  </EvpnVpwsPingEvent >
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	EVPN Ping test name.	String. Length: 1 to 64 characters.	No
XconnectGroupName	Specify a cross-connect group	String. Length: 1 to 31 characters.	No
LocalServiceID	Specify a local service ID	Unsigned integer.	No
RemoteServiceID	Specify a Remote service ID	Unsigned integer.	No
TestResult	Test result	Enumeration: • **0**—Successful. • **1**—Error Stop. • **1**—User Stop.	No
TotalTransmitPacket	Number of sent ICMP echo requests	Unsigned integer. Value range: 1 to 4294967295.	No
TotalReceivePacket	Number of received ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No

Column name	Column description	Data type and restrictions	Support for extended queries
RepeatPacket	Number of repeat ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No
TimeoutPacket	Number of timeout ICMP echo replies	Unsigned integer. Value range: 0 to 4294967295.	No
LossRate	Percentage of unacknowledged packets to the total sent packets	Unsigned integer. Value range: 0 to 100.	No
MinReplyTime	Minimum response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
MaxReplyTime	Maximum response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
AvgReplyTime	Average response time	Unsigned integer. Value range: 0 to 4294967295 microseconds.	No
SummaryErrorReason	Error reason of Summary packet.	Enumeration: • 0— The packet test succeeded. • other—The packet test failed.	No

EvpnVplsPing event

This table is used to report ping information for an EVPN VPLS ping operation.

XML structure for event subscription

```

Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TestName	EVPN Ping test name.	String. Length: 1 to 64 characters.	No

Column name	Column description	Data type and restrictions	Support for extended queries
VsiName	Specify a VSI name	String. Length: 1 to 31 characters.	No
MacAddr	MAC address	Mac:String, H-H-H-H-H-H	No
SourceIpv4Addr	Source Ipv4 address of echo requests.	Ipv4: String, dotted decimal notation. MPLS only.	No
SourceIpv6Addr	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation.SRv6 only.	No
EndOPSID	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation. SRv6 only.	No
ReplayTos	Specify the IP ToS value of echo replies.	Unsigned integer. Value range: 0 to 7. MPLS only.	No
Exp	Specify an EXP value for echo requests.	Unsigned integer. Value range: 0 to 7. MPLS only.	No
PacketsCount	Number of echo requests.	Unsigned integer. Value range: 1 to 4294967295.	No
HopLimitValue	Hop Limit Value	Unsigned integer. Value range: 1 to 255	No
WaitTime	The interval time to send a LSP Ping echo request.	Unsigned integer. Value range: 1 to 10000 milliseconds.	No
ReplyMode	Reply mode.	Enumeration: • 2—Reply via an IPV4 UDP packet. • 4—Reply via an IPV4 UDP packet with router alert.	No
PacketSize	Payload length.	Unsigned integer. Value range: 65 to 8100 bytes.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
TrafficClassValue	Traffic value of echo request.	Unsigned integer. Value range: 0 to 255. SRv6 only.	No
Verbose	Detailed information of reply.	Boolean: • **true**—Reply packet has detailed information • **false—**Reply packet has no detailed	No

Column name	Column description	Data type and restrictions	Support for extended queries
		information MPLS only.

MacAddr	MAC address	Mac:String, H-H-H-H-H-H	No
SourceIpv6Addr	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation. SRv6 only.	No
EndOPSID	Source Ipv6 address of echo requests.	Ipv6: String, dotted decimal notation. SRv6 only.	No
SourceIpv4Addr	Source Ipv4 address of echo requests.	Ipv4: String, dotted decimal notation. MPLS only.	No
ReplayTos	Specify the IP ToS value of echo replies.	Unsigned integer. Value range: 0 to 7. MPLS only.	No
Exp	Specify an EXP value for echo requests.	Unsigned integer. Value range: 0 to 7. MPLS only.	No
HopLimitValue	Hop Limit Value	Unsigned integer. Value range: 1 to 255	No
ReplyMode	Reply mode.	Enumeration: • 2—Reply via an IPV4 UDP packet. • 4—Reply via an IPV4 UDP packet with router alert.	No
TimerOut	The wait time for each reply.	Unsigned integer. Value range: 0 to 65535 milliseconds.	No
TrafficClassValue	Traffic value of echo request.	Unsigned integer. Value range: 0 to 255. SRv6 only.	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSANID	VSAN ID.	Index	Unsigned integer. Value range: 1 to 3839.	N/A
HBAID	HBA ID.	Index	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f4.
Manufacturer	Manufacturer of the HBA.	N/A	String. Length: 1 to 63 characters.	N/A
SerialNumber	Serial number of the HBA.	N/A	String. Length: 1 to 63 characters.	N/A
Model	Model of the HBA.	N/A	String. Length: 1 to 255 characters.	N/A
ModelDescription	Model description of the HBA.	N/A	String. Length: 1 to 255 characters.	N/A
NodeName	WWN of the node containing the HBA.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f5.
NodeSymbolicName	Node symbolic name.	N/A	String. Length: 1 to 255 characters.	N/A
HardwareVersion	Hardware version of the HBA.	N/A	String. Length: 1 to 255 characters.	N/A
DriverVersion	Version of the driver software.	N/A	String. Length: 1 to 255 characters.	N/A
OptionROMVersion	ROM version of the HBA.	N/A	String. Length: 1 to 255 characters.	N/A
FirmwareVersion	Version of the firmware.	N/A	String. Length: 1 to 255 characters.	N/A
OSName	Type and version of the operating system.	N/A	String. Length: 1 to 255 characters.	N/A
MaxCTPayload	Maximum CT payload.	N/A	Unsigned integer.	N/A
VendorID	Vendor identifier.	N/A	String. Length: 1 to 8characters.	This column contains the T10 vendor ID of the manufacturer of the HBA, or an OEM of the HBA.
VendorInformation	Vendor-specific information.	N/A	Unsigned integer.	N/A
PortNumber	Number of the Nx_Port on the HBA.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FabricName	Fabric name.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 20:01:00:e0:fc:a1:58:00 .
BootBIOSVersion	Boot BIOS version.	N/A	String. Length: 1 to 255 characters.	N/A
BootBIOSState	Boot BIOS state.	N/A	Enumeration: • 4294967295—Enabled. • 0—Disabled.	If the HBA provides a boot BIOS and the boot BIOS is enabled, the value of the Boot BIOS State attribute is set to FF FF FF FFh. If the HBA provides a boot BIOS and the boot BIOS is disabled, the value of the Boot BIOS State attribute is set to zero.

FDMI/PortAttributes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSANID	VSAN ID.	Index	Unsigned integer. Value range: 1 to 3839.	N/A
HBAID	HBA ID.	Index	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f4.
PortName	WWN of the port.	Index	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f4.
PortSymbolic Name	Symbolic name of the port.	N/A	String. Length: 1 to 255 characters.	N/A
PortID	FC address of the Port.	N/A	Hexadecimal representation of the three bytes.	Example: 020000.
PortType	Port type.	N/A	Unsigned integer.	• 0—Unidentified. • 1—N_Port. • 2—NL_Port. • 3—FL_Port/NL_Port. • 127—Nx_Port. • 129—F_Port. • 130—FL_Port. • 132—E_Port. • 133—B_Port. • Other—Unknown.

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceClass	Supported class of service.	N/A	Each bit represents a type. As follows: • 1—Class F. • 2—Class 1. • 4—Class 2. • 8—Class 3. • 16—Class 4. • 64—Class 6. • Other—Unknown.	N/A
SupportedFC4Types	Supported FC-4 types.	N/A	Data transmission using Base64 encoding, decoding is as follows: Bitmap. Length: 256 bits. Each octet within this value specifies a set of eight types, with the first octet specifying types 0 through 7, the second octet specifying ports 8 through 15, etc. Within each octet, the most significant bit represents the lowest numbered type, and the least significant bit represents the highest numbered type.	N/A
PortActiveFC4Types	Active FC-4 types of the port.	N/A	Data transmission using Base64 encoding, decoding is as follows: Bitmap. Length: 256 bits. Each octet within this value specifies a set of eight types, with the first octet specifying types 0 through 7, the second octet specifying ports 8 through 15, etc. Within each octet, the most significant bit represents the lowest numbered type, and the least significant bit represents the highest numbered type.	N/A
SupportedSpeed	Supported speed.	N/A	Each bit represents a speed. As follows: • 1—1 Gbps. • 2—2 Gbps. • 4—10 Gbps. • 8—4 Gbps. • 16—8 Gbps. • 32—16 Gbps. • 64—32 Gbps. • 128—20 Gbps. • 256—40 Gbps. • 32768—The speed has not been obtained or cannot be obtained.	Other values are reserved.

Column name	Column description	Column type	Data type and restrictions	Remarks
CurrentPortSpeed	Current port speed.	N/A	Each bit represents a speed. As follows: • 1—1 Gbps. • 2—2 Gbps. • 4—10 Gbps. • 8—4 Gbps. • 16—8 Gbps. • 32—16 Gbps • 64—32 Gbps. • 128—20 Gbps. • 256—40 Gbps. • 32768—The speed has not been obtained or cannot be obtained.	Other values are reserved.
MaximumFrameSize	Maximum FC frame payload size.	N/A	Unsigned integer.	N/A
OSDeviceName	OS device name.	N/A	String. Length: 1to 255 characters.	N/A
HostName	Name of the host associated with the Nx_Port.	N/A	String. Length: 1to 255 characters.	N/A
NodeName	WWN of the node containing the port .	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f4.
PortFabricName	Port fabric name.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 20:01:00:e0:fc:a1:58:00.
PortState	Port state.	N/A	Unsigned integer.	N/A
DiscoveredPortNumber	Number of discovered ports.	N/A	Unsigned integer.	N/A
SmartSANServiceCategory	Smart SAN service category.	N/A	String. Length: 1to 255 characters	N/A
SmartSANGUID	Smart SAN globally unique identifier.	N/A	Five groups of hexadecimal digits, hyphen-separated. Format: XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX	Example: 50014380-1209-54f5-5001-4380120954f4.
SmartSANVersion	Smart SAN version.	N/A	String. Length: 1to 255 characters	N/A
SmartSANProductName	Smart SAN product name (model).	N/A	String. Length: 1to 255 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SmartSANPortInfomation	Smart SAN port information.	N/A	Enumeration: • 1—Physical. • 2—NPIV. • 3—SRIOV. • Other—Unknown.	N/A
SmartSANQoSSupport	Smart SAN QoS support.	N/A	Enumeration: • 0—Not supported. • 1—Supported. • Other—Unknown.	N/A
SmartSANSecuritySupport	Smart SAN security support.	N/A	Enumeration: • 0—Not supported. • 1—Tier-1. • 2—Tier-2. • 3—Tier-3. • Other—Unknown.	N/A
SmartSANConnectedPorts	Smart SAN connected ports. For Host Port registration, this field will display the connected Target Port information. For Target Port registration, this field will display the connected Initiator Port information.	N/A	The combination of the WWNs of ports, blank-separated.	N/A

FDMI/DiagnosticParameterDescriptors

Table description

Item	Description
Feature name	FDMI
Table name	DiagnosticParameterDescriptors
Table type	Multi-instance table
Row name	Descriptor
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortName	WWN of the port.	Index	Eight groups of two hexadecimal digits, colon-separated.	Example: 28:05:00:e0:fc:f1:58:2a.
NodeName	WWN of the node containing the port.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 20:00:00:e0:fc:f1:e8:00.
FabricPortName	Name of a port on a node in the fabric.	N/A	Eight groups of two hexadecimal digits, colon-separated.	N/A
FabricNodeName	Name of a node in the fabric.	N/A	Eight groups of two hexadecimal digits, colon-separated.	This column takes effect only when the FabricPortName column is valid.
PortSpeed	Port speed descriptor.	Data structure	Members include: • SpeedCapabilities. • OperatingSpeed.	N/A
SpeedCapabilities	Port speed capabilities.	N/A	Each bit represents a port speed capability. As follows: • 1—1 Gbps. • 2—2 Gbps. • 4—10 Gbps. • 8—4 Gbps. • 16—8 Gbps. • 32—16 Gbps. • 64—32 Gbps. • Other—Unknown.	N/A
OperatingSpeed	Port operating speed.	N/A	Each bit represents a port operating speed. As follows: • 1—1 Gbps. • 2—2 Gbps. • 4—10 Gbps. • 8—4 Gbps. • 16—8 Gbps. • 32—16 Gbps. • 64—32 Gbps. • 32768—Speed not established. • Other—Unknown.	N/A
PortPhyType	Type of the physical interface for the PN_Port or PF_Port through which the RNID request was received.	N/A	Enumeration: • 0—No Information about Phy Type is provided. • 64—FC. • 128—VFC.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FCoELinkErrorStatusBlock	Link error status block format for FCoE	Data structure	Members include: • FCoELinkFailureCount. • VirtualLinkFailureCount. • MissingFIPCount. • SymbolErrorCount. • ErroredBlockCount. • FCSErrorCount.	This data structure takes effect only when the PortPhyType column is 128.
FCoELinkFailureCount	Number of link failures.	N/A	Unsigned integer.	N/A
VirtualLinkFailureCount	Number of Virtual Link failures.	N/A	Unsigned integer.	N/A
MissingFIPCount	Number of missing FIP keepalives or discovery advertisements.	N/A	Unsigned integer.	N/A
SymbolErrorCount	Number of symbol errors during carrier.	N/A	Unsigned integer.	N/A
ErroredBlockCount	Cumulative count of the events counted by the eight-bit errored blocks counter.	N/A	Unsigned integer.	N/A
FCSErrorCount	Number of frame check sequence errors.	N/A	Unsigned integer.	N/A
FCLinkErrorStatusBlock	Link error status block format for FC.	Data structure	Members include: • FCLinkFailureCount. • LossOfSyncCount. • LossOfSignalCount. • ProtocolError. • InvalidWord. • InvalidCRCCount.	This data structure takes effect only when the PortPhyType column is 64.
FCLinkFailureCount	Number of link failures.	N/A	Unsigned integer.	N/A
LossOfSyncCount	Number of loss-of-synchronization errors.	N/A	Unsigned integer.	N/A
LossOfSignalCount	Number of loss-of-signal errors.	N/A	Unsigned integer.	N/A
ProtocolError	Number of primitive sequence protocol errors.	N/A	Unsigned integer.	N/A
InvalidWord	Number of invalid	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	transmission words.			
InvalidCRCCount	Number of invalid CRC errors.	N/A	Unsigned integer.	N/A
SFPDiagnosticsParameters	SFP diagnostic parameters descriptor.	Data structure	Members include: • SFPNotValid. • SFPTemperature. • SFPTempState. • SFPTempHAlarm. • SFPTempLAlarm. • SFPTempHWarn. • SFPTempLWarn. • SFPVoltage. • SFPVoltageState. • SFPVoltageHAlarm. • SFPVoltageLAlarm. • SFPVoltageHWarn. • SFPVoltageLWarn. • TxBias. • TxBiasState. • TxBiasHAlarm. • TxBiasLAlarm. • TxBiasHWarn. • TxBiasLWarn. • TxPower. • TxPowerState. • TxPowerHAlarm. • TxPowerLAlarm. • TxPowerHWarn. • TxPowerLWarn. • RxPower. • RxPowerState. • RxPowerHAlarm. • RxPowerLAlarm. • RxPowerHWarn. • RxPowerLWarn. • SFPPortTxType. • SFPOpticalPort. • SFPConnectorType. • SFPFECActive.	Data structure of SFPDiagnosticsParameters and data structure of QSFPDiagnosticsParameters are mutual exclusive and only one of them can be set in a single message.
SFPNotValid	SFP diagnostic parameters not valid.	N/A	Enumeration: • 0—Valid. • 1—Invalid.	If the value is 1, the following columns are not valid: • SFPTemperature. • SFPTempState. • SFPTempHAlarm. • SFPTempLAlarm. • SFPTempHWarn. • SFPTempLWarn.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• SFPVoltage. • SFPVoltageState. • SFPVoltageHAlarm. • SFPVoltageLAlarm. • SFPVoltageHWarn. • SFPVoltageLWarn. • TxBias. • TxBiasState. • TxBiasHAlarm. • TxBiasLAlarm. • TxBiasHWarn. • TxBiasLWarn. • TxPower. • TxPowerState. • TxPowerHAlarm. • TxPowerLAlarm. • TxPowerHWarn. • TxPowerLWarn. • RxPower. • RxPowerState. • RxPowerHAlarm. • RxPowerLAlarm. • RxPowerHWarn. • RxPowerLWarn.
SFPTemperature	Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempState	Running state of temperature.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
SFPTempHAlarm	High alarm of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempLAlarm	Low alarm of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempHWarn	High warning of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempLW	Low warning of	N/A	Short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
arn	temperature.		Unit is 1/256 °C.	
SFPVoltage	Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageState	Running state of Voltage.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
SFPVoltageHAlarm	High alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageLAlarm	Low alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageHWarn	High warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageLWarn	Low warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
TxBias	Tx laser bias current.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasState	Running state of TxBias.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
TxBiasHAlarm	High alarm of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasLAlarm	Low alarm of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasHWarn	High warning of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasLWarn	Low warning of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TxPower	Tx output power.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerState	Running state of TxPower.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
TxPowerHAlarm	High alarm of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerLAlarm	Low alarm of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerHWarn	High warning of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerLWarn	Low warning of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPower	Received optical TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerState	Running state of RxPower.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
RxPowerHAlarm	High alarm of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerLAlarm	Low alarm of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerHWarn	High warning of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerLWarn	Low warning of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
SFPPortTxTy	Port tx type.	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
pe			• 0—Other or unknown. • 1—Short Wave Laser. • 2—Long Wave Laser LC 1310nm. • 3—Long Wave Laser LL 1550nm.	
SFPOpticalPort	Optical port flag.	N/A	Enumeration: • 0—No. • 1—Yes.	If the value is 1, the FC_Port is an optical port. If the value is 0, the FC_Port is not an optical port.
SFPConnectorType	Connector type.	N/A	Enumeration: • 0—Other or unknown. • 64—SFP+. • Other—Reserved.	N/A
SFPFECActive	State of FEC active	N/A	Enumeration: • 0—16G FEC status is inactive or unknown. • 1—16G FEC is active.	N/A
QSFPDiagnosticsParameters	QSFP diagnostic parameters descriptor.	Data structure	Members include: • QSFPNotValid. • QSFPTemperature. • QSFPTempState. • QSFPTempHAlarm. • QSFPTempLAlarm. • QSFPTempHWarn. • QSFPTempLWarn. • QSFPVoltage. • QSFPVoltageState. • QSFPVoltageHAlarm. • QSFPVoltageLAlarm. • QSFPVoltageHWarn. • QSFPVoltageLWarn. • LaneIdentifierFlag. • LaneIdentifier. • QSFPTxBiasHAlarm. • QSFPTxBiasLAlarm. • QSFPTxBiasHWarn. • QSFPTxBiasLWarn. • Lane0TxBias. • Lane0TxBiasState. • Lane1TxBias. • Lane1TxBiasState. • Lane2TxBias. • Lane2TxBiasState. • Lane3TxBias. • Lane3TxBiasState. • QSFPTxPowerHAlarm.	Data structure of SFPDiagnosticsParameters and data structure of QSFPDiagnosticsParameters are mutual exclusive and only one of them can be set in a single message.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• QSFPTxPowerLAlarm. • QSFPTxPowerHWarn. • QSFPTxPowerLWarn. • Lane0TxPower. • Lane0TxPowerState. • Lane1TxPower. • Lane1TxPowerState. • Lane2TxPower. • Lane2TxPowerState. • Lane3TxPower. • Lane3TxPowerState. • QSFPRxPowerHAlarm. • QSFPRxPowerLAlarm. • QSFPRxPowerHWarn. • QSFPRxPowerLWarn. • Lane0RxPower. • Lane0RxPowerState. • Lane1RxPower. • Lane1RxPowerState. • Lane2RxPower. • Lane2RxPowerState. • Lane3RxPower. • Lane3RxPowerState. • QSFPPortTxType. • QSFPOpticalPort. • QSFPConnectorType. • QSFPFECActive.	
QSFPNotValid	Whether QSFP diagnostic parameters are valid.	N/A	Enumeration: • 0—Valid. • 1—Invalid.	If the value is 1, the following columns are invalid: • QSFPTemperature. • QSFPTempState. • QSFPTempHAlarm. • QSFPTempLAlarm. • QSFPTempHWarn. • QSFPTempLWarn. • QSFPVoltage. • QSFPVoltageState. • QSFPVoltageHAlarm. • QSFPVoltageLAlarm. • QSFPVoltageHWarn. • QSFPVoltageLWarn.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• LaneIdentifierFlag. • LaneIdentifier. • QSFPTxBiasHAlarm. • QSFPTxBiasLAlarm. • QSFPTxBiasHWarn. • QSFPTxBiasLWarn. • Lane0TxBias. • Lane0TxBiasState. • Lane1TxBias. • Lane1TxBiasState. • Lane2TxBias. • Lane2TxBiasState. • Lane3TxBias. • Lane3TxBiasState. • QSFPTxPowerHAlarm. • QSFPTxPowerLAlarm. • QSFPTxPowerHWarn. • QSFPTxPowerLWarn. • Lane0TxPower. • Lane0TxPowerState. • Lane1TxPower. • Lane1TxPowerState. • Lane2TxPower. • Lane2TxPowerState. • Lane3TxPower. • Lane3TxPowerState. • QSFPRxPowerHAlarm. • QSFPRxPowerLAlarm. • QSFPRxPowerHWarn. • QSFPRxPowerLWarn. • Lane0RxPower. • Lane0RxPowerState. • Lane1RxPower.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• Lane1RxPowerState. • Lane2RxPower. • Lane2RxPowerState. • Lane3RxPower. • Lane3RxPowerState.
QSFPTemperature	Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempState	Running state of Temperature.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
QSFPTempHAlarm	High alarm of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempLAlarm	Low alarm of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempHWarn	High warning of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempLWarn	Low warning of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPVoltage	Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltageState	Running state of Voltage.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
QSFPVoltageHAlarm	High alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltage	Low alarm of	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LAlarm	Voltage.		Unit is 100uV.	
QSFPVoltage HWarn	High warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltage LWarn	Low warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
LaneIdentifier Flag	Lane identifier validity flag.	N/A	Enumeration: • 0—Invalid. • 1—Valid.	If the value is 0, the LaneIdentifier column is not meaningful. If the value is 1, the single lane is indicated by the LaneIdentifier column.
LaneIdentifier	Lane identifier.	N/A	Enumeration: • 0—Lane 0. • 1—Lane 1. • 2—Lane 2. • 3—Lane 3.	This column takes effect only when the LaneIdentifierFlag column is 1, and the value decide which lane is valide about TxBias, TxBiasState, TxPower, TxPowerState,RxPower and RxPowerState.
QSFPTxBias HAlarm	High alarm of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFPTxBiasL Alarm	Low alarm of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFPTxBias HWarn	High warning of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFPTxBiasL Warn	Low warning of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane0TxBias	Tx laser bias current of lane 0.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane0TxBias State	Running state of TxBias of lane 0.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane1TxBias	Tx laser bias current of lane 1.	N/A	Unsigned short. Unit is 2uA.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Lane1TxBias State	Running state of TxBias of lane 1.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane2TxBias	Tx laser bias current of lane 2.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane2TxBias State	Running state of TxBias of lane 2.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane3TxBias	Tx laser bias current of lane 3.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane3TxBias State	Running state of TxBias of lane 3.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
QSFPTxPowerHAlarm	High alarm of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPTxPowerLAlarm	Low alarm of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPTxPowerHWarn	High warning of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPTxPowerLWarn	Low warning of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Lane0TxPower	Tx output power of lane 0.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0TxPowerState	Running state of TxPow of lane 0.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane1TxPower	Tx output power of lane 1.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane1TxPowerState	Running state of TxPow of lane 1.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane2TxPower	Tx output power of lane 2.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane2TxPowerState	Running state of TxPow of lane 2.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane3TxPower	Tx output power of lane 3.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane3TxPowerState	Running state of TxPow of lane 3.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	
QSFPRxPowerHAlarm	High alarm of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerLAlarm	Low alarm of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerHWarn	High warning of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerLWarn	Low warning of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0RxPower	Received optical power of lane 0.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0RxPowerState	Running state of RxPower of lane 0.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane1RxPower	Received optical power of lane 1.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane1RxPowerState	Running state of RxPower of lane 1.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane2RxPower	Received optical power of lane 2.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit is 0.1uW.	
Lane2RxPowerState	Running state of RxPower of lane 2.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
Lane3RxPower	Received optical power of lane 3.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane3RxPowerState	Running state of RxPower of lane 3.	N/A	Each bit represents a type. As follows: • 0—Normal. • 1—Transgress the low warning level. • 2—Transgress the high warning level. • 4—Transgress the low alarm level. • 8—Transgress the high alarm level. • Other—Unknown.	N/A
QSFPPortTxType	Port tx type.	N/A	Enumeration: • 0—Other or unknown. • 1—Short Wave Laser. • 2—Long Wave Laser LC.	N/A
QSFPOpticalPort	Optical port flag.	N/A	Enumeration: • 0—No. • 1—Yes.	If the value is 1, the FC_Port is an optical port. If the value is 0, the FC_Port is not an optical port.
QSFPConnectorType	Connector type.	N/A	Enumeration: • 0—Other or unknown. • 64—QSFP. • Other—Reserved.	N/A
QSFPFECActive	State of FEC active.	N/A	Enumeration: • 0—16G FEC status is inactive or unknown. • 1—16G FEC is active.	N/A
FECStatusDescriptor	FEC status descriptor.	Data structure	Members include: • CorrectedBlocks. • UnCorrectableBlocks.	N/A
CorrectedBloc	Number of FEC	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ks	encoding blocks reported as corrected by hardware.			
UnCorrectableBlocks	Number of FEC encoding blocks reported as uncorrectable by hardware.	N/A	Unsigned integer.	N/A
BufferCredit	Buffer Credit descriptor.	Data structure	Members include: • BBCredit. • AttachedBBCredit. • RoundTripTime.	N/A
BBCredit	FC_Port buffer-to-buffer credit.	N/A	Unsigned integer.	N/A
AttachedBBCredit	Attached FC_Port buffer-to-buffer credit.	N/A	Unsigned integer.	N/A
RoundTripTime	Nominal FC_Port RTT.	N/A	Unsigned integer.	A value of zero indicates the RTT is unknown and a non-zero value indicates the RTT of the link expressed in nanoseconds.
OpticalProductData	Optical Element Data Descriptor.	Data structure	Members include: • VendorName. • Partnumber. • Serialnumber. • Revision. • Date.	N/A
VendorName	Vendor name.	N/A	String. Length: 1 to 16 characters.	N/A
Partnumber	Vendor part number.	N/A	String. Length: 1 to 16 characters.	N/A
Serialnumber	Vendor serialn number.	N/A	String. Length: 1 to 16 characters.	N/A
Revision	Vendor revision.	N/A	String. Length: 1 to 2 characters.	N/A
Date	Vendor's manufacturing date code.	N/A	String. Length: 1 to 8 characters.	N/A

FDMI/RDPInterval

This table contains the interval for sending RDP request packets.

XML structure

```
<FDMI>
  <RDPInterval>
    <Interval></Interval>
  </RDPInterval>
</FDMI>
```

Table description

Item	Description
Feature name	FDMI
Table name	RDPInterval
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Interval for sending RDP request packet.	N/A	Unsigned integer. Value range: 5 to 1440.	N/A

FFILTER

FFILTER/Policy

This table contains file filter policie information.

XML structure

```
<FFILTER>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <PolicyDescription></PolicyDescription>
    </Policy>
  </Policies>
</FFILTER>
```

Table description

Item	Description
Feature name	FFILTER
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the file filter policy	Index	String, case-insensitive Length: 1 to 31 characters.	N/A
PolicyDescription	Description of the file filter policy	N/A	String, case-sensitive Length: 1 to 255 characters.	N/A

FFILTER/PolicyInProfile

This table contains file filter policies applied to the profile.

XML structure

```
<FFILTER>
  <PolicyInProfile>
    <Profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Profile>
  </PolicyInProfile>
</FFILTER>
```

Table description

Item	Description
Feature name	FFILTER
Table name	PolicyInProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive Length: 1 to 100 characters.	N/A
PolicyName	Name of the policy	NA	String, case-insensitive Length: 1 to 31 characters.	N/A

FFILTER/RuleInPolicy

This table contains information about rules in a file filter policy.

XML structure

```
<FFILTER>
  <RuleInPolicy>
    <Rule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <FGroupName></FGroupName>
      <Application></Application>
      <Direction></Direction>
```

```
      <Action></Action>
      <Logging></Logging>
    </Rule>
  </RuleInPolicy>
</FFILTER>
```

Table description

Item	Description
Feature name	FFILTER
Table name	RuleInPolicy
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RuleName	Name of the rule	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
FGroupName	Name of the file type group	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
Application	Application of the rule	N/A	Enumeration: • 1—HTTP • 2—FTP • 4—SMTP • 8—IMAP • 16—POP3 • 32—NFS • 64—SMB • 128—RTMP	Examples: 3—Application is HTTP and FTP.
Direction	Direction of the rule	N/A	Enumeration: • 0—upload • 1—download • 2—both	Default is 0.
Action	Action for packets matching the rule	N/A	Enumeration: • 0—drop • 1—permit	Default is 0.
Logging	Logging or not	N/A	Boolean: • true • false	N/A

FFILTER/FGroup

This table contains file filter file type group information.

XML structure

```
<FFILTER>
  <FGroups>
    <FGroup>
      <FGroupName></FGroupName>
      <FGroupDescription></FGroupDescription>
    </FGroup>

FileSystem

FileSystem/Files

This table describes the actions that can be performed to the file.

XML structure

```
<FileSystem>
  <Files>
    <File>
      <SrcName></SrcName>
      <DstName></DstName>
      <VRF></VRF>
      <Operations>
        <Delete></Delete>
        <UnReservedDelete></UnReservedDelete>
        <Copy></Copy>
        <Move></Move>
        <Rename></Rename>
        <Gzip></Gzip>
        <Gunzip></Gunzip>
        <sha256sum></sha256sum>
        <md5sum></md5sum>
        <MkDir></MkDir>
        <RmDir></RmDir>
      </Operations>
    </File>
  </Files>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	Delete, UnReservedDelete, Copy, Move, Rename, More, Gzip, Gunzip, Sha256sum, Md5sum, MkDir and RmDir are mutually execlusive.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcName	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg	Index	NameString Length: 1 to 4096 characters.	N/A
DstName	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg tftp://192.168.111.77/startup.cfg ftp://1:1@192.168.111.77/startup.cfg http://1.1.1.1/startup.cfg	N/A	NameString Length: 1 to 4096 characters.	N/A
VRF	The VRF name.	N/A	String. Length: 1 to 31 Characters.	If VRF is not specified, it is represented that host is on the public network.
Delete	Delete a file.	N/A	This column must be empty.	N/A
UnReservedDelete	Delete a file permanently.	N/A	This column must be empty.	N/A
Copy	Copy a file.	N/A	This column must be empty. DstName column must not be empty.	N/A
Move	Move a file.	N/A	This column must be empty. DstName column must not be empty.	N/A
Rename	Rename a file or directory.	N/A	This column must be empty. DstName column must not be empty.	N/A
Gzip	Compress file.	N/A	This column must be empty. DstName column must be empty.	N/A
Gunzip	Decompress file.	N/A	This column must be empty. DstName column must be empty.	N/A
Sha256sum	Compute the hash digest of a file using the SHA256	N/A	This column must be empty. DstName column must be	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm.		empty.	
Md5sum	Compute the hash digest of a file using the MD5 algorithm.		This column must be empty. DstName column must be empty.	N/A
MkDir	Create a new directory.	N/A	This column must be empty. DstName column must be empty.	N/A
RmDir	Remove an empty directory.	N/A	This column must be empty. DstName column must be empty.	N/A

FileSystem/RecycleBin

This table describes the actions that can be performed to the file under recycle-bin.

XML structure

```
<FileSystem>
  <RecycleBin>
    <RecycleBinFile>
      <Name></Name>
      <Operations>
        <Undelete></Undelete>
        <Clear></Clear>
      </Operations>
    </RecycleBinFile>
  </RecycleBin>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	RecycleBin
Table type	Multi-instance table
Row name	RecycleBinFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg	Index	String. Length: 1 to 4096 characters.
Undelete	Recover a deleted file.	N/A	This column must be empty.
Clear	Delete a deleted file permanently.	N/A	This column must be empty.

FileSystem/Media

This table describes the actions that can be performed to the media.

XML structure

```
<FileSystem>
  <Media>
    <Medium>
      <Name></Name>
      <Fdisk></Fdisk>
      <Part1Size></Part1Size>
      <Part2Size></Part2Size>
      <Part3Size></Part3Size>
      <Part4Size></Part4Size>
    </Medium>
  </Media>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	Media
Table type	Multi-instance table
Row name	Medium
Restrictions	Part1Size, Part2Size, Part3Size and Part4Size should be assigned in order. It is not permitted to assign Part2Size without Part1Size.

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Storage medium name. For examples: flash: chassis3#slot1#cfa:	Index	String. Length: 1 to 255 characters.
Fdisk	Partition a storage medium.	N/A	This column must be empty.
Part1Size	The size of partition1. Unit: Mbyte.	Unsigned integer.	N/A
Part2Size	The size of partition2. Unit: Mbyte.	Unsigned integer.	N/A
Part3Size	The size of partition3. Unit: Mbyte.	Unsigned integer.	N/A
Part4Size	The size of partition4. Unit: Mbyte.	Unsigned integer.	N/A

FileSystem/Partitions

XML structure

```
<FileSystem>
  <Partitions>
    <Partition>
      <Name></Name>
      <Operations>
        <Format></Format>
        <FixDisk></FixDisk>
        <Umount></Umount>
        <Mount></Mount>
      </Operations>
    </Partition>
  </Partitions>
</FileSystem>
```

Table description

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Storage medium partition name. For examples: flash: chassis3#slot1#cfa0:	Index	String. Length: 1 to 255 characters.
Format	Format a storage medium partition.	N/A	This column must be empty.
FixDisk	Check and repair a storage medium partition.	N/A	This column must be empty.
Umount	Unmount a storage medium partition.	N/A	This column must be empty.
Mount	Mount a storage medium partition.	N/A	This column must be empty.

FileSystem

FileSystem/Files

This table contains the file information.

XML structure

```
<FileSystem>
  <Files>
    <File>
      <Name></Name>
      <Path></Path>
      <Size></Size>
      <Time></Time>
      <IsDirectory></IsDirectory>
    </File>
  </Files>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Fully qualified name of a directory or file	Index	String, case insensitive. Length: 1 to 4096 characters.	Examples: • flash:/logfile/logfile.log • chassis3#slot1#cfa0:/main.cfg

Column name	Column description	Column type	Data type and restrictions	Remark
Path	Absolute path to the file	N/A	String, case insensitive. Length: 1 to 4096 characters.	Examples: • flash:/logfile • chassis3#slot1#cfa0:
Size	File size in bytes	N/A	Unsigned integer. Value range: 0 to2^{64}- 1.	N/A
Time	Latest modification time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
IsDirectory	Whether the Name column carries a directory	N/A	Boolean: • true • false	N/A

FileSystem/RecycleBin

This Table contains recycle bin files information.

XML structure

```
<FileSystem>
  <RecycleBin>
    <RecycleBinFile>
      <Medium></Medium>
      <TrashFiles>
        <FileName></FileName>
      </TrashFiles>
    </RecycleBinFile>
  </RecycleBin>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	RecycleBin
Table type	Multi-instance table
Row name	RecycleBinFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Medium	File system name	Index	String. Length: 1 to 255 characters.	Examples: • chassis2#slot1#flash: • chassis1#slot2#cfa0:
TrashFiles	Files in the recycle bin	Data structure	Members: FileName	N/A
FileName	File name.	N/A	String, case insensitive. Length: 1 to 4096 characters.	Examples: • logfile/logfile.log • main.cfg

FileSystem/Media

This Table contains medium information.

XML structure

```
<FileSystem>
  <Media>
    <Medium>
      <Name></Name>
      <PartitionCapability></PartitionCapability>
    </Medium>
  </Media>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	Media
Table type	Multi-instance table
Row name	Medium
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Storage medium name	Index	String. Length: 1 to 255 characters.	Examples: • chassis2#slot1#flash: • chassis1#slot2#cfa:
PartitionCapability	Whether the medium can be partitioned	N/A	Boolean: • true • false	N/A

FileSystem/Partitions

This Table contains partition information.

XML structure

```
<FileSystem>
  <Partitions>
    <Partition>
      <Name></Name>
      <Total></Total>
      <Used></Used>
      <Free></Free>
      <Bootable></Bootable>
      <MountState></MountState>
    </Partition>
  </Partitions>
</FileSystem>
```

Table description

Item	Description
Feature name	FileSystem
Table name	Partitions
Table type	Multi-instance table
Row name	Partition
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Partition name	Index	String.	Examples:

Column name	Column description	Column type	Data type and restrictions	Remark
			Length: 1 to 255 characters.	• chassis2#slot1#flash: • chassis1#slot2#cfa0:
Total	Total size of the partition in bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
Used	Used size of the partition in bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64}- 1.	N/A
Free	Available size of the partition in bytes	N/A	Unsigned integer. Value range: 0 to 2^{64}- 1.	N/A
Bootable	Whether the partition is the startup partition	N/A	Boolean: • true • false	N/A
MountState	Whether the partition is mounted	N/A	Boolean: • true • false	If the value of this column is false, only this column and the Name column can be read.

FileSystem

FileSystem/Files

Message	Explanation
The destination file name can’t be the same as the source file name. 目标文件名不能与源文件名相同。	During executing copy or move operation, the destination file name must not be the same as the source file name. 目标文件名不能与源文件名相同。
Permission denied. 权限不足。	During executing copy, move, delete or rename operation, user lacks permissions. 权限不足。
The file or directory doesn't exist. 文件或目录不存在。	During executing copy, move, delete or rename operation on a file or directory, the file or directory doesn't exist. 源文件或目标文件目录不存在。
Insufficient storage or disk space. 存储空间不足或者磁盘资源不足。	During executing copy or move operation, insufficient storage or disk space. 存储空间不足或者磁盘资源不足，拷贝失败。
Wrong file name or directory name. Please check. 文件名(或目录名)错误，请检查。	During executing rename operation, the source file name and the destination file name must not end with ‘\’. 文件名(或目录名)错误，请检查。
SrcName and DstName are not in the same directory. 源文件名和目标文件名中的路径不同。	During executing rename operation, the source file and the destination file must in the same parent directory. 重命名操作的源文件和目标文件路径必须相同。
The destination file name is already used. 目标文件名已经被使用。	During executing rename operation, the destination file name must not be used. 重命名操作的目标文件名已被使用。
The directory already exists. 该目录已经存在。	During executing make directory operation, the directory must not exist. 新创建的目录已经存在。
The parent directory doesn't exist. 指定目录不存在。	During executing make directory operation, the parent directory doesn't exist. 新创建目录路径错误，父目录不存在。
A file with the same name already exists. 已存在同名文件。	During executing make directory operation, the directory must not be the same as an exist file. 新创建目录名不能和已存在的文件重名。
Can't remove the directory because it is not empty. 目录非空，无法删除。	During executing delete directory operation, the directory must be empty. 目录非空，无法删除。
Can't execute this command. The security log file is already saved in the storage medium. 不能执行该命令，安全日志文件已经保存在该存储介质。	Before partition a storage device, delete all the saved security log files first. 安全日志文件所在存储介质不能做分区操作。
Please use 'RmDir' to remove the directory. 请使用RmDir删除文件夹。	The directory can't be deleted by ‘Delete’ operation, but ‘RmDir’. 删除目录需要用‘RmDir’命令。

Can't overwrite directory %s with non-directory %s. 不能将目录文件%s改写为非目录文件%s”。	During executing copy or move operation, the destination file name must not be the same as an exist directory. 不能拷贝目录文件到非目录文件。
DstName is not required for this operation. 该操作无需指定DstName列的值。	The ‘DstName’ must not be set in operation ‘Delete’,’ UnReservedDelete’, ‘Gzip’, ‘Gunzip’,‘Sha256sum’,’Md5sum’,’MkDir’ and ’Rmdir’. ‘Delete’,’ UnReservedDelete’, ‘Gzip’, ‘Gunzip’,‘Sha256sum’,’Md5sum’,’MkDir’ 和 ’Rmdir’等操作不能有’DstName’参数。
Please enter a value for the DstName column. 请输入DstName列的值	The ‘DstName’ must be set in operation ‘Copy’, ‘Move’, ‘Rename’,‘Sha256sum’,’Md5sum’,’MkDir’ and ’Rmdir’. ‘Copy’, ‘Move’, ‘Rename’,‘Sha256sum’,’Md5sum’,’MkDir’ 和 ’Rmdir’等操作必须有’ DstName’参数。
Operation failed. Curl unsupported protocol. 操作失败，Curl不支持的协议类型。	Failed to copy file through network, unsupported protocol. 文件URL协议不支持，获取文件失败。
Operation failed. Remote server login denied. 操作失败，登录服务器失败，用户名或密码错误。	Failed to copy file through network, wrong user name or password. 用户名或密码错误，登录服务器失败。
Operation failed. Remote file or directory not found. 操作失败，远端服务器文件或目录不存在。	Failed to copy file through network, remote file or directory not found. 远端服务器文件或目录不存在，下载失败。
Operation failed. Remote server can't connect. 操作失败，远端服务器不可达。	Failed to copy file through network, remote server can't connect. 远端服务器不可达。
Invalid VPN name. 不可用的VPN名字。	Failed to copy file through network, invalid VPN name. 不可用的VPN名字。
Invalid URL. 不可用的URL。	Failed to copy file through network, invalid URL. 无效URL。

FileSystem/Media

Message	Explanation
Storage device error. 存储设备错误。	Can't read storage device. 解析存储设备失败。
The storage space is too small to partition. 存储空间太小，无法分区。	Do not need to partition. 存储空间太小，无法分区。
The partition size must be greater than or equal to %dMB. 新建分区大小必须大于等于%dMB.	The partition size is set too small. 新建分区大小必须大于等于系统设定的最小值。
The partition size must be less than or equal to %uMB. 新建分区大小必须小于等于%uMB.	The partition size is set too big. 新建分区大小必须大小于等于系统设定的最大值。
The remaining space is less than %uMB. 剩余空间不足%uMB。	The remaining space is not enough. 存储设备剩余空间不足。

FileSystem/Partitions

Message	Explanation
The storage device is being used and locked by another process. 设备正在使用中，已被其他进程加锁。	Wait for the storage device to be released. 设备正在使用中，已被其他进程加锁。
Operation failed. The device is in use and locked by another process. 操作失败。此分区正在使用中。	Operation failed, wait for the storage device to be released. 操作失败。此分区正在使用中。

Table description

Item	Description
Feature name	flowspec
Table name	flow-routes
Table type	Multi-instance table
Row name	flow-route
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address-family	Address family	Index	Enumeration: • ipv4. • ipv6.	N/A
name	Flow route name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
protocol	Protocol	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 255.
source-address	Source address to match	N/A	• IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
source-mask-length	Source address mask length	N/A	Unsigned integer. Value range: 0 to 128.	
destination-address	Destination address to match	N/A	• IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
destination-mask-length	Destination address mask length	N/A	Unsigned integer. Value range: 0 to 128.	
port	Match source port or destination port	N/A	Number string. It is a comma-separated list of value items. An item can be an	Example: 1,3-4,6. The value range is 0 to 65535.

Column name	Column description	Column type	Data type and restrictions	Remarks
			individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	
source-port	Source port to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.
destination -port	Destination port to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.
icmp-type	ICMP type to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 255.
icmp-code	ICMP code to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 255.
dscp	Dscp to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 63.
fragment-type	Fragment type to match	N/A	Enumeration: • DF—Don't fragment. • IsF—Is a fragment. • FF—First fragment.	N/A
fragment-mat ch	Whether to match fragment type	N/A	Boolean: • true(default) • false	N/A
packet-length	Packet length to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.

Column name	Column description	Column type	Data type and restrictions	Remarks
tcp-flags	TCP flag to match	N/A	Unsigned integer. Value range: 0 to 63.	N/A
tcp-flags-match	Whether to match TCP flag	N/A	Boolean: • true(default) • false	N/A
tcp-flags-match-any	Whether to match any TCP flag	N/A	Boolean: • true • false(default)	N/A
flow-label	Flow label to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 1048575.
traffic-rate	Traffic rate limit	N/A	Unsigned integer. Value range: 0 to 100000000.	N/A
remark-dscp	DSCP marking	N/A	Unsigned integer. Value range: 0 to 63.	N/A
redirect-vpn-target	Redirect to VPN target	N/A	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 100:1 or 192.168.1.1:1.
redirect-nexthop	Redirect to next hop	N/A	• IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
copy-mode	Redirect copies of the matching packets	N/A	Boolean: • true • false(default)	
color	The color of the SR-TE policy	N/A	String. Length: 4 to 13 characters. • The format is CO<00-11,binary>:Color<0-4294967295>	Example:00:123
sid	The segment identifier of the SRv6 egress node	N/A	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
sid-prefix-length	Length of the SID prefix part	N/A	Unsigned integer. Value range: 32 to 120.	N/A
route-target-list	Route target	Data structure	Members include: • **route-target**.	N/A
route-target	Route target	N/A	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 10:10 or 192.168.1.1:1.

flowspec/applys

This table contains information about Flow routes applied to a BGP instance.

XML structure

```
<flowspec>
  <applys>
    <apply>
      <address-family></address-family>
      <vrf></vrf>
      <flow-route-name></flow-route-name>
      <interface-groups>
        <interface-group>
         <GroupID></GroupID>
        </interface-group>
      </interface-groups>
    </apply>
  </applys>
</flowspec>
```

Table description

Item	Description

			range. Use a hyphen (-) to separate the start and end value of a range.	
source-port	Source port to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.
destination -port	Destination port to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.
icmp-type	ICMP type to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 255.
icmp-code	ICMP code to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 255.
dscp	Dscp to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 63.
fragment-type	Fragment type to match	N/A	Enumeration: • DF—Don't fragment. • IsF—Is a fragment. • FF—First fragment.	N/A
fragment-mat ch	Whether to match fragment type	N/A	Boolean: • true • false	N/A
packet-length	Packet length to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 65535.

Column name	Column description	Column type	Data type and restrictions	Remarks
tcp-flags	TCP flag to match	N/A	Unsigned integer. Value range: 0 to 63.	N/A
tcp-flags-match	Whether to match TCP flag	N/A	Boolean: • true • false	N/A
tcp-flags-match-any	Whether to match any TCP flag	N/A	Boolean: • true • false	N/A
flow-label	Flow label to match	N/A	Number string. It is a comma-separated list of value items. An item can be an individual value or a value range. Use a hyphen (-) to separate the start and end value of a range.	Example: 1,3-4,6. The value range is 0 to 1048575.
traffic-rate	Traffic rate limit	N/A	Unsigned integer. Value range: 0 to 100000000.	N/A
remark-dscp	DSCP marking	N/A	Unsigned integer. Value range: 0 to 63.	N/A
redirect-vpn-target	Redirect to VPN target	N/A	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 100:1 or 192.168.1.1:1.
redirect-nexthop	Redirect to next hop	N/A	• IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
copy-mode	Redirect copies of the matching packets	N/A	Boolean: • true • false	
color	The color of the SR-TE policy	N/A	String. Length: 4 to 13 characters. • The format is CO<00-11,binary>:Color<0-4294967295>	Example:00:123
sid	The segment identifier of the SRv6 egress node	N/A	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
sid-prefix-length	Length of the SID prefix part	N/A	Unsigned integer. Value range: 32 to 120.	N/A
route-target-list	Route target	Data structure	Members include: • **route-target**.	N/A
route-target	Route target	N/A	String. Length: 3 to 21 characters. • The format is ASN:nn or IP_address:nn	Example: 10:10 or 192.168.1.1:1.

flowspec/applys

This table contains information about Flow routes applied to BGP instance..

XML structure

```
<flowspec>
  <applys>
    <apply>
      <address-family></address-family>
      <vrf></vrf>
      <flow-route-name></flow-route-name>
      <interface-groups>
        <interface-group>
         <GroupID></GroupID>
        </interface-group>
      </interface-groups>
    </apply>
  </applys>
</flowspec>
```

Table description

Item	Description
Feature name	flowspec
Table name	applys
Table type	Multi-instance table
Row name	apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address-family	Address family	Index	Enumeration: • ipv4. • ipv6.	N/A
vrf	VRF name.	Index	String, case-sensitive. Length: 0 to 31 characters.	A null string indicates the public instance.
flow-route-name	Flow route name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A

flowspec/applys/apply/interface-groups

This table contains information about Flow routes associated with interface-groups to a BGP instance.

XML structure

Please refer to the XML structure of flowspec/applys.

Table description

Item	Description
Feature name	flowspec
Table name	interface-groups
Table type	Multi-instance table
Row name	interface-group
Restrictions	None

Table description

Item	Description
Feature name	Fundamentals
Table name	WebUI
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionAgingTime	Web user connection timeout in minutes.	N/A	Unsigned integer. Value range: 1 to 999.	Only NETCONF get operation is supported in a vSystem.
HTTP	HTTP configuration information.	Data structure	Members include: • State • Port • AclNumber	N/A
State	HTTP status.	N/A	Enumeration: • enable • disable	N/A
Port	HTTP port number.	N/A	Unassigned integer. Value range: 1 to 65535.	N/A
AclNumber	Number of the ACL for HTTP access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **AclName** column overwrites each other.
AclName	Name of the ACL for HTTP access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **AclNumber** column overwrites each other. The name of an ACL cannot be **all**.
AclType	Type of ACL for HTTP access control.	N/A	Enumeration: • **basic**—basic ACL. • **advanced**—advanced ACL. • **mac**—layer 2 ACL.	N/A
IPv6AclNumber	Number of the ACL for HTTP access control.	N/A	Unassigned integer. Value range: 2000 to 3999.	Only basic and advance ACLs are supported. This column and the IPv6AclName column overwrites each other.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6AclName	Name of the ACL for HTTP access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic and advance ACLs are supported. This column and the IPv6AclNumber column overwrites each other. The name of an ACL cannot be all.
IPv6AclType	Type of IPv6 ACL for HTTP access control.	N/A	Enumeration: • **basic**—basic ACL. • **advanced**—advanced ACL..	N/A
HTTPS	HTTPS configuration information.	Data structure	Members include: • State • Port • AclNumber	N/A
State	HTTPS status.	N/A	Enumeration: • enable • disable	N/A
Port	HTTPS port number.	N/A	Unassigned integer. Value range: 1 to 65535.	N/A
AclNumber	Number of the ACL for HTTPS access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **AclName** column overwrites each other.
AclName	Name of the ACL for HTTPS access control.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **AclNumber** column overwrites each other. The name of an ACL cannot be **all**.
AclType	Type of ACL for HTTPS access control.	N/A	Enumeration: • **basic**—basic ACL. • **advanced**—advanced ACL. • **mac**—layer 2 ACL.	N/A
IPv6AclNumber	Number of the ACL for HTTPS access control.	N/A	Unassigned integer. Value range: 2000 to 3999.	Only basic and advance ACLs are supported. This column and the IPv6AclName column overwrites each other.
IPv6AclName	Name of the ACL for HTTPS access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic and advance ACLs are supported. This column and the IPv6AclNumber column overwrites each other. The name of an ACL cannot be all.
IPv6AclType	Type of IPv6 ACL	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for HTTPS access control.		• **basic**—basic ACL. • **advanced**—advanced ACL.	
SSLPolicyName	Name of the SSL server policy	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
LoginMode	HTTPS login mode	N/A	Enumeration: • **1**—Manual mode. A user must provide a username and password for login authentication. • **2**—Auto mode. A user can provide a username and password or a certificate for login authentication. • **3**—Certificate mode. A user must provide a certificate for login authentication. • **4—Certificate-manual mode. A user must provide both a username and password and a certificate for login authentication.**	N/A
UserName	HTTPS login username	N/A	String, case-insensitive. Length: 1 to 255 characters.	If the value is **cn**, the CN field in the digital certificate is used as the username. If the value is **email-prefix**, the string before the “@” sign in the emailAddress field is used as the username. If the value is a valid OID value, the field corresponding to the object identifier OID-value in the digital certificate is used as the username.
LogEnable	Status of Web operation logging	N/A	Enumeration: • enable • disable	The default varies by device model. For more information, see the command references for the device.

Fundamentals/NetconfResXPath

This table contains NETCONF XML path information.

XML structure

```
<Fundamentals>
  <NetconfResXPath>
    <XPath>
      <Path></Path>
      <Type></Type>
    </XPath>
  </NetconfResXPath>
</Fundamentals>
```

Table description

Item	Description
Feature name	Fundamentals
Table name	NetconfResXPath
Table type	Multi-instance table
Row name	XPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Path	The operational XML resource path .	Index	String. case-insensitive.
Type	The type of the operational XML resource path .	N/A	Enumeration: • 0 —The XML path of NETCONF protocol. Example: “rpc/kill-session”. • 1— The intermediate XML path of NETCONF protocol. Example: “rpc/”. • 2 —The XML path of device resources. Example: “ifmgr/interfaces/interface/ifindex”. • 3 —The intermediate XML path of device resources. Example: “ifmgr/interfaces/interface/” .

Fundamentals/WebMenuPath

This table contains web menu path information.

XML structure

```
<Fundamentals>
  <WebMenuPath>
    <MenuPath>
      <Path></Path>
      <Title></Title>
      <Type></Type>
    </MenuPath>
  </WebMenuPath>
</Fundamentals>
```

Table description

Item	Description
Feature name	Fundamentals
Table name	WebMenuPath
Table type	Multi-instance table
Row name	MenuPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Path	Web path of menu.	Index	String. Case-insensitive.	N/A
Title	The description of WEB menu.	N/A	String. Length: 1 to 31 characters.	Depend on the language of current user.
Type	The type of WEB menu.	N/A	Enumeration: • 0 – Leaf menu which is corresponding to the specific web page. • 1 – Intermediate menu node which is not corresponding to the specific web	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			page.	

Fundamentals/SoapUI

This table contains SOAP service information.

XML structure

```
<Fundamentals>
  <SoapUI>
    <HTTP>
      <IPv4AclNumber></IPv4AclNumber>
      <IPv4AclName></IPv4AclName>
      <IPv6AclNumber></IPv6AclNumber>
      <IPv6AclName></IPv6AclName>
    </HTTP>
    <HTTPS>
      <IPv4AclNumber></IPv4AclNumber>
      <IPv4AclName></IPv4AclName>
      <IPv6AclNumber></IPv6AclNumber>
      <IPv6AclName></IPv6AclName>
    </HTTPS>
    <HttpEnable></HttpEnable>
    <HttpsEnable></HttpsEnable>
  </SoapUI>
</Fundamentals>
```

Table description

Item	Description
Feature name	Fundamentals
Table name	SoapUI
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HTTP	HTTP configuration information.	Data structure	Members include: • IPv4AclNumber • IPv4AclName • IPv6AclNumber • IPv6AclName	N/A
IPv4AclNumber	Number of the IPv4 ACL for HTTP access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **IPv4AclName** column overwrites each other.
IPv4AclName	Name of the IPv4 ACL for HTTP access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **IPv4AclNumber** column overwrites each other. An ACL name cannot be **all**.
IPv6AclNumber	Number of the IPv6 ACL for HTTP access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **IPv6AclName** column overwrites each other.
IPv6AclName	Name of the IPv6 ACL for HTTP access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **IPv6AclNumber** column overwrites each other. An ACL name cannot be **all**.
HTTPS	HTTPS configuration information.	Data structure	Members include: • IPv4AclNumber • IPv4AclName • IPv6AclNumber IPv6AclName	N/A
IPv4AclNumber	Number of the IPv4 ACL for HTTPS access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **IPv4AclName** column overwrites each other.
IPv4AclName	Name of the IPv4 ACL for HTTPS access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **IPv4AclNumber** column overwrites each other. An ACL name cannot be **all**.
IPv6AclNumber	Number of the IPv6 ACL for HTTPS access control.	N/A	Unassigned integer. Value range: 2000 to 2999.	Only basic ACLs are supported. This column and the **IPv6AclName** column overwrites each other. Currently not

Column name	Column description	Column type	Data type and restrictions	Remarks
				supported.
IPv6AclName	Name of the IPv6 ACL for HTTPS access control.	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the **IPv6AclNumber** column overwrites each other. An ACL name cannot be **all**. Currently not supported.
HttpEnable	HTTP status.	N/A	Enumeration: • enable • disable	This column is used to get the configuration of soap http .
HttpsEnable	HTTPS status.	N/A	Enumeration: • enable • disable	This column is used to get the configuration of soap https .

Fundamentals/CurrentVsys

This table is used to get vsys id.

XML structure

```
<Fundamentals>
  <CurrentVsys>
    <VsysIndex/>
  </CurrentVsys>
</Fundamentals>
```

Table description

Item	Description
Feature name	Fundamentals
Table name	CurrentVsys
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsysIndex	Vsys ID.	N/A	Unsigned integer. Value range:1-4095 The default value is 1.	

Fundamentals/Context

This table is used to switch context.

XML structure

```
<Fundamentals>
  <Context>
    <ContextID/>
  </Context>
</Fundamentals>
```

Table description

Item	Description
Feature name	Fundamentals
Table name	Context
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context ID.	N/A	• Unsigned integer.	0 means the system assigns the lowest ID number among the available IDs to the Context.

</GdoiGmGroups>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroups
Table type	Multi-instance table
Row name	GdoiGmGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String. Length: 1 to 63 characters Case insensitive.	N/A.
IPVersion	GM group IP version.	N/A	Enumeration: • **1**—IPv4(Default). • **2**—IPv6.	N/A.
Identity	GDOI GM group ID.	Data structure	Members include: • Type • Address • Number	Use Type to specify which member is valid
Type	Identity type	N/A	Enumeration: • 0—invalid(Default) • 1—Number Type • 2—Address Type	0 means Identity is not specified. In this case neither Address nor Number is valid. 1 means Identity is Address. In this case, only Address is valid. 2 means Identity is Number. In this case only Number is valid.
Number	A number to identify the GDOI GM group.	N/A	Unsigned integer. Value range of 0 to 2147483647.	Number is ignored if Type is not 2.
Address	IPv4 address to identify the GDOI GM group	N/A	IPv4 address.	Address is ignored if Type is not 1.
RegistrationInterface	Registration interface name for a group member	N/A	String, case-insensitive. Length: 1 to 63 characters The default is empty.	N/A.
Encryption	KEK encryption algorithms	Data structure	Members include: • ThreeDesCbc • AesCbc128 • AesCbc192 • AesCbc256 • DesCbc	The encryption algorithms is from 0 to 1.”1”means the encryption algorithms is enable, “0” means disable.
ThreeDesCbc	The 3DES-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc128	The AES-CBC-128 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A
AesCbc192	The AES-CBC-192 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AesCbc256	The AES-CBC-256 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1 The default is 1.	N/A
DecCbc	The DEC-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A

GdoiGmGroupServers

This table displays key servers (KS) of a GM group.

XML structure

```
<GDVPNGM>
<GdoiGmGroupServers>
  <Server>
    <GroupName></GroupName>
    <Host></Host>
    <Vrf></Vrf>
  </Server>
</GdoiGmGroupServers>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupServers
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
Host	Key server IP address or	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. IPv6 example:

Column name	Column description	Column type	Data type and restrictions	Remarks
	hostname		IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters, case-sensitive.	1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
Vrf	VRF instance name	Index	String, case-sensitive. Length: 0 to 31 characters. The default is empty.	If the server is on the public network, the length of characters is 0.

GdoiGmGroupTransformSets

This table displays transform sets of a GM group.

XML structure

```
<GDVPNGM>
<GdoiGmGroupTransformSets>
  <TransformSet>
    <GroupName></GroupName>
    <TransformSetList>
      <TransformSetName></TransformSetName>
    </TransformSetList>
  </TransformSet>
</GdoiGmGroupTransformSets>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupTransformSets
Table type	Multi-instance table
Row name	TransformSet
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
TransformSet List	List of transform set names	Data structure	Members include: • TransformSetName	N/A.
TransformSet Name	IPsec transform set name	Column	String, case-insensitive. Length :1 to 63 characters.	This Column can be repeated for 0 to 6 times.

GdoiIPv4Policies

This table displays GDOI policies of a GM group.

XML structure

```
<GDVPNGM>
<GdoiIPv4Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv4Policies>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv4Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number of the IPsec policy entry	Index	Unsigned integer. • Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name of the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name • Number	N/A
Name	ACL name	N/A	String. • Length: 1 to 63 characters. • Default is empty.	If ACL Name is not empty,the ACL Number does not make sense.
Number	ACL number	N/A	Integer. Value range: 3000 to 3999. • Default is -1.	○ Only when the ACL Name is empty, does the ACL Number make sense.

GdoiIPv6Policies

This table displays GDOI IPv6 policies of a GM group.

XML structure

```
<GDVPNGM>
<GdoiIPv6Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv6Policies>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number of the IPsec policy entry	Index	Unsigned integer. • Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name for the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name • Number	N/A
Name	ACL name	N/A	String. • Length: 1 to 63 characters. • Default is empty.	If ACL Name is not empty,the ACL Number does not make sense.
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999. • Default is 0.	○ Only when the ACL Name is empty, does the ACL Number make sense.

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroups
Table type	Multi-instance table
Row name	GdoiGmGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, Case insensitive. Length: 1 to 63 characters	N/A.
IPVersion	GM group IP version.	N/A	Enumeration: • 1—IPv4(Default) • 2—IPv6	It is not suggested to change a group`s IPVersion from IPv4 to IPV6 or IPV6 to IPV4, some config of the group may lost.
Identity	GDOI GM group ID.	Data structure	Members include: • Type • Address • Number	Use Type to specify which member is valid
Type	Identity type	N/A	Enumeration: • 0—invalid(Default) • 1—Number Type • 2—Address Type	0 means Identity is not specified,in this case neither Address nor Number is valid. 1 means Identity is Address,in this case, only Address is valid. 2 means Identity is Number,in this case only Number is valid.
Number	A number to identify the GDOI GM group.	N/A	Unsigned integer. Value range of 0 to 2147483647.	Number is ignored if Type is not 2.
Address	IPv4 address to identify the GDOI GM group	N/A	IPv4 address.	Address is ignored if Type is not 1.
RegistrationInterface	Registration interface name for a group member	N/A	String, Case insensitive. Length: 1 to 63 characters The default is empty.	N/A.
Encryption	KEK encryption algorithms	Data structure	Members include: • ThreeDesCbc • AesCbc128 • AesCbc192 • AesCbc256 • DesCbc	The encryption algorithms is from 0 to 1.”1”means the encryption algorithms is enable, “0” means disable.
ThreeDesCbc	The 3DES-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc128	The AES-CBC-128 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A
AesCbc192	The AES-CBC-192 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AesCbc256	The AES-CBC-256 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1 The default is 1.	N/A
DecCbc	The DEC-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A

GdoiGmGroupServers

This table displays key servers (KS) of a GM group.

XML structure

```
<GDVPNGM>
<GdoiGmGroupServers>
  <Server>
    <GroupName></GroupName>
    <Host></Host>
    <Vrf></Vrf>
  </Server>
</GdoiGmGroupServers>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupServers
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
Host	Key server IP address or hostname	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string,	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated. Hostname: String, 1 to 253 characters, case-sensitive.	Hostname can contains letters, digits, hyphens (-), and underscores (_).
Vrf	VRF instance name	Index	String, case-sensitive. Length: 0 to 31 characters. The default is empty.	If the server is on the public network, the length of characters is 0.

GdoiGmGroupTransformSets

This table displays transform sets of a GM group.

XML structure

```
<GDVPNGM>
<GdoiGmGroupTransformSets>
  <TransformSet>
    <GroupName></GroupName>
    <TransformSetList>
      <TransformSetName></TransformSetName>
    </TransformSetList>
  </TransformSet>
</GdoiGmGroupTransformSets>
</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupTransformSets
Table type	Multi-instance table
Row name	TransformSet
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransformSet List	List of transform set names	Data structure	Members include: • TransformSetName	N/A.
TransformSet Name	IPsec transform set name	Column	String, case-insensitive. Length :1 to 63 characters.	This Column can be repeated for 0 to 6 times.

GdoiGroupMembers

This table displays GDOI group members.

XML structure

```
<GDVPNGM>
<GdoiGroupMembers>
  <GroupMember>
    <GroupName></GroupName>
    <IPAddress></IPAddress>
    <VRFName></VRFName>

</GDVPNGM>
```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GDOI GM group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPAddress	IP address of the GM.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRFName	Name of the VRF to which the KS belongs.	N/A	String. Length: 0 to 31 characters. The default is empty.	If the KS belongs to the public network, this field is not displayed.
RegStatus	The registration status.	N/A	Enumeration: • 1—Not registered. • 2—Registering. • 3—Registered.	N/A
RegServer	IP address or host name of the KS with which the GM registers.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
ReRegTime	Period of time after which the GM re-registers with a KS.	N/A	Unsigned integer.	Unit: second.
SucceedRegs	Number of successful registrations.	N/A	Unsigned integer.	N/A
AttemptedRegs	Number of registration attempts.	N/A	Unsigned integer.	N/A
LastRekeyFrom	KS from which the GM receives the last rekey	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string,	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

Column name	Column description	Column type	Data type and restrictions	Remarks
	message.		colon-separated. Hostname: String, 1 to 253 characters.	Hostname can contains letters, digits, hyphens (-), and underscores (_).
LastRekeySeqNum	Sequence number of the last received rekey message.	N/A	Unsigned integer.	N/A
MulticastRekeysReceived	Number of multicast rekeys received.	N/A	Unsigned integer.	Valid only when the GDOI GM group is a multicast group.
UnicastRekeysReceived	Number of unicast rekeys received.	N/A	Unsigned integer.	Valid only when the GDOI GM group is a unicast group.
RekeyAcKSent	Number of rekey ACK messages sent.	N/A	Unsigned integer.	This field is displayed only when the GDOI GM group is a unicast group.
AllowableRekeyCipher	Rekey encryption algorithms that the GM allows.	N/A	Each bit represents a algorithm As follows: • **1**—DES-CBC. • **2**—3DES-CBC. • **4**—AES-CBC-128. • **8**—AES-CBC-192. • **16**—AES-CBC-256.	In non-FIPS mode, a GM supports DES-CBC, 3DES-CBC, AES-CBC-128, AES-CBC-192, and AES-CBC-256. In FIPS mode, a GM supports AES-CBC-128, AES-CBC-192, and AES-CBC-256.
AllowableRekeyHash	Rekey hash algorithms that the GM allows.	N/A	Each bit represents a algorithm As follows: • **1**—MD5 • **2**—SHA1 • **4**—SHA2-224 • **8**—SHA2-256 • **16**—SHA2-384 • **32**—SHA2-512 • **64**—AES-XCBC	0 represents any hash algorithm.
AllowableTransforms	List of transform set names	Data structure	Members include: • TransformSetName	N/A
TransformSetName	IPsec transform set name	N/A	String, case-insensitive. Length :1 to 63 characters.	This column can be repeated for 0 to 6 times.
RekeyCumulative	Rekey statistics.	Data structure	Members include: • TotalReceived. • AfterLatestReg. • TotalRekeyAckSent.	N/A
TotalReceived	Total number of rekeys that the GM has	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received.			
AfterLatestReg	Number of rekeys that the GM has received after the last successful registration.	N/A	Unsigned integer.	N/A
LastRekeyReceivedFor	Period of time for which the key has existed after the last rekey operation.	N/A	Unsigned integer.	Unit: second 0 represents N/A.
TotalRekeyAckSent	Number of rekey ACK messages sent.	N/A	Unsigned integer.	N/A

GdoiGmDownloadIPv4AclRules

This table displays ACL information that the GM downloaded from the KS.

XML structure

```
<GDVPNGM>
<GdoiGmDownloadIPv4AclRules>
  <Rule>
    <GroupName></GroupName>
    <ID></ID>

```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmDownloadIPv4AclRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GDOI GM group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	The ID of a rule.	Index	Unsigned integer.	N/A
KeyServer	The key server IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Action	The rule action	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
Protocol	IP protocol number	N/A	Unsigned integer.	Protocols common to RFC 1700, POSIX, and X/Open
Source	ACL of source address	Data structure	Members include: • SrcAddr. • SrcWildLen • SrcPort.	
SrcAddr	The source address of packets.	N/A	IPv4 address.	N/A
SrcWildLen	The wildcard length of source address.	N/A	Unsigned integer.	N/A
SrcPort	The source port of packets.	N/A	Unsigned integer. Range: 1to 65535.	N/A
Destination	ACL of destination address	Data structure	Members include: • DesAddr. • DesWildLen • DesPort.	
DesAddr	The destination address of	N/A	IPv4 address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets.			
DesWildLen	The wildcard length of destination address.	N/A	Unsigned integer.	N/A
DesPort	The destination port of packets.	N/A	Unsigned integer. Range: 1 to 65535.	N/A

GdoiGmDownloadIPv6AclRules

This table displays ACL information that the GM downloaded from the KS.

XML structure

```
<GDVPNGM>

```

Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmLocalIPv4AclRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GDOI GM group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	The ID of a rule.	Index	Integer	
ACL	Reference an ACL for a gdoi group	Data structure	Members include: • ACLName • ACLNumber • ACLRuleID • ACLMode • Action • Protocol • SrcAddr • SrcWildLen • SrcPort • DesAddr • DesWildLen • DesPort	If the ACLRuleID is 65535, it means the ACL is an empty ACL. The ACL does not support to display object-group configuration.
ACLName	ACL name	N/A	String. • Length: 1 to 63 characters. • Default is empty.	If ACL Name is not empty,the ACL Number does not make sense.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999. • Default is 0.	○ Only when the ACL Name is empty, does the ACL Number make sense.
ACLRuleID	ACL Rule ID	N/A	Unsigned integer. Value range: 0 to 65535.	○ 65535 means the ACL rule is empty
ACLMode	Protection modes	N/A	Enumeration: • **1**—per-rule(default). • **2**—per-host. • 3—aggregation.	○ per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. ○ per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes

Column name	Column description	Column type	Data type and restrictions	Remarks
				more system resources when multiple data flows exist between two subnets to be protected. ○ aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Action	The rule action	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	N/A
Protocol	IP protocol number	N/A	Unsigned integer.	Protocols common to RFC 1700, POSIX, and X/Open
SrcAddr	The source address of packets.	N/A	IPv4 address.	N/A
SrcWildLen	The wildcard length of source address.	N/A	Unsigned integer.	N/A
SrcPort	The source port of packets.	N/A	Unsigned integer. Range: 1to 65535.	N/A
DesAddr	The destination address of packets.	N/A	IPv4 address.	N/A
DesWildLen	The wildcard length of destination address.	N/A	Unsigned integer.	N/A
DesPort	The destination port of packets.	N/A	Unsigned integer. Range: 1 to 65535.	N/A

GdoiGmLocalIPv6AclRules

This table displays the ACL information locally configured on the GM.

XML structure

Table name	GdoiIPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number for the IPsec policy entry	Index	Unsigned integer. Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name for the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name • Number.	N/A
Name	ACL name	N/A	String. Length: 1 to 63 characters. Default is empty.	If ACL Name is not empty,the ACL Number does not make sense.
Number	ACL number	N/A	Unsigned integer.	○ Only when the ACL Name is

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 3000 to 3999. Default is 0.	empty, does the ACL Number make sense.

Table description

Item	Description
Feature name	GLB
Table name	TestIpv4Requests/TestIpv4Results
Table type	Multi-instance table
Row name	TestIpv4Request/TestIpv4Result
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	A null string indicates the public network.
DstIpv4Address	The IPv4 destination address of DNS request packets.	Index	Stri ng. Dotted decimal notation.	N/A
DstPort	The destination port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv4Address	The IPv4 source address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	The type of DNS request packets.	Index	Enumeration: • 0—A. • 1—AAAA. • 2—MX. • 3—NS. • 4—CNAME. • 5—SOA. • 6—PTR. • 7—TXT. • 8—SRV.	N/A
DomainName	The domain of DNS request packets.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). If the type is set to PTR, the DomainName must be set in the format of "*1.1.1.1*.**in-addr.arpa**." or "*1.1.0.0.1.1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.1.1.0.0.1.1.0.0*.**ip6.arpa**". It means you must translate an IPv4 or IPv6 address to a domain name manually.
ChassisID	Chassis Chassis ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Return columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	A null string indicates the public network.
DstIpv4Address	The IPv4 destination address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv4Address	The IPv4 source address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	The type of DNS request packets.	Index	Enumeration: • 0—A. • 1—AAAA. • 2—MX. • 3—NS. • 4—CNAME. • 5—SOA. • 6—PTR. • 7—TXT. • 8—SRV.	N/A
DomainName	The domain of DNS request packets.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). If the type is set to PTR, the DomainName must be set in the format of "*1.1.1.1*.**in-addr.arpa**." or "*1.1.0.0.1.1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.1.1.0.0.1.1.0.0*.**ip6.arpa**".
ChassisID	Chassis Chassis ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SlotID	Slot ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
DNSListener	Name of the DNS listener.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
DNSZone	Name of the DNS zone or reverse zone.	N/A	String, case-insensitive. Length: 0 to 253 characters.	A null string indicates the label is not configured.
DNSMap	Name of the DNS mapping.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
VSP	Name of the virtual server pool.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
PreferredAlgorithm	Algorithm.	N/A	Enumeration: • 0—None • 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A
AlternateAlgorithm	Algorithm.	N/A	Enumeration: • 0—None • 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	
FallbackAlgorithm	Algorithm.	N/A	Enumeration: • 0—None • 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A
PrfAlgorithmFailedCause	The cause of preferred algorithm schedule failure.	N/A	Enumeration: • 0—Successful. • 1—No matched DNS listener. • 2—No matched DNS mapping. • 3—No matched virtual server pool. • 4—No matched DNS zone. • 5—No matched DNS reverse zone. • 6—Fails to get buffer. • 7—Fails to get MDC. • 8—No matched record. • 9—No enough memory resource. • 10—Fails to parse domain. • 11—Fails to find DNS listener by ID. • 12—No scheduling content. • 13—Scheduling failed. • 14—No matched virtual server.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AltAlgorithmFailedCause	The cause of alternate algorithm schedule failure.	N/A	Enumeration: • 0—Successful. • 1—No matched DNS listener. • 2—No matched DNS mapping. • 3—No matched virtual server pool. • 4—No matched DNS zone. • 5—No matched DNS reverse zone. • 6—Fails to get buffer. • 7—Fails to get MDC. • 8—No matched record. • 9—No enough memory resource. • 10—Fails to parse domain. • 11—Fails to find DNS listener by ID. • 12—No scheduling content. • 13—Scheduling failed. • 14—No matched virtual server.	N/A
FbkAlgorithmFailedCause	The cause of fallback algorithm schedule failure.	N/A	Enumeration: • 0—Successful. • 1—No matched DNS listener. • 2—No matched DNS mapping. • 3—No matched virtual server pool. • 4—No matched DNS zone. • 5—No matched DNS reverse zone. • 6—Fails to get buffer. • 7—Fails to get MDC. • 8—No matched record. • 9—No enough memory resource. • 10—Fails to parse domain. • 11—Fails to find DNS listener by ID. • 12—No scheduling content. • 13—Scheduling failed. • 14—No matched virtual server.	N/A
VirtualServer	Name of the virtual server.	N/A	String, case-insensitive.	A null string indicates the label is not

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 63 characters.	configured.
RespondType	Response type.	N/A	Enumeration: • 0—Send response. • 1—Send rejected. • 2—No response. • 3—Proxy.	N/A
FailedCause	The cause of DNS request parse failure.	N/A	Enumeration: • 0—Successful. • 1—No matched DNS listener. • 2—No matched DNS mapping. • 3—No matched virtual server pool. • 4—No matched DNS zone. • 5—No matched DNS reverse zone. • 6—Fails to get buffer. • 7—Fails to get MDC. • 8—No matched record. • 9—No enough memory resource. • 10—Fails to parse domain. • 11—Fails to find DNS listener by ID. • 12—No scheduling content. • 13—Scheduling failed. • 14—No matched virtual server.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 63 characters.	configured.
RespondType	Response type.	N/A	Enumeration: • 0—Send response. • 1—Send rejected. • 2—No response. • 3—Proxy.	N/A
FailedCause	The cause of DNS request parse failure.	N/A	Enumeration: • 0—Successful. • 1—No matched DNS listener. • 2—No matched DNS mapping. • 3—No matched virtual server pool. • 4—No matched DNS zone. • 5—No matched DNS reverse zone. • 6—Fails to get buffer. • 7—Fails to get MDC. • 8—No matched record. • 9—No enough memory resource. • 10—Fails to parse domain. • 11—Fails to find DNS listener by ID. • 12—No scheduling content. • 13—Scheduling failed. • 14—No matched virtual server.	N/A

GLB/ClearAllDNSRecords

This table is used to clear all DNS parsing failure records.

XML structure

```
<GLB>
  <ClearAllDNSRecords>
    <Clear></Clear>
  </ClearAllDNSRecords>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	ClearAllDNSRecords
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all DNS parsing failure records.	N/A	This column must be empty.	• N/A

GLB/ClearGlobalDNSListenerStats

This table is used to clear the statistics of a global DNS listener.

XML structure

```
<GLB>
  <ClearGlobalDNSListenerStats>
    <ClearGlobalDNSListenerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearGlobalDNSListenerStat>

GLB/DNSMaps

This table contains information about DNS map.

XML structure

```
<GLB>
  <DNSMaps>
    <DNSMap>
      <Name></Name>
      <VRF></VRF>
      <TTL></TTL>
      <VirtualServerPool></VirtualServerPool>
      <ServiceEnable></ServiceEnable>
    </DNSMap>
  </DNSMaps>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSMaps
Table type	Multi-instance table
Row name	DNSMap
Restrictions	Only DNS map can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
TTL	TTL time of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DNS recorder.		Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600s.	
VirtualServerPool	Name of the virtualserverpool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the DNS map.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

GLB/DNSMapDomains

This table contains information about DNS map domain.

XML structure

```
<GLB>
  <DNSMapDomains>
    <DNSMapDomain>
      <DNSMap></DNSMap>
      <Domain></Domain>
    </DNSMapDomain>
  </DNSMapDomains>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSMapDomains
Table type	Multi-instance table
Row name	DNSMapDomain
Restrictions	Only DNS map domain can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSMap	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the DNS map.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time.

GLB/VirtualServerPools

This table contains information about virtual server pool.

XML structure

```
<GLB>
  <VirtualServerPools>
    <VirtualServerPool>
      <Name></Name>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>

Item	Description
Feature name	GLB
Table name	VirtualServerPools
Table type	Multi-instance table
Row name	VirtualServerPool
Restrictions	Only virtual server pool can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PredictorAlternate	Predictor alternate algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 0—None • 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A
PredictorFallback	Predictor fallback	N/A	Enumeration: • 0—None	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm for LB to select a virtual server to be the DNS recorder for client response.		• 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	
PredictorPreferred	Predictor preferred algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 1—Round-robin (default). • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BusyProtectEnable	Enable the busy protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
HashPreIpv4PrefixLength	Length of IPv4 address mask for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashPreIpv6PrefixLength	Length of IPv6 address prefix for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv4PrefixLength	Length of IPv4 address mask for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv6PrefixLength	Length of IPv6 address prefix for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv4PrefixLength	Length of IPv4 address mask for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv6PrefixLength	Length of IPv6 address prefix for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).

GLB/VSPVirtualServers

This table contains information about Virtual Server Pool Virtual Server.

XML structure

```
<GLB>
  <VSPVirtualServers>
    <VSPVirtualServer>
      <VirtualServerPool></VirtualServerPool>
      <VirtualServer></VirtualServer>
      <Link></Link>
      <Weight></Weight>
    </VSPVirtualServer>
  </VSPVirtualServers>
```

```
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualServers
Table type	Multi-instance table
Row name	VSPVirtualServer
Restrictions	Only VSP virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	Larger number means higher weight.

GLB/VSPVirtualIPs

This table contains virtual IP address information in a virtual server pool.

XML structure

```
<GLB>
  <VSPVirtualIPs>
    <VSPVirtualIP>
      <VirtualServerPool></VirtualServerPool>
      <VirtualIP></VirtualIP>
      <Link></Link>
      <Weight></Weight>
    </VSPVirtualIP>
  </VSPVirtualIPs>
```

```
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualIPs
Table type	Multi-instance table
Row name	VSPVirtualIP
Restrictions	Only VSP virtual ip address can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the virtual server pool.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
Link	Link of the virtual IP address.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IP address.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	Larger number means higher weight.

GLB/VSPVirtualIPv6s

This table contains virtual IPv6 address information in a virtual server pool.

XML structure

```
<GLB>
  <VSPVirtualIPv6s>
    <VSPVirtualIPv6>
      <VirtualServerPool></VirtualServerPool>
      <VirtualIPv6></VirtualIPv6>
      <Link></Link>
      <Weight></Weight>
    </VSPVirtualIPv6>
  </VSPVirtualIPv6s>
```

```
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualIPv6s
Table type	Multi-instance table
Row name	VSPVirtualIPv6
Restrictions	Only VSP virtual ipv6 address can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIPv6	Virtual IPv6 address of the virtual server pool.	Index	Hexadecimal string, colon-separated.	Example: 1::1.
Link	Link of the virtual IPv6 address.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IPv6 address.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	Larger number means higher weight.

GLB/DNSZones

This table contains information about DNS zone.

XML structure

```
<GLB>
  <DNSZones>
    <DNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSZone>
  </DNSZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSZones
Table type	Multi-instance table
Row name	DNSZone
Restrictions	Only DNS zone can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the DNS zone,.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the DNS zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600s.	N/A

GLB/DNSZoneSOAs

This table contains information about DNS zone soa resource record.

XML structure

```
<GLB>
  <DNSZoneSOAs>
    <DNSZoneSOA>

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
PrimaryNS	Name of the Primary name server.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the value is 1.	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second. By default, the value is 3600s.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to 2^{32}-1. Unit: second. By default, the value is 600s.	N/A
Expire	Expire time	N/A	Unsigned integer. Value range: 500 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second. By default, the value is 86400s.	
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600s.	N/A

GLB/DNSZoneMXRRs

This table contains information about DNS zone mx resource record.

XML structure

```
<GLB>
  <DNSZoneMXRRs>
    <DNSZoneMXRR>
      <Zone></Zone>
      <Host></Host>
      <MailServer></MailServer>
      <Preference></Preference>
      <TTL></TTL>
    </DNSZoneMXRR>
  </DNSZoneMXRRs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSZoneMXRRs

      <SimpleKey></SimpleKey>
    </LocalDefaultSyncGroupMem>
  </LocalDefaultSyncGroupMems>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	LocalDefaultSyncGroupMems
Table type	Multi-instance table
Row name	LocalDefaultSyncGroupMem
Restrictions	None.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the local default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the local default synchronization group member.	N/A	Unsigned integer. Value range:1024 to 65535. By default, the value is 3936.	N/A
ServiceEnable	Enable the communicating function of the local default synchronization group member.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Interval	Specify the probe interval for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 259200. Unit: second. By default, the value is 5 seconds.	N/A
RetryTimes	Specify the probe retry times for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 10. By default, the value is 5.	N/A
CipherKey	Specify an authentication key in encrypted form.	N/A	String, case-sensitive. Length: 1 to 53 characters.	Configure CipherKey or SimpleKey, but not both.
SimpleKey	Specify an authentication key in plaintext form.	N/A	String, case-sensitive. Length: 1 to 16 characters.	Configure CipherKey or SimpleKey, but not both.

GLB/RemoteDefaultSyncGroupMems

This table contains information about a remote default synchronization group member.

XML structure

```
<GLB>
  <RemoteDefaultSyncGroupMems>
    <RemoteDefaultSyncGroupMem>
      <Name></Name>
      <Port></Port>
    </RemoteDefaultSyncGroupMem>
  </RemoteDefaultSyncGroupMems>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	RemoteDefaultSyncGroupMems
Table type	Multi-instance table
Row name	RemoteDefaultSyncGroupMem
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the remote default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the remote default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535. By default, the value is 3936.	N/A

GLB/SyncGroupMemberIPAddresses

This table contains information about the IP address of the synchronization group member.

XML structure

```
<GLB>
  <SyncGroupMemberIPAddresses>
```

```
    <SyncGroupMemberIPAddress>
      <SyncGroupMemberType></SyncGroupMemberType>
      <SyncGroupMemberName></SyncGroupMemberName>
      <Ipv4Address></Ipv4Address>
    </SyncGroupMemberIPAddress>
  </SyncGroupMemberIPAddresses>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	SyncGroupMemberIPAddresses
Table type	Multi-instance table
Row name	SyncGroupMemberIPAddress
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyncGroupMemberType	Type of the synchronization group member.	Index	Enumeration: • 0—Local • 1—Remote	N/A
SyncGroupMemberName	Name of the synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the synchronization group member.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

GLB/DataCenters

This table contains information about a data center.

XML structure

```
<GLB>
  <DataCenters>
```

```
    <DataCenter>
      <Name></Name>
      <Description></Description>
      <ServiceEnable></ServiceEnable>

      <User></User>
      <CipherPassword></CipherPassword>
      <SimplePassword></SimplePassword>
    </Server>
```

```
  </Servers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Interval	Specify the communication interval of the server.	N/A	Unsigned integer. Value range:5 to 2419200. By default, the value is 10.	N/A
User	Specify the communication user of the server.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
CipherPassword	Specify the encrypted password of the server.	N/A	String, case-sensitive. Length: 1 to 113 characters.	Configure CipherPassword or SimplePassword, but not both.
SimplePassword	Specify the plaintext password of the server.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Configure CipherPassword or SimplePassword, but not both.

GLB/LocalServers

This table contains information about the local server.

XML structure

```
<GLB>
  <LocalServers>
    <LocalServer>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
    </LocalServer>

```

Table description

Item	Description
Feature name	GLB
Table name	LocalServers
Table type	Multi-instance table
Row name	LocalServer
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Local server name.	Index	String, case-insensitive. Must be localhost.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

GLB/ServerIPAddresses

This table contains information about the IP address of a server.

XML structure

```
<GLB>
  <ServerIPAddresses>
    <ServerIPAddress>
      <DataCenter></DataCenter>
      <Server></Server>
      <Ipv4Address></Ipv4Address>
    </ServerIPAddress>
  </ServerIPAddresses>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	ServerIPAddresses
Table type	Multi-instance table
Row name	ServerIPAddress
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the server.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

GLB/LocalVirtualServers

This table contains information about the virtual server of a local server.

XML structure

```
<GLB>
  <LocalVirtualServers>
    <LocalVirtualServer>
      <DataCenter></DataCenter>
      <LocalServer></LocalServer>
      <VirtualServerType></VirtualServerType>
      <VirtualServer></VirtualServer>
    </LocalVirtualServer>
  </LocalVirtualServers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	LocalVirtualServers
Table type	Multi-instance table
Row name	LocalVirtualServer
Restrictions	Only virtual server of local server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocalServer	Local server name.	Index	String, case-insensitive.	Must be localhost.
VirtualServerType	Virtual server type.	Index	Enumeration: • 0—virtual server 1—virtual IP.	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GlobalDNSListeners

This table contains information about a global DNS listener.

XML structure

```
<GLB>
  <GlobalDNSListeners>
    <GlobalDNSListener>
      <Name></Name>
      <Ipv4Address></Ipv4Address>
      <Ipv4PortNumber></Ipv4PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </GlobalDNSListener>
  </GlobalDNSListeners>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListeners
Table type	Multi-instance table
Row name	GlobalDNSListener
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv4PortNumber	IPv4 port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 53.	
ServiceEnable	Enable the global DNS listener.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Fallback	Fallback action.	N/A	Enumeration: • 0—No response. • 1—Reject (default).	N/A

GLB/GlobalDNSMaps

This table contains information about a global DNS map.

XML structure

```
<GLB>
  <GlobalDNSMaps>
    <GlobalDNSMap>
      <Name></Name>
      <TTL></TTL>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>
      <PredictorPreferred></PredictorPreferred>
      <ServiceEnable></ServiceEnable>
    </GlobalDNSMap>
  </GlobalDNSMaps>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMaps
Table type	Multi-instance table
Row name	GlobalDNSMap
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
TTL	TTL time of the DNS recorder.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600 seconds.	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: • 0—None. • 1—Round-robin. • 2—Random. • 3—Topology. • 4—Proximity.	N/A
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: • 0—None. • 1—Round-robin. • 2—Random. • 3—Topology. • 4—Proximity.	N/A
PredictorPreferred	Preferred predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: 1—Round-robin (default). • 2—Random. • 3—Topology. • 4—Proximity.	N/A
ServiceEnable	Enable the global DNS map.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

GLB/GlobalDNSMapDomains

This table contains information about the domains of a global DNS map.

XML structure

```
<GLB>
  <GlobalDNSMapDomains>
    <GlobalDNSMapDomain>
      <GlobalDNSMap></GlobalDNSMap>
```

```
      <Domain></Domain>
    </GlobalDNSMapDomain>
  </GlobalDNSMapDomains>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMapDomains
Table type	Multi-instance table
Row name	GlobalDNSMapDomain
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalDNS Map	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the global DNS map.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: • Use a question mark (?) to replace one character, except the dot (.). • Multiple question marks can appear in the domain name. • Use an asterisk (*) to replace multiple characters, except the dot (.). • Multiple asterisks can appear in the domain name. • Question marks and asterisks can appear in the domain name at the same time.

GLB/GlobalDNSMapVirtualServerPools

This table contains information about the virtual server pool of a global DNS map.

XML structure

```
<GLB>
  <GlobalDNSMapVirtualServerPools>
    <GlobalDNSMapVirtualServerPool>
      <GlobalDNSMap></GlobalDNSMap>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Weight></Weight>
    </GlobalDNSMapVirtualServerPool>
  </GlobalDNSMapVirtualServerPools>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMapVirtualServerPools
Table type	Multi-instance table
Row name	GlobalDNSMapVirtualServerPool
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalDNSMap	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Virtual server pool for the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the global virtual pool.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

GLB/GlobalVirtualServerPools

This table contains information about a global virtual server pool.

XML structure

```
<GLB>
```

```
  <GlobalVirtualServerPools>
    <GlobalVirtualServerPool>
      <Name></Name>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>
      <PredictorPreferred></PredictorPreferred>
      <BusyProtectEnable></BusyProtectEnable>
    </GlobalVirtualServerPool>
  </GlobalVirtualServerPools>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalVirtualServerPools
Table type	Multi-instance table
Row name	GlobalVirtualServerPool
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates that probe success criteria is all.	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 0—None. • 1—Round-robin. • 2—Random. • 3—Least-connection (not supported) • 4—Topology. • 5—Proximity. • 15—First-available.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 0—None. • 1—Round-robin. • 2—Random. • 3—Least-connection (not supported) • 4—Topology. • 5—Proximity. • 15—First-available.	N/A
PredictorPreferred	Preferred predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 1—Round-robin (default). • 2—Random. • 3—Least-connection (not supported) • 4—Topology. • 5—Proximity. • 15—First-available.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

GLB/GVSPVirtualServers

This table contains information about a virtual server of the global virtual server pool.

XML structure

```
<GLB>
  <GVSPVirtualServers>
    <GVSPVirtualServer>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualServer></VirtualServer>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
    </GVSPVirtualServer>
  </GVSPVirtualServers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualServers
Table type	Multi-instance table
Row name	GVSPVirtualServer
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual server's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual server's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates that probe success criteria is all.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

GLB/GVSPVirtualIPs

This table contains information about the virtual IP address of a global virtual server pool.

XML structure

```
<GLB>
  <GVSPVirtualIPs>
    <GVSPVirtualIP>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualIP></VirtualIP>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
    </GVSPVirtualIP>
  </GVSPVirtualIPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualIPs
Table type	Multi-instance table
Row name	GVSPVirtualIP
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the global virtual server pool.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
ProbeSucce	Probe success	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ssCriteria	criteria for virtual IP.		Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates that probe success criteria is all.	
Link	Link of the virtual IP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IP.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

GLB/GVSPProbes

This table contains information the probe method of a global virtual server pool.

XML structure

```
<GLB>
  <GVSPProbes>
    <GVSPProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Probe></Probe>
    </GVSPProbe>
  </GVSPProbes>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GVSPProbes
Table type	Multi-instance table
Row name	GVSPProbe
Restrictions	Only global virtual server pool probe can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

GLB/GVSPVirtualServerProbes

This table contains information the probe method of a virtual server.

