableStatus>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    </BoardStableStatus>
</BoardStableStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <BoardStableStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <BoardStableStatus>
          <Chassis></Chassis>
          <Slot></Slot>
          <CPUID></CPUID>
          </BoardStableStatus>
      </BoardStableStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

    <BoardStableStatus>
      <Chassis>1</Chassis>
      <Slot>1</Slot>
      <CPUID>0</CPUID>
      <Role>Standby</Role>
      <Status>Stable</Status>
    </BoardStableStatus>
  </BoardStableStatusEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
Role	Role of the board	Enumeration: • Active • Standby • Other
Status	Status of the board	Enumeration: • Stable • Board inserted • Kernel initiating • Service starting • Service stopping • HA Batch backup • Interface data batch backup • MDC starting • MDC stopping • Context starting • Context stopping • Removed(Stable)

PowerFailEvent event

This event is used to report power supply failure information.

XML structure for event subscription

```
<PowerFailEvent>
  <Power>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PowerID></PowerID>
    </Power>
</PowerFailEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
```

```
    <filter type="subtree">
      <PowerFailEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Power>
          <Chassis>1</Chassis>
          <Slot>65535</Slot>
          <CPUID>65535</CPUID>
          <PowerID>1</PowerID>
          </Power>
      </PowerFailEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

      <PowerID>1</PowerID>
      <PhysicalIndex>1</PhysicalIndex>
    </Power>
  </PowerFailEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PowerID	ID of the power supply	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index	Unsigned integer. Value range: 0 to 65535.

PowerNormalEvent event

This event is used to report power supply recovery information.

XML structure for event subscription

```
<PowerNormalEvent>
  <Power>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PowerID></PowerID>
    </Power>
</PowerNormalEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
```

```
    <PowerNormalEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
      <Power>
        <Chassis>1</Chassis>
        <Slot>65535</Slot>
        <CPUID>65535</CPUID>
        <PowerID>1</PowerID>
        </Power>
    </PowerNormalEvent>
  </filter>
</create-subscription>
</rpc>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.	No
PowerID	ID of the power supply	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```
<PowerNormalEvent>
  <Power>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PowerID></PowerID>
    <PhysicalIndex></PhysicalIndex>
  </Power>
</PowerNormalEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
```

```
  <PowerNormalEvent xmlns="Device:1.0">
    <Power>
      <Chassis>1</Chassis>
      <Slot>65535</Slot>
      <CPUID>65535</CPUID>
      <PowerID>1</PowerID>
      <PhysicalIndex>1</PhysicalIndex>
    </Power>
  </PowerNormalEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PowerID	ID of the power supply	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index.	Unsigned integer. Value range: 0 to 65535.

PowerRemoveEvent event

This event is used to report power supply removal information.

XML structure for event subscription

```
<PowerRemoveEvent>
  <Power>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PowerID></PowerID>
    </Power>
</PowerRemoveEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <PowerRemoveEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
```

```
      <Power>
        <Chassis>1</Chassis>
        <Slot>65535</Slot>
        <CPUID>65535</CPUID>
        <PowerID>1</PowerID>
        </Power>
    </PowerRemoveEvent>
  </filter>
 </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	PowerRemoveEvent

      <PowerID>1</PowerID>
      <PhysicalIndex>1</PhysicalIndex>
    </Power>
  </PowerRemoveEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PowerID	ID of the power supply	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index	Unsigned integer. Value range: 0 to 65535.

PowerIncompatibleEvent event

This event is used to report power supply incompatibility information.

XML structure for event subscription

```
<PowerIncompatibleEvent>
  <Power>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PowerID></PowerID>
    </Power>
</PowerIncompatibleEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <PowerIncompatibleEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Power>
```

```
        <Chassis>1</Chassis>
        <Slot>65535</Slot>
        <CPUID>65535</CPUID>
        <PowerID>1</PowerID>
        </Power>
      </PowerIncompatibleEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

      <PowerID>1</PowerID>
      <PhysicalIndex>1</PhysicalIndex>
    </Power>
  </PowerInsertEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PowerID	ID of the power supply	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index	Unsigned integer. Value range: 0 to 65535.

FanEvent event

This event is used to report fan alarm information.

XML structure for event subscription

```
<FanEvent>
  <Fan>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </Fan>
</FanEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <FanEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Fan>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
```

```
        <CPUID>0</CPUID>
      </Fan>
    </FanEvent>
  </filter>
 </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Device
Event name	FanEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.	No

XML structure for event report

```
<FanEvent>
  <Fan>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <PhysicalIndex></PhysicalIndex>
    <FanStatus></FanStatus>
  </Fan>
</FanEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <FanEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
    <Fan>
      <Chassis>0</Chassis>
      <Slot>0</Slot>
```

```
      <CPUID>0</CPUID>
      <PhysicalIndex>100</PhysicalIndex>
      <FanStatus>DEV_FANSTATUS_NORMAL</FanStatus>
    </Fan>
  </FanEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index	Unsigned integer. Value range: 0 to 65535.
FanStatus	Status of the fan	Enumeration: • DEV_FANSTATUS_ABSENT-The fan has been removed. • DEV_FANSTATUS_NORMAL-The fan is operating correctly. • DEV_FANSTATUS_FAIL-The fan is faulty. • DEV_FANSTATUS_DIRECTIONFAULT-The fan direction is faulty.

address-pool event stream

ama-register-to-controller event

This event is used to notify controller that AMA registered successfully.

XML structure for event subscription

```
<ama-register-to-controller>
</ama-register-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	address-pool
Event name	ama-register-to-controller
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras
Support for extended query	no

XML structure for event report

```
<ama-register-to-controller>
   <device-id></device-id>
</ama-register-to-controller>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <ama-register-to-controller
xmlns="urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras">
   <device-id>5</device-id>
  </ama-register-to-controller>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
device-id	AMA device id assigned	Unsigned Integer 32	

Column name	Column description	Data type and restrictions	Remarks
	by app	Value range: 0 to 4294967295.	

ama-report-heart-beat-to-controller event

This event is used to report heart beat to controller for AMA

Controller uses this to detect the inactive of AMA.

The period of heart beat is according to the configuration: flexbng-device-info /controller-send-configuration-to-ama/ device-keep-alive-interval.

.

XML structure for event subscription

```
<ama-report-heart-beat-to-controller>
</ama-report-heart-beat-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

Table description

average-address-usage-ratio	Usage ratio of address pool	Unsigned Integer 32. Value range: 0 to 4294967295.	
Ipv6-address-block-name	IPv6 address block name	String String Length:1 to 63	
Ipv6-address-block-id	IPv6 address block ID	Unsigned Integer 32. Value range: 0 to 4294967295.	

ama-report-address-got-to-controller-ipv4 event

This event is used to notify controller the distribution result of ipv4 address pools.

XML structure for event subscription

```
<ama-report-address-got-to-controller-ipv4>
</ama-report-address-got-to-controller-ipv4>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>

</rpc>
```

Table description

Item	Description
Event stream name	address-pool
Event name	ama-report-address-got-to-controller-ipv4
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras

Item	Description
Support for extended query	no

result	Recycled result of ipv6 address pools	Enumeration: • success • fail	

ama-report-lack-of-address-block event

This event is used to notify controller lack of IP address.When controller recieves this notification,it distributes new address pools to device.

XML structure for event subscription

```
<ama-report-lack-of-address-block>
</ama-report-lack-of-address-block>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	address-pool
Event name	ama-report-lack-of-address-block

flexbng-device-info

The namespace of flexbng-device-info is "urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras".

flexbng-device-info/controller-netconf-registration

This table contains flexbng device registration information.

XML structure

```
<flexbng-device-info>
  <controller-netconf-registration>
    <device-id></device-id>
  </controller-netconf-registration>
</flexbng-device-info>
```

Table description

Item	Description
Feature name	flexbng-device-info
Table name	controller-netconf-registration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
device-id	AMA device id assigned by app	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.

Example

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
   <edit-config>
      <target>
         <running/>
      </target>
      <config xmlns:xc="urn:ietf:params:xml:ns:netconf:base:1.0">
         <v:controller-netconf-registration
xmlns:v="urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras">
```

```
          <v:device-id>5</v:device-id>
        </v:controller-netconf-registration>
      </config>
    </edit-config>
</rpc>
```

flexbng-device-info/controller-send-configuration-to-ama

This table is used to send configuration to ama for controller.

XML structure

```
<flexbng-device-info >
  <controller-send-configuration-to-ama>
    <device-keep-alive-interval></device-keep-alive-interval>
    <ipv4-address-pool-usage-threshold></ipv4-address-pool-usage-threshold>
    <ipv6-address-pool-usage-threshold></ipv6-address-pool-usage-threshold>
    <state-update-interval></state-update-interval>
    <device-sampling-interval></device-sampling-interval>
  </controller-send-configuration-to-ama>
</flexbng-device-info>
```

Table description

Item	Description
Feature name	flexbng-device-info
Table name	controller-send-configuration-to-ama
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
device-keep-alive-interval	Heartbeat interval of confd service	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.
ipv4-address-pool-usage-threshold	IPv4 threshold of pool block usage ratio	N/A	DOUBLE. Value range: 0 to 100.
ipv6-address-pool-usage-threshold	IPv6 threshold of pool block usage ratio	N/A	DOUBLE. Value range: 0 to 100.
state-update-interv	Report interval for pool	N/A	Unsigned Integer 32.

al	block status		Value range: 0 to 4294967295.
device-sampling-interval	Sampling interval for pool block usage ratio	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.

Example

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>
    </target>

DHCP

DHCP/DHCPRelayClearUserInfoByIfIndex

Use this table to clear DHCP relay entries by interface index.

XML structure

```
<DHCP>
  <DHCPRelayClearUserInfoByIfIndex>
    <RelayClearUserInfo>
      <IfIndex></IfIndex>
    </RelayClearUserInfo>
  </DHCPRelayClearUserInfoByIfIndex>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayClearUserInfoByIfIndex
Table type	Multi-instance table
Row name	RelayClearUserInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	If no value is specified for IfIndex, all entries will be cleared.

DHCP/DHCPServerClearIpInUseByPool

Use this table to clear binding information about assigned IP addresses by pool name.

XML structure

```
<DHCP>
  <DHCPServerClearIpInUseByPool>
    <ServerClearIpInUse>
      <PoolName></PoolName>
```

```
      <RelayAddress></RelayAddress>
    </ServerClearIpInUse>
  </DHCPServerClearIpInUseByPool>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClearIpInUseByPool
Table type	Multi-instance table
Row name	ServerClearIpInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolName	DHCP address pool name	Index	String, case insensitive. Length: 1 to 63 characters.
RelayAddress	Relay address	N/A	Hexadecimal string, colon-separated.

DHCP/DHCPServerClearIpInUse

Use this table to clear binding information about assigned IP addresses.

XML structure

```
<DHCP>
  <DHCPServerClearIpInUse>
    <ServerClearIpInUse>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
    </ServerClearIpInUse>
  </DHCPServerClearIpInUse>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClearIpInUse

Item	Description
Table type	Multi-instance table
Row name	ServerClearIpInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A

DHCP/DHCPServerClearIpInUseByVrf

Use this table to clear binding information about assigned IP addresses by VRF.

XML structure

```
<DHCP>
  <DHCPServerClearIpInUseByVrf>
    <ServerClearIpInUseByVrf>
      <VRF></VRF>
      <RelayAddress></RelayAddress>
    </ServerClearIpInUseByVrf>
  </DHCPServerClearIpInUseByVrf>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClearIpInUseByVrf
Table type	Multi-instance table
Row name	ServerClearIpInUseByVrf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the binding information belongs to the public network, do not specify a value for the VRF element.
RelayAddress	Relay address	N/A	Hexadecimal string, colon-separated.	N/A

DHCP/DHCPRelayClearUserInfo

Use this table to clear DHCP relay entries.

XML structure

```
<DHCP>
  <DHCPRelayClearUserInfo>
    <RelayClearUserInfo>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
    </RelayClearUserInfo>
  </DHCPRelayClearUserInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayClearUserInfo
Table type	Multi-instance table
Row name	RelayClearUserInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	To specify the public network, enter a value of 0.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A

DHCP/ImportIpMac

This table contains DHCP IP-MAC binding import information.

XML structure

```
<DHCP>
  <DHCPImportIpMac>
    <PoolName></PoolName>
    <FileName></FileName>
  </DHCPImportIpMac>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPImportIpMac
Table type	Multi-instance table
Row name	No
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	Name of the pool to which the bindings to be imported	N/A	String. Length: 1 to 63 characters.	N/A
FileName	Name of the file to be imported	N/A	String. Length: 1 to 255 characters.	N/A

DHCP/ExportIpMac

This table contains DHCP IP-MAC binding export information.

XML structure

```
<DHCP>
  <DHCPExportIpMac>
    <PoolName></PoolName>
    <FileName></FileName>
  </DHCPExportIpMac>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPExportIpMac
Table type	Multi-instance table
Row name	No
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	Name of the pool from which the bindings are exported	N/A	String. Length: 1 to 63 characters.	N/A
FileName	Name of the file to be exported	N/A	String. Length: 1 to 255 characters.	N/A

DHCP/ DHCPServerDebug

Use this table to turn on or turn off the DHCP server debug information switch.

XML structure

```
<DHCP>
  <DHCPServerDebug>
    <Enable></Enable>
  </DHCPServerDebug>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerDebug
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Turn on or turn off the DHCP server debug information switch	Column	Boolean: • **true** (on) • **false** (off, the default)	N/A

DHCP/DHCPClearPoolMaxUsage

Use this table to clear the peak address usage data for the address pool.

XML structure

```
<DHCP>
  <DHCPClearPoolMaxUsage>
    <PoolClearMaxUsage>
      <PoolName></PoolName>
    </PoolClearMaxUsage>
  </DHCPClearPoolMaxUsage>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPClearPoolMaxUsage
Table type	Multi-instance table
Row name	PoolClearMaxUsage
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	DHCP pool name	Index	String.	N/A

DHCP/ DHCPServerForceRenewSubNet

Use this table to renew information about the subnets allocated to ODAP clients.

XML structure

```
<DHCP>
  <DHCPServerForceRenewSubNet>
    <ServerForceRenewSubNet>
      <PoolIndex></PoolIndex>
    <ServerForceRenewSubNet>
  </DHCPServerForceRenewSubNet>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerForceRenewSubNet
Table type	Multi-instance table
Row name	ServerForceRenewSubNet
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 1 to 8192.	The specified pool index must already exist.

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerIpPool
Table type	Multi-instance table, multi-level table
Row name	IpPool
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 cannot be set.
PoolName	DHCP address pool name	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when create a new row. Cannot be modified.
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the DHCP address pool is on the public network, the length of characters is 0.
NetworkIpv4Address	Primary subnet for dynamic allocation	N/A	String, dotted decimal notation.	Modifying or removing the network configuration deletes the assigned addresses from the current address pool.
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
NetworkExportRoute	Whether to advertise the subnet route	N/A	Boolean: • **true** • **false** (default)	It must be configured together with NetworkIpv4Address
NetworkPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255. Default: 65.	N/A
NetworkTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 0.	
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	The address range specified must be within the subnet. The addresses out of the address range cannot be assigned. It must be configured together with the EndIpv4Address column.
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	It must be configured together with the StartIpv4Address column.
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365. Default: 1.	LeaseDay, LeaseHour, LeaseMinute, LeaseSecond must be configured together. Cannot be configured together with LeaseUnlimit.
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23. Default: 0.	N/A
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseUnlimit	Whether the function of unlimited lease duration is	N/A	Boolean: • **true** • **false**(default)	Cannot be configured together with LeaseDay, LeaseHour, LeaseMinute,

Column name	Column description	Column type	Data type and restrictions	Remarks
	specified.			LeaseSecond.
DomainName	Domain name	N/A	String, case sensitive. Length: 1 to 50 characters.	N/A
GatewayIpv4Address	Gateway addresses	N/A	String, case insensitive. Length: 1 to 1024 characters.	You can specify a space-separated list of up to 64 addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
GatewayExportRoute	Route of export gateway segment	N/A	Boolean: • **True** • **false**	N/A
DNSIpv4Address	DNS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
NetbiosType	NetBIOS node type	N/A	Enumeration: • **1**—b-node. • **2**—p-node. • **3**—m-node. • **4**—h-node.	b-node: Specifies the broadcast node. A b-node client sends the destination name in a broadcast message to get the name-to-IP mapping from a server. h-node: Specifies the hybrid node. An h-node client unicasts the destination name to a WINS server. If it does not receive a response, the h-node client broadcasts the destination name to get the mapping from a server. m-node: Specifies the mixed node. An m-node

Column name	Column description	Column type	Data type and restrictions	Remarks
				client broadcasts the destination name. If it does not receive a response, the m-node client unicasts the destination name to the WINS server to get the mapping. p-node: Specifies the peer-to-peer node. A p-node client sends the destination name in a unicast message to get the mapping from the WINS server.
NbnsIpv4Address	WINS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
SubnetAlloc	The flag of dynamic pool	N/A	Enumeration: • **0**—normal pool (default). • **1**—dynamic pool.	Address pool type does not support change again. Configuration StartIpv4Address and EndIpv4Address is not supported when the pool type is dynamic.
PoolType	Address pool type	N/A	Enumeration. • 0—normal (default). • 1—subnet-alloc • 2—odap-client • 3—odap-server • 4— nat (not supported) • 5—odap-client host	Required when create a new row, cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 6—bas local • 7—bas remote • 8—nat-local (not supported) • 9—odap • 10—nat-central	
SubnetAllocMode	Subnet allocation mode	N/A	Enumeration. • 0—vxlan-id (default). • 1—up-id • 2—pool-name. • 3—interface. • 4—up-backup-profile. • 5—interface-physic. • 6—up-backup-profile-route-refresh.	The address pool type must be subnet-alloc.
SubnetMaskLen	Subnet mask length	N/A	Unsigned integer. Value range: 1 to 32.	Subnet mask length cannot be less than network mask length.
SubnetExportRouteDisable	Whether to disable advertising dynamically allocated subnets	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
SubnetExportRoutePreference	Route preference	N/A	Unsigned integer. Value range: 1 to 255	N/A
SubnetExportRouteTag	Route tag	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
SubnetIdleTime	Delay time for the DHCP server to reclaim idle subnets	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ForbiddenIp	IPv4 adress excluded from dynamic allocation in the current IP pool.	Data structure	Members include: • StartForbiddenIpv4Address • EndForbiddenIpv4Address	You can specify an IPv4 address range excluded from dynamic allocation.
StartForbiddenIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	N/A
EndForbiddenIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	EndForbiddenIpv4Address cannot be lower than the StartForbiddenIpv4Address.
BindingUpAddress	Ipv4 address	N/A	String, dotted decimal notation.	N/A
ExportHostRoute	Whether the function of export host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
OriginSubnetMaskLen	Origin subnet mask length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
SubnetUltizationMark	N/A	Data structure	Members include: • High • Low	N/A
High	Subnet ultization mark high	N/A	Unsigned integer. Value range: 1 to 100. Default:100	N/A
Low	Subnet ultization mark low	N/A	Unsigned integer. Value range: 0 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default:50	
SubnetGiaddr	N/A	N/A	String, dotted decimal notation.	N/A
UnrTag	The tag value of user network route	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
TftpServerDomainName	Tftp server domain name	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
TftpServerIp	Tftp server ip address	N/A	String, dotted decimal notation.	N/A
AllocateNewIp	Whether the function of allocate new ip is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
ExhaustionLogEnable	Whether IP pool exhaustion logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
ExhaustionTrapEnable	Whether the SNMP notification about IP pool exhaustion is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
RouteLogEnable	Whether IP pool route logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInuseThreshold	The warning rate of used ip in dhcp	N/A	Unsigned integer. Value range: 0 to 100.	N/A
IpSubnetInuseThreshold	Subnet usage threshold for the IP address pool, in percentage	N/A	Unsigned integer. Value range: 0 to 100.	N/A
NextServer	The next provided server ip address	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ReserveExpiredIp	N/A	Data structure	Members include: • Enable • Mode • Limit • Time	N/A
Enable	Whether the function of reserve expired ip is specified.	N/A	Boolean: • **True**(default) • **False**	N/A
Mode	The mode of reserve expired ip	N/A	Enumeration: • **Client-id**. (default) • **m**ac	N/A
Limit	The limit number of reserve expired ip	N/A	Unsigned integer. Value range: 1 to 256000.	N/A
Time	The time of reserve expired ip	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
DhcpRelaySwitch	N/A	Data structure	Members include: • NakCount • ServerTimeOut • MasterServerSwitchDelay • RemoteServerAlgorithm	N/A
NakCount	The max number of DHCP-NAK	N/A	Unsigned integer. Value range: 0 to 255.	N/A
GatewayOnly	Modify the giaddr value only	N/A	Boolean: • **true** **false (default)**	N/A
ServerTimeOut	DHCP reply time	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MasterServerSwit	The time of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
chDelay	master server switch delay		Value range: 1 to 65535.	
RemoteServerAlgorithm	N/A	N/A	Enumeration: • Master-backup • polling(default)	N/A
BimsServer	N/A	Data structure	Members include: • Ip • Port • SharekeyType • Password	N/A
Ip	bimsserver ip address	N/A	String, dotted decimal notation.	N/A
Port	Port number	N/A	Unsigned integer. Value range: 1 to 65534	N/A
SharekeyType	N/A	N/A	Enumeration: • cipher. • Simple.	N/A
Password	N/A	N/A	String, case sensitive. Length: 1 to 16（simple）or 1 to 53(cipher) characters.	N/A
Bootfile	N/A	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
DhcpServerSource	N/A	Data structure	Members include: • SourceType • IpAdress • Interface	N/A
SourceType	N/A	N/A	Members include: • IpAddress • Gateway • Interface	N/A
IpAddress	N/A	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	N/A	N/A	Members include: • GigabitEthernet <2-2> • M-GigabitEthernet Interface<0-0> • Serial<2-2> • Vlan-interface<1-1>	N/A
LeaseAllowHint	Whether the function of expired allow-hint is specified.	N/A	Boolean: • **True** • False**(false)**	N/A
VerifyClass	Whether the function of Verify class is specified.	N/A	Boolean: • **True** • **False(false)**	N/A
VoiceConfig	N/A	Data structure	Members include: • AsIp • FailOverIp • FailOverDialerString • VoiceVlanId • VoiceVlanEnable • NcpIp	N/A
AsIp	N/A	N/A	String, dotted decimal notation.	N/A
FailOverIp	N/A	N/A	String, dotted decimal notation.	N/A
FailOverDialerString	N/A	N/A	String, case sensitive. Length: 1 to 39 (0-9, *)characters.	N/A
VoiceVlanID	N/A	N/A	Unsigned integer. Value range: 2 to 4094	N/A
VoiceVlanEnable	Whether the function of VoiceVlanID is	N/A	Boolean: • **True** • **False(false)**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	specified.			
NcpIp	N/A	N/A	String, dotted decimal notation.	N/A
VsrpInstance	N/A	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
ClassRanges	N/A	Data structure	Members include: • Class • StartIp • EndIP	SubTable
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
StartIp	Start ip of range	N/A	String, dotted decimal notation.	N/A
EndIp	End ip of range	N/A	String, dotted decimal notation.	N/A
ClassLeaseTime	IP address lease duration for the DHCP user class in seconds	N/A	Unsigned integer. Value range: 30 to 31622399.	N/A
ClassLeaseUnlimit	Whether to set the IP address lease duration unlimited.	N/A	Boolean: • **true** • **false** (default)	You cannot configure ClassLeaseUnlimit together with ClassLeaseTime .
ClassLeaseAllowHint	Whether to allow the DHCP server to use the DHCP client-suggested lease duration	N/A	Boolean: • **true** • **false** (default)	To configure ClassLeaseAllowHint, configure ClassLeaseTime or ClassLeaseUnlimit first.
ClassOptionGroups	N/A	Data structure	Members include: • Class • OptionGroup	SubTable

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
OptionGroup	Group number	N/A	Unsigned integer. Value range: 1 to 32768	N/A
RemoteServers	N/A	Data structure	Members include: • Ip • VRF • Public	SubTable
Ip	N/A	Index	String, dotted decimal notation.	N/A
VRF	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
Public	Whether the function of remote-server public is specified.	N/A	Boolean: • **True** • **False(false)**	N/A
ValidClasses	N/A	Data structure	Members include: Class	SubTable
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
Networks	N/A	Data structure	Members include: • NetworkAddress • Gateway-list • NetworkSecMask • NetworkSecPriority • NetworkSecExportRoute • NetworkSecPreference • NetworkSecTag	SubTable

Column name	Column description	Column type	Data type and restrictions	Remarks
			• GatewayLists	
Network	Specify a network for the pool	Sublist	N/A	N/A
NetworkAddress	N/A	Index	String, dotted decimal notation.	N/A
NetworkSecMask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
NetworkSecPriority	Priority value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
NetworkSecExportRoute	Whether to advertise the subnet route	N/A	Boolean: • **true** **false**(default)	It must be configured together with NetworkIpv4Address
NetworkSecPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255.	N/A
NetworkSecTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
GatewayLists	N/A	Data structure	Members include: Gateway	SubTable
GatewayList	Specify gateways	Sublist	N/A	N/A
Gateway	Gateway addresses	Index	String, dotted decimal notation.	N/A
Bindings	N/A	Data structure	Members include: • UpIfName • BindingUpId BindingUpBackupProfile	SubTable
Binding	Bind an IPv4 address pool to a UP device	Sublist	N/A	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UpIfName	Interface name.	N/A	String, case sensitive. Length: 1 to 48 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
BindingUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	BindingUpId
BindingUpBackupProfile	Backup group to which IP address pool belongs	N/A	Unsigned integer. Value range: 1 to 16384.	N/A
BindingMasterUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingBackupUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingRouteRefresh	Enable the CP to issue the updated subnet route to UPs after a master-backup switchover in warm backup mode	N/A	Boolean: • **True** • **false** (default)	It must be configured together with BindingUpBackupProfile
ForbiddenIpsInPool	List of ForbiddenIpInPool	Sublist	N/A	N/A
ForbiddenIpInPoo	A space-separated	Sublist	N/A	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
l	list of up to eight excluded IP addresses.			
SingleForbiddenIpv4Address	The excluded IP addresses in an IP pool are still assignable in other IP pools.	N/A	String, dotted decimal notation.	N/A
GatewayOfBasPool	Gateway addresses of bas local or bas remote address pool	N/A	String, dotted decimal notation.	N/A
GatewayMaskOfBasPool	Mask of the gateway address of bas local or bas remote address pool	N/A	String, dotted decimal notation.	N/A
SubnetForceRenew	Renew information about the subnets allocated to ODAP clients	N/A	Boolean: • **true** • **false** (default)	This column is obsolete. To renew the subnets allocated to ODAP clients, use the SubnetForceRenew column in the DHCPServerForceRenewSubNet table, as described in the DHCP NETCONF XML API action reference document.
ReserveGroupName	UP backup group bound to the IP address pool	N/A	String, dotted decimal notation.	Configure this object to assign reserved IP users to the specified UP backup group.
Gateway-list	N/A	N/A	String, dotted decimal notation.	N/A
StartIpv4Network	Start IP address of the IP network	N/A	String, dotted decimal notation.	The specified network range cannot overlap

Column name	Column description	Column type	Data type and restrictions	Remarks
	range in the DHCP NAT-central address pool			with the networks or network ranges specified for any pools in the same network namespace (the public network or VPN instance). If you specify StartIpv4Network, you must also specify EndIpv4Network. You can specify a start IP address only in the NAT-central IP address pool.
EndIpv4Network	End IP address of the IP network range in the DHCP NAT-central address pool	N/A	String, dotted decimal notation.	If you specify StartIpv4Network, you must also specify EndIpv4Network. You can specify an end IP address only in the NAT-central IP address pool.
IpPoolLock	Lock the IP pool to prevent it from being used for IP assignment or lease renewal	N/A	Unsigned integer. Enumeration: • **0**—The IP pool is not locked and can be used for IP assignment and lease renewal. This is the default setting. • **1**—Lock the IP pool in loose mode. • **2**—Lock the IP pool in strict mode.	If an IP pool is locked in loose mode, the DHCP server cannot use it for IP address assignment, but it can still renew leases for clients that have been assigned IP addresses from that pool. Lock an IP pool in strict mode to prevent it from being used for assignment of new IP addresses or lease renewal.

DHCP/DHCPServerPoolStatic

This table contains static binding information of DHCP server IP pool.

XML structure

```
<DHCP>
  <DHCPServerPoolStatic>
    <IpPoolStatic>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <CID></CID>
      <HAddress></HAddress>
      <HType></HType>
      <Description></Description>
    </IpPoolStatic>
  </DHCPServerPoolStatic>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatic
Table type	Multi-instance table
Row name	IpPoolStatic
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
Ipv4Address	IP address of the static binding	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Mask	IP address mask of the static binding	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
CID	Client ID of the static binding	N/A	String, case insensitive. Length: 4 to 254 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H…. The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct. Can not be configured together with HAddress, HType column, but one of the CID and HAddress is required. Can not modify bindings. To change the binding for a DHCP client, you must delete the existing binding first and create a new binding.
HAddress	Client hardware address of the static binding	N/A	String, case insensitive. Length: 4 to 39 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H…. The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit

Column name	Column description	Column type	Data type and restrictions	Remarks
				hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HType	Client hardware address type	N/A	Enumeration: • **1**—Ethernet (default). • **2**—TokenRing.	It must be configured together with the HAddress column.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

Table description

Item	Description
Feature name	DHCP

Table name	DHCPConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DHCPEnable	Whether the function of DHCP is enabled.	N/A	Boolean: • **true** • **false** (default)	N/A
ServerConfig	The configuration of DHCP server	Data structure	Members include: • AlwaysBroadcastAlert • IgnoreBOOTP • BOOTPReplyRFC1048 • Opt82Enabled • PingNumber • PingTimeout • AuthorizedIpConflictIgnore • AllocatedIpThreshold • TrapAddressExhaust • TrapAllocIp • TrapIpInUse • MultiIpPerMacEnable • ReplyExcludeOpt60 • DynamicPoolTag (not supported)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• FramedIpAddressTag • FramedIpNetmaskTag • FramedRouteTag • LocalPoolTag • RemotePoolTag	
AlwaysBroadcast	Whether enable the DHCP server to broadcast all responses or not.	N/A	Boolean: • **true** • **false** (default)	N/A
IgnoreBOOTP	Whether ignore BOOTP requests or not.	N/A	Boolean: • **true** • **false** (default)	N/A
BOOTPReplyRFC1048	Whether enable the DHCP server to send BOOTP responses in RFC 1048 format when it receives RFC 1048-incompliant BOOTP requests for statically bound addresses or not.	N/A	Boolean: • **true** • **false** (default)	N/A
Opt82Enabled	Whether enable the DHCP server to handle Option 82 or not.	N/A	Boolean: • **true** (default) • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PingNumber	Maximum number of ping packets	N/A	Unsigned integer. Value range: 0 to 10. Default: 1.	To disable the address conflict detection, set the value to 0.
PingTimeout	Ping response timeout time on the DHCP server	N/A	Unsigned integer. Value range: 0 to 10000 milliseconds. Default: 500 milliseconds.	To disable the ping operation for address conflict detection, set the value to 0 milliseconds.
Applypolicy	Apply a DHCP policy	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
AuthorizedIpConflictIgnore	Whether to ignore authorized IP address conflicts.	N/A	Boolean: • **true** • **false** (default)	N/A
AllocatedIpThreshold	IP address allocation success rate threshold.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
TrapAddressExhaust	Whether to enable SNMP notifications for IP pool exhaustion or recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapAllocIp	Whether to enable SNMP notifications for IP address allocation success rate threshold violation.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapIpInUse	Whether to enable SNMP	N/A	Boolean: • **true** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	notifications for IP pool usage threshold violation and recovery.		• **false**	
MultiIpPerMacEnable	Whether to enable allocation of different IP addresses to DHCP clients with the same MAC address.	N/A	Boolean: • **true** • **false** (default)	N/A
ReplyExcludeOpt60	Whether to disable the DHCP server from encapsulating Option 60 in DHCP replies.	N/A	Boolean: • **true** • **false** (default)	N/A
DynamicPoolTag	UNR tag value for IP pools that support dynamic subnet allocation.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	This column is not supported.
FramedIpAddressTag	UNR tag value for host routes generated based on the Framed-IP-Address attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
FramedIpNetmaskTag	UNR tag value for network routes	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	generated based on the Framed-IP-Netmask attribute assigned by the RADIUS server.		4294967295. Default: 0.	
FramedRouteTag	UNR tag value for network routes generated based on the Framed-Routing attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
LocalPoolTag	UNR tag value for local BAS IP pools.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
RemotePoolTag	UNR tag value for remote BAS IP pools.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
RelayConfig	Configuration of DHCP relay	Data structure	Members include: • UserInfoRecord • UserInfoRefresh • UserInfoFlushTime • AlwaysUnicast • CheckMacAddressAgingTime • SmartRelayEnable	N/A
UserInfoRecord	Whether the function of recording	N/A	Boolean: • **true** • **false**(default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	client information in relay entries is enabled.			
UserInfoRefresh	Whether enable the relay agent to periodically refresh dynamic relay entries or not.	N/A	Boolean: • **true**(default) • **false**	N/A
UserInfoFlushTime	Interval at which the DHCP relay agent periodically refreshes relay entries	N/A	Unsigned integer. Value range: 0 to 120 seconds. Default: 0 seconds.	To automatically calculate the refresh interval, set the value to 0 seconds.
FloodProtectionThreshold	Threshold of DHCP flood protection	Data structure	Members include: • NumberOfPackets • DetectionTime.	N/A
NumberOfPackets	Number of DHCP packets allowed to be received within detection time and not judged as an attack.	N/A	Unsigned integer. Value range: 2 to 200. Default: 10.	N/A
DetectionTime	Detection time in milliseconds.	N/A	Unsigned integer. Value range: 1000 to 10000. Default: 5000.	N/A
FloodProtectionAgeTime	Aging time of DHCP flood protection entries	N/A	Unsigned integer. Value range: 30 to 600. Default: 300.	N/A
LogEnable	Whether the	N/A	Boolean:	N/A

	function of DHCP logging is enabled		• **true** • **false**(default)	
AlwaysUnicast	Whether to enable the DHCP relay agent to always unicast relayed DHCP response.	N/A	Boolean: • **true** (default) • **false**	N/A
CheckMacAddressAgingTime	Aging time for MAC address check entries on the DHCP relay agent.	N/A	Unsigned integer. Value range: 30 to 600 seconds. Default: 30.	N/A
SmartRelayEnable	Whether to enable the DHCP smart relay feature.	N/A	Boolean: • **true** • **false** (default)	N/A
ConflictIpOffline	Whether to enable the IP conflicting user offline feature.	N/A	Boolean: • **true** • **false** (default)	N/A
RouteLogGlobalEnable	Whether the function of DHCP route logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
Dscp	DSCP value for DHCP packets.	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.	N/A
IfFloodProtectionThreshold	DHCP packet rate threshold that triggers DHCP flood attack protection.	Data structure	Members include: • NumberOfPackets • DetectionTime	N/A

NumberOfPackets	Maximum number of DHCP packets received on an interface.	N/A	Unsigned integer. Value range: 2 to 6000. Default: 3000.	N/A
DetectionTime	Interface-based DHCP attack detection duration.	N/A	Unsigned integer. Value range: 1000 to 10000 milliseconds. Default: 5000.	N/A
IfFloodProtectionAgeTime	Aging time of interface-based DHCP attack suppression entries.	N/A	Unsigned integer. Value range: 30 to 600 seconds.	N/A
ServerDatabase	Configuration of the DHCP server database.	Data structure	Members include: • FileName • Url • UserName • PasswordType • Password • UpdateInterval	N/A
FileName	Name of the DHCP binding backup file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
Url	URL of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UserName	UserName of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
PasswordType	PasswordType of the remote backup file.	N/A	String, case-insensitive. Length: 6 characters.	Cipher or simple
Password	Password of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 73 characters in ciphertext, and 1 to 32 characters	N/A

			in plaintext.	
UpdateInterval	Waiting time for the DHCP server to update the backup file after a DHCP binding change.	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300.	N/A
RequestIpAddressCheck	Enabling status of the request-ip-address check function for DHCP server.	N/A	Boolean: • **True** • **false** (default)	N/A
DiscoverOffline	Whether the DHCP server releases the IP address lease previously assigned to a client when it receives a DHCP DISCOVER message from that client.	N/A	Boolean: • **true**—The server releases the IP address lease and does not respond to the request. • **false**—The server responds with the IP address in the lease.	N/A
RebootRequestOffline	Whether the DHCP server releases the IP address lease previously assigned to a client when it receives a DHCP REQUEST message sent by the client upon a reboot	N/A	Boolean: • **true**—The server releases the IP address lease and does not respond to the request. • **false**—The server responds with the IP address in the lease.	N/A
DHCPRateLimit	Set a limit on	N/A	Unsigned integer.	With this feature

	the receiving rate of DHCP packets from users.		Value range: 1 to 500000000.	enabled, the device will drop DHCP packets that exceed the limit.

DHCP/DHCPIfMode

This table contains DHCP interface mode information.

XML structure

```
<DHCP>
  <DHCPIfMode>
    <IfMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <Option60></Option60>
      <ClientDetect></ClientDetect>
      <FloodProtectionEnable></FloodProtectionEnable>
      <SessionMismatchAction></SessionMismatchAction>
      <ApplyIpPool></ApplyIpPool>
    </IfMode>
  </DHCPIfMode>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfMode
Table type	Multi-instance table
Row name	IfMode
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Mode	DHCP mode	N/A	Enumeration: • **0**—None. • **1**—Server (default). • **2**—Relay. • **3**—RelayProxy.	N/A
Option60	Used to configure DHCP relay to add option 60 in DHCP request message	N/A	String. Length: 1 to 128.	N/A
ClientDetect	Enable the offline detection function of DHCP relay user.	N/A	Boolean: • **true** • **false** (default)	N/A
FloodProtectionEnable	Whether enable DHCP flood protection.	N/A	Boolean: • **true** • **false** (default).	N/A
SessionMismatchAction	Configure the processing method of DHCP request sent by online users whose physical location changes	N/A	Enumeration: • **0**—Invalid(default) • **1**—Roam • **2**—Fastrenew • **3**—All	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	and MAC address remains unchanged by DHCP device.			
ApplyIpPool	Specifies the name of the IP pool to apply to the interface	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DHCP/DHCPRelaySrvIPv4Address

This table contains DHCP servers on the DHCP relay agent information.

XML structure

```
<DHCP>
  <DHCPRelaySrvIPv4Address>
    <RelaySrvIPv4>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <Public></Public>
      <VpnInstanceName></VpnInstanceName>
    </RelaySrvIPv4>
  </DHCPRelaySrvIPv4Address>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySrvIPv4Address
Table type	Multi-instance table
Row name	RelaySrvIPv4
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A
Public	DHCP servers belonging to the public network	Index	Boolean: • **true** • **false**.	N/A
VpnInstanceName	DHCP servers belonging to a VRF	Index	String. Length: 1 to 31.	N/A

DHCP/DHCPServerPoolOption

This table contains DHCP server IP pool options information.

XML structure

```
<DHCP>
  <DHCPServerPoolOption>
    <IpPoolOption>
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
      <OptionValueAscii></OptionValueAscii>
      <OptionValueIpAddresses></OptionValueIpAddresses>
    </IpPoolOption>
  </DHCPServerPoolOption>
```

```
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolOption
Table type	Multi-instance table
Row name	IpPoolOption
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
OptionCode	Number of the customized option	Index	Unsigned integer. Value range: 2 to 254.	Excluding 50 through 54, 56, 58, 59, 61, and 82.
OptionValueHex	Hex string as the option content	N/A	String, case insensitive. Length: 2 to 256 characters.	Only one of OptionValueHex, OptionValueAscii and OptionValueIpAddresses can be set. Hex string of even numbers from 2 to 256 as the option content.
OptionValueAscii	ASCII string as the option content	N/A	String, case sensitive. Length: 1 to 255 characters.	N/A
OptionValueIpAddresses	IP addresses as the option content	N/A	String, case insensitive. Length: 1 to 127 characters.	If there are multiple addresses, separated them by space.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Example: 1.1.1.1 2.2.2.2 3.3.3.3.

DHCP/DHCPRelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPRelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <SourceIfIndex></SourceIfIndex>
      <DefaultGiaddr ></DefaultGiaddr>
      <Gateway></Gateway>
      <RelayInterface></RelayInterface>
    </RelaySrcAddr>
  </DHCPRelaySourceAddress>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv4Address	Source IP address of the DHCP requests forwarded by the DHCP relay agent on the interface	N/A	String, dotted decimal notation.	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.
SourceIfIndex	Index of the source interface for the DHCP requests forwarded by the DHCP relay agent on the interface	N/A	Unsigned integer.	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.If you specify a source interface, its IP address is used as the source IP address of the DHCP requests forwarded by the relay agent. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultGiaddr	Disables the relay agent from setting the specified source IP address in the Giaddr field when it forwards DHCP requests	N/A	Boolean: • **true**—The relay agent does not replace the gateway address in the Giaddr field with the specified source IP address (if any). • **false**—The relay agent sets the specified source address (if any) in the Giaddr field when it forwards DHCP requests.	N/A
Gateway	Gateway of interface	N/A	Boolean: • **true** **false** (default)	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.
RelayInterface	Interface that enable relay	N/A	Boolean: • **true** **false** (default)	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.

DHCP/DHCPRelayInfoEnable

This table contains information about whether the DHCP relay agent support Option 82.

XML structure

```
<DHCP>
  <DHCPRelayInfoEnable>
    <RelayInfoEnable>
      <IfIndex></IfIndex>
      <InfoEnable></InfoEnable>
      <Strategy></Strategy>
```

```
      <RemoteId>
        <Type></Type>
        <Format></Format>
        <String></String>
      </RemoteId>
      <CircuitId>
        <CircuitIdType></CircuitIdType>
        <WithVxlan></WithVxlan>
        <SubInterfaceVlan></SubInterfaceVlan>
        <Format></Format>
        <String></String>
        <Interface></Interface>
        <NodeIdentifierType></NodeIdentifierType>
        <UserDefined></UserDefined>
        <SysnameVlan></SysnameVlan>
      </CircuitId>
      <LinkSelectionAddr></LinkSelectionAddr>
    </RelayInfoEnable>
  </DHCPRelayInfoEnable>
</DHCP>
```

Table description

Item	Description

Table name	DHCPRelayInfoEnable
Table type	Multi-instance table
Row name	RelayInfoEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
InfoEnable	Whether the DHCP relay agent supports Option 82.	N/A	Boolean: • **true** • **false** (default)	N/A
Strategy	Strategy to process Option 82.	N/A	Enumeration: • **0**—replace (default) • **1**—keep • **2**—drop	N/A
RemoteId	Remote ID sub-option configuration.	Data structure	Members include: • Type • Format • String	N/A
Type	Remote ID sub-option type.	N/A	Enumeration: • **0**—normal (default) • **2**—string • **3**—sysname	N/A
Format	Format of the remote ID sub-option.	N/A	Enumeration: • **0**—hex (default) • **1**—ascii	N/A
String	Content of the remote ID sub-option.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
CircuitId	Circuit ID sub-option configuration.	Data structure	Members include: • CircuitIdType • WithVxlan • SubInterfaceVlan • Format • String	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Interface • NodeIdentifierType • UserDefined • SysnameVlan	
CircuitIdType	Circuit ID sub-option type.	N/A	Enumeration: • **0**—normal (default) • **1**—verbose • **2**—string • **4**—bas • **5**—vxlan-port • **6**—srv6-opcode	N/A
WithVxlan	Whether to pad the Circuit ID sub-option with VXLAN ID.	N/A	Boolean: • **true** • **false** (default)	N/A
SubInterfaceVlan	Whether to pad the Circuit ID sub-option with VLAN ID of the L2VE subinterface.	N/A	Boolean: • **true** • **false** (default)	N/A
Format	Format of the circuit ID sub-option.	N/A	Enumeration: • **0**—hex (default) • **1**—ascii	N/A
String	Content of the circuit ID sub-option.	N/A	String, case-sensitive. Length: 3 to 63 characters.	N/A
Interface	Whether to use the interface name as the interface information.	N/A	Boolean: • **true** • **false** (default)	N/A
NodeIdentifierType	Node identifier type.	N/A	Enumeration: • **0**—mac • **1**—sysname	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—user-defined	
UserDefined	User-defined string as the node identifier.	N/A	String, case-sensitive. Length: 1 to 50 characters.	The node identifier cannot contain spaces.
SysnameVlan	Whether to pad the Circuit ID sub-option with the inner and outer VLAN information of request packets.	N/A	Boolean: • **true** • **false**(default)	This parameter is supported only when the device name (**sysname**) is specified as the node identifier.
LinkSelectionAddr	IP address for sub-option 5 of Option 82	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPServerForbiddenIp

This table contains information about IP addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP>
  <DHCPServerForbiddenIp>
    <ForbiddenIp>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </ForbiddenIp>
  </DHCPServerForbiddenIp>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerForbiddenIp
Table type	Multi-instance table

Row name	ForbiddenIp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
StartIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	N/A
EndIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	EndIpv4Address cannot be lower than the StartIpv4Address.

DHCP/DHCPRelayDiscReqFromTnlEnable

This table contains information about whether the DHCP relay discard request from tunnel.

XML structure

```
<DHCP>
  <DHCPRelayDiscReqFromTnlEnable>
    <RelayDiscardReqFromTnlEnable>
      <IfIndex></IfIndex>
      <DiscardReqFromTnlEnable></DiscardReqFromTnlEnable>
    </RelayDiscardReqFromTnlEnable>
  </DHCPRelayDiscReqFromTnlEnable>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayDiscReqFromTnlEnable
Table type	Multi-instance table
Row name	RelayDiscardReqFromTnlEnable
Restrictions	This table supports only interface of VSI type
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
DiscardReqFromTnlEnable	Whether the DHCP relay agent support discard request packet from tunnel .	N/A	Boolean: • **true** • **false** (default)	N/A

DHCP/DHCPRelayMacFowardEnable

This table contains information about whether the DHCP Relay support forward ACK or OFFER packet by Mac Address

XML structure

```
<DHCP>
  <DHCPRelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
      <MacBroadCast></MacBroadCast>
    </RelayMacForwardEnable>
  </DHCPRelayMacFowardEnable>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayMacFowardEnable
Table type	Multi-instance table
Row name	RelayMacForwardEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacEnable	Whether enable mac forward	N/A	Boolean: • **true** • **false** (default)	If mac forward is enable, DHCP server OFFER or ACK packet will forward via unicast.
MacBroadCast	Whether enable mac broadcast		Boolean: • **true** • **false** (default)	It must configured with MacEnable and Mac Enable must be true.

DHCP/DHCPRelayInfo

This table contains information about the DHCP relay agent option (Option 82).

XML structure

```
<DHCP>
  <DHCPRelayInfo>
    <RelayInfo>
      <IfIndex></IfIndex>
      <CircuitIdMode></CircuitIdMode>
    </RelayInfo>
  </DHCPRelayInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfo
Table type	Multi-instance table
Row name	RelayInfo
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
CircuitIdMode	Mode of the Circuit ID sub-option in	N/A	String, case-insensitive. Values include: • **NormalHex**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Option 82		(default) • **NormalAscii** • **VxlanPort**	

DHCP/DHCPVsi

This table contains the VSI configuration of DHCP.

XML structure

```
<DHCP>
  <DHCPVsi>
    <Vsi>
      <VsiName></VsiName>
      <FloodProtectionEnable></FloodProtectionEnable>
    </Vsi>
  </DHCPVsi>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPVsi
Table type	Multi-instance table
Row name	Vsi
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
FloodProtectionEnable	Enabling status of DHCP flood protection	N/A	Boolean: • **True** • **False** (default).	N/A

DHCP/DHCPRelayPoolRemoteServer

This table contains information about remote server address.

XML structure

```
<DHCP>
  <DHCPRelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv4Address></RemoteServerIpv4Address>
      <Public></Public>
     <VpnInstanceName></VpnInstanceName>
   </RemoteServer>
  </DHCPRelayPoolRemoteServer>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayPoolRemoteServer
Table type	Multi-instance table
Row name	RemoteServer
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
RemoteServerIpv4Address		Index	String, dotted decimal notation.	N/A
`Public`		N/A	Boolean: • **true** **false**(default)	The server is on the public network，and the pool VRF is not public
`VpnInstanceName`	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	The server is on the VPN network

DHCP/DHCPServerPoolGroup

This table contains information about the DHCP address pool group.

XML structure

```
<DHCP>
  <DHCPServerPoolGroup>
    <PoolGroup>
      <GroupName></GroupName>
      <vpn></vpn>
      <Pools>
        <Pool>
          <PoolName></PoolName>
          <Priority></Priority>
        </Pool>
      </Pools>
       <DiscoverNakCnt></DiscoverNakCnt>
       <DiscoverNakDuration></DiscoverNakDuration>
      <IpPoolAlgorithmRoundRobinLocal></IpPoolAlgorithmRoundRobinLocal>
      <IpPoolAlgorithmRoundRobinRemote></IpPoolAlgorithmRoundRobinRemote>
      <PoolGroupExhaustionTrapEnable></PoolGroupExhaustionTrapEnable>
```

```
      <PoolGroupExhaustionLogEnable></PoolGroupExhaustionLogEnable>
      <IpInUseThreshold></IpInUseThreshold>
    </PoolGroup>
  </DHCPServerPoolGroup>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolGroup
Table type	Multi-instance table, multi-level table
Row name	PoolGroup
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	DHCP address pool group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
vpn	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the DHCP address pool is on the public network, the length of characters is 0.
PoolName	DHCP address pool name	Sublist	String, case-insensitive. Length: 1 to 63	Required when you create a new

			characters.	row. The name cannot be modified.
Priority	DHCP address pool priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	N/A
DiscoverNakCnt	Maximum number of NAK replies that the relay agent can receive from a DHCP server	N/A	Unsigned integer. Value range: 1 to 255.	N/A
DiscoverNakDuration	Waiting time for NAK replies from a DHCP server	N/A	Unsigned integer. Value range: 1 to 180 seconds.	N/A
IpPoolAlgorithmRoundRobinLocal	DHCP pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
IpPoolAlgorithmRoundRobinRemote	DHCP pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
PoolGroupExhaustionTrapEnable	Whether the SNMP notification about IP pool group exhaustion is enabled	N/A	Boolean: • **True** • **false**(default)	N/A
PoolGroupExhaustionLogEnable	Whether IP pool group exhaustion logging is enabled	N/A	Boolean: • **True** • **false**(default)	N/A
IpInUseThreshold	The warning rate of used ip in dhcp pool	N/A	Unsigned integer. Value range: 0 to 100.	N/A

	group			

DHCP/DHCPServerPolicy/ClassPolicy

This table contains DHCP server policy information.

XML structure

```
<DHCP>
  <DHCPServerPolicy>
    <ServerPolicy>
      <PolicyName></PolicyName>
      <DefaultIpPool></DefaultIpPool>
      <ClassName></ClassName>
      <IpPoolName></IpPoolName>
      <ClassPolicys>
        <ClassPolicy>
          <Class></Class>
          <IpPool></IpPool>
        </ClassPolicy>
      </ClassPolicys>
    </ServerPolicy>
  </DHCPServerPolicy>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPolicy
Table type	Multi-instance table, multi-level table
Row name	ServerPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	DHCP policy name	Index	String, case insensitive. Length: 1 to 63 characters.	Required when create a new row, and the policy name cannot be modified.
DefaultIpPool	Default IP pool name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ClassName	Class name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IpPoolName	Name of the DHCP address pool for the class	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
ClassPolicys	N/A	Data structure	Members include: • Class • IpPool	SubTable
Class	DHCP6 class name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IpPool	IP pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DHCP/DHCPServerClass

This table contains DHCP server class information.

XML structure

```
<DHCP>
  <DHCPServerClass>
    <ServerClass>
```

```
      <ClassName></ClassName>
      <RuleNumber></RuleNumber>
      <RuleType></RuleType>

Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfConfig
Table type	Multi-instance table, multi-level table
Row name	IfConfig
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
RateLimit	Maximum DHCP packet receiving rate on an interface.	N/A	Unsigned integer. Value range: 1 to 512.	N/A
RateSuppressionEnable	Whether to enable interface-based DHCP attack suppression.	N/A	Boolean: • **true** • **false** (default)	N/A
ApplyPool	DHCP address pool name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
ClientDetec	Enable the user logoff detection function of DHCP server or DHCP relay.	N/A	Boolean: • **true** • **false** (default)	N/A
ServerConfig	Server	Data	Members include:	N/A

	configuration.	structure	• CheckMacAddress • ApplyIpPool • ApplyPolicy • PolicyFirstEnable	
CheckMacAddress	Whether to enable MAC address check on the DHCP server.	N/A	Boolean: • **true** • **false**(default)	N/A
ApplyIpPool	IP pool applied to an interface.	N/A	String. Length: 1 to 63.	N/A
ApplyPolicy	DHCP policy applied to an interface.	N/A	String. Length: 1 to 63.	N/A
PolicyFirstEnable	Whether to enable policy-first IP pool selection.	N/A	Boolean: • **true** • **false** (default)	N/A
RelayConfig	Relay agent configuration.	Data structure	Members include: • CheckMacAddress • DhcpServerTimeout • ForwardReplyByO-pt82 • Gateway • NonFirstHopEnable	N/A
CheckMacAddress	Whether to enable MAC address check on the DHCP relay agent.	N/A	Boolean: • **true** • **false** (default)	N/A
DhcpServerTimeout	DHCP server response timeout time for DHCP server switchover.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 30.	N/A
ForwardReplyByOpt82	Whether to enable the DHCP relay	N/A	Boolean: • **true** • **false** (default)	N/A

	agent to forward DHCP replies based on Option 82.			
Gateway	DHCP relay agent address to be padded to DHCP requests.	N/A	String, dotted decimal notation.	N/A
NonFirstHopEnable	Whether to enable non-first-hop DHCP relay	N/A	Boolean: • **true** **false** (default)	For access authentication to take effect, you must enable this feature on the relay agent.
MasterServerSwitchDelay	The time of master server switch delay	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteServerAlgorithm	N/A	N/A	Enumeration: • Master-backup • polling(default)	N/A
IfReleaseAgent	Send a release message to the DHCP server when you delete a user entry	N/A	Boolean: • **true** (default) • **false**	This column does not take effect unless the device acts as a DHCP relay agent. This column is not supported by common users.
Pools	Used to specify the DHCP relay address pool corresponding to DHCP clients	Child table	N/A	N/A
PoolName	Pool name index	Index	String. Length: 1 to 64.	N/A
PoolOption	No 60 specified for distribution	N/A	Unsigned integer. Value range: 1 to 59 && 61	N/A

			to 254. Default: 0.	
PoolOption60	Option specified as 60	N/A	Boolean: • **true** • **false** (default)	N/A
PoolOption60String	Option specifies string followed by 60 for 60 option	N/A	String. Length: 1 to 128.	N/A

DHCP/DHCPServerOptionGroup

This table contains information about the DHCP server option group.

XML structure

```
<DHCP>
  <DHCPServerOptionGroup>
    <ServerOptionGroup>
      <OptionGroup></OptionGroup>
      <OptionCodes>
        <OptionCode>
          <Code></Code>
          <OptionValueHex></OptionValueHex>
          <OptionValueAscii></OptionValueAscii>
          <OptionValueIp></OptionValueIp>
        </OptionCode>
      <OptionCodes>
    </ServerOptionGroup>
  </DHCPServerOptionGroup>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerOptionGroup
Table type	Multi-instance table, multi-level table
Row name	OptionGroup

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionGroup	DHCP option group number.	Index	Unsigned integer. Value range: 1 to 32768.	Required when you create a new row.

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
OptionCodes	N/A	Data structure	Members include: • Code • OptionValueHex • OptionValueAscii • OptionValueIp	SubTable
Code	DHCP option number.	Index	Unsigned integer. Value range: 2 to 254, excluding 50 through 54, 56, 58, 59, 61, and 82.	N/A
OptionValueHex	DHCP option content.	N/A	Hexadecimal string, case-insensitive. Length: even number in the range of 2 to 256 characters.	N/A
OptionValueAscii	DHCP option content.	N/A	String. Length: 1 to 255 characters.	N/A
OptionValueIp	DHCP option content.	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPRelayServerInfo

This table contains information about the DHCP server information on the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPRelayServerInfo>
    <RelayServerInfo>
      <ServerIp></ServerIp>
      <vpn></vpn>
      <DeadCount></DeadCount>
      <DeadTime></DeadTime>
      <NakCount></NakCount>
      <Timeout></Timeout>
    </RelayServerInfo>
  </DHCPRelayServerInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayServerInfo
Table type	Multi-instance table
Row name	RelayServerInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerIp	DHCP server IP address.	Index	String, dotted decimal notation.	N/A
vpn	VRF instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
DeadCount	Maximum number of consecutive communication failures before the relay agent	N/A	Unsigned integer. Value range: 1 to 64. Default: 0.	N/A

	marks a DHCP server as down.			
DeadTime	Time period for the relay agent to wait before communicating with the DHCP server.	N/A	Unsigned integer. Value range: 1 to 65536. Default: 3.	N/A
NakCount	Maximum number of DHCP-NAK packets that the relay agent can receive.	N/A	Unsigned integer. Value range: 0 to 255. Default: 10.	N/A
Timeout	Communication failure check timer.	N/A	Unsigned integer. Value range: 1 to 60. Default: 25.	N/A

DHCP/DHCPServerOdapPoolGateway

This table contains information about the DHCP server information on the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPServerOdapPoolGateway>
    <PoolIndex></PoolIndex>
    <Gateway></Gateway>
    <MaskLen></MaskLen>
  </DHCPServerOdapPoolGateway>
</DHCP>
```

Table description

Item	Description

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerIpPool
Table type	Multi-instance table, multi-level table
Row name	IpPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	N/A
PoolName	DHCP address	N/A	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	pool name		Length: 1 to 63 characters.	
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the pool is on the public network, the length of characters is 0.
NetworkIpv4Address	Primary subnet for dynamic allocation	N/A	String, dotted decimal notation.	N/A
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
NetworkExportRoute	Whether to advertise the subnet route	N/A	Boolean: • **true**. • **false**.	It must be configured together with NetworkIpv4Address
NetworkPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255. Default: 65.	N/A
NetworkTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	N/A
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365.	N/A
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59.	N/A
LeaseUnlimit	Whether the function of unlimited lease duration is specified.	N/A	Boolean: • **true** • **false**	N/A
DomainName	Domain name	N/A	String, case sensitive. Length: 1 to 50 characters.	N/A
GatewayIpv4Address	Gateway addresses	N/A	String, case insensitive. Length: 1 to 1024 characters.	You can specify a space-separated list of up to 64 addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
GatewayExportRoute	Whether to bind gateways to the DHCP server's MAC address in the address management module.	N/A	Boolean: • **true** • **false**	N/A
DNSIpv4Address	DNS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
NetbiosType	NetBIOS node type	N/A	Enumeration: • **1**—b-node. • **2**—p-node. • **3**—m-node. • **4**—h-node.	b-node: Specifies the broadcast node. A b-node client sends the destination name in a broadcast message to get the name-to-IP mapping from a server.

Column name	Column description	Column type	Data type and restrictions	Remarks
				h-node: Specifies the hybrid node. An h-node client unicasts the destination name to a WINS server. If it does not receive a response, the h-node client broadcasts the destination name to get the mapping from a server. m-node: Specifies the mixed node. An m-node client broadcasts the destination name. If it does not receive a response, the m-node client unicasts the destination name to the WINS server to get the mapping. p-node: Specifies the peer-to-peer node. A p-node client sends the destination name in a unicast message to get the mapping from the WINS server.
NbnsIpv4Address	WINS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
PoolType	Address pool type	N/A	Enumeration. • 0—normal • 1—subnet-alloc • 2—odap-client • 3—odap-server	Required when create a new row, cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4— nat (not supported) • 5—odap-client host • 6—bas local • 7—bas remote • 8—nat-local (not supported) • 9—odap • 10—nat-central	
SubnetAllocMode	Subnet allocation mode	N/A	Enumeration. • 0—vxlan-id • 1—up-id • 2—pool-name. • 3—interface. • 4—up-backup-profile. • 5—interface-physic. 6—up-backup-profile-route-refresh.	N/A
SubnetMaskLen	Subnet mask length	N/A	Unsigned integer. Value range: 1 to 32.	Subnet mask length cannot be less than network mask length.
SubnetExportRouteDisable	Whether to disable advertising dynamically allocated subnets	N/A	Boolean: • **true** • **false**	N/A
SubnetExportRoutePreference	Route preference	N/A	Unsigned integer. Value range: 1 to 255	N/A
SubnetExportRouteTag	Route tag	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
SubnetIdleTime	Delay time for the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DHCP server to reclaim idle subnets		Value range: 1 to 4294967295.	
ForbiddenIp	IPv4 adress excluded from dynamic allocation in the current IP pool.	Data structure	Members include: • StartForbiddenIpv4Address • EndForbiddenIpv4Address	You can specify an IPv4 address range excluded from dynamic allocation.
StartForbiddenIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	N/A
EndForbiddenIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	EndForbiddenIpv4Address cannot be lower than the StartForbiddenIpv4Address.
BindingUpAddress	Ipv4 address	N/A	String, dotted decimal notation.	N/A
ExportHostRoute	Whether the function of export host route is specified.	N/A	Boolean: • **True** • **False**	N/A
OriginSubnetMaskLen	Origin subnet mask length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
SubnetUltizationMark	N/A	Data structure	Members include: • High • Low	N/A
High	Subnet ultization mark high	N/A	Unsigned integer. Value range: 1 to 100. Default:100	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Low	Subnet ultization mark low	N/A	Unsigned integer. Value range: 0 to 99. Default:50	N/A
SubnetGiaddr	N/A	N/A	String, dotted decimal notation.	N/A
UnrTag	The tag value of user network route	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
TftpServerDomainName	Tftp server domain name	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
TftpServerIp	Tftp server ip address	N/A	String, dotted decimal notation.	N/A
AllocateNewIp	Whether the function of allocate new ip is specified.	N/A	Boolean: • **true** • **false**	N/A
ExhaustionLogEnable	Whether IP pool exhaustion logging is enabled	N/A	Boolean: • **true** • **false**	N/A
ExhaustionTrapEnable	Whether the SNMP notification about IP pool exhaustion is enabled	N/A	Boolean: • **true** • **false**	N/A
RouteLogEnable	Whether IP pool route logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInuseThreshold	The warning rate of used ip in dhcp	N/A	Unsigned integer. Value range: 0 to 100.	N/A
IpSubnetInuseThreshold	Subnet usage threshold for the IP address pool, in percentage	N/A	Unsigned integer. Value range: 0 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NextServer	The next provided server ip address	N/A	String, dotted decimal notation.	N/A
ReserveExpiredIp	N/A	Data structure	Members include: • Enable • Mode • Limit • Time	N/A
Enable	Whether the function of reserve expired ip is specified.	N/A	Boolean: • **True** • **False**	N/A
Mode	The mode of reserve expired ip	N/A	Enumeration: • **Client-id**. • **m**ac	N/A
Limit	The limit number of reserve expired ip	N/A	Unsigned integer. Value range: 1 to 256000.	N/A
Time	The time of reserve expired ip	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
DhcpRelaySwitch	N/A	Data structure	Members include: • NakCount • ServerTimeOut • MasterServerSwitchDelay • RemoteServerAlgorithm	N/A
NakCount	The max number of DHCP-NAK	N/A	Unsigned integer. Value range: 0 to 255.	N/A
GatewayOnly	Modify the giaddr value only	N/A	Boolean: • **true** **false**	N/A
ServerTimeOut	DHCP reply time	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			65535.	
MasterServerSwitchDelay	The time of master server switch delay	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteServerAlgorithm	N/A	N/A	Enumeration: • Master-backup. • polling	N/A
BimsServer	N/A	Data structure	Members include: • Ip • Port • SharekeyType • Password	N/A
Ip	bimsserver ip address	N/A	String, dotted decimal notation.	N/A
Port	Port number	N/A	Unsigned integer. Value range: 1 to 65534	N/A
SharekeyType	N/A	N/A	Enumeration: • cipher. • Simple.	N/A
Password	N/A	N/A	String, case sensitive. Length: 1 to 16（simple）or 1 to 53(cipher) characters.	N/A
Bootfile	N/A	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
DhcpServerSource	N/A	Data structure	Members include: • SourceType • IpAdress • nterface	N/A
SourceType	N/A	N/A	Members include: • IpAddress • Gateway	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Interface	
IpAddress	N/A	N/A	String, dotted decimal notation.	N/A
Interface	N/A	N/A	Members include: • GigabitEthernet <2-2> • M-GigabitEthernet Interface<0-0> • Serial<2-2> • Vlan-interface<1-1>	N/A
LeaseAllowHint	Whether the function of expired allow-hint is specified.	N/A	Boolean: • **True** • False	N/A
VerifyClass	Whether the function of Verify class is specified.	N/A	Boolean: • **True** • **False**	N/A
VoiceConfig	N/A	Data structure	Members include: • AsIp • FailOverIp • FailOverDialerString • VoiceVlanId • VoiceVlanEnable NcpIp	N/A
AsIp	N/A	N/A	String, dotted decimal notation.	N/A
FailOverIp	N/A	N/A	String, dotted decimal notation.	N/A
FailOverDialerString	N/A	N/A	String, case sensitive. Length: 1 to 39 (0-9, *)characters.	N/A
VoiceVlanID	N/A	N/A	Unsigned integer. Value range: 2 to 4094	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VoiceVlanEnable	Whether the function of VoiceVlanID is specified.	N/A	Boolean: • **True** • **False(**	N/A
NcpIp	N/A	N/A	String, dotted decimal notation.	N/A
VsrpInstance	N/A	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
ClassRanges	N/A	Data structure	Members include: • Class • StartIp • EndIP	SubTable
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
StartIp	Start ip of range	N/A	String, dotted decimal notation.	N/A
EndIp	End ip of range	N/A	String, dotted decimal notation.	N/A
ClassLeaseTime	IP address lease duration for the DHCP user class in seconds	N/A	Unsigned integer. Value range: 30 to 31622399.	N/A
ClassLeaseUnlimit	Whether to set the IP address lease duration unlimited.	N/A	Boolean: • **true** • **false** (default)	You cannot configure ClassLeaseUnlimit together with ClassLeaseTime .
ClassLeaseAllowHint	Whether to allow the DHCP server to use the DHCP client-suggested lease duration	N/A	Boolean: • **true** • **false** (default)	To configure ClassLeaseAllowHint, configure ClassLeaseTime or ClassLeaseUnlimit first.
ClassOptionGrou	N/A	Data	Members include:	SubTable

Column name	Column description	Column type	Data type and restrictions	Remarks
ps		structure	• Class • OptionGroup	
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
OptionGroup	Group number	N/A	Unsigned integer. Value range: 1 to 32768	N/A
RemoteServers	N/A	Data structure	Members include: • Ip • VRF • Public	SubTable
Ip	N/A	Index	String, dotted decimal notation.	N/A
VRF	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
Public	Whether the function of remote-server public is specified.	N/A	Boolean: • **True** • **False**	N/A
ValidClasses	N/A	Data structure	Members include: Class	SubTable
Class	N/A	Index	String, case sensitive. Length: 1 to 63 characters.	N/A
Networks	N/A	Data structure	Members include: • NetworkAddress • Gateway-list • NetworkSecMask • NetworkSecPriority • NetworkSecExportRoute • NetworkSecPrefer	SubTable

Column name	Column description	Column type	Data type and restrictions	Remarks
			ence • NetworkSecTag • GatewayLists	
Network	Specify a network for the pool	Sublist	N/A	N/A
NetworkAddress	N/A	Index	String, dotted decimal notation.	N/A
Gateway-list	N/A	N/A	String, dotted decimal notation.	N/A
NetworkSecMask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	NetworkSecMask
NetworkSecPriority	Sets a Priority value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 65535.	NetworkSecPriority
NetworkSecExportRoute	Whether to advertise the subnet route	N/A	Boolean: • **true** **false**	NetworkSecExportRoute
NetworkSecPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255.	NetworkSecPreference
NetworkSecTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295.	NetworkSecTag
GatewayLists	N/A	Data structure	Members include: Gateway	GatewayLists
GatewayList	Specify gateways	Sublist	N/A	GatewayList
Gateway	Gateway addresses	Index	String, dotted decimal notation.	Gateway
Bindings	N/A	Data structure	Members include: • UpIfName • BindingUpId BindingUpBackupProfil	Bindings

Column name	Column description	Column type	Data type and restrictions	Remarks
			e	
Binding	Bind an IPv4 address pool to a UP device	Sublist	N/A	Binding
UpIfName	Interface name.	N/A	String, case sensitive. Length: 1 to 48 characters.	UpIfName
BindingUpId	Bind the pool to a up-ID	N/A	Unsigned integer. Value range: 1024 to Product customization maximum	BindingUpId
BindingUpBackupProfile	Backup group to which IP address pool belongs	N/A	Unsigned integer. Value range: 1 to 16384.	BindingUpBackupProfile
BindingMasterUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingBackupUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingRouteRefresh	Enable the CP to issue the updated subnet route to UPs after a master-backup switchover in warm backup mode	N/A	Boolean: • **True** • **false** (default)	It must be configured together with BindingUpBackupProfile
ForbiddenIpsInPool	List of ForbiddenIpInPool	Sublist	N/A	ForbiddenIpsInPool
ForbiddenIpInPool	A space-separated list of up to eight excluded IP	Sublist	N/A	ForbiddenIpInPool

Column name	Column description	Column type	Data type and restrictions	Remarks
	addresses.			
SingleForbiddenIpv4Address	Less than eight excluded IP addresses.	N/A	String, dotted decimal notation.	SingleForbiddenIpv4Address
GatewayOfBasPool	Gateway addresses of bas local or bas remote address pool	N/A	String, dotted decimal notation.	GatewayOfBasPool
GatewayMaskOfBasPool	Mask of the gateway address of bas local or bas remote address pool	N/A	String, dotted decimal notation.	GatewayMaskOfBasPool
SubnetForceRenew	Renew information about the subnets allocated to ODAP clients	N/A	Boolean: • **true** • **false**	This column is obsolete. To renew the subnets allocated to ODAP clients, use the SubnetForceRenew column in the DHCPServerForceRenewSubNet table, as described in the DHCP NETCONF XML API action reference document.
ReserveGroupName	UP backup group bound to the IP address pool	N/A	String, dotted decimal notation.	Configure this object to assign reserved IP users to the specified UP backup group.
NetworkSecMask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	NetworkSecMask
NetworkSecPriority	Sets a Priority value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 65535.	NetworkSecPriority

Column name	Column description	Column type	Data type and restrictions	Remarks
NetworkSecExportRoute	Whether to advertise the subnet route	N/A	Boolean: • **true** **false**	NetworkSecExportRoute
NetworkSecPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255.	NetworkSecPreference
NetworkSecTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295.	NetworkSecTag
GatewayLists	N/A	Data structure	Members include: Gateway	GatewayLists
GatewayList	Specify gateways	Sublist	N/A	GatewayList
Gateway	Gateway addresses	Index	String, dotted decimal notation.	Gateway
Bindings	N/A	Data structure	Members include: • UpIfName • BindingUpId BindingUpBackupProfile	Bindings
Binding	Bind an IPv4 address pool to a UP device	Sublist	N/A	Binding
UpIfName	Interface name.	N/A	String, case sensitive. Length: 1 to 48 characters.	UpIfName
BindingUpId	Bind the pool to a up-ID	N/A	Unsigned integer. Value range: 1024 to Product customization maximum	BindingUpId
BindingUpBackupProfile	Backup group to which IP address pool belongs	N/A	Unsigned integer. Value range: 1 to 16384.	BindingUpBackupProfile
ForbiddenIpsInPo	List of	Sublist	N/A	ForbiddenIpsInPool

Column name	Column description	Column type	Data type and restrictions	Remarks
ol	ForbiddenIpInPool			
ForbiddenIpInPool	A space-separated list of up to eight excluded IP addresses.	Sublist	N/A	ForbiddenIpInPool
SingleForbiddenIpv4Address	Less than eight excluded IP addresses.	N/A	String, dotted decimal notation.	SingleForbiddenIpv4Address
GatewayOfBasPool	Gateway addresses of bas local or bas remote address pool	N/A	String, dotted decimal notation.	GatewayOfBasPool
GatewayMaskOfBasPool	Mask of the gateway address of bas local or bas remote address pool	N/A	String, dotted decimal notation.	GatewayMaskOfBasPool
SubnetForceRenew	Renew the information about subnets allocated to ODAP clients	N/A	Boolean: • **true** **false**	SubnetForceRenew
StartIpv4Network	Start IP address of the IP network range in a DHCP nat-central address pool	N/A	String, dotted decimal notation.	The specified network range cannot overlap with the networks or network ranges specified for any pools in the same network namespace (the public network or VPN instance). If you specify StartIpv4Network, you must also specify EndIpv4Network. You can specify a start IP address only in the

Column name	Column description	Column type	Data type and restrictions	Remarks
				NAT-central IP address pool.
EndIpv4Network	End IP address of the IP network range in a DHCP nat-central address pool	N/A	String, dotted decimal notation.	If you specify StartIpv4Network, you must also specify EndIpv4Network. You can specify an end IP address only in the NAT-central IP address pool.
IpPoolLock	IP pool lock state	N/A	Unsigned integer. Enumeration: • **0**—The IP pool is not locked and can be used for IP assignment and lease renewal. This is the default setting. • **1**—The IP pool is locked in loose mode. • **2**—The IP pool is locked in strict mode.	If an IP pool is locked in loose mode, the DHCP server cannot use it for IP address assignment, but it can still renew leases for clients that have been assigned IP addresses from that pool. Lock an IP pool in strict mode to prevent it from being used for assignment of new IP addresses or lease renewal.

DHCP/DHCPServerPoolStatic

This table contains static binding information of DHCP server IP pool.

XML structure

```
<DHCP>
  <DHCPServerPoolStatic>
    <IpPoolStatic>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <CID></CID>
```

```
      <HAddress></HAddress>
      <HType></HType>
      <Description></Description>
    </IpPoolStatic>
  </DHCPServerPoolStatic>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatic
Table type	Multi-instance table
Row name	IpPoolStatic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
Ipv4Address	IP address of the static binding	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IP address mask of the static binding	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
CID	Client ID of the static binding	N/A	String, case insensitive. Length: 4 to 254 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H…. The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example,

Column name	Column description	Column type	Data type and restrictions	Remarks
				aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HAddress	Client hardware address of the static binding	N/A	String, case insensitive. Length: 4 to 39 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H…. The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HType	Client hardware address type	N/A	Enumeration: • **1**—Ethernet. • **2**—TokenRing.	N/A
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

DHCP/DHCPServerIpInUse

This table contains binding information about assigned IP addresses.

XML structure

```
<DHCP>
  <DHCPServerIpInUse>
    <IpInUse>

Table description

Item	Description
Feature name	DHCP
Table name	DHCPConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DHCPEnable	Whether the function of DHCP is enabled.	N/A	Boolean: • **true** • **false**	N/A
ServerConfig	The configuration of DHCP server	Data structure	Members include: • AlwaysBroadcast Alert • IgnoreBOOTP • BOOTPReplyRFC1048 • Opt82Enabled	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• PingNumber • PingTimeout • AuthorizedIpConflictIgnore • AllocatedIpThreshold • TrapAddressExhaust • TrapAllocIp • TrapIpInUse • MultiIpPerMacEnable • ReplyExcludeOpt60 • DynamicPoolTag (not supported) • FramedIpAddressTag • FramedIpNetmaskTag • FramedRouteTag • LocalPoolTag • RemotePoolTag	
AlwaysBroadcast	Whether Enable the DHCP server to broadcast all responses or not.	N/A	Boolean: • **true** • **false**	N/A
IgnoreBOOTP	Whether Ignore BOOTP requests or not.	N/A	Boolean: • **true** • **false**	N/A
BOOTPReplyRFC1048	Whether enable the DHCP server to send BOOTP responses in RFC 1048 format when it receives RFC 1048-incompliant BOOTP requests for	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	statically bound addresses or not.			
Opt82Enabled	Whether enable the DHCP server to handle Option 82 or not.	N/A	Boolean: • **true** • **false**	N/A
PingNumber	Maximum number of ping packets	N/A	Unsigned integer. Value range: 0 to 10.	To disable the address conflict detection, set the value to 0.
PingTimeout	Ping response timeout time on the DHCP server	N/A	Unsigned integer. Value range: 0 to 10000 milliseconds.	To disable the ping operation for address conflict detection, set the value to 0 milliseconds.
Applypolicy	Apply a DHCP policy	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
AuthorizedIpConflictIgnore	Whether to ignore authorized IP address conflicts.	N/A	Boolean: • **true** • **false**	N/A
AllocatedIpThreshold	IP address allocation success rate threshold.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
TrapAddressExhaust	Whether to enable SNMP notifications for	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IP pool exhaustion or recovery.		• **false**	
TrapAllocIp	Whether to enable SNMP notifications for IP address allocation success rate threshold violation.	N/A	Boolean: • **true** • **false**	N/A
TrapIpInUse	Whether to enable SNMP notifications for IP pool usage threshold violation and recovery.	N/A	Boolean: • **true** • **false**	N/A
MultiIpPerMacEnable	Whether to enable allocation of different IP addresses to DHCP clients with the same MAC address.	N/A	Boolean: • **true** • **false**	N/A
ReplyExcludeOpt60	Whether to disable the DHCP server from encapsulating Option 60 in DHCP replies.	N/A	Boolean: • **true** • **false**	N/A
DynamicPoolTag	UNR tag value for IP pools that support dynamic subnet allocation.	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column is not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
FramedIpAddressTag	UNR tag value for host routes generated based on the Framed-IP-Address attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
FramedIpNetmaskTag	UNR tag value for network routes generated based on the Framed-IP-Netmask attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
FramedRouteTag	UNR tag value for network routes generated based on the Framed-Routing attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
LocalPoolTag	UNR tag value for local BAS IP pools.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
RemotePoolTag	UNR tag value for remote BAS IP pools.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
RelayConfig	The configuration of DHCP relay	Data structure	Members include: • UserInfoRecord • UserInfoRefresh	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• UserInfoFlushTime • AlwaysUnicast • CheckMacAddressAgingTime • SmartRelayEnable	
UserInfoRecord	Whether the function of recording client information in relay entries is enabled.	N/A	Boolean: • **true** • **false**	N/A
UserInfoRefresh	Whether enable the relay agent to periodically refresh dynamic relay entries or not.	N/A	Boolean: • **true** • **false**	N/A
UserInfoFlushTime	Interval at which the DHCP relay agent periodically refreshes relay entries	N/A	Unsigned integer. Value range: 0 to 120 seconds.	To automatically calculate the refresh interval, set the value to 0 seconds.
FloodProtectionThreshold	Threshold of DHCP flood protection.	Data structure	Members include: • NumberOfPackets • DetectionTime.	N/A
NumberOfPackets	Number of DHCP packets allowed to be received within detection time and not judged as an attack.	N/A	Unsigned integer. Value range: 2 to 200.	N/A
DetectionTime	Detection time in milliseconds.	N/A	Unsigned integer. Value range: 1000 to 10000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FloodProtectionAgeTime	Aging of DHCP flood protection entries.	N/A	Unsigned integer. Value range: 30 to 600.	N/A
LogEnable	Whether the function of DHCP logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
AlwaysUnicast	Whether to enable the DHCP relay agent to always unicast relayed DHCP response.	N/A	Boolean: • **true** • **false**	N/A
CheckMacAddressAgingTime	Aging time for MAC address check entries on the DHCP relay agent.	N/A	Unsigned integer. Value range: 30 to 600 seconds.	N/A
SmartRelayEnable	Whether to enable the DHCP smart relay feature.	N/A	Boolean: • **true** • **false**	N/A
ConflictIpOffline	Whether to enable the IP conflicting user offline feature.	N/A	Boolean: • **true** • **false**	N/A
RouteLogGlobalEnable	Whether the function of DHCP route logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
Dscp	DSCP value for DHCP packets.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfFloodProtectionThreshold	DHCP packet rate threshold that triggers DHCP flood attack protection.	Data structure	Members include: • NumberOfPackets • DetectionTime	N/A
NumberOfPackets	Maximum number of DHCP packets received on an interface.	N/A	Unsigned integer. Value range: 2 to 6000.	N/A
DetectionTime	Interface-based DHCP attack detection duration.	N/A	Unsigned integer. Value range: 1000 to 10000 milliseconds.	N/A
IfFloodProtectionAgeTime	Aging time of interface-based DHCP attack suppression entries.	N/A	Unsigned integer. Value range: 30 to 600 seconds.	N/A
ServerDatabase	Configuration of the DHCP server database.	Data structure	Members include: • FileName • Url • UserName • PasswordType • Password • UpdateInterval	N/A
FileName	Name of the DHCP binding backup file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
Url	URL of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UserName	UserName of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PasswordType	PasswordType of the remote backup file.	N/A	String, case-insensitive. Length: 6 characters.	Cipher or simple
Password	Password of the remote backup file.	N/A	String, case-insensitive. Length: 1 to 73 characters in ciphertext, and 1 to 32 characters in plaintext.	N/A
UpdateInterval	Waiting time for the DHCP server to update the backup file after a DHCP binding change.	N/A	Unsigned integer. Value range: 60 to 864000 seconds.	N/A
RequestIpAddressCheck	Enabling status of the request-ip-address check function for DHCP server.	N/A	Boolean: • **true** • **false**	N/A
DiscoverOffline	Whether the DHCP server releases the IP address lease previously assigned to a client when it receives a DHCP DISCOVER message from that client.	N/A	Boolean: • **true**—The server releases the IP address lease and does not respond to the request. • **false** The server responds with the IP address in the lease.	N/A
RebootRequestOffline	Whether the DHCP server releases the IP address lease previously	N/A	Boolean: • **true** The server releases the IP address lease and does not respond to the request. • **false**—The server responds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	assigned to a client when it receives a DHCP REQUEST message sent by the client upon a reboot		with the IP address in the lease.	
DHCPRateLimit	Set a limit on the receiving rate of DHCP packets from users	N/A	Unsigned integer. Value range: 1 to 500000000.	With this feature enabled, the device will drop DHCP packets that exceed the limit.

DHCP/DHCPIfMode

This table contains DHCP interface mode information.

XML structure

```
<DHCP>
  <DHCPIfMode>
    <IfMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <Option60></Option60>
      <ClientDetect></ClientDetect>
      <FloodProtectionEnable></FloodProtectionEnable>
      <SessionMismatchAction></SessionMismatchAction>
      <ApplyIpPool></ApplyIpPool>
    </IfMode>
  </DHCPIfMode>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfMode
Table type	Multi-instance table
Row name	IfMode
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Mode	DHCP mode	N/A	Enumeration: • **0**—None. • **1**—Server. • **2**—Relay. • **3**—RelayProxy.	N/A
Option60	Used to configure DHCP relay to add option 60 in DHCP request message	N/A	String. Length: 1 to 128.	N/A
ClientDetect	Enable the offline detection function of DHCP relay user.	N/A	Boolean: • **true** • **false**	N/A
FloodProtectionEnable	Enalbing status of DHCP flood protection	N/A	Boolean: • **true** • **false**	N/A
SessionMismatchAction	Configure the processing method of DHCP request sent by	N/A	Enumeration: • **0**—Invalid • **1**—Roam • **2**—Fastrenew	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	online users whose physical location changes and MAC address remains unchanged by DHCP device.		• **3**—All	
ApplyIpPool	Specifies the name of the IP pool to apply to the interface	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DHCP/DHCPRelaySrvIPv4Address

This table contains DHCP servers on the DHCP relay agent information.

