The traffic class specified after the insert-before keyword doesn’t exist. insert-before指定的类不存在。	The traffic class specified after the insert-before keyword doesn’t exist. insert-before指定的类不存在。
Marking service class can be applied only in the inbound direction. 重标记到Service Class只能被应用到入方向。	Marking service class can be applied only in the inbound direction. 重标记到Service Class只能被应用到入方向。
MPLS label value range error. MPLS标签的范围配置有误。	MPLS label value range error. label-value1should small than label-value2 匹配MPLS标签规则时，*label-value1*的值必须小于*label-value2*的值。
The start port can't be greater than the end port. 起始端口号不能比结束端口号大。	The start RTP port can't be greater than the end RTP port. 匹配RTP协议端口规则时，起始RTP端口号必须小于结束RTP端口号。
The minimum packet length can't be greater than the maximum packet length. 报文的最小长度不能大于最大长度。	The minimum packet length can't be greater than the maximum packet length when if-match packet length. 匹配报文长度规则时，报文的最小长度不能大于最大长度。
The classifier doesn't exist. 该类不存在。	The classifier doesn't exist, create rule failed. 添加流分类规则时，若流分类不存在，添加失败。
The behavior doesn't exist. 该流行为不存在。	The behavior doesn't exist, create action failed. 添加流行为动作时，若流行为不存在，添加失败。
A QoS policy can be applied only to the inbound direction of an interface if a behavior in the QoS policy contains the remark tunnel-dscp command. 当QoS策略的流行为中配置了remark tunnel-dscp时，该策略只能应用到接口入方向。	A QoS policy can be applied only to the inbound direction of an interface if a behavior in the QoS policy contains the remark tunnel-dscp command. 当QoS策略的流行为中配置了remark tunnel-dscp时，该策略只能应用到接口入方向。
The remark tunnel-dscp command and the remark dscp or remark ip-precedence command are mutually exclusive in a behavior. 同一个流行为中，如果已配置remark dscp命令或remark ip-precedence命令，则不允许再配置remark tunnel-dscp命令，反之亦然。	The remark tunnel-dscp command and the remark dscp or remark ip-precedence command are mutually exclusive in a behavior. 同一个流行为中，如果已配置remark dscp命令或remark ip-precedence命令，则不允许再配置remark tunnel-dscp命令，反之亦然。
The policy name has been used by another type of policy.	The policy name has been used by another type of policy, create policy failed.

这个策略名称已被其他类型策略使用。	创建策略时，若名称已被其他类型策略使用，创建失败。
Another QoS policy of the same type has already been applied. Please view the current configuration. 已经应用了相同类型的其他策略，请查看当前配置。	Another QoS policy of the same type has already been applied. Please view the current configuration. 已经应用了相同类型的其他策略，请查看当前配置。
The preorder for the applied QoS policy cannot be dynamically modified. 应用策略的匹配优先级不能动态修改。	The preorder for the applied QoS policy cannot be dynamically modified. 应用策略的匹配优先级不能动态修改。
The QoS policy type cannot be dynamically modified. QoS策略类型不支持动态修改。	The QoS policy type cannot be dynamically modified. QoS策略类型不支持动态修改。
Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction of the interface. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。	Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction of the interface. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。
Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction globally. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。	Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction globally. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。
The operation is not supported, because the interface belongs to an aggregation group. 设备不支持对加入聚合组的接口执行本操作。	The operation is not supported, because the interface belongs to an aggregation group. 设备不支持对加入聚合组的接口执行应用QoS策略操作。
The SDWAN network site ID is required. 必需指定SDWAN网络的站点ID。	The SDWAN network site ID is required. 配置流分类匹配SDWAN网络TTE信息时，站点ID必需指定。
You must also specify a device ID when specifying an interface ID of a SDWAN tunnel interface. 指定SDWAN隧道接口ID时必需同时指定设备ID。	You must also specify a device ID when specifying an interface ID of a SDWAN tunnel interface. 配置流分类匹配SDWAN网络TTE信息时，如果指定SDWAN隧道接口ID，则必需同时指定设备ID。

MQCEvent event

This event is used to report MQC traffic rate information.

XML structure for event subscription

```
<TrafficRateEvent>
  <TrafficRate>
    <ApplyType></ApplyType>
    <Direction></Direction>
    <Classifier></Classifier>
  </TrafficRate>
</TrafficRateEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>MQC</stream>
    <filter type="subtree">
      <TrafficRateEvent xmlns="http://www.h3c.com/netconf/event:1.0/MQC:1.0">
        <TrafficRate>
          <ApplyType>global</ApplyType>
          <Direction>inbound</Direction>
          <Classifier>a</Classifier>
        </TrafficRate>
      </TrafficRateEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

    </GlobalConfig>
  </Ipv4GlobalConfigs>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4GlobalConfigs
Table type	Single-instance table
Row name	GlobalConfig
Restrictions	None.
Support for row creation and deletion	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MtraceServicePort	Mtrace service port number	N/A	Unsigned integer. Value range: 1024 to 49151. Default: 10240.	N/A
CacheUnknownPerEntry	Maximum number of unknown multicast packets that can be cached for an (S, G) entry	N/A	Unsigned integer. Value range: 0 to 256. Default: 1.	N/A
CacheUnknownTotal	Maximum number of all unknown multicast packets that can be cached	N/A	Unsigned integer. Value range: 0 to 65535. Default: 1024.	N/A
RpfFailPktFlooding	Whether to enable the device to flood the multicast data packets that fail the RPF check in all VLANs	N/A	Boolean: • **true**—Enables the device to flood the multicast data packets that fail the RPF check in all VLANs. • **false**—Disables the device from flooding the multicast data packets that fail the RPF check in all VLANs (default).	N/A
RpfFailPktTrapToCpu	Whether to enable the device to deliver the multicast data packets that fail the RPF check to the CPU	N/A	Boolean: • **true**—Enables the device to deliver the multicast data packets that fail the RPF check to the CPU. • **false**—Disables the device from delivering the multicast data packets that fail the RPF check to the CPU (default).	N/A
MulticastFrrMode	Multicast frr mode	N/A	Enumeration: • **0**—by-entry(default).	N/A

			• 1—by-iif.	
MulticastFrrMonitorCycle	Multicast frr monitor cycle cycle-value	N/A	Enumeration: • **0**—10ms. • **1**—20ms. • **2**—40ms. • **3**—100ms. • **4**—200ms(default). • 5—500ms.	N/A
CpuMaxCopyCount	Maximum number of multicast packets copied	N/A	Unsigned integer. Value range: 1 to the device-specific upper limit.	The default value is customized by the product.

Mroute/Ipv6GlobalConfigs

This table contains global configuration of IPv6 multicast routes.

RpfFailPktFlooding	Whether to enable the device to flood the multicast data packets that fail the RPF check in all VLANs	N/A	Boolean: • **true**—Enables the device to flood the multicast data packets that fail the RPF check in all VLANs. • **false**—Disables the device from flooding the multicast data packets that fail the RPF check in all VLANs (default).	N/A
RpfFailPktTrapToCpu	Whether to enable the device to deliver the multicast data packets that fail the RPF check to the CPU	N/A	Boolean: • **true**—Enables the device to deliver the multicast data packets that fail the RPF check to the CPU. • **false**—Disables the device from delivering the multicast data packets that fail the RPF check to the CPU (default).	N/A
MulticastFrrMode	Multicast frr mode	N/A	Enumeration: • **0**—by-entry(default). • **1**—by-iif.	MulticastFrrMode
MulticastFrrMonitorCycle	Multicast frr monitor cycle cycle-value	N/A	Enumeration: • **0**—10ms. • **1**—20ms. • **2**—40ms. • **3**—100ms. • **4**—200ms(default). • **5**—500ms.	MulticastFrrMonitorCycle
CpuMaxCopyCount	Maximum number of multicast packets copied	N/A	Unsigned integer. Value range: 1 to the device-specific upper limit.	The default value is customized by the product.

Mroute/Ipv4Interfaces

This table contains IPv4 multicast routing interfaces information.

XML structure

```
<Mroute>
  <Ipv4Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SupervlanCommunity></SupervlanCommunity>
      <RpfFailPktBridging></RpfFailPktBridging>
    </Interface>
  </Ipv4Interfaces>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IPv4 interfaces index	Index	Unsigned integer.	N/A
SupervlanCommunity	Whether to enable communication between the super-VLAN and all the sub-VLANs	N/A	Boolean: • **true**—Enables communication between the super-VLAN and all the sub-VLANs. • **false**—Disables communication between the super-VLAN and all the sub-VLANs (default).	N/A
RpfFailPktBridging	Whether to check the packets forwarded in the VLAN and failed an RPF check	N/A	Boolean: • **true**—Enables the device to check the packets forwarded in the VLAN and failed an RPF check. • **false**—Disables the device	N/A

			from checking the packets forwarded in the VLAN and failed an RPF check (default).	

Mroute/Ipv6Interfaces

This table contains IPv6 multicast routing interfaces information.

XML structure

```
<Mroute>
  <Ipv6Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SupervlanCommunity></SupervlanCommunity>
      <RpfFailPktBridging></RpfFailPktBridging>
      <MulticastBoundaryScope></MulticastBoundaryScope>
    </Interface>
  </Ipv6Interfaces>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv6Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Ipv6 interfaces index	Index	Unsigned integer.	N/A
SupervlanCommunity	Enable communication between the super-VLAN and all the sub-VLANs	N/A	Boolean: • **true—**Enables communication between the super-VLAN and all the sub-VLANs. • **false—**Disables communication between the super-VLAN and all the sub-VLANs. (default).	N/A

RpfFailPktBridging	Whether to check the packets forwarded in the VLAN and failed an RPF check	N/A	Boolean: • **true—**Enables the device to check the packets forwarded in the VLAN and failed an RPF check. • **false—**Disables the device from checking the packets forwarded in the VLAN and failed an RPF check. (default).	N/A
MulticastBoundaryScope	Specifies multicast forwarding boundary.	N/A	Unsigned integer. Value range: 3 to 15.	It supports the value of 3,4,5,8,14 and 15 currently.

Mroute/Ipv4MulticastBoundarys

This table contains IPv4 multicast boundary configuration information.

XML structure

```
<Mroute>
  <Ipv4MulticastBoundarys>
    <MulticastBoundary>
      <IfIndex></IfIndex>
      <GroupPrefix></GroupPrefix>
      <MaskLength></MaskLength>
    </MulticastBoundary>
  </Ipv4MulticastBoundarys>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4MulticastBoundarys
Table type	Multi-instance table
Row name	MulticastBoundary
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IPv4 Mroute interfaces index	Index	Unsigned integer.	N/A

GroupPrefix	IPv4 multicast group address	Index	String, dotted decimal notation. Value range: 224.0.0.0 to 239.255.255.255.	N/A
MaskLength	Mask length	Index	Unsigned integer. Value range: 4 to 32.	N/A

Mroute/Ipv6MulticastBoundarys

This table contains IPv6 multicast boundary configuration information.

XML structure

```
<Mroute>
  <Ipv6MulticastBoundarys>
    <MulticastBoundary>
      <IfIndex></IfIndex>
      <GroupPrefix></GroupPrefix>
      <MaskLength></MaskLength>
    </MulticastBoundary>
  </Ipv6MulticastBoundarys>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv6MulticastBoundarys
Table type	Multi-instance table
Row name	MulticastBoundary
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IPv6 Mroute interfaces index	Index	Unsigned integer.	N/A
GroupPrefix	IPv6 multicast group address	Index	Hexadecimal string, colon-separated.	Example: FF1E::1
MaskLength	Mask length	Index	Unsigned integer. Value range: 8 to 128.	N/A

Mroute/Ipv4RpfStaticRoutes

This table contains IPv4 rpf route static configuration information.

XML structure

```
<Mroute>
  <Ipv4RpfStaticRoutes>
    <RpfStaticRoute>
      <VRF></VRF>
      <SourceAddr></SourceAddr>
      <MaskLength></MaskLength>
      <NextHop></NextHop>
      <IfName></IfName>
      <Preference></Preference>
    </RpfStaticRoute>
  </Ipv4RpfStaticRoutes>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4RpfStaticRoutes
Table type	Multi-instance table
Row name	RpfStaticRoute
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network
SourceAddr	IPv4 multicast source address	Index	String, dotted decimal notation.	N/A
MaskLength	Mask length	Index	Unsigned integer. Value range: 0 to 32.	N/A
NextHop	RPF neighbor address	Index	String, dotted decimal notation.	N/A
IfName	Interface name	Index	String Length: 2 to 47 characters	An empty string indicates that IfName is not

				configured
Preference	Route perference	N/A	Unsigned integer. Value range: 1 to 255. Default: 1.	N/A

Mroute/Ipv6RpfStaticRoutes

This table contains IPv6 rpf route static configuration information.

XML structure

```
<Mroute>
  <Ipv6RpfStaticRoutes>
    <RpfStaticRoute>
      <VRF></VRF>
      <SourceAddr></SourceAddr>
      <PrefixLength></PrefixLength>
      <NextHop></NextHop>
      <IfName></IfName>
      <Preference></Preference>
    </RpfStaticRoute>
  </Ipv6RpfStaticRoutes>
</Mroute>
```

Table description

Item	Description

Mroute/Ipv4Instances

This table contains IPv4 Mroute instance information.

XML structure

```
<Mroute>
  <Ipv4Instances>
    <Instance>
      <VRF></VRF>
      <LoadSplitting></LoadSplitting>
      <LongestMatch></LongestMatch>
    </Instance>
  </Ipv4Instances>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table supports only default VRF.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
LoadSplitting	Enable multicast load splitting	N/A	Enumeration: • 1—Enables multicast source and group-based load splitting. • 2—Enables multicast source-based load splitting. • 3—Enables multicast load splitting based on links. • 4—Enables multicast load splitting based on ECMP paths. • 5—Enables multicast load	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			balancing based on ECMP paths. • 6—Enables multicast load balancing based on links.	
LongestMatch	Whether to specify the longest prefix match principle for RPF route	N/A	Boolean: • **true**—Specifies the longest prefix match. • **false**—Does not specify the longest prefix match.	N/A

Mroute/Ipv4Mroutes

This table contains IPv4 multicast route information.

XML structure

```
<Mroute>
  <Ipv4Mroutes>
    <MrouteEntry>
      <VRF></VRF>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>

      <OutIfNum></OutIfNum>
      <InIfName></InIfName>
    </MrouteEntry>
  </Ipv4Mroutes>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4Mroutes
Table type	Multi-instance table
Row name	MrouteEntry
Restrictions	This table supports only default VRF.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
GroupAddr	IPv4 multicast group address	Index	String, dotted decimal notation.	Example: 224.1.1.1.
SourceAddr	IPv4 multicast source address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
InIfIndex	Index of the incoming Interface in the multicast route	N/A	Unsigned integer.	N/A
Uptime	Length of time since the multicast route was created	N/A	Unsigned integer (in seconds).	N/A
Expires	Remaining time of the multicast route	N/A	Unsigned integer (in seconds).	N/A
OutIfNum	Total number of outgoing interfaces in the multicast route	N/A	Unsigned integer.	N/A
InIfName	Incoming interface name	N/A	String. Length: 2 to 47 characters.	N/A

Mroute/Ipv4OutIfs

This table contains outgoing interface information of IPv4 multicast routes.

XML structure

```
<Mroute>
  <Ipv4OutIfs>
    <OutIf>
      <VRF></VRF>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <IfIndex></IfIndex>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </OutIf>
  </Ipv4OutIfs>
</Mroute>
```

Table description

      <SpecifyL3vni></SpecifyL3vni>
      <SenderL3vni></SenderL3vni>
    </ExtranetSelectRpf>
  </Ipv4ExtranetSelectRpfs>
</Mroute>
```

Table description

Item	Description
Feature name	Mroute
Table name	Ipv4ExtranetSelectRpfs
Table type	Multi-instance table
Row name	ExtranetSelectRpfs
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReceiverVrf	Receiver VPN name	Index	String. Length: 0 to 31 characters. Case-sensitive.	An empty string indicates the public network.
SpecifySource	Whether to specify a multicast source	Index	Boolean: • **true**—Specifies a multicast source. • **false**—Does not specify a multicast source.	N/A
SourceAddr	IPv4 multicast source address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
SourceMask	Mask length.	Index	Unsigned integer. Value range: 0 to 32.	Example: 24.
SpecifyGroup	Whether to specify a multicast group	Index	Boolean: • **true**—Specifies a multicast group. • **false**—Does not specify a multicast group.	N/A
GroupAddr	IPv4 multicast group address.	Index	String, dotted decimal notation.	Example: 224.1.1.1.
GroupMask	Mask length.	Index	Unsigned integer. Value range: 4 to 32.	Example: 24

Column name	Column description	Column type	Data type and restrictions	Remarks
SenderVrf	Source VPN name.	Index	String. Length: 0 to 31 characters. Case-sensitive.	An empty string indicates the public network.
SpecifyL3vni	Whether to specify a source L3VNI	Index	Boolean: • **true**—Specifies a source L3 VNI • **false**—Does not specify a source L3 VNI	N/A
SenderL3vni	Source L3 VNI	Index	Unsigned integer. Value range: 0 to 16777215.	Example: 1000.

Mroute/Ipv6ExtranetSelectRpfs

This table contains IPv6 MVPN extranet RPF selection policy information.

XML structure

```
<Mroute>
  <Ipv6ExtranetSelectRpfs>
    <ExtranetSelectRpf>
      <ReceiverVrf></ReceiverVrf>
      <SpecifySource></SpecifySource>
      <SourceAddr></SourceAddr>
      <SourceMask></SourceMask>
      <SpecifyGroup></SpecifyGroup>
      <GroupAddr></GroupAddr>
      <GroupMask></GroupMask>

Table description

Item	Description
Feature name	Mroute
Table name	Ipv6Mroutes
Table type	Multi-instance table
Row name	MrouteEntry
Restrictions	This table supports only default VRF.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
GroupAddr	IPv6 multicast group address	Index	Hexadecimal string, colon-separated.	Example: FF1E::1.
SourceAddr	IPv6 multicast source address	Index	Hexadecimal string, colon-separated.	Example: 2100::1.
InIfIndex	Index of the incoming Interface in the IPv6 multicast route	N/A	Unsigned integer.	N/A
Uptime	Length of time since the IPv6 multicast route was created	N/A	Unsigned integer (in seconds).	N/A

Expires	Remaining time of the IPv6 multicast route	N/A	Unsigned integer (in seconds).	N/A
OutIfNum	Total number of outgoing interfaces in the IPv6 multicast route	N/A	Unsigned integer.	N/A
InIfName	Incoming interface name	N/A	String. Length: 2 to 47 characters.	N/A

Mroute/Ipv6OutIfs

This table contains outgoing interface information of IPv6 multicast routes.

XML structure

```
<Mroute>
  <Ipv6OutIfs>
    <OutIf>
      <VRF></VRF>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <IfIndex></IfIndex>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </OutIf>
  </Ipv6OutIfs>
</Mroute>
```

Mroute/Ipv4Instances

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
Maximum number of VRFs that are enabled with IP multicast routing already reached. IP组播实例的数量已达到最大值。	During creating a new multicast VRF, maximum number of VRFs that are enabled with IP multicast routing already reached. 创建一个新的实例时，当前组播实例已经达到最大规格数目。
IP multicast routing is not enabled. IP组播路由尚未开启。	During executing set operation, IP multicast routing is not enabled. 对该表进行配置时，当前IP组播路由还未开启。
The specified VPN instance does not exist. 指定的VPN实例不存在。	During executing set operation，the VPN instance does not exist. 对该表进行配置时，指定的VPN不存在。
The specified VPN instance doesn't exist or is already used by other vSystems. 指定的VPN不存在或者已被其他vsys所使用。	During executing set operation, the specified VPN instance doesn't exist or is being used by other vSystems. 对该表进行配置时，指定的VPN不存在或者已被其他vsys所使用。

Mroute/Ipv4Mroutes

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。

Mroute/Ipv4OutIfs

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。

Mroute/Ipv4ExtranetSelectRpfs

Message	Explanation
MRIB is not configured.. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
The source VPN and the receiver VPN conflict. 当前VPN实例已使用。	During executing set operation, the multicast source and the multicast receiver cannot be in the same VPN. 对该表进行配置时，组播源和组播接受者不能属于同一个VPN。
A multicast RPF routing policy has been configured. 已配置组播RPF路由策略。	During executing set operation, the same source and group has been specified for another VPN instance or anther L3 VNI. 对该表进行配置时，不同的VPN或不同的L3vni不能配置相同的组播源和组播组信息。
The specified VPN instance does not exist. 指定的VPN实例不存在。	During executing set operation, the specified VPN instance does not exist. 对该表进行配置时，已经配置的VPN实例不存在。
Multicast source address is illegal. 组播源地址不合法。	During executing set operation, the multicast source address in the route selction policy is invalid. 对该表进行配置时，组播源地址是不合法的。
Multicast group address is illegal. 组播组地址不合法。	During executing set operation, the multicast group address specified in the route selection policy is invalid. 对该表进行配置时，组播组地址是不合法的。
The source VPN and the L3vni conflict. 不能同时配置组播源VPN和L3vni。	During executing set operation, a source VPN instance and an L3 VNI cannot be specified at the same time. 对该表进行配置时，不能同时配置源VPN和L3vni。
The SpecifySource and SpecifyGroup columns cannot be both configured as false. 组播源地址和组播组地址不能同时配置为0。	The SpecifySource and SpecifyGroup columns cannot be both configured as false. 对该表进行配置时，组播源地址和组播组地址不能同时配置为0。
The address and mask must be configured when the SpecifySource or SpecifyGroup column is true. 当指定组播源或组播组时，地址和掩码不能为空。	The address and mask must be configured when the SpecifySource or SpecifyGroup column is true. 当指定组播源或组播组时，地址和掩码不能为空。

Mroute/Ipv6ExtranetSelectRpfs

Message	Explanation
MRIB is not configured.. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
The source VPN and the receiver VPN conflict. 当前VPN实例已使用。	During executing set operation, the multicast source and the multicast receiver cannot be in the same VPN. 对该表进行配置时，组播源和组播接收者不能属于同一个VPN。

A multicast RPF routing policy has been configured. 已配置组播RPF路由策略。	During executing set operation, a multicast source and group can be specified only for one VPN instance or L3 VNI. 对该表进行配置时，不同的VPN或不同的L3VNI不能配置相同的组播源和组播组信息。
The specified VPN instance does not exist. 指定的VPN实例不存在。	During executing set operation, the specified VPN instance does not exist. 对该表进行配置时，已经配置的VPN实例不存在。
Multicast source address is illegal. 组播源地址不合法。	During executing set operation, the multicast source address in the route selction policy is invalid. 对该表进行配置时，组播源地址是不合法的。
Multicast group address is illegal. 组播组地址不合法。	During executing set operation, the multicast group address specified in the route selection policy is invalid. 对该表进行配置时，组播组地址是不合法的。
Cannot configure the address and mask when the SpecifySource or SpecifyGroup column is false. 没有指定组播源或组播组,不能配置地址和掩码。	You must specify a multicast source or group before you can configure the address and mask. 只有指定组播源或者组播组时才能配置地址和掩码。
The value range for a multicast group mask length is 8 to 128. 组播组地址掩码长度为8-128。	A multicast group mask length must be in the range of 8 to 128. 组播组地址掩码长度为8-128。
The SpecifySource and SpecifyGroup columns cannot be both configured as false. 组播源地址和组播组地址不能同时配置为0。	The SpecifySource and SpecifyGroup column cannot be both configured as false. 对该表进行配置时，组播源地址和组播组地址不能同时配置为0。
The address and mask must be configured when the SpecifySource or SpecifyGroup column is true. 当指定组播源或组播组时，地址和掩码不能为空。	The address and mask must be configured when the SpecifySource or SpecifyGroup column is true. 当指定组播源或组播组时，地址和掩码不能为空。

Mroute/Ipv6Instances

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
Maximum number of VRFs that are enabled with IP multicast routing already reached. IP组播实例的数量已达到最大值。	During creating a new multicast VRF, maximum number of VRFs that are enabled with IP multicast routing already reached. 创建一个新的实例时，当前组播实例已经达到最大规格数目。
IP multicast routing is not enabled. IP组播路由尚未开启。	During executing set operation, IP multicast routing is not enabled. 对该表进行配置时，当前IP组播路由还未开启。
The specified VPN instance does not exist. 指定的VPN实例不存在。	During executing set operation，the VPN instance does not exist. 对该表进行配置时，指定的VPN不存在。
The specified VPN instance doesn't exist or is already used by other vSystems. 对该表进行配置时，指定的VPN不存在或者已被其他vsys所使用。	During executing set operation, the specified VPN instance doesn't exist or is being used by other vSystems. 对该表进行配置时，指定的VPN不存在或者已被其他vsys所使用。

Mroute/Ipv6Mroutes

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。

Mroute/Ipv6OutIfs

Message	Explanation
MRIB is not configured. MRIB尚未配置。	During executing set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During executing set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。

Mroute/Ipv4MulticastBoundarys

Message	Explanation
This boundary is contained in an existing boundary specified on the interface. 配置的指定组播边界地址范围的组播组地址已被包含。	This boundary is contained in an existing boundary specified on the interface. 配置的指定组播边界地址范围的组播组地址已被包含。
Multicast group address is illegal. 组播组地址不合法。	During executing set operation, the multicast group address specified in the route selection policy is invalid. 对该表进行配置时，组播组地址是不合法的。

Mroute/Ipv6MulticastBoundarys

Message	Explanation
This boundary is contained in an existing boundary specified on the interface. 配置的指定组播边界地址范围的组播组地址已被包含。	This boundary is contained in an existing boundary specified on the interface. 配置的指定组播边界地址范围的组播组地址已被包含。
Multicast group address is illegal. 组播组地址不合法。	During executing set operation, the multicast group address specified in the route selection policy is invalid. 对该表进行配置时，组播组地址是不合法的。

Mroute/Ipv4Interfaces

Message	Explanation
The interface type should be VLAN interface. 必须在VLAN接口下进行配置。	The interface must be a VLAN interface. 必须在 VLAN 接口下进行配置。

Mroute/Ipv6Interfaces

Message	Explanation
The interface type should be VLAN interface. 必须在VLAN接口下进行配置。	The interface must be a VLAN interface. 必须在 VLAN 接口下进行配置。

Mroute/Ipv4RpfStaticRoutes

Message	Explanation
Multicast source address is illegal. 组播源地址不合法。	During executing set operation, the multicast source address in the route selction policy is invalid. 对该表进行配置时，组播源地址是不合法的。
Source address is supernet of Nexthop. 组播源地址和组播转发下一跳地址不能处于同一网段。	Source address is supernet of Nexthop. 组播源地址和组播转发下一跳地址不能处于同一网段。
Cannot configure the NextHop and IfName columns to take effect at the same time. 无法同时配置下一跳地址和出接口名称。	During executing set operation, cannot configure the NextHop and IfName columns to take effect at the same time. 对该表进行配置时，不能同时配置下一跳地址和出接口名称为有效值。
NextHop and IfName cannot be set to invalid values at the same time. 下一跳地址和出接口名称不能同时设置为无效值。	During executing set operation, cannot configure the NextHop and IfName columns as invalid values at the same time. 对该表进行配置时，不能同时配置下一跳地址和出接口名称为无效值。
Multicast nexthop address is illegal. 组播下一跳地址不合法。	During executing set operation, the multicast nexthop address is invalid. 对该表进行配置时，组播下一跳地址是不合法的。

Mroute/Ipv6RpfStaticRoutes

Message	Explanation
Multicast source address is illegal. 组播源地址不合法。	During executing set operation, the multicast source address in the route selction policy is invalid. 对该表进行配置时，组播源地址是不合法的。
Source Address is supernet of Nexthop. 组播源地址和组播转发下一跳地址不能处于同一网段。	Source Address is supernet of Nexthop. 组播源地址和组播转发下一跳地址不能处于同一网段。

Cannot configure the NextHop and IfName columns to take effect at the same time. 无法同时配置下一跳地址和出接口名称。	During executing set operation, cannot configure the NextHop and IfName columns to take effect at the same time. 对该表进行配置时，不能同时配置下一跳地址和出接口名称为有效值。
NextHop and IfName cannot be set to invalid values at the same time. 下一跳地址和出接口名称不能同时设置为无效值。	During executing set operation, cannot configure the NextHop and IfName columns as invalid values at the same time. 对该表进行配置时，不能同时配置下一跳地址和出接口名称为无效值。
Multicast nexthop address is illegal. 组播下一跳地址不合法。	During executing set operation, the multicast nexthop address is invalid. 对该表进行配置时，组播下一跳地址是不合法的。

Mroute/Ipv4GlobalConfigs

Message	Explanation
The value of the CpuMaxCopyCount column is out of range. The value range is 1 to %u. 配置的软转发复制份数上限的值非法，该值有效范围是1 - %u。	The value of the CpuMaxCopyCount column cannot be greater than the product customization value. 配置的软转发复制份数上限不能大于产品定制值。

Mroute/Ipv6GlobalConfigs

Message	Explanation
The value of the CpuMaxCopyCount column is out of range. The value range is 1 to %u. 配置的软转发复制份数上限的值非法，该值有效范围是1 - %u。	The value of the CpuMaxCopyCount column cannot be greater than the product customization value. 配置的软转发复制份数上限不能大于产品定制值。

Mroute/Ipv4FlowPolicys

Message	Explanation
MRIB is not configured.. MRIB尚未配置。	During a set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During a set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。	The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。

Mroute/Ipv6FlowPolicys

Message	Explanation
MRIB is not configured.. MRIB尚未配置。	During a set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During a set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。	The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。

Mroute/Ipv4DefaultFlowPolicys

Message	Explanation
MRIB is not configured.. MRIB尚未配置。	During a set operation, MRIB is not configured. 对该表进行配置时，MRIB 还未配置。
MRIB is not ready. MRIB尚未就绪。	During a set operation, MRIB does not fully start up. 对该表进行配置时，MRIB还未完全启动。
The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。	The bandwidth value and unit must be both set. 带宽的值与单位必须同时设置。

MSDP

MSDP/Peers

Message	Explanation
The specified VPN instance does not exist. 指定的VPN实例不存在。	During executing set operation, the configured VPN instance does not exist. 对该表进行配置时，已经配置的VPN实例不存在。
MSDP is not ready. MSDP尚未就绪。	During executing set operation, MSDP has not fully started up. 对该表进行配置时，MSDP还未完全启动。
MSDP is not configured. MSDP未配置。	MSDP is not configured in the current VPN instance. 当前VPN实例中未使能MSDP功能。
The specified VPN instance is being deleted. 指定的VPN实例正在被删除。	Operation failed because the VPN instance is being deleted. VPN实例在删除中无法对其进行操作。
The interface doesn't exist. 不存在的接口。	The interface does not exist. 接口不存在。
The interface to communicate with a peer has not been configured. 尚未配置与对等体通信的接口。	You must specify an interface before configuring the other property columns. 在配置其他属性列之前必须先指定接口。
Failed to operate DBM. DBM操作失败。	The DBM operation failed. 对于DBM的操作失败。
Failed to send an HA message. 发送HA消息失败。	Failed to send a message for real-time backup the configuration of the peer. 发送对等体的配置的实时备份信息失败。
The specified peer doesn't exist. 指定的对等体不存在。	The peer configuration is invalid. 对等体配置是无效的。
The specified interface doesn't belong to the VPN instance. 指定的接口不属于这个VPN实例。	The specified interface must first be associated with the VPN instance. 指定的接口必须先与VPN实例绑定。

MSDP/Instances

Message	Explanation
MSDP is not ready. MSDP尚未就绪。	During executing set operation, MSDP has not fully started up. 对该表进行配置时，MSDP还未完全启动。
The specified VPN instance does not exist.	During executing set operation, the configured VPN instance does not exist.

Message	Explanation
指定的VPN实例不存在。	对该表进行配置时，已经配置的VPN实例不存在。
The keepalive time must be less than the hold time. 保活时间必须小于保持时间。	The keepalive time for the specified MSDP peer connection must be less than the hold time. 配置MSDP对等体会话的保活时间必须小于保持时间。
Configuration can be executed only on public network. 仅在公网中支持该配置。	In the case of multiple instances, only public network allows configuration. 多实例情况下，仅允许在公网中进行相关配置。

        </IPv6Member>
      </Members>
    </Group>
  </Groups>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Group number.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
GroupName	Name of the EPG group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Members	EPG members.	Sublist	N/A	N/A

MSEG/Groups/Members/IPv4Member

This table contains information about IPv4 EPG members.

XML structure

Table description

Item	Description
Feature name	MSEG
Table name	Members
Table type	Multi-instance table
Row name	IPv4Member
Restrictions	This table supports only Members functions.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IPv4 address	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
IPv4MaskLen	Length of the IPv4 address mask.	Index	Unsigned integer. Value range: 0 to 32.	
IPv4VRFName	IPv4 VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters. A null string indicates the public instance.	

MSEG/Groups/Members/IPv6Member

This table contains information about IPv6 EPG members.

XML structure

Table description

Item	Description
Feature name	MSEG
Table name	Members
Table type	Multi-instance table
Row name	IPv6Member
Restrictions	This table supports only Members functions.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Address	IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	IPv6 example: 1:2:3:4:5:6:7:8.
IPv6PrefixLen	Length of the IPv6 address prefix.	Index	Unsigned integer. Value range: 0 to 128.	N/A
IPv6VRFName	IPv6 VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters. A null string indicates the public instance.	N/A

MSEG/Global

This table contains information about the microsegmentation function.