XML structure

```
<GLB>
  <GVSPVirtualServerProbes>
    <GVSPVirtualServerProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>

Probe	Probe method for the virtual IP.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

GLB/GTopoRegionVSPs

This table contains information about the mapping between a global region and a global virtual server pool.

XML structure

```
<GLB>
  <GTopoRegionVSPs>
    <GTopoRegionVSP>
      <GlobalRegion></GlobalRegion>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Priority></Priority>
    </GTopoRegionVSP>
  </GTopoRegionVSPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionVSPs
Table type	Multi-instance table
Row name	GTopoRegionVSP
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the global region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher priority.

GLB/GTopoRegionIPv4s

This table contains information about the mapping between a global region and an IP address.

XML structure

```
<GLB>
  <GTopoRegionIPv4s>
    <GTopoRegionIPv4>
      <GlobalRegion></GlobalRegion>
      <IPv4Address></IPv4Address>

      <CostWeight></CostWeight>
      <MaxNumber></MaxNumber>
      <DefaultProbe></DefaultProbe>
    </GlobalVRFProximityParameter>
  </GlobalVRFProximityParameters>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalVRFProximityParameters
Table type	Multi-instance table
Row name	GlobalVRFProximityParameter
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 24.	Zero means a natural mask.
Timeout	The lifetime of global proximity entries.	N/A	Unsigned integer. Value range: 60 to 3600. By default, the value is 60.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
MaxNumber	Upper limit for global proximity entries.	N/A	Unsigned integer. Value range: 0 to 10000000. By default, the value is 0, which indicates the number of global proximity entries is unlimited.	N/A
DefaultProbe	Default probe method for the global proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters. By default, no default probe is specified.	N/A

GLB/GlobalDNSZones

This table contains information about a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZones>
    <GlobalDNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </GlobalDNSZone>
  </GlobalDNSZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZones
Table type	Multi-instance table
Row name	GlobalDNSZone
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the global DNS zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600 seconds.	N/A

GLB/GlobalDNSZoneSOAs

This table contains information about an SOA resource record for a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZoneSOAs>
    <GlobalDNSZoneSOA>

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneSOAs
Table type	Multi-instance table
Row name	GlobalDNSZoneSOA
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
PrimaryNS	Name of the primary name server.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the value is 1.	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second. By default, the value is 3600 seconds.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to 2^{32}-1. Unit: second. By default, the value is 600 seconds.	N/A
Expire	Expiration time	N/A	Unsigned integer. Value range: 500 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second. By default, the value is 86400 seconds.	
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600 seconds.	N/A

GLB/GlobalDNSZoneMXRRs

This table contains information about MX resource records for a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZoneMXRRs>
    <GlobalDNSZoneMXRR>
      <Zone></Zone>
      <Host></Host>
      <MailServer></MailServer>
      <Preference></Preference>
    </GlobalDNSZoneMXRR>
  </GlobalDNSZoneMXRRs>
</GLB>
```

Table name	GlobalDNSZoneNSRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneNSRR
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative name server name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

GLB/GlobalDNSRevZones

This table contains information about a global DNS reverse zone.

XML structure

```
<GLB>
  <GlobalDNSRevZones>
    <GlobalDNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
      <TTL></TTL>
    </GlobalDNSRevZone>
  </GlobalDNSRevZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZones
Table type	Multi-instance table
Row name	GlobalDNSRevZone
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
TTL	TTL time of the global reverse zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600 seconds.	N/A

GLB/GlobalDNSRevZoneRRs

This table contains information about a resource record for a global DNS reverse zone.

XML structure

```
<GLB>
  <GlobalDNSRevZoneRRs>
    <GlobalDNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
    </GlobalDNSRevZoneRR>
  </GlobalDNSRevZoneRRs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZoneRRs
Table type	Multi-instance table
Row name	GlobalDNSRevZoneRR
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Address	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

GLB/GlobalIpv4ISPLists

This table contains information about a global IPv4 ISP address group.

XML structure

```
<GLB>
  <GlobalIpv4ISPLists>
    <GlobalIpv4ISPList>
      <GlobalISP></GlobalISP>
      <IsIncrement></IsIncrement>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
    </GlobalIpv4ISPList>
  </GlobalIpv4ISPLists>
</GLB>
```

Table description

Item	Description
Feature name	GLB

GLB

GLB/DNSMaps

This table contains information about DNS map.

XML structure

```
<GLB>
  <DNSMaps>
    <DNSMap>
      <Name></Name>
      <VRF></VRF>
      <TTL></TTL>
      <VirtualServerPool></VirtualServerPool>
      <ServiceEnable></ServiceEnable>
    </DNSMap>
  </DNSMaps>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSMaps
Table type	Multi-instance table
Row name	DNSMap
Restrictions	Only DNS map can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates public network.
TTL	TTL time of the DNS recorder.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second.	
VirtualServerPool	Name of the virtualserverpool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the DNS map.	N/A	Enumeration: • 0—Disable • 1—Enable.	N/A

GLB/DNSMapDomains

This table contains information about DNS map domain.

XML structure

```
<GLB>
  <DNSMapDomains>
    <DNSMapDomain>
      <DNSMap></DNSMap>
      <Domain></Domain>
    </DNSMapDomain>
  </DNSMapDomains>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSMapDomains
Table type	Multi-instance table
Row name	DNSMapDomain
Restrictions	Only DNS map domain can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSMap	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the DNS map.	Index	String, case-insensitive. Length: 1 to 253	The string can contain letters, numbers, hyphens (-), underscores

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	(_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time.

GLB/DNSMapStats

This table contains stat information about DNS map.

XML structure

```
<GLB>
  <DNSMapStats>
    <DNSMapStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <MatchedDnsReqs></MatchedDnsReqs>
    </DNSMapStat>
  </DNSMapStats>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSMapStats
Table type	Multi-instance table
Row name	DNSMapStat
Restrictions	Only stats of DNS map can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MatchedDns Reqs	Matched DNS Requests that the DNS listener received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

GLB/VirtualServerPools

This table contains information about virtual server pool.

XML structure

```
<GLB>
  <VirtualServerPools>
    <VirtualServerPool>
      <Name></Name>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>

      <HashPreIpv6PrefixLength></HashPreIpv6PrefixLength>
      <HashAltIpv4PrefixLength></HashAltIpv4PrefixLength>
      <HashAltIpv6PrefixLength></HashAltIpv6PrefixLength>
      <HashFbIpv4PrefixLength></HashFbIpv4PrefixLength>
      <HashFbIpv6PrefixLength></HashFbIpv6PrefixLength>
    </VirtualServerPool>
  </VirtualServerPools>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	VirtualServerPools
Table type	Multi-instance table
Row name	VirtualServerPool
Restrictions	Only virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PredictorAlternate	Predictor alternate algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 0—None • 1—Round-robin • 2—Random. • 3—Least-connection. • 4—Topology • • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A
PredictorFallback	Predictor fallback algorithm for LB to select a	N/A	Enumeration: • 0—None • 1—Round-robin	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	virtual server to be the DNS recorder for client response.		• 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	
PredictorPreferred	Predictor preferred algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: • 1—Round-robin. • 2—Random. • 3—Least-connection. • 4—Topology • 5—Proximity. • 6—Hash source address. • 7—Hash source port. • 8—Hash destination address. • 9—Bandwidth. • 10—Inbound bandwidth. • 11—Outbound bandwidth. • 12—Max bandwidth. • 13—Max inbound bandwidth. • 14—Max outbound bandwidth.	N/A
BusyProtectEnable	Enable the busy	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	protection.		• 0—Disable. • 1—Enable.	
TotalVirtual Servers	Total number of virtual servers in the virtual server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ActiveVirtual Server	Active number of virtual servers in the virtual server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
HashPreIpv 4PrefixLengt h	Length of IPv4 address mask for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashPreIpv 6PrefixLengt h	Length of IPv6 address prefix for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv4 PrefixLength	Length of IPv4 address mask for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv6 PrefixLength	Length of IPv6 address prefix for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv4 PrefixLength	Length of IPv4 address mask for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv6 PrefixLength	Length of IPv6 address prefix for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).

GLB/VSPVirtualServers

This table contains information about Virtual Server Pool Virtual Server.

XML structure

```
<GLB>
  <VSPVirtualServers>
    <VSPVirtualServer>
```

```
      <VirtualServerPool></VirtualServerPool>

Restrictions	Only VSP virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255.	Larger number means higher weight.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Busy.	N/A

GLB/VSPVirtualIPs

This table contains virtual IP address information in a virtual server pool.

XML structure

```
<GLB>
  <VSPVirtualIPs>
    <VSPVirtualIP>
      <VirtualServerPool></VirtualServerPool>
      <VirtualIP></VirtualIP>
      <Link></Link>
      <Weight></Weight>
      <State></State>
    </VSPVirtualIP>
  </VSPVirtualIPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualIPs
Table type	Multi-instance table
Row name	VSPVirtualIP
Restrictions	Only VSP virtual ip address can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the virtual server	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	pool.			
Link	Link of the virtual IP address.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IP address.	N/A	Unsigned integer. Value range: 1 to 255.	Larger number means higher weight.
State	State of the virtual IP address.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A

GLB/VSPVirtualIPv6s

This table contains virtual IPv6 address information in a virtual server pool.

XML structure

```
<GLB>
  <VSPVirtualIPv6s>
    <VSPVirtualIPv6>
      <VirtualServerPool></VirtualServerPool>
      <VirtualIPv6></VirtualIPv6>
      <Link></Link>
      <Weight></Weight>
      <State></State>
    </VSPVirtualIPv6>
  </VSPVirtualIPv6s>
</GLB>
```

Table description

Item	Description
Feature name	GLB

Row name	VSPVirtualIPv6
Restrictions	Only VSP virtual ipv6 address can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIPv6	Virtual IPv6 address of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link of the virtual IPv6 address.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IPv6 address.	N/A	Unsigned integer. Value range: 1 to 255.	Larger number means higher weight.
State	State of the virtual IPv6 address.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A

GLB/DNSZones

This table contains information about DNS zone.

XML structure

```
<GLB>
  <DNSZones>
    <DNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSZone>
  </DNSZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DNSZones
Table type	Multi-instance table
Row name	DNSZone
Restrictions	Only DNS zone can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the DNS zone,.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the DNS zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second. By default, the value is 3600s.	N/A

GLB/DNSZoneSOAs

This table contains information about DNS zone soa resource record.

XML structure

```
<GLB>
  <DNSZoneSOAs>
    <DNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>
      <ResponsibleMail></ResponsibleMail>

Table type	Simple-instance table
Row name	DNSRecord
Restrictions	Only DNS Record can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
OrderNumber	The number of DNS records.	Index	Unsigned integer. Value range: 1 to 2^{32}-1.	N/A
Time	Time when the DNS request was received.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Type	The type of the DNS record.	N/A	Enumeration: • 0—A . • 1—AAAA . • 2—MX . • 3—NS . • 4—CNAME .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—SOA . • 6—PTR . • 7—TXT. • 8—SRV.	
SrcIpAddress	The IP source address of DNS record.	N/A	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS record.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstIpAddress	The IP destination address of DNS record.	N/A	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS record.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VRF	The VRF name of the DNS record.	N/A	String. Length: 0 to 31 characters.	N/A
Domain	The domain of the DNS record.	N/A	String, case-insensitive. Length: 1 to 253 characters.	N/A
FailedCourse	The failure cause of the DNS record.	N/A	Enumeration. • 0—“ ”. • 1—No matched DNS listener. • 2—No matched DNS map. • 3—No matched virtual-server-pool . • 4—No matched DNS zone. • 5— Failed to get buffer. • 6—Failed to get MDC. • 7— No matched record. • 8 No enough memory resource. • 9— Failed to parse domain. • 10— Failed to find DNS listener by ID. • 11—No schedule content. • 12—Schedule	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			fialed. • 13—No matched virtual-server-member.	

GLB/DNSZoneTXTRRs

This table contains information about DNS zone txt resource records.

XML structure

```
<GLB>
  <DNSZoneTXTRRs>
    <DNSZoneTXTRR>

Table type	Multi-instance table
Row name	LocalDefaultSyncGroupMem
Restrictions	Only local default synchronization group member can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the local default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the local default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
ServiceEnable	Enable the communicating function of the local default synchronization group member.	N/A	Enumeration: • 0—Disable • 1—Enable	N/A
Interval	Specify the probe interval for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 259200. Unit: second.	N/A
RetryTimes	Specify the probe retry times for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 10.	N/A
CipherKey	Specify an	N/A	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	authentication key in encrypted form.		Length: 1 to 53 characters.	
Role	Role of the default synchronization group member.	N/A	Enumeration: • 1—Master • 2—Standby	N/A
Online	Online state of the default synchronization group member.	N/A	Enumeration: • 0—Offline • 1—Online	N/A

GLB/RemoteDefaultSyncGroupMems

This table contains information about a remote default synchronization group member.

XML structure

```
<GLB>
  <RemoteDefaultSyncGroupMems>
    <RemoteDefaultSyncGroupMem>
      <Name></Name>
      <Port></Port>
      <Role></Role>
      <ConnectState></ConnectState>
      <Online></Online>
    </RemoteDefaultSyncGroupMem>
  </RemoteDefaultSyncGroupMems>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	RemoteDefaultSyncGroupMems
Table type	Multi-instance table
Row name	RemoteDefaultSyncGroupMem
Restrictions	Only remote default synchronization group member can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the remote default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the remote default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
Role	Role of the default synchronization group member.	N/A	Enumeration: • 1—Master • 2—Standby	N/A
ConnectState	Connection state of the default synchronization group member.	N/A	Enumeration: • 0—Disabled • 1—Connecting • 2—Listening • 3— Established	N/A
Online	Online state of the default synchronization group member.	N/A	Enumeration: • 0—Offline • 1—Online.	N/A

GLB/SyncGroupMemberIPAddresses

This table contains information about the IP address of the synchronization group member.

XML structure

```
<GLB>
  <SyncGroupMemberIPAddresses>
    <SyncGroupMemberIPAddress>
      <SyncGroupMemberType></SyncGroupMemberType>
      <SyncGroupMemberName></SyncGroupMemberName>
      <Ipv4Address></Ipv4Address>
    </SyncGroupMemberIPAddress>
  </SyncGroupMemberIPAddresses>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	SyncGroupMemberIPAddresses
Table type	Multi-instance table
Row name	SyncGroupMemberIPAddress
Restrictions	Only synchronization group member IP address can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyncGroupMemberType	Type of the synchronization group member.	Index	Enumeration: • 0—Local • 1—Remote	N/A
SyncGroupMemberName	Name of the synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the synchronization group member.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

GLB/DataCenters

This table contains information about a data center.

XML structure

```
<GLB>
  <DataCenters>
    <DataCenter>
      <Name></Name>
      <Description></Description>
      <ServiceEnable></ServiceEnable>
      <Online></Online>
      <Servers></Servers>
      <Links></Links>
    </DataCenter>
  </DataCenters>
```

```
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DataCenters
Table type	Multi-instance table
Row name	DataCenter
Restrictions	Only data center can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Specify the description of the data center.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
ServiceEnable	Enable the data center function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Online	Online state of the data center.	N/A	Enumeration: • 0—Offline • 1—Online.	N/A
Servers	The server num of the data center.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Links	The link num of the data center.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

GLB/DataCenterLinks

This table contains information about the links of a data center.

XML structure

```
<GLB>
  <DataCenterLinks>
    <DataCenterLink>
```

```
      <DataCenter></DataCenter>
      <Link></Link>
      <InputRate></InputRate>
      <OutputRate></OutputRate>
    </DataCenterLink>
  </DataCenterLinks>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	DataCenterLinks
Table type	Multi-instance table
Row name	DataCenterLink
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
InputRate	Input rate of the link.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Bytes/s.	N/A
OutputRate	Output rate of the link.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Bytes/s.	N/A

GLB/Servers

This table contains information about a server.

XML structure

```
<GLB>
  <Servers>
    <Server>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
      <Interval></Interval>
      <User></User>
      <CipherPassword></CipherPassword>
      <SimplePassword></SimplePassword>
      <Online></Online>
      <VirtualServers></VirtualServers>
    </Server>
  </Servers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	Only server of server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
Interval	Specify the communication interval of the server.	N/A	Unsigned integer. Value range:5 to 2419200.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
User	Specify the communication user of the server.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
CipherPassword	Specify the encrypted password of the server.	N/A	String, case-sensitive. Length: 1 to 113 characters.	N/A
SimplePassword	Specify the plaintext password of the server.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Online	Online state of the server.	N/A	Enumeration: • 0—Offline • 1—Online.	N/A
VirtualServers	The virtual server number of the server.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

GLB/LocalServers

This table contains information about the local server.

XML structure

```
<GLB>
  <LocalServers>
    <LocalServer>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
      <Online></Online>
    </LocalServer>
  </LocalServers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	LocalServers

Row name	LocalServer
Restrictions	None.
Support for row creation and	No

deletion

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Local server name.	Index	String, case-insensitive.	Must be localhost.
ServiceEnable	Enable the server function.	N/A	Enumeration: • 0—Disable • 1—Enable.	N/A
Online	Online state of the local server.	N/A	Enumeration: • 0—Offline • 1—Online.	N/A

GLB/ServerIPAddresses

This table contains information about the IP address of a server.

XML structure

```
<GLB>
  <ServerIPAddresses>
    <ServerIPAddress>
      <DataCenter></DataCenter>
      <Server></Server>
      <Ipv4Address></Ipv4Address>
    </ServerIPAddress>
  </ServerIPAddresses>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	ServerIPAddresses
Table type	Multi-instance table
Row name	ServerIPAddress
Restrictions	Only server address can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the server.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

GLB/ServerVirtualServers

This table contains information about the virtual servers of a server.

XML structure

```
<GLB>
  <ServerVirtualServers>
    <ServerVirtualServer>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualServer></VirtualServer>
    </ServerVirtualServer>
  </ServerVirtualServers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	ServerVirtualServers
Table type	Multi-instance table
Row name	ServerVirtualServer
Restrictions	Only virtual server of server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/LocalVirtualServers

This table contains information about the virtual server of a local server.

XML structure

```
<GLB>
  <LocalVirtualServers>
    <LocalVirtualServer>
      <DataCenter></DataCenter>
      <LocalServer></LocalServer>
       <VirtualServerType></VirtualServerType>
      <VirtualServer></VirtualServer>
    </LocalVirtualServer>
  </LocalVirtualServers>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	LocalVirtualServers
Table type	Multi-instance table
Row name	LocalVirtualServer
Restrictions	Only virtual server of local server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocalServer	Local server name.	Index	String, case-insensitive.	Must be localhost.
VirtualServerType	Virtual server type.	Index	Enumeration: • 0—virtual server • 1—virtual IP.	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GlobalDNSListeners

This table contains information about a global DNS listener.

XML structure

```
<GLB>
  <GlobalDNSListeners>
    <GlobalDNSListener>
      <Name></Name>
      <Ipv4Address></Ipv4Address>
      <Ipv4PortNumber></Ipv4PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </GlobalDNSListener>
  </GlobalDNSListeners>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListeners
Table type	Multi-instance table
Row name	GlobalDNSListener
Restrictions	Only global listener can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv4PortNumber	IPv4 port number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ServiceEnable	Enable the global DNS listener.	N/A	Enumeration: • 0—Disable • 1—Enable.	N/A
Fallback	Fallback action.	N/A	Enumeration: • 0—No response. • 1—Reject.	N/A

GLB/GlobalDNSListenerStats

This table contains statistics about a global DNS listener.

XML structure

```
<GLB>
  <GlobalDNSListenerStats>
    <GlobalDNSListenerStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>
      <ReceivedValidRequests></ReceivedValidRequests>
      <UnrespondedRequests></UnrespondedRequests>
      <RejectedRequests></RejectedRequests>
    </GlobalDNSListenerStat>
  </GlobalDNSListenerStats>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListenerStats
Table type	Multi-instance table
Row name	GlobalDNSListenerStat
Restrictions	Only stats of global listener can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ReceivedValidRequests	Number of valid requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
UnrespondedRequests	Number of unresponded requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
RejectedRequests	Number of rejected requests that the global DNS listener received from	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the device.			

GLB/GlobalDNSListenerTypeStats

This table contains different types of statistics about a global DNS listener.

XML structure

```
<GLB>
  <GlobalDNSListenerTypeStats>
    <GlobalDNSListenerTypeStat>
      <Name></Name>
      <Type></Type>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>

Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualServers
Table type	Multi-instance table
Row name	GVSPVirtualServer
Restrictions	Only virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtua	Name of the	Index	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
lServerPool	global virtual server pool.		case-insensitive. Length: 1 to 63 characters.	
DataCenter	Name of the virtual server's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual server's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher weight.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Busy.	N/A

GLB/GVSPVirtualIPs

This table contains information about the virtual IP address of a global virtual server pool.

XML structure

```
<GLB>
  <GVSPVirtualIPs>
    <GVSPVirtualIP>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
```

```
      <Server></Server>
      <VirtualIP></VirtualIP>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
      <State></State>
    </GVSPVirtualIP>
  </GVSPVirtualIPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualIPs
Table type	Multi-instance table
Row name	GVSPVirtualIP
Restrictions	Only virtual ip can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the global virtual server pool.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
ProbeSuccessCriteria	Probe success criteria for virtual IP.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Link	Link of the virtual IP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Weight	Weight of the virtual IP.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher weight.
State	State of the virtual IP.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Busy.	N/A

GLB/GVSPProbes

This table contains information the probe method of a global virtual server pool.

XML structure

```
<GLB>
  <GVSPProbes>
    <GVSPProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Probe></Probe>
    </GVSPProbe>
  </GVSPProbes>

Row name	GVSPVIPProbe
Restrictions	Only global virtual ip probe can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	Must be “localhost”
VirtualIP	Virtual IP address of the virtual IP.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the virtual IP.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
State	Probe state of the virtual IP.	N/A	Enumeration: • 0— Invalid. • 1— Succeeded. • 2—Failed. • 3---In progress	N/A

GLB/GTopoRegionVSPs

This table contains information about the mapping between a global region and a global virtual server pool.

XML structure

```
<GLB>
  <GTopoRegionVSPs>
    <GTopoRegionVSP>
      <GlobalRegion></GlobalRegion>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Priority></Priority>
    </GTopoRegionVSP>
  </GTopoRegionVSPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionVSPs
Table type	Multi-instance table
Row name	GTopoRegionVSP
Restrictions	Only Topology Region VSP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the global region.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher priority.

GLB/GTopoRegionIPv4s

This table contains information about the mapping between a global region and an IP address.

XML structure

```
<GLB>
  <GTopoRegionIPv4s>
    <GTopoRegionIPv4>
      <GlobalRegion></GlobalRegion>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Priority></Priority>
    </GTopoRegionIPv4>
  </GTopoRegionIPv4s>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionIPv4s
Table type	Multi-instance table
Row name	GTopoRegionIPv4
Restrictions	Only Topology Region IP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Address	IPv4 address.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
IPv4MaskLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	The column cannot be configured if no IPv4 address is configured.
Priority	Priority of the global topology region.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher priority.

GLB/GlobalRegions

This table contains information about a global region.

XML structure

```
<GLB>
  <GlobalRegions>
    <GlobalRegion>
      <Name></Name>
    </GlobalRegion>
  </GlobalRegions>
</GLB>
```

Table description

Item	Description

Table name	GlobalRegions
Table type	Multi-instance table
Row name	GlobalRegion
Restrictions	Only region can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	Name

GLB/GlobalRegionISPs

This table contains information about the global ISP for a global region.

XML structure

```
<GLB>
  <GlobalRegionISPs>
    <GlobalRegionISP>
      <GlobalRegion></GlobalRegion>
      <GlobalISP></GlobalISP>
    </GlobalRegionISP>
  </GlobalRegionISPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalRegionISPs
Table type	Multi-instance table
Row name	GlobalRegionISP
Restrictions	Only Region ISP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalISP	ISP for the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GlobalISPs

This table contains information about a global ISP.

XML structure

```
<GLB>
  <GlobalISPs>
    <GlobalISP>
      <Name></Name>
      <Origin></Origin>
    </GlobalISP>
  </GlobalISPs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalISPs
Table type	Multi-instance table
Row name	GlobalISP
Restrictions	Only ISP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Origin	Origin of the IPv4 address.	N/A	Enumeration: • 1—Import. • 2—Manual. • 3—Import and manual.	N/A

GLB/GlobalIpv4ISPAddressGroups

This table contains information about a global IPv4 ISP address group.

XML structure

```
<GLB>
  <GlobalIpv4ISPAddressGroups>
    <GlobalIpv4ISPAddressGroup>
      <GlobalISP></GlobalISP>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Origin></Origin>
    </GlobalIpv4ISPAddressGroup>
  </GlobalIpv4ISPAddressGroups>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ISPAddressGroups
Table type	Multi-instance table
Row name	GlobalIpv4ISPAddressGroup
Restrictions	Only IPv4 ISP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	The value must be equal to the summation of the address and the mask.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A
Origin	Origin of the IPv4 address.	N/A	Enumeration: • 1—Import. • 2—Manual. • 3—Import and manual.	N/A

GLB/GlobalISPFile

This table contains information about a global ISP file.

XML structure

```
<GLB>
  <GlobalISPFile>
    <FileName></FileName>
  </GlobalISPFile>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalISPFile
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP file can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the global ISP file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

GLB/GlobalVRFProximityParameters

This table contains information about global proximity parameters.

XML structure

```
<GLB>
  <GlobalVRFProximityParameters>
    <GlobalVRFProximityParameter>
    <VRF></VRF>
    <Ipv4PrefixLength></Ipv4PrefixLength>
    <Timeout></Timeout>
    <RTTWeight></RTTWeight>
    <TTLWeight></TTLWeight>
    <InBandwidthWeight></InBandwidthWeight>
    <OutBandwidthWeight></OutBandwidthWeight>
    <CostWeight></CostWeight>
    <MaxNumber></MaxNumber>
    <DefaultProbe></DefaultProbe>
    </GlobalVRFProximityParameter>
  </GlobalVRFProximityParameters>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalVRFProximityParameters
Table type	Multi-instance table
Row name	GlobalVRFProximityParameter
Restrictions	Only proximity parameter can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	Zero means a natural mask.
Timeout	The lifetime of global proximity entries.	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TTLWeight	The weight of	N/A	Unsigned integer.	N/A

	TTL.		Value range: 0 to 255.	
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MaxNumber	Upper limit for global proximity entries.	N/A	Unsigned integer. Value range: 0 to 10000000.	N/A
DefaultProbe	Default probe method for the global proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

GLB/GlobalIpv4ProximityTables

This table contains information about global IPv4 proximity items.

XML structure

```
<GLB>
  <GlobalIpv4ProximityTables>
    <GlobalIpv4ProximityTable>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Lifetime></Lifetime>
      <BestLink></BestLink>
    </GlobalIpv4ProximityTable>
  </GlobalIpv4ProximityTables>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ProximityTables
Table type	Multi-instance table
Row name	GlobalIpv4ProximityTable

Restrictions	Only IPv4 proximity items can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Lifetime	Lifetime of global proximity items.	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BestLink	The best link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GlobalIpv4ProximityNodes

This table contains information about the real servers of global IPv4 proximity items.

XML structure

```
<GLB>
  <GlobalIpv4ProximityNodes>
    <GlobalIpv4ProximityNode>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
```

```
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Priority></Priority>
      <Link></Link>
    </GlobalIpv4ProximityNode>
  </GlobalIpv4ProximityNodes>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ProximityNodes
Table type	Multi-instance table
Row name	GlobalIpv4ProximityNode
Restrictions	Only IPv4 proximity node can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Priority	Priority.	Index	Unsigned integer. Value range: 1 to 2^{32}-1.	N/A
Link	Link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GlobalProximityStats

This table contains information about global proximity entries.

XML structure

```
<GLB>
  <GlobalProximityStats>
    <GlobalProximityStat>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <TotalCount></TotalCount>
      <Ipv4Count></Ipv4Count>
    </GlobalProximityStat>
  </GlobalProximityStats>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalProximityStats
Table type	Multi-instance table
Row name	GlobalProximityStat
Restrictions	Only proximity can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
TotalCount	Total number of global	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	proximity entries.		2^{32}-1.	
Ipv4Count	The number of global IPv4 proximity entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

GLB/GlobalDNSZones

This table contains information about a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZones>
    <GlobalDNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </GlobalDNSZone>
  </GlobalDNSZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZones
Table type	Multi-instance table
Row name	GlobalDNSZone
Restrictions	Only global DNS zone can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the global DNS zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second.	N/A

GLB/GlobalDNSZoneSOAs

This table contains information about an SOA resource record for a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZoneSOAs>
    <GlobalDNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneCNAMERRs

Table type	Multi-instance table
Row name	GlobalDNSZoneCNAMERR
Restrictions	Only CNAME records of global DNS zone can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Alias	Alias name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Canonical	Canonical name	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

GLB/GlobalDNSZoneNSRRs

This table contains information about NS resource records for a global DNS zone.

XML structure

```
<GLB>
  <GlobalDNSZoneNSRRs>
    <GlobalDNSZoneNSRR>
      <Zone></Zone>
      <SubName></SubName>
      <NameServerName></NameServerName>
    </GlobalDNSZoneNSRR>
  </GlobalDNSZoneNSRRs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneNSRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneNSRR

Restrictions	Only NS records of global DNS zone can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative name server name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

GLB/GlobalDNSRevZones

This table contains information about a global DNS reverse zone.

XML structure

```
<GLB>
  <GlobalDNSRevZones>
    <GlobalDNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
      <TTL></TTL>
    </GlobalDNSRevZone>
  </GlobalDNSRevZones>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZones
Table type	Multi-instance table
Row name	GlobalDNSRevZone
Restrictions	Only global DNS reverse zone can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
TTL	TTL time of the global reverse zone.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: second.	N/A

GLB/GlobalDNSRevZoneRRs

This table contains information about a resource record for a global DNS reverse zone.

XML structure

```
<GLB>
  <GlobalDNSRevZoneRRs>
    <GlobalDNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
    </GlobalDNSRevZoneRR>
  </GlobalDNSRevZoneRRs>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZoneRRs
Table type	Multi-instance table
Row name	GlobalDNSRevZoneRR
Restrictions	Only records of global DNS reverse zone can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Address	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

GLB/GlobalIpv4ISPLists

This table contains information about a global IPv4 ISP address group.

XML structure

```
<GLB>
  <GlobalIpv4ISPLists>
    <GlobalIpv4ISPList>
      <GlobalISP></GlobalISP>
      <AllCount></AllCount>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Origin></Origin>
    </GlobalIpv4ISPList>
  </GlobalIpv4ISPLists>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ISPLists
Table type	Multi-instance table
Row name	GlobalIpv4ISPList
Restrictions	Only IPv4 ISP can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AllCount	The number of all IPv4 address.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	The value must be equal to the summation of the address and the mask. Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A
Origin	Origin of the IPv4 address.	N/A	Enumeration: • 1—Import. • 2—Manual. • 3—Import and manual.	N/A

GLB/GlobalIpv4ProximityTableLists

This table contains information about global IPv4 proximity items.

XML structure

```
<GLB>
  <GlobalIpv4ProximityTableLists>
    <GlobalIpv4ProximityTableList>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <AllCount></AllCount>
      <Lifetime></Lifetime>
      <BestLink></BestLink>
    </GlobalIpv4ProximityTableList>
  </GlobalIpv4ProximityTableLists>
</GLB>
```

Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ProximityTables
Table type	Multi-instance table
Row name	GlobalIpv4ProximityTable
Restrictions	Only IPv4 proximity items can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
AllCount	The number of all global proximity items.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Lifetime	Lifetime of global proximity items.	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BestLink	The best link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

GLB/GLBDomainStructures

This table contains information about domain structure of GLB.

XML structure

```
<GLB>
  <GLBDomainStructures>
    <GLBDomainStructure>
      <Index></Index>
      <Domain></Domain>
      <Level></Level>
    </GLBDomainStructure>
  </GLBDomainStructures>
</GLB>
```

GRPC

GRPC/Configuration

This table contains gRPC configuration information.

XML structure

```
<GRPC>
  <Configuration>
    <State></State>
    <Port></Port>
    <IdleTime></IdleTime>
    <SecurityParams>
      <PKIDomainName></PKIDomainName>
    </SecurityParams>
    <DataModel></DataModel>
    <SensorMode></SensorMode>
    <CPUUsage></CPUUsage>
  </Configuration>
</GRPC>
```

Table description

Item	Description
Feature name	GRPC
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Status of the gRPC service	N/A	Enumeration: • **enable**—The gRPC service is enabled. • **disable**—The gRPC service is disabled.	When State is to be disabled all gRPC configuration will be deleted.
Port	Port number of the gRPC service	N/A	Unsigned integer. Value range: 1 to 65535.	Configuring Port is not allowed when State is or is to be disabled.

Column name	Column description	Column type	Data type and restrictions	Remarks
IdleTime	Idle timeout time for gRPC sessions in minutes	N/A	Unsigned integer. Value range: 0 to 30.	N/A
SecurityParams	Security parameters	Data Structure	Members include: PKIDomainName**.**	SecurityParams
PKIDomainName	PKI domain Name	N/A	String. Length: 1 to 31 characters. Case insensitive.	PKIDomainName
DataModel	Data model of the gRPC service	N/A	Enumeration: • **0**—2-layer data model**.** • **1**—3-layer data model.	
SensorMode	Sensor mode	N/A	Enumeration: • **simple**—Simple sensor mode. • **flex**—Flexible sensor mode.	In simple sensor mode, the logical operator on the filtering is fixed at logical AND. In flexible sensor mode, you can specify the AND or OR operator on the conditions in a filter.
CPUUsage	Specify the maximum CPU usage allowed for telemetry service	N/A	Unsigned integer. percent range: 1 to 50. Default: 4294967295.	gRPC data collection stops when CPU usage threshold is exceeded

GRPC/SensorGroups

This table contains gRPC sensor group information.

XML structure

```

Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
SensorGroup	SensorGroup table	Multi-instance table	N/A	For more information, see the SensorGroup table.

GRPC/SensorGroups/SensorGroup

This table contains gRPC sensor group information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	SensorGroup
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Sensor group name	index	String. Length: 1 to 31 characters.	N/A
SensorPaths	Sensor path information	Sublist	N/A	For more information, see the SensorPaths table.

GRPC/SensorGroups/SensorGroup/SensorPaths

This table contains gRPC sensor path information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	SensorPaths
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorPath	SensorPath table	Multi-instance table	N/A	For more information, see the SensorPath table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath

This table contains gRPC sensor path information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	SensorPath
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Path	Path of the node to be monitored	Index	String. Case insensitive. Length: 1 to 255 characters.	Whether the path is supported or not depends on specific device.
EventCondition	Data pushing conditions for an event-triggered sensor path	NA	String.	NA
Depth	For the sensor path	N/A	Unsigned integer. Value range: 1 to 3.	N/A
ColumnConditions	Conditions information	Sublist	N/A	For more information, see the ColumnConditions table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/Filters

This table contains the gRPC sensor path filters for flexible filtering.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	Filters
Table type	Single-instance table
Row name	Filter
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Filter	Filter table	Multi-instance table	N/A	In this version, this table can contain only one filter. For more information, see the Filter table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/Filters/Filter

This table contains the settings of a gRPC sensor path filter for flexible filtering.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC

Item	Description
Table name	Filter
Table type	Multi-instance table
Row name	Filter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Filter name	Index	String. Length: 1 to 31 characters.	N/A
ConditionRelation	Logical operator on conditions in the filter	Index	Enumeration: • **and**—The filter is matched if all conditions in the filter are matched. • **or**—The filter is matched if any conditions in the filter are matched.	Read-write.
ColumnConditions	Conditions in the filter	Sublist	N/A	For more information, see the ColumnConditions table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/Filters/Filter/ColumnConditions

This table contains the conditions in a flexible filter for filtering gRPC sensor path information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	ColumnConditions
Table type	Single-instance table
Row name	ColumnCondition
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColumnConditions	ColumnConditions table	Multi-instance table	N/A	For more information, see the ColumnCondition table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/Filters/Filter/ColumnConditions/ColumnCondition

This table contains information about a condition in a flexible filter for filtering gRPC sensor path information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	ColumnConditions
Table type	Multi-instance table
Row name	ColumnCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OpField	Attribute operand on which the operation is performed	Index	String. Length: 1 to 64 characters.	Read-write. This column must be under the filter node.
OpType	Comparison operator type	Index	Enumeration: • **eq**—Equal to. • **ge**—Greater than or equal to. • **gt**—Greater than.	Read-write.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **le**—Less than or equal to. • **lt**—Less than. • **ne**—Not equal to.	
OpValue	Value to be compared with the attribute operand	Column	String. Length: 1 to 127 characters.	Read-write.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/ColumnConditions

This table contains GRPC sensor path condition information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	ColumnConditions
Table type	Single-instance table
Row name	ColumnCondition
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColumnConditions	ColumnConditions table	Multi-instance table	N/A	For more information, see the ColumnCondition table.

GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath/ColumnConditions/ColumnCondition

This table contains GRPC sensor path condition information.

XML structure

Please refer to the XML structure of GRPC/SensorGroups.

Table description

Item	Description
Feature name	GRPC
Table name	ColumnConditions
Table type	Multi-instance table
Row name	ColumnCondition
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColumnName	Condition column name	Index	String. Length: 1 to 64 characters.	Read-write. This column must be under sensor path.
ColumnCondition	Condition operator	Index	Enumeration: • **eq.** • **ge.** • **gt.** • **le.** • **lt.** • **ne.**	Read-write.
ColumnValue	Condition Column value	Column	String. Length: 1 to 127 characters.	Read-write. The threshold of the column.

GRPC/DestinationGroups

This table contains gRPC destination group information.

XML structure

GRPC/DestinationGroups/DestinationGroup

This table contains gRPC destination group information.

XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

Table description

Item	Description
Feature name	GRPC
Table name	DestinationGroup
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Destination group name	index	String. Length: 1 to 31 characters.	N/A
Destinations	Destination info	Sublist	N/A	For more information, see the Destinations table.

GRPC/DestinationGroups/DestinationGroup/Destinations

This table contains gRPC destination information.

XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

Table description

Item	Description
Feature name	GRPC
Table name	Destinations
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Destination	Destination table	Multi-instance table	N/A	For more information, see the Destination table.

GRPC/DestinationGroups/DestinationGroup/Destinations/Destination

This table contains gRPC destination information.

XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

Table description

Item	Description
Feature name	GRPC
Table name	Destination
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	Address of the destination group	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the address is a public network address, leave this column empty.
Port	Port number of the destination group	Index	Unsigned integer. Value range: 1 to 65535.	N/A
TLS	Whether use Transport Layer	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Security protocol to secure the communication		• **true**—Use Transport Layer Security protocol • **false**—Not use Transport Layer Security protocol.	

GRPC/DestinationGroups/DestinationGroup/Domains

This table contains gRPC domain information.

XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

Table description

Item	Description
Feature name	GRPC
Table name	Domains
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Domain	Domain table	Multi-instance table	N/A	For more information, see the Domain table.

GRPC/DestinationGroups/DestinationGroup/Domains/Domain

This table contains gRPC domain information.

XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

Table description

Item	Description
Feature name	GRPC
Table name	Domain
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the DNS IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
Name	Domain Name	Index	String Length: 1 to 253 characters,	N/A
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the address is a public network address, leave this column empty.
Port	Port number of the destination group	Index	Unsigned integer. Value range: 1 to 65535.	N/A
TLS	Whether use Transport Layer Security protocol to secure the communication	N/A	Boolean: • **true**—Use Transport Layer Security protocol • **false**—Not use Transport Layer **Security** protocol.	N/A

GRPC/Subscriptions

This table contains gRPC subscription information.

XML structure

```
<GRPC>
  <Subscriptions>
    <Subscription>
      <SubscriptionName></SubscriptionName>
      <Protocol></Protocol>
```

```
      <SourceAddress></SourceAddress>
      <SourcePort></SourcePort>
      <Dscp></Dscp>
      <JsonRowTimestamp></JsonRowTimestamp>
      <SensorProfiles>
       <SensorProfile>
        <GroupName></GroupName>
        <SampleInterval></SampleInterval>
        <SampleIntervalInMSec></SampleIntervalInMSec>
       </SensorProfile>
      </SensorProfiles>
      <DestinationProfiles>
        <DestinationProfile>
          <GroupName></GroupName>
        </DestinationProfile>
      </DestinationProfiles>
      <Encoding></Encoding>
    </Subscription>
  </Subscriptions>
</GRPC>
```

Table description

Item	Description
Feature name	GRPC
Table name	Subscriptions
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Subscription	Subscription table	Multi-instance table	N/A	For more information, see the Subscription table.

GRPC/Subscriptions/Subscription

This table contains gRPC subscription information.

XML structure

Please refer to the XML structure of GRPC/Subscriptions.

Table description

Item	Description
Feature name	GRPC
Table name	Subscription
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	String. Length: 1 to 31 characters.	N/A
Protocol	Telemetry transport protocol	N/A	Enumeration: • 1—UDP • 2—GRPC	N/A
SourceAddress	Source IP address for packets	N/A	IPv4: String, in dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Interface: String, interface type and number	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Interface example: LoopBack2 In the current software version, it must be a loopback interface.
SourcePort	Port number of the sourceAddress	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Dscp	Dscp value of the packet	N/A	Unsigned integer. Value range: 0 to 63.	N/A
JsonRowTimestamp	Row-level timestamp json format protocol	N/A	Enumeration: • **enable**—The Row-level timestamp json format protocol is enabled**.** • **disable**—The Row-level timestamp json format protocol is disabled.	Only the 2-layer telemetry data model supports the json data format.
SensorProfiles	Sensor profile information	Sublist	N/A	For more information, see the SensorProfiles table.

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationProfiles	Destination profile information	Sublist	N/A	For more information, see the DestinationProfiles table.
Encoding	Data encoding format	N/A	Enumeration: • **0**—JSON. • **1**—GPB.	Only the 3-layer telemetry data model supports the GPB data encoding format.

GRPC/Subscriptions/Subscription/SensorProfiles

This table contains gRPC sensor profile information.

XML structure

Please refer to the XML structure of GRPC/Subscriptions.

Table description

Item	Description
Feature name	GRPC
Table name	SensorProfiles
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

GRPC

GRPC/Configuration

This table contains gRPC configuration information.

XML structure

```
<GRPC>
  <Configuration>
    <State></State>
    <Port></Port>
    <IdleTime></IdleTime>
    <SecurityParams>
      <PKIDomainName></PKIDomainName>
    </SecurityParams>
    <DataModel></DataModel>
    <SensorMode></SensorMode>
    <CPUUsage></CPUUsage>
  </Configuration>
</GRPC>
```

Table description

Item	Description
Feature name	GRPC
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the gRPC service	N/A	Enumeration: • **enable**—The gRPC service is enabled. • **disable**—The gRPC service is disabled.
Port	Port number of the gRPC service	N/A	Unsigned integer. Value range: 1 to 65535.

Column name	Column description	Column type	Data type and restrictions
IdleTime	Idle timeout time for gRPC sessions in minutes	N/A	Unsigned integer. Value range: 0 to 30.
SecurityParams	Security parameters	Data Structure	Members include: PKIDomainName
PKIDomainName	PKI domain Name	N/A	String. Length: 1 to 31 characters. Case insensitive.
DataModel	Data model of the gRPC service	N/A	Enumeration: • **0**—2-layer data model**.** • **1**—3-layer data model.
SensorMode	Mode of sensor	N/A	Enumeration: • **simple**—Simple sensor mode. • **flex**—Flexible sensor mode.
CPUUsage	Specify the maximum CPU usage allowed for telemetry service	N/A	Unsigned integer. percent range: 1 to 50. Default: 4294967295.

GRPC/SensorPaths

This table contains gRPC sensor paths information.

XML structure

Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Subscription	Subscription table	Multi-instance table	N/A	For more information, see the Subscription table.

GRPC/Subscriptions/Subscription

This table contains gRPC subscription information.

XML structure

Please refer to the XML structure of GRPC/Subscriptions.

Table description

Item	Description
Feature name	GRPC
Table name	Subscription
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	String. Length: 1 to 31 characters.	N/A
Protocol	Telemetry transport protocol	N/A	Enumeration: • 1—UDP • 2—GRPC	N/A
SourceAddress	Source IP address for packets	N/A	IPv4: String, in dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Interface: String, interface type and number	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Interface example: LoopBack2 In the current software version, it must be a loopback interface.
SourcePort	Port number of the sourceAddress	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Dscp	Dscp value of the packet	N/A	Unsigned integer. Value range: 0 to 63.	N/A
JsonRowTimestamp	Row-level timestamp json format protocol	N/A	Enumeration: • **enable**—The Row-level timestamp json format protocol is enabled**.** • **disable**—The Row-level timestamp json format protocol is disabled.	Only the 2-layer telemetry data model supports the json data format.
SensorProfiles	Sensor profile information	Sublist	N/A	For more information, see the SensorProfiles table.
DestinationProfiles	Destination profile information	Sublist	N/A	For more information, see the DestinationProfiles table.
Encoding	Data encoding format	N/A	Enumeration: • **0**—JSON**.** • **1**—GPB.	Only the 3-layer telemetry data model supports the GPB data encoding format.

GRPC/Subscriptions/Subscription/SensorProfiles

This table contains gRPC sensor profile information.

XML structure

Please refer to the XML structure of GRPC/Subscriptions.

GRPC

GRPC/Configuration

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。
Please stop gRPC server first. 请先去使能gRPC服务。	Disable gRPC first. 请先去使能gRPC服务。
Cannot specify the %s column when you disable the gRPC service. 不能在去使能gRPC服务时指定%s列。	The %s column is available only when gRPC service is enabled. %s列仅在启动gRPC服务后可用。

GRPC/SensorGroups

Message	Explanation
Incomplete parameter. 参数输入不完整。	Specified sampling data filter parameters are incomplete. 必须制定过滤列的值。
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gPRC first. 需要先启动gRPC服务，再提供相关服务。
The path doesn't exist, or it is invalid. path不存在或者格式错误。	Invalid sampling path. path不存在或者格式错误。
The sensor group has been used by subscriptions. Please remove the sensor group from the subscriptions first. 当前sensor group正在被订阅使用，请先从相关订阅下移除。	A user failed to delete a sensor group, failed to assign a sensor path to a sensor group, or failed to remove a sensor path from a sensor group. 用户删除sensor group失败，或者在当前sensor group下配置或移除sensor path失败。
Path *path* is not supported. 不支持指定path。	Unsupported sampling path. 不支持指定path。
Only one filtering method is allowed. 只允许配置一种过滤方法。	Only one filtering method is allowed. 只允许配置一种过滤方法。
Can’t delete the ColumnValue column separately. You must specify the index columns to delete the entire row. 无法单独删除ColumnValue列，只能删除ColumnCondition整行的配置。	A user specified the ColumnValue column in a delete or remove request. 用户在删除操作中指定了 ColumnValue 列。
The condition attribute for data filtering is not supported for tables that contain subtables. 多级表（含有子表的采样路径）不支持condition过滤。	To filter on multi-level tables, use the selection-nodes column to specify columns of interest. 如需对多级表进行过滤，请使用selection-nodes列指定需要获取的数据列。
Flexible filtering and simple filtering for sensor paths are mutually exclusive. Please remove the	If you receive this message when you configure flexible filtering for sensor paths, remove all simple filtering settings for sensor

conflicting filtering settings and try again. 传感器路径的灵活过滤和简单过滤是相互排斥的。请删除冲突的过滤设置，然后重试。	paths, and try again. If you receive this message when you configure simply filtering for sensor paths, remove all flexible filtering settings for sensor paths, and try again. 如果在为传感器路径配置灵活过滤时收到此消息，请删除传感器路径的所有简单过滤设置，然后重试。 如果您在为传感器路径配置简单过滤时收到此消息，请删除传感器路径的所有灵活过滤设置，然后重试。
To change the sensor mode, please first delete all sensor paths in all sensor groups or delete all sensor groups. 要更改传感器模式，请先删除传感器组中的所有传感器路径，或删除所有传感器组。	To change the sensor mode, you must first delete all sensor paths in all sensor groups or delete all sensor groups. 要更改传感器模式，请先删除传感器组中的所有传感器路径，或删除所有传感器组。
The OpField value does not exist. 指定的OpField取值不存在。	The operator value specified for the OpField field does not exist. 指定的OpField 取值不存在。
Invalid operator type. OpType的值无效。	Invalid operator type. OpType的值无效。
Invalid operator value. OpValue的值无效。	Invalid operator value. OpValue的值无效。

GRPC/DestinationGroups

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。
The destination group has been used by subscriptions. Please remove the destination group from the subscriptions first. 当前destination group正在被订阅使用，请先从相关订阅下移除。	A user failed to delete a destination group, failed to assign a collector to a destination group, or failed to remove a collector from a destination group. 用户删除destination group失败，或者在当前destination group下配置或移除采集器失败。

GRPC/Subscriptions

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。
The sensor group doesn't exist. 指定的sensor group不存在。	A user specified a non-existent sensor group. 用户指定了一个不存在的sensor group。
The destination group doesn't exist. 指定的destination group不存在。	A user specified a non-existent destination group. 用户指定了一个不存在的destination group。
Can't specify both SampleInterval and SampleIntervalInMSec at the same time. 不能同时输入SampleInterval和SampleIntervalInMSec。	A user specified both SampleInterval and SampleIntervalInMSec at the same time. 用户同时执行了SampleInterval和SampleIntervalInMSec。

Can’t delete the SampleInterval column separately. You must delete the SensorProfile sublist as a whole. 无法单独删除SampleInterval列，只能删除SensorProfile整个表的配置。	A user specified the SampleInterval column in a delete or remove request. 用户在删除操作中指定了 SampleInterval 列。
Can’t delete the SampleIntervalInMSec column separately. You must delete the SensorProfile sublist as a whole. 无法单独删除SampleIntervalInMSec列，只能删除SensorProfile整个表的配置。	A user specified the SampleIntervalInMSec column in a delete or remove request. 用户在删除操作中指定了 SampleIntervalInMSec 列。

Table description

Item	Description
Feature name	bfd
Table name	bfdCfgSessions
Table type	Multi-instance table
Row name	bfdCfgsession
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
sessName	Name of a BFD session	Index	String. Length: 1 to 64 characters.	Required when create a new row, can not be modified.

bfdHopType	Session hop type	N/A	Enumeration: • - : "Non-IP session." • IP_SINGLE_HOP:" IP single-hop session" • IP_MULTI_HOP"IP multi-hop session"	Required when create a new row, can not be modified.
createType	Type for creating a BFD session	N/A	Enumeration: • SESS_STATIC •	Required when create a new row, can not be modified.
localDiscr	Local discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 32768.	N/A
remoteDiscr	Remote discriminator of a BFD session	N/A	Unsigned integer. • Value range: 1 to 4294967295.	N/A
linkType	Type of the link detected by a BFD session	N/A	Enumeration: • IP • TE_LSP • TE_TUNNEL • VLL_PW •	Required when create a new row, can not be modified.
addrType	Type of the IP address	N/A	Enumeration: • IPV4 • IPV6	Required when create a new row, can not be modified.
outIfName	Name of the outbound interface of a BFD session.	N/A	String. Length: 2 to 47 characters.	This parameter is available only when the type of the detected link is IP.
destAddr	Destination IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. This parameter is available only when the type of the detected link is IP
srcAddr	Source IP address of a BFD session	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
vrfName	Name of the VPN to which a BFD session belongs	N/A	String. Length: 0 to 31 characters.	If the BFD session belongs to the public network, the length of characters is 0.
tunnelName	Name of a TE tunnel	N/A	String. Length: 2 to 47 characters.	This parameter is available only when the type of the detected link is

				TE LSP or TE Tunnel
teBackup	Flag of determining whether the LSP is the primary LSP in a tunnel	N/A	Boolean: • true-backup LSP • false- primary LSP	This parameter is available when the type of the detected link is TE LSP
remotePeer	Remote address of the PW/VSI.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
pwSecondary	Secondary PW flag.	N/A	Boolean: • true - Secondary PW • false - Main PW	N/A
minTxInt	Minimum interval for sending packets	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model.
minRxInt	Minimum interval for receiving packets	N/A	Unsigned integer.	The value is expressed in milliseconds. The value range for this argument varies by device model.
detectMulti	Number of times that a BFD session continuously detects that packets are sent but no response is returned, based on which the system considers the BFD session Down.	N/A	Unsigned integer.	The value range for this argument varies by device model.
trackIfName	Name of the interface tracked by a BFD session.	N/A	String. Length: 2 to 47 characters.	N/A
oneArmEcho	Echo session in one-arm mode, which must be configured for one-arm session type.	N/A	Boolean: • true • false	N/A
minEchoRxInt	Minimum interval for receiving	N/A	Unsigned integer.	The value is expressed in milliseconds. The

	one-arm echo session packets.			value range for this argument varies by device model.

bgpVrfAF	List of BGP address family instances.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs table.

gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF

This table contains information of a BGP address family.

XML structure

Please refer to the XML structure of gsta-bgp/bgp.

Table description

Item	Description
Feature name	gsta-bgp
Table name	bgpVrfAF
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afType	Address family type of a BGP instance.	index	Enumeration: • ipv4uni. • ipv4multi. • ipv4vpn. • ipv6uni. • ipv6vpn.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• ipv4flow. • l2vpnad. • mvpn. • evpn. • ls. • mdt. • vpnv4flow. •	
preferenceExternal	Set the protocol priority of EBGP routes.	N/A	uint8. Value range: 1 to 255	N/A
preferenceInternal	Set the protocol priority of IBGP routes.	N/A	uint8. Value range: 1 to 255	N/A
preferenceLocal	Set the protocol priority of a local BGP route.	N/A	uint8. Value range: 1 to 255.	N/A
loadBalancingEibgp	Configure EBGP and IBGP route load balancing. By default, load balancing cannot be implemented among IBGP and EBGP routes.	N/A	Uint32. Value range: 1 to 16.	N/A
loadBalancingAsPathIgnore	Configure BGP to ignore the AS_Path of each BGP route to the next hop when selecting routes for load balancing. By default, only the routes with the same AS_Path can participate in load balancing.	N/A	Enumeration: • **0**—false. • 1—true.	N/A
loadBalancingAsPathRelax	Configure BGP to ignore comparison of AS_Path attributes with the same length. By default, only the routes with the same AS_Path can participate in load balancing.	N/A	Enumeration: • **0**—false. • **1**—true.	N/A
nexthopDelayTime	Configure the delay-time of next hop.	N/A	Uint32. Value range: 1 to 100.	N/A
tunnelSelectorName	Configure a tunnel selector	N/A	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	and apply it to the BGP IPv4 unicast, BGP VPNv4, and BGP VPNv6 address families so that IPv4 ,VPNv4, and VPNv6 labeled routes can recurse to tunnels based on the tunnel selector. By default, no tunnel selector is configured.		Length: 1 to 40 characters.	
tunnelSelectorAll	Tunnel selector for labeled, imported, and network segment routes.	N/A	Enumeration: • **0**—false. • **1**—true.	N/A
peerAFs	Peers in a specified address family.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs table.
importRoutes	List of imported routes.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes table.

gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs

This table contains BGP peer address family information.

XML structure

Please refer to the XML structure of gsta-bgp/bgp.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peerAF	Peer in a specified address family.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs/peerAF table.

gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs/peerAF

This table contains address family information for a BGP peer.

XML structure

Please refer to the XML structure of gsta-bgp/bgp

Table description

Item	Description
Feature name	gsta-bgp
Table name	peerAF
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
remoteAddress	IPv4 or IPv6 peer address.	Index	IPv4: String, dotted decimal	IPv4 example: 1.1.1.1

Column name	Column description	Column type	Data type and restrictions	Remarks
			notation. IPv6: String.	IPv6 example: 2001::1
advertiseCommunity	Advertise the community attribute to a peer or peer group. By default, the community attribute is not advertised to any peer or peer group.	N/A	Enumeration: • **0**—false. • **1**—true.	N/A
advertiseExtCommunity	Advertise the extended community attribute to a peer or peer group. By default, the extended community attribute is not advertised to any peer or peer group.	N/A	Enumeration: • **0**—false. • **1**—true.	N/A

gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes

This table contains route redistribution information.

XML structure

Please refer to the XML structure of gsta-bgp/bgp.

Table description

Item	Description
Feature name	gsta-bgp
Table name	importRoutes
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
importRoute	Route redistribution. Routes of other protocol types can be redistributed by BGP. By default, BGP does not redistribute routes of other protocol types.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes/importRoute table.

gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes/importRoute

This table contains information of redistributed routes.

XML structure

Please refer to the XML structure of gsta-bgp/bgp

Table description

Item	Description
Feature name	gsta-bgp
Table name	importRoute
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
importProtocol	Routing protocol from which routes can be redistributed.	Index	Enumeration: • 1—direct. • 2—ospf.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	The routing protocol can be IS-IS, OSPF, static, direct, or RIP for an IPv4 unicast address family or an IPv4 multicast address family. The routing protocol can be IS-IS, OSPFv3, static, direct, or RIPng for an IPv6 uincast address family.		• 3—isis • 4—static • 5—rip • 6—ospfv3 • 7—ripng	
importProcessId	Process ID of the routing protocol. The process ID must be specified if the routing protocol is RIP, OSPF, RIPng, or OSPFv3.	Index	Uint32. Value range: 0 to 65535	N/A
importRoutePolicy	When routes are redistributed from other routing protocols, the route-policy filter can be used to filter the routes and change route attributes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
medNew	Specify the MED of imported routes.	N/A	uint64 Value range: 0 to 4294967295	N/A

Table name	ethSubIfs
Table type	Multi-instance table
Row name	ethSubIf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Name of a subinterface. For example, Ethernet 0/1/0.1.	index	String Value range: 1 to 47.	Name of a subinterface.

Column name	Column description	Column type	Data type and restrictions	Remarks
flowType	Subinterface type, including VLAN subinterfaces, subinterfaces for Dot1q VLAN tag termination, subinterfaces for QinQ VLAN tag termination, and stacking subinterfaces.	N/A	Members include: • VlanType • Dot1qTerm • Stacking • QinQTerm • Mapping1to1	Not used.
arpBroadcastEnable	Enable ARP broadcast.	N/A	Boolean: • true • false	Not used.
vlanTypeVid	VLAN ID of the VLAN subinterface.	N/A	Unsigned Short. Value range: 1 to 4094.	Not used.
flowDot1qs	Dot1q VLAN tag termination list.	N/A	Include: • Value • Unit	Dot1q VLAN tag termination list.
flowDot1q	Dot1q VLAN tag termination.	N/A	Include: • Value • Unit	Dot1q VLAN tag termination.
segIndex	QinQ segment.	index	Unsigned integer	Dot1q segment.
vlanIdBgn	Start VLAN ID in the user packet.	N/A	Unsigned integer. Value range: 1 to 4094.	Start VLAN ID.
vlanIdEnd	End VLAN ID in the user packet.	N/A	Unsigned short. Value range: 1 to 4094.	End VLAN ID.
groupId	VLAN group ID.	N/A	Unsigned char. Value range: 1 to 16.	Not used.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Information about an	Index	String. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface		Example: GigabitEthernet2/0/2	
ifDescr	Description of an interface	N/A	String. Length: 1 to 255 characters. Default: Interface name.	N/A
IfAdminStatus	Administrative status of an interface	N/A	String enumeration: • up. • down.	N/A
ifTrapEnable	Enable the trap function on an interface	N/A	Boolean: • true. • false.	N/A
ifStatiEnable	Enable the statistics function on an interface	N/A	Boolean: • true. • false.	N/A
statMode	Mode of statistics collection. statistics by interface or vlangroup	N/A	String enumeration: • baseInterface. • baseVlanGroup.	The baseVlanGroup value is not supported.
ifMtu	IPV4 Maximum transmission unit of an interface	N/A	Unsigned integer. Value range: 0-64000	Applicable to only Layer 3 interfaces.
spreadMtuFlag	Spread the MTU of main interface to subinterface(optional)	N/A	Boolean: • true. • false.	Applicable to only Layer 3 main interfaces.
ifBandwidth	Specify MIB-referenced bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A
ifStatItvl	Interval at which flow statistics are collected on an interface	N/A	Unsigned integer. Value range: 5 to 300	Configured at multiples of 5.
downDelayTime	Specify down-delay-time value in milliseconds	N/A	Unsigned integer. Value range: 1 to 1000 Unit: Milliseconds.	Configured at multiples of 10 when the interface type is eth-trunk.
ifCfgMac	Config MAC Address	N/A	String: Length: 0 to 255 characters.	Config MAC Address, in the format of HH-HH-HH

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Information about an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
ifClass	Identify a main interface or a sub-interface	N/A	String enumeration: • mainInterface. • subInterface.	N/A
ifPhyType	Type of an interface	N/A	String enumeration. For more information, see Table 1.	N/A
ifParentIfName	Name of the main interface	N/A	String. Length: 2 to 47 characters.	Available when the ifClass is subInterface. Example: GigabitEthernet2/0/2
ifNumber	Number of an interface	N/A	String. Length: 1 to 47 characters.	For example: 1, 0/1/0, or 2:1.
ifDescr	Description of an interface	N/A	String. Length: 1 to 255 characters. Default: Interface name.	N/A
ifAdminStatus	Administrative status of an interface	N/A	String enumeration: • up. • down.	N/A
ifTrapEnable	Enable the trap function on an interface	N/A	Boolean: • true. • false.	N/A
ifStatiEnable	Enable the statistics function on an interface	N/A	Boolean: • true. • false.	N/A
statMode	Mode of statistics collection	N/A	String enumeration: • baseInterface. • baseVlanGroup.	The baseVlanGroup value is not supported.
ifMtu	IPV4 Maximum transmission unit of an interface	N/A	Unsigned integer. Value range: 0-64000	Applicable to only Layer 3 interfaces.
spreadMtuFlag	Spread the MTU of main interface to subinterface(optional)	N/A	Boolean: • true. • false.	Applicable to only Layer 3 main interfaces.
ifBandwidth	Specify MIB-referenced bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ifStatItvl	Interval at which flow statistics are collected on an interface	N/A	Unsigned integer. Value range: 5 to 300.	The value must be a multiple of 5 in seconds.
downDelayTime	Specify the down-delay-time value in milliseconds	N/A	Unsigned integer. Value range: 0 to 1000. Unit: Milliseconds.	Configured at multiples of 10，when ifPhyType is Eth-Trunk.
ifCfgMac	Config MAC Address	N/A	String. Length: 0 to 255 characters.	Config MAC Address, in the format of HH-HH-HH.

Table 1 Interface extension types

String enum	Interface type	Description
ATM	IF_ATM_TYPE	ATM interface.
Cpos	IF_CPOS_TYPE	CPOS interface.
E1	IF_E1_TYPE	E1 interface.
InLoopBack	IF_INLOOPBACK_TYPE	Internal loopback interface.
LoopBack	IF_LOOPBACK_TYPE	Loopback interface.
Ethernet	IF_L2ETHERNET_TYPE	Layer 2 FE interface.
GigabitEthernet	IF_L2GE_TYPE	Layer 2 GE interface.
VEB	IF_L2VE_TYPE	Layer 2 VE interface.
XGigabitEthernet	IF_L2XGE_TYPE	Layer 2 10-GE interface.
Ethernet	IF_L3ETHERNET_TYPE	Layer 3 FE interface.
GigabitEthernet	IF_L3GE_TYPE	Layer 3 GE interface.
XGigabitEthernet	IF_L3XGE_TYPE	Layer 3 10-GE interface.
MEth	IF_ME_TYPE	Management Ethernet interface.
MGE	IF_MGE_TYPE	Management GE interface.
Mp-group	IF_MPGROUP_TYPE	MP-group interface.
NULL	IF_NULL_TYPE	Null interface.
Pos	IF_POS_TYPE	POS interface.
Serial	IF_SERIAL_TYPE	Serial interface.
T1	IF_T1_TYPE	T1 interface.
Tunnel	IF_TUNNEL_TYPE	Tunnel interface.
Vlanif	IF_VLAN_TYPE	VLAN interface.
Virtual-Template	IF_VT_TYPE	VT interface.
MTunnel	IF_MTUNNEL_TYPE	M-Tunnel interface.
InAsy	IF_INASY_TYPE	Internal asynchronous serial interface.
Eth-trunk	IF_BAGG_TYPE	Layer 2 aggregate interface.

String enum	Interface type	Description
Register-Tunnel	IF_REGISTER_TUNNEL_TYPE	Register-Tunnel interface.
Ethernet	IF_LOOPFE_TYPE	Loopback FE interface.
GigabitEthernet	IF_LOOPGE_TYPE	Loopback GE interface.
XGigabitEthernet	IF_LOOPXGE_TYPE	Loopback 10-GE interface.
Ethernet	IF_MIRRORFE_TYPE	Mirroring FE interface.
GigabitEthernet	IF_MIRRORGE_TYPE	Mirroring GE interface.
XGigabitEthernet	IF_MIRRORXGE_TYPE	Mirroring 10-GE interface.
Ethernet	IF_IDSFE_TYPE	IDS FE interface.
GigabitEthernet	IF_IDSGE_TYPE	IDS GE interface.
XGigabitEthernet	IF_IDSXGE_TYPE	IDS 10-GE interface.
Eth-trunk	IF_RAGG_TYPE	Layer 3 aggregate interface.
40GE	IF_L2FGE_TYPE	Layer 2 40-GE interface.
100GE	IF_L2HGE_TYPE	Layer 2 100-GE interface.
40GE	IF_L3FGE_TYPE	Layer 3 40-GE interface.
100GE	IF_L3HGE_TYPE	Layer 3 100-GE interface.
40GE	IF_LOOPFGE_TYPE	Loopback 40-GE interface.
100GE	IF_LOOPHGE_TYPE	Loopback 100-GE interface.
40GE	IF_MIRRORFGE_TYPE	Mirroring 40-GE interface.
100GE	IF_MIRRORHGE_TYPE	Mirroring 100-GE interface.
40GE	IF_IDSFGE_TYPE	IDS 40-GE interface.
100GE	IF_IDSHGE_TYPE	IDS 100-GE interface.
VPPP	IF_VPPP_TYPE	Virtual PPP interface.
HDLC-B	IF_HDLCBUNDLE_TYPE	HDLC bundle interface.
Virtual-Ethernet	IF_VE_L2VPN_TYPE	L2VPN virtual Ethernet interface
Virtual-Ethernet	IF_VE_L3VPN_TYPE	L3VPN virtual Ethernet interface
VSI	IF_VSI_TYPE	VSI interface
BAS	IF_LOCAL_BAS_IF_TYPE	Local BAS interface
BAS	IF_GLOBAL_BAS_IF_TYPE	Global BAS interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
tunnelselectnode	Tunnel selector node.	Subtable	N/A	For more information, see the RTP/TunnelSelectors/TunnelSelector/ TunnelSelectnodes/SunnelSelectnode table.

Gsta-route-policy/RTP/TunnelSelectors/TunnelSelector/TunnelSelectNodes/ TunnelSelectNode

This table contains tunnel selector node information.

XML structure

Please refer to the XML structure of RTP/TunnelSelectors.

Table description

Item	Description
Feature name	rtp
Table name	tunnelselectnode
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name of a tunnel selector.	Index	String, case-sensitive. Length: 1 to 40 characters.	N/A
nodeSequence	Sequence number of a node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
matchMode	Matching mode of nodes.	type: rtpMatchMode; mandatory: true;	enumeration • Permit • deny	Perform create or replace operation, Mode can't be empty. Perform Merge operation to create a row, Mode can't be empty. Not support delete or remove operation.
matchCondition	Match type list.	Subtable	N/A	For more information, see the RTP/TunnelSelectors/TunnelSelector/ tunnelselectnodes/

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name of a tunnel selector.	Index	String, case-sensitive. Length: 1 to 40 characters.	N/A
				tunnelselectnode/ matchCondition table.
applyAction	Set type list.	Subtable	N/A	For more information, see the RTP/TunnelSelectors/TunnelSelector/ tunnelselectnodes/ tunnelselectnode/ applyAction table.

Gsta-route-policy/RTP/TunnelSelectors/TunnelSelector/TunnelSelectNodes/ TunnelSelectNode/ MatchCondition

This table contains match type list.

XML structure

Please refer to the XML structure of RTP/TunnelSelectors.

Table description

Item	Description

Item	Description
Feature name	GTS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Type	Match type	Index	Enumeration : • **1**—Any. • **2**—IPv4Acl. • **3**—IPv6Acl. • **4**—queue.	N/A
Value	Match type value	Index	Unsigned integer.	When **Type** is **1**, this column only can be configured as 0. When **Type** is **2**, the value is 2000~5999. When **Type** is **3**, the value is 2000~3999. When **Type** is **4**, the value is 0~7.
BandwidthUnit	Bandwidth Unit	N/A	Enumeration: • **2**—kbps. • **3**—percent.	N/A
CIR	Committed information rate	N/A	Unsigned integer.	N/A
CBS	Committed burst size	N/A	Unsigned integer.	N/A
EBS	Excess burst size	N/A	Unsigned integer.	N/A
PIR	Peak information rate	N/A	Unsigned integer.	N/A
QueueLength	Queue length	N/A	Unsigned integer.	N/A
PassedPkts	Number of pass packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DiscardedPkts	Number of discard packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DelayedPkts	Number of delay packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PassedBytes	Number of pass bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DiscardedBytes	Number of discard bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DelayedBytes	Number of delay bytes	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 2^{64} - 1.	
QueueSize	Queue size	N/A	Unsigned integer.	N/A
`IfName`	Interface name	N/A	String. Length: 1 to 47 characters. Example: GigabitEthernet2/0/2	N/A

GTS/IfCapabilities

This table contains generic traffic shaping (GTS) capabilities of interfaces.

XML structure

```
<GTS>
  <IfCapabilities>
    <Capability>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <IfTokenPara></IfTokenPara>
      <CIRMin></CIRMin>
      <CIRMax></CIRMax>
      <CIRGranularity></CIRGranularity>
      <CBSMin></CBSMin>
      <CBSMax></CBSMax>
      <CBSGranularity></CBSGranularity>
      <EBSMin></EBSMin>
      <EBSMax></EBSMax>
      <EBSGranularity></EBSGranularity>
      <PIRMin></PIRMin>
      <PIRMax></PIRMax>
      <PIRGranularity></PIRGranularity>
      <QueueMin></QueueMin>
      <QueueMax></QueueMax>
      <QueueDefault></QueueDefault>
    </Capability>
  </IfCapabilities>
</GTS>
```

Table description

Item	Description
Feature name	GTS

HardwareQueue

HardwareQueue/QueueMode

This table contains information about queue schedule mode on an interface.

XML structure

```
<HardwareQueue>
  <QueueMode>
    <Queue>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </Queue>
  </QueueMode>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QueueMode
Table type	Multi-instance table
Row name	Queue
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Mode	Queue schedule mode on an interface.	N/A	Enumeration: • **1**—SP. • **2**—Weight WRR. • **3**—Bytecount WRR. • **4**—Weight WFQ. • **5**—Bytecount WFQ.	The default priority trust mode on an interface varies by device.

HardwareQueue/QueueParameter

This table contains information about schedule parameters for the queues on an interface.

XML structure

```
<HardwareQueue>
  <QueueParameter>
    <Queue>
      <IfIndex></IfIndex>
      <QueueID></QueueID>
      <GroupID></GroupID>
      <Weight></Weight>
      <ByteCount></ByteCount>
      <MinBandwidthKbps></MinBandwidthKbps>
    </Queue>
  </QueueParameter>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QueueParameter
Table type	Multi-instance table
Row name	Queue
Restrictions	When queue schedule mode on an interface is SP, do not support this table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product.
QueueID	Queue ID	Index	Unsigned integer Value range: 0 to 15.	N/A
GroupID	Group ID	N/A	Unsigned integer	Value 0 indicates the queue is in group SP.
Weight	Queue weight	N/A	Unsigned integer	The value is valid only when the scheduling unit

Column name	Column description	Column type	Data type and restrictions	Remarks
				is weight.
ByteCount	Queue byte-count	N/A	Unsigned integer	The value is valid only when the scheduling unit is byte-count.
MinBandwidth Kbps	Value of minimum bandwidth	N/A	Unsigned integer	The value is valid only when the queue is a WFQ queue.

HardwareQueue/QMProfiles

This table contains information about queue scheduling profile.

XML structure

```
<HardwareQueue>
  <QMProfiles>
    <Qmprofile>
      <Name></Name>
      <Mode></Mode>
      <Type></Type>
    </Qmprofile>
  </QMProfiles>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfiles
Table type	Multi-instance table
Row name	Qmprofile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Mode	Queue scheduling	N/A	Enumeration: • 0—Advanced.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	profile mode		• 1—Basic.	
Type	Queue scheduling profile type	N/A	Enumeration: • 0—Eight-queue. • 1—Four-queue.	N/A

HardwareQueue/QMProfileQueue

This table contains information about schedule parameters for the queues on a QMProfile.

XML structure

```
<HardwareQueue>
  <QMProfileQueue>
    <Queue>
      <Name></Name>
      <QueueID></QueueID>

      <ServiceType></ServiceType>
      <WredProfile></WredProfile>
    </Queue>
  </QMProfileQueue>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfileQueue
Table type	Multi-instance table
Row name	Queue
Restrictions	When queue scheduling profile is not created, this table is not supported.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
QueueID	Queue ID	Index	Unsigned integer Value range: 0 to 15.	N/A
Mode	Queue mode type	N/A	Enumeration: • 1—SP. • 2—WRR. • 3—WFQ.	When the operation is remove or delete want to set default value. If the item of *Mode* is change. The other column items will be default value.
GroupID	Group ID	N/A	Unsigned integer	When the Queue mode type is SP. The *GroupID* can't be set. When the operation is remove or delete want to set default value. the item of *Mode* must to be set.
Unit	Scheduling unit	N/A	Enumeration: • 1—Weight. • 2—Bytecount.	When the Queue mode type is SP. The *Scheduling Uint* can't be set. When the operation is remove or delete want to set default value. the item of *Mode* must to be set.
Value	Scheduling value	N/A	Unsigned integer	When the Queue mode type is SP. The *Scheduling Value* can't be set. When the operation is remove or delete want to set default value. the item of *Mode* must to be set.
MinBandwidthKbps	Minimum bandwidth in kbps	N/A	Unsigned integer	The value of this column depends on the device model.
MaxBandwidthKbps	Maximum bandwidth in kbps	N/A	Unsigned integer	The value of this column depends on the device model.
MinBandwidthPct	Minimum bandwidth percentage	N/A	Unsigned integer	The profile doesn't support configuring the minimum bandwith and the minimum bandwith percentage at the same time.
MaxBandwidthPct	Maximum bandwidth percentage	N/A	Unsigned integer	The profile doesn't support configuring the maximum bandwith and

Column name	Column description	Column type	Data type and restrictions	Remarks
				the maximum bandwith percentage at the same time.
ServiceType	ServiceType	N/A	Enumeration: • 0—HSI. • 1—STB. • 2—VOIP	N/A
WredProfile	Per-queue WRED profile name	N/A	String. Length: 1 to 32 characters.	N/A

HardwareQueue/InterfaceQMProfile

This table contains information about the queue scheduling profile applied to interface.

XML structure

```
<HardwareQueue>
  <InterfaceQMProfile>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ProfileName></ProfileName>
    </Application>
  </InterfaceQMProfile>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	InterfaceQMProfile
Table type	Multi-instance table
Row name	Application
Restrictions	When queue scheduling profile is not created, this table is not supported.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
ProfileName	Queue scheduling profile name	N/A	String.Length: 1 to 31 characters.	N/A

HardwareQueue/QMProfileGroup

This table contains the maximum bandwidth of a group in a queue scheduling profile.

XML structure

```
<HardwareQueue>
  <QMProfileGroup>
    <Group>
      <Name></Name>
      <GroupID></GroupID>
      <MaxBandwidthKbps></MaxBandwidthKbps>
    </Group>
  </QMProfileGroup>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfileGroup
Table type	Multi-instance table
Row name	Group
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
GroupID	Group ID	Index	Unsigned integer	The value range for this column varies by device model.
MaxBandwidthKbps	Maximum bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

HardwareQueue/Channel

This table contains the channelization bandwidth of a sub interface.

XML structure

```
<HardwareQueue>
 <Channel>
    <Bandwidth>
       <IfName></IfName>
       <BandwidthKbps></BandwidthKbps>
    </Bandwidth>
 </Channel>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	Channel
Table type	Multi-instance table
Row name	Bandwidth
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	Only sub interfaces are supported.
BandwidthKbps	Channelization bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

HardwareQueue/ChannelEnhance

This table contains the channel enhancement of a interface.

XML structure

```
<HardwareQueue>
  <ChannelEnhance>
    <Enhance>
      <IfName></IfName>
      <Enhancement></Enhancement>
    </Enhance>
  </ChannelEnhance>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	ChannelEnhance
Table type	Multi-instance table
Row name	Enhance

Restrictions	No
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Enhancement	Enhancement	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

HardwareQueue/MainIfChannel

This table contains the channelized bandwidth of a subinterface in the default MDC.

XML structure

```
<HardwareQueue>
  <MainIfChannel>
    <Bandwidth>
      <IfName></IfName>
      <SubIfNumber></SubIfNumber>
      <BandwidthKbps></BandwidthKbps>
    </Bandwidth>
  </MainIfChannel>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	MainIfChannel
Table type	Multi-instance table
Row name	Bandwidth
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	Only main interfaces are supported in the default MDC.
SubIfNumber	Subinterface number	Index	Unsigned integer	The value range for this column varies by device model.
BandwidthKbps	Channelization bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

IfType	Interface type	index	Unsigned integer Value range: 0 to 255.	N/A
ScheduleMode	Schedule Mode	N/A	Unsigned integer	N/A
ScheduleUnit	Schedule Unit	N/A	Unsigned integer	N/A
QueueNum	Queue Number	N/A	Unsigned integer	Value is 0 when queue is sp.
BasicMode	Basic Mode	N/A	Unsigned interger	N/A
MaxBandWidth1	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth2	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth3	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth4	Gourp Max BandWidth	N/A	Unsigned interger	N/A

HardwareQueue/DefaultQueueParameter

This table contains information about default queue parameter for an interface.

XML structure

```
<HardwareQueue>
  <DefaultQueueParameter>
    <Queue>
      <IfType></IfType>
      <QueueID></QueueID>
      <SetMask></SetMask>
      <MinBandWidth></MinBandWidth>
      <QueueLength></QueueLength>
      <Group></Group>
      <ScheduleValue></ScheduleValue>
      <MaxBandWidth></MaxBandWidth>
      <ServiceType></ServiceType>
      <MinBandWidthPct></MinBandWidthPct>
    </Queue>
  </DefaultQueueParameter>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	DefaultQueueParameter
Table type	Multi-instance table
Row name	Queue
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfType	Interface type	Index	Unsigned integer Value range: 0 to 255.	N/A
QueueID	Queue ID	Index	Unsigned integer	N/A
SetMask	Set Mask	N/A	Unsigned integer	N/A
MinBandWidth	Min BandWidth	N/A	Unsigned integer	N/A
QueueLength	Queue length	N/A	Unsigned integer	N/A
Group	Group	N/A	Unsigned integer	N/A
ScheduleValue	Schedule Value	N/A	Unsigned integer	N/A
MaxBandWidth	Max BandWidth	N/A	Unsigned integer	N/A
ServiceType	Service Type	N/A	Unsigned integer	N/A
MinBandWidthPct	Min BandWidth percentage	N/A	Unsigned integer	N/A

HardwareQueue/InterfaceQMProfile

This table contains information about the queue scheduling profile applied to interface.

XML structure

```
<HardwareQueue>
  <InterfaceQMProfile>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
```

```
      <ProfileName></ProfileName>
      <IfName></IfName>
    </Application>
  </InterfaceQMProfile>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	InterfaceQMProfile
Table type	Multi-instance table
Row name	Application
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
ProfileName	Queue scheduling profile name	N/A	String.Length: 1 to 31 characters.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

HardwareQueue/QMProfileGroup

This table contains the maximum bandwidth of a group in a queue scheduling profile.

XML structure

```
<HardwareQueue>
  <QMProfileGroup>
    <Group>
```

```
      <Name></Name>
      <GroupID></GroupID>
      <MaxBandWidthKbps></MaxBandWidthKbps>
    </Group>
  </QMProfileGroup>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfileGroup
Table type	Multi-instance table
Row name	Group
Restrictions	No.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
GroupID	Group ID	Index	Unsigned integer	The value range for this column varies by device model.
MaxBandwidthKbps	Maximum bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

HardwareQueue/Channel

This table contains the channelization bandwidth of a sub interface.

XML structure

```
<HardwareQueue>
 <Channel>
    <Bandwidth>
       <IfName></IfName>
       <BandwidthKbps></BandwidthKbps>
    </Bandwidth>
 </Channel>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	Channel
Table type	Multi-instance table
Row name	Bandwidth
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	Only sub interfaces are supported.
BandwidthKbps	Channelization bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

HardwareQueue/ChannelEnhance

This table contains the channel enhancement of a interface.

XML structure

```
<HardwareQueue>
  <ChannelEnhance>
    <Enhance>
      <IfName></IfName>
      <Enhancement></Enhancement>
    </Enhance>
  </ChannelEnhance>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	ChannelEnhance
Table type	Multi-instance table
Row name	Enhance

Restrictions	No
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Enhancement	Enhancement	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

HardwareQueue/MainIfChannel

This table contains the channelized bandwidth of a subinterface in the default MDC.

XML structure

```
<HardwareQueue>
  <MainIfChannel>
    <Bandwidth>
      <IfName></IfName>
      <SubIfNumber></SubIfNumber>
      <BandwidthKbps></BandwidthKbps>
    </Bandwidth>
  </MainIfChannel>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	MainIfChannel
Table type	Multi-instance table
Row name	Bandwidth
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	Only main interfaces are supported in the default MDC.
SubIfNumber	Subinterface number	Index	Unsigned integer	The value range for this column varies by device model.
BandwidthKbps	Channelization bandwidth in kbps	N/A	Unsigned integer	The value range for this column varies by device model.

Message	Explanation
Please enable WFQ queuing first. 请先使能WFQ队列调度模式。	Configure or modify WFQ should enable WFQ queuing first. 配置WFQ队列或修改WFQ队列参数需要在端口队列为WFQ调度模式下使用.
This queue scheduler mode is not enabled. 队列调度模式未使能。	When delete queue scheduler mode, the interface should already configure the scheduler mode. 删除队列调度模式时需要与当前接口的队列调度模式匹配。
Queue is not supported. 不支持该队列。	Queue is not supported. 不支持该队列。
The scheduling units must be the same. 队列调度权重的单位必须相同。	The scheduling units must be the same. 队列调度权重的单位必须相同。
Failed to apply the queue management profile. The minimum bandwidth can't exceed the interface bandwidth. 应用队列调度策略失败。最小保证带宽值不能超过接口带宽值。	Failed to apply the queue management profile. The minimum bandwidth can't exceed the interface bandwidth. 应用队列调度策略失败。最小保证带宽值不能超过接口带宽值。
The number of queue management profiles has reached the upper limit. 队列调度策略数量已达上限。	When create, the number of queue management profiles has reached the upper limit. 创建队列调度策略时队列调度策略数量已达上限。
The queue management profile doesn't exist. 队列调度策略不存在。	When apply, the queue management profile doesn't exist. 应用队列调度策略时策略不存在。
Another queue management profile has been applied. 已应用另一个队列调度策略。	Another queue management profile has been applied. 应用队列调度策略时该对象已应用其他策略。
The profile doesn't support WFQ and WRR queue types at the same time. 不支持WRR+WFQ的队列组合。	The profile doesn't support WFQ and WRR queue types at the same time. 队列调度策略存在非SP队列时需要检测WRR模式和WFQ模式冲突。
A queue schedule value in this queue management profile is out of range on the interface. 队列调度权重的值超出合法范围。	A queue schedule value in this queue management profile is out of range on the interface. 队列调度权重的值超出合法范围。
Maximum bandwidth can't be smaller than the minimum bandwidth. 最大限制带宽的值不能小于最小保证带宽的值。	Maximum bandwidth can't be smaller than the minimum bandwidth. 最大限制带宽的值不能小于最小保证带宽的值。
The profile name has been used by another queue management profile. 队列调度策略名称已存在。	When create, the profile name has been used by another queue management profile. 创建队列调度策略时名称已被占用。
Type of queue management profile is incorrect. 队列调度策略的类型无效。	Type of queue management profile is incorrect. 队列调度策略的类型无效。

The operation conflicts with some existing configurations. 该操作与已经存在的配置发生冲突。	The operation conflicts with some existing configurations such as GTS. 配置队列调度策略和GTS冲突。
Can't delete the queue scheduling profile, because it has been applied. 该调度策略不能被删除，因为已经被应用。	Can't delete the queue scheduling profile, because it has been applied. 不能删除已经被应用的调度策略。
The profile doesn't support configuring the minimum/maximum bandwith and the minimum/maximum bandwith percentage at the same time. 不支持同时配置队列带宽和队列带宽百分比。	The profile doesn't support configuring the minimum/maximum bandwith and the minimum/maximum bandwith percentage at the same time. 队列调度策略不支持同时配置队列最小带宽和最小带宽百分比，不支持同时配置队列最大带宽和最大带宽百分比。
The command must be executed in the default MDC. 该命令必须在缺省MDC下执行。	For a create,meger or replace operation, the command must be executed in the default MDC. 执行create或者meger或者replace操作时，该命令必须在缺省MDC下执行。
The command can be executed only if the main interface is in the same context as the subinterface. 该命令只能在主接口和子接口在同一个环境下执行。	For a create, meger, or replace operation, the command can be executed only if the main interface is in the same context as the subinterface. 执行create或者meger或者replace操作时，该命令只能在主接口和子接口在同一个环境下执行。

IB/IbBackup/Table

This table contains interface backup configuration information.

XML structure

```
<IB>
  <IbBackup>
    <Backup>
      <IfIndex></IfIndex>
      <BackupIfIndex></BackupIfIndex>
      <Priority></Priority>
    </Backup>
  </IbBackup>
</IB>
```

Table description

Item	Description
Feature name	IB
Table name	IbBackup
Table type	Multi-instance table
Row name	Backup
Restrictions	An interface can only be the backup of one interface. A primary interface cannot be configured as a backup interface at the same time. A main interface and its subinterfaces cannot be the backup of each other. The primary and backup interfaces cannot be members of a logical link. For example, they cannot be members of a Layer 3 aggregation group.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupIfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Priority	I Priority of interface.	N/A	Unsigned integer Value range: 0 to 255. Default: 0.	N/A

IB/IbTrack/Table

This table contains backup track configuration information.

XML structure

```
<IB>
  <IbTrack>
    <Track>

IB/IbBackup/Table

This table contains interface backup configuration information.

XML structure

```
<IB>
  <IbBackup>
    <Backup>
      <IfIndex></IfIndex>
      <BackupIfIndex></BackupIfIndex>
      <Priority></Priority>
      <State></State>
    </Backup>
  </IbBackup>
</IB>
```

Table description

Item	Description
Feature name	IB
Table name	IbBackup
Table type	Multi-instance table
Row name	Backup
Restrictions	An interface can only be the backup of one interface. A primary interface cannot be configured as a backup interface at the same time. A main interface and its subinterfaces cannot be the backup of each other. The primary and backup interfaces cannot be members of a logical link. For example, they cannot be members of a Layer 3 aggregation group.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupIfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Priority	I Priority of interface.	N/A	Unsigned integer Value range: 0 to 255.	N/A
State	State of the backup interface	N/A	Enumeration: • 0—INVALID. • 1—UP. • 2—DOWN. • 3—UP_DELAY. • 4—DOWN_DELAY. • 5—STANDBY.	N/A

IB/IbTrack/Table

This table contains backup track configuration information.

XML structure

```
<IB>
  <IbTrack>
    <Track>
      <IfIndex></IfIndex>
      <TrackNum></TrackNum>
    </Track>
  </IbTrack>
</IB>
```

Table description

Item	Description
Feature name	IB
Table name	IbTrack
Table type	Multi-instance table
Row name	Track
Restrictions	If you have configured the backup interface command on the primary interface, you cannot configure the backup track command on the primary or backup interface. If you have associated a backup interface with a track entry, you cannot configure the backup interface command on it or specify it as a backup interface by using the backup interface command.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrackNum	Track entry number	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

IB/IbBackupInfo/Table

This table contains primary interface configuration about backup.

XML structure

```
<IB>
  <IbBackupInfo>
    <BackupInfo>
      <IfIndex></IfIndex>
      <UpperThreshold></UpperThreshold>
      <LowerThreshold></LowerThreshold>
      <UpDelay></UpDelay>
      <DownDelay></DownDelay>
      <FlowCheck></FlowCheck>
      <State></State>
```

```
    </BackupInfo>
  </IbBackupInfo>
</IB>
```

Table description

Item	Description
Feature name	IB
Table name	IbBackupInfo
Table type	Multi-instance table
Row name	BackupInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
UpperThreshold	Upper-threshold	N/A	Unsigned integer Value range: 1 to 99.	N/A
LowerThreshold	Lower-threshold	N/A	Unsigned integer Value range: 1 to 99.	N/A
UpDelay	Up-delay	N/A	Unsigned integer Value range: 1 to 65535.	Unit: seconds
DownDelay	Down-delay	N/A	Unsigned integer Value range: 1 to 65535.	Unit: seconds
FlowCheck	Flow-check time	N/A	Unsigned integer Value range: 30 to 600.	Unit: seconds
State	State of the primary interface	N/A	Enumeration: • 0—INVALID. • 1—UP. • 2—DOWN. • 3—UP_DELAY. • 4—DOWN_DELAY.	N/A

IB/IbBackupStatistics/Table

This table contains statistics information.about backup interface.

XML structure

```
<IB>
  <IbBackupStatistics>
    <BackupStatistics>
      <IfIndex></IfIndex>
      <StatisticsInterval></StatisticsInterval>
      <Bandwidth></Bandwidth>
      <PrimaryTotalIn></PrimaryTotalIn>
      <PrimaryTotalOut></PrimaryTotalOut>
      <PrimaryIntervalIn></PrimaryIntervalIn>
      <PrimaryIntervalOut></PrimaryIntervalOut>
      <PrimaryUsedBandwidth></PrimaryUsedBandwidth>
      <TotalIn></TotalIn>
      <TotalOut></TotalOut>
      <TotalIntervalIn></TotalIntervalIn>
      <TotalIntervalOut></TotalIntervalOut>
      <TotalUsedBandwidth></TotalUsedBandwidth>
    </BackupStatistics>
  </IbBackupStatistics>
</IB>
```

Table description

Item	Description
Feature name	IB
Table name	IbBackupStatistics
Table type	Multi-instance table
Row name	BackupStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
StatisticsInterval	Traffic polling interval	N/A	Unsigned integer.	Unit: seconds

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Expected bandwidth of the primary interface.	N/A	Unsigned integer.	Unit: bps
PrimaryTotalIn	Cumulative sum of incoming bytes on the primary interface at the most recent traffic polling.	N/A	Unsigned integer.	Unit: seconds
PrimaryTotalOut	Cumulative sum of outgoing bytes on the primary interface at the most recent traffic polling.	N/A	Unsigned integer.	Unit: seconds
PrimaryIntervalIn	Number of incoming bytes on the primary interface for the most recent polling interval.	N/A	Unsigned integer.	Unit: seconds
PrimaryIntervalOut	Number of outgoing bytes on the primary interface for the most recent polling interval.	N/A	Unsigned integer.	Unit: seconds
PrimaryUsedBandwidth	The primary interface's used bandwidth that was counted in load sharing computation.	N/A	Unsigned integer.	Unit: bps
TotalIn	Cumulative sum of incoming bytes on the load-shared primary and backup interfaces at the most recent traffic polling.	N/A	Unsigned integer.	Unit: seconds
TotalOut	Cumulative sum of outgoing bytes on the load-shared primary and backup interfaces at the most recent traffic polling.	N/A	Unsigned integer.	Unit: seconds
TotalIntervalIn	Number of incoming bytes on the load-shared primary and backup interfaces for the most recent polling interval.	N/A	Unsigned integer.	Unit: seconds

Column name	Column description	Column type	Data type and restrictions	Remarks
TotalIntervalOut	Number of outgoing bytes on the load-shared primary and backup interfaces for the most recent polling interval.	N/A	Unsigned integer.	Unit: seconds
TotalUsedBandwidth	Total used bandwidth (in bps) of the load-shared primary and backup interfaces for the most recent polling interval.	N/A	Unsigned integer.	Unit: bps

Comware 7 IB NETCONF XML API Error Message Reference

IB/IbBackupInfo

Message	Explanation
This configuration is supported only on the primary interface. 仅主接口上支持本配置。	The interface is a backup interface. 当前接口是备份接口。
Please configure a backup interface first. 请先为当前接口配置备份接口。	The interface is not a primary interface. 当前接口不是主接口。

name	Name of the interface	Index	String. Length: 2 to 47 characters. Example: E1 2/0/21	N/A
description	Textual description of the interface	N/A	String. Length: 1 to 255 characters. Default: Interface name.	N/A
type	Type of the interface	N/A	Identityref.	The type string is sub-interface if the interface is a sub-interface. For more information, see Table 1.
enabled	Configured, desired state of the interface	N/A	Boolean: • true. • false. Default: true.	N/A
link-up-down-trap-enable	Controls whether linkUp/linkDown SNMP notifications are generated for this interface	N/A	Enumeration: • 1(enabled) • 2(disabled)	N/A
admin-status	Desired state of the interface	N/A	Enumeration: • 1(up) • 2(down) • 3 (testing)	For more information, see Table 2.
oper-status	Current operational state of the interface	N/A	Enumeration: • 1(up) • 2(down) • 3 (testing) • 4(unknown) • 5(dormant)	For more information, see Table 2.