XML structure

```
<DHCP>
  <DHCPRelaySrvIPv4Address>
    <RelaySrvIPv4>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <Public></Public>
      <VpnInstanceName></VpnInstanceName>
    </RelaySrvIPv4>
  </DHCPRelaySrvIPv4Address>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySrvIPv4Address
Table type	Multi-instance table
Row name	RelaySrvIPv4
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A
Public	DHCP servers belonging to the public network	Index	Boolean: • **true** • **false**	N/A
VpnInstanceName	DHCP servers belonging to a VRF	Index	String. Length: 1 to 31.	N/A

DHCP/DHCPRelayUserInfo

This table contains DHCP relay entries information.

XML structure

```
<DHCP>
  <DHCPRelayUserInfo>
    <RelayUserInfo>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <IfIndex></IfIndex>
    </RelayUserInfo>
  </DHCPRelayUserInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayUserInfo
Table type	Multi-instance table

Row name	RelayUserInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	0 means public network.
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IfIndex	Interface Index	N/A	Unsigned integer.	0 means no interface information.

DHCP/DHCPServerPoolOption

This table contains DHCP server IP pool options information.

XML structure

```
<DHCP>
  <DHCPServerPoolOption>
    <IpPoolOption>
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
      <OptionValueAscii></OptionValueAscii>
      <OptionValueIpAddresses></OptionValueIpAddresses>
    </IpPoolOption>
  </DHCPServerPoolOption>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolOption
Table type	Multi-instance table
Row name	IpPoolOption
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
OptionCode	Number of the customized option	Index	Unsigned integer. Value range: 2 to 254.	Excluding 50 through 54, 56, 58, 59, 61, and 82.
OptionValueHex	Hex string as the option content	N/A	String, case insensitive. Length: 2 to 256 characters.	Hex string of even numbers from 2 to 256 as the option content.
OptionValueAscii	ASCII string as the option content	N/A	String, case sensitive. Length: 1 to 255 characters.	N/A
OptionValueIpAddresses	IP addresses as the option content	N/A	String, case insensitive. Length: 1 to 127 characters.	Separated by space if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.

DHCP/DHCPServerPoolStatistics

This table contains DHCP server pool statistics information.

XML structure

```
<DHCP>
 <DHCPServerPoolStatistics>
  <IpPoolStatistics>
    <PoolName></PoolName>
    <UsedIpNumber></UsedIpNumber>
    <ExpiredIpNumber></ExpiredIpNumber>
    <TotalIpNumber></TotalIpNumber>
     <DynamicUsedIpNumber></DynamicUsedIpNumber>
     <StaticUsedIpNumber></StaticUsedIpNumber>
     <ConflictIpNumber></ConflictIpNumber>
     <ReserveIpNumber></ReserveIpNumber>
     <FreeIpNumber></FreeIpNumber>
     <IpUsage></IpUsage>
     <IpUsageMax></IpUsageMax>
     <IpUsageMaxTime></IpUsageMaxTime>
   </IpPoolStatistics>
  </DHCPServerPoolStatistics>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatistics
Table type	Multi-instance table
Row name	IpPoolStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	DHCP pool name	Index	String.	N/A
UsedIpNumber	Number of used IP addresses in the address pool	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ExpiredIpNumber	Number of expired IP address leases in the address pool	N/A	Unsigned integer.	N/A
TotalIpNumber	Total number of IP addresses in the address pool	N/A	Unsigned integer.	N/A
DynamicUsedIpNumber	Number of used dynamic IP addresses in the address pool	N/A	Unsigned integer.	N/A
StaticUsedIpNumber	Number of used static IP addresses in the address pool	N/A	Unsigned integer.	N/A
ConflictIpNumber	Number of conflicting IP addresses in the address pool	N/A	Unsigned integer.	N/A
ReserveIpNumber	Number of reserved IP addresses in the address pool	N/A	Unsigned integer.	N/A
FreeIpNumber	Number of free IP addresses in the address pool	N/A	Unsigned integer.	N/A
IpUsage	Address usage of the address pool	N/A	Unsigned integer.	N/A
IpUsageMax	Peak address usage of the address pool	N/A	Unsigned integer.	N/A
IpUsageMaxTime	Date and time when the address usage of the address pool reached the peak	N/A	String.	N/A

DHCP/DHCPRelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPRelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <SourceIfIndex></SourceIfIndex>
      <DefaultGiaddr></DefaultGiaddr>
      <Gateway></Gateway>
      <RelayInterface></RelayInterface>
    </RelaySrcAddr>
  </DHCPRelaySourceAddress>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv4Address	Source IP address of the DHCP requests forwarded by the DHCP relay agent on the interface	N/A	String, dotted decimal notation.	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.
SourceIfIndex	Index of the source interface for the DHCP requests forwarded by the DHCP relay agent on the interface	N/A	Unsigned integer.	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.If you specify a source interface, its IP address is used as the source IP address of the DHCP requests forwarded by the relay agent. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
DefaultGiaddr	Disables the relay agent from setting the specified source IP address in the Giaddr field when it forwards	N/A	Boolean: • **true**—The relay agent does not replace the gateway address in the Giaddr field	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DHCP requests		with the specified source IP address (if any). • **false**—The relay agent sets the specified source address (if any) in the Giaddr field when it forwards DHCP requests.	
Gateway	Gateway of interface	N/A	Boolean: • **true** • **false** (default)	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.
RelayInterface	Interface that enable relay	N/A	Boolean: • **true** • **false** (default)	Ipv4Address , SourceIfIndex, Gatway and RelayInterface can not be set at the same time.

DHCP/DHCPRelayInfoEnable

This table contains information about whether the DHCP relay agent support Option 82.

XML structure

```
<DHCP>
  <DHCPRelayInfoEnable>
    <RelayInfoEnable>
      <IfIndex></IfIndex>
      <InfoEnable></InfoEnable>
      <Strategy></Strategy>
      <RemoteId>
        <Type></Type>
        <Format></Format>
        <String></String>
      </RemoteId>
      <CircuitId>
        <CircuitIdType></CircuitIdType>
```

```
        <WithVxlan></WithVxlan>
        <SubInterfaceVlan></SubInterfaceVlan>
        <Format></Format>
        <String></String>
        <Interface></Interface>
        <NodeIdentifierType></NodeIdentifierType>
        <UserDefined></UserDefined>
        <SysnameVlan></SysnameVlan>
      </CircuitId>
      <LinkSelectionAddr></LinkSelectionAddr>
    </RelayInfoEnable>
  </DHCPRelayInfoEnable>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfoEnable
Table type	Multi-instance table
Row name	RelayInfoEnable
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
InfoEnable	Whether the DHCP relay agent supports Option	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	82.		• **false**	
Strategy	Strategy to process Option 82.	N/A	Enumeration: • **0**—replace • **1**—keep • **2**—drop	N/A
RemoteId	Remote ID sub-option configuration.	Data structure	Members include: • Type • Format • String	N/A
Type	Remote ID sub-option type.	N/A	Enumeration: • **0**—normal • **2**—string • **3**—sysname	N/A
Format	Format of the remote ID sub-option.	N/A	Enumeration: • **0**—hex (default) • **1**—ascii	N/A
String	Content of the remote ID sub-option.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
CircuitId	Circuit ID sub-option configuration.	Data structure	Members include: • CircuitIdType • WithVxlan • SubInterfaceVlan • Format • String • Interface • NodeIdentifierType • UserDefined • SysnameVlan	N/A
CircuitIdType	Circuit ID sub-option type.	N/A	Enumeration: • **0**—normal • **1**—verbose • **2**—string • **4**—bas	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—vxlan-port • **6**—srv6-opcode	
WithVxlan	Whether to pad the Circuit ID sub-option with VXLAN ID.	N/A	Boolean: • **true** • **false**	N/A
SubInterfaceVlan	Whether to pad the Circuit ID sub-option with VLAN ID of the L2VE subinterface.	N/A	Boolean: • **true** • **false**	N/A
Format	Format of the circuit ID sub-option.	N/A	Enumeration: • **0**—hex • **1**—ascii	N/A
String	Content of the circuit ID sub-option.	N/A	String, case-sensitive. Length: 3 to 63 characters.	N/A
Interface	Whether to use the interface name as the interface information.	N/A	Boolean: • **true** • **false**	N/A
NodeIdentifierType	Node identifier type.	N/A	Enumeration: • **0**—mac • **1**—sysname • **2**—user-defined	N/A
UserDefined	User-defined string as the node identifier.	N/A	String, case-sensitive. Length: 1 to 50 characters.	The node identifier cannot contain spaces.
SysnameVlan	Whether to pad the Circuit ID sub-option with the inner and outer VLAN information of	N/A	Boolean: • **true** • **false**	This parameter is supported only when the device name (**sysname**) is specified as the node identifier.

Column name	Column description	Column type	Data type and restrictions	Remarks
	request packets.			
LinkSelectionAddr	IP address for sub-option 5 of Option 82	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPServerLeaseInfo

This table contains DHCP server lease information.

XML structure

```
<DHCP>
  <DHCPServerLeaseInfo>
    <LeaseInfo>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <HostName></HostName>
      <Option55></Option55>
    </LeaseInfo>
  </DHCPServerLeaseInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerLeaseInfo
Table type	Multi-instance table
Row name	LeaseInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
Ipv4Address	IP address allocated to client	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
HostName	Host name of the client	N/A	String, case insensitive. Length: 1 to 253 characters.	The length of characters is 0 when a specific client is used.
Option55	Parameter request list	N/A	String, case insensitive. Length: 2 to 510 characters.	The length of characters is 0 when a specific client is used.

DHCP/DHCPServerForbiddenIp

This table contains information about IP addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP>
  <DHCPServerForbiddenIp>
    <ForbiddenIp>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </ForbiddenIp>
  </DHCPServerForbiddenIp>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerForbiddenIp
Table type	Multi-instance table
Row name	ForbiddenIp
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
StartIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	N/A
EndIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	EndIpv4Address cannot be lower than the StartIpv4Address.

DHCP/DHCPServerSubnetInUse

This table contains information about subnet allocation IP addresses.

XML structure

```
<DHCP>
  <DHCPServerSubnetInUse>
    <SubnetInUse>
      <VRF></VRF>
      <NetworkAddress></NetworkAddress>
      <NetworkMask></NetworkMask>
      <SubAllocMode></SubAllocMode>
      <VXLANID></VXLANID>
      <DPAddress></DPAddress>
      <UsedIpNumber></UsedIpNumber>
      <ExpiredIpNumber></ExpiredIpNumber>
      <TotalIpNumber></TotalIpNumber>
      <PoolName></PoolName>
    </SubnetInUse>
  </DHCPServerSubnetInUse>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerSubnetInUse
Table type	Multi-instance table
Row name	SubnetInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	If the lease is on the public network, the length of characters is 0.
Network Address	Subnet Address	Index	String, dotted decimal notation.	N/A
NetworkMask	Subnet Mask	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 30.	
SubAllocMode	Subnet Alloc Mode	N/A	Enumeration: • **0**—vxlanId. • **1**—dp-address.	If the subnet alloc by the vxlanId mode, the DP address cannot be displayed. If the subnet alloc by the dp-address mode, the vxlanId cannot be displayed.
VXLAN ID	VXLAN ID	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
DPAddress	DP Address	N/A	String, dotted decimal notation.	N/A
UsedIpNumber	Number of used IP addresses in subnet.	N/A	Unsigned integer.	N/A
ExpiredIpNumber	Number of expired IP addresses in subnet.	N/A	Unsigned integer.	N/A
TotalIpNumber	Total Number of allocated IP addresses in subnet	N/A	Unsigned integer.	N/A
PoolName	Subnet-alloc Pool Name	N/A	String.	N/A

DHCP/DHCPRelayDiscReqFromTnlEnable

This table contains information about whether the DHCP relay discard request from tunnel.

XML structure

```
<DHCP>
  <DHCPRelayDiscReqFromTnlEnable>
    <RelayDiscardReqFromTnlEnable>
```

```
      <IfIndex></IfIndex>
      <DiscardReqFromTnlEnable></DiscardReqFromTnlEnable>
    </RelayDiscardReqFromTnlEnable>
  </DHCPRelayDiscReqFromTnlEnable>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayDiscReqFromTnlEnable
Table type	Multi-instance table
Row name	RelayDiscardReqFromTnlEnable
Restrictions	This table supports only interface of VSI type

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
DiscardReqFromTnlEnable	Whether the DHCP relay agent support discard request packet from tunnel .	N/A	Boolean: • **true** • **false**	N/A

DHCP/DHCPRelayMacFowardEnable

This table contains information about whether the DHCP Relay support forward ACK or OFFER packet by Mac Address.

XML structure

```
<DHCP>
  <DHCPRelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
      <MacBroadCast></MacBroadCast>
    </RelayMacForwardEnable>
  </DHCPRelayMacFowardEnable>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayMacFowardEnable
Table type	Multi-instance table
Row name	RelayMacForwardEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacEnable	Whether enable mac forward	N/A	Boolean: • **true** • **false**	If mac forward is enable, DHCP server OFFER or ACK packet will forward via unicast.
MacBroadCast	Whether enable mac broadcast		Boolean: • **true** • **false**	It must configured with MacEnable and Mac Enable must be true.

DHCP/DHCPRelayInfo

This table contains information about the DHCP relay agent option (Option 82).

XML structure

```
<DHCP>
  <DHCPRelayInfo>
    <RelayInfo>
      <IfIndex></IfIndex>
      <CircuitIdMode></CircuitIdMode>
    </RelayInfo>
  </DHCPRelayInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfo
Table type	Multi-instance table
Row name	RelayInfo
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration*

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
CircuitIdMode	Mode of the Circuit ID sub-option in Option 82	N/A	String, case-insensitive. Values include: • **NormalHex** • **NormalAscii** • **VxlanPort**	N/A

DHCP/DHCPVsi

This table contains the VSI configuration informain of DHCP.

XML structure

```
<DHCP>
  <DHCPVsi>
    <Vsi>
      <VsiName></VsiName>
      <FloodProtectionEnable></FloodProtectionEnable>
    </Vsi>
  </DHCPVsi>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPVsi
Table type	Multi-instance table
Row name	RelayInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
FloodProtectionEnable	Enabling status of DHCP flood protection	N/A	Boolean: • **True** • **false**.	N/A

DHCP/DHCPRelayPoolRemoteServer

This table contains information about remote server address.

XML structure

```
<DHCP>
  <DHCPRelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv4Address></RemoteServerIpv4Address>
      <Public></Public>
     <VpnInstanceName></VpnInstanceName>
   </RemoteServer>
  </DHCPRelayPoolRemoteServer>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayPoolRemoteServer
Table type	Multi-instance table
Row name	RemoteServer
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	The specified PoolIndex must already exist.
RemoteServerIpv4Address		Index	String, dotted decimal notation.	N/A
`Public`		N/A	Boolean: • **true** **false**(default)	The server is on the public network，and the pool VRF is not public
`VpnInstanceName`	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	The server is on the VPN network

DHCP/DHCPServerPoolGroup

This table contains information about the DHCP address pool group.

XML structure

```
<DHCP>
  <DHCPServerPoolGroup>
    <PoolGroup>
      <GroupName></GroupName>
      <vpn></vpn>
      <Pools>
        <Pool>
          <PoolName></PoolName>
          <Priority></Priority>
        </Pool>
      </Pools>
       <DiscoverNakCnt></DiscoverNakCnt>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolGroup
Table type	Multi-instance table, multi-level table
Row name	PoolGroup
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	DHCP address pool group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
vpn	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the DHCP address pool is on the public network, the length of characters is 0.

PoolName	DHCP address pool name	Sublist	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
Priority	DHCP address pool priority	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DiscoverNakCnt	Maximum number of NAK replies that the relay agent can receive from a DHCP server	N/A	Unsigned integer. Value range: 1 to 255.	N/A
DiscoverNakDuration	Waiting time for NAK replies from a DHCP server	N/A	Unsigned integer. Value range: 1 to 180 seconds.	N/A
IpPoolAlgorithmRoundRobinLocal	DHCP pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
IpPoolAlgorithmRoundRobinRemote	DHCP pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
PoolGroupExhaustionTrapEnable	Whether the SNMP notification about IP pool group exhaustion is enabled	N/A	Boolean: • **True** • **false**(default)	N/A
PoolGroupExhaustionLogEnable	Whether IP pool group exhaustion logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInUseThreshold	The warning	N/A	Unsigned integer.	N/A

	rate of used ip in dhcp pool group		Value range: 0 to 100.	

DHCP/DHCPServerPolicy/ClassPolicy

This table contains DHCP server policy information.

XML structure

```
<DHCP>
  <DHCPServerPolicy>
    <ServerPolicy>
      <PolicyName></PolicyName>
      <DefaultIpPool></DefaultIpPool>
      <ClassName></ClassName>

      <Giaddr></Giaddr>
    </ServerClass>
  </DHCPServerClass>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClass
Table type	Multi-instance table
Row name	ServerClass
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleNumber	Rule number	Index	Unsigned integer. Value range: 1 to 16.	N/A
RuleType	Match mode	Index	Enumeration: • **1**—hardware-address • **2**—option • **3**—relay-agent	N/A

OptionCode	DHCP option code	N/A	Unsigned integer. Value range: 1 to 254.	N/A
OptionValueHex	Specify DHCP option content with the hexadecimal format	N/A	Hexadecimal string, case-insensitive. Length: even number in the range of 2 to 256 characters.	N/A
OptionValueAscii	Specify DHCP option content with the ASSCII format	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A
OptionValueMask	Specify the mask	N/A	String, case-insensitive. Length: 2 to 256 characters.	N/A
OptionOffSet	Specify the offset	N/A	Unsigned integer. Value range: 0 to 254.	N/A
OptionLen	Length of the match criterion	N/A	Unsigned integer. Value range: 1 to 128.	N/A
OptionPartial	Enable partial match	N/A	Boolean: • true. • false	N/A
HostId	Hardware address	N/A	String, case insensitive. Length: 4 to 39 characters.	N/A
HostIdMask	Hardware address mask	N/A	String, case insensitive. Length: 4 to 39 characters.	N/A
Giaddr	IP address	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPIfConfig

This table contains DHCP server and DHCP interface configuration information.

XML structure

```

  </DHCPIfConfig>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfConfig
Table type	Multi-instance table, multi-level table
Row name	IfConfig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
RateLimit	Maximum DHCP packet receiving rate on an interface.	N/A	Unsigned integer. Value range: 1 to 512.	N/A
RateSuppressionEnable	Whether to enable interface-based DHCP attack suppression.	N/A	Boolean: • **true** • **false**	N/A
ApplyPool	DHCP address pool name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
ClientDetec	Enable the user logoff detection function of DHCP server or DHCP relay.	N/A	Boolean: • **true** • **false**	N/A
ServerConfig	Server configuration.	Data structure	Members include: • CheckMacAddress • ApplyIpPool	N/A

			• ApplyPolicy • PolicyFirstEnable	
CheckMacAddress	Whether to enable MAC address check on the DHCP server.	N/A	Boolean: • **true** • **false**	N/A
ApplyIpPool	IP pool applied to an interface.	N/A	String. Length: 1 to 63.	N/A
ApplyPolicy	DHCP policy applied to an interface.	N/A	String. Length: 1 to 63.	N/A
PolicyFirstEnable	Whether to enable policy-first IP pool selection.	N/A	Boolean: • **true** • **false**	N/A
RelayConfig	Relay agent configuration.	Data structure	Members include: • CheckMacAddress • DhcpServerTimeout • ForwardReplyByO-pt82 • Gateway • NonFirstHopEnable	N/A
CheckMacAddress	Whether to enable MAC address check on the DHCP relay agent.	N/A	Boolean: • **true** • **false**	N/A
DhcpServerTimeout	DHCP server response timeout time for DHCP server switchover.	N/A	Unsigned integer. Value range: 1 to 65535..	N/A
ForwardReplyByOpt82	Whether to enable the DHCP relay agent to forward DHCP replies	N/A	Boolean: • **true** • **false**	N/A

	based on Option 82.			
Gateway	DHCP relay agent address to be padded to DHCP requests.	N/A	String, dotted decimal notation.	N/A
NonFirstHopEnable	Whether to enable non-first-hop DHCP relay	N/A	Boolean: • **true** • **false**	For access authentication to take effect, you must enable this feature on the relay agent.
MasterServerSwitchDelay	The time of master server switch delay	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteServerAlgorithm	N/A	N/A	Enumeration: • Master-backup. • polling	N/A
IfReleaseAgent	Send a release message to the DHCP server when you delete a user entry	N/A	Boolean: • **true** (default) • **false**	This column does not take effect unless the device acts as a DHCP relay agent. This column is not supported by common users.
Pools	Used to specify the DHCP relay address pool corresponding to DHCP clients	Child table	N/A	N/A
PoolName	Pool name index	Index	String. Length: 1 to 64.	N/A
PoolOption	No 60 specified for distribution	N/A	Unsigned integer. Value range: 1 to 59 && 61 to 254.	N/A
PoolOption60	Option specified	N/A	Boolean:	N/A

	as 60		• **true** • **false**	
PoolOption60String	Option specifies string followed by 60 for 60 option	N/A	String. Length: 1 to 128.	N/A

DHCP/DHCPServerOptionGroup

This table contains information about the DHCP server option group.

XML structure

```
<DHCP>
  <DHCPServerOptionGroup>
    <ServerOptionGroup>
      <OptionGroup></OptionGroup>
      <OptionCodes>
        <OptionCode>
          <Code></Code>
          <OptionValueHex></OptionValueHex>
          <OptionValueAscii></OptionValueAscii>
          <OptionValueIp></OptionValueIp>
        </OptionCode>
      <OptionCodes>
    </ServerOptionGroup>
  </DHCPServerOptionGroup>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerOptionGroup
Table type	Multi-instance table, multi-level table
Row name	OptionGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionGroup	DHCP option group number.	Index	Unsigned integer. Value range: 1 to 32768.	Required when you create a new row.

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionCodes	N/A	Data structure	Members include: • Code • OptionValueHex • OptionValueAscii • OptionValueIp	SubTable
Code	DHCP option number.	Index	Unsigned integer. Value range: 2 to 254, excluding 50 through 54, 56, 58, 59, 61, and 82.	N/A
OptionValueHex	DHCP option content.	N/A	Hexadecimal string, case-insensitive. Length: even number in the range of 2 to 256 characters.	N/A
OptionValueAscii	DHCP option content.	N/A	String. Length: 1 to 255 characters.	N/A
OptionValueIp	DHCP option content.	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPRelayServerInfo

This table contains information about the DHCP server information on the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPRelayServerInfo>
    <RelayServerInfo>
      <ServerIp></ServerIp>
```

```
      <vpn></vpn>
      <DeadCount></DeadCount>
      <DeadTime></DeadTime>
      <NakCount></NakCount>
      <Timeout></Timeout>
    </RelayServerInfo>
  </DHCPRelayServerInfo>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayServerInfo
Table type	Multi-instance table
Row name	RelayServerInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerIp	DHCP server IP address.	Index	String, dotted decimal notation.	N/A
vpn	VRF instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
DeadCount	Maximum number of consecutive communication failures before the relay agent marks a DHCP server as down.	N/A	Unsigned integer. Value range: 1 to 64.	N/A
DeadTime	Time period for the relay agent to wait before communicating	N/A	Unsigned integer. Value range: 1 to 65536.	N/A

	with the DHCP server.			
NakCount	Maximum number of DHCP-NAK packets that the relay agent can receive.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Timeout	Communication failure check timer.	N/A	Unsigned integer. Value range: 1 to 60.	N/A

DHCP/DHCPServerOdapPoolGateway

This table contains information about the DHCP server information on the DHCP relay agent.

XML structure

```
<DHCP>
  <DHCPServerOdapPoolGateway>
    <PoolIndex></PoolIndex>
    <Gateway></Gateway>
    <MaskLen></MaskLen>
  </DHCPServerOdapPoolGateway>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerOdapPoolGateway
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 8192.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 cannot be set.
Gateway	Gateway addresses of odap address pool	N/A	String, dotted decimal notation.	N/A
MaskLen	Gateway address mask	N/A	String, dotted decimal notation.	N/A

DHCP/DHCPServerPoolGroupStatistics

This table contains IP pool group statistics on the DHCP server.

XML structure

```
<DHCP>
  <DHCPServerPoolGroupStatistics>
    <IpPoolGroupStatistics>
      <PoolGroupName></PoolGroupName>
      <IncludePoolNum></IncludePoolNum>
      <BoundByDomainNum></BoundByDomainNum>
      <GroupIPUsage></GroupIPUsage>
      <TotalIPNumber></TotalIPNumber>
      <UsedIPNumber></UsedIPNumber>
      <IdleIPNumber></IdleIPNumber>
      <ExpiredIPNumber></ExpiredIPNumber>
      <ExcludeIPNumber></ExcludeIPNumber>
      <ConflictIPNumber></ConflictIPNumber>
```

```
      <DynamicUsedIPNumber></DynamicUsedIPNumber>
      <StaticUsedIPNumber></StaticUsedIPNumber>
      <ReserveIPNumber></ReserveIPNumber>
     </IpPoolGroupStatistics>
   </DHCPServerPoolGroupStatistics>
</DHCP>
```

Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolGroupStatistics
Table type	Multi-instance table
Row name	IpPoolGroupStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolGroupName	DHCP pool group name	Index	String.	N/A
IncludePoolNum	Number of IP address pools bound to the IP pool group	N/A	Unsigned integer.	N/A
BoundByDomainNum	Number of domains bound to the IP pool group	N/A	Unsigned integer.	N/A
GroupIPUsage	Address usage in the IP pool group	N/A	Unsigned integer.	N/A
TotalIPNumber	Total number of IP addresses in the IP pool group	N/A	Unsigned integer..	N/A
UsedIPNumber	Number of used IP addresses in the IP pool group	N/A	Unsigned integer.	N/A
IdleIPNumber	Number of free IP	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address leases in the IP pool group			
ExpiredIPNumber	Number of expired IP address leases in the IP pool group	N/A	Unsigned integer.	N/A
ExcludeIPNumber	Number of excluded IP address leases in the IP pool group	N/A	Unsigned integer.	N/A
ConflictIPNumber	Number of conflicting IP addresses in the IP pool group	N/A	Unsigned integer.	N/A
DynamicUsedIPNumber	Number of used dynamic IP addresses in the IP pool group	N/A	Unsigned integer.	N/A
StaticUsedIPNumber	Number of used static IP addresses in the IP pool group	N/A	Unsigned integer.	N/A
ReserveIPNumber	Number of reserved IP addresses in the IP pool group	N/A	Unsigned integer.	N/A

DHCP

DHCP/dhcp

Message	Explanation
Maximum number of DHCP address pools already reached. DHCP地址池个数超过上限。	Maximum number of DHCP address pools already reached, when created more than 8192 pools before.
Invalid network address. 无效的网段地址。	Invalid network address. Please examine your network address.
Mask length must be in the range of 1 to 30. 掩码长度范围必须为1到30。	The mask length is Invalid.
Invalid start IP address. 无效的起始IP地址。	Invalid start IP address, please check your IP address.
Invalid end IP address. 无效的结束IP地址。	Invalid end IP address, please check your IP address.
The start IP address can’t be greater than the end IP address. 起始IP地址必须小于或等于结束IP地址。	Please make certain that the start IP address is not be greater than the end IP address.
Lease duration can’t be zero. IP地址租约有效期限不能为零。	Invalid Lease duration. Please check your Lease duration.
Failed to set the response timeout time for ping requests. 为IP地址冲突检测指定等待回显响应超时时间失效。	The setting about the response timeout time for ping requests is failed.
Failed to enable DHCP. 开启DHCP功能失败。	DHCP process is not activated.
Invalid IP address. 无效的IP地址。	Invalid IP address. Please check your IP address.
Invalid mask. 无效的掩码。	Invalid mask. Please check your IP address.
Maximum number of statically bound IP address already reached. 静态绑定地址个数超过上限。	Maximum number of statically bound IP address already reached, when the number of statically bound IP address is greater than 8192.
The IP address is bound to another DHCP client. 该IP地址已经被绑定在一台DHCP客户端上。	The IP address is bound to another DHCP client, please try another IP address.
Failed to set the mode. 指定处理模式失败。	The setting about the mode is failed.
Failed to set the address pool name. 指定地址池名称失败。	The setting about the address pool name is failed.
Another address pool is using the name.	The name of address pool is already used.

地址池名称已经存在。	
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration doesn't meet the requirements, please check your configuration.
Maximum number of server IP address already reached. 中继服务器IP地址个数超过上限。	Maximum number of server IP address already reached, when the number of server IP address is greater than 8.
The option is not configurable. 该DHCP选项的配置是被禁止的。	The option is not configurable, please check your option.
Invalid client ID. 无效的客户端ID。	Invalid client ID, please check your client ID.
The address pool doesn't exist. 该DHCP地址池不存在。	The address pool doesn't exist, when getting or deleting it
The subnet has already been configured. 该网段的IP地址已经在其他网段配置。	The subnet has already been configured, please try another subnet.
Invalid client hardware address. 无效的客户端硬件地址。	Invalid client hardware address. Please check your client hardware address.
The statically bound IP address should be a unicast address. 该静态绑定IP地址需要是一个单播地址。	Please make certain that the statically bound IP address is a unicast address.
Not used. 未使用。	The lease is not used.
Failed to configure the Option 82. 配置Option82功能失败。	Configuirng Option 82 fails.
Ipv4Address , SourceIfIndex,GateWay and RelayInterface cannot be set at the same time. 指定DHCP中继向DHCP服务器转发报文的源地址，源接口，Gateway和中继接口不能在一次操作中同时配置	Ipv4Address , SourceIfIndex, Gateway and RelayInterface are set at the same time. 用户指定DHCP中继向DHCP服务器转发报文的源地址时，同时下发了源地址，源接口，Gateway和中继接口信息
Failed to enable the DHCP flood protection. 开启DHCP Flood攻击防范功能失败	The DHCP flood protection is not supported. 设备不支持DHCP Flood攻击防范功能
Failed to configure the DHCP flood protection. DHCP Flood攻击防范功能相关配置下发失败	The configuration of the DHCP flood protection fails. DHCP Flood攻击防范功能相关配置失败(比如Flood 表项老化时间、阈值设置等)
Failed to enable DHCP logging. 开启DHCP日志功能失败。	DHCP logging is not enabled.
Failed to set the priority. 设置优先级失败。	The priority setting is supported only for IP address pools that are created on the ODAP server. 当前只有odap-server地址池才可以在地址池组下配置优先级。
Failed to specify the vsrp name. 设置vsrp 名称失败	Failed to specify the vsrp name.
Failed to specify the boot file name. 配置boot 文件名失败	Failed to specify the boot file name.
Failed to set verification function.	Failed to set verification function.

配置认证功能失败	
Remote-Server IP addresses in the DHCP address pool should be different from each other. 配置Remote-Server在DHCP地址池时IP地址应该不相同	Remote-Server IP addresses in the DHCP address pool should be different from each other.
There are IP addresses allocated in the current range. 当前范围分配了IP地址	There are IP addresses allocated in the current range.
Failed to start the service. 服务启动失败。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Configuration of the RemoteId group does not conform to specifications. RemoteId组配置不符合规定。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Configuration of the CircuitId group does not conform to specifications. CircuitId组配置不符合规定。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Not found. 未找到。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Not enough resources. 空间不足。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Configuration already exists. 配置已存在。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Configuration not supported. 配置不支持。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Unknown error. 未知错误。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Conflict with command : IP subscriber roaming enable. 命令错误，IP订阅遗留。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Failed to change configuration because the DHCP server has already allocated IP addresses. 设置失败，DHCP服务器有已分配IP地址。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Failed to specify the aging time for the mac-address. 因mac地址导致设置失败。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Do not include the username and password in the URL string. Use parameters username and password to specify them. 不要包含用户名和密码在URL中。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Invalid filename.	The configuration doesn't meet the requirements, please check your configuration.

非法文件名。	配置不符合要求，请检查您的配置。
The file already exists. 文件已存在。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Failed to save DHCP client information due to lack of storage resources. 由于缺乏存储资源，无法保存DHCP客户端信息。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Failed to specify the database filename. 设置文件名失败。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Failed to specify the update database interval time. 设置更新时间失败。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Invalid hexadecimal string. 不合法的十六进制字符串。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
The configuration of this option is forbidden. 该选项的配置是被禁止的。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
IP addresses should be different from each other. IP地址之间应该不相同。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
The DHCP server IP-address does not exist. DHCP服务器IP地址不存在。	The configuration doesn't meet the requirements, please check your configuration. 配置不符合要求，请检查您的配置。
Invalid hardware address.(aabb-ccdd-eeff…) 无效的硬件地址。(aabb-ccdd-eeff…)	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Invalid mask.(ffff-ffff-0000…) 无效的掩码。(ffff-ffff-0000…)	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
The hardware address length and the mask length must be identical. 硬件地址长度和掩码长度必须相同。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
The configuration of the hardware-address only contains the HostId column and the HostIdMask column. 硬件地址的配置仅包含HostId列和HostIdMask列。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Invalid IP address. 无效的IP地址。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
The configuration of the relay-agent only contains the Giaddr column. 中继代理的配置仅包含Giaddr列。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Invalid hexadecimal string, and the number of strings is even.	The configuration doesn't meet the requirements. Please check your configuration.

无效的十六进制字符串，且字符串的个数为偶数。	配置不符合要求，请检查您的配置。
Invalid mask, the mask should be a hexadecimal string and the number of strings is even. 无效的掩码，掩码应该为十六进制字符串，且字符串的个数为偶数。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Mask length must be equal to length of the hexadecimal string. 掩码长度必须等于十六进制字符串的长度。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Criterion length must be equal to length of the hexadecimal string. 标准长度必须等于十六进制字符串的长度	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
The configuration of the option not include the Giaddr column and the HostId column and the HostIdMask column. 选项的配置不包含Giaddr列和HostId列和HostIdMask列。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Number of rules has reached the upper limit. 规则数已达上限。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
A rule of another type is using the rule number. 另一类型的规则正在使用规则编号。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Rules with different numbers cannot have the same content. 不同编号的规则不能具有相同的内容。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Failed to process this operation. 无法执行此操作。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置。
Please modify the row data and import it again. 请修改该行数据并重新导入。	The file contant is invalid. 文件中的数据不合法。
Cannot find the file. 文件不存在。	The file does not exist. Please check the file name. 文件不存在，请检查文件名。
The file already existed. 文件已存在。	The file already existed. Please specify another file name. 文件名已经存在，请指定另外一个文件名。
Failed to create the file. 创建文件失败。	Creating the file fails. 设备上创建指定文件时失败。
The interface doesn’t exist. 接口不存在	The interface doesn’t exist for the binding. 绑定时接口不存在
Only one of them can be bound. 只可绑定其中一个	Only one of UPID and Interface can be bound to an IP address pool. 地址池下仅可绑定UPID或者接口其中之一
Failed to configure addresses excluded from dynamic allocation. 无法配置从动态分配中排除的地址	Forbidden-ip configuration is not allowed when the network or gateway address is not configured. 未配置network或gateway地址时，不允许配置forbidden-ip
Failed to configure forbidden IP addresses.	Forbidden-ip configuration is not allowed when users are online.

配置forbidden ip地址失败	有用户在线时，不允许配置forbidden-ip
The master-up-id and the backup-up-id cannot be same. 绑定的主UPID和备UPID不能相同	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Please specify the network first. 请先指定network	Network should be configured before gateway is configured in odap address pool. 在ODAP地址池下配置gateway前要先配置network
Failed to configure gateway 配置gateway失败.	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Please remove the gateway first. 请先移除gateway	Remove gateway before remove network in odap address pool. 在ODAP地址池下移除network前要先移除gateway
The request must contain both DiscoverNakCnt and DiscoverNakDuration. Nak-count和nak-duration必须同时下发	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Failed to enable the dhcp discover user offline feature. 开启Discover user offline 功能失败	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Failed to enable the dhcp reboot-request user offline feature. 开启Reboot-request user offline 功能失败	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Please specify a narrower address range to make sure the subnet mask length is in the range of 16 to 32 for the secondary network segments. 划分的从网段掩码范围必须在16到32之间	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Please reconfigure a network range to make sure the maximum number of secondary network segments in the pool does not exceed 96. 拆分的网段过多，和当前地址池下其他network secondary网段数量加起来大于96个的限制	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
A network range has already been assigned to this pool. To assign a new network range, please remove the existing network range first. 请先删除已存在的network range	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Please make sure the network range does not overlap with the network or network range assigned to any one of the other pools. 当前配置的network range已经包含在其他network range或network范围中	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
IP addresses have been allocated from the current network range. You cannot remove the network range from the IP pool. 当前network range范围内已经有分配出去的IP地址	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Failed to set Client Detect.	The configuration doesn't meet the requirements. Please check your configuration.

ClientDetect配置失败。	配置不符合要求，请检查您的配置
The URL for a file on the TFTP server can't include the username or password. 不要为一个TFTP文件的URL指定用户名和密码。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Invalid filename or URL. 无效的本地文件名或URL。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Invalid Cipher.非法的密文。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Failed to configure the Flood Protection. 配置Flood攻击防范功能失败。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Flood Protection is not support. Flood攻击防范功能不支持。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
The VSI instance is not created. VSI实例不存在。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Deleting the RemoteId group configuration only needs to carry the group name. 删除RemoteId组配置只需且只能携带组名。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Deleting the CircuitId group configuration only needs to carry the group name. 删除CircuitId组配置只需且只能携带组名。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
The node identifier can't include any spaces. 节点标识的字符串中不允许出现空格。	The configuration doesn't meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
ClassLeaseTime must be in the range of 30 to 31622399. ClassLeaseTime范围必须为30到31622399。	The ClassLeaseTime is Invalid.
Incorrect user information. 用户上线失败因为用户信息错误	The client cannot go online because its user information in the DISCOVER message does not pass the check by the DHCP server. 服务器收到报文后检查报文信息，当前携带信息未通过检查
No replies from the DHCP server. 服务器没有回应	The client fails to go online because the DHCP server does not respond. 服务器没有回应报文，上线失败
NAK message received. server回复NAK报文	The client cannot go online because the DHCP server sends an NAK message for some reasons. server因为一些原因发送NAK消息，拒绝用户上线
RELEASE or DECLINE message sent. 客户端发送了RELEASE报文或者是DECLINE报文	The client goes offline because it no longer needs an IP address or the IP address assigned to the client is not usable due to some reasons.

	DHCP客户端不再需要使用分配IP地址或因某些原因导致分配的IP地址不能使用。
IP address lease expired. 租约到期	The client goes offline because its lease expires and the IP address becomes invalid. 租约到期IP地址失效用户下线
The DHCP server notified UCM to delete the user entry. Server通知用户下线	The client goes offline because the DHCP server notifies UCM to delete the user entry for that client due to some reasons. 因为某些原因，server主动通知删除user-info信息
No replies from the client. 用户下线因为客户端没有回复报文	The client goes offline because it does not reply the OFFER message. 用户下线因为客户端没有回复报文
UCM notified the DHCP server to delete the user entry. UCM通知用户下线	The client goes offline because UCM notifies the DHCP server to delete the user entry for that client due to some reasons. 因为某些原因，ucm主动通知删除user-info信息
The client requested to come online again during lease renewal. 续约过程中客户端重新上线	The client sends a DISCOVER message before the DHCP server replies to the lease renewal request of the client. 在服务器回复续约请求之前，客户端重新发送DISCOVER
Address conflict. 地址冲突	The client cannot go online because the address assigned by the DHCP server or the address requested by the client is conflicting. 服务器分配的地址或客户端请求的地址存在冲突
Other. 其他原因	The reason for the client online failure needs further analysis. 该失败原因待细分
No replies from UCM. 用户上线失败因为UCM没有回应	The client fails to go online because UCM does not respond. UCM没有回应租约信息，上线失败
The requested or offered IP address is invalid. 请求或回复的IP地址无效	The client cannot go online because the IP address requested by the client or returned by the DHCP server is invalid. 客户端请求或服务器回复的IP地址无效
Failed to enable DHCP route logging. 开启DHCP路由日志功能失败。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Failed to disable DHCP. 关闭DHCP功能失败。	The DHCP process can not be inactivated. DHCP进程不允许被关闭

DHCP event stream

DHCP event stream description.

DHCP instance status event

This event is used to report status of the DHCP instance.

XML structure for event subscription

```
<InstanceStatus>
</InstanceStatus>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP</stream>
    <filter type="subtree">
      <InstanceStatus xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
      </InstanceStatus>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DHCP
Event name	InstanceStatus
Event namespace	http://www.h3c.com/netconf/event:1.0/dhcp:1.0
Support for extended query	No

XML structure for event report

```
<InstanceStatus>
  <ProtocolType></ProtocolType>
  <Status></Status>
</InstanceStatus>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
   <eventTime>2019-01-21T10:12:15</eventTime>
   <InstanceStatus xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
```

```
    <ProtocolType>1</ProtocolType>
    <Status>Master</Status>
   </InstanceStatus>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
ProtocolType	Protocol type	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
Status	Instance status	String: • Master • Backup • Down	N/A

DHCP user information event

This event is used to report user informations of the DHCP.

XML structure for event subscription

```
<DhcpServerUserInfoEvent>
</DhcpServerUserInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP</stream>
    <filter type="subtree">
      <DhcpServerUserInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
      </DhcpServerUserInfoEvent>
    </filter>
  </create-subscription>
</rpc>]]>]]>
```

Table description

Item	Description
Event stream name	DHCP
Event name	DhcpServerUserInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/dhcp:1.0
Support for extended query	No

XML structure for event report

```
<DhcpServerUserInfoEvent>
  <VRF></VRF>
  <Ipv4Address></Ipv4Address>
  <MacAddress></MacAddress>
  <HostName><HostName>
  <Option55><Option55>
  <OptionType><OptionType>
</DhcpServerUserInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
   <eventTime>2019-01-21T10:12:15</eventTime>
   <DhcpServerUserInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
    <VRF>1</VRF>
    <Ipv4Address>192.168.1.2</Ipv4Address>
    <MacAddress>14-6A-4D-8C-03-16</MacAddress>
    <HostName>loginA<HostName>
    <Option55>017903060c0f212b42438a96</Option55>
    <OptionType>1</OptionType>
   </DhcpServerUserInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
VRF	VPN instance name	String, case-sensitive. Length: 0 to 31 characters.	The character length is 0 for the public network.
Ipv4Address	IP address allocated to a DHCP client	String, dotted decimal notation.	N/A
MacAddress	MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
HostName	Host name of a DHCP client	String, case-insensitive. Length: 0 to 253 characters.	The length of characters is 0 when the DHCP client is used.
Option55	Parameter request list	String, case-insensitive. Length: 0 characters, 2 to 510 characters.	The length of characters is 0 when the DHCP client is used.
OptionType	Parameter request list	Enumeration: • **0**—INSERT. • **1**—DELETE.	N/A

DHCP pool statistics event

This event is used to report pool statistics of the DHCP.

XML structure for event subscription

```
<DhcpServerPoolStatisticsEvent>
</DhcpServerPoolStatisticsEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP</stream>
    <filter type="subtree">
      <DhcpServerPoolStatisticsEvent
xmlns="http://www.h3c.com/netconf/event:1.0/DHCP:1.0">
      </DhcpServerPoolStatisticsEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DHCP
Event name	DhcpServerPoolStatisticsEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DHCP:1.0
Support for extended query	No

XML structure for event report

```
<DhcpServerPoolStatisticsEvent>
  <PoolName></PoolName>
  <Reason></Reason>
  <ExpiredIpNumber></ExpiredIpNumber>
  <DynamicUsedIpNumber><DynamicUsedIpNumber>
  <ConflictIpNumber><ConflictIpNumber>
  <ReserveIpNumber><ReserveIpNumber>
  <FreeIpNumber><FreeIpNumber>
</DhcpServerPoolStatisticsEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-01-21T10:12:15</eventTime>
  <DhcpServerPoolStatisticsEvent
xmlns="http://www.h3c.com/netconf/event:1.0/DHCP:1.0">
    <PoolName>p1</PoolName>
```

```
    <Reason>0</Reason>
    <ExpiredIpNumber>1</ExpiredIpNumber>
    <DynamicUsedIpNumber>1<DynamicUsedIpNumber>
    <ConflictIpNumber>1<ConflictIpNumber>
    <ReserveIpNumber>1<ReserveIpNumber>
    <FreeIpNumber>1<FreeIpNumber>
  </DhcpServerPoolStatisticsEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
PoolName	DHCP address pool name	String, case-insensitive. Length: 1 to 63 characters.	N/A
Reason	The reason of the event	Enumeration: • **0**—users change. • **1**—address subnet network application. • **2**—address subnet network release.	N/A
ExpiredIpNumber	Number of expired IP address leases in the address	Unsigned integer.	N/A
DynamicUsedIpNumber	Number of used dynamic IP addresses in the address pool	Unsigned integer.	N/A
ConflictIpNumber	Number of conflicting IP addresses in the address pool	Unsigned integer.	N/A
ReserveIpNumber	Number of reserved IP addresses in the address pool	Unsigned integer.	N/A
FreeIpNumber	Number of free IP addresses in the address pool	Unsigned integer.	N/A

DHCP user protocol event

This event is used to reportuser DHCP client online or offline events.

XML structure for event subscription

```
<DhcpUserProtocolEvent>
</DhcpUserProtocolEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
```

```
    <stream>DHCP</stream>
    <filter type="subtree">
      <DhcpUserProtocolEvent xmlns="http://www.h3c.com/netconf/event:1.0/DHCP:1.0">
      </DhcpUserProtocolEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DHCP
Event name	DhcpUserProtocolEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DHCP:1.0
Support for extended query	No

XML structure for event report

```
<DhcpUserProtocolEvent>
  <Time></Time>
  <UserID></UserID>
  <UserMAC></UserMAC>
  <FirstVLAN></FirstVLAN>
  <SecondVLAN></SecondVLAN>
  <SN></SN>
  <Type></Type>
  <DiscoverTime></DiscoverTime>
  <OfferTime></OfferTime>
  <RequestTime></RequestTime>
  <AckTime></AckTime>
  <OffTime></OffTime>
  <Reason></Reason>
  <Errcode></ErrCode>
</DhcpUserProtocolEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
    <DhcpUserProtocolEvent xmlns="http://www.h3c.com/netconf/event:1.0/DHCP:1.0">
      <Time>1561539343145</Time>
      <UserID>1</UserID>
      <UserMAC>7C-FB-B1-5A-08-16</UserMAC>
      <FirstVLAN>5</FirstVLAN>
      <SecondVLAN>10</SecondVLAN>
      <SN>DUT1</SN>
      <Type>1</Type>
```

```
      <DiscoverTime>1561539343133</DiscoverTime>
      <OfferTime>1561539343135</OfferTime>
      <RequestTime>1561539343140</RequestTime>
      <AckTime>1561539343145</AckTime>
      <OffTime>0</OffTime>
      <Errcode>0</ErrCode>
    </DhcpUserProtocolEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Time	Incident reporting time	Timestamp accurate to milliseconds	No
UserID	User ID	Unsigned integer.	No
UserMAC	User MAC address	String. Length: 1 to 6 characters.	No
FirstVLAN	Client first VLAN ID	Unsigned integer. Value range: 1 to 4094. Default: 65535	No
SecondVLAN	Client second VLAN ID	Unsigned integer. Value range: 1 to 4094. Default: 65535	No
SN	Service serial number or name	String Length: 1 to 128 characters.	No
Type	Event type	Unsigned integer. Value range: 1 to 255.	No
DiscoverTime	Time when receiving the DISCOVER packet	Timestamp accurate to milliseconds	No
OfferTime	Time when receiving the OFFER packet	Timestamp accurate to milliseconds	No
RequestTime	Time when receiving the REQUEST packet	Timestamp accurate to milliseconds	No
AckTime	Time when receiving the ACK packet	Timestamp accurate to milliseconds	No
OffTime	Time when the client is offline	Timestamp accurate to milliseconds	No
Reason	Client offline reason	String Length: 1 to 255 characters.	No
Errcode	Error code number	Unsigned integer. Value range: 0 to 25999	No

DHCP6

DHCP6/DHCP6ServerUpdateDatabase

Use this table to save current IPv6 DHCP server entries to the file and stop downloading these entries from the file.

XML structure

```
<DHCP6>
  <DHCP6ServerUpdateDatabase>
    <UpdateMode></UpdateMode>
  </DHCP6ServerUpdateDatabase>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerUpdateDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
UpdateMode	Update IPv6 DHCP server database immediately. Stop downloading entries from IPv6 DHCP server database.	N/A	Unsigned integer: • **0**—Now. • **1**—Stop.

DHCP6/DHCP6ServerClearIpInUse

Use this table to clear binding information about assigned IPv6 addresses by VRF and IP6 address.

XML structure

```
<DHCP6>
  <DHCP6ServerClearIpInUse>
    <ClearIpInUse>
      <VRF></VRF>
```

```
      <Ipv6Address></Ipv6Address>
    </ClearIpInUse>
  </DHCP6ServerClearIpInUse>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearIpInUse
Table type	Multi-instance table
Row name	ClearIpInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, do not specify a value for the VRF element.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A

DHCP6/DHCP6ServerClearIpInUseByVrf

Use this table to clear binding information about assigned IPv6 addresses by VRF.

XML structure

```
<DHCP6>
  <DHCP6ServerClearIpInUseByVrf>
    <ClearIpInUseByVrf>
      <VRF></VRF>
      <RelayAddress></RelayAddress>
    </ClearIpInUseByVrf>
  </DHCP6ServerClearIpInUseByVrf>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearIpInUseByVrf

Table type	Multi-instance table
Row name	ClearIpInUseByVrf

VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, do not specify a value for the VRF element.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A

DHCP6/DHCP6ServerClearPDInUseByVrf

Use this table to clear binding information about assigned IPv6 prefixes by VRF.

XML structure

```
<DHCP6>
  <DHCP6ServerClearPDInUseByVrf>
    <ClearPDInUseByVrf>
      <VRF></VRF>
      <RelayAddress></RelayAddress>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the binding information belongs to the public network, do not specify a value for the VRF element.
RelayAddress	Relay address	N/A	Hexadecimal string, colon-separated.	N/A

DHCP6/DHCP6ServerClearPDInUseByPool

Use this table to clear prefix binding information about assigned IPv6 addresses by pool name.

XML structure

```
<DHCP6>
  <DHCP6ServerClearPDInUseByPool>
    <ClearPDInUseByPool>
      <PoolName></PoolName>
      <RelayAddress></RelayAddress>
    </ClearPDInUseByPool>
  </DHCP6ServerClearPDInUseByPool>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearPDInUseByPool
Table type	Multi-instance table
Row name	ClearPDInUseByPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolName	IPv6 DHCP address pool name	Index	String, case-insensitive. Length: 1 to 63 characters.
RelayAddress	Relay address	N/A	Hexadecimal string, colon-separated.

DHCP6/DHCP6ServerDebug

Use this table to turn on or turn off the IPv6 DHCP server debug information switch.

XML structure

```
<DHCP6>
  <DHCP6ServerDebug>
    <Enable></Enable>
  </DHCP6ServerDebug>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6

DHCP6

DHCP6/DHCP6ServerDatabase

This table contains IPv6 DHCP server database configuration information.

XML structure

```
<DHCP6>
  <DHCP6ServerDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCP6ServerDatabase>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerDatabase
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL cannot be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String. case-sensitive. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server. If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String. case-sensitive. Length: 1 to 32 characters.	Cannot be configured for the delete and remove operations.
Password	FTP password	N/A	String. case-sensitive. Length: 1 to 32 characters.	Only plaintext password is supported. For the merge, create and replace operations, Password must be configured with Username. Can not be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

DHCP6/DHCP6ServerIpPool

This table contains IPv6 DHCP server pool information.

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerIpPool
Table type	Multi-instance table, multi-level table
Row name	Pool
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to

Column name	Column description	Column type	Data type and restrictions	Remarks
				automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
PoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Required when create a new row, can not be modified.
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Network	The configuration of the IPv6 subnet	Data structure	Members include: • NetworkIpv6Address • NetworkIpv6PrefixLength • NetworkPreferLifetime • NetworkValidLifetime • NetworkExportRoute • NetworkPreference • NetworkTag	N/A
NetworkIpv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	Modifying or removing the network configuration deletes the assigned addresses from the current address pool.
NetworkIpv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Must be specified with NetworkIpv6Address.
NetworkPreferLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.	It must be configured together with NetworkIpv6Address

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 604800.	when the configuration of the IPv6 subnet is not exist.
NetworkValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with NetworkIpv6Address when the configuration of the IPv6 subnet is not exist. The preferred lifetime can't be longer than the valid lifetime.
NetworkExportRoute	Wether advertise the subnet assigned to IPv6 DHCP clients or not.	N/A	Boolean: • **true** • **false (default)**	It must be configured together with NetworkIpv6Address when the configuration of the IPv6 subnet is not exist.
NetworkPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255. Default: 65.	N/A
NetworkTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	N/A
NetworkPrefixNumber	Number of prefix of IPv6 address segment	N/A	Unsigned integer. Value range: 1 to 1024 Default 0	N/A
NetworkSubPrefixAddress	Address segment of subprefix of IPv6 address segment	N/A	Hexadecimal string, colon-separated.	It must be configured together with NetworkPrefixNumber.
NetworkSubPrefixLength	Address segment length of subprefix of IPv6 address segment	N/A	Unsigned integer. Value range: 1 to 128. Default 0	Must be specified with NetworkSubPrefixAddress

Column name	Column description	Column type	Data type and restrictions	Remarks
Range	The configuration of the non-temporary IPv6 address range	Data structure	Members include: • StartIpv6Address • EndIpv6Address • RangePreferLifetime • RangeValidLifetime	N/A
StartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
EndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	Must be specified with StartIpv6Address.
RangePreferLifetime	The preferred lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with StartIpv6Address when the configuration of the non-temporary IPv6 address range is not exist. The preferred lifetime can't be longer than the valid lifetime.
RangeValidLifetime	The valid lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with StartIpv6Address when the configuration of the non-temporary IPv6 address range is not exist.
TempRange	The configuration of the temporary IPv6 address range	Data structure	Members include: • TempStartIpv6Address • TempEndIpv6Address • TempRangePreferLifetime • TempRangeValidLifetime	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TempStartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempEndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	Must be specified with TempStartIpv6Address.
TempRangePreferLifetime	The preferred lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with TempStartIpv6Address when the configuration of the temporary IPv6 address range is not exist. The preferred lifetime can't be longer than the valid lifetime.
TempRangeValidLifetime	The valid lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with TempStartIpv6Address when the configuration of the temporary IPv6 address range is not exist.
PrefixPool	The configuration of the prefix pool applied in the IPv6 DHCP address pool	Data structure	Members include: • PrefixPoolNumber • PrefixPoolPreferLifetime • PrefixPoolValidLifetime • PrefixPoolExportRoute • PrefixPoolPreference • PrefixPoolTag	N/A
PrefixPoolNumber	Prefix pool number	N/A	Unsigned integer. Value range: 1 to 128	N/A
PrefixPoolPreferL	The preferred	N/A	Unsigned integer.	It must be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
ifetime	lifetime of the prefix pool		Value range: 60 to 4294967295. Default: 604800.	together with PrefixPoolNumber when the configuration of the prefix pool is not exist. The preferred lifetime can't be longer than the valid lifetime.
PrefixPoolValidLifetime	The valid lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with PrefixPoolNumber when the configuration of the prefix pool is not exist.
PrefixPoolExportRoute	Enabling status of adversing prefixes assigned to DHCPv6 clients	N/A	Boolean: • **true** • **false (default)**	N/A
PrefixPoolPreference	Preference value	N/A	Unsigned integer. Value range: 1 to 255. Default: 65.	N/A
PrefixPoolTag	Tag value	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	N/A
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
GatewayIpv6Address	Gateway addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
DNSIpv6Address	DNS server	N/A	String, case-insensitive.	Separated by space if

Column name	Column description	Column type	Data type and restrictions	Remarks
	addresses		Length: 1 to 367 characters.	there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive. Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Specifies a space-separated list of up to eight SIP domain names Example: aa.com bb.com.
ExportAddressHostRoute	Whether the function of export address host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
ExportNdPrefixHostRoute	Whether the function of export nd prefix host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
ExportPdPrefixHostRoute	Whether the function of export	N/A	Boolean: • **True**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	pd prefix host route is specified.		• **False**(default)	
AddressAllocMode	IPv6 Address Allocation Method Configuring IPv6 Address Pool	N/A	Enumeration: • 0-invalid (default) • 1-eui-64 • 2-interface-id	N/A
AftrName	Configure the IPv6 address pool to assign the AFTR domain name to the DHCPv6 client.	N/A	String,uncase-sensitive Length: 1 to 63 characters	N/A
AllocateNewIp	Configuring IPv6 address pool to randomly assign new addresses	N/A	Boolean: • True • False(default)	N/A
DhcpRelaySource	Specify the source address of DHCP relay forwarding message to DHCP server	Data structure	Members include: • SourceType • IpAddress • Interface	N/A
SourceType	The Source Address Type of DHCP Relay Forwarding Messages to DHCP Server	N/A	Enumeration: • 0-invalid (default) • 1-gateway • 2-Interface • 3-IpAddress	It must be configured together with ipAddress when the value is 3. It must be configured together with Interface when the value is 2.
IpAddress	Configure this IP address to the message source address and giaddr field sent to the DHCP server	Index	Hexadecimal string, colon-separated.	N/A
Interface	Interface index.	Index	Unsigned integer	N/A
OptionGroup	Configure IPv6 address pool	N/A	Unsigned integer. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	reference option group		Default 0	
ReserveExpiredIp	Aging DHCPv6 address lease	Data structure	Members include: • Enable • Mode • Limte • Time	N/A
Enable	DHCPv6 address lease switch	N/A	Boolean: • **True (default)** • **false**	N/A
Mode	DHCPv6 address lease mode	N/A	Enumeration: • **0**—**CID** • **1**—MAC (default) • **2**—BUTT	N/A
Limit	Maximum number of reserved IPv6 address lease	N/A	Unsigned integer. Value range: 1 to 256000. Default value 256000	N/A
Time	Keep IPv6 addresses the length of the lease	N/A	Unsigned integer. Value range: 60 to 4294967295. Default value 4294967295	N/A
ReserveExpiredPd	The configuration of the expired prefix lease retention mode.	Data structure	Members include: • Enable • Mode • Limte • Time	N/A
Enable	Enable the reserve expired-pd mode function.	N/A	Boolean: • True • false(default).	N/A
Mode	The mode of reserve expired-pd.	N/A	Enumeration: • 0—CID	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—MAC (default) • 2—BUTT	
Limit	The number of prefix leases.	N/A	Unsigned integer. Value range: 1 to 256000 Default: 256000	N/A
Time	The time of the prefix leases.	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 4294967295	N/A
UnrTag	The tag value of user network route	N/A	Unsigned integer. Value range: 0 to 4294967294 Default: 4294967295	N/A
VirtualDuid	Generate a virtual DUID for the server to use,	Data structure	Members include: • EnterpriseNum • Identifier • HardwareType • Address	N/A
EnterpriseNum	Enterprise number of VirtualDuid.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	It must be configured together with Identifier and cannot be configured with HardwareType or Address.
Identifier	Device identifier of VirtualDuid.	N/A	Hexadecimal string, number is even. Length: 2 to 128 characters.	It must be configured together with EnterpriseNum and cannot be configured with HardwareType or Address.
HardwareType	Hardware types of VirtualDuid.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	It must be configured together with Address and cannot be configured with EnterpriseNum or

Column name	Column description	Column type	Data type and restrictions	Remarks
				Identifier
Address	Hardware address of VirtualDuid.	N/A	Hexadecimal string, number is even. Length: 2 to 128 characters.	It must be configured together with HardwareType and cannot be configured with EnterpriseNum or Identifier
VsrpInstance	Use vsrp instance to create a VSRP instance and enter its view, or enter the view of an existing VSRP instance.	N/A	String, case-sensitive. Length: 1 to 32 characters	N/A
PoolType	The type of a specifies pool	N/A	Enumeration: • 0—normal (default) • **1**—dynamic • 2---ODAP-Client • 3---ODAP-Server • 6—bas local. • 7—bas remote. • 9—odap	N/A
DynamicAddressAllocMode	Dynamic IPv6 address block allocation mode	N/A	Enumeration: • 0—vxlan-id (default) • **1**—up-id • 3—interface • 4—up-backup-profile. • 5—interface-physic. • 6—up-backup-profile-route-refresh.	The address pool type must be dynamic.
DynamicAddressAllocAssignLengt	Specify a prefix length	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
h			Value range: 1 to 127.	
DynamicAddressIdleTime	Specify the maximum idle time for IPv6 address blocks	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 1.	N/A
DynamicPrefixAllocMode	Dynamic IPv6 prefix range allocation mode	N/A	Enumeration: • 0—vxlan-id(default) • **1**—up-id • 3—interface • 4—up-backup-profile. • 5—interface-physic. • 6—up-backup-profile-route-refresh.	N/A
DynamicPrefixAggregateLength	Aggregate assignable IPv6 prefixes based on the length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DynamicPrefixIdleTime	Specify the maximum idle time for IPv6 prefix ranges	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 1.	N/A
DynamicExportRouteDisable	Disable deploying route for assigned IPv6 address blocks	N/A	Boolean: • **true(default)** • **false**	N/A
DynamicExportRouteAddrPreference	Dynamic IPv6 address route preference	N/A	Unsigned integer. Value range: 1 to 255	N/A
DynamicExportRouteAddrTag	Dynamic IPv6 address route tag	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicExportRoutePrefixPreference	Dynamic IPv6 prefix route preference	N/A	Unsigned integer. Value range: 1 to 255	N/A
DynamicExportRoutePrefixTag	Dynamic IPv6 address route tag	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
DynamicPrefixOrigAssignLen	Aggregate assignable IPv6 prefixes based on the length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DynamicUtilizationMark	Dynamic subnet ultization	Data structure	Members include: • High Low	N/A
High	Dynamic subnet ultization mark high	N/A	Unsigned integer. Value range: 1 to 100. Default:100	N/A
Low	Dynamic subnet ultization mark low	N/A	Unsigned integer. Value range: 0 to 99. Default:50	N/A
Giaddr	Link address in the packet odap client send to odap server	N/A	Hexadecimal string, colon-separated.	N/A
ExhaustionLogEnable	Whether IPv6 address or prefix range exhaustion logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
ExhaustionTrapEnable	Whether the SNMP notification about IPv6 address pool exhaustion is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
RouteLogEnable	Whether IPv6 pool route logging is	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	enabled		• **false**(default)	
IpInuseThreshold	IPv6 address pool usage threshold	N/A	Unsigned integer. Value range: 0 to 100.	N/A
PdInuseThreshold	IPv6 prefix usage threshold	N/A	Unsigned integer. Value range: 0 to 100.	N/A
SubnetForceRenew	Renew information about the subnets allocated to ODAP clients	N/A	Boolean: • **true** • **false** (default)	This column is obsolete. To renew the subnets allocated to ODAP clients, use the SubnetForceRenew column in the DHCP6ServerForceRenewSubNet table, as described in the DHCP6 NETCONF XML API action reference document.
Bindings	N/A	SubTable	Members include: • UpIfName • BindingUpId • BindingUpBackupProfile	N/A
Binding	Bind an IPv6 address pool to a UP device	Sublist	N/A	N/A
UpIfName	Interface name.	N/A	String, case sensitive. Length: 1 to 48 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
BindingUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			product-specifc upper limit.	
BindingUpBackupProfile	Backup group to which IPV6 address pool belongs	N/A	Unsigned integer. Value range: 1 to 16384.	N/A
BindingMasterUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingBackupUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingRouteRefresh	Enable the CP to issue the updated subnet route to UPs after a master-backup switchover in warm backup mode	N/A	Boolean: • **True** • **false** (default)	It must be configured together with BindingUpBackupProfile
RemoteServerAlgorithm	Specify a DHCPv6 server selection algorithm when the device acts as a DHCPv6 relay agent	N/A	Enumeration: • **0**—Polling algorithm (default). **1**—Master-backup algorithm.	To forward a DHCPv6 request to all DHCPv6 servers, use the polling algorithm. To forward a DHCPv6 request to the master DHCPv6 server first and then to a backup DHCPv6 server only when the master server is not available, use the master-backup algorithm.
IpSubnetInuseThreshold	The subnet utilization marks forof the IPv6	N/A	Unsigned integer. Value range: 0 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address pool, in percentagewarning rate of used ipv6 network in dhcp			
PdSubnetInuseThreshold	The prefix range utilization marks forof the prefix pool, in percentage warning rate of used ipv6 prefix network in dhcp	N/A	Unsigned integer. Value range: 0 to 100.	N/A
ReserveGroupName	UP backup group bound to the IPv6 address pool	N/A	String, dotted decimal notation.	Configure this object to assign reserved IPv6 address users to the specified UP backup group.
Ipv6PoolLock	Lock the IP pool to prevent it from being used for IPv6 address (or prefix) assignment or lease renewal	N/A	Unsigned integer. Enumeration: • **0**—The IP pool is not locked and can be used for IPv6 (or prefix) assignment and lease renewal. This is the default setting. • **1**—Lock the IP pool in loose mode. **2**—Lock the IP pool in strict mode.	If an IP pool is locked in loose mode, the DHCPv6 server cannot use it for IPv6 address (or prefix) assignment, but it can still renew leases for clients that have been assigned IPv6 addresses (or prefixes) from that pool. Lock an IP pool in strict mode to prevent it from being used for assignment of new IPv6 addresses (or prefixes) or lease renewal.

DHCP6/ DHCP6OptionGroup

This table contains IPv6 DHCP option group and self-defined IPv6 DHCP option configuration information.

XML structure

```
<DHCP6>
  <DHCP6OptionGroup>
    <OptionGroup>
      <GroupNumber></GroupNumber>
      <DNSIpv6Address></DNSIpv6Address>
      <DomainName></DomainName>
      <SIPIpv6Address></SIPIpv6Address>
      <SIPDomainName></SIPDomainName>
    </OptionGroup>
  </DHCP6OptionGroup>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroup
Table type	Multi-instance table
Row name	OptionGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	N/A
DNSIpv6Address	DNS server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses

Column name	Column description	Column type	Data type and restrictions	Remarks
				Example: 1::1 2::2.
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive. Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Specifies a space-separated list of up to eight SIP domain names Example: aa.com bb.com.

DHCP6/ DHCP6OptionGroupOption

This table contains self-defined IPv6 DHCP option configuration information.

XML structure

```
<DHCP6>
  <DHCP6OptionGroupOption>
    <GroupOption>
      <GroupNumber></GroupNumber>
      <OptionCode></OptionCode>
```

```
      <OptionValueHex></OptionValueHex>
    </GroupOption>
  </DHCP6OptionGroupOption>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroupOption
Table type	Multi-instance table
Row name	GroupOption
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	The specified GroupNumber must already exist.
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535	Following values of OptionCode are forbidden: 25,26,37 to 40 and 43 to 48
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.	Lenth of OptionValueHex must be an even number.

DHCP6/DHCP6RelayPoolRemoteServer

This table contains IPv6 DHCP relay pool remote server configuration information.

XML structure

```
<DHCP6>
  <DHCP6RelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv6Address></RemoteServerIpv6Address>
      <OutIfIndex></OutIfIndex>
      <Public></Public>
      <VpnInstanceName></VpnInstanceName>
    </RemoteServer>
  </DHCP6RelayPoolRemoteServer>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayPoolRemoteServer
Table type	Multi-instance table
Row name	RemoteServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.
RemoteServerIpv6Address	IPv6 DHCP server address.	Index	Hexadecimal string, colon-separated.	For the merge, create and replace operations, 0::0,0::1.and local multi-cast address are invalid addresses.

Column name	Column description	Column type	Data type and restrictions	Remarks
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	Unsigned integer.	If a IPv6 DHCP server address is a link-local address, you must specify an outgoing interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Public	DHCP servers belonging to the public network	Index	Boolean: • **true** • **false**.	N/A
VpnInstanceName	DHCP servers belonging to a VRF	Index	String. Length: 1 to 31.	N/A

DHCP6/DHCP6Config

This table contains IPv6 DHCP DSCP configuration information.

XML structure

```
<DHCP6>
  <DHCP6Config>
    <DSCP></DSCP>
    <FloodProtectionThreshold>
      <NumberOfPackets></NumberOfPackets>
      <DetectionTime></DetectionTime>

</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Config
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DSCP	The DSCP value for IPv6 DHCP packets	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.	N/A
FloodProtectionThreshold	The threshold of IPv6 DHCP flood protection.	Data structure	Members include: • NumberOfPackets • DetectionTime.	N/A
NumberOfPackets	Number of IPv6 DHCP packets allowed to be received within detection time and not judged as an attack.	N/A	Unsigned integer. Value range: 2 to 200. Default: 10.	N/A
DetectionTime	The detection time in milliseconds.	N/A	Unsigned integer. Value range: 1000 to 10000. Default: 5000.	N/A
FloodProtectionAgeTime	The age time of IPv6 DHCP flood protection table items.	N/A	Unsigned integer. Value range: 30 to 600. Default: 300.	N/A
LogEnable	Whether the function of IPv6 DHCP logging is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
RouteLogGlobalEnable	Whether the function of IPv6 DHCP route logging is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
AdvertisePdRoute	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	enable the advertise pd-route feature		• **true** • **false** (default)	
IfRateSuppressionThreshold	DHCP packet rate threshold that triggers DHCP flood attack protection	Data structure	Members include: • NumberOfPackets • DetectionTime	N/A
NumberOfPackets	Maximum number of DHCP packets received on an interface	N/A	Unsigned integer. Value range: 2 to 6000. Default: 3000.	N/A
DetectionTime	Interface-based DHCP attack detection duration	N/A	Unsigned integer. Value range: 1000 to 10000 milliseconds. Default: 5000.	N/A
IfRateSuppressionThresholdAgeTime	Aging time of interface-based DHCP attack suppression entries	N/A	Unsigned integer. Value range: 30 to 600 seconds. Default: 300.	N/A
DuidMismatcOffline	Whether to enable the DUID-mismatch offline feature	N/A	Boolean: • **True** • **false** (default)	N/A
MultiIpPerMacEnable	Whether to enable allocation of different IP addresses to DHCP clients with the same MAC address	N/A	Boolean: • **true** • **false** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Unr	Configuration of IPv6 UNR	Data structure	Members include: • FramedIpv6AddressTag • FramedIpv6PrefixTag • FramedIpv6RouteTag • LocalPoolTag • RemotePoolTag	N/A
FramedIpv6AddressTag	UNR tag value for host routes generated based on the Framed-IPv6-Address attribute assigned by the RADIUS server	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
FramedIpv6PrefixTag	UNR tag value for host routes generated based on the Framed-IPv6-Prefix attribute assigned by the RADIUS server	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
FramedIpv6RouteTag	UNR tag value for network routes generated based on the Framed-Routing attribute assigned by the RADIUS server	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
LocalPoolTag	UNR tag value for local BAS IPv6 pools	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 0.	
RemotePoolTag	UNR tag value for remote BAS IPv6 pools	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 0.	N/A
EntryConvertEnable	Whether the function of IPv6 DHCP entry convert is enabled	N/A	Boolean: • **True** • **false** (default)	N/A
AdvertiseAddressRoute	Whether the function of IPv6 DHCP advertise address route is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
RelayMacForwardEnable	Whether the function of IPv6 DHCP relay mac forward is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
RelayMacForwardBroadcastEnable	Whether the function of IPv6 DHCP relaymac forward broadcast is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
ConflictIpv6Offline	Whether to enable the IPv6 conflicting user offline feature.	N/A	Boolean: • true false (default)	N/A
DHCP6DUID	DHCP unique identifier.The	N/A	String, uncase-insensitive. Length: 8 to 28 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	value is an even hexadecimal number in the range of 8 to 28.			
DHCP6RateLimit	Set a limit on the receiving rate of DHCPv6 packets from users	N/A	Unsigned integer. Value range: 1 to 500000000.	With this feature enabled, the device will drop DHCPv6 packets that exceed the limit.
TrapAddressExhaust	Whether to enable SNMP notifications for IP pool exhaustion or recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapIpInUse	Whether to enable SNMP notifications for IP pool usage threshold violation and recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapPdExhaust	Whether to enable SNMP notifications for prefix pool exhaustion or recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapPdInUse	Whether to enable SNMP	N/A	Boolean: • **true** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	notifications for prefix pool usage threshold violation and recovery.		• **false**	

DHCP6/DHCP6ServerPoolStaticAddress

This table contains IPv6 DHCP server pool static address information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolStaticAddress>
    <PoolStaticAddress>
      <PoolIndex></PoolIndex>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticAddress>
  </DHCP6ServerPoolStaticAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticAddress
Table type	Multi-instance table
Row name	PoolStaticAddress
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when create a new row, can not be deleted.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.	Required when create a new row, can not be deleted.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.	If you do not specify an IAID, the server does not match the client IAID for prefix assignment.
PreferLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800	The preferred lifetime can't be longer than the valid lifetime.
ValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	N/A
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

DHCP6/DHCP6ServerPoolStaticPrefix

This table contains IPv6 DHCP server pool static prefix information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolStaticPrefix>
    <PoolStaticPrefix>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6If
Table type	Multi-instance table
Row name	IfConfigure
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns for B70

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Mode	DHCPv6 mode	N/A	Enumeration: • **0**—None(default). • **1**—Server. • **2**—Relay.	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: • **true** • **false**(default).	N/A
ServerRapidCommit	Enable the rapid commit function.	N/A	Boolean: • **true** • **false**(default).	N/A
ServerPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	N/A
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: • **true** • **false**(default)	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolRapidCommit	Enable the rapid commit function.	N/A	Boolean: • **true** • **false**(default)	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
RelayInterfaceIDMode	IPV6 Interface-Id Option	N/A	Enumeration: • **0**—None(default). • **1**—Bas. • **2**—Interface.	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—User Mac.	of the interface.
RelayGatewayAddress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A
RelayClientLinkAddressEnable	Enable DHCPv6 relay support to add option 79	N/A	Boolean: • **True** • **false**(default)	N/A
RequestFromTunneIDiscard	Configure DHCP relay drop received from vxlan tunnel	N/A	Boolean: • **true** • **false**(default)	N/A
RelaySourceAddress	Specify the source address of message forwarded by DHCPv6 relay to DHCPv6 server	Data structure	Members include: • IPv6Address • Interface	N/A
IPv6Address	Specify the IPv6 address as the source address of the message sent to DHCPv6 server	N/A	Hexadecimal string, Colon separated.	N/A
Interface	Specify IPv6 address of the interface as the source address of the message sent to DHCPv6 server	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
ClientDetect	Enabling status of client offline detection	N/A	Boolean: • **true** • **false** (default)	N/A
DiscardReqFromTnlEnable	Support for discarding request packet from	N/A	Boolean: • **true** • **false** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	tunnels by the DHCP relay agent			
SessionMismatchAction	Configuration of DHCPv6 session-mismatch action	N/A	Enumeration: • **0**—Drop. (default). • **1**—Fast-renew	N/A
FloodProtectionEnable	DHCPv6 flood attack prevention	N/A	Boolean: • **True** • **false**(default)	N/A
IfRateSuppressionEnable	DHCPv6 interface attack suppression	N/A	Boolean: • **true** • **false**(default)	N/A
ApplyPolicy	DHCPv6 policy referenced by the interface	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ClientInfoRecord	DHCPv6 relay entry recording function	N/A	Boolean: • **true** • **false**(default)	N/A
SessionMismatchAction	Processing method of DHCPv6 request sent by online users whose physical location changes and MAC address remains unchanged by DHCPv6 device	N/A	Enumeration: • **0**—Invalid(default) • **1**—Roam • **2**—Fastrenew • **3**—All	N/A
RelayReleaseAgent	Notify DHCPv6 server to release lease when clearing relay entries	N/A	Boolean: • **True** • **false**(default)	Only when the device is configured to work in DHCPv6 relay mode, and the DHCPv6 relay entry recording is enabled, can the lease release function of DHCPv6 server be notified when the relay

Column name	Column description	Column type	Data type and restrictions	Remarks
				entries are cleared

Columns for B75

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Mode	DHCPv6 mode	N/A	Enumeration: • **0**—None (default). • **1**—Server. • **2**—Relay.	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes	N/A	Boolean: • **true** • **false**(default).	N/A
ServerRapidCommit	Enabling status of the rapid commit function	N/A	Boolean: • **true** • **false** (default).	N/A
ServerPreference	Server preference	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and prefixes	N/A	Boolean: • **true** • **false**(default)	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolRapidCommit	Enabling status of the rapid commit function	N/A	Boolean: • **true** • **false** (default)	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Server preference	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
RelayInterfaceIDMode	IPV6 Interface-ID Option	N/A	Enumeration: • 0—None(default). • 1—Bas. • **2**—Interface. • 3—Cn-telecom • 4—Tr-101	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index of the interface.
RelayGatewayAddress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A
ClientDetect	Enabling status of client offline detection	N/A	Boolean: • **true** • **false** (default)	N/A
DiscardReqFromTnlEnable	Support for discarding request packet from tunnels by the	N/A	Boolean: • **true** • **false** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DHCP relay agent			
SessionMismatchAction	Configuration of DHCPv6 session-mismatch action	N/A	Enumeration: • **0**—Drop (default). • **1**—Fast-renew	N/A
RemoteServerAlgorithm	Specify a DHCPv6 server selection algorithm when the device acts as a DHCPv6 relay agent	N/A	Enumeration: • **0**—Polling algorithm (default). • 1—Master-backup algorithm.	To forward a DHCPv6 request to all DHCPv6 servers, use the polling algorithm. To forward a DHCPv6 request to the master DHCPv6 server first and then to a backup DHCPv6 server only when the master server is not available, use the master-backup algorithm.
NonFirstHopEnable	Whether to enable non-first-hop DHCPv6 relay	N/A	Boolean: • **true** • **false** (default)	For access authentication to take effect, you must enable this feature on the relay agent.

DHCP6/DHCP6ServerPoolOption

This table contains IPv6 DHCP server pool option information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolOption>
    <PoolOption>
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
    </PoolOption>
  </DHCP6ServerPoolOption>
```

```
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolOption
Table type	Multi-instance table
Row name	PoolOption
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535	Following values of OptionCode are forbidden: 25,26,37 to 40 and 43 to 48
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.	Required when create a new row, can not be deleted.Lenth of OptionValueHex must be an even number.

DHCP6/DHCP6ServerClass

This table contains DHCPv6 server class information.

XML structure

```
<DHCP6>
  <DHCP6ServerClass>
    <ServerClass>
      <ClassName></ClassName>
      <RuleNumber></RuleNumber>
      <RuleType></RuleType>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
      <OptionValueAscii></OptionValueAscii>
      <OptionValueMask></OptionValueMask>
      <OptionOffset></OptionOffset>
      <OptionLen></OptionLen>
      <OptionPartial></OptionPartial>
      <LinkAddr></LinkAddr>
    </ServerClass>
  </DHCP6ServerClass>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClass
Table type	Multi-instance table
Row name	ServerClass
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleNumber	Rule number	Index	Unsigned integer. Value range: 1 to 16.	N/A

RuleType	Match mode	Index	Enumeration: • **2**—option • **3**—relay-agent	N/A
OptionCode	DHCPv6 option code	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
OptionValueHex	Specify the option content to be matched in the hexadecimal format	N/A	Hexadecimal string, case-insensitive. Length: even number in the range of 2 to 256 characters.	N/A
OptionValueAscii	Specify the option content to be matched in the ASSCII format	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A
OptionValueMask	Specify the mask	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionOffSet	Specify the offset	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
OptionLen	Specify the string length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
OptionPartial	Enable partial match	N/A	Boolean: • true. • false (default).	N/A
LinkAddr	Link address	N/A	String, dotted decimal notation.	N/A

DHCP6/DHCP6ServerForbiddenPrefix

This table contains DHCPv6 server forbidden prefix information.

XML structure

```
<DHCP6>
  <DHCP6ServerForbiddenPrefix>
    <ForbiddenPrefix>
      <VRF></VRF>
      <StartPrefix></StartPrefix>
      <StartPrefixLen></StartPrefixLen>
```

```
      <EndPrefix></EndPrefix>
      <EndPrefixLen></EndPrefixLen>
    </ForbiddenPrefix>
  </DHCP6ServerForbiddenPrefix>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerForbiddenPrefix
Table type	Multi-instance table
Row name	ForbiddenPrefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the IPv6 pool is on the public network, the character length is 0
StartPrefix	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	N/A
StartPrefixLen	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
EndPrefix	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	When sending the end address immediately, the end address is higher than or equal to the start address.
EndPrefixLen	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	The prefix lengths of the start prefix and the end prefix should be the same.

DHCP6/DHCP6ServerPolicy/ClassPolicy

This table contains information about the DHCPv6 server policy.

XML structure

```
<DHCP6>
  <DHCP6ServerPolicy>
    <ServerPolicy>
      <PolicyName></PolicyName>
      <DefaultIpPool></DefaultIpPool>
      <ClassPolicys>
        <ClassPolicy>
          <Class></Class>
          <IpPool></IpPool>
        </ClassPolicy>
      </ClassPolicys>
    </ServerPolicy>
  </DHCP6ServerPolicy>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPolicy
Table type	Multi-instance table, multi-level table
Row name	ServerPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	DHCP policy name	Index	String, case-insensitive. Length: 1 to 63	Required when you create a new row. The name

			characters.	cannot be modified.
DefaultIpPool	Default IP pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassPolicys	N/A	Data structure	Members include: • Class • IpPool	SubTable
Class	DHCP6 class name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IpPool	IP pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DHCP6/DHCP6Vsi

This table contains the VSI configuration of DHCP.