XML structure

```
<MSEG>
  <Global>
    <Enable></Enable>
    <ResMode></ResMode>
  </Global>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG

Item	Description
Table name	Global
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the microsegmentation function globally.	Column	Boolean: • **true**. • **false**.	Default:false
ResMode	Configure the resource mode for microsegmentation.	Column	Enumeration: **dual-stack-mode**.	N/A

MSEG/AggGroups

This table contains information about the microsegmentation aggregation.

XML structure

```
<MSEG>
  <AggGroups>
    <AggGroup>
      <BaseID></BaseID>
      <AggGroupName></AggGroupName>
      <MaskLength></MaskLength>
    </AggGroup>
  </AggGroups>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	AggGroups
Table type	Multi-instance table
Row name	None

Item	Description
Restrictions	This table supports only aggregation functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaseID	Group number.	Index	Unsigned integer. Value range: 2 to 65534.	The value can only be even number,but can't be 0.
AggGroupName	Name of the EPG aggregation group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
MaskLength	Wildcard low-order bits.	Column	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of GroupID. Example: BaseID is 16, the MaskLength can be 1,2,3,4.

MSEG/Match

This table contains information about the microsegmentation subnet matching method.

XML structure

```
<MSEG>
  <Match>
    <SubnetMatch></SubnetMatch>
  </Match>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	Match
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubnetMatch	Subnet matching method	Column	Enumeration: • **1**—Longest matching • **2**—Precise matching	Default: Precise matching

Table description

Item	Description
Feature name	MSEG
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Group number.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
GroupName	Name of the EPG group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Members	EPG members.	Sublist	N/A	N/A

MSEG/Groups/Members/IPv4Member

This table contains information about IPv4 EPG members.

XML structure

Table description

Item	Description
Feature name	MSEG
Table name	Members
Table type	Multi-instance table
Row name	IPv4Member
Restrictions	This table supports only Members functions.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IPv4 address	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
IPv4MaskLen	Length of the IPv4 address mask.	Index	Unsigned integer. Value range: 0 to 32.	
IPv4VRFName	IPv4 VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters. A null string indicates the public instance.	

MSEG/Groups/Members/IPv6Member

This table contains information about IPv6 EPG members.

XML structure

Table description

Item	Description
Feature name	MSEG
Table name	Members
Table type	Multi-instance table
Row name	IPv6Member
Restrictions	This table supports only Members functions.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Address	IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	IPv6 example: 1:2:3:4:5:6:7:8.
IPv6PrefixLen	Length of the IPv6 address prefix.	Index	Unsigned integer. Value range: 0 to 128.	N/A
IPv6VRFName	IPv6 VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters. A null string indicates the public instance.	N/A

MSEG/Global

This table contains information about the microsegmentation function.

XML structure

```
<MSEG>
  <Global>
    <Enable></Enable>
    <ResMode></ResMode>
  </Global>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	Global

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the microsegmentation function globally.	Column	Boolean: • **true**. • **false**.	N/A
ResMode	Configure the resource mode for microsegmentation.	Column	Enumeration: **dual-stack-mode.**	N/A

MSEG/AggGroups

This table contains information about the microsegmentation aggregation.

XML structure

```
<MSEG>
  <AggGroups>
    <AggGroup>
      <BaseID></BaseID>
      <AggGroupName></AggGroupName>
      <MaskLength></MaskLength>
    </AggGroup>
  </AggGroups>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	AggGroups
Table type	Multi-instance table
Row name	None
Restrictions	This table supports only aggregation functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaseID	Group number.	Index	Unsigned integer. Value range: 2 to 65534.	The value can only be even number,but can't be 0.
AggGroupName	Name of the EPG aggregation group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
MaskLength	Wildcard low-order bits.	Column	Unsigned integer. Value range: 1 to 15.	The value less than the binary bits of GroupID. Example: BaseID is 16, the MaskLength can be 1,2,3,4.

MSEG/Match

This table contains information about the microsegmentation subnet matching method.

XML structure

```
<MSEG>
  <Match>
    <SubnetMatch></SubnetMatch>
  </Match>
</MSEG>
```

Table description

Item	Description
Feature name	MSEG
Table name	Match
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubnetMatch	Subnet matching method	Column	Enumeration: • **1**—Longest matching • **2**—Precise matching	Default: Precise matching

Table description

Item	Description
Feature name	MVPN
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name.	Index	String. Length: 1 to 31 characters.	Public networks are not supported.
NetworkType	Type of VPN	Index	Enumeration: • **1**—Normal. • **2**—EVPN.	Used to distinguish the original ordinary MVPN from the new EVPN.
PmsiTunnelType	Tunnel mode	Index	Enumeration: • **1**—MDT. • **2**—RSVP-TE. • **3**—MLDP. • **4**—BIER. • **5**---Ingress-replication	The current software version supports only MDT, BIER, and Ingress-replication modes.
PrivateAF	MVPN address family View	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	When this column is created, other columns are created and assigned default values.
SourceInterface	MVPN source interface	N/A	Unsigned integer.	N/A.
EvpnDrniGroup	Whether to use the common virtual address of the DRNI system as the IP address of MVXLAN source interface	N/A	Boolean: • **true**—Yes. • **false**—No (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultGroup	Default group address	N/A	String, dotted decimal notation. Value range: 224.0.1.0 to 239.255.255.255.	It cannot be included in other Data-Group addresses, nor can it be the same as other Default-Group addresses.
DataGroupAddr	Multicast group address	N/A	String, dotted decimal notation. Value range: 224.0.1.0 to 239.255.255.255.	It cannot be included in other DataGroup addresses, nor can it be the same as other Default-Group addresses.
DataGroupMask	Multicast group mask	N/A	Unsigned integer. Value range: 1 to 32.	It varies from device to device.
DataGroupSwitchThreshold	Switchover threshold	N/A	Unsigned integer. Value range: 0 to 16777216. Default: 0.	All DataGroup-related attribute columns need to ensure that Addr and Mask are specified.
DataGroupPrivateSgAcl	Advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	All DataGroup-related attribute columns need to ensure that Addr and Mask are specified.
DataDelay	Delay time before switching from the default MDT to a data	N/A	Unsigned integer. Value range: 1 to 60. Default: 3.	N/A.
DciEnable	Enabling status of DCI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
DciSwitchDelay	Delay time before restoring	N/A	Unsigned integer. Value range: 1 to 3600.	N/A.
SpmsiAdvertiseSourceActive	Enabling status of advertising active multicast source information by S-PMSI A-D routes	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
DrniLocalAddress	IP address used by the local VTEP in the DR system	N/A	String, dotted decimal notation. Value range: 1.0.0.0 to 223.255.255.255.	You must specify both this column and the DrniRemoteAddress column.
DrniRemoteAddress	IP address used by the peer VTEP in the DR system	N/A	String, dotted decimal notation. Value range: 1.0.0.0 to 223.255.255.255.	You must specify both this column and the DrniLocalAddress

Column name	Column description	Column type	Data type and restrictions	Remarks
				column.
InclusiveDynamic	Enable the inclusive tunnel dynamic.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
InclusiveBierSubDomain	Bier sub-domain number.	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	You can configure this column only when the value of InclusiveDynamic is true.
InclusiveBierBsl	Bit string length	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	You can configure this column only when the value of InclusiveDynamic is true. The value range varies by device model. The value can be 64, 128, 256, or other.
SelectiveDynamic	Enabling status of dynamic selective tunnel creation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
SelectiveBierSubDomain	BIER sub-domain ID	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	You can configure this column only when the value of SelectiveDynamic is true.
SelectiveBierBsl	Bit string length	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	You can configure this column only when the value of SelectiveDynamic is true. The value range varies by device model. The value can be 64, 128, 256, or other.
SelectiveAcl	ACL number or ACL name	N/A	acl number : Unsigned integer. Value range: 3000 to 3999. acl name : String. Length: 1 to 63 characters.	You can configure this column only when the value of SelectiveDynamic is true.
SelectiveThreshold	Threshold value	N/A	Unsigned integer. Value range: 0 to 16777216. Default: 0.	You can configure this the column only when the value of SelectiveDynamic is true.
SelectiveLimit	Maximum number of selective tunnels	N/A	Unsigned integer. Value range: 1 to 8192.	You can configure this column only when the value of

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 256.	SelectiveDynamic is true.
SelectiveHolddown	Holddown time	N/A	Unsigned integer. Value range: 0 to 180. Default: 60.	N/A
AutoDiscoveryInterAs	Enabling status of inter-AS auto-discovery	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
TunnelSourceMulticastPrefix	Name of a multicast service	N/A	String. Length: 1 to 31 characters.	You must configure this column together with TunnelSourceServiceId.
TunnelSourceServiceId	ID of the multicast service.	N/A	Unsigned integer. Value range: 0 to 1048575. Default: 0.	You must configure this column together with TunnelSourceMulticastPrefix.
CMulticastFrrEnable	Enabling c-multicast Frr	N/A	Boolean: • **true**—Enabled. **false**—Disabled (default).	Support BIER mode only.
CMulticastFrrAcl	ACL number or ACL name	N/A	acl number : Unsigned integer. Value range: 3000 to 3999. acl name : String. Length: 1 to 63 characters.	You can configure this column only when the value of CMulticastFrrEnable is true.
EvpnMLagGroup	Whether to use the common virtual address of the M-LAG system as the IP address of MVXLAN source interface	N/A	Boolean: • **true**—Yes. • **false**—No (default).	N/A
MLagLocalAddress	IP address used by the local VTEP in the M-LAG system	N/A	String, dotted decimal notation. Value range: 1.0.0.0 to 223.255.255.255.	You must specify both this column and the MLagRemoteAddress column.
MLagRemoteAddress	IP address used by the peer VTEP in the M-LAG system	N/A	String, dotted decimal notation. Value range: 1.0.0.0 to 223.255.255.255.	You must specify both this column and the MLagLocalAddress column.

Message	Explanation
MD is not configured. MD尚未配置。	MD view is not enabled yet. MD 视图没有被使能。
The number of muticast-domain instances has reached the upper limit. 多播域实例数已达到上限。	When this instance is created, the number of instances in the multicast-domain has reached the upper limit. 创建一个实例的时候，多播域实例数已达到上限。
Configuration failed,MTunnel resources are insufficient. 配置失败，MTunnel资源不足。	Configuration failure due to insufficient MTunnel resources. 因为MTunnel资源不足导制的配置失败。
VPN-Instance does not exist. 不存在的VPN实例。	This is a vpn-instance that hasn't been created yet . 这是一个还没有被创建出来的VPN实例。
Views are not allowed to be modified in view deletion. 视图删除中不允许修改视图。	The configuration is being cleared and modifications to this object are not allowed. 正在清除相关配置，不允许对该对象修改。
Invalid paramenter. 无效的参数。	The configuration doesn’t meet the requirements, please check your configuration. 配置不符合要求，请确认。
Failed to obtain MD configuration data. 获取MD配置数据失败。	Unable to obtain MD module related running configuration from background. 无法从后台获取MD模块相关运行配置。
DefaultGroup address configuration has been used. DefaultGroup地址配置已被使用。	DefaultGroup address configuration has been used by other instance objects and cannot be repeated. DefaultGroup地址配置已经被别的实例对象使用过，不可重复。
DataGroup address configuration has been used. DataGroup地址配置已被使用。	DataGroup address configuration has been used by other instance objects and cannot be repeated. DataGroup地址配置已经被别的实例对象使用过，不可重复。
VPN instance with a different mode already exists. 具有不同模式的VPN实例已存在。	This VPN instances have been assigned another mode. 这个VPN实例已经被分配了别的模式。
The default-group can't be the same as that of another VPN instance. default-group不能与另一个VPN实例的组相同。	Cannot have the same default-group between different instances. 不同实例之间不可以有相同的default-group。
Conflict with L2 VXLAN mtunnel. 与L2 vxlan mtunnel冲突。	Conflict with L2 VXLAN mtunnel. 与L2 vxlan mtunnel冲突。
The default-group can't be included in the data-groups of VPN instance. default-group不能包含在VPN实例的data-group中。	Default-Group address and Data-Group address cannot be the same. Default-Group地址和Data-Group地址不可以相同。
The data-groups can't contain the default-group of VPN instance. data-group不能包含在VPN实例的default-group中。	Default-Group address and Data-Group address cannot be the same. Default-Group地址和Data-Group地址不可以相同。

The data-groups overlap with those of VPN instance. data-group与VPN实例的data-group重叠。	Data-Group cannot be the same in different instances. 不同实例中的Data-Group不可以相同
The configuration must be same in IPV4 and IPV6. IPv4和IPv6中的配置相同。	This configuration is the same in IPv4 and IPv6 address families. 此配置在IPv4和IPv6地址族中相同。
Can't specify an RSVP-TE P2MP tunnel interface as an MVPN souce interface. Please specify another interface. 无法将rsvp-te p2mp隧道接口指定为mvpn源接口。	The MVPN instance source interface does not support RSVP-TE and p2mp tunnel interfaces. MVPN实例源接口不支持rsvp-te和p2mp隧道接口。
The local IP address is invalid. 本地IP地址无效	The local IP address must be a unicast address. 本地IP地址必须是单播地址。
The remote IP address is invalid. 远端IP地址无效。	The remote IP address must be a unicast address. 远端IP地址必须是单播地址。
The parameter is incomplete. 参数不全。	Both the local IP address and remote IP address must be configured. 本地IP地址与远端IP地址必须同时配置。
The parameter SourceInterface must be configured at the same time. 需要同时配置参数SourceInterface。	To specify the EvpnMLagGroup parameter, you must first specify the SourceInterface parameter. 参数EvpnMLagGroup必须与SourceInterface一起配置。
The sub-domain and BSL must be same for selective tunnels and inclusive tunnels. 相容性隧道和选择性隧道的BIER子域编号及比特串长度必须保持一致。	Selective tunnels and inclusive tunnels must have the same sub-domain ID and BSL.. 相容性隧道和选择性隧道的BIER子域编号及比特串长度必须保持一致。
The value is too large because of insufficient memory. 隧道数量太大，存储空间不够。	The value is too large because of insufficient memory. Memory is not enough. 隧道数量太大，存储空间不够。
The service IDs must be different in IPv4 and IPv6. IPv4 和 IPv6 的组播服务ID必须不同。	The service IDs must be different in IPv4 and IPv6. IPv4 和 IPv6 的组播服务ID必须不同。
The service ID is already used by another VPN instance. 这个组播服务ID已经配置于其它VPN实例。	A service ID can be used by only one VPN instance. 这个组播服务ID不能重复配置于不同的VPN实例里。
The multicast service ID exceeds the limit. 组播服务ID长度超过限制。	The multicast service ID exceeds the limit. 组播服务ID长度超过限制。
When the InclusiveDynamic is false , the inclusive tunnel should not be configured. 关闭相容性隧道动态模式时，不能存在配置。	When the InclusiveDynamic is false , the inclusive tunnel should not have be configured. 关闭相容性隧道动态模式时，不能存在配置。
When the SelectiveDynamic is false , the selective tunnel should not be configured. 关闭选择性隧道动态模式时，不能存在配置。	When the SelectiveDynamic is false , the selective tunnel should not be configured. 关闭选择性隧道动态模式时，不能存在配置。
The TunnelSourceMulticastPrefix and the TunnelSourceServiceId should be configured at the same time. 组播服务名称和组播服务ID必须同时配置。	The TunnelSourceMulticastPrefix and the TunnelSourceServiceId should be configured at the same time. 组播服务名称和组播服务ID必须同时配置。
When the CMulticastFrrEnable is false , the C-Multicast FRR should not be configured.	When the CMulticastFrrEnable is false , the C-Multicast FRR should not be configured.

关闭组播快速重路由时，不能存在配置。	关闭组播快速重路由时，不能存在配置。

MVPN/MulticastPrefixes

Message	Explanation
The prefix address, prefix mask, and service ID length must be configured simultaneously. 必须同时配置前缀地址、前缀掩码和服务ID长度。	The prefix address, prefix mask, and service ID length must be configured simultaneously. 必须同时配置前缀地址、前缀掩码和服务 ID 长度。
The sum of the prefix mask length and the service ID length cannot exceed 128. 前缀掩码长度和服务ID长度之和不能超过128。	The sum of the prefix mask length and service ID length cannot exceed 128. 配置的前缀掩码长度和服务ID长度之和不能超过128。
The prefix ipv6 address is being used. 前缀IPv6地址被占用。	You must specify an unused prefix IPv6 address. 配置的前缀IPv6地址不能被占用。
The service ID length is too small. 配置的服务ID长度过小。	The service ID length is small. 配置的服务ID长度过小。

NAT

NAT/ResetNatStaticLoadBalance

Re-balance the load of static NAT on multiple CPUs

XML structure

```
<NAT>
  <ResetNatStaticLoadBalance>
    <Reset></Reset>
  </ResetNatStaticLoadBalance>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetNatStaticLoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Data type and restrictions
Reset	Re-balance the load of static NAT.	This column must be empty.

NAT/ResetNatDynamicLoadBalance

Re-balance the load of dynamic NAT on multiple CPUs

XML structure

```
<NAT>
  <ResetNatDynamicLoadBalance>
    <Dynamic>
      <AddrGroupNumber></AddrGroupNumber>
      <Reset></Reset>
    </Dynamic>
```

```
  </ResetNatDynamicLoadBalance>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetNatDynamicLoadBalance
Table type	Single-instance table
Row name	Dynamic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Re-balance the load of dynamic NAT.	N/A	This column must be empty.
AddrGroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.

NAT/ResetInboundStaticCount

This table contains information about one-to-one or net-to-net mappings for inbound static NAT.

XML structure

```
<NAT>
  <ResetInboundStaticCount>
    <Mapping>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <StartIpv4Address></StartIpv4Address>
        <EndIpv4Address></EndIpv4Address>
        <GlobalObjGrp></GlobalObjGrp>
      </GlobalInfo>
      <LocalInfo>

        <LocalObjGrp></LocalObjGrp>
      </LocalInfo>
    </Mapping>
  </ResetInboundStaticCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetInboundStaticCount
Table type	Single-instance table
Row name	Mapping
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalInfo	External network address pool information	Data structure.	Members include: • GlobalVRF. • StartIpv4Address. • EndIpv4Address. • GlobalObjGrp	EndIpv4Address is optional when configure one-to-one mapping for inbound static NAT.
GlobalVRF	VRF of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The StartIpv4Address cannot be greater than the EndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses.
EndIpv4Address	End IPv4 address of the external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6.
GlobalObjGrp	Object group of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
LocalInfo	Internal network address information	Data structure.	Members include: • LocalVRF. • Ipv4Address. • Ipv4PrefixLength. • LocalObjGrp	N/A
LocalVRF	VRF of internal address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	An internal network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	The prefix length of the internal network address	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for inbound static NAT.
LocalObjGrp	Object group of internal address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A

NAT/ResetOutboundStaticCount

This table contains information about one-to-one or net-to-net mappings for outbound static NAT.

XML structure

```
<NAT>
  <ResetOutboundStaticCount>
    <Mapping>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <StartIpv4Address></StartIpv4Address>
        <EndIpv4Address></EndIpv4Address>
        <LocalObjGrp></LocalObjGrp>
      </LocalInfo>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>

GlobalObjGrp	Object group of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A

NAT/ResetInboundDynamicCount

This table contains the inbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <ResetInboundDynamicCount>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
    </Interface>
  </ResetInboundDynamicCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetInboundDynamicCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	An ACL can be used by only one inbound dynamic NAT rule an

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface.

NAT/ResetOutboundDynamicCount

This table contains the outbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <ResetOutboundDynamicCount>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
    </Interface>
  </ResetOutboundDynamicCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetOutboundDynamicCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix”

Column name	Column description	Column type	Data type and restrictions	Remarks
				in Ifmgr NETCONF XML API Configuration Reference.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	If you do not specify any ACL, NAT translates all packets, else translates the packets which matches the ACL. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number. An ACL can be used by only one outbound dynamic NAT rule an interface. This column can be null.

NAT/ResetServerCount

This table contains information about mappings between the IP address and port of internal servers to NAT address and port for the internal servers.

XML structure

```
<NAT>
  <ResetServerCount>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalStartIpv4Address></GlobalStartIpv4Address>
        <GlobalEndIpv4Address></GlobalEndIpv4Address>
        <GlobalStartPortNumber></GlobalStartPortNumber>
        <GlobalEndPortNumber></GlobalEndPortNumber>
        <GlobalIfIndex></GlobalIfIndex>
      </GlobalInfo>
    </Interface>
  </ResetServerCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetServerCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: • GlobalVRF. • GlobalStartIpv4Address. • GlobalEndIpv4Address. • GlobalStartPortNumber. • GlobalEndPortNumber. • GlobalIfIndex.	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater

Column name	Column description	Column type	Data type and restrictions	Remarks
				than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index or interface name, The IP address of the interface is used as the NAT address for the internal server.	N/A	String. case-sensitive. Length: 1 to 99 characters.	Only loopback interfaces and " IfIndex " are supported. Some versions support interface name. For relevant information, The IP address of the interface is used as the NAT address. Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				takes effect. This index can be null.

NAT/ResetOutboundPortBlockCount

This table contains the port block groups applied to the outbound direction of the interfaces.

XML structure

```
<NAT>
  <ResetOutboundPortBlockCount>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
    </Interface>
  </ResetOutboundPortBlockCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetOutboundPortBlockCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface. After you apply a port block group to an interface, the system automatically computes the IP-to-port block mappings and creates entries for them. When a private IP address accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.

NAT/PolicyRuleMove

Move the policy rules of order.

XML structure

```
<NAT>
  <PolicyRuleMove>
    <Rule>
      <SrcRuleName></SrcRuleName>
      <DstRuleName></DstRuleName>
      <Direction></Direction>
    </Rule>
  </PolicyRuleMove>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMove
Table type	Muitl-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcRuleName	source policy rule	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
DstRuleName	destination policy rule	Index	String. case insensitive. Length: 1 to 63 characters.	This column can be null.
Direction	Move the rule to before or after the objective rule	Index	Boolean: • true—YES • false—NO(default).	If the direction is false and the DstRulename is null, the srcRuleName is moved to the front If the direction is true and the DstRulename is null, the srcRuleName is moved to the end.

NAT/ResetPolicyRuleCount

This table contains NAT policy information.

XML structure

```
<NAT>
  <ResetPolicyRuleCount>
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </ResetPolicyRuleCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetPolicyRuleCount
Table type	Single-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

NAT/ResetObjServerCount

This table contains the object server NAT rules on interfaces.

XML structure

```
<NAT>
  <ResetObjServerCount>
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </ResetObjServerCount>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ResetObjServerCount
Table type	Single-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT Object Server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

NAT/CreateServer

This table contains information about mappings between the private IP address and port of internal servers to NAT address and port for the internal servers.

XML structure

```
<NAT>
  <CreateServer>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalStartIpv4Address></GlobalStartIpv4Address>
        <GlobalEndIpv4Address></GlobalEndIpv4Address>

        <LocalVRF></LocalVRF>
        <LocalStartIpv4Address></LocalStartIpv4Address>
        <LocalEndIpv4Address></LocalEndIpv4Address>
        <LocalStartPortNumber></LocalStartPortNumber>
        <LocalEndPortNumber></LocalEndPortNumber>
      </LocalInfo>
    </Interface>
  </CreateServer>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	CreateServer
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: • GlobalVRF. • GlobalStartIpv4Address. • GlobalEndIpv4Address. • GlobalStartPortNumber. • GlobalEndPortNumber. • GlobalIfIndex.	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The *GlobalStartPortNumber* cannot be greater than the *GlobalEndPortNumber*. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index.	Index	Unsigned integer.	Only loopback interfaces and "IfIndex"

Column name	Column description	Column type	Data type and restrictions	Remarks
	The IP address of the interface is used as the NAT address of the internal server.			are supported. If the eIP address of the interface is used as the NAT address, Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicting address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect. This index can be null.
LocalInfo	Internal network address information	Data structure.	Members include: • LocalVRF. • LocalStartIpv4Address. • LocalEndIpv4Address. • LocalStartPortNumber. • LocalEndPortNumber. • LocalSrvGroupNumber.	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4Address	End IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.6.
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	The *LocalStartPortNumber* cannot be greater than the *LocalEndPortNumber*. If they are the same, the internal port number range has only one port. The internal port number range can include a maximum of 255 ports.
LocalEndPort	End port number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Number	of an internal port range		Value range: 1 to 65535.	

NAT/DeleteServer

This table contains information about mappings between the private IP address and port of internal servers to NAT address and port for the internal servers.

XML structure

```
<NAT>
  <DeleteServer>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalStartIpv4Address></GlobalStartIpv4Address>
        <GlobalEndIpv4Address></GlobalEndIpv4Address>
        <GlobalStartPortNumber></GlobalStartPortNumber>
        <GlobalEndPortNumber></GlobalEndPortNumber>
        <GlobalIfIndex></GlobalIfIndex>
      </GlobalInfo>
    </Interface>
  </DeleteServer>
</NAT>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface except loopback, NULL, FC, FCB and encrypt interface.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: • GlobalVRF. • GlobalStartIpv4Address. • GlobalEndIpv4Address. • GlobalStartPortNumber. • GlobalEndPortNumber. • GlobalIfIndex.	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The *GlobalStartPortNumber* cannot be greater than the *GlobalEndPortNumber*. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port	Index	Unsigned integer.	This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
	number range		Value range: 1 to 65535.	
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	Only loopback interfaces and " IfIndex " are supported. The IP address of the interface is used as the NAT address. Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect. This index can be null.

NAT/CreateOutbound

This table contains the outbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <CreateOutbound>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <VRF></VRF>
    </Interface>
  </CreateOutbound>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	CreateOutbound
Table type	Multi-instance table

Item	Description
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	NAT translates the packets that match the ACL. If you do not specify any ACL, NAT translates all packets. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number. An ACL can be used by only one outbound dynamic NAT rule an interface. This column can be null.
VRF	VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.

NAT/DeleteOutbound

This table contains the outbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <DeleteOutbound>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
```

```
    </Interface>
  </DeleteOutbound>
</NAT>
```

NAT

NAT/AddrGroups

This table contains information about NAT address groups.

XML structure

```
<NAT>
  <AddrGroups>
    <AddrGroup>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <ExtendedBlockNumber></ExtendedBlockNumber>
      <StartPort></StartPort>
      <EndPort></EndPort>
      <ExtendedBlockMultiGlobalIp></ExtendedBlockMultiGlobalIp>
    </AddrGroup>
  </AddrGroups>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	AddrGroups
Table type	Multi-instance table
Row name	AddrGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Master/backup mode: No VRRP keyword is required. Load sharing method:

Column name	Column description	Column type	Data type and restrictions	Remarks
				Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT address pool address, so that traffic is transmitted on the active device in the backup group. When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the traffic flow to be transmitted on the active device in the specified VRRP backup group.
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	To configure dynamic NAT444, you must configure port block for the referenced NAT address group. With dynamic NAT444 configured, when a private IP address initiates a connection to the public network, the NAT444 gateway assigns it a public IP address and a port block, and creates an entry for the mapping. For subsequent connections from the private IP address, the NAT444 gateway translates the private IP address to the mapped public IP address and the ports to ports in the mapped port block. In a NAT address group, the port block size cannot be larger than the number of ports in the port range. Configure this item before configuring *ExtendedBlockNumber*, deleting this item also deletes *ExtendedBlockNumber*.

Column name	Column description	Column type	Data type and restrictions	Remarks
ExtendedBlockNumber	The number of extended port blocks.	N/A	Unsigned integer. Value range: 1 to 5.	With this parameter specified, when a private IP address accesses the public network, but the ports in the mapped port block are all occupied, the NAT gateway extends port blocks for the private IP address. A user can contain up to *ExtendedBlockNumber*+1 port blocks at the same time. If you want to configure this you must first configure the *PortBlocksize*.
StartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	Set *StartPort* and *EndPort* to their default values to define a default port range. The *StartPort* cannot be greater than the *EndPort*. The number of ports in a port range cannot be smaller than the port block size.
EndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A
ExtendedBlockMultiGlobalIp	Whether to set the global IP of the extended port block is different from the global IP of the pre-allocated port block	N/A	Boolean: • true—YES • false—NO	Enabling this command may result in the failure of expansion port block allocation, resulting in insufficient use of public network resources. NAT translation of service traffic fails, resulting in packet loss. However, it can be guaranteed that in the scenario of BRAS user linkage NAT, the public network information of the user expansion port block is the same as the public network information of the pre-allocated port block. The AAA server requires no special handling. After

Column name	Column description	Column type	Data type and restrictions	Remarks
				disabling it, the public network resources can be fully utilized.

NAT/AddrGroupMembers

This table contains information about the NAT address group members.

XML structure

```
<NAT>
  <AddrGroupMembers>
    <GroupMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupMember>
  </AddrGroupMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	AddrGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are the same, the

Column name	Column description	Column type	Data type and restrictions	Remarks
				group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

NAT/AddrGroupExcludeMembers

This table contains information about the NAT address group exclude members.

XML structure

```
<NAT>
  <AddrGroupExcludeMembers>
    <GroupExcludeMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupExcludeMember>
  </AddrGroupExcludeMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	AddrGroupExcludeMembers
Table type	Multi-instance table
Row name	GroupExcludeMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group exclude member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group exclude member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

NAT/InboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <InboundDynamicRules>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <AddrGroupNumber></AddrGroupNumber>
      <VRF></VRF>
      <NoPAT></NoPAT>
      <Reversible></Reversible>
      <AutoAddRoute></AutoAddRoute>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
      <Counting></Counting>
    </Interface>
```

```
  </InboundDynamicRules>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	InboundDynamicRules
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule an interface.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat inbound configuration in both PAT and NO-PAT modes. This column is affirmatively chosen item.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: • true—YES • false—NO(default).	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP

Column name	Column description	Column type	Data type and restrictions	Remarks
				ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO(default).	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry. This column can only be configured in NO-PAT mode.
AutoAddRoute	Whether adds a route to the NAT address when address translation is performed for a packet.	N/A	Boolean: • true—YES • false—NO(default).	The output interface is the NAT interface and the next-hop is the source address before translation. If you do not specify this keyword, you must manually add the route. It is recommended that you specify this keyword. This column can only be configured in NO-PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Counting	Whether open the switch of matching the inbound dynamic NAT rule statistics	N/A	Boolean: • true—YES • false—NO(default)	N/A

NAT/OutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <OutboundDynamicRules>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <AddrGroupNumber></AddrGroupNumber>
      <VRF></VRF>

Table description

Item	Description
Feature name	NAT
Table name	InboundStaticMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalInfo	External network address pool information	Data structure.	Members include: • GlobalVRF. • StartIpv4Address. • EndIpv4Address.	EndIpv4Address is optional when configure one-to-one mapping for inbound static NAT.
GlobalVRF	VRF of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The StartIpv4Address cannot be greater than the EndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses.
EndIpv4Address	End IPv4 address of the external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6.

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalInfo	Internal network address information	Data structure.	Members include: • GlobalVRF. • Ipv4Address. • Ipv4PrefixLength.	N/A
LocalVRF	VRF of internal address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
Ipv4Address	An internal network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	The prefix length of the internal network address	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for inbound static NAT.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify an ACL, the source addresses of all incoming packets and the destination addresses of all outgoing packets are translated. If you specify an ACL and do not specify the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. The destination addresses of packets originating from internal hosts to the external are not translated. If you specify both an ACL and the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. If packets originating from internal hosts to the external are permitted by ACL reverse matching, the destination address is translated.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO(default).	Support for this keyword depends on the device model. This column can only be configured when *ACLNumber* is also configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the static mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the static mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
Counting	Whether open the switch of matching the NAT inbound static mapping statistics	N/A	Boolean: • true—YES • false—NO(default).	N/A

Table description

Item	Description
Feature name	NAT
Table name	ServerOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: • GlobalVRF. • GlobalStartIpv4Address. • GlobalEndIpv4Address. • GlobalStartPortNumber. • GlobalEndPortNumber. • GlobalIfIndex.	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The *GlobalStartPortNumber* cannot be greater than the *GlobalEndPortNumber*. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	Only loopback interfaces and " IfIndex " are supported. The IP address of the interface is used as the NAT address. Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect. This index can be null.
LocalInfo	Internal network address information	Data structure.	Members include: • LocalVRF. • LocalStartIpv4Address. • LocalEndIpv4Address. • LocalStartPortNumber. • LocalEndPortNumber. • LocalSrvGroupNumber.	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this

Column name	Column description	Column type	Data type and restrictions	Remarks
				option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4Address	End IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.6.
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	The *LocalStartPortNumber* cannot be greater than the *LocalEndPortNumber*. If they are the same, the internal port number range has only one port. The internal port number range can include a maximum of 255 ports.
LocalEndPortNumber	End port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LocalSrvGroupNumber	The internal server group to which the internal server belongs.	N/A	Unsigned integer. Value range: 0 to 65535.	With this parameter, the load sharing NAT Server feature is configured. Support for the value range depends on the device model.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you specify an ACL, only packets permitted by the ACL can be translated by using the mapping. Support for this parameter depends on the device model.
Reversible	Whether reverse address translation is supported.	N/A	Boolean: • true—YES • false—NO(default)	Reverse address translation applies to connections actively initiated by internal hosts to the external host. It uses existing mappings to translate the destination address for packets of these connections if the packets are permitted by ACL reverse matching.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the

Column name	Column description	Column type	Data type and restrictions	Remarks
				VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server. In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
Counting	Whether open the switch of matching the NAT server statistics	N/A	Boolean: • true—YES • false—NO(default)	N/A
RuleName	Name of the NAT Server	N/A	String, case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.

The following table describes the address-port mappings between an external network and an internal network for NAT Server. The mappings which is not listed is not supported and will be treated as configuration conflict.

Noun explanation:

Consecutive external addresses: *GlobalEndIpv4Address* is greater than *GlobalStartIpv4Address*.