			• 6(not-present) • 7(lower-layer-down)	
last-change	Time when the interface entered its current operational state	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
if-index	IfIndex value for the ifEntry represented by this interface	N/A	Integer. Value range: 1 to 2147483647.	N/A
phys-address	Interface's address at its protocol sub-layer	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
speed	Estimated current bandwidth (in bps) of the interface	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
statistics	Collection of interface-related statistics objects	N/A	Include: • discontinuity-time. • in-octets • in-unicast-pkts • in-broadcast-pkts • in-multicast-pkts • in-discards • in-errors • in-unknown-protos • out-octets • out-unicast-pkts • out-broadcast-pkts • out-multicast-pkts • out-discards • out-errors	N/A
discontinuity-time	Latest time when any one or more of this interface's counters suffered a discontinuity	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
in-octets	Total number of octets received on the interface, including framing characters	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
in-unicast-pkts	Number of packets, delivered by this sub-layer to a higher (sub-)layer, that were not addressed to a multicast or broadcast	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

	address at this sub-layer			
in-broadcast-pkts	Number of packets, delivered by this sub-layer to a higher (sub-)layer, that were addressed to a broadcast address at this sub-layer	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
in-multicast-pkts	Number of packets, delivered by this sub-layer to a higher (sub-)layer, that were addressed to a multicast address at this sub-layer	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
in-discards	Number of inbound packets that were chosen to be discarded even though no errors had been detected to prevent them being delivered to a higher-layer protocol	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
in-errors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
in-unknown-protos	For packet-oriented interfaces, the number of packets received via the interface that were discarded because of an unknown or unsupported protocol	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
out-octets	Total number of octets transmitted out of the interface, including framing	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

	characters			
out-unicast-pkts	Total number of packets that higher-level protocols requested be transmitted, and that were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
out-broadcast-pkts	Total number of packets that higher-level protocols requested be transmitted, and that were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
out-multicast-pkts	Total number of packets that higher-level protocols requested be transmitted, and that were addressed to a multicast address at this sub-layer, including those that were discarded or not sent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
out-discards	Number of outbound packets that were chosen to be discarded even though no errors had been detected to prevent them being transmitted	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
out-errors	For packet-oriented interfaces, the number of outbound	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

	packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors			
mode-l2	Specify the sub-interface to use the l2 mode	N/A	Boolean: • true. • false. Default: false	N/A
bind-ni-name	Network instance to which an interface is bound	N/A	String. Length: 1 to 31 characters. Example: vpn100	N/A

Table 1 Interface extension types

String num	Interface type	Description
other	IF_COMMON_TYPE	General interface.
other	IF_AM_TYPE	Analog modem interface.
atmIma	IF_ASY_TYPE	Asynchronous serial port.
atm	IF_IMA_TYPE	IMA interface.
other	IF_ATM_TYPE	ATM interface.
	IF_AUX_TYPE	AUX interface.
other	IF_BRI_TYPE	ISDN BRI interface.
other	IF_BVI_TYPE	Bridge-group virtual interface.
sonet	IF_CONSOLE_TYPE	Console interface.
other	IF_CPOS_TYPE	CPOS interface.
other	IF_DIALER_TYPE	Dialer interface.
e1	IF_LOCAL_VA_TYPE	Local VA interface, bound to a physical interface.
ds3	IF_E1_TYPE	E1 interface.
other	IF_E3_TYPE	E3 interface.
ethernetCsmacd	IF_INETH_TYPE	Internal Ethernet interface.
other	IF_INLOOPBACK_TYPE	Internal loopback interface.
other	IF_LOOPBACK_TYPE	Loopback interface.
other	IF_ENCRYPT_TYPE	Encryption interface.
ethernetCsmacd	IF_L2ETHERNET_TYPE	Layer 2 FE interface.

String num	Interface type	Description
ethernetCsmacd	IF_L2GE_TYPE	Layer 2 GE interface.
ethernetCsmacd	IF_L2VE_TYPE	Layer 2 VE interface.
other	IF_L2XGE_TYPE	Layer 2 10-GE interface.
ethernetCsmacd	IF_L3ETHERNET_TYPE	Layer 3 FE interface.
ethernetCsmacd	IF_L3GE_TYPE	Layer 3 GE interface.
ethernetCsmacd	IF_L3VE_TYPE	Layer 3 VE interface.
ethernetCsmacd	IF_L3XGE_TYPE	Layer 3 10-GE interface.
other	IF_ME_TYPE	Management Ethernet interface.
ethernetCsmacd	IF_MFR_TYPE	MFR interface.
ethernetCsmacd	IF_MGE_TYPE	Management GE interface.
other	IF_MPGROUP_TYPE	MP-group interface.
ethernetCsmacd	IF_NULL_TYPE	Null interface.
other	IF_POS_TYPE	POS interface.
other	IF_RPR_POS_TYPE	RPR POS physical interface.
ethernetCsmacd	IF_RPR_XGE_TYPE	RPR 10-GE physical interface.
ethernetCsmacd	IF_RPR_GE_TYPE	RPR GE physical interface.
other	IF_SERIAL_TYPE	Serial interface.
	IF_SUBSCRIBER_LINE_TYPE	Subscriber line interface.
ds1	IF_T1_TYPE	T1 interface.
ds3	IF_T3_TYPE	T3 interface.
tunnel	IF_TUNNEL_TYPE	Tunnel interface.
other	IF_GLOBAL_VA_TYPE	Global VA interface, bound to a global logical interface.
l3ipvlan	IF_VLAN_TYPE	VLAN interface.
other	IF_VT_TYPE	VT interface.
ieee80211	IF_RADIO_DOT11_TYPE	WLAN-Radio interface.
other	IF_WLAN_ESS_TYPE	WLAN ESS interface.
other	IF_WLAN_DBSS_TYPE	WLAN DBSS interface.
other	IF_WLAN_BSS_TYPE	WLAN BSS interface.
other	IF_WLAN_ETH_TYPE	WLAN Ethernet interface.
other	IF_WLAN_TUN_TYPE	WLAN tunnel interface.
other	IF_OLT_TYPE	OLT interface.
other	IF_ONU_TYPE	ONU interface.
other	IF_MTUNNEL_TYPE	M-Tunnel interface.
other	IF_CELLULAR_TYPE	Cellular interface.
other	IF_INASY_TYPE	Internal asynchronous serial interface.
other	IF_L2RPR_TYPE	Layer 2 RPR logical interface.

String num	Interface type	Description
other	IF_L3RPR_TYPE	Layer 3 RPR logical interface.
ieee8023adLag	IF_BAGG_TYPE	Layer 2 aggregate interface.
other	IF_REGISTER_TUNNEL_TYPE	Register-Tunnel interface.
ethernetCsmacd	IF_LOOPFE_TYPE	Loopback FE interface.
ethernetCsmacd	IF_LOOPGE_TYPE	Loopback GE interface.
ethernetCsmacd	IF_LOOPXGE_TYPE	Loopback 10-GE interface.
ethernetCsmacd	IF_MIRRORFE_TYPE	Mirroring FE interface.
ethernetCsmacd	IF_MIRRORGE_TYPE	Mirroring GE interface.
ethernetCsmacd	IF_MIRRORXGE_TYPE	Mirroring 10-GE interface.
ethernetCsmacd	IF_IDSFE_TYPE	IDS FE interface.
ethernetCsmacd	IF_IDSGE_TYPE	IDS GE interface.
ethernetCsmacd	IF_IDSXGE_TYPE	IDS 10-GE interface.
ieee8023adLag	IF_RAGG_TYPE	Layer 3 aggregate interface.
ethernetCsmacd	IF_L2FGE_TYPE	Layer 2 40-GE interface.
ethernetCsmacd	IF_L2HGE_TYPE	Layer 2 100-GE interface.
ethernetCsmacd	IF_L3FGE_TYPE	Layer 3 40-GE interface.
ethernetCsmacd	IF_L3HGE_TYPE	Layer 3 100-GE interface.
ethernetCsmacd	IF_LOOPFGE_TYPE	Loopback 40-GE interface.
ethernetCsmacd	IF_LOOPHGE_TYPE	Loopback 100-GE interface.
ethernetCsmacd	IF_MIRRORFGE_TYPE	Mirroring 40-GE interface.
ethernetCsmacd	IF_MIRRORHGE_TYPE	Mirroring 100-GE interface.
ethernetCsmacd	IF_IDSFGE_TYPE	IDS 40-GE interface.
ethernetCsmacd	IF_IDSHGE_TYPE	IDS 100-GE interface.
other	IF_FC_TYPE	FC interface.
other	IF_VFC_TYPE	VFC interface.
other	IF_FCB_TYPE	FC bundle interface.
other	IF_EVI_LINK_TYPE	EVI-link interface.
ethernetCsmacd	IF_SCHANNEL_TYPE	S-channel interface.
other	IF_FCM_TYPE	FCM interface.
other	IF_VPPP_TYPE	Virtual PPP interface.
other	IF_TRILL_REMOTE_TYPE	Remote TRILL interface.
other	IF_HDLCBUNDLE_TYPE	HDLC bundle interface.
ieee8023adLag	IF_GSCHANNEL_TYPE	Aggregate S-channel interface.
ethernetCsmacd	IF_L2TGE_TYPE	Layer 2 20-GE interface.
ethernetCsmacd	IF_L3TGE_TYPE	Layer 3 20-GE interface.
ethernetCsmacd	IF_LOOPTGE_TYPE	Loopback 20-GE interface.
ethernetCsmacd	IF_MIRRORTGE_TYPE	Mirroring 20-GE interface.

String num	Interface type	Description
ethernetCsmacd	IF_IDSTGE_TYPE	IDS 20-GE interface.
other	IF_AC_TYPE	AC interface.
other	IF_UPW_TYPE	U-PW interface.
other	IF_NPW_TYPE	N-PW interface.
tunnel	IF_TUNNEL_BUNDLE_TYPE	Tunnel bundle interface.
ethernetCsmacd	IF_EFM_TYPE	EFM interface.
other	IF_MAPPED_TYPE	Mapped interface.
ethernetCsmacd	IF_CBGE_TYPE	CBGE interface.
ethernetCsmacd	IF_CBXGE_TYPE	CBXGE interface.
ethernetCsmacd	IF_CBFGE_TYPE	CBFGE interface.
ethernetCsmacd	IF_CBHGE_TYPE	CBHGE interface.
ethernetCsmacd	IF_PEX_TYPE	PEX interface.
other	IF_VE_L2VPN_TYPE	L2VPN virtual Ethernet interface
other	IF_VE_L3VPN_TYPE	L3VPN virtual Ethernet interface
other	IF_BLADE_TYPE	Blade interface
ieee8023adLag	IF_BLAGG_TYPE	Blade aggregation interface
other	IF_ETHCHANNEL_TYPE	EtherChannel interface
other	IF_BETH_TYPE	Beth interface
other	IF_RETH_TYPE	Reth interface
other	IF_VSI_TYPE	VSI interface
other	IF_CEM_TYPE	CEM interface
other	IF_INCOMM_TYPE	INCOMM interface
other	IF_SVPNAC_TYPE	SVPN-AC interface
other	IF_LISP_TYPE	LISP interface
other	IF_L2RPRLOCAL_TYPE	Layer 2 RPR interface
ieee8023adLag	IF_SCHANNEL_BUNDLE_TYPE	S-channel bundle interface
other	IF_WLAN_MESH_TYPE	WLAN Mesh interface
other	IF_WLAN_MESHLINK_TYPE	WLAN-MeshLink interface
other	IF_CMTUNNEL_TYPE	CMTunnel interface
ethernetCsmacd	IF_L2SGE_TYPE	Layer 2 SGE interface
ethernetCsmacd	IF_L3SGE_TYPE	Layer 3 SGE interface
ethernetCsmacd	IF_L2WGE_TYPE	Layer 2 WGE interface
ethernetCsmacd	IF_L3WGE_TYPE	Layer 3 WGE interface
ethernetCsmacd	IF_LOOPWGE_TYPE	Loopback WGE interface
ethernetCsmacd	IF_MIRRORWGE_TYPE	Mirroring WGE interface
ethernetCsmacd	IF_IDSWGE_TYPE	IDS WGE interface
ethernetCsmacd	IF_LOOPSGE_TYPE	Loopback SGE interface

String num	Interface type	Description
ethernetCsmacd	IF_MIRRORSGE_TYPE	Mirroring SGE interface
other	IF_WTU_ETH_TYPE	WTU ETH interface
ethernetCsmacd	IF_IDSSGE_TYPE	IDS SGE interface
ethernetCsmacd	IF_L2_50GE_TYPE	Layer 2 50-GE interface.
ethernetCsmacd	IF_L3_50GE_TYPE	Layer 3 50-GE interface.
ethernetCsmacd	IF_MIRROR_50GE_TYPE	Mirroring 50-GE interface.
ethernetCsmacd	IF_LOOP_50GE_TYPE	Loopback 50-GE interface.
ethernetCsmacd	IF_IDS_50GE_TYPE	IDS 50-GE interface.
other	IF_ROLT_TYPE	ROLT interface
other	IF_RONU_TYPE	RONU interface
ethernetCsmacd	IF_L2_400GE_TYPE	Layer 2 400-GE interface.
ethernetCsmacd	IF_L3_400GE_TYPE	Layer 3 400-GE interface.
ethernetCsmacd	IF_MIRROR_400GE_TYPE	Mirroring 400-GE interface.
ethernetCsmacd	IF_LOOP_400GE_TYPE	Loopback 400-GE interface.
ethernetCsmacd	IF_IDS_400GE_TYPE	IDS 400-GE interface.
Other	IF_MAX_TYPE	N/A

Table 2 Interface operational status

Value	Operational status	Remarks
1	up	When the administrative status of an interface changes to up, the operational status of the interface changes to up if the interface is ready to transmit and receive network traffic.
2	down	• When the administrative status of an interface changes to up, the operational status of the interface remains in the down status if a fault prevents it from going to the up status. • When the administrative status of an interface changes to down, the operational status of the interface changes to down.
3	testing	No operation packets can be transmitted or received through the interface.
4	unknown	The operational status of the interface cannot be determined.
5	dormant	When the administrative status of an interface changes to up, the operational status of the interface changes to dormant if the interface is waiting for external actions (such as a serial line waiting for an incoming connection).
6	notPresent	When the administrative status of an interface changes to up, the operational status of an interface remains in the notPresent status if the interface has missing components (typically hardware).
7	lowerLayerDown	The lower-layer interfaces are down.

IFIT

IFIT/ClearDynamicFlow

The ClearDynamicFlow table is used to clear dynamic learning information from flows.

XML structure

```
<IFIT>
  <ClearDynamicFlow>
    <FlowID></FlowID>
  </ClearDynamicFlow>
</IFIT>
```

Table description

Item	Description
Feature name	IFIT
Table name	ResetDynamicFlow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FlowID	Flow ID of a dynamic flow	N/A	Unsigned integer. Value range: 0 to 18446744073709551614.	If you do not specify a flow ID, all flows will be cleared.

IFIT/ClearFlowStatistic

The ClearFlowStatistic table is used to clear statistics information of flows..

XML structure

```
<IFIT>
  <ClearFlowStatistic>
    <FlowID></FlowID>
  </ClearFlowStatistic>
</IFIT>
```

Table description

IFIT/Global

This table contains global configuration parameters about ifit.

XML structure

```
<IFIT>
  <Global>
    <Enable></Enable>
    <DeviceID></DeviceID>
    <DeviceIP></DeviceIP>
    <DyncAgeMulti></DyncAgeMulti>
    <ThresholdPercent></ThresholdPercent>
    <Encapsulations>
      <Encapsulation>
        <NextHop></NextHop>
      </Encapsulation>
    </Encapsulations>
  </Global>
</IFIT>
```

Table description

Item	Description
Feature name	Ifit
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of iFIT	N/A	Boolean: • true.	Please use remove operation to disabled iFIT.
DeviceID	Device ID of iFIT	N/A	Unsigned integer. Value range: 1 to 1048575	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceIP	Device IP of iFIT	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DyncAgeMulti	Aging timer of dynamic flows	N/A	Unsigned integer. Value range: 2 to 100	N/A
ThresholdPercent	Percentage threshold on the number of dynamic flows	N/A	Unsigned integer. Value range: 0 to 100	The percentage threshold represents the ratio of current dynamic flows to maximum dynamic flows. The default value for this column varies by device model.
Encapsulations	Encapsulation information	Sublist	N/A	N/A

IFIT/Global/Encapsulations

This table contains encapsulations of nexthop configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Global

Table description

Item	Description
Feature name	Ifit
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceName	Name of an iFIT instance	Index	String. Length: 1 to 31 characters	N/A
NetworkType	Transmit network type of an iFIT instance	N/A	Enumeration: • **1**—Tunnel. (Default) • **2**—Native-IP.	N/A
Measure	Measurement related configuration	Data structure	Members include: • Enable • Mode • Period • Delay • Loss	N/A
Enable	Enabling status of measurement	N/A	Boolean: • true. • false .(Default)	N/A
Mode	Type of measurement mode	N/A	Enumeration: • **1**—e2e. (Default) • **2**—trace.	N/A
Period	Statistics polling period	N/A	Enumeration: • 1 • 10 • 30(default) • 60 • 300	Unit is seconds.
Delay	Status of delay measurement	N/A	Boolean: • true. (Default) • false.	N/A
Loss	Status of loss	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	measurement		• true. (Default) • false.	
UniFlow	Unidirectional flow information	Subtable	N/A	N/A
BindInterfaces	Index of a bound interface	Subtable	N/A	N/A

IFIT/Instances/UniFlow

This table contains unidirectional flow configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Instances.

Table description

Item	Description
Feature name	Ifit
Table name	UniFlow
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrFamily	Family of IP address	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
SourceIP	Source IP address of the flow	N/A	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated.3. ANY: Mean all legal IP Addresses.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
SourceMask	Source mask length of the flow	N/A	Unsigned integer.	Value range of IPv4:1 to 32; Value range of IPv6:1 to 32;

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationIP	Destination IP address of the flow	N/A	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated. 3. ANY: Mean all legal IP Addresses.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
DestinationMask	Destination mask length of the flow	N/A	Unsigned integer.	Value range of IPv4: 1 to 32; Value range of IPv6: 1 to 32;
Protocol	Type of protocol	N/A	Unsigned integer.	Example:TCP: 6, UDP:17,SCTP:132
SourcePort	Source port number	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DestinationPort	Destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Dscp	Differentiated Services Code Point	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VRF	VPN instance	N/A	String. Length: 1 to 31 characters.	N/A
NextHop	Next hop IP address of the flow	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
XCGName	XCG name	N/A	String. Length: 1 to 31 characters.	N/A
ConnectionName	Connection name	N/A	String. Length: 1 to 20 characters.	N/A
PeerLocator	Peer locator prefix address	Data structure	Members include: • Prefix • PrefixLength	N/A
Prefix	Prefix address	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
PrefixLength	Prefix Length	N/A	Unsigned integer. Value range: 32 to 120.	N/A

IFIT/Instances/BindInterfaces

This table contains binding interfaces of instance configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Global

Table description

Item	Description
Feature name	Ifit
Table name	BindInterfaces
Table type	Multi-instance table
Row name	BindInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Name of a bound interface.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Table description

Item	Description
Feature name	Ifit
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of iFIT	N/A	Boolean: • true.	N/A
DeviceID	Device ID of iFIT	N/A	Unsigned integer. Value range: 1 to 1048575	N/A
DeviceIP	Device IP of iFIT	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
DyncAgeMulti	Aging timer of dynamic flows	N/A	Unsigned integer. Value range: 2 to 100	N/A
ThresholdPercent	Percentage threshold on the number of dynamic flows	N/A	Unsigned integer. Value range: 0 to 100	The percentage threshold represents the ratio of current dynamic flows to maximum dynamic flows. The default value for this column varies by device model.
Encapsulations	Encapsulations information	Sublist	N/A	N/A

IFIT/Global/Encapsulations

This table contains encapsulations of nexthop configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Global

Table description

Item	Description
Feature name	Ifit
Table name	Encapsulations
Table type	Multi-instance table
Row name	Encapsulation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NextHop	Next hop IP address of encapsulation	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

IFIT/Instances

This table contains instance information about ifit.

XML structure

```
<IFIT>

Table description

Item	Description
Feature name	Ifit
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceName	Name of an ifit instance	Index	String. Length: 1 to 31 characters	N/A
NetworkType	Transmit network type of an iFIT instance	N/A	Enumeration: • **1**—Tunnel. • **2**—Native-IP.	N/A
Measure	Measurement related configuration	Data structure	Members include: • Enable • Mode • Period • Delay • Loss	N/A
Enable	Enabling status of measurement	N/A	Boolean: • true. • false .	N/A
Mode	Type of measurement mode	N/A	Enumeration: • **1**—e2e. • **2**—trace.	N/A
Period	Statistics polling period	N/A	Enumeration: • **10**. • **30**. • **60**. • **300**.	Unit is seconds.
Delay	Status of delay measurement	N/A	Boolean: • true. • false.	N/A
Loss	Status of loss measurement	N/A	Boolean: • true. • false.	N/A
UniFlow	Unidirectional flow information	Subtable	N/A	N/A
BindInterfaces	Index of a bound interface	Subtable	N/A	N/A

IFIT/Instances/UniFlow

This table contains unidirectional flow configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Instances.

Table description

Item	Description
Feature name	Ifit
Table name	UniFlow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrFamily	Family of IP address	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
SourceIP	Source IP address of the flow	N/A	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated. 3. ANY: Mean all legal IP Addresses.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
SourceMask	Source mask length of the flow	N/A	Unsigned integer.	N/A
DestinationIP	Destination IP address of the flow	N/A	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated. 3. ANY: Mean all legal IP Addresses.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
DestinationMask	Destination mask length of the flow	N/A	Unsigned integer.	N/A
Protocol	Type of protocol	N/A	Unsigned integer.	Example:TCP: 6, UDP:17,SCTP:132

Column name	Column description	Column type	Data type and restrictions	Remarks
SourcePort	Source port number	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DestinationPort	Destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Dscp	Differentiated Services Code Point	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VRF	VPN instance	N/A	String. Length: 1 to 31 characters.	N/A
NextHop	Next hop IP address of the flow	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
XCGName	XCG name	N/A	String. Length: 1 to 31 characters.	N/A
ConnectionName	Connection name	N/A	String. Length: 1 to 20 characters.	N/A
PeerLocator	Peer locater prefix address	Data structure	Members include: • Prefix • PrefixLength	N/A
Prefix	Prefix address	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
PrefixLength	Prefix Length	N/A	Unsigned integer. Value range: 32 to 120.	N/A

IFIT/Instances/BindInterfaces

This table contains binding interfaces of instance configuration parameters about ifit.

XML structure

See the XML structure of IFIT/Instances

Table description

Item	Description
Feature name	Ifit
Table name	BindInterfaces
Table type	Multi-instance table
Row name	BindInterface

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Name of a bound interface.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

IFIT/FlowStatistics

This table container the statistics information of flows.

XML structure

				sticDetails."

IFIT/FlowStatistics/StatisticDetails

This table container the detail statistics information of flows.

XML structure

See the XML structure of IFIT/FlowStatistics.

Table description

Item	Description
Feature name	Ifit
Table name	FlowStatistics
Table type	Multi-instance table
Row name	FlowStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeriodID	Period identifier	Index	Unsigned integer. Length: 64 bits.	N/A
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	N/A
Direction	Flow direction	Index	Enumeration: • **1**—Ingress. • **2**—TransInput • **3**—TransOutput • **4**—Egress.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Period	Statistics polling period	N/A	Enumeration: • **1**. • **10**. • **30** • **60** • **300**	Unit is seconds.

Column name	Column description	Column type	Data type and restrictions	Remarks
PacketCount	Packet number	N/A	Unsigned integer. Length: 64 bits.	N/A
ByteCount	Byte number	N/A	Unsigned integer. Length: 64 bits.	N/A
TimestampSecond	Second part of the timestamp	N/A	Unsigned integer. Length: 64 bits.	N/A
TimestampNanoSecond	Nanosecond part of the timestamp	N/A	Unsigned integer. Length: 64 bits.	N/A
TTL	Time to live	N/A	Unsigned integer. Length: 32 bits.	N/A
ErrorInfo	Error information	N/A	Unsigned integer. Length: 32 bits. Bit 0 (trust flag): • Not set—Accurate period. • Set—Inaccurate period.	The trust flag is set in the first two periods and not set in the subsequent periods.
IfAggName	Aggregate interface name.	N/A	String. Length: 2 to 47 characters. Example: Route-Aggregation1	N/A

Ifmgr

Ifmgr/Interfaces

This table contains interface action information.

XML structure

```
<Ifmgr>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Clear></Clear>
      <Default></Default>
      <Loopback></Loopback>
    </Interface>
  </Interfaces>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Clear	Clears interface statistics.	N/A	This column must be empty.
Default	Restore default settings.	N/A	This column must be empty.

Column name	Column description	Column type	Data type and restrictions
Loopback	Interface loopback testing.	N/A	Enumeration: • **1**—Internal • **2**—External Applicable to only Ethernet interfaces and AUX interfaces which loopback testing can be auto stopped.

Ifmgr/ClearAllIfStatistics

This table is used to clear statistics on all interfaces.

XML structure

```
<Ifmgr>
  <ClearAllIfStatistics>
    <Clear></Clear>
  </ClearAllIfStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ClearAllIfStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all interfaces.	N/A	This column must be empty.

Ifmgr/SubInterfaces

This table is used to create or delete sub-interfaces.

XML structure

```
<Ifmgr>
  <SubInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SubNum></SubNum>
      <Remove></Remove>
    </Interface>
  </SubInterfaces>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	SubInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	• Create: Interface index of parent interface. • Delete: Interface index of the sub-interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SubNum	Sub-interface number.	N/A	Unsigned integer	• Applicable to only create a sub-interface • This column must be specified when create a sub-interface. • The range of SubNum is reference in table

Column name	Column description	Column type	Data type and restrictions	Remarks
				of InterfaceCapabilities which in Data API.
Remove	Delete specified sub-interface.	N/A	This column must be empty.	Applicable to only delete a sub-interface

Ifmgr/LogicInterfaces

This table is used to create or delete logic interfaces.

XML structure

```
<Ifmgr>
  <LogicInterfaces>
    <Interface>
      <IfTypeExt></IfTypeExt>
      <Number></Number>
      <Remove></Remove>
    </Interface>
  </LogicInterfaces>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	LogicInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfTypeExt	The type of interface.	Index	Unsigned integer	IfTypeExt is Reference in table of Ifmgr/Interfaces.which in Data API. The supported logic interface type as follow: • 16—IF_LOOPBACK_TYPE • 41—IF_VLAN_TY

Column name	Column description	Column type	Data type and restrictions	Remarks
				PE • 56—IF_BAGG_TYPE • 67—IF_RAGG_TYPE • 110—IF_RETH_TYPE • 111—IF_VSI_TYPE • 114—IF_SSLVPNAC_TYPE • 160—IF_ROLT_TYPE
Number	Number of the logic interface.	Index	Unsigned integer	The range of Number is Reference in table of InterfaceCapabilities which in Data API.
Remove	Delete specified logic interface.	N/A	This column must be empty.	Applicable to only delete a logic interface.

Ifmgr/VirtualCableTest

This table is used to test the cable connection of Ethernet interfaces and get the test results.

XML structure

```
<Ifmgr>
  <VirtualCableTest>
    <Interface>
      <IfIndex></IfIndex>
    </Interface>
  </VirtualCableTest>
</Ifmgr>
```

Responsed XML structure

```
<Ifmgr>
  <VirtualCableTest>
    <Interface>
      <IfIndex></IfIndex>
      <CableStatus></CableStatus>
      <CableLen></CableLen>
      <Mismatch></Mismatch>
      <PairSkew></PairSkew>
      <PairSwap></PairSwap>
      <PairPolarity></PairPolarity>
```

```
      <InsertionLoss></InsertionLoss>
      <ReturnLoss></ReturnLoss>
      <NearEndCrosstalk></NearEndCrosstalk>
    </Interface>
  </VirtualCableTest>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	VirtualCableTest
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Layer 2 interfaces of FastEthernet, GigabitEthernet and Ten-GigabitEthernet.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions supportinterface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Responsed Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	
CableStatus	Cable status of an interface	N/A	Enumeration: • **0—The test failed.** • **1—Normal, the cable is in good condition.** • 2—**Abnormal (open), an open circuit is detected.** • **3—Abnormal (short), a short circuit is detected.** • **4—Abnormal, the cable**	

Column name	Column description	Column type	Data type and restrictions	Remarks
			is abnormal.	
CableLen	Cable length of an interface	N/A	Unsigned integer, in metres.	
Mismatch	Pair impedance mismatch information of an interface	N/A	Unsigned integer: • **0xffffffff**—Not support • **0**—Mismatch • Others—Match	
PairSkew	Pair skew information of an interface	N/A	Unsigned integer, in ns. The value is 0xffffffff if not support.	
PairSwap	Pair swap information of an interface	N/A	Unsigned integer: • **0xffffffff**—Not support • **0**—Normal • Others—Swap	
PairPolarity	Pair **polarity** information of an interface	N/A	Unsigned integer: • **0xffffffff**—Not support • **0**—Normal • Others—Swap	
InsertionLoss	Insertion loss information of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.	
ReturnLoss	Return loss infomaion of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.	
NearEndCrosstalk	Near-end crosstalk of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.	

Ifmgr/ClearPacketDropStatistics

This table is used to clear interfaces packet drop statistics.

XML structure

```
<Ifmgr>
  <ClearPacketDropStatistics>
    <Interface>
      <IfIndex></IfIndex>
      <Clear></Clear>
    </Interface>
  </ClearPacketDropStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ClearPacketDropStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions supportinterface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Clear	Clear interface packet drop statistics.	N/A	This column must be empty.	Applicable to only clear Clear interface packet drop statistics

Ifmgr/ShutdownAllPhyIf

This table is used to shut down all physical interfaces.

XML structure

```
<Ifmgr>
  <ShutdownAllPhyIf>
    <Shutdown></Shutdown>
  </ShutdownAllPhyIf>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ShutdownAllPhyIf
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Shutdown	Shut down all physical interfaces.	N/A	Boolean: • true—shutdown • false—undo shutdown	

Ifmgr/EthFlexESwitch

This table is used to switch port type of interfaces between Ethernet and FlexE.

XML structure

```
<Ifmgr>
  <EthFlexESwitch>
    <Interface>
      <IfName></IfName>
      <PortType></PortType>
    </Interface>
  </EthFlexESwitch>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	EthFlexESwitch
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: HundredGigE2/0/2	• N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PortType	Port type of the interface to be switched.	N/A	Enumeration: • **1**—switch to Ethernet type • **2**—switch to FlexE type • **3**—switch to FlexE-FG type	• N/A

Description	Interface description	N/A	String. Length: 1 to 255 characters.	N/A

			Default: *interface-name* **Interface**.	
AdminStatus	Interface administration status	N/A	Enumeration: • **1**—Up (default). • **2**—Down.	N/A
ConfigSpeed	Configured speed of an interface.	N/A	Each bit represents a speed. As follows: • **1**—Auto • **2**—10Mbps • **4**—100Mbps • **8**—155Mbps • **16**—622Mbps • **32**—1Gbps • **64**—2Gbps • **128**—2.5Gbps • **256**—4Gbps • **512**—8Gbps • **1024**—10Gbps • **2048**—16Gbps • **4096**—20Gbps • **8192**—40Gbps • **16384**—100Gbps • **32768**—5Gbps • **65536—25Gbps** • **131072—32Gbps** • 262144—50Gbps • 524288—200Gbps • 1048576—400Gbps	Examples: • **32**—Speed is 1000Mbps. • **37**—Auto-ne gotiation mode, and negotiation values are 100Mbps and 1000Mbps.
ConfigDuplex	Configured duplex mode of an interface	N/A	Enumeration: • **1**—Full. • **2**—Half. • **3**—Auto.	Applicable to only Ethernet interfaces.
PortLayer	Port layer of an interface	N/A	Enumeration: • **1**—Layer 2 • **2**—Layer 3	Applicable to Ethernet interfaces.
LinkType	VLAN type of an interface	N/A	Enumeration: • **1**—Access (default). • **2**—Trunk. • **3**—Hybrid.	Applicable to only Layer 2 interfaces.
PVID	Port VLAN ID (PVID) of an interface	N/A	Unsigned integer. Value range: 1 to 4094.	Applicable to only Layer 2 interfaces.
MAC	MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Loopback	Loopback test	N/A	Enumeration: • 0—No loopback • **1**—Internal • **2**—External	Applicable to only interfaces of Ethernet and AUX.
MDI	MDI mode of an	N/A	Enumeration:	Applicable to only Layer 2 Ethernet

	interface		• **1**—MDI-II (crossover cable) • **2**—MDI-X (straight-through cable) • **3**—MDI-AUTO (auto-sensing)	interfaces.
ConfigMTU	Configured MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ConfigBandwidth	Configured expected bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A
Interval	Sampling interval of an interface	N/A	Unsigned integer. Value range: 5 to 300, in seconds, in step of 5	N/A
ForceUP	Forcibly bring up an interface.	N/A	Boolean: • **true** • **false**	Applicable to only Ethernet and POS interfaces.
KeepAlive	KeepAlive value of an interface	N/A	Unsigned integer. Value range: 0 to 32767.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
KeepAliveRetry	KeepAlive retry times of an interface	N/A	Unsigned integer. Value range: 1 to 255.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
TrafficStatisticsEnable	Enable interface statistics collection.	N/A	Enumeration: • enable • disable	Applicable to only Layer 3 subinterfaces.
SubIfRateStatisticsEnable	Enable rate statistics collection for the subinterfaces of an interface	N/A	Enumeration: • enable • disable	Applicable to only main interface and POS channels.
LinkDelay	Physical state change suppression configuration of an interface.	N/A	Include: • UpTime • DownTime	
UpTime	Configured link-up event suppression interval of an interface.	N/A	Unsigned integer. Value range: 0 to 30000, in milliseconds. Within 10 seconds, in step of 100; More than 10 seconds, in step of 1000.	
DownTime	Configured link-down event suppression interval of an interface.	N/A	Unsigned integer. Value range: 0 to 30000, in milliseconds. Within 10 seconds, in step of 100; More than 10 seconds, in step of 1000.	

ServiceSlot	Primary traffic processing slot ID	N/A	Include: • Chassis • Slot • Cpu	N/A
Chassis	ID of the IRF member device where the entity resides.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Cpu	CPU ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ServiceStandbySlot	Backup traffic processing slot ID	N/A	Include: • Chassis • Slot • Cpu	N/A
Chassis	ID of the IRF member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Cpu	CPU ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Ifmgr/TrafficStatistics/Interval

This table contains traffic sampling interval information of all interfaces.

XML structure

```
<Ifmgr>
  <TrafficStatistics>
    <Interval>
      <Interval></Interval>
    </Interval>
  </TrafficStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Sampling interval of all interfaces, in seconds, in step of 5.	N/A	Unsigned integer. Value range: 5 to 300. It can configured only when Configurable" (Reference in table of TrafficStatistics/Interval which in Data API) value is true.

Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	
Subslot	SubSlot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	
ConfigMode	Bandwidth configuration mode	N/A	Enumeration: • 1—Bandwidth. • 2—TimeSlot.	If the Client ID is already configured under the Flexe-Group interface, the FlexE interface configmode

Column name	Column description	Column type	Data type and restrictions	Remarks
				cannot be modified.
FlexeGroups	FlexE group interfaces	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups

This table contains creating information of FlexE group interfaces.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	FlexeGroups
Table type	Multi-instance table
Row name	FlexeGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Group ID	Index	Unsigned integer. Value range: 1 to 1048573.	
BindPhyInterfaces	FlexE Physical interface config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/BindPhyInterfaces table
Clients	FlexE client config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/Clients table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/BindPhyInterfaces

This table contains binding information of FlexE group interfaces.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	BindPhyInterfaces
Table type	Multi-instance table
Row name	BindPhyInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhyIfIndex	FlexE Phisycal Interface index.	Index	Unsigned integer	For information about the string type, see "错误!书签自引用无效。". Some versions support interface name. For relevant information, see the XSD document of your product.For information about the string type, see "错误!书签自引用无效。"
PhyNo	PHY number for the FlexE physical interface	N/A	Unsigned integer. Value range: 1 to 254.	

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE Client ID	Index	Unsigned integer. Value range: 1 to 65534.	If you replace the Client, you must carry the ConfigMode.
Bandwidth	Bandwidth value in Gbps	N/A	Unsigned integer. Value range:5 to 4194303 (in steps of 5)	
TimeSlots	TimeSlots	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/Clients/TimeSlots table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/Clients/Client/TimeSlots

This table contains TimeSlot configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr

Table name	TimeSlots
Table type	Multi-instance table
Row name	TimeSlot
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhyIndex	FlexE Phisycal Interface index.	Index	Unsigned integer	For information about the string type, see "错误!书签自引用无效。". Some versions support interface name. For relevant information, see the XSD document of your product.For information about the string type, see "错误!书签自引用无效。"
TimeSlotList	TimeSlot list	N/A	TimeSlots, separated by commas(,) or hyphens (-)	

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/ClientChannels

This table contains ClientChannel configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	ClientChannels
Table type	Multi-instance table
Row name	ClientChannel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientChannelID	FlexE Client Channel ID.	Index	Unsigned integer	
ClientConfigMode	Bandwidth configuration mode	NA	Enumeration: • 1—Bandwidth. • 2—TimeSlot.	If the Client ID is already configured in the ChannelClients, the ClientConfigMode cannot be modified.如果ChannelClients表创建了Client，则ClientConfigMode不能被修改
Bandwidth	Bandwidth value in Gbps	N/A	Unsigned integer. Value range:10 to 4194303 (in steps of 10)	
TimeSlots	FlexE TimeSlot config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/ClientsChannels/TimeSlots table
Clients	FlexE ClientChannel config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/ClientsChannels/clients table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/ChannelClients/TimeSlots

This table contains TimeSlot configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	TimeSlots
Table type	Multi-instance table
Row name	TimeSlot
Restrictions	None
Support for row creation and	Yes

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhyInterface	FlexE Phisycal Interface index.	Index	Unsigned integer	For information about the string type, see "错误!书签自引用无效。". Some versions support interface name. For relevant information, see the XSD document of your product.For information about the string type, see "错误!书签自引用无效。"
TimeSlotList	TimeSlot list	N/A	TimeSlots, separated by commas(,) or hyphens (-)	

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/ChannelClients/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE ClientChannel	Index	Unsigned integer. Value range: 1 to 65534.	

Column name	Column description	Column type	Data type and restrictions	Remarks
	Client ID			
Bandwidth	Bandwidth value in Gbps	N/A	Unsigned integer. Value range:10 to 4194303 (in steps of 10)	Only the ClientConfigMode is bandwidth, this column can be configured，只有ClientConfigMode配置为bandwidth时，此节点可以配置
SubTimeSlot List	SubTimeSlot list	N/A	SubTimeSlots, separated by commas(,) or hyphens (-)	Only the ClientConfigMode is timeslot, this column can be configured。只有ClientConfigMode配置为timeslot时，此节点可以配置

Ifmgr/ShutdownAllPhyIf

This table is used to shut down all physical interfaces.

XML structure

```
<Ifmgr>
  <ShutdownAllPhyIf>
    <Shutdown></Shutdown>
  </ShutdownAllPhyIf>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ShutdownAllPhyIf
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Shutdown	Shut down all physical	N/A	Boolean: • true—shutdown	

Column name	Column description	Column type	Data type and restrictions	Remarks
	interfaces		• false—undo shutdown	

Ifmgr/FlexeFgInterfaces

This table contains FlexeFg interface information.

XML structure

```
<Ifmgr>
  <FlexeFgInterfaces>
    <FlexeFgInterface>
      <IfName></IfName>
      <ConfigMode></ConfigMode>
      <Clients>
        <Client>
         <ClientID></ClientID>
         <Bandwidth></Bandwidth>
         <SubTimeSlotList></SubTimeSlotList>
         <Client>
        <Clients>
    </FlexEFGInterface>
  </FlexEFGInterfaces>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	FlexeFgInterfaces
Table type	Multi-instance table
Row name	FlexeFgInterface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: FlexE-FG10G2/0/2	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ConfigMode	Bandwidth configuration mode	N/A	Enumeration: • 1—Bandwidth. • 2—Sub-timeslot.	If the Client ID is already configured, the FlexE Fg interface configmode cannot be modified.
Clients	FlexE Fg client config	Subtable	N/A	For more information, see the Ifmgr/FlexeFgInterfaces/FlexeFgInterface/Clients

Ifmgr/FlexeFgInterfaces/FlexeFgInterface/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeFgInterface.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE Fg Client ID	Index	Unsigned integer. Value range: 1 to 65534.	If you replace the Client, you must carry the ConfigMode.
Bandwidth	Bandwidth value in Mbps	N/A	Unsigned integer. Value range:10 to 4194303 (in steps of 10)	
SubTimeSlot List	SubTimeSlotList	N/A	TimeSlots, separated by commas(,) or hyphens (-)	

Ifmgr/LinkFlap

This table is used to enable link flapping protection globally.

XML structure

```
<Ifmgr>
  <LinkFlap>
    <Enable></Enable>
    <Batch></Batch>
    <Interval></Interval>
    <Threshold></Threshold>
  </LinkFlap>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	LinkFlap
Table type	Single-instance table
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable link flapping protection globally	N/A	Boolean: • true—enable • false—disable	
Batch	Enable link flapping protection both globally and on all interfaces	N/A	Boolean: • true—enable • false—disable	
Interval	Specifies the link flapping detection interval in seconds	N/A	Unsigned integer. Value range: 5 to 86400. Default: 10	
Threshold	Specifies the link flapping detection threshold	N/A	Unsigned integer. Value range: 2 to 1200. Default: 5	

Appendix

A string can contain multiple items that are separated by commas (,). An item can be in one of the following formats:

- *interface name*
- *interface range-name*
- *interface name A to interface name B*

When you use an item in the *interface name* format, follow these restrictions and guidelines:

- Spaces are not allowed between the interface type and interface number.

  Example:

  Correct: GigabitEthernet1/3/0/1

  Incorrect: GigabitEthernet 1/3/0/1

- If the interface name is the same as an existing interface range name, the system sends the request to interfaces in the interface range rather than the interface.

  Example:

  If you have configured the **interface range name** *Ten-Giga1/2/0/1* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1** as an item, the system sends the request to interfaces in the interface range named **Ten-Giga1/2/0/1**.

- If the interface range name is the same as an existing interface index, the system sends the request to the interface rather than interfaces in the interface range.

  Example:

  If you have configured the **interface range name** *111* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use *111* as an item, the system sends the request to the interface *GigabitEthernet1/2/0/2*.

  Note: the index of **interface** *GigabitEthernet1/2/0/2* is 111.

When you use an item in the *interface range name* format, follow these restrictions and guidelines:

- If the interface range name is in the *interface name A,interface name B* format, the system sends the request to interface A and interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1,Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1,Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 and Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

- If the interface range name is in the *interface name A* to *interface name B* format, the system sends the request to interfaces interface A through interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 through Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

When you use an item in the *interface name A to interface name B* format, follow these restrictions and guidelines:

- The interfaces before and after the word **to** must be of the same type and reside on the same card and sub-card.
- If the interfaces are subinterfaces, they must also belong to the same main interface.
- The end interface number must be larger than the start interface number.

Example:

Incorrect:

Ten2/0/1 to Ten3/0/2 The start and end interfaces reside on different cards.

Ten2/0/1 to Ten2/1/2 The start and end interfaces reside on different sub-cards.

Ten2/0/1 to Ten2/0/1:3 The start and end interfaces are of different types.

Giga2/0/1 to Ten2/0/25 The start and end interfaces are of different types.

Ten2/0/3:1 to Ten2/0/4:2 The start and end subinterfaces belong to different main interfaces.

Ten2/0/3:4 to Ten2/0/3:1 The start interface number is larger than the end interface number.

Correct:

Ten2/0/1 to Ten2/0/5

Ten2/0/1:1 to Ten2/0/1:100

Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
AbbreviatedName	Abbreviated name of an interface	N/A	String. Length: 2 to 47 characters. Example: GE2/0/2	N/A
PortIndex	Port index	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ifTypeExt	Interface extension type	N/A	Unsigned integer.	For more information, see Table 2.
ifType	Interface type	N/A	Unsigned integer.	Additional values for ifType are assigned by the Internet Assigned Numbers Authority (IANA), through updating the syntax of the IANA ifType textual convention.
Description	Interface description	N/A	String. Length: 1 to 255 characters.	N/A
AdminStatus	Interface administration status	N/A	Enumeration: • **1**—Administratively up. • **2**—Administratively down.	N/A
OperStatus	Interface operation status	N/A	Enumeration: • **1**—up. • **2**—down. • **3**—testing. • **4**—unknown. • **5**—dormant. • **6**—notPresent. • **7**—lowerLayerDown.	For more information, see 0.
ConfigSpeed	Configured speed of an interface, in kbps	N/A	• Each bit represents a speed • As follows: • 1—Auto • 2—10Mbps • 4—100Mbps • 8—155Mbps • 16—622Mbps • 32—1Gbps • 64—2Gbps • 128—2.5Gbps	Examples: • 32—Speed is 1000Mbps. • 37—Auto-negotiation mode, and negotiation values are 100Mbps and 1000Mbps.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 256—4Gbps • 512—8Gbps • 1024—10Gbps • 2048—16Gbps • 4096—20Gbps • 8192—40Gbps • 16384—100Gbps • 32768—5Gbps • 65536—25Gbps • 131072—32Gbps • 262144—50Gbps • 524288—200Gbps • 1048576—400Gbps	
ActualSpeed	Actual speed of an interface, in kbps	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	Applicable to only Ethernet interfaces.
ConfigDuplex	Configured duplex mode of an interface	N/A	Enumeration: • **1**—Full. • **2**—Half. • **3**—Auto.	Applicable to only Ethernet interfaces.
ActualDuplex	Actual duplex mode of an interface	N/A	Enumeration: • **1**—Full. • **2**—Half. • **3**—Auto.	Applicable to only Ethernet interfaces.
PortLayer	Port layer of an interface	N/A	Enumeration: • **1**— Layer 2 • **2—**Layer 3	N/A
LinkType	VLAN type of an interface	N/A	Enumeration: • **1**—Access. • **2**—Trunk. • **3**—Hybrid.	Applicable to only Layer 2 interfaces.
PVID	Port VLAN ID (PVID) of an interface	N/A	Unsigned integer. Value range: 1 to 4094.	Applicable to only Layer 2 interfaces.
InetAddressIPV4	Primary IPv4 address of an interface	N/A	String, dotted decimal notation.	N/A
InetAddressIPV4Mask	Primary IPv4 address mask of an interface	N/A	String, dotted decimal notation.	N/A
PhysicalIndex	Entity index of an interface	N/A	Unsigned integer.	Applicable to only Physical interfaces.
MAC	MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A.
ForwardingAttributes	Forwarding attributes of an interface	N/A	Bit mask: • 1: Broadcast • 2: Non-Broadcast Multi-Access	Applicable to only Layer 3 interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4:Loopback • 8:P2P • 16:Multicast • 32: Network Management Interface	
Loopback	Loopback test	N/A	Enumeration: • **0**—No loopback • **1**—Internal • **2**—External	Applicable to only interfaces of Ethernet and AUX.
MDI	MDI mode of an interface	N/A	Enumeration: • **1**—MDI-II (crossover cable) • **2**—MDI-X (straight-through cable) • 3—MDI-AUTO (auto-sensing)	Applicable to only Layer 2 Ethernet interfaces.
ConfigMTU	Configured MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ActualMTU	Actual MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ConfigBandwidth	Configured expected bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A
ActualBandwidth	Bandwidth of an interface	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	If the expected bandwidth has been configured, this field displays the configured expected bandwidth. Otherwise, this field displays the actual bandwidth.
SubPort	Whether the port is sub-interface.	N/A	Boolean: • true • false	N/A
Interval	Sampling interval of an interface	N/A	Unsigned integer. Value range: 5 to 300, in seconds, in step of 5	N/A
ForceUP	Forcibly bring up an interface.	N/A	Boolean: • **true** • **false**	Applicable to only Ethernet and POS interfaces.
Actual64Bandwidth	Bandwidth of an interface	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	If the expected bandwidth has been configured, this field displays the configured expected bandwidth. Otherwise, this field displays the actual bandwidth.

Column name	Column description	Column type	Data type and restrictions	Remarks
KeepAlive	KeepAlive value of an interface	N/A	Unsigned integer. Value range: 0 to 32767.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
KeepAliveRetry	KeepAlive retry times of an interface	N/A	Unsigned integer. Value range: 1 to 255.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
DefaultMac	Default MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
LastChange	From last state change time to now.	N/A	String.	N/A
PhyLastChange	From last physical state change time to now.	N/A	String.	N/A
TrafficStatisticsEnable	Enable interface statistics collection.	N/A	Enumeration: • enable • disable	Applicable to only Layer 3 subinterfaces.
SubIfRateStatisticsEnable	Enable rate statistics collection for the subinterfaces of an interface	N/A	Enumeration: • enable • disable	Applicable to only main interface and POS channels.
Ipv4ProtocolStatus	Ipv4 Protocol State	N/A	Enumeration: • **0**—down • **1**—up	Only Layer 3 interfaces are supported.
Ipv6ProtocolStatus	Ipv6 Protocol State	N/A	Enumeration: • **0**—down • **1**—up	Only Layer 3 interfaces are supported.
LinkDelay	Physical state change suppression configuration of an interface.	N/A	Include: • UpTime • DownTime	
UpTime	Configured link-up event suppression interval of an interface.	N/A	Unsigned integer. Value range: 0 to 30000, in milliseconds.	
DownTime	Configured link-down event suppression interval of an interface.	N/A	Unsigned integer. Value range: 0 to 30000, in milliseconds.	
ServiceSlot	Primary traffic	N/A	Include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	processing slot ID		• Chassis • Slot • Cpu	
Chassis	ID of the IRF member device where the entity resides.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range:0 to 65535.	N/A
Cpu	CPU ID	N/A	Unsigned integer. Value range:0 to 65535.	N/A
ServiceStandbySlot	Backup traffic processing slot ID	N/A	Include: • Chassis • Slot • Cpu	N/A
Chassis	ID of the IRF member device where the entity resides	N/A	Unsigned integer. Value range:0 to 65535.	N/A
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range:0 to 65535.	N/A
Cpu	CPU ID	N/A	Unsigned integer. Value range:0 to 65535.	N/A
PhyStatus	Physical layer status	N/A	Enumeration: • **0**—down • **1**—up	N/A

Table 1 Interface operation status

Value	Operation status	Remarks
1	up	When the administration status of an interface changes to up, the operation status of the interface changes to up if the interface is ready to transmit and receive network traffic.
2	down	• When the administration status of an interface changes to up, the operation status of the interface remains in the down status if a fault prevents it from going to the up status. • When the administration status of an interface changes to down, the operation status of the interface changes to down.
3	testing	No operation packets can be transmitted or received through the interface.
4	unknown	The operation status of the interface cannot be determined.
5	dormant	When the administration status of an interface changes to up, the operation status of the interface changes to dormant if the interface is waiting for external actions (such as a serial line waiting for an incoming connection).
6	notPresent	When the administration status of an interface changes to up, the operation status of an interface remains in the notPresent status if the

Value	Operation status	Remarks
		interface has missing components (typically hardware).
7	lowerLayerDown	The lower-layer interfaces are down.

Table 2 Interface extension types

Value	Interface type	Description
0	IF_COMMON_TYPE	General interface.
1	IF_AM_TYPE	Analog modem interface.
2	IF_ASY_TYPE	Asynchronous serial port.
3	IF_IMA_TYPE	IMA interface.
4	IF_ATM_TYPE	ATM interface.
5	IF_AUX_TYPE	AUX interface.
6	IF_BRI_TYPE	ISDN BRI interface.
7	IF_BVI_TYPE	Bridge-group virtual interface.
8	IF_CONSOLE_TYPE	Console interface.
9	IF_CPOS_TYPE	CPOS interface.
10	IF_DIALER_TYPE	Dialer interface.
11	IF_LOCAL_VA_TYPE	Local VA interface, bound to a physical interface.
12	IF_E1_TYPE	E1 interface.
13	IF_E3_TYPE	E3 interface.
14	IF_INETH_TYPE	Internal Ethernet interface.
15	IF_INLOOPBACK_TYPE	Internal loopback interface.
16	IF_LOOPBACK_TYPE	Loopback interface.
17	IF_ENCRYPT_TYPE	Encryption interface.
18	IF_L2ETHERNET_TYPE	Layer 2 FE interface.
19	IF_L2GE_TYPE	Layer 2 GE interface.
20	IF_L2VE_TYPE	Layer 2 VE interface.
21	IF_L2XGE_TYPE	Layer 2 10-GE interface.
22	IF_L3ETHERNET_TYPE	Layer 3 FE interface.
23	IF_L3GE_TYPE	Layer 3 GE interface.
24	IF_L3VE_TYPE	Layer 3 VE interface.
25	IF_L3XGE_TYPE	Layer 3 10-GE interface.
26	IF_ME_TYPE	Management Ethernet interface.
27	IF_MFR_TYPE	MFR interface.
28	IF_MGE_TYPE	Management GE interface.
29	IF_MPGROUP_TYPE	MP-group interface.
30	IF_NULL_TYPE	Null interface.
31	IF_POS_TYPE	POS interface.

Value	Interface type	Description
32	IF_RPR_POS_TYPE	RPR POS physical interface.
33	IF_RPR_XGE_TYPE	RPR 10-GE physical interface.
34	IF_RPR_GE_TYPE	RPR GE physical interface.
35	IF_SERIAL_TYPE	Serial interface.
36	IF_SUBSCRIBER_LINE_TYPE	Subscriber line interface.
37	IF_T1_TYPE	T1 interface.
38	IF_T3_TYPE	T3 interface.
39	IF_TUNNEL_TYPE	Tunnel interface.
40	IF_GLOBAL_VA_TYPE	Global VA interface, bound to a global logical interface.
41	IF_VLAN_TYPE	VLAN interface.
42	IF_VT_TYPE	VT interface.
43	IF_RADIO_DOT11_TYPE	WLAN-Radio interface.
44	IF_WLAN_ESS_TYPE	WLAN ESS interface.
45	IF_WLAN_DBSS_TYPE	WLAN DBSS interface.
46	IF_WLAN_BSS_TYPE	WLAN BSS interface.
47	IF_WLAN_ETH_TYPE	WLAN Ethernet interface.
48	IF_WLAN_TUN_TYPE	WLAN tunnel interface.
49	IF_OLT_TYPE	OLT interface.
50	IF_ONU_TYPE	ONU interface.
51	IF_MTUNNEL_TYPE	M-Tunnel interface.
52	IF_CELLULAR_TYPE	Cellular interface.
53	IF_INASY_TYPE	Internal asynchronous serial interface.
54	IF_L2RPR_TYPE	Layer 2 RPR logical interface.
55	IF_L3RPR_TYPE	Layer 3 RPR logical interface.
56	IF_BAGG_TYPE	Layer 2 aggregate interface.
57	IF_REGISTER_TUNNEL_TYPE	Register-Tunnel interface.
58	IF_LOOPFE_TYPE	Loopback FE interface.
59	IF_LOOPGE_TYPE	Loopback GE interface.
60	IF_LOOPXGE_TYPE	Loopback 10-GE interface.
61	IF_MIRRORFE_TYPE	Mirroring FE interface.
62	IF_MIRRORGE_TYPE	Mirroring GE interface.
63	IF_MIRRORXGE_TYPE	Mirroring 10-GE interface.
64	IF_IDSFE_TYPE	IDS FE interface.
65	IF_IDSGE_TYPE	IDS GE interface.
66	IF_IDSXGE_TYPE	IDS 10-GE interface.
67	IF_RAGG_TYPE	Layer 3 aggregate interface.

Value	Interface type	Description
68	IF_L2FGE_TYPE	Layer 2 40-GE interface.
69	IF_L2HGE_TYPE	Layer 2 100-GE interface.
70	IF_L3FGE_TYPE	Layer 3 40-GE interface.
71	IF_L3HGE_TYPE	Layer 3 100-GE interface.
72	IF_LOOPFGE_TYPE	Loopback 40-GE interface.
73	IF_LOOPHGE_TYPE	Loopback 100-GE interface.
74	IF_MIRRORFGE_TYPE	Mirroring 40-GE interface.
75	IF_MIRRORHGE_TYPE	Mirroring 100-GE interface.
76	IF_IDSFGE_TYPE	IDS 40-GE interface.
77	IF_IDSHGE_TYPE	IDS 100-GE interface.
78	IF_FC_TYPE	FC interface.
79	IF_VFC_TYPE	VFC interface.
80	IF_FCB_TYPE	FC bundle interface.
81	IF_EVI_LINK_TYPE	EVI-link interface.
82	IF_SCHANNEL_TYPE	S-channel interface.
83	IF_FCM_TYPE	FCM interface.
84	IF_VPPP_TYPE	Virtual PPP interface.
85	IF_TRILL_REMOTE_TYPE	Remote TRILL interface.
86	IF_HDLCBUNDLE_TYPE	HDLC bundle interface.
87	IF_GSCHANNEL_TYPE	Aggregate S-channel interface.
88	IF_L2TGE_TYPE	Layer 2 20-GE interface.
89	IF_L3TGE_TYPE	Layer 3 20-GE interface.
90	IF_LOOPTGE_TYPE	Loopback 20-GE interface.
91	IF_MIRRORTGE_TYPE	Mirroring 20-GE interface.
92	IF_IDSTGE_TYPE	IDS 20-GE interface.
93	IF_AC_TYPE	AC interface.
94	IF_UPW_TYPE	U-PW interface.
95	IF_NPW_TYPE	N-PW interface.
96	IF_TUNNEL_BUNDLE_TYPE	Tunnel bundle interface.
97	IF_EFM_TYPE	EFM interface.
98	IF_MAPPED_TYPE	Mapped interface.
99	IF_CBGE_TYPE	CBGE interface.
100	IF_CBXGE_TYPE	CBXGE interface.
101	IF_CBFGE_TYPE	CBFGE interface.
102	IF_CBHGE_TYPE	CBHGE interface.
103	IF_PEX_TYPE	PEX interface.
104	IF_VE_L2VPN_TYPE	L2VPN virtual Ethernet interface

Value	Interface type	Description
105	IF_VE_L3VPN_TYPE	L3VPN virtual Ethernet interface
106	IF_BLADE_TYPE	Blade interface
107	IF_BLAGG_TYPE	Blade aggregation interface
108	IF_ETHCHANNEL_TYPE	EtherChannel interface
109	IF_BETH_TYPE	Beth interface
110	IF_RETH_TYPE	Reth interface
111	IF_VSI_TYPE	VSI interface
112	IF_CEM_TYPE	CEM interface
113	IF_INCOMM_TYPE	INCOMM interface
114	IF_SVPNAC_TYPE	SVPN-AC interface
115	IF_ LISP_TYPE	LISP interface
116	IF_L2RPRLOCAL_TYPE	Layer 2 RPR interface
117	IF_SCHANNEL_BUNDLE_TYPE	SCHANNEL BUNDLE interface
118	IF_WLAN_MESH_TYPE	WLAN Mesh interface
119	IF_WLAN_MESHLINK_TYPE	WLAN-MeshLink interface
120	IF_CMTUNNEL_TYPE	CMTunnel interface
121	IF_L2SGE_TYPE	Layer 2 SGE interface
122	IF_L3SGE_TYPE	Layer 3 SGE interface
123	IF_L2WGE_TYPE	Layer 2 WGE interface
124	IF_L3WGE_TYPE	Layer 3 WGE interface
125	IF_LOOPWGE_TYPE	LOOP WGE interface
126	IF_MIRRORWGE_TYPE	MIRROR WGE interface
127	IF_IDSWGE_TYPE	IDS WGE interface
129	IF_LOOPSGE_TYPE	LOOP SGE interface
130	IF_MIRRORSGE_TYPE	MIRROR SGE interface
131	IF_WTU_ETH_TYPE	WTU ETH interface
132	IF_LOCAL_BAS_IF_TYPE	LOCAL BAS interface
133	IF_GLOBAL_BAS_IF_TYPE	GLOBAL BAS interface
134	IF_L2VGE_TYPE	Layer 2 VGE interface
135	IF_L3VGE_TYPE	Layer 3 VGE interface
136	IF_LOOPVGE_TYPE	LOOP VGE interface
137	IF_MIRRORVGE_TYPE	MIRROR VGE interface
138	IF_IDSVGE_TYPE	IDS VGE interface
139	IF_L2VMETH_TYPE	Layer 2 VMETH interface
140	IF_LORA_RADIO_TYPE	LORA RADIO interface
141	IF_DWDM_TYPE	DWDM interface
142	IF_IDSSGE_TYPE	IDS SGE interface

Value	Interface type	Description
143	IF_L2_50GE_TYPE	Layer 2 50-GE interface.
144	IF_L3_50GE_TYPE	Layer 3 50-GE interface.
145	IF_MIRROR_50GE_TYPE	Mirroring 50-GE interface.
146	IF_LOOP_50GE_TYPE	Loopback 50-GE interface.
147	IF_IDS_50GE_TYPE	IDS 50-GE interface.
148	IF_L2_50_100GE_TYPE	Layer 2 Fifty-HundredGigE interface
149	IF_L3_50_100GE_TYPE	Layer 3 Fifty-HundredGigE interface
150	IF_MIRROR_50_100GE_TYPE	MIRROR Fifty-HundredGigE interface
151	IF_LOOP_50_100GE_TYPE	LOOP Fifty-HundredGigE interface
152	IF_IDS_50_100GE_TYPE	ID Fifty-HundredGigE interface
153	IF_FLEX_50GE_TYPE	FlexE-FiftyGig interface
154	IF_FLEX_HGE_TYPE	FlexE-HundredGig interface
155	IF_FLEX50_100GE_TYPE	FlexE-50-100G interface
156	IF_L2FLEXE_TYPE	Layer 2 FlexE interface.
157	IF_L3FLEXE_TYPE	Layer 3 FlexE interface.
160	IF_ROLT_TYPE	ROLT interface
161	IF_RONU_TYPE	RONU interface
166	IF_REMOTE_TYPE	Remote interface
167	IF_L2_400GE_TYPE	Layer 2 400-GE interface.
168	IF_L3_400GE_TYPE	Layer 3 400-GE interface.
169	IF_MIRROR_400GE_TYPE	Mirroring 400-GE interface.
170	IF_LOOP_400GE_TYPE	Loopback 400-GE interface.
171	IF_IDS_400GE_TYPE	IDS 400-GE interface.
172	IF_VSYS_TYPE	Vsys-interface
174	IF_FLEXE_GROUP_TYPE	FlexE-Group interface.
185	IF_LOCAL_VE_L2VPN_TYPE	Local L2VPN virtual Ethernet interface
186	IF_LOCAL_VE_L3VPN_TYPE	Local L3VPN virtual Ethernet interface
256	IF_MAX_TYPE	N/A

Ifmgr/TrafficStatistics/Interfaces

This table contains interface traffic statistics during specific sampling periods.

XML structure

```
<Ifmgr>
  <TrafficStatistics>
   <Interfaces>
```

```
    <Interface>
      <IfIndex></IfIndex>
      <Name></Name>

      <OutPkts></OutPkts>
      <InOctets></InOctets>
      <OutOctets></OutOctets>
      <InBits></InBits>
      <OutBits></OutBits>
    </Interface>
   </Interfaces>
  </TrafficStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.
Interval	Sampling interval of an interface, in seconds	N/A	Unsigned integer. Value range: 5 to 300.
InPkts	Number of inbound packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPkts	Number of outbound packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InOctets	Number of inbound bytes during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutOctets	Number of outbound bytes during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Column name	Column description	Column type	Data type and restrictions
InBits	Number of inbound bits during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutBits	Number of outbound bits during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Ifmgr/TrafficStatistics/Interval

This table contains traffic sampling interval information of all interfaces.

XML structure

```
<Ifmgr>
  <TrafficStatistics>
    <Interval>
      <Configurable></Configurable>
      <Interval></Interval>
    </Interval>
  </TrafficStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Configurable	Whether the sampling interval for all interfaces can be configured.	N/A	Boolean: • **true** • **false**
Interval	Sampling interval of all interfaces, in seconds.	N/A	Unsigned integer. Value range: 5 to 300. It is valid only when “Configurable” above is true.

Ifmgr/Statistics

This table contains interface statistics.

XML structure

Item	Description
Restrictions	The statistics can be cleared.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
AbbreviatedName	Abbreviated name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GE2/0/2
InOctets	Number of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InUcastPkts	Number of inbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNUcastPkts	Number of inbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InDiscards	Number of discarded inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InErrors	Number of errored inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InUnknownProtos	Number of unsupported and unknown inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InRate	Rate of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutOctets	Number of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutUcastPkts	Number of outbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNUcastPkts	Number of outbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutDiscards	Number of discarded outbound packets on an	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	interface.		Value range: 0 to 2^{64} - 1.
OutErrors	Number of errored outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutRate	Rate of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
LastClear	Local time when the statistics on an interface were cleared most recently.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
InPktRate	Rate of inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPktRate	Rate of outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InPkts	Number of inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPkts	Number of outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InBitRate	Number of inbound bits per second on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutBitRate	Number of outbound bits per second on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InRunts	Number of inbound runt packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutRunts	Number of outbound runt packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InGiants	Number of inbound giant packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutGiants	Number of outbound giant packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Ifmgr/Ports

This table contains port information, such as all physical Ethernet interfaces, Layer 2 aggregate interface, Layer 2 VE interface, Layer 2 RPR logical interface, WLAN ESS interface, WLAN BSS interface, WLAN DBSS interface, WLAN tunnel interface, S-channel interface, Aggregate S-channel interface and other logical interfaces which are not Layer 2 Ethernet subinterfaces.

Table description

Item	Description
Feature name	Ifmgr
Table name	InterfaceCapabilities
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Configurable	Whether the interface is configurable.	N/A	Boolean: • **true** • **false**	N/A
Shutdown	Whether the interface can be shutdown manually.	N/A	Boolean: • **true** • **false**	N/A
Speed	Mode of speed which can be configured.	N/A	• Each bit represents a speed. • As follows: • 1—Auto • 2—10Mbps • 4—100Mbps • 8—155Mbps • 16—622Mbps • 32—1Gbps • 64—2Gbps • 128—2.5Gbps • 256—4Gbps • 512—8Gbps • 1024—10Gbps • 2048—16Gbps • 4096—20Gbps • 8192—40Gbps • 16384—100Gbps • 32768—5Gbps • 65536—25Gbps • 131072—32Gbps • 262144—50Gbps • 524288—200Gbps • 1048576—400Gbps	Example: 38 —Speed 10Mbps, 100Mbps, and 1Gbps are configurable.
AutoSpeed	Modes of auto-negotiation speed which can be configured.	N/A	Each bit represents a speed. As follows: • 1—10Mbps • 2—100Mbps • 4—1Gbps	Example: 6—auto-negotiation speed 100Mbps and 1Gbps are configurable.
Duplex	Modes of duplex which can be configured.	N/A	Each bit represents a kind of duplex mode. As follows: • 1— Full • 2—Half • 4—Auto	Applicable to only Ethernet interfaces. Example: 7—Duplex mode 'Full', 'Half' Auto 'Half' are configurable.
PortLayer	Whether the port layer can be changed.	N/A	Boolean: • **true** • **false**	Applicable to only Ethernet interfaces.
Loopback	Whether the loopback test	N/A	Boolean:	Applicable to only Ethernet interfaces

Column name	Column description	Column type	Data type and restrictions	Remarks
	can be configured.		• **true** • **false**	and AUX.
MDI	Types of MDI which can be configured.	N/A	Each bit represents a type of the line connected to the port. • 1: **mdi** (straight-through cable) • **2: mdix (crossover cable)** • **4: automdix (auto-sensing)**	Applicable to only Layer 2 Ethernet interfaces. Example: 7—'mdi', 'mdix' and 'automdix' are configurable.
Bandwidth	Whether the bandwidth can be configured.	N/A	Boolean: • **true** • **false**	N/A
MinMTU	The minimum MTU which can be configured.	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
MaxMTU	The maximum MTU which can be configured.	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
MinSubNum	Minimum sub-interface number.	N/A	Unsigned integer.	N/A
MaxSubNum	Maximum sub-interface number.	N/A	Unsigned integer.	N/A
MaxCreateSubNum	The total numbers of sub-interface which can be created.	N/A	Unsigned integer.	N/A
ContextAllocType	The allocation type of an interface for CONTEXT.	N/A	Each bit represents an allocation type. As follows: • 1—The allocation type is shared. • 2—The allocation type is exclusive.	Example: 3—The allocation types can be both shared and exclusive.
Removable	Whether the interface can be deleted.	N/A	Boolean: • true • false	N/A
Interval	Whether the sampling interval can be configured.	N/A	Boolean: • **true** • **false**	
ForceUP	Whether port force up can be configured.	N/A	Boolean: • **true** • **false**	Applicable to only Ethernet and POS interfaces.
LoopbackAutoStop	Whether the loopback detection can be	N/A	Boolean: • **true**	

Column name	Column description	Column type	Data type and restrictions	Remarks
	auto stop.		• **false**	
MAC	Whether MAC can be configured.	N/A	Boolean: • **true** • **false**	
TrafficStatisticsEnable	Whether interface statistics collection for interface can be configured.	N/A	Boolean: • **true** • **false**	
SubIfRateStatisticsEnable	Whether interface rate statistics collection for the subinterface of interface can be configured.	N/A	Boolean: • **true** • **false**	
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
FlexECapability	Whether the interface can be switched to a FlexE interface	N/A	Boolean: • **True** • **false**	Applicable to only physical interfaces.
FlexEFGCapabilityServiceSlotCap	Whether the interfaceService slot can be switched to a FlexEFG interfaceconfigured.	N/A	Boolean: • **True** • **true** • **false**	Applicable to only physical interfaces.N/A
ServiceStandbySlotCap	Whether Service standby slot can be configured.	N/A	Boolean: • **true** • **false**	N/A

Ifmgr/TypeCapabilities

This table contains interface type capability information.

XML structure

```
<Ifmgr>
  <TypeCapabilities>
    <Capability>
      <IfTypeExt></IfTypeExt>
      <MinNum></MinNum>
      <MaxNum></MaxNum>
```

```

Table description

Item	Description
Feature name	Ifmgr
Table name	EthInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Ethernet interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Combo	Combo mode of an interface	N/A	Enumeration: • **1**—fiber mode • **2**—copper mode • **3**—auto mode	Applicable to only Ethernet interfaces.
FlowControl	Flow control information of an interface	N/A	Enumeration: • 1—Enable flow control • 2—Disable • **3**—Only enable flow control packet receiving	Applicable to only Physical interfaces.
AutoPowerDown	Port auto power down	N/A	Boolean: • **true** • **false**	Applicable to only Physical interfaces.
Jumboframe	Jumbo frame information of an interface	N/A	Unsigned integer, the value is 0 if jumbo fame is disable on an interface.	
BroadcastSu	Broadcast	N/A	Include:	

Column name	Column description	Column type	Data type and restrictions	Remarks
ppression	suppression information of an interface		• Value • Unit	
ConfigValue	Configured broadcast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
ActualValue	Actual broadcast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
Unit	Broadcast suppression unit	N/A	Enumeration: • **1—ratio** • 2—pps • **3**—kbps	
Action	Action of broadcast suppression	N/A	Enumeration:. • **0—NA** • **1**—blockEgressUnknown	
MulticastSuppression	Multicast suppression information of an interface	N/A	Include: • Value • Unit	
ConfigValue	Configured multicast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
ActualValue	Actual multicast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
Unit	Multicast suppression unit	N/A	Enumeration: • **1—ratio** • 2—pps • **3**—kbps	
Flag	Multicast suppression flag	N/A	Enumeration: • **1—all** • **2—unknown**	

Column name	Column description	Column type	Data type and restrictions	Remarks
UnknownUnicastSuppression	UnknownUnicast suppression information of an interface	N/A	Include: • Value • Unit	
ConfigValue	Configured unknownUnicast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
ActualValue	Actual unknownUnicast suppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	
Unit	UnknownUnicast suppression unit	N/A	Enumeration: • **1—ratio** • 2—pps • **3**—kbps	
Action	Action of UnKnown Unicast suppression	N/A	Enumeration:. • **0—NA** • **1**—blockEgressUnknown	
BPDUDrop	Whether any type of IEEE BPDUs is drop on the port.	N/A	Boolean: • **true** • **false**	Applicable to only Layer 2 Physical interfaces.
EEE	Whether energy efficient ethernet is enable on the port.	N/A	Boolean: • **true** • **false**	Applicable to only Physical interfaces.
ConnectMode	Port connection mode of an interface.	N/A	Enumeration: • **1—Normal connection mode** • 2—Extend connection mode	Applicable to only Layer 2 10GE interfaces.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
FiberOrCopper	Actual fiber or copper mode of an interface	N/A	Enumeration: • 1—fiber mode • 2—copper mode	Applicable to only Ethernet interfaces.
KnownUnicastSuppression	Known Unicast Suppression information of an interface	N/A	Include: • Value • Unit	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ConfigValue	Config Known unicast suppression value of an interface	N/A	Unsigned integer. Value range: • ratio: 0 to 100 • pps: 0 to 1.4881 * the maximum interface rate. • kbps: 0 to the maximum interface rate	N/A
ActualValue	Actual KnownUnicastSuppression value of an interface	N/A	Unsigned integer. Value range: • **ratio: 0 to 100** • pps: 0 to 1.4881 * the maximum interface rate. kbps: 0 to the maximum interface rate	N/A
Unit	KnownUnicast suppression unit	N/A	Enumeration: • **1**—ratio • **2**—pps • **3**—kbps	N/A

IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
CtlMode	Storm constrain protective action	N/A	Enumeration: • 0—N/A • 1—Block • 2—Shutdown	

Column name	Column description	Column type	Data type and restrictions	Remarks
Trap	Event trap switch	N/A	Boolean: • true • false	
Log	Event log switch	N/A	Boolean: • true • false	
Broadcast	Broadcast storm constrain information of an interface	N/A	Include: • Upper • Lower • Unit • Forward • SwitchNum	
Upper	Broadcast upper threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Lower	Broadcast lower threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Unit	Broadcast threshold unit	N/A	Enumeration: • 1—pps • 2—ratio • 3—kbps	
Forward	Broadcast traffic forwarding status	N/A	Enumeration: • 0—Forwarding • 1—Block • 2—Shutdown	
SwitchNum	Number of broadcast traffic forwarding state changes	N/A	Unsigned integer.	
Multicast	Multicast storm constrain information of an interface	N/A	Include: • Upper • Lower • Unit • Forward • SwitchNum	
Upper	Multicast upper threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	

Column name	Column description	Column type	Data type and restrictions	Remarks
Lower	Multicast lower threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Unit	Multicast threshold unit	N/A	Enumeration: • 1—pps • 2—ratio • 3—kbps	
Forward	Multicast traffic forwarding status	N/A	Enumeration: • 0—Forwarding • 1—Block • 2—Shutdown	
SwitchNum	Number of multicast traffic forwarding state changes	N/A	Unsigned integer.	
UnknownUnicast	Unknown-unicast storm constrain information of an interface	N/A	Include: • Upper • Lower • Unit • Forward • SwitchNum	
Upper	Unknown-unicast upper threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Lower	Unknown-unicast lower threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Unit	Unknown-unicast unit	N/A	Enumeration: • 1—pps • 2—ratio • 3—kbps	
Forward	Unknown-unicast traffic forwarding status	N/A	Enumeration: • 0—Forwarding • 1—Block • 2—Shutdown	
SwitchNum	Number of unknown-unicast traffic forwarding state changes	N/A	Unsigned integer.	

Column name	Column description	Column type	Data type and restrictions	Remarks
KnownUnicast	Known-unicast storm constrain information of an interface	N/A	Include: • Upper • Lower • Unit • Forward • SwitchNum	
Upper	Known-unicast upper threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Lower	Known-unicast lower threshold value	N/A	Unsigned integer. Value range: • pps: 1 to 1.4881 * the maximum interface rate • ratio: 1 to 100 • kbps: 1 to the maximum interface rate	
Unit	Known-unicast unit	N/A	Enumeration: • 1—pps • 2—ratio • 3—kbps	
Forward	Known-unicast traffic forwarding status	N/A	Enumeration: • 0—Forwarding • 1—Block • 2—Shutdown	
SwitchNum	Number of known-unicast traffic forwarding state changes	N/A	Unsigned integer.	
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

Ifmgr/StormConstrain/Interval

This table contains storm constrain traffic collection interval information.

XML structure

```
<Ifmgr>
  <StormConstrain>
    <Interval>
      <Interval></Interval>
    </Interval>
```

```
  </StormConstrain>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table
Row name	N/A
Restrictions	

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Traffic statistics collection interval for storm constrain on all interfaces, in seconds	N/A	Unsigned integer. Value range: 1 to 300.

Ifmgr/StormConstrain/WhiteProtocol

This table contains storm constrain traffic white protocol.

XML structure

```
<Ifmgr>
  <StormConstrain>
   <WhitelistProtocol>
      <Protocol></Protocol>
   </WhitelistProtocol>
  </StormConstrain>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	WhiteProtocol
Table type	Single-instance table
Row name	N/A
Restrictions	
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Protocol	Whitelist-protocol	• Each bit represents a protocol. • As follows: • 1—arpreq • 2—bpdu • 4—dhcp • 8—igmp • 16—rip	Example: • 22 —Protocol bpdu, dhcp, and rip are configurable.

Ifmgr/PortIsolation/Groups

This table contains port isolation groups information.

XML structure

```
<Ifmgr>
  <PortIsolation>
    <Groups>
      <Group>
        <IsolatedGroupID></IsolatedGroupID>
        <InterfaceList></InterfaceList>
      </Group>
    </Groups>
  </PortIsolation>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	Applicable to only Layer 2 interfaces of Ethernet and aggregation.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IsolatedGroup ID	Isolation group ID.	Index	Unsigned integer.	
InterfaceList	Interface IfIndex list of an isolation group ID.	N/A	Number string. It is a comma-separated list of IfIndex items. An item can be an individual IfIndex or an IfIndex range. Use a hyphen (-) to separate the start and end IfIndexes of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Examples: 1,2,3,5-8,10-20 Example: 1,2,3,5-8,10-20. Available IfIndexes are in the IfIndex column in the Ifmgr/Interfaces table.

Ifmgr/PortIsolation/Interfaces

This table contains interface isolation information.

XML structure

```
<Ifmgr>
  <PortIsolation>
    <Interfaces>
      <Interface>
       <IfIndex></IfIndex>
       <IsolatedGroupID></IsolatedGroupID>
       <IfName></IfName>
      </Interface>
    </Interfaces>
  </PortIsolation>
</Ifmgr>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupNum	The maximum port isolation group number.	N/A	Unsigned integer.	

Ifmgr/DeviceCapabilities

This table contains the capabilities of the interfaces on device.

XML structure

```
<Ifmgr>
  <DeviceCapabilities>
   <HistoryTrafficStatistic></HistoryTrafficStatistic>
   <ManualNoLoopBack></ManualNoLoopBack>
   <DefaultShutdown></DefaultShutdown>
   <StormSuppressionAction></StormSuppressionAction>
   <StormWhiteListProtocol></StormWhiteListProtocol>
   <TrafficPeakStatistic></TrafficPeakStatistic>
  </DeviceCapabilities>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	DeviceCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HistoryTraffic	Whether you need to support	N/A	Boolean:	

Column name	Column description	Column type	Data type and restrictions	Remarks
Statistic	the history traffic statistic		• True • false	
ManualNoLoopBack	Whether you need to stop the loopback test on an interface manually	N/A	Boolean: • true • false	
DefaultShutdown	Whether an interface is shut down by default	N/A	Boolean: • true • false	
StormSuppressionAction	Whether StormSuppressionAction can be configured.	N/A	Each bit represents a type as follows: • **1**— broadcast. • **2**—unknown outbound multicast. • **4**—unknown outbound unicast.	For example, 3 means the types can be both broadcast and multicast.
StormWhiteListProtocol	Whether stormconstrain whitelistProtocol can be configured.	N/A	Boolean: • true • false	N/A
TrafficPeakStatistic	Whether you need to support the traffic peak statistic	N/A	Boolean: • true • false	

Ifmgr/ReserveVlanInterface

This table contains the reservation of VLAN interface resources.

XML structure

```
<Ifmgr>
  <ReserveVlanInterface>
    <VlanInterface>
     <Type></Type>
     <VlanList></VlanList>
    </VlanInterface>
  </ReserveVlanInterface>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ReserveVlanInterface

Table type	Multi-instance table
Row name	VlanInterface
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the reservation of VLAN interface resources is global or local.	Index	Enumeration: • **1**—Global. • **2**—Local	The reservation of global VLAN interface resources or local VLAN interface resources.
VlanList	List of VLANs for the reservation of VLAN interface resources.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20

Ifmgr/SubChannel

This table contains the sub channel index information of interface.

XML structure

```
<Ifmgr>
  <SubChannel>
    <Interface>
     <IfIndex></IfIndex>
     <CreateMode></CreateMode>
     <SubChannelIndex></SubChannelIndex>
    </Interface>
  </SubChannel>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	SubChannel
Table type	Multi-instance table

Row name	Interface
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
CreateMode	The mode of creating sub channel.	Index	Enumeration: • 1—serial-set • 2—eth-channel	N/A
SubChannelIndex	The interface index of each subchannel.	Index	Unsigned integer	N/A

Ifmgr/CellularChannel

This table contains sub channel creating information of cellular controller.

XML structure

```
<Ifmgr>
  <CellularChannel>
    <Interface>
      <IfIndex></IfIndex>
      <CreateMode></CreateMode>
      <ChannelNum></ChannelNum>
    </Interface>
  </CellularChannel>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	CellularChannel
Table type	Multi-instance table
Row name	Interface
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
CreateMode	The mode of creating sub channel.	Index	Enumeration: • 1—serial-set • 2—eth-channel	N/A
ChannelNum	Sub channel number.	Index	Unsigned integer	N/A

Ifmgr/NewSubInterfaces

This table contains creating information of sub-interfaces.

XML structure

```
<Ifmgr>
  <NewSubInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SubNum></SubNum>
      <IfName></IfName>
      <SubIfIndex></SubIfIndex>
    </Interface>
  </NewSubInterfaces>
```

```
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	NewSubInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the main interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SubNum	Sub-interface number.	Index	Unsigned integer	The range for SubNum is shown in the InterfaceCapabilities table.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
SubIfIndex	Sub-interface index	N/A	Unsigned integer	Interface index of the sub-interface.

Ifmgr/EthPortStatistics

This table contains interface statistics.

Table name	EthPortStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
InBytes	Number of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InPkts	Number of inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InUcastPkts	Number of inbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Column name	Column description	Column type	Data type and restrictions
InBrdcastPkts	Number of inbound broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InMulticastPkts	Number of inbound multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InPauses	Number of inbound pause frames on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalBytes	Number of inbound normal bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalUnicastBytes	Number of inbound normal unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalBrdcastBytes	Number of inbound normal broadcast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalMulticastBytes	Number of inbound normal multicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InUnknownUnicastBytes	Number of inbound unknown unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalPkts	Number of inbound normal packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalUnicastPkts	Number of inbound normal unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalBrdcastPkts	Number of inbound normal broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalMulticastPkts	Number of inbound normal multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InUnknownUnicastPkts	Number of inbound unknown unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InNormalPauses	The number of normal pauses received on the interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InErrorPkts	Number of error inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InPktSpeed	Rate of inbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InByteSpeed	Rate of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InBrdcastPktSpeed	Rate of inbound broadcast packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InMulticastPktSpeed	Rate of inbound multicast	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	packages on an interface.		Value range: 0 to 2^{64} - 1.
InRunts	Number of inbound runts on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InGiants	Number of inbound giants on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InThrottles	Number of inbound frames that had a non-integer number of bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InErrCRCFrames	Total number of inbound frames that had a normal length, but contained CRC errors.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InErrFrames	Total number of inbound frames that contained CRC errors and a non-integer number of bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InOverrunDropPkts	Number of packets dropped because the input rate of the port exceeded the queuing capability.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InAbortPkts	Total number of illegal inbound packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InIgnoreDropFrames	Number of inbound frames dropped because the receiving buffer of the port ran low.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InParityErrFrames	Total number of frames with parity errors.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InSpeedPeakBytes	Peak rate of inbound traffic in Bps, and the time when the peak inbound traffic rate occurred.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InSpeedPeakTime	Speed peak time of inbound bytes on an interface.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS..
OutBytes	Number of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPkts	Number of outbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutUcastPkts	Number of outbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutBrdcastPkts	Number of outbound broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutMulticastPkts	Number of outbound multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPauses	Number of outbound pause	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	frames on an interface.		Value range: 0 to 2^{64} - 1.
OutNormalBytes	Number of outbound normal bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalUnicastBytes	Number of outbound normal unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalBrdcastBytes	Number of outbound normal broadcast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalMulticastBytes	Number of outbound normal multicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutUnknownUnicastBytes	Number of outbound unknown unicast bytes on an interface. unsupported protocol.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalPkts	Number of outbound normal packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalUnicastPkts	Number of outbound normal unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalBrdcastPkts	Number of outbound normal broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalMulticastPkts	Number of outbound normal multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutUnknownUnicastPkts	Number of outbound unknown unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNormalPauses	Number of outbound normal pause frames on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutErrorPkts	Number of error outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutPktSpeed	Rate of outbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutByteSpeed	Rate of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutBrdcastPktSpeed	Rate of outbound broadcast packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutMulticastPktSpeed	Rate of outbound multicast packages on an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutUnderRunDropPkts	Number of packets dropped because the output rate of the interface exceeded the output queuing capability.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Column name	Column description	Column type	Data type and restrictions
OutBuffFailDropPkts	Number of packets dropped because the transmitting buffer of the interface ran low.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutAbortPkts	Number of packets that failed to be transmitted, for example, because of Ethernet collisions.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutDeferedFrames	Number of frames that the interface deferred to transmit because of detected collisions.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutCollisionFrames	Number of frames that the interface stopped transmitting because Ethernet collisions were detected during transmission.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutLateCollisionFrames	Number of frames that the interface deferred to transmit after transmitting their first 512 bits because of detected collisions.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutLostCarriers	Number of carrier losses during transmission.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutNoCarriers	Number of times that the port failed to detect the carrier when attempting to send frames.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutSpeedPeakBytes	Peak rate of outbound traffic in Bps, and the time when the peak outbound traffic rate occurred.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
OutSpeedPeakTime	Speed peak time of outbound bytes on an interface.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.

Ifmgr/IfHistoryTrafficStatistics

This table contains history traffic statistics of the interface.

XML structure

```
<Ifmgr>
  <IfHistoryTrafficStatistics>
    <TrafficStatistics>
      <IfIndex></IfIndex>
      <Interval></Interval>
      <TimeStamp></TimeStamp>
      <InOctets></InOctets>
```

```
      <OutOctets></OutOctets>
      <IfName></IfName>
    </TrafficStatistics>
  </IfHistoryTrafficStatistics>
</Ifmgr>
```

Table description

Interval	Shutdown recovery interval in seconds	N/A	Unsigned integer. Value range: 0 to 300.	N/A

Ifmgr/IfRateStatistics

This table contains interfaces rate information.

XML structure

```
<Ifmgr>
  <IfRateStatistics>
    <Interface>
      <StartIfIndex></StartIfIndex>
```

```
      <ReqCount></ReqCount>
      <BufData></BufData>
    </Interface>
  </IfRateStatistics>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	IfRateStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmon NETCONF XML API Configuration Reference.
ReqCount	Requiring counts of interface	N/A	Unsigned integer.	This column contains count of interface every bulk we want to get. The default is 10.And the maximum is 46. If we specify the operation type is “get-bulk”, it won’t return anything when the reqcount is less than 10.
BufData	Data of rate statistics.	N/A	Binary	This column has three sections. The first is ifindex that the last one of previous bulk.

Column name	Column description	Column type	Data type and restrictions	Remarks

				The second is count of interface that every bulk we get really. The last is information of rate statistics, which containing the interface's index, name, the package rate and the byte rate.
				StartIfIndex (UINT32) //Ifindex of the first interface in this bulk
				ActualCount (UINT32) //Counts that this bulk actually got
				BatchRate (N * 88) //Information of rate statistics, including N data blocks(BASE64 Coding)(N = ActualCount), and every data block includes
				//IfIndex (UINT32)
				//szIfName (48 UCHAR)
				//InSpeedPkt (UINT64)
				//InSpeedByte (UINT64)
				//OutSpeedPkt (UINT64)
				//OutSpeedByte (UINT64)

Ifmgr/IfPacketDropStatistics

This table contains interface packet-drop related statistics

XML structure

```
<Ifmgr>
  <IfPacketDropStatistics>
    <Interface>
      <IfIndex></IfIndex>
      <InsufficientBandDrop></InsufficientBandDrop>
      <FFPDrop></FFPDrop>
```

```
      <STPDrop></STPDrop>

	insufficient bandwidth.		
FFPDrop	Packets dropped due to Fast Filter Processor (FFP).	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
STPDrop	Packets dropped due to STP non-forwarding state.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
RateLimitDrop	Packets dropped due to rate-limit.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
BroadcastBuppressionDrop	Packets dropped due to unicast-suppression.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
UnicastBuppressionDrop	Packets dropped due to unicast-suppression.	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.
MulticastSuppressionDrop	Packets dropped due to multicast-suppression.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
TxDrop	Packets dropped due to transmitted packet aging.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InsufficientBuffInDrop	Packets dropped due to insufficient data buffer. Input dropped: 0.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
InsufficientBuffOutDrop	Packets dropped due to insufficient data buffer. output dropped: 0.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

Ifmgr/DevicePortInfo/Interfaces

This table contains device port information.

XML structure

```
<Ifmgr>
  <DevicePortInfo>
    <Interfaces>
      <Interface>
        <IfIndex></IfIndex>
        <Port></Port>
        <ModuleID></ModuleID>
      </Interface>
    </Interfaces>
  </DevicePortInfo>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr

Item	Description
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Port	Serial number of the physical interface.	N/A	Unsigned integer.
ModuleID	Module ID of the physical interface.	N/A	Unsigned integer.

Ifmgr/DataBuffer/IfBuffer

This table contains the buffer of interface.