XML structure

```
<DHCP6>
  <DHCP6Vsi>
    <Vsi>
      <VsiName></VsiName>
      <FloodProtectionEnable></FloodProtectionEnable>
    </Vsi>
  </DHCP6Vsi>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Vsi
Table type	Multi-instance table
Row name	Vsi
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
FloodProtectionEnable	Enabling status of DHCP flood protection	N/A	Boolean: • **True** • **False** (default).	N/A

DHCP6/DHCP6ServerPoolGroup

This table contains DHCPv6 address pool group information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolGroup>
    <PoolGroup>
      <GroupName></GroupName>
      <vpn></vpn>
      <Pools>
        <Pool>
          <PoolName></PoolName>
```

```
        <Priority></Priority>
      </Pool>
    </Pools>
    <Ipv6PoolAlgorithmRoundRobinLocal></Ipv6PoolAlgorithmRoundRobinLocal>
    <Ipv6PoolAlgorithmRoundRobinRemote></Ipv6PoolAlgorithmRoundRobinRemote>
    <PoolGroupExhaustionTrapEnable></PoolGroupExhaustionTrapEnable>
    <PoolGroupExhaustionLogEnable></PoolGroupExhaustionLogEnable>
    <IpInUseThreshold></IpInUseThreshold>
  </PoolGroup>
 </DHCP6ServerPoolGroup>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolGroup
Table type	Multi-instance table, multi-level table
Row name	PoolGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
GroupName	DHCPv6 address pool group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
vpn	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the DHCPv6 address pool is on the public

				network, the length of characters is 0.
PoolName	DHCPv6 address pool name	Sublist	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
Priority	DHCPv6 address pool priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	N/A
Ipv6PoolAlgorithmRoundRobinLocal	DHCPv6 pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
Ipv6PoolAlgorithmRoundRobinRemote	DHCPv6 pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
PoolGroupExhaustionTrapEnable	Whether the SNMP notification about IPv6 pool group exhaustion is enabled	N/A	Boolean: • **True** • **false**(default)	N/A
PoolGroupExhaustionLogEnable	Whether IPv6 pool group exhaustion logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInUseThreshold	The warning rate of used ipv6 address in dhcp pool group	N/A	Unsigned integer. Value range: 0 to 100.	N/A

DHCP6/DHCP6ServerForbiddenIpv6

This table contains information about IPv6 addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerForbiddenIpv6>
    <ForbiddenIpv6>
      <VRF></VRF>
      <StartIpv6Address></StartIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </ForbiddenIpv6>
  </DHCP6ServerForbiddenIpv6>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerForbiddenIpv6
Table type	Multi-instance table
Row name	ForbiddenIpv6
Restrictions	None
Support for row creation and deletion	Yes

Columns

DHCP6/DHCP6RelayMacFowardEnable

This table contains information about whether the DHCPv6 relay supports forwarding ACK or OFFER packet by MAC address.

XML structure

```
<DHCP6>
  <DHCP6RelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
```

```
      <MacBroadCast></MacBroadCast>
    </RelayMacForwardEnable>
  </DHCP6RelayMacFowardEnable>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayMacFowardEnable
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RelayMacForwardEnable	The configuration of the RelayMacForwardEnable	Data structure	Members include: • MacEnable • MacBroadCast	N/A
MacEnable	Whether enable MAC forwarding	N/A	Boolean: • **true** • **false** (default)	If MAC forwarding is enabled, DHCPv6 server OFFER or ACK packet will be forwarded via unicast.
MacBroadCast	Whether enable MAC broadcasting	N/A	Boolean: • **true** • **false** (default)	It must be configured with MacEnable and the value for MacEnable must be true.

DHCP6/DHCP6RelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP6 relay agent.

XML structure

```
<DHCP6>
  <DHCP6RelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <SourceIfIndex></SourceIfIndex>
    </RelaySrcAddr>
  </DHCP6RelaySourceAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Address	Source IP addresses of the	N/A	Hexadecimal string, colon-separated.	Ipv6Address and sourceIfIndex cannot be

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets sent by the DHCP6 relay agent			set at the same time.
SourceIfIndex	The source interface for the DHCP6 relay agent	N/A	Unsigned integer.	Ipv6Address and sourceIfIndex cannot be set at the same time.

DHCP6/DHCP6ServerPoolForbiddenAddress

This table contains information about IPv6 addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolForbiddenAddress>
    <PoolForbiddenAddress>
      <PoolIndex></PoolIndex>
      <StartAddress></StartAddress>
      <EndAddress></EndAddress>
    </PoolForbiddenAddress>
  </DHCP6ServerPoolForbiddenAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolForbiddenAddress
Table type	Multi-instance table
Row name	PoolForbiddenAddress
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
StartAddress	Start IPv6 address of an IPv6 address range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	N/A
EndAddress	End IPv6 address of an IPv6 address range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	The value for end-address cannot be lower than that for start-address.

DHCP6/DHCP6ServerPoolForbiddenPrefix

This table contains information about IPv6 prefixes excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolForbiddenPrefix>
    <PoolForbiddenPrefix>
      <PoolIndex></PoolIndex>
      <StartPrefix></StartPrefix>
      <StartPrefixLen></StartPrefixLen>
      <EndPrefix></EndPrefix>
      <EndPrefixLen></EndPrefixLen>
    </PoolForbiddenPrefix>
  </DHCP6ServerPoolForbiddenPrefix>
```

```
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolForbiddenPrefix
Table type	Multi-instance table
Row name	PoolForbiddenPrefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
StartPrefix	Start IPv6 prefix of an IPv6 prefix range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	
StartPrefixLen	Length of the StartPrefix	Index	Unsigned integer Value range: 1 to 128.	N/A
EndPrefix	End IPv6 prefix of an IPv6 prefix range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	The value for end-prefix cannot be lower than that for start-prefix.

Column name	Column description	Column type	Data type and restrictions	Remarks
EndPrefixLen	Length of the EndPrefix	Index	Unsigned integer. Value range: 1 to 128.	N/A

DHCP6/DHCP6RelayServerInfo

This table contains the configuration for remote DHCPv6 server liveness detection.

XML structure

```
<DHCP6>
  <DHCP6RelayServerInfo>
    <RelayServerInfo>
      <Vpn></Vpn>
      <ServerIp></ServerIp>
      <DeadCount></DeadCount>
      <DeadTime></DeadTime>
      <TimeOut></TimeOut>
    </RelayServerInfo>
  </DHCP6RelayServerInfo>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayServerInfo
Table type	Multi-instance table
Row name	RelayServerInfo
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Vpn	VPN (or VRF) instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If a VPN instance is not specified, the public network is specified
ServerIp	IPv6 address of a DHCPv6 server	Index	Hexadecimal string, colon-separated.	If no value is specified for ServerIp, all remote DHCPv6 servers are specified.
DeadCount	The maximum number of consecutive communication failures before the relay agent marks a DHCPv6 server as down	N/A	Unsigned integer Value range: 1 to 64 Default: 0.	N/A
DeadTime	The amount of time that the DHCPv6 relay agent must wait before it can send requests to the server after the server was marked as down	N/A	Unsigned integer Value range: 1 to 65536 Default:3.	N/A
TimeOut	The maximum interval that the DHCPv6 relay agent waits for the response to a request sent to the remote DHCPv6 server	N/A	Unsigned integer. Value range: 1 to 60 Default:55.	N/A

DHCP6/DHCP6ServerPoolVendorSpecific

This table contains the configuration for DHCPv6 Option17.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolVendorSpecific>
    <PoolVendorSpecific>
      <PoolIndex></PoolIndex>
      <EnterpriseNumber></EnterpriseNumber>
      <SubOptionInfos>

DHCP6

DHCP6/DHCP6ServerDatabase

This table contains IPv6 DHCP server database information.

XML structure

```
<DHCP6>
  <DHCP6ServerDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCP6ServerDatabase>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Object file name	N/A	String, case-insensitive. Length: 1 to 255 characters.
URL	Object URL string	N/A	String. case-sensitive. Length: 1 to 255 characters.
Username	FTP username	N/A	String. case-sensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 32 characters.
Password	FTP password	N/A	String. case-sensitive. Length: 1 to 32 characters.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds.

DHCP6/DHCP6ServerIpPool

This table contains IPv6 DHCP server pool information.

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerIpPool

Table type	Multi-instance table, multi-level table
Row name	Pool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	N/A
PoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Network	The configuration of the IPv6 subnet	Data structure	Members include: • NetworkIpv6Address • NetworkIpv6PrefixLength • NetworkPreferLifetime • NetworkValidLifetime • NetworkExportRoute • NetworkPreference • NetworkTag	N/A
NetworkIpv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	N/A
NetworkIpv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	N/A
NetworkPreferLif	The preferred	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
etime	lifetime of the IPv6 subnet		Value range: 60 to 4294967295.	
NetworkValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
NetworkExportRoute	Wether advertise the subnet assigned to DHCPv6 clients or not.	N/A	Boolean: • **true** • **false**	N/A
NetworkPreference	Preference for the network route to be advertised	N/A	Unsigned integer. Value range: 1 to 255.	N/A
NetworkTag	Tag value for the network route to be advertised	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
NetworkPrefixNumber	Number of prefix of IPv6 address segment	N/A	Unsigned integer. Value range: 1 to 1024 Default: 0	N/A
NetworkSubPrefixAddress	Address segment of subprefix of IPv6 address segment	N/A	Hexadecimal string, colon-separated.	It must be configured together with NetworkPrefixNumber.
NetworkSubPrefixLength	Address segment length of subprefix of IPv6 address segment	N/A	Unsigned integer. Value range: 1 to 128. Default: 0	Must be specified with NetworkSubPrefixAddress.
Range	The configuration of the non-temporary IPv6 address range	Data structure	Members include: • StartIpv6Address • EndIpv6Address • RangePreferLifetime • RangeValidLifetime	N/A
StartIpv6Address	The start IPv6	N/A	Hexadecimal string,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address		colon-separated.	
EndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
RangePreferLifetime	The preferred lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A .
RangeValidLifetime	The valid lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
TempRange	The configuration of the temporary IPv6 address range	Data structure	Members include: • TempStartIpv6Address • TempEndIpv6Address • TempRangePreferLifetime • TempRangeValidLifetime	N/A
TempStartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempEndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempRangePreferLifetime	The preferred lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
TempRangeValidLifetime	The valid lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
PrefixPool	The configuration of the prefix pool	Data structure	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	applied in the IPv6 DHCP address pool		• PrefixPoolNumber • PrefixPoolPreferLifetime • PrefixPoolValidLifetime • PrefixPoolExportRoute • PrefixPoolPreference • PrefixPoolTag	
PrefixPoolNumber	Prefix pool number	N/A	Unsigned integer. Value range: 1 to 128	N/A
PrefixPoolPreferLifetime	The preferred lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
PrefixPoolValidLifetime	The valid lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
PrefixPoolExportRoute	Enabling status of advertising prefixes assigned to DHCPv6 clients	N/A	Boolean: • **true** **false**	N/A
PrefixPoolPreference	Preference value	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PrefixPoolTag	Tag value	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
GatewayIpv6Address	Gateway addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
				1::1 2::2.
DNSIpv6Address	DNS server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example: 1::1 2::2.
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-sensitive. Length: 1 to 407 characters.	Seperated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Example: aa.com bb.com.
ExportAddressHostRoute	Whether the function of export address host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
ExportNdPrefixHostRoute	Whether the function of export nd prefix host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
ExportPdPrefixHostRoute	Whether the function of export pd prefix host route is specified.	N/A	Boolean: • **True** • **False**(default)	N/A
AddressAllocMode	IPv6 Address Allocation Method Configuring IPv6 Address Pool	N/A	Enumeration: • 0-invalid • 1-eui-64 • 2-interface-id	N/A
AftrName	Configure the IPv6	N/A	String,uncase-sensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address pool to assign the AFTR domain name to the DHCPv6 client.		Length: 1 to 63 characters	
AllocateNewIp	Configuring IPv6 address pool to randomly assign new addresses	N/A	Boolean: • True • False(default)	N/A
DhcpRelaySource	Specify the source address of DHCP relay forwarding message to DHCP server	Data structure	Members include: • SourceType • IpAddress • Interface	N/A
SourceType	The Source Address Type of DHCP Relay Forwarding Messages to DHCP Server	N/A	Enumeration: • 0-invalid • 1-gateway • 2-Interface • 3-IpAddress	It must be configured together with ipAddress when the value is 3. It must be configured together with Interface when the value is 2.
OptionGroup	Configure IPv6 address pool reference option group	N/A	Unsigned integer. Value range: 1 to 100.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Ipv6Address	IPv6 DHCP DHCP servers IPv6 address on the IPv6 DHCP relay agent.	Index	Hexadecimal string, colon-separated.	N/A
ReserveExpiredIp	Aging DHCPv6 address lease	Data structure	Members include: • Enable • Mode • Limte • Time	N/A
Eable	DHCPv6 address	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	lease switch		• **True** • **false**	
Mode	DHCPv6 address lease mode	N/A	Enumeration: • 0—CID • 1—MAC • 2—BUTT	N/A
Limte	Maximum number of reserved IPv6 address lease	N/A	Unsigned integer. Value range: 1 to 256000. Default value 256000	N/A
Time	Keep IPv6 addresses the length of the lease	N/A	Unsigned integer. Value range: 60 to 4294967295. Default value 4294967295	N/A
ReserveExpiredPd	The configuration of the expired prefix lease retention mode.	Data structure	Members include: • Enable • Mode • Limte • Time	N/A
Enable	Enable the reserve expired-pd mode function.	N/A	Boolean: • **True** • **false**(default).	N/A
Mode	The mode of reserve expired-pd.	N/A	Enumeration: • **0**—duid(default). • **1**—mac	N/A
Limte	The number of prefix leases.	N/A	Unsigned integer. Value range: 1 to 256000 Default: 256000	N/A
Time	The time of the prefix leases.	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 4294967295	
UnrTag	The tag value of user network route	N/A	Unsigned integer. Value range: 0 to 4294967294. Default: 4294967295	N/A
VirtualDuid	Generate a virtual DUID for the server to use,	Data structure	Members include: • EnterpriseNum • Identifier • HardwareType • Address	N/A
EnterpriseNum	Enterprise number of VirtualDuid.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	It must be configured together with Identifier and cannot be configured with HardwareType or Address.
Identifier	Device identifier of VirtualDuid.	N/A	Hexadecimal string, number is even. Length: 2 to 128 characters.	It must be configured together with EnterpriseNum and cannot be configured with HardwareType or Address.
HardwareType	Hardware types of VirtualDuid.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	It must be configured together with Address and cannot be configured with EnterpriseNum or Identifier
Address	Hardware address of VirtualDuid.	N/A	Hexadecimal string, number is even. Length: 2 to 128 characters.	It must be configured together with HardwareType and cannot be configured with EnterpriseNum or Identifier
VsrpInstance	Use vsrp instance	N/A	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	to create a VSRP instance and enter its view, or enter the view of an existing VSRP instance.		Length: 1 to 32 characters	
PoolType	The type of a specifies pool	N/A	Enumeration: • 0—normal (default) • **1**—dynamic • 2---ODAP-Client • 3---ODAP-Server • 6—bas local. • 7—bas remote. • 9—odap	N/A
DynamicAddressAllocMode	Dynamic IPv6 address block allocation mode	N/A	Enumeration: • **0**—vxlan-id • **1**—up-id • **3—**interface • 4—up-backup-profile. • 5—interface-physic. • 6—up-backup-profile-route-refresh	The address pool type must be dynamic
DynamicAddressAllocAssignLength	Specify a prefix length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DynamicExportRouteDisable	Disable deploying route for assigned IPv6 address blocks	N/A	Boolean: • **true(default)** • **false**	N/A
DynamicAddressIdleTime	Specify the maximum idle time for IPv6 address blocks	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicPrefixAllocMode	Dynamic IPv6 prefix range allocation mode	N/A	Enumeration: • **0**—vxlan-id • **1**—up-id • 3—interface • 4—up-backup-profile. • 5—interface-physic. • 6—up-backup-profile-route-refresh	N/A
DynamicPrefixAggregateLength	Aggregate assignable IPv6 prefixes based on the length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DynamicPrefixIdleTime	Specify the maximum idle time for IPv6 prefix ranges	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 1.	N/A
DynamicExportRouteAddrPreference	Route preference for IPv6 addresses	N/A	Unsigned integer. Value range: 1 to 255.	N/A
DynamicExportRouteAddrTag	Tag value for IPv6 addresses	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
DynamicExportRoutePrefixPreference	Route preference for IPv6 prefixes	N/A	Unsigned integer. Value range: 1 to 255.	N/A
DynamicExportRoutePrefixTag	Tag value for IPv6 prefixes	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
DynamicPrefixOrigAssignLen	IPv6 prefix length that the ODAPv6 client uses to assign IPv6 prefix ranges to users.	N/A	Unsigned integer. Value range: 0 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicUtilizationMark	N/A	Data structure	Members include: • High • Low	N/A
High	The high utilization mark in percentage	N/A	Unsigned integer. Value range: 1 to 100. Default:100	N/A
Low	The low utilization mark in percentage	N/A	Unsigned integer. Value range: 0 to 99. Default:50	N/A
ExhaustionLogEnable	IPv6 address or prefix range exhaustion logging is enabled	N/A	Boolean: • **true** • **false**	N/A
ExhaustionTrapEnable	Whether the SNMP notification about IPv6 address pool exhaustion is enabled	N/A	Boolean: • **true** • **false**	N/A
RouteLogEnable	Whether IPv6 pool route logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInuseThreshold	IPv6 address pool usage threshold	N/A	Unsigned integer. Value range: 0 to 100.	N/A
PdInuseThreshold	IPv6 prefix usage threshold	N/A	Unsigned integer. Value range: 0 to 100.	N/A
SubnetForceRenew	Renew information about the subnets allocated to ODAP clients	N/A	Boolean: • **true** • **false**	This column is obsolete. To renew the subnets allocated to ODAP clients, use the SubnetForceRenew column in the DHCP6ServerForceRenewSubNet table, as described in the DHCP6

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API action reference document.
Bindings	N/A	SubTable	Members include: • UpIfName • BindingUpId BindingUpBackupProfile	N/A
Binding	Bind an IPv6 address pool to a UP device	Sublist	N/A	N/A
UpIfName	Interface name.	N/A	String, case sensitive. Length: 1 to 48 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
BindingUpId	Bind the pool to a up-ID	N/A	Unsigned integer. Value range: 1024 to Product customization maximum	N/A
BindingUpBackupProfile	Backup group to which IPV6 address pool belongs	N/A	Unsigned integer. Value range: 1 to 16384.	N/A
BindingMasterUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper limit.	N/A
BindingBackupUpId	Bind the pool to a UP-ID	N/A	Unsigned integer. Value range: 1024 to product-specifc upper	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			limit.	
BindingRouteRefresh	Enable the CP to issue the updated subnet route to UPs after a master-backup switchover in warm backup mode	N/A	Boolean: • **True** • **false** (default)	It must be configured together with BindingUpBackupProfile
RemoteServerAlgorithm	DHCPv6 server selection algorithm when the device acts as a DHCPv6 relay agent	N/A	Enumeration: • **0**—Polling algorithm (default). • **1**—Master-backup algorithm.	If the polling algorithm is used, the relay agent forwards a DHCPv6 request to all DHCPv6 servers. If the master-backup algorithm is used, the relay agent forwards a DHCPv6 request to the master DHCPv6 server first and then to a backup DHCPv6 server only when the master server is not available
IpSubnetInuseThreshold	Subnet usage threshold for the IPv6 address pool, in percentage	N/A	Unsigned integer. Value range: 0 to 100.	N/A
PdSubnetInuseThreshold	Prefix range usage threshold for the IPv6 address pool, in percentage	N/A	Unsigned integer. Value range: 0 to 100.	N/A
ReserveGroupName	UP backup group bound to the IPv6 address pool	N/A	String, dotted decimal notation.	Configure this object to assign reserved IPv6 address users to the specified UP backup group.
Ipv6PoolLock	Whether the IP	N/A	Unsigned integer.	If an IP pool is locked in

Column name	Column description	Column type	Data type and restrictions	Remarks
	pool is locked		Enumeration: • **0**—The IP pool is not locked and can be used for IPv6 (or prefix) assignment and lease renewal. This is the default setting. • **1**—The IP pool is locked in loose mode. • **2**—The IP pool is locked in strict mode.	loose mode, the DHCPv6 server cannot use it for IPv6 address (or prefix) assignment, but it can still renew leases for clients that have been assigned IPv6 addresses (or prefixes) from that pool. Lock an IP pool in strict mode to prevent it from being used for assignment of new IPv6 addresses (or prefixes) or lease renewal.

DHCP6/DHCP6OptionGroup

This table contains IPv6 DHCP option group and self-defined IPv6 DHCP option configuration information.

XML structure

```
<DHCP6>
  <DHCP6OptionGroup>
    <OptionGroup>
      <GroupNumber></GroupNumber>
      <DNSIpv6Address></DNSIpv6Address>
      <DomainName></DomainName>
      <SIPIpv6Address></SIPIpv6Address>
      <SIPDomainName></SIPDomainName>
    </OptionGroup>
  </DHCP6OptionGroup>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroup
Table type	Multi -instance table
Row name	OptionGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	N/A
DNSIpv6Address	DNS server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
				1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive. Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Specifies a space-separated list of up to eight SIP domain names Example: aa.com bb.com.

DHCP6/DHCP6OptionGroupOption

This table contains self-defined IPv6 DHCP option configuration information.

XML structure

```
<DHCP6>
  <DHCP6OptionGroupOption>
    <GroupOption>
      <GroupNumber></GroupNumber>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
    </GroupOption>
  </DHCP6OptionGroupOption>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroupOption
Table type	Multi -instance table
Row name	GroupOption

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.

DHCP6/DHCP6RelayPoolRemoteServer

This table contains IPv6 DHCP relay pool remote server configuration information.

XML structure

```
<DHCP6>
  <DHCP6RelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv6Address></RemoteServerIpv6Address>
      <OutIfIndex></OutIfIndex>
      <Public></Public>
      <VpnInstanceName></VpnInstanceName>
    </RemoteServer>
  </DHCP6RelayPoolRemoteServer>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayPoolRemoteServer

Table type	Multi -instance table
Row name	RemoteServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
RemoteServerIpv6Address	IPv6 DHCP server address.	Index	Hexadecimal string, colon-separated.
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the DHCPv6 server	Index	Unsigned integer.
Public	IPv6 DHCP servers belong to Public	Index	Boolean: • **true** • **false**
VpnInstanceName	DHCP servers belong to VRF	Index	String. Length: 1 to 31.

DHCP6/DHCP6Config

This table contains IPv6 DHCP DSCP configuration information.

XML structure

```
<DHCP6>
  <DHCP6Config>
    <DSCP></DSCP>
    <FloodProtectionThreshold>
      <NumberOfPackets></NumberOfPackets>
      <DetectionTime></DetectionTime>
```

    <TrapPdInUse></TrapPdInUse>
  </DHCP6Config>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Config
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DSCP	The DSCP value for IPv6 DHCP packets	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FloodProtectionThreshold	Treshold of IPv6 DHCP flood protection.	Data structure	Members include: • NumberOfPackets • DetectionTime.	N/A
NumberOfPackets	Number of IPv6 DHCP packets allowed to be received within detection time and not judged as an attack.	N/A	Unsigned integer. Value range: 2 to 200.	N/A
DetectionTime	Detection time in milliseconds.	N/A	Unsigned integer. Value range: 1000 to 10000.	N/A
FloodProtectionAgeTime	Aging time of IPv6 DHCP flood protection table items.	N/A	Unsigned integer. Value range: 30 to 600.	N/A
LogEnable	Whether the function of IPv6 DHCP logging is enabled	N/A	Boolean: • **true** • **false**	N/A
RouteLogGlobalEnable	Whether the function of IPv6 DHCP route logging is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
EntryConvertEnable	Whether the function of	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IPv6 DHCP entry convert is enabled		• **false**	
AdvertiseAddressRoute	Whether the function of IPv6 DHCP advertise address route is enabled	N/A	Boolean: • **true** • **false**	N/A
RelayMacForwardEnable	Whether the function of IPv6 DHCP relay mac forward is enabled	N/A	Boolean: • **true** • **false**	N/A
RelayMacForwardBroadcastEnable	Whether the function of IPv6 DHCP relaymac forward broadcast is enabled	N/A	Boolean: • **true** • **false**	N/A
AdvertisePdRoute	Whether to enable the advertise pd-route feature.	N/A	Boolean: • **true** • **false**	N/A
IfRateSuppressionThreshold	DHCP packet rate threshold that triggers DHCP flood attack protection.	Data structure	Members include: • NumberOfPackets • DetectionTime	N/A
NumberOfPackets	Maximum number of DHCP packets received on an interface.	N/A	Unsigned integer. Value range: 2 to 6000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectionTime	Interface-based DHCP attack detection duration.	N/A	Unsigned integer. Value range: 1000 to 10000 milliseconds.	N/A
IfRateSuppressionThresholdAgeTime	Aging time of interface-based DHCP attack suppression entries.	N/A	Unsigned integer. Value range: 30 to 600 seconds.	N/A
DuidMismatcOffline	Whether to enable the duid-mismatch offline feature.	N/A	Boolean: • **True** • **false**	N/A
MultiIpPerMacEnable	Whether to enable allocation of different IP addresses to DHCP clients with the same MAC address.	N/A	Boolean: • **true** • **false**	N/A
Ipv6Unr	Configuration of IPv6 Unr.	Data structure	Members include: • FramedIpv6AddressTag • FramedIpv6PrefixTag • FramedIpv6RouteTag • LocalPoolTag • RemotePoolTag	N/A
FramedIpv6AddressTag	UNR tag value for host routes generated based on the Framed-IPv6-Address attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FramedIpv6PrefixTag	UNR tag value for host routes generated based on the Framed-IPv6-Prefix attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
FramedIpv6RouteTag	UNR tag value for network routes generated based on the Framed-Routing attribute assigned by the RADIUS server.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
LocalPoolTag	UNR tag value for local BAS IPv6 pools.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
RemotePoolTag	UNR tag value for remote BAS IPv6 pools.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
ConflictIpv6Offline	Whether to enable the IPv6 conflicting user offline feature.	N/A	Boolean: • **True** • **false**	N/A
DHCP6DUID	DHCP unique identifier.The value is an even hexadecimal	N/A	String, uncase-insensitive. Length: 8 to 28 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number in the range of 8 to 28.			
DHCP6RateLimit	Set a limit on the receiving rate of DHCPv6 packets from users	N/A	Unsigned integer. Value range: 1 to 500000000.	With this feature enabled, the device will drop DHCPv6 packets that exceed the limit.
TrapAddressExhaust	Whether to enable SNMP notifications for IP pool exhaustion or recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapIpInUse	Whether to enable SNMP notifications for IP pool usage threshold violation and recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapPdExhaust	Whether to enable SNMP notifications for prefix pool exhaustion or recovery.	N/A	Boolean: • **true** (default) • **false**	N/A
TrapPdInUse	Whether to enable SNMP notifications for prefix pool usage	N/A	Boolean: • **true** (default) • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	threshold violation and recovery.			

DHCP6/DHCP6ServerPoolStaticAddress

This table contains IPv6 DHCP server pool static address information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolStaticAddress>
    <PoolStaticAddress>
      <PoolIndex></PoolIndex>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticAddress>
  </DHCP6ServerPoolStaticAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticAddress
Table type	Multi-instance table
Row name	PoolStaticAddress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.

DHCP6/DHCP6ServerPoolStaticPrefix

This table contains IPv6 DHCP server pool static prefix information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolStaticPrefix>
    <PoolStaticPrefix>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <DUID></DUID>
```

```
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticPrefix>
  </DHCP6ServerPoolStaticPrefix>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticPrefix
Table type	Multi-instance table
Row name	PoolStaticPrefix
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.

Column name	Column description	Column type	Data type and restrictions
PreferLifetime	The preferred lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	The valid lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.

DHCP6/DHCP6RelaySrvAddress

This table contains IPv6 DHCP relay server configuration information.

XML structure

```
<DHCP6>
  <DHCP6RelaySrvAddress>
    <RelaySrvIPv6>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <OutIfIndex></OutIfIndex>
      <Public></Public>
      <Vpn-Instance></Vpn-Instance>
    </RelaySrvIPv6>
  </DHCP6RelaySrvAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelaySrvAddress
Table type	Multi-instance table
Row name	RelaySrvIPv6
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
Ipv6Address	IPv6 DHCP DHCP servers IPv6 address on the IPv6 DHCP relay agent.	Index	Hexadecimal string, colon-separated.
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	Unsigned integer.
Public	DHCP servers belonging to the public network	Index	Boolean: • **True** • **false**.
Vpn-Instance	The vpn instance for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	String, case sensitive. Length: 1 to 31 characters.

DHCP6/DHCP6PrefixPool

This table contains IPv6 DHCP prefix pool configuration information.

XML structure

```
<DHCP6>
  <DHCP6PrefixPool>
    <PrefixPool>
      <VRF></VRF>
      <PrefixPoolNumber></PrefixPoolNumber>
      <Ipv6Prefix>

Columns for B70

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Mode	DHCPv6 mode	N/A	Enumeration: • **0**—None. • **1**—Server. • **2**—Relay.	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: • **true** • **false**	N/A
ServerRapidCommit	Enable the rapid commit function.	N/A	Boolean: • **true** • **false**	N/A
ServerPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	N/A
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and	N/A	Boolean: • **true** • **false**	It must be configured together with ApplyPoolName when apply a IPv6 DHCP

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefixes.			address pool to an interface.
ApplyPoolRapidCommit	Enable the rapid commit function.	N/A	Boolean: • **true** • **false**	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
RelayInterfaceIDMode	IPV6 Interface-Id Option	N/A	Enumeration: • **0**—None. • **1**—Bas. • **2**—Interface. • 3—User Mac.	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index of the interface.
RelayGatewayAddress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A
RelayClientLinkAddressEnable	Enable DHCPv6 relay support to add option 79	N/A	Boolean: • **True** • **false**	N/A
RequestFromTunneIDiscard	Configure DHCP relay drop received from vxlan tunnel	N/A	Boolean: • **true** • **false**	N/A
RelaySourceAddress	Specify the source address of message forwarded by DHCPv6 relay to DHCPv6 server	Data structure	Members include: • IPv6Address • Interface	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Address	Specify the IPv6 address as the source address of the message sent to DHCPv6 server	N/A	Hexadecimal string, Colon separated.	N/A
Interface	Specify IPv6 address of the interface as the source address of the message sent to DHCPv6 server	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
FloodProtectionEnable	DHCPv6 flood attack prevention function	N/A	Boolean: • **True** • **false**	N/A
IfRateSuppressionEnable	DHCPv6 interface attack suppression function	N/A	Boolean: • **true** • **false**	N/A
ApplyPolicy	Specify the DHCPv6 policy referenced by the interface	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ClientInfoRecord	DHCPv6 relay user table entry recording function	N/A	Boolean: • **true** • **false**	N/A
SessionMismatchAction	Configure the processing method of DHCPv6 request sent by online users whose physical location changes and MAC address remains unchanged by DHCPv6 device	N/A	Enumeration: • **0**—Invalid • **1**—Roam • **2**—Fastrenew • **3—**All	N/A
RelayReleaseAgent	Notify DHCPv6 server to release	N/A	Boolean: • **True**	Only when the device is configured to work in

Column name	Column description	Column type	Data type and restrictions	Remarks
	lease when clearing user table entries is configured		• **false**	DHCPv6 relay mode, and the DHCPv6 relay user table entry recording function is enabled, can the lease release function of DHCPv6 server be notified when the user table entry is cleared
ClientDetect	Enabling status of client offline detection	N/A	Boolean: • **true** • **false**	N/A
DiscardReqFromTnlEnable	Whether the DHCP relay agent supports discarding request packet from tunnels	N/A	Boolean: • **true** • **false**	N/A
SessionMismatchAction	Configuration of DHCPv6 session-mismatch action	N/A	Enumeration: • **0**—Drop. • **1**—Fast-renew	N/A

Columns for B75

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Mode	DHCPv6 mode	N/A	Enumeration: • **0**—None • **1**—Server • **2**—Relay	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes	N/A	Boolean: • **true** • **false**	N/A
ServerRapidCommit	Enabling status of the rapid commit function	N/A	Boolean: • **true** • **false**	N/A
ServerPreference	Server preference	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	N/A
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and prefixes	N/A	Boolean: • **true** • **false**	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolRapidCommit	Enabling status of the rapid commit function	N/A	Boolean: • **true** • **false**	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Server preference	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
RelayInterfaceID Mode	IPV6 Interface-ID Option	N/A	Enumeration: • **0**—None • **1**—Bas. • **2**—Interface. • 3—Cn-telecom • 4—Tr-101	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index of the interface.
RelayGatewayAd dress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A
ClientDetect	Enabling status of client offline detection	N/A	Boolean: • **true** • **false**	N/A
DiscardReqFrom TnlEnable	Support for discarding request packet from tunnels by the DHCP relay agent	N/A	Boolean: • **true** • **false**	N/A
SessionMismatch Action	Configuration of DHCPv6 session-mismatch action	N/A	Enumeration: • **0**—Drop • **1**—Fast-renew	N/A
RemoteServerAlg orithm	Specify a DHCPv6 server selection algorithm when the device acts as a DHCPv6 relay agent	N/A	Enumeration: • **0**—Polling algorithm (default). • 1—Master-backup algorithm.	To forward a DHCPv6 request to all DHCPv6 servers, use the polling algorithm. To forward a DHCPv6 request to the master DHCPv6 server first and then to a backup DHCPv6 server only when the master server is not available, use the master-backup algorithm.
NonFirstHopEnab le	Whether to enable non-first-hop DHCPv6 relay	N/A	Boolean: • **true** • **false**	For access authentication to take effect, you must enable this feature on the relay

Column name	Column description	Column type	Data type and restrictions	Remarks
				agent.

DHCP6/DHCP6ServerIpInUse

This table contains binding information about assigned IPv6 addresses.

XML structure

```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerIpInUse
Table type	Multi-instance table
Row name	IpInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Type	IPv6 address binding types	N/A	Enumeration: • **0**—Static(F). • **1**—Static(O). • **2**—Static(C).. • **3—Auto(E)** • 4—**Auto(O)** • 5—**Auto(C)**
EndLease	Time when the lease of the IPv6 address will expire.	N/A	String, case-sensitive. Length: 1 to 19 characters.
ClientIPv6Address	Client IPv6 address	N/A	Hexadecimal string, colon-separated.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	Preferred lifetime in seconds of the IPv6 address	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	Valid lifetime in seconds of the IPv6 address	N/A	Unsigned integer. Value range: 60 to 4294967295.

DHCP6/DHCP6ServerPDInUse

This table contains prefix binding information about assigned IPv6 addresses.

XML structure

```
<DHCP6>
  <DHCP6ServerPDInUse>
    <PDInUse>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <Type></Type>
      <EndLease></EndLease>
      <ClientIPv6Address></ClientIPv6Address>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
    </PDInUse>
  </DHCP6ServerPDInUse>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPDInUse
Table type	Multi-instance table
Row name	PDInUse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength

Column name	Column description	Column type	Data type and restrictions
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.
Type	IPv6 address binding types	N/A	Enumeration: • **0**—Static(F). • **1**—Static(O). • **2**—Static(C).. • **3—Auto(E)** • 4—**Auto(O)** • 5—**Auto(C)**
EndLease	Time when the lease of the IPv6 address will expire.	N/A	String, case-sensitive. Length: 1 to 19 characters.
ClientIPv6Address	Client IPv6 address	N/A	Hexadecimal string, colon-separated.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	Preferred lifetime in seconds of the IPv6 prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	Valid lifetime in seconds of the IPv6 prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.

DHCP6/ DHCP6ServerPoolOption

This table contains IPv6 DHCP server pool option information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolOption>
    <PoolOption>
```

```
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
    </PoolOption>
  </DHCP6ServerPoolOption>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolOption
Table type	Multi-instance table
Row name	PoolOption
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.

DHCP6/DHCP6ServerClass

This table contains DHCPv6 server class information.

XML structure

```
<DHCP6>
  <DHCP6ServerClass>
    <ServerClass>
```

```
      <ClassName></ClassName>
      <RuleNumber></RuleNumber>
      <RuleType></RuleType>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
      <OptionValueAscii></OptionValueAscii>
      <OptionValueMask></OptionValueMask>
      <OptionOffset></OptionOffset>
      <OptionLen></OptionLen>
      <OptionPartial></OptionPartial>
      <LinkAddr></LinkAddr>
    </ServerClass>
  </DHCP6ServerClass>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClass
Table type	Multi-instance table
Row name	ServerClass
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class Name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleNumber	Rule number	Index	Unsigned integer. Value range: 1 to 16.	N/A
RuleType	Match mode	Index	Enumeration: • **2**—option • **3**—relay-agent	N/A
OptionCode	DHCPv6 option code	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
OptionValueHex	Specify the option	N/A	Hexadecimal string,	N/A

	content to be matched in the hexadecimal format		case-insensitive. Length: even number in the range of 2 to 256 characters.	
OptionValueAscii	Specify the option content to be matched in the ASSCII format	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A
OptionValueMask	Specify the mask	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionOffSet	Specify the offset	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
OptionLen	Specify the string length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
OptionPartial	Enable partial match	N/A	Boolean: • **true**. • **false**.	N/A
LinkAddr	Link address	N/A	String, dotted decimal notation.	N/A

DHCP6/DHCP6ServerForbiddenPrefix

This table contains IPv6 DHCP server forbidden prefix information.

XML structure

```
<DHCP6>
  <DHCP6ServerForbiddenPrefix>
    <ForbiddenPrefix>
      <VRF></VRF>
      <StartPrefix></StartPrefix>
      <StartPrefixLen></StartPrefixLen>
      <EndPrefix></EndPrefix>
      <EndPrefixLen></EndPrefixLen>
    </ForbiddenPrefix>
  </DHCP6ServerForbiddenPrefix>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerForbiddenPrefix
Table type	Multi-instance table
Row name	ForbiddenPrefix
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0
StartPrefix	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	N/A
StartPrefixLen	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
EndPrefix	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	When sending the end address immediately, the end address is greater than or equal to the start address
EndPrefixLen	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	The prefix lengths of the start prefix and the end prefix should be the same

DHCP6/DHCP6ServerPolicy/ClassPolicy

This table contains information about the DHCPv6 server policy

XML structure

```
<DHCP6>
  <DHCP6ServerPolicy>
    <ServerPolicy>
      <PolicyName></PolicyName>
      <DefaultIpPool></DefaultIpPool>
      <ClassPolicys>
        <ClassPolicy>
          <Class></Class>
          <IpPool></IpPool>
        </ClassPolicy>
      </ClassPolicys>
    </ServerPolicy>
  </DHCP6ServerPolicy>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPolicy
Table type	Multi-instance table, multi-level table
Row name	ServerPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	DHCP policy name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
DefaultIpPool	Default IP pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassPolicys	N/A	Data structure	Members include: • Class • IpPool	SubTable
Class	DHCP6 class name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IpPool	Ip pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DHCP6/DHCP6Vsi

This table contains the VSI configuration of DHCP.

XML structure

```
<DHCP6>
  <DHCP6Vsi>
    <Vsi>
      <VsiName></VsiName>
      <FloodProtectionEnable></FloodProtectionEnable>
    </Vsi>
  </DHCP6Vsi>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Vsi

Item	Description
Table type	Multi-instance table
Row name	Vsi
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
FloodProtectionEnable	Enabling status of DHCP flood protection	N/A	Boolean: • **True** • **false**	N/A

DHCP6/DHCP6ServerPoolGroup

This table contains DHCPv6 address pool group information.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolGroup>
    <PoolGroup>
      <GroupName></GroupName>
      <vpn></vpn>
      <Pools>
        <Pool>
          <PoolName></PoolName>
          <Priority></Priority>
        </Pool>
      </Pools>
      <Ipv6PoolAlgorithmRoundRobinLocal></Ipv6PoolAlgorithmRoundRobinLocal>
      <Ipv6PoolAlgorithmRoundRobinRemote></Ipv6PoolAlgorithmRoundRobinRemote>
      <PoolGroupExhaustionTrapEnable></PoolGroupExhaustionTrapEnable>
      <PoolGroupExhaustionLogEnable></PoolGroupExhaustionLogEnable>
      <IpInUseThreshold></IpInUseThreshold>
    </PoolGroup>
  </DHCP6ServerPoolGroup>
```

```
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolGroup
Table type	Multi-instance table, multi-level table
Row name	PoolGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
GroupName	DHCPv6 address pool group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
vpn	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
PoolName	DHCPv6 address pool name	Sublist	String, case-insensitive. Length: 1 to 63 characters.	Required when you create a new row. The name cannot be modified.
Priority	DHCPv6 address pool priority	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Ipv6PoolAlgorithmRoundRobinLocal	DHCPv6 pool group	N/A	Boolean: • **True**	N/A

	roundrobin		• **False**(default)	
Ipv6PoolAlgorithmRoundRobinRemote	DHCPv6 pool group roundrobin	N/A	Boolean: • **True** • **False**(default)	N/A
PoolGroupExhaustionTrapEnable	Whether the SNMP notification about IPv6 pool group exhaustion is enabled	N/A	Boolean: • **True** • **false**(default)	N/A
PoolGroupExhaustionLogEnable	Whether IPv6 pool group exhaustion logging is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
IpInUseThreshold	The warning rate of used ipv6 address in dhcp pool group	N/A	Unsigned integer. Value range: 0 to 100.	N/A

DHCP6/DHCP6ServerForbiddenIpv6

This table contains information about IPv6 addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerForbiddenIpv6>
    <ForbiddenIpv6>
      <VRF></VRF>
      <StartIpv6Address></StartIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </ForbiddenIpv6>
  </DHCP6ServerForbiddenIpv6>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerForbiddenIpv6
Table type	Multi-instance table
Row name	ForbiddenIpv6
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.
StartIpv6Address	Start IPv6 address of an IPv6 address range that is excluded from dynamic allocation globally	Index	Hexadecimal string, colon-separated.
EndIpv6Address	End IPv6 address of an IPv6 address range that is excluded from dynamic allocation globally	Index	Hexadecimal string, colon-separated.

DHCP6/DHCP6RelayMacFowardEnable

This table contains information about whether the DHCPv6 relay supports forwarding ACK or OFFER packet by MAC address.

XML structure

```
<DHCP6>
  <DHCP6RelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
      <MacBroadCast></MacBroadCast>
```

```
    </RelayMacForwardEnable>
  </DHCP6RelayMacFowardEnable>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayMacFowardEnable
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RelayMacForwardEnable	The configuration of the RelayMacForwardEnable	Data structure	Members include: • MacEnable • MacBroadcast	N/A
MacEnable	Whether enable MAC forwarding	N/A	Boolean: • **true** • **false**	If MAC forwarding is enabled, DHCPv6 server OFFER or ACK packet will be forwarded via unicast.
MacBroadCast	Whether enable MAC broadcasting	N/A	Boolean: • **true** • **false**	It must be configured with MacEnable and the value for MacEnable must be true.

DHCP6/DHCP6RelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP6 relay agent.

XML structure

```
<DHCP6>
  <DHCP6RelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <SourceIfIndex></SourceIfIndex>
    </RelaySrcAddr>
  </DHCP6RelaySourceAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Address	Source IP addresses of the	N/A	Hexadecimal string, colon-separated.	Ipv6Address and sourceIfIndex cannot be

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets sent by the DHCP6 relay agent			set at the same time.
SourceIfIndex	The source interface for the DHCP6 relay agent	N/A	Unsigned integer.	Ipv6Address and sourceIfIndex cannot be set at the same time.

DHCP6/DHCP6ServerPoolForbiddenAddress

This table contains information about IPv6 addresses excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolForbiddenAddress>
    <PoolForbiddenAddress>
      <PoolIndex></PoolIndex>
      <StartAddress></StartAddress>
      <EndAddress></EndAddress>
    </PoolForbiddenAddress>
  </DHCP6ServerPoolForbiddenAddress>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolForbiddenAddress
Table type	Multi-instance table
Row name	PoolForbiddenAddress
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
StartAddress	Start IPv6 address of an IPv6 address range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	N/A
EndAddress	End IPv6 address of an IPv6 address range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	The value for end-address cannot be lower than that for start-address.

DHCP6/DHCP6ServerPoolForbiddenPrefix

This table contains information about IPv6 prefixes excluded from dynamic allocation globally.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolForbiddenPrefix>
    <PoolForbiddenPrefix>
      <PoolIndex></PoolIndex>
      <StartPrefix></StartPrefix>
      <StartPrefixLen></StartPrefixLen>
      <EndPrefix></EndPrefix>
      <EndPrefixLen></EndPrefixLen>
    </PoolForbiddenPrefix>
  </DHCP6ServerPoolForbiddenPrefix>
```

```
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolForbiddenPrefix
Table type	Multi-instance table
Row name	PoolForbiddenPrefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
StartPrefix	Start IPv6 prefix of an IPv6 prefix range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	N/A
StartPrefixLen	Length of the StartPrefix	Index	Unsigned integer Value range: 1 to 128.	N/A
EndPrefix	End IPv6 prefix of an IPv6 prefix range that is excluded from dynamic allocation	Index	Hexadecimal string, colon-separated.	The value for end-prefix cannot be lower than that for start-prefix.

Column name	Column description	Column type	Data type and restrictions	Remarks
EndPrefixLen	Length of the EndPrefix	Index	Unsigned integer. Value range: 1 to 128.	N/A

DHCP6/DHCP6ServerPoolStatistics

This table contains DHCP6 server pool statistics information.

XML structure

```
<DHCP6>
 <DHCP6ServerPoolStatistics>
   <Ipv6PoolStatistics>
     <PoolName></PoolName>
     <UsedIpNumber></UsedIpNumber>
     <UsedPdNumber></UsedPdNumber>

     <PdUsageMaxTime></PdUsageMaxTime>
    </Ipv6PoolStatistics>
   </DHCP6ServerPoolStatistics>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStatistics
Table type	Multi-instance table
Row name	IpPoolStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	DHCPv6 pool name	Index	String.	N/A
UsedIpNumber	Number of used IP addresses in the address pool	N/A	Unsigned integer.	N/A
UsedPdNumber	Number of used prefix in the address pool	N/A	Unsigned integer.	N/A
ExpiredIpNumber	Number of expired IP address leases in the address pool	N/A	Unsigned integer.	N/A
ExpiredPdNumber	Number of expired prefix leases in the address pool	N/A	Unsigned integer.	N/A
ConflictIpNumber	Number of conflicting IP addresses in the address pool	N/A	Unsigned integer.	N/A
TotalIpNumber	Total number of IP addresses in the address pool	N/A	String.	N/A
TotalPdNumber	Total number of prefixes in the address pool	N/A	String.	N/A
DynamicUsedIpNumber	Number of used dynamic IP addresses in the address pool	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicUsedPdNumber	Number of used dynamic PD prefixes in the address pool	N/A	Unsigned integer.	N/A
StaticUsedIpNumber	Number of used static IP addresses in the address pool	N/A	Unsigned integer.	N/A
StaticUsedPdNumber	Number of used static PD prefixes in the address pool	N/A	Unsigned integer.	N/A
ReserveIpNumber	Number of reserved IP addresses in the address pool	N/A	Unsigned integer.	N/A
ReservePdNumber	Number of reserved PD prefixes in the address pool	N/A	Unsigned integer.	N/A
FreeIpNumber	Number of free IP addresses in the address pool	N/A	String.	N/A
FreePdNumber	Number of free PD prefixes in the address pool	N/A	String.	N/A
IpUsage	Address usage of the address pool	N/A	Unsigned integer.	N/A
IpUsageMax	Peak address usage of the address pool	N/A	Unsigned integer.	N/A
IpUsageMaxTime	Date and time when the address usage of the address pool reached the peak	N/A	String.	N/A
PdUsage	Prefix usage of the address pool	N/A	Unsigned integer.	N/A
PdUsageMax	Peak prefix usage of the address pool	N/A	Unsigned integer.	N/A
PdUsageMaxTime	Date and time when the prefix usage of the address pool reached the peak	N/A	String.	N/A

DHCP6/DHCP6RelayServerInfo

This table contains operational data about remote DHCPv6 server liveness availability detection.

XML structure

```
<DHCP6>
  <DHCP6RelayServerInfo>
    <RelayServerInfo>
      <Vpn></Vpn>
      <ServerIp></ServerIp>
      <DeadCount></DeadCount>
      <DeadTime></DeadTime>
      <TimeOut></TimeOut>
    </RelayServerInfo>
  </DHCP6RelayServerInfo>
</DHCP6>
```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayServerInfo
Table type	Multi-instance table
Row name	RelayServerInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Vpn	VPN (or VRF) instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If a VPN instance is not specified, the public network is specified
ServerIp	IPv6 address of a DHCPv6 server	Index	Hexadecimal string, colon-separated.	If no value is specified for ServerIp, all remote DHCPv6 servers are specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DeadCount	The maximum number of consecutive communication failures before the relay agent marks a DHCPv6 server as down	N/A	Unsigned integer Value range: 1 to 64.	N/A
DeadTime	The amount of time that the DHCPv6 relay agent must wait before it can send requests to the server after the server was marked as down	N/A	Unsigned integer Value range: 1 to 65536.	N/A
TimeOut	The maximum interval that the DHCPv6 relay agent waits for the response to a request sent to the remote DHCPv6 server	N/A	Unsigned integer. Value range: 1 to 60.	N/A

DHCP6/DHCP6ServerPoolGroupStatistics

This table contains IPv6 pool group statistics on the DHCPv6 server.

XML structure

```
<DHCP6>
  <DHCP6ServerPoolGroupStatistics>
    <Ipv6PoolGroupStatistics>
      <PoolGroupName></PoolGroupName>
      <IncludePoolNum></IncludePoolNum>
      <BoundByDomainNum></BoundByDomainNum>

Column name	Column description	Column type	Data type and restrictions	Remarks
	in the address pool group			
UsedPDNumber	Number of used prefixes in the address pool group	N/A	Unsigned integer.	N/A
IdlePDNumber	Number of free prefixes in the address pool group	N/A	String.	N/A
ExpiredPDNumber	Number of expired prefix leases in the address pool group	N/A	Unsigned integer.	N/A
ExcludePDNumber	Number of excludedprefixes in the address pool group	N/A	Unsigned integer.	N/A
ConflictPDNumber	Number of conflicting prefixes in the address pool group	N/A	Unsigned integer.	N/A
DynamicUsedPDNumber	Number of used dynamic prefixes in the address pool group	N/A	Unsigned integer.	N/A
StaticUsedPDNumber	Number of used static prefixes in the address pool group	N/A	Unsigned integer.	N/A
ReservePDNumber	Number of reserved prefixes in the address pool group	N/A	Unsigned integer.	N/A

DHCP6/DHCP6ServerPoolVendorSpecific

This table contains the configuration for DHCPv6 Option17.

XML structure

```

Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolVendorSpecific
Table type	Multi-instance table
Row name	PoolVendorSpecific
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	N/A	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index. For the delete and remove operations, 0 can not be set.
EnterpriseNumber	Vendor ID	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
SubOptionInfos	N/A	Data structure	Members include:	SubTable

Column name	Column description	Column type	Data type and restrictions	Remarks
			• SubOptionCode • SubOptionValueHex • SubOptionValueAscii • SubOptionValueIpv6	
SubOptionCode	DHCPv6 vendor-specific suboption code	Index	Unsigned integer. Value range: 1～65535	N/A
SubOptionValueHex	Specify a hexadecimal string as the option content	N/A	Hexadecimal string, case-insensitive. Length: even number in the range of 2 to 128 characters.	N/A
SubOptionValueAscii	Specify an ASCII string as the option content	N/A	String. Length: 1 to 64 characters.	N/A
SubOptionValueIpv6	Specify IPv6 addresses as the option content	N/A	String. Length: 1 to 159 characters.	N/A

DHCP6/dhcp6

Message	Explanation
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The configuration doesn't meet the requirements.Please check your configuration.
The URL for a file on the TFTP server can't include the username or password. 不要为一个TFTP文件的URL指定用户名和密码。	Please make sure the URL for a file on the TFTP server does not include the username or password.
Invalid filename or URL. 无效的本地文件名或URL。	Invalid filename or URL.Please check it.
The URL can't include the username or password. 不要在URL中携带用户名和密码信息。	Please make sure the URL does not include the username or password.
The system is saving DHCPv6 server entries to the backup file. Please wait…. 系统正在将DHCPv6服务器表项写入备份表项的文件中。请等待。	The system is saving DHCPv6 server entries to the backup file.
The system is downloading DHCPv6 server entries from the backup file. Please wait…. 系统正在从备份表项的文件中恢复DHCPv6服务器表项。请等待。	The system is downloading DHCPv6 server entries from the backup file.
The static binding already exists in another DHCPv6 address pool. 静态绑定表项已经在配置在其他DHCPv6地址池中。	The static binding already exists in another DHCPv6 address pool. Please try another one.
For a non-temporary IPv6 address range, the preferred lifetime can't be longer than the valid lifetime. 配置非临时IPv6地址范围时，首选生命期要小于等于有效生命期。	For a non-temporary IPv6 address range, the preferred lifetime cannot be longer than the valid lifetime.
For a temporary IPv6 address range, the preferred lifetime can't be longer than the valid lifetime. 配置临时IPv6地址范围时，首选生命期要小于等于有效生命期。	For a temporary IPv6 address range, the preferred lifetime cannot be longer than the valid lifetime.
For an IPv6 subnet, the preferred lifetime can't be longer than the valid lifetime. 配置IPv6网段地址池时，首选生命期要小于等于有效生命期。	For an IPv6 subnet, the preferred lifetime cannot be longer than the valid lifetime.
For a prefix pool, the preferred lifetime can't be longer than the valid lifetime. 配置引用前缀池时，首选生命期要小于等于有效生命期。	For a prefix pool, the preferred lifetime cannot be longer than the valid lifetime.
In a non-temporary IPv6 address range, the start IPv6 address can't be higher than the end IPv6 address. 配置非临时IPv6地址范围时，起始IPv6地址不能大于结束IPv6地址。	Please make certain that In a non-temporary IPv6 address range, the start IPv6 address isn't higher than the end IPv6 address.
In a temporary IPv6 address range, the start IPv6	Please make certain that In a temporary IPv6 address range, the

address can’t be higher than the end IPv6 address. 配置临时IPv6地址范围时，起始IPv6地址不能大于结束IPv6地址。	start IPv6 address isn’t higher than the end IPv6 address.
DHCPv6 address pool name can’t be changed. 指定IPv6地址池名称失败。	DHCPv6 address pool name can’t be changed.
Another DHCPv6 address pool is using the name. 其他IPv6地址池正在使用该名字。	Another DHCPv6 address pool is using the name, please try another name.
Invalid IPv6 subnet address. 非法的IPv6网段地址。	Invalid IPv6 subnet address, please check your IPv6 subnet address.
Invalid start IPv6 address. 非法的起始IPv6地址。	Invalid start IPv6 address, please check it.
Invalid end IPv6 address. 非法的结束IPv6地址。	Invalid end IPv6 address, please check it.
Invalid IPv6 address. 非法的IPv6地址。	Invalid IPv6 address, please check it.
Non-temporary IPv6 address range and temporary IPv6 address range can’t overlap. 非临时IPv6地址范围和临时IPv6地址范围不能互相重叠。	Please make certain that non-temporary IPv6 address range and temporary IPv6 address range is not overlap.
Number of DHCPv6 address pools exceeded the limit. DHCPv6地址池个数超过上限。	Number of DHCPv6 address pools exceeded the limit, when the number of DHCPv6 address pools is greater than 1024.
The IPv6 subnet already exists in another DHCPv6 address pool. 该IPv6网段的地址已经在配置在其他IPv6地址池中。	The IPv6 subnet already exists in another DHCPv6 address pool, please try another subnet.
The DHCPv6 address pool doesn’t exist. 该DHCPv6地址池不存在。	The DHCPv6 address pool doesn’t exist, when getting or deleting it.
Invalid length for the SIP server domain name. SIP服务器的域名长度不符合配置要求。	Invalid length for the SIP server domain name, please check it.
The option is not configurable. 该DHCPv6选项的配置是被禁止的。	The option is not configurable, please check your option.
The DHCPv6 option group doesn’t exist. 该DHCPv6选项组不存在。	The DHCPv6 option group doesn’t exist, when getting or deleting it.
Number of servers in the DHCPv6 address pool exceeded the limit. 该地址池可配DHCPv6服务器个数已达上限。	Number of servers in the DHCPv6 address pool exceeded the limit, when the number of servers in the DHCPv6 address pool is greater than 8.
An output interface is required when the DHCPv6 server address is a multicast address or link-local address. 当DHCPv6服务器地址为组播地址或者链路本地地址必须指定出接口。	Please make certain that an output interface is required when the DHCPv6 server address is a multicast address or link-local address.
The valid lifetime can’t be shorter than the preferred lifetime.	Please make certain that the valid lifetime isn’t shorter than the preferred lifetime.

有效生命期不应小于首选生命期。	
Invalid DUID. 非法的DUID字符串。	Invalid DUID, please check it.
Number of statically bound address exceeded the limit. 该地址池静态绑定的IPv6地址个数已达上限。	Number of statically bound address exceeded the limit, when the number of statically bound address is greater than 8192.
Number of statically bound prefixes exceeded the limit. 该地址池静态绑定IPv6地址前缀个数已达上限。	Number of statically bound prefixes exceeded the limit, when the number of statically bound prefixes is greater than 4096.
The assigned prefix length can’t be shorter than the specified prefix length. 分配的前缀长度不能小于前缀长度。	Please make certain that the assigned prefix length isn’t shorter than the specified prefix length.
Difference between the specified prefix length and the assigned prefix length can’t be greater than 16. 分配的前缀长度和前缀长度大小差异应该不小于16。	Please make certain that the difference between the specified prefix length and the assigned prefix length isn’t greater than 16.
Prefix pools can’t overlap. 前缀池不应该重叠。	Please make certain that prefix pools isn’t overlap.
Number of DHCPv6 servers on the interface exceeded the limit. 该接口上指定的DHCPv6服务器个数已达上线。	Number of DHCPv6 servers on the interface exceeded the limit, when the number of DHCPv6 servers on the interface is greater than 8.
Number of VRF exceeded the limit. VRF个数已达到上限。	Number of VRF exceeded the limit.
Not available. 未使用。	The Lease is not used.
Failed to enable DHCPv6 logging. 开启DHCPv6日志功能失败。	DHCPv6 logging is not enabled.
The start IPv6 address can't be greater than the end IPv6 address. 起始IPv6地址必须小于或等于结束IPv6地址。	The start IPv6 address can't be greater than the end IPv6 address.
Failed to set the priority. 设置优先级失败。	The priority setting is supported only for IPV6 address pools that are created on the ODAP server. 当前只有odap-server地址池才可以在地址池组下配置优先级。
Invalid IPv6 address. 无效的IPv6地址。	The configuration doesn’t meet the requirements. Please check your configuration.
The Configuration of the relay-agent only contains the LinkAddr column. 中继代理的配置仅包含LinkAddr列。	The configuration doesn’t meet the requirements. Please check your configuration.
Invalid hexadecimal string, and the number of strings is even. 无效的十六进制字符串，且字符串的个数为偶数。	The configuration doesn’t meet the requirements. Please check your configuration.
Invalid mask, the mask should be a hexadecimal string and the number of strings is even. 无效的掩码，掩码应该为十六进制字符串，且字符串的个数为偶数。	The configuration doesn’t meet the requirements. Please check your configuration.

Mask length must be equal to length of the hexadecimal string. 掩码长度必须等于十六进制字符串的长度。	The configuration doesn't meet the requirements. Please check your configuration.
The hex string and length do not match. 十六进制字符串和长度不匹配。	The configuration doesn't meet the requirements. Please check your configuration.
The configuration of the option not include the LinkAddr column. 选项的配置不包含LinkAddr列。	The configuration doesn't meet the requirements. Please check your configuration.
Number of rules has reached the upper limit. 规则数已达上限。	The configuration doesn't meet the requirements. Please check your configuration.
A rule of another type is using the rule number. 另一类型的规则正在使用规则编号。	The configuration doesn't meet the requirements. Please check your configuration.
Rules with different numbers cannot have the same content. 不同编号的规则不能具有相同的内容。	The configuration doesn't meet the requirements. Please check your configuration.
Failed to process this operation. 无法执行此操作。	The configuration doesn't meet the requirements. Please check your configuration.
The interface doesn't exist. 接口不存在	The interface doesn't exist for the binding. 绑定时接口不存在
Only one of them can be bound. 只可绑定其中一个	Only one of UPID and Interface can be bound to an IPV6 address pool. 地址池下仅可绑定UPID或者接口其中之一
Failed to specify the domain name. 配置域名失败	The configuration of domain name is illegal 域名配置不合法
Failed to specify the VSRP name. 配置vsrp名失败	Invalid VSRP name is configured 配置了无效的vsrp名称
Failed to configure IPv6 reservation. 配置老化地址租约保留功能失败	The IPv6 reservation is not configured successfully 没有成功配置老化地址租约保留功能
Failed to specify the option-group. 指定选项组失败	Invalid option-group is specified 指定了无效的选项组
Failed to specify the AFTR name. 指定AFTR name失败	The specified AFTR name is not allowed to be specified 指定的AFTR name不允许被指定
Failed to specify a temporary address range address range. 无法指定临时地址范围地址范围	A temporary address range address range is not configured successfully 没有成功配置临时地址范围地址范围
Temporary addresses should not overlap non-temporary addresses. 临时地址不应与非临时地址重叠	Temporary and non-temporary addresses overlap 临时地址与非临时地址出现重叠部分
Failed to specify a SIP server. 配置SIP服务器失败	An invalid SIP server is configured 配置了无效的SIP服务器
The number of SIP server addresses has reached the upper limit.	The SIP server address can no longer be configured

SIP服务器地址数已达到上限	无法再配置SIP服务器地址
The utilization mark must between 0 and 100. 地址段或前缀段的使用率上下限在0到100之间	The utilization mark mast should be in the range of 0 to 100 地址段或前缀段的使用率上下限应在0到100范围内
Operation failed. This command can be successfully executed only when no IPv6 addresses are assigned to DHCPv6 clients. 操作失败。只有在没有为DHCPv6客户端分配IPv6地址时，才能成功执行此命令。	If an IPv6 address is assigned to the DHCPv6 client, the operation fails 如果为DHCPv6客户端分配了IPv6地址，操作失败
The assigned prefix length must be equal to or greater than the network prefix length. 指定的前缀长度必须等于或大于网络前缀长度	The specified prefix length cannot be less than the network prefix length 指定的前缀长度不能小于网络前缀长度
Failed to specify the process mode. 无法指定进程模式	Failed to set the process mode 指定进程模式操作未成功
Operation failed. 操作失败	The operation is not successful 操作没有成功
The network is used by subnet-leased ip. 网段由子网租用的ip使用	Subnet-leased ip cannot use the network 子网租用的ip不能使用网段
Please remove the address pool from all its bound address pool groups first. 请先从其所有绑定地址池组中删除地址池	Please unbind the address pool from the address pool groups first 请首先解除地址池组中地址池的绑定
Number of VPN instances exceeded the limit. VPN数量达到最大值	The maximum number of VPNs has been reached. 无法再配置VPN
The configuration has already been configured in another pool. 配置已在另一个池中配置	Configuration from one pool is not allowed to be reconfigured in another pool 不允许将另一个池中的配置，在其它池里再配置
The specified prefix or address has already been bound. 指定的前缀或地址已绑定	The bound prefix or address is not allowed to be bound again 已经绑定的前缀或地址不允许再重复绑定
Failed to specify the IPv6 network. 无法指定IPv6地址网段	Specify an invalid IPv6 address network 指定无效的IPv6地址网段
There are forbidden ip allocated in the range. 在范围内分配了禁止的ip	A forbidden ip is not allowed to be assigned 禁止的IP不允许被分配
Can't change the configuration because the assigned IPv6 address blocks are being used by online users. 无法更改配置，因为在线用户正在使用分配的IPv6地址块	When the assigned IPv6 address blocks are being used by online users, the configuration is not allowed to be changed 分配的IPv6地址块正在被在线用户使用时，配置不允许被更改
Operation failed because of online users. 因为存在在线用户使用，操作失败	Operating failed because the target configuration is used by online users 操作在线用户使用，导致失败
The assigned prefix length must be equal to or greater than network prefix length. 指定的前缀长度必须等于或大于网络前缀长度	The specified prefix length cannot be less than the network prefix length 指定的前缀长度不能小于网络前缀长度

The prefix has been configured in a prefix pool. 前缀已在前缀池中配置	The prefix is configured in the prefix pool 前缀池中配置了该前缀
Failed to apply the prefix pool. 无法应用前缀池	The prefix pool cannot be used 前缀池不能被使用
Forbidden prefix addresses exist in the range. 范围内有禁止的前缀地址	Forbidden prefix addresses are not allowed to be used 禁止的前缀地址不允许被使用
Another prefix pool has already been applied. 已应用另一个前缀池	Another prefix pool has already been used 另一个前缀池已经被使用
The prefix pool or the prefix in the pool has been applied to another address pool. 前缀池或池中的前缀应用于另一个地址池	The prefix pool or the prefix in the pool applied to another address pool is not allowed to be used 应用于另一个地址池的前缀池或池中的前缀不允许在被使用
The aggregated prefix length must be in the range of the origin prefix length and the assigned prefix length of the prefix pool. 聚合前缀长度必须在前缀池的原始前缀长度和分配的前缀长度范围内	The aggregated prefix length cannot be separated from the range of origin prefix length and the assigned prefix length of the prefix pool. 聚合前缀长度不能脱离前缀池的原始前缀长度和分配的前缀长度范围
Can't change the configuration because the IPv6 prefix ranges are being used by online users. 由于用户在线，无法删除前缀池	Failed to delete prefix pool when user is online 用户在线时删除前缀池失败
Failed to specify the gateway addresses. 无法指定网关地址	Failed to specify gateway address. 指定网关地址失败
Failed to specify the IPv6 address of the DNS server. 无法指定DNS服务器的IPv6地址	Specify an invalid IPv6 address in the DNS server 指定DNS服务器无效的IPv6地址
The number of DNS servers has reached the upper limit. DNS服务器数已达到上限	Cannot specify more DNS servers 无法再指定DNS服务器
Failed to create the DHCP pool. 创建DHCP池失败	The DHCP address pool is not successfully created 没有成功创建DHCP地址池
The address pool type mismatches. 模式错误	Invalid Mode 无效的模式
The number of DHCPv6 pools has reached the upper limit. DHCPv6池的数量已达到上限	Cannot create more DHCPv6 address pools. 无法再创建DHCPv6地址池
Failed to configure forbidden IP addresses. 配置forbidden ip地址失败	Forbidden-ip configuration is not allowed when users are online. 有用户在线时，不允许配置forbidden-ip
The master-up-id and the backup-up-id cannot be same. 绑定的主UPID和备UPID不能相同	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
The DHCPv6 server address does not exist. DHCP6服务器地址不存在	The specified DHCPv6 remote server address does not exist on the network. 指定的DHCPv6远端服务器地址不存在

Incorrect user information. 用户上线失败因为用户信息错误	The client cannot go online because its user information in the SOLICIT message does not pass the check by the DHCPv6 server. 服务器收到报文后检查报文信息，当前携带信息未通过检查
No replies from the DHCPv6 server. 用户上线失败因为服务器没有回应	The client fails to go online because the DHCPv6 server does not respond. 服务器没有回应租约信息，上线失败
REPLY message with denial information received. 客户端收到拒绝上线的REPLY报文	The client cannot go online because its IPv6 address request is denied by the DHCPv6 server for some reasons. 客户端上线失败，因为服务器拒绝了它的地址请求
RELEASE or DECLINE message sent. 用户下线因为客户端发送了RELEASE报文或者是DECLINE报文	The client goes offline because it no longer needs an IPv6 address or the IPv6 address assigned to the client is not usable due to some reasons. DHCP客户端不再需要使用分配IP地址或因某些原因导致分配的IPv6地址不能使用。
IPv6 address lease expired. 用户下线因为租约到期	The client goes offline because its lease expires and the IPv6 address becomes invalid. 租约到期IP地址失效用户下线
The DHCPv6 server notified UCM to delete the user entry. Server通知用户下线	The client goes offline because the DHCPv6 server notifies UCM to delete the user entry for that client due to some reasons. 因为某些原因，server主动通知删除user-info信息
No replies from the client. 用户下线因为客户端没有回复报文	The client goes offline because it does not reply the ADVERTISE message. 用户下线因为客户端没有回复报文
UCM notified the DHCPv6 server to delete the user entry. UCM通知用户下线	The client goes offline because UCM notifies the DHCPv6 server to delete the user entry for that client due to some reasons. 因为某些原因，ucm主动通知删除user-info信息
The client requested to come online again during lease renewal. 续约过程中客户端重新上线	The client sends a SOLICIT message before the DHCPv6 server replies to the lease renewal request of the client. 在服务器回复续约请求之前，客户端重新发送SOLICIT
Address conflict. 地址冲突	The client cannot go online because the address assigned by the DHCPv6 server or the address requested by the client is conflicting. 服务器分配的地址或客户端请求的地址存在冲突
Other. 其他原因	The reason for the client online failure needs further analysis. 该失败原因待细分
No replies from UCM. 用户上线失败因为UCM没有回应	The client fails to go online because UCM does not respond. UCM没有回应租约信息，上线失败
The requested or offered IPv6 address is invalid. 请求或回复的IP地址无效	The client cannot go online because the IPv6 address requested by the client or returned by the DHCPv6 server is invalid. 客户端请求或服务器回复的IP地址无效
Failed to enable IPv6 DHCP route logging. 开启DHCPv6路由日志功能失败。	The configuration doesn’t meet the requirements. Please check your configuration. 配置不符合要求，请检查您的配置
Number of Vendor exceeded the limit.	A maximum of 8 vendors can be configured in an address pool. 一个地址池下最多配置8个Vendor。

Vendor个数已达到上限。	
Number of SubOption exceeded the limit. SubOption个数已达到上限。	A maximum of 16 suboptions can be configured under one Vendor. 一个Vendor下最多配置16个SubOption。
Failed to exclude the IPv6 addresses from dynamic allocation. 从动态分配地址中排除IPV6地址失败。	The current ipv6 address is in use and can not be forbidden. 当前IPV6地址已经被使用，无法被禁用。

DHCPv6 event stream

DHCPv6 event stream description.

DHCPv6 pool statistics event

This event is used to report pool statistics of the DHCPv6.

XML structure for event subscription

```
<Dhcp6ServerPoolStatisticsEvent>
</Dhcp6ServerPoolStatisticsEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP6</stream>
    <filter type="subtree">
      <Dhcp6ServerPoolStatisticsEvent
xmlns="http://www.h3c.com/netconf/event:1.0/DHCP6:1.0">
      </Dhcp6ServerPoolStatisticsEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DHCP6
Event name	Dhcp6ServerPoolStatisticsEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DHCP6:1.0
Support for extended query	No

XML structure for event report

```
<Dhcp6ServerPoolStatisticsEvent>
  <PoolName></PoolName>
  <Reason></Reason>
  <ExpiredIpNumber></ExpiredIpNumber>
  <ExpiredPdNumber></ExpiredPdNumber>
  <DynamicUsedIpNumber><DynamicUsedIpNumber>

Table description

Column name	Column description	Data type and restrictions	Remarks
PoolName	DHCP address pool name	String, case-insensitive. Length: 1 to 63 characters.	N/A
Reason	The reason of the event	Enumeration: • **0**—users change. • **1**—address subnet network application. • **2**—address subnet network release. • **3**—prefix subnet network application. • **4**—prefix subnet network release.	N/A
ExpiredIpNumber	Number of expired IP address leases in the address	Unsigned integer.	N/A
ExpiredPdNumber	Number of expired PD prefix leases in the address	Unsigned integer.	N/A
DynamicUsedIpNumber	Number of used dynamic IP addresses in the address pool	Unsigned integer.	N/A
DynamicUsedPdNumber	Number of used dynamic PD prefixes in the address pool	Unsigned integer.	N/A

Column name	Column description	Data type and restrictions	Remarks
ConflictIpNumber	Number of conflicting IP addresses in the address pool	Unsigned integer.	N/A
ReserveIpNumber	Number of reserved IP addresses in the address pool	Unsigned integer.	N/A
ReservePdNumber	Number of reserved PD prefixes in the address pool	Unsigned integer.	N/A
FreeIpNumber	Number of free IP addresses in the address pool	String.	N/A
FreePdNumber	Number of free PD prefixes in the address pool	String.	N/A

DHCPv6 user protocol event

This event is used to report user DHCPv6 client online or offline events.

XML structure for event subscription

```
<Dhcp6UserProtocolEvent>
</Dhcp6UserProtocolEvent>
Example:
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP6</stream>
    <filter type="subtree">
      <Dhcp6UserProtocolEvent xmlns="http://www.h3c.com/netconf/event:1.0/DHCP6:1.0">
      </Dhcp6UserProtocolEvent>
    </filter>
  </create-subscription>
</rpc>
```

```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Time	Incident reporting time	Timestamp accurate to milliseconds	No
UserID	User ID	Unsigned integer.	No
UserMAC	User MAC address	String. Length: 1 to 6 characters.	No
FirstVLAN	Client first VLAN ID	Unsigned integer. Value range: 1 to 4094. Default: 65535	No
SecondVLAN	Client second VLAN ID	Unsigned integer. Value range: 1 to 4094. Default: 65535	No
SN	Service serial number or name	String Length: 1 to 128 characters.	No
Type	Event type	Unsigned integer. Value range: 1 to 255.	No
SolictTime	Time when receiving the SOLICT packet	Timestamp accurate to milliseconds	No
AdvertiseTime	Time when receiving the ADVERTISE packet	Timestamp accurate to milliseconds	No
RequestTime	Time when receiving the REQUEST packet	Timestamp accurate to milliseconds	No
RenewTime	Time when receiving the RENEW packet	Timestamp accurate to milliseconds	No
RebindTime	Time when receiving the REBIND packet	Timestamp accurate to milliseconds	No
ReplyTime	Time when receiving the REPLY packet	Timestamp accurate to milliseconds	No
OffTime	Time when the client is offline	Timestamp accurate to milliseconds	No
Reason	Client offline reason	String Length: 1 to 255 characters.	No
Errcode	Error code number	Unsigned integer. Value range: 0 to 25999	No

DHCPC

DHCPC/DHCPCConfig

This table contains DHCP client configuration information.

XML structure

```
<DHCPC>
  <DHCPCConfig>
    <DadEnable></DadEnable>
    <DSCP></DSCP>
  </DHCPCConfig>
</DHCPC>
```

Table description

Item	Description
Feature name	DHCPC
Table name	DHCPCConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DadEnable	Whether the function of duplicated address detection is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
DSCP	Set the DSCP value for DHCP packets sent by the DHCP client	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.	A bigger DSCP value represents a higher priority.

DHCPC/DHCPAlloc

This table contains the information about using DHCP for IP address acquisition.

XML structure

```
<DHCPC>
  <DHCPAlloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
    </Alloc>
  </DHCPAlloc>
</DHCPC>
```

Table description

Item	Description
Feature name	DHCPC
Table name	DHCPAlloc
Table type	Multi-instance table
Row name	Alloc
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllocEnable	Whether the function of the interface to use DHCP for IP address acquisition is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

DHCPC/DHCPClientID

This table contains DHCP client ID configuration information.

XML structure

```
<DHCPC>
  <DHCPClientID>
    <ClientID>
      <IfIndex></IfIndex>
      <ASCII></ASCII>
      <Hex></Hex>
      <ClientIfIndex></ClientIfIndex>
    </ClientID>
  </DHCPClientID>
</DHCPC>
```

Table description

Item	Description
Feature name	DHCPC
Table name	DHCPClientID
Table type	Multi-instance table
Row name	ClientID
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ASCII	DHCP Client ID in ASCII code type	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.	This column cannot be configured with Hex column or ClientIfIndex column together.

Column name	Column description	Column type	Data type and restrictions	Remarks
Hex	DHCP Client ID in hex code type	N/A	Hexadecimal string. Length: 4 to 64 characters.	This column cannot be configured with ASCII column or ClientIfIndex column together.
ClientIfIndex	Uses the MAC address of interface as a DHCP client ID	N/A	Unsigned integer.	Only Layer 3 interfaces are supported. This column cannot be configured with ASCII column or Hex column together.

DHCPC/BootpAlloc

This table contains the information about using BOOTP for IP address acquisition.

XML structure

```
<DHCPC>
  <BootpAlloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
    </Alloc>
  </BootpAlloc>
</DHCPC>
```

Table description

IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllocEnable	Whether the function of the interface to use BOOTP for IP address acquisition is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

DHCPC/DHCPCIfConfig

This table contains DHCP client configuration information on interface.

XML structure

```
<DHCPC>
  <DHCPCIfConfig>
    <IfConfigure>
      <IfIndex></IfIndex>
      <TrackID></TrackID>
      <Priority></Priority>
    </IfConfigure>
  </DHCPCIfConfig>
</DHCPC>
```

Table description

Item	Description
Feature name	DHCPC
Table name	DHCPCIfConfig
Table type	Multi -instance table
Row name	IfConfigure
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
TrackID	Track number	N/A	Unsigned integer. Value range: 1 to 1024.	No track number is set by default.
Priority	Priority of the gateway	N/A	Unsigned integer. Value range: 1 to 255. Default: 70.	The greater the value, the higher the priority.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
AllocEnable	Whether the function of the interface to use	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DHCP for IP address acquisition is enabled		• **false**	
CurrentState	Current state of the DHCP client	N/A	Enumeration: • **1**—HALT. • **2**—INIT. • **3**—SELECTING. • **4**—REQUESTING. • **5**—BOUND. • **6**—RENEWING. • **7**—REBOUNDING.	N/A
AllocatedIpv4Address	IPv4 address allocated by the DHCP server	N/A	String, dotted decimal notation.	N/A
AllocatedIpv4Mask	IPv4 address mask allocated by the DHCP server	N/A	String, dotted decimal notation.	N/A
DHCPServerIpv4Address	IPv4 address of the DHCP server that assigned IP addresses	N/A	String, dotted decimal notation.	N/A
Allocatedlease	Lease time (in seconds) for the allocated address	N/A	Unsigned integer.	N/A
DefaultRouter	The gateway address specified for the DHCP client	N/A	String, dotted decimal notation.	N/A
DNSIpv4Address	DNS server addresses	N/A	String, case insensitive. Length: 1 to 255 characters.	You can display a space-separated list of up to sixteen addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
T1	1/2 lease time (in seconds) for the allocated address	N/A	Unsigned integer.	N/A
T2	7/8 lease time (in seconds) for the allocated address	N/A	Unsigned integer.	N/A

DHCPC/DHCPClientID

This table contains DHCP client ID configuration information.

XML structure

```
<DHCPC>
```

```
  <DHCPClientID>
    <ClientID>
      <IfIndex></IfIndex>
      <ASCII></ASCII>
      <Hex></Hex>
      <ClientIfIndex></ClientIfIndex>
    </ClientID>
  </DHCPClientID>
</DHCPC>
```

Table description

Item	Description
Feature name	DHCPC
Table name	DHCPClientID
Table type	Multi-instance table
Row name	ClientID
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
ASCII	DHCP Client ID in ASCII code type	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.	This column cannot be configured with Hex column or ClientIfIndex column together.

Column name	Column description	Column type	Data type and restrictions	Remarks
Hex	DHCP Client ID in hex code type	N/A	Hexadecimal string. Length: 4 to 64 characters.	This column cannot be configured with ASCII column or ClientIfIndex column together.
ClientIfIndex	Uses the MAC address of interface as a DHCP client ID	N/A	Unsigned integer.	Only Layer 3 interfaces are supported. This column cannot be configured with ASCII column or Hex column together.

DHCPC/BootpAlloc

This table contains the information about using BOOTP for IP address acquisition.

XML structure

```
<DHCPC>
  <BootpAlloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
      <AllocatedIpv4Address></AllocatedIpv4Address>
      <AllocatedIpv4Mask></AllocatedIpv4Mask>
      <MacAddress></MacAddress>
    </Alloc>
  </BootpAlloc>
</DHCPC>
```

IfIndex	Interface index.	Index	Unsigned integer.	N/A
Type	Types of DHCPv6 client	Index	Enumeration: • **0**—Stateless client. • **1**—Stateful client requesting prefix. • **2**—Stateful client requesting address.	N/A
State	Current states of the DHCPv6 client	N/A	Enumeration: • **0**—IDLE. • **1**—SOLICIT. • **2**—REQUEST. • **3**—OPEN. • **4**—RENEW. • **5**—REBIND. • **6**—RELEASE. • **7**—DECLINE. • **8**—INFO-REQUESTING.	N/A
IAID	IA identifier	N/A	Hexadecimal string. Length: 1 to 10 characters.	N/A
ClientDUID	DUID of the DHCPv6 client	N/A	Hexadecimal string. Length: 4 to 64 characters.	N/A
ReachableViaIpv6Address	Reachable address for the DHCPv6 client. It is the link local address of the DHCPv6 server or DHCPv6 relay agent	N/A	Hexadecimal string, colon-separated.	N/A
Ipv6Address	IPv6 address obtained.	N/A	Hexadecimal string, colon-separated.	This column is not available when the DHCPv6 client type is Stateless client.
Ipv6PrefixLength	IPv6 prefix length obtained.	N/A	Unsigned integer. Value range: 1 to 128.	This column is not available when the DHCPv6 client type is Stateless client.
DNSServer	IPv6 address of the DNS server	N/A	String, case insensitive.	Seperated by space if there are multiple

Column name	Column description	Column type	Data type and restrictions	Remarks
				addresses. Example: 1::1 2::2 3::3.
DomainName	Domain name suffix	N/A	String, case insensitive. Length: 1 to 50 characters.	N/A
PreferredLifetime	Preferred lifetime in seconds	N/A	Unsigned integer.	N/A
ValidLifetime	Valid lifetime in seconds	N/A	Unsigned integer.	N/A
T1	T1 time value in seconds	N/A	Unsigned integer.	N/A
T2	T2 time value in seconds	N/A	Unsigned integer.	N/A

DHCPSP

DHCPSP/DHCPSPUpdateBindingDatabase

This table is used to save current DHCP snooping entries to the file.