Single external address: *GlobalEndIpv4Address* is equal to *GlobalStartIpv4Address*, or *GlobalEndIpv4Address* is null.

Consecutive external ports: *GlobalEndPortNumber* is greater than *GlobalStartPortNumber*.

Single external port: *GlobalEndPortNumber* is equal to *GlobalStartPortNumber*, or *GlobalEndPortNumber* is null.

Consecutive internal addresses: *LocalEndIpv4Address* is greater than *LocalStartIpv4Address*.

Single internal address: *LocalEndIpv4Address* is equal to *LocalStartIpv4Address*, or *LocalEndIpv4Address* is null.

Consecutive internal ports: *LocalEndPortNumber* is greater than *LocalStartPortNumber*.

Single internal port: *LocalEndPortNumber* is equal to *LocalStartPortNumber*, or *LocalEndPortNumber* is null.

External network	Internal network
An external address	An internal address.
An external address and an external port number	An internal address and an internal port number.
An external address and *N* consecutive external port numbers	An internal address and an internal port number.
	N consecutive internal addresses and an internal port number.
	An internal address and *N* consecutive internal port numbers.
N consecutive external addresses	An internal address.
	N consecutive internal addresses.
N consecutive external addresses and an external port number	An internal address and an internal port number.
	N consecutive external addresses and an internal port number.
	An internal address and *N* consecutive internal port numbers.
An external address and an external port number	An internal server group.
An external address and *N* consecutive external port numbers	
N consecutive external addresses and an external port number	

NAT/PortBlockGroups

GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Master/Backup mode: No VRRP keyword is required. Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT port group address so that the traffic is transmitted on the active device in the backup group. When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the traffic flow to be transmitted on the active device in the specified VRRP backup group.
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The

Column name	Column description	Column type	Data type and restrictions	Remarks
				port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	Set *GlobalStartPort* and *GlobalEndPort* to their default values to define a default port range. The *GlobalStartPort* cannot be greater than the *GlobalEndPort*. The port range must include all ports that the public IP addresses use for address translation. The number of ports in a port range cannot be smaller than the port block size.
GlobalEndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A

NAT/PortBlockGroupLocalMembers

This table contains the information of private IP address members in NAT port block groups.

XML structure

```
<NAT>
  <PortBlockGroupLocalMembers>
    <LocalMember>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </LocalMember>
  </PortBlockGroupLocalMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT

Item	Description
Table name	PortBlockGroupLocalMembers
Table type	Multi-instance table
Row name	LocalMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple private IP address members in a port block group, but they cannot overlap. Private IP address members in different port block groups can overlap. For static NAT444, in a port block group, the number of private IP addresses cannot be larger than the number of assignable port blocks. Otherwise, some private IP addresses cannot obtain port blocks.
VRF	VRF to which the private IP address member belong.	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the private IP address member does not belong to any VPN.
StartIpv4Address	Start IPv4 address of the private IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the private IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one private IP address.

NAT/PortBlockGroupGlobalMembers

This table contains the information of public IP address members in NAT port block groups.

XML structure

```
<NAT>
  <PortBlockGroupGlobalMembers>
    <GlobalMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GlobalMember>
  </PortBlockGroupGlobalMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupGlobalMembers
Table type	Multi-instance table
Row name	GlobalMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple public IP address members in a port block group, but they cannot overlap. Public IP address members in different port block groups can overlap. But the port ranges for overlapped members in different port block groups cannot overlap. The number of port blocks that a public IP address can assign is determined by dividing the number of ports in

Column name	Column description	Column type	Data type and restrictions	Remarks
				its port range by the port block size.
StartIpv4Address	Start IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one public IP address.

NAT/OutboundPortBlockOnInterfaces

This table contains the port block groups applied to the outbound direction of the interfaces.

XML structure

```
<NAT>
  <OutboundPortBlockOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
      <Counting></Counting>
    </Interface>
  </OutboundPortBlockOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	OutboundPortBlockOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface. After you apply a port block group to an interface, the system automatically computes the IP-to-port block mappings and creates entries for them. When a private IP address accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.
Counting	Whether open the switch of matching the NAT portblock group statistics	N/A	Boolean: • true—YES • false—NO(default).	N/A

NAT/DNSMappings

This table contains the mappings about the domain name of an internal server to the public IP address, public port number, and protocol type of the server.

XML structure

```
<NAT>
  <DNSMappings>
    <MapInfo>
      <Domain></Domain>
      <Protocol></Protocol>
      <Ipv4Address></Ipv4Address>
      <IfIndex></IfIndex>
      <PortNumber></PortNumber>
    </MapInfo>
```

```
  </DNSMappings>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	DNSMappings
Table type	Multi-instance table
Row name	MapInfo
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The domain name of an internal server.	Index	String, case-sensitive. Length: 1 to 253 characters.	A domain name is a dot-separated that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can contain at most 253 characters, and each separated string contains no more than 63 characters.
Protocol	The type of the protocol used by the internal server.	N/A	Enumeration: • 6—TCP. • 17—UDP.	This column is affirmatively chosen item.
Ipv4Address	The public IP address used by the internal server to provide services to the external network.	N/A	String, dotted decimal notation.	Example: 1.1.1.6. The Ipv4Address and IfIndex are two configuration modes, only one mode must be configured.
IfIndex	Interface index	N/A	Unsigned integer.	Enables Easy IP to use the IP address of the interface specified by its index as the public address of the internal server. Only loopback interfaces are supported.
PortNumber	The public port number used by	N/A	Unsigned integer. Value range: 1 to 65535.	This column is affirmatively chosen

Column name	Column description	Column type	Data type and restrictions	Remarks
	the internal server to provide services to the external network.			item.

NAT/ALG

This table contains the protocols for which NAT with ALG is enabled.

XML structure

```
<NAT>
  <ALG>
    <ALGInfo>
      <AppID></AppID>
      <EnableALG></EnableALG>
    </ALGInfo>
  </ALG>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 14. • 0—DNS • 1—FTP. • 2—ICMP-ERROR • 3—H.323 • 4—SIP • 5—TFTP • 6—RTSP	Use ALG with NAT to translate the payload information to ensure the establishment of data connections. NAT translates IP address and port information in packet headers, and ALG processes the fields in application layer payloads. The

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 7—SQLNET • 8—XDMCP • 9—ILS • 10—MGCP • 11—NBT • 12—PPTP • 13—RSH • 14—SCCP	packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.
EnableALG	Whether enable NAT with ALG.	N/A	Boolean: • true—YES • false—NO(default).	N/A

NAT/EIM

This table is about the mapping behavior mode for PAT.

XML structure

```
<NAT>
  <EIM>
    <EnableEIM></EnableEIM>
    <ACLNumber></ACLNumber>
  </EIM>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	EIM
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableEIM	Whether enable **Endpoint-Independent Mapping** (EIM).	N/A	Boolean: • true—YES • false—NO(default).	•**Endpoint-Independent Mapping**—EIM uses the same IP and port mapping for packets from the same source and port to any destination IP and port. An EIM entry is generated to record the IP and port mapping. This behavior allows packets from any external host to access the internal user by using the NAT address and port. This behavior facilitates communication among hosts that connect to different NAT gateways. •**Address and Port-Dependent Mapping**—Uses different IP and port mappings for packets with the same source IP and port to different destination IP addresses and ports. This behavior does not allow packets from an external host to be sent to any NAT address and port unless the internal host has previously sent a packet of the same protocol to that external host. This behavior is secure but inconvenient for communication among hosts connecting to different NAT gateways. This configuration takes effect only on outbound PAT. Address and Port-Dependent Mapping always applies to inbound PAT.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive.	Applies the NAT mapping behavior to packets that are permitted by the ACL. If no ACL is specified, the

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	Endpoint-Independent Mapping applies to all packets. This field is available only when *EnableEIM* is set to true.

NAT/HairpinOnInterfaces

This table contains the interfaces where hairpin is enabled.

XML structure

```
<NAT>
  <HairpinOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableHairpin></EnableHairpin>
    </Interface>
  </HairpinOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	HairpinOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
EnableHairpi	Whether enable	N/A	Boolean:	NAT hairpin allows

Column name	Column description	Column type	Data type and restrictions	Remarks
n	hairpin on the interface		• true—YES • false—NO(default).	internal hosts behind the same NAT device to access each other only after they use the NAT addresses. NAT hairpin functions on the interface that connects the internal network and translates the source and destination IP addresses of a packet on the interface. NAT hairpin typically operates with NAT Server, outbound dynamic NAT, or outbound static NAT.

NAT/LogRule

This table contains NAT log configurations.

XML structure

```
<NAT>
  <LogRule>
    <GlobalLog>
      <EnableGlobalLog></EnableGlobalLog>
      <ACLNumber></ACLNumber>
    </GlobalLog>
    <EnableFlowBeginLog></EnableFlowBeginLog>
    <EnableFlowEndLog></EnableFlowEndLog>
    <ActiveFlowLog>
      <EnableActiveFlowLog></EnableActiveFlowLog>
      <Interval></Interval>
    </ActiveFlowLog>
    <EnablePortBlockAssignLog></EnablePortBlockAssignLog>
    <EnablePortBlockWithDrawLog></EnablePortBlockWithDrawLog>
    <EnableAlarmLog></EnableAlarmLog>
  </LogRule>
</NAT>
```

Table description

Item	Description
Feature name	NAT

Item	Description
Table name	LogRule
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLog	Global log configuration.	Data structure.	Members include: • EnableGlobalLog. • ACLNumber.	N/A
EnableGlobalLog	Whether enable the NAT logging function.	N/A	Boolean: • true—YES • false—NO(default).	Other column takes effect only after you enable NAT logging.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If an ACL is specified, this command logs NAT flows that match the permit statements in the ACL. If no ACL is specified, this configuration logs all NATed data flows. This field is available only when *EnableGlobalLog* is set to true.
EnableFlowBeginLog	Whether enable logging for NAT session establishment events.	N/A	Boolean: • true—YES • false—NO(default).	When a NAT session is established, this function outputs a NAT log.
EnableFlowEndLog	Whether enable logging for NAT session removal events.	N/A	Boolean: • true—YES • false—NO(default).	N/A
ActiveFlowLog	Active flow log configuration.	Data structure.	Members include: • EnableActiveFlowLog. • Interval.	N/A
EnableActiveFlowLog	Whether enable logging for active NAT flows.	N/A	Boolean: • true—YES • false—NO(default).	Configure this column must also configure the *Interval*.
Interval	The interval for logging active NAT flows (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	Configure *EnableActiveFlowLog* to true to configure this item.
EnablePortBl	Whether enable	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ockAssignLog	logging for port block assigning.		• true—YES • false—NO(default).	
EnablePortBlockWithDrawLog	Whether enable logging for port block withdrawing.	N/A	Boolean: • true—YES • false—NO(default).	N/A
EnableAlarmLog	Whether enable logging for alarm.	N/A	Boolean: • true—YES • false—NO(default).	N/A

NAT/HotBackup

This table contains NAT hot backuping configurations.

XML structure

```
<NAT>
  <HotBackup>
    <EnablePortBlock></EnablePortBlock>
  </HotBackup>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	HotBackup
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnablePortBlock	Whether enable hot backuping for port block.	N/A	Boolean: • true—YES • false—NO(default)	N/A

NAT/StaticLoadBalance

This table contains NAT static load balance configurations.

XML structure

```
<NAT>
  <StaticLoadBalance>
    <EnableStaticLoadBalance></EnableStaticLoadBalance>
  </StaticLoadBalance>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	StaticLoadBalance
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaticLoadBalance	Whether enable load balance function for nat static configure.	N/A	Boolean: • true—YES • false—NO(default).	N/A

NAT/ReplyRedirectOnInterfaces

This table contains the interfaces where redirect reply-route is enabled.

XML structure

```
<NAT>
  <ReplyRedirectOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableReplyRedirect></EnableReplyRedirect >
    </Interface>
  </ReplyRedirectOnInterfaces >
```

```
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ReplyRedirectOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	• Unsigned integer.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
EnableReply Redirect	Whether enable redirect reply-route on the interface	N/A	Boolean: • true—YES • false—NO(default).	N/A

NAT/NATPolicy

This table contains informations about NAT policy.

XML structure

```
<NAT>
  <NatPolicy>
    <Policy></Policy>
  </NatPolicy>
```

```
</NAT>
```

Table description

Item	Description

Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String. case insensitive. Length:1 to 63 characters.	N/A

NAT/PolicyRuleMembers

This table contains information about the NAT policy rule members.

XML structure

```
<NAT>
  <PolicyRuleMembers>
    <Rule>
      <RuleName></RuleName>
      <Description></Description>
      <OutboundInterface></OutboundInterface>
      <Action></Action>
      <AddrGroupNumber></AddrGroupNumber>
      <AddrGroupName></AddrGroupName>
      <Reversible></Reversible>
      <PortPreserved></PortPreserved>
      <Disable></Disable>
      <Counting></Counting>
    </Rule>
  </PolicyRuleMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMembers
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy	Index	String. case insensitive. Length:1 to 63 characters.	N/A
Description	Rule description	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
OutboundInterface	Interface index or interface name	N/A	String.case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Action	Action on packets matching the rule	N/A	Enumeration 0—NO-PAT 1—PAT. 2—EasyIp 3—NO-Nat.	You cannot specify an action when you remove or delete a rule . You must specify an action when you replace a rule.or when you merge or create a rule that does not exist. The address of the interface will be used when you chose the EasyIp. Choose NO-Nat when Perform no address translation.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535	When you choose the EasyIP mode,The value of the column must be invalid. An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat outbound configuration in both PAT and NO-PAT modes.
AddrGroupName	NAT address group name	N/A	String.case-sensitive. Length: 1 to 63 characters.	Both AddrGroupName and AddrNumber has been configured, the AddrGroupName will be used.

Column name	Column description	Column type	Data type and restrictions	Remarks
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO(default).	Support for this keyword depends on the device model. This column can only be configured in NO-PAT mode.
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: • true—YES • false—NO(default).	This column can only be configured in PAT mode and EasyIP mode.
Disable	Disable the rule.	N/A	Boolean: • true—YES • false—NO(default)	N/A
Counting	Enabling status of NAT policy match counting	N/A	Boolean: • true—YES • false—NO(default)	N/A

NAT/PolicyRuleMemberSrcObj

This table contains information about the NAT policy rule source object-group.

XML structure

```
<NAT>
  <PolicyRuleMemberSrcObj>

Table description

Item	Description
Feature name	NAT
Table name	ObjServer
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT object server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DstObjGrpList	Destination object group	Data structure	Members include: DstObjGrp	N/A
DstObjGrp	Name of the destination object group	N/A	String, case insensitive. Length: 1 to 31 characters.	The column is repeatable. The maximum is 5.
SrvObjGrpList	Service object group	Data structure	Members include: SrvObjGrp	N/A
SrvObjGrp	Service object group	N/A	String, case insensitive. Length: 1 to 31 characters.	The column is repeatable. The maximum is 1.
Action	Action on packetsmatching the rule	N/A	Enumeration 0—net-to-single.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when

Column name	Column description	Column type	Data type and restrictions	Remarks
				you merge or create a rule that does not exist.
LocalInfo	Internal network address information	Data structure	Members include: • LocalIP LocalPort	N/A
LocalIP	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server. In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Disable	Disable the rule.	N/A	Boolean: • true—YES false—NO(default)	N/A
Counting	Whether enabling counting NAT obj server statistics	N/A	Boolean: • true—YES false—NO(default)	N/A

NAT/ObjServerName

This table contains information about the name of NAT object server.

XML structure

```
<NAT>
  <ObjServerName>
```

```
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </ObjServerName>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ObjServerName
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT object server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

NAT/Nat66

This table contains information about the NAT66 prefix

XML structure

```
<NAT>
  <Nat66>
    <Prefix>
      <IfIndex></IfIndex>
      <TransMode></TransMode>
      <OrigPrefix></OrigPrefix>
      <OrigPrefixLen></OrigPrefixLen>
      <TransPrefix></TransPrefix>
      <TransPrefixLen></TransPrefixLen>
      <TotalNum></TotalNum>
    </Prefix>
  </Nat66>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	Nat66
Table type	Multi-instance table
Row name	Prefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
TransMode	Translate mode	Index	Enumeration: 0—SNAT. 1—DNAT	N/A
OrigPrefix	Original Prefix	Index	Hexadecimal string, colon-separated.	N/A
OrigPrefixLen	The length of OrigPrefix	Index	Unsigned integer. Value range: 1 to 128	N/A
TransPrefix	Translate Prefix	Index	Hexadecimal string, colon-separated.	N/A
TransPrefixLen	The length of transprefix	Index	Unsigned integer. Value range: 1 to 128	N/A

NAT/LinkSwitchReSession

This table contains information about the recreate NAT sessions upon link switchover

XML structure

```
<NAT>
  <LinkSwitchReSession>
    <Enable></Enable>
```

```
  </LinkSwitchReSession>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	LinkSwitchReSession
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	switchover	column	Boolean: • **true**—Yes • **false**—No (default).	NAT sessions upon link switchover

NAT/MAP

This table contains NAT MAP configurations.

XML structure

```
<NAT>
  <MAP>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Interface>
  </MAP>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	MAP
Table type	Multi-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index or name of tunnel interface for MAP.
Enable	Whether enable NAT address translation for MAP.	N/A	Boolean: • true—YES • false—NO.(default)	N/A

Configuration/Profiles/NatProfileAddrGroups

This table contains information about NAT address groups in the profile view. For information about the Configuration and Profiles, see *Comware Configuration NETCONF XML API Configuration Reference*.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <NatProfileAddrGroups>
        <NatProfileAddrGroup>
          <GroupNumber></GroupNumber>
          <GroupName></GroupName>
        </NatProfileAddrGroup>
      </NatProfileAddrGroups>
    </Profile>
  </Profiles>
</Configuration>
```

Table description

Item	Description

Item	Description
Row name	NatProfileAddrGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
GroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	N/A

Configuration/Profiles/NatProfileAddrGroupMembers

This table contains information about the NAT address group members in the profile view. For information about the Configuration and Profiles, see *Comware Configuration NETCONF XML API Configuration Reference*.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <NatProfileAddrGroupMembers>
        <NatProfileAddrGroupMember>
          <GroupNumber></GroupNumber>
          <StartIpv4Address></StartIpv4Address>
          <EndIpv4Address></EndIpv4Address>
        </NatProfileAddrGroupMember>
      </NatProfileAddrGroupMembers>
    </Profile>
  </Profiles>
</Configuration>
```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileAddrGroupMembers

Item	Description
Table type	Multi-instance table
Row name	NatProfileAddrGroupMember
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

Configuration/Profiles/InterfacesProfileConfig/NatProfileInboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces in the profile view. For information about the Configuration and Profiles, see *Comware Configuration NETCONF XML API Configuration Reference*.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <InterfacesProfileConfig>
```

```
      <InterfaceProfileConfig>

    </InterfacesProfileConfig>
  </Profile>
 </Profiles>
</Configuration>
```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileInboundDynamicRules
Table type	Multi-instance table
Row name	NatProfileInboundDynamicRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule on an interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat inbound configuration in both PAT and NO-PAT modes. This column is affirmatively chosen item.
AddrGroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	The same address group number can only use one address group name, and different address group numbers cannot use the same address group name The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether to perform only IP address translation.	N/A	Boolean: • true—YES • false—NO(default).	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether to translate the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO(default).	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry. This column can only be configured in NO-PAT mode.
AutoAddRoute	Whether to add a route to the NAT address when address translation is	N/A	Boolean: • true—YES • false—NO(default).	The output interface is the NAT interface and the next-hop is the source address before translation. If you do

Column name	Column description	Column type	Data type and restrictions	Remarks
	performed for a packet.			not specify this keyword, you must manually add the route. It is recommended that you specify this keyword. This column can only be configured in NO-PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Disable	Whether to enable this dynamic mapping	N/A	Boolean	If this parameter is not specified, the address translation mapping is enabled.
Description	Description of the dynamic mapping	N/A	String, Length: 1 to 63 characters.	Configuring the description information of the dynamic mapping. The description is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
Counting	Whether to enable the dynamic mapping counting	N/A	Boolean	Enable to count each first packet address translation This column can be null.

Configuration/Profiles/nterfacesProfileConfig/NatProfileOutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces in the profile view. For information about the Configuration and Profiles, see *Comware Configuration NETCONF XML API Configuration Reference*.

XML structure

```
<Configuration>

Feature name	NAT
Table name	NatProfileOutboundDynamicRules
Table type	Multi-instance table
Row name	NatProfileOutboundDynamicRule

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify any ACL, NAT translates all packets, else translates the packets which matches the ACL. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number. An ACL can be used by only one outbound dynamic NAT rule an interface. This column can be null.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the nat inbound and nat outbound configurations. It cannot be used by the nat outbound configuration in both PAT and NO-PAT modes. If you do not specify any address group, the IP address of the interface is used as the NAT address. Easy IP is used. This column is affirmatively chosen

Column name	Column description	Column type	Data type and restrictions	Remarks
				item.
AddrGroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	The same address group number can only use one address group name, and different address group numbers cannot use the same address group name The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether to perform only IP address translation.	N/A	Boolean: • true—YES • false—NO(default).	NO-PAT mode can't be configured without AddrGroupNumber. PAT only supports TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether to translate the destination address of a packet that originates from external hosts to the internal host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO(default).	This column can only be configured in NO-PAT mode.
PortPreserved	Whether to preserve the port number for PAT.	N/A	Boolean: • true—YES • false—NO(default).	This column can only be configured in PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark

Column name	Column description	Column type	Data type and restrictions	Remarks
				(''), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Disable	Whether to enable this dynamic mapping	N/A	Boolean	If this parameter is not specified, the address translation mapping is enabled.
Description	Description of the dynamic mapping	N/A	String, Length: 1 to 63 characters.	Configuring the description information of the dynamic mapping. The description is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark (''), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
Counting	Whether to enable the dynamic mapping counting	N/A	Boolean	Enable to count each first packet address translation This column can be null.

NAT

NAT/AddrGroups

This table contains information about NAT address groups.

XML structure

```
<NAT>
  <AddrGroups>
    <AddrGroup>
      <GroupNumber></GroupNumber>
      <Description></Description>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <ExtendedBlockNumber></ExtendedBlockNumber>
      <StartPort></StartPort>
      <EndPort></EndPort>
      <ExtendedBlockMultiGlobalIp></ExtendedBlockMultiGlobalIp>
    </AddrGroup>
  </AddrGroups>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	AddrGroups
Table type	Multi-instance table
Row name	AddrGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	NAT address group description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
VRID	Identifier of the	N/A	Unsigned integer.	• Master/backup

Column name	Column description	Column type	Data type and restrictions	Remarks
	virtual router		Value range: 1 to 255.	mode: No VRRP keyword is required. • Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT address pool address, so that traffic is transmitted on the active device in the backup group. When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the flow of traffic and enable traffic to be transmitted on the active device in the specified VRRP backup group.
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	To configure dynamic NAT444, you must configure port block for the referenced NAT address group. With dynamic NAT444 configured, when a private IP address initiates a connection to the public network, the NAT444 gateway assigns it a public IP address and a port block, and creates an entry for the mapping. For subsequent connections from the private IP address, the NAT444 gateway translates the private IP address to the mapped public IP address and the ports to ports in the mapped port block. In a NAT address group, the port block size cannot be larger than the number of

Column name	Column description	Column type	Data type and restrictions	Remarks
				ports in the port range. Configure this item before configuring *ExtendedBlockNumber*, deleting this item also deletes *ExtendedBlockNumber*.
ExtendedBlockNumber	The number of extended port blocks.	N/A	Unsigned integer. Value range: 1 to 5.	With this parameter specified, when a private IP address accesses the public network, but the ports in the mapped port block are all occupied, the NAT gateway extends port blocks for the private IP address. A user can contain up to *ExtendedBlockNumber*+1 port blocks at the same time. If you want to configure this you must first configure the *PortBlocksize*.
StartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	Set *StartPort* and *EndPort* to their default values to define a default port range. The *StartPort* cannot be greater than the *EndPort*. The number of ports in a port range cannot be smaller than the port block size.
EndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ExtendedBlockMultiGlobalIp	Whether to set the global IP of the extended port block is different from the global IP of the pre-allocated port block	N/A	Boolean: • true—YES • false—NO	Enabling this command may result in the failure of expansion port block allocation, resulting in insufficient use of public network resources. NAT translation of service traffic fails, resulting in packet loss. However, it can be guaranteed that in the scenario of BRAS user linkage NAT, the public network information of the user expansion port block is the same as the public network

Column name	Column description	Column type	Data type and restrictions	Remarks
				information of the pre-allocated port block. The AAA server requires no special handling. After disabling it, the public network resources can be fully utilized.

NAT/AddrGroupHealthCheck

This table contains information about NAT address group health check.

XML structure

```
<NAT>
  <AddrGroupHealthCheck>
    <GroupNumber></GroupNumber>
    <ProbeName></ProbeName>
  </AddrGroupHealthCheck>
</NAT>
```

Table description

Item	Description

Row name	AddrBlock
Restrictions	None

Columns

	Column description	Column type	Data type and restrictions	Remarks
AddrPoolName	NAT address pool name	Index	String, case-sensitive. Length:1 to31characters.	N/A
VxLanID	VXLAN ID	Index	Unsigned integer, Value range: 0-16777215.	N/A
DPAddress	DP address	Index	String, dotted decimal notation.	Example: 11.1.1.2.
StartIpv4Address	Start IPv4 address of the dynamic address block	Index	String, dotted decimal notation.	Example: 1.1.1.1. The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are same, the block member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of block members.
EndIpv4Address	End IPv4 address of the dynamic address block		String, dotted decimal notation.	Example: 1.1.1.6.

NAT/InboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <InboundDynamicRules>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
```

```
      <AddrGroupNumber></AddrGroupNumber>
      <VRF></VRF>
      <NoPAT></NoPAT>
      <Reversible></Reversible>
      <AutoAddRoute></AutoAddRoute>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
    </Interface>
  </InboundDynamicRules>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	InboundDynamicRules
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule an interface.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the NAT inbound and NAT outbound configuration. It cannot be used by the NAT inbound configuration in both PAT and NO-PAT modes. This column is affirmatively chosen

Column name	Column description	Column type	Data type and restrictions	Remarks
				item.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: • true—YES • false—NO.	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO.	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry. This column can only be configured in NO-PAT mode.
AutoAddRoute	Whether adds a route to the NAT address when address translation is performed for a packet.	N/A	Boolean: • true—YES • false—NO.	The output interface is the NAT interface and the next-hop is the source address before translation. If you do not specify this keyword, you must manually add the route. It is recommended that you specify this keyword. This column can only be configured in NO-PAT mode.
`RuleName`	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
`RulePriority`	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
MatchingCount	Number of packets matching the	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	inbound dynamic NAT rule.			
Counting	Whether open the switch of matching the inbound dynamic NAT rule statistics	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/OutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces.

XML structure

```
<NAT>
  <OutboundDynamicRules>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <AddrGroupNumber></AddrGroupNumber>
      <VRF></VRF>
      <NoPAT></NoPAT>
      <Reversible></Reversible>
      <PortPreserved></PortPreserved>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
      <WhetherPersistConfig></WhetherPersistConfig>
    </Interface>
  </OutboundDynamicRules>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	OutboundDynamicRules
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify any ACL, NAT translates all packets, else translates the packets which matches the ACL. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number. An ACL can be used by only one outbound dynamic NAT rule an interface. This column can be null.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the NAT inbound and NAT outbound configurations. It cannot be used by the NAT outbound configuration in both PAT and NO-PAT modes. If you do not specify any address group, the IP address of the interface is used as the NAT address. Easy IP is used. This column is affirmatively chosen item.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP	N/A	Boolean:	NO-PAT mode can't be configured without

Column name	Column description	Column type	Data type and restrictions	Remarks
	address translation.		• true—YES • false—NO.	AddrGroupNumber. PAT only supports TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from external hosts to the internal host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO.	This column can only be configured in NO-PAT mode.
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: • true—YES • false—NO.	This column can only be configured in PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
MatchingCount	Number of packets matching the outbound dynamic NAT rule.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the outbound dynamic NAT rule statistics	N/A	Boolean: • true—YES • false—NO.	N/A
WhetherPersistConfig	Whether to save the configuration	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/InboundStaticMappings

This table contains information about one-to-one or **net-to-net** mappings for inbound static NAT.

XML structure

```
<NAT>
  <InboundStaticMappings>
    <Mapping>
      <GlobalInfo>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalInfo	External network address pool information	Data structure.	Members include: • GlobalVRF. • StartIpv4Address. • EndIpv4Address.	EndIpv4Address is optional when configure one-to-one mapping for inbound static NAT.
GlobalVRF	VRF of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The StartIpv4Address cannot be greater than the EndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses.
EndIpv4Address	End IPv4 address of the external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6.
LocalInfo	Internal network address information	Data structure.	Members include: • GlobalVRF. • Ipv4Address. • Ipv4PrefixLength.	N/A
LocalVRF	VRF of internal address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
Ipv4Address	An internal network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	The prefix length of the internal network address	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for inbound static NAT.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify an ACL, the source addresses of all incoming packets and the destination addresses of all outgoing packets are translated. If you specify an ACL and do not specify the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. The destination addresses

Column name	Column description	Column type	Data type and restrictions	Remarks
				of packets originating from internal hosts to the external are not translated. If you specify both an ACL and the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. If packets originating from internal hosts to the external are permitted by ACL reverse matching, the destination address is translated.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO.	Support for this keyword depends on the device model. This column can only be configured when *ACLNumber* is also configured.
RuleName	Name of the static mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the static mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
MatchingCount	Number of packets matching the NAT inbound static mapping	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the NAT inbound	N/A	Boolean: • true—YES • false—NO.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalInfo	Internal network address pool information	Data structure.	Members include: • LocalVRF. • StartIpv4Address. • EndIpv4Address.	EndIpv4Address is optional when configure one-to-one mapping for outbound static NAT.
LocalVRF	VRF of internal address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIpv4Address	Start IPv4 address of an internal address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The StartIpv4Address cannot be greater than the EndIpv4Address. If they are the same, the internal address pool has only one address. The internal address pool can contain a maximum of 255 addresses.
EndIpv4Address	End IPv4 address of the internal address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6.
GlobalInfo	External network address information	Data structure.	Members include: • GlobalVRF. • Ipv4Address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Ipv4PrefixLength.	
GlobalVRF	VRF of external address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
Ipv4Address	An external network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	The prefix length of the external network address	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for outbound static NAT.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify an ACL, the source addresses of all outgoing packets and the destination addresses of all incoming packets are translated. If you specify an ACL and do not specify the reversible keyword, the source addresses of outgoing packets permitted by the ACL are translated. The destination addresses of packets originating from external hosts to the internal are not translated. If you specify both an ACL and the reversible keyword, the source addresses of outgoing packets permitted by the ACL are translated. If packets originating from external hosts to the internal are permitted by ACL reverse matching, the destination address is translated.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO.	Support for this keyword depends on the device model. This column can only be configured when *ACLNumber* is also configured.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the static NAT on the same

Column name	Column description	Column type	Data type and restrictions	Remarks
				address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the static NAT.In dual-system hot backup with load balancing, if the static NAT address and the VRRP backup group address are in the same network segment, you need to manually configure static NAT and VRRP binding.
RuleName	Name of the static mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the static mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
MatchingCount	Number of packets matching the NAT outbound static mapping	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the NAT outbound static mapping statistics	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/OutboundStaticObjMappings

This table contains information about object-group mappings for outbound static NAT.

XML structure

```
<NAT>
  <InboundStaticObjMappings>
    <Mapping>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <LocalObjGrp></LocalObjGrp>
          </LocalInfo>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalObjGrp></GlobalObjGrp>
      </GlobalInfo>
      <ACLNumber></ACLNumber>
      <Reversible></Reversible>
      <Disable></Disable>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
    </Mapping>
  </InboundStaticObjMappings>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	InboundStaticObjMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalInfo	Internal network address information	Data structure.	Members include: • LocalVRF. • LocalObjGrp.	N/A
LocalVRF	VRF of internal address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public Object Group do not use this parameter.
LocalObjGrp	An internal network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalInfo	External network address pool information	Data structure.	Members include: • GlobalVRF. • GlobalObjGrp.	N/A
GlobalVRF	VRF of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public Object Group, do not use this parameter.
GlobalObjGrp	GlobalObjGrp of an external address object	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalObjGrp
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify an ACL, the source addresses of all incoming packets and the destination addresses of all outgoing packets are translated. If you specify an ACL and do not specify the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. The destination addresses of packets originating from internal hosts to the external are not translated. If you specify both an ACL and the reversible keyword, the source addresses of incoming packets permitted by the ACL are translated. If packets originating from internal hosts to the external are permitted by ACL reverse matching, the destination address is translated.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO.	Support for this keyword depends on the device model. This column can only be configured when *ACLNumber* is also configured.
Disable	Whether the rule is enabled or disabled.	N/A	Boolean: • true—YES	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false—NO.	
MatchingCount	Number of packets matching the NAT inbound static mapping	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the NAT inbound static mapping statistics	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/StaticOnInterfaces

This table contains the interfaces where static NAT is enabled.