XML structure

```
<Ifmgr>
  <DataBuffer>
    <IfBuffer>
      <Interface>
        <IfIndex></IfIndex>
        <FreeBuf></FreeBuf>
        <InitBuf></InitBuf>
        <MinBuf></MinBuf>
        <MissPkts></MissPkts>
        <IfName></IfName>
      </Interface>
    </IfBuffer>
  </DataBuffer>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	IfBuffer
Table type	Multi-instance table
Row name	Interface
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
FreeBuf	The number of packet buffers available for the interface.	N/A	Unsigned integer.
InitBuf	The number of packet buffers allocated when the interface was created.	N/A	Unsigned integer.
MinBuf	The smallest number of packet buffers available for the interface.	N/A	Unsigned integer.
MissPkts	Broadcast storm constrain information of an interface.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.
IfName	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2

Ifmgr/FlexeInstances

This table contains FlexeInstance interface information.

XML structure

Table description

Item	Description
Feature name	Ifmgr
Table name	FlexeInstances
Table type	Multi-instance table
Row name	FlexeInstance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	
Subslot	SubSlot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	
ConfigMode	Bandwidth configuration mode	N/A	Enumeration: • 1—BandWidth. • 2—TimeSlot.	
FlexeGroups	FlexE group interfaces	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups

This table contains creating information of FlexE group interfaces.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	FlexeGroups

Table type	Multi-instance table
Row name	FlexeGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Group ID	Index	Unsigned integer. Value range: 1 to 1048573.	
IfIndex	Group interface ifdex	N/A.		Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BindPhyInterfaces	FlexE Physical interface config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/BindPhyInterfaces table
Clients	FlexE client config	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/Clients table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/BindPhyInterfaces

This table contains binding information of FlexE group interfaces.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	BindPhyInterfaces
Table type	Multi-instance table
Row name	BindPhyInterface

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhyIfIndex	FlexE Phisycal Interface index.	Index	Unsigned integer	For information about the string type, see "错误!未找到引用源。". Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
PhyNo	PHY number for the FlexE physical interface	NA	Unsigned integer. Value range: 1 to 254.	

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE Client ID	Index	Unsigned integer. Value range: 1 to 65534.	
FlexeIfIndex	FlexE Client interface ifdex	N/A		Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Bandwidth	Bandwidth value in Gbps	N/A	Unsigned integer. Value range:5 to 4194303 (in steps of 5)	
TimeSlots	TimeSlots	Subtable	N/A	For more information, see the Ifmgr/FlexeInstances/FlexeGroups/Clients/TimeSlots table

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/ChannelClients/TimeSlots

This table contains TimeSlot configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	TimeSlots
Table type	Multi-instance table
Row name	TimeSlot
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhyInterface	FlexE Phisycal Interface index.	Index	Unsigned integer	For information about the string type, see "错误!未找到引用源。". Some versions support interface name. For relevant information, see the XSD document of your product.For information about the string type, see "错误!未找到引用源。"
TimeSlotList	TimeSlot list	N/A	TimeSlots, separated by commas(,) or hyphens (-)	

Ifmgr/FlexeInstances/FlexeInstance/FlexeGroups/FlexeGroup/ChannelClients/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeInstance.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE ClientChannel Client ID	Index	Unsigned integer. Value range: 1 to 65534.	
Bandwidth	Bandwidth value in Gbps	N/A	Unsigned integer. Value range:5 to 4194303 (in steps of 5)	Only the ClientConfigMode is bandwidth, this column can be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
SubTimeSlot List	SubTimeSlot list	N/A	SubTimeSlots, separated by commas(,) or hyphens (-)	Only the ClientConfigMode is timeslot, this column can be configured

Ifmgr/InterfaceTrafficPeak

This table contains interface traffic peak information.

XML structure

```
<Ifmgr>
  <InterfaceTrafficPeak>
    <Interface>
      <IfName></IfName>
      <InBitRatePeaks>
        <InBitRatePeak>
          <PeakIndex></PeakIndex>
          <PeakValue></PeakValue>
          <PeakTimeStamp></PeakTimeStamp>
        </InBitRatePeak>
      </InBitRatePeaks>
      <OutBitRatePeaks>

          <PeakTimeStamp></PeakTimeStamp>
        </OutPacketRatePeak>
      </OutPacketRatePeaks>
    </Interface>
  </InterfaceTrafficPeak>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	InterfaceTrafficPeak
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	Applicable to only Ethernet interfaces.
InBitRatePeaks	History peak rate of inbound traffic on an interface.	Subtable	N/A	For more information, see the Ifmgr/InterfaceTrafficPeak/Interface/InBitRatePeaks table.
OutBitRatePeaks	History peak rate of outbound traffic on an interface.	Subtable	N/A	For more information, see the Ifmgr/InterfaceTrafficPeak/Interface/OutBitRatePeaks table.
InPacketRatePeaks	History peak rate of inbound packets on an interface.	Subtable	N/A	For more information, see the Ifmgr/InterfaceTrafficPeak/Interface/InPacketRatePeaks table.
OutPacketRatePeaks	History peak rate of outbound packets on an interface.	Subtable	N/A	For more information, see the Ifmgr/InterfaceTrafficPeak/Interface/OutPacketRatePeaks table.

Ifmgr/InterfaceTrafficPeak/Interface/InBitRatePeaks

This table contains the history peak rate of inbound traffic on an interface.

XML structure

See the XML structure of InterfaceTrafficPeak.

Table description

Item	Description
Feature name	Ifmgr
Table name	InBitRatePeaks
Table type	Multi-instance table
Row name	InBitRatePeak
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeakIndex	Ranking of the history peak rate of inbound traffic.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PeakValue	Peak rate of inbound traffic in bps.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PeakTimeStamp	Time when the peak inbound traffic rate occurred.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS..	N/A

Ifmgr/InterfaceTrafficPeak/Interface/OutBitRatePeaks

This table contains the history peak rate of outbound traffic on an interface.

XML structure

See the XML structure of InterfaceTrafficPeak.

Table description

Item	Description
Feature name	Ifmgr
Table name	OutBitRatePeaks
Table type	Multi-instance table
Row name	OutBitRatePeak
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeakIndex	Ranking of the history peak rate of outbound traffic.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PeakValue	Peak rate of outbound traffic in bps.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PeakTimeStamp	Time when the peak outbound traffic rate occurred.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS..	N/A

Ifmgr/InterfaceTrafficPeak/Interface/InPacketRatePeaks

This table contains the history peak rate of inbound packets on an interface.

XML structure

See the XML structure of InterfaceTrafficPeak.

Table description

Item	Description
Feature name	Ifmgr
Table name	InPacketRatePeaks
Table type	Multi-instance table
Row name	InPacketRatePeak
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeakIndex	Ranking of the history peak rate of inbound packets.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PeakValue	Peak rate of inbound packets in pps.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PeakTimeStamp	Time when the peak inbound packet rate occurred.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS..	N/A

Ifmgr/InterfaceTrafficPeak/Interface/OutPacketRatePeaks

This table contains history peak rate of outbound packets on an interface.

XML structure

See the XML structure of InterfaceTrafficPeak.

Table description

Item	Description
Feature name	Ifmgr
Table name	OutPacketRatePeaks
Table type	Multi-instance table
Row name	OutPacketRatePeak
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeakIndex	Ranking of the history peak rate of outbound packets.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PeakValue	Peak rate of outbound packets in pps.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PeakTimeStamp	Time when the peak outbound packet rate occurred.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS..	N/A.

Ifmgr/ShutdownAllPhyIf

This table is used to shut down all physical interfaces.

XML structure

```
<Ifmgr>
  <ShutdownAllPhyIf>
    <Shutdown></Shutdown>
  </ShutdownAllPhyIf>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	ShutdownAllPhyIf
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Shutdown	Shut down all physical interfaces	N/A	Boolean: • **true**—shutdown • **false**—undo shutdown	

Ifmgr/Suppression

This table contains interface suppression statistics.

XML structure

```
<Ifmgr>
  <Suppression>
    <Interface>
      <IfName></IfName>
      <BroadcastSuppression>

         <Client>
        <Clients>
    </FlexEFGInterface>
  </FlexEFGInterfaces>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	FlexeFgInterfaces
Table type	Multi-instance table
Row name	FlexeFgInterface

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: FlexE-FG10G2/0/2	N/A
ConfigMode	Bandwidth configuration mode	N/A	Enumeration: • 1—Bandwidth. • 2—Sub-timeslot.	If the Client ID is already configured, the FlexE Fg interface configmode cannot be modified.
Clients	FlexE Fg client config	Subtable	N/A	For more information, see the Ifmgr/FlexeFgInterfaces/FlexeFgInterface/Clients

Ifmgr/FlexeFgInterfaces/FlexeFgInterface/Clients

This table contains Client configuration information.

XML structure

See the XML structure of FlexeFgInterface.

Table description

Item	Description
Feature name	Ifmgr
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientID	FlexE Fg Client ID	Index	Unsigned integer. Value range: 1 to 65534.	If you replace the Client, you must carry the ConfigMode.
Bandwidth	Bandwidth value in Mbps	N/A	Unsigned integer. Value range:10 to 4194303 (in steps of 10)	
SubTimeSlot List	SubTimeSlotList	N/A	TimeSlots, separated by commas(,) or hyphens (-)	

Ifmgr/LinkFlap

This table is used to enable link flapping protection globally.

XML structure

```
<Ifmgr>
  <LinkFlap>
    <Enable></Enable>
    <Batch></Batch>
    <Interval></Interval>
    <Threshold></Threshold>
  </LinkFlap>
</Ifmgr>
```

Table description

Item	Description
Feature name	Ifmgr
Table name	LinkFlap
Table type	Single-instance table
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable link flapping protection globally	N/A	Boolean: • true—enable • false—disable	

Column name	Column description	Column type	Data type and restrictions	Remarks
Batch	Enable link flapping protection both globally and on all interfaces	N/A	Boolean: • true—enable • false—disable	
Interval	Specifies the link flapping detection interval in seconds	N/A	Unsigned integer. Value range: 5 to 86400. Default: 10	
Threshold	Specifies the link flapping detection threshold	N/A	Unsigned integer. Value range: 2 to 1200. Default: 5

Ifmgr

Ifmgr/Interfaces

Message	Explanation
The administrative state of management interface cannot be modified. 不能修改管理接口的接口管理状态。	暂未引用
Please set the link type of the port to access first. 请先把接口链路类型改成Access。	During merging operation for LinkType of interfaces table, set the link type of the port to access first. 在对接口信息表的 LinkType 字段进行 Merge 操作时，需要先把接口链路类型改成 Access。
The VLAN doesn't support the operation. 该VLAN不支持当前操作。	During executing set operation for LinkType of interfaces table, the VLAN doesn't support the operation. 在对接口信息表的 LinkType 字段进行下发数据时，该 VLAN 不支持当前操作。
Cannot change the link type of %s because this operation conflicts with the %s configuration. 不能更改%s的链路类型因为当前操作和%s配置冲突。	During executing set operation for LinkType of interfaces table, this operation cannot change the link type for the port because this operation conflicts with the port's configuration. 在对接口信息表的 LinkType 字段进行下发数据时，不能更改该端口的链路类型因为当前操作和该端口配置冲突。
The VLAN does not exist. 该VLAN不存在。	During executing set operation for PVID of interfaces table, the VLAN doesn't exist. 在对接口信息表的 PVID 字段进行下发数据时，该 VLAN 不存在。
This is not a hybrid port. 不是一个Hybrid端口。	During executing set operation for PVID of interfaces table, the link type of the port is not hybrid. 在对接口信息表的 PVID 字段进行下发数据时，该端口类型不是一个 Hybrid 端口。
This is not a trunk port. 不是一个Trunk端口。	During executing set operation for PVID of interfaces table, the link type of the port is not trunk. 在对接口信息表的 PVID 字段进行下发数据时，该端口类型不是一个 trunk 端口。
The specified duplex mode is not supported. 该接口不支持所指定的双工状态。	During executing set operation for cfgduplex of interfaces table, the specified duplex mode is not

	supported. 在对接口信息表的 cfgduplex 字段进行下发数据时，该接口不支持所指定的双工状态。
Duplex mode cannot be configured when loopback external or loopback internal command is configured. 该接口正处于环回测试状态，不能修改双工模式。	During executing set operation for cfgduplex of interfaces table, the duplex mode cannot be configured when the loopback external or loopback internal command is configured. 在对接口信息表的 cfgduplex 字段进行下发数据时，该接口正处于环回测试状态，不能修改双工模式。
You do not have the privilege to access %s. 没有操作接口的权限。	暂未引用
The interface doesn't support the operation. 该接口不支持此操作。	During executing set operation for cfgduplex of interfaces table, the interface doesn't support the operation. 在对接口信息表某个字段进行下发数据时,该接口不支持此操作。
Configuration cannot be configured when loopback external or loopback internal command is configured. 该接口正处于环回测试状态，不能修改配置。	During executing set operation for interfaces table, the configuration cannot be modified when the loopback external or loopback internal command is configured. 在对接口信息表进行下发数据时,该接口因为正处于环回测试状态，导致不能修改配置。
Invalid speed value for port auto-negotiation. 该接口不支持所指定的自协商速率。	During executing set operation for ConfigSpeed of interfaces table, the speed value for port auto-negotiation is invalid. 在对接口信息表的 ConfigSpeed 字段进行下发数据时, 该接口不支持所指定的自协商速率。
The MTU range is %u to %u. MTU取值范围为%u到%u。	During executing set operation for ConfigMTU of interfaces table, the MTU should be in the valid range. 在对接口信息表的 ConfigMTU 字段进行下发数据时, MTU 应该被设置有效的取值范围。
The %s interface number range is %u to %u. %s接口的接口编号范围是%u到%u。	During executing set operation for IfIndex of interfaces table, the interface number should be in the valid range. 在对接口信息表的 IfIndex 字段进行下发数据时,接口的接口编号应该被设置有效的取值范围。
Column SubNum cannot be included when you remove the interface. 删除接口的时候不能带SubNum列。	During executing remove operation, the SubNum column cannot be included. 在对执行删除接口时不能带 SubNum 列。
Allocated VLANs can not be set as port PVID. 已经被分配的VLAN不能设置成端口PVID。	During executing set operation for PVID of interfaces, allocated VLANs can not be set as a PVID. 在对接口信息表的 PVID 字段进行下发数据时，已经被分

	配的 VLAN 不能设置成端口 PVID。
The operation is not permitted because this port is shared with other contexts. 操作不被允许，因为该端口已经被其它Context共享。	During executing set operation for LinkType of interfaces table, it is not permitted because this port is shared with other contexts. 在对接口信息表的 LinkType 字段进行下发数据时，操作不被允许，因为该端口已经被其它 Context 共享。
Can't shut down the last active physical interface on a PEX for PEX links. Please shut down the PEX physical interface on the parent device that provides PEX connectivity for the PEX. 不允许shutdown PEX设备上连接两个设备之间的最后一条active链路上的PEX口，如果需要改变链路topo，请shutdown父设备上的接口。	During executing set operation for ShutDown of interfaces table, it can't shut down the last active physical interface on a PEX for PEX links. Please shut down the PEX physical interface on the parent device that provides PEX connectivity for the PEX. 在对接口信息表进行下发 shutdown 数据时，不允许 shutdown PEX 设备上连接两个设备之间的最后一条 active 链路上的 PEX 口，如果需要改变链路 topo，请 shutdown 父设备上的接口。
Operation not supported on the last active physical port bound to IRF port which connected to the master! Please shutdown the other end of the link. 与连接到主设备的IRF端口绑定的最后一个有效物理端口不支持此操作！请shutdown对端接口。	During executing set operation for ShutDown of interfaces table, the operation is not supported on the last active physical port bound to the IRF port which connects to the master! Please shut down the other end of the link. 在对接口信息表进行下发 shutdown 数据时，与连接到主设备的 IRF 端口绑定的最后一个有效物理端口不支持此操作！请 shutdown 对端接口。
Can not be configured with loopback external/internal command together. 不能和loopback external/internal命令一起配置。	During executing set operation for ShutDown of interfaces table, it can not be configured with the loopback external/internal command together. 在对接口信息表进行下发 shutdown 数据时,不能和 loopback external/internal 命令一起配置。
Can not be configured with port up-mode command together. 不能和port up-mode命令一起配置。	During executing set operation for ShutDown of interfaces table, it can not be configured with the port up-mode command together. 在对接口信息表进行下发 shutdown 数据时，不能和 port up-mode 命令一起配置。
Bind all interfaces in the same group to IRF ports or cancel the bindings on all of them. 绑定或取消绑定同一个组的接口到IRF端口。	During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to IRF ports or the bindings on all of them should be cancelled. 在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 IRF 端口。
Bind all interfaces in the same group to PEX ports or cancel the bindings on all of them. 绑定或取消绑定同一个组的接口到PEX端口。	During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to PEX ports or the bindings on all of them should be cancelled.

	在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 PEX 端口。
Bind all interfaces in the same group to IRF/PEX ports or cancel the bindings on all of them. 绑定或取消绑定同一个组的接口到IRF/PEX端口。	During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to IRF/PEX ports or the bindings on all of them should be cancelled. 在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 IRF/PEX 端口。
The shutdown, port up-mode and loopback commands are exclusive with each other. Shutdown、loopback和up-mode命令相互互斥。	During executing merge operation for interfaces table, the shutdown, port up-mode and loopback commands are exclusive with each other. 在对接口信息表进行 Merge 操作时 Shutdown loopback 和 up-mode 命令不允许同时被设置。
LOOPBACK can not be specified when port is administratively down. 接口状态显示为Administratively DOWN时，则不能进行内部和外部环回测试。	when the port is administratively down, LOOPBACK can not be specified. 当接口状态显示为 Administratively DOWN 时，则不能进行内部和外部环回测试。
Port up-mode can not be specified when port is administratively down. 接口状态显示为Administratively DOWN时，则不能配置port up-mode。	when the port is administratively down, port up-mode can not be specified. 当接口状态显示为 Administratively DOWN 时，则不能配置 port up-mode。
The specified group doesn't exist. 指定的端口隔离组不存在。	During executing get operation for interfaces table, the specified group doesn't exist. 当对接口信息表进行获取数据时，指定的端口隔离组不存在。
The arguments are incompletely configured. 配置的参数不完整。	During executing set operation for interfaces table, the arguments are incompletely configured. 当对接口进行设置参数时，配置的参数不完整。
The interface has been allocated and can't change the link mode. 接口已经被分配，不支持切换工作模式。	Due to the interface has been allocated, it can't change the link mode. 因为接口已经被分配，不支持切换工作模式。
The value is out of the effective range. 参数值不在有效范围内。	During executing get operation for interfaces table, the value is out of the effective range. 当对接口信息表进行设置时，参数的值不再有效范围内。
The value must be a multiple of 5. 配置值须是5的倍数。	During executing set operation for interfaces table, the value must be a multiple of 5. 当对接口信息表进行设置时，参数的值须是 5 的倍数。
Invalid interface name. 接口名称格式错误。	During executing check operation for interfaces name, the interface name is invalid. 当在检查接口名称格式时出现了错误。

Insufficient system resources. 系统资源不足。	During adding or parsing operation, system resources are insufficient. 当在进行添加或者解析操作时，出现系统资源不足。
%s is not a valid interface name. 包含无效的接口名称%s。	During executing set operation for interfaces name, the interface name in invalid. 当在设置接口名字时包含无效的格式。
The operation failed because the port is a member port of a Layer 2 aggregation group. 操作失败，该接口已经是二层聚合组成员端口。	During executing merge operation for Ethinterfaces table, the operation failed because the port is a member port of a Layer 2 aggregation group. 在对接口信息表进行 merge 操作时，操作失败，该接口已经是二层聚合组成员端口。
The operation failed because the port is joining or leaving a Layer 2 aggregation group. 操作失败，接口正在加入或退出聚合组。	During executing merge operation for Ethinterfaces table, the operation failed because the port is joining or leaving a Layer 2 aggregation group. 在对接口信息表进行 merge 操作时，操作失败，接口正在加入或退出聚合组。
The operation failed because the OLT interface is a member port of an ROLT interface. 操作失败，该接口已经是 OLT 冗余口的成员端口。	During executing set operation for interfaces table, the operation failed because the OLT interface is a member port of an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，该接口已经是 OLT 冗余口成员端口。
The operation failed because the OLT interface is joining or leaving an ROLT interface. 操作失败，接口正在加入或退出 OLT 冗余口。	During executing set operation for interfaces table, the operation failed because the OLT interface is joining or leaving an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，接口正在加入或退出 OLT 冗余口。
When the value is within 10 seconds (10000 milliseconds), the value must be a multiple of 100. 10 秒内，配置值须是 100 的倍数。	During executing set operation for interfaces table, the value must be a multiple of 100. 当对接口信息表进行设置时，参数的值须是 100 的倍数。
When the value is more than 10 seconds (10000 milliseconds), the value must be a multiple of 1000. 超过10秒，配置值须是1000的倍数。	During executing set operation for interfaces table, the value must be a multiple of 1000. 当对接口信息表进行设置时，参数的值须是 1000 的倍数。
The operation failed because of conflicting with the port link-flap configuration. 操作失败，因为与 link-flap 配置冲突。	During executing set operation for interfaces table, the operation conflicts with the port link-flap configuration. Please execute the undo port link-flap enable command first. 在对接口信息表进行 set 操作时，与 link-flap 配置冲突，请先删除 link-flap 配置。
The operation failed because of conflicting with the dampening configuration.	During executing set operation for interfaces table, the operation conflicts with the dampening configuration.

操作失败，因为与 dampening 配置冲突。	Please execute the undo dampening command first. 在对接口信息表进行 set 操作时，与 dampening 配置冲突，请先删除 dampening 配置。

Ifmgr/NewSubInterfaces

Message	Explanation
The %s subinterface number range is %u to %u. %s接口可创建的子接口编号范围是%u到%u。	During executing get operation for SubNum of new subinterfaces table, the subinterface number should be in the valid range. 在对子接口信息表的 SubNum 进行获取操作时，接口可创建的子接口编号的有效范围。
Can not configure this parameter in async flow mode. 当接口工作在异步方式、流模式时不能配置本参数。	When the interface in async flow mode, can not configure this parameter. 当接口工作在异步方式、流模式时不能配置本参数。
Can not delete this interface. 该接口不能被删除。	During executing undo operation for new subinterfaces ,it can not be deleted. 在对子接口进行 undo 操作时，该接口不能被删除。
Failed to delete %s, for %s has member ports. 删除%s失败，因为%s有成员接口。	During executing undo operation for new subinterfaces, it will fail to be deleted because it has member ports. 在对子接口进行 undo 操作时，因为其有成员接口导致删除失败。
The virtual-template is being used and can't be deleted. 接口 virtual-template 正在使用，不能被删除。	During executing undo operation for new subinterfaces, the virtual-template can't be deleted because it is being used. 在对子接口进行 undo 操作时，因为接口 virtual-template 正在使用，不能被删除。
The interface in use cannot be deleted. 接口正在使用，不能被删除。	During executing undo operation for new subinterfaces, the interface in use cannot be deleted. 在对子接口进行 undo 操作时，因为接口正在使用，不能被删除。
The interface cannot be created because the system is busy. 接口创建失败，因为系统忙。	During executing Create operation for new subinterfaces, it will fail to be created because the system is busy. 在对子接口进行创建操作时，因为系统忙，接口创建失败。
The start interface and the end interface must be of the same type.	During executing set operation for sub channel interface name, the start interface and the end interface

'to'关键字前后的两个接口的类型必须一致。	must be of the same type. 在检查子通道接口名时，'to'关键字前后的两个接口的类型必须一致。
The start interface and the end interface must reside on the same card. 'to'关键字前后的两个接口的必须位于同一单板上。	During executing set operation for sub channel interface name, the start interface and the end interface must reside on the same card. 在检查子通道接口名时，'to'关键字前后的两个接口的必须位于同一单板上。
The interfaces beside 'to' must be two subinterfaces or two sub tunnel. 'to'关键字前后的两个接口必须同时为子接口或者为子通道接口。	During executing set operation for sub channel interface name, the interfaces beside 'to' must be two subinterfaces or two sub tunnels. 在检查子通道接口名时，'to'关键字前后的两个接口必须同时为子接口或者为子通道接口。
The start sub interface and the end sub interface must be on the same interface. 前后子接口必须在同一个接口上。	During executing set operation for sub interface, the start sub interface and the end sub interface must be on the same interface. 在对子接口进行设置操作时，前后两个子接口必须在同一个接口上。
The end interface number must be greater than the start interface number. 后面的接口编号必须大于前面的接口编号。	During executing set operation for sub interface, the end interface number must be greater than the start interface number. 在对子接口进行设置操作时，后面的接口编号必须大于前面的接口编号。
Can't create the sub interface because the main interface is in an aggregation group. 不能创建子接口因为主接口在一个聚合口成员。	During executing create operation for sub interface, it can't create the sub interface because the main interface is in an aggregation group. 在执行创建子接口操作时，不能创建子接口因为主接口在一个聚合口成员。
The interface already exists. 接口已存在。	During executing create operation for sub interface , the interface already exists. 在执行创建子接口操作时，接口已存在。
The interface is not a sub interface. 该接口不是子接口。	During executing create operation for sub interface , the interface is not a sub interface. 在执行创建子接口操作时，该接口不是子接口。
The resource has been used. 资源已经在使用中。	暂未引用
The system does not support Reserve Vlan Interface. 系统不支持Reserve Vlan Interface。	暂未引用
Can not create this interface. 无法创建该接口。	During executing create operation for sub interface, this interface can not be created.

	在执行创建子接口操作时，该接口无法被创建。

Ifmgr/EthInterfaces

Message	Explanation
The link aggregation group doesn't exist. 指定的聚合组不存在。	During executing merge operation for Ethinterfaces table, The link aggregation group doesn't exist. 在对接口信息表进行 merge 操作时，指定的聚合组不存在。
%s has been assigned to another aggregation group. %s 已经加入其他聚合组。	During executing merge operation for Ethinterfaces table, the interfaces has been assigned to another aggregation group. 在对接口信息表进行 merge 操作时,该接口已经加入其他聚合组。
Can't assign %s to a link aggregation group because the interface has subinterfaces. %s 加入聚合组失败，因为该端口包含子接口。	During executing merge operation for Ethinterfaces table,can't assign it to a link aggregation group because the interface has subinterfaces. 在对接口信息表进行 merge 操作时，因为该端口包含子接口导致加入聚合组失败。
Can't assign the L2VPN-enabled interface %s to a link aggregation group. %s 加入聚合组失败，因为该端口使能了 L2VPN 业务。	During executing merge operation for Ethinterfaces table, can't assign the L2VPN-enabled interface to a link aggregation group. 在对接口信息表进行 merge 操作时，因为该端口使能了 L2VPN 业务导致加入聚合组失败。
Can't assign %s to a link aggregation group because the interface is enabled with port security, MAC authentication, or 802.1X authentication. %s 加入聚合组失败，因为该端口使能了端口安全、MAC 认证或者 802.1X 认证。	During executing merge operation for Ethinterfaces table, can't assign it to a link aggregation group because the interface is enabled with port security, MAC authentication, or 802.1X authentication. 在对接口信息表进行 merge 操作时，因为该端口使能了端口安全、MAC 认证或者 802.1X 认证导致加入聚合组失败。
Failed to create the link aggregation group. 聚合组创建失败。	During executing merge operation for Ethinterfaces table, failed to create the link aggregation group. 在对接口信息表进行 merge 操作时，聚合组创建失败。
Can't assign the sub interface %s to a link aggregation group. %s 加入聚合组失败，因为该端口是子接口。	During executing merge operation for Ethinterfaces table, can't assign the sub interface to a link aggregation group. 在对接口信息表进行 merge 操作时，因为该端口是子接口导致加入聚合组失败。
Failed to set the hash key mode, because the mode is not supported. 设置负载分担模式失败，因为设备不支持指定的模式。	During executing merge operation for Ethinterfaces table, failed to set the hash key mode, because the mode is not supported. 在对接口信息表进行 merge 操作时，因为设备不支持指定的模式导致设置负载分担模式失败。

The load-sharing mode of flexible can not be configurated with others. 负载分担 flexible 模式不能和其他模式同时配置。	During executing merge operation for Ethinterfaces table, the load-sharing mode of flexible can not be configurated with others. 在对接口信息表进行 merge 操作时，负载分担 flexible 模式不能和其他模式同时配置。
The load-sharing mode of per-packet can not be configurated with others. 负载分担 per-packet 模式不能和其他模式同时配置。	During executing merge operation for Ethinterfaces table, the load-sharing mode of per-packet can not be configurated with others. 在对接口信息表进行 merge 操作时，负载分担 per-packet 模式不能和其他模式同时配置。
Can't assign %s to a link aggregation group because the interface is shared by multiple contexts. %s 加入聚合组失败，因为该端口已被多个 context 共享。	During executing merge operation for Ethinterfaces table, can't assign it to a link aggregation group because the interface is shared by multiple contexts. 在对接口信息表进行 merge 操作时，端口加入聚合组失败，因为该端口已被多个 context 共享。
Can't assign the port to the aggregation group because its attribute configurations are different than the aggregate interface. 接口上存在的属性类配置和聚合接口不同，该接口不能加入聚合组。	During executing merge operation for Ethinterfaces table, can't assign the port to the aggregation group because its attribute configurations are different than the aggregate interface. 在对接口信息表进行 merge 操作时，接口上存在的属性类配置和聚合接口不同，该接口不能加入聚合组。
Please set the manual recovery mode for PFC deadlock detection first. 请先配置 PFC 死锁检测功能的恢复方式为手工恢复。	During executing merge operation for lfrecover table, please set the manual recovery mode for PFC deadlock detection first. 在对接口信息表进行 merge 操作时，请先配置 PFC 死锁检测功能的恢复方式为手工恢复。
Please specify the indexes and associated contents for the element 'LAGGMembers'. 对于 merge、create 操作，不能对表 LAGGMembers 只下发索引列，应同时指定索引列和非索引列。	During executing merge operation for Ethinterfaces table, please specify the indexes and associated contents for the element 'LAGGMembe. 在对接口信息表进行 merge 操作时，对于 merge、create 操作，不能对表 LAGGMembers 只下发索引列，应同时指定索引列和非索引列。

Ifmgr/PortIsolation/Interfaces

Message	Explanation
The operation failed because the OLT interface is a member port of an ROLT interface. 操作失败，该接口已经是OLT冗余口的成员端口。	During executing set operation for interfaces table, the operation failed because the OLT interface is a member port of an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，该接口已经是 OLT 冗余口成员端口。
The operation failed because the OLT interface is joining or leaving an ROLT interface. 操作失败，接口正在加入或退出 OLT 冗余口。	During executing set operation for interfaces table, the operation failed because the OLT interface is joining or leaving an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，接口正在加入或

	退出 OLT 冗余口。

Ifmgr/LogicInterfaces

Message	Explanation
The operation failed because the ROLT interface has OLT member ports. 操作失败，该ROLT接口存在OLT成员端口。	An ROLT interface with member ports cannot be deleted. 如果 ROLT 接口存在 OLT 成员端口，不允许删除。

Ifmgr/FlexeInstances

Message	Explanation
Bandwidth configuration already exists for FlexE logical interfaces.Please remove the bandwidth configuration first. 修改 ConfigMode 操作失败，存在业务口使用带宽。	已经存在业务口绑定了带宽，再设置时隙模式
Timeslot binding configuration already exists for FlexE logical interfaces. Please remove the timeslot binding configuration first. 修改 ConfigMode 操作失败，存在业务口使用带宽。	已经存在业务口绑定了时隙，再设置带宽模式

Ifmgr/FlexeGroups

Message	Explanation
The number of FlexE group interfaces must be less than or equal to the number of FlexE physical interfaces on the subslot. 操作失败，超过实际限制。	当创建的 FlexE-Group 接口的个数超过了子卡上 FlexE 物理接口的实际个数时，会提示 FlexE-Group 接口的个数应小于等于子卡上 FlexE 物理接口的实际个数。
Remove the FlexE physical interfaces and FlexE logical interfaces from the FlexE group interface first. 操作失败，应先删除业务口。	当指定的 FlexE-Group 接口中存在 FlexE 物理接口或 FlexE 业务接口时，不允许删除 FlexE-Group 接口，会提示需要先清除 FlexE-Group 接口中的 FlexE 物理接口或 FlexE 业务接口。
The FlexE interface group doesn’t exist. 操作失败，提示该组不存在。	当配置大的 flexe-group 命令时，若加入的 group 不存在，会提示指定的 group 不存在。
Remove the FlexE physical interfaces and FlexE logical interfaces from the FlexE group interface first. 做操失败，存在业务口。	存在业务口在使用，应先删除物理口和逻辑口对应的业务。

Ifmgr/BindPhyInterfaces

Message	Explanation
A FlexE physical interface with the same PHY number has already been bound to the FlexE group interface. 操作失败，存在相同编号。	当 group 内已经有物理口配置了 phy-number 参数，若另一个物理口配置相同的 phy-number 参数加入同一个 group，会提示当前 phy-number 已存在。
The FlexE physical interface has already been bound to another FlexE group interface. 操作失败，该物理口已被使用。	当指定的物理口已经绑定在其他 group 下，会提示物理口已绑定。
Operation failed because the bandwidth resources of the FlexE physical interface are being used by a FlexE logical interface. 操作失败，存在业务使用。	当该 FlexE 物理接口的带宽已经被 FlexE 使用时，不能删除 FlexE 物理接口或修改 FlexE 物理接口的 phy-number，提示物理接口的带宽已被业务接口使用。
Remove the FlexE physical interfaces and FlexE logical interfaces from the FlexE group interface first. 操作失败，应先删除业务口。	当指定的 FlexE-Group 接口中存在 FlexE 物理接口或 FlexE 业务接口时，不允许删除 FlexE-Group 接口，会提示需要先清除 FlexE-Group 接口中的 FlexE 物理接口或 FlexE 业务接口。
The physical FlexE interface and the FlexE logical interface must be on the same subslot. 操作失败，不存在该资源。	绑定不属于本板的物理 Flexe 口。

Ifmgr/Clients

Message	Explanation
Please first bind the FlexE physical interface to the FlexE group interface first. 操作失败，未绑定物理口。	当指定 FlexE-Group 口未绑定物理口，若此时配置 client 命令，会提示物理口未绑定。
Not enough bandwidth resources. 操作失败，带宽资源不足。	当绑定带宽时，子卡上带宽资源不足，会提示配置失败，带宽资源不足。
Not enough hardware resources to create a FlexE logical interface. 操作失败，硬件资源不足。	当配置 client-id 时，子卡硬件资源不足，不能创建对应的 FlexE 业务接口，此时提示配置失败，没有足够的硬件资源。
The client ID is being used by another FlexE group interface. 操作失败，该业务口已经存在。	该业务口已经存在。
This configuration conflicts with the current Configmode.	带宽模式下配置时隙或者时隙模式下配置带宽。

该配置与当前带宽模式冲突。	

Ifmgr/TimeSlots

Timeslots of the FlexE physical interface are being used by other FlexE logical interfaces. 操作失败，资源已被占用。	当绑定的 client 指定 timeslot 时，指定物理口的 timeslot 已被其他 client 使用，会提示配置失败，timeslot 冲突。
The specified timeslots must be already bound to the FlexE logical interface. 操作失败，不存在该设置。	存在未绑定时隙，删除失败。
Some of the timeslots have already been bound to another FlexE logical interface. 操作失败，资源已被占用。	存在已被占用的时隙。
Timeslots of the FlexE physical interface haven't been bound to the FlexE logical interface. 操作失败，不存在该资源。	解绑未绑定的物理接口时隙。

Ifmgr/ClientChannels

The client ID and client channel ID must be different. 操作失败，该 ID 已被使用	当创建 client-channel 视图时，指定的 ID 已被其他 client 使用，会提示创建失败，id 冲突
Operation failed, because the client channel or interface has been configured with a FG client ID 操作失败，存在业务口	当更改 client-channel 视图下模式时，存在业务口时会被提示，应删除该视图下业务口

Interface event

This event is used to report interface active/deactive or up/down information.

XML structure for event subscription

```
<InterfaceEvent>
  <Interface>
    <Name></Name>
    <IfType></IfType>
  </Interface>
</InterfaceEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
      <InterfaceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <Interface>
          <Name>Serial2/0/1</Name>
        </Interface>
      </InterfaceEvent>
    </filter>
  </create-subscription>
</rpc>

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
      <InterfaceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <Interface>
          <IfType>50</IfType>
        </Interface>
      </InterfaceEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	Ifmgr
Event name	InterfaceEvent

Item	Description
Event namespace	http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Size: 1 to 47	No
IfType	Interface type	Unsigned integer. For more information, see Table 2 in Ifmgr NETCONF XML API Data Reference.	No

XML structure for event report

```

  </Interface>
</InterfaceEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <InterfaceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
    <Interface>
      <Name>Serial2/0/1</Name>
      <Status>IF_LINK_UP</Status>
      <IfIndex></IfIndex>
      <Adminstatus >ADMIN_UP</Adminstatus>
      <Operstatus>OPER_UP</Operstatus>
      <Description>The Interface GigabitEthernet2/0/1 occurred IF_LINK_UP event,the
      administration status is ADMIN_UP,operation status is OPER_UP.</Description>
    </Interface>
  </InterfaceEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Size: 1 to 47	No
Status	Interface status	Enumeration: IF_ACTIVE IF_DEACTIVE IF_PHY_UP IF_PHY_DOWN IF_LINK_UP IF_LINK_DOWN	No
Description	Ifmgr event description	String. Size: 1 to 255	No
IfIndex	Interface index	Unsigned integer.	No
AdminStatus	Administration status of an interface	Unsigned integer. • ADMIN_UP. • ADMIN_DOWN.	No
OperStatus	Operation status of an interface	Unsigned short. • OPER_UP. • OPER_DOWN. • OPER_TESTING. • OPER_UNKNOW. • OPER_DORMANT. • OPER_NOTPERSENT. • OPER_LOWERLAYERDOWN.	No

Bandwidth event

This event is used to report bandwidth change information.

XML structure for event subscription

```
<InterfaceBandWidthEvent>
  <InterfaceBandWidth>
    <Name></Name>
  </InterfaceBandWidth>
</InterfaceBandWidthEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
```

```
      <InterfaceBandWidthEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <InterfaceBandWidth>
          <Name>Serial2/0/1</Name>
        </InterfaceBandWidth>
      </InterfaceBandWidthEvent>
    </filter>
  </create-subscription>
</rpc>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about the string type, see "Appendix"
InputUsage	Threshold for the inbound bandwidth usage	N/A	Include: • HighThres • LowThres	N/A
HighThres	Upper threshold for the inbound bandwidth usage	N/A	Unsigned integer. Value range: 1 to 100.	N/A
LowThres	Lower threshold for the inbound bandwidth usage	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutputUsage	Threshold for the outbound bandwidth usage	N/A	Include: • HighThres • LowThres	N/A
HighThres	Upper threshold for the outbound bandwidth usage	N/A	Unsigned integer. Value range: 1 to 100.	N/A
LowThres	Lower threshold for the outbound bandwidth usage	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InputErrorAlarm	Threshold for the number of inbound error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of inbound error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of inbound error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of inbound error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the inbound	N/A	Boolean: • true	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	bandwidth exceeds the upper threshold, the physical interface goes down		• false	
OutputErrorAlarm	Threshold for the number of outbound error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of outbound error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of outbound error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of outbound error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of outbound error packets exceeds the upper threshold, the physical interface goes down	N/A	Boolean: • true • false	N/A
SdhError	Threshold for the number of SDH error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of SDH error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of SDH error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH error packets exceeds the	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	upper threshold, the physical interface goes down.			
SdhB1Error	Threshold for the number of SDH B1 error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH B1 error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of SDH B1 error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of SDH B1 error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH B1 error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
SdhB2Error	Threshold for the number of SDH B2 error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH B2 error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of SDH B2 error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of SDH B2 error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH B2 error packets exceeds the upper threshold, the physical interface goes	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	down.			
CRCErrorThres	Threshold for the CRC error packets.	N/A	Include: • Type • HighThres • LowThres • Interval • EnableShutdown	N/A
Type	Inspection type for the CRC error packets	N/A	Enumeration: • 1—absolute • 2—ratio	N/A
HighThres	Upper threshold for the CRC error packets.	N/A	Unsigned integer. Value range: • absolute: 1–4294967295 • ratio: 1 to 100	N/A
LowThres	Low threshold for the CRC error packets.	N/A	Unsigned integer. Value range: • absolute: 1–4294967295 • ratio: 1 to 100	N/A
Interval	Inspection interval for the CRC error packets	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of CRC error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
RxPauseFrame	Threshold for the number of received pause frames.	N/A	Include: • HighThres • LowThres • Interval	N/A
HighThres	Upper threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of received pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TxPauseFram	Threshold for the number of transmitted pause frames.	N/A	Include: • HighThres • LowThres • Interval	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThres	Upper threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of transmitted pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of transmitted pause frames exceeds the upper threshold, the physical interface goes down	N/A	Boolean: • True • false	N/A
Giant	Threshold for the number of Giant error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of Giant error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of Giant error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of Giant error packets.	N/A	Unsigned integer : Value range: 1 to 65535.	N/A
EnableShutdown	When the number of Giant error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
Runt	Threshold for the number of Runt error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThres	Upper threshold for the number of Runt error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of Runt error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of Runt error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of Runt error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A

Appendix

A string can contain multiple items that are separated by commas (,). An item can be in one of the following formats:

- *interface name*
- *interface range-name*
- *interface name A to interface name B*

When you use an item in the *interface name* format, follow these restrictions and guidelines:

- Spaces are not allowed between the interface type and interface number.

  Example:

  Correct: GigabitEthernet1/3/0/1

  Incorrect: GigabitEthernet 1/3/0/1
- If the interface name is the same as an existing interface range name, the system sends the request to interfaces in the interface range rather than the interface.

  Example:

  If you have configured the **interface range name** *Ten-Giga1/2/0/1* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1** as an item, the system sends the request to interfaces in the interface range named **Ten-Giga1/2/0/1**.

When you use an item in the *interface range name* format, follow these restrictions and guidelines:

- If the interface range name is in the *interface name A,interface name B* format, the system sends the request to interface A and interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1,Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1,Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces

Ten-GigabitEthernet 1/2/0/1 and Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

- If the interface range name is in the *interface name A* to *interface name B* format, the system sends the request to interfaces interface A through interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 through Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

When you use an item in the *interface name A to interface name B* format, follow these restrictions and guidelines:

- The interfaces before and after the word **to** must be of the same type and reside on the same card and sub-card.
- If the interfaces are subinterfaces, they must also belong to the same main interface.
- The end interface number must be larger than the start interface number.

Example:

Incorrect:

Ten2/0/1 to Ten3/0/2 The start and end interfaces reside on different cards.

Ten2/0/1 to Ten2/1/2 The start and end interfaces reside on different sub-cards.

Ten2/0/1 to Ten2/0/1:3 The start and end interfaces are of different types.

Giga2/0/1 to Ten2/0/25 The start and end interfaces are of different types.

Ten2/0/3:1 to Ten2/0/4:2 The start and end subinterfaces belong to different main interfaces.

Ten2/0/3:4 to Ten2/0/3:1 The start interface number is larger than the end interface number.

Correct:

Ten2/0/1 to Ten2/0/5

Ten2/0/1:1 to Ten2/0/1:100

	for the number of inbound error packets.			
Interval	Inspection interval for the number of inbound error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the inbound bandwidth exceeds the upper threshold, the physical interface goes down	N/A	Boolean: • true • false	N/A
OutputErrorAlarm	Threshold for the number of outbound error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of outbound error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of outbound error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of outbound error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of outbound error packets exceeds the upper threshold, the physical interface goes down	N/A	Boolean: • true • false	N/A
SdhError	Threshold for the number of SDH error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	SDH error packets.			
Interval	Inspection interval for the number of SDH error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
SdhB1Error	Threshold for the number of SDH B1 error packets.	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH B1 error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of SDH B1 error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of SDH B1 error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH B1 error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
SdhB2Error	Threshold for the number of SDH B2 error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of SDH B2 error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of SDH B2 error packets.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Inspection interval for the number of SDH B2 error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of SDH B2 error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
CRCErrorThres	Threshold for the CRC error packets.	N/A	Include: • Type • HighThres • LowThres • Interval • EnableShutdown	N/A
Type	Inspection type for the CRC error packets	N/A	Enumeration: • 1—absolute • 2—ratio	N/A
HighThres	Upper threshold for the CRC error packets.	N/A	Unsigned integer. Value range: • absolute: 1–4294967295 • ratio: 1 to 100	N/A
LowThres	Low threshold for the CRC error packets.	N/A	Unsigned integer. Value range: • absolute: 1–4294967295 • ratio: 1 to 100	N/A
Interval	Inspection interval for the CRC error packets	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of CRC error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
RxPauseFrame	Threshold for the number of received pause frames	N/A	Include: • HighThres • LowThres • Interval	N/A
HighThres	Upper threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Inspection interval for the number of received pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TxPauseFram	Threshold for the number of transmitted pause frames	N/A	Include: • HighThres • LowThres • Interval	N/A
HighThres	Upper threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of transmitted pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of transmitted pause frames exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A
Giant	Threshold for the number of Giant error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of Giant error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of Giant error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of Giant error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of Giant error packets exceeds the upper threshold,	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the physical interface goes down.			
Runt	Threshold for the number of Runt error packets	N/A	Include: • HighThres • LowThres • Interval • EnableShutdown	N/A
HighThres	Upper threshold for the number of Runt error packets.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of Runt error packets.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of Runt error packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of Runt error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: • true • false	N/A

Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmon NETCONF XML API Configuration Reference.
TaskName	Statistical task name of an interface	Index	String. Length: 1 to 31 characters.	N/A
DataIndex	Statistical data index	Index	Unsigned integer. Value range: 0 to 16.	0 means the real-time data in the current unexpired statistics interval.

Column name	Column description	Column type	Data type and restrictions	Remarks
				1 means the data in the latest complete statistics interval, and so on. 16 means the data in the earliest complete statistics interval.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
Timestamp	Statistical timestamp	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InSpeedBit	Rate of inbound bits on an interface	N/A	Include: • ValidFlag • PeakValue • PeakTimestamp • ValleyValue • ValleyTimestamp • AverageValue	N/A
ValidFlag	Valid identification of the statistical task of InSpeedBit	N/A	Enumeration: • **0**—No statistics. • **1**—Valid.	N/A
PeakValue	Peak value of each sample interval in the statistical interval of InSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PeakTimestamp	Peak time of each sample interval in the statistical interval of InSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ValleyValue	Valley value of each sample interval in the statistical interval of InSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ValleyTimestamp	Valley time of each sample interval in the statistical interval of InSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AverageValue	Average value of each sample interval in the statistical interval of InSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutSpeedBit	Rate of outbound bits on an interface	N/A	Include: • ValidFlag	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• PeakValue • PeakTimestamp • ValleyValue • ValleyTimestamp • AverageValue	
ValidFlag	Valid identification of the statistical task of OutSpeedBit	N/A	Enumeration: • **0**—No statistics. • **1**—Valid.	N/A
PeakValue	Peak value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PeakTimestamp	Peak time of each sample interval in the statistical interval of OutSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ValleyValue	Valley value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ValleyTimestamp	Valley time of each sample interval in the statistical interval of OutSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AverageValue	Average value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

        <PeakTimestamp>2018-11-19T18:20:00</PeakTimestamp>
        <ValleyValue>600</ValleyValue>
        <ValleyTimestamp>2018-11-19T18:25:00</ValleyTimestamp>
        <AverageValue>700</AverageValue>
      </Measure>
    </Interface>
  </IfmonStatisticsEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
IfIndex	Interface index	Unsigned integer.	No
TaskName	Statistical task name of an interface	String. Length: 1 to 31 characters.	No
MeasureName	Statistical measure name of an interface	String. Length: 1 to 63 characters.	No
PeakValue	Peak value of each sample interval in the statistical interval	Unsigned integer. Value range: 0 to 2^{64} - 1.	No
PeakTimestamp	Peak time of each sample interval in the statistical interval of measure	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	No
ValleyValue	Valley value of each sample interval in the statistical interval of measure	Unsigned integer. Value range: 0 to 2^{64} - 1.	No
ValleyTimestamp	Valley time of each sample interval in the statistical interval of measure	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	No
AverageValue	Average Value of each sample interval in the statistical interval of measure	Unsigned integer. Value range: 0 to 2^{64} - 1.	No

IfmonInputUsageAlarmEvent event

This event is used to report interface input-usage alarm information.

XML structure for event subscription

```
<IfmonInputUsageAlarmEvent>
  <Interface>
    <IfName> </IfName>
  </Interface>
</IfmonInputUsageAlarmEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmon</stream>
    <filter type="subtree">
```

```
    <IfmonInputUsageAlarmEvent
xmlns="http://www.h3c.com/netconf/event:1.0/Ifmon:1.0">
      <Interface>
        <IfName>GigabitEthernet2/0/1</IfName>
      </Interface>
    </IfmonInputUsageAlarmEvent>
  </filter>
 </create-subscription>
</rpc>
```

Table description

Table description

Item	Description
Feature name	IGMP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	IGMP enabling status	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
Version	IGMP version	N/A	Enumeration: • **1**—IGMP version 1. • **2**—IGMP version 2 (default). • **3**—IGMP version 3.	N/A
AuthEnabled	IGMP authorization enabling status	N/A	Boolean: • **true**—Enabled. • false—Disabled (default).	N/A
JoinBySession	Per-session multicast forwarding status	N/A	Enumeration: • **1**—Per-session multicast forwarding is enabled for BRAS access users. • **2**—Per-session multicast forwarding is enabled for non-BRAS access users. • 3—Per-session multicast forwarding is enabled for both BRAS and non-BRAS access users.	N/A
UserAggOuterVlan	Outer VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
UserAggInnerVlan	Inner VLAN for static VLAN tagging on multicast packets	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
DynamicVlan	Status of user-VLAN-based dynamic VLAN tagging on multicast packets	N/A	Enumeration: • **0**—Disabled (default). • **1—Enabled**	N/A
QueryInterval	General query interval	N/A	Unsigned integer. Value range: 1 to 31744, in seconds. Default: 125.	N/A
RobustCount	Robustness count	N/A	Unsigned integer. Value range: 1 to 255. Default: 2.	N/A
LastMemberQueryInterval	Last member query interval	N/A	Unsigned integer. Value range: 1 to 25, in seconds. Default: 1.	N/A
MaxRespo	Maximum	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
nseTime	response time		Value range: 1 to 3174, in seconds. Default: 10.	
OtherQuerierPresentInterval	Other querier present interval	N/A	Unsigned integer. Value range: 1 to 31744, in seconds. Default: 255	N/A
GroupPolicy	Multicast group policy	Data structure	Members include: • Acl • IgmpVersion	N/A
Acl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. • Length: 1 to 63.	N/A
IgmpVersion	Version number	N/A	Unsigned integer. Value range: 1 to 3.	By default, a multicast group policy takes effect on IGMP reports of all versions.
Proxy	IGMP proxy enabling status	N/A	Enumeration: • **0**—Disabled. • **1—Enabled.**	N/A
ProxyForwarding	IGMP proxy forwarding enabling status	N/A	Enumeration: • **0**—Disabled. • 1—Enabled.	N/A

IGMP/HostInterfaces

This table contains IGMP host interface information.

XML structure

```
<IGMP>
  <HostInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enabled></Enabled>
    </Interface>
  </HostInterfaces>
</IGMP>
```

Table description

Item	Description
Feature name	IGMP
Table name	HostInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Enabled	IGMP enabling status.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

IGMP/UserProfiles

This table contains IGMP user profile information.

XML structure

```
<IGMP>
  <UserProfiles>
    <UserProfile>
      <UserProfileName></UserProfileName>
      <AccessPolicy></AccessPolicy>
    </UserProfile>
  </UserProfiles>
</IGMP>
```

Table description

Item	Description
Feature name	IGMP
Table name	UserProfiles
Table type	Multi-instance table
Row name	UserProfile
Restrictions	None.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain letters, digits, underscores (_), minus signs (-), and dots (.). The name can start with a letter or digit, and cannot contain only digits. The name must be unique globally.
AccessPolicy	ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A

IGMP/SsmMappings

This table contains IGMP SSM mapping information.

XML structure

```
<IGMP>
  <SsmMappings>
    <SsmMapping>
      <VRF></VRF>
      <SourceAddr></SourceAddr>
      <Policy></Policy>
    </SsmMapping>
  </SsmMappings>
</IGMP>
```

Table description

Item	**Description**
Feature name	IGMP

Item	Description
Table name	SsmMappings
Table type	Multi-instance table
Row name	SsmMapping
Restrictions	No.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SourceAddr	IPv4 multicast source address	Index	String, dotted decimal notation.	N/A
Policy	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63.	N/A

IGMP/Instances

This table contains IGMP instance information.

XML structure

```
<IGMP>
  <Instances>
    <Instance>
      <VRF></VRF>
      <QueryInterval></QueryInterval>
      <RobustCount></RobustCount>
      <LastMemberQueryInterval></LastMemberQueryInterval>

LastMemberQueryInterval	Specify a lLast member query interval.	N/A	Unsigned integer. Value range: 1 to 25, in seconds.	N/A
MaxResponseTime	Specify a mMaximum response time.	N/A	Unsigned integer. Value range: 1 to 3174, in seconds.	N/A
OtherQuerierPresentInterval	Specify an oOther querier present interval.	N/A	Unsigned integer. Value range: 1 to 31744, in seconds.	N/A
GroupPolicy	Multicast gGroup pPolicy	Data structure	Members include: • Acl • IgmpVersion	N/A
Acl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: • 2000 to 3999. ACL name: • String. • Length: 1 to 63.	If the ACL does not exist or does not have valid rules, hosts cannot join any multicast groups.N/A
IgmpVersion	Version number.	N/A	Unsigned integer. Value range: 1 to 3.	By default, this commanda multicast group policy takes effect on IGMP reports of all versions.N/A
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Proxy	IGMP proxy enabling status	N/A	Enumeration: • **0**—Disabled. • 1—Enabled.	N/A
ProxyForwarding	IGMP proxy forwarding enabling status	N/A	Enumeration: • **0**—Disabled. • 1—Enabled.	N/A

IGMP/Groups

This table contains IGMP group information.

XML structure

```
<IGMP>
  <Groups>
    <Group>
      <IfIndex></IfIndex>
      <GroupAddr></GroupAddr>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </Group>
  </Groups>
</IGMP>
```

Table description

Item	Description
Feature name	IGMP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
GroupAddr	IPv4 multicast group address.	Index	String, dotted decimal notation.	Example: 224.1.1.1.
Uptime	Length of time since the multicast group	N/A	Unsigned integer (in seconds).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	was reported.			
Expires	Remaining time of the multicast group.	N/A	Unsigned integer (in seconds).	N/A
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

IGMP/SrcList

This table contains source information of IGMP groups.

XML structure

```
<IGMP>
  <SrcList>
    <Src>
      <IfIndex></IfIndex>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </Src>
  </SrcList>
</IGMP>
```

IGMP

IGMP/Interfaces

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP is not complete startup. 对该表进行配置时，IGMP还未完全启动。
Can’t specify an inner VLAN ID if no outer VLAN ID is specified. 若需要配置内层VLAN，则必须先配置外层VLAN。	During executing set operation, you must specify an outer VLAN ID before you can specify an inner VLAN ID. 对该表进行配置时，若需要配置内层VLAN，则必须先配置外层VLAN。
VLAN tagging for multicast packets and per-session multicast forwarding are mutually exclusive on a subinterface. 对组播报文进行VLAN封装与按会话记录用户加入的组播组，这两种配置互斥，不允许在同一个子接口上配置。	During executing set operation, you cannot configure both VLAN tagging for multicast packets and per-session multicast forwarding on a subinterface. 对该表进行SET操作时，对组播报文进行VLAN封装与按会话记录用户加入的组播组，这两种配置互斥，不允许在同一个子接口上配置。
Static VLAN tagging and user-VLAN-based dynamic VLAN tagging for multicast packets are mutually exclusive on a subinterface. 对组播报文的静态VLAN封装与基于用户VLAN的动态VLAN封装，这两种配置互斥，不允许在同一个子接口上配置。	During executing set operation, you cannot configure both static VLAN tagging and user-VLAN-based dynamic VLAN tagging for multicast packets on a subinterface. 对该表进行SET操作时，对组播报文的静态VLAN封装与基于用户VLAN的动态VLAN封装，这两种配置互斥，不允许在同一个子接口上配置。
User-VLAN-based dynamic VLAN tagging for multicast cannot be configured or de-configured while users are online. 当有用户在线时，不能对基于用户VLAN的动态VLAN封装进行配置或者去配置。	During executing set operation, User-VLAN-based dynamic VLAN tagging for multicast cannot be configured or de-configured while users are online. 对该表进行SET操作时，当有用户在线时，不能对基于用户VLAN的动态VLAN封装进行配置或者去配置。
The column of IgmpVersion can’t exist alone without Acl. IgmpVersion属性列不能脱离Acl而单独存在。	During executing set operation, the operation is forbidden that would cause IgmpVersion exist alone. 对该表进行配置时，将导致IgmpVersion单独存在的操作禁止下发。
The acl input is invalid. ACL输入不合法。	During executing set operation, the acl input is invalid. 对该表进行配置时，ACL输入不合法。
The IgmpVersion and Acl columns must be both configured. IGMP版本和ACL必须同时配置。	The IgmpVersion and Acl columns must be both configured. 对该表进行配置时，IGMP版本和ACL必须同时配置。
The UserAggInnerVlan and UserAggOuterVlan columns must be both configured. 组播报文封装的内外层VLAN Tag必须同时配置。	The UserAggInnerVlan and UserAggOuterVlan columns must be both configured. 对该表进行配置时，组播报文封装的内外层VLAN Tag必须同时配置。
The JoinBySession column can only be configured as 3. 按会话记录用户加入的组播组只可配置为3。	The JoinBySession column can only be configured as 3. 对该表进行配置时，按会话记录用户加入的组播组只可配置为3。

IGMP/Groups

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP is not complete startup. 对该表进行配置时，IGMP还未完全启动。

IGMP/SrcList

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP is not complete startup.. 对该表进行配置时，IGMP还未完全启动。

IGMP/HostInterfaces

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP is not complete startup. 对该表进行配置时，IGMP还未完全启动。

IGMP/UserProfiles

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP does not completely start up. 对该表进行配置时，IGMP还未完全启动。

IGMP/SsmMappings

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready.	During executing set operation, IGMP is not complete startup.

IGMP尚未就绪。	对该表进行配置时，IGMP还未完全启动。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the VPN instance does not exist. 对该表进行配置时，VPN实例不存在。
ACL must be set with index. ACL必须同索引一起下发。	During executing set operation, acl must be set with index. 对该表进行配置时，ACL必须同配置对象一起下发。
ACL must be deleted with configuration object. ACL必须同配置对象一起删除。	During executing set operation, acl must be deleted with configuration object. 对该表进行配置时，ACL必须同配置对象一起删除。
The acl input is invalid. ACL输入不合法。	During executing set operation, the acl input is invalid. 对该表进行配置时，ACL输入不合法。
The specified igmp vpn-instance view is not existed. 指定的IGMP实例视图不存在。	During executing set operation, the specified igmp vpn-instance view is not existed. 对该表进行配置时，指定的IGMP实例视图不存在。

IGMP/Instances

Message	Explanation
IGMP is not configured. IGMP尚未配置。	During executing set operation, IGMP is not configured. 对该表进行配置时，IGMP 还未配置。
IGMP is not ready. IGMP尚未就绪。	During executing set operation, IGMP is not complete startup. 对该表进行配置时，IGMP还未完全启动。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the VPN instance does not exist. 对该表进行配置时，VPN实例不存在。

IGMP/StaticGroups

Message	Explanation
The multicast group address is illegal. 组播组地址不合法。	During set operation, the multicast group address specified is invalid. 对该表进行配置时，组播组地址是不合法的。
Configuration conflict.配置冲突	During set operation, For the same multicast group or source, the non-VLAN-based, single-VLAN-based, or double-VLAN-based static member interface configurations are mutually exclusive. 对该表进行配置时，对于同一个组播组或组播源组，不带VLAN封装、带一层VLAN封装和带两层VLAN封装的静态加入配置两两互斥，不允许同时配置。

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable IGMP snooping for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
Version	Specify the IGMP snooping version for the specified VSI.	N/A	Enumeration: • **2**(default) • **3**	N/A
DropUnknow	Enable IGMP	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
n	snooping dropping unknown multicast data for the specified VSI.		• **disable**(default) • **enable**	
Querier	Enable the IGMP snooping querier for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
QueryInterval	Set the IGMP snooping general query interval for the specified VSI.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IP address of IGMP general queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SpecialQuerySourceAddr	Specify the source IP address for IGMP group-specific queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ReportSourceAddr	Specify the source IP address of IGMP reports for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LeaveSourceAddr	Specify the source IP address for IGMP leave messages for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Proxy	Enable IGMP snooping proxy for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
QuerierElection	Enable IGMP snooping querier election for the specified VSI.	N/A	Enumeration: • **disable**(default) • **enable**	N/A

IGMPSnooping/FastLeavePorts

This table contains the IGMP snooping fast leave information on ports.

XML structure

```
<IGMPSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
    </Interface>
  </FastLeavePorts>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
FastLeaveVlanList	Set IGMP snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

IGMPSnooping/GroupLimitPorts

This table contains the IGMP snooping group limit information on ports.

XML structure

```
<IGMPSnooping>
```

```
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList ></GroupLimitVlanList>
    </Interface>
  </GroupLimitPorts>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set IGMP snooping group limit for VLANs on a port.	N/A	VLAN list.	You must specify VLANs when the operation is merge, create or replace. You can't specify VLANs when the operation is delete or remove. Example: 1,2,3,5-8,10-20.

IGMPSnooping/StaticGroupPorts

This table contains the IGMP snooping group information of ports based on service-instance.

XML structure

```
<IGMPSnooping>
  <StaticGroupPorts>
    <StaticGroupPort>
      <IfIndex></IfIndex>
      <VSIStaticGroups>
        <VSIStaticGroup>
          <SrvID></SrvID>
          <GroupAddr></GroupAddr>
          <SourceAddr></SourceAddr>
        </VSIStaticGroup>
      </VSIStaticGroups>
    </StaticGroupPort>
  </StaticGroupPorts>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	StaticGroupPorts
Table type	Multi-instance table
Row name	StaticGroupPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
SrvID	Service instance ID	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 4096.	
GroupAddr	Specify a multicast group address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SourceAddr	Specify a multicast source address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

IGMPSnooping

IGMPSnooping/Configuration

This table contains global IGMP snooping information.

XML structure

```
<IGMPSnooping>
  <Configuration>
    <Enabled></Enabled>
  </Configuration>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Enabled	Set IGMP snooping state globally.	N/A	Enumeration: • **enable** • **disable**

IGMPSnooping/VLANs

This table contains the IGMP snooping information for VLANs.

XML structure

```
<IGMPSnooping>
  <VLANs>
    <VLAN>
      <VLANID></VLANID>
      <Enabled></Enabled>
```

```
    <Version></Version>
    <DropUnknown></DropUnknown>
    <Querier></Querier>
    <QueryInterval></QueryInterval>
    <GeneralQuerySourceAddr></GeneralQuerySourceAddr>
    <SpecialQuerySourceAddr></SpecialQuerySourceAddr>
    <ReportSourceAddr></ReportSourceAddr>
    <LeaveSourceAddr></LeaveSourceAddr>
    <Proxy></Proxy>
    <QuerierElection></QuerierElection>
    <TriggeredQueryPortDown></TriggeredQueryPortDown>
    <TriggeredQueryPortUp></TriggeredQueryPortUp>   </VLAN>
  </VLANs>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enabled	Set IGMP snooping state for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A
Version	Specify the IGMP snooping version for specified VLAN.	N/A	Enumeration: • **2** • **3**	N/A
DropUnknown	Set IGMP snooping dropping unknown for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A
Querier	Set IGMP snooping querier for specified VLAN.	N/A	Enumeration: • **enable** • **disable**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QueryInterval	Specify IGMP snooping general query interval for specified VLAN.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IP address of IGMP general queries for specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SpecialQuerySourceAddr	Specify the source IP address for IGMP group-specific queries for specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ReportSourceAddr	Specify the source IP address of IGMP reports for the specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LeaveSourceAddr	Specify the source IP address for IGMP leave messages for the specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Proxy	Enable IGMP snooping proxy for the specified VLAN.	N/A	Enumeration: • **disable** • **enable**	N/A
QuerierElection	Enable IGMP snooping querier election for the specified VLAN.	N/A	Enumeration: • **disable** • **enable**	N/A
TriggeredQueryPortDown	IGMP snooping query triggered by port-down events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A
TriggeredQueryPortUp	IGMP snooping query triggered by port-up events in a VLAN.	N/A	Enumeration: • **disable**—Disabled (default). • **enable**—Enabled.	N/A

IGMPSnooping/VSIs

This table contains the IGMP snooping information for VSIs.

XML structure

```
<IGMPSnooping>
  <VSIs>
    <VSI>
      <VsiName></VsiName>
      <Enabled></Enabled>
      <Version></Version>
      <DropUnknown></DropUnknown>
      <Querier></Querier>
      <QueryInterval></QueryInterval>
      <GeneralQuerySourceAddr></GeneralQuerySourceAddr>
      <SpecialQuerySourceAddr></SpecialQuerySourceAddr>
      <ReportSourceAddr></ReportSourceAddr>
      <LeaveSourceAddr></LeaveSourceAddr>
      <Proxy></Proxy>
      <QuerierElection></QuerierElection>
    </VSI>
  </VSIs>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable IGMP snooping for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
Version	Specify the IGMP snooping version for the specified VSI.	N/A	Enumeration: • **2** • **3**	N/A
DropUnknown	Enable IGMP snooping dropping	N/A	Enumeration: • **disable**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	unknown multicast data for the specified VSI.		• **enable**	
Querier	Enable IGMP snooping querier for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
QueryInterval	Set the IGMP snooping general query interval for the specified VSI.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IP address of IGMP general queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SpecialQuerySourceAddr	Specify the source IP address for IGMP group-specific queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ReportSourceAddr	Specify the source IP address of IGMP reports for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LeaveSourceAddr	Specify the source IP address for IGMP leave messages for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Proxy	Enable IGMP snooping proxy for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A
QuerierElection	Enable IGMP snooping querier election for the specified VSI.	N/A	Enumeration: • **disable** • **enable**	N/A

IGMPSnooping/FastLeavePorts

This table contains the IGMP snooping fast leave information on ports.

XML structure

```
<IGMPSnooping>
```

```
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
      <IfName></IfName>
    </Interface>
  </FastLeavePorts>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
FastLeaveVlanList	Set IGMP snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

IGMPSnooping/GroupLimitPorts

This table contains the IGMP snooping group limit information on ports.

XML structure

```
<IGMPSnooping>
  <GroupLimitPorts>
```

```
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList></GroupLimitVlanList>
      <IfName></IfName>
    </Interface>
  </GroupLimitPorts>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set IGMP snooping group limit for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

IGMPSnooping/IPv4Layer2MulticastGroups

This table contains information about Layer 2 IP multicast groups for VLANs.

XML structure

```
<IGMPSnooping>
  <IPv4Layer2MulticastGroups>
    <VLAN>
      <VLANID></VLANID>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <IfIndex></IfIndex>
      <PortAttribute></PortAttribute>
      <IfName></IfName>
    </VLAN>
  </IPv4Layer2MulticastGroups>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	IPv4Layer2MulticastGroups
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
GroupAddr	IPv4 multicast address .	Index	String, dotted decimal notation.	N/A
SourceAddr	IPv4 address.	Index	String, dotted decimal notation.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
PortAttribute	Port attribute.	N/A	Each bit represents a port attribute. Values: • 1—Learned from IGMP packets. • 2—Learned from IGMP packets with Exclude filter mode. • 4—Configured statically. • 8—Learned from PIM packets. • 16—Obtained from the kernel. • 32—Learned from (*, *) entries. • 64—Learned from (*, G) entries. • 128—Processed successfully. • 256—Failed to being processed. • 512—TRILL port that floods multicast data after the topology changes in VLAN.	Examples: • 129—means a port learned from IGMP packets and processed successfully. • 136—means a port learned from PIM packets and processed successfully.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

IGMPSnooping/VsiIPv4Layer2MulticastGroups

This table contains information about Layer 2 IP multicast groups for VSIs.

XML structure

```
<IGMPSnooping>
  <VsiIPv4Layer2MulticastGroups>
    <VSI>
      <VsiName></VsiName>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <LinkID></LinkID>
      <PortAttribute></PortAttribute>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <IfName></IfName>
    </VSI>
  </VsiIPv4Layer2MulticastGroups>
</IGMPSnooping>
```

Table description

Item	Description
Feature name	IGMPSnooping
Table name	VsiIPv4Layer2MulticastGroups
Table type	Multi-instance table
Row name	VSI
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
GroupAddr	IPv4 multicast address.	Index	String, dotted decimal notation.	N/A
SourceAddr	IPv4 address.	Index	String, dotted decimal notation.	N/A
LinkID	Link ID.	Index	Unsigned integer.	N/A
PortAttribute	Port attribute.	N/A	Each bit represents a port attribute. Values: • 1—Learned from IGMP packets. • 2—Learned from IGMP packets with Exclude filter mode. • 8—Learned from PIM packets. • 16—Obtained from the kernel. • 32—Learned from (*, *) entries. • 64—Learned from (*, G) entries. • 128—Processed successfully. • 256—Failed to being processed. • 512—Multicast tunnel interface for a multicast-mode VXLAN. • 1024—Learned from EVPN BGP route. • 2048—Port in Exclude filter-mode and learned from EVPN BGP route.	Examples: • 129—means a port learned from IGMP packets and processed successfully. • 1152—means a port learned from EVPN BGP route and processed successfully.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
SrvID	Ethernet service instance ID.	N/A	Unsigned integer. Value range: 0 to 4096.	The value is 0 if the interface is not a Layer 2 Ethernet interface.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

IGMPSnooping/StaticGroupPorts

This table contains the IGMP snooping group information of ports based on service-instance.

XML structure

```
<IGMPSnooping>
  <StaticGroupPorts>
    <StaticGroupPort>
      <IfIndex></IfIndex>
      <VSIStaticGroups>
        <VSIStaticGroup>
          <SrvID></SrvID>
          <GroupAddr></GroupAddr>
          <SourceAddr></SourceAddr>
        </VSIStaticGroup>
      </VSIStaticGroups>
    </StaticGroupPort>
  </StaticGroupPorts>
</IGMPSnooping>
```

Table description

Item	Description

IGMPSnooping

IGMPSnooping/Configuration

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabling globally. 全局IGMP snooping正在去使能。	During executing set operation to enable global IGMP snooping, IGMP snooping is disabling globally. 使能全局IGMP snooping时，全局IGMP snooping正在去使能。

IGMPSnooping/VLANs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping drop-unknown is enabled globally. 全局IGMP snooping已配置drop-unknown。	During executing set operation to enable drop-unkown for this VLAN, IGMP snooping drop-unknown is enabled globally. 使能VLAN内drop-unknown时，全局drop-unkown已经使能。
IGMP snooping is disabled on the VLAN. VLAN未使能IGMP snooping。	During executing set operation for this VLAN, IGMP snooping is disabled on the VLAN. 对该VLAN进行设置时，VLAN未使能IGMP snooping。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation for this VLAN, IGMP snooping is disabled globally. 对该VLAN进行设置时，全局IGMP snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VLAN, the value of GeneralQuerySourceAddr is invalid. 对该VLAN内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VLAN, the value of SpecialQuerySourceAddr is invalid. 对该VLAN内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VLAN, the value of ReportSourceAddr is invalid. 对该VLAN内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of leave messages. Leave报文源IP地址错误。	During executing set operation for LeaveSourceAddr of this VLAN, the value of LeaveSourceAddr is invalid. 对该VLAN内LeaveSourceAddr进行设置时，LeaveSourceAddr值错误。

IGMPSnooping/VSIs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation,daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping drop-unknown is enabled globally. 全局IGMP snooping已配置drop-unknown。	During executing set operation to enable drop-unkown for this VSI, IGMP snooping drop-unknown is enabled globally. 使能VSI内drop-unknown时，全局drop-unkown已经使能。
IGMP snooping is disabled on the VSI. VSI未使能IGMP snooping。	During executing set operation for thisVSI, IGMP snooping is disabled on theVSI. 对该VSI进行设置时，VSI未使能IGMP snooping。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation for thisVSI, IGMP snooping is disabled globally. 对该VSI进行设置时，全局IGMP snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VSI, the value of GeneralQuerySourceAddr is invalid. 对该VSI内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VSI, the value of SpecialQuerySourceAddr is invalid. 对该VSI内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VSI, the value of ReportSourceAddr is invalid. 对该VSI内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of leave messages. Leave报文源IP地址错误。	During executing set operation for LeaveSourceAddr of this VSI, the value of LeaveSourceAddr is invalid. 对该VSI内LeaveSourceAddr进行设置时，LeaveSourceAddr值错误。

IGMPSnooping/FastLeavePorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get或者set操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation, IGMP snooping is disabled globally. 对该表进行配置时，全局 IGMP snooping 未使能。

IGMPSnooping/GroupLimitPorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation, IGMP snooping is disabled globally. 对该表进行配置时，全局 IGMP snooping 未使能。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	GroupLimitVLANList can’t be removed alone, and should be removed together with Limit. GroupLimitVLANList不能单独删除，需要和Limit一起删除。

IGMPSnooping/IPv4Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

IGMPSnooping/ VSIIPv4Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	The mode of DPD	N/A	Enumeration: • **1**—On-demand, • 2—Periodic	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
Keepalive	Global keepalive configuration	Data structure	Members include: • Interval • Timeout	N/A
Interval	Keepalive Interval	N/A	Unsigned integer: Value range:20 to 28800, in seconds.	N/A
Timeout	Keepalive Timout	N/A	Unsigned integer: Value range:20 to 28800, in seconds.	N/A
SignIDfrom Cert	Digital signature authentication, If enable get the identity of the local end from the	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	certificate			
InvalidSPIRecovery	If enable Re-stablish an IKE SA upon an invalid-SPI event	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
NatKeepaliveInterval	NAT keepalive Interval	N/A	Unsigned integer: Value range:5 to 300, in seconds. Default value is 20	N/A
IKESACountLimit	Limit the number of IKE SA established and in negotiation	Data structure	Members include: • EstablishLimit • NegotiateLimit	N/A
EstablishLimit	Limit the maximum number of established SAs	N/A	Unsigned integer: Value range:1 to 99999	N/A
NegotiateLimit	Limit the maximum number of negotiation SAs	N/A	Unsigned integer: Value range:1 to 99999	N/A
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
LoggingNegotiation	Logging for IKE event negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
CompatibleSm4	Backward compatibility for the sm4-cbc	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm			
GmInitiatorVersion	The version number carried in the negotiation message	N/A	Enumeration: • 1—1.0 • 2—1.1	N/A
GdQuantum	GD-quantum settings	Data structure	Members include: • Enable • AppDevInfo • AuthKey • ServerIPType • ServerIPAddress • Port • DecryptQuantumKey	N/A
Enable	Enable GD-quantum encryption	N/A	Boolean: • **true**—Enable. • **false—**Disable.	N/A
AppDevInfo	GD-quantum access ID	N/A	String: Length: 9 characters Digits only.	N/A
AuthKey	GD-quantum authentication key	N/A	String: Length: 64 hex characters for a plaintext key. Case sensitive.	Specify the AuthKey in plain text text.
ServerIPType	IP version of the GD-quantum server address	N/A	Enumeration: • 0—IPv4.	N/A
ServerIPAddress	IP address of the GD-quantum server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
Port	Port number of the GD-quantum server.	N/A	Unsigned integer: Value range:1 to 65535. Default value is 8013.	N/A
DecryptQuantumKey	GD-quantum decryption key	N/A	String: Length: 64 hex characters for a plaintext key. Case sensitive.	Specify the DecryptKey in plain text text.
ZdQuantum	ZD-quantum settings	Data structure	Members include: • Enable. • AppDevInfo.	N/A
Enable	Enable ZD-quantum encryption	N/A	Boolean: • **true**—Enable. • **false—**Disable.	N/A
AppDevInfo	ZD-quantum access ID	N/A	String: Length:1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Case sensitive	

IKEv1/Profiles

Table description

Item	Description
Feature name	IKEv1
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE profile	N/A	Unsigned integer: Value range:1 to 65535 Default value is 100.	N/A
Mode	The phase 1 negotiation mode	N/A	Enumeration: • **1**—Main • 2—Aggressive • 3—GM-main Default value is 1	N/A
ProposalList	Reference an IKE proposal for the IKE profile	Data structure	Members include: • ProposalItem	N/A
ProposalItem	IKE proposal number	N/A	Unsigned integer: Value range:1 to 65535	Contains up to 6 ProposalItem in ProposalList.
KeychainList	Reference an IKE keychain for the IKE profile	Data structure	Members include: • KeychainItem	N/A
KeychainItem	IKE keychain name	N/A	String: Length:1 to 63 characters	Case insensitive. Contains up to 6 KeychainItem in KeychainList.
CertificateDomainList	Reference a PKI domain for the IKE profile	Data structure	Members include: • DomainItem	N/A
DomainItem	PKI domain name	N/A	String: Length:1 to 31 characters Case insensitive.	Contains up to 6 KeychainItem in KeychainList.
CertACPList	Reference a PKI certificate access control policy for the IKE profile	Data structure	Members include: • CertACPItem	N/A
CertACPItem	The Name of PKI certificate access control policy	N/A	String: Length:1 to 31 characters Case insensitive.	Contains unrestricted CertACPItem in CertACPList.
MatchRemoteFQDNList	Configure a rule of match the peer FQDN information for	Data structure	Members include: • FQDNItem	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the IKE profile			
FQDNItem	The peer FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted FQDNItem in MatchRemoteFQDNList.Incremental support
MatchRemoteUserFQDNList	Configure a rule of match the peer User FQDN information for the IKE profile	Data structure	Members include: • UserFQDNItem	N/A
UserFQDNItem	The peer user FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted UserFQDNItem in MatchRemoteUserFQDNList. .Incremental support
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
MatchLocalAddr	Match the local address	Data structure	Members include: • AddressType • IpAddress • VRF • Interface	N/A
AddressType	The type of IP address	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—Interface	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.
DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	The mode of DPD	N/A	Enumeration: • **1**—On-demand, • 2—Periodic	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
InsideVRF	The inside VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	N/A
ClientXauth	Whether the client authentication is enabled.	N/A	Boolean: • true • false (default)	N/A
AAAAuthorization	AAA authentication	N/A	Members include: • Domain • UserName	N/A
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	Domain name must not include / \\ | " : * ? < > @, and must not be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown. Domain must be configured when the instance does not exist.
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	User name must not include \\ | / : * ? < > @, and must not be a, al, all.
SASoftDuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 10 to 36000.	N/A
ClientXauthUser	Client authentication user information	N/A	Members include: • User. • PasswordType. • Password. • ClientXauthServer.	N/A
User	Username	N/A	String: case-insensitive. Length: 1 to 55 characters.	The username cannot contain a forward slash

Column name	Column description	Column type	Data type and restrictions	Remarks
				(/), backslash (\), vertical bar (|), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@). The username cannot be **a**, **al**, or **all**.
PasswordType	Type of the user password	N/A	Enumeration: • **1**—Simple. • **2**—Cipher.	N/A
Password	User password	N/A	Plaintext string: 1 to 63 characters. Ciphertext string: 1 to 110 characters.	N/A
ClientXauthServer	ClientXauthServer	N/A	Enumeration: • 0—None • 2—JitServer	N/A
MatchRemoteDomainList	Peer FQDN domain information for IKE profile matching	Data structure	Members include: DomainItem.	N/A
DomainItem	Peer FQDN domain	N/A	String: case sensitive. Length:1 to 255 characters.	.Incremental support
RemoteIdentityauthorization	Enable authorization based on peer identity	Data structure	Members include: • Domain. • UserName	Domain must be specified when UserName is specified.
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	Domain name must not include / \\ | " : * ? < > @, and must not be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown. Domain must be configured when the instance does not exist.
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	User name must not include \\ | / : * ? < > @, and must not be a, al, all.
Sm4Version	The sm4 version	N/A	Enumeration: • 1—standard • 2—draft Default value is 1.	The column is only available in GM delivery.
GmInitiatorVersion	The version number carried in the negotiation message	N/A	Enumeration: • 1—1.0 • 2—1.1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerSerialNumber	The serial number of the peer certificate	N/A	String: not case-sensitive. Length:1 to 127 characters.	A string of hexadecimal numbers.
MatchRemoteAddr	Peer gateway IP address for matching ike profile	Data structure	Members include: • MatchType • IpAddress	N/A
MatchType	The type of matching remote address	N/A	Enumeration: • 1—dynamic • 2—static	N/A
IpAddress	The IP address of peer gateway	N/A	Ipv4 address or Ipv6 address	When MatchType is dynamic, cannot config IpAddress.
DynamicSrcPortEnable	Whether using the dynamic port for negotiation	N/A	Boolean: • true • false (default)	N/A

IKEv1/MatchRemoteIpv4AddressByHostName

This table is used to configure a rule that uses a hostname to identify the remote IPv4 address for matching remote identity.

XML structure

```
<IKEv1>
  <MatchRemoteIpv4AddressByHostName>
    <RemoteID>
      <Profile></Profile>
      <HostName></HostName>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4AddressByHostName>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4AddressByHostName
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of an IKE profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
HostName	Remote host name	Index	String. Length:1 to 253 characters.	N/A
VRF	VPN instance to which the remote host address belongs	Index	String, case sensitive. Length: 0 to 31 characters.	If the remote host is on the public network, the length of characters is 0.

IKEv1/MatchRemoteIpv4Address

This table is used to operate the rule about how to match remote identity when it's IPv4 address.

XML structure

```
<IKEv1>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Address	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	Index	Ipv4Address mask	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/MatchRemoteIpv6Address

This table is used to operate the rule about how to match remote identity when it's IPv6 address.

XML structure

```
<IKEv1>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Address	The value of IPv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer: Value range:0 to 128, in seconds.	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/ MatchRemoteIpv4Range

This table is used to operate the rule about how to match remote identity when it's IPv4 address range.

XML structure

```
<IKEv1>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv1>
```

Table description

Item	Description

Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv4Address	Start IPv4 Address	Index	Ipv4Address	N/A
EndIpv4Address	End IPv4 Address	Index	Ipv4Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/ MatchRemoteIpv6Range

This table is used to operate the rule about how to match remote identity when it's IPv6 range.

XML structure

```
<IKEv1>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv6Address	Start IPv6 Address	Index	Ipv6Address	N/A
EndIpv6Address	End IPv6 Address	Index	Ipv6Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/Proposals

This table is used to configure IKE proposals.

XML structure

```
<IKEv1>
  <Proposals>
    <Proposal>
      <Priority></Priority>
      <AuthorityMethod></AuthorityMethod>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <DHID></DHID>
      <SADuration></SADuration>
      <Description></Description>
    </Proposal>
  </Proposals>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Proposal
Table type	Multi-instance table

Row name	Proposal
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	priority	Index	Unsigned integer. Value range: 0 to 65535.	If the Priority is set to 0,the proposal will be created automatically wih the largest number currently unused
AuthorityMethod	Authentication method Id	N/A	Enumeration: • **1**—Pre-Shared-Key • 2—RSA-Signature • 3—DSA-Signature • 4—RSA-DE-digital envelope • 5—SM2-DE-digital envelope • 6—ECDSA-Signature Default value is **1**	N/A
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer	See table IKECapabilities for supported Authentication algorithm
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer	See table IKECapabilities for supported Diffie-Hellman group
SADuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 60 to 604800. in seconds. Default value is 86400	N/A
Description	Description of proposal	N/A	String: Length:1 to 80 characters Case sensitive	

IKEv1/Keychains

This table is used to configure IKE keychain.

XML structure

```
<IKEv1>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Priority></Priority>
      <KeychainVRF></KeychainVRF>
      <MatchLocalAddr>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <VRF></VRF>
        <Interface></Interface>
      </MatchLocalAddr>
    </Keychain>
  </Keychains>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE keychain	N/A	Unsigned integer: • Value range:1 to 65535. Default value is 100	N/A
KeychainVRF	The VPN instance of keychain	N/A	String: Length:1 to 31 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	belongs to		Case sensitive	
MatchLocal Addr	Match the local address	Data structure	Members include: • AddressType • IpAddress • VRF • Interface	N/A
AddressTyp e	The type of IP address	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—Interface	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.

IKEv1/HostPreSharedKeys

This table is used to configure the host pre-shared key for IKE keychain.

XML structure

```
<IKEv1>
  <HostPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Host></Host>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </HostPreSharedKeys>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	HostPreSharedKeys

Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Host	Host name	Index	String: Length:1 to 255 characters Case sensitive	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: • **1**—Simple, • 2—Cipher	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

IKEv1/DomainPreSharedKeys

This table is used to configure the domain pre-shared key for IKE keychain.

XML structure

```
<IKEv1>
  <DomainPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Domain></Domain>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </DomainPreSharedKeys>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	DomainPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Domain	Peer FQDN domain	Index	String: Length:1 to 255 characters Case sensitive	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: • **1**—Simple, • 2—Cipher	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

IKEv1/Ipv4AddressByHostNamePSKs

This table is used to configure a preshared key in an IKE keychain for negotiation with a peer IPv4 address identified by the hostname.

XML structure

```
<IKEv1>
  <Ipv4AddressByHostNamePSKs>

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressByHostNamePSKs
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of an IKE keychain	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
HostName	Remote host name	Index	String. Length: 1 to 253 characters.	N/A
KeyType	Type of the preshared key	N/A	Enumeration: • **1**—Simple. • 2—Cipher.	N/A
Key	Value of the preshared key	N/A	String. Length: • 1 to 128 characters for a plaintext key string. • 1 to 201 characters for a ciphertext key string.	N/A

IKEv1/ Ipv4AddressPreSharedKeys

This table is used to configure the IPv4 address pre-shared key for IKE keychain.

XML structure

```
<IKEv1>
  <Ipv4AddressPreSharedKeys>
```

```
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </Ipv4AddressPreSharedKeys>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Address	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	N/A	Ipv4Address Mask	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: • **1**—Simple, • 2—Cipher	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

IKEv1/ Ipv6AddressPreSharedKeys

This table is used to configure the IPv6 address pre-shared key for IKE keychain.

XML structure

```
<IKEv1>
  <Ipv6AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </Ipv6AddressPreSharedKeys>
</IKEv1>
```

Table description

Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
LowIpv6Address	Start Ipv6 Address	Index	Ipv6Address	N/A
HighIpv6Address	End Ipv6 Address	Index	Ipv6Address	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: • **1**—Simple, • 2—Cipher	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

IKEv1/Ipv4AddressGroup

This table is used to configure an IKE IPv4 address pool for assigning IPv4 addresses to remote peers.

XML structure

```
<IKEv1>
  <Ipv4AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
```

```
      <StartIPAddr></StartIPAddr>
      <EndIPAddr></EndIPAddr>
      <IPv4Mask></IPv4Mask>
    </AddressGroup>
  </Ipv4AddressGroup>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressGroup
Table type	Multi-instance table
Row name	AddressGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the IPv4 address group	Index	String: case-insensitive. Length:1 to 63 characters.	N/A
StartIPaddr	Start IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.	StartIPaddr can not be higher than EndIPaddr. StartIPaddr and EndIPaddr must be configured together when the instance does not exist.
EndIPaddr	End IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.	N/A
IPv4Mask	Mask of the IPv4 address	N/A	IPv4: String, dotted decimal notation.	N/A

IKEv1/Ipv6AddressGroup

This table is used to configure an IKE IPv6 address pool for assigning IPv6 addresses to remote peers.

XML structure

```
<IKEv1>
```

```
  <Ipv6AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
      <IPv6Addr>
        <Prefix></Prefix>
        <PrefixLen></PrefixLen>
      </IPv6Addr>
      <AssignLen></AssignLen>
    </AddressGroup>
  </Ipv6AddressGroup>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv6AddressGroup
Table type	Multi-instance table
Row name	AddressGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the IPv6 address pool	Index	String: case-insensitive. Length:1 to 63 characters.	N/A
IPv6Addr	IPv6 information.	Data structure	Members include: • Prefix. • PrefixLen.	The two members must both be specified.
Prefix	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
PrefixLen	Length of the IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
AssignLen	IPv6 prefix length for assignment.	N/A	Unsigned integer. Value range: 1 to 128.	N/A

Table description

Item	Description
Feature name	IKEv1
Table name	GlobalConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	The mode of DPD	N/A	Enumeration: • **1**—On-demand, • 2—Periodic	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
Keepalive	Global keepalive configuration	Data structure	Members include: • Interval • Timeout	N/A
Interval	Keepalive Interval	N/A	Unsigned integer: Value range:20 to 28800, in seconds.	N/A
Timeout	Keepalive Timout	N/A	Unsigned integer: Value range:20 to 28800, in seconds.	N/A
SignIDfrom Cert	Digital signature authentication, If enable get the identity of the local end from the certificate	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InvalidSPIRecovery	If enable Re-stablish an IKE SA upon an invalid-SPI event	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
NatKeepaliveInterval	NAT keepalive Interval	N/A	Unsigned integer: Value range:5 to 300, in seconds. Default value is 20	N/A
IKESACountLimit	Limit the number of IKE SA in established and in negotiation	Data structure	Members include: • EstablishLimit • NegotiateLimit	N/A
EstablishLimit	Limit the maximum number of established SAs	N/A	Unsigned integer: Value range:1 to 99999	N/A
NegotiateLimit	Limit the maximum number of negotiation SAs	N/A	Unsigned integer: Value range:1 to 99999	N/A
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
LoggingNegotiation	Logging for IKE event negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
Compatible Sm4	Backward compatibility for the sm4-cbc algorithm	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GmInitiatorVersion	The version number carried in the negotiation message	N/A	Enumeration: • 0—None • 1—1.0 • 2—1.1	None is reserved for future completion, for now, it just behaves like 1.1.
GdQuantum	GD-quantum settings	Data structure	Members include: • Enable • AppDevInfo • AuthKey • ServerIPType • ServerIPAddress • Port • DecryptQuantumKey	N/A
Enable	Enable GD-quantum encryption	N/A	Boolean: • **true**—Enable. • **false—**Disable.	N/A
AppDevInfo	GD-quantum access ID	N/A	String: Length: 9 characters Digits only.	N/A
AuthKey	GD-quantum authentication key	N/A	String: Length: 64 hex characters for a plaintext key. Case sensitive.	N/A.
ServerIPType	IP version of the GD-quantum server address	N/A	Enumeration: • 0—IPv4.	N/A
ServerIPAddress	IP address of the GD-quantum server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: `10.1.1.1`.
Port	Port number of the GD-quantum server.	N/A	Unsigned integer: Value range:1 to 65535.	N/A
DecryptQuantumKey	GD-quantum decryption key	N/A	String: Length: 64 hex characters for a plaintext key. Case sensitive.	N/A
ZdQuantum	ZD-quantum settings	Data structure	Members include: • Enable. • AppDevInfo.	N/A
Enable	Enable ZD-quantum encryption	N/A	Boolean: • **true**—Enable. • **false—**Disable.	N/A
AppDevInfo	ZD-quantum access ID	N/A	String: Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Case sensitive	

IKEv1/Profiles

This table displays IKE profiles information.

Table description

Item	Description
Feature name	IKEv1
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE profile	N/A	Unsigned integer: Value range:1 to 65535 Default value is 100.	N/A
Mode	The phase 1 negotiation mode	N/A	Enumeration: • **1**—Main • 2—Aggressive • 3—GM-main Default value is 1	N/A
ProposalList	Reference an IKE proposal for the IKE profile	Data structure	Members include: • ProposalItem	N/A
ProposalItem	IKE proposal number	N/A	Unsigned integer: Value range:1 to 65535	Contains up to 6 ProposalItem in ProposalList.
KeychainList	Reference an IKE keychain for the IKE profile	Data structure	Members include: • KeychainItem	N/A
KeychainItem	IKE keychain name	N/A	String: Length:1 to 63 characters Case insensitive.	Contains up to 6 KeychainItem in KeychainList.
CertificateDomainList	Reference a PKI domain for the IKE profile	Data structure	Members include: • DomainItem	N/A
DomainItem	PKI domain name	N/A	String: Length:1 to 31 characters Case insensitive.	Contains up to 6 KeychainItem in KeychainList.
CertACPList	Reference a PKI certificate access control policy for the IKE profile	Data structure	Members include: • CertACPItem	N/A
CertACPItem	The Name of PKI certificate access control policy	N/A	String: Length:1 to 31 characters Case insensitive.	Contains unrestricted CertACPItem in CertACPList.
MatchRemoteFQDNList	Configure a rule of match the peer FQDN information for the IKE profile	Data structure	Members include: • FQDNItem	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FQDNItem	The peer FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted FQDNItem in MatchRemoteFQDNList.
MatchRemoteUserFQDNList	Configure a rule of match the peer User FQDN information for the IKE profile	Data structure	Members include: • UserFQDNItem	N/A
UserFQDNItem	The peer user FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted UserFQDNItem in MatchRemoteUserFQDNList.
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
MatchLocalAddr	Match the local address	Data structure	Members include: • AddressType • IpAddress • VRF • Interface	N/A
AddressType	The type of IP address	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—Interface	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.
DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	The mode of DPD	N/A	Enumeration: • **1**—On-demand, • 2—Periodic	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
InsideVRF	The inside VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	N/A
ClientXauth	Whether the client authentication is enabled.	N/A	Boolean: • true • false	N/A
AAAAuthorization	AAA authentication	N/A	Members include: • Domain • UserName	N/A
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	N/A
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	N/A
SASoftDuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 10 to 36000.	N/A
ClientXauthUser	Client authentication user information	N/A	Members include: • User. • PasswrodType. • Password. • ClientXauthServer.	N/A
User	Username	N/A	String: case-insensitive. Length: 1 to 55 characters.	N/A
PasswordType	Type of the user password	N/A	Enumeration: • **1**—Simple, • **2**—Cipher	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Password	User password	N/A	Plaintext string: 1 to 63 characters. Ciphertext string: 1 to 110 characters.	N/A
ClientXauthServer	ClientXauthServer	N/A	Enumeration: • 0—None • 2—JitServer	N/A
MatchRemoteDomainList	Peer FQDN domaininformation for IKE profile matching	Data structure	Members include: DomainItem.	N/A
DomainItem	Peer FQDN domain	N/A	String: case sensitive. Length:1 to 255 characters.	N/A
RemoteIdentityauthorization	Enable authorization based on peer identity	Data structure	Members include: • Domain. • UserName	N/A
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	N/A
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	N/A
Sm4Version	The sm4 version	N/A	Enumeration: • 1—standard • 2—draft	The column is only available in GM delivery.
GmInitiatorVersion	The version number carried in the negotiation message	N/A	Enumeration: • 0—None • 1—1.0 • 2—1.1	When value is None, the global configuration takes effect.
PeerSerialNumber	The serial number of the peer certificate	N/A	String:not case-sensitive. Length:1 to 127 characters.	A string of hexadecimal numbers.
MatchRemoteAddr	Peer gateway IP address for matching ike profile	Data structure	Members include: • MatchType • IpAddress	N/A
MatchType	The type of matching remote address	N/A	Enumeration: • 1—dynamic • 2—static	N/A
IpAddress	The IP address of peer gateway	N/A	Ipv4 address or Ipv6 address	When MatchType is dynamic, no IpAddress.
DynamicSrcPortEnable	Whether using the dynamic port for negotiation	N/A	Boolean: • true • false	N/A

IKEv1/MatchRemoteIpv4AddressByHostName

This table displays match remote identity IPv4 address by hostname information.

XML structure

```
<IKEv1>
  <MatchRemoteIpv4AddressByHostName>
    <RemoteID>
      <Profile></Profile>
      <HostName></HostName>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4AddressByHostName>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of an IKE profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
HostName	Remote host name	Index	String. Length:1 to 253 characters.	N/A
VRF	VPN instance to which the remote host address belongs	Index	String, case sensitive. Length: 0 to 31 characters.	If the remote host is on the public network, the length of characters is 0.