XML structure

```
<DHCPSP>
  <DHCPSPUpdateBindingDatabase>
    <Update></Update>
  </DHCPSPUpdateBindingDatabase>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPUpdateBindingDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Update	Update DHCP snooping database immediately	N/A	String.	This column must be empty.

DHCPSP/DHCPSPClearBinding

This table is used to clear DHCP snooping entries.

XML structure

```
<DHCPSP>
  <DHCPSPClearBinding>
    <ClearBinding>
      <Ipv4Address></Ipv4Address>
      <VLANID></VLANID>
```

```
    </ClearBinding>
  </DHCPSPClearBinding>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPUpdateBindingDatabase
Table type	Multi-instance table
Row name	ClearBinding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	If Ipv4Address is empty, clears all DHCP snooping entries.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	If VLANID is empty, clears the DHCP snooping entry for the specified IP address in all Vlan.

DHCPSP

DHCPSP/DHCPSPBindingDatabase

This table contains DHCP snooping binding database configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPBindingDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCPSPBindingDatabase>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPBindingDatabase
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL cannot be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String, case insensitive.. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server. If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String, case insensitive.. Length: 1 to 32 characters.	Cannot be configured for the delete and remove operations.
Password	FTP password	N/A	String, case insensitive.. Length: 1 to 32 characters.	Only plaintext password is supported. For the merge, create and replace operations, Password must be configured with Username. Cannot be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

DHCPSP/DHCPSPInterface

This table contains the configuration information on interface about using DHCP snooping.

XML structure

```
<DHCPSP>
  <DHCPSPInterface>
    <Interface>
      <IfIndex></IfIndex>
      <BindingRecord></BindingRecord>

      <CheckGiaddress></CheckGiaddress>
      <Disable></Disable>
      <CheckRequestMessage></CheckRequestMessage>
      <Trust></Trust>
      <LearnMaxNum></LearnMaxNum>
      <RateLimitNum></RateLimitNum>
    </Interface>
  </DHCPSPInterface>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
BindingRecord	Whether enable the interface to record DHCP snooping entry or not.	N/A	Boolean: • **true** • **false** (default)	Applicable to only Layer 2 interfaces of the Restrictions.
CheckMacAddres s	Whether enable the interface to check MAC address in DHCP packets or not.	N/A	Boolean: • **true** • **false**(default)	N/A
Deny	Enable or disable the interface to block DHCP packets	N/A	Boolean: • **true**—Enable. • **false**—Disable (default).	N/A
CheckGiaddress	Whether enable the interface to check giaddress in DHCP packets or not.	N/A	Boolean: • **true** • **false**(default)	N/A
Disable	Whether to disable DHCP snooping on the interface	N/A	Boolean: • **true**—Disable. • **false**—Enable (default).	N/A
CheckRequestMe ssage	Whether enable the interface to check request message in DHCP packets or not.	N/A	Boolean: • **true** • **false** (default)	Applicable to only Layer 2 interfaces of the Restrictions.

Column name	Column description	Column type	Data type and restrictions	Remarks
Trust	Whether to configure an interface as a trusted interface.	N/A	Boolean: • **true** • **false** (default)	N/A
LearnMaxNum	The maximum number of DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model. Applicable to only Layer 2 interfaces of the Restrictions. No limit as default. 0 means No limit.

DHCPSP/DHCPSPOpt82CircuitIDVLAN

This table contains DHCP snooping option 82 circuit ID with VLAN configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPOpt82CircuitIDVLAN>
    <VLANCircuitID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <CircuitID></CircuitID>
    </VLANCircuitID>
  </DHCPSPOpt82CircuitIDVLAN>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82CircuitIDVLAN
Table type	Multi-instance table
Row name	VLANCircuitID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
CircuitID	Option82 circuit ID string	N/A	String, case-insensitive. Length: 3 to 63 characters.	For the merge, create and replace operations, the CircuitID must be configured. For the remove and delete operations, the CircuitID cannot be configured.

DHCPSP/DHCPSPOpt82RemoteIDVLAN

This table contains DHCP snooping option 82 remote ID with VLAN configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPOpt82RemoteIDVLAN>
    <VLANRemoteID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <RemoteID></RemoteID>

</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82RemoteIDVLAN
Table type	Multi-instance table
Row name	VLANRemoteID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
RemoteID	Option82 remote ID string	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.	For the merge, create and replace operations, the RemoteID and Sysname cannot be configured simultaneously and RemoteID or Sysname must be configured. Cannot be configured for the delete and remove operations.
Sysname	Whether the function of system name fix in option 82 remote ID is used.	N/A	Boolean: • **true** • **false** (default)	For the merge, create and replace operations, the RemoteID and Sysname cannot be configured simultaneously and RemoteID or Sysname must be configured. Cannot be configured for the delete and remove operations.

DHCPSP/DHCPSPOpt82VendorIDVLAN

This table contains DHCP snooping option 82 vendor ID with VLAN configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPOpt82VendorIDVLAN>
```

```
    <VLANVendorID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>

```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82
Table type	Multi-instance table
Row name	Option82
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Option82Enable	Whether enable theDHCP snooping to support Option 82 or not.	N/A	Boolean: • **true**. • **false** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Strategy	Option 82 strategy type	N/A	Enumeration: • **0**—Drop. • **1**—Keep. • **2**—Replace (default).	N/A
Circuit	The configuration of Circuit ID sub-option	Data structure	Members include: • CircuitID • CircuitIDMode • CircuitIDNodeIDType • CircuitIDNodeID • CircuitIDFormat	N/A
CircuitID	Circuit ID user defined string	N/A	String, case insensitive. Length: 3 to 63 characters.	For the merge, create and replace operations, the CircuitID must be configured if CircuitIDMode is 2 and cannot be configured if CircuitIDMode is 0 or 1.
CircuitIDMode	Circuit ID mode	N/A	Enumeration: • **0**—Normal (default). • **1**—Verbose. • **2**—User-defined. • **4**—Wlan-private	If you specify this parameter, you must also specify the CircuitIDFormat parameter. If you specify CircuitIDMode in a remove or delete operation,CircuitID, CircuitIDNodeIDType, and CircuitIDNodeID will be removed automatically.
CircuitIDNodeIDType	Circuit IP node-identifier type	N/A	Enumeration: • **0**—Mac (default). • **1**—Sysname. • **2**—User-defined.	If CircuitIDNodeIDType is configured for the remove and delete operations, CircuitIDNodeID will be removed automatically.

Column name	Column description	Column type	Data type and restrictions	Remarks
				For the merge, create and replace operations, the CircuitIDNodeIDType can be configured only when CircuitIDMode is 1.
CircuitIDNodeID	Circuit ID node-identifier user defined string	N/A	String, case insensitive. Length: 1 to 50 characters.	For the merge, create and replace operations, the CircuitIDNodeID must be configured if CircuitIDNodeIDType is 2 and cannot be configured if CircuitIDNodeIDType is 0 or 1.
CircuitIDFormat	Circuit ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii. • **2**—Undefined.	It must be configured together with the CircuitIDMode. CircuitIDFormat must be 1 if CircuitIDMode is 2. The default CircuitIDFormat is Hex when CircuitIDMode is Normal; The default CircuitIDFormat is Undefined when CircuitIDMode is Verbose; The default CircuitIDFormat is Ascii when CircuitIDMode is User-defined.
WpSsid	SSID to be added in the Circuit ID suboption in wlan-private	N/A	String, case insensitive. Length: 1 to 32 characters.	To include this parameter in the request, you must set the CircuitIDMode to 4.

Column name	Column description	Column type	Data type and restrictions	Remarks
	padding mode			You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2.
WpBssid	BSSID to be added in the Circuit ID suboption in wlan-private padding mode	N/A	MAC address, in H-H-H format.	To include this parameter in the request, you must set the CircuitIDMode to 4. You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2. The specified MAC address cannot be a multicast, all-zero, or all-F MAC address. When you specify the MAC address, you can omit the leading zeros in each segment of the MAC address. For example, you can enter **f-e2-1** for **000f-00e2-0001**.
WpApmac	AP-MAC to be added in the Circuit ID suboption in wlan-private padding mode	N/A	MAC address, in H-H-H format.	To include this parameter in the request, you must set the CircuitIDMode to 4. You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2. The specified MAC address cannot be a multicast, all-zero, or all-F MAC address. When you specify the MAC address, you can omit the leading zeros in

Column name	Column description	Column type	Data type and restrictions	Remarks
				each segment of the MAC address. For example, you can enter **f-e2-1** for **000f-00e2-0001**.
Remote	The configuration of Remote ID sub-option	Data structure	Members include: • RemoteIDMode • RemoteID • RemoteIDFormat	N/A
RemoteIDMode	Remote ID mode	N/A	Enumeration: • **0**—Normal (default). • **1**—Sysname. • **2**—User-defined.	It must be configured together with the RemoteIDFormat. If RemoteIDMode is configured for the remove and delete operations, RemoteID will be removed automatically.
RemoteID	Remote ID user defined string	N/A	String, case insensitive. Length: 1 to 63 characters.	For the merge, create and replace operations, the RemoteID must be configured if RemoteIDMode is 2 and cannot be configured if RemoteIDMode is 0 or 1.
RemoteIDFormat	Remote ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	It must be configured together with the RemoteIDMode. RemoteIDFormat must be 1 if RemoteIDMode is 1 or 2. The default RemoteIDFormat is Hex when RemoteIDMode is Normal; The default RemoteIDFormat is

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ascii when CircuitIDMode is Sysname or User-defined;
Vendor	The configuration of Vendor ID sub-option	Data structure	Members include: • VendorSpecificNodeType • VendorSpecificNodeUserDefine	N/A
VendorSpecifcNodeType	The type of node identifier content.	N/A	Enumeration: • **0**—mac(default). • **1**—sysname. • **2**—user-defined.	N/A
VendorSpecificNodeUserDefine	The content of node identifier when type is user-defined.	N/A	String, case-sensitive. Length: 1 to 50 characters.	The node identifier cannot contain spaces.

DHCPSP/DHCPSPConfig

This table contains DHCP snooping configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPConfig>
    <DHCPSPEnable></DHCPSPEnable>

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPAPConfigs
Table type	Multi-instance table
Row name	DHCPSPAPConfig
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
APName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

DHCPSPEnable	Whether to enable the function of AP DHCP snooping	N/A	Boolean: • **true** • **false** (default)	N/A
Option82Enable	Whether to enable the AP DHCP snooping to support Option 82	N/A	Boolean: • **true** • **false** (default)	N/A
CircuitID	Configuration of AP Circuit ID sub-option	Data structure	Members include: • CircuitIDMode	N/A
CircuitIDMode	AP Circuit ID mode	N/A	Enumeration: • **0**—Normal (default). • **1**—Wlan-private. • **2—**Wlan-private encoded	N/A
CircuitIDFormat	AP Circuit ID format	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	It must be configured together with CircuitIDMode. CircuitIDFormat must be Hex or Ascii. if CircuitIDMode is Normal, The default CircuitIDFormat is Hex. If CircuitIDMode is wlan-private. The default CircuitIDFormat is ascii.
RemoteID	Configuration of Wlan Remote ID	Data structure	Members include:	N/A

	sub-option		• RemoteIDMode • RemoteIDFormat • RemoteIDString	
RemoteIDMode	Remote ID mode	N/A	Enumeration: • **0**—Normal (default). • **1**—User-defined. • **2** —None.	It must be configured together with the RemoteIDFormat if RemoteIDMode is 0 or 1. If RemoteIDMode is configured for the remove and delete operations, RemoteID will be removed automatically.
RemoteIDFormat	Remote ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	It must be configured together with the RemoteIDMode if RemoteIDMode is 0 or 1. RemoteIDFormat must be 1 if RemoteIDMode is 1. The default RemoteIDFormat is Hex when RemoteIDMode is Normal; The default RemoteIDFormat is Ascii when

				CircuitIDMode is User-defined;
RemoteIDString	Remote ID user defined string	N/A	String, case insensitive. Length: 1 to 63 characters.	For the merge, create and replace operations, the RemoteID must be configured if RemoteIDMode is 1 and cannot be configured if RemoteIDMode is 0 or 2.

DHCPSP/DHCPSPWlanConfigs

This table contains Wlan DHCP snooping configuration.

XML structure

```
<DHCPSP>
  <DHCPSPWlanConfigs>
    <DHCPSPWlanConfig>
      <ServiceTemplateName></ServiceTemplateName>
      <Option82Enable></Option82Enable>

      <LearnMaxNum></LearnMaxNum>
      <RateLimitNum></RateLimitNum>
    </Interface>
  </DHCPSPInterface>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types:

	Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
BindingRecord	Whether enable the interface to record DHCP snooping entry or not.	N/A	Boolean: • **true** • **false**	Applicable to only Layer 2 interfaces of the Restrictions.
CheckMacAddress	Whether enable the interface to check MAC address in DHCP packets or not.	N/A	Boolean: • **true** • **false**	N/A
Deny	Enable or disable the interface to block DHCP packets	N/A	Boolean: • **true**—Enable. • **false**—Disable (default).	N/A
CheckGiaddress	Whether enable the interface to check giaddress in DHCP packets or not.	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Disable	Whether to disable DHCP snooping on the interface	N/A	Boolean: • **true**—Disable. • **false**—Enable (default).	N/A
CheckRequestMessage	Whether enable the interface to check request message in DHCP packets or not.	N/A	Boolean: • **true** • **false**	Applicable to only Layer 2 interfaces of the Restrictions.
Trust	Whether to configure an interface as a trustd interface.	N/A	Boolean: • **true** • **false**	N/A
LearnMaxNum	The maximum number of DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model. Applicable to only Layer 2 interfaces of the Restrictions.

DHCPSP/DHCPSPOpt82CircuitIDVLAN

This table contains DHCP snooping option 82 circuit ID with VLAN configuration information.

XML structure

```
<DHCPSP>
  <DHCPSPOpt82CircuitIDVLAN>
    <VLANCircuitID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <CircuitID></CircuitID>
    </VLANCircuitID>
  </DHCPSPOpt82CircuitIDVLAN>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82CircuitIDVLAN

</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82
Table type	Multi-instance table
Row name	Option82
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface names. For more information, see the

Column name	Column description	Column type	Data type and restrictions	Remarks
				XSD document for your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Option82Enable	Whether enable the DHCP snooping to support Option 82 or not.	N/A	Boolean: • **true** • **false**	N/A
Strategy	Option 82 strategy type	N/A	Enumeration: • **0**—Drop. • **1**—Keep. • **2**—Replace.	N/A
Circuit	The configuration of Circuit ID sub-option	Data structure	Members include: • CircuitID • CircuitIDMode • CircuitIDNodeIDType • CircuitIDNodeID • CircuitIDFormat	N/A
CircuitID	Circuit ID user defined string	N/A	String, case-insensitive. Length: 3 to 63 characters.	When you perform a merge, create, or replace operation, you must specify the CircuitID parameter if CircuitIDMode is 2. Do not specify the CircuitID parameter if CircuitIDMode is 0 or 1.
CircuitIDMode	Circuit ID mode	N/A	Enumeration: • **0**—Normal. • **1**—Verbose. • **2**—User-defined. • **4**—Wlan-private	If you specify this parameter, you must also specify the CircuitIDFormat parameter. If you specify CircuitIDMode in a remove or delete operation,CircuitID,

Column name	Column description	Column type	Data type and restrictions	Remarks
				CircuitIDNodeIDType, and CircuitIDNodeID will be removed automatically.
CircuitIDNodeIDType	Circuit IP node-identifier type	N/A	Enumeration: • **0**—Mac. • **1**—Sysname. • **2**—User-defined.	If you specify CircuitIDNodeIDType in a remove or delete operation, CircuitIDNodeID will be removed automatically. When you perform a merge, create, or replace operation, you can configure CircuitIDNodeIDType only when the value for CircuitIDMode is 1.
CircuitIDNodeID	Circuit ID node-identifier user defined string	N/A	String, case-insensitive. Length: 1 to 50 characters.	When you perform a merge, create, or replace operation, you must specify the CircuitIDNodeID parameter if CircuitIDNodeIDType is 2. Do not specify the CircuitIDNodeID parameter if CircuitIDNodeIDType is 0 or 1.
CircuitIDFormat	Circuit ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii. • **2**—Undefined.	If you specify this parameter, you must also specify the CircuitIDMode parameter. CircuitIDFormat must be 1 if CircuitIDMode is 2. The default CircuitIDFormat is Hex when CircuitIDMode is set to 0 (normal mode). The default CircuitIDFormat is Undefined when CircuitIDMode is set to 1 (verbose mode). The default CircuitIDFormat is Ascii when CircuitIDMode is set to 2 (user-defined

Column name	Column description	Column type	Data type and restrictions	Remarks
				mode).
WpSsid	SSID to be added in the Circuit ID suboption in wlan-private padding mode	N/A	String, case insensitive. Length: 1 to 32 characters.	To include this parameter in the request, you must set the CircuitIDMode to 4. You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2.
WpBssid	BSSID to be added in the Circuit ID suboption in wlan-private padding mode	N/A	MAC address, in H-H-H format.	To include this parameter in the request, you must set the CircuitIDMode to 4. You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2. The specified MAC address cannot be a multicast, all-zero, or all-F MAC address. When you specify the MAC address, you can omit the leading zeros in each segment of the MAC address. For example, you can enter **f-e2-1** for **000f-00e2-0001**.
WpApmac	AP-MAC to be added in the Circuit ID suboption in wlan-private padding mode	N/A	MAC address, in H-H-H format.	To include this parameter in the request, you must set the CircuitIDMode to 4. You cannot include this parameter in the request if CircuitIDNodeIDType is set to 0,1 or 2. The specified MAC address cannot be a multicast, all-zero, or all-F MAC address. When you specify the MAC address, you can omit the leading zeros in

Column name	Column description	Column type	Data type and restrictions	Remarks
				each segment of the MAC address. For example, you can enter **f-e2-1** for **000f-00e2-0001**.
Remote	The configuration of Remote ID sub-option	Data structure	Members include: • RemoteIDMode • RemoteID RemoteIDFormat	N/A
RemoteIDMode	Remote ID mode	N/A	Enumeration: • **0**—Normal. • **1**—Sysname. • **2**—User-defined.	If you specify this parameter, you must also specify RemoteIDFormat. If you specify RemoteIDMode in a remove or delete operation, RemoteID will be removed automatically.
RemoteID	Remote ID user defined string	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RemoteIDFormat	Remote ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	N/A
Vendor	The configuration of Vendor ID sub-option	Data structure	Members include: • VendorSpecificNodeType • VendorSpecificNodeUserDefine	N/A
VendorSpecificNodeType	The type of node identifier content.	N/A	Enumeration: • **0**—mac • **1**—sysname • **2**—user-defined	N/A
VendorSpecificNodeUserDefine	The content of node identifier when type is user-define	N/A	String, case-sensitive. Length: 1 to 50 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	d.			

DHCPSP/DHCPSPBinding

This table contains DHCP snooping entries information.

XML structure

```
<DHCPSP>
  <DHCPSPBinding>
    <Binding>
      <Ipv4Address></Ipv4Address>
      <VLANID></VLANID>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitMinNum	The minimum rate number can be configured	N/A	Unsigned integer.	N/A
RateLimitM	The maximum rate number can be	N/A	Unsigned integer.	A value of 0 means that

Column name	Column description	Column type	Data type and restrictions	Remarks
axNum	configured			rate limit isn't supported.

DHCPSP/DHCPSPEthernetServiceInstance

This table contains the Ethernet service instance configuration information of DHCP snooping.

XML structure

```
<DHCPSP>
  <DHCPSPEthernetServiceInstance>
    <EthernetServiceInstance>
      <IfIndex></IfIndex>
      <ServiceInstance></ServiceInstance>
      <Trust></Trust>
    </EthernetServiceInstance>
  </DHCPSPEthernetServiceInstance>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPEthernetServiceInstance
Table type	Multi-instance table
Row name	EthernetServiceInstance
Restrictions	This table supports only Layer 2 Ethernet interfaces or Layer 2 aggregate interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ServiceInstance	Service instance ID	Index	Unsigned integer.	N/A
Trust	Whether to configure the interface for the Ethernet service instance as a trusted interface	N/A	Boolean: • **true** • **false**	N/A

DHCPSP/DHCPSPVsi

This table contains the VSI configuration information of DHCP snooping.

XML structure

```
<DHCPSP>
  <DHCPSPVsi>
    <Vsi>
      <VsiName></VsiName>
      <BindingRecord></BindingRecord>
      <TrustTunnel></TrustTunnel>
    </Vsi>
  </DHCPSPVsi>
</DHCPSP>
```

Table description

Item	Description

  </DHCPSPAPConfig>
 </DHCPSPAPConfigs>
</DHCPSP>
```

Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPAPConfigs
Table type	Multi-instance table
Row name	DHCPSPAPConfig
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
APName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
DHCPSPEnable	Whether to enable the function of AP DHCP snooping	N/A	Boolean: • **true** • **false**	N/A
Option82Enable	Whether to enable the AP DHCP snooping to support Option 82	N/A	Boolean: • **true** • **false**	N/A
CircuitID	Configuration of AP Circuit ID sub-option	Data structure	Members include: • CircuitIDMode	N/A
CircuitIDMode	AP Circuit ID mode	N/A	Enumeration: • **0**—Normal.. • **1**—Wlan-private. • **2**—Wlan-private encoded	It must be configured together with the

				CircuitIDFormat.
CircuitIDFormat	AP Circuit ID format	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	It must be configured together with CircuitIDMode. CircuitIDFormat must be Hex or Ascii. if CircuitIDMode is Normal, The default CircuitIDFormat is Hex. if CircuitIDMode is wlan-private. The default CircuitIDFormat is ascii.
RemoteID	Configuration of Wlan Remote ID sub-option	Data structure	Members include: • RemoteIDMode • RemoteIDFormat • RemoteIDString	N/A
RemoteIDMode	Remote ID mode	N/A	Enumeration: • **0**—Normal • **1**—User-defined. • **2**—None.	It must be configured together with the RemoteIDFormat if RemoteIDMode is 0 or 1. If RemoteIDMode is configured for the remove and delete

				operations, RemoteID will be removed automatically.
RemoteIDFormat	Remote ID format type	N/A	Enumeration: • **0**—Hex. • **1**—Ascii.	It must be configured together with the RemoteIDMode if RemoteIDMode is 0 or 1. RemoteIDFormat must be 1 if RemoteIDMode is 1. The default RemoteIDFormat is Hex when RemoteIDMode is Normal; The default RemoteIDFormat is Ascii when CircuitIDMode is User-defined;
RemoteIDString	Remote ID user defined string	N/A	String, case insensitive. Length: 1 to 63 characters.	For the merge, create and replace operations, the RemoteID must be configured if RemoteIDMode is 1 and cannot be configured if RemoteIDMode is 0 or 2.

DHCPSP/DHCPSPWlanConfigs

This table contains Wlan DHCP snooping configuration.

XML structure

```
<DHCPSP>
  <DHCPSPWlanConfigs>
    <DHCPSPWlanConfig>
      <ServiceTemplateName></ServiceTemplateName>
      <Option82Enable></Option82Enable>

Message	Explanation
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The configuration doesn't meet the requirements, please check your configuration.
Invalid VLAN ID. 非法的VLAN ID。	Invalid VLAN ID, please check your VLAN ID.
The URL of the TFTP file can't include username or password. 不要为一个TFTP文件的URL指定用户名和密码。	Please do not set a username or password for a URL of the TFTP file.
Invalid filename or URL. 无效的本地文件名或URL。	Invalid filename or URL, please check it.
The URL can't include the username or password. 不要在URL中携带用户名和密码信息。	Please do not set username or password in the URL.
The system is saving DHCP snooping entries to backup file. Please wait. 系统正在将DHCP Snooping表项写入备份表项的文件中。请等待。	The system is saving DHCP snooping entries to backup file.
The system is downloading DHCP snooping entries from the backup file. Please wait. 系统正在从备份表项的文件中恢复DHCP Snooping表项。请等待。	The system is downloading DHCP snooping entries from the backup file.
The node identifier can't include any spaces. 节点标识的字符串中不允许出现空格。	Please make certain that the node identifier is not include any spaces.
The value is out of range. 参数值超出范围。	The value is out of range, please check your value.
The VSI instance does not exist. VSI实例不存在。	The VSI instance is not created. 配置DHCP Snooping信任通道（远端站点）时，对应的VSI实例未创建。
The Ethernet service instance does not exist. Service instance不存在。	The Ethernet service instance is not created. 配置DHCP Snooping信任通道（本地站点）时，对应的以太网服务实例未创建。
Please first enable DHCP snooping logging. 首先请启用DHCP监听日志记录	未配置DHCP监听日志记录,无法配置监听阀值 DHCP listening logging is not configured, unable to configure listening threshold
The wireless service template does not exist. 无线服务模板不存在。	The wireless service template is not created.
CircuitIDMode and CircuitIDFormat must be issued at the same time. CircuitIDMode和CircuitIDFormat必需同时下发。	CircuitIDMode and CircuitIDFormat must be issued at the same time.

Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6BindingDatabase
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL can not be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String. case sensitive. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server. If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String. case sensitive. Length: 1 to 32 characters.	Can not be configured for the delete and remove operations.
Password	FTP password	N/A	String. case sensitive. Length: 1 to 32 characters.	Only plaintext password is supported. For the merge, create and replace operations, Password must be configured with Username. Can not be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

DHCPSP6/DHCPSP6Interface

This table contains the configuration information on interface about using IPv6 DHCP snooping.

XML structure

```
<DHCPSP6>
  <DHCPSP6Interface>
    <Interface>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>

      <Deny></Deny>
      <Trust></Trust>
    </Interface>
  </DHCPSP6Interface>
</DHCPSP6>
```

Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Interface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interfaceS-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of IPv6 DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive IPv6 DHCP packets, in Kbps.	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model. No limit as default. 0 means No limit.
BindingRecord	Whether enable the interface to record IPv6 DHCP snooping entry or not.	N/A	Boolean: • **true** • **false**(default)	N/A
CheckRequestMessage	Whether enable the interface to check request message in IPv6 DHCP packets or not.	N/A	Boolean: • **true** • **false**(default)	N/A
PDBindingRecord	Whether enable the interface to record IPv6 DHCP Snooping prefix entry or not	N/A	Boolean: • **true** • **false**(default)	N/A
CheckRelayForward	Whether Relay-Forward check is enabled on the interface	N/A	Boolean: • true • false (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Deny	Whether configuration an interface to be enable or not.	N/A	Boolean: • **true** • **false**(default)	N/A
Trust	Whether configurate an interface to be trusted or not.	N/A	Boolean: • **true** • **false**(default)	N/A

DHCPSP6/DHCPSP6OptionInterfaceID

This table contains IPv6 DHCP snooping option 18 DUID configuration information.

XML structure

```
<DHCPSP6>
  <DHCPSP6OptionInterfaceID>
    <InterfaceID>

Table type	Multi-instance table
Row name	RemoteID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 0 to 4094.	0 means don't specify the VLAN.
RemoteID	Option37 DUID string	N/A	String, case-insensitive. Length: 1 to 128 characters.	For the merge, create and replace operations, the RemoteID must be configured. For the remove and delete operations, the

Column name	Column description	Column type	Data type and restrictions	Remarks
				RemoteID can not be configured.

DHCPSP6/DHCPSP6OptionEnable

This table contains IPv6 DHCP snooping option 82 configuration information.

XML structure

```
<DHCPSP6>
  <DHCPSP6OptionEnable>
    <OptionEnable>
      <IfIndex></IfIndex>
      <InterfaceIDEnable></InterfaceIDEnable>
      <RemoteIDEnable></RemoteIDEnable>
    </OptionEnable>
  </DHCPSP6OptionEnable>
</DHCPSP6>
```

      <CheckRelayForword></CheckRelayForword>
      <Deny></Deny>
    </Interface>
  </DHCPSP6Interface>
</DHCPSP6>
```

Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Interface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types:

	Layer 2 Ethernet interface/Layer 2 aggregate interfaceS-channel interface/S-channel aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer.	The value range depends on the device model.
BindingRecord	Whether enable the interface to record DHCP snooping entry or not	N/A	Boolean: • **true** • **false**(default)	N/A
CheckRequestMessage	Whether enable the interface to check request message in DHCP packets or not	N/A	Boolean: • **true** • **false**(default)	N/A
PDBindingRecord	Whether enable the interface to record IPv6 DHCP Snooping prefix entry or not	N/A	Boolean: • **true** • **false**	N/A
CheckRelayForward	Whether Relay-Forward check is enabled on the interface	N/A	Boolean: • true • false (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Deny	Whether configuration an interface to be enable or not.	N/A	Boolean: • **true** • **false**	N/A
Trust	Whether configurate an interface to be trusted or not	N/A	Boolean: • **true** • **false**(default)	N/A

DHCPSP6/DHCPSP6OptionInterfaceID

This table contains IPv6 DHCP snooping option 18 DUID configuration information.

XML structure

```
<DHCPSP6>
  <DHCPSP6OptionInterfaceID>
    <InterfaceID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <Mode></Mode>
      <InterfaceID></InterfaceID>
    </InterfaceID>
  </DHCPSP6OptionInterfaceID>
</DHCPSP6>
```

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis of a node.	N/A	Unsigned short. Value range: 0 to 65535.	如果Chassis，SLOT cpu都不输入表示收集所有的。如果是集中式设备，输入0或者不输入。
Slot	Slot of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned short. Value range: 0 to 65535.	如果是单cpu，输入0或者不输入。
FileName	The file name for diagnosis.	N/A	String. Length: 1 to 127 characters.	文件名后缀必须是'.tar.gz'!
InfoType	Diagnostic information type.	N/A	Enumeration: 1—all. 2—hardware. 3—infrastructure. 4—l2. 5—l3. 6—service.	可选，默认是all
KeyInfo	Whether only collect key info.	N/A	Boolean: • True • false	可选，默认值为false
Collect	Collect diagnostic information.	N/A	This column must be empty.	N/A
Clear	Clear the diagnostic information result	N/A	This column must be empty.	输入chassis slot cpu表示清除指定板卡的诊断结果。不输入输入chassis slot cpu表示清除所有slot的结果。

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis of a node.	N/A	Unsigned short. Value range: 0 to 65535.	如果Chassis，SLOT cpu都不输入表示收集所有的。如果是集中式设备，输入0或者不输入。
Slot	Slot of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned short. Value range: 0 to 65535.	如果是单cpu，输入0或者不输入。
FileName	The file name for	N/A	String.	文件名后缀必须是

Column name	Column description	Column type	Data type and restrictions	Remarks
	diagnosis.		Length: 1 to 127 characters.	'.tar.gz'!
CollectStatus	Status of this node.	N/A	Enumeration: • 1—InProgress • 2.—Failure	N/A
CollectFailed Reason	Failed reason of this node.	N/A	Unsigned integer	“CollectStatus”字段为”Failure”时生效

Diagnostic/CollectDiagnosticInfo

This table contains collext diagnostic information.

XML structureFILE

```
<Diagnostic>

Table description

Item	Description
Feature name	Diagnostic
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Index	Unsigned integer. Value range: 0 to 65535.
Total	Total memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Used	Used memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Free	Free memory	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	space (KB)		Value range: 0 to 4294967295.
FreeRatio	Free memory ratio (%)	N/A	Double. Value range: 0 to 100. Formats: %.1f
Buffers	Memory space used for buffers (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Cached	Memory space used for cache (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
CommitLimit	Memory space currently available for allocation (KB)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
CommittedAS	Memory space allocated by processes (KB)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
VmallocTotal	Total allocated virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
VmallocUsed	Used virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
VmallocChunk	Free virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
SwapTotal	Total memory space used for swapping (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
SwapFree	Free memory space dedicated for swapping (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
LowTotal	Total low-memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
LowFree	Free low-memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
HighTotal	Total high-memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
HighFree	Free high-memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
MemoryUsage	Memory usage ratio (%)	N/A	Double. Value range: 0 to 100. Formats: %.1f
DMATotal	DMA Total	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	memory size (KB)		Value range: 0 to 4294967295.
DMAFree	DMA Free memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Diagnostic/ProcessesMemory (currently not available)

This table contains memory information about the Processes.

XML structure

```
<Diagnostic>
  <ProcessesMemory>
    <Process>

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
Name	Target name	Index	String. Length: 1 to 255 characters.
Active	Number of active targets	N/A	Unsigned integer. Value range: 0 to 4294967295.
Number	Total number of targets	N/A	Unsigned integer. Value range: 0 to 4294967295.
Size	Target memory space (KB)	N/A	Unsigned integer. Value range: 0 to 2147483647.
Align	Aligned memory	N/A	Unsigned integer. Value range: 0 to 2147483647.
Slab	Number of targets in one slab	N/A	Unsigned integer. Value range: 0 to 2147483647.
PgSlab	Number of memory pages for one slab	N/A	Unsigned integer. Value range: 0 to 2147483647.
ASlabs	Number of active slabs	N/A	Unsigned integer. Value range: 0 to 4294967295.
NSlabs	Total number of slabs	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 0 to 4294967295.

Diagnostic/MemoryAlert

This table contains free-memory alarm settings and status information.

XML structure

```
<Diagnostic>
  <MemoryAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Unit></Unit>
      <MinorThreshold></MinorThreshold>
      <SevereThreshold></SevereThreshold>
      <CriticalThreshold></CriticalThreshold>
      <NormalThreshold></NormalThreshold>
      <EarlyWarningThreshold></EarlyWarningThreshold>
      <SecureThreshold></SecureThreshold>
      <CurrentState></CurrentState>
      <ChassisName></ChassisName>
    </Alert>
  </MemoryAlert>
</Diagnostic>
```

Table description

Item	Description
Feature name	Diagnostic
Table name	MemoryAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Unit	Unit for memory thresholds	N/A	Enumeration: • MB • Percentage	N/A
MinorThreshold	Minor insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the minor alarm feature.
SevereThreshold	Severe insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the severe alarm feature.
CriticalThresholdl	Critical insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the critical alarm feature.
NormalThreshold	Normal free-memory state threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	N/A
EarlyWarningThreshold	Early-warning threshold for insufficient-free-memory condition	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the early warning feature.

Column name	Column description	Column type	Data type and restrictions	Remarks
SecureThreshold	Early-warning-removed threshold for insufficient-free-memory condition	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	N/A
CurrentState	Current memory alarm status	N/A	Enumeration: • **Minor** • **Severe** • **Critical** • **Normal** • **EarlyWarning** • **Secure**	N/A
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.	Only fcc and lcc are supported.

Diagnostic/CoreAlert

This table contains core alarm settings and status information.

XML structure

```
<Diagnostic>
  <CoreAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <CoreID></CoreID>
      <CoreThreshold></CoreThreshold>
      <Current5SUsage></Current5SUsage>
      <Current1MUsage></Current1MUsage>
      <Current5MUsage></Current5MUsage>
      <LastState></LastState>
      <CoreMinorThreshold></CoreMinorThreshold>
      <CoreRecoveryThreshold></CoreRecoveryThreshold>
      <ChassisName></ChassisName>
    </Alert>
  </CoreAlert>
</Diagnostic>
```

Table description

Item	Description
Feature name	Diagnostic

Item	Description
Table name	CoreAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the card	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
CoreID	ID of the Core	Index	Unsigned integer. Value range: 0 to 65535.
CoreThreshold	Core usage Threshold (%)	N/A	Unsigned integer. Value range: 2 to 100 Default: 4294967295
Current5SUsage	Core usage in the most recent 5-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100
Current1MUsage	Core usage in the most recent 12 five-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100
Current5MUsage	Core usage in the most recent 60 five-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100
LastState	Previous core alarm status	N/A	Enumeration: • Normal • Warning
CoreMinorThreshold	Core usage minor threshold (%)	N/A	Unsigned integer. Value range: 1 to 99 Default: 4294967295

Column name	Column description	Column type	Data type and restrictions
CoreRecovery Threshold	Core usage recovery threshold (%)	N/A	Unsigned integer. Value range: 0 to 98 Default: 4294967295
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Diagnostic/CPUGroups

This table contains usage information about the logical CPU groups.

XML structure

```
<Diagnostic>
  <CPUGroups>
    <CPUGroup>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>

      <GroupName></GroupName>
      <CPUUsage></CPUUsage>
      <Last1mUsage></Last1mUsage>
      <Last5mUsage></Last5mUsage>
      <ChassisName></ChassisName>
    </CPUGroup>
  </CPUGroups>
</Diagnostic>
```

Table description

Item	Description
Feature name	Diagnostic
Table name	CPUGroups
Table type	Multi-instance table
Row name	CPUGroup
Restrictions	Available only for logical CPU groups

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
GroupID	ID of CPU group	Index	Unsigned integer. Value range: 0 to 65535. For example: 0 means control plane, 1 means data plane
GroupName	Name of CPU group	N/A	String. Length: 1 to 64 characters.
CPUUsage	Usage in the most recent 5-second interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.
Last1mUsage	Usage in the most recent 1-minute interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.
Last5mUsage	Usage in the most recent 5-minute interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.
ChassisName	Name of chassis.	N/A	String. Length: 0 to 32 characters.

Diagnostic/Configuration

This table contains the global settings of the diagnostic module.

XML structure

```
<Diagnostic>
  <Configuration>
      <MonitorDiskEnable></MonitorDiskEnable>
      <DefaultMonitorDiskUsageInterval></DefaultMonitorDiskUsageInterval>
      <MonitorDiskUsageInterval></MonitorDiskUsageInterval>
  </Configuration>
</Diagnostic>
```

Table description

Item	Description
Feature name	Diagnostic
Table name	Configuration
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type
MonitorDiskEnable	Enable disk usage monitoring.	N/A	Boolean: • **true** • **false**
DefaultMonitorDiskUsageInterval	Default disk usage monitoring interval in seconds.	N/A	Unsigned integer. Value range: 5 to 1800.
MonitorDiskUsageInterval	Disk usage monitoring interval in seconds.	N/A	Unsigned integer. Value range: 5 to 1800.

Diagnostic/DiskAlert

This table contains disk usage alarm settings.

XML structure

```
<Diagnostic>
  <DiskAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <DiskName></DiskName>
      <Threshold></Threshold>
    </Alert>
  </DiskAlert>
</Diagnostic>
```

Table description

Item	Description

Diagnostics event stream

CPUEvent event

This event is used to report CPU alarm information.

XML structure for event subscription

```
<CPUEvent>
  <CPU>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </CPU>
</CPUEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Diagnostic</stream>
    <filter type="subtree">
      <CPUEvent xmlns="http://www.h3c.com/netconf/event:1.0/Diagnostic:1.0">
        <CPU>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
        </CPU>
      </CPUEvent>
    </filter>
  </create-subscription>
</rpc>
```

Columns

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
Description	CPU event description.	Enumeration: • CPU_SEVERE_THRESHOLD • CPU_SEVERE_RECOVERY • CPU_MINOR_THRESHOLD • CPU_MINOR_RECOVERY	N/A
CPUUsage	CPU usage (%)	Unsigned integer. Value range: 0 to 100.	N/A
Core	CPUInfo of core	Members include: • CoreID • CPUUsage • Idle • User • Kernel • Interrupt	N/A
CoreID	Core ID	Unsigned integer. Value range: 0 to 65535.	N/A
CPUUsage	Core CPU usage (%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Idle	CPU idle time ratio(%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
User	Ratio of the time of processes executing in user mode to CPU total time(%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Kernel	Ratio of the time of processes executing in kernel mode to CPU total time (%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Interrupt	Ratio of the time of interrupt to total cpu time.	Double. Value range: 0 to 100.	Accurate to the second decimal place. Example: 12.34

Column name	Column description	Data type and restrictions	Remarks
		Formats: %.2f	
Process	CPUInfo of process	Members include: • JobID • PID • Name • CPUUsage • Priority • State • FDs • Memory • RunTime	N/A
JobID	Job ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PID	Process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
Name	Process name	String. Length: 1 to 255 characters.	Only report the top 5 cpuusage processes.
CPUUsage	CPUUsage of Process	Double. Value range: 0 to 100. Formats: %.2f	N/A
Priority	Process priority	Unsigned integer. Value range: 0 to 65535.	N/A
State	Running state of process	Enumeration: • **R**—Running. • **S**—Sleeping. • **T**—Traced or stopped. • **D**—Uninterruptible sleep. • **Z**—Zombie.	N/A
FDs	File descriptions of process	Unsigned integer. Value range: 0 to 4294967295.	N/A
Memory	Size of the process memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
RunTime	Runtime of process	String. Formats: • HH:MM:SS Runtime < 100h • HHh Runtime >= 100h	N/A

MemoryEvent event

This event is used to report memory alarm information.

XML structure for event subscription

```
<MemoryEvent>
  <Memory>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </Memory>
</MemoryEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">

Columns

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides.	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node.	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU Identification.	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Memory event description.	Enumeration: • MEM_EARLYWARNING_THRESHOLD • MEM_EARLYWARNING_RECOVERY • MEM_MINOR_THRESHOLD • MEM_MINOR_RECOVERY • MEM_SEVERE_THRESHOLD • MEM_SEVERE_RECOVERY • MEM_CRITICAL_THRESHOLD • MEM_CRITICAL_RECOVERY	N/A
Total	Total memory size (KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
Used	Size of the used memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
Free	Size of the free	Unsigned integer.	N/A

Column name	Column description	Data type and restrictions	Remarks
	memory space (KB)	Value range: 0 to 4294967295.	
FreeRatio	Free memory Ratio(%)	Unsigned integer. Value range: 0 to 100.	N/A
LowTotal	Total LowMem size (KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
LowFree	Size of the free LowMem space (KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
HighTotal	Total HighMem size (KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
HighFree	Size of the free HighMem space (KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
TopUsageProcess	Memory Info of top usage process	Members include: • JID • Name • Used	Only report the top 5 memory usage processes.
JID	Process Job ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
Name	Process name	String. Length: 1 to 255 characters.	N/A
Used	Size of the process used memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
TopUsageSlub	Memory Info of top usage slub	Members include: • Name • Used	Only report the top 5 memory usage target.
Name	Target name	String. Length: 1 to 255 characters.	N/A
Used	Size of the target used memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A

CoreEvent event

This event is used to report core alarm information.

XML structure for event subscription

```
<CoreEvent>
  <Cores>
    <Chassis></Chassis>

Columns

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the card	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
CoreID	ID of the Core.	Unsigned integer. Value range: 0 to 65535.	N/A
CoreUsage	Core usage (%)	Unsigned integer. Value range: 0 to 100.	In last 30 minutes the core usage
CpuLast5sUsage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats:	In last 5 seconds the CPU usage.

Column name	Column description	Data type and restrictions	Remarks
		%.2f	
CpuLast1mUsage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats: %.2f	In last 1 minute the CPU usage.
CpuLast5mUsage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats: %.2f	In last 5 minutes the CPU usage.
CoreThreshold	Core usage threshold	Unsigned integer. Value range: 2 to 100. Default: 4294967295.	N/A
Process	High-core usage processes	Members include: • Name • CPU • JobID • PID • InLast5sUsage • InLast1mUsage • InLast5mUsage • State • Memory	Only the top high-core usage processes are reported
Name	Process name	String. Length: 1 to 255 characters.	N/A
CPU	Core that held one of the top high-core usage processes when the high-core usage alarm was issued	Unsigned integer. Value range: 0 to 65535.	N/A
JobID	Job ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PID	Process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PPID	Parent process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
InLast5sUsage	Usage in the most recent 5-second interval (%)	Double. Value range: 0 to 100. Formats: %.1f	N/A
InLast1mUsage	Usage in the most recent 1-minute interval (%)	Double. Value range: 0 to 100. Formats: %.1f	N/A
InLast5mUsage	Usage in the most recent 5-minute interval	Double.	N/A

Column name	Column description	Data type and restrictions	Remarks
	(%)	Value range: 0 to 100. Formats: %.1f	
State	Running state of process	Enumeration: • **R**—Running. • **S**—Sleeping. • **T**—Traced or stopped. • **D**—Uninterruptible sleep. • **Z**—Zombie.	N/A
Memory	Size of the process memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
EventType	Core event type.	String: • **CORE_SEVERE_THRESHOLD**—A severe CPU core usage alarm occurred. • **CORE_SEVERE_RECOVERY**—A severe CPU core usage alarm was removed. • **CORE_MINOR_THRESHOLD**—A minor CPU core usage alarm occurred. **CORE_MINOR_RECOVERY**—A minor CPU core usage alarm was removed.	N/A
CoreMinorThreshold	Core usage minor threshold	Unsigned integer. Value range: 1 to 99. Default: 4294967295.	N/A
CoreRecoveryThreshold	Core usage recovery threshold	Unsigned integer. Value range: 0 to 98. Default: 4294967295.	N/A

DiskEvent event

This event is used to report disk alarm information.

XML structure for event subscription

```
<DiskEvent>
  <Disk>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Compile	Activate all DPI settings	N/A	Boolean: • true • false	N/A

DIM/ImportWarningFile

This table contains the warning file of the warning parameter profile.

XML structure

```
<DIM>
  <ImportWarningFiles>
    <ImportWarningFile>
      <ParameterName></ParameterName>
      <Action></Action>
      <FileName></FileName>
```

```
    </ImportWarningFile>
  </ImportWarningFiles>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ImportWarningFiles
Table type	Multi-instance table
Row name	ImportWarningFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Warning parameter profile name	Index	String: case-insensitive. • Length: 1 to 63 characters.	Only support unsigned integers,characters and underlines.
Action	Action	N/A	Enumeration: • **1**—Block	N/A
FileName	Warning file name	N/A	String: case-insensitive. • Length: 1 to 255 characters.	N/A

DIM/ResetWarningFile

This table contains information about removing the warning file of the warning parameter profile.

XML structure

```
<DIM>
  <ResetWarningFiles>
    <ResetWarningFile>
      <ParameterName></ParameterName>
      <Action></Action>
    </ResetWarningFile>
  </ResetWarningFiles>
</DIM>
```

Table description

Item	Description
Feature name	DIM

Table name	ResetWarningFiles
Table type	Multi-instance table
Row name	ResetWarningFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Warning parameter profile name	Index	String: case-insensitive. • Length: 1 to 63 characters.	Only support unsigned integers,characters and underlines.
Action	Action	N/A	Enumeration: • **1**—Block	N/A

DIM/PcapUpload

This table contains configurations for uploading captured files to the cloud platform.

XML structure

```
<DIM>
  <PcapUpload>
    <URL></URL>
    <UploadTime></UploadTime>
    <UploadSize></UploadSize>
    <Enable></Enable>
  </PcapUpload>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	PcapUpload
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the cloud platform	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
UploadTime	Period of time for uploading captured files	N/A	Unsigned integer. Value range: 1 to 60, in minutes.	The unit is minute, and the default value is 5.
UploadSize	Max size of captured files to be uploaded	N/A	Unsigned integer. Value range: 1 to 20.	The unit is MB, and the default value is 10.
Enable	Enabling status of captured file uploading	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

DIM

DIM/BlockParameters

This table contains block parameters.

XML structure

```
<DIM>
  <BlockParameters>
    <BlockParameter>
      <ParameterName></ParameterName>
      <Denyperiod></Denyperiod>
    </BlockParameter>
  </BlockParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	BlockParameters
Table type	Multi-instance table
Row name	BlockParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Denyperiod	Deny period	N/A	Unsigned integer. Value range: 1 to 86400s	Default is 1800s

DIM/CaptureParameters

This table contains capture parameters.

XML structure

```
<DIM>
  <CaptureParameters>
    <CaptureParameter>
      <ParameterName></ParameterName>
      <CaptureMax></CaptureMax>
      <CaptureExceedURL></CaptureExceedURL>
      <StartTime></StartTime>
    </CaptureParameter>
  </CaptureParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	CaptureParameters
Table type	Multi-instance table
Row name	CaptureParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
CaptureMax	Max space for captured packets	N/A	Unsigned integer. Value range: 0 to 1024	Default is 512 Kbytes
CaptureExceedURL	The URL while the packets size exceeds the max space, they will be sent to	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
StartTime	Time when the system sends the packets	N/A	Time. Format: HH:MM:SS	Default is 01:00:00

DIM/LoggingParameters

This table contains logging parameters.

XML structure

```
<DIM>
  <LoggingParameters>
    <LoggingParameter>
      <ParameterName></ParameterName>
      <IsLogToHost></IsLogToHost>
      <IsLogMail></IsLogMail>
      <IsLogLanguageCN></IsLogLanguageCN>
    </LoggingParameter>
  </LoggingParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	BlockParameters
Table type	Multi-instance table
Row name	BlockParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsLogToHost	Sending log to host or not	N/A	Boolean: • true • false	N/A
IsLogMail	Email the logs to an email server or not	N/A	Boolean: • true • false	N/A
IsLogLanguageCN	Support for logs in Chinese	N/A	Boolean: • true • false	Only attack name support chinese

DIM/RedirectParameters

This table contains redirect parameters.

XML structure

```
<DIM>
  <RedirectParameters>
    <RedirectParameter>
      <ParameterName></ParameterName>
      <url></url>
    </RedirectParameter>
  </RedirectParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RedirectParameters
Table type	Multi-instance table
Row name	RedirectParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
url	Target URL for redirect	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

DIM/MailParameters

This table contains mail parameters.

XML structure

```
<DIM>
  <MailParameters>
    <MailParameter>
      <ParameterName></ParameterName>
      <ServerAddr></ServerAddr>
      <SrcMailAddr></SrcMailAddr>
      <DstMailAddr></DstMailAddr>
```

```
      <LocalDomain></LocalDomain>
      <UserName></UserName>
      <Password></Password>
      <IsNeedAuthentication></IsNeedAuthentication>
      <IsNeedSPA></IsNeedSPA>
      <TimeLimit></TimeLimit>
      <MailNumLimit></MailNumLimit>
    </MailParameter>
  </MailParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	MailParameters
Table type	Multi-instance table
Row name	MailParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServerAddr	Mail server's address	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMailAddr	Source mail address	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMailAddr	Destination mail address	N/A	String, case-insensitive. Length: 1 to 502characters.	N/A
LocalDomain	Local domain name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
UserName	Mail user name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Password	Password	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsNeedAuthentication	Requires authentication by the mail server or not	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IsNeedSPA	Requires using SPA by the mail server or not	N/A	Boolean: • true • false	N/A
TimeLimit	Time interval limit	N/A	Unsigned Integer: Value range: 1 to 10 minutes	By default, DIM mail limits 10 mails in 5 minutes.
MailNumLimit	Mail max number limit	N/A	Unsigned Integer: Value range: 1 to 100	By default, DIM mail limits 10 mails in 5 minutes.

DIM/InspectBypass

This table contains bypass parameters.

XML structure

```
<DIM>
  <InspectBypass>
    <BypassByConfig></BypassByConfig>
  </InspectBypass>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	InspectBypass
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BypassByConfig	Value of bypass.	N/A	Boolean: • true • false	N/A

DIM/ProxyServerParameters

This table contains information about DIM proxy server parameters.

XML structure

```
<DIM>
  <ProxyServerParameters>
    <ProxyServerParameter>
      <ProxyAddress></ProxyAddress>
      <ProxyPort></ProxyPort>
      <UserName></UserName>
      <PassWord></PassWord>
    </ProxyServerParameter>
  </ProxyServerParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ProxyServerParameters
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProxyAddress	Proxy server address	N/A	String, case-insensitive Length: 3 to 63 characters.	N/A
ProxyPort	Proxy server port	N/A	Unsigned integer: Value range: 1 to 65535.	N/A
UserName	Proxy username	N/A	String, case-insensitive Length: 1 to 31 characters.	N/A
PassWord	Proxy password	N/A	String, case-sensitive Length: 1 to 31 characters.	N/A

DIM/DimFileUncompress

This table contains the maximum length of file uncompressing.

XML structure

```
<DIM>
```

```
  <DimFileUncompress>
    <Size></Size>
  </DimFileUncompress>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	DimFileUncompress
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Size	Maximum szie that can be uncompressed	N/A	Unsigned integer. Value range: 1 to 200MB.	N/A

DIM/ProxyServerPara

This table contains information about DIM proxy server parameters.

XML structure

```
<DIM>
  <ProxyServerPara>
    <ProxyAddress></ProxyAddress>
    <ProxyPort></ProxyPort>
    <UserName></UserName>
    <PassWord></PassWord>
  </ProxyServerPara>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ProxyServerPara
Table type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProxyAddress	Proxy server address	N/A	String, case-insensitive Length: 3 to 63 characters.	N/A
ProxyPort	Proxy server port	N/A	Unsigned integer: Value range: 1 to 65535.	N/A
UserName	Proxy username	N/A	String, case-insensitive Length: 1 to 31 characters.	N/A
PassWord	Proxy password	N/A	String, case-sensitive Length: 1 to 31 characters.	N/A

DIM/StreamFixedLength

This table contains the length of data per data stream to be inspected.

XML structure

```
<DIM>
  <StreamFixedLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <Length></Length>
    </Protocol>
  </StreamFixedLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	StreamFixedLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP • MAIL	Protocol MAIL include SMTP, POP3 and IMAP
Length	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048KB.	N/A

DIM/FileScanLength

This table contains the length of file per data stream to be inspected.

XML structure

```
<DIM>
  <FileScanLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <Length></Length>
    </Protocol>
  </FileScanLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	FileScanLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP	Protocol MAIL include SMTP, POP3 and IMAP

			• MAIL • NFS • SMB	
Length	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048KB.	N/A

DIM/StreamFixedSwitch

This table contains the feature fixed length of data per data stream to be inspected setting.

XML structure

```
<DIM>
  <StreamFixedSwitch>
    <SwitchByConfig></SwitchByConfig>
  </StreamFixedSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	StreamFixedSwitch
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature fixed length of data per data stream to be inspected.	N/A	Boolean: • true • false	N/A

DIM/FileScanSwitch

This table contains the feature fixed length of file per data stream to be inspected setting.

XML structure

```
<DIM>
```

```
  <FileScanSwitch>
    <SwitchByConfig></SwitchByConfig>
  </FileScanSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	FileScanSwitch
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature fixed length of file per data stream to be inspected.	N/A	Boolean: • true • false	N/A

DIM/RealIPAddressEnable

This table contains the settings of the real source IP switch.

XML structure

```
<DIM>
  <RealIPAddressEnable>
    <DetectionEnable></DetectionEnable>
  </RealIPAddressEnable>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressEnable
Table Type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectionEnable	Enabling status of detecting real source IP	N/A	Boolean: • true • false	Default is false

DIM/RealIPAddressPriority

This table contains the settings of field priority in the real source IP.

XML structure

```
<DIM>
  <RealIPAddressPriority>
  <RealIPAddrPriority>
    <RealIpAddrField></RealIpAddrField>
    <Level></Level>
  </RealIPAddrPriority>
  </RealIPAddressPriority>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressPriority
Table Type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RealIpAddrField	Field of the real	Index	String: case-insensitive	N/A

	source IP		• X-Forwarder-For. • Cdn-Src-IP. • X-Real-IP. • Tcp Options.	
Level	Level of the field in the real source IP.	N/A	Unsigned integer. Value range: 0 to 100.	Default is 0

DIM/RealIPAddressXff

This table contains the settings of the X-Forwarded-For field in the real source IP acquisition method.

XML structure

```
<DIM>
  <RealIPAddressXff>
    <XffLocation></XffLocation>
  </RealIPAddressXff>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressXff
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XffLocation	Get originating source IP address from X-Forwarded-For field.	N/A	Enumeration: • **1**—tail. • **2**—head.	N/A

DIM/TcpOptionConfig

This table contains information about getting real source IP from TCP option.

XML structure

```
<DIM>
  <TcpOptionConfig>
    <TcpOptOffset></TcpOptOffset>
    <DetectLength></DetectLength>
    <DetectValue></DetectValue>
    <RealIPOffset></RealIPOffset>
  </TcpOptionConfig>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	TcpOptionConfig
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TcpOptOffset	Offset bytes after which the search operation starts in the TCP Option filed	Index	Unsigned integer. Value range: 0 to 32.	Default is 0
DetectLength	Number of bytes to search for the detection content	N/A	Unsigned integer. Value range: 2 to 40.	N/A
DetectValue	Content to be searched for	N/A	Hex string, must be enclosed within vertical bars. Length: 6 to 66 characters.	N/A
RealIPOffset	Offset from the detection content to locate the real IP address value	N/A	Unsigned integer. Value range: 0 to 32.	Default is 0

DIM/ExactPriority

This table contains the status of the accurate inspection.

XML structure

```
<DIM>
  <ExactPriority>
    <Switch></Switch>
  </ExactPriority>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ExactPriority
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Switch	Enabling status of the exact priority feature.	N/A	Boolean: • **True**—Enabled. • **False**—Disabled (default).

DIM/DIMFixedLength

This table contains the length of data per data stream to be inspected.

XML structure

```
<DIM>
  <DIMFixedLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <FileFixedLength></FileFixedLength>
      <StreamFixedLength></StreamFixedLength>
      <MD5FixedLength></MD5FixedLength>
    </Protocol>
  </DIMFixedLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	DIMFixedLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP • MAIL • NFS • SMB	The value MAIL includes the protocols of SMTP, POP3 and IMAP.
FileFixedLength	Length of file per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A
StreamFixedLength	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A
MD5FixedLength	Length of data per data stream to be MD5-inpected	N/A	Unsigned integer: Value range: 1 to 5120.	N/A

DIM/MD5ScanSwitch

This table contains the feature MD5 hash-based inspection of a fixed length of files setting.

XML structure

```
<DIM>
  <MD5ScanSwitch>
    <SwitchByConfig></SwitchByConfig>
  </MD5ScanSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	MD5ScanSwitch
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature MD5 hash-based inspection of a fixed length of files.	N/A	Boolean: • true • false	N/A

DIM/PerformanceOption

This table contains the performance option of DIM engine setting.

XML structure

```
<DIM>
  <PerformanceOption>
    <OptionValue></OptionValue>
  </PerformanceOption>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	PerformanceOption
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionValue	Performance option.	N/A	Enumeration: • **1**—High-performance. • **2**—Balanced. • **3**—High-rate. • **4**—User-defined.	Default: 2.

DIM/WarningParameters

This table contains warning parameter profile.

XML structure

```
<DIM>
  <WarningParameters>
    <WarningParameter>
      <ParameterName></ParameterName>
    </WarningParameter>
  </WarningParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	WarningParameters
Table type	Multi-instance table
Row name	WarningParameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Warning parameter profile name	Index	String, case-insensitive. Length: 1 to 63 characters.	Only support unsigned integers,characters and underlines.

DIM/IntelligentInspectServerConfig

This table contains the IP address of the intelligent inspect server .This config is use by Anti-virus and DGA.

XML structure

```
<DIM>
  <IntelligentInspectServerConfig>
    <IpAddress></IpAddress>
  </IntelligentInspectServerConfig>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	IntelligentInspectServerConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address of the intelligent inspect server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`

DIM/IntelligentInspectExceptionDomain

This table contains exceptional domains for intelligent inspect.This config is use by IPReputation and DGA.

XML structure

```
<DIM>
  <IntelligentInspectExceptionDomain>
    <Domains>
      <Domain></Domain>
    </Domains>
  </IntelligentInspectExceptionDomain>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	IntelligentInspectExceptionDomain
Table type	Multi-instance table
Row name	Domains
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Exceptional domain for intelligent inspect	Index	String, case-insensitive. Length: 3 to 255 characters. The domain name can contain only letters, digits, hyphens (-), and dots (.). An exceptional domain name cannot start or end with a dot (.). A dot (.) acts as the delimiter between a higher-level domain name and a lower-level domain name in a multilevel domain name. The domain name at each level is a string of 1 to 63 characters.	Example: baidu.com

DIM/AutoUpdateParameters

This table contains information about signature auto-update parameters.

XML structure

```
<DIM>
  <AutoUpdateParameters>
    <AutoUpdateParameter>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
      <VrfName></VrfName>
    </AutoUpdateParameter>
  </AutoUpdateParameters>

DIM

DIM/BlockParameters

This table contains block parameters.

XML structure

```
<DIM>
  <BlockParameters>
    <BlockParameter>
      <ParameterName></ParameterName>
      <Denyperiod></Denyperiod>
    </BlockParameter>
  </BlockParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	BlockParameters
Table type	Multi-instance table
Row name	BlockParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Denyperiod	Deny period	N/A	Unsigned integer. Value range: 1 to 86400s.	Default is 1800s

DIM/CaptureParameters

This table contains capture parameters.

XML structure

```
<DIM>
  <CaptureParameters>
    <CaptureParameter>
      <ParameterName></ParameterName>
      <CaptureMax></CaptureMax>
      <CaptureExceedURL></CaptureExceedURL>
      <UploadTime></UploadTime>
    </CaptureParameter>
  </CaptureParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	CaptureParameters
Table type	Multi-instance table
Row name	CaptureParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
CaptureMax	Max space for captured packets	N/A	Unsigned integer. Value range: 0 to 1024	Default is 512 Kbytes
CaptureExceedURL	The URL while the packets size exceeds the max space, they will be sent to	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UploadTime	Time when the system sends the packets	N/A	Time. Format: HH:MM:SS	Default is 01:00:00

DIM/LoggingParameters

This table contains logging parameters.

XML structure

```
<DIM>
  <LoggingParameters>
    <LoggingParameter>
      <ParameterName></ParameterName>
      <IsLogToHost></IsLogToHost>
      <IsLogMail ></IsLogMail>
      <IsLogLanguageCN></IsLogLanguageCN>
    </LoggingParameter>
  </LoggingParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	BlockParameters
Table type	Multi-instance table
Row name	BlockParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsLogToHost	Sending log to host or not	N/A	Boolean: • true • false	N/A
IsLogMail	Email the logs to an email server or not	N/A	Boolean: • true • false	N/A
IsLogLanguageCN	Support for logs in Chinese	N/A	Boolean: • true • false	Only attack name support chinese

DIM/RedirectParameters

This table contains redirect parameters.

XML structure

```
<DIM>
  <RedirectParameters>
    <RedirectParameter>
      <ParameterName></ParameterName>
      <url></url>
    </RedirectParameter>
  </RedirectParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RedirectParameters
Table type	Multi-instance table
Row name	RedirectParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
url	Target URL for redirect	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

DIM/MailParameters

This table contains mail parameters.

XML structure

```
<DIM>
  <MailParameters>
    <MailParameter>
      <ParameterName></ParameterName>
      <ServerAddr></ServerAddr>
      <SrcMailAddr></SrcMailAddr>
      <DstMailAddr></DstMailAddr>
      <LocalDomain></LocalDomain>
```

```
      <UserName></UserName>
      <Password></Password>
      <IsNeedAuthentication></IsNeedAuthentication>
      <IsNeedSPA></IsNeedSPA>
      <TimeLimit></TimeLimit>
      <MailNumLimit></MailNumLimit>
    </MailParameter>
  </MailParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	MailParameters
Table type	Multi-instance table
Row name	MailParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServerAddr	Mail server's address	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcMailAddr	Source mail address	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstMailAddr	Destination mail address	N/A	String, case-insensitive. Length: 1 to 502 characters.	N/A
LocalDomain	Local domain name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
UserName	Mail user name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Password	Password	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsNeedAuthentication	Requires authentication by the mail server or not	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IsNeedSPA	Requires using SPA by the mail server or not	N/A	Boolean: • true • false	N/A
TimeLimit	Time interval limit	N/A	Unsigned Integer: Value range: 1 to 10 minutes	By default, DIM mail limits 10 mails in 5 minutes.
MailNumLimit	Mail max number limit	N/A	Unsigned Integer: Value range: 1 to 100	By default, DIM mail limits 10 mails in 5 minutes.

DIM/ActivePercentage

This table contains active percentage.

XML structure

```
<DIM>
  <ActivePercentage>
    <Percentage></Percentage>
  </ActivePercentage>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ActivePercentage
Table Type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Percentage of active.	N/A	Unsigned integer: Value range: 0 to 100.	When the value range is 0 to 100,it means in active, Otherwise, means error

DIM/InspectBypass

This table contains bypass information.

XML structure

```
<DIM>
  <InspectBypass>
    <BypassByConfig></BypassByConfig>
  </InspectBypass>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	InspectBypass
Table Type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BypassByConfig	Value of bypass.	N/A	Boolean: • true • false	N/A

DIM/ProxyServerParameters

This table contains information about DIM proxy server parameters.

XML structure

```
<DIM>
  <ProxyServerParameters>
    <ProxyServerParameter>
      <ProxyAddress></ProxyAddress>
      <ProxyPort></ProxyPort>
      <UserName></UserName>
      <PassWord></PassWord>
    </ProxyServerParameter>
  </ProxyServerParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ProxyServerParameters
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProxyAddress	Proxy server address	N/A	String, case-insensitive Length: 3 to 63 characters.	N/A
ProxyPort	Proxy server port	N/A	Unsigned integer: Value range: 1 to 65535.	N/A
UserName	Proxy username	N/A	String, case-insensitive Length: 1 to 31 characters.	N/A
PassWord	Proxy password	N/A	String, case-sensitive Length: 1 to 31 characters.	N/A

DIM/DimFileUncompress

This table contains the maximum length of file uncompressing.

XML structure

```
<DIM>
  <DimFileUncompress>
    <Size></Size>
  </DimFileUncompress>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	DimFileUncompress
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Size	Maximum size that can be uncompressed	N/A	Unsigned integer. Value range: 1 to 200MB.	N/A

DIM/DeviceInfo

This table contains the device node where main dpid running on.

XML structure

```
<DIM>
  <DeviceInfo>
    <ModuleName></ModuleName>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </DeviceInfo>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	DeviceInfo
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModuleName	The name of current module.	Index	String. Length: 1 to 63 characters..	N/A
Chassis	Chassis of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned integer.	N/A

			Value range: 0 to 65535.	

DIM/ProxyServerPara

This table contains information about DIM proxy server parameters.

XML structure

```
<DIM>
  <ProxyServerPara>
    <ProxyAddress></ProxyAddress>
    <ProxyPort></ProxyPort>
    <UserName></UserName>
    <PassWord></PassWord>
  </ProxyServerPara>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ProxyServerPara
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProxyAddress	Proxy server address	N/A	String, case-insensitive Length: 3 to 63 characters.	N/A
ProxyPort	Proxy server port	N/A	Unsigned integer: Value range: 1 to 65535.	N/A
UserName	Proxy username	N/A	String, case-insensitive Length: 1 to 31 characters.	N/A
PassWord	Proxy password	N/A	String, case-sensitive Length: 1 to 31 characters.	N/A

DIM/StreamFixedLength

This table contains the length of data per data stream to be inspected.

XML structure

```
<DIM>
  <StreamFixedLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <Length></Length>
    </Protocol>
  </StreamFixedLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	StreamFixedLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP • MAIL	Protocol MAIL include SMTP, POP3 and IMAP
Length	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A

DIM/FileScanLength

This table contains the length of file per data stream to be inspected.

XML structure

```
<DIM>
  <FileScanLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <Length></Length>
    </Protocol>
```

```
  </FileScanLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	FileScanLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP • MAIL • NFS • SMB	Protocol MAIL include SMTP, POP3 and IMAP
Length	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A

DIM/StreamFixedSwitch

This table contains the feature fixed length of data per data stream to be inspected setting.

XML structure

```
<DIM>
  <StreamFixedSwitch>
    <SwitchByConfig></SwitchByConfig>
  </StreamFixedSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	StreamFixedSwitch
Table Type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature fixed length of data per data stream to be inspected.	N/A	Boolean: • true • false	N/A

DIM/FileScanSwitch

This table contains the feature fixed length of file per data stream to be inspected setting.

XML structure

```
<DIM>
  <FileScanSwitch>
    <SwitchByConfig></SwitchByConfig>
  </FileScanSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	FileScanSwitch
Table Type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature fixed length of file per data stream to be inspected.	N/A	Boolean: • true • false	N/A

DIM/RealIPAddressEnable

This table contains the settings of the real source IP switch.

XML structure

```
<DIM>
  <RealIPAddressEnable>
    <DetectionEnable></DetectionEnable>
  </RealIPAddressEnable>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressEnable
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectionEnable	Enabling status of detecting real source IP	N/A	Boolean: • true • false	Default is false

DIM/RealIPAddressPriority

This table contains the settings of field priority in the real source IP.

XML structure

```
<DIM>
  <RealIPAddressPriority>
    <RealIPAddrPriority>
       <RealIpAddrField></RealIpAddrField>
      <Level></Level>
     </RealIPAddrPriority>
  </RealIPAddressPriority>
```

```
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressPriority
Table Type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RealIpAddrField	Field of the real source IP	Index	String: case-insensitive • X-Forwarded-For. • Cdn-Src-IP. • X-Real-IP. • Tcp Options.	N/A
Level	Level of the field in the real source IP.	N/A	Unsigned integer. Value range: 0 to 100.	Default is 0

DIM/RealIPAddressXff

This table contains the settings of the X-Forwarded-For field in the real source IP acquisition method.

XML structure

```
<DIM>
  <RealIPAddressXff>
    <XffLocation></XffLocation>
  </RealIPAddressXff>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	RealIPAddressXff
Table Type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XffLocation	Get originating source IP address from X-Forwarded-For field.	N/A	Enumeration: • **1**—tail. • **2**—head.	N/A

DIM/TcpOptionConfig

This table contains information about getting real source IP from TCP option.

XML structure

```
<DIM>
  <TcpOptionConfig>
    <TcpOptOffset></TcpOptOffset>
    <DetectLength></DetectLength>
    <DetectValue></DetectValue>
    <RealIPOffset></RealIPOffset>
  </TcpOptionConfig>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	TcpOptionConfig
Table Type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TcpOptOffset	Offset bytes after	Index	Unsigned integer.	Default is 0

	which the search operation starts in the TCP Option filed		Value range: 0 to 32.	
DetectLength	Number of bytes to search for the detection content	N/A	Unsigned integer. Value range: 2 to 40.	N/A
DetectValue	Content to be searched for	N/A	Hex string, must be enclosed within vertical bars. Length: 6 to 66 characters.	N/A
RealIPOffset	Offset from the detection content to locate the real IP address value	N/A	Unsigned integer. Value range: 0 to 32.	Default is 0

DIM/ExactPriority

This table contains the status of the accurate inspection.

XML structure

```
<DIM>
  <ExactPriority>
    <Switch></Switch>
  </ExactPriority>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ExactPriority
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Switch	Enabling status of the exact priority feature.	N/A	Boolean: • **True**—Enabled. • **False**—Disabled.

DIM/DIMFixedLength

This table contains the length of data per data stream to be inspected.

XML structure

```
<DIM>
  <DIMFixedLength>
    <Protocol>
      <ProtocolName></ProtocolName>
      <FileFixedLength></FileFixedLength>
      <StreamFixedLength></StreamFixedLength>
      <MD5FixedLength></MD5FixedLength>
    </Protocol>
  </DIMFixedLength>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	DIMFixedLength
Table type	Multi-instance table
Row name	Protocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolName	Protocol name	Index	String: case-insensitive • HTTP • FTP • MAIL • NFS • SMB	The value MAIL includes the protocols of SMTP, POP3 and IMAP.
FileFixedLength	Length of file per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A
StreamFixedLength	Length of data per data stream to be inpected	N/A	Unsigned integer: Value range: 1 to 2048.	N/A
MD5FixedLength	Length of data per data stream to be MD5-inpected	N/A	Unsigned integer: Value range: 1 to 5120.	N/A

DIM/MD5ScanSwitch

This table contains the feature MD5 hash-based inspection of a fixed length of files setting.

XML structure

```
<DIM>
  <MD5ScanSwitch>
    <SwitchByConfig></SwitchByConfig>
  </MD5ScanSwitch>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	MD5ScanSwitch
Table Type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchByConfig	Enabling status of the feature MD5 hash-based inspection of a fixed length of files.	N/A	Boolean: • true • false	N/A

DIM/PerformanceOption

This table contains the performance option of DIM engine setting.

XML structure

```
<DIM>
  <PerformanceOption>
    <OptionValue></OptionValue>
  </PerformanceOption>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	PerformanceOption
Table Type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionValue	Performance option.	N/A	Enumeration: • **1**—High-performance. • **2**—Balanced. • **3**—High-rate. • **4**—User-defined.	N/A

DIM/WarningParameters

This table contains warning parameter profile.

XML structure

```
<DIM>
  <WarningParameters>
    <WarningParameter>
      <ParameterName></ParameterName>
    </WarningParameter>
  </WarningParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	WarningParameters
Table type	Multi-instance table
Row name	WarningParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Warning parameter profile name	Index	String, case-insensitive. Length: 1 to 63 characters.	Only support unsigned integers,characters and underlines.

DIM/ModuleSupport

This table contains the information that the modules is suppoted or not by DPI.

XML structure

```
<DIM>
  <ModuleSupport>
    <NBARSupport></NBARSupport>
    <IPSSupport></IPSSupport>
    <AVCSupport></AVCSupport>
    <UFILTERSupport></UFILTERSupport>
    <DFILTERSupport></DFILTERSupport>
    <AVSupport></AVSupport>
    <AUDITSupport></AUDITSupport>
    <FFILTERSupport></FFILTERSupport>
    <NETSHARESupport></NETSHARESupport>
    <IPREPUTATIONSupport></IPREPUTATIONSupport>
    <WAFSupport></WAFSupport>
    <CCSupport></CCSupport>
    <APTSupport></APTSupport>
  </ModuleSupport>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	ModuleSupport
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NBARSupport	NBAR is supported or not by DPI.	N/A	Boolean: • true • false	N/A
IPSSupport	IPS is supported or not by DPI.	N/A	Boolean: • true • false	N/A
AVCSupport	AVC is supported or not by DPI.	N/A	Boolean: • true • false	N/A
UFILTERSupport	UFILTER is supported or not by DPI.	N/A	Boolean: • true • false	N/A
DFILTERSupport	DFILTER is supported or not by DPI.	N/A	Boolean: • true • false	N/A
AVSupport	AV is supported or not by DPI.	N/A	Boolean: • true • false	N/A
AUDITSupport	AUDIT is supported or not by DPI.	N/A	Boolean: • true • false	N/A
FFILTERSupport	FFILTER is supported or not by DPI.	N/A	Boolean: • true • false	N/A
NETSHARESupport	NETSHARE is supported or not by DPI.	N/A	Boolean: • true • false	N/A
IPREPUTATIONSupport	IPREPUTATION is supported or not by DPI.	N/A	Boolean: • true • false	N/A
WAFSupport	WAF is supported or not by DPI.	N/A	Boolean: • true • false	N/A
CCSupport	CC is supported or not by DPI.	N/A	Boolean: • true • false	N/A
APTSupport	APT is supported or not by DPI.	N/A	Boolean: • true • false	N/A

DIM/IntelligentInspectServerConfig

This table contains the IP address of the intelligent inspect server.

XML structure

```
<DIM>
  <IntelligentInspectServerConfig>
    <IpAddress></IpAddress>
  </IntelligentInspectServerConfig>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	IntelligentInspectServerConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address of the intelligent-inspect server	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DIM/IntelligentInspectServerState

This table contains status information of the intelligent inspect server.

XML structure

```
<DIM>
  <IntelligentInspectServerState>
    <IpAddress></IpAddress>
    <State></State>
    <Supported></Supported>
  </IntelligentInspectServerState>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	IntelligentInspectServerState
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address of the intelligent inspect server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`
State	Status of the intelligent inspect server	N/A	Enumeration: • **0**—Disconnected. • **1**—Connecting. • **2**—Connected.	N/A
Supported	Supported or not supported	N/A	Boolean: • true • false	N/A

DIM/IntelligentInspectExceptionDomain

This table contains exceptional domains for intelligent inspect.

XML structure

```
<DIM>
  <IntelligentInspectExceptionDomain>
    <Domains>
      <Domain></Domain>
    </Domains>
  </IntelligentInspectExceptionDomain>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	IntelligentInspectExceptionDomain
Table type	Multi-instance table

Row name	Domains
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Exceptional domain for ntelligent inspect	Index	String, case-insensitive. Length: 3 to 255 characters. The domain name can contain only letters, digits, hyphens (-), and dots (.). An exceptional domain name cannot start or end with a dot (.). A dot (.) acts as the delimiter between a higher-level domain name and a lower-level domain name in a multilevel domain name. The domain name at each level is a string of 1 to 63 characters.	Example: baidu.com

DIM/AutoUpdateParameters

This table contains information about signature auto-update parameters.

XML structure

```
<DIM>
  <AutoUpdateParameters>
    <AutoUpdateParameter>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
      <VrfName></VrfName>
    </AutoUpdateParameter>
  </AutoUpdateParameters>
</DIM>
```

Table description

Item	Description
Feature name	DIM
Table name	AutoUpdateParameters
Table type	Single-instance table
Row name	AutoUpdateParameter
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	IP address type	N/A	Enumeration: 1—IPv4 2—IPv6	N/A
IpAddress	IP address	N/A	IPv4 or IPv6	N/A
IfIndex	Interface index	N/A	Unsigned integer.	N/A
VrfName	VPN instance name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

DLP

DLP/ImportResourceFile

This table contains information about import resourece file.

XML structure

```
<DLP>
  <ImportResourceFile>
    <FileName></FileName>
  </ImportResourceFile>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ImportResourceFile
Table type	Multi-instance table
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	The name of file imported	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required

DLP/ExportResourceFile

This table contains information about regex template list of a regex condition.

XML structure

```
<DLP>
  <ExportResourceFile>
    <ResourceType></ResourceType>
    <FileName></FileName>
  </ExportResourceFile>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ExportResourceFile
Table type	Multi-instance table
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceType	Resource Type.	N/A	Unsigned integer. Value range: 1 to 2147483647.	Required. From left to right,the bit which is 1 represents that the corresponding resource needs to be exported. Regex template corresponds to the 8th bit. Mail template corresponds to the 7th bit. Mail server corresponds to the 6th bit. Syslog template corresponds to the 5th bit. File type template corresponds to the 4th bit Upload file template correspnds to the 3rd bit. Index file corresponds to the 2nd bit Event stete corresponds to the 1st bit. For example,we need to export regex template and index file template,the resource type bit is 10000010B,so the resource type is 130.
FileName	The name of file exported	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.

DLP

DLP/RegexTemplateList

This table contains information about regex template list of a regex condition.

XML structure

```
<DLP>
  <RegexTemplateList>
    <RegexTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <Regex></Regex>
    </RegexTemplate>
  </RegexTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	RegexTemplateList
Table type	Multi-instance table
Row name	RegexTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 1000.	Required. Because of size limit,value in range :1 to 1000 is permitted
ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Regex template name can not contain the word default as prefix when create a new template. Modification is not allowed.
Regex	Regex expression	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.

DLP/MailTemplateList

This table contains information about mail template list of a response action.

XML structure

```
<DLP>
  <MailTemplateList>
    <MailTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerID></ServerID>

Item	Description
Feature name	DLP
Table name	MailTemplateList
Table type	Multi-instance table
Row name	MailTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted

ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Mail template name can not contain the word default as prefix when create a new template. Modification is not allowed.
ServerID	Mail Server ID.	N/A	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
MailToList	Where do the mail send to.	Data structure	Members include: • Address.	Required. (list contains up to 10 elements)
Address	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required.
MailCCList	Carbon copy.	Data structure	Members include: • CC address.	Optional. (list contains up to 10 elements)
CCAddress	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional.
MailBCCList	Blind carbon copy	Data structure	Members include: • BCC address.	Optional. (list contains up to 10 elements)
BCCAddress	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional.
Subject	Subject of the mail.	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.
Body	Body of the mail.	N/A	String, case-sensitive. Length: 1 to 511 characters.	Required.

DLP/MailServerList

This table contains information about mail server list.

XML structure

```
<DLP>
  <MailServerList>
    <MailServer>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerAddress></ServerAddress>
      <UserName></UserName>
      <Password></Password>
      <Encryption></Encryption>
      <Authenticate></Authenticate>
      <Sender></Sender>
    </MailServer>
  </MailServerList>
```

```
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	MailTemplateList
Table type	Multi-instance table
Row name	MailTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Mail Server ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Mail Server Name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required.
ServerAddress	Server address	N/A	String, case-sensitive. • Length: 1 to 63 characters.	Required. Support IP address or mail domain.
UserName	UserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required
Password	Password	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required
Encryption	Whether to encryption	N/A	Boolean: • true—YES • false—NO(default)..	Optional.
Authenticate	Whether to authenticate	N/A	Boolean: • true—YES • false—NO(default)..	Optional.
Sender	Mail Sender	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required

DLP/SyslogTemplateList

This table contains information about syslog template list of a response action.

XML structure

```
<DLP>
  <SyslogTemplateList>
    <SyslogTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <SyslogLevel></SyslogLevel>
      <SyslogTemp></SyslogTemp>
    </SyslogTemplate>
  </SyslogTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	SyslogTemplateList
Table type	Multi-instance table
Row name	SyslogTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Syslog template name can not contain the word default as prefix when create a new template. Modification is not allowed.
SyslogLevel	Syslog level	N/A	Enumeration: • **1**—Alert. • **2**---Critical • **3**—Error. • **4**—Warning • **5**---Notice • **6**---Info(default)	Optional.
SyslogTemp	Syslog template	N/A	String, case-sensitive. Length: 1 to 511 characters.	Required

DLP/UploadFileTemplateList

This table contains information about upload file template.