XML structure

```
<NAT>
  <StaticOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableStatic></EnableStatic>
    </Interface>
  </StaticOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	StaticOnInterfaces

```

Table description

Item	Description
Feature name	NAT
Table name	ServerOnInterfaces

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: • GlobalVRF. • GlobalStartIpv4Address. • GlobalEndIpv4Address. • GlobalStartPortNumber. • GlobalEndPortNumber. • GlobalIfIndex.	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port	Index	Unsigned integer.	The *GlobalStartPortNumber*

Column name	Column description	Column type	Data type and restrictions	Remarks
	number range		Value range: 1 to 65535.	cannot be greater than the *GlobalEndPortNumber*. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	Only loopback interfaces and " IfIndex " are supported. The IP address of the interface is used as the NAT address. Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect. This index can be null.
LocalInfo	Internal network address information	Data structure.	Members include: • LocalVRF. • LocalStartIpv4Address. • LocalEndIpv4Address. • LocalStartPortNumber. • LocalEndPortNumber. • LocalSrvGroupNumber.	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4	End IPv4 address of the	N/A	String, dotted decimal	Example: 1.1.1.6.

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	internal address pool		notation.	
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	The *LocalStartPortNumber* cannot be greater than the *LocalEndPortNumber*. If they are the same, the internal port number range has only one port. The internal port number range can include a maximum of 255 ports.
LocalEndPortNumber	End port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LocalSrvGroupNumber	The internal server group to which the internal server belongs.	N/A	Unsigned integer. Value range: 0 to 65535.	With this parameter, the load sharing NAT Server feature is configured. Support for the value range depends on the device model.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you specify an ACL, only packets permitted by the ACL can be translated by using the mapping. Support for this parameter depends on the device model.
Reversible	Whether reverse address translation is supported.	N/A	Boolean: • true—YES. • false—NO.	Reverse address translation applies to connections actively initiated by internal hosts to the external host. It uses existing mappings to translate the destination address for packets of these connections if the packets are permitted by ACL reverse matching.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup

Column name	Column description	Column type	Data type and restrictions	Remarks
				group to bind to the NAT server. In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
MatchingCount	Number of packets matching the NAT server	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the NAT server statistics	N/A	Boolean: • true—YES • false—NO.	N/A
RuleName	Name of the NAT server	N/A	String, case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.
WhetherPersistConfig	Whether to save the configuration	N/A	Boolean: • true—YES • false—NO.	N/A

The following table describes the address-port mappings between an external network and an internal network for NAT Server. The mappings which is not listed is not supported and will be treated as configuration conflict.

Noun explanation:

Consecutive external addresses: *GlobalEndIpv4Address* is greater than *GlobalStartIpv4Address*.

Single external address: *GlobalEndIpv4Address* is equal to *GlobalStartIpv4Address*, or *GlobalEndIpv4Address* is null.

Consecutive external ports: *GlobalEndPortNumber* is greater than *GlobalStartPortNumber*.

Single external port: *GlobalEndPortNumber* is equal to *GlobalStartPortNumber*, or *GlobalEndPortNumber* is null.

Consecutive internal addresses: *LocalEndIpv4Address* is greater than *LocalStartIpv4Address*.

Single internal address: *LocalEndIpv4Address* is equal to *LocalStartIpv4Address*, or *LocalEndIpv4Address* is null.

Consecutive internal ports: *LocalEndPortNumber* is greater than *LocalStartPortNumber*.

Single internal port: *LocalEndPortNumber* is equal to *LocalStartPortNumber*, or *LocalEndPortNumber* is null.

External network	Internal network
An external address	An internal address.
An external address and an external port number	An internal address and an internal port number.
An external address and *N* consecutive external port numbers	An internal address and an internal port number.
	N consecutive internal addresses and an internal port number.
	An internal address and *N* consecutive internal port numbers.
N consecutive external addresses	An internal address.
	N consecutive internal addresses.
N consecutive external addresses and an external port number	An internal address and an internal port number.
	N consecutive external addresses and an internal port number.
	An internal address and *N* consecutive internal port numbers.
An external address and an external port number	An internal server group.
An external address and *N* consecutive external port numbers	
N consecutive external addresses and an external port number	

NAT/PortBlockGroups

This table contains the information about NAT port block groups.

XML structure

```
<NAT>
  <PortBlockGroups>
    <Group>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <GlobalStartPort></GlobalStartPort>
      <GlobalEndPort></GlobalEndPort>
    </Group>
  </PortBlockGroups>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	• Master/Backup mode: No VRRP keyword is required. • Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT port group address so that the traffic is transmitted on the active device in the backup group. When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the flow of traffic and enable traffic to be transmitted on the active device in the specified VRRP backup group.
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The

				port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	Set *GlobalStartPort* and *GlobalEndPort* to their default values to define a default port range. The *GlobalStartPort* cannot be greater than the *GlobalEndPort*. The port range must include all ports that the public IP addresses use for address translation. The number of ports in a port range cannot be smaller than the port block size.
GlobalEndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

NAT/PortBlockGroupLocalMembers

This table contains the information of private IP address members in NAT port block groups.

XML structure

```
<NAT>
  <PortBlockGroupLocalMembers>
    <LocalMember>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </LocalMember>
  </PortBlockGroupLocalMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupLocalMembers
Table type	Multi-instance table
Row name	LocalMember

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple private IP address members in a port block group, but they cannot overlap. Private IP address members in different port block groups can overlap. For static NAT444, in a port block group, the number of private IP addresses cannot be larger than the number of assignable port blocks. Otherwise, some private IP addresses cannot obtain port blocks.
VRF	VRF to which the private IP address member belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the private IP address member does not belong to any VPN.
StartIpv4Address	Start IPv4 address of the private IP address member	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the private IP address member	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one private IP address.

NAT/PortBlockGroupGlobalMembers

This table contains the informations of public IP address members in NAT port block groups.

XML structure

```
<NAT>
  <PortBlockGroupGlobalMembers>
```

```
    <GlobalMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GlobalMember>
  </PortBlockGroupGlobalMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupGlobalMembers
Table type	Multi-instance table
Row name	GlobalMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple public IP address members in a port block group, but they cannot overlap. Public IP address members in different port block groups can overlap. But the port ranges for overlapped members in different port block groups cannot overlap. The number of port blocks that a public IP address can assign is determined by dividing the number of ports in its port range by the port block size.
StartIpv4Address	Start IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the

				same, you specifies only one public IP address.

NAT/OutboundPortBlockOnInterfaces

This table contains the port block groups applied to the outbound direction of the interfaces.

XML structure

```
<NAT>
  <OutboundPortBlockOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
    </Interface>
  </OutboundPortBlockOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	OutboundPortBlockOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface. After you apply a port block group to an interface, the system

				automatically computes the IP-to-port block mappings and creates entries for them. When a private IP address accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.
MatchingCount	Number of packets matching the NAT portblock group.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Counting	Whether open the switch of matching the NAT portblock group statistics	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/DNSMappings

This table contains the mappings about the domain name of an internal server to the public IP address, public port number, and protocol type of the server.

XML structure

```
<NAT>
  <DNSMappings>
    <MapInfo>
      <Domain></Domain>
      <Protocol></Protocol>
      <Ipv4Address></Ipv4Address>
      <IfIndex></IfIndex>
      <PortNumber></PortNumber>
    </MapInfo>
  </DNSMappings>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	DNSMappings
Table type	Multi-instance table
Row name	MapInfo

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The domain name of an internal server.	Index	String, case-sensitive. Length: 1 to 253 characters.	A domain name is a dot-separated that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can contain at most 253 characters, and each separated string contains no more than 63 characters.
Protocol	The type of the protocol used by the internal server.	N/A	Enumeration: • 6—TCP. 17—UDP.	This column is affirmatively chosen item.
Ipv4Address	The public IP address used by the internal server to provide services to the external network.	N/A	String, dotted decimal notation.	Example: 1.1.1.6. The Ipv4Address and IfIndex are two configuration modes, only one mode must be configured.
IfIndex	Interface index	N/A	Unsigned integer.	Enables Easy IP to use the IP address of the interface specified by its index as the public address of the internal server. Only loopback interfaces are supported.
PortNumber	The public port number used by the internal server to provide services to the external network.	N/A	Unsigned integer. Value range: 1 to 65535.	This column is affirmatively chosen item.

NAT/ALG

This table contains the protocols for which NAT with ALG is enabled.

XML structure

```
<NAT>
```

```
  <ALG>
    <ALGInfo>
      <AppID></AppID>
      <AppName></AppName>
      <EnableALG></EnableALG>
    </ALGInfo>
  </ALG>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 14. • 0—DNS • 1—FTP. • 2—ICMP-ERROR • 3—H.323 • 4—SIP • 5—TFTP • 6—RTSP • 7—SQLNET • 8—XDMCP • 9—ILS • 10—MGCP • 11—NBT • 12—PPTP • 13—RSH • 14—SCCP	Use ALG with NAT to translate the payload information to ensure the establishment of data connections. NAT translates IP address and port information in packet headers, and ALG processes the fields in application layer payloads. The packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.

AppName	Protocol name for which NAT with ALG is enabled.	N/A	String, Case-insensitive. Length: 1 to 63 characters.	N/A
EnableALG	Whether enable NAT with ALG.	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/EIM

This table is about the mapping behavior mode for PAT.

XML structure

```
<NAT>
  <EIM>
    <EnableEIM></EnableEIM>
    <ACLNumber></ACLNumber>
  </EIM>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	EIM
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableEIM	Whether enable **Endpoint-Independent Mapping** (EIM).	N/A	Boolean: • true—YES • false—NO.	•**Endpoint-Independent Mapping**—EIM uses the same IP and port mapping for packets from the same source and port to any destination IP and port. An EIM entry is generated to record the IP and port mapping. This behavior allows packets from any external host to access the internal user by

				using the NAT address and port. This behavior facilitates communication among hosts that connect to different NAT gateways. •**Address and Port-Dependent Mapping**—Uses different IP and port mappings for packets with the same source IP and port to different destination IP addresses and ports. This behavior does not allow packets from an external host to be sent to any NAT address and port unless the internal host has previously sent a packet of the same protocol to that external host. This behavior is secure but inconvenient for communication among hosts connecting to different NAT gateways. This configuration takes effect only on outbound PAT. Address and Port-Dependent Mapping always applies to inbound PAT.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	Applies the NAT mapping behavior to packets that are permitted by the ACL. If no ACL is specified, the Endpoint-Independent Mapping applies to all packets. This field is available only when *EnableEIM* is set to true.

NAT/HairpinOnInterfaces

This table contains the interfaces where hairpin is enabled.

XML structure

```
<NAT>
  <HairpinOnInterfaces>
    <Interface>
```

```
      <IfIndex></IfIndex>
      <EnableHairpin></EnableHairpin>
    </Interface>
  </HairpinOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	HairpinOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
EnableHairpin	Whether enable hairpin on the interface	N/A	Boolean: • true—YES • false—NO.	NAT hairpin allows internal hosts behind the same NAT device to access each other only after they use the NAT addresses. NAT hairpin functions on the interface that connects the internal network and translates the source and destination IP addresses of a packet on the interface. NAT hairpin typically operates with NAT Server, outbound dynamic NAT, or outbound static NAT.

NAT/LogRule

This table contains NAT log configurations.

XML structure

```
<NAT>
  <LogRule>
    <GlobalLog>
      <EnableGlobalLog></EnableGlobalLog>
      <ACLNumber></ACLNumber>
    </GlobalLog>
      <EnableFlowBeginLog></EnableFlowBeginLog>
      <EnableFlowEndLog></EnableFlowEndLog>
    <ActiveFlowLog>
      <EnableActiveFlowLog></EnableActiveFlowLog>
      <Interval></Interval>
    </ActiveFlowLog>
    <EnablePortBlockAssignLog></EnablePortBlockAssignLog>
    <EnablePortBlockWithDrawLog></EnablePortBlockWithDrawLog>
    <EnableAlarmLog></EnableAlarmLog>
  </LogRule>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	LogRule
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLog	Global log configuration.	Data structure.	Members include: • EnableGlobalLog. • ACLNumber.	N/A
EnableGlobal Log	Whether enable the NAT logging function.	N/A	Boolean: • true—YES • false—NO.	Other column takes effect only after you enable NAT logging.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive.	If an ACL is specified, this command logs NAT flows that match the permit statements in the ACL. If no ACL is specified, this

			Length: 1 to 63 characters.	configuration logs all NATed data flows. This field is available only when *EnableGlobalLog* is set to true.
EnableFlowBeginLog	Whether enable logging for NAT session establishment events.	N/A	Boolean: • true—YES • false—NO	When a NAT session is established, this function outputs a NAT log.
EnableFlowEndLog	Whether enable logging for NAT session removal events.	N/A	Boolean: • true—YES • false—NO.	N/A
ActiveFlowLog	Active flow log configuration.	Data structure.	Members include: • EnableActiveFlowLog. • Interval.	N/A
EnableActiveFlowLog	Whether enable logging for active NAT flows.	N/A	Boolean: • true—YES • false—NO.	Configure this column must also configure the *Interval*.
Interval	The interval for logging active NAT flows (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	Configure *EnableActiveFlowLog* to true to configure this item.
EnablePortBlockAssignLog	Whether enable logging for port block assigning.	N/A	Boolean: • true—YES • false—NO.	N/A
EnablePortBlockWithDrawLog	Whether enable logging for port block withdrawing.	N/A	Boolean: • true—YES • false—NO.	N/A
EnableAlarmLog	Whether enable logging for alarm.	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/HotBackup

This table contains NAT hot backuping configurations.

XML structure

```
<NAT>
  <HotBackup>
    <EnablePortBlock></EnablePortBlock>
  </HotBackup>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	HotBackup
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnablePortBlock	Whether enable hot backuping for port block.	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/Statistics

This table contains NAT statistics.

XML structure

```
<NAT>
  <Statistics>
    <StatisticInfo>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SessionCount></SessionCount>
      <NatSessionRate></NatSessionRate>
      <EIMCount></EIMCount>
      <InboundNoPATCount></InboundNoPATCount>
      <OutboundNoPATCount></OutboundNoPATCount>
      <BandwidthActualUseRatio></BandwidthActualUseRatio>
      <PortBlock>
        <StaticCount></StaticCount>
        <ActiveStaticCount></ActiveStaticCount>
        <DynamicCount></DynamicCount>
        <ActiveDynamicCount></ActiveDynamicCount>
      </PortBlock>
    </StatisticInfo>
```

```
  </Statistics>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	Statistics
Table type	Multi-instance table
Row name	StatisticInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
SessionCount	Number of NAT session entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
NatSessionRate	Establishment rate of NAT sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
EIMCount	Number of EIM entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
InboundNoPATCount	Number of inbound NO-PAT entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
OutboundNoPATCount	Number of outbound NO-PAT entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
BandwidthActualUseRatio	Value of the actual bandwidth usage	N/A	Unsigned integer. Value range: 0 to 100.	N/A
PortBlock	Statistics about port block.	Data structure.	Members include: • StaticCount. • ActiveStaticCount. • DynamicCount. • ActiveDynamicCount	N/A
StaticCount	Number of static	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IP-to-port block mapping entries.		Value range: 0 to 2^{64} - 1.	
ActiveStaticCount	Number of dynamic IP-to-port block mapping entries that can be created.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	It equals the number of port blocks for dynamic assignment, including those have been assigned and those not assigned yet.
DynamicCount	Number of static IP-to-port block mapping entries that are in current use.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ActiveDynamicCount	Number of dynamic IP-to-port block mapping entries that have been created.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	It equals the number of assigned port blocks.

NAT/StaticLoadBalance

This table contains NAT static load balance configurations.

XML structure

```
<NAT>
  <StaticLoadBalance>
    <EnableStaticLoadBalance></EnableStaticLoadBalance>
  </StaticLoadBalance>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	StaticLoadBalance
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaticLoadBalance	Whether enable load balance function for NAT static configure.	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/Capabilities

This table contains NAT support special capabilities.

XML structure

```
<NAT>
  <Capabilities>
    <OutboundEasyIP></OutboundEasyIP>
  </Capabilities>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OutboundEasyIP	Whether support EasyIP for NAT dynamic outbound configure.	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/ReplyRedirectOnInterfaces

This table contains the interfaces where redirect reply-route is enabled.

XML structure

```
<NAT>
  <ReplyRedirectOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableReplyRedirect></EnableReplyRedirect>
    </Interface>
  </ReplyRedirectOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	ReplyRedirectOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
EnableReplyRedirect	Whether enable redirect reply-route on the interface	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/NATPolicy

This table contains information about NAT policy.

XML structure

```
<NAT>
  <NatPolicy>
    <Policy></Policy>
  </NatPolicy>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	NatPolicy

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	View of the Nat policy	N/A	Boolean: • true—YES • false—NO.	N/A

NAT/PolicyRules

This table contains information about NAT policy rules.

XML structure

```
<NAT>
  <PolicyRules>
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </PolicyRules>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String.case insensitive. Length:1 to 63 characters.	N/A

NAT/PolicyRuleMembers

This table contains information about the NAT policy rule members.

XML structure

```
<NAT>
  <PolicyRuleMembers>
    <Rule>
      <RuleName></RuleName>
      <Description></Description>
      <OutboundInterface></OutboundInterface>
      <SrcObjGrpList>
        <SrcIpObjGroup></SrcIpObjGroup>
      </SrcObjGrpList>
      <DstObjGrpList>
        <DstIpObjGroup></DstIpObjGroup>
      </DstObjGrpList>
      <SrvObjGrpList>
        <ServiceObjGroup></ServiceObjGroup>
      </SrvObjGrpList>
      <Action></Action>
      <AddrGroupNumber></AddrGroupNumber>
      <AddrGroupName></AddrGroupName>
      <Reversible></Reversible>
      <PortPreserved></PortPreserved>
```

```
      <Disable></Disable>
      <Counting></Counting>
      <MatchingCount></MatchingCount>
    </Rule>
  </PolicyRuleMembers>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMembers
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description		Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String. case insensitive. Length:1 to 63 characters.	N/A
Description	Rule description	N/A	String. case-sensitive. Length: 1 to 63 characters.	N/A
OutboundInterface	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrcObjGrpList	Source object group of the policy rule	Data structure	Members include: • SrcIpObjGroup.	N/A

Column name	Column description		Data type and restrictions	Remarks
SrcIpObjGroup	Name of the Source IP object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A
DstObjGrpList	Destination object group of the policy rule	Data structure	Members include: • DstIpObjGroup.	N/A
DstIpObjGroup	Name of the Destination IP object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A
SrvObjGrpList	Service object group of the policy rule	Data structure	Members include: • ServiceIpObjGroup.	N/A
ServiceObjGroup	Name of the Service object group	N/A	String. case insensitive.. Length: 1 to 31 characters.	N/A
Action	Action on packetsmatching the rule	N/A	Enumeration: 0—NO-PAT. 1—PAT. 2—EasyIP. 3—NO-Nat.	You cannot specify an action when you remove or delete a rule . You must specify an action when you replace a rule.or when you merge or create a rule that does not exist. The address of the interface will be used when you chose the EasyIp. Choose NO-Nat when Perform no address translation.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	When you choose the EasyIP mode,The value of the column must be invalid. An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat outbound configuration in both PAT and NO-PAT modes.
AddrGroupName	NAT address group name	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A

Column name	Column description		Data type and restrictions	Remarks
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO.	Support for this keyword depends on the device model. This column can only be configured in NO-PAT mode.
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: • true—YES • false—NO.	This column can only be configured in PAT mode and EasyIP mode.
Disable	Disable the rule.	N/A	Boolean: • true—YES • false—NO.	N/A
Counting	Enabling stauts of NAT policy match counting	N/A	Boolean: • true—YES • false—NO.	N/A
MatchingCount	Number of packets matching the NAT policy.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

NAT/PolicyRuleMemberSrcObj

This table contains information about the NAT policy rule source object-group.

XML structure

```
<NAT>
  <PolicyRuleMemberSrcObj>
    <Rule>
      <RuleName></RuleName>
      <SrcObjGrpList>
        <SrcIpObj></SrcIpObj>

SrvObj	Name of the Service object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A

NAT/DestinationNatOnInterfaces

This table contains information about the NAT acl server.

XML structure

```
<NAT>
  <DestinationNatOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <LocalIpv4Address></LocalIpv4Address>
        <LocalPortNumber></LocalPortNumber>
      </LocalInfo>
      <Action></Action>
      <VRID></VRID>
      <Disable></Disable>
      <Description></Description>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
    </Interface>
  </DestinationNatOnInterfaces>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	DestinationNatOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	index	Unsigned integer. Value range: 2000 to 3999	N/A
LocalInfo	Internal network address information	Data structure	Members include: • LocalVRF. • LocalIpv4Address. • LocalIpv4Address..	N/A
LocalVRF	VRF of internal address	N/A	String. case-sensitive Length: 1 to 31 characters.	N/A
LocalIpv4Address	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPortNumber	An internal port number	N/A	Unsigned integer. Value range: 1 to 65535	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server. In dual-system hot backup with load balancing, if the

Column name	Column description	Column type	Data type and restrictions	Remarks
				address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Disable	Disable the rule.	N/A	Boolean: • true—YES • false—NO.	N/A
Description	Rule description	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the NAT ACLserver	N/A	String, case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.

NAT/ObjServer

This table contains information about the NAT object server.

XML structure

```
<NAT>
  <ObjServer>
    <Rule>
      <RuleName></RuleName>
      <IfIndex></IfIndex>

    <MatchingCount></MatchingCount>
    <Counting></Counting>
    <Description></Description>
    <RuleTotalCount></ RuleTotalCount >
  </Mapping>
 </StaticMappings>
</NAT>
```

Table description

Item	Description
Feature name	NAT.
Table name	StaticMappings.
Table type	Multi-instance table.
Row name	Mapping.
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mapping Mode	Direction of the Static Nat mode	Index	Enumeration • **0**—Inbound • **1**—Outbound.	N/A
OrigInfo	Network address pool information	Data structure	Members include: • OrigVRF.	StartIp and EndIp are a pair, at the same time

	before translation		• StartIp. • EndIp. • OrigObjGrp	OrigObjGrp cannot exist with this pair. EndIp is optional when you configure one-to-one static mapping.
OrigVRF	VRF of address pool before translation	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIp	Start IPv4 address of an internal address pool before translation	Index	String, dotted decimal notation.	IPv4 Example: 1.1.1.1. The StartIp cannot be higher than the EndIp. If they are the same, the internal address pool has only one address. The internal address pool can contain a maximum of 255 addresses.
EndIp	End IPv4 address of the address pool before translation	Index	String, dotted decimal notation.	IPv4 Example: 1.1.1.6.
OrigObjGrp	Name of the IPv4 object group before translation	Index	String, case-sensitive. Length: 1 to 63 characters.	When you choose the Address Group mode, the value of the column can only be configured.
TransInfo	Network address information after translation	Data structure	Members include: • TransVRF. • IpAddress. • IpPrefixLength. • TransObjGrp.	If OrigInfo uses StartIp and EndIp or OrigObjGrp, the TransInfo must be same value.
TransVRF	VRF of address after translation	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
IpAddress	An network IPv4 address after translation	Index	String, dotted decimal notation.	IPv4 Example: 1.1.1.1.
IpPrefixLength	Prefix length of the network address after translation	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for static NAT.
TransObjGrp	Name of the IPv4 object group after translation	Index	String, case-sensitive. Length: 1 to 63 characters.	When you choose the Address Group mode, the value of the column can only be configured.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	If you do not specify an ACL, the source addresses of all outgoing packets and the destination addresses of all incoming packets are translated. If you specify an ACL and do not specify the reversible keyword, the source addresses of outgoing packets permitted by the ACL are translated. The destination addresses of packets originating from

				external hosts to the internal are not translated. If you specify both an ACL and the reversible keyword, the source addresses of outgoing packets permitted by the ACL are translated. If packets originating from external hosts to the internal are permitted by ACL reverse matching, the destination address is translated.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • **true**—Yes • **false**—No.	Support for this keyword depends on the device model. This column can only be configured when *ACLNumber* is also configured.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the static NAT on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the static NAT. In dual-system hot backup with load balancing, if the static NAT address and the VRRP backup group address are in the same network segment, you need to manually configure static NAT and VRRP binding.
RuleName	Name of the static mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the static mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Disable	Enabling status of the static mapping	N/A	Boolean: • **true**—Yes • **false**—No	N/A

Description	Rule description	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Matching Count	Total number of the static nat configure	N/A	Unsigned integer.	N/A
Counting	Enabling status of rule match counting	N/A	Boolean: • **true**—Yes • **false**—No	N/A
RuleTotal Count	Total rule number of the Static nat.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

NAT/MAP

This table contains NAT MAP configurations.

XML structure

```
<NAT>
  <MAP>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Interface>
  </MAP>
</NAT>
```

Table description

Item	Description
Feature name	NAT
Table name	MAP
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index or name of tunnel interface for MAP.
Enable	Whether enable NAT address translation for	N/A	Boolean: • true—YES	N/A

	map.		• false—NO.	

Configuration/Profiles/NatProfileAddrGroups

This table contains information about NAT address groups in the profile view. For the information of Configuration and Profiles, please refer to “Comware Configuration NETCONF XML API Data Reference” document.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <NatProfileAddrGroups>
        <NatProfileAddrGroup>
          <GroupNumber></GroupNumber>
          <GroupName></GroupName>
        </NatProfileAddrGroup>
      </NatProfileAddrGroups>
    </Profile>
  </Profiles>
</Configuration>
```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileAddrGroups
Table type	Multi-instance table
Row name	NatProfileAddrGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
GroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	N/A

Configuration/Profiles/NatProfileAddrGroupMembers

This table contains information about the NAT address group members in the profile view. For the information of Configuration and Profiles, please refer to “Comware Configuration NETCONF XML API Data Reference” document.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <NatProfileAddrGroupMembers>
        <NatProfileAddrGroupMember>
          <GroupNumber></GroupNumber>
          <StartIpv4Address></StartIpv4Address>
          <EndIpv4Address></EndIpv4Address>
        </NatProfileAddrGroupMember>
      </NatProfileAddrGroupMembers>
    </Profile>
  </Profiles>
</Configuration>
```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileAddrGroupMembers
Table type	Multi-instance table
Row name	NatProfileAddrGroupMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The *StartIpv4Address* cannot be greater than the *EndIpv4Address*. If they are the same, the group member has only

Column name	Column description	Column type	Data type and restrictions	Remarks
				one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

Configuration/Profiles/InterfacesProfileConfig/NatProfileInboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces in the profile view. For the information of Configuration and Profiles, please refer to “Comware Configuration NETCONF XML API Data Reference” document.

XML structure

```
<Configuration>
  <Profiles>
    <Profile>
      <Name></Name>
      <InterfacesProfileConfig>
        <InterfaceProfileConfig>
          <InterfaceName></InterfaceName>
          <NatProfileInboundDynamicRules>
            <NatProfileInboundDynamicRule>
              <ACLNumber></ACLNumber>
              <AddrGroupNumber></AddrGroupNumber>
              <AddrGroupName></AddrGroupName>
              <VRF></VRF>
              <NoPAT></NoPAT>
              <Reversible></Reversible>
              <AutoAddRoute></AutoAddRoute>
              <RuleName></RuleName>

              <Disable></Disable>
              <Description></Description>
              <Counting></Counting>
            </NatProfileInboundDynamicRule>
```

```
            </NatProfileInboundDynamicRules>
          </InterfaceProfileConfig>
        </InterfacesProfileConfig>
      </Profile>
    </Profiles>
</Configuration>
```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileInboundDynamicRules
Table type	Multi-instance table
Row name	NatProfileInboundDynamicRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule an interface.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the NAT inbound and NAT outbound configuration. It cannot be used by the NAT inbound configuration in both PAT and NO-PAT modes. This column is affirmatively chosen item.
AddrGroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	The same address group number can only use one address group name, and different address group numbers cannot use the same address group name The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical

Column name	Column description	Column type	Data type and restrictions	Remarks
				bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: • true—YES • false—NO.	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO.	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry. This column can only be configured in NO-PAT mode.
AutoAddRoute	Whether adds a route to the NAT address when address translation is performed for a packet.	N/A	Boolean: • true—YES • false—NO.	The output interface is the NAT interface and the next-hop is the source address before translation. If you do not specify this keyword, you must manually add the route. It is recommended that you specify this keyword. This column can only be configured in NO-PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the

Column name	Column description	Column type	Data type and restrictions	Remarks
				priority is lowest.
Disable	Whether to enable this dynamic mapping	N/A	Boolean	If this parameter is not specified, the address translation mapping is enabled.
Description	Description of the dynamic mapping	N/A	String, Length: 1 to 63 characters.	Configuring the description information of the dynamic mapping. The description is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
Counting	Whether to enable the dynamic mapping counting	N/A	Boolean	Enable to count each first packet address translation This column can be null.

Configuration/Profiles/InterfacesProfileConfig/NatProfileOutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces in the profile view. For the information of Configuration and Profiles, please refer to “Comware Configuration NETCONF XML API Data Reference” document.

XML structure

```

Table description

Item	Description
Feature name	NAT
Table name	NatProfileOutboundDynamicRules
Table type	Multi-instance table
Row name	NatProfileOutboundDynamicRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you do not specify any ACL, NAT translates all packets, else translates the packets which matches the ACL. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number.

Column name	Column description	Column type	Data type and restrictions	Remarks
				An ACL can be used by only one outbound dynamic NAT rule an interface. This column can be null.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the NAT inbound and NAT outbound configurations. It cannot be used by the NAT outbound configuration in both PAT and NO-PAT modes. If you do not specify any address group, the IP address of the interface is used as the NAT address. Easy IP is used. This column is affirmatively chosen item.
AddrGroupName	NAT address group name	N/A	String. Length: 1 to 63 characters..	The same address group number can only use one address group name, and different address group numbers cannot use the same address group name The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: • true—YES • false—NO.	NO-PAT mode can't be configured without AddrGroupNumber. PAT only supports TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.

Column name	Column description	Column type	Data type and restrictions	Remarks
Reversible	Whether translates the destination address of a packet that originates from external hosts to the internal host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: • true—YES • false—NO.	This column can only be configured in NO-PAT mode.
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: • true—YES • false—NO.	This column can only be configured in PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
Disable	Whether to enable this dynamic mapping	N/A	Boolean	If this parameter is not specified, the address translation mapping is enabled.
Description	Description of the dynamic mapping	N/A	String, Length: 1 to 63 characters.	Configuring the description information of the dynamic mapping. The description is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar (|), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Whether to enable the dynamic mapping counting	N/A	Boolean	Enable to count each first packet address translation This column can be null.

Comware 7 NAT NETCONF XML API Error Message Reference

NAT/InboundDynamicRules

Message	Explanation
The address group is already used by outbound dynamic NAT. 指定的地址组已经被出方向动态NAT引用。	An address group could not be used by outbound or inbound at the same time. 同一个地址池不能同时被inbound和outbound所引用。
The address group is already used by inbound PAT. 指定的地址组已经被入方向PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
The address group is already used by inbound NO-PAT. 指定的地址组已经被入方向NO-PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
An address group is required. 地址组为必选配置项。	This message means address group not be configured. 这个提示说明地址组没有被配置。
This device doesn't support inbound dynamic NAT rules. 当前设备不支持入方向动态NAT。	This message means device doesn't support inbound dynamic NAT rules. 这个提示说明当前设备不支持入方向动态NAT。

NAT/OutboundDynamicRules

Message	Explanation
The address group is already used by outbound dynamic NAT. 指定的地址组已经被出方向动态NAT引用。	An address group could not be used by outbound or inbound at the same time. 同一个地址池不能同时被inbound和outbound所引用。
The address group is already used by inbound PAT. 指定的地址组已经被入方向PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
The address group is already used by inbound NO-PAT. 指定的地址组已经被入方向NO-PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
Only one outbound dynamic NAT rule can be configured for the same flow on the interface. 配置的出方向动态NAT与接口已有配置冲突。	Same ACL has been configured for another outbound dynamic NAT rules on this interface. 当前接口下已经存在另一条ACL相同的出方向NAT规则。
PAT doesn't support reverse address translation. PAT模式的NAT不能配置反向地址转换。	PAT mode doesn't support reverse address translation. PAT模式下不支持反向地址转换。

NO-PAT doesn't support port number preservation. NO-PAT模式的NAT不能配置端口保持功能。	NO-PAT mode doesn't support port number preservation. NO-PAT模式下不支持端口保持功能。
NO-PAT doesn't support Easy IP. Easy IP方式下不能配置NO-PAT模式。	Easy IP and NO-PAT are mutually exclusive. Easy IP和NO-PAT是互斥的。
NO-PAT for outbound NAT doesn't take effect when the EIM mode with 3-tuple entries has been configured on the device. EIM模式下，NO-PAT方式的动态地址转换配置不生效。	NO-PAT entries cannot be created in EIM mode. 在EIM模式下，无法建立NO-PAT表项。

NAT/ServerOnInterfaces

Message	Explanation
The public address and port configuration overlaps with existing public address and port configuration on the interface. 指定的外网信息与接口上的已有外网信息配置重叠。	The public address and port already configured by another nat server rules. 同一个接口下已经存在该公网信息的NAT内部服务器配置。
End public address can't be smaller than start public address. 指定的外网结束地址不能小于起始地址。	Global end address could not less than global start address. 公网结束地址不能小于起始地址。
End public port number can't be smaller than start public port number. 指定的外网结束端口不能小于起始端口。	Global end port number could not less than global start port number. 公网结束端口不能小于起始端口。
End private address can't be smaller than start private address. 指定的内网结束地址不能小于起始地址。	Local end address could not less than local start address. 私网结束地址不能小于起始地址。
End private port number can't be smaller than start private port number. 指定的内网结束端口不能小于起始端口。	Local end port number could not less than local start port number. 私网结束端口不能小于起始端口。
Number of addresses in the public IP address range exceeded the limit. 指定的外网地址范围大小超过系统允许的最大值。	Difference between global end address and global start address is greater than 255. 公网结束地址和起始地址之差超过255。
Number of ports in the public port range exceeded the limit. 指定的外网端口范围大小超过系统允许的最大值。	Difference between global end port number and global start port number is greater than 255. 公网结束端口和起始端口之差超过255。
Number of IP addresses is not equal to number of ports. 指定的地址范围与端口范围的大小不一致。	Total global IP numbers must be equal to total local port numbers. 公网地址总数需要和私网可用端口总数相等。
Number of public ports is not equal to number of private ports. 指定的外网端口范围与内网端口范围的大小不一致。	The global port range size must be equal to local port range size. 公网端口范围大小和私网端口范围大小必须一致
Number of public IP addresses is not equal to number of private IP addresses. 指定的外网地址范围与内网地址范围的大小不一	The global IP range size must be equal to local IP range size. 公网地址范围大小和私网地址范围大小必须一致

致。	
The private address configuration overlaps with existing private address configuration. 指定的内网地址与已有内网地址配置重叠。	The local address overlaps with existing configuration. 指定的私网地址与已配置的私网地址重叠。
Please configure both or neither of the private and public ports. 内网端口与外网端口必须同时配置，或者都不配置。	Global port number and local port number must be configured at the same time or not. 公网端口和私网端口同时配置或者同时不配置。
Please specify either public IP addresses or an interface connected to the external network. 外网地址和外网接口必须且只能配置其中一个。	Nat server could specify global address or an interface as parameter, but only one of them can be configured. 内部服务器可以指定流量的接口或者公网地址作为规则参数，但是只能指定其中一个。
Port numbers can only be configured for TCP or UDP. 只有TCP和UDP协议可以配置端口号。	If the protocol is not TCP or UDP, NAT Server is configured without port information (include global port and local port). 不是TCP或者UDP协议时，不能配置公网端口和私网端口。
Please specify either an internal server group or private IP addresses. 内网地址和内部服务器组必须且只能配置其中一个。	Nat server could specify server group or local address as parameter, but only one of them can be configured. 内部服务器可以指定内部服务器组或者私网地址作为规则参数，但是只能指定其中一个。
Public addresses and public ports can't both be consecutive. 外网地址和外网端口不能同时配置为连续形式。	The continuous global IP and continuous global port could not be configured at the same time. 公网地址和公网端口不能同时配置为连续形式。
Private addresses and private ports can't both be consecutive. 内网地址和内网端口不能同时配置为连续形式。	The continuous local IP and continuous local port could not be configured at the same time. 私网地址和私网端口不能同时配置为连续形式。
Internal server group must be specified with public ports, rather than private ports. 配置内部服务器组的同时必须配置外网端口，但不能同时配置内网端口。	Local server group must be specified with global ports, rather than private ports. 配置内部服务器组的同时必须配置外网端口，但不能同时配置内网端口。
The public address and port configuration conflicts with the private address and port configuration. 外网信息与内网信息冲突。	Global address and ports cannot overlaps with local address and ports. 公网信息和私网信息不能重叠。
End address must be configured together with start address. 配置结束地址必须同时配置起始地址。	If end address have been configured, start address cannot be empty. 配置了结束地址，起始地址就不能为空。
End port must be configured together with start port. 配置结束端口必须同时配置起始端口。	If end ports have been configured, start ports cannot be empty. 配置了结束端口，起始端口就不能为空。

NAT/InboundStaticMappings

Message	Explanation
End public address can't be smaller than start public address. 指定的外网结束地址不能小于外网起始地址。	Global end address could not less than global start address. 公网结束地址不能小于起始地址。
Number of addresses in the public IP address range exceeded the limit.	Difference between global end address and global start address is greater than 255.