IKEv1/MatchRemoteIpv4Address

This table displays match remote identity IPv4 address information

XML structure

```
<IKEv1>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Address	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	Index	Ipv4Address mask	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It’s a public network when VRF is a null string.

IKEv1/MatchRemoteIpv6Address

This table displays match remote identity IPv6 address information

XML structure

```
<IKEv1>
```

```
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Address	The value of IPv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer: Value range:0 to 128, in seconds.	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It’s a public network when VRF is a null string.

IKEv1/ MatchRemoteIpv4Range

This table displays match remote identity IPv4 range information

XML structure

```
<IKEv1>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
```

```
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Range

Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv4Address	Start IPv4 Address	Index	Ipv4Address	N/A
EndIpv4Address	End IPv4 Address	Index	Ipv4Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/ MatchRemoteIpv6Range

This table displays match remote identity IPv6 range information

XML structure

```
<IKEv1>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <VRF></VRF>
    </RemoteID>
```

```
  </MatchRemoteIpv6Range>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv6Address	Start IPv6 Address	Index	Ipv6Address	N/A
EndIpv6Address	End IPv6 Address	Index	Ipv6Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

IKEv1/Proposals

This table displays IKE proposals information

XML structure

```
<IKEv1>
  <Proposals>
    <Proposal>
      <Priority></Priority>
      <AuthorityMethod></AuthorityMethod>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <DHID></DHID>
      <SADuration></SADuration>
```

```
      <Description></Description>
    </Proposal>
  </Proposals>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Proposals
Table type	Multi-instance table
Row name	Proposal
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	priority	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AuthorityMethod	Authentication method Id	N/A	Enumeration: • **1**—Pre-Shared-Key • 2—RSA-Signature • 3—DSA-Signature • 4—RSA-DE-digital envelope • 5—SM2-DE-digital envelope • 6—ECDSA-Signature Default value is **1**	N/A
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer.	See table IKECapabilities for supported Authentication algorithm.
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer.	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer.	See table IKECapabilities for supported Diffie-Hellman group
SADuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 60 to 604800. in seconds. Default value is 86400	N/A
Description	Description of proposal	N/A	String:	

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length:1 to 80 characters Case sensitive	

IKEv1/Keychains

This table displays IKE keychains information

XML structure

```
<IKEv1>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Priority></Priority>
      <KeychainVRF></KeychainVRF>
      <MatchLocalAddr>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <VRF></VRF>
        <Interface></Interface>
      </MatchLocalAddr>
    </Keychain>
  </Keychains>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE keychain	N/A	Unsigned integer: Value range:1 to 65535. Default value is 100	N/A
KeychainVRF	The VPN instance of keychain belongs to	N/A	String: Length:1 to 31 characters Case sensitive	N/A
MatchLocalAddr	Match the local address	Data structure	Members include: • AddressType • IpAddress • VRF • Interface	N/A
AddressType	The type of IP address	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—Interface	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.

IKEv1/HostPreSharedKeys

This table displays host pre-shared-keys information for IKE keychain

XML structure

```
<IKEv1>
  <HostPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Host></Host>
    </PreSharedKey>
  </HostPreSharedKeys>
```

```
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	HostPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Host	Host name	Index	String: Length:1 to 255 characters Case sensitive	N/A

IKEv1/DomainPreSharedKeys

This table displays Domain pre-shared-keys information for IKE keychain

XML structure

```
<IKEv1>
  <DomainPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Domain></Domain>
    </PreSharedKey>
  </DomainPreSharedKeys>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1

Table name	DomainPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Domain	Peer FQDN domain	Index	String: Length:1 to 255 characters Case sensitive	N/A

IKEv1/Ipv4AddressByHostNamePSKs

This table contains the preshared key specified in an IKE keychain for negotiation with a peer IPv4 address identified by the hostname.

XML structure

```
<IKEv1>
  <Ipv4AddressByHostNamePSKs>
    <PreSharedKey>
      <Keychain></Keychain>
      <HostName></HostName>
    </PreSharedKey>
  </Ipv4AddressByHostNamePSKs>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressByHostNamePSKs
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of an IKE keychain	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
HostName	Remote host name	Index	String. Length: 1 to 253 characters.	N/A

IKEv1/ Ipv4AddressPreSharedKeys

This table displays IPv4 address presharedkeys information for IKE keychain

XML structure

```
<IKEv1>
  <Ipv4AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </PreSharedKey>
  </Ipv4AddressPreSharedKeys>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Case insensitive	
Ipv4Address	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	N/A	Ipv4Address Mask	N/A

IKEv1/ Ipv6AddressPreSharedKeys

This table displays IPv6 address presharedkeys information for IKE keychain

XML structure

```
<IKEv1>
  <Ipv6AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </PreSharedKey>
  </Ipv6AddressPreSharedKeys>
</IKEv1>
```

Table description

Item	Description

  </IKESAs>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	IKESAs
Table type	Multi-instance table
Row name	IKESA
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionID	ConnectionID of IKE SA	Index	Unsigned integer.	N/A
OutsideVRF	Outbound VRF	N/A	String: Length:1 to 31 characters Case sensitive	N/A
InsideVRF	Inbound VRF	N/A	String: Length:1 to 31 characters Case sensitive	N/A
Profile	Name of IKE profile	N/A	String: Length:1 to 63 characters Case insensitive	N/A
Initiator	If Local gateway be the initiator	Data structure	Boolean: • **true**—initiator. • **false**—response.	N/A
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the local identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—DN	
IpAddress	The value of address when the local identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the local identity isn't IP address	N/A	String: Length: Actual length Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's DN name.
RemoteID	The identity of the peer end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the peer identity	N/A	Enumeration: • **1**—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the peer identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the peer identity isn't IP address	N/A	String: Length: Actual length Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's DN Name.
RemoteIpAddress	IP address of peer gateway	N/A	Ipv4Address or Ipv6 Address	N/A
LocalIpAddress	IP address of local gateway	N/A	Ipv4Address or Ipv6 Address	N/A
AuthorityMethod	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer. Authentication algorithm Id	See table IKECapabilities for supported Authentication algorithm
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer. Encryption algorithm Id	See table IKECapabilities for supported Encryption algorithm

Column name	Column description	Column type	Data type and restrictions	Remarks
DHID	Diffie-Hellman group ID	N/A	Unsigned integer.. Diffie-Hellman group ID	See table IKECapabilities for supported Diffie-Hellman group
ExchangeMode	Negotiation mode	N/A	Enumeration: • **1**—Main. • **2**—Aggressive	N/A
IsNATTraversal	UDP encapsulation used for NAT traversal	N/A	Boolean: • **true**—Need traversal. • **false**—non-essential.	N/A
SADuration	IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A
RemainingSADuration	Remaining IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A
Flag	Flag of SA	N/A	Unsigned integer.	0x00000001 **RD (READY)**, which means the SA has been established 0x00000002 **ST (STAYALIVE)**, which means this end is the initiator of the tunnel negotiation. 0x00000004 **RL (REPLACED)**, which means the SA has been replaced by a new one and will be deleted later. 0x00000008 **FD (FADING)**, which means the SA is in use, but it is about to expire and will be deleted soon. 0x80000000 **Unknown,** which means The SA status is Unkown.
DOI	Domain of interpretation which SA belong	N/A	Enumeration: • **1**—IPsec. • **2**—GDOI	N/A
AssignedIpAddress	Assigned IP address of peer	Data structure	Members include: • Type • IpAddress • Ipv6PrefixLength	N/A
AddressType	The type of the IP Address	N/A	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address.
Ipv6PrefixLength	The prefix length of IPv6 address	N/A	Unsigned integer: Value range:1 to 128.	The prefix length must be specified when Ip address type is Ipv6.

IKEv1/GlobalStatistics

This table displays IKE global statistics information.

XML structure

```

InitTunnels	Number of as the initiator for the successful establishment of IKE tunnel	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
InitTunnelFails	Number of as the initiator did not successfully established IKE tunnel	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RespTunnels	Number of as a response to successful establishment of IKE tunnel	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RespTunnelFails	Number of as the response	N/A	Unsigned integer.	

Column name	Column description	Column type	Data type and restrictions	Remarks
	did not successfully establishment ed IKE tunnel		Value range: 0 to 2^{32}-1.	N/A
InOctets	Number of the recived Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutOctets	Number of the sent Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InPkts	Number of recived packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutPkts	Number of sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP2Exchanges	Number of recived exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2Exchanges	Number of sent exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP2ExchangeRejects	Number of dropped recived exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2ExchangeRejects	Number of dropped sent exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP2SADelRequests	Number of recived request of SA in the second stage	Data structure	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2SADelRequests	Number of recived request of SA in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InNotifys	Number of recived notify news	N/A	Unsigned integer. Value range: 0 to 2^{32}-1	N/A
OutNotifys	Number of sent notify news	N/A	Unsigned integer. Value range: 0 to 2^{32}-1	N/A
InDropPkts	Number of droped recived	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets			
OutDropPkts	Number of droped sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
DropPktsDetails	Number of dropped packets due to authentication failure	Data structure	Members include: • AuthFails • `NoSAFails` • `InvalidCookieFails` • `AttrNotSuppFails` • `NoProposalChosenFails` • `UnsuppExchTypeFails` • `InvalidIDFails` • `InvalidPropFails` • `CertTypeUnsuppFails` • `InvalidCertAuthFails` • `InvalidSignFails` • `CertUnavailableFails`	`N/A`
AuthFails	The reason for the failure of building IKE tunnel	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
NoSAFails	Number of lack of available IKE SA in the negotiate process	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
InvalidCookieFails	Number of dropped packets due to Invalid cookie	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
AttrNotSuppFails	Number of dropped packets due to Nonsupport transform load attribute	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
NoProposalChosenFails	Number of dropped packets due to Witnout the option proposal	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
UnsuppExchTypeFails	Number of dropped packets due to Nonsupport exchange type	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
InvalidIDFails	Number of dropped packets due to Invalid ID load	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InvalidPropFails	Number of dropped packets due to Invalid proposal	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
CertTypeUnsuppFails	Number of dropped packets due to Nonsupport certificate type	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
InvalidCertAuthFails	Number of dropped packets due to Invalid CA	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
InvalidSignFails	Number of dropped packets due to Invalid signature	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
CertUnavailableFails	Number of dropped packets due to cannot obtain certificate	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

IKEv1/TunnelsStatistics

This table displays IKE tunnel statistics information.

XML structure

```

Table description

Item	Description
Feature name	IKEv1
Table name	TunnelsStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IKE tunnel ID	Index	Unsigned integer. Value range: 0 to 2^{32}-1	N/A
InOctets	Number of the recived Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutOctets	Number of the sent Bytes	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InPkts	Number of recived packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutPkts	Number of sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP2Exchanges	Number of recived exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2Exchanges	Number of sent exchanges in the second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	stage			
InP2ExchangeRejects	Number of dropped recived exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2ExchangeRejects	Number of dropped sent exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP2SADelRequests	Number of recived request of SA in the second stage	Data structure	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP2SADelRequests	Number of recived request of SA in the second stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InP1SADelRequests	Number of recived request of SA in the first stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutP1SADelRequests	Number of sent request of SA in the first stage	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
InNotifys	Number of recived notify news	N/A	Unsigned integer. Value range: 0 to 2^{32}-1	N/A
OutNotifys	Number of sent notify news	N/A	Unsigned integer. Value range: 0 to 2^{32}-1	N/A
InDropPkts	Number of droped recived packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A
OutDropPkts	Number of droped sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1	N/A

IKEv1/IKECapabilities

This table displays all the algorithm capabilities that the IKE module support.

XML structure

```
<IKEv1>
  <IKECapabilities>
    <IKECapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <AlgType></AlgType>
    </IKECapability>
  </IKECapabilities>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	IKECapabilities
Table type	Multi-instance table
Row name	IKECapability
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	IKEv1 supports algorithm ID	Index	Positive Integer	N/A
AlgName	IKEv1 supports algorithm name	N/A	String. Length: 1 to 255 characters. Case insensitive	N/A
AlgType	Type of algorithm	N/A	Enumeration: • **1**—Diffie-Hellman group • 2—Encryption algorithm • 3—Authentication algorithm	N/A

IKEv1/Ipv4AddressGroup

This table displays IKE IPv4 address pool information.

XML structure

```
<IKEv1>
  <Ipv4AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
      <StartIPAddr></StartIPAddr>
      <EndIPAddr></EndIPAddr>
      <IPv4Mask></IPv4Mask>
    </AddressGroup>
  </Ipv4AddressGroup>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressGroup
Table type	Multi-instance table
Row name	AddressGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Name of the IPv4 address group	Index	String: case-insensitive. Length:1 to 63 characters.
StartIPaddr	Start IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.
EndIPaddr	End IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.
IPv4Mask	Mask of the IPv4 address	N/A	IPv4: String, dotted decimal notation.

IKEv1/Ipv6AddressGroup

This table displays IKE IPv6 address pool information.

XML structure

```
<IKEv1>
  <Ipv6AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
      <IPv6Addr>
        <Prefix></Prefix>
        <PrefixLen></PrefixLen>
      </IPv6Addr>
      <AssignLen></AssignLen>
    </AddressGroup>
  </Ipv6AddressGroup>
</IKEv1>
```

Table description

Item	Description
Feature name	IKEv1
Table name	Ipv6AddressGroup
Table type	Multi-instance table
Row name	AddressGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Name of the IPv6 address pool	Index	String: case-insensitive. Length:1 to 63 characters.
IPv6Addr	IPv6 information.	Data structure	Members include: • Prefix. • PrefixLen.
Prefix	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.
PrefixLen	Length of the IPv6 address	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	prefix.		Value range: 1 to 128.
AssignLen	IPv6 prefix length for assignment.	N/A	Unsigned integer. Value range: 1 to 128.

Comware 7 IKEv1 NETCONF XML API Error Message Reference

IKEv1/GlobalConfiguration

Message	Explanation
This device not suppot the configuration. 该设备不支持该项配置。	This device doesn't support the configuration.. 设备不支持该配置项。
ZD-quantum has not been enabled. 中电量子功能未开启。	Configuration is allowed only after you enable ZD-quantum. 开启中电量子功能后，才能进行配置。

IKEv1/Profiles

Message	Explanation
Domain name must not include / \\ | """" : * ? < > @, and must not be d, d, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown. 域名不允许包含 / \\ | """" : * ? < > @，也不允许为 d，de，def，defa，defau，defaul，default，i，if，if-，if-u，if-un，if-unk，if-unkn，if-unkno，if-unknow，if-unknown。	Specifies the ISP domain used for requesting authorization attributes. The domain name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The name cannot be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown. 申请授权属性时使用的ISP域名，域名不能包括“/”、“\”、“|”、“""”、“:”、“*”、“?”、“<”、“>”以及“@”字符，且不能为字符串“d”、“de”、“def”、“defa”、“defau”、“defaul”、“default”、“i”、“if”、“if-”、“if-u”、“if-un”、“if-unk”、“if-unkn”、“if-unkno”、“if-unknow”和“if-unknown”。
User name must not include \\ | / : * ? < > @, and must not be a, al, all. 用户名不允许包含 \\，|，/，:，*，?，<，>，@，也不允许为a，al，all。	Specifies the username used for requesting authorization attributes. The username cannot contain a forward slash (/), backslash (\), vertical bar (|), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The username cannot be a, al, or all. 申请授权属性时使用的用户名，用户名不允许包含 \\，|，/，:，*，?，<，>，@，用户名也不允许为a，al，all。
The number of keychains in the profile exceeds the limit. 指定profile下的Keychain个数超出上限。	You can specify a maximum of six IKE keychains for an IKE profile. 一个IKE profile中最多可以指定六个IKE keychain。
The number of certificate domains in the profile exceeds the limit. 指定profile下的证书所属PKI域的个数超出上限。	You can specify a maximum of six PKI domains for an IKE profile. 一个IKE profile中最多可以引用六个PKI域。
Invalid username. 无效的用户名。	Specifies the username for client authentication. The username cannot contain a forward slash (/), backslash (\), vertical bar (|), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The username cannot be a, al, or all. 配置客户端认证的用户名，用户名不允许包含 \\，|，/，:，*，?，<，>，@，用户名也不允许为a，al，all。

Invalid password. 无效的密码。	Specifies the password for client authentication. Its plaintext form is a case-sensitive string of 1 to 63 characters. Its encrypted form is a case-sensitive string of 1 to 110 characters. 配置客户端认证的密码，明文密码为1～63个字符的字符串；密文密码为1～110个字符的字符串。
The feature GD-quantum has not been enabled. 国盾量子功能未开启。	Configuration is allowed after you enable GD-quantum. 开启国盾量子功能后，才能进行配置。
To configure or delete the port number, you must also specify the ServerIP address. 配置或删除端口号时，IP地址必须下发。	To configure or delete the port number of a GD-quantum server, you must also specify the IP address of the GD-quantum server. 配置或删除国盾量子服务器端口号时，国盾量子服务器IP地址必须下发。
To delete the GD-quantum server's IP address, you must also specify the port number. 删除国盾量子服务器IPAddess时，必须下发端口号。	To delete the IP address of a GD-quantum server, you must also specify the port number of the GD-quantum server. 删除国盾量子服务器IPAddess时，必须下发端口号。

IKEv1/MatchRemoteIpv4AddressByHostName

Message	Explanation
Invalid host name. 无效的主机名。	Invalid host name. 无效的主机名。

IKEv1/Ipv4AddressByHostNamePSKs

Message	Explanation
A pre-shared key is already configured for the IPv4 address specified by the hostname. 该主机名对应的预共享密钥已存在。	The pre-shared key is already configured for the Ipv4 address specified by the hostname and cannot be configured again. 该主机名对应的预共享密钥已存在时，不能再次下发。
Invalid host name. 无效的主机名。	Invalid host name. 无效的主机名。

IKEv1/ Ipv4AddressPreSharedKeys

Message	Explanation
A pre-shared key is already configured for this address. 该地址的预共享秘钥已存在。	The pre-shared key is already configured for this address and cannot be configured again. 该地址的预共享密钥已存在时，不能再次下发。
A pre-shared key is already configured for this host. 该主机的预共享秘钥已存在。	The pre-shared key is already configured for this host and cannot be configured again. 该主机的预共享密钥已存在时，不能再次下发。

IKEv1/ Ipv6AddressPreSharedKeys

Message	Explanation
A pre-shared key is already configured for this address. 该地址的预共享秘钥已存在。	The pre-shared key is already configured for this address and cannot be configured again. 该地址的预共享密钥已存在时，不能再次下发。
A pre-shared key is already configured for this host. 该主机的预共享秘钥已存在。	The pre-shared key is already configured for this host and cannot be configured again. 该主机的预共享密钥已存在时，不能再次下发。

IKEv1/Ipv4AddressGroup

Message	Explanation
Start IP address can't be higher than end IP address. 起始IP地址不能大于结束IP地址。	End-ipv4-address of an IKE IPv4 address group can’t be lower than start-ipv4-address. 配置IKE IPv4地址池时 ，起始IP地址不能大于结束IP地址。
Number of IP addresses in the group exceeded the limit. 该地址池的地址数目超过最大值。	An IKE IPv4 address pool can contain a maximum of 8192 IPv4 addresses. 每个地址池中包括的IPv4地址的最大数目为8192。
The address group overlaps with an existing address group. 该地址池与已存在地址池重叠。	Address groups cannot overlap with each other. 地址池的地址范围不能相互重叠。
Configuration items don't meet the requirements. 不符合配置要求。	The start-ipv4-address and end-ipv4-address must be specified together. 起始地址和结束地址必须同时下发。
Invalid IPv4 mask. 无效的IPv4掩码。	Must specify correct IPv4 address mask or correct length of IPv4 address mask. 必须下发正确的掩码或掩码长度。
IP address not allowed in address group. 该地址不允许在地址池中使用。	The IP address can’t be used in the address group. 该地址不允许在地址池中使用。

IKEv2

IKEv2/GlobalConf

This table is used to configure IKEv2 global settings.

XML structure

```
<IKEv2>
  <GlobalConf>
    <DPD>
      <Mode></Mode>
      <Interval></Interval>
      <Retry></Retry>
    </DPD>
    <CookieChallenge></CookieChallenge>
    <NatKeepaliveInterval></NatKeepaliveInterval>
  </GlobalConf>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	GlobalConf
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DPD	Global Dead Peer Detection (DPD) settings	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	Operating mode of DPD	N/A	Enumeration: • **1**—On-demand • **2**—Periodic	N/A
Interval	Time interval for triggering	N/A	Unsigned integer: Value range: 10 to 3600, in	The interval must be larger than the retry.

Column name	Column description	Column type	Data type and restrictions	Remarks
	DPD		seconds.	
Retry	DPD retry interval	N/A	Unsigned integer: Value range: 2 to 60, in seconds. Default value is 5.	N/A
CookieChallenge	Number of half-open IKE SAs that triggers cookie challenging	N/A	Unsigned integer: Value range: 0 to 1000, or 65535. Default value is 65535.	If the value is 65535, cookie challenging feature disabled.
NatKeepaliveInterval	NAT keepalive interval	N/A	Unsigned integer: Value range: 5 to 3600, in seconds. Default value is 10.	N/A

IKEv2/Profiles

This table is used to configure IKEv2 profiles.

```

Table description

Item	Description
Feature name	IKEv2
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the IKEv2 profile	N/A	Unsigned integer. Value range: 1 to 65535 Default value is 100.	N/A
LocalAuthMethod	Local identity authentication method	N/A	Enumeration: • **1**—Preshared key • **2**—DSA signature • **3**—RSA signature • **4**—ECDSA signature	N/A
RemoteAuthMethodList	Remote identity authentication method list	Data structure	Members include: • RemoteAuthMethodItem	N/A
RemoteAuthMethodItem	Remote identity authentication method	N/A	Enumeration: • **1**—Preshared key • **2**—DSA signature • **3**—RSA signature • **4**—ECDSA signature	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ConfigExchangeList	Configuration exchange feature	Data structure	Members include: • ConfigExchangeItem	N/A
ConfigExchangeItem	Configuration exchange setting	N/A	Enumeration: • **1**—Request • **2**—Set accept • **3**—Set send	N/A
Keychain	IKE keychain used for the IKEv2 profile	N/A	String. Length: 1 to 63 characters.	N/A
SADuration	IKEv2 SA lifetime	N/A	Unsigned integer. Value range: 120 to 86400, in seconds. Default value is 86400.	N/A
NatKeepaliveInterval	NAT keepalive interval for the IKEv2 profile	N/A	Unsigned integer. Value range: 5 to 3600, in seconds.	N/A
InsideVRF	Inside VPN instance	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
DPD	Dead Peer Detection (DPD) settings	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	Operating mode of DPD	N/A	Enumeration: • **1**—On-demand • **2**—Periodic	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer. Value range: 10 to 3600, in seconds.	The interval must be larger than the retry.
Retry	DPD retry interval	N/A	Unsigned integer. Value range: 2 to 60, in seconds. Default value is 5.	N/A
MatchVRF	VPN instance for the IKEv2 profile	Data structure	Members include: • MatchVrfType • VRFName	N/A
MatchVrfType	Network type	N/A	Enumeration: • **1**—Any. • **2**—Specific VPN instance.	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
AAAAuthorization	AAA authorization	N/A	Members include: • Domain • UserName	N/A
Domain	ISP domain used for	N/A	String, case-insensitive.	Domain name must not contain / \\ | " : * ?

Column name	Column description	Column type	Data type and restrictions	Remarks
	requesting authorization attributes		Length: 1 to 255 characters.	< > @, and must not be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown.
UserName	Username used for requesting authorization attributes	N/A	String, case-sensitive. Length: 1 to 55 characters.	User name must not contain \\ | / : * ? < > @, and must not be a, al, all.
IdentityLocal	Identity information for the IKEv2 profile	Data structure	Members include: • IdentityType • StringValue • IpAddress	N/A
IdentityType	Identity Type	N/A	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address • **3**—dn. • **4**—email • **5**—fqdn. • **6**—key-id	N/A
StringValue	Identity Value	N/A	String. Length: 1 to 255 characters.	N/A
IpAddress	The value of address	N/A	IPv4 address or IPv6 address	N/A

IKEv2/MatchRemoteIpv4Address

This table is used to specify remote identity information (IPv4 address) for IKEv2 profile matching.

XML structure

```
<IKEv2>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address used as the remote identity	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4Mask	Mask of the IPv4 address	Index	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.

IKEv2/MatchRemoteIpv6Address

This table is used to specify remote identity information (IPv6 address) for IKEv2 profile matching.

XML structure

```
<IKEv2>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Address

Item	Description
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address used as the remote identity	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer. Value range: 0 to 128.	N/A

IKEv2/MatchRemoteIpv4Range

This table is used to specify remote identity information (IPv4 address range) for IKEv2 profile matching.

XML structure

```
<IKEv2>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.2. The end address must be higher than the start address.

IKEv2/MatchRemoteIpv6Range

This table is used to specify remote identity information (IPv6 address range) for IKEv2 profile matching.

XML structure

```
<IKEv2>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:9. The end address must be higher than the start address.

IKEv2/ProfileMatchRemotePeer

This table is used to specify remote identity information (FQDN, email address, or key ID of the peer) for IKEv2 profile matching.

XML structure

```
<IKEv2>
  <ProfileMatchRemotePeer>
    <MatchRemotePeer>
      <Profile></Profile>
      <PeerType></PeerType>
      <PeerName></PeerName>
    </MatchRemotePeer>
  </ProfileMatchRemotePeer>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchRemotePeer
Table type	Multi-instance table
Row name	MatchRemotePeer
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKEv2 profile	Index	String, case insensitive. Length:1 to 63 characters.	N/A
PeerType	peer Type	Index	Enumeration: • **1**—fqdn • **2**—email • **3**—key-id	N/A
PeerName	peer ID for IKEv2 profile	Index	String: Length:1 to 255 characters.	N/A

IKEv2/ProfileMatchLocalIpAddress

This table is used to specify a local IP address to which an IKEv2 profile can be applied.

XML structure

```
<IKEv2>
  <ProfileMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Profile></Profile>
      <IPType></IPType>
      <Address></Address>
    </MatchLocalIpAddress>
  </ProfileMatchLocalIpAddress>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: • **1**—IPv4 address • **2**—IPv6 address	N/A
Address	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

IKEv2/ProfileMatchLocalInterfaces

This table is used to specify a local interface to which an IKEv2 profile can be applied.

XML structure

```
<IKEv2>
  <ProfileMatchLocalInterfaces>
    <MatchLocalInterface>
      <Profile></Profile>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </ProfileMatchLocalInterfaces>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer.	N/A

IKEv2/Policies

This table is used to configure IKEv2 policies.

XML structure

```
<IKEv2>
  <Policies>
    <Policy>
      <Name></Name>
      <Priority></Priority>
      <ProposalList>
        <ProposalItem></ProposalItem>
      </ProposalList>
      <MatchVRF>
        <MatchVRFType></MatchVRFType>
        <VRFName></VRFName>
      </MatchVRF>
    </Policy>
  </Policies>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority for the IKEv2 policy	N/A	Unsigned integer. Value range: 1 to 65535 Default value is 100.	N/A
ProposalList	IKEv2 proposal list for the IKEv2 policy	Data structure	Members include: • ProposalItem	N/A
ProposalItem	IKEv2 proposal	Data structure	String. Length: 1 to 63 characters.	N/A
MatchVRF	VPN instance for IKEv2 policy matching	Data structure	Members include: • MatchVrfType • VRFName	N/A
MatchVrfType	Network type	N/A	Enumeration: • **1**—Any. • **2**—Specific VPN instance.	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

IKEv2/PolicyMatchLocalIpAddress

This table is used to specify the local IPv4 or IPv6 address used for IKEv2 policy matching.

XML structure

```
<IKEv2>
  <PolicyMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Policy></Policy>
      <IPType></IPType>
      <IpAddress></IpAddress>
    </MatchLocalIpAddress>
  </PolicyMatchLocalIpAddress>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalIpAddress

Item	Description
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 Policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: • **1**—IPv4 address • **2**—IPv6 address	N/A
IpAddress	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

IKEv2/PolicyMatchLocalInterfaces

This table is used to specify the local interface used for IKEv2 policy matching.

XML structure

```
<IKEv2>
  <PolicyMatchLocalInterfaces>
    <MatchLocalInterface>
      <Policy></Policy>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </PolicyMatchLocalInterfaces>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None

Item	Description
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer	N/A

IKEv2/Proposals

This table is used to configure IKEv2 proposals.

XML structure

```
<IKEv2>
  <Proposals>
    <Proposal>
      <Name></Name>
      <IntegrityList>
        <IntegrityItem></IntegrityItem>
      </IntegrityList>
      <EncryptionList>
        <EncryptionItem></EncryptionItem>
      </EncryptionList>
      <DhList>
        <DhItem></DhItem>
      </DhList>
      <PrfAlgList>
        <PrfAlgItem></PrfAlgItem>
      </PrfAlgList>
    </Proposal>
  </Proposals>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Proposal
Table type	Multi-instance table

Item	Description
Row name	Proposal
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Proposal name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IntegrityList	Integrity protection algorithm list for the IKEv2 proposal.	Data structure	Members include: • IntegrityItem	N/A
IntegrityItem	Integrity protection algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported authentication algorithms.
EncryptionList	Encryption algorithm list for the IKEv2 proposal	Data structure	Members include: • EncryptionItem	N/A
EncryptionItem	Encryption algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported encryption algorithms.
DhList	DH groups list for the IKEv2 proposal	Data structure	Members include: • DhItem	N/A
DhItem	DH groups	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported DH groups.
PrfAlgList	PRF algorithm list for the IKEv2 proposal	Data structure	Members include: • PrfAlgItem	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrfAlgItem	PRF algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported PRF algorithms.

IKEv2/Keychains

This table is used to configure IKEv2 keychains.

XML structure

```
<IKEv2>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Peer></Peer>
      <HostName></HostName>
      <Identity>
        <IdentityType></IdentityType>
        <StringValue></StringValue>
        <LocalIpAddress></LocalIpAddress>
      </Identity>
      <Address>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <Ipv4Mask></Ipv4Mask>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Address>
      <PreSharedKeyLocal>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyLocal>
      <PreSharedKeyRemote>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyRemote>
      <PreSharedKeySymmetric>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeySymmetric>
    </Keychain>
  </Keychains>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 keychain	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Peer	Name of an IKEv2 peer	Index	String. Length: 1 to 63 characters.	N/A
HostName	Host name for the IKEv2 peer	N/A	String. Length: 1 to 253 characters.	N/A
Identity	ID of the IKEv2 peer	Data structure	Members include: • IdentityType • StringValue • LocalIpAddress • KeyId	N/A
IdentityType	Identity type	N/A	Enumeration: • **1**—Ipv4Address • **2**—Ipv6Address • **3**—email • **4**—fqdn • **5**—key-id	N/A
StringValue	Identity string	N/A	String. Length: 1 to 255 characters.	N/A
LocalIpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Address	IP address of the IKEv2 peer	Data structure	Members include: • AddressType • IpAddress • Ipv4Mask • Ipv6PrefixLength	N/A
AddressType	IP address type	Data structure	Enumeration: • **1**—IPv4 address	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—IPv6 address	
IpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Ipv4Mask	Mask of the IPv4 address	N/A	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.
Ipv6PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PreSharedKeyLocal	Preshared key for certificate signing	Data structure	Members include: • KeyType • Key	PreSharedKeyLocal and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreSharedKeyRemote	Preshared key for certificate authentication	Data structure	Members include: • KeyType • Key	PreSharedKeyRemote and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreSharedKeySymmetric	Symmetric preshared key for certificate signing	Data structure	Members include: • KeyType • Key	PreSharedKeySymmetric cannot be configured together with PreSharedKeyLocal or PreSharedKeyRemote.
KeyType	Type of the symmetric preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the symmetric preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A

IKEv2

IKEv2/GlobalConf

This table contains IKEv2 global configuration information.

XML structure

```
<IKEv2>
  <GlobalConf>
    <DPD>
      <Mode></Mode>
      <Interval></Interval>
      <Retry></Retry>
    </DPD>
    <CookieChallenge></CookieChallenge>
    <NatKeepaliveInterval></NatKeepaliveInterval>
  </GlobalConf>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	GlobalConf
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DPD	Global Dead Peer Detection (DPD) settings	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	Operating mode of DPD	N/A	Enumeration: • **1**—On-demand • **2**—Periodic	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer: Value range: 10 to 3600, in seconds.	The interval must be larger than the retry.

Column name	Column description	Column type	Data type and restrictions	Remarks
Retry	DPD retry interval	N/A	Unsigned integer: Value range: 2 to 60, in seconds.	N/A
CookieChallenge	Number of half-open IKE SAs that triggers cookie challenging	N/A	Unsigned integer: Value range: 0 to 1000, or 65535.	If the value is 65535, cookie challenging feature disabled.
NatKeepaliveInterval	NAT keepalive interval	N/A	Unsigned integer: Value range: 5 to 3600, in seconds.	N/A

IKEv2/Profiles

This table contains IKEv2 profiles information.

XML structure

```
<IKEv2>
  <Profiles>
    <Profile>
      <Name></Name>
      <Priority></Priority>
      <LocalAuthMethod></LocalAuthMethod>
      <RemoteAuthMethodList>
        <RemoteAuthMethodItem></RemoteAuthMethodItem>
      </RemoteAuthMethodList>

        <MatchVrfType></MatchVrfType>
        <VRFName></VRFName>
      </MatchVRF>
      <AAAAuthorization>
        <Domain></Domain>
        <UserName></UserName>
```

```
      </AAAAuthorization>
      <IdentityLocal>
        <IdentityType></IdentityType>
        <StringValue></StringValue>
        <IpAddress></IpAddress>
      </IdentityLocal>
    </Profile>
  </Profiles>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the IKEv2 profile	N/A	Unsigned integer. Value range: 1 to 65535	N/A
LocalAuthMethod	Local identity authentication method	N/A	Enumeration: • **1**—Preshared key • **2**—DSA signature • **3**—RSA signature • **4**—ECDSA signature	N/A
RemoteAuthMethodList	Remote identity authentication method list	Data structure	Members include: • RemoteAuthMethodItem	N/A
RemoteAuthMethodItem	Remote identity authentication method	N/A	Enumeration: • **1**—Preshared key • **2**—DSA signature • **3**—RSA signature • **4**—ECDSA signature	N/A
ConfigExchangeList	Configuration exchange feature	Data structure	Members include: • ConfigExchangeItem	N/A
ConfigExchangeItem	Configuration exchange	N/A	Enumeration: • **1**—Request	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	setting		• **2**—Set accept • **3**—Set send	
Keychain	IKE keychain used for the IKEv2 profile	N/A	String. Length: 1 to 63 characters.	N/A
SADuration	IKEv2 SA lifetime	N/A	Unsigned integer. Value range: 120 to 86400, in seconds.	N/A
NatKeepaliveInterval	NAT keepalive interval for the IKEv2 profile	N/A	Unsigned integer. Value range: 5 to 3600, in seconds.	N/A
InsideVRF	Inside VPN instance	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
DPD	Dead Peer Detection (DPD) settings	Data structure	Members include: • Mode • Interval • Retry	N/A
Mode	Operating mode of DPD	N/A	Enumeration: • **1**—On-demand • **2**—Periodic	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer. Value range: 10 to 3600, in seconds.	The interval must be larger than the retry.
Retry	DPD retry interval	N/A	Unsigned integer. Value range: 2 to 60, in seconds.	N/A
MatchVRF	VPN instance for the IKEv2 profile	Data structure	Members include: • MatchVrfType • VRFName	N/A
MatchVrfType	Network type	N/A	Enumeration: • **1**—Any. • **2**—Specific VPN instance.	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
AAAAuthorization	AAA authorization	N/A	Members include: • Domain • UserName	N/A
Domain	ISP domain used for requesting authorization attributes	N/A	String, case-insensitive. Length: 1 to 255 characters.	Domain name must not contain / \\ | " : * ? < > @, and must not be d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown.
UserName	Username	N/A	String, case-sensitive.	User name must not

Column name	Column description	Column type	Data type and restrictions	Remarks
	used for requesting authorization attributes		Length: 1 to 55 characters.	contain \\ | / : * ? < > @, and must not be a, al, all.
IdentityLocal	Identity information for the IKEv2 profile	Data structure	Members include: • IdentityType • StringValue • IpAddress	N/A
IdentityType	Identity Type	N/A	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address • **3**—dn. • **4**—email • **5**—fqdn. • **6**—key-id	N/A
StringValue	Identity Value	N/A	String. Length: 1 to 255 characters.	N/A
IpAddress	The value of address	N/A	IPv4 address or IPv6 address	N/A

IKEv2/MatchRemoteIpv4Address

This table contains match remote identity information (IPv4 address) of IKEv2 profiles.

XML structure

```
<IKEv2>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address used as the remote identity	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4Mask	Mask of the IPv4 address	Index	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.

IKEv2/MatchRemoteIpv6Address

This table contains match remote identity information (IPv6 address) of IKEv2 profiles.

XML structure

```
<IKEv2>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address used as the remote identity	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer. Value range: 0 to 128.	N/A

IKEv2/MatchRemoteIpv4Range

This table contains match remote identity information (IPv4 address range) of IKEv2 profiles.

XML structure

```
<IKEv2>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.2. The end address must be higher than

Column name	Column description	Column type	Data type and restrictions	Remarks
				the start address.

IKEv2/MatchRemoteIpv6Range

This table contains match remote identity information (IPv6 address range) of IKEv2 profiles.

XML structure

```
<IKEv2>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:9. The end address must be higher than the start address.

IKEv2/ProfileMatchRemotePeer

This table contains match remote identity information (FQDN, email address, or key ID of the peer) of IKEv2 profiles.

XML structure

```
<IKEv2>
  <ProfileMatchRemotePeer>
    <MatchRemotePeer>
      <Profile></Profile>
      <PeerType></PeerType>
      <PeerName></PeerName>
    </MatchRemotePeer>
  </ProfileMatchRemotePeer>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchRemotePeer
Table type	Multi-instance table
Row name	MatchRemotePeer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKEv2 profile	Index	String, case insensitive. Length:1 to 63 characters.	N/A
PeerType	peer Type	Index	Enumeration: • **1**—fqdn • **2**—email • **3**—key-id	N/A
PeerName	peer ID for IKEv2 profile	Index	String: Length:1 to 255 characters.	N/A

IKEv2/ProfileMatchLocalIpAddress

This table contains match local IP address information of IKEv2 profiles.

XML structure

```
<IKEv2>
  <ProfileMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Profile></Profile>
      <IPType></IPType>
      <Address></Address>
    </MatchLocalIpAddress>
  </ProfileMatchLocalIpAddress>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: • **1**—IPv4 address • **2**—IPv6 address	N/A
Address	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

IKEv2/ProfileMatchLocalInterfaces

This table displays match local interfaces information of IKEv2 profiles.

XML structure

```
<IKEv2>
  <ProfileMatchLocalInterfaces>
    <MatchLocalInterface>
      <Profile></Profile>
```

```
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </ProfileMatchLocalInterfaces>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer.	N/A

IKEv2/Policies

This table contains IKEv2 policy information.

XML structure

```
<IKEv2>
  <Policies>
    <Policy>
      <Name></Name>
      <Priority></Priority>
      <ProposalList>
        <ProposalItem></ProposalItem>
      </ProposalList>
      <MatchVRF>
        <MatchVRFType></MatchVRFType>
        <VRFName></VRFName>
      </MatchVRF>
    </Policy>
  </Policies>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority for the IKEv2 policy	N/A	Unsigned integer. Value range: 1 to 65535	N/A
ProposalList	IKEv2 proposal list for the IKEv2 policy	Data structure	Members include: • ProposalItem	N/A
ProposalItem	IKEv2 proposal	Data structure	String. Length: 1 to 63 characters.	N/A
MatchVRF	VPN instance for IKEv2 policy matching	Data structure	Members include: • MatchVrfType • VRFName	N/A
MatchVrfType	Network type	N/A	Enumeration: • 0—Public. • 1—Any. • 2—Specific VPN instance.	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

IKEv2/PolicyMatchLocalIpAddress

This table contains match local IP address information of IKEv2 policies.

XML structure

```
<IKEv2>
  <PolicyMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Policy></Policy>
      <IPType></IPType>
```

```
      <IpAddress></IpAddress>
    </MatchLocalIpAddress>
  </PolicyMatchLocalIpAddress>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 Policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: • **1**—IPv4 address • **2**—IPv6 address	N/A
IpAddress	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

IKEv2/PolicyMatchLocalInterfaces

This table displays match local interface information of IKEv2 policies.

XML structure

```
<IKEv2>
  <PolicyMatchLocalInterfaces>
    <MatchLocalInterface>
      <Policy></Policy>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </PolicyMatchLocalInterfaces>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer	N/A

IKEv2/Proposals

This table contains IKEv2 proposals information.

XML structure

```
<IKEv2>
  <Proposals>
    <Proposal>
      <Name></Name>
      <IntegrityList>
        <IntegrityItem></IntegrityItem>
      </IntegrityList>
      <EncryptionList>
        <EncryptionItem></EncryptionItem>
      </EncryptionList>
      <DhList>
         <DhItem></DhItem>
      </DhList>
      <PrfAlgList>
         <PrfAlgItem></PrfAlgItem>
      </PrfAlgList>
    </Proposal>
  </Proposals>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Proposal
Table type	Multi-instance table
Row name	Proposal
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Proposal name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IntegrityList	Integrity protection algorithm list for the IKEv2 proposal.	Data structure	Members include: • IntegrityItem	N/A
IntegrityItem	Integrity protection algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported authentication algorithms.
EncryptionList	Encryption algorithm list for the IKEv2 proposal	Data structure	Members include: • EncryptionItem	N/A
EncryptionItem	Encryption algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported encryption algorithms.
DhList	DH groups list for the IKEv2 proposal	Data structure	Members include: • DhItem	N/A
DhItem	DH groups	N/A	Unsigned integer	See IKEv2Capabilities table for supported DH groups.
PrfAlgList	PRF algorithm list for the IKEv2 proposal	Data structure	Members include: • PrfAlgItem	N/A
PrfAlgItem	PRF algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported PRF algorithms.

IKEv2/Keychains

This table contains IKE keychains information.

XML structure

```
<IKEv2>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Peer></Peer>
      <HostName></HostName>
      <Identity>
        <IdentityType></IdentityType>
        <StringValue></StringValue>
        <LocalIpAddress></LocalIpAddress>
      </Identity>
      <Address>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <Ipv4Mask></Ipv4Mask>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Address>
      <PreSharedKeyLocal>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyLocal>
      <PreSharedKeyRemote>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyRemote>
      <PreSharedKeySymmetric>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeySymmetric>
    </Keychain>
  </Keychains>
</IKEv2>
```

Table description

Item	Description
Feature name	IKEv2
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 keychain	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Peer	Name of an IKEv2 peer	Index	String. Length: 1 to 63 characters.	N/A
HostName	Host name for the IKEv2 peer	N/A	String. Length: 1 to 253 characters.	N/A
Identity	ID of the IKEv2 peer	Data structure	Members include: • IdentityType • StringValue • LocalIpAddress • KeyId	N/A
IdentityType	Identity type	N/A	Enumeration: • **1**—Ipv4Address • **2**—Ipv6Address • **3**—email • **4**—fqdn • **5**—key-id	N/A
StringValue	Identity string	N/A	String. Length: 1 to 255 characters.	N/A
LocalIpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Address	IP address of the IKEv2 peer	Data structure	Members include: • AddressType • IpAddress • Ipv4Mask • Ipv6PrefixLength	N/A
AddressType	IP address type	Data structure	Enumeration: • **1**—IPv4 address • **2**—IPv6 address	N/A
IpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Ipv4Mask	Mask of the IPv4 address	N/A	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.
Ipv6PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 0 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PreShared KeyLocal	Preshared key for certificate signing	Data structure	Members include: • KeyType • Key	PreSharedKeyLocal and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreShared KeyRemote	Preshared key for certificate authentication	Data structure	Members include: • KeyType • Key	PreSharedKeyRemote and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreShared KeySymmetric	Symmetric preshared key for certificate signing	Data structure	Members include: • KeyType • Key	PreSharedKeySymmetric cannot be configured together with PreSharedKeyLocal or PreSharedKeyRemote.
KeyType	Type of the symmetric preshared key	N/A	Enumeration: • **1**—Plaintext • **2**—Ciphertext	N/A
Key	Value of the symmetric preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A

IKEv2/IKEv2Capabilities

This table contains information about the algorithms supported by IKEv2.

XML structure

```
<IKEv2>
  <IKEv2Capabilities>
    <IKEv2Capability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <AlgType></AlgType>
```

```
    </IKEv2Capability>
  </IKEv2Capabilities>
</IKEv2>
```

Table description

Item	Description

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionID	ConnectionID of IKEv2 SA	Index	Unsigned integer.	N/A
LocalIP	IP address of the local security gateway	N/A	IPv4: String, dotted	IPv4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv6 example: 1:2:3:4:5:6:7:8.
LocalPort	Port number of the local security gateway	N/A	Unsigned integer.	N/A
RemoteIP	IP address of the remote security gateway	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
RemotePort	Port number of the remote security gateway	N/A	Unsigned integer.	N/A
OutsideVRF	Outbound VRF	N/A	String: Length: 1 to 31 characters Case sensitive.	N/A
InsideVRF	Inbound VRF	N/A	String: Length: 1 to 31 characters Case sensitive.	N/A
LocalSPI	Local SPI	N/A	String: Length: 1 to 8 characters Case sensitive.	N/A
RemoteSPI	Remote SPI	N/A	String: Length: 1 to 8 characters Case sensitive.	N/A
LocalIDType	ID type of the local security gateway	N/A	String: Length: 1 to 33 characters Case sensitive.	N/A
LocalID	ID of the local security gateway	N/A	String: Length: 1 to 256 characters Case sensitive.	N/A
RemoteIDType	ID type of the remote security gateway	N/A	String: Length: 1 to 33 characters Case sensitive.	N/A
RemoteID	ID of the remote security gateway	N/A	String: Length: 1 to 256 characters Case sensitive.	N/A
AuthSignMethod	Signature method that the IKEv2 proposal uses in authentication	N/A	Enumeration: • 1—Pre-shared key • 2—DSA-	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			signature • 3—RSA-signature • 4—ECDSA-signature	
AuthVerifyMethod	Verification method that the IKEv2 proposal uses in authentication	N/A	Enumeration: • 1—Pre-shared key • 2—DSA-signature • 3—RSA-signature • 4—ECDSA-signature	N/A
IntegrityAlg	Integrity protection algorithms that the IKEv2 proposal uses	N/A	Enumeration: • 1—MD5 • 2—SHA1 • 3—SHA256 • 4—SHA384 • 5—SHA512 • 6—AES-XCBC-MAC	N/A
PRFAlg	PRF algorithms that the IKEv2 proposal uses	N/A	Enumeration: • 1—MD5 • 2—SHA1 • 3—SHA256 • 4—SHA384 • 5—SHA512 • 6—AES-XCBC-MAC	N/A
EncaryptionAlg	Encryption algorithms that the IKEv2 proposal uses	N/A	Enumeration: • 1—DES-CBC • 2—3DES-CBC • 3—AES-CBC-128 • 4—AES-CBC-192 • 5—AES-CBC-256 • 6—AES-CTR-128 • 7—AES-CTR-192 • 8—AES-CTR-256	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 9—CAMELLIA-CBC-128 • 10—CAMELLIA-CBC-192 • 11—CAMELLIA-CBC-256	
SADuration	IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A
RemainingSADuration	Remaining IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800, in seconds.	N/A
DHID	Diffie-Hellman group ID	N/A	Enumeration: • 2—MODP768/Group1 • 3—MODP1024/Group2 • 4—MODP1536/Group5 • 5—MODP2048/Group14 • 6—ECP256/Group19 • 7—ECP384/Group20 • 8—MODP2048(256 subgroup)/Group24	N/A
IsNATTraversal	UDP encapsulation used for NAT traversal	N/A	Enumeration: • 1—Enabled. • 2—Disabled.	N/A
DPDDetectInterval	DPD detection interval in seconds	N/A	Unsigned integer.	N/A
DPDRetryInterval	DPD retry interval in seconds	N/A	Unsigned integer.	N/A
TransmitEntity	Role of the local end in IKEv2 negotiation	N/A	Enumeration: • 1—Initiator • 2—Responder	N/A
LocalWindow	Local window size	N/A	Unsigned integer.	N/A
RemoteWindow	Remote window size	N/A	Unsigned integer.	N/A
LocalReqMsgID	Local request message ID	N/A	Unsigned integer.	N/A
RemoteReqMsgID	Remote request message ID	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalNextMsgID	Local next message ID	N/A	Unsigned integer.	N/A
RemoteNextMsgID	Remote next message ID	N/A	Unsigned integer.	N/A
PushIpAddress	Pushed IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8/68.
AssignedIpAddressList	IP address list assigned to the remote end by the local end	Data structure	Members include: AssignedIpAddress	N/A
AssignedIpAddress	IP address assigned to the remote end by the local end	N/A	String. Length: 1 to 63 characters.	N/A

IKEv2/DefaultProposal

This table contains the default information of IKEv2 proposal.

XML structure

Table name	DefaultProposal

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IntegrityList	Integrity protection algorithm list for the IKEv2 proposal.	Data structure	Members include: IntegrityItem	N/A
IntegrityItem	Integrity protection algorithms	N/A	• Unsigned integer	See IKEv2Capabilities table for supported authentication algorithms.
EncryptionList	Encryption algorithm list for the IKEv2 proposal	Data structure	Members include: EncryptionItem	N/A
EncryptionItem	Encryption algorithms	N/A	• Unsigned integer	See IKEv2Capabilities table for supported encryption algorithms.
DhList	DH groups list for the IKEv2 proposal	Data structure	Members include: DhItem	N/A
DhItem	DH groups	N/A	• Unsigned integer	See IKEv2Capabilities table for supported DH groups.
PrfAlgList	PRF algorithm list for the IKEv2 proposal	Data structure	Members include: PrfAlgItem	N/A
PrfAlgItem	PRF algorithms	N/A	• Unsigned integer	See IKEv2Capabilities table for supported PRF algorithms.

IKEv2/DefaultPolicy

This table contains the default information of IKEv2 policy.

XML structure

```
<IKEv2>
  <DefaultPolicy>
    <Proposal></Proposal>
    <MatchVRFName></MatchVRFName>
  </DefaultPolicy>
</IKEv2>
```

</INOF>
```

Table description

Item	Description
Feature name	INOF
Table name	Hosts
Table type	Multi-instance table
Row name	Host
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostIPAddress	Host IP information.	Index	Union: • IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Type	Access type	N/A	Enumeration: • **Local** • **Remote**	N/A
AccessDevice	Interface IP information.	N/A	Union: • IPv4: String, dotted decimal notation. • IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
AccessInterface	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Example: GigabitEthernet2/0/2	
HardZoning	Status of the hard-zoning	N/A	Enumeration: • **0**— -- • **1**—**Normal** • **2**—**Abnormal**	N/A

INOF/State

This table contains inof state information.

XML structure

```
<INOF>
  <State>
    <Role></Role>
  </State>
</INOF>
```

Table description

Item	Description
Feature name	INOF
Table name	State
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Role	Role of device	N/A	Enumeration: • **Reflector** • **Reflect-client** • **Standalone**	N/A

INOF/Zones

This table contains inof zones information.

XML structure

```
<INOF>
  <Zones>
    <Zone>
      <Name></Name>
        <Hosts>
          <Host>

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Global	Global table of Analyzer	Subtable	N/A	N/A
Instances	Instances of Analyzer	Sublist	N/A	N/A

INQA/Analyzer/Global

This table contains global analyzer information.

XML structure

Please refer to the XML structure of INQA/Analyzer/Global.

Table description

Item	Description
Feature name	INQA

Item	Description
Table name	Global
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID for packet loss measurement	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
UdpPort	UDP port for the analyzer to communicate with collectors	N/A	Unsigned integer. Value range: 1024 to 65535.	default：53312

INQA/Analyzer/Instances

This table contains information about analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances.

Table description

Item	Description
Feature name	INQA
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 8355838.	
Enable	Enablling status of the instance statistics	N/A	Boolean: • true • false(default)	N/A
Description	Description of the instances	N/A	String. Length: 1 to 64 characters.	N/A
Collectors	Collectors of the analyzer instances	Sublist	N/A	N/A
LossThreshold	Packet loss thresholds of the analyzer instances	Subtable	N/A	N/A
DelayThreshold	Packet delay thresholds of the analyzer instances	Subtable	N/A	N/A
Amses	AMS of the analyzer instances	Sublist	N/A	N/A

INQA/Analyzer/Instances/Collectors

This table contains collectors of the analyzer instance.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Collectors.

Table description

Item	Description
Feature name	INQA
Table name	Collectors
Table type	Multi-instance table
Row name	Collector
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for packet loss measurement	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. When this CollectorID is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.

INQA/Analyzer/Instances/LossThreshold

This table contains the packet loss alarm parameters of the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/LossThreshold.

Table description

Item	Description
Feature name	INQA
Table name	LossThreshold
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperLimit	Upper limit of the packet loss rate	N/A	String. Length: 1 to 10 characters. Value range: 0.000001~100. Unit: Percentage.	Both must be bound
LowLimit	Threshold is crossed if the packet loss rate drops below it	N/A	String. Length: 1 to 10 characters. Value range: 0.000001~100. Unit: Percentage.	Both must be bound

INQA/Analyzer/Instances/DelayThreshold

This table contains the packet delay alarm parameters of the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/DelayThreshold.

Table description

Item	Description
Feature name	INQA
Table name	DelayThreshold
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperLimit	Upper limit of the packet delay	N/A	Unsigned integer. Value range: 0 to 3600000. Unit: Millisecond.	Both must be bound
LowLimit	Threshold is crossed if the packet delay drops below it	N/A	Unsigned integer. Value range: 0 to 3600000. Unit: Millisecond.	Both must be bound
UpperLimitUs	Upper limit of the packet delay in microseconds	N/A	Unsigned integer. Value range: 0 to 3600000000. Unit: Microsecond.	Optional configuration.
LowLimitUs	Lower limit of the packet delay in microseconds	N/A	Unsigned integer. Value range: 0 to 3600000000. Unit: Microsecond.	Optional configuration.

INQA/Analyzer/Instances/Amses

This table contains AMS of the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses.

Table description

Item	Description
Feature name	INQA
Table name	Amses
Table type	Multi-instance table
Row name	Amse
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AmsID	AMS ID	Index	Unsigned integer. Value range: 1 to 2147483647.	N/A
DelayMeasure	Flag of delay measurement	N/A	Enumeration: • oneway • twoway	N/A
FlowDir	Measured flows	N/A	Enumeration: • forward • backward • bidirection	N/A
InGroups	Ingress measurement point group	Sublist	N/A	N/A
OutGroups	Egress measurement point group	Sublist	N/A	N/A

INQA/Analyzer/Instances/Amses/InGroups

This table contains ingroup group of AMS for the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses/InGroups.

Table description

Item	Description
Feature name	INQA
Table name	InGroups

Item	Description
Table type	Multi-instance table
Row name	InGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for packet loss measurement	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. When the CollectorID in the instance is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.
MpID	Measurement point	Index	Unsigned integer. Value range: 1 to 16777215.	Must be bound CollectorID

INQA/Analyzer/Instances/Amses/OutGroups

This table contains ingroup group of AMS for the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses/ OutGroups.

Table description

Item	Description
Feature name	INQA
Table name	OutGroups
Table type	Multi-instance table
Row name	OutGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for	Index	IPv4: String, dotted decimal	IPv4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	packet loss measurement		notation.	When the CollectorID in the instance is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.
MpID	Measurement point	Index	Unsigned integer. Value range: 1 to 16777215.	Must be bound CollectorID

INQA/Collector

This table contains INQA collector information.

XML structure

INQA/Collector/Global

This table contains basic information about an INQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Global
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
Analyzer	INQA analyzer	Subtable	N/A	N/A
ColorFlag	Flag bit for a monitored metric	Subtable	N/A	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DelayColorFlag	Flag bit for a monitored metric	Subtable	N/A	N/A

INQA/Collector/Global/Analyzer

This table contains information about an INQA analyzer that is associated with an INQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	N/A	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	N/A	Unsigned integer. Value range: 1024 to 65535. Default: 53312.	N/A
VpnName	VPN instance	N/A	String. Length: 1 to 31 characters.	N/A

INQA/Collector/Global/AddiAnalyzers

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	AddiAnalyzers
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddiAnalyzer	additional iNQA analyzer	Sublist	N/A	N/A

INQA/Collector/Global/AddiAnalyzers/AddiAnalyzer

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	AddiAnalyzer
Table type	Multi -instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	Index	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	Index	Unsigned integer. Value range: 1024 to 65535.	N/A
VpnName	VPN instance	Index	String. Length: 1 to 31 characters.	An empty string indicates the public network.

INQA/Collector/Global/ColorFlag

This table contains INQA collector color flag information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	ColorFlag
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColorBit	A TOS bit to flag packet loss measurement	N/A	Unsigned integer. Value range: 5 to 7.	N/A
ColorField	Bit position	N/A	Enumeration String: • IPTOS	N/A

INQA/Collector/Global/DelayColorFlag

This table contains INQA collector color flag information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	DelayColorFlag
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColorBit	A TOS bit to flag packet loss measurement	N/A	Unsigned integer. Value range: 5 to 7.	N/A
ColorField	Bit position	N/A	Enumeration String: • IPTOS	N/A

INQA/Collector/Instances

This table contains information about INQA collector instances.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Instances
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Instance	Instance information	Sublist	N/A	N/A

INQA/Collector/Instances/Instance

This table contains information about an INQA collector instance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Instance
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer. Value range: 1 to 8355838.	N/A
Enable	Enabling status of the continual for the Collector instance	N/A	Boolean: • true—Enable. • false—Disable.(Default)	N/A
DelayMeasureEnable	Enabling status of the continual for the Collector	N/A	Boolean: • true—Enable. • false—Disable.(Default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	instance			
Description	Instance description	N/A	String. Length: 1 to 64 characters.	N/A
Interval	Statistical interval	N/A	Enumeration: • 10(Default) • 60 • 600	Unit is seconds.
Analyzer	Analyzer for packet loss measurement	Subtable	N/A	N/A
Flows	Measured flows	Subtable	N/A	N/A
Mps	Measurement point	Subtable	N/A	N/A

INQA/Collector/Instances/Analyzer

This table contains information about an INQA analyzer that is associated with an INQA collector instance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate	N/A	Unsigned integer. Value range: 1024 to 65535. Default: 53312.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	with the analyzer			
VpnName	VPN instance	N/A	String. Length: 1 to 31 characters	N/A

INQA/Collector/Instances/AddiAnalyzers

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector inastance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	AddiAnalyzers
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddiAnalyzer	additional iNQA analyzer	Sublist	N/A	N/A

INQA/Collector/Instances/AddiAnalyzers/AddiAnalyzer

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector inastance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Instance
Table type	Multi -instance table
Row name	AddiAnalyzer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	Index	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	Index	Unsigned integer. Value range: 1024 to 65535.	N/A
VpnName	VPN instance	Index	String. Length: 1 to 31 characters.	An empty string indicates the public network.

INQA/Collector/Instances/Flows

This table contains information about measured flows.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Flows
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Flow	Flow information	Sublist	N/A	N/A

INQA/Collector/Instances/Flows/Flow

This table contains measured flow information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Flow
Table type	Multi-instance table
Row name	Flow
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FlowDir	Flow direction	Index	Enumeration string: • forward. • backward. • bidirection.	N/A
AddressFamily	Address family	N/A	Enumeration String: • IPv4. • IPv6	When the SourceIP or DestinationIP protocol changes, the value will also change.
Dscp	DSCP of the flow	N/A	Unsigned integer. Value range: 0 to 63.	N/A
SourceIP	Source IP address of the flow	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. Only IP unicast addresses can be configured.
SourceIPMask	Source mask length of the flow	N/A	Unsigned integer. Value range: 1 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationIP	Destination IP address of the flow	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. Only IP unicast addresses can be configured.
DestinationIP Mask	Destination mask length of the flow	N/A	Unsigned integer. Value range: 1 to 128.	N/A
ProtocolNum	Protocol number	N/A	Unsigned integer. Value range: 0 to 255. 6 and 17 represent TCP and UDP.	N/A
BeginSrcPort Num	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginSrcPortNum must be smaller than EndSrcPortNum.
EndSrcPortN um	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginSrcPortNum must be smaller than EndSrcPortNum.
BeginDestPor tNum	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginDestPortNum must be smaller than EndDestPortNum.
EndDestPort Num	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginDestPortNum must be smaller than EndDestPortNum.
VxlanMatch	Vxlan match	N/A	Enumeration String: • overlay. • Transmit • hybrid	N/A

INQA/Collector/Instances/Mps

This table contains measurement points information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Mps
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mp	Measurement point information	Sublist	N/A	N/A

INQA/Collector/Instances/Mps/Mp

This table contains measurement point information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Mp
Table type	Multi-instance table
Row name	Mp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MpID	Measurement point ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
ColorType	Color type	N/A	Enumeration String: • in-point. • out-point. • mid-point.	N/A
PortDir	Port direction	N/A	Enumeration String: • inbound. • outbound.	N/A

INQA/Interfaces

This table contains analyzer interfaces information.

XML structure

```
<INQA>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <MpID></MpID>
    </Interface>

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Global	Global table of the analyzer	subtable	N/A	N/A
Instances	Analyzer instances	sublist	N/A	N/A

INQA/Analyzer/Global

This table contains global analyzer information.

XML structure

Please refer to the XML structure of INQA/Analyzer/Global.

Table description

Item	Description
Feature name	INQA
Table name	Global
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID for packet loss measurement	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
UdpPort	UDP port for the analyzer to communicate with collectors	N/A	Unsigned integer. Value range: 1024 to 65535. default: 53312	N/A

INQA/Analyzer/Instances

This table contains information about analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances.

Table description

Item	Description
Feature name	INQA
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer. Value range: 1 to 8355838.	N/A
Enable	Enablling status of the instance statistics	N/A	Boolean: • true • false(default)	N/A
Description	Description of the instance	N/A	String. Length: 1 to 64 characters.	N/A
Collectors	Collectors of the analyzer Instance	Sublist	N/A	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LossThreshold	Packet loss thresholds of the analyzer instances	Subtable	N/A	N/A
Amses	AMS of the analyzer instances	Sublist	N/A	N/A

INQA/Analyzer/Instances/Collectors

This table contains collectors of the analyzer instance.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Collectors.

Table description

Item	Description
Feature name	INQA
Table name	Collectors
Table type	Multi-instance table
Row name	Collector
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for packet loss measurement	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. When this CollectorID is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.

INQA/Analyzer/Instances/LossThreshold

This table contains the packet loss alarm parameters of the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/LossThreshold.

Table description

Item	Description
Feature name	INQA
Table name	LossThreshold
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperLimit	Upper limit of the packet loss rate	N/A	String. Length: 1 to 10 characters. Value range: 0.000001 to 100. Unit: Percentage.	Both must be bound
LowLimit	Lower limit of the packet loss rate	N/A	String. Length: 1 to 10 characters. Value range: 0.000001 to 100. Unit: Percentage.	Both must be bound

INQA/Analyzer/Instances/Amses

This table contains AMS of the analyzer instances..

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses.

Table description

Item	Description
Feature name	INQA
Table name	Amses
Table type	Multi-instance table
Row name	Ams
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AmsID	AMS ID	Index	Unsigned integer. Value range: 1 to 2147483647.	N/A
FlowDir	Measured flows	N/A	Enumeration: • forward • backward • bidirection	N/A
InGroups	Ingress measurement point group	Sublist	N/A	N/A
OutGroups	Egress measurement point group	Sublist	N/A	N/A

INQA/Analyzer/Instances/Amses/InGroups

This table contains ingroup group of AMS for the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses/InGroups.

Table description

Item	Description
Feature name	INQA
Table name	InGroups
Table type	Multi-instance table
Row name	InGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for packet loss measurement	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. When the CollectorID in the instance is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.

Column name	Column description	Column type	Data type and restrictions	Remarks
MpID	Measurement point	Index	Unsigned integer. Value range: 1 to 16777215.	Must be bound CollectorID

INQA/Analyzer/Instances/Amses/OutGroups

This table contains ingroup group of AMS for the analyzer instances.

XML structure

Please refer to the XML structure of INQA/Analyzer/Instances/Amses/ OutGroups.

Table description

Item	Description
Feature name	INQA
Table name	OutGroups
Table type	Multi-instance table
Row name	OutGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID for packet loss measurement	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. When the CollectorID in the instance is deleted, the same CollectorID in the ingroup and outgroup of the AMS is also deleted.
MpID	Measurement point	Index	Unsigned integer. Value range: 1 to 16777215.	Must be bound CollectorID

Instances	Configure a collector instance	Subtable	N/A	N/A

INQA/Collector/Global

This table contains basic information about an INQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Global
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector ID	N/A	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
Analyzer	INQA analyzer	Subtable	N/A	N/A
ColorFlag	Flag bit for a monitored metric	Subtable	N/A	N/A

INQA/Collector/Global/Analyzer

This table contains information about an INQA analyzer that is associated with an INQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	N/A	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
VpnName	VPN instance	N/A	String. Length: 1 to 31 characters.	N/A

INQA/Collector/Global/AddiAnalyzers

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	AddiAnalyzers
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddiAnalyzer	additional iNQA analyzer	Sublist	N/A	N/A

INQA/Collector/Global/AddiAnalyzers/AddiAnalyzer

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	AddiAnalyzer
Table type	Multi -instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	Index	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	Index	Unsigned integer. Value range: 1024 to 65535.	N/A
VpnName	VPN instance	Index	String. Length: 1 to 31 characters.	An empty string indicates the public network.

INQA/Collector/Global/ColorFlag

This table contains INQA collector color flag information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	ColorFlag
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColorBit	A TOS field bit to flag packet loss measurement	N/A	Unsigned integer. Value range: 5 to 7.	N/A
ColorField	Bit position	N/A	Enumeration String: • IPTOS	N/A

INQA/Collector/Instances

This table contains information abut INQA collector instances.

XML structure

Please refer to the XML structure of INQA/Collector.

Column name	Column description	Column type	Data type and restrictions	Remarks
Instance	Instance information	Sublist	N/A	N/A

INQA/Collector/Instances/Instance

This table contains information about an INQA collector instance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Instance
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer. Value range: 1 to 8355838.	N/A
Enable	Enabling status of the continual measurement for the Collector instance	N/A	Boolean: • **true—Enable.** • **false—Disable.**	N/A
Description	Instance description	N/A	String. Length: 1 to 64 characters.	N/A
Interval	Statistical interval	N/A	Enumeration: • **10** • **60** • **600**	Unit is seconds.
Analyzer	Analyzer for packet loss measurement	Subtable	N/A	N/A
Flows	Measured flows	Subtable	N/A	N/A
Mps	Measurement point	Subtable	N/A	N/A

INQA/Collector/Instances/Analyzer

This table contains information about an INQA analyzer that is associated with an INQA collector instance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Analyzer
Table type	Single-instance table
Row name	N/A
Restrictions	None

INQA/Collector/Instances/AddiAnalyzers

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector inastance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item			Description		
Feature name			INQA		
Table name			AddiAnalyzers		
		Table type	Single-instance table		
Row name			N/A		
Restrictions			None		
		Support for row creation and deletion	No		

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddiAnalyzer	additional iNQA analyzer	Sublist	N/A	N/A

INQA/Collector/Instances/AddiAnalyzers/AddiAnalyzer

This table contains information about the additional iNQA analyzer that is associated with an iNQA collector inastance.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Instance

Item	Description
Table type	Multi-instance table
Row name	AddiAnalyzer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyzerID	Analyzer ID	Index	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1.
UdpPort	UDP port for the collector to communicate with the analyzer	Index	Unsigned integer. Value range: 1024 to 65535.	N/A
VpnName	VPN instance	Index	String. Length: 1 to 31 characters	An empty string indicates the public network.

INQA/Collector/Instances/Flows

This table contains information about measured flows.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Flows
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Flow	Flow information	Sublist	N/A	N/A

INQA/Collector/Instances/Flows/Flow

This table contains measured flow information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Flow
Table type	Multi-instance table
Row name	Flow
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FlowDir	Flow direction	Index	Enumeration string: • forward. • backward. • bidirection.	N/A
AddressFamily	Address family	N/A	Enumeration String: • IPv4. • IPv6	N/A
Dscp	DSCP of the flow	N/A	Unsigned integer. Value range: 0 to 63.	N/A
SourceIP	Source IP address of the flow	N/A	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1. Only IP unicast addresses can be configured.
SourceIPMask	Source mask length of the flow	N/A	Unsigned integer. Value range: 1 to 32.	N/A
DestinationIP	Destination IP address of the flow	N/A	IPv4: String, dotted decimal notation.	IPV4 example: 1.1.1.1. Only IP unicast addresses can be configured.
DestinationIPMask	Destination mask length of the flow	N/A	Unsigned integer. Value range: 1 to 32.	N/A
ProtocolNum	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			6 and 17 represent TCP and UDP.	
BeginSrcPortNum	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginSrcPortNum must be smaller than EndSrcPortNum.
EndSrcPortNum	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginSrcPortNum must be smaller than EndSrcPortNum.
BeginDestPortNum	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginDestPortNum must be smaller than EndDestPortNum.
EndDestPortNum	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	BeginDestPortNum must be smaller than EndDestPortNum.
VxlanMatch	Vxlan match	N/A	Enumeration String: • overlay. • Transmit • hybrid	N/A

INQA/Collector/Instances/Mps

This table contains measurement point information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Mps
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mp	Measurement point information	Sublist	N/A	N/A

INQA/Collector/Instances/Mps/Mp

This table contains measurement point information.

XML structure

Please refer to the XML structure of INQA/Collector.

Table description

Item	Description
Feature name	INQA
Table name	Mp
Table type	Multi-instance table
Row name	Mp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MpID	Measurement point ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
IfIndex	interface name	N/A	String. Length: 1 to 31 characters.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
ColorType	Color type	N/A	Enumeration string: • in-point. • out-point. • **mid-point.**	N/A
PortDir	Port direction	N/A	Enumeration string: • **inbound.** • **outbound.**	N/A

INQA/Interfaces

This table contains analyzer interface information.

XML structure

```
<INQA>
  <Interfaces>
```

```
    <Interface>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <MpID></MpID>
    </Interface>
  </Interfaces>
</INQA>
```

INQA/Instance

Message	Explanation
“The instance has been enabled.” 实例已经使能。”	The instance has been enabled. 实例已使能。
“A flow with the same attributes (except flow direction) has already been specified in another instance.” “其他实例已经存在flow。”	The flow has already been specified in another instance. 其他实例已经存在 flow。
“The measurement is enabled.” “有实例持续使能，不允许删除操作。”	The delete operation failed because the measurement is enabled. 实例持续使能. 不允许删除操作。
“The instance to which the MP is bound has been enabled.” “有MP绑定的实例持续使能。”	The instance to which the MP is bound has been enabled. 有 MP 绑定的实例持续使能。
“A flow has already been specified for the instance. To specify a new flow for the instance, please delete the existing flow first.” “当前实例已经配置了目标流，需要删除方可配置。”	A flow has already been specified for the instance. 已经配置了目标流。
“The MP does not exist.” “当前实例接口下不允许绑定不存在的Mp ID。”	You are not allowed to bind a nonexistent MP ID to the current instance interface. 当前实例接口下不允许绑定不存在的Mp。
“You must configure a forward flow before configuring the backward flow.”	No forward flow is configured. 正向流没有配置。

“正向流没有配置，不允许配置反向流。”	
“Lack of MP setting.” “实例下未配置Mp，请先配置。”	MP is not configured. 未配置 Mp。
“The instance does not exist. Please configure the instance first.” “实例不存在，操作失败。”	The instance does not exist. 实例不存在。
“Lack of flag bit setting.” “染色位信息没有配置，需要配置染色位。”	Lack of flag bit setting. 染色位信息没有配置。
“Lack of measured flow setting.” “未配置目标流，请首先配置目标流。”	Measured flow is not configured. 未配置目标流。
“The source and destination IP addresses are required for symmetric bidirectional flows.” “双向流需要同时配置源地址和目的地址。”	The source and destination IP addresses are required for symmetric bidirectional flows. 双向流需要同时配置源地址和目的地址。
“The collector does not exist in the analyzer instance.” “实例下不存在当前的collector。”	The collector does not exist in the analyzer instance. collector 在实例下不存在。
“The value of upper limit cannot be less than the value of lower limit.” “alarm的下限不能高于上限。”	The upper limit value cannot be less than the lower limit value. alarm 的下限不能高于上限。
“The configuration of in-group and out-group cannot be the same.” “In-group和Out-group的collector ID和MP ID不能完全一样。”	The configuration of in-group and out-group cannot be the same. In-group 和 Out-group 的 collector ID 和 MP ID 不能完全一样。
“Maximum number of instances already reached.” “instance个数已经达到上限，不允许配置。”	Maximum number of instances has been already reached. instance 个数已经达到上限。
“Maximum number of MPs already reached.” “Mp个数已经达到上限，不允许配置。”	Maximum number of MPs has been already reached. Mp 个数已经达到上限。
“Maximum number of AMSs already reached.” “Ams个数已经达到上限，不允许配置。”	Maximum number of AMSs has been already reached. Ams 个数已经达到上限。
“Maximum number of in-groups already reached.” “In-group个数已经达到上限，不允许配置。”	Maximum number of in-groups has been already reached. In-group 个数已经达到上限。
“Maximum number of out-groups already reached.” “Out-group个数已经达到上限，不允许配置。”	Maximum number of out-groups has been already reached. Out-group 个数已经达到上限。

“Maximum number of collectors in the analyzer instance already reached.” “Analyzer实例下Collector个数已经达到上限，不允许配置。”	Maximum number of collectors has been already reached in the analyzer instance. Analyzer 实例下 Collector 个数已经达到上限。
“NTP is disabled or time is not synchronized.” “ntp未使能或者时间未达到同步。”	NTP is disabled. ntp 未使能。
“The end port number must be higher than the start port number.” “端口的终止值必须大于起始值。”	The end port number must be higher than the start port number. 端口的终止值必须大于起始值。
“You cannot configure both TOS bit 5 of color flag and flows with DSCP.” “染色位为第5位时与带有dscp特征的目标流互斥。”	You cannot configure both TOS bit 5 of color flag and flows with DSCP. 染色位为第 5 位时与带有 dscp 特征的目标流互斥。
“The loss color flag and delay color flag cannot be configured at the same time.” “时延染色位和丢包染色位不允许配置成一致。”	The loss color flag and delay color flag cannot be configured at the same time. 时延染色位和丢包染色位不允许配置成一致。

INQA/Interface

Message	Explanation
“The MP is already bound to another interface.” “当前配置的Mp已经绑定了其他接口。”	The MP is already bound to another interface. 该 mp 已经绑定了其他接口。
“This interface is already bound to another MP.” “当前接口已经绑定了其他Mp。”	This interface is already bound to another MP 接口已经绑定了其他 Mp。
“Lack of MP-interface binding.” “存在测量点未绑定接口索引，请首先绑定接口索引。”	The MP-interface binding is not configured. 未绑定接口索引。

INQA/Collector/Global

Message	Explanation
“The flow DSCP value and the ToS bit 5 setting cannot be both specified.” “染色位为第5位与带有DSCP特征的目标流配置互斥。”	The flow DSCP value and the ToS bit 5 setting cannot be both specified. 染色位为第5位时与带有dscp特征的目标流互斥。
“Color bit and bit position must be both specified.”	The color bit and bit position must be both specified.

“染色位信息和染色位置必须同时下发。”	染色位信息和染色位置必须同时下发。
“Duplicate analyzer settings.” “两个分析仪的信息不能完全相同。”	Duplicate analyzer settings. 两个分析仪的信息不能完全相同。
“The number of additional analyzers has reached the upper limit.” “分析器的个数已经达到最大值，不允许配置”	The number of additional analyzers has reached the upper limit. 分析器的个数已经达到最大值，不允许配置。
“You cannot specify different UDP port numbers for the same pair of analyzer ID and VPN instance name.” “不能为同一对 analyzer ID 和 VPN 实例名称指定不同的 UDP 端口号。”	You cannot specify different UDP port numbers for the same pair of analyzer ID and VPN instance name. 不能为同一对 analyzer ID 和 VPN 实例名称指定不同的 UDP 端口号。
“The loss color flag and the delay color flag setting conflict with each other and they cannot be both specified.” “时延染色位与丢包染色位配置互斥。”	The flow DSCP value and the ToS bit 5 setting conflict with each other and they cannot be both specified. 时延染色位与丢包染色位配置互斥。

INQA/Collector/Instance

Message	Explanation
“Operation failed because the instance has been enabled.” 配置失败，实例正处于测量状态。”	Failed to enable the measurement because it is enabled in the instance. 实例已使能。
“A measured flow with the same attributes has already been specified for another instance. ” “配置冲突，目标流已经和其它实例绑定。”	A measured flow with the same attributes has already been specified for another instance. 其他实例已经存在 flow。
“Cannot edit the MP settings because the measurement is enabled for the instance to which the MP is bound.” “MP绑定的实例正在测量，不允许修改MP的配置。”	The MP settings cannot be edited because the measurement is enabled for the instance to which the MP is bound. 有 MP 绑定的实例持续使能。
“A measured flow has already been configured in the instance.” “当前实例已经配置了目标流。”	A measured flow has already been configured in the instance. To configure a new measured flow in the instance, delete the existing flow first. 当前实例已经配置了目标流，需要删除方可配置。
“You must configure a forward flow before configuring the backward flow.” “不允许仅配置反向流，请先配置正向流。”	You must configure a forward flow before configuring the backward flow. 不允许仅配置反向流，请先配置正向流。
“No MP is configured in the instance.” “实例下未配置MP。”	No MP is configured. Please configure an MP first. 实例下未配置 MP，请先配置。

“Failed to enable the measurement because the instance does not exist.” “开启测量失败，因为实例下未配置实例。”	Failed to enable the measurement, because the specified instance does not exist. Please configure an instance first. 实例不存在。
“Failed to enable the measurement because no flag bit setting is configured in the instance.” “开启测量失败，因为实例下未配置染色位。”	Failed to enable the measurement, because no flag bit setting is configured. Please configure the flag bit setting first. 开启测量失败，因为实例下未配置染色位。
“No measured flow is configured.” “未配置目标流。”	No measured flow is configured. Please configure a measured flow first. 开启测量失败，因为实例下未配置目标流。
“The source and destination IP addresses must be both specified for symmetric bidirectional flows.” “双向流需要同时配置源地址和目的地址。”	The source and destination IP addresses must be both specified for symmetric bidirectional flows. 双向流需要同时配置源地址和目的地址。
“Maximum number of instances already reached.” “实例个数已经达到上限。”	Maximum number of instances has been already reached. instance个数已经达到上限。
“Maximum number of MPs already reached.” “MP个数已经达到上限。”	Maximum number of MPs has been already reached. Mp个数已经达到上限。
“The end port number must be higher than the start port number.” “端口编号的终止值必须大于起始值。”	The end port number must be higher than the start port number. 端口的终止值必须大于起始值。
“The port number can be configured only when the protocol is TCP or UDP.” “当协议为TCP或者UDP时才可以配置端口号。”	The port number can be configured only when the protocol is TCP or UDP. 当协议为TCP或者UDP的时候才可以下发端口号。
“To issue a mask, issue an IP address first.” “不允许仅配置地址掩码，地址掩码需要和IP地址一起配置。”	An IP address must be issued before a mask. 下发地址掩码之前需要先下发IP地址。
“To delete a measured flow, you must specify the flow direction.” “删除流目标时，必须指定流方向。”	To delete a measured flow, you cannot delete only one attribute column. 删除流目标时，不能单独删除某一个属性列。
“The MP ID, color type, traffic direction must be all specified.” “必须同时指定MP ID、MP类型和流方向。”	The MP ID, color type, traffic direction must be all specified. 必须同时下发MPID，color type，port direction。
“The port number must be specified when the protocol is TCP or UDP.” “协议为UDP或者TCP时，必须指定端口号。”	When the protocol is TCP or UDP, the port number must be specified. 协议为UDP或者TCP时，必须要下发端口号。
“Failed to create a measured flow because	You must specify the flow direction in order to create a measured

required setting are missing.” “目标流创建失败，缺少必选参数。”	flow. 目标流创建失败，请指定流方向。
“To delete an MP, specify only the MP ID.” “删除测量点时，只能指定MP的编号，不能指定其他参数。”	To delete an MP, specify only the MP ID 删除测量点时，只允许删除索引。
“Duplicate analyzer settings.″ “两个分析仪的信息不能完全相同。”	Duplicate analyzer settings. 两个分析仪的信息不能完全相同。
“The number of additional analyzers has reached the upper limit.” “分析器的个数已经达到最大值，不允许配置”	The number of additional analyzers has reached the upper limit. 分析器的个数已经达到最大值，不允许配置
“You cannot specify different UDP port numbers for the same pair of analyzer ID and VPN instance name.” “不能为同一对 analyzer ID 和 VPN 实例名称指定不同的 UDP 端口号。”	You cannot specify different UDP port numbers for the same pair of analyzer ID and VPN instance name. 不能为同一对analyzer ID和VPN实例名称指定不同的UDP端口号。

INQA/Collector/Interface

Message	Explanation
“The MP does not exist.” “绑定的MP不存在。”	A nonexistent MP cannot be bound to the interface. 当前接口绑定的MP不存在。
“The MP has already been bound to another interface.” “当前配置的MP已经绑定了其他接口。”	The MP has already been bound to another interface. 该 mp 已经绑定了其他接口。
“The interface has already been bound to another MP.” “当前接口已经绑定了其它MP。”	This interface has already been bound to another MP 接口已经绑定了其他 Mp。
“The MP-interface binding is not configured.” “MP未绑定接口。”	The MP-interface binding is not configured. Please configure the binding first. 未绑定接口索引。

FlowInfo event

This event is used to report iFIT flow information when the flow information is updated.

XML structure for event subscription

```
<FlowInfo>
  <flowentry>
    <FlowNodeID></FlowNodeID>
    <FlowMonID></FlowMonID>
  </flowentry>
</FlowInfo>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>InSuitOam</stream>
    <filter type="subtree">
    <FlowInfo xmlns="http://www.h3c.com/netconf/event:1.0/InSuitOam:1.0">
      <flowentry>
        <FlowNodeID>1</FlowNodeID>
        <FlowMonID>1</FlowMonID>
      </flowentry>
    </FlowInfo>
    </filter>
  </create-subscription>
</rpc>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
FlowNodeID	Node identifier of monitored flow	Unsigned integer. Value range: 1 to 4294967295	No
FlowMonID	Monitored flow identifier	Unsigned integer. Value range: 1 to 1048575	No
addrFamily	Family of IP address	Enumeration: • **0**—IPv4. • **1**—IPv6.	No
SourceIP	Source IP address of the flow	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated.	No
SourceMask	Source mask length of the flow	Unsigned integer.	No
DestinationIP	Destination IP address of the flow	Union: 1. IPv4: String, dotted decimal notation. 2. IPv6: Hexadecimal string, colon-separated.	No
DestinationMask	Destination mask length of the flow	Unsigned integer.	No
SourcePort	Source port number	Unsigned integer. Value range: 0 to 65535.	No
DestinationPort	Destination port number	Unsigned integer. Value range: 0 to 65535.	No
Protocol	Type of protocol	Unsigned integer.	No
BindingIfName	Full name of an binding interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	No
VRF	VPN instance	String. Length: 1 to 31 characters.	No
Dscp	DSCP value.	Unsigned integer. Value range: 0 to 63.	No

MeasureReport event

This event is used to report iFIT measure information when the measure information is updated.

XML structure for event subscription

```
<MeasureReport>
  <reportEntry>
    <FlowNodeID></FlowNodeID>
    <FlowMonID></FlowMonID>
  </reportEntry>
<MeasureReport>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>InSuitOam</stream>
    <filter type="subtree">
      <MeasureReport xmlns="http://www.h3c.com/netconf/event:1.0/InSuitOam:1.0">
        <reportEntry>
          <FlowNodeID>1</FlowNodeID>
          <FlowMonID>1</FlowMonID>
        </reportEntry>
      </MeasureReport>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	InSuitOam
Event name	MeasureReport
Event namespace	http://www.h3c.com/netconf/event:1.0/InSuitOam:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
FlowNodeID	Node identifier of monitored flow	Unsigned integer. Value range: 1 to 1048575	N/A
FlowMonID	Monitored flow identifier	Unsigned integer. Value range: 1 to 1048575	N/A

XML structure for event report

```
<MeasureReport>
  <reportEntry>
    <FlowNodeID></FlowNodeID>
    <FlowMonID></FlowMonID>
```

```
    <direction></direction>
    <IfName></IfName>
    <PeriodID></PeriodID>
    <period></period>
    <PacketCount></PacketCount>
    <TimestampSecond></TimestampSecond>
    <TimestampNanoSecond></TimestampNanoSecond>
    <trunkIfName></trunkIfName>
    <ErrorInfo></ErrorInfo>
  </reportEntry>
</MeasureReport>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2021-09-21T09:10:51</eventTime>
  < MeasureReport xmlns="http://www.h3c.com/netconf/event:1.0/InSuitOam:1.0">
    <reportEntry>

      <TimestampNanoSecond>2042130</TimestampNanoSecond>
      <trunkIfName>Route-Aggregation1</trunkIfName>
      <ErrorInfo>1</ErrorInfo>
    </reportEntry>
  </MeasureReport>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
FlowNodeID	Node identifier of monitored flow	Unsigned integer. Value range: 1 to 1048575	No
FlowMonID	Monitored flow identifier	Unsigned integer. Value range: 1 to 1048575	No
direction	Flow direction	Enumeration: • **0**—Ingress. • **1**—TransInput • **2**—TransOutput • **3**—Egress.	No

Column name	Column description	Data type and restrictions	Support for extended queries
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	No
PeriodID	Period identifier	Unsigned integer. Length: 32 bits.	No
period	Statistics polling interval	Enumeration: • **0**—1 second. • **1**—10 seconds. • **2**—30 seconds • **3**—60 seconds. • **4**—300 seconds	No
PacketCount	Packet number	Unsigned integer. Length: 64 bits.	No
TimestampSecond	Second part of the timestamp	Unsigned integer. Length: 64 bits.	No
TimestampNanoSecond	Nanosecond part of the timestamp	Unsigned integer. Length: 64 bits.	No
trunkIfName	Full name of a trunk interface	String. Length: 2 to 47 characters. Example: Route-Aggregation1	No
ErrorInfo	Error information	Unsigned integer. Length: 32 bits.	No

IPCIM/IpSourceBindingInterface

This table contains IPSG binding information.

XML structure

```
<IPCIM>
  <IpSourceBindingInterface>
    <SourceBinding>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
    </SourceBinding>
  </IpSourceBindingInterface>
</IPCIM>
```

Table description

Item	Description
Feature name	IPCIM
Table name	IpSourceBindingInterface
Table type	Multi-instance table
Row name	SourceBinding
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface/subinterface VLAN interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference. Value 0 means to configure a global static IPv4SG binding, which takes effect on all interfaces.
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	Value 0.0.0.0 means that no IPv4 address is specified. Either an IPv4 address or a MAC address must be specified.
MacAddress	MAC address	Index	Format: HH-HH-HH-HH-HH-HH.	Example: 00-0c-af-e3-5d-c0. Vlaue 00-00-00-00-00-00 means that no MAC address is specified. Either an IPv4 address or a MAC address must be specified.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 0 to 4094.	Value 0 means that no VLAN ID is specified.

IPCIM/IpVerifySource

Table description

Item	Description
Feature name	IPFW
Table name	IPFWLoadSharing
Table type	Multi-instance table

Item	Description
Row name	LoadSharing
Restrictions	None
Support for row creation and deletion	No

Columns for B64

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Type	Method for obtaining the IPv4 address	N/A	Enumeration: • **1**—PACKET. • **2**—FLOW. • **3**—ALGORITHM	N/A
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer. Value range: 0 to 7.	N/A
DestIp	Load sharing based on destination IP address	N/A	Boolean: • **true** • **false**	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: • **true** • **false**	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean: • **true** • **false**	N/A
DestPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: • **true** • **false**	N/A

Columns for B70

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	Value range is 0 to 7
Type	Method for obtaining the IPv4 address	Index	Enumeration: • **0**—DEFAULT. • **1**—PACKET. • **2**—FLOW. • **3**—ALGORITHM • **4**—TUNNEL	0:Restore default configuration. 1:Configuration type only 2:Can only be configured DestIp , SrcIp , IpPro , DestPort, SrcPort, IngressPort ; 3: Can only be configured AlgorithmNum, Seed, Shift 4: Can only be configured Tunnlemode

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer. Value range: 0 to 7.	Default value 4294967295, Note: it shows default value If AlgorithmNum equals to 0,
Seed	The start hash value for the load-sharing algorithm	N/A	Unsigned integer.	Default value is set by user
Shift	The offset value for the load-sharing calculation result	N/A	Unsigned integer.	Default value is set by user
DestIp	Load sharing based on destination IP address	N/A	Boolean: • **true** • **false**	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: • **true** • **false**	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean: • **true** • **false**	N/A
DestPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A
SrcPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: • **true** • **false**	N/A
FlowLabel	Load sharing based on flow label	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Tunnleouter	Load sharing based on Tunnel outer	N/A	Boolean: • **true** • **false**	N/A
TunnelInner	Load sharing based on Tunnel Inner	N/A	Boolean: • **true** • **false**	N/A
TunnelAll	Load sharing based on Tunnel All	N/A	Boolean: • **true** • **false**	N/A

IPFW/IPFWLastHopHold

This table contains last hop holding information.

XML structure

```
<IPFW>
  <IPFWLastHopHold>
    <LastHopHold>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </LastHopHold>
  </IPFWLastHopHold>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopHold
Table type	Multi-instance table
Row name	LastHopHold
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix”in *Ifmgr NETCONF XML API Configuration Reference*.
Mode	Enabling status of the last hop holding feature	N/A	Unsigned integer: • **1**—Enabled. • **2**—Disabled.	N/A

IPFW/IPFWSetService

This table contains IP service information.