XML structure

```
<DLP>
  <UploadFileTemplateList>
    <UploadFileTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerIP></ServerIP>
      <ServerType></ServerType>
      <ShareName></ShareName>
      <WorkGroup></WorkGroup>
      <StorePath></StorePath>
      <UserName></UserName>
      <Password></Password>
    </UploadFileTemplate>
  </UploadFileTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	UploadFileTemplateList
Table type	Multi-instance table
Row name	UploadFileTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Upload file template name can not contain the word default as prefix when create a new template.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Modification is not allowed.
ServerIP	Server IP	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional If select Ftp,must fill ServerIp.
ServerType	Server Type	N/A	Enumeration: • **1**—Local.(default) • **2**—Ftp	Required If select Loacl, must fill StorePath. If select Ftp,must fill UserName Password.
ShareName	Share Name	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
WorkGroup	Work Group	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
StorePath	Store Path	N/A	String, case-sensitive. Length: 1 to 253 characters.	Optional
UserName	UserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
Password	Password	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional

DLP/IndexFileTemplateList

This table contains information about index file template.

XML structure

```
<DLP>
  <IndexFileTemplateList>
    <IndexFileTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <IndexFileName></IndexFileName>
    </IndexFileTemplate>
  </IndexFileTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IndexFileTemplateList
Table type	Multi-instance table

Row name	IndexFileTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Index file template name can not contain the word default as prefix when create a new template. Modification is not allowed.
IndexFileName	Index file name	N/A	String, case-sensitive. Length: 1 to 255 characters.	Required.

DLP/LocalIpv4RangeList

This table contains configuration information for the intranet filtering condition.

XML structure

```
<DLP>
  <LocalIpv4RangeList>
    <NameList>
      <AddrObjectName></AddrObjectName>
    </NameList>
  </LocalIpv4RangeList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	LocalIpv4RangeList
Table type	Single-instance table
Row name	None
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrObjectName	Address object group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DLP/LocalIpv6RangeList

This table contains configuration information for the intranet filtering condition.

XML structure

```
<DLP>
  <LocalIpv6RangeList>
    <NameList>
      <AddrObjectName></AddrObjectName>
    </NameList>
  </LocalIpv6RangeList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	LocalIpv6RangeList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrObjectName	Address object group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DLP/ProtocolFilterList

This table contains configuration information for the protocol filtering condition.

XML structure

```
<DLP>
  <ProtocolFiterList>
    <SelectAll></SelectAll>
    <DiselectAll></DiselectAll>
    <NameList>
      <ProtocolName></ProtocolName>
    </NameList>
  </ProtocolFiterList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ProtocolFilterList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SelectAll	Select all	N/A	Boolean: • true(default) • false	Select all by default.
DiselectAll	Diselect all	N/A	Boolean: • true • false(default)	Select all by default
ProtocolName	Protocol type name	N/A	String, case-insensitive. Length: 1 to 31 characters.	Required. The protocol name is system pre-defined. The protocol name is allowed ftp, smtp, imap, pop3, smb, nfs, http, https.

DLP/FlowDirectionList

This table contains flow direction monitoring configuration information.

XML structure

```
<DLP>
  <FlowDirectionList>
    <directswitch></directswitch>
  </FlowDirectionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	FlowDirectionList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
directswitch	The flow direction switch	N/A	• Enumeration: • 1—Inbound. • 2—Outbound (default) • 3—All.	Outbound by default.

DLP/DetectPolicyList

This table contains Data Leakage Prevention (DLP) policies.

XML structure

```
<DLP>
  <DetectPolicyList>
    <DetectPolicy>
      <PolicyID></PolicyID>
      <PolicyName></PolicyName>
      <Description></Description>
```

```
      <ScanMode></ScanMode>
      <PolicyEnable></PolicyEnable>
    </DetectPolicy>
  </DetectPolicyList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	DetectPolicyList
Table type	Multi-instance table
Row name	DetectPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	DLP policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyName	DLP policy name	N/A	String, case insensitive. Length: 1 to 31 characters.	Required.
Description	DLP policy description	N/A	String, case insensitive. Length: 1 to 127 characters.	Optional.
ScanMode	Scan mode	N/A	Enumeration: • 1—Fast scan. (Default.) • 2—Complete scan.	Optional.
PolicyEnable	Whether to enable the DLP policy	N/A	Boolean: • **true**—Enable. (Default.) • **false**—Disable.	Optional.

DLP/DetectRuleList

This table contains DLP policy detection rules.

XML structure

```
<DLP>
  <DetectRuleList>
    <DetectRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
```

```
      <RuleName></RuleName>
      <DefaultSeriousLevel></DefaultSeriousLevel>
    </DetectRule>
  </DetectRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	DetectRuleList
Table type	Multi-instance table
Row name	DetectRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
DefaultSeriousLevel	Default severity level for the rule	N/A	Enumeration: • **1**—High. • **2**—Medium. • **3**—Low. • **4**—Info. (Default.)	Optional.

DLP/IdentityRuleList

This table contains DLP policy identity rules.

XML structure

```
<DLP>
  <IdentityRuleList>
    <IdentityRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
```

```
      <DefaultSeriousLevel></DefaultSeriousLevel>
    </IdentityRule>
  </IdentityRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IdentityRuleList
Table type	Multi-instance table
Row name	IdentityRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
DefaultSeriousLevel	Default severity level for the rule	N/A	Enumeration: • **1**—High. • **2**—Medium. • **3**—Low. • **4**—Info. (Default.)	Optional.

DLP/ExceptionDetectRuleList

This table contains DLP policy exception detection rules.

XML structure

```
<DLP>
  <ExceptionDetectRuleList>
    <ExceptionDetectRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
    </ExceptionDetectRule>
```

```
  </ExceptionDetectRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ExceptionDetectRuleList
Table type	Multi-instance table
Row name	ExceptionDetectRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Exception detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Exception detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.

DLP/ExceptionIdentityRuleList

This table contains DLP policy exception identity rules.

XML structure

```
<DLP>
  <ExceptionIdentityRuleList>
    <ExceptionIdentityRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleList	Response rule ID list	Data structure	Members include: • RuleID	Optional
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.

DLP/RegexConditionList

This table contains regular expression conditions for detection rules.

XML structure

```
<DLP>
  <RegexConditionList>
    <RegexCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <MatchType></MatchType>
      <MatchCount></MatchCount>
      <RegexList>
        <RegexTemplateID></RegexTemplateID>
      </RegexList>
      <MatchComponent></MatchComponent>
    </RegexCondition>
  </RegexConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	RegexConditionList
Table type	Multi-instance table
Row name	RegexCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
MatchType	Regular expression match type	N/A	Enumeration: • 1—Exist. (Default.) • 2—Count. • 3—Unique.	Required.
MatchCount	Number of hits required	N/A	Unsigned integer. Value range: 1 to 2147483647.	Required when the match type is 2 and 3.
RegexList	Name of the regular expression list	Data structure	Members include: • RegexTemplateID	Required.
RegexTemplateID	Regular expression template ID	Index	Unsigned integer. Value range: 0 to 1000.	Required.
MatchComponent	Regular expression component match type	N/A	Enumeration: • 1—Single. (Default.) • 2—All.	Optional.

DLP/KeywordConditionList

This table contains keyword conditions for detection rules.

XML structure

```
<DLP>
  <KeywordConditionList>
    <KeywordCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <CaseSensitive></CaseSensitive>
      <EnableSimpleKey></EnableSimpleKey>
      <SimpleKeyList>
        <SimpleKey></SimpleKey>
      </SimpleKeyList>
      <EnableProximityKey></EnableProximityKey>
      <WholeWord></WholeWord>
      <MatchType></MatchType>
      <MatchCount></MatchCount>
      <MatchComponent></MatchComponent>
      <ProximityKeyList>
        <Left></Left>
        <Right></Right>
        <Distance></Distance>
      </ProximityKeyList>
    </KeywordCondition>
  </KeywordConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	KeywordConditionList
Table type	Multi-instance table
Row name	KeywordCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
CaseSensitive	Whether the rule is case sensitive	N/A	Boolean: • **true**—Enable. (Default.) • **false**—Disable.	Required.
EnableSimpleKey	Whether to enable simple keyword matching	N/A	Boolean: • **true**—Enable. (Default.) • **false**—Disable	Required. EnableSimpleKey and EnableProximityKey enable at least one.
SimpleKeyList	Name of the simple keyword list	Data structure	Members include: • SimpleKeys	Required when EnableSimpleKey is true. (length limit is 10)
SimpleKey	Simple keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
EnableProximityKey	Whether to enable neighboring keyword matching	N/A	Boolean: • **true**—Enable. (Default.) • **false**—Disable.	Required.
WholeWord	Whether to match the whole word	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Optional. This column takes effect only on English keywords.
MatchType	Keyword match type	N/A	Enumeration: • **1**—Exist. • **2**—Count. • **3—**Unique	Optional.
MatchCount	Number of hits required.	N/A	Unsigned integer. Value range: 1 to 2147483647.	Required when the match type is 2 and 3.

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchComponent	Keyword component match type.	N/A	Enumeration: • **1**—Single. (Default.) • **2**—All.	Optional.
ProximityKeyList	Name of the neighboring keyword list	Data structure	Members include: • Left. • Right. Distances.	Required when EnableProximityKey is true.
Left	Left keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
Right	Right keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
Distance	Distance of the neighboring keywords	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required.

DLP/IndexFileConditionList

This table contains Indexed document matching (IDM) conditions for detection rules.

XML structure

```
<DLP>
  <IndexFileConditionList>
    <IndexFileCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <IndexTemplateID></IndexTemplateID>
      <Threshold></Threshold>
      <MatchType></MatchType>
    </IndexFileCondition>
  </IndexFileConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IndexFileConditionList
Table type	Multi-instance table
Row name	IndexFileCondition

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
IndexTemplateID	IDM template ID	N/A	Unsigned integer. Value range: 0 to 100.	Required.
Threshold	Ratio threshold	N/A	Unsigned integer. Value range: 0 to 100.	Optional.
MatchType	Match type	N/A	Enumeration: • 1—Exist. (Default.) • 2—Count.	Optional.

DLP/FileAttriConditonList

This table contains file attribution conditions for detection rules.

XML structure

```
<DLP>
  <FileAttriConditionList>
    <FileAttriCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <ConditionType></ConditionType>
      <FileTypeList>
```

```
      <FileTypeID></FileTypeID>
    </FileTypeList>
    <FileNameList>
      <FileName></FileName>
    </FileNameList>
    <FileSizeList>
      <Type></Type>
      <MinSize></MinSize>
      <MinSizeUnit></MinSizeUnit>
      <MaxSize></MaxSize>
      <MaxSizeUnit></MaxSizeUnit>
    </FileSizeList>
  </FileAttriCondition>
 </FileAttriConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	FileAttriConditionList
Table type	Multi-instance table
Row name	FileAttriCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
ConditionType	File attribute condition type	N/A	String, case sensitive • FILENAME.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• FILESIZE. • FILETYPE.	
FileTypeList	File type list name	Data structure	Members include: • FileTypeID.	Required when ConditionType is FILETYPE.
FileTypeID	File type ID	N/A	Unsigned integer. Value range: 0 to 1515.	Required.
FileNameList	Name of the file name list	Data structure	Members include: • FileName.	Required when ConditionType is FILENAME.
FileName	File name.	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
FileSizeList	Name of the file size list	Data structure	Members include: • Type. • MinSize • MinSizeUnit • MaxSize • MaxSizeUnit	Required when ConditionType is FILESIZE.
Type	File attribute match type	N/A	Enumeration: • 1—Size of a single file.	Required.
MinSize	Minimum file size	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required when type is 1.
MinSizeUnit	Unit for the minimum file size column	N/A	String, case sensitive. • B • KB • MB • GB	Required when type is 1.
MaxSize	Maximum file size	N/A	Unsigned integer. Value range: 0 to 2147483647	Required when type is 1.
MaxSizeUnit	Unit for the maximum file size column	N/A	String, case sensitive. • B. • KB. • MB. • GB	Required when type is 1.

DLP/SenderConditionList

This table contains sender conditions for identity rules.

XML structure

```
<DLP>
  <SenderConditionList>
    <SenderCondition>
      <RuleID></RuleID>
```

```
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <EmailList>
        <Email></Email>
      </EmailList>
      <IPType></IPType>
      <IPList>
        <IP></IP>
      </IPList>
      <IPGroupList>
         <ObjectName></ObjectName>
      </IPGroupList>
      <UserList>
        <User></User>
      </UserList>
      <GroupList>
        <GroupName></GroupName>
        <DomainName></DomainName>
      </GroupList>
    </SenderCondition>
  </SenderConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	SenderConditionList
Table type	Multi-instance table
Row name	SenderCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Identity rule • 2—Identity exception rule	Required.
ConditionID	Sender condition	Index	Unsigned integer.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
	ID		Value range: 0 to 10000.	
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
EmailList	Email list name.	Data structure	Members include: • Email	Optional. You must configure one of the following items: EmailList, IPList.
Email	Email address.	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
IPType	IP type of the IPList.	N/A	Enumeration: • 1—IPv4 • 2—IPv6	Required when you configure an IP address or address object group.
IPList	IPv4 or IPv6 list.	Data structure	Members include: • IP	Optional.
IP	IPv4 or IPv6 address	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPGroupList	IPv4 or IPv6 address object group list	Data structure	Members include: • ObjectName	Optional.
ObjectName	IPv4 or IPv6 address object group name	N/A	String, case sensitive. Length: 1 to 31characters.	Required.
UserList	User list	Data structure	Members include: • User	Optional.
User	User name	N/A	String, case sensitive. Length: 1 to 55 characters.	Required.
GroupList	User group list	Data structure	Members include: • GroupName • DomainName	Optional.
GroupName	User group name	N/A	String, case sensitive. Length: 1 to 32 characters.	Required.
DomainName	User group domain name	N/A	String, case sensitive. Length: 1 to 255 characters.	Optional.

DLP/ReceiverConditionList

This table contains receiver conditions for identity rules.

XML structure

```
<DLP>
  <ReceiverConditionList>
    <ReceiverCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <EmailList>
        <Email></Email>
      </EmailList>
      <HostList>
        <Host></Host>
      </HostList>
      <IPType></IPType>
      <IPList>
        <IP></IP>
      </IPList>
      <IPGroupList>
        <ObjectName></ObjectName>
      </IPGroupList>
      <UserList>
        <User></User>
      </UserList>
      <ReceiverType></ReceiverType>
      <ReceiverCount></ReceiverCount>
      <GroupList>
        <GroupName></GroupName>
        <DomainName></DomainName>
      </GroupList>
    </ReceiverCondition>
  </ReceiverConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ReceiverConditionList
Table type	Multi-instance table

Item	Description
Row name	ReceiverCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Identity rule • 2—Identity exception rule	Required.
ConditionID	Sender condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
EmailList	Email list name.	Data structure	Members include: • Email.	Optional.
Email	Email address.	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
HostList	Host list name	Data structure	Members include: • Host.	You must configure one of the following items: EmailList, IPList, and HostList.
Host	Host name.	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPType	IP type of the IPList.	N/A	Enumeration: • 1—IPv4 • 2—IPv6	Required when you configure an IP address or address object group.
IPList	IPv4 or IPv6 list.	Data structure	Members include: • IP	Optional.
IP	IPv4 or IPv6 address	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPGroupList	IPv4 or IPv6 address object group list	Data structure	Members include: • ObjectName	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjectName	IPv4 or IPv6 address object group name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
UserList	User list.	Data structure	Members include: • User	Optional.
User	User name.	N/A	String, case sensitive. Length: 1 to 55 characters.	Required.
ReceiverType	Receiver type	N/A	Enumeration: • **1**—All. (Default.) • **2—Count.**	Applied only to Email addresses.
ReceiverCount	Number of hits required	N/A	Unsigned integer. Value range: 1 to 2147483647.	Required when ReceiverType is 2.
GroupList	User group list.	Data structure	Members include: • **GroupName** **DomainName**	Optional.
GroupName	User group name	N/A	String, case sensitive. Length: 1 to 32 characters.	Required.
DomainName	User group domain name	N/A	String, case sensitive. Length: 1 to 255 characters.	Optional.

DLP/ProtocolConditionList

This table contains protocol conditions for detection rules.

XML structure

```
<DLP>
  <ProtocolConditionList>
    <ProtocolCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <ProtocolList>
        <ProtocolType></ProtocolType>
      </ProtocolList>
    </ProtocolCondition>
  </ProtocolConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ProtocolConditionList
Table type	Multi-instance table
Row name	ProtocolCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
ProtocolList	Protocol type list	Data structure	Members include: • ProtocolType	Required.
ProtocolType	Protocol type.	N/A	• Enumeration: • 1—FTP. • 2—SMTP. • **3—**SMB**.** • 4**—**NFS. • 5**—**POP3. • 6**—**IMAP. • 7**—**HTTP. • 8—HTTPS/SSL.	Required.

DLP/ResponseRuleTempList

This table contains DLP policy response rules.

XML structure

```
<DLP>
  <ResponseRuleTempList>
    <ResponseRuleTemp>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <Description></Description>
    </ResponseRuleTemp>
  </ResponseRuleTempList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseRuleTempList
Table type	Multi-instance table
Row name	ResponseRuleTemp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required
Description	Response rule description	N/A	String, case sensitive. Length: 0 to 127 characters.	Optional

DLP/ResponseConditionList

This table contains response conditions for response rules.

XML structure

```
<DLP>
  <ResponseConditionList>
    <ResponseCondition>
      <RuleID></RuleID>
      <RuleName></RuleName>
```

```
      <ConditionID></ConditionID>
      <ConditionType></ConditionType>
      <Operator></Operator>
      <ValueList>
        <Value></Value>
      </ValueList>
    </ResponseCondition>
  </ResponseConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseConditionList
Table type	Multi-instance table
Row name	ResponseCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required
ConditionID	Condition ID.	Index	Unsigned integer. Value range: 0 to 10000.	Required.
ConditionType	Condition type	N/A	Enumeration: • 1—Severity. • 2—Protocol. • 3—Hits.	Required. Select a condition type based on file attributes.
Operator	Operator	N/A	Enumeration: • 1—In. • 2—Not in. • 3—Greater than or Equal to. • 4—Less than or Equal to. • 5—Between.	Required If ConditionType is 1 or 2, select 1 or 2 . If ConditionType is 3, select 3, 4, or 5.
ValueList	Value list name	Data structure	Members include: • Value.	Required.
Value	Value	N/A	Unsigned integer.	Required

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 2147483647.	if ConditionType is 1, select 1, 2, 3, or 4, which means High, Medium, Low or Info, respectively. If ConditionType is 2, select one from 1 to 8, which means FTP, SMTP, SMB, NFS, POP3, IMAP, HTTP, or HTTPS, respectively. If ConditionType is 3 and Operator is 3 (Greater) or 4 (Less), one value is required. If ConditionType is 3 and Operator is 5 (Between), two values are required.

DLP/ResponseActionList

This table contains response action lists for response rules.

XML structure

```
<DLP>
  <ResponseActionList>
    <ResponseAction>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ActionID></ActionID>
      <ActionType></ActionType>
      <TemplateID></TemplateID>
      <Content></Content>
    </ResponseAction>
  </ResponseActionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseActionList
Table type	Multi-instance table
Row name	ResponseAction
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required
ActionID	Action ID.	Index	Unsigned integer. Value range: 0 to 10000.	Required.
ActionType	Action type.	N/A	Enumeration: • 1—Uploads the file. • 2—Adds a comment. • 3—Sends a log message. • 4—Sends an email.	Required.
TemplateID	Specifies the template ID referenced by the response action type.	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required.
Content	**Specifies the content information for the response action type.**	N/A	String, case insensitive. Length: 1 to 127 characters.	Required.

DLP

DLP/AllocIDList

This table contains information about allocing local id range

XML structure

```
<DLP>
  <AllocIDList>
    <AllocID>
      <Type></Type>
      <ID></ID>
    </AllocID>
  </AllocIDList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	AllocIDList
Table type	Multi-instance table
Row name	AllocID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	The Type of ID	Index	Enumeration • 0—Policy ID. • 1—Rule ID. • 2—Condition ID or Action ID • 3—Regex ID • 4—MailTemplate ID • 5---MailServer ID • 6---Syslog ID • 7---FileTypeTemplate ID • 8---UploadFileTemplate ID • 9---IndexFileTemplate ID	Required. 0、1、2、7、10 is reserved. According to Type,we can get ID of different table index.

			• 10---EventState ID	
ID	Alloc ID	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required

DLP/RegexTemplateList

This table contains information about regex template list of a regex condition.

XML structure

```
<DLP>
  <RegexTemplateList>
    <RegexTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <Regex></Regex>
      <TotalNum></TotalNum>
    </RegexTemplate>
  </RegexTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	RegexTemplateList
Table type	Multi-instance table
Row name	RegexTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID.	Index	Unsigned integer. Value range: 1 to 1000.	Required. Because of size limit,value in range :1 to 1000 is permitted
ResourceName	Resource name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional. Regex template name can not contain the word default as prefix when create a new template. Modification is not allowed.

Regex	Regex expression	N/A	String, case-sensitive. Length: 1 to 127 characters.	Optional.
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/MailTemplateList

This table contains information about mail template list of a response action.

XML structure

```
<DLP>
  <MailTemplateList>
    <MailTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerID></ServerID>
      <MailToList>
        <Address></Address>
      </MailToList>
      <MailCCList>
        <CCAddress></CCAddress>
      </MailCCList>
      <MailBCCList>
        <BCCAddress></BCCAddress>
      </MailBCCList>
      <Subject></Subject>
      <Body></Body>
      <TotalNum></TotalNum>
    </MailTemplate>
  </MailTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	MailTemplateList
Table type	Multi-instance table
Row name	MailTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Mail template ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Send Mail name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required. Mail template name can not contain the word default as prefix when create a new template. Modification is not allowed.
ServerID	Mail Server ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
MailToList	Where do the mail send to.	Data structure	Members include: • Address.	Required.(list contains up to 10 elements
Address	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required.
MailCCList	Carbon copy.	Data structure	Members include: • CC address.	Optional. (list contains up to 10 elements)
CCAddress	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional.
MailBCCList	Blind carbon copy	Data structure	Members include: • BCC address.	Optional. (list contains up to 10 elements)
BCCAddress	Address list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional.
Subject	Subject of the mail.	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.
Body	Body of the mail.	N/A	String, case-sensitive. Length: 1 to 512 characters.	Optional.
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/MailServerList

This table contains information about mail server list.

XML structure

```
<DLP>
  <MailServerList>
```

```
    <MailServer>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerAddress></ServerAddress>
      <UserName></UserName>
      <Password></Password>
      <Encryption></Encryption>
      <Authenticate></Authenticate>
      <Sender></Sender>
      <TotalNum></TotalNum>
    </MailServer>
  </MailServerList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	MailTemplateList
Table type	Multi-instance table
Row name	MailTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Mail Server ID.	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Mail Server Name.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required.
ServerAddress	Server address	N/A	String, case-sensitive. • Length: 1 to 63 characters.	Required. Support IP address or mail domain.
UserName	UserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required
Password	Password	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required
Encryption	Whether to encryption	N/A	Boolean: • true—YES • false—NO	Optional.
Authenticate	Whether to	N/A	Boolean:	Optional.

	authenticate		• true—YES • false—NO	
Sender	Mail Sender	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/SyslogTemplateList

This table contains information about syslog template list of a response action.

XML structure

```
<DLP>
  <SyslogTemplateList>
    <SyslogTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <SyslogLevel></SyslogLevel>
      <SyslogTemp></SyslogTemp>
      <TotalNum></TotalNum>
    </SyslogTemplate>
  </SyslogTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	SyslogTemplateList
Table type	Multi-instance table
Row name	SyslogTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Syslog template ID.	index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Syslog	N/A	String, case-sensitive.	Required.

	template name.		Length: 1 to 63 characters.	Syslog template name can not contain the word default as prefix when create a new template. Modification is not allowed.
SyslogLevel	Syslog level	N/A	Enumeration: • **1**—Alert. • **2**---Critical • **3**—Error. • **4**—Warning • **5**---Notice • **6**---Info	Optional.
SyslogTemp	Syslog template	N/A	String, case-sensitive. Length: 1 to 511 characters.	Required.
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/UploadFileTemplateList

This table contains information about upload file template.

XML structure

```
<DLP>
  <UploadFileTemplateList>
    <UploadFileTemplate>
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <ServerIP></ServerIP>
      <ServerType></ServerType>
      <ShareName></ShareName>
      <WorkGroup></WorkGroup>
      <StorePath></StorePath>
      <UserName></UserName>
      <Password></Password>
      <TotalNum></TotalNum>
    </UploadFileTemplate>
  </UploadFileTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	UploadFileTemplateList
Table type	Multi-instance table

Row name	UploadFileTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	Resource ID	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Resource Name	N/A	String, case-sensitive. Length: 1 to 63 characters.	Required.
ServerIP	Server IP	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
ServerType	Server Type	N/A	Enumeration: • **1**—Local.(default) • **2**—Ftp	Required If select Loacl, must fill StorePath. If select Ftp,must fill StorePath UserName Password.
ShareName	Share Name	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
WorkGroup	Work Group	N/A	String, case-sensitive. Length: 1 to 253 characters.	Optional
StorePath	Store Path	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
UserName	UserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
Password	Password	N/A	String, case-sensitive. Length: 1 to 63 characters.	Optional
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/IndexFileTemplateList

This table contains information about index file template.

XML structure

```
<DLP>
  <IndexFileTemplateList>
    <IndexFileTemplate>
```

```
      <ResourceID></ResourceID>
      <ResourceName></ResourceName>
      <IndexFileName></IndexFileName>
      <TotalNum></TotalNum>
    </IndexFileTemplate>
  </IndexFileTemplateList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IndexFileTemplateList
Table type	Multi-instance table
Row name	IndexFileTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResourceID	File index template ID	Index	Unsigned integer. Value range: 1 to 100.	Required. Because of size limit,value in range :1 to 100 is permitted
ResourceName	Index file full name	N/A	String, case-sensitive. Length: 1 to 127 characters.	Required.
IndexFileName	Index file name	N/A	String, case-sensitive. Length: 1 to 255 characters.	Required.
TotalNum	Total Number of datas	N/A	Unsigned integer. Value range: 1 to 2147481647	Optional

DLP/LocalIpv4RangeList

This table contains configuration information for the intranet filtering condition.

XML structure

```
<DLP>
  <LocalIpv4RangeList>
    <NameList>
      <AddrObjectName></AddrObjectName>
    </NameList>
```

```
  </LocalIpv4RangeList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	LocalIpv4RangeList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrObjectName	Address object group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DLP/LocalIpv6RangeList

This table contains configuration information for the intranet filtering condition.

XML structure

```
<DLP>
  <LocalIpv6RangeList>
    <NameList>
      <AddrObjectName></AddrObjectName>
    </NameList>
  </LocalIpv6RangeList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	LocalIpv6RangeList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrObjectName	Address object group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

DLP/ProtocolFilterList

This table contains configuration information for the protocol filtering condition.

XML structure

```
<DLP>
  <ProtocolFiterList>
    <SelectAll></SelectAll>
    <DiselectAll></DiselectAll>
    <NameList>
      <ProtocolName></ProtocolName>
    </NameList>
  </ProtocolFiterList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ProtocolFilterList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SelectAll	Select all	N/A	Boolean: • true • false	N/A
DiselectAll	Diselect all	N/A	Boolean: • true • false	N/A
ProtocolName	Protocol type	N/A	String, case-insensitive.	Required.

	name		Length: 1 to 31 characters.	The protocol name is system pre-defined. The protocol name is allowed ftp, smtp, imap, pop3, smb, nfs, http, https.

DLP/FlowDirectionList

This table contains monitor flow direction configuration information.

XML structure

```
<DLP>
  <FlowDirectionList>
    <directswitch></directswitch>
  </FlowDirectionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	FlowDirectionList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
directswitch	The flow direction switch	N/A	• Enumeration: • 1—Inbound. • 2—Outbound • 3—All.	N/A

DLP/FileTypeMapList

This table contains mappings between file type IDs and file type names.

XML structure

```
<DLP>
  <FileTypeMapList>
```

```
    <FileTypeMap>
      <FileTypeID></FileTypeID>
      <FileTypeName></FileTypeName>
    </FileTypeMap>
  </FileTypeMapList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	FileTypeMapList
Table type	Multi-instance table
Row name	FileTypeMap
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FileTypeID	File type ID	Index	Unsigned integer. Value range: 0 to 1515.
FileTypeNam e	File type name	N/A	String, case sensitive. Length: 1 to 31 characters.

DLP/SpecificationsList

This table contains information about DLP policy specifications.

XML structure

```
<DLP>
  <SpecificationsList>
    <Specifications>
      <SpecType></SpecType>
      <MaxNumber></MaxNumber>
    </Specifications>
  </SpecificationsList>
</DLP>
```

Table description

Item	Description
Feature name	DLP

Item	Description
Table name	SpecificationsList
Table type	Multi-instance table
Row name	Specifications
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SpecType	Specifications Type	Index	Enumeration: • 1—Policy. • 2—ResponseRuleTemp. • 3—DetectRule. • 4—ExceptDetectRule • 5—IdetityRule. • 6—ExceptIdetityRule. • 7—ResponseRuleQuote • 8—Condition	Required.
MaxNumber	The max number of the specifications	N/A	Unsigned integer. Value range: 0 to 30.	Required

DLP/DetectPolicyList

This table contains DLP policies.

XML structure

```
<DLP>
  <DetectPolicyList>
    <DetectPolicy>
      <PolicyID></PolicyID>
      <PolicyName></PolicyName>
      <Description></Description>
      <ScanMode></ScanMode>
      <PolicyEnable></PolicyEnable>
      <AllPolicyCount></AllPolicyCount>
    </DetectPolicy>
  </DetectPolicyList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	DetectPolicyList
Table type	Multi-instance table
Row name	DetectPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	DLP policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyName	DLP policy name	N/A	String, case-insensitive. Length: 1 to 31 characters.	Required.
Description	DLP policy description	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional.
ScanMode	Scan mode	N/A	Enumeration • 1—Fast scan. • 2—Complete scan.	Optional.
PolicyEnable	Whether to enable the DLP policy	N/A	Boolean: • **true**—Enable • **false**—Disable	Optional.
AllPolicyCount	Number of policies.	N/A	Unsigned integer. Value range: 0 to 20.	Optional.

DLP/DetectRuleList

This table contains DLP policy detection rules.

XML structure

```
<DLP>
  <DetectRuleList>
    <DetectRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
```

```
      <DefaultSeriousLevel></DefaultSeriousLevel>
      <ConditionTypeList>
        <ConditionType></ConditionType>
      </ConditionTypeList>
    </DetectRule>
  </DetectRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	DetectRuleList
Table type	Multi-instance table
Row name	DetectRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
DefaultSeriousLevel	Default severity level for the rule	N/A	Enumeration: • **1**—High. • **2**—Medium. • **3**—Low. • **4**—Info	Optional.
ConditionTypeList	Codition type list	Data structure	Members include: • **ConditionType.**	Optional.
ConditionType	Condition type	N/A	Enumeration: • **1**—Regex. • **2**—Key Word. • **3**—Index File. • **4**—File name • **5**—File size • **6**—File type • **7**—Protocol	Required.

DLP/IdentityRuleList

This table contains DLP policy identity rules.

XML structure

```
<DLP>
  <IdentityRuleList>
    <IdentityRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ConditionTypeList>
        <ConditionType></ConditionType>
      </ConditionTypeList >
      <DefaultSeriousLevel></DefaultSeriousLevel>
    </IdentityRule>
  </IdentityRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IdentityRuleList
Table type	Multi-instance table
Row name	IdentityRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
DefaultSeriousLevel	Default severity level for the rule	N/A	Enumeration: • **1**—High. • **2**—Medium. • **3**—Low. • **4**—Info	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
ConditionTypeList	Codition type list	Data structure	Members include: • **ConditionType.**	Optional.
ConditionType	Condition type	N/A	Enumeration: • **1**—Sender. • **2**—Receiver.	Required.

DLP/ExceptionDetectRuleList

This table contains DLP policy exception detection rules.

XML structure

```
<DLP>
  <ExceptionDetectRuleList>
    <ExceptionDetectRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ConditionTypeList>
        <ConditionType></ConditionType>
      </ConditionTypeList >
    </ExceptionDetectRule>
  </ExceptionDetectRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ExceptionDetectRuleList
Table type	Multi-instance table
Row name	ExceptionDetectRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Exception detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Exception detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
ConditionTypeList	Codition type list	Data structure	Members include: • **ConditionType.**	Optional.
ConditionType	Condition type	N/A	Enumeration: • **1**—Regex. • **2**—Key Word. • **3**—Index File. • **4**—File name • **5**—File size • **6**—File type • **7**—Protocol	Required.

DLP/ExceptionIdentityRuleList

This table contains DLP policy exception identity rules.

XML structure

```
<DLP>
  <ExceptionIdentityRuleList>
    <ExceptionIdentityRule>
      <PolicyID></PolicyID>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ConditionTypeList>
        <ConditionType></ConditionType>
      </ConditionTypeList >
    </ExceptionIdentityRule>
  </ExceptionIdentityRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ExceptionIdentityRuleList
Table type	Multi-instance table
Row name	ExceptionIdentityRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleID	Identity exception rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Identity exception rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
ConditionTypeList	Codition type list	Data structure	Members include: • **ConditionType.**	Optional
ConditionType	Condition type	N/A	Enumeration: • **1**—Sender. • **2**—Receiver.	Required.

DLP/ResponseRuleList

This table contains response rules used by DLP policies.

XML structure

```
<DLP>
  <ResponseRuleList>
    <ResponseRule>
      <PolicyID></PolicyID>
      <RuleList>
        <RuleID></RuleID>
        <RuleName></RuleName>
       </RuleList>
    </ResponseRule>
  </ResponseRuleList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseRuleList
Table type	Multi-instance table
Row name	ResponseRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleList	Response rule ID list	Data structure	Members include: • RuleID • RuleName	Optional.
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.

DLP/RegexConditionList

This table contains regular expression conditions for detection rules.

XML structure

```
<DLP>
  <RegexConditionList>
    <RegexCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <MatchType></MatchType>
      <MatchCount></MatchCount>
      <RegexList>
        <RegexTemplateID></RegexTemplateID>
      </RegexList>
      <MatchComponent></MatchComponent>
    </RegexCondition>
  </RegexConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	RegexConditionList
Table type	Multi-instance table

Item	Description
Row name	RegexCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detect Rule • 2—Except Detect Rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
MatchType	Regular expression match type	N/A	Enumeration: • 1—Exist. • 2—Count. • 3—Unique.	Required.
MatchCount	Number of hits required	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required when the match type is 2.
RegexList	Name of the regular expression list	Data structure	Members include: • RegexTemplateID.	Optional.
RegexTemplateID	Regular expression template ID	Index	Unsigned integer. Value range: 0 to 1000.	Required.
MatchComponent	Regular expression component match type	N/A	Enumeration: • 1—Single. • 2—All.	Optional.

DLP/KeywordConditionList

This table contains keyword conditions for detection rules.

XML structure

```

Table description

Item	Description
Feature name	DLP
Table name	KeywordConditionList
Table type	Multi-instance table
Row name	KeywordCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular	Index	Unsigned integer.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
	expression condition ID		Value range: 0 to 10000.	
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
CaseSensitive	Whether the rule is case sensitive	N/A	Boolean: • **true**—Enable. • **false—Disable.**	Required.
EnableSimpleKey	Whether to enable simple keyword matching	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Required.
SimpleKeyList	Name of the simple keyword list	Data structure	Members include: • **SimpleKey.**	Optional. (length limit is 10)
SimpleKey	Simple keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
EnableProximityKey	Whether to enable neighboring keyword matching	N/A	Boolean: • **true**—Enable. • **false**—Disable	Required.
WholeWord	Whether to match the whole word	N/A	Boolean: • **true**—Enable. • **false—Disable.**	Optional. This column takes effect only on English keywords.
MatchType	Keyword match type	N/A	Enumeration: • **1**—Exist. • **2**—Count. • **3—Unique.**	Optional.
MatchCount	Number of hits required.	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required when the match type is 2.
MatchComponent	Keyword component match type.	N/A	Enumeration: • **1**—Single. • **2—All.**	Optional.
ProximityKeyList	Name of the neighboring keyword list	Data structure	Members include: • Left. • Right. • Distances.	Optional.
Left	Left keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
Right	Right keyword	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
Distance	Distance of the neighboring keywords	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required.

DLP/IndexFileConditionList

This table contains Indexed document matching (IDM) conditions for detection rules.

XML structure

```
<DLP>
  <IndexFileConditionList>
    <IndexFileCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <IndexTemplateID></IndexTemplateID>
      <Threshold></Threshold>
      <MatchType></MatchType>
    </IndexFileCondition>
  </IndexFileConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	IndexFileConditionList
Table type	Multi-instance table
Row name	IndexFileCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration:	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Detection rule • 2—Detection exception rule	
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
IndexTemplateID	IDM template ID	N/A	Unsigned integer. Value range: 0 to 100.	Required.
Threshold	Ratio threshold	N/A	Unsigned integer. Value range: 0 to 100.	Optional.
MatchType	Match type	N/A	Enumeration: • 1—Exist. • 2—Matched.	Optional.

DLP/FileAttriConditonList

This table contains file attribution conditions for detection rules.

XML structure

```
<DLP>
  <FileAttriConditionList>
    <FileAttriCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>

  </FileAttriConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	FileAttriConditionList
Table type	Multi-instance table
Row name	FileAttriCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
ConditionType	File attribute condition type	N/A	String, case sensitive • FILENAME • FILESIZE • FILETYPE	Required.
FileTypeList	File type list name	Data structure	Members include: • FileTypeID.	Optional.
FileTypeID	File type ID	N/A	Unsigned integer. Value range: 0 to 1515.	Required.
FileNameList	Name of the file name list	Data structure	Members include: • FileName.	Optional.
FileName	File name.	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
FileSizeList	Name of the file	Data	Members include:	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
	size list	structure	• Type. • MinSize • MinSizeUnit • MaxSize • MaxSizeUnit	
Type	File attribute match type	N/A	Enumeration: • 1—Size of a single file.	Optional.
MinSize	Minimum file size	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required when type is 1.
MinSizeUnit	Unit for the minimum file size column	N/A	String, case sensitive. • B. • KB. • MB. • GB.	Required when type is 1.
MaxSize	Maximum file size	N/A	Unsigned integer. Value range: 0 to 2147483647	Required when type is 1.
MaxSizeUnit	Unit for the maximum file size column	N/A	String, case sensitive. • B. • KB. • MB. • GB.	Required when type is 1.

DLP/SenderConditionList

This table contains sender conditions for identity rules.

XML structure

```
<DLP>
  <SenderConditionList>
    <SenderCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>

      <UserList>
        <User></User>
      </UserList>
      <GroupList>
        <GroupName></GroupName>
        <DomainName></DomainName>
      </GroupList>
    </SenderCondition>
  </SenderConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	SenderConditionList
Table type	Multi-instance table
Row name	SenderCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Identity rule • 2—Identity exception rule	Required.
ConditionID	Sender condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
EmailList	Email list name.	Data structure	Members include: • Email.	Optional.
Email	Email address.	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
IPType	IP type of the IPList.	N/A	Enumeration: • 1—IPv4	Required when you configure an IP address or address object

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—IPv6	group.
IPList	IPv4 or IPv6 list.	Data structure	Members include: • IP	Optional.
IP	IPv4 or IPv6 address	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPGroupList	IPv4 or IPv6 address object group list	Data structure	Members include: • ObjectName	Optional.
ObjectName	IPv4 or IPv6 address object group name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
UserList	User list	Data structure	Members include: • User	Optional.
User	User name	N/A	String, case sensitive. Length: 1 to 55 characters.	Required.
GroupList	User group list	Data structure	Members include: • ObjectName • DomainName	Optional. GroupName and DomainName must be configured at the same time.
GroupName	User group name	N/A	String, case sensitive. Length: 1 to 32 characters.	Required.
DomainName	User group domain name	N/A	String, case sensitive. Length: 1 to 255 characters.	Optional.

DLP/ReceiverConditionList

This table contains receiver conditions for identity rules.

XML structure

```
<DLP>
  <ReceiverConditionList>
    <ReceiverCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <EmailList>
```

```
      <Email></Email>

</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ReceiverConditionList
Table type	Multi-instance table
Row name	ReceiverCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Identity rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleType	Rule type	Index	Enumeration: • 1—Identity rule • 2—Identity exception rule	Required.
ConditionID	Sender condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Identity rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
EmailList	Email list name.	Data structure	Members include: • Email.	Optional.
Email	Email address.	N/A	String, case sensitive. Length: 1 to 63 characters.	Required.
HostList	Host list name	Data structure	Members include: • Host.	You must configure one of the following items: EmailList, IPList, and HostList.
Host	Host name.	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPType	IP type of the IPList.	N/A	Enumeration: • 1—IPv4 • 2—IPv6	Required. Required when you configure an IP address or address object group.
IPList	IPv4 or IPv6 list.	Data structure	Members include: • IP	Optional.
IP	IPv4 or IPv6 address	N/A	String, case sensitive. Length: 1 to 127 characters.	Required.
IPGroupList	IPv4 or IPv6 address object group list	Data structure	Members include: • ObjectName	Optional.
ObjectName	IPv4 or IPv6 address object group name	N/A	String, case sensitive. Length: 1 to 31characters.	Required.
UserList	User list.	Data structure	Members include: • User	Optional.
User	User name.	N/A	String, case sensitive. Length: 1 to 55 characters.	Required.
ReceiverType	Receiver type	N/A	Enumeration: • **1**—All. • **2—Count.**	Applied only to Email addresses.
ReceiverCount	Number of hits required	N/A	Unsigned integer. Value range: 0 to 2147483647.	Optional.
GroupList	User group list.	Data structure	Members include: • ObjectName	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
			DomainName	
GroupName	User group name	N/A	String, case sensitive. Length: 1 to 32 characters.	Required.
DomainName	User group domain name	N/A	String, case-sensitive. Length: 1 to 255 characters.	Optional.

DLP/ProtocolConditionList

This table contains protocol conditions for detection rules.

XML structure

```
<DLP>
  <ProtocolConditionList>
    <ProtocolCondition>
      <RuleID></RuleID>
      <RuleType></RuleType>
      <ConditionID></ConditionID>
      <PolicyID></PolicyID>
      <RuleName></RuleName>
      <ProtocolList>
        <ProtocolType></ProtocolType>
      </ProtocolList>
    </ProtocolCondition>
  </ProtocolConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ProtocolConditionList
Table type	Multi-instance table
Row name	ProtocolCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Detection rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleType	Rule type	Index	Enumeration: • 1—Detection rule • 2—Detection exception rule	Required.
ConditionID	Regular expression condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
PolicyID	Policy ID	N/A	Unsigned integer. Value range: 0 to 10000.	Required when you create a condition.
RuleName	Detection rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required when you create a condition.
ProtocolList	Protocol type list	Data structure	Members include: • ProtocolType	Required.
ProtocolType	Protocol type.	N/A	Enumeration: • 1—FTP. • 2—SMTP. • **3—**SMB**.** • 4—NFS. • 5—POP3. • 6—IMAP. • 7—HTTP. • 8—HTTPS/SSL.	Required.

DLP/ResponseRuleTempList

This table contains DLP policy response rules.

XML structure

```
<DLP>
  <ResponseRuleTempList>
    <ResponseRuleTemp>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <Description></Description>

        <ConditionID></ConditionID>
        <ConditionType></ConditionType>
      </ConditionList>
      <ActionList>
        <ActionID></ActionID>
        <ActionType></ActionType>
      </ActionList>
      <TotalNum></TotalNum>
    </ResponseRuleTemp>
  </ResponseRuleTempList>
```

```
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseRuleTempList
Table type	Multi-instance table
Row name	ResponseRuleTemp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
Description	Response rule description	N/A	String, case sensitive. Length: 0 to 127 characters.	Optional.
ConditionList	Condition list name.	Data structure	Members include: • ConditionID • ConditionType	Optional.
ConditionID	Condition ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
ConditionType	Condition type	N/A	Enumeration: • 1—Severity. • 2—Protocol.. • 3—Hits.	Required.
ActionList	Action list name.	Data structure	Members include: • ActionID • ActionType	Optional.
ActionID	Action ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
ActionType	Action type	N/A	Enumeration: • 1—Uploads the file. • 2—Adds a comment. • 3—Sends a log message. • 4—Sends an email.	Required
TotalNum	Total number of response rules	N/A	Unsigned integer. Value range: 0 to 30.	Required

DLP/ResponseConditionList

This table contains response conditions for response rules.

XML structure

```
<DLP>
  <ResponseConditionList>
    <ResponseCondition>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ConditionID></ConditionID>
      <ConditionType></ConditionType>
      <Operator></Operator>
      <ValueList>
        <Value></Value>
      </ValueList>
    </ResponseCondition>
  </ResponseConditionList>
</DLP>
```

Table description

Item	Description
Feature name	DLP
Table name	ResponseConditionList
Table type	Multi-instance table
Row name	ResponseCondition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Response rule ID	Index	Unsigned integer. Value range: 0 to 10000.	Required.
RuleName	Response rule name	N/A	String, case sensitive. Length: 1 to 31 characters.	Required.
ConditionID	Condition id.	Index	Unsigned integer. Value range: 0 to 10000.	Required.
ConditionType	Condition type	N/A	Enumeration: • 1—Severity. • 2—Protocol. • 3—Hits.	Required. Select a condition type based on file attributes.

Column name	Column description	Column type	Data type and restrictions	Remarks
Operator	Operator	N/A	Enumeration: • 1—IN. • 2—Not in. • 3—Greater. • 4—Less. • 5—Between.	Required If ConditionType is 1 or 2, select 1 or 2 . If ConditionType is 3, select 3, 4, or 5.
ValueList	Value list name	Data structure	Members include: • Value.	Required.
Value	Value	N/A	Unsigned integer. Value range: 0 to 2147483647.	Required if ConditionType is 1, select 1, 2, 3, or 4, which means High, Medium, Low or Info, respectively. If ConditionType is 2, select one from 1 to 8, which means FTP, SMTP, SMB, NFS, POP3, IMAP, HTTP, or HTTPS, respectively. If ConditionType is 3 and Operator is 3 (Greater) or 4 (Less), one value is required. If ConditionType is 3 and Operator is 5 (Between), two values are required.

DLP/ResponseActionList

This table contains response action lists for response rules.

XML structure

```
<DLP>
  <ResponseActionList>
    <ResponseAction>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <ActionID></ActionID>
      <ActionType></ActionType>
      <TemplateID></TemplateID>
      <Content></Content>
    </ResponseAction>
  </ResponseActionList>
</DLP>
```

DLP/RegexTemplateList

Message	Explanation
The resource id has been existed. 资源id已存在。	The resource id .can't be created repeatedly. 资源id不能重复创建。
The resource name has been existed. 资源名已存在。	The resource name .can't be created repeatedly. 资源名不能重复创建。
The numberof resource is out of range. 配置的资源条数已超出规格。	The max number of regex template list is 1000 正则表达式模版表的最大条数是1000。。
The number of resource is out of range. 正则表达式不合法。	The regex must be valid. 正则表达式必须是有效的。

DLP/MailTemplateList

Message	Explanation
The resource id has been existed. 资源id已存在。	The resource id .can't be created repeatedly. 资源id不能重复创建。
The resource name has been existed. 资源名已存在。	The resource name .can't be created repeatedly. 资源名不能重复创建。
The mail server id is out of range. 邮件服务器ID超过范围。	The mail server id of mail template list is from 1 to 100.. 邮件告警模版表的服务器id是在1~100内的。
The numberof resource is out of range. 配置的资源条数已超出规格。	The max number of mail template list is from 1 to 100.. 邮件告警模版表的最大条数是100。

DLP/ MailServerList

Message	Explanation
The resource id has been existed. 资源id已存在。	The resource id .can't be created repeatedly. 资源id不能重复创建。
The resource name has been existed. 资源名已存在。	The resource name .can't be created repeatedly. 资源名不能重复创建。
The numberof resource is out of range. 配置的资源条数已超出规格。	The max number of mail server list is 100.. 邮件服务器表的最大条数是100。。

The mail (server) address is illegal. 输入的邮箱（服务器）地址非法。	The mail address must be valid ip address or mail domain. 邮件服务器地址必须是有效的ip地址或者邮箱域名。

DLP/UploadFileTemplateList

Message	Explanation
The resource id has been existed. 资源id已存在。	The resource id .can't be created repeatedly. 资源id不能重复创建。
The resource name has been existed. 资源名已存在。	The resource name .can't be created repeatedly. 资源名不能重复创建。
The ip address is invalid 输入的ip地址无效。	The ip address must be valid. Ip地址必须是有效的。
The numberof resource is out of range. 配置的资源条数已超出规格。	The max number of upload file template list is100.. 文件上传服务器模版表的最大条数是100。。
There is no available hard disk, please select ftp server. 无可用硬盘，请选择ftp服务器。	The hard disk must exist when server type is local. 当服务器类型选择local时本地必须有硬盘。

DLP/IndexFileTemplateList

Message	Explanation
The resource id has been existed. 资源id已存在。	The resource id .can't be created repeatedly. 资源id不能重复创建。
The resource name has been existed. 资源名已存在。	The resource name .can't be created repeatedly. 资源名不能重复创建。
The numberof resource is out of range. 配置的资源条数已超出规格。	The max number of index file template list is100.. 指纹文件模版表的最大条数是100。
The IDM resource file has been existed. 该指纹索引文件已经存在。	The same name of index file is not allowed to be imported when creating a new config. 当新建一条配置的时候不允许导入有重复文件名的指纹文件。
The finger file imported is invalid. 导入的指纹文件无效。	The finger file imported must be from IDMTool software. 导入的指纹文件必须是由IDMTool软件产生的。

DLP/ImportResourceFile

Message	Explanation
The imported file is illegal. 导入的文件非法。	The imported file must be valid. 导入的文件必须是有效的。

DLP/ExportResourceFile

Message	Explanation
The space of device is not enough to export config file package. 设备空间不足，无法导出。	There must be enough space left for exporting package. 必须有足够的空间容纳导出的配置压缩包。

DLP/LocalIpv4RangeList

Message	Explanation
The number of object groups exceeds the limit. 对象组数量超限。	The number of object groups exceeds the limit. 对象组数量超过最大限制。
There is an IP type that does not match object group. 存在IP类型与当前引用的地址对象组不匹配。	There is an IP type that does not match object group. 当前引用的地址对象组列表里存在IP类型不符合的对象组。
Failed to add intranet filter condition. 添加内外网过滤条件失败。	Failed to add intranet filter condition. 更新下发内外网过滤条件失败。

DLP/LocalIpv6RangeList

Message	Explanation
The number of object groups exceeds the limit. 对象组数量超限。	The number of object groups exceeds the limit. 对象组数量超过最大限制。
There is an IP type that does not match object group. 存在IP类型与当前引用的地址对象组不匹配。	There is an IP type that does not match object group. 当前引用的地址对象组列表里存在IP类型不符合的对象组。
Failed to add intranet filter condition. 添加内外网过滤条件失败。	Failed to add intranet filter condition. 更新下发内外网过滤条件失败。

DLP/ProtocolFilterList

Message	Explanation
There are types of protocols that are not supported. 存在不支持的协议类型。	The resource id .can't be created repeatedly. 下发的协议列表里存在业务不支持的协议类型。
Failed to add protocol type filter condition. 添加协议类型过滤条件失败。	Failed to add protocol type filter condition. 更新下发协议过滤条件失败。

DLP/DetectPolicyList

Message	Explanation
The number of policy is out of range. 策略条数超出规格。	The maximum specification of policy configuration is 20. 策略配置的最大规格是20个。
The policy name has been existed. 该策略名已存在。	The policy name can't be created repeatedly. 策略名称不能重复创建。
The policy node can't be found. 对应的策略节点不存在。	The policy for the specified ID does not exist. 指定ID的策略不存在。

DLP/DetectRuleList

Message	Explanation
The number of rule is out of range. 规则条数超出规格。	The maximum specification of detection rules under the policy is 5. 策略下检测规则的最大规格是5个。
The detect rule name has been existed. 检测规则名称已存在。	The detection rule name can't be created repeatedly. 检测规则名称不能重复创建。
The rule does not exist. 查找不到规则配置。	The detection rule for the specified ID does not exist. 指定ID的检测规则不存在。

DLP/IdentityRuleList

Message	Explanation
The number of rule is out of range. 规则条数超出规格。	The maximum specification of identity rules under the policy is 5. 策略下身份规则的最大规格是5个。
The identity rule name has been existed..	The identity rule name can't be created repeatedly.

该身份规则名称已存在。	身份规则名称不能重复创建。
The rule does not exist. 查找不到规则配置。	The identity rule for the specified ID does not exist. 指定ID的身份规则不存在。

DLP/ExceptionDetectRuleList

Message	Explanation
The number of rule is out of range. 规则条数超出规格。	The maximum specification of exception rules under the policy is 5. 策略下例外检测规则的最大规格是5个。
The exception detect rule name has been existed. 该例外检测规则名称已存在。	The identity rule name can’t be created repeatedly. 例外检测规则名称不能重复创建。
The rule does not exist. 查找不到规则配置。	The identity rule for the specified ID does not exist. 指定ID的例外检测规则不存在。

DLP/ExceptionIdentityRuleList

Message	Explanation
The number of rule is out of range. 规则条数超出规格。	The maximum specification of exception identity rules under the policy is 5. 策略下身份规则的最大规格是5个。
The exception identity rule name has been existed. 该例外身份规则名称已存在。	The exception identity rule name can’t be created repeatedly. 例外身份规则名称不能重复创建。
The rule does not exist. 查找不到规则配置。	The identity rule for the specified ID does not exist. 指定ID的例外身份规则不存在。

DLP/ResponseRuleList

Message	Explanation
The number of rule is out of range. 规则条数超出规格。	The maximum specification of exception identity rules under the policy is 5. 策略下相应规则的最大规格是5个。
The quote template don't exist.. 引用模板不存在。	The resource name can’t be created repeatedly. 资源名称不能重复创建。

DLP/RegexConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of regex condition under detection rule is 5. 检测规则下正则条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified regex condition under the specified rule does not exist. 指定规则下的指定正则条件不存在。
The quote template don't exist.. 引用模板不存在。	

DLP/KeywordConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of keyword condition under detection rule is 5. 检测规则下关键字条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified keyword condition under the specified rule does not exist. 指定规则下的指定关键字条件不存在。

DLP/IndexFileConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of index file condition under detection rule is 5. 检测规则下索引文件条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified index file condition under the specified rule does not exist. 指定规则下的指定索引文件条件不存在。
The quote template don't exist..	

引用模板不存在。	

DLP/FileAttriConditonList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specifications of file name, file type and file size conditions under the detection rule are 5 respectively. 检测规则下文件名、文件类型和文件大小条件的最大规格分别是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified file attribute condition under the specified rule does not exist. 指定规则下的指定文件属性条件不存在。
There are types of filetypes that are not supported. 存在不支持的文件类型。	

DLP/SenderConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of sender condition under identity rule is 5. 身份规则下发送者条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified sender condition under the specified rule does not exist. 指定规则下的指定发送者条件不存在。

DLP/ReceiverConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of receiver condition under identity rule is 5. 身份规则下接收者条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。

The condition configuration does not exist. 该条件配置不存在。	The specified receiver condition under the specified rule does not exist. 指定规则下的指定接收者条件不存在。

DLP/ProtocolConditionList

Message	Explanation
The rule contains conditions of this type that are out of limit. 该规则包含的该类型条件超限。	The maximum specification of protocol condition under detection rule is 5. 检测规则下协议条件的最大规格是5个。
The condition configuration already exists. 该条件配置已存在。	Condition id cannot be repeat. 条件的id值不能重复。
The condition configuration does not exist. 该条件配置不存在。	The specified protocol condition under the specified rule does not exist. 指定规则下的指定协议条件不存在。

DLP/ResponseRuleTempList

Message	Explanation
The response rule template has been existed. 该条响应规则模版已存在。	The response rule template id can’t be created repeatedly. 响应规则模板id不能重复。
The response rule template node can't be found. 对应的响应规则模版节点不存在。	The response rule template for the specified ID does not exist. 指定id的响应规则模板不存在。
The rule name of response rule template has been existed. 该条响应规则模版的资源名已存在。	The name of the response rule template can’t be created repeatedly. 响应规则模板名称不能重复。

DLP/ResponseConditionList

Message	Explanation
The number of response condition in response template is out of range. 响应规则包含的响应条件条数超出规格。	The maximum specification of the condition under the response rule template is 5. 响应规则模版下条件的最大规格是5个。

DLP/ResponseActionList

Message	Explanation
The number of response action in response	The maximum specification of actions under the response

template is out of range. 响应规则包含的响应动作条数超出规格。	rule template is 5. 响应规则模版下动作的最大规格是5个。

DLP/ImportPolicyFile

Message	Explanation
The configer file size is zero. 配置文件是空文件。	The imported profile package cannot be an empty file. 导入的配置文件包不能是空文件。
The configer file format is error. 配置文件格式错误。	Failed to add protocol type filter condition. 更新下发协议过滤条件失败。
The configer file packet is don't exist. 配置文件包不存在。	
The imported file type is illegal. 导入的文件类型非法。	
The configer file packet extracted failed. 配置文件包解压失败。

DNS

DNS/DNSClearHost

This table is used to clear DNS host entries.

XML structure

```
<DNS>
  <DNSClearHost>
    <ClearHost>
      <VRF></VRF>
      <Type></Type>
      <QueryType></QueryType>
    </ClearHost>
  </DNSClearHost>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSClearHost
Table type	Multi-instance table
Row name	ClearHost
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the length of characters is 0.
Type	Domain name-to-IP address mapping type	Index	Enumeration: • **1**—Static. • **2**—Dynamic. • 3—Cached.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QueryType	Query type	Index	Enumeration: • **1**—A. • **2**—AAAA.	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address. If all the query type is set, the length of the column is 0.

DNS

DNS/DNSHost

This table contains DNS host configuration information.

XML structure

```
<DNS>
  <DNSHost>
    <Host>
      <VRF></VRF>
      <HostName></HostName>
      <Type></Type>
      <QueryType></QueryType>
      <Result></Result>
    </Host>
  </DNSHost>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSHost
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the value is null.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Domain name-to-IP address mapping type	Index	Enumeration: • **1**—Static.	N/A
QueryType	Query type	Index	Enumeration: • **1**—A. • **2**—AAAA.	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address.
Result	Replied result	N/A	String, case insensitive. Length: 1 to 45 characters.	Required. An IPv4 address as QueryType is A, an IPv6 address as QueryType is AAAA.

DNS/DNSServer

This table contains DNS server configuration information.

XML structure

```
<DNS>
  <DNSServer>
    <Server>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
    </Server>
  </DNSServer>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSServer
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
Type	DNS server type	Index	Enumeration: • **1**—Static.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

DNS/DNSDomain

This table contains information about domain name suffix configuration.

XML structure

```
<DNS>
  <DNSDomain>
    <Domain>
      <VRF></VRF>
      <Type></Type>
      <DomainName></DomainName>
    </Domain>
  </DNSDomain>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSDomain
Table type	Multi-instance table
Row name	Domain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the domain name suffix is on the public network, the value is null.
Type	Domain name suffix type	Index	Enumeration: • **1**—Static.	N/A
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.

DNS/DNSConfig

This table contains DNS configuration information.

XML structure

```
<DNS>
  <DNSConfig>
    <DNSProxyEnable></DNSProxyEnable>
    <DNSDSCP></DNSDSCP>
    <DNSDSCP6></DNSDSCP6>
    <DNSSnoopingLogEnable></DNSSnoopingLogEnable>
    <DNSSnoopingRateLimit></DNSSnoopingRateLimit>
    <DNSTransparentProxyEnable></DNSTransparentProxyEnable>
```

```
    <DNSRedirectEnable></DNSRedirectEnable>
    <DNSCacheEnable></DNSCacheEnable>
    <DNSFastReplyEnable></DNSFastReplyEnable>
    <DNSFastReplyIgnoreClientVPN></DNSFastReplyIgnoreClientVPN>
    <DNSSnoopingEnable></DNSSnoopingEnable>
    <DNSCacheTTLMinimum></DNSCacheTTLMinimum>
    <DNSCacheTTLMaximum></DNSCacheTTLMaximum>
  </DNSConfig>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSProxyEnable	Whether the function of DNS proxy is enabled	N/A	Boolean: • **true** • **false**(default)	Support for this function depends on the device model.
DNSDSCP	DSCP value for DNS packets sent by a DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A
DNSDSCP6	DSCP value for IPv6 DNS packets sent by an IPv6 DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A
DNSSnoopingLogEnable	Whether the DNS snooping logging function is enabled	N/A	Boolean: • **true** • **false** (default)	Support for this function depends on the device model.
DNSSnoopingRateLimit	Limit rate on DNS packet	N/A	Usigned integer. Value range: 64 to 512. Default: 0.	The value range depends on the device model.
DNSTransparentProxyEnable	Whether the function of DNS transparent proxy is enabled	N/A	Boolean: • **true** • **false** (default)	Support for this function depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSRedirectEnable	Whether the function of DNS redirect is enabled	N/A	Boolean: • **true** • **false**(default)	Support for this feature depends on the device model.
DNSCacheEnable	Whether the function of DNS cache is enabled	N/A	Boolean: • **true** • **false**(default)	Support for this function depends on the device model.
DNSFastReplyEnalbe	Whether the function of DNS fast reply is enabled	N/A	Boolean: • **true** • **false**(default)	Support for this function depends on the device model.
DNSFastReplyIgnoreClientVPN	Whether the function of ignoring client VPN for DNS fast reply is enabled	N/A	Boolean: • **true** • **false**(default)	Support for this function depends on the device model. By default, the DNS client only queries a domain in the cache from the DNS server in the same VPN. Configure this function to enable the DNS client to query a domain from different VPNs.
DNSSnoopingEnable	Whether the function of DNS snooping is enabled	N/A	Boolean: • **true** • **false (default)**	Support for this function depends on the device model.
DNSCacheTTLMinimum	The minimum TTL of dns cache	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
DNSCacheTTLMaximum	The maximum TTL of dns cache	N/A	Unsigned integer. Value range: 60 to 3600.	N/A

DNS/DNSIfServer

This table contains DNS server of interface information.

XML structure

```
<DNS>
  <DNSIfServer>
    <Server>
      <IfIndex></IfIndex>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndexOut></IfIndexOut>
    </Server>
  </DNSIfServer>
```

```
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSIfServer
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
Type	DNS server type	Index	Enumeration: • **1**—Static.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • **1**—IPv4.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndexOut	Output interface Index	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

DNS/DNSHostAge

This table contains information about DNS aging time.

XML structure

```
<DNS>
  <DNSHostAge>
    <HostAge>
      <VRF></VRF>
      <HostName></HostName>
      <AgingTime></AgingTime>
    </HostAge>
  </DNSHostAge>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSHostAge
Table type	Multi-instance table
Row name	HostAge
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).
AgingTime	Aging time of host name	N/A	Unsigned integer. Value range 0 to 604800.	If AgingTime is set to 0, it means the host exists permanently.

DNS/DNSServerGroup

This table contains DNS server groups.

XML structure

```
<DNS>
  <DNSServerGroup>
    <ServerGroup>
      <GroupID></GroupID>
      <VRF></VRF>
      <GroupName></GroupName>
    </ServerGroup>
  </DNSServerGroup>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSServerGroup
Table type	Multi-instance table
Row name	ServerGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Index of the DNS server group.	Index	Unsigned integer. Value range 1 to 16.	
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
GroupName	The description of the group.	N/A	String, case insensitive. Length: 1 to 253 characters.	

DNS/DNSGroupServer

This table contains DNS servers of a server group.

XML structure

```
<DNS>
  <DNSGroupServer>
    <GroupServer>
```

```
      <GroupID></GroupID>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
    </GroupServer>
  </DNSGroupServer>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSGroupServer
Table type	Multi-instance table
Row name	GroupServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	DNS server group ID.	Index	Unsigned integer. Value range 1 to 16.	Dns Server-Group ID.
AddressType	Server address type	Index	Enumeration: ● **1**—IPv4. ● **2**—IPV6.	The server address type contains only IPv4 and IPv6.
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

DNS/DNSDomainRule

This table will be discarded.It is recommended to use a new table DNSDomainRuleExt.

XML structure

```
<DNS>
  <DNSDomainRule>
    <DomainRule>
      <RuleID></RuleID>
      <DomainName></DomainName>
      <Type></Type>
      <VRF></VRF>
      <ServerGroupID></ServerGroupID>
    </DomainRule>
  </DNSDomainRule>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSDomainRule
Table type	Multi-instance table
Row name	DomainRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Domain name rule ID.	Index	Unsigned integer. Value range 1 to 16.	Domain name rule ID.
DomainName	Domain name.	Index	String, case sensitive. Length: 1 to 253 characters.	Domain name matched by domain name rule.
Type	Domain name type.	N/A	Enumeration: ● **1**—domain. ● **2**—subdomain.	Domain types are divided into domain and subdomains
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerGroupID	Index of the DNS server group.	N/A	Unsigned integer. Value range 1 to 16.	Server group bound to domain name rules.

DNS/DNSDomainRuleExt

This table contains the DNS domain rule information.

XML structure

```
<DNS>
  <DNSDomainRuleExt>
    <DomainRule>
      <RuleID></RuleID>
      <Type></Type>
      <DomainName></DomainName>
      <VRF></VRF>
      <ServerGroupID></ServerGroupID>
    </DomainRule>
  </DNSDomainRuleExt>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSDomainRuleExt
Table type	Multi-instance table
Row name	DomainRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Domain name rule ID.	Index	Unsigned integer. Value range 1 to 16.	Domain name rule ID.
Type	Domain name type.	Index	Enumeration: ● **1**—domain. ● **2**—subdomain.	Domain types are divided into domains and subdomains

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case sensitive. Length: 1 to 253 characters.	Domain name matched by domain name rule.
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
ServerGroupID	Index of the DNS server group.	N/A	Unsigned integer. Value range 1 to 16.	Server group bound to domain name rules.

</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSHost
Table type	Multi-instance table
Row name	Host
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the value is null.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Domain name-to-IP address mapping type	Index	Enumeration: • **1**—Static. • **2**—Dynamic.	N/A
QueryType	Query type	Index	Enumeration: • **1**—A. • **2**—AAAA.	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address.
AgeTime	Time in seconds that a mapping can be stored in the cache.	N/A	Unsigned integer. Value range: 1 to 604800 seconds.	No aging time for a static mapping. No aging time for a mapping whose lifetime is specified as 0.
Result	Replied result	N/A	String, case insensitive.	IPv4 address string as QueryType is A, IPv6 address string as QueryType is AAAA. Seperated by space if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3. 1::1 2::2 3::3.

DNS/DNSHostCache

This table contains DNS host cache information.

XML structure

```
<DNS>
  <DNSHostCache>
    <HostCache>
      <VRF></VRF>
      <HostName></HostName>
      <Server></Server>
      <Type></Type>
      <QueryType></QueryType>
      <AgeTime></AgeTime>
      <Result></Result>
    </HostCache>
  </DNSHostCache>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSHostCache
Table type	Multi-instance table
Row name	HostCache
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the value is null.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).
Server	IP address of DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	N/A
Type	Domain name-to-IP address mapping type	Index	Enumeration: • **1**—Cached	N/A
QueryType	Query type	Index	Enumeration: • **1**—A. • **2**—AAAA.	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address.
AgeTime	Time in seconds that a mapping can be stored in the cache.	N/A	Unsigned integer. Value range: 1 to 4294967295 seconds.	No aging time for a static mapping. No aging time for a mapping whose lifetime is specified as 0 by the table of DNS/DNSDomainAge.

Column name	Column description	Column type	Data type and restrictions	Remarks
Result	Replied result	N/A	String, case insensitive.	It is an IPv4 address if QueryType is A, IPv6 and it is an IPv6 address if QueryType is AAAA. Separated by spaces if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3. 1::1 2::2 3::3.

DNS/DNSServer

This table contains DNS server information.

XML structure

```
<DNS>
  <DNSServer>
    <Server>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Priority></Priority>
    </Server>
  </DNSServer>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSServer
Table type	Multi-instance table
Row name	Server
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
Type	DNS server type	Index	Enumeration: • **1**—Static. • **2**—Dynamic.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index	Index	Unsigned integer.	The system returns null if AddressType is 1or the IpAddress is not a link-local address.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Priority	Priority of DNS server	N/A	Unsigned integer. Value range: 0 to 5.	The lower the value, the greater the priority. The priority indicates query sequence when resolving a domain name.

DNS/DNSDomain

This table contains domain name suffix information.

XML structure

```
<DNS>
  <DNSDomain>
    <Domain>
      <VRF></VRF>
      <Type></Type>
      <DomainName></DomainName>
      <Priority></Priority>
    </Domain>
  </DNSDomain>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSDomain
Table type	Multi-instance table
Row name	Domain
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the domain name suffix is on the public network, the value is null.
Type	Domain name suffix type	Index	Enumeration: • **1**—Static. • **2**—Dynamic.	N/A
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.
Priority	Priority of domain name suffix	N/A	Unsigned integer. Value range: 0 to 15.	The lower the value, the greater the priority. The priority indicates query sequence when resolving a domain name.

DNS/DNSConfig

This table contains DNS configuration information.

XML structure

```
<DNS>
  <DNSConfig>
    <DNSProxyEnable></DNSProxyEnable>
```

```
    <DNSDSCP></DNSDSCP>
    <DNSDSCP6></DNSDSCP6>
    <DNSSnoopingLogEnable></DNSSnoopingLogEnable>
    <DNSSnoopingRateLimit></DNSSnoopingRateLimit>
    <DNSTransparentProxyEnable></DNSTransparentProxyEnable>
    <DNSRedirectEnable></DNSRedirectEnable>
    <DNSCacheEnable></DNSCacheEnable>
    <DNSFastReplyEnable></DNSFastReplyEnable>
    <DNSFastReplyIgnoreClientVPN></DNSFastReplyIgnoreClientVPN>
    <DNSSnoopingEnable></DNSSnoopingEnable>
    <DNSCacheTTLMinimum></DNSCacheTTLMinimum>
    <DNSCacheTTLMaximum></DNSCacheTTLMaximum>
  </DNSConfig>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSProxyEnable	Whether the function of DNS proxy is enabled	N/A	Boolean: • **true** • **False**	Support for this function depends on the device model.
DNSDSCP	DSCP value for DNS packets sent by a DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DNSDSCP6	DSCP value for IPv6 DNS packets sent by an IPv6 DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DNSSnoopingLogEnable	Whether the DNS snooping logging function is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model.
DNSSnoopingRateLimit	Limit rate on DNS packets, in Kbps	N/A	Usigned integer. Value range: 64 to 512. Default: 0.	The value range depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSTransparentProxyEnable	Whether the function of DNS transparent proxy is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model.
DNSRedirectEnable	Whether the function of DNS redirect is enabled	N/A	Boolean: • **true** • **false**	Support for this feature depends on the device model.
DNSCacheEnable	Whether the function of DNS cache is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model.
DNSFastReplyEnalbe	Whether the function of DNS fast reply is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model.
DNSFastReplyIgnoreClientVPN	Whether the function of ignoring client VPN for DNS fast reply is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model. By default, the DNS client only queries a domain in the cache from the DNS server in the same VPN. Configure this function to enable the DNS client to query a domain from different VPNs.
DNSSnoopingEnable	Whether the function of DNS snooping is enabled	N/A	Boolean: • **true** • **false**	Support for this function depends on the device model.
DNSCacheTTLMinimum	The minimum TTL of dns cache	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
DNSCacheTTLMaximum	The maximum TTL of dns cache	N/A	Unsigned integer. Value range: 60 to 3600.	N/A

DNS/DNSSpecification

This table contains DNS specification information.

XML structure

```
<DNS>
  <DNSSpecification>
    <SupportDNSProxy></SupportDNSProxy>
    <SupportDNSFastReply></SupportDNSFastReply>
    <SupportDNSCache></SupportDNSCache>
    <SupportDNSRedirect></SupportDNSRedirect>
    <SupportDNSDomainRule></SupportDNSDomainRule>
    <SupportDNSServerGroup></SupportDNSServerGroup>
```

```
  </DNSSpecification>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDNS Proxy	Whether the function of DNS proxy is supported.	N/A	Boolean: • **true** • **false**	N/A
SupportDNS FastReply	Whether the function of DNS fast reply is supported.	N/A	Boolean: • **true** • **false**	N/A
SupportDNS Cache	Whether the function of DNS cache is supported.	N/A	Boolean: • **true** • **false**	N/A
SupportDNS Redirect	Whether DNS redirect is supported	N/A	Boolean: • **true** • **false**	N/A
SupportDNS DomainRule	Whether the DNS domain rule is supported	N/A	Boolean: • **true** • **false**	N/A
SupportDNS ServerGroup	Whether the DNS server group is supported	N/A	Boolean: • **true** • **false**	N/A

DNS/DNSIfServer

This table contains DNS server of interface information.

XML structure

```
<DNS>
```

```
  <DNSIfServer>
    <Server>
      <IfIndex></IfIndex>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndexOut></IfIndexOut>
      <IfName></IfName>
      <IfNameOut></IfNameOut>
      <Priority></Priority>
    </Server>
  </DNSIfServer>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSIfServer
Table type	Multi-instance table
Row name	Server
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
Type	DNS server type	Index	Enumeration: • **1**—Static. • **2**—Dynamic.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • **1**—IPv4.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndexOut	Output interface Index	Index	Unsigned integer.	The system returns null if AddressType is 1 or the IpAddress is not a link-local address.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
IfNameOut	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	The system returns null if AddressType is 1 or the IpAddress is not a link-local address.
Priority	Priority of DNS server	N/A	Unsigned integer. Value range: 0 to 5.	The lower the value, the greater the priority. The priority indicates query sequence when resolving a domain name.

DNS/DNSHostAge

This table contains the aging time of a host name.

XML structure

```
<DNS>
  <DNSHostAge>
    <HostAge>
      <VRF></VRF>
      <HostName></HostName>
      <AgingTime></AgingTime>
    </HostAge>
  </DNSHostAge>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSHostAge
Table type	Multi-instance table
Row name	HostAge
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).
AgingTime	Aging time	N/A	Unsigned integer. Value range 0 to 604800.	If AgingTime is set to be 0, it means the host exists permanently.

DNS/DNSServerGroup

This table contains DNS server groups.

XML structure

```
<DNS>
  <DNSServerGroup>
    <ServerGroup>
      <GroupID></GroupID>
      <VRF></VRF>
      <GroupName></GroupName>
    </ServerGroup>
  </DNSServerGroup>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSServerGroup
Table type	Multi-instance table
Row name	ServerGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Index of the DNS server group	Index	Unsigned integer. Value range 1 to 16.	
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
GroupName	The description of the group.	N/A	String, case insensitive. Length: 1 to 253 characters.	

DNS/DNSGroupServer

This table contains DNS servers of a server group.

XML structure

```
<DNS>
  <DNSGroupServer>
    <GroupServer>
      <GroupID></GroupID>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
      <Priority></Priority>
    </GroupServer>
  </DNSGroupServer>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSGroupServer
Table type	Multi-instance table
Row name	GroupServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	DNS server group ID.	Index	Unsigned integer. Value range 1 to 16.	
AddressType	Server address type.	Index	Enumeration: ● **1**—IPv4. ● **2**—IPV6.	The server address type contains only IPv4 and IPv6.
IpAddress	IP address of the DNS server.	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index.	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Priority	Priority of domain name matching.	N/A	Unsigned integer. Value range 0 to 5.	Priority of domain name matching.

DNS/DNSDomainRule

This table will be discarded.It is recommended to use a new table DNSDomainRuleExt.

XML structure

```
<DNS>
  <DNSDomainRule>
    <DomainRule>
      <RuleID></RuleID>
      <DomainName></DomainName>
      <Type></Type>
      <VRF></VRF>
      <ServerGroupID></ServerGroupID>
    </DomainRule>
  </DNSDomainRule>
</DNS>
```

Table description

Item	Description
Feature name	DNS
Table name	DNSDomainRule
Table type	Multi-instance table
Row name	DomainRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Domain name rule ID.	Index	Unsigned integer. Value range 1 to 16.	Domain name rule ID.
DomainName	Domain name.	Index	String, case sensitive. Length: 1 to 253 characters.	Domain name matched by domain name rule.
Type	Domain name type.	N/A	Enumeration: ● **1**—domain. ● **2**—subdomain.	Domain types are divided into domains and subdomains
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the value is null.
ServerGroupID	Index of the DNS server group.	N/A	Unsigned integer. Value range 1 to 16.	Server group bound to domain name rules.

DNS/DNSDomainRuleExt

This table contains the DNS domain rule information.

XML structure

```
<DNS>
  <DNSDomainRuleExt>
    <DomainRule>
      <RuleID></RuleID>
      <Type></Type>
      <DomainName></DomainName>
      <VRF></VRF>
      <ServerGroupID></ServerGroupID>
    </DomainRule>
```

```
  </DNSDomainRuleExt>
</DNS>
```

Table description

DNS host event ····· 1
XML structure for event subscription ····· 1
XML structure for event report ····· 2

DNS host event

This event is used to report dns host information when the address of dns is changed.

XML structure for event subscription

```
<DNSEvent>
  <DNSHost>
      <VRF></VRF>
      <HostName></HostName>
      <HostNameType></HostNameType>
      <QueryType></QueryType>
  </DNSHost>
</DNSEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DNSHost</stream>
    <filter type="subtree">
      <DNSEvent xmlns="http://www.h3c.com/netconf/event:1.0/DNSHost:1.0">
        <DNSHost>
          <VRF></VRF>
          <HostName>baidu.com</HostName>
          <HostNameType>2</HostNameType>
          <QueryType>1</QueryType>
        </DNSHost>
      </DNSEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DNSHost
Event name	DNSEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DNSEvent:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
VRF	VRF instance name	String, case sensitive. Length: 1 to 31 characters.	No

HostName	Host name	String, case insensitive. Length: 1 to 253 characters.	NO
HostNameType	Host name type	Enumeration: • **1**—Full host name. • **2**—Sub host name	NO
QueryType	Query type	Enumeration: • **1**—A. • **2**—AAAA.	NO

XML structure for event report

```
<DNSEvent>
  <DNSHost>
    <HostName></HostName>
    <HostNameType></HostNameType>
    <QueryType></QueryType>
    <Result></Result>
    <HostEvent></HostEvent>
  </DNSHost>
</DNSEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <DNSEvent xmlns="http://www.h3c.com/netconf/event:1.0/DNSEvent:1.0">
    <DNSHost>
      <HostName>baidu.com</HostName>
      <HostNameType>2</HostNameType>
      <QueryType>1</QueryType>
      <Result>1.1.1.1 2.2.2.2</Result>
      <HostEvent>2</HostEvent>
    </DNSHost>
  </DNSEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
HostName	Host name	String, case insensitive. Length: 1 to 253 characters.	NO
HostNameType	Host name type	Enumeration: • **1**—Full host name. • **2**—Sub host name	NO

Column name	Column description	Data type and restrictions	Support for extended queries
QueryType	Query type	Enumeration: • **1**—A. • **2**—AAAA.	NO
Result	Replied result	String, case insensitive.	IPv4 address string as QueryType is A, IPv6 address string as QueryType is AAAA. Result is null as full host is deleted. Separated by space if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3. 1::1 2::2 3::3.
HostEvent	Host event type	Enumeration: • **1**—Update. • **2**—Add • **3**—Delete	Host event can be 1，if host name type equals 1. Host event can be 2,3，if host name type equals 2.

Domain

Domain/Domains

Domain status table.

XML structure

```
<Domain>
  <Domains>
    <Domain>
      <DomainName></DomainName>
      <State></State>
    </Domain>
  </Domains>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters.
State	Status of the domain	N/A	Enumeration: • **0**—Block. • **1**—Active.

Domain/ResetUserRecords

This table clears user online or offline records.

XML structure

```
<Domain>
```

```
  <ResetUserRecords>
      <RecordType></RecordType>
  </ResetUserRecords>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	ResetUserRecords
Table type	Single-instance table
Row name	ResetUserRecord
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RecordType	Type of user records to be cleared	Index	Enumeration: • **0**—Abnormal offline records. • **1**—Normal offline records. • **2**—Offline records. • **3**—Online failure records.

Domain/ActiveWebServers

This table sets active web servers.

XML structure

```
<Domain>
  <ActiveWebServers>
    <ActiveWebServer>
      <DomainName></DomainName>
      <ActiveServer></ActiveServer>
      <ActiveIpv6Server></ActiveIpv6Server>
    </ActiveWebServer>
  </ActiveWebServers>
</Domain>
```

Table description

Item	Description

Domain

Domain/GlobalConfig

Global domain configuration information table.

XML structure

```
<Domain>
  <GlobalConfig>
    <DefaultDomain></DefaultDomain>
    <IfUnknownDomain></IfUnknownDomain>
    <DeviceId></DeviceId>
  </GlobalConfig>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	A maximum of 1024 domains can be created.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultDomain	Default domain	N/A	String, case-insensitive. Length: 1 to 255 characters.	By default, the default domain is the predefined domain named system.
IfUnknownDomain	ISP domain that accommodates users assigned to nonexistent domains	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A
DeviceId	Device ID of the access device	N/A	Unsigned integer. Value range: 1 to 255.	Default: 0.

Domain/SessionLimit

The maximum number of concurrent users that can log on to the device through the specified method.