指定的外网地址范围大小超过系统允许的最大值。	公网结束地址和起始地址之差超过255。
Invalid end public address. The end public address can't be greater than 255. 指定的外网结束地址错误，外网结束地址不能大于255。	Global end address and start address must be at the same network segment(mask less than 24). 公网结束地址和起始地址必须在同一网段（掩码小于24）
Public IP addresses are already used by another inbound static NAT mapping. 指定的外网地址已经被其他入方向静态NAT表项引用。	The global address overlaps with existing NAT inbound configuration. 指定的公网地址与已配置的NAT inbound公网地址重叠。
Private IP addresses are already used by another inbound static NAT mapping. 指定的内网地址已经被其他入方向静态NAT表项引用。	The local address overlaps with existing NAT inbound configuration. 指定的私网地址与已配置的NAT inbound公网地址重叠。
This device does not support inbound static NAT rules. 当前设备不支持入方向静态NAT。	This device doesn't support NAT static inbound. 当前设备不支持入方向静态NAT。

NAT/ OutboundStaticMappings

Message	Explanation
End private address can't be smaller than start private address. 指定的内网结束地址不能小于内网起始地址。	Local end address could not less than local start address. 私网结束地址不能小于起始地址。
Number of addresses in the private address range exceeded the limit. 指定的内网地址范围大小超过系统允许的最大值。	Difference between local end address and local start address is greater than 255. 私网结束地址和起始地址之差超过255。
Invalid end private address. The end private address can't be greater than 255. 指定的内网结束地址错误，内网结束地址不能大于255。	Local end address and start address must be at the same network segment(mask less than 24). 私网结束地址和起始地址必须在同一网段（掩码小于24）
Public IP addresses are already used by another outbound static NAT mapping. 指定的外网地址已经被其他出方向静态NAT表项引用。	The global address overlaps with existing NAT outbound configuration. 指定的公网地址与已配置的NAT outbound公网地址重叠。
Private IP addresses are already used by another outbound static NAT mapping. 指定的内网地址已经被其他出方向静态NAT表项引用。	The local address overlaps with existing NAT outbound configuration. 指定的私网地址与已配置的NAT outbound公网地址重叠。
An ACL is required for reverse address translation. 配置反向地址转时必须指定ACL。	An ACL is required for reversible configured as true. Reversible配置为True时，必须配置ACL规则。

NAT/AddrGroupMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
Number of addresses in the IP address range exceeded the limit. 地址组成员中的IP地址数已经达到最大值。	Difference between end address and start address is greater than 255. 地址组成员的结束地址和起始地址之差超过255。
The address range overlaps with an existing address range in the same address group. 指定的地址组成员与已有的地址组成员配置重叠。	The address overlaps with existing address at the same address group. 配置的地址与本地址组中已配置的地址重叠。
The address range overlaps with an existing address range in another address group. 指定的地址组成员与其他地址组中的成员配置重叠。	The address overlaps with existing address at another address group. 配置的地址与其他地址组中已配置的地址重叠。
Operation failed because the NAT address group is bound to a NAT IP pool. NAT地址组与全局NAT地址池绑定，无法通过本方式向该NAT地址组中添加地址成员。	The configured address overlaps with the address bound to a NAT IP pool. 配置的地址与NAT地址组绑定的地址池为该NAT地址组分配的地址重叠。
Operation failed because the CGN backup mode conflicts with the nat address group configured with an address range. 将CGN备份模式配置为温备负载分担模式或温备非负载分担模式的操作与手工方式向NAT地址组中添加地址成员的操作冲突。	The CGN backup mode conflicts with the address range configured under the address group. 将CGN备份模式配置为温备负载分担模式或温备非负载分担模式的操作与手工方式向NAT地址组中添加地址成员的操作冲突。
Operation failed because service-instance-group bind multiple failover groups and address group being manually assigned address are mutually exclusive. 业务实例组与多个备份组绑定的操作与手工方式向NAT地址组中添加地址成员的操作冲突。	The method of binding multiple backup groups to a service-instance-group conflicts with the method of manually configuring an address group under an address group. 业务实例组与多个备份组绑定的操作与手工方式向NAT地址组中添加地址成员的操作冲突。
Interfaces configured with the same NAT address or NAT address group must be bound to the same NAT service card. 多个接口引用了同一个NAT地址或NAT地址组时，这些接口必须指定同一个NAT业务板进行NAT处理。	Configure the same NAT address or address group must be bound to the same NAT service card. 多个接口引用了同一个NAT地址或NAT地址组时，这些接口必须指定同一个NAT业务板进行NAT处理。
The number of addresses in the NAT address group has reached the upper limit. NAT地址组中的地址数量已经达到设备支持的最大值。	The number of addresses configured under the address group has reached the configurable maximum. NAT地址组下配置的地址数量已经达到设备支持的最大值。

NAT/AddrGroups

Message	Explanation
End port number can't be smaller than start port number.	End port number can't be smaller than start port number.

指定的结束端口不能小于起始端口。	指定的结束端口不能小于起始端口。
Port block size can't be greater than number of ports in the port range. 指定的端口块大小值不能大于公网IP地址端口范围。	Port block size can't be greater than port range. 端口块大小不能大于公网地址的端口范围。
The address range overlaps with an existing address range in the same address group. 指定的地址组成员与已有的地址组成员配置重叠。	The address overlaps with existing address at the same address group. 配置的地址与本地址组中已配置的地址重叠。
The address range overlaps with an existing address range in another address group. 指定的地址组成员与其他地址组中的成员配置重叠。	The address overlaps with existing address at another address group. 配置的地址与其他地址组中已配置的地址重叠。

NAT/ PortBlockGroupLocalMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
The private address range overlaps with an existing private address range in the same address group. 指定的内网地址与已有内网地址配置重叠。	The local address overlaps with existing local address. 配置的私网地址与已配置的地址重叠。

NAT/PortBlockGroupGlobalMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
The public address range overlaps with an existing public address range in the same address group. 指定的公网地址成员与已有公网地址成员配置重叠。	The global address overlaps with existing local address. 配置的公网地址与已配置的地址重叠。
Maximum number of addresses in the public IP address range already reached. 端口块组中公网地址成员的数目已经达到最大值。	Difference between end address and start address is greater than 255. 公网地址的结束地址和起始地址之差超过255。

NAT/HotBackup

Message	Explanation
This device doesn't support nat portblock sync switch. 当前设备不支持更改温备开关。	Not allow to change nat portblock sync switch. 不允许操作温备开关。

NAT/OutboundDynamicRuleMove

Message	Explanation
Cannot move because the second rule is the lowest priority. 规则移动失败，第二条规则的优先级的值已达到最小。	The system does not allow the moving of the rule if the second rule had been the lowest priority. 不允许规则移动，因为第二条规则的优先级值已经达到最小。
Cannot move because the first rule does not exist. 规则移动失败，第一条规则不存在。	The system does not allow the moving of the rule if the first rule does not exist. 当第一条规则不存在时，不允许移动规则。
Cannot move because the second rule does not exist. 规则移动失败，第二条规则不存在。	The system does not allow the moving of the rule if the second rule does not exist. 当第二条规则不存在时，不允许移动规则。
Cannot move because the second rule is the highest priority. 规则移动失败，第二条规则的优先级的值已达到最大。	The system does not allow the moving of the rule if the second rule has been the highest priority. 当第二条规则的优先级值已经达到最大，不允许移动规则。
Cannot move because the second rule is invalid. 规则移动失败，第二条规则是无效规则。	The system does not allow the moving of the rule if the second rule is invalid. 第二条规则无效，不允许移动规则。

NBAR/SignatureAutoUpgradeNow

This table contains the information of APR signatures auto upgrading at once.

XML structure

```
<NBAR>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
`AutoUpgradeNow`	Update APR signature database immediately	N/A	N/A	This column must be empty.

NBAR/SignatureManualUpgrading

This table contains the information of APR signatures manual upgrade.

XML structure

```
<NBAR>
  <SignatureManualUpgrading>
    <URL></URL>
  </SignatureManualUpgrading>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the upgrade signature file	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	URL

NBAR/SignatureRollback

This table contains the information of APR signatures rollback.

XML structure

```
<NBAR>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	SignatureRollback
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	Rollback APR signature database	N/A	N/A	Boolean: • true：rollback last version • false：rollback original version

```

Table description

Item	Description
Feature name	NBAR
Table name	`SignatureAutoUpgrading`
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 02:00:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: • 0—Week • 1—periodic	Default is 1
Day	Days	N/A	Unsigned integer: 0-6.	When Type is **0**, the value range is 0 to 6. Otherwise, the value is invalid

NBAR/TerminalObjectGroup

This table contains the information of terminal IP object group.

XML structure

```
<NBAR>
  <TerminalObjectGroup>
    <IPV4ManageObjGroupName></IPV4ManageObjGroupName>
    <IPV4TerminalObjGroupName></IPV4TerminalObjGroupName>
    <IPV6ManageObjGroupName></IPV6ManageObjGroupName>
    <IPV6TerminalObjGroupName></IPV6TerminalObjGroupName>
  </TerminalObjectGroup>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	TerminalObjectGroup
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4ManageObjGroupName	The ipv4 manage object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV4TerminalObjGroupName	The ipv4 terminal object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV6ManageObjGroupName	The ipv6 manage object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV6TerminalObjGroupName	The ipv6 terminal object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

NBAR/UserApps

This table contains user-defined application information.

XML structure

```
<NBAR>
  <UserApps>
    <UserApp>
      <AppName></AppName>
      <ProtocolType></ProtocolType>
    </UserApp>
  </UserApps>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserApps
Table type	Multi-instance table
Row name	UserApp
Restrictions	This table is supported only on Comware 7 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProtocolType	Type of the protocol	N/A	Enumeration: • **0**—TCP. • **1**—UDP. • **2**—HTTP.	

NBAR/Usersigs

This table contains user-defined signature information.

XML structure

```
<NBAR>
  <Usersigs>
    <Usersig>
      <AppName></AppName>
      <SigID></SigID>
```

```
      <HeaderField></HeaderField>
      <ValueType></ValueType>
      <Value></Value>
      <Offset></Offset>
    </Usersig>
  </Usersigs>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserSigs
Table type	Multi-instance table
Row name	UserSig
Restrictions	This table is supported only on Comware 7 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SigID	ID of the user-defined signatures	Index	Unsigned short. Value range: 1 to 65535.	N/A
HeaderField	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ValueType	Type of the match pattern	N/A	Enumeration: • **0**—STRING. • **1**—HEX. • **2**—REGEX.	N/A
Value	Value of the match pattern	N/A	String. Length: 3 to 256 characters (for ValueType 0). Length: 6 to 254 characters (for ValueType 1). Length: 3 to 253 characters (for ValueType 2).	N/A
Offset	Value of the byte offset	N/A	Unsigned short. Value range: 0 to 65535.	N/A

NBAR/MatchContents

This table contains match contents information.

XML structure

```
<NBAR>
  <MatchContents>
    <MatchContent>
      <AppName></AppName>
      <SigID></SigID>
      <ContentID></ContentID>

      <Depth></Depth>
      <Distance></Distance>
      <Within></Within>
    </MatchContent>
  </MatchContents>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	MatchContents
Table type	Multi-instance table
Row name	MatchContent
Restrictions	This table is supported only on Comware 7 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SigID	ID of the user-defined signatures	Index	Unsigned short. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ContentID	ID of the match content	Index	Unsigned char. Value range: 1 to 255.	N/A
HeaderField	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Operator	Type of the Operator	N/A	Enumeration: • **0**—include. • **1**—not include.	N/A
ValueType	Type of the match pattern	N/A	Enumeration: • **0**—TEXT. • **1**—HEX. • **2**—REGEX.	N/A
Value	Value of the match pattern	N/A	String. Length: 3 to 256 characters (for ValueType 0). Length: 6 to 254 characters (for ValueType 1). Length: 3 to 253 characters (for ValueType 2).	N/A
Offset	Specifying where to start searching	N/A	Unsigned short. Value range: 0 to 65535.	N/A
Depth	Specifying how far into a packet should search	N/A	Unsigned short. Value range: 3 to 65535.	N/A
Distance	Specifying the distance from the last searching	N/A	Signed short. Value range: -32767 to 32767.	N/A
Within	Specifying how far into a packet should search from the last searching	N/A	Unsigned short. Value range: 3 to 65535.	N/A

NBAR/UserApplications

This table contains information about user-defined applications.

XML structure

```
<NBAR>
  <UserApplications>
    <UserApplication>
      <AppName></AppName>
      <Description></Description>
      <SecRisk></SecRisk>
      <RuleLogic></RuleLogic>
```

```
      <DetectLen></DetectLen>
      <Priority></Priority>
    </UserApplication>
  </UserApplications>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserApplications
Table type	Multi-instance table
Row name	UserApplication
Restrictions	This table is supported only on Comware 9 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application name can't be **invalid** or **other**.
Description	Description of the application	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
SecRisk	Risk type for the application	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RuleLogic	Relationship between rules for the application	N/A	Enumeration: • **0**—OR. • **1**—AND.	N/A
DetectLen	Specify the NBAR application detect length	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Priority	Priority level of the application	N/A	Unsigned integer. Value range: 1 to 255.	N/A

NBAR/UserRules

This table contains information about user-defined rules for an application.

XML structure

```
<NBAR>
  <UserRules>
    <UserRule>
      <AppName></AppName>
      <RuleID></RuleID>
      <PatternType></PatternType>
      <Description></Description>
      <L4ProtocolName></L4ProtocolName>
      <L5ProtocolName></L5ProtocolName>
      <Direction></Direction>
      <IPType></IPType>
      <SrcIP></SrcIP>
      <SrcIpPrefixLength></SrcIpPrefixLength>
      <SrcPortMin></SrcPortMin>
      <SrcPortMax></SrcPortMax>
      <DestIP></DestIP>
      <DestIpPrefixLength></DestIpPrefixLength>
      <DestPortMin></DestPortMin>
      <DestPortMax></DestPortMax>
      <Enable></Enable>
    </UserRule>
  </UserRules>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserRules
Table type	Multi-instance table
Row name	UserRule
Restrictions	This table is supported only on Comware 9 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens

Column name	Column description	Column type	Data type and restrictions	Remarks
	application			(-), and underlines (_). The application name can't be **invalid** or **other**.
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 8.	The value is defined by user.
PatternType	Type of the rule	N/A	Enumeration: • **1**—Number. • **2**—Keyword.	N/A
Description	Description of the rule	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
L4ProtocolName	Layer 4 protocol type in the rule	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
L5ProtocolName	Layer 5 protocol type in the rule	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
Direction	Pattern direction of the rule	N/A	Enumeration: • **0**—To server. • **1**—To client. • **2**—Both.	N/A
IPType	IP version	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.	Only IPv4 is supported now.
SrcIP	Source IP address	N/A	String, case-insensitive. Length: 1 to 45 characters.	N/A
SrcIpPrefixLength	Length of the source address mask.	Index	Unsigned integer. Value range: 0 to 32.	N/A
SrcPortMin	Start port number of a source port range	N/A	Unsigned short: Value range: 1 to 65535.	N/A
SrcPortMax	End port number of a source port range	N/A	Unsigned short: Value range: 1 to 65535.	N/A
DestIP	Destination IP address	N/A	String, case-insensitive. Length: 1 to 45 characters.	N/A
DestIpPrefixLength	Length of the destination address mask.	Index	Unsigned integer. Value range: 0 to 32.	N/A
DestPortMin	Start port number of a destination port range	N/A	Unsigned short: Value range: 1 to 65535.	N/A
DestPortMax	End port number of a destination port range	N/A	Unsigned short: Value range: 1 to 65535.	N/A
Enable	Whether or not to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	enable the rule		• true. • false.	

NBAR/UserLenSignatures

This table contains information about user-defined length signatures.

XML structure

```
<NBAR>
  <UserLenSignatures>
    <UserLenSignature>
      <AppName></AppName>
      <RuleID></RuleID>
      <PositionName></PositionName>
      <bNotEqual></bNotEqual>
      <StartPatternValue></StartPatternValue>
      <EndPatternValue></EndPatternValue>
    </UserLenSignature>
  </UserLenSignatures>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserLenSignatures
Table type	Multi-instance table
Row name	UserLenSignature
Restrictions	This table is supported only on Comware 9 in the current software version.

NBAR

NBAR/SignatureFileInfos

This table contains the signature file information.

XML structure

```
<NBAR>
  <SignatureFileInfos>
    <FileInfo>
      <FileName></FileName>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Updates></Updates>
    </FileInfo>
  </SignatureFileInfos>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	SignatureFileInfos
Table type	Multi-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Version	Version of the signature file	N/A	Enumeration: • 1—current • 2—last • 3—factory	N/A
FileName	File name of the signature file	N/A	String: case-insensitive Length: 1 to 31 characters.	N/A
PublishedTime	The time when the signature is published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	Consider time-zone

Column name	Column description	Column type	Data type and restrictions	Remarks
Updates	Information of the signature file	N/A	String: case-insensitive Length: 1 to 255 characters.	N/A

NBAR/SignatureAutoUpgrading

This table contains the information of APR signatures auto-upgrade settings.

XML structure

```
<NBAR>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 02:00:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: • 0—Week • 1—periodic	Default is 1
Day	Days	N/A	Unsigned integer:	When Type is **0**, the value range is 0 to 6.

Column name	Column description	Column type	Data type and restrictions	Remarks
			0-6.	Otherwise, the value is invalid

NBAR/UpdatePercentage

This table contains the percentage of update.

XML structure

```
<NBAR>
  <UpdatePercentage>
    <Percentage></Percentage>
    <ErrorCode></ErrorCode>
  </UpdatePercentage>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UpdatePercentage
Table Type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column Type	Data Type and restrictions	Remarks
Percentage	the percentage of update.	N/A	Unsigned integer	When the value range is 0 to 100,it means in upgrading, Otherwise, means error
ErrorCode	the errorcode of update.	N/A	Enumeration: • 0—Success • 1—License check error • 2—SigFile check error • 3—Server connect error	N/A

NBAR/TerminalObjectGroup

This table contains the information of terminal IP object group.

XML structure

```
<NBAR>
  <TerminalObjectGroup>
    <IPV4ManageObjGroupName></IPV4ManageObjGroupName>
    <IPV4TerminalObjGroupName></IPV4TerminalObjGroupName>
    <IPV6ManageObjGroupName></IPV6ManageObjGroupName>
    <IPV6TerminalObjGroupName></IPV6TerminalObjGroupName>
  </TerminalObjectGroup>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	TerminalObjectGroup
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4ManageObjGroupName	The ipv4 manage object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV4TerminalObjGroupName	The ipv4 terminal object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV6ManageObjGroupName	The ipv6 manage object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
IPV6TerminalObjGroupName	The ipv6 terminal object group name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

NBAR/UserApps

This table contains user defined applications information.

XML structure

```
<NBAR>
  <UserApps>
    <UserApp>
      <AppName></AppName>
      <ProtocolType></ProtocolType>
    </UserApp>
  </UserApps>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserApps
Table type	Multi-instance table
Row name	UserApp
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProtocolType	Type of the Protocol	N/A	Enumeration: • **0**—TCP. • **1**—UDP. • **2**—HTTP.	

NBAR/Usersigs

This table contains user defined signatures information.

XML structure

```
<NBAR>
  <Usersigs>
    <Usersig>
      <AppName></AppName>
      <SigID></SigID>
      <HeaderField></HeaderField>
```

```
      <ValueType></ValueType>
      <Value></Value>

    </Usersig>
  </Usersigs>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	Usersigs
Table type	Multi-instance table
Row name	Usersig
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SigID	ID of the user defined signatures	Index	Unsigned short. Value range: 1 to 65535.	N/A
HeaderField	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ValueType	Type of the match pattern	N/A	Enumeration: • **0**—STRING. • **1**—HEX. • **2**—REGEX.	N/A
Value	Value of the match pattern	N/A	String. Length: 3 to 256 characters (for ValueType 0). Length: 6 to 254 characters (for ValueType 1). Length: 3 to 253 characters (for ValueType 2).	N/A
Offset	Value of the byte offset	N/A	Unsigned short. Value range: 0 to 65535.	N/A

NBAR/MatchContents

This table contains match contents information.

XML structure

```
<NBAR>
  <MatchContents>
    <MatchContent>
      <AppName></AppName>
      <SigID></SigID>
      <ContentID></ContentID>
      <HeaderField></HeaderField>
      <Operator></Operator>
      <ValueType></ValueType>
      <Value></Value>
      <Offset></Offset>
      <Depth></Depth>
      <Distance></Distance>
      <Within></Within>
    </MatchContent>
  </MatchContents>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	MatchContents

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application name can't be **invalid** or **other**.
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 8.	N/A
PositionName	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
bNotEqual	Is not equal or equal	N/A	Boolean: • true • false	N/A
StartPatternValue	Start value of the number when the match type is number	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A
EndPatternValue	End value of the number when the match type is number	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	N/A

NBAR/UserACSignatures

This table contains information about user-defined AC signatures.

XML structure

```
<NBAR>
  <UserACSignatures>
    <UserACSignature>
      <AppName></AppName>
      <RuleID></RuleID>
      <SigID></SigID>
      <PositionName></PositionName>
      <MatchMode></MatchMode>
      <PatternString></PatternString>
      <Offset></Offset>
      <Depth></Depth>
    </UserACSignature>
  </UserACSignatures>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserACSignatures
Table type	Multi-instance table
Row name	UserACSignature
Restrictions	This table is supported only on Comware 9 in the current software version.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application name can't be **invalid** or **other**.
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 8.	N/A
SigID	ID of the match signature	Index	Unsigned integer: Value range: 1 to 65535.	N/A
PositionName	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MatchMode	Type of the user-defined pattern	N/A	Enumeration: • **0**—Text. • **2**—Hex	N/A
PatternString	Value of the user-defined pattern	N/A	String. Length: 3 to 127 characters.	N/A
Offset	Specifies where to start searching	N/A	Unsigned short. Value range: 1 to 65535.	N/A
Depth	Specifies how far into a packet NBAR should search	N/A	Unsigned short. Value range: 3 to 65535.	N/A

NBAR/UserDetections

This table contains information about the NBAR user-defined detection items of a signature.

XML structure

```
<NBAR>
  <UserDetections>
    <UserDetection>
      <AppName></AppName>
      <RuleID></RuleID>
      <SigID></SigID>
      <DetectionID></DetectionID>
      <PositionName></PositionName>
      <MatchType></MatchType>
      <MatchMode></MatchMode>
      <PatternString></PatternString>
```

```
      <Offset></Offset>
      <Depth></Depth>
      <Distance></Distance>
      <Within></Within>
    </UserDetection>
  </UserDetections>
</NBAR>
```

Table description

Item	Description
Feature name	NBAR
Table name	UserDetections
Table type	Multi-instance table
Row name	UserDetection
Restrictions	This table is supported only on Comware 9 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the user-defined application	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The application name can't be **invalid** or **other**.
RuleID	ID of the match rule	Index	Unsigned integer: Value range: 1 to 8..	N/A
SigID	ID of the match signature	Index	Unsigned integer: Value range: 1 to 65535.	N/A
DetectionID	ID of the user detection item	Index	Unsigned integer. Value range: 1 to 10.	N/A
PositionName	Header field of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MatchType	Match operator type	N/A	Enumeration: • **1**—include. • **2**—exclude.	N/A
MatchMode	Type of the user-defined pattern	N/A	Enumeration: • **0**—Text. • **1**—Regex. • **2**—Hex.	N/A
PatternString	Value of the user-defined pattern	N/A	String. Length: 3 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Offset	Offset specifies where to start searching	N/A	Unsigned short. Value range: 1 to 65535.	N/A
Depth	Depth specifies how far into a packet NBAR should search	N/A	Unsigned short. Value range: 3 to 65535.	N/A
Distance	Specifies the distance from the last searching	N/A	Signed short. Value range: -32767 to 32767, excluding 0.	N/A
Within	Specifies how far into a packet NBAR should search from the last searching	N/A	Unsigned short. Value range: 3 to 65535.	N/A

ND/NDTable

This table contains information about neighbor entries.

XML structure

```
<ND>
  <NDTable>
    <NDEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
    </NDEntry>
  </NDTable>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDTable
Table type	Multi-instance table
Row name	NDEntry
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. If the specified interface is a VLAN interface, the VLAN ID corresponding to the interface must be consistent with the value of the VLANID column. Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	It must be configured together with the PortIndex column.
PortIndex	Port index	N/A	Unsigned integer.	It must be configured together with the VLANID column. The port specified by PortIndex must belong to the VLAN specified by VLANID.
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. Required. 0 means public network.

ND/NDLearnLimit

This table contains the information of maximum number of dynamic neighbor entries that an interface can learn.

XML structure

```
<ND>
  <NDLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
    </LearnLimit>
  </NDLearnLimit>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2/Layer 3 interface Layer 2/Layer 3 aggregate interface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model. The default setting varies with device models.

ND/NDInterface

This table contains neighbor interface information.

XML structure

```
<ND>
  <NDInterface>
    <Interface>
      <IfIndex></IfIndex>
      <DADAttempts></DADAttempts>
      <ModeUNI></ModeUNI>
    </Interface>
```

```
  </NDInterface>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
DADAttempts	The number of attempts to send an NS message for DAD	N/A	Unsigned integer. Value range: 0 to 600. Default: 1.	0 means DAD is disabled. Only Layer 3 interfaces are supported.
ModeUNI	Configure a port as a customer-side port true: Customer-side port false:Network-side port	N/A	Boolean: • **true** • **false** (default)	Whether the ModeUNI is supported depends on the device model. Only VLAN interfaces are supported.

ND/NDConfig

This table contains neighbor configuration information.

XML structure

```
<ND>
  <NDConfig>
    <StaleAging></StaleAging>
    <LinkLocalMinimize></LinkLocalMinimize>
    <HopLimit></HopLimit>
    <StaleAgingUnit></StaleAgingUnit>
    <OnOffLineLog></OnOffLineLog>
    <Rate><Rate>
    <IPConflictRecord></IPConflictRecord>
    <MoveRecord></MoveRecord>
    <RABroadcastToTunnels></RABroadcastToTunnels>
  </NDConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAging	The aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds. Default: 240 minutes.	The aging time must config together with aging time value
LinkLocalMinimize	Wether minimize link-local ND entries or not	N/A	Boolean: • **true** • **false** (default)	N/A
HopLimit	The Hop Limit field in the IPv6 header	N/A	Unsigned integer. Value range: 1 to 255. Default: 64.	If the device advertises the hop limit in RA messages, all RA message receivers receiving the RA message fill the value into the Hop Limit field of IPv6 packets to be sent.

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: • **0**—Aging in minutes. • **1**—Aging in seconds	The aging time value type must config together with aging time.
OnOffLineLog	Whether ND online and offline log is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
Rate	Rate value of outputting logs	N/A	Unsigned integer. Value range: 10 to 300. Default: 100.	N/A
IPConflictRecord	Whether ND conflict IP record is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
MoveRecord	Whether ND move record is enabled	N/A	Boolean: • **true** • **false** (default)	N/A
RABroadcastToTunnels	Whether ND RA brocast to tunnel is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

ND/NDRA

This table contains information about neighbor RA.

Row name	RA
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RAHalt	Whether suppress an interface from advertising RA message or not	N/A	Boolean: • **true** (default) • **false**—Disabled.	N/A
MaxInterval	The maximum interval for advertising RA messages	N/A	Unsigned integer. Value range: 4 to 1800 seconds. Default: 600 seconds.	It must be configured together with the MinInterval column.
MinInterval	The minimum interval for advertising RA messages	N/A	Unsigned integer. Value range: 3 to three-fourths of the MaxInterval. Default: 200 seconds.	It must be configured together with the MaxInterval column.
NoAdvLinkMTU	Whether turn off the MTU option in RA messages or not	N/A	Boolean: • **true** • **false** (default)	N/A
HopLimitUnspecified	Whether specify unlimited hops in RA messages or not	N/A	Boolean: • **true** • **false** (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ManagedAddressFlag	Whether set the managed address flag to 1 or not	N/A	Boolean: • **true** • **false** (default)	N/A
OtherFlag	Whether set the other flag to 1 or not	N/A	Boolean: • **true** • **false** (default)	N/A
RouterLifetime	The router lifetime in RA messages	N/A	Unsigned integer. Value range: 0 to 9000 seconds. Default: 1800 seconds.	0 means the router does not serve as the default router
NSRetransTimer	The interval for retransmitting an NS message	N/A	Unsigned integer. Value range: 1000 to 4294967295 milliseconds. Default: 1000 milliseconds.	N/A
RouterPreference	The router preference in RA messages	N/A	Enumeration: • **1**—High. • **2**—Low. • **3**—Medium (default).	N/A
NudReachableTime	The neighbor reachable time on an interface	N/A	Unsigned integer. Value range: 1 to 3600000 milliseconds. Default: 30000 milliseconds.	N/A
BootFileUrl	URL address of boot file in RA messages	N/A	String. Length: 1 to 127 characters.	The URL address begins with http://, https:// , ftp:// or tftp://.
BroadcastToTunnels	Whether the function of common ND RA BroadcastToTunnels Is enabled	N/A	Boolean: • **true** • **false** (default)	N/A

ND/NDRAPrefix

This table contains information about neighbor RA prefix.

XML structure

```
<ND>
  <NDRAPrefix>
    <RAPrefix>
      <IfIndex></IfIndex>
     <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
```

```
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </Ipv6Prefix>
     <ValidLifetime></ValidLifetime>
     <PreferredLifetime></PreferredLifetime>
     <NoAutoConfig></NoAutoConfig>
     <OffLink></OffLink>
     <NoAdvertise></NoAdvertise>
   </RAPrefix>
  </NDRAPrefix>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefix
Table type	Multi-instance table
Row name	RAPrefix
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	It must be configured as valid IPv6 prefix.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidLifetime	The valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured,it must be configured. When it is not configured,it is the default value.
PreferredLifetime	The preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured,it must be configured. When it is not configured,it is the default value..
NoAutoConfig	Whether the function of not to be used for stateless autoconfiguration is enabled	N/A	Boolean: • **true** • **false** (default)	When NoAdvertise is configured ,it can't be configured.
OffLink	Whether the function of the address with the prefix is not directly reachable on the link is enabled	N/A	Boolean: • **true** • **false** (default)	When NoAdvertise is configured ,it can't be configured.
NoAdvertise	Whether not advertising the prefix specified in the command is enabled	N/A	Boolean: • **true** • **false**	When it is configured, the lifetime can't be configured, and the lifetime is the default value.