XML structure

```
<IPFW>
  <IPFWSetService>
    <DscpEnable></DscpEnable>
    <VpnPeerIdEnable></VpnPeerIdEnable>
    <MplsExpEnable></MplsExpEnable>
  </IPFWSetService>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetService

Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DscpEnable	Enabling status of the DSCP service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
VpnPeerIdEnable	Enabling status of the VPN peer ID service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MplsExpEnable	Enabling status of the MPLS EXP service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPFW/IPFWLastHopBackupSwitch

This table contains IP last hop backup information.

XML structure

```
<IPFW>
  <IPFWLastHopBackupSwitch>
    <BackupEnable></BackupEnable>
  </IPFWLastHopBackupSwitch>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW

Table name	IPFWLastHopBackupSwitch
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupEnable	Enable last-hop Backup	N/A	Enumeration: • **1**—Enable. • **2**—Disable.	N/A

IPFW/IPFWTcpMss

This table contains interface TCP MSS information.

XML structure

```
<IPFW>
  <IPFWTcpMss>
    <TcpMss>
      <IfIndex></IfIndex>
      <Num></Num>
    </TcpMss>
  </IPFWTcpMss>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWTcpMss
Table type	Multi-instance table
Row name	TcpMss

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Num	TCP max segment size	N/A	Unsigned integer. Value range: 128 to 65535.	The maximum value is the maximum MTU that the interface supports minus 40.

IPFW/IPFWDFSet

This table contains packet DF bit information.

XML structure

```
<IPFW>
  <IPFWDFSet>
      <IPDFBit></IPDFBit>
  </IPFWDFSet>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW

Item	Description
Table name	IPFWDFSet
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPDFBit	Setting of the DF bit	N/A	Enumeration: • **0**—DISABLE. • **1**—SET. • **2**—CLEAR.	N/A

IPFW/IPFWSymmetric

This table contains IP symmetric forwarding.

XML structure

```
<IPFW>
  <IPFWSymmetric>
    <Symmetric>
      <SymmetricMode></SymmetricMode>
    </Symmetric>
  </IPFWSymmetric>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSymmetric
Table type	Multi-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Symmetric	Enabling status of the symmetric forwarding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPFW/IPFWFwdPolicy

This table contains the forwarding policy information.

XML structure

```
<IPFW>
  <IPFWFwdPolicy>
    <FwdPolicy></FwdPolicy>
  </IPFWFwdPolicy>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWFwdPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
FwdPolicy	Set the current forwarding policy	N/A	Unsigned integer Value range: 1 to 4. • **1**—Per-flow forwarding policy. • **2**—Per-packet forwarding policy. • **3**—Three-tuple-based per-flow forwarding policy. • **4**—Enhanced per-flow forwarding policy.

IPFW/IPFWSetStatistic

This table contains interface-specific IPv4 and IPv6 staitistic collection configuration.

XML structure

```
<IPFW>
  <IPFWSetStatistic>
    <SetStatistic>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <Direct></Direct>
      <InPktType></InPktType>
      <OutPktType></OutPktType>
    </SetStatistic>
  </IPFWSetStatistic>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetStatistic
Table type	Multi-instance table
Row name	SetStatistic

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Enable	Enabling status of the statistics collection	N/A	Unsigned integer • **1**—Enabled • **2**—Disabled	Default value is 2
Direct	Traffic direction	N/A	Enumeration: • **0**—Inbound • **1**—Outbound • **2**—Both	Default value is 2
InPktType	Inbound packet type	N/A	Enumeration: • **1**—Broadcast • **2**—Multicast • **3**—Broadcast,Multicast • **4**—Unicast • **5**—Broadcast,Unicast • **6**—Multicast,Unicast • **7**—Broadcast,Multicast,Unicast	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutPktType	Outbound packet type	N/A	Enumeration: • **1**—Broadcast • **2**—Multicast • **3**—Broadcast,Multicast • **4**—Unicast • **5**—Broadcast,Unicast • **6**—Multicast,Unicast • **7**—Broadcast,Multicast,Unicast	N/A

IPFW/IPFWForwardConverseLearn

This table contains information about conversational learning for IP forwarding.

XML structure

```
<IPFW>
  <IPFWForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
    <AgingTime></AgingTime>
  </IPFWForwardConverseLearn>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWForwardConverseLearn
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverseLearnEnable	Whether conversational learning for host route FIB entries is enabled	N/A	Boolean: • **true**. • **false** (default).	N/A
AgingTime	Aging time for host route FIB entries	N/A	Unsigned integer. Value range: 60 to 1440, in minutes. Default: 60.	N/A

IPFW/IPFWMTU

This table contains IPV4 interface MTU information.

XML structure

```
<IPFW>
  <IPFWMTU>
    <MTU>
      <IfName></IfName>
      <MTU></MTU>
    </MTU>
  </IPFWMTU>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWMTU
Table type	Multi-instance table
Row name	MTU
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters.	Only Layer 3 interfaces are supported.
MTU	Interface MTU	N/A	Unsigned integer. • Value range: minimum MTU to maximum MTU.	Applicable to only Layer 3 interfaces. The minimum MTU and the maximum MTU value depend on the device and the interface type.

IPFW/IPFWErrorEnable

This table contains interface-specific IPv4 and IPv6 error statistics collection configuration.

XML structure

```
<IPFW>
  <IPFWErrorEnable>
 <ErrorEnable>
    <in-L2-MTU-errors></in-L2-MTU-errors>
    <out-L2-MTU-errors></out-L2-MTU-errors>

Table name	IPFWErrorEnable
Table type	Single-instance table
Row name	ErrorEnable
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
in-L2-MTU-errors	Monitor L2MTU packet loss in the incoming direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-L2-MTU-errors	Monitor L2MTU packet loss in the outbound direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-vlan-mismatch-errors	Monitor the inbound VLAN mismatch and packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-vlan-mismatch-errors	Monitor packet loss due to VLAN mismatch in the outbound direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
in-spanningtree-errors	Monitoring the incoming spanning tree to filter packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-spanningtree-errors	Monitoring the outgoing direction spanning tree filtering packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-same-interface-errors	Monitor incoming source incoming and outgoing packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-L3-header-errors	Monitor the incoming L3 header error packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-L3-ttl-errors	Monitor incoming L3 ttl0/ttll packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-storm-control-errors	Monitor incoming storm control and filter packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-L3-rib-errors	Monitor L3 packet loss in the incoming direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-L3-nexthop-errors	Monitor next-hop packet loss in the incoming direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
in-L3-MTU-errors	Monitor L3 mtu packet loss in the incoming direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-ACL-errors	Monitor incoming ACL packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-ACL-errors	Monitor acl packet loss in the outbound direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-checksum-errors	Monitor incoming parity error and packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-checksum-errors	Check the error packet loss when monitoring the outgoing direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A

IPFW/BPA

This table enables the BGP policy accounting function.

XML structure

```
<IPFW>
  <BPA>
    <Accounting>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <Classification></Classification>
    </Accounting>
  </BPA>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	BPA
Table type	Single-instance table
Row name	Accounting
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
Direction	Traffic direction	Index	Enumeration: • **1**—Input • **2**—Output	N/A
Classification	Basis of IP traffic classification	N/A	Enumeration: • **0**—destination • **1**—source	N/A

IPFW/IPFWEcmpMode

This table contains the forwarding ecmp mode information.

XML structure

```
<IPFW>
  <IPFWEcmpMode>
    <EcmpMode></EcmpMode>
     <FlowSetInactiveTime></FlowSetInactiveTime>
    <FlowSetInactiveSize></FlowSetInactiveSize>
    <FlowSetInactiveHashMode></FlowSetInactiveHashMode>
  </IPFWEcmpMode>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWEcmpMode
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EcmpMode		N/A	Enumeration: • 0—Disable(default) • **1**—Compressed • **2**—Eligible • 3—Enhanced • 4—Fixed • 5—Spray • 6—Fir	N/A
FlowSetInactiveTime		N/A	Unsigned integer. Value range:customed, in microseconds.	Used when the “EcmpMode” column is 2 or 6.
FlowSetInactiveSize		N/A	Unsigned integer. Value range:customed, in bytes.	Used when the “EcmpMode” column is 6.
FlowSetInactiveHashMode		N/A	Enumeration: • **0**—Eligible • **1**—Fixed • **2**—Spray(default)	Used when the “EcmpMode” column is 6.

IPFW/FIBConsistencyTable

This table contains the information about FIB consistency check.

XML structure

```
<IPFW>
  <FIBConsistencyTable>
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </FIBConsistencyTable>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	FIBConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConsistencyCheckEnable	Whether FIB consistency check is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

Table description

Item	Description
Feature name	IPFW
Table name	IPFWLoadSharing
Table type	Multi-instance table
Row name	LoadSharing
Restrictions	None

Columns for B64

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Type	Method for obtaining the IPv4 address	N/A	Enumeration: • **1**—PACKET. • **2**—FLOW. • **3**—ALGORITHM	N/A
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DestIp	Load sharing based on destination IP address	N/A	Boolean: • **true** • **false**	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: • **true** • **false**	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean: • **true** • **false**	N/A
DestPort	Load sharing based on destination port.	N/A	Boolean: • **true** • **false**	N/A
SrcPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: • **true** • **false**	N/A

Columns for B70

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	Value range is 0 to 7

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	IP-forwarding Load-sharing mode	Index	Enumeration: • **0**—DEFAULT • **1**—PACKET. • **2**—FLOW. • **3**—ALGORITHM • 4—TUNNEL	0:Restore default configuration. 1:Configuration type only 2:Can only be configured DestIp , SrcIp , IpPro , DestPort, SrcPort, IngressPort ; 3: Can only be configured AlgorithmNum, Seed, Shift 4: Can only be configured Tunnlemode
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer. Value range: 0 to 7.	Default value 4294967295
Seed	The start hash value for the load-sharing algorithm	N/A	Unsigned integer.	Default value is set by user
Shift	The offset value for the load-sharing calculation result	N/A	Unsigned integer.	Default value is set by user
DestIp	Load sharing based on destination IP address	N/A	Boolean: • **true** • **false**	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: • **true** • **false**	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean: • **true** • **false**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DestPort	Load sharing based on destination port.	N/A	Boolean: • **true** • **false**	N/A
SrcPort	Load sharing based on destination port	N/A	Boolean: • **true** • **false**	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: • **true** • **false**	N/A
FlowLabel	Load sharing based on flow label	N/A	Boolean: • **true** • **false**	N/A
Tunnleouter	Load sharing based on tunnel outer	N/A	Boolean: • **true** • **false**	N/A
TunnelInner	Load sharing based on tunnel inner	N/A	Boolean: • **true** • **false**	N/A
TunnelAll	Load sharing based on tunnel all	N/A	Boolean: • **true** • **false**	N/A

IPFW/IPFWSpecification

This table contains load-sharing support information.

XML structure

```
<IPFW>
  <IPFWSpecification>
    <LoadSharingSupportFlow></LoadSharingSupportFlow>
    <LoadSharingSuportPacket></LoadSharingSuportPacket>
    <LoadSharingSuportSwitch></LoadSharingSuportSwitch>
    <LoadSharingSuportDestIp></LoadSharingSuportDestIp>
    <LoadSharingSuportSrcIp></LoadSharingSuportSrcIp>
    <LoadSharingSuportIpPro></LoadSharingSuportIpPro>
```

```
    <LoadSharingSuportDestPort></LoadSharingSuportDestPort>
    <LoadSharingSuportSrcPort></LoadSharingSuportSrcPort>
    <LoadSharingSuportIngressPort></LoadSharingSuportIngressPort>
    <SupportLastHop></SupportLastHop>
    <SupportLastHopBackup></SupportLastHopBackup>
  </IPFWSpecification>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadSharingSupportFlow	Support load sharing based on flow.	N/A	Boolean: • true • false	N/A
LoadSharingSupportPacket	Support load sharing based on packet.	N/A	Boolean: • true • false	N/A
LoadSharingSupportSwitch	Support load sharing based on switch.	N/A	Boolean: • true • false	N/A
LoadSharingSupportDestIp	Support load sharing based on destination IP address.	N/A	Boolean: • true • false	N/A
LoadSharingSupportSrcIp	Support load sharing based on source IP address.	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadSharingSupportIpPro	Support load sharing based on IP protocol.	N/A	Boolean: • true • false	N/A
LoadSharingSupportDestPort	Support load sharing based on destination port.	N/A	Boolean: • true • false	N/A
LoadSharingSupportSrcPort	Support load sharing based on source port.	N/A	Boolean: • true • false	N/A
LoadSharingSupportIngressPort	Support load sharing based on ingress port.	N/A	Boolean: • true • false	N/A
SupportLastHop	Support last hop.	N/A	Boolean: • true • false	N/A
SupportLastHopBackup	Support last hop backup.	N/A	Boolean: • true • false	N/A

IPFW/IPFWLastHopHold

This table contains last hop holding information.

XML structure

```
<IPFW>
  <IPFWLastHopHold>
    <LastHopHold>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </LastHopHold>
  </IPFWLastHopHold>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopHold
Table type	Multi-instance table
Row name	LastHopHold
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Mode	Enabling status of the last hop holding feature	N/A	Unsigned integer: • **1**—Enabled. • **2**—Disabled.	N/A

IPFW/IPFWSetService

This table contains IP service information.

XML structure

```
<IPFW>
  <IPFWSetService>
    <DscpEnable></DscpEnable>
    <VpnPeerIdEnable></VpnPeerIdEnable>
```

```
    <MplsExpEnable></MplsExpEnable>
  </IPFWSetService>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetService
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DscpEnable	Enabling status of the DSCP service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
VpnPeerIdEnable	Enabling status of the VPN peer ID service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MplsExpEnable	Enabling status of the MPLS EXP service	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPFW/IPFWLastHopBackupSwitch

This table contains IP last hop backup information.

XML structure

```
<IPFW>
  <IPFWLastHopBackupSwitch>
    <BackupEnable></BackupEnable>
  </IPFWLastHopBackupSwitch>
```

```
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopBackupSwitch
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupEnable	Enable last hop backup	N/A	Enumeration: • **1**—Enable. • **2**—Disable.	N/A

IPFW/IPFWTcpMss

This table contains interface TCP MSS information.

XML structure

```
<IPFW>
  <IPFWTcpMss>
    <TcpMss>
      <IfIndex></IfIndex>
      <Num></Num>
    </TcpMss>
  </IPFWTcpMss>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWTcpMss
Table type	Multi-instance table
Row name	TcpMss
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Num	TCP max segment size	N/A	Unsigned integer. Value range: 128 to 65535.	The maximum value is the maximum MTU that the interface supports minus 40.

IPFW/IPFWDFSet

This table contains packet DF bit information.

XML structure

```
<IPFW>
  <IPFWDFSet>
      <IPDFBit></IPDFBit>
```

```
  </IPFWDFSet>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWDFSet
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPDFBit	Setting of the DF bit	N/A	Enumeration: • **0**—DISABLE. • **1**—SET. • **2**—CLEAR.	N/A

IPFW/IPFWSymmetric

This table contains IP symmetric forwarding.

XML structure

```
<IPFW>
  <IPFWSymmetric>
    <Symmetric>
      <SymmetricMode></SymmetricMode>
    </Symmetric>
  </IPFWSymmetric>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSymmetric
Table type	Multi-instance table
Row name	None
Restrictions	None
Item	Description

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Symmetric	Enabling status of the symmetric forwarding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPFW/IPFWFwdPolicy

This table contains the forwarding policy information.

XML structure

```
<IPFW>
  <IPFWFwdPolicy>
    <FwdPolicy></FwdPolicy>
  </IPFWFwdPolicy>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWFwdPolicy

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FwdPolicy	Get the current forwarding policy	N/A	Unsigned integer Value range: 1 to 4. • **1**—Per-flow forwarding policy. • **2**—Per-packet forwarding policy. • **3**—Three-tuple-based per-flow forwarding policy. • **4**—Enhanced per-flow forwarding policy.

IPFW/IPFWFwdPolicySpecification

This table contains specification information.

XML structure

```
<IPFW>
  <IPFWFwdPolicySpecification>
    <SupportPolicyMode></SupportPolicyMode>
    <SupportThreeTuple></SupportThreeTuple>
    <SupportEnhance></SupportEnhance>
  </IPFWFwdPolicySpecification>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWFwdPolicySpecification
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SupportPolicyMode	Whether the policy mode switchover is supported	N/A	Boolean: • true. • false.
SupportThreeTuple	Whether the three-tuple-based per-flow forwarding mode is supported	N/A	Boolean: • true. • false.
SupportEnhance	Whether the enhanced per-flow forwarding mode is supported	N/A	Boolean: • true. • false.

IPFW/IPFWDFSpecification

This table contains DF specification information.

XML structure

```
<IPFW>
  <IPFWDFSpecification>
    <SupportIPDF></SupportIPDF>
  </IPFWDFSpecification>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWDFSpecification

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SupportIPDF	Whether the IPDF is supported	N/A	Boolean: • true. • false.

IPFW/IPFWSetStatistic

This table contains interface-specific IPv4 and IPv6 statistics collection configuration.

XML structure

```
<IPFW>
  <IPFWSetStatistic>
    <SetStatistic>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <Direct></Direct>
      <InPktType></InPktType>
      <OutPktType></OutPktType>
    </SetStatistic>
  </IPFWSetStatistic>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetStatistic
Table type	Multi-instance table

Row name	SetStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Enable	Enabling status of the statistics collection	N/A	Unsigned integer • **1**—Enabled • **2**—Disabled	Default value is 2
Direct	Traffic direction	N/A	Enumeration: • **0**—Inbound • **1**—Outbound • **2**—Both	Default value is 2
InPktType	Inbound packet type	N/A	Enumeration: • **1**—Broadcast • **2**—Multicast • **3**—Broadcast,Multicast • **4**—Unicast • **5**—Broadcast,Unicast • **6**—Multicast,Unicast • **7**—Broadcast,Multicast,Unicast	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutPktType	Outbound packet type	N/A	Enumeration: • **1**—Broadcast • **2**—Multicast • **3**—Broadcast,Multicast • **4**—Unicast • **5**—Broadcast,Unicast • **6**—Multicast,Unicast • **7**—Broadcast,Multicast,Unicast	N/A

IPFW/IPStatistic

This table shows statistics information about IPv4 and IPv6 packets.

XML structure

```
<IPFW>
  <IPStatistic>
    <Statistic>
      <IfIndex></IfIndex>
      <Type></Type>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Type	IP version	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
InPackets	Received packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InPacketsRate	Packet receiving rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InBytes	Received bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InBytesRate	Byte receiving rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InMcastPackets	Received multicast packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InMcastBytes	Received multicast bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
InBcastPackets	Received broadcast packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutPackets	Sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutPacketsRate	Packet sending rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutBytes	Sent bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutBytesRate	Byte sending rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutMcastPackets	Sent multicast packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutMcastBytes	Sent multicast bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
OutBcastPackets	Sent broadcast packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

IPFW/IPFWForwardConverseLearn

This table contains information about conversational learning for IP forwarding.

XML structure

```
<IPFW>
  <IPFWForwardConverseLearn>
    <ForwardConverseLearnEnable></ForwardConverseLearnEnable>
    <AgingTime></AgingTime>
  </IPFWForwardConverseLearn>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWForwardConverseLearn
Table type	Single-instance table
Row name	ForwardConverseLearn
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ForwardConverseLearnEnable	Whether conversational learning for host route FIB entries is enabled	N/A	Boolean: • **true**. • **false**.	N/A
AgingTime	Aging time for host route FIB entries	N/A	Unsigned integer. Value range: 60 to 1440, in minutes.	N/A

IPFW/IPFWMTU

This table contains IPV4 interface MTU information.

XML structure

```
<IPFW>
  <IPFWMTU>
    <MTU>
      <IfName></IfName>
      <MTU></MTU>
    </MTU>
  </IPFWMTU>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWMTU
Table type	Multi-instance table
Row name	MTU
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters.	Only Layer 3 interfaces are supported.
MTU	Interface MTU	N/A	Unsigned integer. • Value range: minimum MTU to maximum MTU.	Applicable to only Layer 3 interfaces. The minimum MTU and the maximum MTU value depend on the device and the interface type.

IPFW/IPFWErrorEnable

This table contains interface-specific IPv4 and IPv6 error statistics collection configuration.

XML structure

```
<IPFW>
  <IPFWErrorEnable>
  <ErrorEable>
    <in-L2-MTU-errors></in-L2-MTU-errors>
    <out-L2-MTU-errors></out-L2-MTU-errors>
    <in-vlan-mismatch-errors></in-vlan-mismatch-errors>
    <out-vlan-mismatch-errors></out-vlan-mismatch-errors>
    <in-spanningtree-errors></in-spanningtree-errors>
    <out-spanningtree-errors></out-spanningtree-errors>
```

```

out-ACL-errors	Monitor acl packet loss in the outbound direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-checksum-errors	Monitor incoming parity error and packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
out-checksum-errors	Check the error packet loss when monitoring the outgoing direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-illegal-interface-errors	Monitor the inbound port bitmap as 0 packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A
in-L3-header-ipv6-errors	Monitor the incoming L3 header ipv6 error packet loss	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
in-L3-rib-ipv6-errors	Monitor L3 ipv6 packet loss in the incoming direction	N/A	Unsigned integer • **1**—Enabled. • **2**—Disabled.	N/A

IPFW/BPA

This table enables the BGP policy accounting function.

XML structure

```
<IPFW>
  <BPA>
    <Accounting>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <Classification></Classification>
    </Accounting>
  </BPA>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	BPA
Table type	Single-instance table
Row name	Accounting
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Traffic direction	Index	Enumeration: • **1**—Input • **2**—Output	N/A
Classification	Basis of IP traffic classification	N/A	Enumeration: • **0**—destination • **1**—source	N/A

IPFW/BPAStatistic

This table contains IPv4 BGP policy statistics on an interface.

XML structure

```
<IPFW>
  <BPAStatistic>
    <Statistic>
      <IfIndex></IfIndex>
      <TrafficIndex></TrafficIndex>
      <Direction></Direction>
      <Packets></Packets>
      <PacketBytes></PacketBytes>
      <PacketsRate></PacketsRate>
      <PacketBitsRate></PacketBitsRate>
    </Statistic>
  </BPAStatistic>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	BPAstatistic
Table type	Multi-instance table
Row name	Statistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
TrafficIndex	Traffic index	Index	Unsigned integer.	The traffic index range varies by product.
Direction	Traffic direction	Index	Enumeration: • **1**—Input • **2**—Output	N/A
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketBytes	Number of bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketsRate	Packet rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketBitsRate	Bit rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

IPFW/BPAGlobalStatistic

This table contains IPv4 BGP policy statistics on an interface.

XML structure

```
<IPFW>
  <BPAGlobalStatistic>
    <Statistic>
      <TrafficIndex></TrafficIndex>
      <Direction></Direction>
      <Packets></Packets>
      <PacketBytes></PacketBytes>
      <PacketsRate></PacketsRate>
      <PacketBitsRate></PacketBitsRate>
    </Statistic>
  </BPAGlobalStatistic>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	BPAGlobalStatistic
Table type	Multi-instance table
Row name	Statistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrafficIndex	Traffic index	Index	Unsigned integer.	The traffic index range varies by product.
Direction	Traffic direction	Index	Enumeration: • **1**—Input • **2**—Output	N/A
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketBytes	Number of bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketsRate	Packet rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
PacketBitsRate	Bit rate	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

IPFW/IPFWEcmpMode

This table contains the forwarding ecmp mode information.

XML structure

```
<IPFW>
  <IPFWEcmpMode>
    <EcmpMode></EcmpMode>
     <FlowSetInactiveTime></FlowSetInactiveTime>
    <FlowSetInactiveSize></FlowSetInactiveSize>
    <FlowSetInactiveHashMode></FlowSetInactiveHashMode>
  </IPFWEcmpMode>
</IPFW>
```

Table description

Item	Description
Feature name	IPFW
Table name	IPFWEcmpMode
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EcmpMode		N/A	Enumeration: • **0**—Disable(default) • **1**—Compressed • **2**—Eligible • **3**—Enhanced • **4**—Fixed • **5**—Spray • **6**—Fir	N/A
FlowSetInactiveTime		N/A	Unsigned integer. Value range:customed, in microseconds.	Used when the “EcmpMode” column is 2 or 6.

Column name	Column description	Column type	Data type and restrictions	Remarks
FlowSetInactiveSize		N/A	Unsigned integer. Value range:customed, in bytes.	Used when the “EcmpMode” column is 6.
FlowSetInactiveHashMode		N/A	Enumeration: • **0**—Eligible • **1**—Fixed • **2**—Spray(default)	Used when the “EcmpMode” column is 6.

IPFW/FIBConsistencyTable

This table contains the information about FIB consistency check.

XML structure

```
<IPFW>
  <FIBConsistencyTable>
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </FIBConsistencyTable>
</IPFW>
```

Table description

Item	Description

TcpHandshaking event

This event is used to report TCP handshake packet information encoded by Base64.

XML structure for event subscription

```
<TcpHandshakingEvent>
</TcpHandshakingEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ipfw_event</stream>
    <filter type="subtree">
      <TcpHandshakingEvent xmlns="http://www.h3c.com/netconf/event:1.0/ipfw_event:1.0">
      </TcpHandshakingEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	ipfw_event
Event name	TcpHandshakingEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/ipfw_event:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries

XML structure for event report

```
<TcpHandshakingEvent>
  <DataBase64>
  </DataBase64>
</TcpHandshakingEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <TcpHandshakingEvent xmlns="http://www.h3c.com/netconf/event:1.0/ipfw_event:1.0">
```

```
    <DataBase64>AOD8AGhRABAUAAAQgQAP/wgARQAAbr3mAAD/Bt6PEAAACg8AAAoEAAQAAAHiQAADlEdQEB
    AA9GEAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAGVRpGCIX

Item	Description
Feature name	IPoE
Table name	IPoEv6WhiteList
Table type	Multi-instance table
Row name	WhiteList
Restrictions	Layer 3 aggregate interface/subinterface view Layer 3 Ethernet interface/subinterface view L3VE interface/subinterface view VEth interface/subinterface view VLAN interface view
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
IPv6Mask	IPv6 mask.	Index	Unsigned integer 1 to 128.	Currently fixed to value 128

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name of the CHAP mode.	N/A	String. Length: 1 to 255 characters.	N/A
Description	Static description.	N/A	String. Length: 1 to 31 characters.	N/A

IPoE/DhcpAuthDomain

This table contains the information about configuring the IPoE DHCP authentication domain.

XML structure

```
<IPoE>
  <DhcpAuthDomain>
    <AuthDomain>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
    </AuthDomain>
  </DhcpAuthDomain>
</IPoE>
```

```

Table description

Item	Description
Feature name	IPoE
Table name	IPv4Session
Table type	Multi-instance table
Row name	Session
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IPAddress	IPv4 address	Index	String, dotted decimal notation.	N/A
MACAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
UserID	User ID assigned to a user in online state	N/A	String. Length: 1 to 10 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceVLAN	Service provider VLAN	N/A	Unsigned short.	N/A
CustomerVLAN	Customer VLAN	N/A	Unsigned short.	N/A
SessionType	Session type	N/A	Enumeration: • **0**—NULL • **3**—Static. • **4**—DHCP • **5**—Unclassified-ip	N/A
State	User state	N/A	Enumeration: • **1**—Init • **2**—Offline • **3**—Auth • **4**—AuthFail • **5**—AuthPass • **6**—AssignedIP • **7**—Online • **8—**Backup	N/A
DHCPLeaseTime	Lease duration	N/A	Unsigned integer.	Unit: seconds This function is not supported in data plane mode.
DeviceName	Device name	N/A	String. Length: 1 to 128 characters.	
LoginTime	User login time	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss This function is not supported in data plane mode.
OnlineTime	User online duration	N/A	String. Length: 1 to 8 characters.	This function is not supported in data plane mode.
RemainTime	AAA-authorized session duration	N/A	Unsigned integer.	Unit: seconds This function is not supported in data plane mode.
UplinkPktNum	Number of packets uplink.	N/A	Value range: 0 to 2^{64}-1.	N/A
UplinkByteNum	Number of bytes uplink.	N/A	Value range: 0 to 2^{64}-1.	N/A
DownlinkPktNum	Number of packets downlink.	N/A	Value range: 0 to 2^{64}-1.	N/A
DownlinkByteNum	Number of bytes downlink.	N/A	Value range: 0 to 2^{64}-1.	N/A
Bytes	Bytes	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ReplyBytes	Reply bytes	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A

IPoE/DhcpAuthDomain

This table contains the information about configuring the IPoE DHCP authentication domain.

XML structure

```
<IPoE>
  <DhcpAuthDomain>
    <AuthDomain>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
    </AuthDomain>
  </DhcpAuthDomain>
</IPoE>
```

Table description

Item	Description
Feature name	IPoE
Table name	DhcpAuthDomain
Table type	Multi-instance table
Row name	AuthDomain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	N/A	String Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A

IPoE/UnclassifiedIPAuthDomain

This table contains the information about configuring the IPoE unclassified-IP authentication domain.

XML structure

```
<IPoE>
  <UnclassifiedIPAuthDomain>
    <AuthDomain>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
    </AuthDomain>
  </UnclassifiedIPAuthDomain>
</IPoE>
```

Table description

IPReputation/SignatureManualUpgrading

This table is used to update signature manually.

XML structure

```
<IPReputation>
  <SignatureManualUpgrading>
    <Sort></Sort>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrading>
</IPReputation>
```

Table description

Item	Description
Feature name	IPReputation
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Sort	Sort of the update signature	Index	Enumeration: • **0**—IP reputation • **1**—DNS reputation	N/A
URL	URL of the upgrade signature file.	N/A	String, case-insensitive For a remote file, Length: 1 to 255 characters. For a local file, Length: 1 to 127 characters.	URL
Location	Location of the file.	N/A	Enumeration: • 0—Local • 1—remote	If Location is set to 0, the device deletes the signature file when the signature library update is completed.

IPReputation/SignatureRollback

This table is used to rollback signature file.

XML structure

```
<IPReputation>
  <SignatureRollback>
    <Sort></Sort>
    <Rollback></Rollback>
  </SignatureRollback>
</IPReputation>
```

Table description

Item	Description

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Sort	Sort of the status	Index	Enumeration: • **0**—IP reputation • **1**—DNS reputation	N/A
ServiceEnable	Enabling status of the reputation feature	Index	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
StatisticsEnable	Enabling status of the statistic collection feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPReputation/ExceptionIP

This table contains IP address exception information.

XML structure

```
<IPReputation>
  <ExceptionIP>
    <IP>
      <IPAddress></IPAddress>
      <AddressType></AddressType>
    </IP>
  </ExceptionIP>
</IPReputation>
```

Table description

Item	Description
Feature name	IPReputation
Table name	ExceptionIP
Table type	Multi-instance table
Row name	IP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPAddress	IP address exception	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Length: 1 to 46 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
AddressType	IP version	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A

IPReputation/AttackCategory

This table contains attack category information.

XML structure

```
<IPReputation>
  <AttackCategory>
    <AttackConfig>
      <Sort></Sort>
      <AttackID></AttackID>
      <AttackName></AttackName>
      <Action></Action>

Item	Description
Feature name	IPS
Table name	ImportSnortSignatures
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the imported signature file.	N/A	String, case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	URL
Location	Location of the file.	N/A	Enumeration: • 0—Local • 1—remote	If Location is set to 0, the device deletes the snort file after the snort file import is complete.

IPS/SignatureManualUpgrade

This table contains information about IPS signature manual upgrade.

XML structure

```
<IPS>
  <SignatureManualUpgrade>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrade>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureManualUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the upgrade signature file.	N/A	String, case-insensitive For a remote file, Length: 1 to 255 characters. For a local file, Length: 1 to 127 characters.	URL
Location	Location of the file.	N/A	Enumeration: • 0—Local • 1—remote	If Location is set to 0, the device deletes the signature file when the signature library update is completed.

IPS/SignatureAutoUpgradeNow

This table contains information about immediate IPS signature auto upgrading.

XML structure

```
<IPS>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgrade Now	Immediate auto upgrade	N/A	This column must be empty.	N/A

IPS/SignatureRollback

This table contains information about IPS signatures rollback.

XML structure

```
<IPS>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureRollback
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	Rollback to a specific version	N/A	Boolean: • true: Rollback to last version • false: Rollback to the original version	N/A

IPS/UnloadSnortSignatures

This table contains information about removing IPS user-defined rules.

XML structure

```
<IPS>
  <UnloadSnortSignatures>
    <Unload></Unload>
  </UnloadSnortSignatures>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	UnloadSnortSignatures
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Unload	Remove user-defined rule	N/A	This column must be empty	N/A

IPS/ClearHitStatistics

This table contains information about clearing IPS hit statistics.

XML structure

```
<IPS>
  <ClearHitStatistics>
    <Clear>
      <PolicyName></PolicyName>
      <SigIDList>
        <SigID></SigID>
      </SigIDList>
    </Clear>
  </ClearHitStatistics>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	ClearHitStatistics
Table type	Multi-instance table
Row name	Clear
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SigIDList	List of IPS signature id	Data structure	Members include: • SigID.	N/A
SigID	ID of the IPS signature	column	Unsigned integer. Value range: 1 to 536870910.	N/A

IPS/ExportSignatures

This table contains information about export IPS Signatures.

XML structure

```
<IPS>
  <ExportSignatures>
     <PolicyName></PolicyName>
     <FileName></FileName>
  </ExportSignatures>
```

```
<IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	ExportSignatures
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FileName	Name of the export file	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A

IPS/ClearHitStatistics

This table contains information about clearing IPS hit statistics.

XML structure

```
<IPS>
  <ClearHitStatistics>
    <Clear>
      <PolicyName></PolicyName>
      <SigIDList>
        <SigID></SigID>
      </SigIDList>
    </Clear>
  </ClearHitStatistics>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	ClearHitStatistics
Table type	Multi-instance table

Row name	Clear
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SigIDList	List of IPS signature id	Data structure	Members include: • SigID.	N/A
SigID	ID of the IPS signature	column	Unsigned integer. Value range: 1 to 1610612720.	N/A

IPS/WhiteListsCompile

This table contains information about IPS white lists compile.

XML structure

```
<IPS>
  <WhiteListsCompile>
    <CompileWhiteList></CompileWhiteList>
  </WhiteListsCompile>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	WhiteListsCompile
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CompileWhite List	Active IPS white lists funcation	N/A	Boolean: • true: Compile IPS white lists	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			function • false: Don't compile IPS white lists function	

IPS/WhiteListsStatisticsClear

This table contains information about IPS white lists statistics clear.

XML structure

```
<IPS>
  <WhiteListsStatisticsClear>
    <ClearAll></ClearAll>
    <WhiteListNum></WhiteListNum>
  </WhiteListsStatisticsClear>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	WhiteListsStatisticsClear
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClearAll	Clear IPS white lists funcation	Index	Boolean: • true: Clear all IPS white lists statisitics • false: Clear WhiteListNum statistics	N/A
WhiteListNum	Number of the IPS whitelist	N/A	Unsigned integer. Value range: 1 to 256.	N/A

</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	Policies
Table type	Multi-instance table
Row name	Policy

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IPS policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be **default**
FilterDirection	Traffic direction to which the IPS signature applies	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2**—Both.	N/A
FilterSeverity	Severity level of the IPS signature	N/A	Unsigned integer • **1**—Low. • **2**—Medium. • **4**—High. • **8**—Critical.	To specify multiple severity levels, set the value to the sum of the severity level IDs. For example, set the value to 3 to specify severity levels low (1) and medium (2.).
FilterAction	Default action of the IPS signature	N/A	Unsigned integer • **1**—Block. • **2**—Drop. • **4**—Permit. • **8**—Reset.	To specify multiple actions, set the value to the sum of the action IDs. For example, set the value to 3 to specify actions block (1) and drop (2).
FilterStatus	Default status of the IPS signature	N/A	Enumeration: • **0**—Disabled. • **1**—Enabled. • **2**—Both. • **3**—Default.	Default is 3.
ProtectionList	List of protected targets	Data structure	Members include: • ProtectionId. • SubProtectionId.	N/A
ProtectionId	ID of the protected target	N/A	Unsigned integer.	A protected target list can contain an unlimited number of protected targets obtained from the IPS signature file.
SubProtectionId	ID of the protected subtarget	N/A	Unsigned integer.	A protected target list can contain an unlimited number of subtargets.
CategoryList	List of attack categories	Data structure	Members include: • CategoryId. • SubCategoryId.	N/A
CategoryId	ID of the attack category	N/A	Unsigned integer.	An attack category list can contain an unlimited number of attack categories.
SubCategoryId	ID of the Subcategory	N/A	Unsigned integer.	An attack category can contain an unlimited number of subcategories obtained

Column name	Column description	Column type	Data type and restrictions	Remarks
				from the IPS signature file.
Action	Action applied to matching packets.	N/A	Enumeration: • 0—Block. • 1—Drop. • 2—Permit. • 3—Reset. • 4—Redirect. • 5—Default.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A
IsLogToHost	Sending log to host or not	N/A	Boolean: • true. • false.	N/A
IsLogMail	Email the logs to an email server or not	N/A	Boolean: • true. • false.	N/A
IsLogGlobal	Enable the global log parameter or not	N/A	Boolean: • true. • false.	N/A
EmailParameterName	Email parameter profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
EmailLowestSeverity	Lowest severity to send email logs	N/A	Enumeration: • 0—Low. • 1—Medium. • 2—High. • 3—Critical.	By default, IPS lowest severity level for sending email logs is low.
HitCountEnable	Enable IPS policy hit count	N/A	Boolean: • true. • false.	Default is false.
PolicyHitCounts	IPS policy signature hit count sum	N/A	Unsigned integer.	N/A

IPS/PolicyOnProfile

This table contains information about the IPS policy applied to a DPI application profile.

XML structure

```
<IPS>
  <PolicyOnProfile>
    <profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </profile>
  </PolicyOnProfile>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	PolicyOnProfile
Table type	Multi-instance table
Row name	profile
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the DPI application profile	Index	String, case-insensitive. Length: 1 to 100 characters.	N/A
PolicyName	Name of the IPS policy applied to the DPI application profile	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

IPS/PolicyExceptonSigs

This table contains information about exception signatures in an IPS policy..

XML structure

```
<IPS>
  <PolicyExceptionSigs>
    <PolicyExceptionSig>
      <PolicyName></PolicyName>
      <Userdefined></Userdefined>
      <SigID></SigID>
      <Enabled></Enabled>
```

```
      <Action></Action>
      <Logging></Logging>
      <Capture></Capture>
    </PolicyExceptionSig>
  </PolicyExceptionSigs>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	PolicyExceptionSigs
Table type	Multi-instance table
Row name	PolicyExceptionSig
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Userdefined	Whether or not the IPS signature is user defined	Index	Boolean: • true. • false.	N/A
SigID	ID of the IPS signature	Index	Unsigned integer. Value range: 1 to 4294967295.	The value is obtained from the IPS signature file.
Enabled	Whether or not the IPS signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the IPS signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect. • **5**—Default.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A

IPS/SignatureAutoUpgrade

This table contains IPS signature library auto update settings.

XML structure

```
<IPS>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not IPS signature library auto update is enabled	N/A	Boolean: • true. • false (default).	N/A
StartTime	Time when IPS signature library auto update starts	N/A	Time Format: HH:MM:SS	By default, IPS signature library auto update starts at 02:00:00 every day.
Type	Whether IPS signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: • **0**—Weekly. • **1**—Daily.	By default, IPS signature library auto update occurs on a daily basis.
Day	Days of the week on which IPS signature library	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only **Type** is set to **0**.

Column name	Column description	Column type	Data type and restrictions	Remarks
	auto update occurs			

IPS/ActionDefaultParameters

This table contains IPS action parameter settings.

XML structure

```
<IPS>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration: • **1**—Block. • **2**—Capture. • **3**—Logging. • **4**—Redirect. • **5**—Mail.	N/A
ParameterName	Parameter name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The IPS action parameters are defined in the DIM module.

IPS/UpdateLoggingDaily

This table contains daily sending settings for IPS signature library update logging.

XML structure

```
<IPS>
  <UpdateLoggingDaily>
    <StartTime></StartTime>
  </UpdateLoggingDaily>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	UpdateLoggingDaily
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartTime	Time to send IPS fastlog every day	N/A	Time Format: HH:MM:SS	By default, IPS sends fastlog at 02:00:00 every day.

IPS/WhiteLists

This table contains IPS whitelist information.

XML structure

```
<IPS>
  <WhiteLists>
    <WhiteList>
      <WhiteListNum></WhiteListNum>
      <Description></Description>
      <SigID></SigID>
      <MatchType></MatchType>
      <URLString></URLString>
```

```
      <SrcIpv4Addr></SrcIpv4Addr>
      <SrcIpv6Addr></SrcIpv6Addr>
      <StatisticCnt></StatisticCnt>
    </WhiteList>
  </WhiteLists>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	WhiteLists
Table type	Multi-instance table
Row name	WhiteList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
WhiteListNum	Number of the IPS whitelist entries	Index	Unsigned integer. Value range: 1 to 256.	N/A
Description	Description of the whitelist	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
SigID	IPS signature ID	N/A	Unsigned integer. Value range: • 1 to 4294967294	N/A
MatchType	URL match type	N/A	Enumeration: • **0**—Accurate match. • **1**—Fuzzy match.	N/A
URLString	URL string	N/A	String, case-insensitive Length: 3 to 460.	N/A
SrcIpv4Addr	Source IPv4 address	N/A	String, decimal notation. Length: 1 to 15 characters.	N/A
SrcIpv6Addr	Source IPv6 address	N/A	Hexadecimal string, colon-separated. Length: 1 to 45 characters.	N/A
StatisticCnt	Whitelist hit count	N/A	Unsigned integer. Value range: 1 to 4294967295.	Only supports getting data.

IPS/GlobalConfiguration

This table contains information about IPS global configuration.

XML structure

```
<IPS>
  <GlobalConfiguration>
    <EnableWhiteList></EnableWhiteList>
  </GlobalConfiguration>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	GlobalConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableWhiteList	Enabling status of the IPS whitelist	N/A	Boolean: • **true**—Enabled. • **false**—Disabled. (default)	N/A

Table description

Item	Description
Feature name	IPS
Table name	ProtectionList
Table type	Multi-instance table
Row name	Protection
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the protected target	Index	Unsigned integer.	N/A
ProtectionName	Name of the protected target	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SubProtectionList	List of subtargets contained in the protected target	Data structure	Members include: • SubProtectionId. • SubProtectionName.	A protected target can contain an unlimited number of subtargets.
SubProtectionId	ID of the subtarget	N/A	Unsigned integer.	N/A
SubprotectionName	Name of the subtarget	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

IPS/CategoryList

This table contains attack category information obtained from the IPS signature file.

XML structure

```
<IPS>
  <CategoryList>
    <Category>
      <CategoryId></CategoryId>
      <CategoryName></CategoryName>
      <SubCategoryList>
```

```
        <SubCategoryId></SubCategoryId>
        <SubCategoryName></SubCategoryName>
      </SubCategoryList>
    </Category>
  </CategoryList>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	CategoryList
Table type	Multi-instance table
Row name	Category
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryId	ID of the attack category	Index	Unsigned integer.	N/A
CategoryName	Name of attack category	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SubCategoryList	List of attack subcategories contained in the attack category	Data structure	Members include: • SubCategoryId. • SubCategoryName.	An attack category can contain an unlimited number of attack subcategories.
SubCategoryId	ID of the attack subcategroy	N/A	Unsigned integer.	N/A
SubCategoryName	Name of the attack subcategory	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

IPS/PolicyExceptionSigs

This table contains information about exception signatures in an IPS policy.

XML structure

```
<IPS>
  <PolicyExceptionSigs>
    <PolicyExceptionSig>
      <PolicyName></PolicyName>
      <Userdefined></Userdefined>
```

```
      <SigID></SigID>
      <Enabled></Enabled>
      <Action></Action>
      <Logging></Logging>
      <Capture></Capture>
    </PolicyExceptionSig>
  </PolicyExceptionSigs>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	PolicyExceptionSigs
Table type	Multi-instance table
Row name	PolicyExceptionSig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Userdefined	Whether or not the IPS signature is user defined	Index	Boolean: • true. • false.	N/A
SigID	ID of the IPS signature	Index	Unsigned integer. Value range: 1 to 4294967295.	The value is obtained from the IPS signature file.
Enabled	Whether or not the IPS signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the IPS signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect. • **5**—Default.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets			

IPS/Signatures

This table contains the IPS signature information.

XML structure

```
<IPS>
  <Signatures>
    <Signature>
      <SigID></SigID>
      <UserDefined></UserDefined>
      <SigName></SigName>

Table description

Item	Description
Feature name	IPS
Table name	Signatures
Table type	Multi-instance table
Row name	Signature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SigID	ID of the signature	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the IPS signature file.
UserDefined	Whether or not the IPS signature is user defined	N/A	Boolean: • true. • false.	N/A
SigName	Name of the signature	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value is obtained from the IPS signature file.
SigDescription	Description of the signature	N/A	String, case-insensitive. Length: 1 to 1023 characters.	The value is obtained from the IPS signature file.
PublishTime	Time when the signature was published	N/A	String, case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
Protection	Protected target of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
SubProtection	Protected subtarget of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
Severity	Severity level of the signature	N/A	Enumeration: • **1**—Critical. • **2**—High. • **3**—Medium. • **4**—Low.	The value is obtained from the IPS signature file.
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2**—Both.	The value is obtained from the IPS signature file.

Column name	Column description	Column type	Data type and restrictions	Remarks
Category	Attack category of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
CVEList	CVE list	Data structure	Members include: • CVE.	N/A
CVE	CVE ID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
BIDList	BID list	Data structure	Members include: • BID.	N/A
BID	BID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
MSList	MS list	Data structure	Members include: • MS.	N/A
MS	MS of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
Enabled	Whether or not the IPS signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the IPS signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A
Solution	Solution to the attack	N/A	String, case-insensitive. Length: 1 to 511 characters.	The value is obtained from the IPS signature file.
AttackFunction	Subcategory of the signature	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

IPS/SignatureFileInfos

This table contains IPS signature file information.

XML structure

```
<IPS>
  <SignatureFileInfos>
    <FileInfo>
      <FileStatus></FileStatus>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Description></Description>
    </FileInfo>
  </SignatureFileInfos>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureFileInfos
Table type	MultiSingle-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileStatus	Status of the IPS signature file	Index	Enumeration: • **1**—Current. • **2**—Last. • **3**—Factory (default).	N/A
Version	Version of the IPS signature file	N/A	String, case-insensitive. Length: 1 to 31 characters.	Example: 1.0.36.
PublishedTime	Time when the signature file was published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	The local time zone is used.
Description	Description of the IPS signature file	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

IPS/SignatureAutoUpgrade

This table contains IPS signature library auto update settings.

XML structure

```
<IPS>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not IPS signature library auto update is enabled	N/A	Boolean: • true. • false (default).	N/A
StartTime	Time when IPS signature library auto update starts	N/A	Time. Format: HH:MM:SS.	By default, IPS signature library auto update starts at 02:00:00 every day.
Type	Whether IPS signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: • **0**—Weekly. • **1**—Daily.	By default, IPS signature library auto update occurs on a daily basis.
Day	Days of the week on which IPS signature library auto update occurs	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only **Type** is set to **0**.

IPS/SignatureUpgradePercentage

This table contains the IPS signature library update progress information.

XML structure

```
<IPS>
  <SignatureUpgradePercentage>
    <Percentage></Percentage>
  </SignatureUpgradePercentage>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignatureUpgradePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Progress of the signature library update operation, in percentages.	N/A	Unsigned integer. Value range: 0 to 100.	Any value outside the valid range indicates that an error has occurred.

IPS/ActionDefaultParameters

This table contains IPS action parameter settings.

XML structure

```
<IPS>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	ActionDefaultParameters
Table type	MultiSingle-instance table
Row name	ActionDefaultParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration: • **1**—Block. • **2**—Capture. • **3**—Logging. • **4**—Redirect. • **5**—Mail.	N/A
ParameterName	Parameter name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The IPS action parameters are defined in the DIM module.

IPS/SignaturePages

This table contains information about IPS signatures displayed on paginated lists.

XML structure

```
<IPS>
  <SignaturePages>
    <SignaturePage>
      <UserID></UserID>
      <Position></Position>
      <TotalCount></TotalCount>
      <SigID></SigID>
      <SigName></SigName>
      <SigDescription></SigDescription>
      <PublishTime></PublishTime>
      <UpdateTime></UpdateTime>
      <Protection></Protection>
      <SubProtection></SubProtection>
      <Severity></Severity>
      <Direction></Direction>
```

```
      <Category></Category>
      <CVEList>
        <CVE></CVE>
      </CVEList>
      <BIDList>
        <BID></BID>
      </BIDList>

      <Capture></Capture>
      <Solution></Solution>
      <AttackFunction></AttackFunction>
    </SignaturePage>
  </SignaturePages>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	SignaturePages
Table type	MultiSingle-instance table
Row name	SignaturePage
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of the current user	Index	Unsigned integer.	N/A
Position	Position of the signature on the entire signature list.	Index	Unsigned integer.	N/A
TotalCount	Total number of signatures	N/A	Unsigned integer.	If the query function is used, the total number of signatures in the query results is displayed.
SigID	ID of the signature	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the IPS signature file.

Column name	Column description	Column type	Data type and restrictions	Remarks
SigName	Name of the signature	N/A	String: case-insensitive. Length: 1 to 127 characters.	The value is obtained from the IPS signature file.
SigDescription	Description of the signature	N/A	String: case-insensitive. Length: 1 to 1023 characters.	The value is obtained from the IPS signature file.
PublishTime	Time when the signature was published	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
Protection	Protected target of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
SubProtection	Protected subtarget	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
Severity	Severity level of the signature	N/A	Enumeration: • **1**—Critical. • **2**—High. • **3**—Medium. • **4**—Low.	The value is obtained from the IPS signature file.
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2**—Both.	The value is obtained from the IPS signature file.
Category	Attack category of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
CVEList	CVE List	Data structure	Members include: • CVE.	N/A
CVE	CVE-ID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
BIDList	BID list	Data structure	Members include: • BID.	N/A
BID	BID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
MSList	MS list	Data structure	Members include: • MS.	N/A
MS	MS of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
Enabled	Whether or not the signature is	N/A	Boolean: • true.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	enabled		• false.	
Action	Action to take on packets matching the signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A
Solution	Solution to the attack	N/A	String: case-insensitive. Length: 1 to 511 characters.	The value is obtained from the IPS signature file.
AttackFunction	Subcategory of the signature	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A

IPS/UserSignatureAnalyseInfos

This table contains IPS signature import failure analysis information.

XML structure

```
<IPS>
  <UserSignatureAnalyseInfos>
    <UserSignatureAnalyseInfo>
      <ID></ID>
      <AnalyseInfo></AnalyseInfo>
    </UserSignatureAnalyseInfo>
  </UserSignatureAnalyseInfos>
</IPS>

Table name	UserSignatureAnalyseInfos
Table type	MultiSingle-instance table
Row name	UserSignatureAnalyseInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the IPS signature failed to be imported	Index	Unsigned integer.	N/A
AnalyseInfo	Analysis information	N/A	String, case-insensitive. Length: 1 to 511 characters.	N/A

IPS/UpdateLoggingDaily

This table contains daily sending settings for IPS signature library update logging.

XML structure

```
<IPS>
  <UpdateLoggingDaily>
    <StartTime></StartTime>
  </UpdateLoggingDaily>
</IPS>
```

Table description

Item	Description
Feature name	IPS
Table name	UpdateLoggingDaily
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartTime	Time to send IPS fastlog every day	N/A	Time Format: HH:MM:SS	By default, IPS sends fastlog at 02:00:00 every day.

IPS/SigHitCounts

This table contains information about the hit statistics of IPS signatures displayed on paginated lists.

XML structure

```
<IPS>
  <SigHitCounts>
    <SigHitCount>
      <UserID></UserID>
      <Position></Position>
      <PolicyName></PolicyName>
      <PageNo></PageNo>
      <CntPerPage></CntPerPage>
      <TotalCount></TotalCount>
      <SigHitCntJsonVal></SigHitCntJsonVal>
    </SigHitCount>
  </SigHitCounts>
</IPS>
```

Table description

Item	Description

IPS/SignatureManualUpgrade

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Cannot perform this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	Upgrade failure due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade fails due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

IPS/SignatureAutoUpgradeNow

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
The signature version is up to date. No update is needed. 特征库已是最新版本，不需要进行升级。	Automatic upgrade is to upgrade the signature library to the latest version released on the official website. If it is the latest version, no upgrade is needed. 自动升级是将特征库升级到官网发布的最新版本，如果已经是最新版本就不需要再升级了。
Cannot do this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	Upgrade failure due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available.	The upgrade failed due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

操作失败：设备内存不足。	
Operation failed because a connection to the signature library server could not be established. 操作失败: 连接特征库服务器失败。	The connection to www.h3c.com failed. For a successful upgrade, the device must connect to www.h3c.com to get the signature library files. 需要连接www.h3c.com网站获取特征库文件才能升级成功，连接www.h3c.com失败。
Cannot update the signature library because the required service card cannot be found. 未检测到业务板，特征库升级失败。	M9K equipment cannot be upgraded without service card. M9k设备若没有业务板，不可以进行升级操作。

IPS/SignatureRollback

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Cannot execute this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	The upgrade fails due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade fails due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

IPS/ImportSnortSignatures

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Failed to parse the snort file. Please examine the snort file. Snort文件解析错误。	When importing snort rules, snort files are illegal and parsing fails. 导入snort规则时，snort文件不合法，解析失败。

IPsec

IPsec/ResetAllSA

This table is used to reset all IPsec SA.

XML structure

```
<IPsec>
  <ResetAllSA>
    <Reset/>
  </ResetAllSA>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetAllSA
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Reset all IPsec SA	N/A	Must be empty

IPsec/ResetSAPolicies

This table is used to reset IPsec SA by policy.

XML structure

```
<IPsec>
  <ResetSAPolicies>
    <Reset>
      <PolicyName></PolicyName>
      <AddrType></AddrType>
      <SeqNum></SeqNum>
    </Reset>
```

```
  </ResetSAPolicies>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetSAPolicies
Table type	Multi-instance table
Row name	Reset
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The policy name	Index	String. Length: 1 to 63 characters.	N/A
AddrType	IP protocol type	Index	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address.	N/A
SeqNum	The sequence number for the IPsec policy	N/A	Unsigned integer. Value range: 1 to 65535.	If don't specify SeqNum, it will reset all the IPsec SAs belong to the policy group.

IPsec/ResetSARemoteAddr

This table is used to reset IPsec SA by remote address.

XML structure

```
<IPsec>
  <ResetSARemoteAddrs>
    <Reset>
      <AddrType></AddrType>
      <RemoteAddr></RemoteAddr>
    </Reset>
  </ResetSARemoteAddrs>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetSARemoteAddrs
Table type	Multi-instance table
Row name	Reset
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
AddrType	IP protocol type	Index	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address.
RemoteAddr	Remot IP address	Index	Ipv4 address or Ipv6 address

IPsec/ResetSASPI

This table is used to reset IPsec SA by SPI, remote address and security protocol.

XML structure

```
<IPsec>
  <ResetSASPIs>
    <Reset>
      <AddrType></AddrType>
      <RemoteAddr></RemoteAddr>
      <SecurityProto></SecurityProto>
      <SPI></SPI>
    </Reset>
  </ResetSASPIs>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetSASPI
Table type	Multi-instance table
Row name	Reset

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
AddrType	IP protocol type	Index	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address.
RemoteAddr	Remote IP address	Index	Ipv4 address or Ipv6 address
SecurityProto	IPsec Security Protocol	Index	Enumeration: • 1—AH. • 2—ESP.
SPI	Security Parameter Index	Index	Unsigned integer. Value range: 0 to $2^{32}-1$.

IPsec/ClearGlobalStats

This table is used to clear IPsec global statistics.

XML structure

```
<IPsec>
  <ClearGlobalStats>
    <Clear/>
  </ClearGlobalStats>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ClearGlobalStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear IPsec global statistics	N/A	Must be empty

IPsec/ClearTunnelsStats

This table is used to clear IPsec tunnel statistics.

XML structure

```
<IPsec>
  <ClearTunnelsStats>
    <Clear>
      <TunnelID></TunnelID>
    </Clear>
  </ClearTunnelsStats>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ClearTunnelsStats
Table type	Multi-instance table
Row name	Clear
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.

IPsec/SmartVpnMoveLinks

This table is used to smart-vpn move link.

XML structure

```
<IPsec>
```

```
  <SmartVpnMoveLinks>
    <SmartVpnMoveLink>
      <Name></Name>
      <SrcID></SrcID>
      <DestID></DestID>
    </SmartVpnMoveLink>
  </SmartVpnMoveLinks>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnMoveLinks
Table type	Multi-instance table
Row name	SmartVpnMoveLink
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Profile name	Index	String Length: 1 to 63 characters.	N/A
SrcID	Source ID	N/A	Unsigned integer.	N/A
DestID	Destination ID.	N/A	Unsigned integer.	N/A

IPsec/SmartVpnActiveLinks

This table is used to configure a smart-VPN active link.

XML structure

```
<IPsec>
  <SmartVpnActiveLinks>
    <SmartVpnActiveLink>
      <Name></Name>
      <LinkID></LinkID>
    </SmartVpnActiveLink>
  </SmartVpnActiveLinks>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnActiveLinks
Table type	Multi-instance table
Row name	SmartVpnActiveLink
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Profile name	Index	String Length: 1 to 63 characters.	N/A
LinkID	Link ID	N/A	Unsigned integer. Value range: 1 to 30.	N/A

IPsec/IPSecDiagnose

This table is used to set Diagnose item for IPSec.

XML structure

```
<IPsec>
  <IPSecDiagnose>
    <Type></Type>
    <IfIndex></IfIndex>
    <Protocol></Protocol>
    <SrcIP></SrcIP>
    <DstIP></DstIP>
    <SrcPort></SrcPort>
    <DstPort></DstPort>
    <Vrf></Vrf>
  </IPSecDiagnose>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPSecDiagnose

Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	The diagnose type	N/A	Enumeration: • **1**—Flow. • **2**—Interface. • **3**—RemoteIP.
IfIndex	The ifindex	N/A	Unsigned integer.
Protocol	The protocol number	N/A	Unsigned integer. Value range:0 to 255
SrcIP	The source IP	N/A	IPv4:String,dotted decimal notation.
DstIP	The destination IP	N/A	IPv4:String,dotted decimal notation.
SrcPort	The source port	N/A	Unsigned integer. Value range: 0 to 65535
DstPort	The destination port	N/A	Unsigned integer. Value range: 0 to 65535
Vrf	The vpn index	N/A	String,case-sensitive. Length:1 to 31 characters.

IPsec/StopDiagnose

This table is used to stop Diagnosing for IPSec.

XML structure

```
<IPsec>
  <StopDiagnose>
    <Stop/>
  </StopDiagnose>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	StopDiagnose
Table type	Single-instance table
Row name	N/A

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Stop	Stop diagnose	N/A	Must be empty

IPsec/ResetAllSdwanLocalSA

This table is used to reset all sdwan IPsec local SA.

XML structure

```
<IPsec>
  <ResetAllSdwanLocalSA>
    <Reset/>
  </ResetAllSdwanLocalSA>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetAllSdwanLocalSA
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Reset all sdwan IPsec local SA	N/A	Must be empty

IPsec/ResetSdwanLocalSAByIfIndex

This table is used to reset sdwan IPsec local SA by interface index.

XML structure

```
<IPsec>
```

```
  <ResetSdwanLocalSAByIfIndex>
    <Reset>
      <IfIndex></IfIndex>
    </Reset>
  </ResetSdwanLocalSAByIfIndex>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetSdwanLocalSAByIfIndex
Table type	Multi-instance table
Row name	Reset
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer

IPsec/ResetAllSdwanRemoteSA

This table is used to reset all sdwan IPsec Remote SA.

XML structure

```
<IPsec>
  <ResetAllSdwanRemoteSA>
    <Reset/>
  </ResetAllSdwanRemoteSA>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetAllSdwanRemoteSA
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reset	Reset all sdwan IPsec Remote SA	N/A	Must be empty	Reset

IPsec/ResetAllSdwanTunnel

This table is used to reset all sdwan IPsec tunnel.

XML structure

```
<IPsec>
  <ResetAllSdwanTunnel>
    <Reset/>
  </ResetAllSdwanTunnel>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetAllSdwanTunnel
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Reset all sdwan IPsec tunnel	N/A	Must be empty

IPsec/ResetSdwanTunnelById

This table is used to reset sdwan IPsec tunnel by tunnel id.

XML structure

```
<IPsec>
  <ResetSdwanTunnelById>
```

```
    <Reset>
      <TunnelID></TunnelID>
    </Reset>
  </ResetSdwanTunnelById>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ResetSdwanTunnelById
Table type	Multi-instance table
Row name	Reset
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.

IPsec/ClearAllSdwanTunnelStats

This table is used to clear all sdwan IPsec tunnel statistics.

XML structure

```
<IPsec>
  <ClearAllSdwanTunnelStats>
    <Clear/>
  </ClearAllSdwanTunnelStats>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ClearAllSdwanTunnelStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear all sdwan IPsec sdwan statistics	N/A	Must be empty

IPsec/ClearSdwanTunnelStatsById

This table is used to clear sdwan IPsec tunnel statistics by tunnel id.

XML structure

```
<IPsec>
  <ClearSdwanTunnelStatsById>
    <Clear>
      <TunnelID></TunnelID>
    </Clear>
  </ClearSdwanTunnelStatsById>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	ClearSdwanTunnelStatsById
Table type	Multi-instance table
Row name	Clear
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.

IPsec

IPsec/IPv4ApplyPolicies

This table is used to apply an IPsec IPv4 policy to an interface.

XML structure

```
<IPsec>
  <IPv4ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv4ApplyPolicies>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPv4ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name		String. Length: 1 to 63 characters.

IPsec/IPv6ApplyPolicies

This table is used to apply an IPsec IPv6 policy to an interface.

XML structure

```
<IPsec>
  <IPv6ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv6ApplyPolicies>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPv6ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name		String. Length: 1 to 63 characters.

IPsec/IPv4SourceInterfaces

This table is used to bound an IPsec IPv4 policy to a source interface.

XML structure

```
<IPsec>
  <IPv4SourceInterfaces>
    <IPv4SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv4SourceInterface>
  </IPv4SourceInterfaces>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPv4SourceInterfaces
Table type	Multi-instance table
Row name	IPv4SourceInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
`Interface`	The source interface name	N/A	String.	N/A

IPsec/IPv6SourceInterfaces

This table is used to bound an IPsec IPv6 policy to a source interface.

XML structure

```
<IPsec>
  <IPv6SourceInterfaces>
    <IPv6SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv6SourceInterface>
  </IPv6SourceInterfaces>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPv6SourceInterfaces
Table type	Multi-instance table
Row name	IPv6SourceInterface

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
Interface	The source interface name	N/A	String.	N/A

IPsec/InterfacesDFBit

This table is used to configure the DF bit on the interface.

XML structure

```
<IPsec>
  <InterfacesDFBit>
    <InterfaceDFBit>
      <IfIndex></IfIndex>
      <DFBit></DFBit>
    </InterfaceDFBit>
  </InterfacesDFBit>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	InterfacesDFBit
Table type	Multi-instance table
Row name	InterfaceDFBit
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	N/A Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on an interface	N/A	Enumeration: • **1**—clear. • **2**—copy. • **3**—set.	N/A

IPsec/GlobalConf

This table is used to configure IPsec global configuration.

XML structure

```
<IPsec>
  <GlobalConf>
    <DecryptCheck></DecryptCheck>
    <LoggingPacket></LoggingPacket>
    <Redundancy></Redundancy>
    <DFBit></DFBit>
    <AntiReplay>
      <State></State>
      <CheckWindow></CheckWindow>
    </AntiReplay>
    <SADuration>
      <Seconds></Seconds>
      <KiloBytes></KiloBytes>
    </SADuration>
    <SAIdleTime ></SAIdleTime>
    <FlowRedirect></FlowRedirect>
    <EstablishTunnelLimit></EstablishTunnelLimit>
    <Fragmentation></Fragmentation>
    <LoggingNegotiation></LoggingNegotiation>
    <SASoftDuration>
      <Seconds></Seconds>
      <KiloBytes></KiloBytes>
```

```
    </SASoftDuration>
    <FlowOverlapCheck></FlowOverlapCheck>
    <IPv4FlowNetmask>
      <Source></Source>
      <Destination></Destination>
    </IPv4FlowNetmask>  </GlobalConf>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	GlobalConf
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
DecryptCheck	ACL checking for de-encapsulated IPsec packets.	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.
LoggingPacket	Logging for IPsec packets	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).
Redundancy	IPsec redundancy	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on all interface	N/A	Enumeration: • **1**—clear. • **2**—copy(default). • **3**—set.
AntiReplay	Anti-replay configuration	Data structure	Members include: • State. • CheckWindow.
State	Anti-replay state	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.
CheckWindow	Anti-replay window size	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
			• **1**—Window size is 64(default). • **2**—Window size is 128. • 3—Window size is 256. • 4—Window size is 512. • 5—Window size is 1024. • 6—Window size is 2048. • 7—Window size is 4096.
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800. The default is 3600.
KiloBytes	The traffic-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295. The default is 1843200.
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.
FlowRedirect	OpenFlow entry deployment	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).
EstablishTunnelLimit	Limit the number of IPsec tunnels	N/A	Unsigned integer. Value range: 1 to 4294967295.
Fragmentation	Fragment MTU-exceeded packets	N/A	Enumeration: • **1**—Fragment packets before IPsec encapsulation (default). • **2**—Fragment packets after IPsec encapsulation.
LoggingNegotiation	Logging for IPsec event negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).
SASoftDuration	Global IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.
Seconds	The time-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.
KiloBytes	The traffic-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.
FlowOverlapCheck	IPsec flow overlap check	N/A	Boolean: • true—Enable.

Column name	Column description	Column type	Data type and restrictions
			• false—Disable(default).
IPv4FlowNetmask	IPsec IPv4 flow mask filtering	Data structure	Members include: • Source. • Destination.
Source	Minimum mask length of the IPv4 flow source address	N/A	Unsigned integer. Value range: 1 to 32. The default is 0.
Destination	Minimum mask length of the IPv4 flow destination address	N/A	Unsigned integer. Value range: 1 to 32. The default is 0.

IPsec/TransformSets

This table is used to configure IPsec transform set information.

XML structure

```
<IPsec>
  <TransformSets>
    <TransformSet>

Table description

Item	Description
Feature name	IPsec
Table name	IPv4ISAKMPPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The ISAKMP policy name	Index	String. Length: 1 to 63 characters.	N/A
SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name. • Number.	You can only specify Name or Number, but not both. To delete an ACL, specify the name,

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Mode.	number, or both the name and number of the ACL.
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: • **1**—per-rule(default). • **2**—per-host. • 3—aggregation.	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected. aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Remote	Remote IP address for the IPsec policy	Data structure	Members include: • Addr. • HostName.	You can specify Addr or HostName, but not both. Configure the normal address.
Addr	Remote IP address	N/A	IPv4 address, dotted decimal notation.	Example: 1.1.1.1
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv4 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: • Transformset.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: • RRIEnable. • Preference. • Tag	N/A
RRIEnable	The IPsec reverse route inject (RRI) feature	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: • InboundSyncInterval. • OutboundSyncInterval.	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
SmartLinkProfile	Specify an Smart policy for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SATriggerMode	IPsec SA negotiation triggering mode	N/A	Enumeration: • **1**—traffic-based(default). • **2**—auto.	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
RemoteAddrList	Remote IP address list for the IPsec policy	Data structure	Members include: RemoteAddrItem	N/A
RemoteAddrItem	IPsec policy remote address	N/A	String. Length: 1 to 253 characters.	IPv4 address or host name string.
Primary	Use the first address as the primary address	N/A	Boolean: • **true**. • **false** (default).	N/A
PolicyEnable	Enable the IPsec policy entry	N/A	Boolean: • **true**—Disable. • **false**—Enable(default).	N/A
Alias	Alias for the IPsec policy entry	N/A	String. Length: 1 to 127 characters.	N/A
SwitchBack	Automatic switchback to the primary remote address	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	responder only and does not initiate IPsec negotiation or IPsec renegotiation			

IPsec/IPv4PolicyRemoteAddresses

This table is used to configure IPv4 ISAKMP policy remote addresses information.

ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name. • Number. • Mode.	You can only specify Name or Number, but not both. To delete an ACL, specify the name, number, or both the name and number of the ACL.

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: • **1**—per-rule(default). • **2**—per-host. • 3—aggregation.	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected. aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Remote	Remote IP address for the IPsec policy	Data structure	Members include: • Addr. • HostName.	You can only specify Addr or HostName, but not both.
Addr	Remote IP address	N/A	Ipv4 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv4 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: • Transformset.	N/A
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.

Column name	Column description	Column type	Data type and restrictions	Remarks
QosPreClassify	QoS pre-classify feature	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: • RRIEnable. • Preference. • Tag	N/A
RRIEnable	The IPsec reverse route inject (RRI) feature	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: • InboundSyncInterval. • OutboundSyncInterval.	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyEnable	Enable the IPsec policy template entry	N/A	Boolean: • **true**—Disable. • **false**—Enable(default).	N/A
Alias	Alias for the IPsec policy template entry	N/A	String. Length: 1 to 127 characters.	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec responder only and does not initiate IPsec renegotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

Row name	IsakmpProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The IPsec profile name	Index	String, case-insensitive Length: 1 to 63 characters	N/A
Description	The description of the used IPsec profile	N/A	String, case-sensitive Length: 1 to 80 characters	N/A
TransformsetList	The list of the IPsec transform sets		Members include: • Transformset	N/A
Transformset	The name of the IPsec transform set	N/A	String, case-insensitive Length: 1 to 63 characters	A maximum of six transform set names can be specified.
IkeProfileName	The IKE profile name	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
SADuration	IPsec SA life	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	time	structure	• Seconds. • KiloBytes.	
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2ProfileName	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
Alias	Alias for the IPsec profile entry	N/A	String. Length: 1 to 127 characters.	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec responder only and does not initiate IPsec negotiation or IPsec renegotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable(default).	N/A

IPsec/TunnelApplyProfile

This table is used to apply the IPsec profile name to the tunnel interface.

XML structure

```
<IPsec>
  <TunnelApplyProfile>
    <ApplyProfile>
      <TunnelID></TunnelID>
      <IPsecPrfName></IPsecPrfName>
      <ACL>
        <Name></Name>
        <Number></Number>
      </ACL>
    </ApplyProfile>
  </TunnelApplyProfile>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	TunnelApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer Value range: 0 to 1023	N/A
IPsecPrfName	IPsec profile name	N/A	String Length: 0 to 63 characters The default is empty	Case-insensitive and contains only letters, digits, and dots (.).
ACL	Reference an ACL	Data structure	Members include: • Name. Number.	You can only specify Name or Number, but not both.
Name	ACL name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
Name	ACL name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A

IPsec/SmartVpnProfiles

This table contains basic smart-VPN profile information.

XML structure

```
<IPsec>
  <SmartVpnProfiles>
    <SmartVpnProfile>
      <Name></Name>
      <AutoSwitchCycles></AutoSwitchCycles>
      <DetectionInterval>
        <IntervalNum></IntervalNum>
        <PacketNum></PacketNum>
        <ThresholdLoss></ThresholdLoss>
        <ThresholdDelay></ThresholdDelay>
        <SrcAddr></SrcAddr>
        <DestAddr></DestAddr>
      </DetectionInterval>
      <Enable></Enable>
    </SmartVpnProfile>
  </SmartVpnProfiles>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnProfiles
Table type	Multi-instance table
Row name	SmartVpnProfile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Smart-VPN profile name	Index	String Length: 1 to 63 characters.	N/A
IfIndex	Interface index of the tunnel	N/A	Unsigned integer.	For information about the string type, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

AutoSwitchCycles	Maximum number of automatic switches allowed	N/A	Unsigned integer. Value range: 0 to 5.	Default value is 3.
DetectionInterval	The configuration of detection	Data structure	Members include: • IntervalNum • ThresholdType • ThresholdVal • SrcAddr • DestAddr	
IntervalNum	Detection Interval Num	N/A	Unsigned integer. Value range: 1 to 3.	Default value is 1.
PacketNum	Number of detection packets	N/A	Unsigned integer. Value range: 1 to 30.	Default value is 10.
ThresholdLoss	Threshold loss	N/A	Unsigned integer. Value range: 1 to 100.	Default value is 30.
ThresholdDelay	Threshold delay	N/A	Unsigned integer. Value range: 1 to 3000.	Default value is 500.
SrcAddr	Detection source IPv4 address	N/A	String, dotted decimal notation.	
DestAddr	Detection destination IPv4 address	N/A	String, dotted decimal notation.	
Enable	Whether Profile is enabled	N/A	Boolean: • **true**—enable profile • **false**—disable profile	

IPsec/SmartVpnGateways

This table contains basic gateway information.

XML structure

```
<IPsec>
  <SmartVpnGateways>
    <SmartVpnGateway>
      <IfIndex></IfIndex>
      <GatewayAddr></GatewayAddr>
      <NoRouteEnable></NoRouteEnable>
    </SmartVpnGateway>
  </SmartVpnGateways>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnGateways
Table type	Multi-instance table
Row name	SmartVpnGateway
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about the string type, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
GatewayAddr	Gateway address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
NoRouteEnable	Whether no route is enabled	N/A	Boolean: • **true**—enable no-route • **false**—disable no-route	

IPsec/SmartVpnLinkLists

This table contains basic link list information of a smart-VPN profile.

XML structure

```
<IPsec>
  <SmartVpnLinkLists>
    <SmartVpnLinkList>
      <ProfileName></ProfileName>
      <LinkID></LinkID>
      <IfIndex></IfIndex>
      <LinkLocalAddr></LinkLocalAddr>
      <LinkNextHop></LinkNextHop>
      <LinkRemote></LinkRemote>
    </SmartVpnLinkList>
  </SmartVpnLinkLists>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnLinkLists
Table type	Multi-instance table
Row name	SmartVpnLinkList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Profile name	Index	String Length: 1 to 63 characters.	N/A
LinkID	Link ID	Index	Unsigned integer. Value range: 1 to 10.	
IfIndex	Interface index	N/A	Unsigned integer.	For information about the string type,see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
LinkLocalAddr	Local IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
LinkNextHop	Nexthop IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
LinkRemote	Link remote IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.

IPsec/InterfacesNoNat

This table is used to configure the no-nat-process for an interface.

XML structure

```
<IPsec>
  <InterfacesNoNat>
    <InterfaceNoNat>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </InterfaceNoNat>
  </InterfacesNoNat>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	InterfacesNoNat
Table type	Multi-instance table
Row name	InterfaceNoNat
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable or disable the no-nat-process function	N/A	Boolean: • true • false	Default is false.

IPsec/SdwanProfiles

This table is used to configure sdwan IPsec profile information.

XML structure

```
<IPsec>
  <SdwanProfiles>
    <SdwanProfile>
      <Name></Name>
      <Description></Description>
      <TransformSet></TransformSet>
      <SADuration>
        <Seconds></Seconds>
      </SADuration>
    </SdwanProfile>
  </SdwanProfiles>
```

```
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SdwanProfiles
Table type	Multi-instance table
Row name	SdwanProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The IPsec profile name	Index	String, case-insensitive Length: 1 to 63 characters.	N/A
Description	The description of the used IPsec profile	N/A	String, case-sensitive Length: 1 to 80 characters.	N/A
Transformset	The name of the IPsec transform set	N/A	String, case-insensitive Length: 1 to 63 characters.	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A

IPsec

IPsec/IPv4ApplyPolicies

This table displays IPv4 policies that have been applied to interface.

XML structure

```
<IPsec>
  <IPv4ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv4ApplyPolicies>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPv4ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.
Policy	IPsec policy name	Index	String. Length: 1 to 63 characters.

IPsec/IPv6ApplyPolicies

This table displays IPv6 policies that have been applied to interface.

XML structure

```
<IPsec>
  <IPv6ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv6ApplyPolicies>
</IPsec>
```

Table description

```

Table description

Item	Description
Feature name	IPsec
Table name	GlobalConf
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
DecryptCheck	ACL checking for de-encapsulated IPsec packets.	N/A	Boolean: • **true**—Enable. • **false**—Disable.
LoggingPacket	Logging for IPsec packets	N/A	Boolean: • **true**—Enable. • **false**—Disable.
Redundancy	IPsec redundancy	N/A	Boolean: • **true**—Enable. • **false**—Disable.
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on all interface	N/A	Enumeration: • **1**—clear. • **2**—copy. • **3**—set.
AntiReplay	Anti-replay configuration	Data structure	Members include: • State. • CheckWindow.
State	Anti-replay state	N/A	Boolean: • **true**—Enable. • **false**—Disable.
CheckWind	Anti-replay	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
ow	window size		• **1**—Window size is 64. • **2**—Window size is 128. • 3—Window size is 256. • 4—Window size is 512. • 5—Window size is 1024. • 6—Window size is 2048. • 7—Window size is 4096.
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800. The default is 3600.
KiloBytes	The traffic-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295. The default is 1843200.
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.
FlowRedirect	OpenFlow entry deployment	N/A	Boolean: • **true**—Enable. • **false**—Disable.
EstablishTunnelLimit	Limit the number of IPsec tunnels	N/A	Unsigned integer. Value range: 1 to 4294967295.
Fragmentation	Fragment MTU-exceeded packets	N/A	Enumeration: • **1**—Fragment packets before IPsec encapsulation. • **2**—Fragment packets after IPsec encapsulation.
LoggingNegotiation	Logging for IPsec event negotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.
SASoftDuration	Global IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.
Seconds	The time-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.
KiloBytes	The traffic-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.
FlowOverlapCheck	IPsec flow overlap check	N/A	Boolean: • true—Enable. • false—Disable.

Column name	Column description	Column type	Data type and restrictions
IPv4FlowNetmask	IPsec IPv4 flow mask filtering	Data structure	Members include: • Source. • Destination.
Source	Minimum mask length of the IPv4 flow source address	N/A	Unsigned integer. Value range: 1 to 32. The default is 0.
Destination	Minimum mask length of the IPv4 flow destination address	N/A	Unsigned integer. Value range: 1 to 32. The default is 0.

IPsec/TransformSets

This table displays transform sets information.

XML structure

```
<IPsec>
  <TransformSets>
    <TransformSet>
      <Name></Name>
      <EncapMode></EncapMode>
      <Proto></Proto>
      <ESPAuthAlgList>
        <ESPAuthAlgItem></ESPAuthAlgItem>
      </ESPAuthAlgList>
      <ESPEncrAlgList>
        <ESPEncrAlgItem></ESPEncrAlgItem>
      </ESPEncrAlgList>
      <AHAuthAlgList>
        <AHAuthAlgItem></AHAuthAlgItem>
      </AHAuthAlgList>
      <PFS></PFS>
      <EsnEnable></EsnEnable>
    </TransformSet>
  </TransformSets>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec

Table name	TransformSets
Table type	Multi-instance table
Row name	TransformSet
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of the IPsec transform set	Index	String. Length: 1 to 63 characters.	N/A
EncapMode	Encapsulation mode	N/A	Enumeration: • **1**—transport. • **2**—tunnel.	N/A
Proto	Security protocol	N/A	Enumeration: • 1—Specifies the AH protocol. • 2—Specifies using the ESP protocol first and then using the AH protocol. • 3—Specifies the ESP protocol.	N/A
ESPAuthAlgList	The authentication algorithm for ESP	Data structure	Members include: • ESPAuthAlgItem.	N/A
ESPAuthAlgItem	The authentication algorithm number for ESP	N/A	The algorithm number is defined by IPsecCapabilities table.	N/A
ESPEncrAlgList	The encryption algorithm fo ESP	Data structure	Members include: • ESPEncrAlgItem.	N/A
ESPEncrAlgItem	The encryption algorithm number for ESP	N/A	The algorithm number is defined by IPsecCapabilities table	Contains up to 6 ESPEncrAlgItem in ESPEncrAlgList.
AHAuthAlgList	The authentication algorithm number for ESP	Data structure	Members include: • AHAuthAlgItem.	N/A
AHAuthAlgItem	The authentication algorithm number for AH	N/A	The algorithm number is defined by IPsecCapabilities table.	N/A
PFS	Perfect Forward Secrecy	N/A	The Diffie-Hellman group ID is defined by IPsecCapabilities table.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EsnEnable	Extended Sequence Number function	N/A	Enumeration: • **1**—Disable(default). • **2**—ESN. • **3**—ESN and non-ESN.	N/A

IPsec/IPv4ISAKMPPolicies

This table displays IPv4 ISAKMP policies information.

XML structure

```
<IPsec>
  <IPv4ISAKMPPolicies>
    <Policy>
      <Name></Name>
      <SeqNum></SeqNum>

Table description

Item	Description
Feature name	IPsec
Table name	IPv4ISAKMPPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The ISAKMP policy name	Index	String. Length: 1 to 63 characters.	N/A
SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name. • Number. • Mode.	You can only specify Name or Number, but not both.
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: • **1**—per-rule. • **2**—per-host. • 3—aggregation.	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected. aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Remote	Remote IP address for the IPsec policy	Data structure	Members include: • Addr. • HostName.	The Get operation gets the address currently in use.
Addr	Remote IP address	N/A	Ipv4 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv4 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: • Transformset.	N/A
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: • **true**—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Disable.	
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: • RRIEnable. • Preference. • Tag	N/A
RRIEnable	The IPsec reverse route inject (RRI) feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: • InboundSyncInterval. • OutboundSyncInterval.	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
SATriggerMode	IPsec SA negotiation triggering mode	N/A	Enumeration: • **1**—traffic-based. • **2**—auto.	N/A
SmartLinkProfile	Specify an Smart policy for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
SASoftDurat	IPsec SA soft	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ion	lifetime buffer	structure	• Seconds. • KiloBytes.	
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
RemoteAddrList	Remote IPv4 address list for the IPsec policy	Data structure	Members include: RemoteAddrItem	N/A
RemoteAddrItem	IPsec policy remote IPv4 address	N/A	String. Length: 1 to 253 characters.	IPv4 address or host name string.
Primary	First address used as the primary address	N/A	Boolean: • **true.** • **false.**	N/A
PolicyEnable	Enable the IPsec policy entry	N/A	Boolean: • **true**—Disable. • **false**—Enable(default).	N/A
Alias	Alias for the IPsec policy entry	N/A	String. Length: 1 to 127 characters.	N/A
SwitchBack	Automatic switchback to the primary remote address	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec responder only and does not initiate IPsec negotiation or IPsec renegotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A

Table description

Item	Description
Feature name	IPsec
Table name	IPv6PolicyTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The ISAKMP policy name	Index	String. Length: 1 to 63 characters.	N/A
SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: • Name. • Number. • Mode.	You can only specify Name or Number, but not both.
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: • **1**—per-rule. • **2**—per-host. • 3—aggregation.	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected. aggregation: One IPsec

Column name	Column description	Column type	Data type and restrictions	Remarks
				tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Remote	Remote IP address for the IPsec policy	Data structure	Members include: • Addr. • HostName.	You can only specify Addr or HostName, but not both.
Addr	Remote IP address	N/A	Ipv6 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv6 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: • Transformset.	N/A
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: • RRIEnable. • Preference. • Tag	N/A
RRIEnable	The IPsec reverse route inject (RRI) feature	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	time-based lifetime of IPsec SA		Value range: 180 to 604800.	
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to `86400`.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: • InboundSyncInterval. • OutboundSyncInterval.	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
PolicyEnable	Enable the IPsec policy template entry	N/A	Boolean: • **true**—Disable. • **false**—Enable(default)..	N/A
Alias	Alias for the IPsec policy template entry	N/A	String. Length: 1 to 127 characters.	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec responder only and does not initiate IPsec renegotiation	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A

IPsec/IPv4ManualPolicies

This table displays IPv4 manual policies.

Table description

Item	Description
Feature name	IPsec

Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.
AddrType	IP protocol type	N/A	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: • **1**—active. • **2**—standby.
SAMode	SA negotiation mode	N/A	Enumeration: • **1**—Manual. • **2**—ISAKMP. • **3**—Template.
PFS	Perfect Forward Secrecy	N/A	The Diffie-Hellman group ID is defined by IPsecCapabilities table.
ACLNumber	ACL Number	N/A	Unsigned integer. Value range: 3000 to 3999.
LocalAddr	Source IP address of the IPsec tunnel	N/A	Ipv4 address or Ipv6 address
RemoteAddr	Destination IP address of the IPsec tunnel	N/A	Ipv4 address or Ipv6 address
SrcFlow	Source data flow protected by the IPsec tunnel	Data structure	Members include: • Proto. • Addr. • MaskLen. • Port.
Proto	Source protocol type	N/A	Unsigned integer. Value range: 0 to 255.
Addr	Source IP address	N/A	Ipv4 address or Ipv6 address
MaskLen	Source IP address mask length	N/A	Unsigned integer.
Port	Source port number	N/A	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
DestFlow	Destination data flow protected by the IPsec tunnel	Data structure	Members include: • Proto. • Addr. • MaskLen. • Port.
Proto	Destination protocol type	N/A	Unsigned integer. Value range: 0 to 255.
Addr	Destination IP address	N/A	Ipv4 address or Ipv6 address
MaskLen	Destination IP address mask length	N/A	Unsigned integer.
Port	Destination port number	N/A	Unsigned integer. Value range: 0 to 65535.
SecurityProto	IPsec SecurityProtocol	N/A	Enumeration: • 1—AH. • 2—AH-ESP. • 3—ESP.
SPI	Security Parameter Index	Data structure	Members include: • ESPInbound. • ESPOutbound. • AHInbound. • AHOutbound.
ESPInbound	ESP inbound SPI	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$.
ESPOutbound	ESP outbound SPI	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$.
AHInbound	AH inbound SPI	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$.
AHOutbound	AH Outbound SPI	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$.
PolicyName	The ISAKMP policy name	N/A	String. Length: 1 to 63 characters.
PolicySeqNum	The sequence number for the IPsec policy	N/A	Unsigned integer. Value range: 1 to 65535. N/A
IfIndex	Interface index	N/A	Unsigned integer.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.
InsideVRF	Inside vpn-instance	N/A	String. Length: 1 to 31 characters.
PolicyAlias	Alias of the IPsec policy	N/A	String. Length: 1 to 127 characters.

Column name	Column description	Column type	Data type and restrictions
	entry		
TunnelStatus	IPsec tunnel status	N/A	Enumeration: • **1**—Not established • **2**—Established

Table description

Item	Description
Feature name	IPsec
Table name	SAs
Table type	Multi-instance table
Row name	SA
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID which the SA belongs to	Index	Unsigned integer.
SAIndex	SA index	Index	Unsigned integer.
Direction	SA's direction	N/A	Enumeration: • **1**—Inbound. • **2**—Outbound.
Proto	Security protocol	N/A	Enumeration: • **1**—AH. • **2**—ESP.
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
SAMode	SA negotiation mode	N/A	Enumeration: • **1**—Manual. • **2**—ISAKMP. • **3**—Template.
EncapMode	Encapsulation mode	N/A	Enumeration: • **1**—transport. • **2**—tunnel.
PFS	Perfect Forward Secrecy	N/A	The Diffie-Hellman group ID is defined by IPsecCapabilities table.
AuthAlg	Authentication algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
EncrAlg	Encryption algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
SADuration	IPsec SA life time	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
			• Seconds. • KiloBytes.
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.
KiloBytes	The traffic-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.
SARemainingDuration	Remaining IPsec SA lifetime	Data structure	Members include: • Seconds. • KiloBytes.
Seconds	Remaining IPsec SA lifetime in seconds	N/A	Unsigned integer. Value range: 180 to 604800.
KiloBytes	Remaining IPsec SA lifetime in kilobytes	N/A	Unsigned integer. Value range: 2560 to 4294967295.
RemainingIdleTime	Remaining IPsec SA idle time	N/A	Unsigned integer. Value range: 0 to 86400.
NatTraversal	UDP encapsulation used for NAT traversal	N/A	Boolean: • **true**—Enable. • **false**—Disable.
AntiReplay	Anti-replay configuration	Data structure	Members include: • State. • CheckWindow.
State	Anti-replay state	N/A	Boolean: • **true**—Enable. • **false**—Disable.
CheckWindow	Anti-replay window size	N/A	Enumeration: • **1**—Window size is 64. • **2**—Window size is 128. • 3—Window size is 256. • 4—Window size is 512. • 5—Window size is 1024. • 6—Window size is 2048. • 7—Window size is 4096.
PathMTU	Path MTU of the IPsec SA	N/A	Unsigned integer.
MaxRcvSN	Max sequence number in the received packets	N/A	Unsigned integer.
MaxSendSN	Max sequence	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	number in the sent packets		
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: • **1**—active. • **2**—standby.
IfIndex	Interface index	N/A	Unsigned integer.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.
PolicyName	Name of the used IPsec policy	N/A	String. Length: 1 to 63 characters.
PolicySeqNum	Sequence number of the IPsec policy entry	N/A	Unsigned integer. Value range: 1 to 65535.

IPsec/GlobalSAs

This table displays information about IPsec SAs.

XML structure

```
<IPsec>
  <GlobalSAs>
    <GlobalSA>
      <TunnelID></TunnelID>
      <SAIndex></SAIndex>
      <Direction></Direction>
      <Protocol></Protocol>
      <SPI></SPI>
      <PFS></PFS>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <Status></Status>
      <ProfileName></ProfileName>
    </GlobalSA>
  </GlobalSAs>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	`GlobalSAs`

Table type	Multi-instance table
Row name	`GlobalSA`
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IPsec tunnel ID	Index	Unsigned integer.	N/A
SAIndex	SA index	Index	Unsigned integer.	N/A
Direction	SA's direction	N/A	Enumeration: • **1**—Inbound. • 2—Outbound	N/A
Protocol	Security protocol	N/A	Enumeration: • **1**—AH. • **2**—ESP.	N/A
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
PFS	Perfect Forward Secrecy	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
AuthorityAlg	Authentication algorithm	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
EncryptionAlg	Encryption algorithm	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: • **1**—active. • **2**—standby.	N/A
ProfileName	The IPsec profile name.	N/A	String. Length: 1 to 63 characters.	N/A

IPsec/Count

This table displays IPsec SA and Tunnel count information.

XML structure

```
<IPsec>
  <Count>
    <SACount></SACount>
    <TunnelCount></TunnelCount>
```

```
  </Count>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	Count
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SACount	The number of IPsec SAs	N/A	Unsigned integer.
TunnelCount	The number of IPsec tunnels	N/A	Unsigned integer.

IPsec/GlobalStats

This table displays IPsec global statistics information.

XML structure

```
<IPsec>
  <GlobalStats>
    <RcvPkts></RcvPkts>
    <SentPkts></SentPkts>

      <Replayed></Replayed>
      <ACLCheckFailure></ACLCheckFailure>
      <MTUCheckFailure></MTUCheckFailure>
      <LoopbackLimitExceeded></LoopbackLimitExceeded>
      <CryptospeedLimitExceeded></CryptospeedLimitExceeded>
      <ResponderOnlyLimit></ResponderOnlyLimit>
    </DropPktsStats>
  </GlobalStats>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	GlobalStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RcvPkts	Number of received sent IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentPkts	Number of sent IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
RcvBytes	Number of bytes of received IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentBytes	Number of bytes of sent IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
RcvPktRate	Number of IPsec-protected packets received per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentPktRate	Number of IPsec-protected packets sent	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

Column name	Column description	Column type	Data type and restrictions
	per second		
RcvByteRate	Number of bytes of IPsec-protected packets received per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentByteRate	Number of bytes of IPsec-protected packets sent per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropRcvPkts	Number of dropped IPsec-protected received packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropSentPkts	Number of dropped IPsec-protected sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropPktsStats	Dropped packets statistics	Data structure	Members include: • NoAvailableSA. • WrongSA. • InvalidLen. • AuthFailure. • EncapFailure. • DecapFailure. • Replayed. • ACLCheckFailure. • MTUCheckFailure. • LoopbackLimitExceeded.
NoAvailableSA	Number of dropped packets due to lack of available IPsec SA	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
WrongSA	Number of dropped packets due to wrong IPsec SA	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
InvalidLen	Number of dropped packets due to invalid packet length	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
AuthFailure	Number of dropped packets due to authentication failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

Column name	Column description	Column type	Data type and restrictions
EncapFailure	Number of dropped packets due to encapsulation failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DecapFailure	Number of dropped packets due to decapsulation failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
Replayed	Number of dropped replayed packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
ACLCheckFailure	Number of dropped packets due to ACL check failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
MTUCheckFailure	Number of dropped packets due to MTU check failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
LoopbackLimitExceeded	Number of dropped packets due to loopback limit exceeded	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
CryptospeedLimitExceeded	Number of dropped packets due to Cryptospeed exceeded	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
ResponderOnlyLimit	Number of packets dropped because of the responder-only restriction	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

IPsec/TunnelStats

This table displays IPsec tunnel statistics information.

XML structure

```

Table description

Item	Description
Feature name	IPsec
Table name	TunnelStats
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.
RcvPkts	Number of received sent IPsec-protecte	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

Column name	Column description	Column type	Data type and restrictions
	d packets		
SentPkts	Number of sent IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
RcvBytes	Number of bytes of received IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentBytes	Number of bytes of sent IPsec-protected packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
RcvPktRate	Number of IPsec-protected packets received per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentPktRate	Number of IPsec-protected packets sent per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
RcvByteRate	Number of bytes of IPsec-protected packets received per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
SentByteRate	Number of bytes of IPsec-protected packets sent per second	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropRcvPkts	Number of dropped IPsec-protected received packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropSentPkts	Number of dropped IPsec-protected sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DropPktsStats	Dropped packets statistics	Data structure	Members include: • NoAvailableSA. • WrongSA. • InvalidLen. • AuthFailure. • EncapFailure. • DecapFailure. • Replayed. • ACLCheckFailure. • MTUCheckFailure.