XML structure

```
<Domain>
  <SessionLimit>
    <Ftp></Ftp>
    <Telnet></Telnet>
    <Http></Http>
    <Ssh></Ssh>
    <Https></Https>
    <Snetconf></Snetconf>
    <Scp></Scp>
    <Sftp></Sftp>
    <Stelnet></Stelnet>
  </SessionLimit>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	SessionLimit
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ftp	Maximum number of concurrent FTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. • In non-FIPS mode, the value for this column can take effect. • In FIPS mode, this column is ignored.
Telnet	Maximum number of concurrent Telnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32. • In non-FIPS mode, the value for this column can take

Column name	Column description	Column type	Data type and restrictions	Remarks
				effect. • In FIPS mode, this column is ignored.
Http	Maximum number of concurrent HTTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. • In non-FIPS mode, the value for this column can take effect. • In FIPS mode, this column is ignored.
Ssh	Maximum number of concurrent SSH users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Https	Maximum number of concurrent HTTPS users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32.
Snetconf	Maximum number of concurrent NETCONF over SSH users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Scp	Maximum number of concurrent SCP users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Sftp	Maximum number of concurrent SFTP users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Stelnet	Maximum number of concurrent Stelnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.

Domain/Domains

Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	A maximum of 1024 domains can be created. The domain named system is predefined and can't be deleted.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	A predefined domain named system exists.
SessTimeIncludeIdle	Whether to include the idle cut period or user online detection period in the user online duration to be sent to the server	N/A	Boolean: • **true**—The idle cut period or user online detection period is included in the user online duration to be sent to the server. • **false**—The idle cut period or **user** online detection period is excluded from the user online duration to be sent to the server.	Default: false. Only portal users support the user online detection period.
AcctStartDelayTime	Delay time for sending accounting-start request message.	N/A	Unsigned integer. Value range: 1 to 300, in seconds.	N/A
AcctStartFailAction	Access control for users that encounter accounting-start failures	N/A	Enumeration: • **0—**Allows the users to stay online. • **1—**Logs off the users.	Default: 0.
AcctUpdateFail	Configuration for users that encounter accounting-updat	Data structure	Members include: • MaxTimes. • AcctUpdateFailAction.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	e failures			
MaxTimes	Maximum number of consecutive accounting-update failures allowed for each user	N/A	Unsigned integer. Value range: 1 to 255.	Default: 1.
AuthenFailOnlineDomain	ISP domain name for auth-fail online	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A
AuthenRadiusRecover	Access control for fail-permit users when a RADIUS authentication server recovers	Data structure	Members include: • Action. • RecoverDomainName	N/A
Action	Action to take on the fail-permit users when a RADIUS authentication server recovers	N/A	Enumeration: • **0**—Allows the users to stay online for reauthentication in a new ISP domain. • **1**—Logs off the users. • **2**—reauth.	N/A
RecoverDomainName	Name of the new ISP domain for the fail-permit users after a RADIUS authentication server recovers	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	RecoverDomain must be set to the same as to DomainName
AuthenRadiusUnavailableDomain	Name of the fail-permit domain for reauthenticating users in this ISP domain when all RADIUS servers in this ISP domain become unavailable	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	N/A
AcctUpdateFailAction	Access control for users that encounter accounting-update failures	N/A	Enumeration: • **0**—Allows the users to stay online. • **1**—Logs off the users.	Default: 0.
ServiceType	Service type of the domain	N/A	Enumeration: • **0**—High-Speed Internet (HSI) service. • **1**—Set Top Box (STB) service. • **2**—Voice over IP (VoIP) service.	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
AccessLimit	Maximum number of concurrent access users	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
UserAddrType	User address type of the domain	N/A	Enumeration: • 0—public-ipv4. • 1—private-ipv4. • 2—public-ds. • 3—private-ds. • 4—ds-lite. • 5—ipv6. • 6—nat64.	N/A
BasicServiceIpType	Basic service IP type	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—IPv4-IPv6. • **4**—IPv6-PD. • **5**—IPv4-IPv6PD. • **6**— IPv6-IPv6PD • **7**— IPv4-IPv6-IPv6PD	N/A
TimeoutDelay time	DHCPv6 request timeout timer	N/A	Unsigned integer. Value range: 30 to 1000, in seconds.	Default: 60 seconds .
AuthorAttrs	Authorization attributes	Data structure	Members include: • AclNumber. • InboundCIR. • InboundPIR. • OutboundCIR. • OutboundPIR. • IdleTime. • IdleFlow. • TrafficDirection. • ProfileName. • IpPoolName. • Ipv4PoolGroupName. • Ipv6PoolName. • Ipv6PoolGroupName • Ipv6Address. • Ipv6PrefixLength. • Ipv6NdPrefixPoolName. • PrimDnsIpaddr. • PrimDnsIpv6addr. • SecDnsIpaddr. • SecDnsIpv6addr. • PortalUrl. • Unlimited. • RedirectTimes • VRF. • IgmpMaxAccessNum.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• MldMaxAccessNum. • SessGroupProfileName. • SessTimeOut. • InboundUserPriority • OutboundUserPriority • UserGroupName • VRF. • IgmpMaxAccessNum. • MldMaxAccessNum. • SessTimeOut. • VsiName. • VlanID. • MicroSegmentID. • AuthorProfile.	
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
InboundCIR	Input information rate and committed information rate	N/A	Unsigned integer.	The InboundCIR, InboundPIR, OutboundCIR, and OutboundPIR columns are strongly correlated. The value for the InboundCIR column must be smaller than or equal to the value for the InboundPIR column. The InboundCIR and OutboundCIR columns must be issued in pairs.
InboundPIR	Input information rate and peak information rate	N/A	Unsigned integer.	N/A
OutboundCIR	Output information rate and committed information rate	N/A	Unsigned integer.	The value for the OutboundCIR column must be smaller than or equal to the value for the OutboundPIR column. The InboundCIR and OutboundCIR columns must be issued in pairs.
OutboundPIR	Output information rate and peak information rate	N/A	Unsigned integer.	N/A
IdleTime	Idle timeout period	N/A	Unsigned integer. Value range: 1 to 129600, in minutes.	N/A
IdleFlow	The minimum traffic that must be generated in	N/A	Unsigned integer. Value range: 1 to 10240000, in	Default: 10240 bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
	the idle timeout period		bytes.	
TrafficDirection	The traffic direction for idle cut	N/A	Enumeration: • **0**—both. • **1**—inbound • **2**—outbound	Default: 0.
ProfileName	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid characters include letters, digits, minus signs (-), dots (.), and underscores (_). The name must start with a letter or a digit, and it cannot be all digits.
IpPoolName	IPv4 address pool name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Ipv4PoolGroupName	IPv4 address pool group name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6PoolName	IPv6 address pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6PoolGroupName	IPv6 address pool group name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address for specifying the prefix	N/A	Hexadecimal string, colon-separated.	For example, `2001:12::22:33`.
Ipv6PrefixLength	IPv6 prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Ipv6NdPrefixPoolName	IPv6 ND prefix pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
PrimDnsIpaddr	IPv4 address of the primary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
PrimDnsIpv6addr	IPv6 address of the primary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecDnsIpaddr	IPv4 address of the secondary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecDnsIpv6addr	IPv6 address of the secondary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
PortalUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
Unlimited	Do not limit the times to redirect each user	N/A	Boolean: • **true**—Enable. • **false**—Disable.(default)	The specific times are specificed by the RedirectTimes parameter,if Unlimited

Column name	Column description	Column type	Data type and restrictions	Remarks
				is false the redirect time default 2.
RedirectTimes	Maximum number of redirects	N/A	Unsigned integer. Value range: 1 to 10.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
IgmpMaxAccessNum	The maximum number of IGMP groups that an IPv4 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
MldMaxAccessNum	The maximum number of MLD groups that an IPv6 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
SessGroupProfileName	Session group profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SessTimeOut	Session timeout timer	N/A	Unsigned integer. Value range: 1 to 4294967295.	Users are logged off when the session timeout timer expires for the users.
InboundUserPriority	Inbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
OutboundUserPriority	Outbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
UserGroupName	User group name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
VsiName	Vsi Name	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A
VlanID	Vlan ID	N/A	Unsigned integer. Value range: 1 to 4094	N/A
MicroSegmentID	Microsegment ID	N/A	Unsigned interger. Value range: 1 to 65535	N/A
AuthorProfile	AuthorProfile	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A
ItaPolicyName	ITA policy name	N/A	String, not case-insensitive. Length: 1 to 31 characters.	Specifies the ITA service policy adopted by the current ISP domain.
Ipv6InterfaceID	Assign interface IDs to PPP users during IPv6CP negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.	When IPv6CP negotiation is configured, the device forcibly assigns an interface ID to a PPP user. It does not accept non-zero and

Column name	Column description	Column type	Data type and restrictions	Remarks
				non-conflicting interface IDs carried in user packets.
RedirectActiveTime	Redirect URL active period	N/A	Unsigned integer. Value range: 1 to 900.	N/A
RedirectMoveTemporary	Enable the temporary redirect feature	N/A	Boolean: • —**true**—Enable. • —**false**—Disable.	Default: false
RedirectSerIpaddr	IPv4 address of the Web server that owns the redirect URL	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
RedirectSerIpv6addr	IPv6 address of the Web server that owns the redirect URL	N/A	IPv6: Hexadecimal string.	IPv6 example: `1:12::22:33`.
ServiceRateLimitMode	The rate limit mode for EDSG services	N/A	Enumeration: • **0**—separate. • **1**—merge.	Default:separate.
WebServerIpaddr	IPv4 address of the Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
WebServerIpv6addr	IPv6 address of the Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecWebServerIpaddr	IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecWebServerIpv6addr	IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
WebServerUrl	The Web server URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified URL does not start with http:// or https://, the system considers that the URL starts with http://.
WebServerTrackId	Track ID for the IPv4 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	This column and the WebServerUrl column must be specified in pairs.
WebServer Ipv6Url	Web server IPv6 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv6 URL does not start with http:// or https://, the system considers that the IPv6 URL starts with http://.
WebServerIpv6TrackId	Track ID for the IPv6 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	This column and the WebServerIpv6Url column must be

Column name	Column description	Column type	Data type and restrictions	Remarks
				specified in pairs.
SecUrlWebServerIpaddr	IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecUrlWebServerIpv6addr	IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecUrlSecWebServerIpaddr	Secondary IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecUrlSecWebServerIpv6addr	Secondary IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecWebServerUrl	Secondary Web server IPv4 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv4 URL does not start with http:// or https://, the system considers that the IPv4 URL starts with http://.
SecWebServerTrackId	Track ID for the secondary IPv4 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	This column and the SecWebServerUrl column must be specified in pairs.
SecWebServerIpv6Url	Secondary Web server IPv6 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv6 URL does not start with http:// or https://, the system considers that the IPv6 URL starts with http://.
SecWebServerIpv6TrackId	Track ID for the secondary IPv6 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	This column and the SecWebServerIpv6Url column must be specified in pairs.
NasIdName	NAS ID	N/A	String, case-insensitive. Length: 1 to 253 characters.	N/A
AcctQuotaOut	Configuration for users that encounter accounting quota-out	Data structure	Members include: • Action. • RedirectUrl • StopAcct • UserProfileName • NoAcctUpdate	N/A
Action	Access control for users that encounter accounting quota-out	N/A	Enumeration: • **0**—online. • **1**—offline. • **2**—redirect-url.	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
RedirectUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
StopAcct	Send stop charging message	N/A	Boolean: • false—Do not send stop charging message. • true—Send stop charging message.	Default: false.
UserProfileName	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
NoAcctUpdate	Do not send accounting update packets to obtain new quotas	N/A	Boolean: • false—Send accounting update packets to obtain new quotas. • true—Do not send accounting update packets to obtain new quotas.	Default: false.
AcctDualStack	Accounting scheme for dual-stack	N/A	Enumeration: • **0**—separate. • **1**—merge.	Default: 1.
UserAutoSave	Whether to enable automatic backup of user information	N/A	Boolean: • **true**—Enable automatic backup of access user information. • **false**—Disable automatic backup of access user information.	Default: true.Transfer control separation environment not supported
CheckInterfaceVPN	Whether to enable strict check for VPN instances associated with the access interfaces	N/A	Boolean: • **true**—Enable strict check for VPN instances associated with the access interfaces. • **false**—Disable strict check for VPN instances associated with the access interfaces.	N/A
DynamicAuthorEffectiveAttrs	Dynamically assigned attributes that will take effect on a user after the user is assigned to this ISP domain from another ISP domain	Data structure	Members include: • Car. • SessGroupProfile. • SessTimeOut.. • Url. • UserPriority. • UserGroup. • UserProfile. • WebServer	N/A
Car	Whether to assign the CAR attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
SessGroupPr	Whether to	N/A	Boolean:	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
ofile	assign the session group profile atttribute through CoA messages		• true. • false.	
SessTimeOut	Whether to assign the session timeout time atttribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
Url	Whether to assign the redirect URL atttribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
UserGroup	Whether to assign the user group attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
UserPriority	Whether to assign the user priority attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
UserProfile	Whether to assign the user profile attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
WebServer	Whether to assign the Web server attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.

Domain/Schemes

Domain scheme table.

XML structure

```
<Domain>
  <Schemes>
    <Scheme>
      <DomainName></DomainName>
      <AaaType></AaaType>
      <AccessType></AccessType>
      <SchemeList></SchemeList>
      <SchemeNameList></SchemeNameList>
```

```
    </Scheme>
  </Schemes>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
AaaType	AAA type	Index	Enumeration: • **0**—Authentication. • **4**—Authorization. • **5**—Accounting.	There are some restrictions among the column AccessType, the column AaaType, and the column SchemeList. Those restrictions will be described in the Restrictions section below the table.
AccessType	Access type	Index	Enumeration: • **0**—Login. • **1**—Super. • **2**—Command. • **3**—LAN access. • **4**—PPP. • **5**—Default. • **6**—Portal. • **7**—IKE. • **8**—IPoE. • **9**—SSL VPN. • **10**—ADVPN. • **11**—ONU. • **12**—PPPoEA	
SchemeList	AAA method types	N/A	String. Length: 1 to 9 characters, using the format of 1-2-4. The hyphen (-) is used to separate the digits that represent different AAA methods, including: • **1**—HWTACACS.	

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—RADIUS. • **3**—LDAP. • **4**—Local. • **5**—None. The string 1-2-4 indicates that HWTACACS is specified as the primary authentication, authorization, or accounting method. If the HWTACACS method fails, the RADIUS method applies. If the RADIUS method fails, the local method applies.	
SchemeNameList	Scheme name list	N/A	String, case-insensitive. Length: 0 to 68 characters, may contain 0 to 2 scheme names. Every scheme name contains two parts: Scheme name length and scheme name string. The scheme name is in the format of xxmm……mm. • The xx argument represents the scheme name length. Use two digits to set the scheme name length. • The mm……mm argument represents the scheme name string. The string is 1 to 32 characters. For example: • The string 08abcdefgh represents a scheme whose name is abcdefgh and whose name length is 8 characters. • The string 10testtestte04test represents two schemes. One scheme is named as testtestte and the name length is 10 characters. The other scheme is named as test and the name length is 4 characters.	If this column is not available, no schemes are specified.

Restrictions:

- The letter Y indicates that a specific access type supports a specific method for authentication, authorization, or accounting.
- You can specify one primary method and multiple backup methods for authentication, authorization, or accounting. An AAA method with a lower level can be the backup of another

method that has a higher level. The following list arranges the methods from high level to low level:

- RADIUS, TACACS, and LDAP.
- Local.
- None.

Among the highest-level methods, the RADIUS method and TACACS method can be the backup of each other.

- In FIPS mode, all access types can't use the none method for authentication, authorization, or accounting.

AAA method (level) / Access type +AAA type		RADIUS (3)	TACACS (3)	LDAP (3)	Local (2)	None (1)
Default	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Login	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Super	Authentication	Y	Y			
Command	Authorization		Y		Y	Y
	Accounting		Y			
LAN access (MAC authentication or 802.1X)	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
PPP	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y	Y	Y	Y
	Accounting	Y	Y		Y	Y
Portal	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
IKE	Authentication	Y			Y	Y
IPoE	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
SSL VPN	Authentication	Y		Y	Y	Y
	Authorization	Y		Y	Y	Y
	Accounting	Y			Y	Y
ADVPN	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y

ONU	Authentication	Y			Y	Y
PPPoEA	Accounting	Y				Y

Domain/BroadcastSchemes

RADIUS broadcast scheme table for a domain.

XML structure

```
<Domain>
  <BroadcastSchemes>
    <BroadcastScheme>
      <DomainName></DomainName>
      <AccessType></AccessType>
      <SchemeName></SchemeName>
    </BroadcastScheme>
  </BroadcastSchemes>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	BroadcastSchemes
Table type	Multi-instance table
Row name	BroadcastScheme
Restrictions	Configure this table only for domains that have been configured RADIUS accounting.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The name can't contain the following characters: \ | / : * ? " < > @	N/A
AccessType	Access type	Index	Enumeration: • **3**—LAN access. • **4**—PPP. • **6**—Portal. • **8**—IPoE.	At present, only one RADIUS broadcast scheme is supported for a domain.

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String. Length: 1 to 32 characters.	

Domain/EnableAbnormalOfflineRecords

This table controls the enabling status of the user abnormal offline recording feature.

XML structure

```
<Domain>
  <EnableAbnormalOfflineRecords>
    <Enable></Enable>
  </EnableAbnormalOfflineRecords>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	EnableAbnormalOfflineRecords
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable the user abnormal offline recording feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The default varies by device model.

Domain/EnableNormalOfflineRecords

This table controls the enabling status of the user normal offline recording feature.

XML structure

```
<Domain>
```

```
  <EnableNormalOfflineRecords>
    <Enable></Enable>
  </EnableNormalOfflineRecords>
</Domain>
```

Enable	Whether to enable the user offline recording feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The default varies by device model.

Domain/EnableOnlineFailRecords

This table controls the enabling status of the user online failure recording feature.

XML structure

```
<Domain>
  <EnableOnlineFailRecords>
    <Enable></Enable>
  </EnableOnlineFailRecords>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	EnableOnlineFailRecords
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable the user online failure recording feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The default varies by device model.

Domain/CriticalProfiles

This table contains critical profile information.

XML structure

```
<Domain>
  <CriticalProfiles>
    <CriticalProfile>
      <ProfileName></ProfileName>
      <DefaultMicroSegment>
        <MicroSegmentID></MicroSegmentID>
        <MicroSegmentVSIName></MicroSegmentVSIName>
        <UrlUserLogoff></UrlUserLogoff>
      </DefaultMicroSegment>
    </CriticalProfile>
  </CriticalProfiles>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	CriticalProfiles
Table type	Multi-instance table
Row name	CriticalProfile
Restrictions	A maximum of 16 critical profiles can be created.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Critical profile name	Index	String. Length: 1 to 31 characters.	N/A
DefaultMicroSegment	Default critical microsegment for users that have failed 802.1X or MAC authentication because of unreachable servers	Data structure	Members include: • MicroSegmentID. • MicroSegmentVSIName. • UrlUserLogoff.	If a user does not match any critical microsegment in the critical profile when it fails authentication because of unreachable servers, the user is assigned to the default critical microsegment.

Column name	Column description	Column type	Data type and restrictions	Remarks
MicroSegmentID	ID of the default critical microsegment	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.	N/A
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on a port when the first user is assigned to the critical microsegment on the port	N/A	Enumeration: • **0**—Keeps the users online (default). • **1**—Logs off the users.	This column is applicable only to MAC authentication users.

Domain/CriticalProfileVRFs

This table contains critical microsegment and VPN instance mapping information in critical profiles.

XML structure

```
<Domain>
  <CriticalProfileVRFs>
    <CriticalProfileVRF>
      <ProfileName></ProfileName>
      <VRF></VRF>
      <MicroSegment>
        <MicroSegmentID></MicroSegmentID>
        <MicroSegmentVSIName></MicroSegmentVSIName>
        <UrlUserLogoff></UrlUserLogoff>
      </MicroSegment>
    </CriticalProfileVRF>
  </CriticalProfileVRFs>
</Domain>
```

Table description

Item	Description

Table name	CriticalProfileVRFs
Table type	Multi-instance table
Row name	CriticalProfileVRF
Restrictions	None
Support for row creation and	Yes

Item	Description
deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Critical profile name	Index	String. Length: 1 to 31 characters.	You must create a critical profile first before you create, merge, or replace vpn-instances for it.
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
MicroSegment	Critical microsegment for users that have failed 802.1X or MAC authentication because of unreachable servers	Data structure	Members include: • MicroSegmentID. • MicroSegmentVSIName. • UrlUserLogoff.	N/A
MicroSegmentID	ID of the critical microsegment	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.	N/A
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on a port when the first user is assigned to the critical microsegment on the port	N/A	Enumeration: • **0**—Keeps the users online (default). • **1**—Logs off the users.	This column is applicable only to MAC authentication users.

Domain/Interfaces

This table contains information about roaming domain on interface.

XML structure

```
<Domain>
  <Interfaces>
    <Interface>
      <IfName></IfName>
      <RoamDomain></RoamDomain>
```

```
    </Interface>
  </Interfaces>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String, case-insensitive. Length: 1 to 47 characters.	N/A
RoamDomain	Roming domain on interface	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A

Domain/AuthorProfiles

This table contains author profile information.

XML structure

```
<Domain>
  <AuthorProfiles>
    <AuthorProfile>
      <ProfileName></ProfileName>
      <DefaultMicroSegment>
        <MicroSegmentID></MicroSegmentID>
        <MicroSegmentVSIName></MicroSegmentVSIName>
        <UrlUserLogoff></UrlUserLogoff>
      </DefaultMicroSegment>
    </AuthorProfile>
  </AuthorProfiles>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	AuthorProfiles
Table type	Multi-instance table
Row name	AuthorProfile
Restrictions	A maximum of 16 Author profiles can be created.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Author profile name	Index	String. Length: 1 to 31 characters.	N/A
DefaultMicroSegment	Default author microsegment for users that have failed 802.1X or MAC or WEB authentication	Data structure	Members include: • MicroSegmentID. • MicroSegmentVSIName. • UrlUserLogoff.	If a user does not match any author microsegment in the author profile when it fails authentication, the user is assigned to the default author microsegment.
MicroSegmentID	ID of the default author microsegment	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.	N/A
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on a port when the first user is assigned to the author microsegment	N/A	Enumeration: • **0**—Keeps the users online (default). • **1**—Logs off the users.	This column is applicable only to MAC authentication users.

Domain/AuthorProfileVRFs

This table contains author microsegment and VPN instance mapping information in author profiles.

XML structure

```
<Domain>
```

```
  <AuthorProfileVRFs>
    <AuthorProfileVRF>
      <ProfileName></ProfileName>
      <VRF></VRF>
      <MicroSegment>

Domain

Domain/GlobalConfig

Global domain configuration information table.

XML structure

```
<Domain>
  <GlobalConfig>
    <DefaultDomain></DefaultDomain>
    <IfUnknownDomain></IfUnknownDomain>
    <UserMaxSessNoFamily></UserMaxSessNoFamily>
    <DeviceId></DeviceId>
  </GlobalConfig>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	A maximum of 1024 domains can be created.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultDomain	Default domain.	N/A	String, case-insensitive. Length: 1 to 255 characters.	By default, the default domain is the predefined domain named system.
IfUnknownDomain	ISP domain that accommodates users assigned to nonexistent domains.	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	N/A
UserMaxSessNoFamily	Whether to process shared-account users as non-family users	N/A	Boolean: • true. • false.	N/A
DeviceId	Device ID of the access device	N/A	Unsigned integer. Value range: 1 to 255.	Default: 0.

Domain/SessionLimit

The maximum number of concurrent users that can log on to the device through the specific method.

XML structure

```
<Domain>
  <SessionLimit>
    <Ftp></Ftp>
    <Telnet></Telnet>
    <Http></Http>
    <Ssh></Ssh>
    <Https></Https>
    <Snetconf></Snetconf>
    <Scp></Scp>
    <Sftp></Sftp>
    <Stelnet></Stelnet>
  </SessionLimit>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	SessionLimit
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ftp	Maximum number of concurrent FTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. • In non-FIPS mode, the value for this column can take effect. • In FIPS mode, this column is ignored.
Telnet	Maximum number of concurrent Telnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32. • In non-FIPS mode, the value for this column can take effect. • In FIPS mode, this

Column name	Column description	Column type	Data type and restrictions	Remarks
				column is ignored.
Http	Maximum number of concurrent HTTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. • In non-FIPS mode, the value for this column can take effect. • In FIPS mode, this column is ignored.
Ssh	Maximum number of concurrent SSH users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Https	Maximum number of concurrent HTTPS users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32.
Snetconf	Maximum number of concurrent NETCONF over SSH users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Scp	Maximum number of concurrent SCP users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Sftp	Maximum number of concurrent SFTP users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Stelnet	Maximum number of concurrent Stelnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.

Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	A maximum of 1024 domains can be created. The domain named system is predefined and cannot be deleted.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	A predefined domain named system exists.
SessTimeIncludeIdle	Whether to include the idle cut period or user online detection period in the user online duration to be sent to the server	N/A	Boolean: • true—The idle cut period or user online detection period is included in the user online duration to be sent to the server. • false—The idle cut period or user online detection period is excluded from the user online duration to be sent to the server.	Default: false. Only portal users support the user online detection period.
State	Status of the domain	N/A	Enumeration: • **0**—Blocked. • **1**—Active.	Default: 1.
AcctStartFail	Access control	N/A	Enumeration:	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	for users that encounter accounting-start failures		• **0**—Allows the users to stay online. • **1**—Logs off the users.	
AcctUpdateFail	Configuration for users that encounter accounting-update failures	Data structure	Members include: • MaxTimes. • AcctUpdateFailAction.	N/A
AuthenFailOnlineDomain	ISP domain name for auth-fail online	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A
AuthenRadiusRecover	Access control for fail-permit users when a RADIUS authentication server recovers	Data structure	Members include: • Action. • RecoverDomainName.	N/A
Action	Action to take on the fail-permit users when a RADIUS authentication server recovers	N/A	Enumeration: • **0**—Allows the users to stay online for reauthentication in a new ISP domain. • **1**—Logs off the users. • **2**—reauth.	N/A
RecoverDomainName	Name of the new ISP domain for the fail-permit users after a RADIUS authentication server recovers	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	RecoverDomain must be set to the same as to DomainName
AuthenRadiusUnavailableDomain	Name of the fail-permit domain for reauthenticating users in this ISP domain when all RADIUS servers in this ISP domain become unavailable	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \ | / : * ? " < > @	N/A
MaxTimes	Maximum number of consecutive accounting-update failures allowed for each user	N/A	Unsigned integer. Value range: 1 to 255.	Default: 1.
AcctUpdateFailAction	Access control for users that encounter accounting-update failures	N/A	Enumeration: • **0**—Allows the users to stay online. • **1**—Logs off the users.	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Service type of the domain	N/A	Enumeration: • **0**—High-Speed Internet (HSI) service. • **1**—Set Top Box (STB) service. • **2**—Voice over IP (VoIP) service.	Default: 0.
AccessLimit	Maximum number of concurrent access users	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
UserAddrType	User address type of the domain	N/A	Enumeration: • **0**—public-ipv4. • **1**—private-ipv4. • **2**—public-ds. • **3**—private-ds. • **4**—ds-lite. • **5**—ipv6. • **6**—nat64.	N/A
BasicServiceIpType	Basic service IP type	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6. • **3**—IPv4-IPv6. • **4**—IPv6-PD. • **5**—IPv4-IPv6PD. • **6**—IPv6-IPv6PD • **7**—IPv4-IPv6-IPv6PD	N/A
TimeoutDelay time	DHCPv6 request timeout timer	N/A	Unsigned integer. Value range: 30 to 1000, in seconds.	Default: 60 seconds .
AuthorAttrs	Authorization attributes	Data structure	Members include: • AclNumber. • InboundCIR. • InboundPIR. • OutboundCIR. • OutboundPIR. • IdleTime. • IdleFlow. • TrafficDirection. • ProfileName. • IpPoolName. • Ipv4PoolGroupName. • Ipv6PoolName. • Ipv6PoolGroupName • Ipv6Address. • Ipv6PrefixLength. • Ipv6NdPrefixPoolName. • PrimDnsIpaddr. • PrimDnsIpv6addr.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• SecDnsIpaddr. • SecDnsIpv6addr. • PortalUrl. • Unlimited. • RedirectTimes • VRF. • IgmpMaxAccessNum. • MldMaxAccessNum. • SessGroupProfileName. • SessTimeOut. • InboundUserPriority • OutboundUserPriority • UserGroupName • AuthorProflie	
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
InboundCIR	Input information rate and committed information rate	N/A	Unsigned integer.	The InboundCIR, InboundPIR, OutboundCIR, and OutboundPIR columns are strongly correlated. The value for the InboundCIR column must be smaller than or equal to the value for the InboundPIR column. The InboundCIR and OutboundCIR columns must be issued in pairs.
InboundPIR	Input information rate and peak information rate	N/A	Unsigned integer.	N/A
OutboundCIR	Output information rate and committed information rate	N/A	Unsigned integer.	The value for the OutboundCIR column must be smaller than or equal to the value for the OutboundPIR column. The InboundCIR and OutboundCIR columns must be issued in pairs.
OutboundPIR	Output information rate and peak information rate	N/A	Unsigned integer.	N/A
IdleTime	Idle timeout period	N/A	Unsigned integer. Value range: 1 to 129600, in minutes.	N/A
IdleFlow	The minimum traffic that must be generated in	N/A	Unsigned integer. Value range: 1 to 10240000, in	Default: 10240 bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
	the idle timeout period		bytes.	
TrafficDirection	The traffic direction for idle cut	N/A	Enumeration: • **0**—both. • **1**—inbound • **2**—outbound	Default: 0.
ProfileName	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid characters include letters, digits, minus signs (-), dots (.), and underscores (_). The name must start with a letter or a digit, and it cannot be all digits.
IpPoolName	IPv4 address pool name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Ipv4PoolGroupName	IPv4 address pool group name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6PoolName	IPv6 address pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6PoolGroupName	IPv6 address pool group name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address for specifying the prefix	N/A	Hexadecimal string, colon-separated.	For example, `2001:12::22:33`.
Ipv6PrefixLength	IPv6 prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Ipv6NdPrefixPoolName	IPv6 ND prefix pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
PrimDnsIpaddr	IPv4 address of the primary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
PrimDnsIpv6addr	IPv6 address of the primary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 1:2:3:4:5:6:7:8.
SecDnsIpaddr	IPv4 address of the secondary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
SecDnsIpv6addr	IPv6 address of the secondary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 1:2:3:4:5:6:7:8.
PortalUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
Unlimited	Do not limit the times to redirect each user	N/A	Boolean: • **true**—Enable. • **false**—Disable.(default)	The specific times are specificed by the RedirectTimes parameter,if Unlimited

Column name	Column description	Column type	Data type and restrictions	Remarks
				is false the redirect time default 2.
RedirectTimes	Maximum number of redirects	N/A	Unsigned integer. Value range: 1 to 10.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
IgmpMaxAccessNum	The maximum number of IGMP groups that an IPv4 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
MldMaxAccessNum	The maximum number of MLD groups that an IPv6 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
SessGroupProfileName	Session group profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SessTimeOut	The users will be offline when the time is over	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
InboundUserPriority	Inbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
OutboundUserPriority	Outbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
UserGroupName	User-group name	N/A	String, not case-insensitive. Length: 1 to 32 characters.	N/A
VsiName	Vsi Name	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A
VlanID	Vlan ID	N/A	Unsigned integer. Value range: 1 to 4094	N/A
MicroSegmentID	Microsegment ID	N/A	Unsigned interger. Value range: 1 to 65535	N/A
AuthorProfile	AuthorProfile	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A
ItaPolicyName	ITA policy name	N/A	String, not case-insensitive. Length: 1 to 31 characters.	Specifies the ITA service policy adopted by the current ISP domain.
Ipv6InterfaceID	Assign interface IDs to PPP users during IPv6CP negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.	When IPv6CP negotiation is configured, the device forcibly assigns an interface ID to a PPP user. It does not accept non-zero and non-conflicting interface

Column name	Column description	Column type	Data type and restrictions	Remarks
				IDs carried in user packets.
RedirectActiveTime	Redirect URL active period	N/A	Unsigned integer. Value range: 1 to 900.	N/A
RedirectMoveTemporary	Enable the temporary redirect feature	N/A	Boolean: • —**true**—Enable. • —**false**—Disable.	N/A
RedirectSerIpaddr	IPv4 address of the Web server that owns the redirect URL	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
RedirectSerIpv6addr	IPv6 address of the Web server that owns the redirect URL	N/A	IPv6: Hexadecimal string.	IPv6 example: `21:12::22:33`.
ServiceRateLimitMode	The rate limit mode for EDSG services	N/A	Enumeration: • **0**—separate. • **1**—merge.	N/A
WebServerIpaddr	IPv4 address of the Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
WebServerIpv6addr	IPv6 address of the Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecWebServerIpaddr	IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecWebServerIpv6addr	IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
WebServerUrl	The Web server URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified URL does not start with http:// or https://, the system considers that the URL starts with http://.
WebServerTrackId	Track ID for the IPv4 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
WebServerIpv6Url	Web server IPv6 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv6 URL does not start with http:// or https://, the system considers that the IPv6 URL starts with http://.
WebServerIpv6TrackId	Track ID for the IPv6 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
SecUrlWebServerIpaddr	IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.

Column name	Column description	Column type	Data type and restrictions	Remarks
SecUrlWebServerIpv6addr	IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecUrlSecWebServerIpaddr	Secondary IPv4 address of the secondary Web server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
SecUrlSecWebServerIpv6addr	Secondary IPv6 address of the secondary Web server	N/A	IPv6: Hexadecimal string.	IPv6 example: `2001:12::22:33`.
SecWebServerUrl	Secondary Web server IPv4 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv4 URL does not start with http:// or https://, the system considers that the IPv4 URL starts with http://.
SecWebServerTrackId	Track ID for the secondary IPv4 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
SecWebServerIpv6Url	Secondary Web server IPv6 URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	It should start with http:// or https://. If the specified IPv6 URL does not start with http:// or https://, the system considers that the IPv6 URL starts with http://.
SecWebServerIpv6TrackId	Track ID for the secondary IPv6 Web server	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
NasIdName	NAS ID	N/A	String, case-insensitive. Length: 1 to 253 characters.	N/A
AcctQuotaOut	Configuration for users that encounter accounting quota-out	Data structure	Members include: • Action. • RedirectUrl • StopAcct • UserProfileName NoAcctUpdate	N/A
Action	Access control for users that encounter accounting quota-out	N/A	Enumeration: • **0**—online. • **1**—offline. • **2**—redirect-url.	N/A
RedirectUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
StopAcct	Send stop charging message	N/A	Boolean: • false—Do not send stop charging message.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• true—Send stop charging message.	
UserProfileName	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
NoAcctUpdate	Do not send accounting update packets to obtain new quotas	N/A	Boolean: • false—Send accounting update packets to obtain new quotas. • true—Do not send accounting update packets to obtain new quotas.	N/A
AcctDualStack	Accounting scheme for dual-stack	N/A	Enumeration: • **0**—separate. • **1**—merge.	N/A
UserSession	Shared-account user parameters	Data structure	Members include: • MaxNumber. • CaseInsensitive.	N/A
MaxNumber	Set the maximum number of concurrent logins for a user account	N/A	Unsigned integer. Value range: 1 to 512.	N/A
CaseInsensitive	Whether to not use capitalization to differentiate usernames	N/A	Boolean: • **true**—Not use capitalization to differentiate usernames. • **false**—Use capitalization to differentiate usernames.	N/A
AuthCustSessTimeout	Authorization session timeout timer for none-authentication users	N/A	Unsigned integer. Value range: 1 to 4294967294, in seconds.	N/A
L2tpForce	Whether to enable forcible use of RADIUS server-authorized L2TP attributes	N/A	Boolean: • **ture**—Enabled. • **false**—Disabled.	N/A
L2tpGroup	L2TP group specified for the ISP domain	Data structure	Members include: • Name. • Number.	N/A
Name	L2TP group name	N/A	String,case-sensitive. Length: 1 to 32 characters.	N/A
Number	L2TP group number	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
IPv6NdAutoMFlag	Whether to set the managed	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address configuration flag (M) to 1 in RA advertisements to be sent		• **true**. • **false**.	
IPv6NdAutoOFlag	Whether to set the other stateful configuration flag (O) to 1 in RA advertisements to be sent	N/A	Boolean: • **true**. • **false**.	N/A
UserAutoSave	Whether to enable automatic backup of user information	N/A	Boolean: • **true**—Enable automatic backup of access user information. • **false**—Disable automatic backup of access user information.	N/A
CheckInterfaceVPN	Whether to enable strict check for VPN instances associated with the access interfaces	N/A	Boolean: • **true**—Enable strict check for VPN instances associated with the access interfaces. • **false**—Disable strict check for VPN instances associated with the access interfaces.	N/A
DynamicAuthorEffectiveAttrs	Dynamically assigned attributes that will take effect on a user after the user is assigned to this ISP domain from another ISP domain	Data structure	Members include: • Car. • SessGroupProfile. • SessTimeOut. • Url. • UserPriority. • UserGroup. • UserProfile. • WebServer.	N/A
Car	Whether to assign the CAR attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
SessGroupProfile	Whether to assign the session group profile atttribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
SessTimeOut	Whether to assign the session timeout time atttribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
Url	Whether to	N/A	Boolean:	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	assign the redirect URL atttribute through CoA messages		• true. • false	
UserGroup	Whether to assign the user group attribute through CoA messages	N/A	Boolean: • true. • False.	Default: false.
UserPriority	Whether to assign the user priority attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
UserProfile	Whether to assign the user profile attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.
WebServer	Whether to assign the Web server attribute through CoA messages	N/A	Boolean: • true. • false.	Default: false.

Domain/Schemes

Domain scheme table.

XML structure

```
<Domain>
  <Schemes>
    <Scheme>
      <DomainName></DomainName>
      <AaaType></AaaType>
      <AccessType></AccessType>
      <SchemeList></SchemeList>
      <SchemeNameList></SchemeNameList>
    </Scheme>
  </Schemes>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	Schemes

Table type	Multi-instance table
Row name	Scheme
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
AaaType	AAA type.	Index	Enumeration: • 0—Authentication. • 4—Authorization. • 5—Accounting.	There are some restrictions among the columns AccessType, AaaType, and SchemeList. Those restrictions will be described in the Restrictions section below the table.
AccessType	Access type.	Index	Enumeration: • 0—Login. • 1—Super. • 2—Command. • 3—LAN access. • 4—PPP. • 5—Default. • 6—Portal. • 7—IKE. • 8—IPoE. • 9—SSL VPN. • 10—ADVPN. • 11—ONU. • 12—PPPoEA	
SchemeList	AAA method types.	N/A	String. Length: 1 to 9 characters, using the format of 1-2-4. A hyphen (-) is used to separate the digits that represent different AAA methods, including: • 1—HWTACACS. • 2—RADIUS. • 3—LDAP. • 4—Local. • 5—None. The string 1-2-4 indicates that HWTACACS is specified as the primary authentication, authorization, or accounting method. If the HWTACACS method fails, the RADIUS method applies. If the RADIUS method fails, the local method applies.	
SchemeNam	Scheme name	N/A	String, case-insensitive.	If this column is not available, no schemes

Column name	Column description	Column type	Data type and restrictions	Remarks
eList	list.		Length: 0 to 68 characters, which can contain 0 to 2 scheme names. Every scheme name contains two parts: Scheme name length and scheme name string. The scheme name is in the format of xxmm……mm. • The xx argument represents the scheme name length. Use two digits to set the scheme name length. • The mm……mm argument represents the scheme name string. The string is 1 to 32 characters. For example: • The string 08abcdefgh represents a scheme whose name is abcdefgh and whose name length is 8 characters. • The string 10testtestte04test represents two schemes. One scheme is named as testtestte and the name length is 10 characters. The other scheme is named as test and the name length is 4 characters.	are specified.

Restrictions:

- The letter Y indicates that a specific access type supports a specific method for authentication, authorization, or accounting.
- You can specify one primary method and multiple backup methods for authentication, authorization, or accounting. An AAA method with a lower level can be the backup of another method that has a higher level. The following list arranges the methods from high level to low level:
  - RADIUS, TACACS, or LDAP.
  - Local.
  - None.

  Among the highest-level methods, the RADIUS method and the TACACS method can be the backup of each other.
- In FIPS mode, all access types cannot use the none method for authentication, authorization, or accounting.

AAA method (level) Access type +AAA type	RADIUS (3)	TACACS (3)	LDAP (3)	Local (2)	None (1)

Default	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Login	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Super	Authentication	Y	Y			
Command	Authorization		Y		Y	Y
	Accounting		Y			
LAN access (MAC authentication or 802.1X)	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
PPP	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y	Y	Y	Y
	Accounting	Y	Y		Y	Y
Portal	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
IKE	Authentication	Y			Y	Y
IPoE	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
SSL VPN	Authentication	Y		Y	Y	Y
	Authorization	Y		Y	Y	Y
	Accounting	Y			Y	Y
ADVPN	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
ONU	Authentication	Y			Y	Y
PPPoEA	Accounting	Y				Y

Domain/BroadcastSchemes

RADIUS broadcast scheme table for a domain.

XML structure

```
<Domain>
  <BroadcastSchemes>
```

```
    <BroadcastScheme>
      <DomainName></DomainName>
      <AccessType></AccessType>
      <SchemeName></SchemeName>
    </BroadcastScheme>
  </BroadcastSchemes>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	BroadcastSchemes
Table type	Multi-instance table
Row name	BroadcastScheme
Restrictions	Configure this table only for domains that have been configured RADIUS accounting.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The name can't contain the following characters: \ | / : * ? " < > @	N/A
AccessType	Access type.	Index	Enumeration: • 3—LAN access. • 4—PPP. • 6—Portal. • 8—IPoE.	At present, only one RADIUS broadcast scheme is supported for a domain.
SchemeName	RADIUS scheme name.	Index	String. Length: 1 to 32 characters.	

Domain/Specification

The domain feature capability differs on different devices or on the same device in different states.

- Additional description for the table Domain/SessionLimit, including what service types are supported on the device in the current state. The device can limit the number of concurrent online users only for the service types that are supported in the current state.
- Additional description for the table Domain/Schemes. Whether the device supports the none method as the authentication, authorization, or accounting method.

XML structure

```
<Domain>

      </DefaultMicroSegment>
    </AuthorProfile>
  </AuthorProfiles>
</Domain>
```

Table description

Item	Description
Feature name	Domain
Table name	AuthorProfiles
Table type	Multi-instance table
Row name	AuthorProfile
Restrictions	A maximum of 16 author profiles can be created.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Author profile name	Index	String. Length: 1 to 31 characters.	N/A
DefaultMicroSegment	Default author microsegment for users that have failed 802.1X or MAC or WEB authentication	Data structure	Members include: • MicroSegmentID. • MicroSegmentVSIName. • UrlUserLogoff.	If a user does not match any author microsegment in the author profile when it fails authentication, the user is assigned to the default author microsegment.
MicroSegmentID	ID of the default author microsegment	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MicroSegmentVSIName	VSI name used to match user packets in VSIs	N/A	String. Length: 1 to 31 characters.	N/A
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on a port when the first user is assigned to the author microsegment	N/A	Enumeration: **0**—Keeps the users online **1**—Logs off the users.	This column is applicable only to MAC authentication users.

Domain/AuthorProfileVRFs

This table contains author microsegment and VPN instance mapping information in author profiles.

XML structure

```
<Domain>
  <AuthorProfileVRFs>
    <AuthorProfileVRF>
      <ProfileName></ProfileName>
      <VRF></VRF>
      <MicroSegment>

  <ClearInterStatistics>
    <Interface>
      <IfIndex></IfIndex>
```

```
      <Clear></Clear>
    </Interface>
  </ClearInterStatistics>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	ClearInterStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Resets the interface's statistics or guest VLAN's users.	Index	Unsigned integer.
Clear	Clears the interface's statistics.	N/A	• This column must be empty

Dot1X/ResetGVLANUser

This table resets Dot1X interface's all users in guest VLAN.

XML structure

```
<Dot1X>
  <ResetGVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <ResetAll></ResetAll>
    </Interface>
  </ResetGVLANUser>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	ResetGVLANUser
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Clears the interface's guest VLAN's users.	Index	Unsigned integer.
ResetAll	Resets the interface' users in guest VLAN.	N/A	• This column must be empty

Dot1X/ResetOneGVLANUser

This table resets one of Dot1X interface users of guest VLAN.

XML structure

```
<Dot1X>
  <ResetOneGVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <UserMAC></UserMAC>
      <Reset></Reset>
    </Interface>
  </ResetOneGVLANUser>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	ResetOneGVLANUser
Table type	Multi-instance table

Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Resets the interface's guest VLAN's user.	Index	Unsigned integer.
UserMAC	The designated user's MAC.	Index	MAC address
Reset	Resets the interface's designated user in guest VLAN	N/A	• This column must be empty

Dot1X/ResetAccessUsers

This table logs off online 802.1X users.

XML structure

```
<Dot1X>
  <ResetAccessUsers>
    <IfIndex></IfIndex>
    <MAC></MAC>
    <UserName></UserName>
    <Vlan></Vlan>
    <Vsi></Vsi>
    <MicroSegmentID></MicroSegmentID>
    <OnlineType></OnlineType>
  </ResetAccessUsers>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	ResetAccessUsers
Table type	Single-instance table

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	N/A	Unsigned integer.
MAC	User MAC address	N/A	MAC address.
UserName	Username	N/A	String. Length: 1 to 253 characters.
Vlan	User VLAN	N/A	Unsigned integer. Value range: 1 to 4094.
Vsi	User VSI name	N/A	String. Length: 1 to 31 characters.
MicroSegmentID	User microsegment ID	N/A	Unsigned integer. Value range: 1 to 65535.
OnlineType	Type of online users	N/A	Enumeration: • 1—Successful. • 2—Preauth domain. • 3—Auth-Fail domain. • 4—Critical domain.

  </Protocol>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	Protocol
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable 802.1X globally	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
AuthenMethod	Authentication method of 802.1X	N/A	Enumeration: • **1**—CHAP (default). • **2**—PAP. • **3**—EAP.
DomainDelimiterAt	Delimiter "@" between username and domain name	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.
DomainDelimiterSlash	Delimiter "/" between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
DomainDelimiterBackslash	Delimiter "\" between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
DomainDelimiterDot	Delimiter "." between username and domain	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
QuietEnable	Whether to enable the 802.1X quiet feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
QuietInterval	Quiet timer value	N/A	Unsigned integer Value range: 10 to 120 seconds. Default: 60 seconds.
HandshakeInterval	Handshake timer value	N/A	Unsigned integer. Value range: 5 to 1024 seconds. Default: 15 seconds.
ReauthenInterval	Periodic reauthentication timer value	N/A	Unsigned integer. Value range: 60 to 86400 seconds. Default: 3600 seconds.
ServerInterval	Server timeout timer value	N/A	Unsigned integer. Value range: 100 to 300 seconds. Default: 100 seconds.
SupplicantInterval	Client timeout timer value	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 1 to 120 seconds. Default: 30 seconds.
ReqIDInterval	Username request timeout timer value	N/A	Unsigned integer. Value range: 1 to 120 seconds. Default: 30 seconds.
RequestRetryCount	Maximum number of attempts for sending an authentication request to a client	N/A	Unsigned integer. Value range: 1 to 10. Default: 2.
GVlanInterval	User aging timer value for 802.1X guest VLANs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
GVsiInterval	User aging timer value for 802.1X guest VSIs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.

Dot1X/EAD

This table contains 802.1X EAD assistant parameters.

XML structure

```
<Dot1X>
  <EAD>
    <AssistEnable></AssistEnable>
    <AssistURL></AssistURL>
    <AuthenEscapePermit></AuthenEscapePermit>
  </EAD>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	EAD
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
AssistEnable	Whether to enable the EAD assistant feature	N/A	Boolean: • **true**—Enabled • **false**—Disabled(default)
AssistURL	Redirect URL used with EAD assistant	N/A	String. Length: 1 to 64 characters.
AuthenEscapePermit	Whether to permit authentication escape.	N/A	Boolean: • **true**—Enabled • **false—Disabled**

Dot1X/EADFreeIPs

This table contains 802.1X EAD assistant free IPs.

XML structure

```
<Dot1X>
  <EADFreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </EADFreeIPs>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	EADFreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IPv4Address	IP address used in the EAD assistant feature	Index	String, dotted decimal notation.
IPv4Mask	IP address mask	Index	Ipv4Mask.

Dot1X/EADFreeMicroSegments

This table contains parameters about 802.1X EAD assistant free microsegments.

XML structure

```
<Dot1X>
  <EADFreeMicroSegments>
    <EADFreeMicroSegment>
      <FreeMicroSegmentID></FreeMicroSegmentID>
    </EADFreeMicroSegment>
  </EADFreeMicroSegments>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	EADFreeMicroSegments
Table type	Multi-instance table
Row name	EADFreeMicroSegment
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FreeMicroSegmentID	Microsegment ID used in the EAD assistant feature	Index	Unsigned integer. Value range: 1 to 65535.

Dot1X/Smarton

This table contains 802.1X SmartOn information. The table is only supported by NEC device.

XML structure

```
<Dot1X>
  <Smarton>
    <SwitchID></SwitchID>
    <Password></Password>
    <RetryCount></RetryCount>
  </Smarton>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	Smarton
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SwitchID	SmartOn switch ID	N/A	String. • Length: 1 to 30 characters.
Password	SmartOn password	N/A	String. Length: 1 to 16 characters. Not return.
RetryCount	Maximum number of attempts for retransmitting an EAP-Request/Notification packet to a client	N/A	Unsigned integer. Value range: 1 to 10. Default: 3.

Dot1X/Interfaces

This table contains interface-specific 802.1X information.

XML structure

```
<Dot1X>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
```

```
      <Enable></Enable>
      <SmartonEnable></SmartonEnable>

      <GVsiDelayNewMACEnable></GVsiDelayNewMACEnable>
      <AuthServerUnReachEscape></AuthServerUnReachEscape>
    </Interface>
  </Interfaces>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Whether to enable 802.1X on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
SmartonEnable	Whether to enable the SmartOn feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
PortControl	Port control status of the interface	N/A	Enumeration: • **1**—authorized-force. • **2**—unauthorized-force. • **3**—auto (default).
PortMethod	Control method of the interface	N/A	Enumeration: • **1**—Port-based. • **2**—MAC-based (default).
ReauthenEnable	Whether to enable periodic reauthentication	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
FailVLAN	VLAN for users that have failed 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094. Default: No 802.1X Auth-Fail VLAN is configured.
CriticalVLAN	VLAN for users that have failed 802.1X authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094. Default: No 802.1X critical VLAN is configured.
GuestVLAN	VLAN used before 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094. Default: No 802.1X guest VLAN is configured.
FailVSI	VSI for users that have failed 802.1X authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
CriticalVSI	VSI for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GuestVSI	VSI with restricted services for non-authenticated 802.1X users	N/A	String. Length: 1 to 31 characters.
CriticalEapol	Whether to enable the device to send an EAP-Success packet to	N/A	Boolean: • **true**—Enabled.

Column name	Column description	Column type	Data type and restrictions
	an 802.1X client when its client user is assigned to the critical VLAN or VSI on the interface		• **false**—Disabled (default).
HandshakeEnable	Whether to enable the online user handshake feature	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.
SecHandshakeEnable	Whether to enable the online user handshake security feature	N/A	Boolean: • **true**—Enabled • **false**—Disabled(default)
ReauthUnreachableMode	Whether to allow authenticated 802.1X users to stay online when no server is reachable to perform 802.1X reauthentication for these users	N/A	Enumeration: • **0**—Offline (default). • **1**—Online.
MandDomain	Mandatory authentication domain on this interface	N/A	String. Length: 1 to 255 characters.
MaxUser	Maximum number of users allowed on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 4294967295.
MaxPreAuthUser	Maximum number of preauth-domain users allowed on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 4294967295.
MaxAuthFailUser	Maximum number of auth-fail-domain users allowed on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295. • Default: 4294967295.
MulticastTrigger	Enabling status of multicast trigger on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
UnicastTrigger	Whether to enable unicast trigger on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
CriticalMicroSegment	Microsegment for users that have failed 802.1X authentication because of unreachable servers	Data structure	N/A
CriticalMicroSegmentID	VSI name for the critical microsegment	N/A	Unsigned integer. Value range: 1 to 65535.
MicroSegmentVSIName	VSI name for critical micro-segment	N/A	String. Length: 1 to 31 characters.
CriticalProfile	Critical profile for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GVlanDelayEapolEnab	Whether to enable	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
le	EAPOL-triggered 802.1X guest VLAN assignment delay on the interface		• **true**—Enabled. • **false**—Disabled (default).
GVlanDelayNewMACEnable	Whether to enable new MAC-triggered 802.1X guest VLAN assignment delay on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
GVsiDelayEapolEnable	Whether to enable EAPOL-triggered 802.1X guest VSI assignment delay on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
GVsiDelayNewMACEnable	Whether to enable new MAC-triggered 802.1X guest VSI assignment delay on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0—**Disable online users to bypass offline detection when all authentication servers are unavailable. • **1—**Enable online users to bypass offline detection and stay online when all authentication servers are unavailable.

Table description

Item	Description
Feature name	Dot1X
Table name	Protocol
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether 802.1X is enabled globally	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
AuthenMethod	Authentication method of 802.1X	N/A	Enumeration: • **1**—CHAP. • **2**—PAP. • **3**—EAP.
DomainDelimiterAt	Delimiter “@” between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
DomainDelimiterSlash	Delimiter “/” between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
DomainDelimiterBackslash	Delimiter “\” between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
DomainDelimiterDot	Delimiter “.” between username and domain name	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
QuietEnable	Status of the 802.1X quiet feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
QuietInterval	Quiet timer value	N/A	Unsigned integer. Value range: 10 to 120 seconds.
HandshakeInterval	Handshake timer value	N/A	Unsigned integer. Value range: 5 to 1024 seconds.
ReauthenInterval	Periodic reauthentication timer value	N/A	Unsigned integer. Value range: 60 to 86400 seconds.
ServerInterval	Server timeout timer value	N/A	Unsigned integer. Value range: 100 to 300 seconds.
SupplicantInterval	Client timeout timer value	N/A	Unsigned integer. Value range: 1 to 120 seconds.
ReqIDInterval	Username request timeout timer value	N/A	Unsigned integer. Value range: 1 to 120 seconds.
RequestRetryCount	Maximum number of attempts for sending an authentication request to a client	N/A	Unsigned integer. Value range: 1 to 10.

Column name	Column description	Column type	Data type and restrictions
OnlineUserNum	Current online user count	N/A	Unsigned integer.
GVlanInterval	User aging timer value for 802.1X guest VLANs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
GVsiInterval	User aging timer value for 802.1X guest VSIs	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.

Dot1X/EAD

This table contains 802.1X EAD assistant information.

XML structure

```
<Dot1X>
  <EAD>
    <AssistEnable></AssistEnable>
    <AssistURL></AssistURL>
    <AuthenEscapePermit></AuthenEscapePermit>
  </EAD>
</Dot1X>
```

Table description

Item	Description
Feature name	Dot1X
Table name	EAD
Table type	Single-instance table
Row name	None
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
AssistEnable	Status of the EAD assistant feature	N/A	Boolean: • **true**—Enabled • **false**—Disabled.
AssistURL	Redirect URL used with EAD assistant	N/A	String. Length: 1 to 64 characters.

Column name	Column description	Column type	Data type and restrictions
AuthenEscapePermit	Whether to permit authentication escape.	N/A	Boolean: • **true**—Enabled • **false**—Disabled

Dot1X/EADFreeIPs

This table contains 802.1X EAD assistant free IPs.

XML structure

```
<Dot1X>
  <EADFreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>

Table description

Item	Description
Feature name	Dot1X
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Enabling status of 802.1X on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
SmartonEnable	Enabling status of the SmartOn feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
PortControl	Port control status of the interface	N/A	Enumeration: • **1**—authorized-force. • **2**—unauthorized-force. • **3**—auto.
PortMethod	Control method of the interface	N/A	Enumeration: • **1**—Port-based. • **2**—MAC-based.
PortRole	Role of the interface in authentication	N/A	Enumeration: • **1**—Authenticator.
ReauthenEnable	Enabling status of periodic reauthentication	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
FailVLAN	VLAN for users that have failed 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094.
CriticalVLAN	VLAN for users that have failed 802.1X authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.
GuestVLAN	VLAN used before 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094.
FailVSI	VSI for users that have failed 802.1X authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
CriticalVSI	VSI for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GuestVSI	VSI with restricted services for non-authenticated 802.1X users	N/A	String. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
CriticalEapol	Status of the feature that enables the device to send an EAP-Success packet to an 802.1X client when its client user is assigned to the critical VLAN or VSI on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
HandshakeEnable	Enabling status of the online user handshake feature on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
SecHandshakeEnable	Enabling status of the online user handshake security feature on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ReauthUnreachableMode	Whether to allow authenticated 802.1X users to stay online when no server is reachable to perform 802.1X reauthentication for these users	N/A	Enumeration: • **0**—Offline. • **1**—Online.
MandDomain	Mandatory authentication domain on this interface	N/A	String. Length: 1 to 255 characters.
MaxUser	Maximum number of users allowed on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295.
MaxPreAuthUser	Maximum number of preauth-domain users allowed on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295
MaxAuthFailUser	Maximum number of auth-fail-domain users allowed on this interface MaxPreAuthUser	N/A	Unsigned integer. Value range: 1 to 4294967295
MulticastTrigger	Enabling status of multicast trigger on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
UnicastTrigger	Enabling status of unicast trigger on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
OnlineUserNum	Number of online 802.1X users on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
RcvPktNum	Number of received EAPOL packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.

Column name	Column description	Column type	Data type and restrictions
SndPktNum	Number of sent EAPOL packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
StartPktNum	Number of received EAPOL-Start packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
LogoffPktNum	Number of received EAPOL-LogOff packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
RespIDPktNum	Number of received EAP-Response/ID packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
RespPktNum	Number of received EAP-Response(other than EAP-Response/ID) packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
ReqIDPktNum	Number of sent EAP-Request/ID packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
ReqPktNum	Number of sent EAP-Request (other than EAP-Request /ID) packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
RcvErrorPktNum	Number of received error packets on the interface	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.
CriticalMicroSegment	Microsegment for users that have failed 802.1X authentication because of unreachable servers	Data structure	N/A
CriticalMicroSegmentID	Critical microsegment ID	N/A	Unsigned integer. Value range: 1 to 65535.
MicroSegmentVSIName	VSI name for the critical microsegment	N/A	String. Length: 1 to 31 characters.
CriticalProfile	Critical profile for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GVlanDelayEapolEnable	Whether EAPOL-triggered 802.1X guest VLAN assignment delay is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
GVlanDelayNewMACEnable	Whether new MAC-triggered 802.1X guest VLAN assignment delay is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
GVsiDelayEapolEnable	Whether EAPOL-triggered 802.1X guest VSI assignment delay is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
GVsiDelayNewMACEnable	Whether new MAC-triggered 802.1X guest VSI assignment delay is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0—**Online users cannot bypass offline detection when all authentication servers are unavailable. • **1—**Online users can bypass offline detection to stay online when all authentication servers are unavailable**.**

Dot1X/InterfaceUsers

This table displays 802.1X user information.

Table description

Item	Description
Feature name	Dot1X
Table name	InterfaceUsers
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
UserMAC	MAC address of a user on the interface	Index	MAC address.
Name	Username	N/A	String. Length: 1 to 253 characters.
Domain	ISP domain used for 802.1X authentication	N/A	String. Length: 1 to 255 characters.
Ipv4Addr	IPv4 address of the user	N/A	String, dotted decimal notation.
Ipv6Addr	IPv6 address of the user	N/A	Hexadecimal string, colon-separated.
InitialVLAN	VLAN to which the user belongs before 802.1X authentication	N/A	Unsigned integer Value range: 1 to 4094.
AuthzVLAN	VLAN ID assigned to the user by the AAA server after the user passes authentication	N/A	Unsigned integer Value range: 1 to 4094.
AuthzACLGroup	ACL group number assigned to the user by the AAA server after the user passes authentication	N/A	Unsigned integer.
AuthzUserProfile	User profile name assigned to the user by the AAA server after the user passes authentication	N/A	String.

Column name	Column description	Column type	Data type and restrictions
TermAction	Action attribute assigned by the AAA server when the session timeout timer expires	N/A	Enumeration: • **0**—Default. • **1**—Radius-request.
TimeoutPeriod	Period value of session timeout timer assigned by the server	N/A	Unsigned integer
LogonTime	Time from which the user logs on	N/A	String.Format: YYYY-MM-DD HH:MM:SS.
OnlineDuration	Online duration of the user	N/A	Unsigned integer.
AuthzVSI	VSI name assigned to the user by the AAA server after the user passes authentication	N/A	String. Length: 1 to 31 characters.
AuthzMicroSegmentID	Microsegment ID assigned to the user by the AAA server after the user passes authentication	N/A	Unsigned integer. Value range: 1 to 65535.
AuthzURL	URL assigned to the user by the AAA server after the user passes authentication	N/A	String. Length: 1 to 255 characters.
AuthzIPv6URL	IPv6 URL assigned to the user by the AAA server after the user passes authentication	N/A	String. Length: 1 to 255 characters.
DrniNasIpType	In DRNI networking, the nas ip address type used for user authentication on DR interface	N/A	Enumeration: • **1**—Local. • **2**—Peer.
DrniUserState	User status on DR interface in DRNI network	N/A	Enumeration: • **0**—Inactive. • **1**—Active.
MLagNasIpType	In MLAG networking, the nas ip address type used for user authentication on MLAG interface	N/A	Enumeration: • “Local". • “Peer”.
MLagUserState	User status on MLAG interface in MLAG network	N/A	Enumeration: • “Inactive”. • “Active”.
OnlineType	Type of online users	N/A	Enumeration: • **1**—Successful. • **2**—Preauth domain. • **3**—Auth-Fail domain. • **4**—Critical domain.

Message	Explanation
Can't set a nonexistent VLAN as a guest VLAN. 无法将一个不存在的VLAN配置为Guest VLAN。	VLAN do not exist。 指定的VLAN不存在
Can't set a nonexistent VLAN as an Auth-Fail VLAN. 无法将一个不存在的VLAN配置为Auth-Fail VLAN。	VLAN do not exist。 指定的VLAN不存在
Can't set a nonexistent VLAN as a critical VLAN. 无法将一个不存在的VLAN配置为Critical VLAN。	VLAN do not exist。 指定的VLAN不存在
Failed to enable 802.1X on the interface, because it is a link aggregation member port 端口使能802.1X失败，因为端口为聚合口成员。	Failed to enable 802.1X on the interface, because it is a link aggregation member port 聚合口成员不能配置802.1X
Can't enable 802.1X for port security mode is configured on the port. 使能802.1X失败，因为该端口已经使能端口安全。	Can't enable 802.1X for port security mode is configured on the port. 使能802.1X失败，因为该端口已经使能端口安全。
Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。	Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。
Can't configure port-control for port security is enabled. 配置端口控制失败，因为已经使能端口安全。	Can't configure port-control for port security is enabled. 配置端口控制失败，因为已经使能端口安全。
Can't configure port-control for port security mode is configured on the port. 配置端口控制失败，因为该端口已经使能端口安全。	Can't configure port-control for port security mode is configured on the port. 配置端口控制失败，因为该端口已经使能端口安全。
Can't configure port-method for port security is enabled. 配置端口控制方式失败，因为已经使能端口安全。	Can't configure port-method for port security is enabled. 配置端口控制方式失败，因为已经使能端口安全。
Can't configure port-method for port security mode is configured on the port. 配置端口控制方式失败，因为该端口已经使能端口安全。	Can't configure port-method for port security mode is configured on the port. 配置端口控制方式失败，因为该端口已经使能端口安全。
Can't configure port-method for MAC authentication is enabled on the port. 配置端口控制方式失败，因为MAC地址认证已经使能。	Can't configure port-method for MAC authentication is enabled on the port. 配置端口控制方式失败，因为MAC地址认证已经使能。
The specified number must be higher than the current number of online users. 配置的最大用户数必须大于当先在线用户数。	The specified number must be higher than the current number of online users. 配置的最大用户数必须大于当先在线用户数。
Can't set a dynamic VLAN as an guest VLAN. 无法将一个动态VLAN配置成Guest VLAN。	Can't set a dynamic VLAN as an guest VLAN. 无法将一个动态VLAN配置成Guest VLAN。
Can't set a dynamic VLAN as a Auth-Fail VLAN.	Can't set a dynamic VLAN as a Auth-Fail VLAN.

无法将一个动态VLAN配置成Auth-Fail VLAN。	无法将一个动态VLAN配置成Auth-Fail VLAN。
Can't set a dynamic VLAN as a critical VLAN. 无法将一个动态VLAN配置成Critical VLAN。	Can't set a dynamic VLAN as a critical VLAN. 无法将一个动态VLAN配置成Critical VLAN。
Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全，MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。	Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全，MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。
This operation conflicts with VSI configuration. 此操作和VSI配置冲突。	VLAN configuration conflicts with VSI configuration. VLAN配置和VSI配置冲突。
This operation conflicts with VLAN configuration. 此操作和VLAN配置冲突。	VLAN configuration conflicts with VSI configuration. VLAN配置和VSI配置冲突。
Can't enable 802.1X on an IPP port. 不能使能802.1X，因为这是一个IPP接口。	Can't enable 802.1X on an IPP port. 不能使能802.1X，因为这是一个IPP接口。
This operation conflicts with pre-auth domain configuration. 配置失败，因为与前域配置冲突。	This operation conflicts with pre-auth domain configuration. 配置失败，因为与前域配置冲突。
This operation conflicts with the URL-unavailable domain configuration. 此操作和URL逃生域配置冲突。	The 802.1X guest VLAN or VSI, Auth-Fail VLAN or VSI, and critical VLAN, VSI, microsegment, or profile settings conflict with the URL-unavailable domain configuration. 802.1X认证的Guest VLAN/VSI, Auth-fail VLAN/VSI和Critical VLAN/VSI/microsegment/profile配置都与URL逃生域配置冲突。

802.1X /FreeIp

Message	Explanation
The maximum number of free-IP segments has reached. Free-IP 片段的最大数目已经达到。.	The maximum number of free-IP segments has reached. Free-IP 片段数超限。
Invalid IP address or subnet mask. 无效的IP地址或子网掩码。	Invalid IP address or subnet mask. 无效的IP地址或子网掩码。

802.1X /EADFreeMicroSegments

Message	Explanation
Maximum number of free microsegments already reached. 免认证微分段的最大数目已经达到。.	Maximum number of free microsegments already reached. 免认证微分段数目超限。

802.1X /Protocol

Message	Explanation
Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。	Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。
Can't disable 802.1X for port security is enabled. 去使能802.1x失败，因为已经使能端口安全。	Can't disable 802.1X for port security is enabled. 去使能802.1x失败，因为已经使能端口安全。

802.1X /EadAssist

Message	Explanation
Can't enable the EAD assistant function when MAC authentication is enabled globally. 使能EAD快速部署失败，因为已经使能MAC地址认证	Can't enable the EAD assistant function when MAC authentication is enabled globally. 使能EAD快速部署失败，因为已经使能MAC地址认证
Can't enable the EAD assistant function when port security is enabled globally. 使能EAD快速部署失败，因为已经使能端口安全	Can't enable the EAD assistant function when port security is enabled globally.. 使能EAD快速部署失败，因为已经使能端口安全

Dot1X event stream

802.1X event stream description.

Dot1XAuthTrace event

This event is used to report 802.1X authentication information, including user login time and logoff time, or authentication failure time and reason.

XML structure for event subscription

```
<Dot1XAuthTrace>
</Dot1XAuthTrace>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Dot1X</stream>
    <filter type="subtree">
      <Dot1XAuthTrace xmlns="http://www.h3c.com/netconf/event:1.0/Dot1X:1.0">
      </Dot1XAuthTrace>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Dot1X
Event name	Dot1XAuthTrace
Event namespace	http://www.h3c.com/netconf/event:1.0/Dot1X:1.0
Support for extended query	No

XML structure for event report

```
<Dot1XAuthTrace>
  <User>
    <UserMAC></UserMAC>
    <SN></SN>
    <UserName></UserName>
    <IfName></IfName>
    <AuthorVLAN></AuthorVLAN>

```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
UserMAC	User MAC address	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	No	Example: 00-01-00-01-00-01.
SN	Device serial number	String. Length: 1 to 32 characters.	No	N/A
UserName	Username	String. Length: 1 to 253 characters.	No	N/A
IfName	Name of the interface through which the user accesses the device	String. Length: 2 to 47 characters.	No	Example: GigabitEthernet2/0/2.

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
AuthorVLAN	ID of the authorization VLAN	Unsigned short. Value range: 1 to 4094.	No	This column is empty when the event type is 3.
Type	Authentication event type	Enumeration: • **1**—User login. • **2**—User logoff. • **3**—User authentication failure.	No	N/A
StartTime	Time when the authentication started	Unsigned integer64. Unit: microsecond.	No	N/A
LoginTime	Time when the user logged in	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 3.
AuthFailTime	Time when the user failed authentication	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 1 or 2.
AuthFailReason	Authentication failure reason	String. Length: 1 to 253 characters.	No	This column is empty when the event type is 1 or 2.
LogoffTime	Time when the user logged off	Unsigned integer64. Unit: microsecond.	No	This column is empty when the event type is 1 or 3.
LogoffReason	User logoff reason	String. Length: 1 to 253 characters.	No	This column is empty when the event type is 1 or 3. Logoff reasons: • Supplicant logoff. • Supplicant restart. • Reauthentication failure. • Port went down and then came up again. • The port was administratively down. • Online handshake failure. • Idle timeout. • Session timeout. • Real-time accounting failure. • Port status error. • Deauthorization by the device. • The server logged the user off. • Unknown reason.

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
ErrorCode	Error code	Unsigned integer.	No	Error codes: • **0**—Authentication success code. • **1 to 19999**—Authentication failure codes. • **20000 to 39999**—User logoff reason codes. • **50000**—Unknown reason code. Authentication failure codes: • **1 to 1999**—Supplicant reasons. • **2000 to 3999**—Device reasons. • **4000 to 5999**—Authentication server reasons. User logoff reason codes: • **20000 to 21999**—Supplicant reasons. • **22000 to 23999**—Device reasons. • **24000 to 25999**—Authentication server reasons.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same DR MAC address for the DR member devices in a DR system.
SystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	Configure the same DR system priority for the DR member devices in a DR system.

SystemNumber	DR system number	N/A	Unsigned integer. Value range: 1 or 2.	Assign different DR system numbers to the DR member devices in a DR system.
RestoreDelay	Data restoration interval in seconds	N/A	Unsigned integer. Value range: 1 to 3600. Default: 30.	N/A
AutoRecoveryReloadDelay	Reload delay timer in seconds for DR system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A
AuthenticationKey	Encrypted authentication key of packets.	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form.
SequenceCheckEnable	Whether the sequence number check on packets is enabled	N/A	Boolean: • true • false(default)	N/A
StandaloneDelay	Delay that the device must wait before changing to DRNI standalone mode, in seconds	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
ExtraVlanList	VLANs permitted by non-DR interfaces	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “< ExtraVlanList base:incremental="true ">”. If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.

DRNI/Role

This table contains DRNI Role information.

XML structure

```
<DRNI>
  <Role>
    <LocalRolePriority></LocalRolePriority>
  </Role>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	DR role priority of the local DR member device	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	The lower the value, the higher the priority.

DRNI/Keepalive

This table contains DRNI Keepalive information.

XML structure

```
<DRNI>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
    <KeepaliveHoldTime></KeepaliveHoldTime>
    <VRF></VRF>
    <TrackID></TrackID>
  </Keepalive>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV4. • KeepaliveSourceIPV4.	N/A
KeepaliveDestinationIPV4	Destination IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPV4	Source IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.2 This column must be with the KeepaliveDestinationIPV4 column.
IPV6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV6. • KeepaliveSourceIPV6.	N/A
KeepaliveDestinationIPV6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPV6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:2 This column must be with the KeepaliveDestinationIPV6 column.
KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535. Default: 6400	The KeepaliveUDPPort must be with the IP address and KeepaliveUDPPort will be deleted when you delete IP address.
KeepaliveInterval	Keepalive interval in milliseconds	N/A	Unsigned integer Value range: 100 to 10000. Default: 1000.	N/A

KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20 Default: 5.	The DR keepalive timeout timer must be two times the DR keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10. Default: 3.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.
TrackID	Track entry number	N/A	Unsigned integer. Value range: 1 to 1024.	A value of 0 indicates that this column is not configured.

DRNI/IPPTable

This table contains information about IPP ports.

XML structure

```
<DRNI>
  <IPPTable>
    <IPP>
      <IPPNumber></IPPNumber>
      <IfIndex></IfIndex>
    </IPP>
  </IPPTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	IPPTable
Table type	Multi-instance table
Row name	IPP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPPNumber	IPP ID	Index	Unsigned integer.	The IPP ID must be

				fixed at 1.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

DRNI/DRPortTable

This table contains information about DR ports.

XML structure

```
<DRNI>
  <DRPortTable>
    <DRPort>
      <DRGroupId></DRGroupId>
      <IfIndex></IfIndex>
      <AllowSingleMember></AllowSingleMember>
    </DRPort>
  </DRPortTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	DRPortTable
Table type	Multi-instance table
Row name	DRPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DRGroupId	DR group ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A

IfIndex	IfIndex value of the Layer 2 aggregate interface.	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllowSingleMember	Whether allow the aggregate interface to be the single member in the DR group	N/A	Boolean: • true • false(default)	N/A

DRNI/PortTable

This table contains information about DRNI ports.

XML structure

```
<DRNI>
  <PortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrcpShortPeriodEnable></DrcpShortPeriodEnable>
      <PortSystemPriority></PortSystemPriority>
      <PortSystemMAC></PortSystemMAC>
    </Port>
  </PortTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	PortTable
Table type	Multi-instance table
Row name	Port
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DrcpShortPeriodEnable	Whether enable the short DRCP timeout timer.	N/A	Boolean: • true • false(default)	N/A
PortSystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	Configure the same DR system priority on the DR interfaces in the same DR group
PortSystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same DR MAC address on the DR interfaces in the same DR group

DRNI/MAD/MADTable

This table contains information about DRNI MAD.

XML structure

```
<DRNI>
  <MAD>
    <MADTable>
      <MADDefaultAction></MADDefaultAction>
      <MADPersistent></MADPersistent>
      <ExcludeLogicalInterfaces></ExcludeLogicalInterfaces>
    </MADTable>
  </MAD>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	MADTable

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MADDefaultAction	The default action of DRNI MAD.	N/A	Enumeration: • 0—Down(Default). • 1—None.	• Down. Interfaces will be set to DRNI MAD SHUTDOWN state when the IPL goes down except excluded interfaces. • None: Interfaces will not be set to DRNI MAD SHUTDOWN state when the IPL goes down except included interfaces.
`MADPersistent`	DRNI MAD DOWN state persistence	N/A	Boolean: • true • false(default)	N/A
`ExcludeLogicalInterfaces`	Whether all logical interfaces are excluded from the shutdown action by DRNI MAD	N/A	Boolean: • true • false(default)	N/A

DRNI/MAD/UserIncludeInterfaces

This table contains interfaces manually included in the DRNI MAD shutdown action.

XML structure

```
<DRNI>
  <MAD>
    <UserIncludeInterfaces>
      <UserIncludeInterface>
        <IfIndex></IfIndex>
      </UserIncludeInterface>
    </UserIncludeInterfaces>
  </MAD>
```

```
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	UserIncludeInterfaces
Table type	Multi-instance table
Row name	UserIncludeInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

DRNI/MAD/UserExcludeInterfaces

This table contains interfaces manually excluded from the DRNI MAD shutdown action.

XML structure

```
<DRNI>
  <MAD>
    <UserExcludeInterfaces>
      <UserExcludeInterface>
        <IfIndex></IfIndex>
      </UserExcludeInterface>
    </UserExcludeInterfaces>
  </MAD>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	UserExcludeInterfaces
Table type	Multi-instance table
Row name	UserExcludeInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

DRNI/GlobalConsistencyTable

This table contains DRNI global consistency information.

XML structure

```
<DRNI>
  <GlobalConsistencyTable>
    <LocalConsistencyEnable></LocalConsistencyEnable>
    <LocalConsistencyMode></LocalConsistencyMode>
  </GlobalConsistencyTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	GlobalConsistencyTable
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
LocalConsistencyEnable	Whether the local consistency check function is enabled.	N/A	Boolean: • true(Default) • false
LocalConsistencyMode	Local consistency check mode.	N/A	Enumeration: • 0—strict(Default). • 1—loose.

DRNI/IfVirtualIpAddressTable

This table contains information about virtual IP addresses on interfaces.

XML structure

```
<DRNI>
  <IfVirtualIpAddressTable>
    <IfVirtualIpAddress>
      <IfIndex></IfIndex>
      <VirtualIpAddressTable>
        <VirtualIpAddress>
          <IpAddress></IpAddress>
          <PrefixLength></PrefixLength>
          <MacAddress></MacAddress>
          <ActiveMode></ActiveMode>
        </VirtualIpAddress>
      </VirtualIpAddressTable>
    </IfVirtualIpAddress>
  </IfVirtualIpAddressTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	IfVirtualIpAddressTable
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfVirtualIpAddress	Virtual IP address list	Sublist	N/A	For more information, see the DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress table.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress

This table contains information about virtual IP addresses on all interfaces.

Table description

Item	Description
Feature name	DRNI
Table name	IfVirtualIpAddress
Table type	Multi-instance table
Row name	IfVirtualIpAddress
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
VirtualIpAddressTable	Virtual IP address list	Subtable	N/A	For more information, see the DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/Virtu

Column name	Column description	Column type	Data type and restrictions	Remarks
				allpAddressTable table.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable

This table contains information about all virtual IP addresses on an interface.

Table description

Item	Description
Feature name	DRNI
Table name	VirtualIpAddressTable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualIpAddress	Virtual IP address list	Sublist	N/A	For more information, see the DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress table.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress

This table contains information about a virtual IP address on an interface.

Table description

Item	Description
Feature name	DRNI
Table name	VirtualIpAddress
Table type	Multi-instance table
Row name	VirtualIpAddress

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	DRNI virtual IP address	Index	String, dotted decimal notation. Or hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
PrefixLengh	Length of the address prefix	N/A	Unsigned integer	Value range: 1 to 128 for IPv6 1 to 32 for IPv4
MacAddress	MAC address of the DRNI virtual IP address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1
ActiveMode	Whether the virtual IP address is effective on the local device.	N/A	Enumeration: •0—Primary (Default). •1—Active. •2—Standby.	N/A

DRNI

DRNI/Base

This table contains DRNI Base information.

XML structure

```
<DRNI>
  <Base>
    <SystemMAC></SystemMAC>
    <SystemPriority></SystemPriority>
    <SystemNumber></SystemNumber>
    <RestoreDelay></RestoreDelay>
    <AutoRecoveryReloadDelay></AutoRecoveryReloadDelay>
    <AuthenticationKey></AuthenticationKey>
    <SequenceCheckEnable></SequenceCheckEnable>
    <StandaloneDelay></StandaloneDelay>
    <ExtraVlan></ExtraVlan>
  </Base>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1. Configure the same DR MAC address for the DR member devices in a DR system.
SystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535.	Configure the same DR system priority for the DR member devices in a DR system.
SystemNumber	DR system	N/A	Unsigned integer.	Assign different DR

	number		Value range: 1 to.2.	system numbers to the DR member devices in a DR system.
RestoreDelay	Data restoration interval in seconds	N/A	Unsigned integer. Value range: 1 to 3600.	N/A
AutoRecoveryReloadDelay	Reload delay timer in seconds for DR system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A
AuthenticationKey	Encrypted authentication key of packets	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form.
SequenceCheckEnable	Whether the sequence number check on packets is enabled	N/A	Boolean: • true • false	N/A
StandaloneDelay	Delay that the device must wait before changing to DRNI standalone mode, in seconds	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
ExtraVlanList	VLANs permitted by non-DR interfaces	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “< ExtraVlanList base:incremental="true ">”. If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.

DRNI/Role

This table contains DRNI Role information.

XML structure

```
<DRNI>
  <Role>
    <LocalRolePriority></LocalRolePriority>
    <PeerRolePriority></PeerRolePriority>
    <LocalBridgeMAC></LocalBridgeMAC>
    <PeerBridgeMAC></PeerBridgeMAC>
    <LocalConfiguredRole></LocalConfiguredRole>
```

```
    <PeerConfiguredRole></PeerConfiguredRole>
    <LocalEffectiveRole></LocalEffectiveRole>
    <PeerEffectiveRole></PeerEffectiveRole>
    <LocalRoleTrigger></LocalRoleTrigger>
  </Role>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	DR role priority of the local DR member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
PeerRolePriority	DR role priority of the peer DR member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
LocalBridgeMAC	Bridge MAC address of the local DR member device	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
PeerBridgeMAC	Bridge MAC address of the peer DR member device	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
LocalConfiguredRole	DR role calculated based on the role priority and bridge MAC address of the local DR member device	N/A	Enumeration: • 0—none. • 1—primary. • 2—secondary.	N/A
PeerConfiguredRole	DR role calculated based on the role priority and bridge MAC address of the peer DR member device	N/A	Enumeration: • 0—none. • 1—primary. • 2—secondary.	N/A

LocalEffective Role	Current role of the local DR member device	N/A	Enumeration: • 0—none. • 1—primary. • 2—secondary.	N/A
PeerEffective Role	Current role of the peer DR member device	N/A	Enumeration: • 0—none. • 1—primary. • 2—secondary.	N/A
LocalRoleTrigger	The trigger for the current role	N/A	Enumeration: • 0—DR system initialization. • 1—IPL down and all DR interfaces down. • 2—IPL and keepalive link down. • 3—IPL calculation. • 4—IPL down and role calculation based on keepalive link. • 5—Local role is None and peer role is Primary before IPL comes up. • 6—Local role is Primary and peer role is None before IPL comes up.	N/A

DRNI/Keepalive

This table contains DRNI Keepalive information.