ND/NDProxy

This table contains information about neighbor proxy.

XML structure

```
<ND>
  <NDProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
    </Proxy>
  </NDProxy>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDProxy
Table type	Multi-instance table
Row name	Proxy
Restrictions	This table supports interface types: VLAN interface Layer 3 Ethernet interface/ Layer 3 Ethernet subinterface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ProxyEnable	Whether the function of common ND proxy Is enabled	N/A	Boolean: • true • false (default)	N/A
LocalProxyEnable	Whether the function of local ND proxy is enabled	N/A	Boolean: • true • false (default)	N/A

ND/NDStaleAgingTime

This table contains aging time configuration for ND entries in stale state.

XML structure

```
<ND>
  <NDStaleAgingTime>
    <StaleAgingTime>
      <IfIndex></IfIndex>
      <AgingTime></AgingTime>
```

```
        <StaleAgingUnit></StaleAgingUnit>
      </StaleAgingTime>
    </NDStaleAgingTime>
  </ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDStaleAgingTime
Table type	Multi-instance table
Row name	StaleAgingTime
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 • interfaces are • supported.
AgingTime	Aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes or 60 to 86400 seconds	The aging time must be configured together with aging time value type.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: • **0**—Aging in minutes. • **1**—Aging in seconds.	The aging time value type must be configured together with aging time.

ND/NDVsiSnooping

This table contains ND snooping configuration information for VSIs.

XML structure

```
<ND>
  <NDVsiSnooping>
    <VsiSnooping>
      <VsiName></VsiName>
      <SnoopingGlobalEnable></SnoopingGlobalEnable>
      <SnoopingLinklocalEnable></SnoopingLinklocalEnable>
    </VsiSnooping>
```

```
  </NDVsiSnooping>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiSnooping
Table type	Multi-instance table
Row name	VsiSnooping
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SnoopingGlobalEnable	Whether ND global snooping is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SnoopingLinklocalEnable	Whether ND link-local snooping is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDVsiDetection

This table contains ND detection configuration information for VSIs.

XML structure

```
<ND>
  <NDVsiDetection>
    <VsiDetection>
      <VsiName></VsiName>
      <DetectionEnable></DetectionEnable>
    </VsiDetection>
  </NDVsiDetection>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiDetection
Table type	Multi-instance table
Row name	VsiDetection
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
DetectionEnable	Whether ND detection is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDVsiDetectionTrust

This table contains ND trusted AC configuration information for Ethernet service instances.

XML structure

```
<ND>
  <NDVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </NDVsiDetectionTrust>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ND trusted AC	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

ND/NDSrcmacAtkDetec

This table contains information about ND source MAC attack detection.

XML structure

```
<ND>
  <NDSrcmacAtkDetec>
    <SrcmacMode></SrcmacMode>
    <SrcmacThreshold></SrcmacThreshold>
  </NDSrcmacAtkDetec>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSrcmacAtkDetec
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcmacMode	Enabling status of common ND proxy	N/A	Unsigned integer. • **0**—None. • **1**—Filter. • **2**—Monitor.	N/A
SrcmacThreshold	Threshold for ND source MAC attack detection	N/A	Unsigned integer. Value range: 1 to 5000. Default: 30.	N/A

ND/NDIfAtkSuppression

This table contains information about ND interface suppression.

XML structure

```
<ND>
  <NDIfAtkSuppression>
    <Enable></Enable>
    <Threshold></Threshold>
  </NDIfAtkSuppression>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDIfAtkSuppression
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of ND interface attack suppression	N/A	Boolean: • true • false (default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Threshold	Threshold for ND interface attack suppression.	N/A	Unsigned integer. Value range: 1 to 5000. Default: 1000.	N/A

ND/NDUnsolicitedNA(Interface)

This table contains the information about ND unsolicited NA learning on an interface.

XML structure

```
<ND>
  <NDUnsolicitedNA>
    <UnsolicitedNA>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </UnsolicitedNA>
  </NDUnsolicitedNA>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDUnsolicitedNA
Table type	Multi-instance table
Row name	UnsolicitedNA
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see I*fMgr in Ifmgr NETCONF XML API Configuration Reference*. Only Layer 3 interfaces are supported.
Enable	Whether ND unsolicited NA Learning is enabled on the interface	N/A	Boolean: • true • false (default)	N/A

ND/NDRouteAdvertise

This table contains information about interface ND direct route advertisement.

XML structure

```
<ND>
  <NDRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <DelayTime></DelayTime>
      <Preference></Preference>
      <Tag></Tag>
    </RouteAdvertise>
  </NDRouteAdvertise>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Enable	Enabling status of ND direct route advertisement on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled. **(defult)**	N/A
DelayTime	Delay for ND direct route advertisement	N/A	Unsigned integer. Value range: 0 to 3600, in seconds. Default: 0.	N/A
Preference	Preference of the direct routes	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	Preference and Tag can be configured only when ND direct route advertisement on the interface is enabled.
Tag	Route tag for the direct routes	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 0.	Preference and Tag can be configured only when ND direct route advertisement on the interface is enabled.

ND/NDDNSSuppress

This table contains information about the interface ND DNS suppression.

XML structure

```
<ND>
  <NDDNSSuppress>
    <DNSSuppress>
      <IfIndex></IfIndex>
      <ServerSuppressEnable></ServerSuppressEnable>
      <SearchListSuppressEnable></SearchListSuppressEnable>
    </DNSSuppress>
  </NDDNSSuppress>
</ND>
```

Table description

Item	Description
Feature name	ND

Table name	NDDNSSuppress
Table type	Multi-instance table
Row name	DNSSuppress
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
ServerSuppressEnable	Enabling status of ND DNS server suppression on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SearchListSuppressEnable	Enabling status of the ND DNS search list suppression on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDDNSServer

This table contains information about the ND DNS server on an interface.

XML structure

```
<ND>
  <NDDNSServer>
    <DNSServer>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <LifeTime></LifeTime>
      <Infinite></Infinite>
      <Sequence></Sequence>
    </DNSServer>
  </NDDNSServer>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDNSServer

Table type	Multi-instance table
Row name	DNSServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
LifeTime	Life time	N/A	Unsigned integer. Value range: 4 to 4294967295.	The value 4294967295 means infinite. The default setting is three times the max RA interval.
Infinite	Infinite	N/A	Boolean: • **true** • **false**	N/A
Sequence	Sequence	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ND/NDDNSSearchList

This table contains information about the ND DNS search list on an interface.

XML structure

```
<ND>
  <NDDNSSearchList>
    <DNSSearchList>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
      <LifeTime></LifeTime>
      <Infinite></Infinite>
      <Sequence></Sequence>
    </DNSSearchList>
  </NDDNSSearchList>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDNSSearchList
Table type	Multi-instance table
Row name	DNSSearchList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.
LifeTime	Life time	N/A	Unsigned integer. Value range: 4 to 4294967295.	The value 4294967295 means infinite. The default setting is three times the max RA interval.
Infinite	Infinite	N/A	Boolean: • **true** • **false**	N/A
Sequence	Sequence	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ND/NDRAPrefixDefault

This table contains information about ND RA prefix default parameters.

XML structure

```
<ND>
  <NDRAPrefixDefault>
    <RAPrefixDefault>
      <IfIndex></IfIndex>
      <ValidLifetime></ValidLifetime>
      <PreferredLifetime></PreferredLifetime>
      <NoAutoConfig></NoAutoConfig>
      <OffLink></OffLink>
      <NoAdvertise></NoAdvertise>
    </RAPrefixDefault>
  </NDRAPrefixDefault>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefixDefault
Table type	Multi-instance table
Row name	RAPrefixDefault
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidLifetime	Valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds. Default: 2592000	When it is not configured, the default value applies.
PreferredLifetime	Preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds. Default: 604800	When it is not configured, the default value applies.
NoAutoConfig	Indicates the prefix is not used for stateless autoconfiguration	N/A	Boolean: • true • false (default)	If you want to create NoAutoConfig, the ValidLifetime and PreferredLifetime must also be configured.
OffLink	Indicates the address with the prefix is not directly reachable on the link	N/A	Boolean: • true • false (default)	If you want to create OffLink, the ValidLifetime and PreferredLifetime must also be configured.
NoAdvertise	Disables the device from advertising the prefix specified in the command	N/A	Boolean: • true • false	When it is configured, the lifetime cannot be configured, and the lifetime uses the default value.

ND/NDRAPrefixRecord

This table contains information about ND RA prefix records.

XML structure

```
<ND>
  <NDRAPrefixRecord>
    <RAPrefixRecord>
      <VLANID></VLANID>
      <RecordEnable></RecordEnable>
    </RAPrefixRecord>
  </NDRAPrefixRecord>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefixRecord
Table type	Multi-instance table
Row name	RAPrefixRecord

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
RecordEnable	Enabling status of ND RA prefix recording	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDDirectRoutePrefix

This table contains information about neighbor direct route prefix.

XML structure

```
<ND>
  <NDDirectRoutePrefix>
    <DirectRoutePrefix>
      <IfIndex></IfIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <ConvertLength></ConvertLength>
      <RetainHostRoute></RetainHostRoute>
    </DirectRoutePrefix>
  </NDDirectRoutePrefix>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDirectRoutePrefix
Table type	Multi-instance table
Row name	DirectRoutePrefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Prefix	IPv6 prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	It must be a valid IPv6 address.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
ConvertLength	Length of segment routing for the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 127.	N/A
RetainHostRoute	Retain the 128-bit host routes generated by ND entries	N/A	Enumeration: • **0**—Not retain host routes (default). • **1**—Retain host routes.	N/A

ND/NDSuppressionPush

This table contains information about ND suppression push settings.

XML structure

```
<ND>
  <NDSuppressionPush>
    <Interval></Interval>
  </NDSuppressionPush>
</ND>
```

Table description

Item	Description
Feature name	ND

Table name	NDSuppressionPush
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Interval at which ND suppression entries are pushed	N/A	Unsigned integer. Value range: 1 to 1440 minutes.	N/A

ND/NDSnoopingConfig

This table contains ND snooping configuration information.

XML structure

```
<ND>
  <NDSnoopingConfig>
    <DadRetransTime></DadRetransTime>
    <InvalidLifetime></InvalidLifetime>
    <ValidLifetime></ValidLifetime>
  </NDSnoopingConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DadRetransTi	Interval for	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
me	retransmitting an ND DAD message		Value range: 100 to 500 milliseconds. Default: 250 milliseconds.	
InvalidLifetime	Invalid lifetime of ND snooping entries	N/A	Unsigned integer. Value range: 250 to 1000 milliseconds. Default: 500 milliseconds.	N/A
ValidLifetime	Valid lifetime of ND snooping entries	N/A	Unsigned integer. Value range: 60 to 900 seconds. Default: 300 seconds.	N/A

ND/NDSnoopingGleanSource

This table contains ND snooping glean source configuration information.

XML structure

```
<ND>
  <NDSnoopingGleanSource>
    <SnoopingGleanSource>
      <VLANID></VLANID>
      <Enable></Enable>
    </SnoopingGleanSource>
  </NDSnoopingGleanSource>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingGleanSource
Table type	Multi-instance table
Row name	SnoopingGleanSource
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether ND snooping is enabled by IPv6 data packets from unknown sources	N/A	Boolean: • **true** • **false** (default)	N/A

ND/NDSnoopingIfConfig

This table contains interface-specific ND snooping configuration information.

XML structure

```
<ND>
  <NDSnoopingIfConfig>
    <SnoopingIfConfig>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <Uplink></Uplink>
    </SnoopingIfConfig>
  </NDSnoopingIfConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingIfConfig
Table type	Multi-instance table
Row name	SnoopingIfConfig
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML

Column name	Column description	Column type	Data type and restrictions	Remarks
				API Configuration Reference.
LearnMaxNum	Maximum number of dynamic snooping entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model. The default setting varies with device models.
Uplink	Whether interface is an uplink interface	N/A	Boolean: • **true** • **false** (default)	N/A

ND/NDVsiConfig

This table contains VSI-based long ND entry configuration information.

XML structure

```
<ND>
  <NDVsiConfig>
    <VsiConfig>
      <VsiIfIndex></VsiIfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <VrfIndex></VrfIndex>
    </VsiConfig>
  </NDVsiConfig>
</ND>
```

Table name	NDVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiIfIndex	VSI interface index	Index	Unsigned integer.	The VSI interface must be bound to the VSI. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field must be configured when the port is a Layer 2 Ethernet interface. It must be deleted when the port is a Tunnel interface.
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI before you merge, replace or create NDs.
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.

ND/NdRateLimit

This table contains ND rate limit information.

XML structure

```
<ND>
  <NdRateLimit>
    <RateLimit>
      <IfIndex></IfIndex>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
```

```
    </RateLimit>
  </NdRateLimit>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NdRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model. The default value of RateLimitNum depends on the device model. RateLimitNum can be configured only when RateLimitEnable is true.

ND/NdRateLimitLog

This table contains ND rate limit log information.

XML structure

```
<ND>
  <NdRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </NdRateLimitLog>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NdRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
LogInterval	Set the interval of sending report or log	N/A	Unsigned integer. Value range: 1 to 86400. Default: 60.	N/A

ND/NDVsiSuppression

This table contains information about ND suppression entries for VSIs.

XML structure

```
<ND>
  <NDVsiSuppression>
    <VsiSuppression>
      <VsiName></VsiName>
      <SuppressionEnable></SuppressionEnable>
      <SuppressionMode></SuppressionMode>
      <SuppressionMismatchDiscard></SuppressionMismatchDiscard>
      <NoBroadCast></NoBroadCast>
```

```
    </VsiSuppression>
  </NDVsiSuppression>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiSuppression
Table type	Multi-instance table
Row name	VsiSuppression
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SuppressionEnable	Whether ND suppression is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
SuppressionMode	ND suppression mode	N/A	Enumeration: • **1**—**`proxy-reply`** (default). • **2**—**`unicast-forward`**.	N/A
SuppressionMismatchDiscard	ND suppression mismatch discarding mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
NoBroadCast	Whether ND stateless broadcast is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

ND/NDScanKeepalive

This table contains interface-specific information about ND scan keepalive

XML structure

```
<ND>
```

```
  <NDScanKeepalive>
    <IfScanKeepalive>
      <IfIndex></IfIndex>
      <ScanEnable></ScanEnable>
      <AgingTime></AgingTime>
    </IfScanKeepalive >
  </NDScanKeepalive>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDScanKeepalive
Table type	Multi-instance table
Row name	IfScanKeepalive
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
ScanEnable	Whether ND keepalive scanning is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
AgingTime	Aging time of ND keepalive entries	N/A	Unsigned integer. Value range: 1 to 1440.	N/A

ND/NDVsrpPort

This table contains ND VSRP port information

XML structure

```
<ND>
  <NDVsrpPort>
    <PortNum></PortNum>
  </NDVsrpPort>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsrpPort
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNum	Port number of ND VSRP instance	N/A	Unsigned integer. Value range: 1 to 65535.	60044 means not configured.

ND/NDConsistencyTable

This table contains the information about ND consistency check.

XML structure

```
<ND>
  <NDConsistencyTable>
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </NDConsistencyTable>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDConsistencyTable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConsistencyCheckEnable	Whether ND consistency check is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

ND

ND/NDTable

This table contains information about neighbor entries.

XML structure

```
<ND>
  <NDTable>
    <NDEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
      <Type></Type>
      <State></State>
      <AgeTime></AgeTime>
    </NDEntry>
  </NDTable>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDTable
Table type	Multi-instance table
Row name	NDEntry
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
PortIndex	Port index	N/A	Unsigned integer.	N/A
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network
Type	Neighbor information type	N/A	Enumeration: • **1**—Invalid static. • **2**—Static. • **3**—Dynamic. • **4**—OpenFlow. • **5**—Rule.	N/A
State	State of a neighbor	N/A	Enumeration: • **1**—INCMP. • **2**—REACH. • **3**—STALE. • **4**—DELAY. • **5**—PROBE.	N/A
AgeTime	The elapsed time	N/A	Unsigned integer.	N/A

ND/NDLearnLimit

This table contains the information of maximum number of dynamic neighbor entries that an interface can learn.

XML structure

```
<ND>
  <NDLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
    </LearnLimit>
  </NDLearnLimit>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2/Layer 3 interface Layer 2/Layer 3 aggregate interface S-channel interface/S-channel aggregate interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model.

ND/NDInterface

This table contains neighbor interface information.

XML structure

```
<ND>
  <NDInterface>
    <Interface>
      <IfIndex></IfIndex>
      <DADAttempts></DADAttempts>
      <ModeUNI></ModeUNI>
    </Interface>
  </NDInterface>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDInterface

Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
DADAttempts	The number of attempts to send an NS message for DAD	N/A	Unsigned integer. Value range: 0 to 600.	0 means DAD is disabled. Only Layer 3 interfaces are supported.
ModeUNI	Configure a port as a customer-side port true: Customer-side port false:Network-side port	N/A	Boolean: • **true** • **false**	Only VLAN interfaces are supported

ND/NDConfig

This table contains neighbor configuration information.

XML structure

```
<ND>
  <NDConfig>
    <StaleAging></StaleAging>
    <LinkLocalMinimize></LinkLocalMinimize>
    <HopLimit></HopLimit>
    <StaleAgingUnit></StaleAgingUnit>
    <OnOffLineLog></OnOffLineLog>
    <Rate></Rate>
    <IPConflictRecord></IPConflictRecord>
    <MoveRecord></MoveRecord>
    <RABroadcastToTunnels></RABroadcastToTunnels>
  </NDConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAging	The aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds	N/A
LinkLocalMinimize	Wether minimize link-local ND entries or not	N/A	Boolean: • **true** • **false**	N/A
HopLimit	The Hop Limit field in the IPv6 header	N/A	Unsigned integer. Value range: 1 to 255.	If the device advertises the hop limit in RA messages, all RA message receivers receiving the RA message fill the value into the Hop Limit field of IPv6 packets to be sent.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: • **0**—Aging in minutes. • **1**—Aging in seconds..	N/A
OnOffLineLog	Whether ND online and offline log is enabled	Data structure	Boolean: • **true** • **false**	N/A
Rate	Rate value of outputting logs	N/A	Unsigned integer. Value range: 10 to 300.	N/A
IPConflictRecord	Whether ND conflict IP record is enabled	N/A	Boolean: • **true** • **false**	N/A
MoveRecord	Whether ND move record is enabled	N/A	Boolean: • **true** • **false**	N/A
RABroadcastToTunnels	Whether ND RA broadcast to tunnel is enabled	N/A	Boolean: • **true**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**	

ND/NDRA

This table contains information about neighbor RA.

XML structure

```
<ND>
  <NDRA>
    <RA>
      <IfIndex></IfIndex>
      <RAHalt></RAHalt>
      <MaxInterval></MaxInterval>
      <MinInterval></MinInterval>
      <NoAdvLinkMTU></NoAdvLinkMTU>
      <HopLimitUnspecified></HopLimitUnspecified>
      <ManagedAddressFlag></ManagedAddressFlag>
      <OtherFlag></OtherFlag>
      <RouterLifetime></RouterLifetime>
      <NSRetransTimer></NSRetransTimer>
      <RouterPreference></RouterPreference>
      <NudReachableTime></NudReachableTime>
      <BootFileUrl></BootFileUrl>
      <BroadcastToTunnels></BroadcastToTunnels>
    </RA>
  </NDRA>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRA
Table type	Multi-instance table
Row name	RA
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces

Column name	Column description	Column type	Data type and restrictions	Remarks
				are supported.
RAHalt	Whether suppress an interface from advertising RA message or not	N/A	Boolean: • **true** • **false**	N/A
MaxInterval	The maximum interval for advertising RA messages	N/A	Unsigned integer. Value range: 4 to 1800 seconds.	N/A
MinInterval	The minimum interval for advertising RA messages	N/A	Unsigned integer. Value range: 3 to three-fourths of the MaxInterval.	N/A
NoAdvLinkMTU	Whether turn off the MTU option in RA messages or not	N/A	Boolean: • **true** • **false**	N/A
HopLimitUnspecified	Whether specify unlimited hops in RA messages or not	N/A	Boolean: • **true** • **false**	N/A
ManagedAddressFlag	Whether set the managed address flag to 1 or not	N/A	Boolean: • **true**. • **False**	N/A
OtherFlag	Whether set the other flag to 1 or not	N/A	Boolean: • **true** • **false**	N/A
RouterLifetime	The router lifetime in RA messages	N/A	Unsigned integer. Value range: 0 to 9000 seconds.	0 means the router does not serve as the default router
NSRetransTimer	The interval for retransmitting an NS message	N/A	Unsigned integer. Value range: 1000 to 4294967295 milliseconds.	N/A
RouterPreference	The router preference in RA messages	N/A	Enumeration: • **1**—High. • **2**—Low. • **3**—Medium.	N/A
NudReachableTime	The neighbor reachable time on an interface	N/A	Unsigned integer. Value range: 1 to 3600000 milliseconds.	N/A
BootFileUrl	URL address of boot file in RA messages	N/A	String. Length: 1 to 127 characters.	The URL address begins with http://, https:// , ftp:// or tftp://.
BroadcastToTunnels	Whether the function of common ND RA BroadcastToTunnels is enabled	N/A	Boolean: • **true** • **false.**	N/A

ND/NDRAPrefix

This table contains information about neighbor RA prefix.

XML structure

```
<ND>
  <NDRAPrefix>
    <RAPrefix>
      <IfIndex></IfIndex>
     <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
     </Ipv6Prefix>
      <ValidLifetime></ValidLifetime>
      <PreferredLifetime></PreferredLifetime>
      <NoAutoConfig></NoAutoConfig>
      <OffLink></OffLink>
      <NoAdvertise></NoAdvertise>
    </RAPrefix>
  </NDRAPrefix>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefix
Table type	Multi-instance table
Row name	RAPrefix
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 128.	
ValidLifetime	The valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	N/A
PreferredLifetime	The preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	N/A
NoAutoConfig	Whether the function of not to be used for stateless autoconfiguration is enabled	N/A	Boolean: • **true** • **false**	N/A
OffLink	Whether the function of the address with the prefix is not directly reachable on the link is enabled	N/A	Boolean: • **true** • **false**	N/A
NoAdvertise	Whether not advertising the prefix specified in the command is enabled	N/A	Boolean: • **true** • **false**	N/A

ND/NDProxy

This table contains information about neighbor proxy.

XML structure

```
<ND>
  <NDProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
    </Proxy>
  </NDProxy>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDProxy

Table type	Multi-instance table
Row name	Proxy
Restrictions	This table supports interface types: VLAN interface Layer 3 Ethernet interface/ Layer 3 Ethernet subinterface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
ProxyEnable	Whether the function of common ND proxy is enabled	N/A	Boolean: • true • false	N/A
LocalProxyEnable	Whether the function of local ND proxy is enabled	N/A	Boolean: • true • false.	N/A

ND/NDSpecification

This table contains ND specification information.

XML structure

```
<ND>
  <NDSpecification>
    <LearnMaxNumLimit></LearnMaxNumLimit>
    <SupportModeUNI></SupportModeUNI>
  </NDSpecification>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LearnMaxNumLimit	Set the maximum number of dynamic neighbor entries that the interface can learn	N/A	Unsigned integer.
SupportModeUNI	Whether support for configuring a port as a customer-side port or not	N/A	Boolean: • true • false

ND/NDStaleAgineTime

This table contains aging time configuration information for ND entries in stale state.

XML structure

```
<ND>
  <NDStaleAgingTime>
    <StaleAgingTime>
      <IfIndex></IfIndex>
      <AgingTime></AgingTime>
      <StaleAgingUnit></StaleAgingUnit>
    </StaleAgingTime>
  </NDStaleAgingTime>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDStaleAgingTime
Table type	Multi-instance table
Row name	StaleAgingTime
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
AgingTime	Aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 0 to 1440 minutes or 60 to 86400 seconds Default: 0	When it is not configured, the default value applies.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: • **0**—Aging in minutes. • **1**—Aging in seconds.	N/A

ND/NDVsiSnooping

This table contains ND snooping configuration information for VSIs.

XML structure

```
<ND>
  <NDVsiSnooping>
    <VsiSnooping>
      <VsiName></VsiName>
      <SnoopingGlobalEnable></SnoopingGlobalEnable>
      <SnoopingLinklocalEnable></SnoopingLinklocalEnable>
    </VsiSnooping>
  </NDVsiSnooping>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiSnooping
Table type	Multi-instance table
Row name	VsiSnooping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SnoopingGlobalEnable	Whether ND global snooping is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SnoopingLinklocalEnable	Whether ND link-local snooping is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDVsiDetection

This table contains ND detection configuration information for VSIs.

XML structure

```
<ND>
  <NDVsiDetection>
    <VsiDetection>
      <VsiName></VsiName>
      <DetectionEnable></DetectionEnable>
    </VsiDetection>
  </NDVsiDetection>
</ND>
```

Table description

Item	Description
Feature name	ND

Row name	SRV
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TrustEnable	Whether the Ethernet service instance is configured as an ND trusted AC	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

ND/NDSrcmacAtkDetec

This table contains information about ND source MAC attack detection.

XML structure

```
<ND>
  <NDSrcmacAtkDetec>
    <SrcmacMode></SrcmacMode>
    <SrcmacThreshold></SrcmacThreshold>
  </NDSrcmacAtkDetec>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSrcmacAtkDetec
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcmacMode	Enabling status of common ND proxy	N/A	Unsigned integer. • **0**---None. • **1**---Filter. • **2**---Monitor.	N/A
SrcmacThreshold	Threshold for ND source MAC attack detection	N/A	Unsigned integer. Value range: 1 to 5000.	N/A

ND/NDIfAtkSuppression

This table contains information about ND interface suppression.

XML structure

```
<ND>
  <NDIfAtkSuppression>
    <Enable></Enable>
    <Threshold></Threshold>
  </NDIfAtkSuppression>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDIfAtkSuppression
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of ND interface attack suppression	N/A	Boolean: • true • false	N/A
Threshold	Threshold for ND interface attack suppression.	N/A	Unsigned integer. Value range: 1 to 5000.	N/A

ND/NDUnsolicitedNA(Interface)

This table contains the information about ND unsolicited NA learning on an interface.

XML structure

```
<ND>
  <NDUnsolicitedNA>
    <UnsolicitedNA>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </UnsolicitedNA>
  </NDUnsolicitedNA>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDUnsolicitedNA
Table type	Multi-instance table
Row name	UnsolicitedNA
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference. Only Layer 3 interfaces are supported.
Enable	Whether ND unsolicited NA Learning is enabled for the interface	N/A	Boolean: • **true** • **false**	N/A

ND/NDRouteAdvertise

This table contains information about interface ND direct route advertisement.

XML structure

```
<ND>
  <NDRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <DelayTime></DelayTime>
      <Preference></Preference>
      <Tag></Tag>
    </RouteAdvertise>
  </NDRouteAdvertise>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Enable	Enabling status of ND direct route advertisement on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled. **(defult)**	N/A
DelayTime	Delay for ND direct route advertisement	N/A	Unsigned integer. Value range: 0 to 3600, in seconds. Default: 0.	N/A
Preference	Preference of the direct routes	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Tag	Route tag for the direct routes	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ND/NDDNSSuppress

This table contains information about the interface ND DNS suppression.

XML structure

```
<ND>
  <NDDNSSuppress>
    <DNSSuppress>
      <IfIndex></IfIndex>
      <ServerSuppressEnable></ServerSuppressEnable>
      <SearchListSuppressEnable></SearchListSuppressEnable>
    </DNSSuppress>
  </NDDNSSuppress>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDNSSuppress
Table type	Multi-instance table
Row name	DNSSuppress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
ServerSuppressEnable	Enabling status of ND DNS server suppression on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SearchListSuppressEnable	Enabling status of the ND DNS search list suppression on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDDNSServer

This table contains information about the ND DNS server on an interface.

XML structure

```
<ND>
  <NDDNSServer>
    <DNSServer>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <LifeTime></LifeTime>
      <Infinite></Infinite>
      <Sequence></Sequence>
    </DNSServer>
  </NDDNSServer>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDNSServer
Table type	Multi-instance table
Row name	DNSServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
LifeTime	Life time	N/A	Unsigned integer. Value range: 4 to 4294967295.	The value 4294967295 means infinite. The default setting is three times the max RA interval.
Infinite	Infinite	N/A	Boolean: • **true** • **false**	N/A
Sequence	Sequence	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ND/NDDNSSearchList

This table contains information about the ND DNS search list on an interface.

XML structure

```
<ND>
  <NDDNSSearchList>
    <DNSSearchList>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
      <LifeTime></LifeTime>
      <Infinite></Infinite>
      <Sequence></Sequence>
    </DNSSearchList>
```

```
  </NDDNSSearchList>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDNSSearchList
Table type	Multi-instance table
Row name	DNSSearchList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.
LifeTime	Life time	N/A	Unsigned integer. Value range: 4 to 4294967295.	The value 4294967295 means infinite. The default setting is three times the max RA interval.
Infinite	Infinite	N/A	Boolean: • **true** • **false**	N/A
Sequence	Sequence	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ND/NDRAPrefixDefault

This table contains information about ND RA prefix default parameters.

XML structure

```
<ND>
  <NDRAPrefixDefault>
    <RAPrefixDefault>
      <IfIndex></IfIndex>
      <ValidLifetime></ValidLifetime>
      <PreferredLifetime></PreferredLifetime>
      <NoAutoConfig></NoAutoConfig>
      <OffLink></OffLink>
      <NoAdvertise></NoAdvertise>
    </RAPrefixDefault>
  </NDRAPrefixDefault>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefixDefault
Table type	Multi-instance table
Row name	RAPrefixDefault
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidLifetime	Valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds. Default: 2592000	When it is not configured, the default value applies.
PreferredLifetime	Preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds. Default: 604800	When it is not configured, the default value applies.
NoAutoConfig	Indicates the prefix is not used for stateless autoconfiguration	N/A	Boolean: • true • false	If you want to create NoAutoConfig, the ValidLifetime and PreferredLifetime must also be configured.
OffLink	Indicates the address with the prefix is not directly reachable on the link	N/A	Boolean: • true • false	If you want to create OffLink, the ValidLifetime and PreferredLifetime must also be configured.
NoAdvertise	Disables the device from advertising the prefix specified in the command	N/A	Boolean: • true • false	When it is configured, the lifetime cannot be configured, and the lifetime uses the default value.

ND/NDRAPrefixRecord

This table contains information about ND RA prefix records.

XML structure

```
<ND>
  <NDRAPrefixRecord>
    <RAPrefixRecord>
      <VLANID></VLANID>
      <RecordEnable></RecordEnable>
    </RAPrefixRecord>
  </NDRAPrefixRecord>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDRAPrefixRecord
Table type	Multi-instance table
Row name	RAPrefixRecord

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
RecordEnable	Enabling status of ND RA prefix recording	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDDirectRoutePrefix

This table contains information about neighbor direct route prefix.

XML structure

```
<ND>
  <NDDirectRoutePrefix>
    <DirectRoutePrefix>
      <IfIndex></IfIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <ConvertLength></ConvertLength>
      <RetainHostRoute></RetainHostRoute>
    </DirectRoutePrefix>
  </NDDirectRoutePrefix>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDDirectRoutePrefix
Table type	Multi-instance table
Row name	DirectRoutePrefix
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Prefix	IPv6 prefix	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	It must be a valid IPv6 address.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
ConvertLength	Length of segment routing for the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 127.	N/A
RetainHostRoute	Retain the 128-bit host routes generated by ND entries	N/A	Enumeration: • **0**—Not retain host routes. • **1**—Retain host routes.	N/A

ND/NDSuppressionPush

This table contains information about ND suppression push settings.

XML structure

```
<ND>
  <NDSuppressionPush>
    <Interval></Interval>
  </NDSuppressionPush>
</ND>
```

Table description

Item	Description
Feature name	ND

Table name	NDSuppressionPush
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Interval at which ND suppression entries are pushed	N/A	Unsigned integer. Value range: 1 to 1440 minutes. Default: 0	N/A

ND/NDSnoopingConfig

This table contains ND snooping configuration information.

XML structure

```
<ND>
  <NDSnoopingConfig>
    <DadRetransTime></DadRetransTime>
    <InvalidLifetime></InvalidLifetime>
    <ValidLifetime></ValidLifetime>
  </NDSnoopingConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DadRetransTime	Interval for retransmitting an ND DAD message	N/A	Unsigned integer. Value range: 100 to 500 milliseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InvalidLifetime	Invalid lifetime of ND snooping entries.	N/A	Unsigned integer. Value range: 250 to 1000 milliseconds.	N/A
ValidLifetime	Valid lifetime of ND snooping entries	N/A	Unsigned integer. Value range: 60 to 900 seconds.	N/A

ND/NDSnoopingGleanSource

This table contains ND snooping glean source configuration information.

XML structure

```
<ND>
  <NDSnoopingGleanSource>
    <SnoopingGleanSource>
      <VLANID></VLANID>
      <Enable></Enable>
    </SnoopingGleanSource>
  </NDSnoopingGleanSource>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingGleanSource
Table type	Multi-instance table
Row name	SnoopingGleanSource
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLANID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enable	Whether ND snooping is enabled for IPv6 data packets from unknown sources	N/A	Boolean: • **true** • **false**	N/A

ND/NDSnoopingIfConfig

This table contains interface-specific ND snooping configuration information.

XML structure

```
<ND>
  <NDSnoopingIfConfig>
    <SnoopingIfConfig>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <Uplink></Uplink>
    </SnoopingIfConfig>
  </NDSnoopingIfConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDSnoopingIfConfig
Table type	Multi-instance table
Row name	SnoopingIfConfig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
LearnMaxNum	Maximum number of dynamic snooping entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model. The default setting varies with device models.
Uplink	Whether the interface is an uplink	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface		• **true** • **false**	

ND/NDVsiConfig

This table contains VSI-based long ND entry configuration information.