Column name	Column description	Column type	Data type and restrictions
			• LoopbackLimitExceeded.
NoAvailableSA	Number of dropped packets due to lack of available IPsec SA	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
WrongSA	Number of dropped packets due to wrong IPsec SA	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
InvalidLen	Number of dropped packets due to invalid packet length	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
AuthFailure	Number of dropped packets due to authentication failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
EncapFailure	Number of dropped packets due to encapsulation failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
DecapFailure	Number of dropped packets due to decapsulation failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
Replayed	Number of dropped replayed packets	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
ACLCheckFailure	Number of dropped packets due to ACL check failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
MTUCheckFailure	Number of dropped packets due to MTU check failure	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
LoopbackLimitExceeded	Number of dropped packets due to loopback limit exceeded	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.
CryptospeedLimitExceeded	Number of dropped packets due to	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

Column name	Column description	Column type	Data type and restrictions
	Cryptospeed exceeded		
Responder OnlyLimit	Number of packets dropped because of the responder-only restriction	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.

IPsec/IPsecCapabilities

This table displays information about the algorithm capabilities supported by the IPsec module.

XML structure

```
<IPsec>
  <IPsecCapabilities>
    <IPsecCapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <AlgType></AlgType>
    </IPsecCapability>
  </IPsecCapabilities>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IPsecCapabilities
Table type	Multi-instance table
Row name	IPsecCapability
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
AlgID	Algorithm ID	Index	Unsigned .
AlgName	Algorithm name	N/A	String. Length: 1 to 255 characters.
AlgType	Algorithm type	N/A	Enumeration: • **1**—Diffie-Hellman group • 2—Encryption algorithm

Column name	Column description	Column type	Data type and restrictions
			• 3—Authentication algorithm

List of algorithms

AlgID	AlgName	AlgType
1	Group_1	Diffie-Hellman group
2	Group_2	Diffie-Hellman group
3	Group_5	Diffie-Hellman group
4	Group_14	Diffie-Hellman group
5	Group_24	Diffie-Hellman group
6	MD5	Authentication algorithm
7	SHA1	Authentication algorithm
8	SHA256	Authentication algorithm
9	SHA384	Authentication algorithm
10	SHA512	Authentication algorithm
11	3DES-CBC	Encryption algorithm
12	AES-CBC-128	Encryption algorithm
13	AES-CBC-192	Encryption algorithm
14	AES-CBC-256	Encryption algorithm
15	DES-CBC	Encryption algorithm
16	NULL	Encryption algorithm
17	Group_19	Diffie-Hellman group
18	Group_20	Diffie-Hellman group
19	AES-XCBC-MAC	Authentication algorithm
20	AES-CTR-128	Encryption algorithm
21	AES-CTR-192	Encryption algorithm
22	AES-CTR-256	Encryption algorithm
23	CAMELLIA-CBC-128	Encryption algorithm
24	CAMELLIA-CBC-192	Encryption algorithm
25	CAMELLIA-CBC-256	Encryption algorithm
26	GMAC-128	Encryption algorithm
27	GMAC-192	Encryption algorithm
28	GMAC-256	Encryption algorithm
29	GCM-128	Encryption algorithm
30	GCM-192	Encryption algorithm
31	GCM-256	Encryption algorithm

128	SM1-CBC-128	Encryption algorithm
129	SM4-CBC	Encryption algorithm
130	SM3	Authentication algorithm
131	SM1-CBC-192	Encryption algorithm
132	SM1-CBC-256	Encryption algorithm

IPsec/DeviceCapabilities

This table displays the capabilities of device.

XML structure

```
<IPsec>
  <DeviceCapabilities>
    <SupportRedundancy></SupportRedundancy>
    <SupportFlowRedirect></SupportFlowRedirect>
  </DeviceCapabilities>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	DeviceCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SupportRedundancy	Support for redundancy	N/A	Boolean: • **true**—The device supports redundancy. • **false**—The device does not support redundancy.
SupportFlowRedirect	Support for OpenFlow entry deployment	N/A	Boolean: • **true**—The device supports OpenFlow entry deployment. • **false**—The device does not support OpenFlow entry deployment.

IPsec/IsakmpProfiles

This table displays ISAKMP IPsec profile information.

XML structure

```
<IPsec>
  <IsakmpProfiles>
    <IsakmpProfile>
      <Name></Name>
      <Description></Description>
      <TransformSetList>
        <TransformSet></TransformSet>
        </TransformSetList>
      <IkeProfileName></IkeProfileName>
      <SADuration>
        <Seconds></Seconds>
        <KiloBytes></KiloBytes>
      </SADuration>
      <SAIdleTime ></SAIdleTime>
      <SASoftDuration>
        <Seconds></Seconds>
        <KiloBytes></KiloBytes>
      </SASoftDuration>
      <IKEv2ProfileName></IKEv2ProfileName>
      <Alias></Alias>
      <ResponderOnly></ResponderOnly>
    </IsakmpProfile>
  </IsakmpProfiles>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	IsakmpProfiles
Table type	Multi-instance table
Row name	IsakmpProfile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The IPsec	Index	String, case-insensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	profile name		Length: 1 to 63 characters	
Description	The description of the used IPsec profile	N/A	String, case-sensitive Length: 0 to 80 characters	N/A
Transformset	The name of the IPsec transform set	N/A	String, case-insensitive Length: 0 to 63 characters	N/A
IkeProfileName	The ike profile name	N/A	String, case-insensitive Length: 0 to 63 characters	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2ProfileName	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
Alias	Alias for the IPsec profile entry	N/A	String. Length: 1 to 127 characters.	N/A
Responder Only	Enable the responder-only feature, so that the local device acts as the IPsec responder only and does not	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	initiate IPsec negotiation or IPsec renegotiation			

IPsec/TunnelApplyProfile

This table displays the IPsec profile name in the ADVPN configuration for the specified tunnels.

XML structure

```
<IPsec>
  <TunnelApplyProfile>
    <ApplyProfile>
      <TunnelID></TunnelID>
      <IPsecPrfName></IPsecPrfName>
      <ACL>
        <Name></Name>
        <Number></Number>
       </ACL>
    </ApplyProfile>
  </TunnelApplyProfile>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	TunnelApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	The tunnel ID	Index	String, case-insensitive Length: 1 to 63 characters	N/A
IPsecPrfName	IPsec profile name	N/A	String, case-sensitive Length: 0 to 63 characters	N/A
ACL	Reference an	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ACL	structure	• Name. • Number.	
Name	ACL name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

IPsec/SmartVpnProfiles

This table contains smart link policy information.

XML structure

```
<IPsec>
  <SmartVpnProfiles>
    <SmartVpnProfile>
      <Name></Name>
      <ActiveLinkID></ActiveLinkID>
      <AutoSwitchCycles></AutoSwitchCycles>
      <DetectionInterval>
        <IntervalNum></IntervalNum>
        <PacketNum></PacketNum>
        <ThresholdLoss></ThresholdLoss>
        <ThresholdDelay></ThresholdDelay>
        <SrcAddr></SrcAddr>
        <DestAddr></DestAddr>
      </DetectionInterval>
      <Enable></Enable>
      <PolicyAlias></PolicyAlias>
    </SmartVpnProfile>
  </SmartVpnProfiles>
</IPsec>
```

Table description

Item	Description
Featurename	IPsec
Table name	SmartVpnProfiles
Table type	Multi-instance table
Row name	SmartVpnProfile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Smart link policy name	Index	String. Length: 1 to 63 characters.	N/A
ActiveLinkID	ID of the active link	N/A	Unsigned integer. Value range: 1 to 30.	N/A
AutoSwitchCycles	Maximum number of link switchover cycles	N/A	Unsigned integer. Value range: 0 to 5.	N/A
DetectionInterval	Link quality probe configuration	Data structure	Members include: • IntervalNum • ThresholdType • ThresholdVal • SrcAddr • DestAddr	N/A
IntervalNum	Probe packet sending interval	N/A	Unsigned integer. Value range: 1 to 3, in seconds.	N/A
PacketNum	Number of probe packets sent in each probe cycle	N/A	Unsigned integer. Value range: 1 to 30.	N/A
ThresholdLoss	Packet loss ratio threshold	N/A	Unsigned integer. Value range: 1 to 100, in percentages.	N/A
ThresholdDelay	Delay threshold	N/A	Unsigned integer. Value range: 1 to 3000, in milliseconds.	N/A
SrcAddr	Source IP address for link quality probe packets	N/A	String, dotted decimal notation.	N/A
DestAddr	Destination IP address for link quality probe packets	N/A	String, dotted decimal notation.	N/A
Enable	Whether the smart link policy is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
PolicyAlias	Policy alias	N/A	String. Length: 1 to 63 characters.	N/A

IPsec/SmartVpnGateways

This table contains gateway information for local interfaces of the links.

XML structure

```
<IPsec>
```

```
  <SmartVpnGateways>
    <SmartVpnGateway>
      <IfIndex></IfIndex>
      <GatewayAddr></GatewayAddr>
      <NoRouteEnable></NoRouteEnable>
    </SmartVpnGateway>
  </SmartVpnGateways>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec

Feature name	IPsec
Table name	InterfacesNoNat
Table type	Multi-instance table
Row name	InterfaceNoNat
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enabling status of no-NAT processing	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

IPsec/DiagnoseItem

This table displays the diagnostic data for IPsec.

XML structure

```
<IPsec>
  <DiagnoseItems>
    <DiagnoseItems>
      <ItemID></ItemID>
      <Result></Result>
      <ItemName></ItemName>
```

```
      <Reason></Reason>
    </DiagnoseItems>
  </DiagnoseItems>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	DiagnoseItems
Table type	Multi-instance table
Row name	DiagnoseItem
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ItemID	Diagnostic item ID	Index	Unsigned integer.
Result	Result of the diagnostic	N/A	Enumeration: • **0**—Succeeded. • **1**—Failed.
ItemName	Diagnostic item name	N/A	String. Length: 1 to 63 characters.
Reason	Reason for failure	N/A	String. Length: 1 to 1023 characters.

IPsec/DiagnoseState

This table displays IPsec diagnostic state.

XML structure

```
<IPsec>
  <DiagnoseState>
    <State></State>
  </DiagnoseState>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec

Table name	DiagnoseState
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Diagnostic state	N/A	Boolean: • **true**—Diagnosing. • **false**—Finished.

IPsec/P2MPTunnels

This table displays IPsec P2MP tunnels information.

XML structure

```
<IPsec>
  <P2MPTunnels>
    <P2MPTunnel>
      <TunnelID></TunnelID>
      <AddrType></AddrType>
      <PrivateDestAddr></PrivateDestAddr>
      <PublicDestAddr></PublicDestAddr>
      <PublicDestPort></PublicDestPort>
      <CreateTime></CreateTime>
    </P2MPTunnel>
  </P2MPTunnels>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	P2MPTunnels
Table type	Multi-instance table
Row name	P2MPTunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
AddrType	IP protocol type	Index	Enumeration: • 1—IPv4 address • 2—IPv6 address.	N/A
PrivateDestAddr	Private destination IP address of the IPsec P2MP tunnel	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
PublicDestAddr	Public destination IP address of the IPsec P2MP tunnel	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
PublicDestPort	Public destination port number of the IPsec P2MP tunnel	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CreateTime	Existing time (in seconds) of the IPsec P2MP tunnel	N/A	Unsigned integer.	N/A

IPsec/P2MPTunnelCounts

This table displays IPsec P2MP tunnel count information.

XML structure

```
<IPsec>
  <P2MPTunnelCounts>
    <P2MPTunnelCount>
      <TunnelID></TunnelID>
      <AddrType></AddrType>
      <SpokeCount></SpokeCount>
    </P2MPTunnelCount>
  </P2MPTunnelCounts>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec

Table name	P2MPTunnelCounts
Table type	Multi-instance table
Row name	P2MPTunnelCount
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
AddrType	IP protocol type	Index	Enumeration: • 1—IPv4 address • 2—IPv6 address.	N/A
SopkeCount	Number of IPsec P2MP tunnels	N/A	Unsigned integer.	N/A

IPsec/SdwanTunnels

This table displays sdwan IPsec tunnels information.

XML structure

```
<IPsec>
  <SdwanTunnels>
    <Tunnel>
      <TunnelID></TunnelID>

```

```
    </Tunnel>
  </SdwanTunnels>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SdwanTunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.
AddrType	IP protocol type	N/A	Enumeration: • **1**—Ipv4Address. • **2**—Ipv6Address.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: • **1**—active. • **2**—standby.
LocalAddr	Source IP address of the IPsec tunnel	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.
RemoteAddr	Destination IP address of the IPsec tunnel	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.
SecurityProto	IPsec SecurityProtocol	N/A	Enumeration: • 1—AH. • 2—AH-ESP. • 3—ESP.
SPI	Security Parameter Index	Data structure	Members include: • ESPInbound. • ESPOutbound. • AHInbound. • AHOutbound.
ESPInbound	ESP inbound SPI	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
ESPOutbound	ESP outbound SPI	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
AHInbound	AH inbound SPI	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.

Column name	Column description	Column type	Data type and restrictions
AHOutbound	AH Outbound SPI	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
ProfileName	The sdwan profile name	N/A	String. Length: 1 to 63 characters.
IfIndex	Interface index	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.
SiteID	Site ID	N/A	Unsigned integer. Value range: 1 to 65535.
DeviceID	Device ID	N/A	Unsigned integer. Value range: 1 to 255.
InterfaceID	Interface ID	N/A	Unsigned integer. Value range: 1 to 255.
LinkID	Link ID	N/A	Unsigned integer Value range: 1 to 4294967295.
PathMTU	Path MTU of the SDWAN IPsec SA	N/A	Unsigned integer.

IPsec/SdwanLocalSAs

This table displays sdwan IPsec local SAs information.

XML structure

```
<IPsec>
  <SdwanLocalSAs>
    <SA>
      <SAIndex></SAIndex>
      <SPI></SPI>

      <ProfileName></ProfileName>
      <IfName></IfName>
    </SA>
  </SdwanLocalSAs>
</IPsec>
```

Table description

Item	Description
Feature name	IPsec
Table name	SdwanLocalSAs
Table type	Multi-instance table
Row name	SA
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SAIndex	SA index	Index	Unsigned integer.
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
Proto	Security protocol	N/A	Enumeration: • 1—AH. • 2—ESP.
EncapMode	Encapsulation mode	N/A	Enumeration: • **1**—transport.
AuthAlg	Authentication algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
EncrAlg	Encryption algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
LocalLinkID	Local Link ID	N/A	Members include: • SiteID. • DeviceID. • InterfaceID.

Column name	Column description	Column type	Data type and restrictions
SiteID	Site ID	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
DeviceID	Device ID	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
InterfaceID	InterfaceID	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.
LocalAddr	Source IP address of the IPsec tunnel	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.
SADuration	IPsec SA life time	Data structure	Members include: • Seconds.
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.
SARemainingDuration	Remaining IPsec SA lifetime	Data structure	Members include: • Seconds.
Seconds	Remaining IPsec SA lifetime in seconds	N/A	Unsigned integer. Value range: 180 to 604800.
AntiReplay	Anti-replay configuration	Data structure	Members include: • State. • CheckWindow.
State	Anti-replay state	N/A	Boolean: • **true**—Enable. • **false**—Disable.
CheckWindow	Anti-replay window size	N/A	Enumeration: • **1**—Window size is 64. • **2**—Window size is 128. • 3—Window size is 256. • 4—Window size is 512. • 5—Window size is 1024. • 6—Window size is 2048. • 7—Window size is 4096.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: • **1**—active. • **2**—standby.
IfIndex	Interface index	N/A	Unsigned integer.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.
ProfileName	Name of the used IPsec	N/A	String.

Column name	Column description	Column type	Data type and restrictions
	profile		Length: 1 to 63 characters.

IPsec/SdwanRemoteSAs

This table displays sdwan IPsec remote SAs information.

XML structure

```
<IPsec>
  <SdwanRemoteSAs>
    <SA>
      <SAIndex></SAIndex>

Comware 7 IPsec NETCONF XML API Error Message Reference

IPsec/ IPv4ISAKMPPolicies

Message	Explanation
Operation failed. The smart link policy is already assigned to another IPsec policy. 操作失败，该智能选路策略已经被另一个IPsec安全策略引用。	An IPsec smart link policy can only be assigned to one IPsec policy. 一个智能选路策略只能被一个IPsec策略引用。
The specified smart link policy doesn't exist. 指定的智能选路策略不存在。	You must specify an existing IPsec smart link policy by its name. 指定的IPsec智能选路策略必须已存在。
Remote IpAddr cannot coexist with Remote HostName. Remote地址与Remote Hostname不能同时存在。	Remote IpAddr cannot coexist with Remote HostName. Remote地址与Remote Hostname不能同时存在。
Primary cannot be configured alone. Primary不能单独配置。	Primary cannot be configured alone. Primary不能单独配置。
Maximum number of RemoteAddress already reached. RemoteAddress配置已达到上限。	Maximum number of RemoteAddress already reached. RemoteAddress配置已达到上限。
A primary remote IP address for the IPsec tunnel already exists, please remove it first. Primary配置已存在，请先删除。	A primary remote IP address for the IPsec tunnel already exists, please remove it first. Primary配置已存在，请先删除。
Remote Address invalid. Remote地址无效。	Remote Address invalid. Remote地址无效。

IPsec/IPv6ISAKMPPolicies

Message	Explanation
Remote IpAddr cannot coexist with Remote HostName. Remote地址与Remote Hostname不能同时存在。	Remote IpAddr cannot coexist with Remote HostName. Remote地址与Remote Hostname不能同时存在。
Primary cannot be configured alone. Primary不能单独配置。	Primary cannot be configured alone. Primary不能单独配置。
Maximum number of RemoteAddress already reached. RemoteAddress配置已达到上限。	Maximum number of RemoteAddress already reached. RemoteAddress配置已达到上限。
A primary remote IP address for the IPsec tunnel already exists, please remove it first.	A primary remote IP address for the IPsec tunnel already exists, please remove it first.

Primary配置已存在，请先删除。	Primary配置已存在，请先删除。
Remote Address invalid. Remote地址无效。	Remote Address invalid. Remote地址无效。

IPsec/SmartVpnProfile

Message	Explanation
Maximum number of smart link policies already reached. 已达到智能选路策略个数的最大值。	The device supports a maximum of three IPsec smart link policies. 一台设备中最多支持配置3个IPsec智能选路策略。
The policy have bound a smart-link policy,please undo it firstly. 该策略已绑定智能选路策略，请先解除绑定。	An IPsec policy can use only one IPsec smart link policy. 一个IPsec安全策略只能引用一个IPsec智能选路策略。
IP address is not match,please try again. IP地址不匹配，请再次尝试。	When you remove the source and destination IP addresses configured for link quality probe packets, you must specify correct IP addresses . 删除IPsec智能选路链路探测的源IP地址和目的IP地址时，需要指定正确的IP地址。

IPsec/SmartVpnLinkLists

Message	Explanation
Link is active, can not modify. 链路处于激活状态，不能修改。	Link can’t be modified when it’s active. 链路处在激活状态时不支持修改配置。
The same link has exist. 智能选路策略中已经存在相同的链路。	The link is already configured, can’t be configured again. 该链路已经存在，不能再次配置。
Failed to configure the link. The maximum number of interfaces used by the links in the policy was already reached. 策略中链路使用的接口数达到最大值，链路创建失败。	A maximum of 10 links can be configured in an IPsec smart link policy. 一个IPsec智能选路策略下最多可配置10条链路。
Failed to configure the link. The maximum number of remote IP addresses used by the links in the policy was already reached. 策略中链路使用的目的地址数达到最大值，链路创建失败。	A maximum of 3 remote IP addresses can be configured in an IPsec smart link policy. 一个IPsec智能选路策略下最多可配置3个目的IP地址。
Failed to configure the link. The specified remote address is already used by another enabled smart link policy. 指定的目的地址已经被另一个智能选路策略使用，链路创建失败。	A remote IP address can be used by only one IPsec smart link policy. 一个目的IP地址只能使用在一个IPsec智能选路策略中。

IPsec/ SmartVpnMoveLinks

Message	Explanation
The specified link doesn't exist. 指定的链路不存在。	A link must be configured before you move it. 指定链路不存在，无法移动。
Can't move the link because it is in active state. 链路处于激活状态，不能移动。	An active link can’t be moved. 链路处在激活状态时不支持移动。

IPsec/ SmartVpnActiveLinks

Message	Explanation
The specified link doesn't exist. 指定的链路不存在。	The link must be configured before you activate it. 指定链路不存在，无法激活。
Operation failed. The link is currently in active state. 操作失败，该链路已经激活。	An active link does not to be activated again. 链路处在激活状态时不需要再次激活。

IPsec event stream

TunnelCreated event

This event is used to report IPsec tunnel information when an IPsec tunnel is created.

XML structure for event subscription

```
<TunnelCreatedEvent>
  <Tunnel>
    <IfName></IfName>
  </Tunnel>
</TunnelCreatedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPsec</stream>
    <filter type="subtree">
      <TunnelCreatedEvent xmlns="http://www.h3c.com/netconf/event:1.0/ipsec:1.0">
        <Tunnel>
          <IfName>GigabitEthernet1/0/1</IfName>
        </Tunnel>
      </TunnelCreatedEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	IPsec
Event name	TunnelCreatedEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/ipsec:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended query
IfName	Interface name	String. Length: 1 to 47 characters.	No

XML structure for event report

```
<TunnelCreatedEvent>
```

```
  <Tunnel>
    <IfName></IfName>
    <LocalAddress></LocalAddress>
    <RemoteAddress></RemoteAddress>
    <LocalPort></LocalPort>

```

Table description

Column name	Column description	Data type and restrictions	Remarks
IfName	Interface name	String. Length: 1 to 47 characters.	N/A
LocalAddress	Source IP address of the IPsec tunnel	String, IPv4 address string or IPv6 address string.	N/A
RemoteAddress	Destination IP address of the IPsec tunnel	String, IPv4 address string or IPv6 address string.	N/A
LocalPort	Source port number	Unsigned integer. Value range: 0 to 65535.	N/A
RemotePort	Destination port number	Unsigned integer. Value range: 0 to 65535.	N/A
InsideVpnInst	Name of the inside VPN	String.	N/A

Column name	Column description	Data type and restrictions	Remarks
ance	instance	Length: 1 to 31 characters.	
OutsideVpnInstance	Name of the outside VPN instance	String. Length: 1 to 31 characters.	N/A
Role	Device role	Enumeration: • 1—Initiator • 2—Responder • 3—Manual	N/A
PolicyName	IPsec policy name	String, case-insensitive. Length: 1 to 63 characters.	PolicyName is mutually exclusive with ProfileName.
PolicySeqNum	Sequence number of the IPsec policy entry	Unsigned integer. Value range: 1 to 65535.	N/A
ProfileName	IPsec profile name	String, case-insensitive. Length: 1 to 63 characters.	N/A

TunnelDeleted event

This event is used to report IPsec tunnel information when an IPsec tunnel is deleted.

XML structure for event subscription

```
<TunnelDeletedEvent>
  <Tunnel>
    <IfName></IfName>
  </Tunnel>
</TunnelDeletedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPsec</stream>
    <filter type="subtree">
      <TunnelDeletedEvent xmlns="http://www.h3c.com/netconf/event:1.0/ipsec:1.0">
        <Tunnel>
          <IfName>GigabitEthernet1/0/1</IfName>
        </Tunnel>
      </TunnelDeletedEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	IPsec
Event name	TunnelDeletedEvent

Item	Description
Event namespace	http://www.h3c.com/netconf/event:1.0/ipsec:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended query
IfName	Interface name	String. Length: 1 to 47 characters.	No

XML structure for event report

```
<TunnelDeletedEvent>
  <Tunnel>
    <IfName></IfName>
    <LocalAddress></LocalAddress>
    <RemoteAddress></RemoteAddress>
    <LocalPort></LocalPort>
    <RemotePort></RemotePort>
    <InsideVpnInstance></InsideVpnInstance>
    <OutsideVpnInstance></OutsideVpnInstance>
    <Role></Role>
    <PolicyName></PolicyName>
    <PolicySeqNum></PolicySeqNum>
  </Tunnel>
</TunnelDeletedEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>

    </Ipv4Address>
  </Ipv4Addresses>
</IPV4ADDRESS>
```

Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	Ipv4Addresses
Table type	Multi-instance table
Row name	Ipv4Address
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IPv4 address mask.	N/A	String, dotted decimal notation.	N/A
AddressOrigin	The way how the IPv4 address is obtained.	N/A	Unsigned integer. Value range: 1 to 2.	Value 1 and 2 represent the following methods: ● 1: Manual. ● 2: Manual-sub.

IPV4ADDRESS/IPv4AddressPPPNegotiate

This table achieves IPv4 address allocation through PPP negotiation.

XML Structure

```
<IPV4ADDRESS>
  <IPv4AddressPPPNegotiate>
    <AddressPPPNegotiate>
      <IfIndex></IfIndex>
      <ConfigOption></ConfigOption>
    </AddressPPPNegotiate>

Item	Description
Feature name	IPV4ADDRESS
Table name	IPv4AddressUnnumbered
Table type	Multi-instance table
Row name	AddressUnnumbered
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
UnnumberedIfIndex	Interface index.	N/A	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
UnnumberedIfName	Full name of the interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

IPV4ADDRESS/IPv4AddressInterfaceRelation

This table contains IPv4 address and interface relation information.

XML structure

```
<IPV4ADDRESS>
  <Ipv4AddressInterfaceRelation>
    <AddressInterfaceRelation>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <AddressOrigin></AddressOrigin>
      <IfIndex></IfIndex>
    </AddressInterfaceRelation>
  </Ipv4AddressInterfaceRelation>
</IPV4ADDRESS>
```

Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	IPv4AddressInterfaceRelation
Table type	Multi-instance table
Row name	AddressInterfaceRelation
Restrictions	N/A.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	The value of 0 specifies the public network. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see L3vpn in L3vpn NETCONF XML API Data Reference.
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	It must be a host ip address.
AddressOrigin	The way how the IPv4 address is obtained.	Index	Enumeration: 1—Manual. 2—Manual-sub. 3—DHCP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			4—BOOTP. 5—Negotiate. 6—Unnumbered. 7—VRRP.	
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

IPV4ADDRESS/Ipv4GlobalAddresses

This table contains IPv4 global address information.

XML structure

```
<IPV4ADDRESS>
  <Ipv4GlobalAddresses>
    <Ipv4GlobalAddress>
      <VrfName></VrfName>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <AddressOrigin></AddressOrigin>
    </Ipv4GlobalAddress>
  </Ipv4GlobalAddresses>
</IPV4ADDRESS>
```

Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	Ipv4GlobalAddresses
Table type	Multi-instance table
Row name	Ipv4GlobalAddress
Restrictions	This table supports only global addresses.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	VRF instance name.	Index	String. Length: 1 to 31 characters.	If the DHCP gateway is on the public network, the value is null.
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IPv4 address mask.	N/A	String, dotted decimal notation.	N/A
AddressOrigin	The way how the IPv4 address is obtained.	N/A	Enumeration: • 1—DHCPGateway.	N/A

IPV4ADDRESS

IPV4ADDRESS/IPv4Addresses

Message	Explanation
Invalid IP address or subnet mask. 无效IP地址或掩码长度。	Invalid IP address or subnet mask. 无效IP地址或掩码长度。
Maximum number of IP addresses already reached. 接口下已配置的IP地址个数达到上限。	Maximum number of IP addresses already reached. 接口下已配置的IP地址个数达到上限。
Address types don't match. IP地址类型不匹配。	Address types don't match. 删除地址时，类型不匹配。
The IP address doesn't exist. 该IP地址不存在。	The IP address doesn't exist, when getting or deleting it. 删除或获取地址时，该地址不存在。
Can't change the primary IP address to a secondary IP address. 不能直接将主IP地址转换成从IP地址。	Can't change the primary IP address to a secondary IP address. 不能直接将主IP地址转换成从IP地址。
Operation failed. 操作失败。	Failed to send the message. 发消息失败。
This IP address has been assigned to the management Ethernet interface on another MDC. 该IP地址已经被其它MDC的管理以太网接口占用。	This IP address has been assigned to the management Ethernet interface on another MDC. 该IP地址已经被其它MDC的管理以太网接口占用。
The configuration doesn't meet the requirements. 不符合配置要求。	The specified configuration must be empty, when deleting or removing. Or column incomplete when creating or replacing. 删除表项时，地址管理表项特殊，不支持单独恢复属性为默认值或者Create操作和Replace操作，普通列参数不齐全。
The IP address is used by another interface on the device. 本接口的IP地址与设备其他接口的IP地址冲突	The IP address is used by another interface on the device. 本接口的IP地址与设备其他接口的IP地址冲突
The subnet of the IP address overlaps with the subnet of another interface on the device. 接口IP地址所在网段与设备其他接口的IP地址所在网段重叠。	The subnet of the IP address overlaps with the subnet of another interface on the device. 接口IP地址所在网段与设备其他接口的IP地址所在网段重叠。
Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。	Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。

IPV4ADDRESS/IPv4AddressUnnumbered

Message	Explanation
Operation failed. 操作失败。	Failed to send message. 发消息失败。
Invalid lend interface! 被借用接口无效！	Invalid configuration, please modify configuration under the guidance. 配置无效，请在指导下修改配置。
Can't borrow an IP address from an IP unnumbered interface. 被借用的接口已经配置了地址借用。	Can't borrow an IP address from an IP unnumbered interface. 被借用IP地址的接口已经配置了地址借用功能。
Can't configure IP unnumbered on the interface that has lent its IP address to another interface. 本接口已经被其它接口配置借用，不能配置地址借用。	Can't configure IP unnumbered on the interface that has lent its IP address to another interface. 本接口的地址已经被其它接口借用，不能配置地址借用功能。
Can't borrow an IP address from itself. 不能借用本接口的IP地址。	Can't borrow an IP address from itself. 不能借用本接口的IP地址。
Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。	Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。
Failed to execute this command because the access mode of the unnumbered interface is Layer 2. 配置该命令失败的原因是被借用接口的接入模式为二层接入。	Failed to execute this command because the access mode of the unnumbered interface is Layer 2. 配置该命令失败的原因是被借用接口的接入模式为二层接入。

XML structure for event report ····· 4

IPv4Address event

This event is used to report IPv4 address information when the IPv4 address of interface is changed. This event is also used to report IPv4 gateway address information when the IPv4 gateway address of interface is changed.

XML structure for event subscription

```
<IPv4AddressEvent>
  <IPv4Address>
    <Name></Name>
  </IPv4Address>
</IPv4AddressEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPv4Address</stream>
    <filter type="subtree">
      <IPv4AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv4Address:1.0">
        <IPv4Address>
          <Name>GigabitEthernet2/0/1</Name>
        </IPv4Address>
      </IPv4AddressEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	IPv4Address
Event name	IPv4AddressEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/IPv4Address:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 0 to 47 characters.	No

XML structure for event report

```
<IPv4AddressEvent>
```

```
  <IPv4Address>
    <Name></Name>
    <Ipv4Address></Ipv4Address>
    <Ipv4Mask></Ipv4Mask>
    <AddressOrigin></AddressOrigin>
    <AddressStatus></AddressStatus>
    <AddressEvent></AddressEvent>
  </IPv4Address>
</IPv4AddressEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <IPv4AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv4Address:1.0">
    <IPv4Address>
      <Name>GigabitEthernet2/0/1</Name>
      <Ipv4Address>1.1.1.1</Ipv4Address>
      <Ipv4Mask>255.255.255.0</Ipv4Mask>
      <AddressOrigin>1</AddressOrigin>
      <AddressStatus>1</AddressStatus>
      <AddressEvent>1</AddressEvent>
    </IPv4Address>
  </IPv4AddressEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 1 to 47 characters.	No
Ipv4Address	IPv4 address	String, dotted decimal notation.	No
Ipv4Mask	IPv4 address mask	String, dotted decimal notation.	No
AddressOrigin	The way how the IPv4 address is obtained	Enumeration: • **1**—Manual • **2**—Manual-sub • **3**—DHCP • **4**—BOOTP • **5**—Negotiate • **6**—Unnumbered • **7**—VRRP • **8**—Cellular • **9**—MAD	No

Column name	Column description	Data type and restrictions	Support for extended queries
AddressStatus	IPv4 address status	• **1**—Active • **2**---InActive	No
AddressEvent	IPv4 address event	• **1**—Add • **2**—Delete • **3**—Update	No

Ipv4 Global Address event

This event reports an IPv4 global address change on the interface.

XML structure for event subscription

```
<IPv4GlobalAddressEvent>
  <IPv4GlobalAddress>
    <VrfIndex></VrfIndex>
  </IPv4GlobalAddress>
</IPv4GlobalAddressEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPv4Address</stream>
    <filter type="subtree">
      <IPv4GlobalAddressEvent
xmlns="http://www.h3c.com/netconf/event:1.0/IPv4Address:1.0">
        <IPv4GlobalAddress>
          <VrfIndex>3</VrfIndex>
        </IPv4GlobalAddress>
      </IPv4GlobalAddressEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

IPV6ADDRESS

IPV6ADDRESS/Ipv6AddressesConfig

This table contains configuration information about IPv6 addresses.

XML structure

```
<IPV6ADDRESS>
  <Ipv6AddressesConfig>
    <AddressEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <AddressOrigin></AddressOrigin>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <AnycastFlag></AnycastFlag>
    </AddressEntry>
  </Ipv6AddressesConfig>
</IPV6ADDRESS>
```

Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressesConfig
Table type	Multi-instance table
Row name	AddressEntry
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	It must be configured as valid IPv6 prefix when the AddressOrigin column is 2.
AddressOrigin	The way how the IPv6 address is obtained.	Index	Enumeration: • **1**—AssignedIP. • **2**—AssignedEUI64IP. • **3**—LinklocalIP.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix.	N/A	Unsigned integer. Value range: 1 to 128.	Required when the AddressOrigin column is 1 or 2. Optional when the AddressOrigin column is 3. Value range is 1 to 64 when the AddressOrigin column is 2. Value range is 10 to 128 when the AddressOrigin column is 3**.** The delete and remove operations do not support this column except that the AddressOrigin column is 3. The merge, create, and replace operations must include this column except that the AddressOrigin column is 3.
AnycastFlag	Whether the IPv6 address is an anycast address.	N/A	Boolean: • **true** • **false** (default)	It can not be configured when the AddressOrigin column is 2 or 3. Can not be modified. The delete and remove operations do not support this column. The merge, create, and replace operations must include this column.

IPV6ADDRESS/Ipv6AddressesAuto

This table contains the information about IPv6 addresses autoconfiguration.

XML structure

```
<IPV6ADDRESS>
```

```
  <Ipv6AddressesAuto>
    <AutoAddress>
      <IfIndex></IfIndex>
      <Auto></Auto>
      <AutoLinkLocal></AutoLinkLocal>
    </AutoAddress>
  </Ipv6AddressesAuto>
</IPV6ADDRESS>
```

Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressesAuto
Table type	Multi-instance table
Row name	AutoAddress
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Auto	Whether the stateless address autoconfiguration function is enabled on an interface.	N/A	Boolean: • **true** • **false** (default)	N/A
AutoLinkLocal	Whether or not generate a link-local address on an interface automatically.	N/A	Boolean: • **true** • **false** (default)	N/A

IPV6ADDRESS/Ipv6AddressGlobalConfig

This table contains global configuration information about IPv6 addresses.

XML structure

```
<IPV6ADDRESS>
  <Ipv6AddressGlobalConfig>
    <DuplicateAutoDetectEnable></DuplicateAutoDetectEnable>
    <DuplicateAutoDetectInterval></DuplicateAutoDetectInterval>
  </Ipv6AddressGlobalConfig>
</IPV6ADDRESS>
```

Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressGlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DuplicateAutoDetectEnable	Whether IPv6 conflict auto detection is enabled.	N/A	Boolean: • **true** • **false** (default)	N/A
DuplicateAutoDetectInterval	Time interval for IPv6 conflict auto detection.	N/A	Unsigned integer. Value range: 1 to 60, in seconds. Default: 5.	N/A

IPV6ADDRESS/Ipv6AddressCellular

This table achieves IPv6 address allocation through the modem-manufacturer's proprietary protocol.

XML Structure

```
<IPV6ADDRESS>
  <Ipv6AddressCellular>
```

```
      <AddressCellular>
        <IfIndex></IfIndex>
        <ConfigOption></ConfigOption>
      </AddressCellular>
    </Ipv6AddressCellular>
  </IPV6ADDRESS>
```

Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressCellular
Table type	Multi-instance table
Row name	AddressCellular
Restrictions	This table supports only ethernet channel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	NameAndIndexUnion.	Only ethernet channel interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
ConfigOption	Whether the interface is enabled to obtain an IPv6 address from the modem by using the modem-manufacturer's proprietary protocol	N/A	Boolean: • **true** • **false** (default)	After you enable this feature, the IPv6 address assigned to the interface before will be deleted.

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	NameAndIndexUnion.	Only ethernet channel interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML*

Column name	Column description	Column type	Data type and restrictions	Remarks
				API Configuration Reference.
ConfigOption	Whether the interface is enabled to obtain an IPv6 address from the modem by using the modem-manufacturer's proprietary protocol	N/A	Boolean: • **true** • **false** (default)	After you enable this feature, the IPv6 address assigned to the interface before will be deleted.

IPV6ADDRESS/Ipv6AddressGateway

This table is used to obtain the highest-priority gateway address of the interface.

XML Structure

```
<IPV6ADDRESS>
  <Ipv6AddressGateway>
    <GatewayAddress>
      <IfIndex></IfIndex>
      <VrfIndex></VrfIndex>
      <GatewayAddr></GatewayAddr>
    </GatewayAddress>
  </Ipv6AddressGateway>
</IPV6ADDRESS>
```

IPV6ADDRESS

IPV6ADDRESS/Ipv6AddressesConfig

Message	Explanation
The IPv6 address is used by another interface on the device. 本接口的IP地址与设备其他接口的IP地址冲突	The IPv6 address is used by another interface on the device. 本接口的IP地址与设备其他接口的IP地址冲突
The subnet of the IPv6 address overlaps with the subnet of another interface on the device. 接口IPv6地址所在网段与设备其他接口的IPv6地址所在网段重叠。	The subnet of the IPv6 address overlaps with the subnet of another interface on the device. 接口IPv6地址所在网段与设备其他接口的IPv6地址所在网段重叠。
The prefix length can't be greater than 64. 前缀长度不应该超过64位。	The prefix length can't be greater than 64. 为接口配置EUI-64格式的全球单播地址时，前缀长度取值不能大于64。
Can't assign the IPv6 unspecified address. 不能配置一个IPv6未指定地址。	Can't assign the IPv6 unspecified address. 不能将未指定地址配置为接口的全球单播地址。
Can't assign the IPv6 loopback address. 不能配置一个IPv6环回地址。	Can't assign the IPv6 loopback address. 不能将环回地址配置为接口的全球单播地址。
Can't assign an IPv6 multicast address. 不能配置一个IPv6组播地址。	Can't assign an IPv6 multicast address. 不能将组播地址配置为接口的全球单播地址。
Can't assign a reserved IPv6 subnet anycast address. 不能配置一个子网路由任播地址。	Can't assign a reserved IPv6 subnet anycast address. 不能将子网路由器任播地址配置为接口的全球单播地址。
Can't assign an IPv6 link-local address. 不能配置一个链路本地地址。	Can't assign an IPv6 link-local address. 不能将链路本地地址配置为接口的全球单播地址。
Invalid IPv6 link-local address. 非法的链路本地地址。	Invalid IPv6 link-local address. 配置的链路本地地址无效，链路本地地址的前缀是FE80::/10。
Maximum number of IPv6 addresses on the interface already reached. 该接口下配置的IPv6地址总个数超过上限。	Maximum number of IPv6 addresses on the interface already reached. 该接口下配置的单播地址总数超过上限。缺省情况下，接口下可配置的单播地址总数为32，具体取值产品可定制。
The IPv6 global unicast address conflicts with the anycast address on the interface. 接口上的IPv6全球单播地址和任播地址冲突。	The IPv6 global unicast address conflicts with the anycast address on the interface. 接口上的IPv6全球单播地址和任播地址冲突。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The specified configuration must be empty, when deleting or removing. Or column incomplete when creating or replacing. 创建地址时，下发的请求中要包含索引列和非索引列。 删除地址时，下发的请求中只能包含索引列，不能包含非索引列。
Invalid IPv6 prefix. 非法的IPv6前缀。	Invalid configuration, please modify configuration under the guidance. 为接口配置EUI-64格式的全球单播地址时，IPv6地址和IPv6地址前缀做与操作，结果和IPv6地址不同。

The prefix length of a link-local address must not be less than 10. 链路本地地址的前缀长度必须不小于10。	The prefix length of a link-local address must not be less than 10. 链路本地地址的前缀长度必须大于或等于10。
Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。	Failed to execute this command because the access mode of the interface is Layer 2. 配置该命令失败的原因是当前接口的接入模式是二层接入。

IPv6Address event

This event is used to report IPv6 address information when the IPv6 address of an interface is changed.

XML structure for event subscription

```
<IPv6AddressEvent>
  <IPv6Address>
    <Name></Name>
  </IPv6Address>
</IPv6AddressEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPv6Address</stream>
    <filter type="subtree">
      <IPv6AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0">
        <IPv6Address>
          <Name>GigabitEthernet2/0/1</Name>
        </IPv6Address>
      </IPv6AddressEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	IPv6Address
Event name	IPv6AddressEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 0 to 47 characters.	No

XML structure for event report

```
<IPv6AddressEvent>
  <IPv6Address>
    <Name></Name>
    <Ipv6Address></Ipv6Address>
    <Ipv6PrefixLength></Ipv6PrefixLength>
    <AddressOrigin></AddressOrigin>
    <AddressStatus></AddressStatus>
    <AddressEvent></AddressEvent>
  </IPv6Address>
</IPv6AddressEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <IPv6AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0">
    <IPv6Address>
      <Name>GigabitEthernet2/0/1</Name>
      <Ipv6Address>1::1</Ipv6Address>
      <Ipv6PrefixLength>64</Ipv6PrefixLength>
      <AddressOrigin>1</AddressOrigin>
      <AddressStatus>1</AddressStatus>
      <AddressEvent>1</AddressEvent>
    </IPv6Address>
  </IPv6AddressEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 1 to 47 characters.	No
Ipv6Address	IPv6 address	Hexadecimal string, colon-separated.	No
Ipv6PrefixLength	Length of the IPv6 prefix	Unsigned integer. Value range: 1 to 128.	No
AddressOrigin	The way how the IPv6 address is obtained	Enumeration: • **1**—AssignedIP • **2**—AssignedEUI64IP • **3**—LinklocalIP • **4**—AssignedAutoIP • **5**—DHCPv6	No

Column name	Column description	Data type and restrictions	Support for extended queries
AddressStatus	IPv6 address status	Enumeration: • **1**—Preferred • **2**—Deprecated • **3**—Invaild • **4**—Tentative • **5**—Duplicate	No
AddressEvent	IPv6 address event	Enumeration: • **1**—Add • **2**—Delete • **3**—Update	No

IPv6AddressGateway event

This event is used to report the IPv6 gateway address change event on an interface.

XML structure for event subscription

```
<IPv6AddressGatewayEvent>
  <IPv6AddressGateway>
    <IfName></IfName>
  </IPv6AddressGateway>
</IPv6AddressGatewayEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPv6Address</stream>
    <filter type="subtree">
      <IPv6AddressGatewayEvent
xmlns="http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0">
        <IPv6AddressGateway>
          <IfName>GigabitEthernet2/0/1</IfName>
        </IPv6AddressGateway>
      </IPv6AddressGatewayEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	IPv6Address
Event name	IPv6AddressGatewayEvent

Item	Description
Event namespace	http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
IfName	Interface name	String. Length: 0 to 47 characters.	No

XML structure for event report

```
<IPv6AddressGatewayEvent>
  <IPv6AddressGateway>
    <IfName></IfName>
    <VrfIndex></VrfIndex>
    <GatewayAddr></GatewayAddr>
    <GatewayEvent></GatewayEvent>
  </IPv6AddressGateway>
</IPv6AddressGatewayEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <IPv6AddressGatewayEvent

IRF

IRF/ConvertMode

This table contains IRF mode convert information.

Please save the configuration before do this action.

When you convert the IRF mode the device will reboot automatically.

XML structure

```
<IRF>
  <ConvertMode>
    <StackMode></StackMode>
    <ConvertCfg></ConvertCfg>
  </ConvertMode>
</IRF>
```

Table description

Item	Description
Feature name	IRF
Table name	ConvertMode
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StackMode	Stack mode will be changed to.	N/A	Boolean: • **true** • **false**	true: Change to stack mode. false: Change to standalone mode. Also available in standalone mode.
ConvertCfg	Whether or not convert the configuration before change the stack mode.	N/A	Boolean: • **true** • **false**	true: Convert configuration file before changing stack mode. false: Don't convert configuration file before changing stack mode. Also available in standalone mode.

IRF/PortConfiguration

This table contains IRF port configuration activate information.

Please save the configuration before do this action.

After you activated the IRF configuration, the device maybe auto merge and reboot.

XML structure

```
<IRF>
  <PortConfiguration>
    <Activate />
  </PortConfiguration>
</IRF>
```

Table description

Item	Description

IRF/Configuration

This table contains IRF global configuration information.

XML structure

```
<IRF>
  <Configuration>
    <AutoMerge></AutoMerge>
    <AutoUpgrade></AutoUpgrade>
    <Domain></Domain>
    <LinkDelay></LinkDelay>
    <MacPersist></MacPersist>
  </Configuration>
</IRF>
```

Table description

Item	Description
Feature name	IRF
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoMerge	State of the auto merge function	N/A	EnableState. Default: variant between products.	enable: The IRF fabric automatically reboots its member devices when it fails in the master election during an IRF fabric merge. disable: Manual reboot is required to complete an IRF fabric merge.

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgrade	Status of the software auto-update function	N/A	EnableState. Default: variant between products.	enable: The master device automatically pushes its software images to the device you are adding to the IRF fabric. disable: You must manually make sure the joining device uses the same software images as the master device. If not, the new device cannot join the IRF fabric.
Domain	Domain ID for the IRF fabric	N/A	Unsigned integer. Value range: 0 to 4294967295 Default: 0	N/A
LinkDelay	IRF link down report delay	N/A	Unsigned integer. Value range: 0 to 10000. Unit: milliseconds Default: variant between products.	If the interval is set to 0, link down events are reported without any delay.
MacPersist	IRF bridge MAC persistence setting	N/A	Enumberation. • 1—Timer (default) • 2—Always • 3—No	Timer: A 6 minutes timer, bridge MAC address of the IRF fabric persists for 6 minutes after the master leaves. Always: Bridge MAC address of the IRF fabric does not change after the master leaves. No: Bridge MAC address of the new master replaces the original one as soon as the old master leaves.

IRF/Members

This table contains configuration of the IRF members.

XML structure

```
<IRF>
  <Members>
    <Member>
      <MemberID></MemberID>
      <NewMemberID></NewMemberID>
      <Description></Description>
```

```
      <Priority></Priority>
    </Member>
  </Members>
</IRF>
```

Table description

Item	Description
Feature name	IRF
Table name	Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID.	Index	Unsigned integer. Value range: 0 to 32. Stack mode: 1 to 32. **Stand-alone mode: 0.**	The current member ID of the device. The maximum member ID is variant between products. Also available in stand-alone mode.
NewMemberID	Member ID assigned to the device.	N/A	Unsigned integer. Value range: 1 to 32. Default: Stack mode: MemberID. Stand-alone mode: 1	This member ID takes effect at reboot. The maximum member ID is variant between products. Also available in stand-alone mode.
Description	Description for the member device.	N/A	String. Max length: 1 to 127 characters.	A string of 1 to 127 ASCII characters.
Priority	Member priority.	N/A	Unsigned integer. Value range: 1 to 32. Default: 1.	Also available in stand-alone mode.

IRF/IRFPorts

This table contains configuration of the IRF ports.

XML structure

```
<IRF>
  <IRFPorts>
    <IRFPort>
      <MemberID></MemberID>
      <Port></Port>
      <Interface>
        <IfName></IfName>
        <MDCName></MDCName>
        <Mode></Mode>
      </Interface>
    </IRFPort>
  </IRFPorts>
</IRF>
```

Table description

Item	Description
Feature name	IRF
Table name	IRFPorts
Table type	Multi-instance table
Row name	IRFPort
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID	Index	Unsigned integer. Value range: Stack mode: 1 to 32. Default: 1. **Stand-alone mode: 0.**	The current member ID of the device. Also available in stand-alone mode.
Port	IRF port number	Index	Unsigned integer. Value range: 1 to 2	1: IRF port 1 2: IRF port 2 Also available in stand-alone mode.
Interface	Physical port of an IRF port	Data structure	Members: • IfName • MDCName • Mode	Multi-instance. Maximum occurrence is MaxIfNumPerIRFPort. Also available in stand-alone mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	Physical port of an IRF port
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 characters Optional	If MDCName is specified, it binds physical ports on the MDC to an IRF port. If no MDCName is specified, it binds physical ports on the default MDC to an IRF port.
Mode	Physical IRF port mode	N/A	Enumeration. • 1—Normal • 2—Enhanced • 3—Extended Default: variant between products.	Normal: Sets the binding mode to normal. Enhanced: Sets the binding mode to enhanced. Extended: Sets the binding mode to extended.

Table description

Item	Description
Feature name	IRF
Table name	IRFPorts
Table type	Multi-instance table
Row name	IRFPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID	index	Unsigned integer. Value range: Stack mode: 1 to 32. **Stand-alone mode: 0.**	The current member ID of the device. Also available in stand-alone mode.
Port	IRF port number	index	Unsigned integer. Value range: 1 to 2	1: IRF port 1 2: IRF port 2 Also available in stand-alone mode.
Neighbor	Neighbor member ID of this device.	N/A	Unsigned integer. Value range: 1 to 32.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the IRF port.	N/A	Enumeration. • 1—Disabled • 2—Up • 3—Down • 4—Isolated • 5—Timeout	N/A
Interface	Physical port of an IRF port	Data structure	Members: • IfName • MDCName • Mode • LinkState	Multi-instance. Maximum occurrence is MaxIfNumPerIRFPort. Also available in stand-alone mode.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	Physical port of an IRF port
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 Optional	If MDCName is specified, it binds physical ports on the MDC to an IRF port. If MDCName is not specified, it binds physical ports on the default MDC to an IRF port.
Mode	Physical IRF port mode	N/A	Enumeration. • 1—Normal • 2—Enhanced • 3—Extended	Normal: Sets the binding mode to normal. Enhanced: Sets the binding mode to enhanced. Extended: Sets the binding mode to extended.
LinkState	Link state of the interface.	N/A	Enumeration. • 1—Up • 2—Down • 3—ADM • 4—Absent	Up: Link is up. Down: Link is down. ADM: The port has been manually shut down with the shutdown command. Absent: Interface module that hosts the port is not present.
LinkStateInMDC	IRF link state on MDC of the specified IRF port.	Data structure	Members: • MDCName • State	Multi-instance. Also available in stand-alone mode.
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 Optional	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the IRF port in a MDC.	N/A	Enumeration. • 1—Up • 2—Down • 3—Timeout	N/A

IRF

IRF/ConvertMode

Message	Explanation
The device is already in stand-alone mode. 设备正是独立运行模式。	Mode convert failed. 模式设置失败。
The device is already in IRF mode. 设备正是堆叠模式运行。	Mode convert failed. 模式设置失败。
Please disconnect the IRF connection first. 请先断开堆叠连接。	Mode convert failed. 模式设置失败。
Please try again later. 请稍后再试。	Cannot convert mode right now. 暂时无法设置。
Some files are open, please try again later. 部分文件处于打开状态，请稍后再试。	Failed to reboot. 重启失败。
Flash is in write mode, please try again later. Flash处于写模式，请稍后再试。	Failed to reboot. 重启失败。
The specified boot file does not exist. 下次启动文件不存在。	Failed to reboot. 重启失败。
System is saving configuration file, please try again later. 系统正在保存配置文件，请稍后再试。	Failed to reboot. 重启失败。
System is updating, please try again later. 系统正在升级，请稍后再试。	Failed to reboot. 重启失败。
System is busy now, please try again later. 系统忙，请稍后再试。	Failed to reboot. 重启失败。
The MDC is busy. Please try again later. MDC忙，请稍后再试。	Failed to reboot. 重启失败。
The Context is busy. Please try again later. Context忙，请稍后再试。	Failed to reboot. 重启失败。
Failed to reboot. 重启失败。	Failed to reboot. 重启失败。

IRF/Configuration

Message	Explanation
Configuration is not support in stand-alone mode. 独立运行模式不支持该配置。	Set to irf mode first 请先切换成堆叠模式

IRF/PortConfiguration

Message	Explanation
Configuration is not support in stand-alone mode. 独立运行模式不支持该配置。	Set to irf mode first 请先切换成堆叠模式

IRF/IRFPorts

Message	Explanation
The IRF port and the bound physical port must be on the same device. 堆叠口及其绑定的物理接口必须在同一个设备上。	The IRF port and the bound physical port are on diffrent devices. 堆叠口及其绑定的物理接口不在同一个设备上。
Physical port %s has been bound to another IRF port. 接口已经被绑定到另一个堆叠口中。	Bounding physical port failed. 接口绑定失败。
Please shut down interface first. 请先禁用接口。	Bounding physical port failed. 接口绑定失败。
Number of physical ports exceeded the limit. 超过了堆叠口可配置的最大物理接口数量。	Failed to add physical port. 物理口数已到最大值。
Exceed the max member ID. 超过最大的成员编号。	Exceed the max member ID. 成员编号已到最大值
This mode is not support on the IRF port. 堆叠口不支持该模式。	Failed to set mode. 设置堆叠口模式失败。
Interface is not exist. 接口不存在。	Invalid interface. 接口无效。
Interface can't be bound to an IRF port. 接口不能配置为堆叠口。	Failed to bound to an IRF port. 接口配置为堆叠口失败。
Interface doesn't belong to the specified MDC. 接口不在指定的MDC中。	Failed to bound to an IRF port. 接口配置为堆叠口失败。
Configuration failed. The interface has been configured to combine with other breakout interfaces. 配置失败因为接口下配置了using命令。	Configuration failed. 配置失败。
Configuration failed. The interface has been configured to split. 配置失败因为接口下配置了using命令。	Configuration failed. 配置失败。

Table description

Item	Description
Feature name	ISIS
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
CostStyle	Cost style.	Data structure	Members include: • Style. • RelaxSpfLimit.	N/A
Style	Style ID.	N/A	Enumeration: • **1**—narrow (default). • **2**—wide.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—compatible. • **4**—narrow-compatible. • **5**—wide-compatible.	
RelaxSpfLimit	Whether to accept routes with cost greater than 1023.	N/A	Boolean: • **true**—Accept routes with cost greater than 1023. • **false**—Does not accept routes with cost greater than 1023 (default).	N/A
NetworkEntity	Configure the network entity title (NET) for an IS-IS process.	N/A	String. Length: 1 to 82 characters A NET comprises the following parts: • Area ID—With a length of 1 to 13 bytes. • System ID—A system ID uniquely identifies a host or router in the area and has a fixed 6-byte length. • SEL—It has a value of 0 and a fixed 1-byte length.	Specify a NET as a dotted hexadecimal string in the X....X.XXXX....XXXX.00 format. The X....X segment represents the area address, the XXXX....XXXX segment represents the system ID, and the 00 segment is the SEL. Repeat supported for 3 times.
LevelId	Router working level.	N/A	Enumeration: • **1**—Level 1. • **2**—Level 2. • **3**—Level-1-2 (default).	N/A
DistributeBgpLs	Allow the device to send the link state information to bgp	Data structure	Members include: • LsType • InstanceId. • LevelType.	N/A
LsType	Link state type.	N/A	Enumeration: • 1—BGP LS. • 2—Link state.	N/A
InstanceId	Instance Id	N/A	Unsigned integer. Value range 0 to 65535	N/A
LevelType	Level type	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2 (default).	N/A.
NSR	Open the ISIS protocol NSR	N/A	Boolean: • **true**—Open the	N/A .

Column name	Column description	Column type	Data type and restrictions	Remarks
	function		ISIS protocol NSR function. • **false**—Close the ISIS protocol NSR function (default).	
SRGB	Specify range of SRGB.	Data structure	Members include: • **Lowerbound.** • **Upperbound.**	The members of Lowerbound and Upperbound must be specified.
Lowerbound	Min value of SRGB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer.	N/A
MplsTe	MPLS traffic engineering information for IS-IS.	Data structure	Members include: • Enable. • LevelType.	The member of Enable must be specified.
Enable	Enable MPLS traffic engineering for IS-IS.	N/A	Boolean: • **true**—Enable MPLS traffic engineering for IS-IS. • **false**—Disable MPLS traffic engineering for IS-IS (default).	N/A
LevelType	Level type	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2 (default).	N/A
SetOverload	Set the overload bit	Data structure	Members include: • SetType. • Timeout. • NbrSystemId. • NbrTimeout. • AllowExternal • AllowInterLevel.	N/A
SetType	Type of set-overload	N/A	Enumeration: • 0—Do not set overload. • 1—Force overload. • 2—Set overload on startup. • 3—Set overload on startup and start from specified neighbor. • 4—Set overload on startup and wait for BGP.	The member of SetType must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Timeout of set-overload.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds. Default: 600 seconds.	N/A
NbrSystemId	Specifies the neighbor for OnStartup StartFromNbr type.	N/A	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A
NbrTimeout	Timeout of the specified neighbor.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds. Default: 1200 seconds.	N/A
AllowExternal	Whether to allow advertising redistributed prefixes.	N/A	Boolean: • **true**—Allow advertising redistributed prefixes. • **false**—Do not allow advertising redistributed prefixes (default).	N/A
AllowInterLevel	Whether to allow advertising inter-level leaked prefixes.	N/A	Boolean: • **true**—Allow advertising inter-level leaked prefixes. • **false**—Do not allow advertising inter-level leaked prefixes (default).	N/A
Overload	Set the overload bit	Data structure	Members include: • AdjustCost • AdjustCostValue	N/A
AdjustCost	Whether to adjust cost.	N/A	Enumeration: • 0—Do not adjust cost. • 1—Adjust cost to the maximum value. • 2—Adjust cost by add an additional value.	N/A
AdjustCostValue	Adjust cost by add an additional value.	N/A	Unsigned integer. Value range: 1 to 16777213.	This column must and can only be specified when AdjustCost is 2
Isolate	Whether to isolate IS-IS from current network.	N/A	Boolean: • **true**—Isolate IS-IS from current network.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Do not isolate IS-IS from current network (default).	
Shutdown	Whether to shutdown the IS-IS process.	N/A	Boolean: • **true—**Shutdown the IS-IS process. • **false—**Do not shutdown the IS-IS process (default).	N/A
MetricDelaySuppression	Suppress advertisement of link delay information.	Data structure	Members include: • Time. • ThresholdPercent. • ThresholdAbsolute.	Configure suppression timer.
Time	Specify the link delay information timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
ThresholdPercent	Specify the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 100. Default: 10 seconds.	N/A
ThresholdAbsolute	Specify the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 10000. Default: 1000 seconds.	N/A
MetricBandwidthSuppression	Suppress link bandwidth information advertisement.	Data structure	Members include: • Time.	Configure suppression timer
Time	Specify the suppression timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds.	N/A
MetricLossSuppression	Suppress advertisement of link loss information.	Data structure	Members include: • Time. • ThresholdPercent. ThresholdAbsolute.	Configure suppression timer.
Time	Specify the link loss information timer.	N/A	Unsigned integer. Value range: 0 to 600. Default: 120 seconds	N/A
ThresholdPercent	Specify the suppression threshold for link loss variation ratio.	N/A	Unsigned integer. Value range: 0 to 100. Default: 10.	N/A
ThresholdAbsolute	Specify the suppression threshold for	N/A	Unsigned integer. Value range: 0 to 10000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	link loss variation ratio.		Default: 1000.	
BierEnable	Enable BIER function for IS-IS.	N/A	Boolean: • **true**—Enable BIER function for IS-IS. • **false**—Disable BIER function for IS-IS (default).	N/A
AgingSelfLspLife	Lifetime for aged LSPs that are generated by the local device	N/A	Unsigned integer Value range 1 to 65535 Default: 1200 seconds	N/A
AgingNonSelfLspLife	Lifetime for aged LSPs that are received from other devices	N/A	Unsigned integer Value range 1 to 65535 Default: 60 seconds	N/A

Table description

Item	Description
Feature name	ISIS
Table name	Familys
Table type	Multi-instance table
Row name	Family
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
Type	Address Family Identifier	Index	Enumeration: • **1**—IPv4 unicast. • 2—IPv6 unicast.	N/A
RouterId	Router identifier.	N/A	IPv6 address, hexadecimal string, colon-separated.	This command only supports the IPv6 address family.
BfdEnable	Enable BFD for all ISIS interfaces.	N/A	Enumeration: • **0**—Disable (default). • **1**—Enable.	N/A
BfdSessionRestrictAdj	Enable adjacency establishment and maintenance control based on BFD session state for all ISIS	N/A	Enumeration: • **0**—Disable (default). • **1**—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interfaces.			
BfdAdjustCost	Enable all ISIS interfaces to adjust the interface cost according to the BFD session state.	N/A	Enumeration: • **1~16777213**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **none**—Do not adjust cost (default).	N/A
PrimaryPathDetect	Enable all ISIS interfaces to use BFD to detect FRR primary path.	N/A	Enumeration: • **0**—Disable (default). • **1**—BFD ctrl. • **2**—BFD echo.	N/A
SrMpls	Enable SR function based on MPLS.	N/A	Boolean: • **true**—Enable SR function based on MPLS. • **false**—Disable SR function based on MPLS(default).	This command only supports the IPv4 address family.
SrAdjEnable	Enable the neighbor label allocation function.	N/A	Boolean: • **true**—Enable the neighbor label allocation function. • **false**—Disable the neighbor label allocation function(default).	This command only supports the IPv4 address family.
SrMemberPortAdjEnable	Enable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces.	N/A	Boolean: • **true**—Enable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces. • **false**—Disable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces(default).	This command only supports the IPv4 address family.
SidMap	Segment-routing mapping-server messages.	Data structure	Members include: • AdvertiseLocal. • Receive.	N/A
AdvertiseLocal	Whether to advertise local prefix-SID mappings.	N/A	Boolean: • **true**—Advertise local prefix-SID mappings. • **false**—Does not advertise local prefix-SID mappings(default).	This command only supports the IPv4 address family.
Receive	Whether to receive mapping server	N/A	Boolean: • **true**—Receive mapping server	This command only supports the IPv4 address family.

Column name	Column description	Column type	Data type and restrictions	Remarks
	advertisements.		advertisements(default). • **false**—Does not receive mapping server advertisements.	
SrPrefer	The preferred segment-routing messages.	Data structure	Members include: • Enable. • PrefixList.	The member of Enable must be specified.
Enable	Whether to prefer SRLSPs over LDP LSPs	N/A	Boolean: • **true**—Prefer SRLSP over LDP LSP. • **false**—Prefer LDP LSP over SRLSP(default).	This command only supports the IPv4 address family.
PrefixList	Prefix list name.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the Enable is specified false.
SrMicroloopAvoid	Microloop-avoidance information for IS-IS SR.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
EnableLevel1	Enable microloop-avoidance for IS-IS SR level-1.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS SR level-1. • **false**—Disable microloop-avoidance for IS-IS SR level-1(default).	N/A
EnableLevel2	Enable microloop-avoidance for IS-IS SR level-2.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS SR level-2. • **false**—Disable microloop-avoidance for IS-IS SR level-2(default).	N/A
RibUpdateDelayLevel1	The microloop-avoidance RIB-update-delay time for IS-IS SR level-1.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	N/A
RibUpdateDelayLevel2	The microloop-avoidance RIB-update-delay time for IS-IS SR level-2.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	N/A
FrrLfa	LFA information for IS-IS.	Data structure	Members include: • EnableLevel1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• EnableLevel2. • RoutePolicy. • EcmpType.	
EnableLevel1	Enable the LFA calculation for IS-IS level-1.	N/A	Boolean: • **true**—Enable the LFA calculation for IS-IS level-1. • **false**—Disable the LFA calculation for IS-IS level-1(default).	N/A
EnableLevel2	Enable the LFA calculation for IS-IS level-2.	N/A	Boolean: • **true**—Enable the LFA calculation for IS-IS level-2. • **false**—Disable the LFA calculation for IS-IS level-2(default).	N/A
RoutePolicy	Name of the routing policy.	N/A	String. Length: 1 to 63 characters.	N/A
EcmpType	Type of ECMP.	N/A	Enumeration: • default—Calculate the next hop by LFA algorithm. • ecmp-shared—Select a shared backup next hop for ECMP routes. • ecmp-frr—Enable ECMP FRR, and select an independent backup next hop for each ECMP route.	N/A
FrrRemoteLfa	Remote-lfa information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • MaxCostLevel1. • MaxCostLevel2. • PrefixListLevel1. • PrefixListLevel2.	N/A
EnableLevel1	Enable remote LFA calculation using tunnels for IS-IS level-1.	N/A	Boolean: • **true**—Enable remote LFA calculation using tunnels for IS-IS level-1. • **false**—Disable remote LFA calculation using tunnels for IS-IS level-1(default).	This command only supports the IPv4 address family.
EnableLevel2	Enable remote LFA calculation using tunnels for IS-IS level-2.	N/A	Boolean: • **true**—Enable remote LFA calculation using tunnels for IS-IS level-2. • **false**—Disable remote LFA calculation using tunnels for IS-IS	This command only supports the IPv4 address family.

Column name	Column description	Column type	Data type and restrictions	Remarks
			level-2(default).	
MaxCostLevel1	The maximum cost for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 16777215. Default: 16777215.	This command only supports the IPv4 address family.
MaxCostLevel2	The maximum cost for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 16777215. Default: 16777215.	This command only supports the IPv4 address family.
PrefixListLevel1	Prefix list name for IS-IS level-1.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family.
PrefixListLevel2	Prefix list name for IS-IS level-2.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family.
FrrTiLfa	TI-LFA information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • PerPrefixLevel1. • PerPrefixLevel2. • HostLevel1. • HostLevel2. • RoutePolicyLevel1. • RoutePolicyLevel2.	N/A
EnableLevel1	Enable the TI-LFA calculation for IS-IS level-1.	N/A	Boolean: • **true**—Enable the TI-LFA calculation for IS-IS level-1. • **false**—Disable the TI-LFA calculation for IS-IS level-1 (default).	This command only supports the IPv4 address family.
EnableLevel2	Enable the TI-LFA calculation for IS-IS level-2.	N/A	Boolean: • **true**—Enable the TI-LFA calculation for IS-IS level-2. • **false**—Disable the TI-LFA calculation for IS-IS level-2(default).	This command only supports the IPv4 address family.
PerPrefixLevel1	Per-prefix calculation for IS-IS level-1.	N/A	Boolean: • **true**—Calculate per-prefix for IS-IS level-1. • **false**—Does not calculate per-prefix for IS-IS level-1(default).	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
PerPrefixLevel2	Per-prefix calculation for IS-IS level-2.	N/A	Boolean: • **true**—Calculate per-prefix for IS-IS level-2. • **false**—Does not calculate per-prefix for IS-IS level-2(default).	This command only supports the IPv4 address family. This command is invalid when the EnableLevel2 is specified false.

Column name	Column description	Column type	Data type and restrictions	Remarks
HostLevel1	Enable TI-LFA FRR for host for IS-IS level-1.	N/A	Boolean: • **true**—Enable TI-LFA FRR for host IS-IS level-1. • **false**—Disable TI-LFA FRR for host IS-IS level-1(default).	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
HostLevel2	Enable TI-LFA FRR for host for IS-IS level-2.	N/A	Boolean: • **true**—Enable TI-LFA FRR for host IS-IS level-2. • **false**—Disable TI-LFA FRR for host IS-IS level-2(default).	This command only supports the IPv4 address family. This command is invalid when the EnableLevel2 is specified false.
RoutePolicyLevel1	Name of the routing policy for IS-IS level-1.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
RoutePolicyLevel2	Name of the routing policy for IS-IS level-2.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel2 is specified false.
FrrMicroloopAvoid	Microloop-avoidance FRR information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
EnableLevel1	Enable microloop-avoidance for IS-IS level-1.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS level-1. • **false**—Disable microloop-avoidance for IS-IS level-1(default).	This command only supports the IPv4 address family.
EnableLevel2	Enable microloop-avoidance for IS-IS level-2.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS level-2. • **false**—Disable microloop-avoidance for IS-IS level-2(default).	This command only supports the IPv4 address family.
RibUpdateDelayLevel1	The microloop-avoidance RIB-update-delay time for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	This command only supports the IPv4 address family.
RibUpdateDel	The	N/A	Unsigned integer.	This command only

Column name	Column description	Column type	Data type and restrictions	Remarks
ayLevel2	microloop-avoidance RIB-update-delay time for IS-IS level-2.		Value range 1 to 60000. Default: 5000.	supports the IPv4 address family.
FrrTieBreaker	The tiebreaker for an FRR protection mode.	Data structure	Members include: • LowestCostPrefLevel1. • LowestCostPrefLevel2. • NodeProtectPrefLevel1. • NodeProtectPrefLevel2. • NonEcmpPrefLevel1. • NonEcmpPrefLevel2.	N/A
LowestCostPrefLevel1	The preference of link protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255. Default: 20.	N/A
LowestCostPrefLevel2	The preference of link protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255. Default: 20.	N/A
NodeProtectPrefLevel1	The preference of node protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255. Default: 40.	N/A
NodeProtectPrefLevel2	The preference of node protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255. Default: 40.	N/A
NonEcmpPrefLevel1	The preference of non-ECMP protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255. Default: 15.	N/A
NonEcmpPrefLevel2	The preference of non-ECMP protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255. Default: 15.	N/A
SetOverload	Set the overload bit	Data structure	Members include: • SetType. • Timeout. • NbrSystemId. • NbrTimeout. • AllowExternal • AllowInterLevel.	The member of SetType must be specified.
SetType	Type of set-overload	N/A	Enumeration: • 0—Do not set overload. • 1—Force overload. • 2—Set overload on startup. • 3—Set overload on startup and start from specified neighbor. • 4—Set overload on	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			startup and wait for BGP.	
Timeout	Timeout of set-overload.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds. Default: 600 seconds.	N/A
NbrSystemId	Specifies the neighbor for OnStartup StartFromNbr type.	N/A	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A
NbrTimeout	Timeout of the specified neighbor.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds. Default: 1200 seconds.	N/A
AllowExternal	Whether to allow advertising redistributed prefixes.	N/A	Boolean: • **true**—Allow advertising redistributed prefixes. • **false**—Do not allow advertising redistributed prefixes (default).	N/A
AllowInterLevel	Whether to allow advertising inter-level leaked prefixes.	N/A	Boolean: • **true**—Allow advertising inter-level leaked prefixes. • **false**—Do not allow advertising inter-level leaked prefixes (default).	N/A
Overload	Set the overload bit	Data structure	Members include:. • AdjustCost • AdjustCostValue	N/A
AdjustCost	Whether to adjust cost.	N/A	Enumeration: • 0—Do not adjust cost. • 1—Adjust cost to the maximum value. • 2—Adjust cost by add an additional value.	N/A
AdjustCostValue	Adjust cost by add an additional value.	N/A	Unsigned integer. Value range: 1 to 16777213.	This column must and can only be specified when AdjustCost is 2
AdvertiseLinkAttributes	Enable IS-IS to advertise link attributes in LSPs	N/A	Boolean: • true—Configuring IS-IS to carry link attributes when publishing LSP. • false—By default IS-IS publishes an LSP with link attributes . (default)	the link cost style is wide,compatible or wide-compatible
MetricDelayAdvertisement	Enable a device to advertise link delay information.	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableLevel1	Enable a device to advertise link delay information for IS-IS level-1.	N/A	Boolean: • **true**—Enable delay release for IS-IS level-1. • **false**—Turn off the delay release function for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link delay information for IS-IS level-2.	N/A	Boolean: • **true**—Enable delay release for IS-IS level-2. • **false**—Turn off delay release for IS-IS level-2.	N/A
MetricBandwidthAdvertisement	Enable a device to advertise link bandwidth information.	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable a device to advertise link bandwidth information for IS-IS level-1.	N/A	Boolean: • **true**—Enable bandwidth publishing for IS-IS level-1. • **false**—Turn off bandwidth publishing for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link bandwidth information for IS-IS level-2.	N/A	Boolean: • **true**—Enable bandwidth publishing for IS-IS level-2. • **false**—Turn off bandwidth publishing for IS-IS level-2.	N/A
MetricLossAdvertisement	Enable a device to advertise link loss information.	Data structure	Members include: • EnableLevel1. EnableLevel2.	N/A
EnableLevel1	Enable a device to advertise link loss information for IS-IS level-1.	N/A	Enumeration: • **0--**Disable loss publishing for IS-IS level-1. **1--**Enable loss publishing for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link loss information for IS-IS level-2.	N/A	Enumeration: • **0--**Disable loss publishing for IS-IS level-2. **1--**Enable loss publishing for IS-IS level-2.	N/A
FrrMirror	FrrMirror name	Data structure	Members include: • Enable. • DeleteDelayTime.	N/A
Enable	Enable FRR mirror.	N/A	Boolean • **true**—Enable mirror.(default) • **false**—Turn off mirror.	N/A
DeleteDelayT	Time of delete	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ime	delay.		Value range: 1 to 21845. Default : 60.	
Srv6PolicyAutoroute	SRv6 policy autoroute	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-1	N/A	Boolean: • **true**—Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-1. • **false**—Disable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-1 (default).	N/A
EnableLevel2	Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2	N/A	Boolean: • **true**—Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2. • **false**—Disable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2 (default).	N/A
IPv6Topology	Mode of IPv6 IS-IS topology.	N/A	Enumeration: • **0**—IPv6 IS-IS uses IPv4 IS-IS topology (default). • **1**—Enable separated IPv4 and IPv6 topologies. • **2**—Specify compatible mode to advertise IPv6 prefixes to both IPv4 and IPv6 topologies.	This command only supports the IPv6 address family.
Srv6CompressEnable	Whether to enable SRv6 compression	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable SRv6 compression for IS-IS Level-1	N/A	Boolean: • **true**—Enable SRv6 compression for IS-IS Level-1. • **false**—Disable SRv6 compression for IS-IS Level-1 (default).	This command is supported in only the IPv6 address family.
EnableLevel2	Enable SRv6 compression for IS-IS Level-2	N/A	Boolean: • **true**—Enable SRv6 compression for IS-IS Level-2. • **false**—Disable SRv6 compression for IS-IS Level-2 (default).	This command is supported in only the IPv6 address family.
SrMaStrictSid	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	enable segment routing microloop avoidance strict SIDs only.		• **true**—Enable segment routing microloop avoidance strict SIDs only. • **false**—Disable segment routing microloop avoidance strict SIDs only (default).	
FrrTiLfaEncapEnable	Whether to enable fast reroute TI-LFA encapsulation.	N/A	Boolean: • **true**—Enable fast reroute TI-LFA encapsulation. • **false**—Disable fast reroute TI-LFA encapsulation (default).	This command is supported in only the IPv6 address family.
Srv6MaEncapEnable	Whether to enable SRv6 microloop avoidance encapsulation.	N/A	Boolean: • **true**—Enable SRv6 microloop avoidance encapsulation. • **false**—Disable SRv6 microloop avoidance encapsulation (default).	This command is supported in only the IPv6 address family.
AdvAppLinkAttributes	Advertise application link attributes.	Data structure	Members include: • AdvertiseTE. • AdvertiseSRLG. • SuppressOldTE. • SuppressOldSRLG. • Delay • Bandwidth • LinkLoss • UnidirectionalBandwidth	N/A
AdvertiseTE	Advertise TE information in application link attributes.	N/A	Boolean: • **true**—Advertise TE information in application link attributes. • **false**—Do not advertise TE information in application link attributes (default).	N/A
AdvertiseSRLG	Advertise SRLG information in application link attributes.	N/A	Boolean: • **true**—Advertise SRLG information in application link attributes. • **false**—Do not advertise SRLG information in application link attributes (default).	N/A
SuppressOldTE	Suppress old TE information advertisement.	N/A	Boolean: • **true**—Suppress old TE information advertisement. • **false**—Do not Suppress old TE information advertisement (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SuppressOld SRLG	Suppress old SRLG information advertisement.	N/A	Boolean: • **true**—Suppress old SRLG information advertisement. • **false**—Do not Suppress old SRLG information advertisement (default).	N/A
Delay	Advertise delay information in application link attributes.	N/A	Enumeration: • **0**—Disable (default).. • **1**—Enable • **2**—Enable and asla-only	Type33：Unidirectional Link Delay. Type 34: Min/Max Unidirectional Link delay. Type 35: Unidirectional delay Variation.
Bandwidth	Advertise bandwidth information in application link attributes.	N/A	Enumeration: • **0**—Disable (default).. • **1**—Enable • **2**—Enable and asla-only	Type 9: Maximum Link Bandwidth Type 10: Maximum Reservable Link Bandwidth Type 11: Unreserved Bandwidth
LinkLoss	Advertise linkloss information in application link attributes.	N/A	Enumeration: • **0**—Disable (default).. • **1**—Enable • **2**—Enable and asla-only	Type 36: Unidirectional Link Loss.
Unidirectional Bandwidth	Advertise unidirectional-bandwidth information in application link attributes.	N/A	Enumeration: • **0**—Disable (default).. • **1**—Enable • **2**—Enable and asla-only	Type 37: Unidirectional Residual Bandwidth. Type 38: Unidirectional Available Bandwidth. Type 39: Unidirectional Utilized Bandwidth
InterLevelTilfa	Inter level tilfa protection.	Data structure	Members include: • LevelTilfaEnable. • LevelTilfaPrefer.	N/A
LevelTilfaEnable	Enable inter-level-tilfa level-1 protection.	N/A	Boolean: • **true**—Enable inter-level-tilfa level-1 protection. • **false**—Disable inter-level-tilfa level-1 protection (default).	N/A
LevelTilfaPrefer	Specify the inter-level-tilfa protection level-2 backup paths	N/A	Boolean: • **true**—Enable inter-level-tilfa protection level-2 backup paths	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	priority higher.		priority higher. • **false**—Disable inter-level-tilfa protection level-2 backup paths priority higher (default).	
RedistNotCalc	Whether to exclude redistributed routes from route calculation	N/A	Boolean: • **true**—Redistributed routes are excluded from route calculation. • **false**—Redistributed routes can participate in route calculation.	N/A
Srv6AdvertisEnable	Srv6 advertise configuration	N/A	Enumeration: • **0—**Disable Advertise(default)**.** • **1**—Enable l3-service-sid Advertise.	This command is supported in only the IPv6 address family.
MetricDelayNormalize	Link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
Interval	Interval value for link delay normalization	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Offset	Offset value for link delay normalization	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A

Table description

Item	Description
Feature name	ISIS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
EnableNameV4	Instance name	N/A	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
EnableNameV6	Instance name	N/A	String. Length: 1 to 31 characters..	It must be an unsigned integer in the range of 1 to 65535.
CostV4	IPv4 interface cost.	Data structure	Members include:. • Level1Value. • Level2Value	N/A
CostV6	IPv6 interface cost	Data structure	Members include:. • Level1Value. • Level2Value	N/A
Level1Value	Level-1 cost value.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Level2Value	Level-2 cost value.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 16777215	
LevelType	Level type	N/A	Enumeration: • **1**—Level 1. • **2**—Level 2. • **3**—Level-1-2(default)	N/A
NetworkType	The type of network that ISIS use for the specified interface.	N/A	Enumeration: • **1**—Do not change the original network type of interface (default). • 2—Set the network type of broadcast interface to P2P. • 3—Set the network type of broadcast interface to P2P and set the type of MAC address.	N/A
BfdEnableV4	Enable BFD for ISIS.	N/A	Boolean: • **true**—Enable BFD for ISIS. • **false**—Disable BFD for ISIS(default)	Configuring this column might overwrite the configuration for the BfdExcludeV4 column.
BfdEnableV6	Enable BFD for IPv6 ISIS.	N/A	Boolean: • **true**—Enable BFD for IPv6 ISIS. • **false**—Disable BFD for IPv6 ISIS(default)	Configuring this column might overwrite the configuration for the BfdExcludeV6 column.
BfdExcludeV4	Exclude the IPv4 IS-IS interface from using the global BFD configuration.	N/A	Enumeration: • **0**—Do not exclude the IPv4 IS-IS interface from using the global BFD configuration (default). • **1**—Exclude the IPv4 IS-IS interface from using the global BFD configuration.	Configuring this column might overwrite the configuration for the BfdEnableV4 column.
BfdExcludeV6	Exclude the IPv6 IS-IS interface from using the global BFD configuration.	N/A	Enumeration: • **0**—Do not exclude the IPv6 IS-IS interface from using the global BFD configuration (default). • **1**—Exclude the IPv6 IS-IS interface from using the global BFD configuration.	Configuring this column might overwrite the configuration for the BfdEnableV6 column.
BfdSessionRestrictAdjV4	Enable IPv4 IS-IS adjacency establishment and maintenance control based on BFD session state.	N/A	Enumeration: • **0**—Disable (default). • **1**—Enable. • **2**—Exclude from using global BFD configuration.	N/A
BfdSessionRestrictAdjV6	Enable IPv6 IS-IS adjacency	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	establishment and maintenance control based on BFD session state.		• **0**—Disable (default). • **1**—Enable. • **2**—Exclude from using global BFD configuration.	
BfdAdjustCostV4	Adjust the IPv4 IS-IS interface cost according to the BFD session state.	N/A	Enumeration: • **0~16777213**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **exclude**—Exclude from using global BFD configuration. • **none**—Do not adjust cost (default).	N/A
BfdAdjustCostV6	Adjust the IPv6 IS-IS interface cost according to the BFD session state.	N/A	Enumeration: • **0~16777213**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **exclude**—Exclude from using global BFD configuration. • **none**—Do not adjust cost (default).	N/A
BfdAdjustCostSuppressV4	Suppress IPv4 IS-IS interface cost adjustment upon BFD session state changes.	Data structure	Members include: • ResumeInterval. • DetectInterval. • Threshold	N/A
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds. Default: 0 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
Threshold	Specify the number of BFD session down events that triggers an interface cost	N/A	Unsigned integer. Value range: 1 to 100. Default: 1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	adjustment.			
BfdAdjustCostSuppressV6	Suppress IPv6 IS-IS interface cost adjustment upon BFD session state changes.	Data structure	Members include: • ResumeInterval. • DetectInterval. • Threshold	N/A
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds. Default: 0 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
Threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100. Default: 1.	N/A
Frr	Fast reroute messages.	Data structure	Members include: • PrimaryPathDetectV4. • PrimaryPathDetectV6. • LfaDisableLevelV4. • LfaDisableLevelV6. • TiLfaDisableLevelV4. • TiLfaDisableLevelV6. • RemoteLfaDisableLevelV4.	N/A
PrimaryPathDetectV4	BFD work mode for ISIS.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode. • **3**—Exclude from using global BFD configuration.	N/A
PrimaryPathDetectV6	BFD work mode for IPv6 ISIS.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode. • **3**—Exclude from using global BFD configuration.	N/A
LfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
LfaDisableLevelV6	IPv6 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—Level-1-2	
TiLfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
TiLfaDisableLevelV6	IPv6 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
RemoteLfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
Silent	Whether to enable packets receiving and sending on the interface	N/A	Boolean: • **true**—Do not Allow packets receiving and sending on the interface. • **false**—Allow packets receiving and sending on the interface(default).	N/A
LinkDelay	Configure link delay parameters on an IS-IS interface.	Data structure	Members include: • Average. • Minimal. • Maximal. • Variation.	A property column must exist.
Average	Specify the average link	N/A	Unsigned integer. Value range:1 to 16777215.	N/A
Minimal	Specify the minimum link.	N/A	Unsigned integer. Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously
Maximal	Specify the maximum link.	N/A	Unsigned integer. Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously.
Variation	Set the acceptable delay variation.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkLoss	Set the loss value.	N/A	Unsigned integer. Value range:0 to 16777214.	N/A
TeMetricFlexAlgo	Configure te metric parameters of algorithm	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
MetricDelayNormalizeV4	IS-IS link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
MetricDelayNormalizeV6	IPv6 IS-IS link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
Interval	Interval value for link delay normalization	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Offset	Offset value for link delay normalization	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
PeerHoldMaxCostDuration	Advertise the maximum link cost to neighbors within the specified period of time	N/A	Unsigned integer. Value range: 100 to1000000 (milliseconds)	N/A

ISIS/AdjSids

This table contains IS-IS adjacency-sid information.

XML structure

```
<ISIS>
  <AdjSids>
    <AdjSid>
      <IfIndex></IfIndex>
      <Nexthop></Nexthop>
      <SidType></SidType>
      <Sid></Sid>
    </AdjSid>
  </AdjSids>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	AdjSids
Table type	Multi-instance table
Row name	AdjSid
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Nexthop	Nexthop IPv4 address.	Index	String,dotted decimal notation.	This command only supports the broadcast interface. 0.0.0.0 is an invalid value which is used on the P2P interface.
SidType	The type of Prefix-SID	N/A	Enumeration: • **1**—Absolute value of Prefix-SID. • **2**—Index value of Prefix-SID.	This command must be specified.
Sid	Prefix Segment ID	N/A	Unsigned integer.	This command must be specified.

ISIS/SRv6Locators

This table contains IS-IS SRv6 Locators information.

XML structure

```
<ISIS>
  <SRv6Locators>
    <SRv6Locator>
      <Name></Name>
      <LocatorName></LocatorName>
```

```
      <Level></Level>
      <AutoSidDisable></AutoSidDisable>
      <AutoSidCoc32></AutoSidCoc32>
      <AutoSidCocboth></AutoSidCocboth>
    </SRv6Locator>
  </SRv6Locators>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	SRv6Locators
Table type	Multi-instance table
Row name	SRv6Locator
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 1 to 31 characters.	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
LocatorName	SRv6 locator name.	Index	String. Length: 1 to 31 characters.	N/A
Level	Level type.	N/A	Enumeration: • **1**—Level-1. • **2**—Level-2. • **3**—Level-1-2 (default).	N/A
AutoSidDisable	Auto Sid Disable.	N/A	Boolean: • **true**—Auto sid disable. **false—**Auto sid enable (default).	AutoSidDisable, AutoSidCoc32, AutoSidCocboth cannot be configured at the same time
AutoSidCoc32	Auto Sid Coc32 Mode.	N/A	Enumeration: • **0**—coc32. • **1**—coc32 additive.	AutoSidDisable, AutoSidCoc32, AutoSidCocboth cannot be configured at the same time
AutoSidCocboth	Auto Sid Cocboth Mode.	N/A	Enumeration: • 1—coc32. • **2**—coc32-none. • **3**—coc32-all.	AutoSidDisable, AutoSidCoc32, AutoSidCocboth cannot be configured at the same time

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—all.	

ISIS/Redistributes

This table contains IS-IS redistributed route information.

XML structure

```
<ISIS>
  <Redistributes>
    <Redist>
      <Name></Name>
      <FamilyType></FamilyType>
      <TopoId></TopoId>
      <Protocol></Protocol>
      <RedistName></RedistName>
      <RedistLevelType></RedistLevelType>
      <InheritCost></InheritCost>
      <CostType></CostType>
      <Cost></Cost>
      <RoutePolicyName></RoutePolicyName>
      <AllowIBGP></AllowIBGP>
      <AllowDirect></AllowDirect>
      <Tag></Tag>
      <NoSID></NoSID>
    </Redist>
  </Redistributes>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it. It must be an unsigned integer in the range of 1 to 65535.
FamilyType	Address Family Identifier.	Index	Enumeration: • **1**—IPv4 unicast. • **2**—IPv6 unicast.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	Only 0 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6**—BGP. • **7**—EIGRP. • **8**—Guard. • **9**—UNR.	N/A
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the Protocol column is Direct, Static, Guard, or UNR. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is ISIS, OSPF, EIGRP,or RIP. It must be “all” or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.
RedistLevelType	Redistribute level type.	N/A	Enumeration: • **1**—Level 1. • **2**—Level 2 (default). • **3**—Level-1-2.	N/A
InheritCost	Whether to use the original cost	N/A	Boolean: • **true**—Use the original	This column cannot be specified when

Column name	Column description	Column type	Data type and restrictions	Remarks
	of redistributed routes.		cost of redistributed routes. • **false**—Do not use the original cost of redistributed routes.	the CostType column or Cost column exists.
CostType	Redistribute metric type.	N/A	Enumeration: • **1**—internal. • **2**—external (default).	This column cannot be specified when the InheritCost column exists.
Cost	Redistribute metric.	N/A	Unsigned integer. Value range: 0 to 4261412864.	This column cannot be specified when the InheritCost column exists. For the styles of narrow, narrow-compatible, and compatible, the cost is in the range of 0 to 63.
RoutePolicyName	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
AllowIBGP	Allow IBGP routes when importing BGP routes.	N/A	Boolean: • **true**—Import IBGP routes when importing BGP routes. • **false**—Do not import IBGP routes when importing BGP routes (default).	This column can be specified only when the protocol is BGP.
AllowDirect	Whether to contain connected routes.	N/A	Boolean: • **true**—Contain connected routes. • **false**—Do not contain IBGP routes when importing BGP routes (default).	This column can be specified only when the protocol is OSPF,ISIS,RIP, EIGRP.
Tag	Tag value.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
NoSID	Whether to exclude SID when importing routes.	N/A	Boolean: • **true**—Exclude SID when importing routes. • **false**—Do not exclude SID when importing routes (default).	This column can be specified only when the protocol is OSPF,ISIS. This column can be specified only when the FamilyType is IPv4 unicast.

ISIS/LeakRouteLevel1ToLevel2s

This table contains IS-IS LeakRouteLevel1ToLevel2s information.