XML structure

```
<DRNI>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
    <KeepaliveHoldTime></KeepaliveHoldTime>
    <KeepaliveLinkStatus></KeepaliveLinkStatus>
    <VRF></VRF>
    <LastDropCausation></LastDropCausation>
    <TrackID></TrackID>
```

```
  </Keepalive>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV4. • KeepaliveSourceIPV4.	N/A
KeepaliveDestinationIPV4	Destination IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPV4	Source IPv4 address of the keepalive link	N/A	String, dotted decimal notation.	Example: 1.1.1.2 This column must be with the **KeepaliveDestinationIPV4** column.
IPV6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: • KeepaliveDestinationIPV6. • KeepaliveSourceIPV6.	N/A
KeepaliveDestinationIPV6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPV6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:2 This column must be with the **KeepaliveDestinationIPV6** column.
KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535.	The **KeepaliveUDPPort** must be with the IP address and **KeepaliveUDPPort** will be deleted when you delete IP address.
KeepaliveInterval	Keepalive Interval in	N/A	Unsigned integer. Value range: 100 to 10000.	N/A

	milliseconds			
KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20.	The DR keepalive timeout timer must be two times the DR keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10.	N/A
KeepaliveLinkStatus	Keepalive link status	N/A	Enumeration: • 0—unknown. • 1—up. • 2—down.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.
LastDropCausation	Cause for keepalive packet drop	N/A	Enumeration: • 0—None. • 1—Invalid packet type. • 2—The local role is none. • 3—Incorrect packet length. • 4—System MAC inconsistency. • 5—System priority inconsistency. • 6—Incorrect system number. • 7—Invalid packet interval. • 8—Sequence number check failed. • 9—Failed authentication.	If an incoming keepalive packet is not dropped, the cause is None.
TrackID	Track entry number	N/A	Unsigned integer. Value range: 1 to 1024.	A value of 0 indicates that this column is not configured.

DRNI/IPPTable

This table contains DRNI IPP information.

XML structure

```
<DRNI>
  <IPPTable>
    <IPP>
      <IPPNumber></IPPNumber>
      <IfIndex></IfIndex>
    </IPP>
  </IPPTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	IPPTable
Table type	Multi -instance table
Row name	IPP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPPNumber	IPP ID	Index	Unsigned integer. Value range: 1.	The IPP ID must be fixed at 1.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

DRNI/DRPortTable

This table contains information about DR ports.

XML structure

```
<DRNI>
  <DRPortTable>
    <DRPort>
      <DRGroupId></DRGroupId>
      <IfIndex></IfIndex>
      <AllowSingleMember></AllowSingleMember>
    </DRPort>
  </DRPortTable>
</DRNI>

Column name	Column description	Column type	Data type and restrictions	Remarks
DRGroupId	DR group ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
IfIndex	IfIndex value of the Layer 2 aggregate interface	N/A	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllowSingleMember	Whether allow the aggregate interface to be the single member in the DR group	N/A	Boolean: • true • false	N/A

DRNI/PortTable

This table contains information about DRNI ports.

XML structure

```
<DRNI>
  <PortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrcpShortPeriodEnable></DrcpShortPeriodEnable>
      <PortStatus></PortStatus>
```

```
      <LocalDRCPState></LocalDRCPState>
      <PeerDRCPState></PeerDRCPState>
      <LocalSelectedMemberList></LocalSelectedMemberList>
      <PeerSelectedMemberList></PeerSelectedMemberList>
      <PortStatusCausation></PortStatusCausation>
      <PortSystemMAC></PortSystemMAC>
      <PortSystemPriority></PortSystemPriority>
    </Port>
  </PortTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	PortTable
Table type	Multi-instance table
Row name	Port
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DrcpShortPeriodEnable	Whether the short DRCP timeout timer is enable	N/A	Boolean: • true • false	N/A
PortStatus	Port status	N/A	Enumeration: • 0—down. • 1—up.	N/A
LocalDRCPState	DRCP state on the local port	N/A	DRCP state flags. The flag field is one byte long, represented by ABCDEFGH from the lowest bit to the highest bit. A letter is displayed when its bit is 1 and is not displayed when its bit is 0. • A—Indicates whether DRCP is enabled on the	N/A

			local device.1 indicates enabled.0 indicates disabled. • B—Indicates whether DRCP is enabled on the DR peer.1 indicates enabled.0 indicates disabled. • C—Indicates whether DRCP is enabled on a third DR member device. 1 indicates enabled.0 indicates disabled. • D—Indicates whether the local IPP has determined that DRCP is enabled on the DR peer.1 indicates yes.0 indicates no. • E—Indicates the DRCP timeout timer.1 indicates the short timeout timer.0 indicates the long timeout timer. • F—Indicates whether the local IPP permits the packets that contain the negotiated gateway conversation IDs.1 indicates yes.0 indicates no. • G—Indicates whether the local IPP permits the packets that contain the negotiated port conversation IDs.1 indicates yes.0 indicates no. • H—Indicates whether the local DRCPDU receive machine is in default or expired state.1 indicates yes.0 indicates no.	
PeerDRCPState	DRCP state on the peer port	N/A	This column has the same data type and restrictions as **LocalDRCPState**.	N/A
LocalSelectedMemberList	Local DR member device's selected aggregate member ports in a distributed relay group	N/A	Bitmap. No length restrictions. Each octet within this value specifies a set of eight ports, with the first octet specifying ports 1 through 8,the second octet specifying ports 9 through 16,and so on. Within each octet, the most significant bit represents the lowest numbered port, and the least significant bit represents the highest numbered port. Each port of the bridge is represented by a single bit within the value of this object If a bit has a value of 1 then the port is included in the set of	N/A

			ports; a port is not included if its bit has a value of 0.	
PeerSelectedMemberList	Peer DR member device's selected aggregate member ports in a distributed relay group	N/A	This column has the same data type and restrictions as **LocalSelectedMemberList**.	N/A
PortStatusCausation	The cause for the port status change	N/A	Enumeration: • 0—None. • 1—Aggregate interface down. • 100—No correct DRCPDUs received. • 101—Tunnel interface down. • 200—The device role was None. • 201—No peer DR interface configured. • 202—DRNI MAD check. • 203—Configuration consistency check failed.	N/A
PortSystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same DR MAC address on the DR interfaces in the same DR group
PortSystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	Configure the same DR system priority on the DR interfaces in the same DR group

DRNI/MAD/MADTable

This table contains information about DRNI MAD.

XML structure

```
<DRNI>
  <MAD>
    <MADTable>
      <MADDefaultAction></MADDefaultAction>
      <MADState></MADState>
      <MADPersistent></MADPersistent>
      <ExcludeLogicalInterfaces></ExcludeLogicalInterfaces>
    </MADTable>
  </MAD>
```

```
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	MADTable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MADDefaultAction	The default action of DRNI MAD	N/A	Enumeration: • 0—Down. • 1—None.	• Down. Interfaces will be set to DRNI MAD SHUTDOWN state when the IPL goes down except excluded interfaces. • None: Interfaces will not be set to DRNI MAD SHUTDOWN state when the IPL goes down except included interfaces.
MADState	Whether the DR system is on MAD state	N/A	Boolean: • true • false	N/A
`MADPersistent`	DRNI MAD DOWN state persistence	N/A	Boolean: • true • false	N/A
`ExcludeLogicalInterfaces`	Whether all logical interfaces are excluded from the shutdown action by DRNI MAD	N/A	Boolean: • true • false	N/A

DRNI/MAD/UserIncludeInterfaces

This table contains interfaces manually included in the DRNI MAD shutdown action.

XML structure

```
<DRNI>
  <MAD>
    <UserIncludeInterfaces>
      <UserIncludeInterface>
        <IfIndex></IfIndex>
        <Active></Active>
      </UserIncludeInterface>
    </UserIncludeInterfaces>
  </MAD>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI

IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

DRNI/GlobalConsistencyTable

This table contains information about DRNI global consistency check.

XML structure

```
<DRNI>
  <GlobalConsistencyTable>
    <LocalConsistencyEnable></LocalConsistencyEnable>
    <PeerConsistencyEnable></PeerConsistencyEnable>
    <LocalConsistencyMode></LocalConsistencyMode>
    <PeerConsistencyMode></PeerConsistencyMode>
    <Type1Result></Type1Result>
    <Type1InConsistency></Type1InConsistency>
    <Type2Result></Type2Result>
    <Type2InConsistency></Type2InConsistency>
  </GlobalConsistencyTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	GlobalConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LocalConsistencyEnable	Whether local consistency check function is enabled	N/A	Boolean: • true • false
PeerConsistencyEnable	Whether peer consistency check function is enabled	N/A	Boolean: • true • false
LocalConsistencyMode	Local consistency check mode	N/A	Enumeration: • 0—Strict. • 1—Loose.
PeerConsistencyMode	Peer consistency check mode	N/A	Enumeration: • 0—Strict. • 1—Loose.
Type1Result	The result of type1 consistency check	N/A	Enumeration: • 0—None. • 1—Success. • 2—Failed.
Type1InConsistency	The module that failed type1 consistency check	N/A	String.
Type2Result	The result of type2 consistency check	N/A	Enumeration: • 0—None. • 1—Success. • 2—Failed.
Type2InConsistency	The module that failed type2 consistency check	N/A	String.

DRNI/InterfaceConsistencyTable

This table contains information about DRNI interface consistency check.

XML structure

```
<DRNI>
  <InterfaceConsistencyTable>
    <InterfaceConsistency>
      <IfIndex></IfIndex>
      <Type1Result></Type1Result>
      <Type1InConsistency></Type1InConsistency>
      <Type2Result></Type2Result>
      <Type2InConsistency></Type2InConsistency>
    </InterfaceConsistency>
  </InterfaceConsistencyTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	InterfaceConsistencyTable
Table type	Multi-instance table
Row name	InterfaceConsistency
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Type1Result	The result of type1 consistency check	N/A	Enumeration: • 0—None. • 1—Success. • 2—Failed.	N/A
Type1InConsistency	The module that failed type1 consistency check	N/A	String.	N/A
Type2Result	The result of type2 consistency check	N/A	Enumeration: • 0—None. • 1—Success.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Failed.	
Type2InConsistency	The module that failed type2 consistency check	N/A	String.	N/A

DRNI/DrcpStatisticsTable

This table contains information about DRCPDU statistics.

XML structure

```
<DRNI>
  <DrcpStatisticsTable>
    <DrcpStatistics>
      <IfIndex></IfIndex>
      <SendPackets></SendPackets>
      <RcvNormalPackets></RcvNormalPackets>
      <RcvErrPackets></RcvErrPackets>
      <RcvUnKnownPackets></RcvUnKnownPackets>
      <LastRcvFailedReason></LastRcvFailedReason>
      <LastRcvSrcMAC></LastRcvSrcMAC>
    </DrcpStatistics>
  </DrcpStatisticsTable>
</DRNI>
```

Table description

Item	Description
Feature name	DRNI
Table name	DrcpStatisticsTable
Table type	Multi-instance table
Row name	DrcpStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SendPackets	The count of sent packets	N/A	Unsigned integer.	N/A
RcvNormalPackets	The count of received normal packets	N/A	Unsigned integer.	N/A
RcvErrPackets	The count of received error packets	N/A	Unsigned integer.	N/A
RcvUnKnownPackets	The count of received unknown packets	N/A	Unsigned integer.	N/A
LastRcvFailedReason	Last dropped packet reason	N/A	Enumeration: • 0—None. • 1—Incorrect port. • 2—Incorrect packet type. • 3—Incorrect packet version. • 4—Incorrect packet length. • 5—Received packets of oneself. • 6—Local DR interface not configured. • 7—System MAC inconsistency. • 8—System priority inconsistency. • 9—Incorrect system number. • 10—Incorrect sequence number. • 11—Failed authentication. • 12—Other error.	If receive packet successful, the reason is none.
LastRcvSrcMAC	The source MAC address of last received packet.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-01-00-01-00-01.

DRNI/IfVirtualIpAddressTable

This table contains information about virtual IP addresses on interfaces.

XML structure

```
<DRNI>
```

```
  <IfVirtualIpAddressTable>
    <IfVirtualIpAddress>
      <IfIndex></IfIndex>
      <IfName></IfName>

DRNI

DRNI/Base

Message	Explanation
The MAC address cannot be an all-zero address, a multicast address, or a broadcast address. 不允许配置MAC地址为全零MAC地址、组播MAC地址或广播MAC地址。	The system MAC address cannot be an all-zero address, a multicast address, or a broadcast address.

DRNI/Role

Message	Explanation
None. 无。	None.

DRNI/Keepalive

Message	Explanation
Please specify the destination IP addresses of keepalive packets. 指定Keepalive报文的目的IP地址。	Specify the destination IP address of the keepalive link.
The destination and source IP addresses cannot be the same. 目的IP地址和源IP地址不能相同。	The destination address must be different from the source address.
You cannot specify both IPv4 and IPv6 addresses for keepalive packets. Keepalive报文参数不能同时指定IPv4地址和IPv6地址。	The destination and source addresses of the keepalive link must both be IPv4 or IPv6.
Invalid destination or source IP address. 无效的源/目的IP地址。	The IP address is invalid. You must specify a valid destination or source IP address for the keepalive link.
Please delete all parameters of keepalive configuration. 请删除所有的keepalive配置参数。	You need to delete all parameters.
The source and destination IP addresses of keepalive packets must have the same Internet protocol version. Keepalive报文的源IP地址和目的IP地址必须使用相同的IP地址协议。	The Internet protocol version of destination and source address must be the same.

DRNI/IPPTable

Message	Explanation
The interface is already configured as a DR interface. 该接口已经是DR口。	The interface is a DR interface. You cannot configure it as an IPP.
The device already has an IPP. 设备已经存在一个IPP口。	A device can have only one IPP.
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.
The tunnel interface must be in VXLAN mode. Tunnel接口想要配置为IPP口，该Tunnel接口必须处于VXLAN模式。	If you want to configure a tunnel interface as the IPP, it must be in VXLAN mode. 如果想要指定一个Tunnel接口为IPP口，该Tunnel接口必须处于VXLAN模式。
Operation failed. The VXLAN tunnel has been assigned to a VXLAN, or the VXLAN tunnel interface is automatically created. 操作失败，该Tunnel已经与VXLAN关联，或者该Tunnel接口是自动生成的Tunnel接口。	The VXLAN tunnel interface that you want to configure as an IPP has already been assigned to a VXLAN, or it is automatically created. 想要配置为IPP口的Tunnel接口不能与VXLAN关联，或者Tunnel接口不能是自动生成的Tunnel接口。
The type interface is not support to assign as IPP interface. 该类型的接口不支持配置为IPP口。	The IPP must be a Layer 2 aggregate interface or tunnel interface. 仅支持将二层聚合接口和Tunnel接口配置为IPP口。
`Can't configure the interface as an IPP because of a driver error.` 不能配置为IPP口，因为驱动错误	An error occurred in assigning the IPP role to an interface. 绑定IPP口时，驱动发生错误

DRNI/DRPortTable

Message	Explanation
The interface is already configured as an IPP. 该接口已经是IPP口。	The interface is already an IPP. You cannot configure it as a DR interface.
The interface must be a Layer 2 aggregate interface. 该接口必须是二层聚合接口。	You must specify a Layer 2 aggregate interface.
The DR group with the specified ID is already configured on another interface. 该DR口ID已经存在。	A device cannot have two DR groups with the same ID.
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.
The interface is already a DR interface in another DR group. 接口已经是另外一个DR组中的DR口了。	The interface is a DR interface in another DR group. You must specify another interface. 接口已经是另外一个DR组中的DR口，可以尝试更换为另一个接口。

The interface is a member of an S-MLAG group. 接口是一个S-MLAG组的成员接口。	Can't assign the interface to the DR interface because the interface is a member of an S-MLAG group. 接口无法加入该DR接口，因为它已经是一个S-MLAG组的成员接口。
Can't configure the interface as a DR interface because of a driver error. 不能配置为DR口，因为驱动错误。	An error occurred in assigning the DR interface role to an interface. 绑定DR口时，驱动发生错误。
Please first remove the aggregate interface from the DR group. 请先将该聚合接口从DR组中移除。	The interface is already in the DR group. You can enable an aggregate interface to be the single member in a DR group only when you assign the aggregate interface to the DR group. 已经存在该DR组，且与当前配置冲突。

DRNI/MAD/MADTable

Message	Explanation
Can’t change the system MAC address. Please first assign the interface to a DR group. 只有聚合接口配置为DR接口后，才允许在该聚合接口视图下配置系统MAC地址。	The interface must be a DR interface. 该接口必须是DR口。
Can’t change the system priority. Please first assign the interface to a DR group. 只有聚合接口配置为DR接口后，才允许在该聚合接口视图下配置系统优先级。	The interface must be a DR interface.. 该接口必须是DR口。

DRNI/PortTable

Message	Explanation
None. 无。	None.

DRNI/MAD/UserIncludeInterfaces

Message	Explanation
The interface is already excluded from the MAD shutdown action by DRNI. 该接口已经配置为DRNI保留接口。	The interface has been excluded from Mad shutdown action, you must undo the operation first. 该接口已经配置为DRNI保留接口，请先删除该配置。
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.

DRNI/MAD/SystemIncludeInterfaces

Message	Explanation
None. 无。	None.

DRNI/MAD/UserExcludeInterfaces

Message	Explanation
The interface is already included in the MAD shutdown action by DRNI. 该接口已经配置为需要被置为DRNI MAD DOWN状态。	The interface has been included in Mad shutdown action, you must undo the operation first. 该接口已经配置为需要被置为DRNI MAD DOWN状态，请先删除该配置。
Please specify a valid interface index. 请指定有效的接口索引。	The interface index must exist.

DRNI/MAD/SystemExcludeInterfaces

Message	Explanation
None. 无。	None.

DRNI/GlobalConsistencyTable

Message	Explanation
None. 无。	None.

DRNI/InterfaceConsistencyTable

Message	Explanation
None. 无。	None.

DRNI/DrcpStatisticsTable

Message	Explanation
None.	None.

无。	

DRNI/ResetDrcpStatisticsTable

Message	Explanation
None. 无。	None.

DRNI/IfVirtualIpAddressTable

Message	Explanation
None. 无。	None.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress

Message	Explanation
None. 无。	None.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable

Message	Explanation
None. 无。	None.

DRNI/IfVirtualIpAddressTable/IfVirtualIpAddress/VirtualIpAddressTable/VirtualIpAddress

Message	Explanation
Invalid IP address or subnet mask. 无效的IP地址或子网掩码长度。	Invalid IP address or subnet mask. 无效的IP地址或子网掩码长度。
The number of virtual IP addresses assigned to the interface has reached the upper limit. 虚拟IP地址的数量已达到上限。	Maximum number of virtual IP addresses is already reached. 接口下已配置的虚拟IP地址数已达到上限。
The subnet overlaps with another interface.	The subnet of the IP address overlaps with the subnet of another interface on the device.

虚拟IP地址的网段与其他接口下IP地址的网段重复。	接口IP地址配置所在网段与本设备其他接口网段重复。
The IPv6 address overlaps with another interface. 虚拟IPv6地址与其他接口上的IPv6地址重复。	The IPv6 address is used by another interface on the device. 本接口的IPv6地址与本设备其他接口的IPv6地址冲突。
Invalid IPv6 address. You must enter an IPv6 global unicast address. 无效的IPv6地址。仅支持IPv6单播地址。	The IPv6 address is not a valid IPv6 global unicast address. 该IPv6地址不是一个有效的单播地址。
The MAC address has been associated with another IPv4 address. 该MAC地址已经被其他虚拟IPv4地址使用。	The MAC address is used by another IP address. MAC地址已经被其他IP地址使用。
The MAC address has been associated with another IPv6 address. 该MAC地址已经被其他虚拟IPv6地址使用。	The MAC address is used by another IPv6 address. MAC地址已经被其他IPv6地址使用。
Make sure the IP addresses associated with this MAC address are in the same state. 对于同一MAC地址，虚拟IPv4地址和虚拟IPv6地址在DR设备上的状态必须一致。	All IP addresses associated with this MAC address must be in the same state. MAC地址对应的所有IP地址必须处于相同的状态。
The MAC address cannot be an all-zero address, a multicast address, or a broadcast address. 不允许配置MAC地址为全零MAC地址、组播MAC地址或广播MAC地址。	The system MAC address cannot be an all-zero address, a multicast address, or a broadcast address.

DRNI event stream

BaseInfoEvent event

This event is used to report DRNI BaseInfo.

XML structure for event subscription

```
<BaseInfoEvent>
</BaseInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <BaseInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </BaseInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Event stream name	DRNI
Event name	BaseInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

XML structure for event report

```
<BaseInfoEvent>
  <BaseInfo>
    <SystemMAC></SystemMAC>
    <OperationType></OperationType>
  </BaseInfo>
</BaseInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <BaseInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <BaseInfo>
      <SystemMAC>00-01-00-01-00-01</SystemMAC>
      <OperationType>1</OperationType>
```

```
    </BaseInfo>
  </BaseInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
SystemMAC	DR system MAC address	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No	You must configure the same DR system MAC address for the DR member devices in a DR system.
OperationType	Operation type	Enumeration: • **1**—Create. • **2**—Modify. • **3**—Delete.	No	The operation type specifies the operation that DRNI BaseInfo should perform.

RoleInfoEvent event

This event is used to report DRNI RoleInfo.

XML structure for event subscription

```
<RoleInfoEvent>
</RoleInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <RoleInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </RoleInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DRNI
Event name	RoleInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

XML structure for event report

```
<RoleInfoEvent>
  <LocalBridgeMAC></LocalBridgeMAC>
  <PeerBridgeMAC></PeerBridgeMAC>
</RoleInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <RoleInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <RoleInfo>
      <LocalBridgeMAC>00-01-00-01-00-01</LocalBridgeMAC>
      <PeerBridgeMAC>00-01-00-01-00-03</PeerBridgeMAC>
    </RoleInfo>
  </RoleInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query
LocalBridgeMAC	Bridge MAC address of the local device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No
PeerBridgeMAC	Bridge MAC address of the peer device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No

PortInfoEvent event

This event is used to report DRNI PortInfo.

XML structure for event subscription

```
<PortInfoEvent>
</PortInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <PortInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </PortInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DRNI
Event name	PortInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

XML structure for event report

```
<PortInfoEvent>
  <PortInfo>
    <IfIndex></IfIndex>
    <DRGroupId></DRGroupId>
    <OperationType></OperationType>
  </PortInfo>
</PortInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PortInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <PortInfo>
      <IfIndex>66</IfIndex>
      <DRGroupId>66</DRGroupId>
      <OperationType>1</OperationType>
    </PortInfo>
  </PortInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Aggregation interface ifIndex	Unsigned integer.	No	Interface name is not supported.
DRGroupId	DR group ID	Unsigned integer. Value range: 1 to 1024.	No	N/A
OperationType	Operation type	Enumeration: • **1**—Create. • **2**—Modify. • **3**—Delete.	No	The operation type specifies the operation that DNRI PortInfo should perform.

KeepaliveInfoEvent event

This event is used to report DRNI keepalive information.

XML structure for event subscription

```
cfoEvent>
</KeepaliveInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <KeepaliveInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </KeepaliveInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DRNI
Event name	KeepaliveInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

XML structure for event report

```
<KeepaliveInfoEvent>
  <KeepaliveLinkStatus></KeepaliveLinkStatus>
</KeepaliveInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <KeepaliveInfoEvent     xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <KeepaliveInfo>
      <KeepaliveLinkStatus>2</KeepaliveLinkStatus>
    </KeepaliveInfo>
  </KeepaliveInfoEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query
KeepaliveLink Status	Keepalive link status	Enumeration: • 1—Up. • 2—Down.	No

PortStatusEvent event

This event is used to report DRNI port status.

XML structure for event subscription

```
<PortStatusEvent>
</PortStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <PortStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </PortStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	DRNI
Event name	PortStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

XML structure for event report

```
<PortStatusEvent>
  <PortStatusInfo>
    <IfIndex></IfIndex>
    <IfName></IfName>
    <PortStatus></PortStatus>
    <PortStatusCausation></PortStatusCausation>
  </PortStatusInfo>
</PortStatusEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PortStatusEvent     xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <PortStatusInfo>
      <IfIndex>66</IfIndex>
      <IfName>Bridge-Aggregation1</IfName>
      <PortStatus>1</PortStatus>
      <PortStatusCausation>0</PortStatusCausation>
```

```
    </PortStatusInfo>
  </PortStatusEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Interface index	Unsigned integer.	No	Interface name is not supported.
IfName	Interface name	String Length: 1 to 47 characters.	No	N/A
PortStatus	Port status	Enumeration: • 0—Down. • 1—Up.	No	N/A
PortStatusCausation	The cause for the port status change	Enumeration: • 0—None. • 1—Aggregate interface down. • 100—No correct DRCPDUs received. • 101—Tunnel interface down. • 102---Peer no correct DRCPDUs received. • 103---Removed from a IPP group. • 200—The device role was None. • 201—No peer DR interface configured. • 202—DRNI MAD check. • 203—Configuration consistency check failed. • 204—Removed from a DR group.	No	N/A

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	where the interface resides		Value range: 0 to 65535.
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
AppName	Feature name	Index	String. Length: 1 to 15 characters.
Count	Number of connections of a feature for which dropped-packet statistics are configured	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

DropStatistics/DetailIPCounts

This table is used to obtain the number of connections of a feature that have packets dropped due to a specific reason.

XML structure

```
<DropStatistics>
  <DetailIPCounts>
    <DetailIPCount>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <DropReason></DropReason>
      <Count></Count>
    </DetailIPCount>
  </DetailIPCounts>
</DropStatistics>
```

Table description

Item	Description
Feature name	DropStatistics
Table name	DetailIPCounts
Table type	Multi-instance table
Row name	DetailIPCount
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
AppName	Feature name	Index	String. Length: 1 to 15 characters.
DropReason	Drop reason	Index	String. Length: 1 to 63 characters.
Count	Number of connections of a feature that have packets dropped due to a specific reason	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

DropStatistics

DropStatistics/ExportPacket

Message	Explanation
Failed to create the file. 创建文件失败。	When saving the dropped packets to a file, the system failed to create the file due to insufficient space or other reasons. 保存报文到文件时由于空间不足或者其他原因导致失败。
No packets dropped. 没有报文被丢弃。	When saving the dropped packets to a file, there is no packet dropped. 没有需要保存到文件的报文。

DropStatistics/StatisitcsCfg

Message	Explanation
The source IP address field and destination IP address field cannot be null at the same time. 源IP和目的IP地址不能同时为空。	When configuring dropped packet counting based on IP addresses, the source IP and destination IP cannot be both null. 根据IP地址进行丢包统计时不允许源IP地址和目的IP地址都为空。
The source IP address and the destination IP address must be the same type. 源IP与目的IP地址类型必须一致。	When configuring dropped packet counting based on IP addresses, the source IP and the destination IP must belong to the same address family. 根据IP地址进行丢包统计时源IP地址和目的IP地址地址族必须一致。
Invalid source IP address or destination IP address. 源IP或者目的IP地址非法。	When configuring dropped packet counting based on IP addresses, but the source IP or the destination IP is invalid. 根据IP地址进行丢包统计时源IP地址或者目的IP地址非法。
A username is required. 用户名为空。	When configuring dropped packet counting based on users, the username cannot be null. 根据用户名进行丢包统计时用户名不允许为空。
A filter type is required. 过滤类型为空。	When configuring dropped packet counting based on filter conditions, the filter type cannot be null. 使用过滤条件进行丢包统计时过滤类型不能为空。
Not enough memory for the operation. 操作失败，当前设备内存不足。	When configuring dropped packet counting based on filter conditions, the device memory is not enough. 使用过滤条件进行丢包统计时设备内存空间不足。
Another statistics collection is in progress. Please wait... 同时只能有一个进程在配置，请稍候。	When configuring dropped packet counting based on filter conditions, another user is modifying the filter conditions. 使用过滤条件进行丢包统计时，其他用户尝试修改过滤条件。

EAA

EAA/System

This table contains information about EAA.

XML structure

```
<EAA>
  <System>
    <RunStatus></RunStatus>
    <RtmSyslogBuffer>
      <SyslogBufferSize></SyslogBufferSize>
    </RtmSyslogBuffer>
  </System>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	System
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RunStatus	Monitor status of EAA	N/A	EnableState: • **enable** (default). • **disable**.	Monitor status of EAA.
RtmSyslogBuffer	RTM syslog buffer	Subtable	N/A	For more information, see the System/RtmSyslogBuffer table.

EAA/System/RtmSyslogBuffer

This table contains information about EAA.

XML structure

See the XML structure of EAA/System

Table description

Item	Description
Feature name	EAA
Table name	RtmSyslogBuffer
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyslogBuffer Size	Syslog buffer size	N/A	Unsigned integer. Value range: 1 to 500000	N/A

EAA/Environments

This table contains environment information about EAA.

XML structure

```
<EAA>
  <Environments>
    <Environment>
      <EnvironmentName></EnvironmentName>
      <EnvironmentValue></EnvironmentValue>
    </Environment>
  </Environments>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	Environments
Table type	Multi-instance table

Row name	Environment
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Environment Name	Environment name	Index	String. Length: 1 to 63 characters.	N/A
Environment Value	Environment value	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length. For environmental variables definition, please see “Appendix”.

EAA/CliPolicys

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicy	CliPolicy table	Sublist	N/A	For more information, see the EAA/CliPolicys/CliPolicy table.

EAA/CliPolicys/CliPolicy

This table contains CLI policy information.

XML structure

See the XML structure of EAA/CliPolicys

Table description

Item	Description
Feature name	EAA
Table name	CliPolicy
Table type	Multi-instance table
Row name	CliPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicyName	CLI policy name	Index	String. Length: 1 to 63 characters.	N/A
RunningTime	Action execution timeout	N/A	Unsigned integer. Value range: 0 to 31536000	0 means never time out.
CliPolicyEvent	CliPolicyEvent information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent table.
CliPolicyActions	CliPolicyActions information of the CLI policy	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/Cli

Column name	Column description	Column type	Data type and restrictions	Remarks
	name			PolicyActions table.
CliPolicyUserRoles	CliPolicyUserRoles information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyUserRoles table.

EAA/CliPolicys/CliPolicy/CliPolicyEvent

This table contains CLI policy information.

XML structure

See the XML structure of EAA/CliPolicys

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyEvent
Table type	Single-instance table
Row name	N/A
Restrictions	Event tables are mutually exclusive and can not occur at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EventCli	Cli event information of the CLI policy	Subtable	N/A	EventCli tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventCli table.
EventHotplug	Hotplug event information of the CLI policy	Subtable	N/A	EventHotplug tables are mutually exclusive with other event tables.

Column name	Column description	Column type	Data type and restrictions	Remarks
	name			For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug table.
EventInterface	Interface event information of the CLI policy name	Subtable	N/A	EventInterface tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventInterface table.
EventProcess	Process event information of the CLI policy name	Subtable	N/A	EventProcess tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventProcess table.
EventSnmp	Snmp event information of the CLI policy name	Subtable	N/A	EventSnmp tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmp table.
EventSnmpNotification	SnmpNotification event information of the CLI policy name	Subtable	N/A	EventSnmpNotification tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmpNotification table.
EventSyslog	Syslog event information of the CLI policy name	Subtable	N/A	EventSyslog tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/Cli

Column name	Column description	Column type	Data type and restrictions	Remarks
				PolicyEvent/EventSyslog table.
EventTrack	Track event information of the CLI policy name	Subtable	N/A	EventTrack tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventTrack table.
EventPeriod	Period event information of the CLI policy name	Subtable	N/A	Period tables are mutually exclusive with other event tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventPeriod table.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventCli

This table contains EAA, CLI event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys

Table description

Item	Description
Feature name	EAA
Table name	EventCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliStatus	CLI type status	N/A	Enumeration: • **0**—sync. • **1**—async. • **2**—async-skip.	N/A
Mode	CLI monitoring mode	N/A	Enumeration: • **0**—tab. • **1**—help. • **2**—execute.	N/A
Pattern	Regular expression matching command line	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug

This table contains EAA, hotplug event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventHotplug
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HotplugStatus	Hotplug state	N/A	Enumeration: • **0**—all. • **1**—insert • **2**—remove.	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	65535 means not set subslot.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventInterface

This table contains EAA, interface event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventInterface
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfList	List of interface items	N/A	Number string. It is a comma-separated list of interface items. An item can be an individual interface name or an interface range. Use a hyphen (-) to separate the start and end interface item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	Up to 8 items can be entered. Example: null0,GigabitEthernet0/0/1-GigabitEthernet0/0/2.
MonitorObj	Monitoring object	N/A	Enumeration: • **0**—input-errors. • **1**—ouput-errors. • **2**—input-drops. • **3**—ouput-drops. • **4**—rcv-broadcasts. • **5**—rcv-bps. • **6**—rcv-pps. • **7**—tx-bps. • **8**—tx-pps. • **9**—tx-kbps. • **10**—rcv-kbps. • **11**—tx-kpps. • **12**—rcv-kpps.	N/A
StartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
StartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RestartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
RestartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventProcess

This table contains EAA, process event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventProcess
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessType	Process type	N/A	Enumeration: • **0**—start. • **1**—shutdown. • **2**—restart. • **3**—exception.	N/A
Name	Process name	N/A	String. Length: 1 to 63 characters.	N/A
Instance	Process ID	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmp

This table contains EAA, SNMP event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSnmp
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
Monitor	Monitor object	N/A	Enumeration: • **1**—get. • **2**—get-next.	N/A
StartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	
StartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
RestartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
RestartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmpNotification

This table contains EAA, SNMP notification event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSnmpNotification
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	Trap SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
OidVal	OID value	N/A	String. Length: 1 to 512 characters.	N/A
Option	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
Drop	Drop trap	N/A	Boolean: • **false** (default). • **true**.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSyslog

This table contains EAA, Syslog event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: • **0**—LOG_EMERG. • **1**—LOG_ALERT. • **2**—LOG_CRIT. • **3**—LOG_ERR. • **4**—LOG_WARNING. • **5**—LOG_NOTICE. • **6**—LOG_INFO. • **7**—LOG_DEBUG. • **8**—ALL.	N/A
Msg	Regular expression matching Syslog message	N/A	String. Length: 1 to 255 characters.	N/A
Occur	Occurrences	N/A	Unsigned integer. Value range: 1 to 32.	N/A
Period	Time range is seconds	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventTrack

This table contains EAA, track event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventTrack
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackList	List of track items	N/A	Number string. It is a comma-separated list of track items. An item can be an individual track ID or a track ID range. Use a hyphen (-) to separate the start and end track item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	The track list is in the range of 1 to 1024. Up to 16 items can be entered. Example: 1,2,3,5-8,10-20.
State	Monitor change status of track items	N/A	Enumeration: • **1**—positive. • **2**—negative.	N/A
SuppressTime	Suppress time	N/A	Unsigned integer.	The default value is 0.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventPeriod

This table contains EAA, period event policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventPeriod
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Period	Period for triger the event	N/A	Unsigned integer. • Value range: 1 to 43200	Period for triger the event in minutes.

EAA/CliPolicys/CliPolicy/CliPolicyActions

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyActions
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyAction
Table type	Multi-instance table
Row name	CliPolicyAction
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionNum	Action number	Index	Unsigned integer. Value range: 0 to 231	N/A
ActionContent	Action content	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent table.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionContent
Table type	Single-instance table
Row name	N/A

Restrictions	Action operations are mutually exclusive and only one type of action exists in the current table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionSyslog	Syslog action	Subtable	N/A	CliPolicyActionSyslog tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSyslog table.
ActionReboot	Reboot action	Subtable	N/A	CliPolicyActionReboot tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionReboot table.
ActionSwitchover	Switchover action	Subtable	N/A	CliPolicyActionSwitchover tables are mutually exclusive with other action tables.
ActionCli	CLI action	Subtable	N/A	CliPolicyActionCli tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli table.
ActionEmail	Email action	Subtable	N/A	CliPolicyActionEmail tables are mutually exclusive with other action tables.

Column name	Column description	Column type	Data type and restrictions	Remarks
				For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionEmail table.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSyslog

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: • **0**—LOG_EMERG. • **1**—LOG_ALERT. • **2**—LOG_CRIT. • **3**—LOG_ERR. • **4**—LOG_WARNING. • **5**—LOG_NOTICE. • **6**—LOG_INFO. • **7**—LOG_DEBUG.	N/A
Facility	Logging facility used by the log	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	host		• **128**—local0. • **136**—local1. • **144**—local2. • **152**—local3. • **160**—local4. • **168**—local5. • **176**—local6. • **184**—local7.	
Msg	Output log contents	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionReboot

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionReboot
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reboot	Reboot operation	N/A	EnableState: • **enable**.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSwitchover

This table contains information about the switchover policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionSwitchover
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	state of switchover	N/A	EnableState: • **enable**.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Command	Command line	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionEmail

This table contains information about the email policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA

Table name	ActionEmail
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rcpt	Recipients of the email	N/A	String. Length: 1 to 255 characters.	Recipients of the email.
Subject	Email subject	N/A	String. Length: 1 to 255 characters.	Email subject.
Content	Email content	N/A	String. Length: 1 to 255 characters.	Email content.

EAA/CliPolicys/CliPolicy/CliPolicyUserRoles

This table contains CLI policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyUserRoles
Table type	Multi-instance table
Row name	CliPolicyUserRole
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserRoleName	CLI policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

EAA/ScriptPolicys

This table contains Tcl policy information.

XML structure

```
<EAA>
  <ScriptPolicys>
    <ScriptPolicy>
      <ScriptType></ScriptType>
      <PolicyName></PolicyName>
      <PolicyFile></PolicyFile>
    </ScriptPolicy>
  </ScriptPolicys>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	ScriptPolicys
Table type	Multi-instance table
Row name	ScriptPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScriptType	script policy type	Index	Enumeration: • **2**—RTM_POLICYTYPE.	The script currently supported isTCL script, later may support other scripts.

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	script policy name	Index	String. Length: 1 to 63 characters.	N/A
PolicyFile	Script policy file	N/A	String. Length: 1 to 512 characters.	The script currently supported isTCL script, later may support other scripts. The TCL file suffix must be “.tcl”. TCL filename is case sensitive. The TCL file must be a file on the device storage medium. The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/Email

This table contains email information about EAA.

XML structure

```
<EAA>
  <Email>
    <Domain></Domain>
    <Username></Username>
    <Password></Password>
    <MaxSize></MaxSize>
  </Email>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	Email
Table type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Email server domain	N/A	String. Length: 1 to 255 characters.	Email server domain.
Username	Email username	N/A	String. Length: 1 to 255 characters.	Email username.
Password	Email password	N/A	String. Length: 1 to 255 characters.	Email password.
MaxSize	Max size for an email	N/A	Unsigned integer. Value range: 1 to 50	Max size for an email in MB.

Appendix

EAA environment variables decouple the configuration of action arguments from the monitor policy so you can modify a policy easily.

An EAA environment variable is defined as a <*variable_name variable_value*> pair and can be used in different policies. When you define an action, you can enter a variable name with a leading dollar sign (**$***variable_name*). EAA will replace the variable name with the variable value when it performs the action.

To change the value for an action argument, modify the value specified in the variable pair instead of editing each affected monitor policy.

EAA environment variables include system-defined variables and user-defined variables.

System-defined variables

System-defined variables are provided by default, and they cannot be created, deleted, or modified by users. System-defined variable names start with an underscore (_) sign. The variable values are set automatically depending on the event setting in the policy that uses the variables.

System-defined variables include the following types:

- **Public variable**—Available for any events.
- **Event-specific variable**—Available only for a type of event.

Table 2 shows all system-defined variables.

Table 2 System-defined EAA environment variables by event type

Variable name	Description
Any event:	

Variable name	Description
_event_id	Event ID.
_event_type	Event type.
_event_type_string	Event type description.
_event_time	Time when the event occurs.
_event_severity	Severity level of an event.
CLI:	
_cmd	Commands that are matched.
Syslog:	
_syslog_pattern	Log message content.
Hotplug:	
_slot	(Centralized devices.) 0. (Distributed devices) ID of the slot where card hot-swapping occurs. (Centralized IRF devices.) ID of the member device that joins or leaves the IRF fabric.
_subslot	ID of the subslot where subcard hot-swapping occurs.
Interface:	
_ifname	Interface name.
SNMP:	
_oid	OID of the MIB variable where an SNMP operation is performed.
_oid_value	Value of the MIB variable.
SNMP-Notification:	
_oid	OID that is included in the SNMP notification.
Process:	
_process_name	Process name.

User-defined variables

You can use user-defined variables for all types of events.

User-defined variable names can contain digits, characters, and the underscore sign (_), except that the underscore sign cannot be the leading character.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfList	List of interface items	N/A	Number string. It is a comma-separated list of interface items. An item can be an individual interface name or an interface range. Use a hyphen (-) to separate the start and end interface item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	Up to 8 items can be entered. Example: null0,GigabitEthernet0/0/1-GigabitEthernet0/0/2.
MonitorObj	Monitoring object	N/A	Enumeration: • **0**—input-errors. • **1**—output-errors. • **2**—input-drops. • **3**—ouput-drops. • **4**—rcv-broadcasts. • **5**—rcv-bps. • **6**—rcv-pps. • **7**—tx-bps. • **8**—tx-pps • **9**—tx-kbps. • **10**—rcv-kbps. • **11**—tx-kpps. • **12**—rcv-kpps.	N/A
StartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
StartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RestartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
RestartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventProcess

This table contains EAA, process event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventProcess
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessType	Process type	N/A	Enumeration: • **0**—start. • **1**—shutdown. • **2**—restart. • **3**—exception.	N/A
Name	Process name	N/A	String. Length: 1 to 63 characters.	N/A
Instance	Process ID	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmp

This table contains EAA, SNMP event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSnmp
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
Monitor	Monitor object	N/A	Enumeration: • **1**—get. • **2**—get-next.	N/A
StartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	
StartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
RestartOp	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
RestartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmpNotification

This table contains EAA, SNMP notification event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSnmpNotification
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	Trap SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
OidVal	OID value	N/A	String. Length: 1 to 512 characters.	N/A
Option	Comparison operator	N/A	Enumeration: • **0**—gt. • **1**—ge. • **2**—eq. • **3**—ne. • **4**—le. • **5**—lt.	N/A
Drop	Drop trap	N/A	Boolean: • **false** (default). • **true**.	This column must be empty.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSyslog

This table contains EAA, Syslog event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: • **0**—LOG_EMERG. • **1**—LOG_ALERT. • **2**—LOG_CRIT. • **3**—LOG_ERR. • **4**—LOG_WARNING. • **5**—LOG_NOTICE. • **6**—LOG_INFO. • **7**—LOG_DEBUG. • **8**—ALL.	N/A
Msg	Regular expression matching Syslog message	N/A	String. Length: 1 to 255 characters.	N/A
Occur	Occurrences	N/A	Unsigned integer. Value range: 1 to 32.	N/A
Period	Time range is seconds	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventTrack

This table contains EAA, track event, and monitor policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventTrack
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackList	List of track items	N/A	Number string. It is a comma-separated list of track items. An item can be an individual track ID or a track ID range. Use a hyphen (-) to separate the start and end track item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	The track list is in the range of 1 to 1024. Up to 16 items can be entered. Example: 1,2,3,5-8,10-20.
State	Monitor change status of track items	N/A	Enumeration: • **1**-positive. • **2**-negative.	N/A
SuppressTime	Suppress time	N/A	Unsigned integer.	The default value is 0.

EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventPeriod

This table contains EAA, period event policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	EventPeriod
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Period	Period for triger the event	N/A	Unsigned integer. • Value range: 1 to 43200	Period for triger the event in minutes.

EAA/CliPolicys/CliPolicy/CliPolicyActions

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyActions
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicyAction	CliPolicyAction information	Sublist	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction table

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyAction
Table type	Multi-instance table
Row name	CliPolicyAction
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionNum	Action number	Index	Unsigned integer. Value range: 0 to 231	N/A
ActionContent	Action content	Subtable	• N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent table.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionContent
Table type	Single-instance table
Row name	N/A

Restrictions	Action operations are mutually exclusive and only one type of action exists in the current table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionSyslog	Syslog action	Subtable	• N/A	CliPolicyActionSyslog tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSyslog table.
ActionReboot	Reboot action	Subtable	• N/A	CliPolicyActionReboot tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionReboot table.
ActionSwitchover	Switchover action	Subtable	• N/A	CliPolicyActionSwitchover tables are mutually exclusive with other action tables.
ActionCli	CLI action	Subtable	• N/A	CliPolicyActionCli tables are mutually exclusive with other action tables. For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli table.
ActionEmail	Email action	Subtable	• N/A	CliPolicyActionEmail tables are mutually exclusive with other action tables.

Column name	Column description	Column type	Data type and restrictions	Remarks
				For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionEmail table.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSyslog

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: • **0**—LOG_EMERG. • **1**—LOG_ALERT. • **2**—LOG_CRIT. • **3**—LOG_ERR. • **4**—LOG_WARNING. • **5**—LOG_NOTICE. • **6**—LOG_INFO. • **7**—LOG_DEBUG.	N/A
Facility	Logging facility used by the log	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	host		• **128**—local0. • **136**—local1. • **144**—local2. • **152**—local3. • **160**—local4. • **168**—local5. • **176**—local6. • **184**—local7.	
Msg	Output log contents	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionReboot

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionReboot
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reboot	Reboot operation	N/A	EnableState: **enable**.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSwitchover

This table contains information about the switchover policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionSwitchover
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	state of switchover	N/A	EnableState: • **enable**.	N/A

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli

This table contains information about the CLI policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	ActionCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Command	Command line	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionEmail

This table contains information about the email policy action.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA

Table name	ActionEmail
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rcpt	Recipients of the email	N/A	String. Length: 1 to 255 characters.	Recipients of the email.
Subject	Email subject	N/A	String. Length: 1 to 255 characters.	Email subject.
Content	Email content	N/A	String. Length: 1 to 255 characters.	Email content.

EAA/CliPolicys/CliPolicy/CliPolicyUserRoles

This table contains CLI policy information.

XML structure

See the XML structure of EAA/CliPolicys.

Table description

Item	Description
Feature name	EAA
Table name	CliPolicyUserRoles
Table type	Multi-instance table
Row name	CliPolicyUserRole
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserRoleName	CLI policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

EAA/ScriptPolicys

This table contains Tcl policy information.

XML structure

```
<EAA>
  <ScriptPolicys>
    <ScriptPolicy>
      <ScriptType></ScriptType>
      <PolicyName></PolicyName>
      <PolicyFile></PolicyFile>
    </ScriptPolicy>
  </ScriptPolicys>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	ScriptPolicys
Table type	Multi-instance table
Row name	ScriptPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScriptType	script policy type	Index	Enumeration: • **2**—RTM_POLICYTYPE.	The script currently supported isTCL script, later may support other scripts.

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	script policy name	Index	String. Length: 1 to 63 characters.	N/A
PolicyFile	Script policy file	N/A	String. Length: 1 to 512 characters.	The script currently supported isTCL script, later may support other scripts. The TCL file suffix must be “.tcl”. TCL filename is case sensitive. The TCL file must be a file on the device storage medium. The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

EAA/ActivePolicy

This table contains information about the active policy.

XML structure

```
<EAA>
  <ActivePolicys>
    <ActivePolicy>
      <JobID></JobID>
      <PolicyName></PolicyName>
      <PolicyType></PolicyType>
      <EventType></EventType>
      <TimeActive></TimeActive>
    </ActivePolicy>
  </ActivePolicys>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	ActivePolicys

Table type	Multi-instance table
Row name	ActivePolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
JobID	Job id	Index	Unsigned integer. Value range: 1 to 2147483647.	N/A
PolicyName	policy name	N/A	String. Length: 1 to 63 characters.	Monitoring strategy for executing action command.
PolicyType	Policy type	N/A	Enumeration: • **1**—CLI. • **2**—TCL.	N/A
EventType	Event type	N/A	Enumeration: • **0**—PROCESS. • **1**—INTERFACE. • **2**—HOTPLUG. • **3**—SYSLOG. • **4**—CLI. • **5**—SNMP. • **6**—SNMP_NOTIF. • **7**—TRACK. • **8**—EMPTY	N/A
TimeActive	Active time	N/A	String. Length: 1 to 63 characters.	N/A

EAA/RegisteredPolicy

This table contains information about the registered policy.

XML structure

```
<EAA>
  <RegisteredPolicys>
    <RegisteredPolicy>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <EventType></EventType>
      <TimeRegistered></TimeRegistered>
      <PolicyUserRole>
        <UserRoleName></UserRoleName>
      </PolicyUserRole>
```

```
    </RegisteredPolicy>
  </RegisteredPolicys>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	RegisteredPolicy
Table type	Multi-instance table
Row name	RegisteredPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyType	Policy type	Index	Enumeration: • **1**—CLI. • **2**—TCL.	N/A
PolicyName	policy name	Index	String. Length: 1 to 63 characters.	N/A
EventType	Event type	N/A	Enumeration: • **0**—PROCESS. • **1**—INTERFACE. • **2**—HOTPLUG. • **3**—SYSLOG. • **4**—CLI. • **5**—SNMP. • **6**—SNMP_NOTIF. • **7**—TRACK. • **8**—EMPTY	N/A
TimeRegistered	Registered time	N/A	String. Length: 1 to 63 characters.	N/A
PolicyUserRole	User role of a registration police.	Data structure	Members include: • UserRoleName	Multi-instance. The device can configure 64 effective user roles.
UserRoleName	Policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

EAA/Email

This table contains email information about EAA.

XML structure

```
<EAA>
  <Email>
    <Domain></Domain>
    <Username></Username>
    <Password></Password>
    <MaxSize></MaxSize>
  </Email>
</EAA>
```

Table description

Item	Description
Feature name	EAA
Table name	Email
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Email server domain	N/A	String. Length: 1 to 255 characters.	Email server domain.
Username	Email username	N/A	String. Length: 1 to 255 characters.	Email username.
Password	Email password	N/A	String. Length: 1 to 255 characters.	Email password.
MaxSize	Max size for an email	N/A	Unsigned integer. Value range: 1 to 50	Max size for an email in MB.

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the e-mail server.	Index	String. Length: 1 to 63 characters.	String cannot include special characters as follows: (&|'",:%<>/\).

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	Domain address for e-mail server.	N/A	String, case-insensitive. Dotted decimal notation. Length: 1 to 253 characters. By default, no domain is specified.	The string can contain letters, numbers, hyphens(-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time. Domain separated by dot (.), each segment shall not exceed 63 characters.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 25.	N/A
ClientAuthE	Enable the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
nable	client authentication.		• 0—Disable (default). • 1—Enable.	
UserName	E-mail server login username.	N/A	String. Length: 1 to 63 characters.	String cannot include special characters as follows: (&|'",:%<>/\). This column can't be configured only when the ClientAuthEnable is enable(1).
CipherKey	E-mail server login password in encrypted form.	N/A	String, case-sensitive. Length: 1 to 117 characters.	Configure CipherKey or SimpleKey, but not both. This column cannot be configured if the username is not configured. This column can't be configured only when the ClientAuthEnable is enable(1).
SimpleKey	E-mail server login password in plaintext form.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Configure CipherKey or SimpleKey, but not both. This column cannot be configured if the username is not configured. This column can't be configured only when the ClientAuthEnable is enable(1).

InstanceName	eMDI instance	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 31 characters.	
Description	Instance description	N/A	String. Length: 1 to 255 characters.	N/A
RtplrThreshold	Alarm threshold for the RTP packet loss rate	N/A	Unsigned integer. Value range: 1 to 100000. Default：100.	N/A
RtpserThreshold	Alarm threshold for the RTP packet sequence error rate	N/A	Unsigned integer. Value range: 1 to 100000. Default：100.	N/A
UplrThreshold	Alarm threshold for the upstream TCP packet loss rate	N/A	Unsigned integer. Value range: 1 to 100000. Default：100.	N/A
DplrThreshold	Alarm threshold for the downstream TCP packet loss rate	N/A	Unsigned integer. Value range: 1 to 100000. Default：100.	N/A
SuppressTimes	Number of consecutive alarms to be suppressed before logging the event	N/A	Unsigned integer. Value range: 0 to 60. Default：3.	N/A
MonitorPeriod	Monitoring period in seconds	N/A	Enumeration: • 10 • 30 • 60 Default：60.	N/A
Lifetime	eMDI instance lifetime	Data structure	Members include: • TimeType • Value Default：1 hour.	N/A
TimeType	Unit for the lifetime value	N/A	Enumeration: • days • hours • minutes • seconds	N/A
Value	Lifetime Value	N/A	Unsigned integer. days: 1 to 7. hours :1 to 168. minutes :5 to 10080. seconds: 300 to 604800.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	Transport Layer Protocol	N/A	Enumeration: • TCP. • UDP.	N/A
SrcIpAddress	Source IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DstIpAddress	Destination IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
SrcPort	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VXLANID	VXLAN ID	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
VRF	VPN instance	N/A	String. Length: 1 to 31 characters.	N/A
PtValue	RTP packet payload type	N/A	Unsigned integer. Value range: 25-71, 77-127.	This column is supported only if the value of the Protocol column is UDP.
ClockRate	RTP packet clock frequency in Hz	N/A	Enumeration: • 8000. • 16000. • 90000. Default: 90000.	This column is supported only if the value of the Protocol column is UDP.
Fec	Forward Error Correction parameters	Data structure	Members include: • Window • Threshold	N/A
Window	Sliding window size	N/A	Unsigned integer. Value range: 10 to 1000.	N/A
Threshold	Packet loss threshold in packets	N/A	Unsigned integer. Value range: 1 to 100.	N/A
AutoStart	Start the eMDI intstance	N/A	Boolean: • true. • false.	Whether to start the current monitoring instance.False does not mean stopping.

EMDI

EMDI/Instances

Message	Explanation
“Please first specify the data flow to be monitored. ” “配置此命令前未指定实例的目标数据流。”	The target flow is not configured. 监控目标流尚未配置。
“The data flow doesn't support the threshold type. ” “配置的告警阈值类型与目标流的类型不匹配。”	The alarm type does not match the target flow type. 告警类型和目标流类型不匹配。
“The eMDI instance is already started. To modify the configuration for the instance, stop the instance first. ” “试图修改已经启动的监控实例的告警阈值。”	If you want to modify the parameter, please stop the instance first. 如果需要修改参数，请先停止当前监控实例。
“eMDI is not configured. ” “输入此显示命令前emdi进程未启动。”	eMDI is not configured. eMDI 未配置。
“eMDI is not enabled. ” “输入此显示命令前未开启emdi。”	eMDI is not enabled. eMDI未使能。
“The instance doesn’t exist. ” “显示的实例不存在。”	The instance doesn’t exist. 该实例不存在。
“The flow is already bound to another eMDI instance. ” “不同的实例下配置相同的目标流。”	The target flow has been configured by another instance. 该目标流已经被其他实例配置。
“The eMDI instance is already started. To modify the configuration for the instance, stop the instance first. ”	If you want to modify the parameter, please stop the instance first. 如果需要修改参数，请先停止当前监控实例。

“试图修改已经启动的监控实例的目标流。”	
“Maximum number of eMDI instances already reached. ” “创建的实例数已超过最大值。”	The number of eMDI instances exceeds the maximum . eMDI 实例的数量超过最大值了。
“Please first specify the data flow to be monitored.” “启动实例前未配置监控的目标数据流。”	The monitored target data stream is not configured. 监控目标数据流尚未配置。
“Please first specify the UDP data flow to be monitored.” “配置此命令前未指定监控实例所监控的UDP目标流。”	The UDP data flow to be monitored is not specified. 未指定需要监控的 UDP 目标流。
“The data flow is not a UDP data flow. FEC is available only for a UDP data flow. ” “配置的滑动窗口和阈值与目标流的类型不匹配。”	FEC does not match the target flow type. FEC和目标流类型不匹配。
“The eMDI instance is already started. To modify the configuration for the instance, stop the instance first. ” “试图修改已经启动的监控实例的滑动窗口和阈值。”	If you want to modify the parameter, please stop the instance first. 如果需要修改参数，请先停止当前监控实例。
“Addresses need to bind to the target flow.” 地址需绑定目标流	Addresses need to bind to the target flow. 地址需绑定目标流
“Only UDP can be configured.” 仅UDP配置	Current configuration only supports UDP data flow. 当前配置仅支持 UDP 目标流.
“The eMDI measurement is inactive because the VPN instance does not exist.” eMDI测量处于未激活状态，因为VPN实例不存在。	“The eMDI measurement is inactive because the VPN instance does not exist.” eMDI 测量处于未激活状态，因为 VPN 实例不存在。

EMDI/Information

Message	Explanation
“eMDI is not configured. ” “输入此显示命令前emdi进程未启动。”	eMDI is not configured. 未配置 eMDI。
“eMDI is not enabled. ” “输入此显示命令前未开启emdi。”	eMDI is not enabled. eMDI 未使能。
“Maximum number of service modules in the group	The number of board sets exceeds the maximum.

already reached. ” “创建的单板组数量超过最大规格。”	单板组数量超过最大值。。
“The service module group doesn’t exist . ” “被绑定的单板组不存在。”	Service module group doesn’t exist. 绑定的单板组不存在。
“The instance is already bound to another service module group. ” “当前实例已绑定到其他单板组。”	The instance has been bound by another service module group. 当前实例下已经绑定过其他单板组。
“Please specify a service module group with members, or first add members to the service module. ” “绑定的单板组为空单板组。”	The service module group has no member. 绑定的单板组为空单板组。
“The service module doesn't support eMDI.” “所指定需要绑定的板不支持eMDI。”	The service module doesn't support eMDI. 该板不支持eMDI。
“Maximum number of service modules in the group already reached. ” “所要绑定的板已达到最大规格。”	The service modules to be bound has reached the maximum. 要绑定的单板已达到最大规格。

EMDI/Statistics

Message	Explanation
“eMDI is not configured. ” “输入此显示命令前emdi进程未启动。”	eMDI is not configured. 未配置 eMDI。
“eMDI is not enabled. ” “输入此显示命令前未开启emdi。”	eMDI is not enabled. eMDI 未使能。
“The instance doesn’t exist.” “显示的实例不存在。”	The instance doesn’t exist. 该实例不存在。
“No abnormal-flow periods.” “指定的实例无异常统计周期的数据。”	The instance doesn’t exist abnormal data. 该实例不存在异常数据。
“Please start the instance first. “指定的实例还未启动。”	Please start the instance first. 请先启动实例。
“No statistics yet. “实例刚启动监控，还没有产生监控结果。”	There is no statistics existing, please wait for at least a monitor period. 没有统计数据，请至少等待一个监控周期。
“The eMDI instance is already started. To modify	If you want to modify the parameter, please stop the instance

Message	Explanation
the configuration for the instance, stop the instance first. ” “试图修改已经启动的监控实例的监控时间。”	first. 如果需要修改参数，请先停止当前监控实例。
“The eMDI instance is already started. To modify the configuration for the instance, stop the instance first. ” “试图修改已经启动的监控实例的监控周期。”	If you want to modify the parameter, please stop the instance first. 如果需要修改参数，请先停止当前监控实例。
“The instance doesn’t exist. ” “清除一个不存在的监控实例统计信息。”	The instance doesn’t exist. 该实例不存在。

EPA

EPA/Operation

This table describes the operations that can be performed to EPA system.

XML structure

```
<EPA>
  <Operation>
    <OperationType></OperationType>
  </Operation>
</EPA>
```

Table description

Item	Description
Feature name	EPA
Table name	Operation
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OperationType	EPA operation type.	N/A	Enumeration: • 1—Notify EPA delete all monitoring configuration. • 2—Notify EPA smooth monitoring configuration start. • 3—Notify EPA smooth monitoring configuration end.	Must specify the operation which EPA supports.

EPA/Configuration

This table contains information about executing specific configuration files.

XML structure

```
<EPA>
```

```
  <Configuration>
    <ConfigFileName></ConfigFileName>
  </Configuration>
</EPA>
```

Table description

Item	Description
Feature name	EPA
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConfigFileName	Name of the configuration file to be executed.	N/A	String. Length: 1 to 64 characters.	The file must already exist in the directory “flash:/”. The file name should end with “.conf”.

    <Entry>
```

```
      <EntryID></EntryID>
      <MACInfo>
        <MacAddress></MacAddress>
        <VLANID></VLANID>
        <MacMask></MacMask>
      </MACInfo>
    </Entry>
  </Entries>
</EPA>
```

Table description

Item	Description
Feature name	EPA
Table name	Entries
Table type	Multi-instance table
Row name	Entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EntryID	Entry ID	Index	Unsigned integer. Value range: 0 to 1024. The value 0 is an invalid entry ID.	If you set this column to 0, the system automatically assigns a new entry ID. This entry ID is the unoccupied entry ID starting from 1.
MACInfo	The MAC information to be monitored	Data structure	Members include: • MacAddress • VLANID • MacMask	The members must both be specified. When you want to only specify the MACInfo to delete the configuration, you should set EntryID to 0.
MacAddress	MAC address to be monitored	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	VLAN ID to be monitored	Index	Unsigned integer. Value range: 1 to 4094, 65535.	The value 65535 means monitoring the MAC address on all VLANs.
MacMask	Mask for monitored MAC addresses	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-00-00-00.

Table description

Item	Description
Feature name	EPA
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Bridge MAC address of the device.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-a1-10-11-00-01.
DeviceType	N/A	N/A	Enumeration: • 0—Standalone. • 1—SmartMC TC. • 2—SmartMC TM.	N/A
ConfigStatus	The current configuration status of the EPA process.	N/A	String. Length: 1 to 63 characters.	This column returns the EPA configuration status as follow: • “Success”. • “Smooth”. • “Delete all configurations”.

				• “Batch”. • “System busy”.
Enable	Whether EPA is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled	N/A

EPA/Entries

This table contains EPA entries information.

XML structure

```
<EPA>
  <Entries>
    <Entry>
      <EntryID></EntryID>
      <MACInfo>
        <MacAddress></MacAddress>
        <VLANID></VLANID>
        <MacMask></MacMask>
      </MACInfo>
    </Entry>
  </Entries>
</EPA>
```

Table description

Item	Description
Feature name	EPA
Table name	Entries
Table type	Multi-instance table
Row name	Entry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EntryID	Entry ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
MACInfo	The MAC information to be monitored	Data structure	Members include: • MacAddress • VLANID • MacMask	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address to be monitored	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	VLAN ID to be monitored	Index	Unsigned integer. Value range: 1 to 4094, 65535.	65535 means to monitor endpoints of this MAC on all VLANs.
MacMask	Mask for monitored MAC addresses	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-00-00-00.

EPA/Endpoints

This table contains EPA endpoints information.

XML structure

```
<EPA>
  <Endpoints>
    <Endpoint>
      <DeviceID></DeviceID>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <IpAddress></IpAddress>
      <OnlineFlag></OnlineFlag>
      <IfName></IfName>
      <Category></Category>
      <Vendor></Vendor>
      <OS></OS>
    </Endpoint>
  </Endpoints>
</EPA>
```

Table description

Item	Description
Feature name	EPA
Table name	Endpoints
Table type	Multi-instance table
Row name	Endpoint
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Bridge MAC address of the device.	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0a-0c-23-e3-5d-c0.
MacAddress	The MAC address of the detected endpoint.	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	The VLAN ID of the detected endpoint.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
IpAddress	The IP address of the detected endpoint.	N/A	String. Dotted decimal notation or a colon-separated hexadecimal string.	Example: 1.1.1.1, or 1::1.
OnlineFlag	The status of the endpoint.	N/A	Enumeration: • 0—Offline. • 1—Online.	N/A
IfName	Full name of the endpoint's interface.	N/A	String. Length: 2 to 47 characters.	N/A
Category	The category of the detected endpoint.	N/A	String. Length: 1 to 63 characters.	N/A
Vendor	The vendor of the detected endpoint.	N/A	String. Length: 1 to 63 characters.	N/A
OS	The operating system of the detected endpoint.	N/A	String. Length: 1 to 63 characters.	N/A

EPA

EPA/Operation

Message	Explanation
The system is busy. The specified operation cannot be performed. 当前系统正忙，不能执行指定的操作。	Try again when the system is not busy. 当系统不忙时，尝试重新下发。

EPA/Configuration

Message	Explanation
The system is busy. The specified operation cannot be performed. 当前系统正忙，不能执行指定的操作。	Try again when the system is not busy. 当系统不忙时，尝试重新下发。
The file name is invalid. 文件名格式错误。	Please select a .conf file. The file name can contain only letters, digits, and underscores (_). 请选择一个文件名后缀为“.conf”的文件，且文件名只能包含英文字母、数字和“_”（下划线）。
Can't open configuration file. 打开配置文件失败。	The file does not exist or you do not have the privilege to open the file. 由于配置文件不存在或权限限制导致打开文件失败。
Failed to issue EPA configuration: *confCommand*. 配置下发失败，配置：*confCommand*。	EPA configuration *confCommand* cannot be issued. Please examine for configuration conflicts. 终端监控规则*confCommand*下发失败，请检查是否存在配置冲突。

EPA/Base

Message	Explanation
Failed to enable auto identification for endpoints. 开启终端自动识别功能失败。	Failed to enable auto identification for endpoints because the BYOD function is not supported. 由于BYOD功能不支持导致开启终端自动识别功能失败。

EPA/Entries

Message	Explanation
Can't specify the all-zero MAC address. 不可以指定MAC地址为全零MAC地址。	You cannot specify the all-zero MAC address. 不可以指定MAC地址为全零MAC地址。
Can't specify the broadcast MAC address. 不可以指定MAC地址为广播MAC地址。	You cannot specify the broadcast MAC address. 不可以指定MAC地址为广播MAC地址。

Can't specify a multicast MAC address. 不可以指定MAC地址为组播MAC地址。	You cannot specify a multicast MAC address. 不可以指定MAC地址为组播MAC地址。
The rule ID is already used. Please specify another rule ID or use a system-assigned ID by not specifying any ID. 指定的Rule ID已经被使用，请重新指定，或者不指定由系统自动分配。	Please specify an unused rule ID or enter 0 for the system to assign a rule ID automatically. 请指定一个未使用的规则编号，或者指定为零让系统自动分配。
The same rule configuration with a different rule ID already exists. 指定的配置项已存在，且已存在配置项的Rule ID与指定的Rule ID不同。	The same rule configuration with a different rule ID already exists. 指定的配置项已存在，且已存在配置项的Rule ID与指定的Rule ID不同。
Configuration failed. The monitored range overlaps with that of an existing rule. 监控范围交叉，配置失败。	Configuration failed. The monitored range overlaps with that of an existing rule. 监控范围交叉，配置失败。
Maximum number of monitor rules already reached. 监控规则数已经达到上限。	You can configure a maximum of 1024 monitor rules. 终端监控规则最多配置1024条。

EPA event stream

EPA event stream description.

LocalEndpointInfoEvent event

This event is used to report EPA local endpoint Information.

XML structure for event subscription

```
<LocalEndpointInfoEvent>
</LocalEndpointInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>EPA</stream>
    <filter type="subtree">
      <LocalEndpointInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/EPA:1.0">
      </LocalEndpointInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Uni	Interface on ONU device	Index	Unsigned integer Value range: 1 to 79.
SwitchMac	Switch MAC	Index	Six groups of two hexadecimal

Column name	Column description	Column type	Data type and restrictions
			digits, hyphen-separated.
PortId	Port ID	Index	Unsigned integer. Value range: 0 to 23
QosPriority	Port priority	N/A	Enumeration: • **0**—LOW**.** • **1**—HIGH.

Epon/AgmpVlanGlobal

This table contains AGMP VLAN global format for ONU authentication.

XML structure

```
<Epon>
  <Agmp>
    <AgmpVlanGlobals>
      <AgmpVlanGlobal>
        <IfIndex></IfIndex>
        <Uni></Uni>
        <SwitchMac></SwitchMac>
        <VlanEnable></VlanEnable>
        <VlanType></VlanType>
        <VlanMaxNum></VlanMaxNum>
      </AgmpVlanGlobal>
    </AgmpVlanGlobals>
  </Agmp>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	AgmpVlanGlobals
Table type	Multi-instance table
Row name	AgmpVlanGlobal
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Uni	Interface on ONU device	Index	Unsigned integer Value range: 1 to 79.
SwitchMac	Switch MAC	Index	Six groups of two hexadecimal digits, hyphen-separated.
VlanEnable	Whether the VLAN feature is enabled	N/A	Boolean: • **true**—Enable • **false**—Disable
VlanType	VLAN type	N/A	Enumeration: • **1—**PORT_BASED**.** • **2**—8021Q.
VlanMaxNum	Maximum number of VLANs supported	N/A	Enumeration: • **1—**ORI**.** • **2**—128.

Epon/AgmpVlanCfg

This table contains AGMP VLAN configuration format for ONU authentication.

XML structure

```
<Epon>
  <Agmp>
    <AgmpVlanCfgs>
      <AgmpVlanCfg>
        <IfIndex></IfIndex>
        <Uni></Uni>
        <SwitchMac></SwitchMac>
        <VlanOper></VlanOper>
        <Vid></Vid>
        <PortList></PortList>
        <UnTagList></UnTagList>
      </AgmpVlanCfg>
    </AgmpVlanCfgs>
  </Agmp>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	AgmpVlanCfgs
Table type	Multi-instance table
Row name	AgmpVlanCfg
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Uni	Interface on ONU device	Index	Unsigned integer Value range: 1 to 79.
SwitchMac	Switch MAC	Index	Six groups of two hexadecimal digits, hyphen-separated.
VlanOper	Vlan OP.	N/A	Enumeration: • **0—**ADD**.** • **1**—MOD. • **2**—DEL.
Vid	VLAN ID	Index	Unsigned integer You can add or modify only one VLAN at a time, and you can modify multiple VLANs at a time,enter 65535 to delete all VLANs.
PortList	Port ID	N/A	Sring For example, 1,3, or 3-5.
UnTagList	Untagged mask for 802.1Q only	N/A	String For example, if ports 1 and 3 are untagged members of VLAN 1, 1,0,1 is displayed.

Epon/AgmpGlobalCfg

This table contains AGMP global configuration format for ONU authentication.

XML structure

```
<Epon>
  <Agmp>
    <AgmpGlobalCfgs>
      <AgmpGlobalCfg>
        <IfIndex></IfIndex>
        <Uni></Uni>
        <SwitchMac></SwitchMac>
        <FullDuplexFlowControl></FullDuplexFlowControl>
        <BroadcastStormConstrain></BroadcastStormConstrain>
      </AgmpGlobalCfg>
    </AgmpGlobalCfgs>
  </Agmp>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	AgmpGlobalCfgs
Table type	Multi-instance table
Row name	AgmpGlobalCfg
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Uni	Interface on ONU device	Index	Unsigned integer Value range: 1 to 79.
SwitchMac	Switch MAC	Index	Six groups of two hexadecimal digits, hyphen-separated.
FullDuplexFlowControl	Global full duplex flow control switch	N/A	Boolean: • **true**— Enable FullDuplexFlowControl

Column name	Column description	Column type	Data type and restrictions
			• **false**—Disable FullDuplexFlowControl
BroadcastStormConstrain	Broadcast storm filter switch	N/A	Boolean: • **true**— Enable BroadcastStormFiltering • **false**—Disable BroadcastStormFiltering

Epon/AgmpOperType

This table is used to test the cable connection of Ethernet interfaces and get the test results.

XML structure

```
<Epon>
  <Agmp>
    <AgmpOperTypes>
      <AgmpOperType>
        <IfIndex></IfIndex>
        <Uni></Uni>
        <SwitchMac></SwitchMac>
        <OperType></OperType>      </AgmpOperType>
    </AgmpOperTypes>
  </Agmp>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	AgmpOperTypes
Table type	Multi-instance table
Row name	AgmpOperType
Restrictions	None
Support for row creation and deletion	Yes

RColumns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.		
Uni	Interface on ONU device	Index	Unsigned integer Value range: 1 to 79.
SwitchMac	Switch MAC	Index	Six groups of two hexadecimal digits, hyphen-separated.
OperType	There are three types of operations:RebootSwitch,Save Cfg,SetDefault	N/A	Enumeration: • **1**—RebootSwitch. • **2**—SaveCfg • **3**—SetDefault

Epon/OnuAGMPConfigData

This table is used to clear interfaces packet drop statistics.

XML structure

```
<Epon>
  <Agmp>
    <AgmpConfigDatas>
      <AgmpConfigData>
        <IfIndex></IfIndex>
        <Uni></Uni>
        <SwitchMac></SwitchMac>
        <ConfigFile></ConfigFile>
        <OperType></OperType>
      </AgmpConfigData>
    </AgmpConfigDatas>
  </Agmp>
</Epon>
```

Table description

Epon

Epon/OltUsingOnu

This table contains ONU or RONU interface information.

XML structure

```
<Epon>
  <OltUsingOnu>
    <Interface>
      <IfIndex></IfIndex>
      <OnuNum></OnuNum>
    </Interface>
  </OltUsingOnu>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OltUsingOnu
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the OLT interface or ROLT interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
OnuNum	ONU or RONU interface number.	N/A	Number string. It is a comma-separated	Example: 1,2,3,5-8,10-20. The item is permitted to

Column name	Column description	Column type	Data type and restrictions	Remarks
			list of ONU or RONU interface number items. An item can be an individual ONU or RONU interface number or an ONU or RONU interface number range. Use a hyphen (-) to separate the start and end ONU or RONU interface number of a range. Interface number range: 1 to 128. The string cannot end with a comma or hyphen, or include any whitespace characters.	incremental edit.

Epon/RoltInterfaceMember

This table contains the OLT member interfaces of the redundant OLT interface.

XML structure

```
<Epon>
  <RoltInterfaceMember>
    <Interface>
      <IfIndex></IfIndex>
      <MemberIfIndex></MemberIfIndex>
      <MemberPriority></MemberPriority>
    </Interface>
  </RoltInterfaceMember>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	RoltInterfaceMember
Table type	Multi-instance table
Row name	Interface
Restrictions	No
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	ROLT interface index.	Index	Unsigned integer	Interface index of the ROLT interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MemberIfIndex	OLT interface index.	Index	Unsigned integer	Interface index of the OLT member interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MemberPriority	Priority of an OLT interface that will be assigned to an ROLT interface.	N/A	Unsigned integer. Value range: 1 to 255.	You must configure both the MemberIfIndex and MemberPriority if the operation is **create** or **merge**.You can configure only the MemberIfIndex if the operation is **delete** or **remove**.

Epon/OnuBind

This table contains Onu interface binding information.

XML structure

```
<Epon>
  <OnuBind>
    <Interface>
      <IfIndex></IfIndex>
      <BindType></BindType>
```

```
      <MacAddress></MacAddress>
      <Loid></Loid>
      <CipherPaswd></CipherPaswd>
      <SimplePaswd></SimplePaswd>
    </Interface>
  </OnuBind>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuBind
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BindType	Configured binding type of an ONU interface	N/A	Enumeration: • **1**—MAC. • **2—**LOID. • **4**—LOID-PASSWORD.	The binding type cannot be combined.
MacAddress	MAC address of an ONU using the MAC binding type	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-11.
Loid	LOID of an ONU	N/A	String. Length: 1 to 24 character.	Valid only when the BindType label above is LOID or LOID-PASSWORD.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The string of Loid label is case-sensitive, cannot contain the character “?”, and cannot begin or end with the character “DEL”, “@”, “.”, “,”, “!”, “;”, “:”, “”, “”, or the hexadecimal number 0x0-0x20.
CipherPaswd	Cipher password of an LOID using the LOID-PASSWORD binding type to bind an ONU.	N/A	String. Length: 1 to 49 character.	Valid only when the BindType label above is LOID-PASSWORD. The cipher password is generated by simple password.
SimplePaswd	Simple password of an LOID using the LOID-PASSWORD binding type to bind an ONU.	N/A	String. Length: 1 to 12 character.	The string of Loid label is case-sensitive, cannot contain the character “?”, and cannot begin or end with the character “DEL”, “@”, “.”, “,”, “!”, “;”, “:”, “”, “”, or the hexadecimal number 0x0-0x20.

Epon/OnuAutoBind

This table contains auto binding information in the EPON system.

XML structure

```
<Epon>
  <OnuAutoBind>
      <AutoBind>
      <Chassis></Chassis>
      <Slot></Slot>
      <BindType></BindType>
    </AutoBind>
  </OnuAutoBind>
</Epon>
```

Table description

Item	Description
Feature name	Epon

Item	Description
Table name	OnuAutoBind
Table type	Multi-instance table
Row name	AutoBind
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned short. Value range: 0 to 65535.	N/A
BindType	Enable auto binding type, which can be combined.	N/A	Each bit represents a type. as follows: • **1**—MAC • **2**—LOID • **4**—LOID-PASSWORD	If no binding type is set, the default is MAC binding. The item is permitted to incremental edit. Examples: • **1**—MAC. • **3—**MAC, and LOID. • **5—**MAC, and LOID-PASSWORD.

Epon/OnuAutoBindGlobal

This table contains global auto binding information in the EPON system.

XML structure

```
<Epon>
  <OnuAutoBindGlobal>
    <AutoBindGlobal>
      <BindType></BindType>
    </AutoBindGlobal>
  </OnuAutoBindGlobal>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuAutoBindGlobal
Table type	Single-instance table
Row name	AutoBindGlobal
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BindType	Enable auto binding type, which can be combined. Inserting the EPON boards after configuring the auto binding, the configuration also takes effect on the EPON boards.	N/A	Each bit represents a type. as follows: • **1**—MAC • **2**—LOID • **4**—LOID-PASSWORD	If no binding type is set, the default is MAC binding. The item is permitted to incremental edit. Examples: • **1**—MAC. • **3—**MAC, and LOID. • **5—**MAC, and LOID-PASSWORD.

Epon/UniConfigInfo

This table contains UNI interfaces information.

XML structure

```
<Epon>
  <UniConfigInfo>
    <Interface>
      <IfIndex></IfIndex>
      <UniNum></UniNum>
      <VlanMode></VlanMode>
      <PVID></PVID>
      <Shutdown></Shutdown>
    </Interface>
  </UniConfigInfo>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	UniConfigInfo
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
UniNum	UNI number	Index	Unsigned integer	Number index of an UNI interface.
VlanMode	vlan mode of UNI	N/A	Enumeration: • **0**—TRANSPARENT. • **1**—TAG.	Only support TRANSPARENT and TAG.
PVID	Port VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The PVID value when the VlanMode is TAG.By default, no PVID is configured for an UNI interface.
Shutdown	Configured shutdown status of an UNI interface	N/A	Boolean: • **true**—shutdown • **false**—undo shutdown	The configration is undo shutdown by default.

Epon/FiberBackupTCPChannel

This table contains TCP connect information.

XML structure

```
<Epon>
  <FiberBackupTCPChannel>
    <LocalIpAddress></LocalIpAddress>
    <PeerIpAddress></PeerIpAddress>
  </FiberBackupTCPChannel>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	FiberBackupTCPChannel
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalIpAddress	Local IpAdress.	N/A	String. Dotted decimal notation.	Example:192.168.56.1
PeerIpAddress	Peer IpAddress.	N/A	String. Dotted decimal notation.	Example:192.168.56.2

Epon/FiberBackupGroups

This table contains fiber-backup groups information.

XML structure

```
<Epon>
  <FiberBackupGroups>
    <FiberBackupGroup>
      <GroupID></GroupID>
      <GroupType></GroupType>
        <DownLinkMember>
          <MainIfIndex></MainIfIndex>
          <StandbyIfIndex></StandbyIfIndex>
        </DownLinkMember>
      <UplinkIfIndex></UplinkIfIndex>
```

```
    </FiberBackupGroup>
  </FiberBackupGroups>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	FiberBackupGroups
Table type	Multi-instance table
Row name	FiberBackupGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	GroupID as table index.	Index	Unsigned integer. Value range: 1 to 120	N/A
GroupType	Group type.	N/A	Enumeration: • 1—Normal. • 2—Multidevice.	N/A
DownLinkMember	Downlink member information.	Data structure	Members include: • MainIfIndex • StandbyIfIndex	N/A
MainIfIndex	Index of main interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
StandbyIfIndex	Index of standby interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
UplinkIfIndex	Index of uplink interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Epon/OltInterfaces

This table contains Olt interfaces authentication information.

XML structure

```
<Epon>
  <OltInterfaces>
    <OltInterface>
      <IfIndex></IfIndex>
      <AuthenticationDomain></AuthenticationDomain>
    </OltInterface>
  </OltInterfaces>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OltInterfaces
Table type	Multi-instance table
Row name	OltInterface
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index as table index.	Index	Unsigned integer	Some versions support interface

Column name	Column description	Column type	Data type and restrictions	Remarks
				name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AuthenticationDomain	Authentication domain name.	N/A	String. Length: 1 to 255 characters.	N/A

Epon/OnuTransparentMulticasts

This table contains transparent multicast information of ONU/RONU interfaces.

XML structure

```
<Epon>
  <OnuTransparentMulticasts>

Epon

Epon/OltUsingOnu

This table contains ONU or RONU interface information.

XML structure

```
<Epon>
  <OltUsingOnu>
    <Interface>
      <IfIndex></IfIndex>
      <Name></Name>
      <OnuNum></OnuNum>
    </Interface>
  </OltUsingOnu>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OltUsingOnu
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the OLT interface or ROLT interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API

Column name	Column description	Column type	Data type and restrictions	Remarks
				Configuration Reference.
Name	Full name of the interface, including the interface type and number	N/A	String. Length: 2 to 47 characters.	Interface name of the OLT interface or ROLT interface. Example: Olt2/0/2
OnuNum	ONU or RONU interface number.	N/A	Number string: It is a comma-separated list of ONU or RONU interface number items. An item can be an individual ONU or RONU interface number or an ONU or RONU interface number range. Use a hyphen (-) to separate the start and end ONU or RONU interface number of a range. Interface number range: 1 to 128. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A

Epon/RoltInterfaceMember

This table contains the OLT member interfaces of the redundant OLT interface.

XML structure

```
<Epon>
  <RoltInterfaceMember>
    <Interface>
      <IfIndex></IfIndex>
      <MemberIfIndex></MemberIfIndex>
      <MemberPriority></MemberPriority>
      <MemberForwardStatus></MemberForwardStatus>
    </Interface>
  </RoltInterfaceMember>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	RoltInterfaceMember
Table type	Multi-instance table

Item	Description
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	ROLT interface index.	Index	Unsigned integer	Interface index of the ROLT interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MemberIfIndex	OLT interface index.	Index	Unsigned integer	Interface index of the OLT member interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MemberPriority	Priority of an OLT interface that will be assigned to an ROLT interface.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
MemberForwardStatus	Forwarding status of an OLT interface which is assigned to an ROLT interface.	N/A	Boolean: • **true**—Active • **false**—Inactive	By default, the value is false.

Epon/OnuBind

This table contains ONU interface binding information.

XML structure

```
<Epon>
  <OnuBind>
    <Interface>
      <IfIndex></IfIndex>
      <BindType></BindType>
      <MacAddress></MacAddress>
      <Loid></Loid>
      <CipherPaswd></CipherPaswd>
      <SimplePaswd></SimplePaswd>
    </Interface>
  </OnuBind>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuBind
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BindType	Configured binding type of an ONU interface	N/A	Enumeration: • **1**—MAC. • **2—**LOID. • **4**—LOID-PASSWORD.	By default, no binding type is configured for an ONU interface.
MacAddress	MAC address of	N/A	Six groups of two	Valid only when the

Column name	Column description	Column type	Data type and restrictions	Remarks
	an ONU using the MAC binding type		hexadecimal digits, hyphen-separated.	BindType label above is MAC.
Loid	LOID of an ONU to be bound	N/A	String. Length:1 to 24 character.	Valid only when the BindType label above is LOID or LOID-PASSWORD.
CipherPaswd	Cipher password of an LOID using the LOID-PASSWORD binding type to bind an ONU.	N/A	String. Length:1 to 49 character.	The cipher password result is not displayed to the user.
SimplePaswd	Simple password of an LOID using the LOID-PASSWORD binding type to bind an ONU.	N/A	String. Length:1 to 12 character.	The simple password result is not displayed to the user.