XML structure

```
<ND>
  <NDVsiConfig>
    <VsiConfig>
      <VsiIfIndex></VsiIfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <VrfIndex></VrfIndex>
    </VsiConfig>
  </NDVsiConfig>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiIfIndex	VSI interface index	Index	Unsigned integer.	The VSI interface must be bound to the VSI. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *IfMgr in Ifmgr NETCONF XML API Configuration Reference*.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field must be configured when the port is a Layer 2 Ethernet interface. It must be deleted when the port is a Tunnel interface.
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI before you merge, replace or create NDs.
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.

ND/NdRateLimit

This table contains ND rate limit information.

XML structure

```
<ND>
  <NdRateLimit>
    <RateLimit>
      <IfIndex></IfIndex>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
```

```
    </RateLimit>
  </NdRateLimit>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NdRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: • **true** (default) • **false**	N/A
RateLimitNum	Set the rate limit value	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model. The default value of RateLimitNum depends on the device model. RateLimitNum can be configured only when RateLimitEnable is true.

ND/NdRateLimitLog

This table contains ND rate limit log information.

XML structure

```
<ND>
  <NdRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </NdRateLimitLog>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NdRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: • **true** • **false**(default)	N/A
LogInterval	Set the interval of sending reports or logs	N/A	Unsigned integer. Value range: 1 to 86400. Default: 60.	N/A

ND/NDVsiSuppression

This table contains information about ND suppression entries for VSIs.

XML structure

```
<ND>
  <NDVsiSuppression>
    <VsiSuppression>
      <VsiName></VsiName>
      <SuppressionEnable></SuppressionEnable>
      <SuppressionMode></SuppressionMode>
      <SuppressionMismatchDiscard></SuppressionMismatchDiscard>
      <NoBroadCast></NoBroadCast>
```

```
    </VsiSuppression>
  </NDVsiSuppression>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsiSuppression
Table type	Multi-instance table
Row name	VsiSuppression
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SuppressionEnable	Whether ND suppression is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
SuppressionMode	ND suppression mode	N/A	Enumeration: • **1**—**`proxy-reply`**. • **2**—**`unicast-forward`**.	N/A
SuppressionMismatchDiscard	ND suppression mismatch discarding mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
NoBroadCast	Whether ND stateless broadcast is enabled for the VSI	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND/NDScanKeepalive

This table contains interface-specific information about ND scan keepalive

XML structure

```
<ND>
  <NDScanKeepalive>
    <IfScanKeepalive>
      <IfIndex></IfIndex>
```

```
      <ScanEnable></ScanEnable>
      <AgingTime></AgingTime>
    </IfScanKeepalive >
  </NDScanKeepalive>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDScanKeepalive
Table type	Multi-instance table
Row name	IfScanKeepalive
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VSI interface VLAN interface VE-L3VPN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Appendix in Ifmgr NETCONF XML API Configuration Reference.
ScanEnable	Whether ND keepalive scanning is enabled on the interface	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
AgingTime	Aging time of ND keepalive entries	N/A	Unsigned integer. Value range: 0 to 1440.	0 means not configured.

ND/NDVsrpPort

This table contains ND VSRP port information

XML structure

```
<ND>
  <NDVsrpPort>
    <PortNum></PortNum>
  </NDVsrpPort>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDVsrpPort
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNum	Port number of ND VSRP instance	N/A	Unsigned integer. Value range: 1 to 65535.	60044 means not configured.

ND/NDConsistencyTable

This table contains the information about ND consistency check.

XML structure

```
<ND>
  <NDConsistencyTable>
    <ConsistencyCheckEnable></ConsistencyCheckEnable>
  </NDConsistencyTable>
</ND>
```

Table description

Item	Description
Feature name	ND
Table name	NDConsistencyTable
Table type	Single-instance table

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConsistencyCheckEnable	Whether ND consistency check is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

ND event stream

This event stream is used to report ND event information.

NdTable event

This event is used to report ND change information.

XML structure for event subscription

```
<NdTableEvent>
</NdTableEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ND</stream>
    <filter type="subtree">
      <NdTableEvent xmlns="http://www.h3c.com/netconf/event:1.0/ND:1.0">
      </NdTableEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	ND
Event name	NdTableEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/ND:1.0
Support for extended query	No

XML structure for event report

```
<NdTableEvent>
  <NdTable>
    <EventType></EventType>
    <IfIndex></IfIndex>
    <Ipv6Address></Ipv6Address>
    <MacAddress></MacAddress>
    <VLANID></VLANID>
    <PortIndex></PortIndex>
    <VrfIndex></VrfIndex>
    <Type></Type>
    <Sequence></Sequence>
  </NdTable>
```

```
</NdTableEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2020-08-29T09:10:51</eventTime>
  <NdTableEvent xmlns="http://www.h3c.com/netconf/event:1.0/ND:1.0">

      <Type>1</Type>
      <Sequence>1</Sequence>
    </NdTable>
  </NdTableEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration: • **1**—Add. • **2**—Delete. • **3**—Update. • **4**—Batch start. • **5**—Batch. • **6**—Batch end.	The event type specifies an operation that ND performs.
IfIndex	Interface index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Address	IPv6 address	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VLANID	VLAN ID	Unsigned integer. Value range: 1 to 4094.	N/A
PortIndex	Port index	Unsigned integer.	N/A
VrfIndex	Index of the VRF	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network
Type	Neighbor information type	Enumeration: • **1**—Invalid static. • **2**—Static. • **3**—Dynamic. • **4**—OpenFlow. • **5**—Rule.	Invalid static is not supported.

Column name	Column description	Data type and restrictions	Remarks
Sequence	Sequence	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

PingNDIPv6 event

This table is used to report information about an ping ND IPv6 operation.

XML structure for event subscription

```
<PingNDIpv6Event>
  <PingNDIpv6Info>
    <Sequence></Sequence>
    <Host></Host>
    <OutputInterface></OutputInterface>
    <OutputVlan></OutputVlan>
    <ReplyTimeOut></ReplyTimeOut>
    <ReplyCount></ReplyCount>
  </PingNDIpv6Info>
</PingNDIpv6Event>
```

Example:

```
<rpc message-id="110" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ND</stream>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Enable	Enable reporting session information	N/A	Boolean: • 1-True. • 0-False.	N/A.

NETANALYSIS4/IpccGlobalCfg

This table contains information about IPCC mode configuration and IPCC queue configuration.

XML structure

```
<NETANALYSIS4>
  <IpccGlobalCfg>
    <IpccMode></IpccMode>
    <IpccQueueId></IpccQueueId>
  </IpccGlobalCfg>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	IpccGlobalCfg
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpccMode	Specify an IPCC mode	N/A	Enumeration: • 1-low-latency. • 0-high-throughput(default).	N/A.
IpccQueueId	Enable IPCC for a queue	N/A	Unsigned integer. Value range: 0 to 7.	You can specify a queue by its ID in the range of 0 to 7.

NETANALYSIS4/IpccIfCfg

This table is used to enable the IPCC configuration on an interface.

XML structure

```
<NETANALYSIS4>
  <IpccIfCfg>
    <IfCfg>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </IfCfg>
  </IpccIfCfg>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	IpccIfCfg
Table type	Multi-instance table
Row name	IfCfg
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	• Unsigned integer.	N/A
Enable	Enable IPCC	N/A	Enumeration: • **0**—Disable(default). • **1**—Enable	N/A

NETANALYSIS4

NETANALYSIS4/DeployMode

This table contains information about open the working mode of Netanalysis intelligent traffic analysis function.

XML structure

```
<NETANALYSIS4>
  <DeployMode>
    <RoCEv2ModeType></RoCEv2ModeType>
  </DeployMode>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	DeployMode
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2ModeType	Processing message type	N/A	String, case-sensitive: • single • bidir	single:Processing unidirectional message; bidir: Processing bidirectional message .

NETANALYSIS4/DropPkt

This table contains information about enable Netanalysis packet loss statistics function.

XML structure

```
<NETANALYSIS4>
  <DropPkt>
    <RoCEv2Enable></RoCEv2Enable>
```

```
  </DropPkt>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	DropPkt
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Enable	Whether check the number of NAKs.	N/A	Boolean: • **true**. • **false**.	N/A

NETANALYSIS4/FilterStatistic

This table contains the information about the Acl rules of Netanalysis statistics function.

XML structure

```
<NETANALYSIS4>
  <FilterStatistic>
    <RoCEv2ACLName></RoCEv2ACLName>
  </FilterStatistic>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	FilterStatistic
Table type	Single-instance table
Row name	None
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2ACL Name	ACL match criterion by name.	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter *a* to *z* or *A* to *Z*. The ACL name cannot be **all** in any combination of upper- and lower-case letters.

NETANALYSIS4/GlobalStatistic

This table contains the information about open Netanalysis global statistics function.

XML structure

```
<NETANALYSIS4>
  <GlobalStatistic>
    <RoCEv2Enable></RoCEv2Enable>
  </GlobalStatistic>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	GlobalStatistic
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Enable	Global Enable	N/A	Boolean: • **True**. • **False**.	N/A.

NETANALYSIS4/ReportInterval

This table contains the information about the report interval of flows.

XML structure

```
<NETANALYSIS4>
  <ReportInterval>
    <RoCEv2Time></RoCEv2Time>
  </ReportInterval>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	ReportInterval
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Time	the report interval of flows.	N/A	Unsigned integer. Value range: 5 to 500 seconds.	N/A

NETANALYSIS4/InActiveTime

This table contains the information about the aging time of inactive flows.

XML structure

```
<NETANALYSIS4>
  <InActiveTime>
    <RoCEv2Time></RoCEv2Time>
  </InActiveTime>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	InActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Time	Aging time of inactive flows	N/A	Unsigned integer. Value range: 5 to 500 seconds.	N/A

NETANALYSIS4/AiecnEnable

This table contains the function of reporting session information under the open interface.

XML structure

```
<NETANALYSIS4>
  <AiecnEnable>
    <RoCEv2Enable></RoCEv2Enable>
  </AiecnEnable>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	AiecnEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoCEv2Enable	Interface reporting function enabled	N/A	Boolean: **1-True**. **0-False**.	N/A.

NETANALYSIS4/IpccGlobalCfg

This table contains information about IPCC mode configuration and IPCC queue configuration.

XML structure

```
<NETANALYSIS4>
  <IpccGlobalCfg>
    <IpccMode></IpccMode>
    <IpccQueueId></IpccQueueId>
  </IpccGlobalCfg>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	IpccGlobalCfg
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpccMode	Specify an IPCC mode	N/A	Enumeration: • 1-low-latency. • 0-high-throughput.	N/A.
IpccQueueId	Enable IPCC for a queue	N/A	Unsigned integer. Value range: 0 to 7.	You can specify a queue by its ID in the range of 0 to 7.

NETANALYSIS4/IpccIfCfg

This table is used to enable the IPCC configuration on an interface.

XML structure

```
<NETANALYSIS4>
  <IpccIfCfg>
    <IfCfg>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Enable></Enable>
    </IfCfg>
  </IpccIfCfg>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	IpccIfCfg
Table type	Multi-instance table
Row name	IfCfg
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	• Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Enable	Enable IPCC	N/A	Enumeration: • **0**—Disable. • **1**—Enable	N/A

NETANALYSIS4/IpccStatistics

This table contains statistics of CNP packets proactively sent by IPCC devices.

XML structure

```
<NETANALYSIS4>
  <IpccStatistics>
    <IpccIfStatistics>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <CNPNum></CNPNum>
      <FlowNum></FlowNum>
      <RoceV2FlowInfo>
        <RoceV2Flow>
          <DstIP></DstIP>
          <SrcIP></SrcIP>
          <DstQP></DstQP>
          <CNPNumSub></CNPNumSub>
        </RoceV2Flow>
      </RoceV2FlowInfo>
    </IpccIfStatistics>
  </IpccStatistics>
</NETANALYSIS4>
```

Table description

Item	Description
Feature name	NETANALYSIS4
Table name	IpccStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpccIfStatistics	Information in the IpccIfStatistics table	Sublist	For details about the sublist, refer to the IpccIfStatistics table.	N/A

NETANALYSIS4/IpccStatistics/IpccIfStatistics

This table contains statistics of CNP packets proactively sent by IPCC devices.

XML structure

```
Please refer to the XML structure of NETANALYSIS4/IpccStatistics/IpccIfStatistics
```

Table description

Item	Description

NETANALYSIS4 event stream

NETANALYSIS4 event stream description.

NETANALYSIS4 roceV2 connection event

This table is used to report IPv4 NetAnalysis connection information.

XML structure for event subscription

```
<RoceV2ConnectionEvent>
</RoceV2ConnectionEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>NETANALYSIS4</stream>
    <filter type="subtree">
      <RoceV2ConnectionEvent
xmlns="http://www.h3c.com/netconf/event:1.0/NETANALYSIS4:1.0">
        <RoceV2Connection/>
      </RoceV2ConnectionEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	NETANALYSIS4
Event name	RoceV2ConnectionEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/NETANALYSIS4:1.0
Support for extended query	No

XML structure for event report

```
<RoceV2Connection>
  <EventType></EventType>
  <ServiceType></ServiceType>
  <SourceIP></SourceIP>
  <SourceQP></SourceQP>
  <DestinationIP></DestinationIP>

Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
EventType	Event type	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 0 – connection establishment. • 1 – disconnection. • 2 – the connection failed.	
ServiceType	Service type	N/A	Enumeration: • 0 – RC. • 1 – UC. • 2 – RD. • 3 – UD. • 4 – CNP • 5 – XRC.	
SourceIP	IPv4 source address in the IP packet header	N/A	Unsigned integer. String, dotted decimal notation.	N/A
SourceQP	Source queue pairs	N/A	Unsigned integer.	
DestinationIP	IPv4 destination address in the IP packet header	N/A	Unsigned integer. String, dotted decimal notation.	N/A
DestinationQP	destination queue pairs	N/A	Unsigned integer.	
S2DInputInterfaceLocation	The Location of inputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
S2DInputInterface	Source to destination Input interface index	N/A	Unsigned integer.	N/A
S2DInputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
S2DOutputInterfaceLocation	The Location of outputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
S2DOutputInterface	Source to destination Output interface index	N/A	Unsigned integer.	N/A
S2DOutputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
D2SInputInterfaceLocation	The Location of inputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
D2SInputInterface	Destination to Source Input interface index	N/A	Unsigned integer.	N/A
D2SInputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
D2SOutputInterfaceLocation	The Location of outputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
D2SOutputInterface	Destination to Source Output interface index	N/A	Unsigned integer.	N/A
D2SOutputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
TimeStamp	Absolute timestamp	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
Reason	The reason of the connection failed or connection successful	N/A	When EventType is 0,Reason is the following enumeration value is 1~2. Enumeration: • 1 – CM chain building message. • 2 – Non CM chain building. When EventType is 1,Reason is the following enumeration value is 1~2. Enumeration: • 1 – CM chain breaking message. • 2 – Inactive aging time. When EventType is 2,Reason is the following enumeration value is 1~35. Enumeration: • 1 – No QP available. • 2 – No EEC available. • 3 – No resources available. • 4 – Timeout. • 5 – Unsupported request.. • 6 – Invaild Communication ID. • 7 – Invalid Communication Instance. • 8 – Invalid Service ID.	

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 9 – Invalid Transport Service Type. • 10 – Stale Connection. • 11 – RDC does not exist. • 12 – Primary Remote Port GID rejexted. • 13 – Primary Remote Port LID rejected. • 14 – Invalid Primary SL. • 15 – Invaild Primary Traffic Class. • 16 – Invalid Primary Hop Limit. • 17 – Invaild Primary Packet Rate. • 18 – Alternate Remote Port GID rejected. • 19 – Alternate Remote Port LID rejected. • 20 – Invalid Alternate SL. • 21 – Invalid Alternate Traffic Class. • 22 – Invalid Alternate Hop Limit. • 23 – Invalid Alternate Packet Rate. • 24 – Port and CM Redirection. • 25 – Port Redirection. • 26 – Invalid Path MTU. • 27 – Insuffcient Responder Resources. • 28 – Consumer Reject. • 29 – RNR Retry Count Reject. • 30 – Duplicate Local Communication ID • 31 – Unsupported Class Version. • 32 – Invalid Primary Flow Label. • 33 – Invalid Alternate Flow Label. • 34 – Invalid Partition Key • 35 – Required vendor option not supported. • 36 – Reserved(65535)	

NETANALYSIS4 roceV2 statistic event

This table is used to report IPv4 NetAnalysis statistic information.

XML structure for event subscription

```
<RoceV2StatisticEvent>
</RoceV2StatisticEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>NETANALYSIS4</stream>
    <filter type="subtree">
      <RoceV2StatisticEvent
xmlns="http://www.h3c.com/netconf/event:1.0/NETANALYSIS4:1.0">
      <RoceV2Statistic/>
      </RoceV2StatisticEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Service type	N/A	Enumeration: • 0 – RC. • 1 – UC. • 2 – RD. • 3 – UD. • 4 – CNP. • 5 – XRC.	
SourceIP	IPv4 source address in the IP packet header	N/A	Unsigned integer. String, dotted decimal notation.	N/A
SourceQP	Source queue pairs	N/A	Unsigned integer.	
DestinationIP	IPv4 destination address in the IP packet header	N/A	Unsigned integer. String, dotted decimal notation.	N/A
DestinationQP	destination queue pairs	N/A	Unsigned integer.	N/A
S2DRTT	Source to Destination RTT time	N/A	Unsigned integer.	0 means no S2DRTT was obtained.
S2DReadPkts	Number of Source to Destination Read Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
S2DSendPkts	Number of Source to Destination Send Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
S2DWritePkts	Number of Source to Destination Write Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
S2DNAKPkts	Number of Source to	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Destination NAK Packets		18446744073709551615.	
S2DReadPktLen	Source to Destination Read packet lenth	N/A	Unsigned integer	N/A
S2DSendPktLen	Source to Destination Send packet lenth	N/A	Unsigned integer	N/A
S2DWritePktLen	Source to Destination Write packet lenth	N/A	Unsigned integer	N/A
D2SRTT	Destination to Source RTT time	N/A	Unsigned integer	0 means no D2SRTT was obtained.
D2SReadPkts	Number of Destination to Source Read Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
D2SSendPkts	Number of Destination to Source Send Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
D2SWritePkts	Number of Destination to Source Write Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
D2SNAKPkts	Number of Destination to Source NAK Packets	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
D2SReadPktLen	Destination to Source Read packet lenth	N/A	Unsigned integer	N/A
D2SSendPktLen	Destination to Source Send packet lenth	N/A	Unsigned integer	N/A
D2SWritePktLen	Destination to Source Write packet lenth	N/A	Unsigned integer	N/A
S2DInputInterfaceLocation	The Location of inputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
S2DInputInterface	Source to destination Input interface index	N/A	Unsigned integer.	N/A
S2DInputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
S2DOutputInt	The Location of	N/A	String,case-sensitive:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
erfaceLocation	outputinterface is mlag master or mlag slave		• Local:mlag master • Remote:mlag slave	
S2DOutputInterface	Source to destination Output interface index	N/A	Unsigned integer.	N/A
S2DOutputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
D2SInputInterfaceLocation	The Location of inputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
D2SInputInterface	Destination to Source Input interface index	N/A	Unsigned integer.	N/A
D2SInputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
D2SOutputInterfaceLocation	The Location of outputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
D2SOutputInterface	Destination to Source Output interface index	N/A	Unsigned integer.	N/A
D2SOutputInterfaceName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
TimeStamp	Absolute timestamp	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
SlaveBridgeMac	Mlag slave bridge mac	N/A	String,case-sensitive	N/A

NETANALYSIS4 roceV2 Intfstatistic event

This table is used to report IPv4 NetAnalysis interface statistic information.

XML structure for event subscription

```
<RoceV2IntfStatisticEvent>
</RoceV2IntfStatisticEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>NETANALYSIS4</stream>
    <filter type="subtree">
      <RoceV2IntfStatisticEvent
xmlns="http://www.h3c.com/netconf/event:1.0/NETANALYSIS4:1.0">
      <RoceV2IntfStatistic/>
      </RoceV2IntfStatisticEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	NETANALYSIS4
Event name	RoceV2IntfStatisticEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/NETANALYSIS4:1.0
Support for extended query	No

Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputInterfaceLocation	The Location of outputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	N/A
OutputInterface	Source to destination Output interface index	N/A	Unsigned integer.	N/A
OutputInterfaceSpeed	The speed of output interface	N/A	Unsigned integer.	N/A
OutputInterfaceQueue	The value of queue number	N/A	Unsigned integer. Value range: 0 to 255	N/A
OutputInterfaceAverSpeed	The actual speed of output inteface	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	N/A
OutputInterfaceWredLowLimit	The lower limit of the queue	N/A	Unsigned integer.	N/A
OutputInterfaceWredHighLimit	The higher limit of the queue	N/A	Unsigned integer.	N/A
OutputInterfaceWredDiscard	The drop probability of the queue	N/A	Unsigned integer. Value range: 0 to 65535	N/A
OutputInterfaceDevUUID	The UUID of mlag slave	N/A	String,case-sensitive:	Exist only the column of OutputInterfaceLocation is Remote
OutputInterfaceAvgQlen	Average length of the output interface queue	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	N/A
OutputInterfaceTxPkt	Total number of sent packets for the output interface queue	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	N/A
OutputInterfaceTxPktECNMark	Total number of sent packets with the ECN mark for the output interface queue	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	N/A
OutputInterfaceTxByte	Total number of sent bytes for the output interface queue	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	N/A
OutputInterfaceAIEcnEnable	Whether enable ECN of the output interface queue	N/A	Boolean: • **true** • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputInterfaceAIEcnMode	The ECN mode of the output interface queue	N/A	String,case-sensitive: • Centralized: Specifies that the analyzer calculates the ECN triggering threshold and communicates it to devices. • Distributed: Specifies that the device itself intelligently sets the optimal ECN triggering threshold. • Neural: Specifies that the neural network algorithm of the device intelligently sets the optimal ECN triggering threshold. • N/A:invalid mode	N./A
TimeStamp	Absolute timestamp	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	N/A
InputInterfaceLocation	The Location of inputinterface is mlag master or mlag slave	N/A	String,case-sensitive: • Local:mlag master • Remote:mlag slave	repeated multiple times,up to 16 times
InputInterface	Source to destination Input interface index	N/A	Unsigned integer.	repeated multiple times,up to 16 times
InputInterfaceSpeed	The speed of input interface	N/A	Unsigned integer.	repeated multiple times,up to 16 times Speed In M, for example: If the current speed of the interface is 1G, the value is 1000
Flownum	number of flows from the Input interface to the output interface	N/A	Unsigned integer.	repeated multiple times,up to 16 times
BigFlowNum	number of big flows from the Input interface to the output	N/A	Unsigned integer.	repeated multiple times,up to 16 times

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface			The big flow refers to 0.1% of the total bandwidth of the input interface
ServicePkts	Number of Source to Destination Read/Write/Send Packets within 3s	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	repeated multiple times,up to 16 times
ServicePktLen	Read/Write/Send packet lenth within 3s	N/A	Unsigned integer Value range: 0 to 18446744073709551615.	repeated multiple times,up to 16 times
NAKPkts	Number of Source to Destination NAK Packets within 3s	N/A	Unsigned integer. Value range: 0 to 18446744073709551615.	0 means no NAKPkts was obtained. repeated multiple times,up to 16 times
RTT	Source to Destination average value of RTT time within 3s	N/A	Unsigned integer. Value range: 0 to 18446744073709551615	0 means no S2DRTT was obtained. repeated multiple times,up to 16 times

NETCONF 2
Common Error Message 2

NETCONF

Common Error Message

Message	Explanation
Invalid value. 非法输入值。	Invalid value. NETCONF处理通用错误，设置操作的值不符合模块要求。
Can't issue the configuration because of configuration conflict. 当前配置与系统已有配置冲突。	Can't issue the configuration because of configuration conflict. NETCONF处理通用错误，设置操作的配置与系统现有配置冲突。
Configuration already exists. 配置已存在。	Configuration already exists. NETCONF处理通用错误，Create操作时，要创建的配置已存在。
Configuration target does not exist. 配置对象不存在。	Configuration target does not exist. NETCONF处理通用错误，SET的对象不存在。
Configuration does not exist. 配置不存在。	Configuration does not exist, delete operation failed. NETCONF处理通用错误，Delete操作，要删除的配置不存在。
The configuration not supported on the specified target. 指定配置对象不支持对应配置。	The configuration not supported on the specified target. NETCONF处理通用错误，当前对象不支持此配置。例如：在一个只支持二层接口的表里面，用户下发了一个三层接口来进行设置操作。
The session does not have the privilege to process the request. 权限不足，不能执行本次操作。	The session does not have the privilege to process the request. NETCONF处理通用错误，当前用户对当前对象没有RBAC权限。
Resources are insufficient for processing the request. 系统资源不足，请求无法完成。	Resources are insufficient for processing the request. NETCONF处理通用错误，系统资源不足，不能完成本次操作。比如配置资源已经达到了系统规格上限。
The system does not support this operation. 系统不支持当前操作。	The system does not support this operation. NETCONF处理通用错误，不支持当前操作。
Operation failed. 操作失败。	Operation failed. NETCONF处理通用错误，上面所述场景之外的错误。
Expecting element '%s':'%s' under element '%s'. 元素'%s'下缺失元素'%s':'%s'	Expecting element '*path*'. Schema一般错误，必须的元素缺失,其xpath路径为*path*
The element '%s' should have an attribute '%s'. 元素'%s'缺失属性'%s'。	The element *'a'* should have an attribute *'b'.* Schema一般错误，元素*a*必须的属性*b*缺失
The value of element '%s' is invalid. %s 元素'%s'的值无效。%s	The value of element *'a'* is invalid. *Reason* Schema一般错误，元素的*a*值无效，具体原因是：*reason*。
The value of attribute '%s' for element '%s' is invalid. %s 元素'%s'的属性'%s'的值无效。%s	The value of attribute *'a'* for element *'b'* is invalid. *Reason* Schema一般错误，元素*b*的属性*a*的值无效，具体原因是：*reason*。
The number of occurrences of element '%s/%s' is invalid.	The number of occurrences of element '%s/%s' is invalid. Schema一般错误，元素出现的次数不正确。

元素'%s/%s'的出现次数不正确。	
Unexpected element '%s':'%s' under element '%s'. 元素'%s'下意外出现元素'%s':'%s'。	Unexpected element '%s'. Schema一般错误，意外出现一个元素。
Unexpected attribute '%s':'%s' of element '%s'. 元素'%s'意外出现属性'%s':'%s'。	Unexpected attribute '%s' of element '%s'. Schema一般错误，意外出现一个属性。
The child elements of '%s' are invalid. '%s'的子元素无效。	The child elements of '%s' are invalid. Schema一般错误，指定位置元素下的子元素出现次数不正确。
Element '%s' can not have a textual child element. 元素'%s'不能出现文本类型的子元素。	Element '%s' can not have a textual child element. Schema一般错误，元素%s不能出现文本。
Element '%s' can not have a child element. 元素'%s'不能出现子元素。	Element '%s' can not have a child element. Schema一般错误，元素%s不能出现子节点。
%%.%lus is an invalid value of %%s type value. %%.%lus不是有效的%%s类型值。	*value* is an invalid value of *type* type value. Schema一般错误，元素或者属性的值不是一个有效的XSD类型的值
%s cannot be empty. %s不能为空。	%s cannot be empty. Schema一般错误，元素不能为空
The value does not match the regular expression. 元素值与正则表达式不匹配。	The value does not match the regular expression. Schema一般错误，元素值和xsd定义的正则表达式不匹配。
The value does not match the enumeration. 元素值与枚举值不匹配。	The value does not match the enumeration. Schema一般错误，元素值和xsd定义的enumeration枚举值不匹配。
The length must be equal to %s. 元素值长度必须等于%s。	The length must be equal to %s. Schema一般错误，元素长度和xsd定义的长度不相等。
The total digit length must be equal to %s. 元素值的数字总长度必须等于%s。	The total digit length must be equal to %s. Schema一般错误，元素的数字总长度和xsd定义的长度不相等。
The length must be less than or equal to %s. 元素值长度必须小于等于%s。	The length must be less than or equal to maxLength. Schema一般错误，元素的长度大于xsd定义的maxLength最大长度时。
The length must be greater than or equal to %s. 元素值长度必须大于等于%s。	The length must be greater than or equal to minLength. Schema一般错误，元素的长度小于xsd定义的minLength最小长度时。
The value must be less than %s. 元素值必须小于%s。	The value must be less than maxExclusive. Schema一般错误，元素的值大于等于xsd定义的maxExclusive最大值时。
The value must be greater than %s. 元素值必须大于%s。	The value must be greater than minExclusive. Schema一般错误，元素的值小于等于xsd定义的minExclusive最小值时。
The value must be less than or equal to %s. 元素值必须小于等于%s。	The value must be less than or equal to maxInclusive. Schema一般错误，元素的值大于xsd定义的maxInclusive最大值时。
The value must be greater than or equal to %s. 元素值必须大于等于%s。	The value must be greater than or equal tominInclusive. Schema一般错误，元素的值小于xsd定义的minInclusive最小值时。

Netshare

Netshare/Policy

Message	Explanation
Can't create new NetShare control policy because only one NetShare control policy can be created. 最多可以配置一个共享上网管理策略。	Currently the NetShare module allows only one policy to be created. 目前共享上网模块仅允许配置一个策略。
The policy name already exists. 策略名称已存在。	The policy name is being used by another policy. 当前配置的策略名称已存在。
The specified policy does not exist. 策略不存在。	The policy does not exist. 要操作的策略已不存在。

Netshare/Policy/Option

Message	Explanation
Maximum number of source IP addresses already reached. 配置的源IP地址数量超过上限。	The number of source IP address referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的源IP地址数量已超过上限，上限数量为1024。
Maximum number of destination IP addresses already reached. 配置的目的IP地址数量超过上限。	The number of destination IP address referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的目的IP地址数量已超过上限，上限数量为1024。
Maximum number of source security zones already reached. 配置的源安全域数量超过上限。	The number of source security zones referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的源安全域数量已超过上限，上限数量为1024。
Maximum number of destination security zones already reached. 配置的目的安全域数量超过上限。	The number of destination security zones referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的目的安全域数量已超过上限，上限数量为1024。
Maximum number of users already reached. 配置的用户数量超过上限。	The number of users referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的用户数量已超过上限，上限数量为1024。
Maximum number of user groups already reached. 配置的用户组数量超过上限。	The number of user groups referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的用户组数量已超过上限，上限数量为1024。
The specified VPN instance does not exist. VPN实例不存在。	The VPN instance does not exist. VPN实例不存在。

Netshare/Freeze

Message	Explanation
The IP address is frozen.	The specified IP address is frozen.