XML structure

```
<ISIS>
  <LeakRouteLevel1ToLevel2s>
    <LeakRouteLevel1ToLevel2>
      <Name></Name>
      <FamilyType></FamilyType>
      <TopoId></TopoId>
      <LeakEnableFlag></LeakEnableFlag>

Table description

Item	Description
Feature name	ISIS
Table name	Algorithms
Table type	Multi-instance table
Row name	Algorithm
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
AlgoId	Algorithm value.	Index	Unsigned integer. Value range: 128 to 255.	N/A
Advertise	Whether to advertise local algorithm.	N/A	Boolean: • **true**—Advertise local algorithm. • **false**—Does not advertise local algorithm(default).	N/A
Priority	Priority value.	N/A	Unsigned integer. • Value range: 0 to 255. • Default: 128.	N/A
FrrEnable	Whether to enable fast-reroute.	N/A	Boolean: • **true**—Enable fast-reroute(default). • **false**—Does not enable fast-reroute.	N/A
ExcludeAny	Exclude-all affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of ExcludeAny AffinityNames.	The members of AttributeName must be specified on the instance.

Column name	Column description	Column type	Data type and restrictions	Remarks
IncludeAll	Include-all affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of IncludeAll AffinityNames.	The members of AttributeName must be specified on the instance.
IncludeAny	Include-any affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of IncludeAny AffinityNames.	The members of AttributeName must be specified on the instance.
MetricType	Type of metric to be used during the algorithm calculation.	N/A	Enumeration: • **0**—IGP metric (default). • **1**—Minimum unidirectional link delay. • **2**—TE default metric.	N/A
FrrTiLfaEnable	Whether to enable TI-LFA.	N/A	Boolean: • **true**—Enable TI-LFA (default). • **false**—Disable TI-LFA.	N/A
FrrMaEnable	Whether to enable microloop avoidance.	N/A	Boolean: • **true**—Enable microloop avoidance (default). • **false**—Disable microloop avoidance.	N/A
FrrMaDelay	Microloop avoidance configuration for algorithm.	Data structure	Members include: • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
RibUpdateDelayLevel1	Microloop avoidance RIB-update-delay time in Level-1.	N/A	Unsigned integer. Value range: 1 to 60000. Default: 5000.	N/A
RibUpdateDelayLevel2	Microloop avoidance RIB-update-delay time in Level-2.	N/A	Unsigned integer. Value range: 1 to 60000. Default: 5000.	N/A
FrrTiebreaker	Tiebreaker for an FRR protection mode.	Data structure	Members include: • LowestCostPrefLevel1. • LowestCostPrefLevel2. • NodeProtectPrefLevel1. • NodeProtectPrefLevel2.	N/A
LowestCostPrefLevel1	Preference of link protection in Level-1.	N/A	Unsigned integer. Value range 1 to 255. Default: 20.	N/A
LowestCostPrefLevel2	The preference of link protection for algorithm in level-2.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	N/A
NodeProtectPrefLevel1	Preference of node protection in Level-1.	N/A	Unsigned integer. Value range: 1 to 255. Default: 40.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NodeProtectPrefLevel2	Preference of node protection in Level-2.	N/A	Unsigned integer. Value range: 1 to 255. Default: 40.	N/A
TrustLevelEnable	Whether to enable trust-level mapping.	N/A	Boolean: • **true**—Enable trust-level mapping. • **false**—Disable trust-level mapping(default).	N/A
SrlgExclude	Exclude srlg rules on the algorithm calculation.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SrMicroloopAvoidEnable	Enable SR microloop-avoidance for algorithm	N/A	Enumeration: • **0**—Disable SR microloop avoidance. • **1**—Enable SR microloop avoidance (default).	N/A
SrMaStrictSidEnable	Whether to enable segment routing microloop avoidance strict SIDs only.	N/A	Boolean: • **0**—Disable segment routing microloop avoidance strict SIDs only(defalut) • **1**—Enable segment routing microloop avoidance strict SIDs only.	N/A
SrMicroloopAvoidDelay	SR Microloop avoidance configuration for algorithm.	Data structure	Members include: • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
RibUpdateDelayLevel1	The SR microloop-avoidance RIB-update-delay time for IS-IS SR level-1.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	N/A
RibUpdateDelayLevel2	The SR microloop-avoidance RIB-update-delay time for IS-IS SR level-2.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	N/A

ISIS/AffinityMaps

This table contains IS-IS AffinityMaps information.

XML structure

```

```

```
    <AffinityMap>
      <Name></Name>
      <AttributeName></AttributeName>
      <BitPosition></BitPosition>
    </AffinityMap>
  </AffinityMaps>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	AffinityMaps
Table type	Multi-instance table
Row name	AffinityMap
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 1 to 31 characters.	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
AttributeNam e	Name of attribute.	Index	String. Length: 1 to 32 characters.	The members of AttributeName and BitPosition must be specified.
BitPosition	Bitposion of attribute	N/A	Unsigned integer. Value range: 0 to 255.	The members of AttributeName and BitPosition must be specified.

ISIS/IfAffinitys

This table contains IS-IS IfAffinitys information.

XML structure

```
<ISIS>
  <IfAffinitys>
    <IfAffinity>
      <IfIndex></IfIndex>
      <Name></Name>
```

```
      <AffinityName></AffinityName>
    </IfAffinity>
  </IfAffinitys>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	IfAffinitys
Table type	Multi-instance table
Row name	IfAffinity
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Name	Instance name	Index	String. Length: 1 to 31 characters	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
AffinityName	Set affinity attribute on the interface	N/A	String. It is a comma-separated list of AffinityNames.	You must create one or more affinity in isis instance before set affinity on the interface.And it can set max to 32. Example: 1,3,120,255.

ISIS/PrefixSidV4

This table contains IS-IS PrefixSid information.

XML structure

```
<ISIS>
  <PrefixSidV4>
    <PrefixSid>
      <IfIndex></IfIndex>
      <FlexAlgo></FlexAlgo>
      <SidType></SidType>
      <Sid></Sid>
      <ExplicitNull></ExplicitNull>
      <PHP></PHP>
      <NFlagClear></NFlagClear>
    </PrefixSid>
  </PrefixSidV4>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	PrefixSidV4
Table type	Multi-instance table
Row name	PrefixSid
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
FlexAlgo	Algorithm value	Index	Unsigned integer.. Value range:0, 128 to 255.	N/A
SidType	The type of Prefix-SID	N/A	Enumeration: • **1**—Absolute value of Prefix-SID. • **2**—Index value of Prefix-SID.	N/A
Sid	Prefix Segment ID	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ExplicitNull	Explicit null label	N/A	Boolean: • **true**—The upstream neighbor replaces the prefix SID with an explicit null label. • **false—**The upstream neighbor does not replace the prefix SID with an explicit null label(default).	N/A
PHP	Penultimate hop popping flag	N/A	Boolean: • **true**—Pops the penulimate hop(default). • **false**—Does not pop the penulimate hop.	N/A
NFlagClear	Clear the N-flag	N/A	Boolean: • **true**—Clears the N-flag for the prefix SID. • **false**—Does not clear the N-flag for the prefix SID(default).	N/A

ISIS/RedistBiers

This table contains IS-IS redistributed BIER information.

XML structure

```

Table description

Item	Description
Feature name	ISIS
Table name	RedistBiers
Table type	Multi-instance table
Row name	RedistBier

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it. It must be an unsigned integer in the range of 1 to 65535.
FamilyType	Address Family Identifier.	Index	Enumeration: • **1**—IPv4 unicast. • **2**—IPv6 unicast.	Only IPv6 unicast is supported now.
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	Only 0 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: • **1**—BGP.	Only BGP is supported now.
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be “all” or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.

ISIS/Summaries

This table contains IS-IS Summaries information.

XML structure

```

  <Summaries>
    <Summary>
      <Name></Name>
      <FamilyType></FamilyType>
      <TopoId></TopoId>
      <Prefix></Prefix>
      <PrefixLen></PrefixLen>
      <AvoidFeedback></AvoidFeedback>
```

```
      <GenerateNull0></GenerateNull0>
      <Level></Level>
      <Tag></Tag>
      <AlgoId></AlgoId>
      <Explicit></Explicit>
    </Summary>
  </Summaries>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	Summaries
Table type	Multi-instance table
Row name	Summary
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it. It must be an unsigned integer in the range of 1 to 65535.
FamilyType	Address Family Identifier.	Index	Enumeration: • 1—IPv4 unicast. • 2—IPv6 unicast.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	Only 0 is supported now.
Prefix	Summary address.	Index	String,IPv4 address or IPv6 address.	N/A
PrefixLen	Summary address prefix length.	Index	Unsigned integer. Value range: 0 to 32(IPv4),0 to 128(IPv6).	The maximum length of IPv4 is 32. The maximum length of IPv6 is 32.
AvoidFeedback	Avoid learning this summary route through SPF.	N/A	Boolean: • **true**—Avoid learning this summary route through SPF. • **false**—Do not Avoid	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			learning this summary route through SPF(default).	
GenerateNull0	Generate the discard route for preventing route loops.	N/A	Boolean: • **true**—Generate the discard route for preventing route loops. • **false**—Do not Generate the discard route for preventing route loops (default).	N/A
Level	Aggregating routes level.	N/A	Enumeration: • 1—Level-1. • 2—Level-2(default). • 3—Level-1-2.	N/A
Tag	Set tag for summarized routes.	N/A	Unsigned integer. Value range: 1 to 4294967295.	It can only be set as an unsigned integer in the range of 1 to 4294967295.
AlgoId	Flexible algorithm ID.	N/A	Unsigned integer. Value range: 0,128 to 255. Default: 0.	N/A
Explicit	Configure summary the same algorithms.	N/A	Boolean: • **true**—Configure summary the same algorithms. • **false**—Do not Configure summary the same algorithms (default).	This column can be specified only when the AlgoId is in the range of 128 to 255.

Table description

Item	Description
Feature name	ISIS
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
IsName	IS-IS name.	N/A	String. Length: 0 to 64 characters.	N/A
CostStyle	Cost style.	Data structure	Members include: • Style. • RelaxSpfLimit.	N/A
Style	Style ID.	N/A	Enumeration: • **1**—narrow. • **2**—wide. • **3**—compatible. • **4**—narrow-compatible. • **5**—wide-compatible.	N/A
RelaxSpfLimit	Whether to accept routes with cost greater than 1023.	N/A	Boolean: • **true**—Accept routes with cost greater than 1023. • **false**—Does not accept routes with cost greater than 1023 .	N/A
NetworkEntity	Configure the network entity title (NET) for an IS-IS process.	N/A	String. Length: 1 to 82 characters A NET comprises the following parts: • Area ID—With a length of 1 to 13 bytes.	Specify a NET as a dotted hexadecimal string in the X....X.XXXX....XXXX.00 format. The X....X segment represents the area address, the XXXX....XXXX segment represents

Column name	Column description	Column type	Data type and restrictions	Remarks
			• System ID—A system ID uniquely identifies a host or router in the area and has a fixed 6-byte length. • SEL—It has a value of 0 and a fixed 1-byte length.	the system ID, and the 00 segment is the SEL. Repeat supported for 3 times.
LevelId	Router working level.	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2	N/A
DistributeBgpLs	Allow the device to send the link state information to bgp	Data structure	Members include: • LsType • InstanceId. • LevelType.	N/A
LsType	Link state type.	N/A	Enumeration: • 1—BGP LS. • 2—Link state.	N/A
InstanceId	Instance Id	N/A	Unsigned integer. Value range 0 to 65535.	N/A
LevelType	Level type	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2.	N/A
NSR	Open the ISIS protocol NSR function	N/A	Boolean: • **true**—Open the ISIS protocol NSR function. • **false**—Close the ISIS protocol NSR function.	N/A
SRGB	Specify range of SRGB.	Data structure	Members include: • Lowerbound. • Upperbound.	The members of Lowerbound and Upperbound must be specified.
Lowerbound	Min value of SRGB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer.	N/A
EffectedSRGB	Specify range of effected SRGB.	Data structure	Members include: • Lowerbound. • Upperbound.	N/A
Lowerbound	Min value of effected SRGB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of effected SRGB.	N/A	Unsigned integer.	N/A
MplsTe	MPLS traffic	Data	Members include:	The member of Enable

Column name	Column description	Column type	Data type and restrictions	Remarks
	engineering information for IS-IS.	structure	• Enable. • LevelType.	must be specified.
Enable	Enable MPLS traffic engineering for IS-IS.	N/A	Boolean: • **true**—Enable MPLS traffic engineering for IS-IS. • **false**—Disable MPLS traffic engineering for IS-IS.	N/A
LevelType	Level type	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2.	N/A
SetOverload	Set the overload bit	Data structure	Members include:. • SetType. • Timeout. • NbrSystemId. • NbrTimeout. • AllowExternal • AllowInterLevel.	N/A
SetType	Type of set-overload	N/A	Enumeration: • 0—Do not set overload. • 1—Force overload. • 2—Set overload on startup. • 3—Set overload on startup and start from specified neighbor. • 4—Set overload on startup and wait for BGP.	N/A
Timeout	Timeout of set-overload.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	N/A
NbrSystemId	Specifies the neighbor for OnStartup StartFromNbr type.	N/A	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A
NbrTimeout	Timeout of the specified neighbor.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	N/A
AllowExternal	Whether to allow advertising redistributed	N/A	Boolean: • **true**—Allow advertising	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefixes.		redistributed prefixes. • **false—Do not a**llow advertising redistributed prefixes.	
AllowInterLevel	Whether to allow advertising inter-level leaked prefixes.	N/A	Boolean: • **true**—Allow advertising inter-level leaked prefixes. • **false**—Do not allow advertising inter-level leaked prefixes.	N/A
Overload	Set the overload bit	Data structure	Members include:. • AdjustCost • AdjustCostValue	N/A
AdjustCost	Whether to adjust cost.	N/A	Enumeration: • 0—Do not adjust cost. • 1—Adjust cost to the maximum value. • 2—Adjust cost by add an additional value.	N/A
AdjustCostValue	Adjust cost by add an additional value.	N/A	Unsigned integer. Value range: 1 to 16777213.	N/A
Isolate	Whether to isolate IS-IS from current network.	N/A	Boolean: • **true**—Isolate IS-IS from current network. • **false**—Do not isolate IS-IS from current network.	N/A
Shutdown	Whether to shutdown the IS-IS process.	N/A	Boolean: • **true—**Shutdown the IS-IS process. • **false—**Do not shutdown the IS-IS process.	N/A
MetricDelaySuppression	Suppress advertisement of link delay information.	Data structure	Members include: • Time. • ThresholdPercent. • ThresholdAbsolute.	Configure suppression timer.
Time	Specify the link delay information timer.	N/A	Unsigned integer. Value range: 0 to 600.	N/A
ThresholdPercent	Specify the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	suppression threshold for link delay variation ratio.		Value range: 0 to 100.	
ThresholdAbsolute	Specify the suppression threshold for link delay variation ratio.	N/A	Unsigned integer. Value range: 0 to 10000.	N/A
MetricBandwidthSuppression	Suppress link bandwidth information advertisement.	Data structure	Members include: • Time.	Configure suppression timer
Time	Specify the suppression timer.	N/A	Unsigned integer. Value range: 0 to 600.	N/A
MetricLossSuppression	Suppress advertisement of link loss information.	Data structure	Members include: • Time. • ThresholdPercent. ThresholdAbsolute.	Configure suppression timer.
Time	Specify the link loss information timer.	N/A	Unsigned integer. Value range: 0 to 600.	N/A
ThresholdPercent	Specify the suppression threshold for link loss variation ratio.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
ThresholdAbsolute	Specify the suppression threshold for link loss variation ratio.	N/A	Unsigned integer. Value range: 0 to 10000.	N/A
LspLengthReceive	The max length of LSP to receive.	N/A	Unsigned integer. Value range 512 to 16384.	N/A
LspLengthOriginate	The max length of LSP to originate.	Data structure	Members include: • OriginateLevel1 • OriginateLevel2.	N/A
OriginateLevel1	The max length of level-1 LSP to originate.	N/A	Unsigned integer. Value range 512 to 16384.	N/A
OriginateLevel2	The max length of level-2 LSP to originate.	N/A	Unsigned integer. Value range 512 to 16384.	N/A
Timers	The timers of LSP.	Data structure	Members include: • LspMaxAge • LspRefreshTime.	N/A
LspMaxAge	The max age of LSP	N/A	Unsigned integer. Value range 1 to 65535.	N/A
LspRefreshTime	The time interval of LSP refresh	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range 1 to 65534.	
SpfInterval	The interval of SPF.	Data structure	Members include: • Mode • Max • Min • Incr • FixedTime	
Mode	The mode of SPF	N/A	Enumeration: • **0**—Normal. • **1**—Normal exclude-prc. • **2**—Conservative. • **3**—Conservative exclude-prc. • **4**—Millisecond. • **5**—Millisecond exclude-prc.	N/A
Max	The max interval of SPF	N/A	Unsigned integer.	N/A
Min	The min interval of SPF	N/A	Unsigned integer.	N/A
Incr	The increase interval of SPF	N/A	Unsigned integer.	N/A
FixedTime	The fixed interval of SPF	N/A	Unsigned integer.	N/A
SrTunnelCount	The count of segment-routing tunnel.	Data structure	Members include: • Level1Count. • Level2Count.	N/A
Level1Count	The count of level-1 tunnel.	N/A	Unsigned integer.	N/A
Level2Count	The count of level-2 tunnel.	N/A	Unsigned integer.	N/A
SRLB	Specify range of SRLB.	Data structure	Members include: • Lowerbound. • Upperbound.	N/A
Lowerbound	Min value of SRLB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of SRLB.	N/A	Unsigned integer.	N/A
BierEnable	Enable BIER function for IS-IS.	N/A	Boolean: • **true**—Enable BIER function for IS-IS. • **false**—Disable BIER function for IS-IS.	N/A
AgingSelfLspLife	Lifetime for aged LSPs that are generated by the local device	N/A	Unsigned integer Value range 1 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingNonSelfLspLife	Lifetime for aged LSPs that are received from other devices	N/A	Unsigned integer Value range 1 to 65535	N/A

Table description

Item	Description
Feature name	ISIS
Table name	Familys
Table type	Multi-instance table
Row name	Family
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	You must create an instance before merge or create type.It must be an unsigned integer in the range of 1 to 65535.
Type	Address Family Identifier	Index	Enumeration: • **1**—IPv4 unicast. • **2**—IPv6 unicast.	N/A
RouterId	Router identifier.	N/A	IPv6 address, hexadecimal string, colon-separated.	This command only supports the IPv6 address family.
BfdEnable	Enable BFD for all ISIS interfaces.	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A
BfdSessionRestrictAdj	Enable adjacency establishment and maintenance control based on BFD session state for all ISIS interfaces.	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A
BfdAdjustCost	Enable all ISIS interfaces to adjust the	N/A	Enumeration: • **1~16777213**—Value to be	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface cost according to the BFD session state.		added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **none**—Do not adjust cost.	
PrimaryPathDetect	Enable all ISIS interfaces to use BFD to detect FRR primary path.	N/A	Enumeration: • **0**—Disable. • **1**—BFD ctrl. • **2**—BFD echo.	N/A
SrMpls	Enable SR function based on MPLS.	N/A	Boolean: • **true**—Enable SR function based on MPLS. • **false**—Disable SR function based on MPLS.	This command only supports the IPv4 address family.
SrAdjEnable	Enable the neighbor label allocation function.	N/A	Boolean: • **true**—Enable the neighbor label allocation function. • **false**—Disable the neighbor label allocation function.	This command only supports the IPv4 address family.
SrMemberPortAdjEnable	Enable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces.	N/A	Boolean: • **true**—Enable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces. • **false—**Disable the neighbor label allocation function for member ports of Layer 3 aggregate interfaces.	This command only supports the IPv4 address family.
SidMap	Segment-routing mapping-server messages.	Data structure	Members include: • AdvertiseLocal. • Receive.	N/A
AdvertiseLocal	Whether to advertise local prefix-SID mappings.	N/A	Boolean: • **true**—Advertise local prefix-SID mappings. • **false**—Does not advertise local prefix-SID mappings.	This command only supports the IPv4 address family.
Receive	Whether to receive mapping server advertisements.	N/A	Boolean: • **true**—Receive mapping server advertisements. • **false**—Does not receive mapping server advertisements.	This command only supports the IPv4 address family.
SrPrefer	The preferred segment-routing	Data structure	Members include: • Enable.	The member of Enable must be

Column name	Column description	Column type	Data type and restrictions	Remarks
	messages.		• PrefixList.	specified.
Enable	Whether to prefer SRLSPs over LDP LSPs	N/A	Boolean: • **true**—Prefer SRLSP over LDP LSP. • **false**—Prefer LDP LSP over SRLSP.	This command only supports the IPv4 address family.
PrefixList	Prefix list name.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the Enable is specified false.
SrMicroloopAvoid	Microloop-avoidance information for IS-IS SR.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
EnableLevel1	Enable microloop-avoidance for IS-IS SR level-1.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS SR level-1. • **false**—Disable microloop-avoidance for IS-IS SR level-1.	N/A
EnableLevel2	Enable microloop-avoidance for IS-IS SR level-2.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS SR level-2. • **false**—Disable microloop-avoidance for IS-IS SR level-2.	N/A
RibUpdateDelayLevel1	The microloop-avoidance RIB-update-delay time for IS-IS SR level-1.	N/A	Unsigned integer. Value range 1 to 60000.	N/A
RibUpdateDelayLevel2	The microloop-avoidance RIB-update-delay time for IS-IS SR level-2.	N/A	Unsigned integer. Value range 1 to 60000.	N/A
FrrLfa	LFA information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • RoutePolicy. • EcmpType.	N/A
EnableLevel1	Enable the LFA calculation for IS-IS level-1.	N/A	Boolean: • **true**—Enable the LFA calculation for IS-IS	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			level-1. • **false**—Disable the LFA calculation for IS-IS level-1.	
EnableLevel2	Enable the LFA calculation for IS-IS level-2.	N/A	Boolean: • **true**—Enable the LFA calculation for IS-IS level-2. • **false**—Disable the LFA calculation for IS-IS level-2.	N/A
RoutePolicy	Name of the routing policy.	N/A	String. Length: 1 to 63 characters.	N/A
EcmpType	Type of ECMP.	N/A	Enumeration: • default—Calculate the next hop by LFA algorithm. • ecmp-shared—Select a shared backup next hop for ECMP routes. • ecmp-frr—Enable ECMP FRR, and select an independent backup next hop for each ECMP route.	N/A
FrrRemoteLfa	Remote-lfa information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • MaxCostLevel1. • MaxCostLevel2. • PrefixListLevel1. • PrefixListLevel2.	N/A
EnableLevel1	Enable remote LFA calculation using tunnels for IS-IS level-1.	N/A	Boolean: • **true**—Enable remote LFA calculation using tunnels for IS-IS level-1. • **false**—Disable remote LFA calculation using tunnels for IS-IS level-1.	This command only supports the IPv4 address family.
EnableLevel2	Enable remote LFA calculation using tunnels for IS-IS level-2.	N/A	Boolean: • **true**—Enable remote LFA calculation using tunnels for IS-IS level-2. • **false**—Disable remote LFA calculation using tunnels for IS-IS level-2.	This command only supports the IPv4 address family.
MaxCostLevel1	The maximum cost for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 16777215.	This command only supports the IPv4 address family.
MaxCostLevel2	The maximum cost for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 16777215.	This command only supports the IPv4 address family.

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListLevel1	Prefix list name for IS-IS level-1.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family.
PrefixListLevel2	Prefix list name for IS-IS level-2.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family.
FrrTiLfa	TI-LFA information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • PerPrefixLevel1. • PerPrefixLevel2. • HostLevel1. • HostLevel2. • RoutePolicyLevel1. • RoutePolicyLevel2.	N/A
EnableLevel1	Enable the TI-LFA calculation for IS-IS level-1.	N/A	Boolean: • **true**—Enable the TI-LFA calculation for IS-IS level-1. • **false**—Disable the TI-LFA calculation for IS-IS level-1 .	This command only supports the IPv4 address family.
EnableLevel2	Enable the TI-LFA calculation for IS-IS level-2.	N/A	Boolean: • **true**—Enable the TI-LFA calculation for IS-IS level-2. • **false**—Disable the TI-LFA calculation for IS-IS level-2.	This command only supports the IPv4 address family.
PerPrefixLevel1	Per-prefix calculation for IS-IS level-1.	N/A	Boolean: • **true**—Calculate per-prefix for IS-IS level-1. • **false**—Does not calculate per-prefix for IS-IS level-1.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
PerPrefixLevel2	Per-prefix calculation for IS-IS level-2.	N/A	Boolean: • **true**—Calculate per-prefix for IS-IS level-2. • **false**—Does not calculate per-prefix for IS-IS level-2.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel2 is specified false.
HostLevel1	Enable TI-LFA FRR for host for IS-IS level-1.	N/A	Boolean: • **true**—Enable TI-LFA FRR for host IS-IS level-1. • **false**—Disable TI-LFA FRR for host IS-IS level-1.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
HostLevel2	Enable TI-LFA FRR for host for IS-IS level-2.	N/A	Boolean: • **true**—Enable TI-LFA FRR for host IS-IS level-2.	This command only supports the IPv4 address family.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Disable TI-LFA FRR for host IS-IS level-2.	This command is invalid when the EnableLevel2 is specified false.
RoutePolicyLevel1	Name of the routing policy for IS-IS level-1.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel1 is specified false.
RoutePolicyLevel2	Name of the routing policy for IS-IS level-2.	N/A	String. Length: 1 to 63 characters.	This command only supports the IPv4 address family. This command is invalid when the EnableLevel2 is specified false.
FrrMicroloopAvoid	Microloop-avoidance FRR information for IS-IS.	Data structure	Members include: • EnableLevel1. • EnableLevel2. • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A
EnableLevel1	Enable microloop-avoidance for IS-IS level-1.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS level-1. • **false**—Disable microloop-avoidance for IS-IS level-1.	This command only supports the IPv4 address family.
EnableLevel2	Enable microloop-avoidance for IS-IS level-2.	N/A	Boolean: • **true**—Enable microloop-avoidance for IS-IS level-2. • **false**—Disable microloop-avoidance for IS-IS level-2.	This command only supports the IPv4 address family.
RibUpdateDelayLevel1	The microloop-avoidance RIB-update-delay time for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 60000.	This command only supports the IPv4 address family.
RibUpdateDelayLevel2	The microloop-avoidance RIB-update-delay time for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 60000.	This command only supports the IPv4 address family.
FrrTieBreaker	The tiebreaker for an FRR protection mode.	Data structure	Members include: • LowestCostPrefLevel1. • LowestCostPrefLevel2. • NodeProtectPrefLevel1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• NodeProtectPrefLevel2. • NonEcmpPrefLevel1. • NonEcmpPrefLevel2.	
LowestCostPrefLevel1	The preference of link protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255.	N/A
LowestCostPrefLevel2	The preference of link protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NodeProtectPrefLevel1	The preference of node protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NodeProtectPrefLevel2	The preference of node protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NonEcmpPrefLevel1	The preference of non-ECMP protection for IS-IS level-1.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NonEcmpPrefLevel2	The preference of non-ECMP protection for IS-IS level-2.	N/A	Unsigned integer. Value range 1 to 255.	N/A
SetOverload	Set the overload bit	Data structure	Members include: • SetType. • Timeout. • NbrSystemId. • NbrTimeout. • AllowExternal • AllowInterLevel.	N/A
SetType	Type of set-overload	N/A	Enumeration: • 0—Do not set overload. • 1—Force overload. • 2—Set overload on startup. • 3—Set overload on startup and start from specified neighbor. • 4—Set overload on startup and wait for BGP.	N/A
Timeout	Timeout of set-overload.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	N/A
NbrSystemId	Specifies the neighbor for OnStartup StartFromNbr type.	N/A	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NbrTimeout	Timeout of the specified neighbor.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	N/A
AllowExternal	Whether to allow advertising redistributed prefixes.	N/A	Boolean: • **true**—Allow advertising redistributed prefixes. • **false—Do not a**llow advertising redistributed prefixes.	N/A
AllowInterLevel	Whether to allow advertising inter-level leaked prefixes.	N/A	Boolean: • **true**—Allow advertising inter-level leaked prefixes. • **false**—Do not allow advertising inter-level leaked prefixes.	N/A
Overload	Set the overload bit	Data structure	Members include:. • AdjustCost • AdjustCostValue	N/A
AdjustCost	Whether to adjust cost.	N/A	Enumeration: • 0—Do not adjust cost. • 1—Adjust cost to the maximum value. • 2—Adjust cost by add an additional value.	N/A
AdjustCostValue	Adjust cost by add an additional value.	N/A	Unsigned integer. Value range: 1 to 16777213.	N/A
AdvertiseLinkAttributes	Enable IS-IS to advertise link attributes in LSPs	N/A	Boolean: • **true**—Configuring IS-IS to carry link attributes when publishing LSP. • **false**—By default IS-IS publishes an LSP with link attributes .	The link cost style is wide, compatible or wide-compatible
MetricDelayAdvertisement	Enable a device to advertise link delay information.	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable a device to advertise link delay information for IS-IS level-1.	N/A	Boolean: • **true**—Enable delay release for IS-IS level-1. • **false**—Turn off the delay release function for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link delay information for IS-IS level-2.	N/A	Boolean: • **true**—Enable delay release for IS-IS level-2. • **false**—Turn off delay release for IS-IS level-2.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MetricBandwidthAdvertisement	Enable a device to advertise link bandwidth information.	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable a device to advertise link bandwidth information for IS-IS level-1.	N/A	Boolean: • **true**—Enable bandwidth publishing for IS-IS level-1. • **false**—Turn off bandwidth publishing for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link bandwidth information for IS-IS level-2.	N/A	Boolean: • **true**—Enable bandwidth publishing for IS-IS level-2. • **false**—Turn off bandwidth publishing for IS-IS level-2.	N/A
MetricLossAdvertisement	Enable a device to advertise link loss information.	Data structure	Members include: • EnableLevel1. EnableLevel2.	N/A
EnableLevel1	Enable a device to advertise link loss information for IS-IS level-1.	N/A	Enumeration: • **0--**Disable loss publishing for IS-IS level-1. **1--**Enable loss publishing for IS-IS level-1.	N/A
EnableLevel2	Enable a device to advertise link loss information for IS-IS level-2.	N/A	Enumeration: • **0--**Disable loss publishing for IS-IS level-2. **1--**Enable loss publishing for IS-IS level-2.	N/A
FrrMirror	FrrMirror name	Data structure	Members include: • Enable. • DeleteDelayTime.	N/A
Enable	Enable FRR mirror.	N/A	Boolean • **true**—Enable mirror. • **false**—Turn off mirror.	N/A
DeleteDelayTime	Time of delete delay.	N/A	Unsigned integer. Value range: 1 to 21845.	N/A
Srv6PolicyAutoroute	SRv6 policy autoroute	Data structure	Members include: • EnableLevel1. • EnableLevel2	N/A
EnableLevel1	Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-1	N/A	Boolean: • **true**—Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-1. • **false**—Disable SRv6 policy autoroute and	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			SRv6 policy group autoroute for IS-IS level-1.	
EnableLevel2	Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2	N/A	Boolean: • **true**—Enable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2. • **false**—Disable SRv6 policy autoroute and SRv6 policy group autoroute for IS-IS level-2.	N/A
PeerStatistics	The statistics of isis neighbors.	Data structure	Members include: • LANLevel1Up. • LANLevel1Init. • LANLevel2Up. • LANLevel2Init. • P2PUp. • P2PInit.	N/A
LANLevel1Up	The number of IS-IS LAN level-1 neighbors whose state is up .	N/A	Unsigned integer.	N/A
LANLevel1Init	The number of IS-IS LAN level-1 neighbors whose state is init .	N/A	Unsigned integer.	N/A
LANLevel2Up	The number of IS-IS LAN level-2 neighbors whose state is up .	N/A	Unsigned integer.	N/A
LANLevel2Init	The number of IS-IS LAN level-2 neighbors whose state is init .	N/A	Unsigned integer.	N/A
P2PUp	The number of IS-IS P2P neighbors whose state is up .	N/A	Unsigned integer.	N/A
P2PInit	The number of IS-IS P2P neighbors whose state is init .	N/A	Unsigned integer.	N/A
Preference	The priority of IS-IS	N/A	Unsigned integer. Value range 1 to 255.	N/A
ImportRouteLimit	The max number of route to import	N/A	Unsigned integer. Value range 1 to 262144.	N/A
IPv6Topology	Mode of IPv6 IS-IS topology.	N/A	Enumeration: • **0**—IPv6 IS-IS uses IPv4 IS-IS topology.	This command only supports the IPv6 address family.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Enable separated IPv4 and IPv6 topologies. • **2**—Specify compatible mode to advertise IPv6 prefixes to both IPv4 and IPv6 topologies.	
Srv6CompressEnable	Whether to enable SRv6 compression	Data structure	Members include: • EnableLevel1. • EnableLevel2.	N/A
EnableLevel1	Enable SRv6 compression for IS-IS Level-1	N/A	Boolean: • **true**—Enable SRv6 compression for IS-IS Level-1. • **false**—Disable SRv6 compression for IS-IS Level-1.	This command is supported in only the IPv6 address family.
EnableLevel2	Enable SRv6 compression for IS-IS Level-2	N/A	Boolean: • **true**—Enable SRv6 compression for IS-IS Level-2. • **false**—Disable SRv6 compression for IS-IS Level-2.	This command is supported in only the IPv6 address family.
SrMaStrictSidEnable	Whether to enable segment routing microloop avoidance strict SIDs only.	N/A	Boolean: • **true**—Enable segment routing microloop avoidance strict SIDs only. • **false**—Disable segment routing microloop avoidance strict SIDs only.	N/A
FrrTiLfaEncapEnable	Whether to enable fast reroute TI-LFA encapsulation.	N/A	Boolean: • **true**—Enable fast reroute TI-LFA encapsulation. • **false**—Disable fast reroute TI-LFA encapsulation.	This command is supported in only the IPv6 address family.
Srv6MaEncapEnable	Whether to enable SRv6 microloop avoidance encapsulation.	N/A	Boolean: • **true**—Enable SRv6 microloop avoidance encapsulation. • **false**—Disable SRv6 microloop avoidance encapsulation.	This command is supported in only the IPv6 address family.
AdvAppLinkAttributes	Advertise application link attributes.	Data structure	Members include: • AdvertiseTE. • AdvertiseSRLG. • SuppressOldTE. • SuppressOldSRLG. • Delay • Bandwidth	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• LinkLoss • UnidirectionalBandwidth	
AdvertiseTE	Advertise TE information in application link attributes.	N/A	Boolean: • **true**—Advertise TE information in application link attributes. • **false**—Do not advertise TE information in application link attributes.	N/A
AdvertiseSRLG	Advertise SRLG information in application link attributes.	N/A	Boolean: • **true**—Advertise SRLG information in application link attributes. • **false**—Do not advertise SRLG information in application link attributes.	N/A
SuppressOldTE	Suppress old TE information advertisement.	N/A	Boolean: • **true**—Suppress old TE information advertisement. • **false**—Do not Suppress old TE information advertisement.	N/A
SuppressOldSRLG	Suppress old SRLG information advertisement.	N/A	Boolean: • **true**—Suppress old SRLG information advertisement. • **false**—Do not Suppress old SRLG information advertisement.	N/A
Delay	Advertise delay information in application link attributes.	N/A	Enumeration: • **0**—Disable.. • **1**—Enable • **2**—Enable and asla-only	Type33：Unidirectional Link Delay. Type 34: Min/Max Unidirectional Link delay. Type 35: Unidirectional delay Variation.
Bandwidth	Advertise bandwidth information in application link attributes.	N/A	Enumeration: • **0**—Disable. • **1**—Enable • **2**—Enable and asla-only	Type 9: Maximum Link Bandwidth Type 10: Maximum Reservable Link Bandwidth Type 11: Unreserved Bandwidth
LinkLoss	Advertise linkloss information in application link attributes.	N/A	Enumeration: • **0**—Disable.. • **1**—Enable • **2**—Enable and asla-only	Type 36: Unidirectional Link Loss.
Unidirectional	Advertise unidirectional-ba	N/A	Enumeration:	Type 37: Unidirectional

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	ndwidth information in application link attributes.		• **0**—Disable • **1**—Enable • **2**—Enable and asla-only	Residual Bandwidth. Type 38: Unidirectional Available Bandwidth. Type 39: Unidirectional Utilized Bandwidth
InterLevelTilfa	Inter level tilfa protection.	Data structure	Members include: • LevelTilfaEnable. • LevelTilfaPrefer.	N/A
LevelTilfaEnable	Enable inter-level-tilfa level-1 protection.	N/A	Boolean: • **true**—Enable inter-level-tilfa level-1 protection. • **false**—Disable inter-level-tilfa level-1 protection.	N/A
LevelTilfaPrefer	Specify the inter-level-tilfa protection level-2 backup paths priority higher.	N/A	Boolean: • **true**—Enable inter-level-tilfa protection level-2 backup paths priority higher. • **false**—Disable inter-level-tilfa protection level-2 backup paths priority higher.	N/A
RedistNotCalc	Whether to exclude redistributed routes from route calculation	N/A	Boolean: • **true**—Redistributed routes are excluded from route calculation. • **false**—Redistributed routes can participate in route calculation.	N/A
Srv6AdvertisEnable	Srv6 advertise configuration	N/A	Enumeration: • **0—**Disable Advertise**.** • **1**—Enable l3-service-sid Advertise.	This command is supported in only the IPv6 address family.
MetricDelayNormalize	Link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
Interval	Interval value for link delay normalization	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Offset	Offset value for link delay normalization	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A

Table description

Item	Description
Feature name	ISIS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface

Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
EnableNameV4	Instance name	N/A	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
EnableNameV6	Instance name	N/A	String. Length: 1 to 31 characters..	It must be an unsigned integer in the range of 1 to 65535.
CostV4	IPv4 interface cost.	Data structure	Members include:. • Level1Value. • Level2Value	N/A
CostV6	IPv6 interface cost	Data structure	Members include:. • Level1Value. • Level2Value	N/A
Level1Value	Level-1 cost value.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Level2Value	Level-2 cost value.	N/A	Unsigned integer. Value range: 1 to 16777215	N/A
LevelType	Level type	N/A	Enumeration: • **1**—Level 1. • **2**—Level 2. • **3**—Level-1-2	N/A
NetworkType	The type of network that ISIS use for the specified interface.	N/A	Enumeration: • **1**—Do not change the original network type of interface. • **2**—Set the network type of broadcast interface to P2P. • 3—Set the network type of broadcast interface to P2P and set the type of MAC address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdEnableV4	Enable BFD for ISIS.	N/A	Boolean: • **true**—Enable BFD for ISIS. • **false**—Disable BFD for ISIS	Configuring this column might overwrite the configuration for the BfdExcludeV4 column.
BfdEnableV6	Enable BFD for IPv6 ISIS.	N/A	Boolean: • **true**—Enable BFD for IPv6 ISIS. • **false**—Disable BFD for IPv6 ISIS	Configuring this column might overwrite the configuration for the BfdExcludeV6 column.
BfdExcludeV4	Exclude the IPv4 IS-IS interface from using the global BFD configuration.	N/A	Enumeration: • **0**—Do not exclude the IPv4 IS-IS interface from using the global BFD configuration. • **1**—Exclude the IPv4 IS-IS interface from using the global BFD configuration.	Configuring this column might overwrite the configuration for the BfdEnableV4 column.
BfdExcludeV6	Exclude the IPv6 IS-IS interface from using the global BFD configuration.	N/A	Enumeration: • **0**—Do not exclude the IPv6 IS-IS interface from using the global BFD configuration. • **1**—Exclude the IPv6 IS-IS interface from using the global BFD configuration.	Configuring this column might overwrite the configuration for the BfdEnableV6 column.
BfdSessionRestrictAdjV4	Enable IPv4 IS-IS adjacency establishment and maintenance control based on BFD session state.	N/A	Enumeration: • **0**—Disable. • **1**—Enable. • **2**—Exclude from using global BFD configuration.	N/A
BfdSessionRestrictAdjV6	Enable IPv6 IS-IS adjacency establishment and maintenance control based on BFD session state.	N/A	Enumeration: • **0**—Disable. • **1**—Enable. • **2**—Exclude from using global BFD configuration.	N/A
BfdAdjustCostV4	Adjust the IPv4 IS-IS interface cost according to the BFD session state.	N/A	Enumeration: • **0~16777213**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **exclude**—Exclude from using global BFD configuration. • **none**—Do not adjust cost.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdAdjustCostV6	Adjust the IPv6 IS-IS interface cost according to the BFD session state.	N/A	Enumeration: • **0~16777213**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 16777214 when the BFD session goes down. • **exclude**—Exclude from using global BFD configuration. • **none**—Do not adjust cost.	N/A
BfdAdjustCostSuppressV4	Suppress IPv4 IS-IS interface cost adjustment upon BFD session state changes.	Data structure	Members include: • ResumeInterval. • DetectInterval. • Threshold.	N/A
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
Threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
BfdAdjustCostSuppressV6	Suppress IPv6 IS-IS interface cost adjustment upon BFD session state changes.	Data structure	Members include: • ResumeInterval. • DetectInterval. • Threshold	N/A
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
Threshold	Specify the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number of BFD session down events that triggers an interface cost adjustment.		Value range: 1 to 100.	
Frr	Fast reroute messages.	Data structure	Members include: • PrimaryPathDetectV4. • PrimaryPathDetectV6. • LfaDisableLevelV4. • LfaDisableLevelV6. • TiLfaDisableLevelV4. • TiLfaDisableLevelV6. • RemoteLfaDisableLevelV4.	N/A
PrimaryPathDetectV4	BFD work mode for ISIS.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode. • **3**—Exclude from using global BFD configuration.	N/A
PrimaryPathDetectV6	BFD work mode for IPv6 ISIS.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode. • **3**—Exclude from using global BFD configuration.	N/A
LfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
LfaDisableLevelV6	IPv6 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
TiLfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
TiLfaDisableLevelV6	IPv6 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
RemoteLfaDisableLevelV4	IPv4 level type	N/A	Enumeration: • **1**—Level 1 • **2**—Level 2 • **3**—Level-1-2	N/A
Silent	Whether to enable packets receiving and	N/A	Boolean: • **true**—Do not Allow packets receiving and	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sending on the interface		sending on the interface. • **false—**Allow packets receiving and sending on the interface.	
LinkDelay	Configure link delay parameters on an IS-IS interface.	Data structure	Members include: • Average. • Minimal. • Maximal. • Variation.	A property column must exist.
Average	Specify the average link	N/A	Unsigned integer. Value range:1 to 16777215.	N/A
Minimal	Specify the minimum link.	N/A	Unsigned integer. Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously
Maximal	Specify the maximum link.	N/A	Unsigned integer. Value range: 1 to 16777215.	The attribute column Minimal and Maximal must be issued simultaneously.
Variation	Set the acceptable delay variation.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
LinkLoss	Set the loss value.	N/A	Unsigned integer. Value range:0 to 16777214.	N/A
TeMetricFlexAlgo	Configure te metric parameters of algorithm	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
DISPriority	The priority for isis DIS election.	Data structure	Members include: • PriorityLevel1. • PriorityLevel2.	N/A
PriorityLevel1	The level-1 priority for isis DIS election.	N/A	Unsigned integer.	N/A
PriorityLevel2	The level-2 priority for isis DIS election.	N/A	Unsigned integer.	N/A
MPLSTE	Whether or not to enable MPLS TE.	Data structure	Members include: • MPLSTELevel1. • MPLSTELevel2.	N/A
MPLSTELevel1	Whether or not to enable level-1 MPLS TE.	N/A	Boolean	N/A
MPLSTELevel2	Whether or not to enable level-2 MPLS TE.	N/A	Boolean	N/A
IfName	Interface name	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 47 characters.	
MetricDelayNormalizeV4	IS-IS link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
MetricDelayNormalizeV6	IPv6 IS-IS link delay normalization settings	Data structure	Members include: • Interval. • Offset.	The Interval value must be specified.
Interval	Interval value for link delay normalization	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
Offset	Offset value for link delay normalization	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
PeerHoldMaxCostDuration	Advertise the maximum link cost to neighbors within the specified period of time	N/A	Unsigned integer. Value range: 100 to1000000 (milliseconds)	N/A

ISIS/AdjSids

This table contains IS-IS adjacency-sid information.

XML structure

```
<ISIS>
  <AdjSids>
    <AdjSid>
      <IfIndex></IfIndex>
      <Nexthop></Nexthop>
      <SidType></SidType>
      <Sid></Sid>
      <IfName></IfName>
    </AdjSid>
  </AdjSids>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	AdjSids
Table type	Multi-instance table

Row name	AdjSid
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Nexthop	Nexthop IPv4 address.	Index	String,dotted decimal notation.	This command only supports the broadcast interface. 0.0.0.0 is an invalid value which is used on the P2P interface.
SidType	The type of Prefix-SID	N/A	Enumeration: • **1**—Absolute value of Prefix-SID. • **2**—Index value of Prefix-SID.	This command must be specified.
Sid	Prefix Segment ID	N/A	Unsigned integer.	This command must be specified.
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

ISIS/LSPs

This table contains IS-IS lsp information.

XML structure

```
<ISIS>
  <LSPs>
    <LSP>
      <Name></Name>
      <Level></Level>
      <LspID></LspID>

      <CheckSum></CheckSum>
      <RemainingLifetime></RemainingLifetime>
      <ZeroAgeTime></ZeroAgeTime>
      <Length></Length>
```

```
      <Attach></Attach>
      <Partition></Partition>
      <Overload></Overload>
    </LSP>
  </LSPs>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	LSPs
Table type	Multi-instance table
Row name	LSP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
Level	Router working level.	Index	Enumeration: • **1**—Level-1. • **2**—Level-2.	N/A
LspID	LSP Identifier	Index	String. Length: 0 to 263 characters.	N/A
Sequence	The sequence number of LSP	N/A	String. Length: 0 to 20 characters.	N/A
CheckSum	The checksum of LSP	N/A	String. Length: 0 to 20 characters.	N/A
RemainingLifetime	The remaining lifetime of LSP	N/A	Unsigned integer.	N/A
ZeroAgeTime	The remaining time before the LSP is deleted.	N/A	Unsigned integer.	N/A
Length	The length of LSP.	N/A	Unsigned integer.	N/A
Attach	The attach bit of LSP.	N/A	Boolean: • **true**—The attach bit is set to 1. • **false—**The attach bit is set to 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Partition	The partition bit of LSP.	N/A	Boolean: • **true**—The partition bit is set to 1. • **false—**The partition bit is set to 0.	N/A
Overload	The overload bit of LSP.	N/A	Boolean: • **true**—The overload bit is set to 1. • **false—**The overload bit is set to 0.	N/A

ISIS/Peers

This table contains IS-IS peer information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
Ifindex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
LinkType	The link type of the peer	Index	Enumeration: • **1**—Level-1. • **2**—Level-2. • **3**—Level-1-2.	N/A
NeighborSysID	The system ID of the peer	Index	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A
CircuitID	The circuit ID of the peer	N/A	String. Length: 0 to 259 characters.	N/A
State	The state of peer	N/A	Enumeration: • **0**—Down. • **1**—Init. • **2**—Up.	N/A
HoldTime	The remaining lifetime of peer	N/A	Unsigned integer.	N/A
NeighborPriority	The priority of peer for DIS elect.	N/A	Unsigned integer. Value range 0 to 127.	Only supported on broadcast network.
NeighborAreaAddress	The area address of neighbor.	N/A	String,	N/A

NeighborUpTime	The time after neighor up.	N/A	String. Format: hh:mm:ss	N/A
GracefulRestart	The state of graceful restart	Data structure	Members include: • Capable. • RestartingSign. • SuppressAdver.	N/A
Capable	Whether of not to enable graceful restart helper	N/A	Boolean: • true—Enable. • false—Disable.	N/A
RestartingSignal	The restarting signal of graceful restart.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
SuppressAdver	The suppress adver signal of graceful restart.	N/A	Boolean: • true—Enable. • false—Disable.	N/A
SNPAAddress	SNPA address of the neighbor.	N/A	String	N/A
NeighbourIpAddress	The IP Address of neighbor.	N/A	String	N/A
LinkLocalAddress	The LinkLocal address of neighbour.	N/A	String	N/A
GlobalUnicastAddress	The IPv6 global address of neighbour.	N/A	String	N/A

ISIS/SRLabels

This table contains IS-IS SRLabel information.

      <RedistName></RedistName>
      <RedistLevelType></RedistLevelType>
      <InheritCost></InheritCost>
      <CostType></CostType>
      <Cost></Cost>
      <RoutePolicyName></RoutePolicyName>
      <AllowIBGP></AllowIBGP>
      <AllowDirect></AllowDirect>
      <Tag></Tag>
      <NoSID></NoSID>
    </Redist>
  </Redistributes>
</ISIS>
```

Table description

Item	Description
Feature name	ISIS
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it. It must be an unsigned integer in the range of 1 to 65535.
FamilyType	Address Family Identifier.	Index	Enumeration: • 1—IPv4 unicast. • 2—IPv6 unicast.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	Only 0 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: • 1—Direct. • 2—Static. • 3—RIP. • 4—OSPF. • 5—ISIS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 6—BGP. • 7—EIGRP. • 8—Guard. • 9—UNR.	
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the Protocol column is Direct, Static, Guard, or UNR. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is ISIS, OSPF, EIGRP,or RIP. It must be “all” or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.
RedistLevelType	Redistribute level type.	N/A	Enumeration: • 1—Level 1. • 2—Level 2. • 3—Level-1-2.	N/A
InheritCost	Whether to use the original cost of redistributed routes.	N/A	Boolean: • true—Use the original cost of redistributed routes. • false—Do not use the original cost of redistributed routes.	This column cannot be specified when the CostType column or Cost column exists.
CostType	Redistribute metric type.	N/A	Enumeration: • 1—internal. • 2—external.	This column cannot be specified when the InheritCost column exists.
Cost	Redistribute metric.	N/A	Unsigned integer. Value range: 0 to 4261412864.	This column cannot be specified when the InheritCost column exists. For the styles of narrow, narrow-compatible, and compatible, the cost is in the range of 0 to 63.
RoutePolicyName	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
AllowIBGP	Allow IBGP routes when importing BGP	N/A	Boolean: • true—Import IBGP routes when importing BGP	This column can be specified only when the protocol is BGP.

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes.		routes. • false—Do not import IBGP routes when importing BGP routes.	
AllowDirect	Whether to contain connected routes.	N/A	Boolean: • true—Contain connected routes. • false—Do not contain IBGP routes when importing BGP routes.	This column can be specified only when the protocol is OSPF,ISIS,RIP, EIGRP.
Tag	Tag value.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
NoSID	Whether to exclude SID when importing routes.	N/A	Boolean: • true—Exclude SID when importing routes. • false—Do not exclude SID when importing routes.	This column can be specified only when the protocol is OSPF,ISIS. This column can be specified only when the FamilyType is IPv4 unicast.

ISIS/LeakRouteLevel1ToLevel2s

This table contains IS-IS LeakRouteLevel1ToLevel2s information.

XML structure

```
<ISIS>
  <LeakRouteLevel1ToLevel2s>

Table description

Item	Description
Feature name	ISIS
Table name	Algorithms
Table type	Multi-instance table
Row name	Algorithm
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
AlgoId	Algorithm value.	Index	Unsigned integer. Value range: 128 to 255.	N/A
Advertise	Whether to advertise local algorithm.	N/A	Boolean: • **true**—Advertise local algorithm. • **false**—Does not advertise local algorithm.	N/A
Priority	Priority value.	N/A	Unsigned integer. • Value range: 0 to 255.	N/A
FrrEnable	Whether to enable fast-reroute.	N/A	Boolean: • **true**—Enable fast-reroute. • **false**—Does not enable fast-reroute.	N/A
ExcludeAny	Exclude-all affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of ExcludeAny AffinityNames.	N/A
IncludeAll	Include-all affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of IncludeAll AffinityNames.	N/A
IncludeAny	Include-any affinity rules on the algorithm calculation.	N/A	String. It is a comma-separated list of IncludeAny AffinityNames.	N/A
MetricType	Type of metric to be used during the algorithm calculation.	N/A	Enumeration: • **0**—IGP metric. • **1**—Minimum unidirectional link delay. • **2**—TE default metric.	N/A
FrrTiLfaEnable	Whether to enable TI-LFA.	N/A	Boolean: • **true**—Enable TI-LFA. • **false**—Disable TI-LFA.	N/A
FrrMaEnable	Whether to enable microloop avoidance.	N/A	Boolean: • **true**—Enable microloop avoidance. • **false**—Disable microloop avoidance.	N/A
FrrMaDelay	Microloop avoidance configuration for algorithm.	Data structure	Members include: • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RibUpdateDelayLevel1	Microloop avoidance RIB-update-delay time in Level-1.	N/A	Unsigned integer. Value range 1 to 60000.	N/A
RibUpdateDelayLevel2	Microloop avoidance RIB-update-delay time in Level-2.	N/A	Unsigned integer. Value range 1 to 60000.	N/A
FrrTiebreaker	Tiebreaker for an FRR protection mode.	Data structure	Members include: • LowestCostPrefLevel1. • LowestCostPrefLevel2. • NodeProtectPrefLevel1. • NodeProtectPrefLevel2.	N/A
LowestCostPrefLevel1	Preference of link protection in Level-1.	N/A	Unsigned integer. Value range 1 to 255.	N/A
LowestCostPrefLevel2	Preference of link protection in Level-2.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NodeProtectPrefLevel1	Preference of node protection in Level-1.	N/A	Unsigned integer. Value range 1 to 255.	N/A
NodeProtectPrefLevel2	Preference of node protection in Level-2.	N/A	Unsigned integer. Value range 1 to 255.	N/A
TrustLevelEnable	Whether to enable trust-level mapping.	N/A	Boolean: • **true**—Enable trust-level mapping. • **false**—Disable trust-level mapping.	N/A
SrlgExclude	Exclude srlg rules on the algorithm calculation.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SrMicroloopAvoidEnable	Enable SR microloop-avoidance for algorithm	N/A	Enumeration: • **0**—Disable SR microloop avoidance. • **1**—Enable SR microloop avoidance.	N/A
SrMaStrictSidEnabl	Whether to enable segment routing microloop avoidance strict SIDs only.	N/A	Boolean: • **0**—Disable segment routing microloop avoidance strict SIDs only. • **1**—Enable segment routing microloop avoidance strict SIDs only.	N/A
SrMicroloopAvoidDelay	SR Microloop avoidance configuration for	Data structure	Members include: • RibUpdateDelayLevel1. • RibUpdateDelayLevel2.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm.			
RibUpdateDelayLevel1	The SR microloop-avoidance RIB-update-delay time for IS-IS SR level-1.	N/A	Unsigned integer. Value range 1 to 60000.	N/A
RibUpdateDelayLevel2	The SR microloop-avoidance RIB-update-delay time for IS-IS SR level-2.	N/A	Unsigned integer. Value range 1 to 60000.	N/A

ISIS/AffinityMaps

This table contains IS-IS AffinityMaps information.

Maximum value and minimum value must be issued simultaneously minimum value. 时延参数的最大值和最小值必须同时下发。	Maximum value and minimum value must be issued simultaneously minimum value. 时延参数的最大值和最小值必须同时下发。
You cannot set the BfdEnableV4 and BfdExcludeV4 columns to true at the same time. BfdEnableV4 与 BfdExcludeV4 属性列不能同时配置为 true。	You cannot set the BfdEnableV4 and BfdExcludeV4 columns to true at the same time. BfdEnableV4 与 BfdExcludeV4 属性列不能同时配置为 true。
You cannot set the BfdEnableV6	You cannot set the BfdEnableV6

and BfdExcludeV6 columns to true at the same time. BfdEnableV6 与 BfdExcludeV6 属性列不能同时配置为 true。	and BfdExcludeV6 columns to true at the same time. BfdEnableV6 与 BfdExcludeV6 属性列不能同时配置为 true。
Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when Metric-link-loss is enabled for IS-IS. 当进程使能Metric-link-loss时，Cost style必须是wide、compatible或wide-compatible。	Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when Metric-link-loss is enabled for IS-IS. 当进程使能Metric-link-loss时，Cost style必须是wide、compatible或wide-compatible。
When the suppression function of the Metric-link-loss is configured,Time ThresholdPercent ThresholdAbsolute must be issued simultaneously. 丢包率发布抑制定时器、丢包率变化率的抑制阈值、丢包率变化绝对值的抑制阈值必须同时下发。	When the suppression function of the Metric-link-loss is configured,Time ThresholdPercent ThresholdAbsolute must be issued simultaneously. 丢包率发布抑制定时器、丢包率变化率的抑制阈值、丢包率变化绝对值的抑制阈值必须同时下发。
You must specify the Interval column. 需要指定 Interval 属性列。	You must specify the Interval column. 需要指定 Interval 属性列。
The Offset value must be smaller than the Interval value. Offset 属性列的值必须小于 Interval 属性列的值。	The Offset value must be smaller than the Interval value. Offset 属性列的值必须小于 Interval 属性列的值。

ISIS/VRFs

Message	Explanation
IS-IS is not configured. 未配置IS-IS。	The ISIS process doesn’t start. Isis进程未启动。
The maximum value must be greater than the minimum value. 最大值小于等于最小值。	The maximum value must be greater than the minimum value. 最大值小于等于最小值。
Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when MPLS SR is enabled for IS-IS. 当进程使能SR MPLS时，Cost style 必须是wide、compatible或wide-compatible。	Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when MPLS SR is enabled for IS-IS. 当进程使能SR MPLS时，Cost style 必须是wide、compatible或wide-compatible。
The SRGB is invalid. It must contain the configured prefix SIDs. 已配置的prefix-SID值不在目前配置的SRGB范围内。	The SRGB is invalid. It must contain the configured prefix SIDs. 已配置的prefix-SID值不在目前配置的SRGB范围内。
IS-IS进程已存在网络实体名称，无法修改系统ID。 The IS-IS process is already configured with a NET. Cannot change the system ID.	IS-IS进程已存在网络实体名称，无法修改系统ID。 The IS-IS process is already configured with a NET. Cannot change the system ID.
A maximum of three NETs with different area IDs and the same system ID can be configured. 最多允许配置三个区域ID不同、系统ID相同的网络实体名称。	A maximum of three NETs with different area IDs and the same system ID can be configured. 最多允许配置三个区域ID不同、系统ID相同的网络实体名称。

Can't enable MPLS TE for IS-IS when the cost style isn't WIDE,COMPATIBLE,or WIDE-COMPATIBLE. 当进程使能MPLS TE时，Cost style 必须是wide、compatible或wide-compatible。	Can't enable MPLS TE for IS-IS when the cost style isn't WIDE,COMPATIBLE,or WIDE-COMPATIBLE. 当进程使能MPLS TE时，Cost style 必须是wide、compatible或wide-compatible。
The TE feature is not configured. 未配置TE。	The TE feature is not configured. 未配置TE。
When the SetType property is specified as 1, this property column is not allowed to be configured. 当SetType属性指定为1时，不允许配置此属性列。	When the SetType attribute is specified as 1, only the AllowInterLevel, AllowExternal attribute column can be carried. 当SetType属性指定为1时，只能携带AllowInter和AllowExternal属性列。
This property column is not allowed to be configured when the SetType attribute is specified as 2 or 4. 当SetType属性指定为2或4时，不允许配置此属性列。	When the SetType attribute is specified as 2 or 4, only AllowInterLevel, AllowExternal, and Timeout attribute columns can be carried. 当SetType属性指定为2或4时，只能携带AllowInterLevel , AllowExternal, Timeout属性列。
When the SetType attribute of SetOverload is specified as 3, the NbrSystemId attribute must be carried. 当SetOverload的SetType属性指定为3时，必须携带NbrSystemId属性。	When the SetType attribute of SetOverload is specified as 3, the NbrSystemId attribute must be carried. 当SetOverload的SetType属性指定为3时，必须携带NbrSystemId属性。
When the SetType property is specified as 0, this property column is not allowed to be configured. 当SetOverload的SetType属性指定为0时，只能携带SetOverload组下的SetType属性列。	When the SetType attribute is specified as 0, only the SetType column can be carried. 当SetOverload的SetType属性指定为0时，只能携带SetOverload组下的SetType属性列。
The member of SetType must be specified.When set the SetOverload. 配置SetOverload时，必须携带SetType属性列。	The member of SetType must be specified.When set the SetOverload. 当配置SetOverload时,这个SetType属性列必须携带。
When the AdjustCost property is specified as 0 or 1, this property column is not allowed to be configured. 当AdjustCost的值配置为0或1时，不允许携带此属性列。	When the AdjustCost property is specified as 0 or 1, this AdjustCostValue column is not allowed to be configured. 当AdjustCost的值配置为0或1时，不允许携带AdjustCostValue属性列。
You must carry the AdjustCostValue attribute column when the value of the AdjustCost is configured to 2. 当AdjustCost的值配置为2时，必须携带AdjustCostValue属性列。	You must carry the AdjustCostValue attribute column when the value of the AdjustCost is configured to 2. 当AdjustCost的值配置为2时，必须携带AdjustCostValue属性列。
Deleting NbrSystemId attributes alone is not supported. 不支持单独删除NbrSystemId属性。	Deleting NbrSystemId attributes alone is not supported. 不支持单独删除NbrSystemId属性。
Configuring the AdjustCostValue attribute alone is not supported. 不支持单独配置AdjustCostValue属性列。	Configuring the AdjustCostValue attribute alone is not supported. 不支持单独配置AdjustCostValue属性列。
Time ThresholdPercent ThresholdAbsolute must be issued simultaneously. 时延发布抑制定时器、时延变化率的抑制阈值、时延变化绝对值的抑制阈值必须同时下发。	Time ThresholdPercent ThresholdAbsolute must be issued simultaneously. 时延发布抑制定时器、时延变化率的抑制阈值、时延变化绝对值的抑制阈值必须同时下发。
Cost style must be wide, compatible or wide-compatible.	When you distribute some configurations, you must first issue the cost style as wide, compatible or wide compatible.

配置网络性能参数时，链路开销值类型必须为wide、compatible或wide-compatible。	当下发网络性能参数的配置时，必须首先下发Cost style为wide、compatible或wide-compatible的配置。
BIER can be enabled for only one IS-IS process. 只支持在一个IS-IS进程上使能BIER。	BIER can be enabled for only one IS-IS process. 只支持在一个IS-IS进程上使能BIER。
BIER is supported only in the public network. 只支持在公网IS-IS进程中使能BIER。	BIER is supported only in the public network. 只支持在公网IS-IS进程中使能BIER。
Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when BIER is enabled for IS-IS. Cost style 必须是wide、compatible或wide-compatible才能执行该配置。	Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when BIER is enabled for IS-IS. Cost style 必须是wide、compatible或wide-compatible才能执行该配置。
BIER is available for only the WIDE, COMPATIBLE or WIDE-COMPATIBLE cost styles. 当进程使能BIER时，Cost style 必须是wide、compatible或wide-compatible	BIER is available for only the WIDE, COMPATIBLE or WIDE-COMPATIBLE cost styles. 当进程使能BIER时，Cost style 必须是wide、compatible或wide-compatible。
Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when Srv6AdvertisEnable is not configured as default(Disable Advertise). 已经存在Srv6AdvertisEnable的非默认配置，不允许将Cost style修改为wide、compatible或wide-compatible之外的类型。	Cost style must be WIDE, COMPATIBLE or WIDE-COMPATIBLE when Srv6AdvertisEnable is not configured as default(Disable Advertise). 已经存在Srv6AdvertisEnable的非默认配置，不允许将Cost style修改为wide、compatible或wide-compatible之外的类型。

ISIS/Familys

Message	Explanation
IS-IS is not configured. 未配置IS-IS。	The ISIS process doesn’t start. Isis进程未启动。
Can't enable MPLS SR for IS-IS when the cost style isn't WIDE, COMPATIBLE, or WIDE-COMPATIBLE. cost style未配置为wide、compatible或wide-compatible。	Can't enable MPLS SR for IS-IS when the cost style isn't WIDE, COMPATIBLE, or WIDE-COMPATIBLE. cost style未配置为wide、compatible或wide-compatible。
The command only supports the IPv4 address family. 该配置仅支持IPv4地址族。	The command only supports the IPv4 address family. 该配置仅支持IPv4地址族。
The enable, ecmpType, and policy attributes of LFA cannot coexist. LFA的enable、ecmpType和policy属性不能共存。	The enable, ecmpType, and policy attributes of LFA cannot coexist. LFA的enable、ecmpType和policy属性不能共存。
The host and policy attributes of TI-LFA cannot coexist. TI-LFA的host属性不能与policy共存。	The host and policy attributes of TI-LFA cannot coexist. TI-LFA的host属性不能与policy共存。
SRLSP is not configured. 未配置SRLSP。	SRLSP is not configured. 未配置SRLSP。
TI-LFA is not configured. 未配置TI-LFA功能。	TI-LFA is not configured. 未配置TI-LFA功能。

When the SetType property is specified as 1, this property column is not allowed to be configured. 当SetType属性指定为1时，不允许配置此属性列。	When the SetType attribute is specified as 1, only the AllowInterLevel, AllowExternal attribute column can be carried. 当SetType属性指定为1时，只能携带AllowInterLevel和AllowExternal属性列。
This property column is not allowed to be configured when the SetType attribute is specified as 2 or 4. 当SetType属性指定为2或4时，不允许配置此属性列。	When the SetType attribute is specified as 2 or 4, only AllowInterLevel, AllowExternal, and Timeout attribute columns can be carried. 当SetType属性指定为2或4时，只能携带AllowInterLevel、AllowExternal或Timeout属性列。
When the SetType attribute of SetOverload is specified as 3, the NbrSystemId attribute must be carried. 当SetOverload的SetType属性指定为3时，必须携带NbrSystemId属性。	When the SetType attribute of SetOverload is specified as 3, the NbrSystemId attribute must be carried. 当SetOverload的SetType属性指定为3时，必须携带NbrSystemId属性。
The command only supports the Ipv6 address family. 仅IPv6地址族下支持此配置。	The command only supports the Ipv6 address family. 仅IPv6地址族下支持此配置。
When the SetType property is specified as 0, this property column is not allowed to be configured. 当SetOverload的SetType属性指定为0时，只能携带SetOverload组下的SetType属性列。	When the SetType attribute is specified as 0, only the SetType column can be carried. 当SetOverload的SetType属性指定为0时，只能携带SetOverload组下的SetType属性列。
The member of SetType must be specified.When set the SetOverload. 配置SetOverload时，必须携带SetType属性列。	The member of SetType must be specified.When set the SetOverload. 当配置SetOverload时，必须携带SetType属性列。
When the AdjustCost property is specified as 0 or 1, this property column is not allowed to be configured. 当AdjustCost的值配置为0或1时，不允许携带此属性列。	When the AdjustCost property is specified as 0 or 1, this AdjustCostValue column is not allowed to be configured. 当AdjustCost的值配置为0或1时，不允许携带AdjustCostValue属性列。
You must carry the AdjustCostValue attribute column when the value of the AdjustCost is configured to 2. 当AdjustCost的值配置为2时，必须携带AdjustCostValue属性列。	You must carry the AdjustCostValue attribute column when the value of the AdjustCost is configured to 2. 当AdjustCost的值配置为2时，必须携带AdjustCostValue属性列。
Deleting NbrSystemId attributes alone is not supported. 不支持单独删除NbrSystemId属性。	Deleting NbrSystemId attributes alone is not supported. 不支持单独删除NbrSystemId属性。
Configuring the AdjustCostValue attribute alone is not supported. 不支持单独配置AdjustCostValue属性列。	Configuring the AdjustCostValue attribute alone is not supported. 不支持单独配置AdjustCostValue属性列。
The command only supports the IPv6 address family. 该配置仅支持IPv6地址族。	The command only supports the IPv6 address family. 该配置仅支持IPv6地址族。
Invalid IPv6 address. 无效的IPv6地址。	Invalid IPv6 address. 无效的IPv6地址。
Cost style must be wide, compatible or wide-compatible. 配置网络性能参数时，链路开销值类型必须为wide、compatible或wide-compatible。	When you distribute some configurations, you must first issue the cost style as wide, compatible or wide compatible. 当下发网络性能参数的配置时，必须首先下发Cost style为wide、

	compatible或wide-compatible的配置。
The SuppressOldTE column cannot be configured when the AdvertiseTE column is not specified or is specified as FALSE. AdvertiseTE属性列未指定或指定为FALSE时，不允许配置SuppressOldTE属性列。	The SuppressOldTE column cannot be configured when the AdvertiseTE column is not specified or is specified as FALSE. AdvertiseTE属性列未指定或指定为FALSE时，不允许配置SuppressOldTE属性列。
The SuppressOldSRLG column cannot be configured when the AdvertiseSRLG column is not specified or is specified as FALSE. AdvertiseSRLG属性列未指定或指定为FALSE时，不允许配置SuppressOldSRLG属性列。	The SuppressOldSRLG column cannot be configured when the AdvertiseSRLG column is not specified or is specified as FALSE. AdvertiseSRLG属性列未指定或指定为FALSE时，不允许配置SuppressOldSRLG属性列。
The LevelTilfaPrefer column cannot be configured when the LevelTilfaEnable column is not specified or is specified as FALSE. ISIS event stream

ISIS stream description.

ISIS peer state event

This event is used to report ISIS peer state information.

XML structure for event subscription

```
<ISISPeerStateEvent>
</ISISPeerStateEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ISIS_STREAM</stream>
    <filter type="subtree">
      <ISISPeerStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/ISIS:1.0">
      </ISISPeerStateEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
ProcId	Process ID	String. Length: 0 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
Ifindex	Interface index.	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Level	The level of the peer	Enumeration: • Level-1. • Level-2. • Level-1-2.	N/A

NeighborSysID	The system ID of the peer	String. Length: 1 to 82 characters Format: XXXX.XXXX.XXXX	N/A
CircuitID	The circuit ID of the peer	String. Length: 0 to 259 characters.	N/A
State	The state of peer	Enumeration: • Down. • Init. • Up.	N/A
HoldTime	The remaining lifetime of peer	Unsigned integer.	N/A
NeighborPriority	The priority of peer for DIS elect.	Unsigned integer. Value range 0 to 127.	Only supported on broadcast network.
NeighborAreaAddress	The area address of neighbor.	String,	N/A
NeighborUpTime	The time after neighor up.	String. Format: hh:mm:ss	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
SNPAAddress	SNPA address of the neighbor.	String	N/A
NeighborIpv4Address	The IPv4 Address of neighbor.	String	N/A
LinkLocalAddress	The LinkLocal address of neighbor.	String	N/A
GlobalUnicastAddress	The IPv6 global address of neighbor.	String	N/A
Sequence	Sequence	Unsigned integer. Value range: 1 to 4294967295.	N/A

L2tpEnable	Whether the function of L2TP is enabled.	N/A	Boolean: • **true** • **false(default)**	N/A
IcrqLimit	Maximum number of ICRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 60000. Default: 0	N/A
SccrqMinLimit	Minimum number of SCCRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 10000. Default: 0	N/A
SccrqLimit	Maximum number of SCCRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 10000. Default: 0	N/A
TunnelLimit	Maximum number of L2TP tunnels that can be set up per UP id	N/A	Unsigned integer. Value range: 1 to 65535.	Only support CTRL VM and BRAS VM mode
SessionLimit	Maximum number of L2TP sessions that can be set up per UP id	N/A	Unsigned integer. Value range: 1 to 4294967295.	Only support CTRL VM and BRAS VM mode

L2TPV2/L2tpv2Group

This table contains L2TP group configuration information.

XML structure

```
<L2TPV2>
  <L2tpv2Group>
    <Group>
      <GroupNum></GroupNum>
      <Mode></Mode>
      <AllowVTNum></AllowVTNum>
      <AllowRtmName></AllowRtmName>
      <LnsIP></LnsIP>
      <LnsName></LnsName>
      <UserType></UserType>
```

```
      <UserName></UserName>

      <Password></Password>
      <AuthEnable></AuthEnable>
      <MChapEnable></MChapEnable>
      <MLcpEnable></MLcpEnable>
      <AvpHiddenEnable></AvpHiddenEnable>
      <FlowControlEnable></FlowControlEnable>
      <HelloTime></HelloTime>
      <VPNInstance></VPNInstance>
    </Group>
  </L2tpv2Group>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2Group
Table type	Multi-instance table
Row name	Group
Restrictions	N/A
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	Group number.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Group mode.	N/A	Enumeration: • **0**—lac. • **1**—lns	N/A
AllowVTNum	Specifies a VT interface by its number.	N/A	Unsigned integer.	It can only be configured when Mode is lns. The value range depended on device.
AllowRtmName	Specifies the name of the tunnel peer (LAC) initiating tunneling requests	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be configured when Mode is lns.

Column name	Column description	Column type	Data type and restrictions	Remarks
LnsIP	Specifies LNS IP addresses.	N/A	String, case-sensitive. Length: 1 to 79 characters.	It can only be configured when Mode is lac. Separated by space if there are multiple addresses. Specifies a space-separated list of up to five addresses Example: 1.1.1.1 2.2.2.2 3.3.3.3.
LnsName	LNS DNS name	N/A	String, case-insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.), for example, aabbcc.com. The DNS name suffix can include a maximum of 253 characters, and each separated string includes no more than 63 characters.
UserType	To configure the condition for the LAC to initiate tunneling requests	N/A	Enumeration: • **0**—domain name • **1**—full user name	It can only be configured when Mode is lac.
UserName	user name.	N/A	String, case-sensitive. Length: 1 to 255 characters.	It can only be configured when Mode is lac.
TunnelName	Local tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be set when the group exists or the value of Mode is valid.
PassWord	password.	N/A	String, case-sensitive. Length: 1 to 16 characters.	It can only be set when the group exists or the value of Mode is valid.
AuthEnable	L2TP tunnel authentication.	N/A	Boolean: • **true(default)** • **false**	It can only be set when the group exists or the value of Mode is valid.
MChapEnable	To force the LNS to perform CHAP authentication for users.	N/A	Boolean: • **true** • **false(default)**	It can only be configured when Mode is lns.
MLcpEnable	To force an LNS to perform LCP negotiation with users.	N/A	Boolean: • **true** • **false(default)**	It can only be configured when Mode is lns.

Column name	Column description	Column type	Data type and restrictions	Remarks
AvpHiddenEnable	To enable transferring AVP data in hidden mode.	N/A	Boolean: • **true** • **false(default)**	It can only be set when the group exists or the value of Mode is valid.
FlowControlEnable	To enable L2TP session flow control.	N/A	Boolean: • **true** • **false(default)**	It can only be set when the group exists or the value of Mode is valid.
HelloTime	Hello interval.	N/A	Unsigned integer. Value range: 60 to 1000. Default: 60	It can only be set when the group exists or the value of Mode is valid.
VPNInstance	VPN instance	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be set when the group exists or the value of Mode is valid.

L2TPV2/L2tpv2LacUPSrcIP

This table contains the information about configuring the L2TPv2 LAC UP source IP.

XML structure

```
<L2TPV2>
  <L2tpv2LacUPSrcIP>
    <LacUPSrcIP>
      <GroupNum></GroupNum>
      <UPlists>
        <UPlist>
          <UPid></UPid>
          <IPaddress></IPaddress>
        </UPlist>
      </UPlists>
    </LacUPSrcIP>
  </L2tpv2LacUPSrcIP>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2LacUPSrcIP
Table type	Multi-instance table
Row name	LacUPSrcIP

Restrictions	UPlist only supports one UP
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	L2TP group number.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
UPid	UP ID.	Index	Unsigned integer. 1024 to 2047.	N/A
IPaddress	Tunnel local IP address.	N/A	String, dotted decimal notation.	N/A

L2TPV2/L2tpUPGlobal

This table contains the information about L2TP configuration of UP.

XML structure

```
<L2TPV2>
  <L2tpUPGlobal>
    <UP>
      <UpId></UpId>
      <TunnelIDRange>
        <Start></Start>
        <End></End>
      </TunnelIDRange>
      <IcrqLimit></IcqLimit>
      <TunnelLimit></TunnelLimit>
      <SessionLimit></SessionLimit>
    </UP>
  </L2tpUPGlobal>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2

L2TPV2

L2TPV2/L2tpAutoClient

This table contains the information about auto client.

XML structure

```
<L2TPV2>
  <L2tpAutoClient>
    <AutoClient>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <GroupID></GroupID>
    </AutoClient>
  </L2tpAutoClient>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpAutoClient
Table type	Multi-instance table
Row name	AutoClient
Restrictions	This table supports interface types: virtual-ppp interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	The LAC uses tunnel parameters of the L2TP group to establish the tunnel.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

L2TPV2/L2tpv2LacSrcIP

This table contains the information about L2TP tunnel source IP addresses.

XML structure

```
<L2TPV2>
  <L2tpv2LacSrcIP>
    <LacSrcIP>
      <IfIndex></IfIndex>
      <IPaddress></IPaddress>
    </LacSrcIP>
  </L2tpv2LacSrcIP>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2LacSrcIP
Table type	Multi-instance table
Row name	LacSrcIP
Restrictions	This table supports interface types: vsi interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IPaddress	Tunnel local IP address.	N/A	String, dotted decimal notation.	N/A

L2TPV2/L2tpVaPool

This table contains the information about L2TPV2 va-pool.

XML structure

```
<L2TPV2>
  <L2tpVaPool>
    <VaPool>
      <L2tpVTNum></L2tpVTNum>
      <L2tpVANum></L2tpVANum>
    </VaPool>
  </L2tpVaPool>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	PPPUserPap
Table type	Multi-instance table
Row name	VaPool
Restrictions	VT interface must be exist

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpVTNum	Template-number	Index	Unsigned integer. Value range: 1 to 2047	Specifies an existing VT interface by its number to use the VA pool. The value range for this argument varies by device model.
L2tpVANum	*Va-volume*	N/A	Unsigned integer. Value range: 1 to 65534	N/A

L2TPV2/L2tpGlobal

This table contains the information about global configuration of l2tp.

XML structure

```
<L2TPV2>
  <L2tpGlobal>
    <L2tpEnable></L2tpEnable>
    <IcrqLimit></IcrqLimit>
    <SccrqMinLimit></SccrqMinLimit>
    <SccrqLimit></SccrqLimit>
    <SessionLimit></SessionLimit>
    <TunnelLimit></TunnelLimit>
  </L2tpGlobal>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpGlobal
Table type	Single instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpEnable	Whether the function of L2TP is enabled.	N/A	Boolean: • **true** • false	N/A
IcrqLimit	Maximum number of ICRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 60000.	N/A
SccrqMinLimit	Minimum number of SCCRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 10000.	N/A
SccrqLimit	Maximum number of SCCRQ packets processed per second.	N/A	Unsigned integer. Value range: 1 to 10000.	N/A
TunnelLimit	Maximum number of L2TP tunnels that can be set up per UP id	N/A	Unsigned integer. • Value range: 1 to 65535.	Only support CTRL VM and BRAS VM mode
SessionLimit	Maximum number of L2TP sessions that can be set up per UP id	N/A	Unsigned integer. Value range: 1 to 4294967295.	Only support CTRL VM and BRAS VM mode

L2TPV2/L2TPV2TunnelInfo

This table contains the information about using display l2tp tunnel to display information about L2TP tunnels.

XML structure

```
<L2TPV2>
  <L2TPV2TunnelInfo>
    <TunnelInfo>
      <LocalTIDIndex></LocalTIDIndex>
      <RemoteTID></RemoteTID>
      <State></State>
      <Sessions></Sessions>
      <RemoteAddr></RemoteAddr>
      <RemotePort></RemotePort>
      <RemoteName></RemoteName>
```

```
      <ModeType></ModeType>

  </L2TPV2TunnelInfo>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2TPV2TunnelInfo
Table type	Multi-instance table
Row name	TunnelInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalTIDIndex	Local tunnel ID.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteTID	Remote tunnel ID.	N/A	Unsigned integer. • Value range: 1 to 65535.	N/A
State	Tunnel state.	N/A	Enumeration: • **0—Idle (default)** • **1—Wait-reply** • **2—Wait-connect** • **3—Established** • **4—Stopping**	Session state: Idle. Wait-tunnel—Waits for the tunnel to be established. Wait-reply—Waits for an ICRP message indicating the call is accepted. Wait-connect—Waits for an ICCN message. Established—Establishes the tunnel successfully. Stopping—Is being offline.
Sessions	Number of sessions within the tunnel.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteAddr	IP address of the peer.	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RemotePort	UDP port number of the peer.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RemoteName	Name of the tunnel peer.	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
ModeType	TunnelModeType.	N/A	Enumeration: • **0—LAC** • **1—LNS**	N/A

L2TPV2/L2TPV2TunnelExtendInfo

This table contains the information about using display l2tp tunnel to display information about L2TP tunnels for extension.

XML structure

```
<L2TPV2>
  <L2TPV2TunnelExtendInfo>
    <TunnelExtendInfo>
      <LocalAddrIndex></LocalAddrIndex>
      <LocalTIDIndex></LocalTIDIndex>
      <RemoteTID></RemoteTID>
      <State></State>
      <Sessions></Sessions>
      <RemoteAddr></RemoteAddr>
      <RemotePort></RemotePort>

    </Group>
  </L2tpv2Group>
</L2TPV2>
```

Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2Group
Table type	Multi-instance table
Row name	Group
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	Group number.	Index	Unsigned integer. • Value range: 1 to 65535.	N/A
Mode	Group mode.	N/A	Enumeration: • **0—lac** • **1—lns**	N/A
AllowVTNum	Specifies a VT interface by its number.	N/A	Unsigned integer.	It can only be visible when Mode is lns. The value range depended on device.
AllowRtmName	Specifies the name of the tunnel peer (LAC) initiating tunneling requests	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be visible when Mode is lns.
LnsIP	Specifies LNS IP addresses.	N/A	String, case-sensitive. Length: 1 to 79 characters.	It can only be visible when Mode is lac. Separated by space if there are multiple addresses. Specifies a space-separated list of up to five addresses Example: 1.1.1.1 2.2.2.2 3.3.3.3.
LnsName	LNS DNS name	N/A	String, case-insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.), for example, aabbcc.com. The DNS name suffix can include a maximum of 253 characters, and each separated string includes no more than 63 characters.
UserType	To configure the condition for the LAC to initiate tunneling requests	N/A	Enumeration: • **0—domain name** • **1—full user name**	It can only be visible when Mode is lac.
UserName	user name.	N/A	String, case-sensitive. Length: 1 to 255 characters.	It can only be visible when Mode is lac.

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelName	Local tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be set when the group exists or the value of Mode is valid.
PassWord	password.	N/A	String, case-sensitive. Length: 1 to 16 characters.	It can only be set when the group exists or the value of Mode is valid.
AuthEnable	L2TP tunnel authentication.	N/A	Boolean: • **true** • **false**	It can only be set when the group exists or the value of Mode is valid.
MChapEnable	To force the LNS to perform CHAP authentication for users.	N/A	Boolean: • **true** • **false**	It can only be visible when Mode is lns.
MLcpEnable	To force an LNS to perform LCP negotiation with users.	N/A	Boolean: • **true** • **false**	It can only be visible when Mode is lns.
AvpHiddenEnable	To enable transferring AVP data in hidden mode.	N/A	Boolean: • **true** • **false**	It can only be set when the group exists or the value of Mode is valid.
FlowControlEnable	To enable L2TP session flow control.	N/A	Boolean: • **true** • **false**	It can only be set when the group exists or the value of Mode is valid.
HelloTime	Hello interval.	N/A	Unsigned integer. Value range: 60 to 1000.	It can only be set when the group exists or the value of Mode is valid.
VPNInstance	VPN instance	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be set when the group exists or the value of Mode is valid.

L2TPV2/L2tpv2LacUPSrcIP

This table contains the information about configuring the L2TPv2 LAC UP source IP.

XML structure

```
<L2TPV2>
  <L2tpv2LacUPSrcIP>
    <LacUPSrcIP>
      <GroupNum></GroupNum>
      <UPlists>

Feature name	L2TPV2
Table name	TunnelStatics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpId	UP ID.	N/A	Unsigned integer. 1024~8192.	Only for CP. This field can be used for filtering.
TunnleID	Local tunnel ID.	N/A	Unsigned short.	This field can be used for filtering.
LocalAddr	Local IP address.	N/A	String, dotted decimal notation.	This field can be used for filtering.
RemoteAddr	Remote IP address.	N/A	String, dotted decimal notation.	This field can be used for filtering.
Mode	Session mode.	N/A	Enumeration: • **0—LAC.** • **1—LNS.**	This field can be used for filtering.
GroupName	L2TP group name.	N/A	String, case-sensitive. Length: 1 to 32 characters.	This field can be used for filtering.
GroupNum	L2TP group number.	N/A	Unsigned short Value range: 1 to 65535.	This field can be used for filtering.

Column name	Column description	Column type	Data type and restrictions	Remarks
RemoteTName	Remote tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	This field can be used for filtering.
Statistics	Total number of tunnels	N/A	Unsigned integer.	N/A

L2TPV2/Sessions

This table displays L2TP session configuration information.

Xml structure

```
<L2TPV2>
  <Sessions>
    <Session>
      <TunnelID></TunnelID>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	L2TP group number	Index	Unsigned short. 1~65535	N/A
GroupName	L2TP group name	N/A	• String, length: 1~32.	N/A
UpId	UP ID.	N/A	Unsigned integer. 1024~8192.	Only for CP. This field can be used for filtering.
Mode	Tunnels mode	N/A	Enumeration: • **0—LAC** • **1—LNS**	This field can be used for filtering.
Tunnels	Tunnel number of group	N/A	Unsigned short.	This field can be used for filtering.
Sessions	Session number of group	N/A	Unsigned short.	N/A
TunnelAuth	Tunnel auth	N/A	Enumeration: • **0—Disabled** • **1—Enabled**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalTName	Local tunnel name	N/A	String, length: 1~31	N/A
RecvWin	The size of tunnel receive window	N/A	Unsigned short.	N/A
SendWin	The size of tunnel send window	N/A	Unsigned short.	N/A
AVPHidden	Use cipher-text to transform AVP data	N/A	Enumeration: • **0—No** • **1—Yes**	N/A
HelloInterval	The interval of transform hello packet	N/A	Unsigned short.	Uint: seconds.
IPDSCP	IP DSCP	N/A	Unsigned char.	N/A
FlowCtl	Flow control function	N/A	Enumeration: • **0—Disabled** • **1—Enabled**	N/A
VPNInstance	VPN instance	N/A	Length: 1 to 31 characters.	N/A
WorkMode	Working mode of LAC	N/A	Enumeration: • **0—Master-backup** • **1—Load-sharing**	N/A
SourceIP	Source IP	N/A	String, dotted decimal notation.	N/A
TPerUser	Tunnel only for one user	N/A	Enumeration: • **0—No** • **1—Yes**	N/A
TriType	LAC trigger type	N/A	Enumeration: • 0—**FullUserName** • 1—**Domain**	N/A
TriUserName	LAC trigger user name	N/A	String, length: 1~255	N/A
VSRPSIP	VSRP source IP	N/A	String, dotted decimal notation	N/A
VSRPInstance	VSRP instance	N/A	Length: 1 to 31 characters.	N/A
VTNumber	VT number used to establish tunnel	N/A	Unsigned short	N/A
LocalIPAddr	Local IP address	N/A	String, dotted decimal notation.	N/A
RemoteTName	Remote tunnel name	N/A	Length: 1 to 31 characters.	N/A
MandatoryCHAP	Mandatory user to CHAP	N/A	Enumeration: • **0—No** • **1—Yes**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MandatoryLCP	Mandatory user to LCP	N/A	Enumeration: • **0—No** • **1—Yes**	N/A
LnsIpSum	Sum of lnsip	N/A	Unsigned integer.	N/A
IPAddr	LNS IP address	Index	String, dotted decimal notation.	N/A
Weight	The weight of LNS IP address	N/A	Unsigned short.	N/A

L2TPV2/Tunnels

Table description

Item	Description
Feature name	L2TPV2
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Local tunnel ID.	Index	Unsigned short. Value range: 1 to 65535	N/A
LocalAddr	Local IP address.	Index	String, dotted decimal notation.	N/A
UpId	UP ID.	N/A	Unsigned integer. 1024~8192	Only for CP. This field can be used for filtering.
RemoteAddr	Remote IP address.	N/A	String, dotted decimal notation.	This field can be used for filtering.
RemoteTName	Remote tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	This field can be used for filtering.
Mode	Tunnels mode	N/A	Enumeration: • **0—LAC.** • **1—LNS.**	This field can be used for filtering.
GroupName	L2TP group name	N/A	String, case-sensitive. Length: 1 to 32 characters.	This field can be used for filtering.
GroupNum	L2TP group number	N/A	Unsigned short Value range: 1 to 65535	This field can be used for filtering.

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Tunnel state.	N/A	Enumeration: • **0—Idle** • **1—Wait-reply** • **2—Wait-connect** • **3—Established** • **4—Stopping**	Tunnel state: Idle. Wait-tunnel—Waits for the tunnel to be established. Wait-reply—Waits for an ICRP message indicating the call is accepted. Wait-connect—Waits for an ICCN message. Established—Establishes the tunnel successfully. Stopping—Is being offline.
RemoteTID	Remote tunnel ID	N/A	Unsigned short.	N/A
Sessions	Number of sessions within the tunnel.	N/A	Unsigned short.	N/A
RemotePort	UDP port number of the peer.	N/A	Unsigned short.	N/A
TunnelType	Tunnel type	N/A	Enumeration: • **0—Group.** • **1—Radius.**	N/A
SendWinsize	Send window size	N/A	Unsigned short.	N/A
SendWinLlimit	Send win lower-limit	N/A	Unsigned short.	N/A
SendWinUlimit	Send win upper-limit	N/A	Unsigned short.	N/A
RecvWinSize	Recv window size	N/A	Unsigned short.	N/A
CtlMsgNr	Control message Nr	N/A	Unsigned short.	N/A
LatestHelloNs	Latest hello packet Ns	N/A	Unsigned short.	N/A
RcvSameHello	Recv same hello times.	N/A	Unsigned short.	N/A
AckTimeout	Ack timeout times	N/A	Unsigned integer64. Value range: 0 to 2^{64} - 1.	N/A
RemoteFramCap	Remote framing cap	N/A	Enumeration: • **1—Sync.** • **2—Async.** • 3—**Both..**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RemoteBearerCap	Remote bearer cap	N/A	Enumeration: • **1**—Digital. • **2**—Analog. • 3—**Both.**.	N/A
RemoteProVer	Remote protocol ver	N/A	Unsigned short.	N/A
RemoteVendorName	Remote vendor name	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A
TunnelAuth	Tunnel auth	N/A	Enumeration: • **1—Enabled.** • **2—Disabled.**	N/A
AssignmentID	Assignment ID	N/A	String, case-sensitive. Length: 1 to 252 characters.	N/A
DisconCause	Disconnection cause	N/A	String, case-sensitive. Length: 1 to 31 characters.	Displays only if the tunnel connection is disconnected. Disconnection cause: L2TP fail：Negotiation fails L2TP cut command：The side clearance L2TP peer clear：Triggers local cleanup on the opposite end L2TP no response：No response to end N/A：The tunnel connection was disconnected for other unknown reasons
CauseCode	Cause Code	N/A	Unsigned short.	N/A

L2TPV2/L2tpUPGlobal

This table contains the information about L2TP configuration of UP.

XML structure

```

L2VPN

L2VPN/ClearVSIStatistics

This table is used to clear traffic statistics of the VSI.

XML structure

```
<L2VPN>
  <ClearVSIStatistics>
    <VSIStatistics>
      <VsiName></VsiName>
      <Clear></Clear>
    </VSIStatistics>
  </ClearVSIStatistics>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	ClearVSIStatistics
Table type	Multi-instance table
Row name	VSIStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
Clear	Clear VSI traffic statistics.	N/A	This column must be empty.	Clear

L2VPN/ClearAllVSIStatistics

This table is used to clear traffic statistics of all VSI.

XML structure

```
<L2VPN>
  <ClearAllVSIStatistics>
    <Clear></Clear>
  </ClearAllVSIStatistics>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	ClearAllVSIStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all VSIs.	N/A	This column must be empty.

L2VPN/ClearACStatistics

This table is used to clear traffic statistics of an AC. Currently, the AC can only be an Ethernet service instance.

XML structure

```
<L2VPN>
  <ClearACStatistics>
    <ACStatistics>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Clear></Clear>
    </ACStatistics>
  </ClearACStatistics>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	ClearACStatistics
Table type	Multi-instance table
Row name	ACStatistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Clear	Clear traffic statistics.	N/A	This column must be empty.	Clear

L2VPN/ClearAllACStatistics

This table is used to clear traffic statistics of all ACs. Currently, an AC can only be an Ethernet service instance.

XML structure

```
<L2VPN>
  <ClearAllACStatistics>
    <Clear></Clear>
  </ClearAllACStatistics>
</L2VPN>
```

Table description

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all ACs.	N/A	This column must be empty.

L2VPN/SwitchoverPW

This table is used to switch traffic from the specified PW to its backup PW.

XML structure

```
<L2VPN>
  <SwitchoverPW>
    <PeerAddr></PeerAddr>
    <PWID></PWID>
    <Switch></Switch>
  </SwitchoverPW>
</L2VPN>
```

Table description

Item	Description
Feature name	L2VPN
Table name	SwitchoverPW
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerAddr	LSR ID of the peer PE	N/A	String, dotted decimal notation.	N/A
PWID	PW ID of the PW	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Switch	Switch to backup PW	N/A	This column must be empty.	N/A

L2VPN/ClearVSIMAC

This table is used to reset learned MAC address for the specified VSI.

XML structure

```
<L2VPN>
  <ClearVSIMAC>
    <VSI>
      <VsiName></VsiName>
      <Clear></Clear>
    </VSI>
  </ClearVSIMAC>
</L2VPN>
```

Table description

Item	Description