Epon/OnuAutoBind

This table contains auto binding information in the EPON system.

XML structure

```
<Epon>
  <OnuAutoBind>
    <AutoBind>
      <Chassis></Chassis>
      <Slot></Slot>
      <BindType></BindType>
    </AutoBind>
  </OnuAutoBind>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuAutoBind
Table type	Multi-instance table
Row name	AutoBind
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned short. Value range: 0 to 65535.	N/A
BindType	Enable auto binding type, which can be combined.	N/A	Each bit represents a type. As follows: • **1**—MAC • **2**—LOID • **4**—LOID-PASSWORD	By default, no bind type for auto bind. Examples: • **1**—MAC. • **3—**MAC, and LOID. • **5—**MAC and LOID-PASSWORD.

Epon/OnuAutoBindGlobal

This table contains global auto binding information in the EPON system.

XML structure

```
<Epon>
  <OnuAutoBindGlobal>
    <AutoBindGlobal>
      <BindType></BindType>
    </AutoBindGlobal>
  </OnuAutoBindGlobal>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuAutoBindGlobal
Table type	Single-instance table
Row name	AutoBindGlobal
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BindType	Enable auto binding type, which can be combined.	N/A	Each bit represents a type. As follows: • **1**—MAC • **2**—LOID • **4**—LOID-PASSWORD	By default, no bind type for auto bind. Examples: • **1**—MAC. • **3—**MAC, and LOID. • **5—**MAC and LOID-PASSWORD.

Epon/UniConfigInfo

This table contains UNI interfaces information.

XML structure

```
<Epon>
  <UniConfigInfo>
    <Interface>
      <IfIndex></IfIndex>
      <UniNum></UniNum>
      <VlanMode></VlanMode>
      <PVID></PVID>
      <Shutdown></Shutdown>
    </Interface>
  </UniConfigInfo>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	UniConfigInfo
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
UniNum	UNI number	Index	Unsigned integer	Number index of the UNI interface.
VlanMode	vlan mode of UNI	N/A	Enumeration: • **0—**TRANSPARENT**.** • **1**—TAG. • **2**—TRANSLATION. • **3**—AGGREGATION. • **4**—TRUNK. • **5**—QINQ.	The value is 0 by default.
PVID	Port VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The PVID value when the VlanMode is TAG.By default, no PVID is configured for a UNI interface.
Shutdown	Configured shutdown status of UNI an interface	N/A	Boolean: • **true**—shutdown • **false**—undo shutdown	The configration is undo shutdown by default.

Epon/OnuReportInfo

This table contains online or offline information of ONU interfaces.

XML structure

```
<Epon>
  <OnuReportInfo>
    <Interface>
      <IfIndex></IfIndex>
      <Name></Name>
      <OnlineStatus></OnlineStatus>
      <BindMac></BindMac>
```

```
      <MaxUni></MaxUni>
    </Interface>
  </OnuReportInfo>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuReportInfo
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of the interface, including the interface type and number	N/A	String. Length: 2 to 47 characters.	Interface name of the ONU interface or RONU interface. Example: Onu2/0/2:1
OnlineStatus	Online status of the ONU	N/A	Boolean: • **true**—online • **false**—offline	The value is false by default.
BindMac	MAC address of the ONU to be bound	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Valid only when the OnlineStatus label above is true.
MaxUni	Max number of UNI interfaces	N/A	Unsigned integer.	Valid only when the OnlineStatus label above is true.

Epon/OnuNeighborReportInfo

This table contains online or offline information of ONU neighbor interfaces.

XML structure

```
<Epon>
  <OnuNeighborReportInfo>
    <Interface>
      <IfIndex></IfIndex>
      <UniNum></UniNum>
      <OnlineStatus></OnlineStatus>
      <NeighborInfo>
        <NeighborMac></NeighborMac>
        <NeighborType></NeighborType>
      </NeighborInfo>
    </Interface>
  </OnuNeighborReportInfo>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuNeighborReportInfo
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the ONU or RONU interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
UniNum	UNI number	Index	Unsigned integer	N/A
OnlineStatus	Online status of the ONU neighbor	N/A	Boolean: • **true** — online • **false** — offline	The value is false by default.
NeighborInfo	Report info of the ONU neighbor	N/A	Include: • NeighborMac • NeighborType	N/A
NeighborMac	MAC address of the ONU neighbor to be bound	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
NeighborType	Type of the ONU neighbor	N/A	Enumeration: • **1**—AP.	N/A

Epon/FiberBackupTCPChannel

This table contains TCP connect information.

XML structure

```
<Epon>
  <FiberBackupTCPChannel>
    <LocalIpAddress></LocalIpAddress>
    <PeerIpAddress></PeerIpAddress>
  </FiberBackupTCPChannel>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	FiberBackupTCPChannel
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalIpAddress	Local IpAdress.	N/A	String. Dotted decimal notation.	Example:192.168.56.1

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerIpAddres s	Peer IpAddress.	N/A	String. Dotted decimal notation.	Example:192.168.56.2

Epon/FiberBackupGroups

This table contains fiber-backup groups information.

XML structure

```
<Epon>
  <FiberBackupGroups>
    <FiberBackupGroup>
      <GroupID></GroupID>
      <GroupType></GroupType>
      <DownLinkMember>
        <MainIfIndex></MainIfIndex>
        <StandbyIfIndex></StandbyIfIndex>
        <MainIfState></MainIfState>
        <StandbyIfState></StandbyIfState>
      </DownLinkMember>
      <UplinkIfIndex></UplinkIfIndex>
    </FiberBackupGroup>
  </FiberBackupGroups>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	FiberBackupGroups
Table type	Multi-instance table
Row name	FiberBackupGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	GroupID as table index.	Index	Unsigned integer. Value range: 1 to 120	N/A
GroupType	Group type.	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Normal. • 2—Multidevice.	
DownLinkMember	Downlink member information.	Data structure	Members include: • MainIfIndex • StandbyIfIndex • MainIfState • StandbyIfState	N/A
MainIfIndex	Index of main interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
StandbyIfIndex	Index of standby interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MainIfState	State of main interface	N/A	Enumeration: • 1—Other. • 2—Active. • 3—Ready.	Read-only.
StandbyIfState	State of standby interface	N/A	Enumeration: • 1—Other. • 2—Active. • 3—Ready.	Read-only.
UplinkIfIndex	Index of uplink interface	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Epon/OltInterfaces

This table contains Olt interfaces authentication information.

XML structure

```
<Epon>
  <OltInterfaces>
    <OltInterface>
      <IfIndex></IfIndex>
      <AuthenticationDomain></AuthenticationDomain>
    </OltInterface>
  </OltInterfaces>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OltInterfaces
Table type	Multi-instance table
Row name	OltInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index as table index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AuthenticationDomain	Authentication domain name.	N/A	String. Length: 1 to 255 characters.	N/A

Epon/OnuTransparentMulticasts

This table contains transparent multicast information of ONU/RONU interfaces.

XML structure

```
<Epon>
  <OnuTransparentMulticasts>
    <OnuTransparentMulticast>
      <IfIndex></IfIndex>
      <DestMAC></DestMAC>
      <VlanID></VlanID>
    </OnuTransparentMulticast>
  </OnuTransparentMulticasts>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	OnuTransparentMulticasts
Table type	Multi-instance table
Row name	OnuTransparentMulticast

IfIndex	Interface index as table index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
UniNum	UNI number	Index	Unsigned integer.	Number index of the UNI interface.
DestMAC	Multicast MAC address.	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VlanID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A

Epon/OnuAuthFormat/MACAddress

This table contains MAC address format for ONU authentication.

XML structure

```
<Epon>
  <OnuAuthFormat>
    <MACAddress>
      <WithHyphen></WithHyphen>
      <Uppercase></Uppercase>
    </MACAddress>
  </OnuAuthFormat>
</Epon>
```

Table description

Item	Description
Feature name	Epon
Table name	MACAddress
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
WithHyphen	Configure the MAC address to be with or without hyphens.	N/A	Boolean: • **true**—With hyphens • **false**—Without hyphens	A MAC address is with hyphens by default.
Uppercase	Configure the MAC address to use upper case letters or lower case letters.	N/A	Boolean: • **true**—Upper case • **false**—Lower case	A MAC address uses upper case letters by default.

Epon/AgmpTopo

This table contains AGMP Topo format for ONU authentication.

XML structure

```
<Epon>
```

```
  <Agmp>
    <AgmpTopos>
      <AgmpTopo>
        <IfIndex></IfIndex>
        <SwitchId></SwitchId>
        <SwitchMac></SwitchMac>
        <DownLinkPort></DownLinkPort>
        <UpLinkPort></UpLinkPort>
        <UpLinkMac></UpLinkMac>

Epon/OltUsingOnu

Message	Explanation
The interface in use cannot be deleted. 接口正在使用，不能被删除。	During executing undo operation for ONU interfaces, the interface in use cannot be deleted. 在对 ONU 接口进行 undo 操作时，因为接口正在使用，不能被删除。
Cannot delete this interface. 无法删除该接口。	During executing delete operation for ONU interface, this interface can not be deleted. 在执行删除 ONU 接口操作时，该接口无法被删除。
Cannot create this interface. 无法创建该接口。	During executing create operation for ONU interface, this interface can not be created. 在执行创建 ONU 接口操作时，该接口无法被创建。
Failed to create some interfaces. 部分接口创建失败。	During executing create operation for ONU interface, some interface creates failed. 在执行创建 ONU 接口操作时，部分接口创建失败。
Failed to delete some interfaces. 部分接口删除失败。	During executing delete operation for ONU interface, some interface deletes failed. 在执行删除 ONU 接口操作时，部分接口删除失败。
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for OltUsingOnu table, this operation is only supported on the OLT or ROLT interface. OltUsingOnu 表进行设置操作时，只支持 OLT、ROLT 接口。
The ONUs attached to %s are recovering. Please wait. 接口%s 的 ONU 接口正在配置，请稍后再试。	During executing delete operation for ONU interface, the ONUs are recovering. 在执行删除 ONU 接口操作时，ONU 接口正在配置。
Onu belong to %s can’t be deleted. Please undo the onu auto bind configuration of slot %hu first. 不能删除%s 的 ONU 接口。请先删除%hu 槽的自动绑定配置。	During executing delete operation for ONU interface, it can’t be deleted, because of onu auto configuration. 在执行删除 ONU 接口操作时，配置了自动绑定，不允许删除 ONU 接口。
Onu belong to %s can’t be deleted. Please undo the onu auto bind configuration of chassis %hu slot %hu first. 不能删除%s 的 ONU 接口。请先删除%hu 框%hu 槽的自动绑定配置。	During executing delete operation for ONU interface, it can’t be deleted, because of onu auto configuration. 在执行删除 ONU 接口操作时，配置了自动绑定，不允许删除 ONU 接口。
Onu belong to %s can’t be deleted. Please undo	During executing delete operation for RONU interface,

the onu auto bind configuration first. 不能删除%s 的 ONU 接口。请先删除自动绑定配置。	it can't be deleted, because of onu auto configuration. 在执行删除 RONU 接口操作时，配置了自动绑定，不允许删除 RONU 接口。
Please input the valid ONU number parameters, the valid ONU number: %u-%u. 请输入有效的 ONU 编号参数，ONU 编号的有效范围：%u-%u。	During executing set operation for OltUsingOnu table, the OnuNum is invalid OltUsingOnu 表进行设置操作时，OnuNum 范围无效。
Operation failed. 操作失败。	When operating the OltUsingOnu table failed, and the reason is not clear, this prompt will be printed by default. 对 OltUsingOnu 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/RoltInterfaceMember

Message	Explanation
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for RoltInterfaceMember table, this operation is only supported on the ROLT interface. RoltInterfaceMember 表进行设置操作时，只支持 ROLT 接口。
The OLT interface is already a member of another ROLT interface. 该 OLT 接口已经是其他 ROLT 接口的成员口。	During executing set operation for RoltInterfaceMember table, the OLT interface is already a member of another ROLT interface. 在对 RoltInterfaceMember 表进行设置操作时，该 OLT 接口已经是其他 ROLT 接口的成员口。
The priority is already used by another member interface. 相同优先级的成员接口已经存在。	During executing set operation for RoltInterfaceMember table, the priority is already used by another member interface. 在对 RoltInterfaceMember 表进行设置操作时，该优先级已经是同一 ROLT 接口的另一个成员口的优先级。
Number of members has exceeded the limit. ROLT 接口的成员口个数达到上限。	During executing set operation for RoltInterfaceMember table, the number of members has exceeded the limit. 在对 RoltInterfaceMember 表进行设置操作时，该接口的成员口达到上限。
The operation failed because the OLT interface has been assigned to a fiber backup group. OLT 接口已经加入光纤备份组，不能再加入 ROLT 接口。	During executing set operation for RoltInterfaceMember table, the operation failed because the OLT interface has been assigned to a fiber backup group. 在对 RoltInterfaceMember 表进行设置操作时，操作失

	败，因为该 OLT 接口已经加入光纤备份组。
Can't assign the interface to the ROLT interface because its attribute configurations are different from the ROLT interface. 接口上存在的属性类配置和 OLT 冗余接口不同，该接口不能加入 OLT 冗余口。	During executing set operation for interfaces table, can't assign the interface to the ROLT interface because its attribute configurations are different from the ROLT interface. 在对接口信息表进行 set 操作时，接口上存在的属性类配置和 OLT 冗余接口不同，该接口不能加入 OLT 冗余口。
The operation failed because the OLT interface has been configured with L2VPN. 操作失败，该端口配置了 L2VPN 业务。	During executing set operation for RoltInterfaceMember table, the operation failed because the OLT interface has been configured with L2VPN. 在对 RoltInterfaceMember 表进行 set 操作时，因为该端口配置了 L2VPN 业务导致加入 ROLT 失败。
Can't assign the interface to the ROLT interface because it has configured authentication mode. OLT 接口配置了认证模式，不能再加入 OLT 冗余接口。	During executing set operation for RoltInterfaceMember table, the operation failed because it has configured authentication mode. 在对 RoltInterfaceMember 表进行设置操作时，操作失败，因为 OLT 接口配置了认证模式配置。
Operation failed. 操作失败。	When operating the RoltInterfaceMember table failed, and the reason is not clear, this prompt will be printed by default. 对 RoltInterfaceMember 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/OnuBind

Message	Explanation
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for OnuBind table, this operation is only supported on the ROLT interface. OnuBind 表进行设置操作时，只支持 ONU、RONU 接口。
Multicast and broadcast MAC addresses aren't supported. 不支持广播 MAC 地址与多播 MAC 地址。	During executing set operation for OnuBind table, the multicast and broadcast MAC addresses aren't supported when then BindType is MAC. 在对 OnuBind 表配置 MAC 绑定操作时，MAC 地址不支持广播与多播。
The MAC address is the bridge MAC address. 该 MAC 地址是桥 MAC。	During executing set operation for OnuBind table, the operation failed because the MAC address is the bridge MAC address. 在对 OnuBind 表配置 MAC 绑定操作时，操作失败，因为 MAC 地址是桥 MAC。
Invalid MAC address.	During executing set operation for OnuBind table, the operation failed because of invalid MAC address.

无效的 MAC 地址。	在对 OnuBind 表配置 MAC 绑定时，操作失败，因为 MAC 地址是无效的。
The ONU has been bound to an ONU port on another OLT port. 该 ONU 设备已经被其他 OLT 接口的 ONU 接口绑定。	During executing set operation for OnuBind table, the ONU device has been bound to an ONU port on another OLT port. 在对 OnuBind 表进行设置操作时，该 ONU 设备已经被其他 OLT 接口的 ONU 接口绑定。
The ONU port has already been bound to an ONU. 该 ONU 接口已经配置了 ONU 绑定。	During executing set operation for OnuBind table, the ONU port has already been bound to an ONU。 在对 OnuBind 表进行设置操作时，该 ONU 接口已经配置了 ONU 绑定。
Can't bind any ONU to the port because the bandwidth is not sufficient. 接口的带宽不足，不能绑定 ONU。	During executing set operation for OnuBind table, the operation failed because of insufficient bandwidth, can't bind any ONU to the port. 在对 OnuBind 表进行设置操作时，接口的带宽不够，不能绑定 ONU。
Can’t bind the same LOID to different ONU ports of an OLT. 同一 OLT 接口的不同 ONU 接口，不能绑定相同的 LOID。	During executing set operation for OnuBind table, can't bind the same LOID to different ONU ports of an OLT. 在对 OnuBind 表进行设置操作时，属于 OLT 接口的不同 ONU 接口，不能绑定相同的 LOID。
Can’t bind the same MAC address to different ONU ports of an OLT. 同一 OLT 接口的不同 ONU 接口，不能绑定相同的 MAC 地址。	During executing set operation for OnuBind table, can't bind the same MAC address to different ONU ports of an OLT. 在对 OnuBind 表进行设置操作时，属于 OLT 接口的不同 ONU 接口，不能绑定相同的 MAC 地址。
Please input the MAC address. 请输入 MAC 地址。	During executing set operation for OnuBind table, please input the MAC address value, if the BindType is MAC. 在对 OnuBind 表进行设置操作时，如果是 MAC 绑定，请同时输入 MAC 地址。
Please input the LOID parameter. 请输入 LOID 参数。	During executing set operation for OnuBind table, please input the LOID value, if the BindType is LOID. 在对 OnuBind 表进行设置操作时，如果是 LOID 绑定，请同时输入 LOID。
Please input both the LOID and the CipherPaswd or SimplePaswd parameters. 请输入 LOID、CipherPaswd 或者 LOID、SimplePaswd 参数。	During executing set operation for OnuBind table, please input both the LOID value and the CipherPaswd or SimplePaswd, if the BindType is LOID-PASSWORD. 在对 OnuBind 表进行设置操作时，如果是 LOID-PASSWORD 绑定，请同时输入 LOID 与 CipherPaswd 或者 LOID 与 SimplePaswd。
Operation failed.	When operating the OnuBind table failed, and the

操作失败。	reason is not clear, this prompt will be printed by default. 对 OnuBind 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/OnuAutoBind

Message	Explanation
Operation failed. 操作失败。	When operating the OnuAutoBind table failed, and the reason is not clear, this prompt will be printed by default. 对 OnuAutoBind 表操作失败时，但又没有返回问题原因，则默认打印此提示。
No more ONU interfaces can be created on the %s. Please unbind one ONU ID of the OLT first。 OLT 接口没有资源创建更多的 ONU 接口，请先解绑一个 ONU。	During executing set operation for OnuAutoBind table, no more ONU interface can be created on the OLT interface. Please unbind one ONU ID of the OLT first. 在对 OnuAutoBind 表进行设置操作时，OLT 接口没有资源创建更多的 ONU 接口，需要先解绑一个 ONU。

Epon/UniConfigInfo

Message	Explanation
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for UniConfigInfo table, this operation is only supported on the ROLT interface. UniConfigInfo 表进行设置操作时，只支持 ONU、RONU 接口。
Please input integral configuration parameters. 请输入完整的配置参数。	When configuring UNI PVID, please input the VlanMode and PVID at the same time. 配置 UNI PVID 时，需要同时输入 VlanMode 和 PVID。

Epon/FiberBackupTCPChannel

Message	Explanation
Operation failed. 操作失败。	When operating the FiberBackupTCPChannel table failed, and the reason is not clear, this prompt will be printed by default. 对 FiberBackupTCPChannel 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/FiberBackupGroups

Message	Explanation
The group doesn't exist. 指定备份组不存在。	During executing set operation for FiberBackupGroups table, the fiber backup group doesn't exist. 在对 FiberBackupGroups 表进行设置操作时，指定的备份组不存在。
Illegal fiber backup group ID. 指定备份组 ID 无效。	During executing set operation for FiberBackupGroups table, the fiber backup group ID is invalid. 在对 FiberBackupGroups 表进行设置操作时，指定的备份组 ID 无效。
The fiber backup group with different type already existed. 已存在其他类型的备份组。	During executing set operation for FiberBackupGroups table, the fiber backup group with same group ID but with different type has already existed. 在对 FiberBackupGroups 表进行设置操作时，设置的备份组已存在其他类型的同编号的备份组。
The multidevice fiber backup group can only contain one master or standby interface. 跨设备光纤备份组只能指定一个主或备端口。	During executing set operation for FiberBackupGroups table, the multidevice fiber backup group can only contain one master or standby interface. 在对 FiberBackupGroups 表进行设置操作时，跨设备光纤备份组只能指定一个主或备端口。
Can't delete the fiber backup group: The group has members. 不能删除包含成员端口的备份组。	During executing set operation for FiberBackupGroups table, the fiber backup group with members can not be deleted. 在对 FiberBackupGroups 表进行设置操作时，不能删除包含成员端口的备份组。
The port has already been added to another fiber backup group. 该端口已配置在其他备份组。	During executing set operation for FiberBackupGroups table to add a member to the fiber backup group, the port has already been added to another fiber backup group. 在对 FiberBackupGroups 表进行设置操作时，不能配置已经添加到其他备份组中的端口到指定备份组。
The fiber backup group already has two members. 本地备份组中已存在两个成员口。	During executing set operation for FiberBackupGroups table, the fiber backup group only can configure two members. 在对 FiberBackupGroups 表进行设置操作时，本地备份组只能配置两个成员口。
Can't assign the interface to a fiber backup group because it has been assigned to an ROLT interface. 不能配置已经加入到 ROLT 接口的端口到备份组。	During executing set operation for FiberBackupGroups table, can't assign the interface which has been assigned to an ROLT interface to a fiber backup group. 在对 FiberBackupGroups 表进行设置操作时，不能配置已经加入到 ROLT 接口的端口到备份组。
The fiber backup group must be configed a master interface first.	During executing set operation for FiberBackupGroups table, the fiber backup group must be configed a

本地备份组必须首先配置一个主端口。	master interface first. 在对 FiberBackupGroups 表进行设置操作时，本地备份组必须首先配置一个主端口。
The fiber backup group has been configed a master interface. 本地备份组已经配置了一个主端口。	During executing set operation for FiberBackupGroups table, the fiber backup group has been configed a master interface. 在对 FiberBackupGroups 表进行设置操作时，本地备份组已经配置了一个主端口，不能再添加其他主端口。
Uplink interface can be configured only in a multidevice fiber backup group. 仅跨设备光纤备份组可以配置上行口。	During executing set operation for FiberBackupGroups table, uplink interface can be configured only in a multidevice fiber backup group. 在对 FiberBackupGroups 表进行设置操作时，仅有跨设备光纤备份组可以配置上行口。
Only one uplink interface can be configured in a multidevice fiber backup group. 跨设备光纤备份组只能配置一个上行口。	During executing set operation for FiberBackupGroups table, only one uplink interface can be configured in a multidevice fiber backup group. 在对 FiberBackupGroups 表进行设置操作时，跨设备光纤备份组只能配置一个上行口。
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for FiberBackupGroups table, this operation is only supported on the OLT or UPLINK interface. 在对 FiberBackupGroups 表进行设置操作时，只支持 OLT、UPLINK 相关接口类型。
Operation failed. 操作失败。	When operating the FiberBackupGroups table failed, and the reason is not clear, this prompt will be printed by default. 在 对 FiberBackupGroups 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/OltInterfaces

Message	Explanation
This operation is not supported on the interface. 该接口不支持本操作。	During executing set operation for OltUsingOnu table, this operation is only supported on the OLT or ROLT interface. FiberBackupGroups 表进行设置操作时，只支持 OLT、ROLT 接口。
Operation failed. 操作失败。	When operating the OltInterfaces table failed, and the reason is not clear, this prompt will be printed by default. 对 OltInterfaces 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/OnuTransparentMulticasts

Message	Explanation
Up to 8 transparent multicast MAC address and VLAN entries can be configured. 透传组播配置的MAC地址和VLAN不能都相同且不能超过8个。	Can not configure more than 8 transparent multicast entries. 最多只能配置 8 个组播透传。
The configuration of the MAC address and VLAN already exists. 指定 MAC 地址和 VLAN 的透传组播配置已存在。	When you add a transparent multicast configuration and the configuration with the same MAC address and VLAN already exists, this prompt will be printed. 添加透传组播配置时，发现指定的 MAC 和 VLAN 已存在，提示此错误。
The configuration of the MAC address and VLAN doesn't exist. 指定 MAC 地址和 VLAN 的透传组播配置不存在。	When you delete a transparent multicast configuration and the configuration with the same MAC address and VLAN does not exist, this prompt will be printed. 删除透传组播配置时，发现指定的 MAC 和 VLAN 不存在，提示此错误。
Forwarding multicast packets transparently has been configured for single UNI ports. 单个 UNI 口已配置透传组播。	When you configure a transparent multicast configuration for all UNI ports and a configuration for a single UNI port already exists, this prompt will be printed. 已配置了单个 UNI 口的透传组播配置，再配置全部 UNI 的透传组播配置时，提示此错误。
Only support the multicast mac-address. 只支持组播 MAC 地址。	Transparent multicast configuration only support the multicast mac-address. 透传组播配置只支持组播 MAC 地址。
Operation failed. 操作失败。	When operating the OnuTransparentMulticasts table failed, and the reason is not clear, this prompt will be printed by default. 对 OnuTransparentMulticasts 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/UniTransparentMulticasts

Message	Explanation
Up to 8 transparent multicast MAC address and VLAN entries can be configured. 透传组播配置的MAC地址和VLAN不能都相同且不能超过8个。	Can not configure more than 8 transparent multicast entries. 最多只能配置 8 个组播透传。
The configuration of the MAC address and VLAN already exists.	When you add a tranparent multicast configuration and the configuraiton with the same MAC and VLAN

指定 MAC 地址和 VLAN 的透传组播配置已存在。	already exists, this prompt will be printed. 添加透传组播配置时，发现指定的 MAC 和 VLAN 已存在，提示此错误。
The configuration of the MAC address and VLAN doesn't exists. 指定 MAC 地址和 VLAN 的透传组播配置不存在。	When you delete a transparent multicast configuration and the configuration with the same MAC address and VLAN does not exist, this prompt will be printed. 删除透传组播配置时，发现指定的 MAC 和 VLAN 不存在，提示此错误。
Forwarding multicast packets transparently has been configured for all UNI ports. 已在 ONU 口上配置所有 UNI 口的透传组播。	When you configure a transparent multicast configuration for a single UNI port and a configuration for all UNI ports already exists, this prompt will be printed. 已配置了全部 UNI 口的透传组播配置，再配置单个 UNI 的透传组播配置时，提示此错误。
Only support the multicast mac-address. 只支持组播 MAC 地址。	Transparent multicast configuration only support the multicast mac-address. 透传组播配置只支持组播 MAC 地址。
Operation failed. 操作失败。	When operating the UniTransparentMulticasts table failed, and the reason is not clear, this prompt will be printed by default. 对 UniTransparentMulticasts 表操作失败时，但又没有返回问题原因，则默认打印此提示。

Epon/AgmpPort

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpQosGlobal

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpQosPort

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpVlanGlobal

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP.	Does not support AGMP.

不支持AGMP。	不支持 AGMP

Epon/AgmpVlanCfg

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP
VLAN configuration conflicts, with VLAN xx,xx,xx,xx please try another VLAN ID . VLAN配置冲突，与Vlan xx,xx,xx,xx冲突，请尝试其他VLAN ID。	VLAN configuration conflicts.Please try another VLAN ID . VLAN 配置存在冲突，请尝试其他 VLAN ID
The number of device VLANs has reached the limit! Please delete some VLANs and try again. 设备VLAN数量已达最限制！请先删除部分VLAN后重试。	The number of VLANs has reached the maximum limit and cannot be created. Please delete some VLANs before creating a VLAN. VLAN 数量已达到最大限制，无法创建，请删除部分 VLAN 后再创建
The VLAN already exists and cannot be created repeatedly, Please confirm . VLAN已存在，不能重复创建，请确认。	The created VLAN already exists and cannot be created repeatedly, Please cconfirm. 创建的 VLAN 已经存在，不能重复创建，请检查确认

Epon/AgmpGlobalCfg

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpResetCounter

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpOperType

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

Epon/AgmpConfigData

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP.	Does not support AGMP.

不支持AGMP。	不支持 AGMP
The imported file is wrong. Please select the correct file. 导入的文件有误，请选择正确的文件。	The imported file is incorrect, Please check the imported file and select the correct one. 导入的文件不正确，请检查导入的文件，并选择正确的文件

Epon/AgmpSwitchName

Message	Explanation
The local port status is incorrect or the network is busy, and the configuration reading fails. Please confirm the local port status is correct and refresh the page again. 本地端口状态不正确或网络忙，读取配置失败，请确认本地端口状态正确后，重新刷新页面。	Errors caused by incorrect settings, busy network, incorrect configuration, and incorrect local port status. Please confirm the local port status is correct and refresh the page again. 由于设置错误、网络忙、配置错误以及本地端口状态不正确导致错误
Page input error. 页面输入错误。	The issued configuration error returns an error 下发的配置参数出错导致错误
Does not support AGMP. 不支持AGMP。	Does not support AGMP. 不支持 AGMP

OnuOnline event

This event is used to report ONU interface online information.

XML structure for event subscription

```
<OnuOnlineEvent>
  <OnuOnline>
    <Name></Name>
  </OnuOnline>
</OnuOnlineEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Epon</stream>
    <filter type="subtree">
      <OnuOnlineEvent xmlns="http://www.h3c.com/netconf/event:1.0/Epon:1.0">
        <OnuOnline>
          <Name>Onu2/0/1:1</Name>
        </OnuOnline>
      </OnuOnlineEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Epon
Event name	OnuOnlineEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Epon:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	ONU or RONU interface name	String. Size: 1 to 47	No

XML structure for event report

```
<OnuOnlineEvent>
  <OnuOnline>
    <IfIndex></IfIndex>
```

```
    <BindMac></BindMac>
    <MaxUni></MaxUni>
    <OnuModel></OnuModel>
  </OnuOnline>
</OnuOnlineEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-01-11T09:10:51</eventTime>
  <OnuOnlineEvent xmlns="http://www.h3c.com/netconf/event:1.0/Epon:1.0">
    <OnuOnline>
      <IfIndex>1296</IfIndex>
      <BindMac>00-11-22</BindMac>
      <MaxUni>79</MaxUni>
      <OnuModel>ET304</OnuModel>
   </OnuOnline>
  </OnuOnlineEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	No
IfIndex	Interface index	Unsigned integer.	No
BindMac	MAC address of an ONU to be bound	Three groups of two hexadecimal digits, hyphen-separated.	No
MaxUni	Max number of UNI interfaces	Unsigned integer	No
OnuModel	Device model of an ONU	String. Length: 2 to 24 characters. Example: ET304	No

OnuOffline event

This event is used to report ONU interface offline information.

XML structure for event subscription

```
<OnuOfflineEvent>
  <OnuOffline>
    <Name></Name>
```

```
  </OnuOffline>
</OnuOfflineEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">

Enable	Erps ring instance protocol enable statue	N/A	Boolean: • true. • false.	N/A
Connects	Erps connects	Sublist	N/A	N/A
ConnectRingID	Erps connect ring	Index	Unsigned integer. Value range: 1 to 255.	N/A
ConnectInstanceList	Erps connect instances	N/A	Number string. It is a comma-separated list of Instance items. An item can be an individual instance ID or a instance ID range. Use a hyphen (-) to separate the start and end instances of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
RevertiveOper	Erps revertive operation	N/A	Boolean: • true. • false.	N/A
Timer	Timer of erps	Data structure	Members include: • **Guard**. • **HoldOff**. • **Wtr**	N/A
Guard	Guard timer of erps	N/A	Unsigned integer. Value range: 10 to 2000, Step by 10	N/A
HoldOff	Hold off timer of erps	N/A	Unsigned integer. Value range: 0 to 10000, Step by 100	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Wtr	Wtr timer of erps	N/A	Unsigned integer. Value range: 1 to 12	N/A

ERPS/Rings/Instances

Erps ring instances info

XML structure

Please refer to the XML structure of ERPS/Rings.

Table description

Item	Description
Feature name	ERPS

Restrictions	None

ERPS/Interfaces

This table provides erps interace info.

XML structure

```
<ERPS>
  <Interfaces>
    <Interface>
      <IfName></IfName>
      <Tracks>
        <Track>
          <TrackID></TrackID>
          <RingID></RingID>
          <InstanceList></InstanceList>
        </Track>
      </Tracks>
    </Interface>
  </Interfaces>
</ERPS>
```

Table description

Item	Description
Feature name	ERPS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only track function.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	If name	Index	String. Length: 0 to 47 characters.	N/A
Tracks	Track info	Sublist	N/A	N/A
TrackID	Track index	Index	Unsigned integer. Value range: 1 to 1024.	N/A
RingCouples	Ring couple info	Table	N/A	N/A
RingID	Ring index	Index	Unsigned integer. Value range: 1 to 255.	N/A
InstanceList	Instance list of specifical trace	N/A	Number string. It is a comma-separated list of ring items. An item can be an individual ring ID or a ring ID range. Use a hyphen (-) to separate the start and end rings of a range.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The string cannot end with a comma or hyphen, or include any whitespace characters.	

ERPS/Interfaces/Tracks

Erps

Erps/Rings

Message	Explanation
Can't delete a ring before deleting all its instances. 环内存在实例，不能删除环。	Can't delete a ring before deleting all its instances. 环内存在实例，不能删除环。
Can't change the ring type before deleting all its instances. 环内存在实例，不能配置环的类型。	There are instances under the ring. The type of the ring cannot be configured. 环下有实例存在，不能配置环的类型。
An instance of the ring has been enabled with ERPS. 实例已使能ERPS协议。	The ring has enabled instance. 实例已使能。
Can't change the port of the ERPS ring. 当前不能修改环成员端口。	Can't change the port of the ERPS ring. 非法修改环成员端口配置。
The port is already an ERPS port. 端口已经是ERPS环成员端口。	The port is already an ERPS port. 当前端口已经是ERPS环成员端口。
ERPS ports must be trunk ports. ERPS环成员端口必须为Trunk类型。	ERPS ports must be trunk ports. 配置ERPS端口必须为trunk类型。
Can't configure the port as an ERPS port because RRPP, Smart Link, STP or LPDT is configured on the port. 配置ERPS环端口失败，因为该端口上可能有RRPP、Smart Link、STP或者LPDT的配置。	Can't configure the port as an ERPS port because RRPP, SMLK, STP or LPDT is configured on the port. 配置ERPS端口，端口上不能有RRPP，SMLK，STP或者LPDT的配置。
Port0 and Port1 can't be the same port. 环端口0和环端口1不能为同一个端口。	Port0 and port1 can't be the same port. port0和port1不能为同一个端口。

Erps/Instances

Message	Explanation
Can't change the control VLAN because the instance has been enabled with ERPS. 实例已使能ERPS协议，不能修改控制VLAN。	Can't change the control VLAN after the instance is enabled. 实例已使能，不能修改控制VLAN。
Can't specify a reserved VLAN as the ERPS control VLAN. 不能将预留VLAN配置成控制VLAN。	Can't specify an existing reserved VLAN as the ERPS control VLAN. 待创建VLAN已经存在。
The MSTI ID has been used by another ERPS instance. MSTI编号已被其他实例占用。	The VLANs mapped to the instance is being protected by another ERPS instance. 保护VLAN被其他实例占用。

Can't modify the ERPS node role after the instance is enabled with ERPS. 实例处于使能状态，不能修改节点角色。	Can't modify the ERPS node role after the instance is enabled. 实例已经使能，不能修改实例节点角色。
The current ring is not a subring. 该环不是子环。	The current ring is not a subring. 该环不是子环。
Please first configure a control VLAN for the instance is enabled with ERPS. 实例使能ERPS协议前，先配置控制VLAN。	Please configure a control VLAN for the ERPS instance first. 在配置实例使能时，先配置控制VLAN。
Please specify an MSTI ID before the instance is enabled with ERPS. 实例使能ERPS协议前，先配置MSTI编号。	Please configure a protected VLAN for the ERPS instance first. 在配置实例使能时，先配置保护VLAN。
Failed to add the ERPS port to the VLAN. 将ERPS成员端口加入VLAN失败。	Add vlan failed on the ERPS port. 端口加VLAN失败。
Can't delete MSTI IDs because the instance is enabled with ERPS. 当前实例已经使能，不能删除所有MSTI编号。	Can't delete all protected VLANs because the ERPS instance is enabled. 该ERPS实例已经使能，不能删除所有保护实例。
An RPL port or interconnection port must be specified for a node other than the normal node. 非普通节点角色必须配置RPL端口或互联节点端口。	Normal node don't have rpl attribute, besides, Noderole and rpl ports need to be configured simultaneously. normal节点没有RPL属性，除此之外，节点角色和RPL属性需同时配置。
The RPL attribute cannot be specified for the normal node. 普通节点角色不能配置RPL端口。	normal node cannot configure rpl attribute. 配置节点角色为normal时，不能带RPL属性。
Can't delete the instance because it is active with ERPS. 当前实例已激活，不能删除。	Can't delete the instance because the instance is active. 当前实例已激活，不能删除。
Failed to configure the control VLAN. 配置控制VLAN时失败。	Failed to configure the ERPS control VLAN. 配置控制VLAN时出错。

Erps/Connects

Message	Explanation
The current instance is not an interconnection node when a ring is associated with a subring. 配置环关联时，实例的节点不是互联节点。	The current instance is not an interconnection node. 配置关联实例时，当前实例不是互联节点。
Can't associate the instance itself. 配置环关联时，环ID和实例ID不能都相同。	Can't connect self instance. 配置关联实例中有环ID和实例ID与自身相同。
Maximum number of associated instances already reached. 关联实例数目超过设备支持的最大值。	The connect instance number is out of range. 关联实例数目最多为256个。

Erps/Tracks

Message	Explanation
InstanceList cannot be empty. InstanceList属性不能为空。	InstanceList can not empty. InstanceList属性不能为空。

Erps/ SwitchState

Message	Explanation
A member port must be specified when the switching mode is configured. 配置倒换模式时，必须指定环成员端口。	The inversion mode and port need to be configured simultaneously. 倒换模式和端口须同时配置。
Failed to configure the manual switching mode for the port because it has been configured for the other port. 手动倒换模式配置失败，节点的另一个端口已有手动倒换模式的配置。	The manual switch request is ignored, because of there is an existing manual switch request on the other port. 在已有MS端口节点的另一个端口配置MS。
Failed to configure the forced switching mode for the port because it has been configured for the other port. 强制倒换模式配置失败，节点的另一个端口已有强制倒换模式的配置。	The forced switch request is ignored, because of there is an existing forced switch request on the other port. 在已有FS端口节点的另一个端口配置FS。

Erps/ ClearInstanceState

Message	Explanation
Failed to remove the MS mode and FS mode settings because no MS mode and FS mode settings exist on the non-owner node. 清除倒换模式失败，在非主节点无FS/MS模式的配置。	The local end is not in forced switch mode or manual switch mode, and is not an owner node. 非owner节点，且无FS/MS端口，清除FS/MS状态未生效。

      <EncapFlag></EncapFlag>
      <IsUserVlanMode></IsUserVlanMode>
    </SubInterface>
  </SubInterfaces>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	SubInterfaces
Table type	Multi-instance table
Row name	SubInterface
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
EncapType	VLAN termination type	N/A	Enumeration: • **0**—None. • **1**—Dot1q unambiguous. • **2**—Dot1q ambiguous. • **5**—Untagged. • **6**—Default.	N/A
VlanID	Outermost VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094	Outermost VLAN tag for unambiguous VLAN termination. Used when the “EncapType” column is 1.
FirstVlanList	Outermost VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of *vlan-id1* to *vlan-id2*. The value range for VLAN IDs is 1 to 4094. The value for the *vlan-id2* argument must be equal to or greater than the value for the *vlan-id1* argument. Used when the “EncapType” column is 2.
EncapFlag	Configures the subinterface to terminate packets that include one or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	• **0**—STRICT • **1**—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan. • **false**—vlan-type.	Some version might not support this column.

ETH/VlanQinQTermination

This table contains QinQ VLAN termination information.

XML structure

```
<ETH>
  <VlanQinQTermination>
```

```
    <QinqTermination>
      <IfIndex></IfIndex>
      <VlanID></VlanID>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VlanID	Layer 1 VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
SecondVlan	Layer 2 VLAN ID or VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of *vlan-id1* to *vlan-id2*. The value range for VLAN IDs is 1 to 4094. The value for the *vlan-id2* argument must be equal to or greater than the value for the *vlan-id1*

Column name	Column description	Column type	Data type and restrictions	Remarks
				argument. Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	N/A	Unsigned integer. Value range: 1	Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	• **0**—STRICT • **1**—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan. • **false**—vlan-type.	Some versions might not support this column.

ETH/UnderlayForwardBypass

This table contains underlay forward bypass information.

XML structure

```
<ETH>
  <UnderlayForwardBypass>
    <Bypass>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Bypass>
  </UnderlayForwardBypass>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	UnderlayForwardBypass
Table type	Multi-instance table

Item	Description
Row name	Bypass
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 physical interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Specifies the action of whether or not to bypass the VXLAN packets from ETH.	N/A	Boolean: • **true**—Enable the function. • **false**—Disable the function.	N/A

ETH/EthIfMacAddress

This table contains Ethernet interface MAC address information.

XML structure

```
<ETH>
  <EthIfMacAddress>
    <IfMacAddress>
      <IfIndex></IfIndex>
      <MacAddress></MacAddress>
    </IfMacAddress>
  </EthIfMacAddress>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	EthIfMacAddress
Table type	Multi-instance table
Row name	IfMacAddress
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

ETH/VlanTerminations

This table contains VLAN termination information.

XML structure

```
<ETH>
  <VlanTerminations>
    <VlanTermination>
      <IfIndex></IfIndex>
      <FirstVlanBgn></FirstVlanBgn>
      <FirstVlanEnd></FirstVlanEnd>
      <SecondVlan></SecondVlan>
      <QinqAny></QinqAny>
      <EncapType></EncapType>
      <EncapFlag></EncapFlag>
      <IsUserVlanMode></IsUserVlanMode>
    </VlanTermination>
  </VlanTerminations>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	VlanTerminations
Table type	Multi-instance table
Row name	VlanTermination
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
FirstVlanBgn	Start outermost VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
FirstVlanEnd	End outermost VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	The value for the FirstVlanEnd must be equal to or greater than the value for the FirstVlanBgn.
SecondVlan	Layer 2 VLAN ID or VLAN ID list	Index	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of *vlan-id1* to *vlan-id2*. The value range for VLAN IDs is 1 to 4094. The value for the *vlan-id2* argument must be equal to or greater than the value for

Column name	Column description	Column type	Data type and restrictions	Remarks
				the *vlan-id1* argument. Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	Index	Unsigned integer. Value range: 1	Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
EncapType	VLAN termination type	N/A	Enumeration: • **0**—None. • **1**—Dot1q unambiguous. • **2**—Dot1q ambiguous. • **3**—Qinq unambiguous. • **4**—Qinq ambiguous. • **5**—Untagged. • **6—**Default.	N/A
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1 Default: 0	• 0—STRICT • 1—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan**.** • **false**—vlan-type (default).	Some versions might not support this column.

ETH/VlanTerminationIfConfig

This table contains VLAN termination configuration information of interfaces.

XML structure

```
<ETH>
  <VlanTerminationIfConfig>
    <IfConfig>
      <IfIndex></IfIndex>
      <BroadcastEnable></BroadcastEnable>
      <BroadcastRaEnable></BroadcastRaEnable>
    </IfConfig>
  </VlanTerminationIfConfig>
```

```
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	VlanTerminationIfConfig
Table type	Multi-instance table
Row name	IfConfig
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only layer 3 physical interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in *Ifmgr NETCONF XML API Configuration Reference*.
BroadcastEnable	Enabling status of an interface to transmit broadcasts and multicasts.	N/A	Boolean: • **true**—Enable**.** • **false**—Disable(default)**.**	Use this configuration when ambiguous Dot1q or QinQ termination is enabled on an interface.
BroadcastRaEnable	Enabling status of an interface to transmit multicast router advertisements.	N/A	Boolean: • **true**—Enable**.** • **false**—Disable(default)**.**	Use this configuration when ambiguous Dot1q or QinQ termination is enabled on an interface.

ETH/MapL2VE

This table contains mappings between Layer 3 Ethernet interfaces and virtual Ethernet bridge (VEB) interfaces.

XML structure

```
<ETH>
  <EthMapL2VE>
    <MapL2VE>

      <FirstVlanList></FirstVlanList>
      <EncapFlag></EncapFlag>
      <IsUserVlanMode></IsUserVlanMode>
    </SubInterface>
  </SubInterfaces>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	SubInterfaces
Table type	Multi-instance table
Row name	SubInterface
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			GigabitEthernet2/0/2.1	
EncapType	VLAN termination type	N/A	Enumeration: • **0**—None. • **1**—Dot1q unambiguous. • **2**—Dot1q ambiguous. • **3**—Qinq unambiguous. • **4**—Qinq ambiguous. • **5**—Untagged. • **6**—Default.	N/A
VlanID	Outermost VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094	Outermost VLAN tag for unambiguous VLAN termination.
FirstVlanList	Outermost VLAN ID list	N/A	String.	A range of outermost VLAN IDs.
EncapFlag	Configures the subinterface to terminate packets that include one or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	• **0**—STRICT • **1**—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan. • **false**—vlan-type.	Some versions might not support this column.

ETH/ETHSpecification

This table contains VLAN termination support information.

XML structure

```
<ETH>
  <ETHSpecification>
      <SupportDot1q></SupportDot1q>
      <SupportQinq></SupportQinq>
      <SupportUntagged></SupportUntagged>
      <SupportDefault></SupportDefault>
      <SupportLoose></SupportLoose>
  </ETHSpecification>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	ETHSpecification
Table type	Multi-instance table
Row name	N/A
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions
SupportDot1q	Whether Dot1q termination is supported	N/A	Boolean: • true • false
SupportQinq	Whether Qinq termination is supported	N/A	Boolean: • true • false
SupportUntagged	Whether Untagged termination is supported	N/A	Boolean: • true • false
SupportDefault	Whether Default termination is supported	N/A	Boolean: • true • false
SupportLoose	Whether the subinterface supports terminating packets that include one or more layers of VLAN tags.	N/A	Boolean: • true • false

ETH/VlanQinQTermination

This table contains QinQ VLAN termination information.

XML structure

```
<ETH>
  <VlanQinQTermination>
    <QinqTermination>
      <IfIndex></IfIndex>
      <VlanID></VlanID>
      <IfName></IfName>
      <SecondVlan></SecondVlan>
      <QinqAny></QinqAny>
      <EncapFlag></EncapFlag>
```

```
      <IsUserVlanMode></IsUserVlanMode>
    </QinqTermination>
  </VlanQinQTermination>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	VlanQinQTermination
Table type	Multi-instance table
Row name	QinqTermination
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VlanID	Layer 1 VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.1	N/A
SecondVlan	Layer 2 VLAN ID or VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of *vlan-id1* to *vlan-id2*. The value range for VLAN IDs is 1 to 4094. The value for the *vlan-id2* argument must be equal to or greater than the value for the *vlan-id1* argument. Note: The “SecondVlan”

Column name	Column description	Column type	Data type and restrictions	Remarks
				column and the “QinqAny” column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	N/A	Unsigned integer. Value range: 1	Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	• **0**—STRICT • **1**—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan. • **false**—vlan-type.	Some versions might not support this column.

ETH/UnderlayForwardBypass

This table contains underlay forward bypass information.

XML structure

```
<ETH>
  <UnderlayForwardBypass>
    <Bypass>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Enable></Enable>
    </Bypass>
  </UnderlayForwardBypass>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	UnderlayForwardBypass
Table type	Multi-instance table
Row name	Bypass

Item	Description
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 physical interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/1	N/A
Enable	Specifies the action of whether or not to bypass the VXLAN packets from ETH.	N/A	Boolean: • **true**—Enable the function. • **false**—Disable the function.	N/A

ETH/EthIfMacAddress

This table contains Ethernet interface MAC address information.

XML structure

```
<ETH>
  <EthIfMacAddress>
    <IfMacAddress>
      <IfIndex></IfIndex>
      <MacAddress></MacAddress>
    </IfMacAddress>
  </EthIfMacAddress>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	EthIfMacAddress
Table type	Multi-instance table
Row name	IfMacAddress
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

ETH/VlanTerminations

This table contains VLAN termination information.

XML structure

```
<ETH>
  <VlanTerminations>
    <VlanTermination>
      <IfIndex></IfIndex>
      <FirstVlanBgn></FirstVlanBgn>
      <FirstVlanEnd></FirstVlanEnd>
      <SecondVlan></SecondVlan>
      <QinqAny></QinqAny>
      <IfName></IfName>
      <EncapType></EncapType>
      <EncapFlag></EncapFlag>
      <IsUserVlanMode></IsUserVlanMode>
    </VlanTermination>
  </VlanTerminations>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	VlanTerminations
Table type	Multi-instance table
Row name	VlanTermination
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
FirstVlanBgn	Start outermost VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
FirstVlanEnd	End outermost VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	The value for the FirstVlanEnd must be equal to or greater than the value for the FirstVlanBgn.
SecondVlan	Layer 2 VLAN ID or VLAN ID list	Index	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of *vlan-id1* to *vlan-id2*. The value range for VLAN IDs is 1 to 4094. The value for the *vlan-id2* argument must be equal to or greater than the value for the *vlan-id1* argument.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	Index	Unsigned integer. Value range: 1	Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.1	N/A
EncapType	VLAN termination type	N/A	Enumeration: • **0**—None. • **1**—Dot1q unambiguous. • **2**—Dot1q ambiguous. • **3**—Qinq unambiguous. • **4**—Qinq ambiguous. • **5**—Untagged. • **6—**Default.	N/A
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	• 0—STRICT • 1—LOOSE
IsUserVlanMode	VLAN termination mode	N/A	Boolean: • **true**—user-vlan**.** • **false**—vlan-type.	Some versions might not support this column.

ETH/VlanTerminationIfConfig

This table contains VLAN termination configuration information of interfaces.

XML structure

```
<ETH>
  <VlanTerminationIfConfig>
    <IfConfig>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <BroadcastEnable></BroadcastEnable>
```

```
      <BroadcastRaEnable></BroadcastRaEnable>
    </IfConfig>
  </VlanTerminationIfConfig>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	VlanTerminationIfConfig
Table type	Multi-instance table
Row name	IfConfig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only layer 3 physical interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in *Ifmgr NETCONF XML API Configuration Reference*.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.1	N/A
BroadcastEnable	Enabling status of an interface to transmit broadcasts and multicasts.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Use this configuration when ambiguous Dot1q or QinQ termination is enabled on an interface.
BroadcastRaEnable	Enabling status of an interface to transmit multicast router advertisements.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Use this configuration when ambiguous Dot1q or QinQ termination is enabled on an interface.

ETH/MapL2VE

This table contains mappings between Layer 3 Ethernet interfaces and virtual Ethernet bridge (VEB) interfaces.

XML structure

```
<ETH>
  <EthMapL2VE>
    <MapL2VE>
      <IfName></IfName>
      <MapVEName></MapVEName>
    </MapL2VE>
  </EthMapL2VE>
</ETH>
```

Table description

Item	Description
Feature name	ETH
Table name	EthMapL2VE
Table type	Multi-instance table
Row name	MapL2VE
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Layer 3 Ethernet interface name	Index	String, case-sensitive. Length: 1 to 47 characters.	Only Layer 3 physical Ethernet interfaces are supported.
MapVEName	Name of the VEB interface mapped to the Layer 3 Ethernet interface	N/A	String, case-sensitive. Length: 1 to 47 characters.	Supports interface name.

EVPN

EVPN/ClearMACMobility

This table is used to clear the specified MAC mobility statistics.

XML structure

```
<EVPN>
  <ClearMACMobility>
    <MACMobility>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <Clear></Clear>
    </MACMobility>
  </ClearMACMobility>
</EVPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	ClearMACMobility
Table type	Multi-instance table
Row name	MACMobility
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Some versions support only unicast addresses or the all-zero MAC address.
Clear	Clear MAC mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearMACMobilityByEvpn

This table is used to clear the specified MAC mobility statistics according to an EVPN instance..

XML structure

```
<EVPN>
  <ClearMACMobilityByEvpn>
    <ClearByEvpn>
      <EvpnName></EvpnName>
      <MacAddr></MacAddr>
      <Clear></Clear>
    </ClearByEvpn>
  </ClearMACMobilityByEvpn>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearMACMobilityByEvpn
Table type	Multi-instance table
Row name	ClearByEvpn
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnName	EVPN instance name	index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Some versions support only unicast addresses or the all-zero MAC address.
Clear	Clear MAC mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearMACMobilityByIf

This table is used to clear the specified MAC mobility statistics according to the type and name of an interface.

XML structure

```
<EVPN>
  <ClearMACMobilityByIf>
    <ClearByIf>
      <IfIndex></IfIndex>
      <MacAddr></MacAddr>
      <Clear></Clear>
    </ClearByIf>
  </ClearMACMobilityByIf>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearMACMobilityByIf
Table type	Multi-instance table
Row name	ClearByIf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MacAddr	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Some versions support only unicast addresses or the all-zero MAC address.
Clear	Clear MAC mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearAllMACMobility

This table is used to clear all MAC mobility statistics.

XML structure

```
<EVPN>
  <ClearAllMACMobility>
    <Clear></Clear>
  </ClearAllMACMobility>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearAllMACMobility
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all MAC mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearARPMobility

This table is used to clear the specified ARP mobility statistics.

XML structure

```
<EVPN>
  <ClearARPMobility>
    <ARPMobility>
      <VrfName></VrfName>
      <IpAddress></IpAddress>
      <Clear></Clear>
    </ARPMobility>
  </ClearARPMobility>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearARPMobility
Table type	Single-instance table
Row name	ARPMobility
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	The value of _public_ indicates the public instance.
IpAddress	Remote IP address	N/A	String, dotted decimal notation.	N/A
Clear	Clear ARP mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearAllARPMobility

This table is used to clear all ARP mobility statistics.

XML structure

```
<EVPN>
  <ClearAllARPMobility>
    <Clear></Clear>
  </ClearAllARPMobility>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearAllARPMobility
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all ARP mobility statistics	N/A	N/A	This column must be empty.

EVPN/ClearAllSRv6PeerStatistics

This table is used to clear all EVPN over SRv6 peer statistics.

XML structure

```
<EVPN>
  <ClearAllSRv6PeerStatistics>
    <Clear></Clear>
  </ClearAllSRv6PeerStatistics>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	ClearAllSRv6PeerStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all EVPN over SRv6 peer statistics	N/A	N/A	This column must be empty.

EVPN/ClearSRv6VPLSPeerStatistics

This table is used to clear EVPN VPLS over SRv6 peer statistics on VSIs.

XML structure

```
<EVPN>
  <ClearSRv6VPLSPeerStatistics>
    <ClearSRv6VPLSPeerStatistic>
```

```
      <VsiName></VsiName>
      <PeerAddr></PeerAddr>
      <Clear></Clear>
    </ClearSRv6VPLSPeerStatistic>
  </ClearSRv6VPLSPeerStatistics>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	EvpnInstances
Table type	Multi-instance table
Row name	EvpnInstance
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnName	EVPN name	Index	String. Length: 1 to 31 characters.	N/A
MacAdvertise	MAC advertisement	N/A	Boolean: • **true**—Enabled(default). • **false—**Disabled.	N/A
ArpMacLearn	ARP MAC learning	N/A	Boolean: • **true**—Enabled(default). • **false—**Disabled.	N/A
NdMacLearn	ND MAC learning	N/A	Boolean: • **true**—Enabled(default). • **false**—Disabled.	N/A
ArpAdvertise	ARP advertisement	N/A	Boolean: • **true**—Enabled(default) • **false**—Disabled	N/A
ETree	Status of EVPN E-tree	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
FrrLocal	Status of local FRR for EVPN	N/A	Enumeration: • **0**—Inherit (default). • **1**—Enabled. • **2**—Disabled.	N/A
UMR	Unknown MAC route	N/A	Enumeration: • 1—Send. • 2—Receive. 3—Send and receive.	This column cannot be modified.
UMRSendFlag	Unknown MAC route send flag	N/A	Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
PwClassName	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
TunnelPolicyName	Tunnel policy related to the	N/A	String. Length: 1 to 126 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PW			
ImportRoutePolicy	Import routing policy	N/A	String. Length: 1 to 63 characters.	N/A
ExportRoutePolicy	Export routing policy	N/A	String. Length: 1 to 63 characters.	N/A
EvpnSRv6Locators	EVPN over SRv6 locators	Sublist	N/A	N/A
SegmentRoutingIteration	Segment Routing Iteration	N/A	Enumeration: • **0**—No segment routing iteration(default). • **1**—Best effort. • **2**—Traffic engineering. • **3**—Traffic engineering and best effort, traffic engineering preferred.	N/A

EVPN/EvpnInstances/EvpnSRv6Locators

This table is a sublist of EvpnInstances. This table contains information about EVPN over SRv6 locators.

XML structure

```
<EVPN>
  <EvpnInstances>
    <EvpnInstance>
      <EvpnSRv6Locators>
        <EvpnSRv6Locator>
          <LocatorName></LocatorName>
          <Dt2uLocatorName></Dt2uLocatorName>

```

Table description

Item	Description
Feature name	EVPN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
DrniGroupIpAddress	Drni Group Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
EdgeGroupIp	Edge Group Ip	N/A	String,IPv4 address string or	Example: 1.1.1.1

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address		IPv6 address string.	or 1::1.
EVPN_DRNI	Distributed Resilient Network Interconnect	N/A	Members include: • LocalIpAddress • RemoteIpAddress	N/A
LocalIpAddress	Local Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. only support Ipv4 address.
RemoteIpAddress	Remote Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. only support Ipv4 address.
GlobalMacAddr	Global Mac Address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Some versions only support unicast address or all 0s.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobility Suppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacMobility Suppression column is true.
Suppression Time	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobility Suppression column is true.
IrbAsymmetric	EVPN asymmetric IRB	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IrbAsymmetricRoutePolicy	Routing policy for EVPN asymmetric IRB	N/A	String. • Length: 1 to 63 characters	You must first enable the L2VPN feature globally.
MultihomingIgnoreEthernetTag	Whether to ignore the Ethernet tag when advertising multihoming routes	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
MultihomingVpwsFrrLocal	Whether to enable local FRR for EVPN VPWS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
MultihomingVplsFrrLocal	Whether to enable local FRR for EVPN VPLS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
VpwsFrrRemote	Whether to enable remote FRR for EVPN VPWS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
EvpnNDMobilitySuppression	Status of EVPN ND mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnNDMobility	Attributes of ND mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A
DetectTime	ND mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
MoveTimes	ND move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
SuppressionTime	ND mobility suppression	N/A	Unsigned integer.	The default value for this column is

Column name	Column description	Column type	Data type and restrictions	Remarks
	time		Value range: 0 and 120 to 3600, in seconds.	0 (permanent). Use this column only when the value for the EvpnNdMobilitySuppression column is true.
DfElectionAlgorithm	DF election algorithm	N/A	Enumeration: • **0**—Default. • **2**—Preference.	The default value for this column is 0.
MultihomingReOriginatedMac	Whether to enable Multihoming re-originatedMac	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.
GatewayMacUnmovable	Gateway MAC address is advertised with a MAC Mobility extended community where the static flag is set to 1	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.
GatewayAdvertiseMacipRoute	MAC/IP route advertising for distributed-gateway	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.
EvpnArpMobilitySuppression	Status of EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.The configuration for these parameters also apply to VXLAN/Base.
EvpnArpMobility	Attributes of ARP mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A.
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the

Column name	Column description	Column type	Data type and restrictions	Remarks
				EvpnArpMobilitySuppression column is true.
Suppression Time	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnArpMobilitySuppression column is true.

EVPN/InterfaceConfigs

This table contains information about configurations of interfaces.

XML structure

```
<EVPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <EvpnDelayTime></EvpnDelayTime>
      <EvpnTrackPeerAddrs>
      </EvpnTrackPeerAddrs>
      <EvpnADDelayTime></EvpnADDelayTime>
      <EvpnMACMobility></EvpnMACMobility>
      <EvpnArpMobility></EvpnArpMobility>
      <EvpnNDMobility></EvpnNDMobility>
      <DfElectionAlgorithm></DfElectionAlgorithm>
      <DfElectionPreference></DfElectionPreference>
      <PreferenceNonRevertive></PreferenceNonRevertive>
    </InterfaceConfig>
  </InterfaceConfigs>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	InterfaceConfigs
Table type	Multi -instance table
Row name	InterfaceConfig
Restrictions	This table supports only Layer 3 Ethernet interfaces.

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
EvpnDelayTime	Delay Time	N/A	Unsigned integer, Value range:3-1200.	N/A
EvpnTrackPeerAddrs	EvpnTrackPeerAddrs	Sublist	N/A	N/A
EvpnADDelayTime	AD delay Time	N/A	Unsigned integer, Value range:3-1200.	N/A
EvpnMACMobility	EvpnMACMobility	Sublist	N/A	N/A
EvpnArpMobility	EvpnArpMobility	Sublist	N/A	N/A
EvpnNDMobility	EvpnNDMobility	Sublist	N/A	N/A
DfElectionAlgorithm	DF election algorithm	N/A	Enumeration: • **0**—default. • **2**—preference.	The default value for this column is 0.
DfElectionPreference	DF election preference	N/A	Unsigned integer. Value range: 0 to 65535.	The default value for this column is 32767. This column takes effect when the value for the DfelectionAlgorithm or EVPN/Base/DfelectionAlgorithm column is 2.
PreferenceNonRevertive	DF election preference non revertive mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

EVPN/InterfaceConfigs/EvpnTrackPeerAddrs

RemoteSrvID	Remote service ID	N/A	Unsigned integer. Value range: 4096 to 16777215.	N/A
ForwardingPreferred	Whether to specify the EVPN VPWS PW as the preferred forwarder	N/A	Boolean: • **true**—Yes (default). • **false**—No.	N/A
BumForwardingDX2L	Whether to enable End.DX2L SID-based BUM forwarding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
PwClassName	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
UMR	Unknown MAC Route	N/A	Enumeration: • **1**—send enable. • **2**—receive enable. • **3**—send and receive	This column cannot be modified.

			enable. • 4—send and detail-suppressed enable. • 5—send and detail-suppressed and receive enable.	
UMRSendFlag	Unknown MAC route send flag	N/A	Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. • 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
DefaultColor	Evpn default color ID	N/A	Unsigned integer(32).	N/A
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • false—Disabled (default).	You must first enable the L2VPN feature globally.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.

EVPN/SRv6VplsRTs

This table contains information about EVPN route targets associated with VPLS.

XML structure

```
<EVPN>
  <SRv6VplsRTs>
    <SRv6VplsRT>
      <VsiName></VsiName>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </SRv6VplsRT>
  </SRv6VplsRTs>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	SRv6VplsRTs
Table type	Multi-instance table
Row name	SRv6VplsRT
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI and enable EVPN SRv6 encapsulation before you merge, replace, or create SRv6 RTs, and the RTs are not auto in table SRv6VplsRTs.
RTType	Route target type	Index	Enumeration: • **1**—Import. • **2**—Export.	N/A
RTEntry	Route target	Index	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	N/A

EVPN/VPWSEncapsSRv6

This table contains information about EVPN VPWS with SRv6 encapsulation.

XML structure

```
<EVPN>
  <VPWSEncapsSRv6s>
    <VPWSEncapsSRv6>
      <XCGName></XCGName>
      <RD></RD>
      <SegmentRoutingIteration></SegmentRoutingIteration>
      <FrrLocal></FrrLocal>
      <ImportRoutePolicy></ImportRoutePolicy>
      <ExportRoutePolicy></ExportRoutePolicy>
      <FrrRemote></FrrRemote>
      <DefaultColor></DefaultColor>
     </VPWSEncapsSRv6>
  </VPWSEncapsSRv6s>
</EVPN>
```

Table name	VPWSEncapsSRv6s
Table type	Multi-instance table
Row name	VPWSEncapsSRv6
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG name	Index	String. Length: 1 to 31 characters.	You must create a XCG before you merge, replace, or create SRv6 RDs, and the RDs are not auto in table VPWSEncapsSRv6 .
RD	Route	Data	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	distinguisher	structure	Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	
SegmentRoutingIteration	Segment Routing Iteration	N/A	Enumeration:. • **0**—No segment routing iteration(default). • **1**—Best effort. • **2**—Traffic engineering. • **3**—Traffic engineering and best effort, traffic engineering preferred.	N/A
FrrLocal	Whether to enable local FRR for EVPN VPWS	N/A	Enumeration:. • **0**—Inherit (default). • **1**—enable. • **2**—disable.	When the value is 0, this column inherits the configuration of EVPN/base/MultihomingVpwsFrrLocal.
ImportRoutePolicy	Import routing policy	N/A	String. Length: 1 to 63 characters.	N/A
ExportRoutePolicy	Export routing policy	N/A	String. Length: 1 to 63 characters.	N/A
FrrRemote	Whether to enable remote FRR for EVPN VPWS	N/A	Enumeration:. • **0**—Inherit (default). • **1**—enable. **2—**disable.	When the value is 0, this column inherits the configuration of EVPN/base/VpwsFrrRemote.
DefaultColor	Evpn default color ID	N/A	Unsigned integer(32).	N/A

EVPN/SRv6VpwsRTs

This table contains information about EVPN route targets associated with VPWS.

XML structure

```
<EVPN>
  <SRv6VpwsRTs>
    <SRv6VpwsRT>
      <XCGName></XCGName>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </SRv6VpwsRT>
  </SRv6VpwsRTs>
```

```
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event	N/A	Boolean: • **true**—Enabled.	You must first enable the L2VPN feature globally.

Column name	Column description	Column type	Data type and restrictions	Remarks
	suppression		• **false**—Disabled.	
DrniGroupIpAddress	Drni Group Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
EdgeGroupIpAddress	Edge Group Ip Address	N/A	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
EVPN_DRNI	Distributed Resilient Network Interconnect	N/A	Members include: • LocalIpAddress • RemoteIpAddress	N/A
LocalIpAddress	Local Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
RemoteIpAddress	Remote Ip Address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
GlobalMacAddr	Global Mac Address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Some versions only support unicast address or all 0s.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	This column takes effect only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	This column takes effect only when the value for the EvpnMacMobilitySuppression column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	This column takes effect only when the value for the EvpnMacMobilitySuppression column is true.
IrbAsymmetric	EVPN asymmetric IRB	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
IrbAsymmetricRoutePolicy	Routing policy for EVPN asymmetric IRB	N/A	String. Length: 1 to 63 characters	You must first enable the L2VPN feature globally.
MultihomingIgnoreEthernetTag	Whether to ignore the Ethernet tag when advertising	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	multihoming routes			
MultihomingVpwsFrrLocal	Whether to enable local FRR for EVPN VPWS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
MultihomingVplsFrrLocal	Whether to enable local FRR for EVPN VPLS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
VpwsFrrRemote	Whether to enable remote FRR for EVPN VPWS at a multihomed site	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
EvpnNDMobilitySuppression	Status of EVPN ND mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnNDMobility	Attributes of ND mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	ND mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	This column takes effect only when the value for the EvpnNDMobilitySuppression column is true.
MoveTimes	ND move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	This column takes effect only when the value for the EvpnNDMobilitySuppression column is true.
SuppressionTime	ND mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	This column takes effect only when the value for the EvpnNDMobilitySuppression column is true.
AvailableGlobalMacAddr	Available Global Mac Address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DfElectionAlgorithm	Dfelection algorithm	N/A	Enumeration: • **0**—default. • **2**—preference.	N/A
MultihomingReOriginatedMac	Whether to enable Multihoming re-originatedMac	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.

Column name	Column description	Column type	Data type and restrictions	Remarks
GatewayMacUnmovable	Gateway MAC address is advertised with a MAC Mobility extended community where the static flag is set to 1	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	You must first enable the L2VPN feature globally.
GatewayAdvertiseMacipRoute	MAC/IP route advertising for distributed-gateway	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnArpMobilitySuppression	Status of EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.The configuration for these parameters also apply to VXLAN/Base.
EvpnArpMobility	Attributes of ARP mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A.
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
SuppressionTime	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnArpMobilitySuppression column is true.

EVPN/InterfaceConfigs

This table contains information about configurations of interfaces.

XML structure

```
<EVPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <EvpnDelayTime></EvpnDelayTime>
      <EvpnTrackPeerAddrs>
      </EvpnTrackPeerAddrs>
      <EvpnADDelayTime></EvpnADDelayTime>
      <EvpnMACMobility></EvpnMACMobility>
      <EvpnArpMobility></EvpnArpMobility>
      <EvpnNDMobility></EvpnNDMobility>
      <DfElectionAlgorithm></DfElectionAlgorithm>
      <DfElectionPreference></DfElectionPreference>
      <PreferenceNonRevertive></PreferenceNonRevertive>
    </InterfaceConfig>
  </InterfaceConfigs>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	InterfaceConfigs
Table type	Multi -instance table
Row name	InterfaceConfig
Restrictions	This table supports only Layer 3 Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
EvpnDelayTime	Delay Time	N/A	Unsigned integer, Value range:3-1200.	N/A
EvpnTrackPeerAddrs	EvpnTrackPeerAddrs	Sublist	N/A	N/A
EvpnADDelayTime	AD delay Time	N/A	Unsigned integer, Value range:3-1200.	N/A
EvpnMACMobility	EvpnMACMobility	Sublist	N/A	N/A
EvpnArpMobility	EvpnArpMobility	Sublist	N/A	N/A
EvpnNDMobility	EvpnNDMobility	Sublist	N/A	N/A
DfElectionAlgorithm	Dfelection algorithm	N/A	Enumeration: • **0**—default. • **2**—preference.	N/A
DfElectionPreference	Dfelection preference	N/A	Unsigned integer. Value range: 0 to 65535.	This column only work when the value for the DfelectionAlgorithm or EVPN/Base/DfelectionAlgorithm column is 2.
PreferenceNonRevertive	Dfelection preference non revertive	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

EVPN/InterfaceConfigs/EvpnTrackPeerAddrs

This table is a sublist of InterfaceConfigs. This table contains information about Evpn TrackPeer Addrs.

XML structure

```
<EVPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <EvpnTrackPeerAddrs>
        <EvpnTrackPeerAddr>
          <Ipv4PeerAddr></Ipv4PeerAddr>
```

```
      </EvpnTrackPeerAddr>
    </EvpnTrackPeerAddrs>
  </InterfaceConfig>
</InterfaceConfigs>
</EVPN>
```

Table description

Table description

Item	Description
Feature name	EVPN
Table name	EvpnVPLSEncaps
Table type	Multi-instance table
Row name	EvpnVPLSEncap
Restrictions	You must enable L2VPN globally first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
RD	Route distinguisher	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	N/A
PwClassName	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
TunnelPolicyName	Tunnel policy related to the PW	N/A	String. Length: 1 to 126 characters.	N/A
Statistics	Status of PW statistics	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	Support for this command depends on the device model.
ETree	Status of EVPN	N/A	Boolean:	N/A

	E-tree		• **true**—Enabled. • **false**—Disabled.	
DefaultColor	Evpn default color ID	N/A	Unsigned integer(32).	N/A
FrrLocal	Whether to enable local FRR for EVPN VPLS	N/A	Enumeration:. • **0**—Inherit (default). • **1**—enable. • **2—**disable.	When the value is 0, this column inherits the configuration of EVPN/base/MultihomingVplsFrrLocal.
UMR	Unknown MAC Route	N/A	• **Enumeration:** • 1—send enable. • 2—receive enable. • 3—send and receive enable. • 4—send and detail-suppressed enable. • 5—send and detail-suppressed and receive enable.	This column cannot be modified.
UMRSendFlag	Unknown MAC route send flag	N/A	Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. • 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: • 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacMobilitySuppression

				column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.

EVPN/EvpnVPWSEncaps

This table contains information about EVPN VPWS with MPLS encapsulation.

XML structure

```
<EVPN>
  <EvpnVPWSEncaps>
    <EvpnVPWSEncap>
      <XCGName></XCGName>

Table description

Item	Description
Feature name	EVPN
Table name	VPLSEncapsSRv6s

Item	Description
Table type	Multi-instance table
Row name	VPLSEncapsSRv6
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI before you merge, replace, or create SRv6 RDs, and the RDs are not auto in table VPLSEncapsSRv6.
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	N/A
SRv6Locator	Attributes of SRv6 locator	N/A	Members include: • LocatorName. • Dt2uLocatorName. • AutoSid.	N/A
LocatorName	Locator name	N/A	String. Length: 1 to 31 characters.	You must and only need to specify this column when you remove or delete the locator, and the Dt2uLocatorName column or AutoSid column is ignored.
Dt2uLocatorName	DT2U locator name	N/A	String. Length: 1 to 31 characters.	The column is available when the value of **LocatorName** is specified.
Dx2LocatorName	End.DX2 locator name	N/A	String. Length: 1 to 31 characters.	If this column is required, you must also specify the LocatorName column.
Dx2lLocatorName	End.DX2L locator name	N/A	String. Length: 1 to 31 characters.	If this column is required, you must also specify the LocatorName column.
Dt2ulLocator	End.DT2UL	N/A	String.	If this column is required, you must

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	locator name		Length: 1 to 31 characters.	also specify the LocatorName column.
AutoSid	Status of automatic SID allocation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	The column is available when the value of **LocatorName** is specified.
SegmentRoutingIteration	Segment Routing Iteration	N/A	Enumeration: • **0**—No segment routing iteration(default). • **1**—Best effort. • **2**—Traffic engineering. • **3**—Traffic engineering and best effort, traffic engineering preferred.	N/A
ETree	Status of EVPN E-tree	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TunnelPolicyName	Tunnel policy related to the PW	N/A	String. Length: 1 to 126 characters.	N/A
FrrLocal	Whether to enable local FRR for EVPN VPLS	N/A	Enumeration:. • **0**—Inherit. • **1**—enable. • **2**—disable.	When the value is 0, this column inherits the configuration of EVPN/base/MultihomingVplsFrrLocal.
ImportRoutePolicy	Import routing policy	N/A	String. Length: 1 to 63 characters.	N/A
ExportRoutePolicy	Export routing policy	N/A	String. Length: 1 to 63 characters.	N/A
UnicastForwardingDx2	Whether to enable End.DX2 SID-based unicast forwarding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Statistics	PW traffic statistics	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Support for this column depends on the device model.
LocalSrvID	Local service ID	N/A	Unsigned integer. Value range: 4096 to 16777215.	N/A
RemoteSrvID	Remote service ID	N/A	Unsigned integer. Value range: 4096 to 16777215.	N/A
ForwardingPreferred	Whether to specify the EVPN VPWS PW as the preferred	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	forwarder			
BumForwardingDX2L	Whether to enable End.DX2L SID-based BUM forwarding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
PwClassName	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
UMR	Unknown MAC Route	N/A	Enumeration: • **1**—send enable. • **2**—receive enable. • **3**—send and receive • enable. • 4—send and detail-suppressed enable. • 5—send and detail-suppressed and receive enable.	This column cannot be modified.
UMRSendFlag	Unknown MAC route send flag	N/A	Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. • 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
DefaultColor	Evpn default color ID	N/A	Unsigned integer(32).	N/A
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the

Column name	Column description	Column type	Data type and restrictions	Remarks
				value for the EvpnMacMobilitySuppression column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.

EVPN/SRv6VplsRTs

This table contains information about EVPN route targets associated with VPLS.

XML structure

```
<EVPN>
  <SRv6VplsRTs>

Feature name	EVPN
Table name	EvpnInstanceExtends
Table type	Multi-instance table
Row name	EvpnInstanceExtend
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnName	EVPN name	Index	String. Length: 1 to 31 characters.	You must create the evpn instance first.
EvpnMACMobility	MAC mobility	Sublist	N/A	N/A
EvpnArpMobility	Arp mobility	Sublist	N/A	N/A
EvpnNDMobility	ND mobility	Sublist	N/A	N/A

EVPN/EvpnInstanceExtends/EvpnMACMobility

This table is a sublist of EvpnInstanceExtends. This table contains information about EVPN MAC Mobility.

XML structure

```
<EVPN>
  <EvpnInstanceExtends>
    <EvpnInstanceExtend>
      <EvpnMACMobility>
        <EvpnMacMobilitySuppression></EvpnMacMobilitySuppression>
        <DetectTime></DetectTime>
        <MoveTimes></MoveTimes>
        <SuppressionTime></SuppressionTime>
      </EvpnMACMobility>
```

```
    </EvpnInstanceExtend>
  </EvpnInstanceExtends>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	EvpnMacMobility
Table type	Single-instance table
Row name	N/A
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacMobilitySuppression column is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.

EVPN/EvpnInstanceExtends/EvpnArpMobility

This table is a sublist of EvpnInstanceExtends. This table contains information about EVPN Arp Mobility.

XML structure

```
<EVPN>
  <EvpnInstanceExtends>
    <EvpnInstanceExtend>
      <EvpnArpMobility>
        <EvpnArpMobilitySuppression></EvpnArpMobilitySuppression>
        <DetectTime></DetectTime>
        <MoveTimes></MoveTimes>
        <SuppressionTime></SuppressionTime>
      </EvpnArpMobility>
    </EvpnInstanceExtend>
  </EvpnInstanceExtends>
</EVPN>
```

Table description

Item	Description
Feature name	EVPN
Table name	EvpnArpMobility
Table type	Single-instance table
Row name	N/A
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EvpnArpMobilitySuppression	Status of EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
SuppressionTime	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnArpMobilitySuppression column is true.

EVPN/EvpnInstanceExtends/EvpnNDMobility

This table is a sublist of EvpnInstanceExtends. This table contains information about EVPN ND Mobility.

XML structure

```
<EVPN>
  <EvpnInstanceExtends>
    <EvpnInstanceExtend>
      <EvpnNDMobility>
        <EvpnNDMobilitySuppression></EvpnNDMobilitySuppression>
        <DetectTime></DetectTime>
        <MoveTimes></MoveTimes>
        <SuppressionTime></SuppressionTime>
      </EvpnNDMobility>
    </EvpnInstanceExtend>
  </EvpnInstanceExtends>
</EVPN>
```

LSPVPing

EvpnVpwsPing event

This table is used to report ping information for an EVPN VPWS ping operation.

XML structure for event subscription

```
<EvpnVpwsPingEvent>
  <PingInfo>
    <TestName></TestName>
    <XconnectGroupName></XconnectGroupName>
    <LocalServiceID></LocalServiceID>
    <RemoteServiceID></RemoteServiceID>
    <EndOPSID></EndOPSID>
    <Exp></Exp>
    <SourceIpv4Addr></SourceIpv4Addr>
    <SourceIpv6Addr></SourceIpv6Addr>
    <PacketsCount></PacketsCount>
    <HopLimitValue></HopLimitValue>
    <WaitTime></WaitTime>
    <ReplyMode></ReplyMode>
    <PacketSize></PacketSize>
    <TimerOut></TimerOut>
    <TrafficClassValue></TrafficClassValue >
  </PingInfo>
</EvpnVpwsPingEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LSPVPing</stream>
     <filter type="subtree">
      <EvpnVpwsPingEvent xmlns="http://www.h3c.com/netconf/event:1.0/lspvping:1.0">
        <PingInfo>
          <TestName></TestName>
          <XconnectGroupName></XconnectGroupName>
          <LocalServiceID></LocalServiceID>
          <RemoteServiceID></RemoteServiceID>
          <Exp></Exp>
          <SourceIpv4Addr></SourceIpv4Addr>
          <PacketsCount></PacketsCount>
          <HopLimitValue></HopLimitValue>
          <WaitTime></WaitTime>
          <ReplyMode></ReplyMode>
```

```
        <PacketSize></PacketSize>
        <TimerOut></TimerOut>
      </PingInfo>
    </EvpnVpwsPingEvent>
  </filter>
 </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	EVPNPing
Event name	EvpnVpwsPingEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/lspvping:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	EVPN Ping test name.	String. Length: 1 to 64 characters.	No
XconnectGroupName	Specify a cross-connect group	String. Length: 1 to 31 characters.	No
EndOPSID	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation.SRv6 only.	No
SourceIpv4Addr	Source Ipv4 address of echo requests.	Ipv4: String, dotted decimal notation.MPLS only.	No
SourceIpv6Addr	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation.SRv6 only.	No
LocalServiceID	Specify a local service ID	Unsigned integer. Value range: 1 to 16777215.	No
RemoteServiceID	Specify a Remote service ID	Unsigned integer. Value range: 1 to 16777215.	No
Exp	Specify an EXP value for echo requests.	Unsigned integer. Value range: 0 to 7. MPLS only.	No
PacketsCount	Number of echo requests.	Unsigned integer. Value range: 1 to 4294967295.	No
HopLimitValue	Hop Limit Value	Unsigned integer. Value range: 1 to 255.	No

Column name	Column description	Data type and restrictions	Support for extended queries
		SRv6 only.	
WaitTime	The interval time to send a LSP Ping echo request.	Unsigned integer. Value range: 1 to 10000 milliseconds.	No
ReplyMode	Reply mode.	Enumeration: • 2—Reply via an IPV4 UDP packet. • 4—Reply via an IPV4 UDP packet with router alert.	No
PacketSize	Payload length.	Unsigned integer. Value range: 65 to 8100 bytes.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
TrafficClassValue	Traffic value of echo request.	Unsigned integer. Value range: 0 to 255. SRv6 only.	No

XML structure for event report

```
<EvpnVpwsPingEvent>