IP地址已经被冻结。	想要操作的IP地址已经被冻结

Netshare/UnFreeze

Message	Explanation
The IP address is not frozen. 指定的IP地址未被冻结。	The specified IP address is unfrozen. 想要操作的IP地址已经被解冻。

Netshare/ShareStatusInfors

Message	Explanation
The IP address is not on the shared IP address list. 共享状态列表中不存在该IP地址。	The specified IP address does not exist in the shared status list. 想要操作的IP地址不存在共享列表中。

NETSLICING

NETSLICING/NetworkSlice/Attributes

Message	Explanation
The network slicing process has not started. Netslicing进程未启动。	The network slicing process has not started. Netslicing进程未启动。
The network slicing process is being reset. Netslicing进程正在重置。	The network slicing process is being reset. Netslicing进程正在重置。
This column can be configured only when global network slicing is enabled. 只有将SliceEnable置为1，才能配置该属性列。	This column can be configured only when global network slicing is enabled. 只有将SliceEnable置为1，才能配置该属性列。
This column is not supported when global network slicing is disabled. 不能去使能SliceEnable时指定该属性列。	This column is not supported when global network slicing is disabled. 不能去使能SliceEnable时指定该属性列。
Global network slicing cannot be disabled when network slicing settings have been configured on interfaces. 接口下已配置了切片使能，不能去使能SliceEnable。	Global network slicing cannot be disabled when network slicing settings have been configured on interfaces. 接口下已配置了切片使能，不能去使能SliceEnable。

NETSLICING/NetworkSlice/Instances

Message	Explanation
Maximum number of network slice instances already reached. 已达到最大网络切片实例数。	Maximum number of network slice instances already reached. 已达到最大网络切片实例数。
The network slice instance cannot be deleted, because its ID has been specified for an interface. 接口下配置了该切片ID，实例不能删除。	The network slice instance cannot be deleted, because its ID has been specified for an interface. 接口下配置了该切片ID，实例不能删除。
The instance can't be deleted, because its instance ID has been mapped to a color. color映射使用了该切片ID，实例不能删除。	The instance can't be deleted, because its instance ID has been mapped to a color. color映射使用了该切片ID，实例不能删除。

NETSLICING/NetworkSlice/Interfaces

Message	Explanation
Global network slicing has not been configured. 未配置全局network-slice。	Global network slicing has not been configured. 未配置全局network-slice。
Base interface association can't be configured on the interface, because a network slice channel already exists on the interface. 接口下已存在网络切片通道，则该接口下不能配置	Base interface association can't be configured on the interface, because a network slice channel already exists on the interface. 接口下已存在网络切片通道，则该接口下不能配置BasicSliceID。

BasicSliceID。	
The network slice instance ID specified for the slicing interface can't be associated with another slicing interface. 切片转发接口上配置BasicSliceID指定切片ID不能关联其他切片转发接口。	The network slice instance ID specified for the slicing interface can't be associated with another slicing interface. 切片转发接口上配置BasicSliceID指定切片ID不能关联其他切片转发接口。
Base interface association can't be configured on a Layer 3 main interface or aggregate interface. 三层路由主接口、聚合主接口不允许配置BasicSliceID命令。	Base interface association can't be configured on a Layer 3 main interface or aggregate interface. 三层路由主接口、聚合主接口不允许配置BasicSliceID命令。
Network slicing can't be disabled on the interface, because it has been associated with a slice base interface. 接口下已配置BasicSliceID，则该接口不可以去使能网络切片。	Network slicing can't be disabled on the interface, because it has been associated with a slice base interface. 接口下已配置BasicSliceID，则该接口不可以去使能网络切片。
The base interface association configuration can't be deleted from the interface, because a network slice channel exists on the interface. 切片转发口下已存在网络切片通道，则该接口下不能删除BasicSliceID。	The base interface association configuration can't be deleted from the interface, because a network slice channel exists on the interface. 切片转发口下已存在网络切片通道，则该接口下不能删除BasicSliceID。
Failed to associate the interface with a base interface. Please first create the network slice channel represented by the network slice instance ID on the base interface. 基础接口上如果不存在网络切片通道，则该切片转发接口下不能配置BasicSliceID。	Failed to associate the interface with a base interface. Please first create the network slice channel represented by the network slice instance ID on the base interface. 基础接口上如果不存在网络切片通道，则该切片转发接口下不能配置BasicSliceID。
Network slicing can't be disabled on the interface, because it has been specified as the base interface of a slicing interface. 接口下配置的slice-id，已被切片转发口配置关联BasicSliceID，则该接口不可以去使能网络切片。	Network slicing can't be disabled on the interface, because it has been specified as the base interface of a slicing interface. 接口下配置的slice-id，已被切片转发口配置关联BasicSliceID，则该接口不可以去使能网络切片。
Network slicing can't be enabled on a member port of an aggregate interface. 聚合口成员口不允许配置网络切片。	Network slicing can't be enabled on a member port of an aggregate interface. 聚合口成员口不允许配置网络切片。

NETSLICING/NetworkSlice/Interfaces/InterfaceSlices

Message	Explanation
The network slice instance ID doesn't exist. 切片ID实例不存在。	The network slice instance ID doesn't exist. 切片ID实例不存在。
The Bandwidth column is required. 需要补齐Bandwidth属性列。	The Bandwidth column is required. 需要补齐Bandwidth属性列。
The same network slice instance ID has been configured for the main interface or subinterface. 主接口或者子接口下已配置相同的slice-id。	The same network slice instance ID has been configured for the main interface or subinterface. 主接口或者子接口下已配置相同的slice-id。
The bandwidth value configured for the interface	The bandwidth value configured for the interface exceeds the

exceeds the upper limit. 接口下配置的带宽值超过了最大限制。	upper limit. 接口下配置的带宽值超过了最大限制。
Maximum number of network slice channels already reached. 已达到最大网络切片通道数。	Maximum number of network slice channels already reached. 已达到最大网络切片通道数。
The slice bandwidth configuration conflicts with some existing settings such as HQoS, exclusive bandwidth, CBQ, and MPLS TE bandwidth. 切片带宽配置与HQoS、独占带宽、CBQ、MPLS TE带宽等部分现有配置存在冲突。	The slice bandwidth configuration conflicts with some existing settings such as HQoS, exclusive bandwidth, CBQ, and MPLS TE bandwidth. 切片带宽配置与HQoS、独占带宽、CBQ、MPLS TE带宽等部分现有配置存在冲突。
The sum of the slice bandwidth and the channelized bandwidth configured for the interface exceeds the limit. 接口配置的切片带宽和通道化带宽之和超过限制。	The sum of the slice bandwidth and the channelized bandwidth configured for the interface exceeds the limit. 接口配置的切片带宽和通道化带宽之和超过限制。
The slice id can not configure bandwidth and dataplane at the same time. SliceID不能同时配置Bandwidth和DataPlane。	The slice id can not configure bandwidth and dataplane at the same time. SliceID不能同时配置Bandwidth和DataPlane。
The valid bandwidth or dataplane is required. 需要有效的Bandwidth或者DataPlane属性列。	The valid bandwidth or dataplane is required. 需要有效的Bandwidth或者DataPlane属性列。
The network slice instance ID can't be removed, because it has been specified as the slice instance ID of the base interface for a slicing interface. 接口下配置的slice-id，已被切片转发口关联为BasicSliceID，则该接口下配置的slice-id不可被删除。	The network slice instance ID can't be removed, because it has been specified as the slice instance ID of the base interface for a slicing interface. 接口下配置的slice-id，已被切片转发口关联为BasicSliceID，则该接口下配置的slice-id不可被删除。
Failed to create the network slice channel on the slicing interface, because another network slice channel specified with the data-plane keyword already exists on the slicing interface. 切片转发口下只能配置一条data-plane。	Failed to create the network slice channel on the slicing interface, because another network slice channel specified with the data-plane keyword already exists on the slicing interface. 切片转发口下只能配置一条data-plane。

NETSLICING/NetworkSlice/ClearStatistics

Message	Explanation
To clear specific network slicing statistics, you must specify a network slice instance ID, an interface index or name, or both. 清除指定切片ID或接口下统计数据时，需要指定切片ID或接口索引。	To clear specific network slicing statistics, you must specify a network slice instance ID, an interface index or name, or both. 清除指定切片ID或接口下统计数据时，需要指定切片ID或接口索引。

NETSLICING/NetworkSlice/ColorMappings

Message	Explanation
The SliceID column is required. 需要补齐SliceID属性列。	The SliceID column is required. 需要补齐SliceID属性列。
The network slice instance ID doesn't exist.	The network slice instance ID doesn't exist.

切片ID实例不存在。	切片ID实例不存在。

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Filter
Table type	Multi-instance table
Row name	InterfaceFilter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex,

Column name	Column description	Column type	Data type and restrictions	Remarks
				see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Traffic direction	Index	Enumeration: • **1**—Incoming traffic. • **2**—Outgoing traffic.	N/A
AclNumber	IPv4 ACL number	N/A	Unsigned integer. For an IPv4 basic ACL, the value range is 2000 to 2999. For an IPv4 advanced ACL, the value range is 3000 to 3999. For an IPv4 MAC ACL, the value range is 4000 to 4999. For an IPv4 user-defined ACL, the value range is 5000 to 5999.	NetStream filtering uses an ACL to identify target packets. If you want to collect data for specific flows, use the ACL permit statements to identify the flows. NetStream collects data only for these flows. If you do not want to collect data for specific flows, use the ACL deny statements to identify the flows. NetStream does not collect data for these flows. The value range for IPv4 ACL number varies by product branch. For more information about the value range in a product branch, see that product branch.

NETSTREAM4/NS4V9RefreshTime

This table contains information about the refresh rate of time for the NetStream version 9 template.

XML structure

```
<NETSTREAM4>
  <NS4V9RefreshTime>
    <Time></Time>
  </NS4V9RefreshTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshTime
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Time	Interval at which the template is sent	N/A	Unsigned integer. The value range is 1 to 3600 minutes. The default time-based refresh interval is 30 minutes.

NETSTREAM4/NS4V9RefreshPacket

This table contains information about the refresh rate of packet for the NetStream version 9 template.

XML structure

```
<NETSTREAM4>
  <NS4V9RefreshPacket>
    <Packet></Packet>
  </NS4V9RefreshPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshPacket
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Packet	Number of packets that are sent before the template is sent	N/A	Unsigned integer. The value range is 1 to 600. The default packet count-based refresh rate is 20 packets.

NETSTREAM4/NS4Host

This table contains the information about the destination host to which the IPv4 NetStream exports.

XML structure

```
<NETSTREAM4>
  <NS4Host>
    <Host>
      <VrfIndex></VrfIndex>
      <IP></IP>
      <UDPPort></UDPPort>
    </Host>
  </NS4Host>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Host
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
IP	IP address of the host	Index	String, dotted decimal notation.	N/A
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

NETSTREAM4/NS4Source

This table contains the information about the source interface for NetStream data to be sent to NetStream servers.

XML structure

```
<NETSTREAM4>
  <NS4Source>
    <IfIndex></IfIndex>
  </NS4Source>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Source
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Source interface index	N/A	Unsigned integer.	This supports name index.

NETSTREAM4/NS4ActiveTime

This table contains the information about the aging time of active flows.

XML structure

```
<NETSTREAM4>
  <NS4ActiveTime>
    <ActiveTime></ActiveTime>
  </NS4ActiveTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4ActiveTime
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ActiveTime	Aging time of active flows	N/A	Unsigned integer. Value range: 1 to 60 minutes. Default: 30 minutes.

NETSTREAM4/NS4InActiveTime

This table contains the information about the aging time of inactive flows.

XML structure

```
<NETSTREAM4>
  <NS4InActiveTime>
    <InActiveTime></InActiveTime>
  </NS4InActiveTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4InActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
InActiveTime	Aging time of inactive flows	N/A	Unsigned integer. Value range: 10 to 600 seconds. Default: 30 seconds.

NETSTREAM4/NS4MaxEntry

This table contains the information about the upper limit on IPv4 NetStream entries.

XML structure

```
<NETSTREAM4>
  <NS4MaxEntry>
    <MaxEntry></MaxEntry>
    <Action></Action>
  </NS4MaxEntry>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEntry	Maximum number of IP NetStream entries can be cached	N/A	Unsigned integer. Default: User-defined value	N/A.
Action	Processing method when the upper limit is reached	N/A	Boolean: • true—Ages out the oldest entries when the upper limit is reached. • false—Disables creation of a new entry when the upper limit is reached.	N/A

NETSTREAM4/NS4Version

This table contains information about the version that IPv4 NetSrteam uses to export data.

XML structure

```
<NETSTREAM4>
  <NS4Version>
    <Version></Version>
    <As></As>
    <Nexthop></Nexthop>
    <SerialNumber></SerialNumber>
  </NS4Version>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Version
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Version	Version format	N/A	Enumeration: • 5 • 9 (default) • 10
As	Autonomous system	N/A	Enumeration: • **0**—peer-as (default) • **1**—origin-as
Nexthop	BGP nexthop	N/A	Boolean: • true • false (default)
SerialNumber	Device serial number	N/A	Boolean: • true • false (default)

NETSTREAM4/NS4Rate

This table contains information about the export rate.

XML structure

```
<NETSTREAM4>
  <NS4Rate>
    <Rate></Rate>
  </NS4Rate>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NETSTREAM4Rate
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Rate	Export rate	N/A	Unsigned integer. Value range: 0 to 1000. Default: 0.

NETSTREAM4/NS4Aging

This table contains information about IPv4 NetStream periodical aging and TCP FIN- and RST-triggered aging.

XML structure

```
<NETSTREAM4>
  <NS4Aging>
    <AgingEnable></AgingEnable>
  </NS4Aging>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Aging

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
AgingEnable	Enabling status of periodical aging, TCP FIN and RST-triggered aging.	N/A	Boolean: • true (default). • false.

NETSTREAM4/NS4IPSECRawPacket

This table contains information about NetStream for outgoing packets before/after IPsec encapsulation.

XML structure

```
<NETSTREAM4>
  <NS4IPSECRawPacket>
    <IPSECRawPacket>
      <IfIndex></IfIndex>
      <RawPacketEnable></RawPacketEnable>
    </IPSECRawPacket>
  </NS4IPSECRawPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4IPSECRawPacket
Table type	Single-instance table
Row name	IPSECRawPacket
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
RawPacketEnable	Enabling status of NetStream for outgoing packets before IPsec encapsulation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	By default, NetStream is enabled for outgoing IPsec encapsulated packets.

NETSTREAM4/NS4MPLSCollection

This table contains information about MPLS-aware IPv4 NetStream.

XML structure

```
<NETSTREAM4>
  <NS4MPLSCollection>
    <LabelPosition1></LabelPosition1>
    <LabelPosition2></LabelPosition2>
    <LabelPosition3></LabelPosition3>
    <NoIPFieldsEnable></NoIPFieldsEnable>
  </NS4MPLSCollection>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MPLSCollection
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LabelPositions1	Position of the first label in the label stack	N/A	Enumeration: • 0(default) • 1 • 2 • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
LabelPositions2	Position of the second label in the label stack	N/A	Enumeration: • 0(default) • 1 • 2 • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
LabelPositions3	Position of the third label in the label stack	N/A	Enumeration: • 0(default) • 1 • 2 • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
NoIPFieldsEnable	Specifies not to count IP fields.	N/A	Boolean: • true. • false (default).	N/A

NETSTREAM4/NS4SRv6PolicyEnable

This table contains information about enabling NetStream on an SRv6 policy.

XML structure

```
<NETSTREAM4>
  <NS4SRv6PolicyEnable>
    <SRv6PolicyEnable>
      <Endpoint></Endpoint>
      <Color></Color>
      <Enable></Enable>
    </SRv6PolicyEnable>
  </NS4SRv6PolicyEnable>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4SRv6PolicyEnable
Table type	Multi-instance table
Row name	SRv6PolicyEnable
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	IPv6 address of the policy endpoint.	Index	IPv6: hexadecimal string, colon-separated.	N/A
Color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
Enable	Enabling NetStream.	N/A	Enumeration: • **0**—Disable • 1—Enables NetStream on an SRv6 policy for outgoing traffic.	N/A

NETSTREAM4/NS4SRv6PolicySampler

This table contains information about enabling NetStream sampling on an SRv6 Policy.

XML structure

```
<NETSTREAM4>
```

```
  <NS4SRv6PolicySampler>
    <SRv6PolicySampler>
      <Endpoint></Endpoint>
      <Color></Color>
      <SamplerName></SamplerName>
    </SRv6PolicySampler>
  </NS4SRv6PolicySampler>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4SRv6PolicySampler
Table type	Multi-instance table
Row name	SRv6PolicySampler
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	IPv6 address of the policy endpoint.	Index	IPv6: hexadecimal string, colon-separated.	N/A
Color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
SamplerName	Sampler name.	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A

NETSTREAM4/NS4GREInnerPacket

This table contains IPv4 NetStream statistics on GRE inner packets.

XML structure

```
<NETSTREAM4>
  <NS4GREInnerPacket>
    <InnerPacketEnable></InnerPacketEnable>
  </NS4GREInnerPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4GREInnerPacket
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
InnerPacketEnable	Whether to enable statistics on GRE inner packets.	N/A	Boolean: • true. • false(default).

NETSTREAM4/NS4HostEx

This table contains the information about the destination host to which the IPv4 NetStream exports.

XML structure

```
<NETSTREAM4>
  <NS4HostEx>
    <Host>
      <VrfIndex></VrfIndex>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <UDPPort></UDPPort>
    </Host>
  </NS4HostEx>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4HostEx
Table type	Multi-instance table
Row name	Host

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
AddressType	Type of the host IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	IP address of the host	Index	String, case insensitive. Length: 1 to 45 characters.	If the AddressType is IPv4,specify an IPv4 address. If the AddressType is IPv6,specify an IPv6 address.
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

NETSTREAM4

NETSTREAM4/NS4Enable

This table contains information about enabling NetStream on an interface.

XML structure

```
<NETSTREAM4>
  <NS4Enable>
    <InterfaceEnable>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Enable></Enable>
    </InterfaceEnable>
  </NS4Enable>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Enable
Table type	Multi-instance table
Row name	InterfaceEnable
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in I*fmgr NETCONF XML API Configuration Reference*.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Enable	Traffic direction	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **0**—Disable • **1**—Enables NetStream for incoming traffic. • **2**—Enables NetStream for outgoing traffic. • **3**—Enables NetStream for incoming and outgoing traffic.	

NETSTREAM4/NS4Sampler

This table contains information about enabling NetStream sampling on an interface.

XML structure

```
<NETSTREAM4>
  <NS4Sampler>
    <InterfaceSampler>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <IfName></IfName>
      <SamplerName></SamplerName>
    </InterfaceSampler>
  </NS4Sampler>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Sampler
Table type	Multi-instance table
Row name	InterfaceSampler
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Direction	Traffic direction	Index	Enumeration: • **1**—Incoming traffic. • **2**—Outgoing traffic.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
SamplerName	Sampler name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

NETSTREAM4/NS4Filter

This table contains information about enabling NetStream filtering an interface.

XML structure

```
<NETSTREAM4>
  <NS4Filter>
    <InterfaceFilter>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <IfName></IfName>
      <AclNumber></AclNumber>
    </InterfaceFilter>
  </NS4Filter>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Filter
Table type	Multi-instance table
Row name	InterfaceFilter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Traffic direction	Index	Enumeration: • **1**—Incoming traffic. • **2**—Outgoing traffic.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
AclNumber	IPv4 ACL number.	N/A	Unsigned integer. For an IPv4 basic ACL, the value range is 2000 to 2999. For an IPv4 advanced ACL, the value range is 3000 to 3999. For an IPv4 MAC ACL, the value range is 4000 to 4999. For an IPv4 user-defined ACL, the value range is 5000 to 5999.	NetStream filtering uses an ACL to identify target packets. If you want to collect data for specific flows, use the ACL permit statements to identify the flows. NetStream collects data only for these flows. If you do not want to collect data for specific flows, use the ACL deny statements to identify the flows. NetStream does not collect data for these flows. The value range for IPv4 ACL number varies by product branch. For more information about the value range in a product branch, see that product branch.

NETSTREAM4/NS4V9RefreshTime

This table contains information about the refresh rate of time for the NetStream version 9 template.

XML structure

```
<NETSTREAM4>
  <NS4V9RefreshTime>
    <Time></Time>
```

```
  </NS4V9RefreshTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshTime
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Time	Interval at which the template is sent	N/A	Unsigned integer. Value range: 1 to 3600 minutes.

NETSTREAM4/NS4V9RefreshPacket

This table contains information about the refresh rate of packet for the NetStream version 9 template.

XML structure

```
<NETSTREAM4>
  <NS4V9RefreshPacket>
    <Packet></Packet>
  </NS4V9RefreshPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Packet	Number of packets that are sent before the template is sent	N/A	Unsigned integer. Value range: 1 to 600.

NETSTREAM4/NS4Host

This table contains the information about the destination host to which the IPv4 NetStream exports.

XML structure

```
<NETSTREAM4>
  <NS4Host>
    <Host>
      <VrfIndex></VrfIndex>
      <IP></IP>
      <UDPPort></UDPPort>
    </Host>
  </NS4Host>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Host
Table type	Multi-instance table
Row name	Host
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
IP	IP address of the host	Index	String, dotted decimal notation.	N/A
UDPPort	UDP port of the host	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535	

NETSTREAM4/NS4Source

This table contains the information about the source interface for NetStream data to be sent to NetStream servers.

XML structure

```
<NETSTREAM4>
  <NS4Source>
    <IfIndex></IfIndex>
    <IfName></IfName>
  </NS4Source>
</NETSTREAM4>
```

Table description

Item	Description

Table name	NS4Source
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Source interface index	N/A	Unsigned integer	This supports name index.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

NETSTREAM4/NS4ActiveTime

This table contains the information about the aging time of active flows.

XML structure

```
<NETSTREAM4>
  <NS4ActiveTime>
    <ActiveTime></ActiveTime>
  </NS4ActiveTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4ActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ActiveTime	The active timeout	N/A	Unsigned integer. Value range: 1 to 60 minutes.

NETSTREAM4/NS4InActiveTime

This table contains the information about the aging time of inactive flows.

XML structure

```
<NETSTREAM4>
  <NS4InActiveTime>
    <InActiveTime></InActiveTime>
  </NS4InActiveTime>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4

Row name	None

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
InActiveTime	The Inactive timeout	N/A	Unsigned integer. Value range: 10 to 600 seconds.

NETSTREAM4/NS4MaxEntry

This table contains the information about the upper limit on IPv4 NetStream entries.

XML structure

```
<NETSTREAM4>
  <NS4MaxEntry>
    <MaxEntry></MaxEntry>
    <Action></Action>
  </NS4MaxEntry>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEntry	The MaxEntries of ip netstream	N/A	Unsigned integer	N/A.
Action	Processing method when the upper limit is reached	N/A	Boolean: • true—Ages out the oldest entries when the upper limit is reached. • false—Disables creation of a new entry	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			when the upper limit is reached.	

NETSTREAM4/NS4Version

This table contains information about the version that IPv4 NetSrteam uses to export data.

XML structure

```
<NETSTREAM4>
  <NS4Version>
    <Version></Version>
    <As></As>
    <Nexthop></Nexthop>
    <SerialNumber></SerialNumber>
  </NS4Version>
</NETSTREAM4>
```

Table description

Item	Description

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Version	The ip netstream version	N/A	Enumeration: • 5 • 9 • 10
As	The autonomous system	N/A	Enumeration: • **0**—peer-as • **1**—origin-as
Nexthop	bgp-nexthop	N/A	Boolean: • true • false
SerialNumber	Device serial number	N/A	Boolean: • true

Column name	Column description	Column type	Data type and restrictions
			false

NETSTREAM4/NS4Rate

This table contains information about the export rate.

XML structure

```
<NETSTREAM4>
  <NS4Rate>
    <Rate></Rate>
  </NS4Rate>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NETSTREAM4Rate
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Rate	Export rate	N/A	Unsigned integer. Value range: 0 to 1000

NETSTREAM4/NS4Aging

This table contains information about IPv4 NetStream periodical aging and TCP FIN- and RST-triggered aging.

XML structure

```
<NETSTREAM4>
  <NS4Aging>
    <AgingEnable></AgingEnable>
  </NS4Aging>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Aging
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
AgingEnable	Enabling status of periodical aging, TCP FIN and RST-triggered aging.	N/A	Boolean: • true. • false.

NETSTREAM4/NS4IPSECRawPacket

This table contains information about NetStream for outgoing packets before/after IPsec encapsulation.

XML structure

```
<NETSTREAM4>
  <NS4IPSECRawPacket>
    <IPSECRawPacket>
      <IfIndex></IfIndex>
      <RawPacketEnable></RawPacketEnable>
    </IPSECRawPacket>
  </NS4IPSECRawPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4IPSECRawPacket
Table type	Single-instance table
Row name	IPSECRawPacket
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
RawPacketEnable	Enabling status of NetStream for outgoing packets before IPsec encapsulation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	By default, NetStream is enabled for outgoing IPsec encapsulated packets.

NETSTREAM4/NS4MPLSCollection

This table contains information about MPLS-aware IPv4 NetStream.

XML structure

```
<NETSTREAM4>
  <NS4MPLSCollection>
    <LabelPosition1></LabelPosition1>
    <LabelPosition2></LabelPosition2>
    <LabelPosition3></LabelPosition3>
    <NoIPFieldsEnable></NoIPFieldsEnable>
  </NS4MPLSCollection>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MPLSCollection
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LabelPositions1	Position of the first label in the label stack	N/A	Enumeration: • 0. • 1 • 2 • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
LabelPositions2	Position of the second label in the label stack	N/A	Enumeration: • 0. • 1 • 2. • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
LabelPositions3	position of the third label in the label stack.	N/A	Enumeration: • 0. • 1 • 2 • 3 • 4 • 5 • 6 • 7 • 8 • 9 • 10	N/A
NoIPFieldsEnable	Specifies not to count IP fields.	N/A	Boolean: • true. • false.	N/A

NETSTREAM4/NS4ExportInfo

This table contains information about the IPv4 NetStream data Export.

XML structure

```
<NETSTREAM4>
  <NS4ExportInfo>
    <ExportInfo>
      <ExportType></ExportType>
      <Ipv4Address></Ipv4Address>
      <VrfIndex></VrfIndex>
      <UDPPort></UDPPort>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <V5ExportNum></V5ExportNum>
      <V5UDPDatagramsNum></V5UDPDatagramsNum>
      <V5UDPDatagramsFailed></V5UDPDatagramsFailed>
      <V8ExportNum></V8ExportNum>
      <V8UDPDatagramsNum></V8UDPDatagramsNum>
      <V8UDPDatagramsFailed></V8UDPDatagramsFailed>
      <V9ExportNum></V9ExportNum>
      <V9UDPDatagramsNum></V9UDPDatagramsNum>
      <V9UDPDatagramsFailed></V9UDPDatagramsFailed>
      <V10ExportNum></V10ExportNum>
      <V10UDPDatagramsNum></V10UDPDatagramsNum>
      <V10UDPDatagramsFailed></V10UDPDatagramsFailed>
    </ExportInfo>
  </NS4ExportInfo>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4ExportInfo
Table type	Multi-instance table
Row name	ExportInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ExportType	Export Type	index	Unsigned integer: • 1-17	1-13:aggregation 14:IP 15:MPLS 16:L2 17:IPL2

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address	index	String, dotted decimal notation.	HOST ip address
VrfIndex	Index of the VRF	index	Unsigned integer.	N/A
UDPPort	UDP Port	N/A	Unsigned integer.	N/A
IfIndex	Interface Index	N/A	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
V5ExportNum	Version 5 exported flows number.	N/A	Unsigned integer.	N/A
V5UDPDatagramsNum	Version 5 exported UDP datagram number.	N/A	Unsigned integer.	N/A
V5UDPDatagramsFailed	Version 5 exported UDP datagram failed number.	N/A	Unsigned integer.	N/A
V8ExportNum	Version 8 exported flows number.	N/A	Unsigned integer.	N/A
V8UDPDatagramsNum	Version 8 exported flows number.	N/A	Unsigned integer.	N/A
V8UDPDatagramsFailed	Version 8 exported UDP datagram failed number.	N/A	Unsigned integer.	N/A
V9ExportNum	Version 9 exported flows number.	N/A	Unsigned integer.	N/A
V9UDPDatagramsNum	Version 9 exported UDP datagram number.	N/A	Unsigned integer.	N/A
V9UDPDatagramsFailed	Version 9 exported UDP datagram failed number.	N/A	Unsigned integer.	N/A
V10ExportNum	Version 10 exported flows number.	N/A	Unsigned integer.	Some version may not support.
V10UDPDatagramsNum	Version 10 exported UDP datagram number.	N/A	Unsigned integer.	Some version may not support.
V10UDPDatagramsFailed	Version 10 exported UDP	N/A	Unsigned integer.	Some version may not support.

Column name	Column description	Column type	Data type and restrictions	Remarks
	datagram failed number.			

NETSTREAM4/NS4Specification

This table contains information about IPv4 NetStream specification.

XML structure

```
<NETSTREAM4>
  <NS4Specification>
    <MaxEntryAction></MaxEntryAction>
    <MaxEntryNum></MaxEntryNum>
    <MinEntryNum></MinEntryNum>
    <ActiveMaxTimeOut></ActiveMaxTimeOut>
    <InActiveMaxTimeOut></InActiveMaxTimeOut>
    <NoSupportMPLS></NoSupportMPLS>
    <SupportGlobal></SupportGlobal>
    <NSNoFilter></NSNoFilter>
    <NSSupportMirror></NSSupportMirror>
    <NSNoSampler></NSNoSampler>
    <NS4IfSetConfBitMap></NS4IfSetConfBitMap>
    <NSNoAging></NSNoAging>
    <NsSupportVxlan></NsSupportVxlan>
    <NsIgnoreDirect></NsIgnoreDirect>
    <NsModeRaw></NsModeRaw>
  </NS4Specification>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Specification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
MaxEntryAction	Whether the entry action is supported	N/A	Boolean: • true. • false.
MaxEntryNum	Max entry number	N/A	Unsigned integer.
MinEntryNum	Min entry number	N/A	Unsigned integer.
ActiveMaxTimeOut	Active Max TimeOut	N/A	Unsigned integer.
InActiveMaxTimeOut	Inactive Max TimeOut	N/A	Unsigned integer.
NoSupportMPLS	Whether the MPLS is supported	N/A	Boolean: • true. • False.
SupportGlobal	Whether enabling IPv4 NetStream globally is supported	N/A	Boolean: • true. • false.
NSNoFilter	Whether filter is supported.	N/A	Boolean: • true. • false.
NSSupportMirror	Whether the mirror is supported.	N/A	Boolean: • true. • false.
NSNoSampler	Whether the sampler is supported.	N/A	Boolean: • true. • false.
NS4IfSetConfBitMap	Whether the interface is supported.	N/A	Unsigned integer.
NSNoAging	Whether the aging is supported.	N/A	Boolean: • true. • false.
NsSupportVxlan	Whether the VXLAN is supported.	N/A	Boolean: • true. • false.
NsIgnoreDirect	Whether ignore direct.	N/A	Boolean: • true. • false.
NsModeRaw	Whether the IPsec raw is supported.	N/A	Boolean: • true. • false.

NETSTREAM4/NS4CacheInfo

This table contains information about IPv4 NetStream Cache.

XML structure

```
<NETSTREAM4>
  <NS4CacheInfo>
    <CacheInfo>
      <LipNode></LipNode>
      <HashIndex></HashIndex>
      <Order></Order>
      <FlowType></FlowType>
      <PacketNum></PacketNum>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <VxlanID></VxlanID>
      <SrcAddress></SrcAddress>
      <SrcPort></SrcPort>
      <DstAddress></DstAddress>
      <DstPort></DstPort>
      <Protocol></Protocol>
      <Tos></Tos>
      <AppID></AppID>
      <MplsTopType></MplsTopType>
      <MplsTopLabelIP></MplsTopLabelIP>
      <MplsTopLabelMaskLen></MplsTopLabelMaskLen>
      <MplsLable1></MplsLable1>
      <MplsLable2></MplsLable2>
      <MplsLable3></MplsLable3>
    </CacheInfo>
  </NS4CacheInfo>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4CacheInfo
Table type	Multi-instance table
Row name	CacheInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LipNode	The LipNode index	Index	Unsigned integer.	N/A
HashIndex	The hash table index	Index	Unsigned integer Value range: 0 to 65535.	N/A
Order	Position of hash conflict link	Index	Unsigned integer.	N/A
FlowType	NetStream entry type	N/A	Enumeration: • **1**—IP • **2**—MPLS • **3**—MIX	N/A
PacketNum	Total number of packets	N/A	Unsigned integer	Unsigned integer. Value range: 0 to 2^{64} - 1.
IfIndex	Interface index	Index	Unsigned integer.	This supports name index
Direction	Direction of the packet	N/A	Enumeration: • **0**—OUT • **1**—IN	N/A
VxlanID	N/A	N/A	Unsigned integer.	N/A
SrcAddress	IP address of the source	N/A	String, dotted decimal notation.	N/A
SrcPort	Port of the source.	N/A	Unsigned integer.	N/A
DstAddress	IP address of the destination	N/A	String, dotted decimal notation.	N/A
DstPort	Port of the destination.	N/A	Unsigned integer.	N/A
Protocol	Protocol type	N/A	Unsigned integer.	N/A
Tos	Service type	N/A	Unsigned integer.	N/A
AppID	Application ID	N/A	Unsigned integer.	N/A
MplsTopType	MPLS top type	N/A	Enumeration: • **0**—UNKNOW • **1**—TE_MIDPT • **2**—ATOM • **3**—VPN • **5**—BGP • **6**—LDP	N/A
MplsTopLabelIP	Label IP address	Index	String, dotted decimal notation.	N/A
MplsTopLabelMaskLen	Lable ip mask length	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MplsLable1	First mpls lable	N/A	Unsigned integer.	N/A
MplsLable2	Second MPLS lable	N/A	Unsigned integer.	N/A
MplsLable3	Third MPLS lable	N/A	Unsigned integer.	N/A

NETSTREAM4/NS4SRv6PolicyEnable

This table contains information about enabling NetStream on an SRv6 policy.

XML structure

```
<NETSTREAM4>
  <NS4SRv6PolicyEnable>
    <SRv6PolicyEnable>
      <Endpoint></Endpoint>
      <Color></Color>
      <Enable></Enable>
    </SRv6PolicyEnable>
  </NS4SRv6PolicyEnable>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4SRv6PolicyEnable
Table type	Multi-instance table
Row name	SRv6PolicyEnable
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	IPv6 address of the policy endpoint.	Index	IPv6: hexadecimal string, colon-separated.	N/A
Color	Color associated	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	with the policy			
Enable	Enabling NetStream.	N/A	Enumeration: • **0**—Disable • 1—Enables NetStream on an SRv6 policy for outgoing traffic.	N/A

NETSTREAM4/NS4SRv6PolicySampler

This table contains information about enabling NetStream sampling on an SRv6 Policy.

XML structure

```
<NETSTREAM4>
  <NS4SRv6PolicySampler>
    <SRv6PolicySampler>
      <Endpoint></Endpoint>
      <Color></Color>
      <SamplerName></SamplerName>
    </SRv6PolicySampler>
  </NS4SRv6PolicySampler>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4SRv6PolicySampler
Table type	Multi-instance table
Row name	SRv6PolicySampler
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	IPv6 address of the policy endpoint.	Index	IPv6: hexadecimal string, colon-separated.	N/A
Color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SamplerName	Sampler name.	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A

NETSTREAM4/NS4GREInnerPacket

This table contains IPv4 NetStream statistics on GRE inner packets.

XML structure

```
<NETSTREAM4>
  <NS4GREInnerPacket>
    <InnerPacketEnable></InnerPacketEnable>
  </NS4GREInnerPacket>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4GREInnerPacket
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
InnerPacketEnable	Whether to enable statistics on GRE inner packets.	N/A	Boolean: • true. • false.

NETSTREAM4/NS4HostEx

This table contains the information about the destination host to which the IPv4 NetStream exports.

XML structure

```
<NETSTREAM4>
  <NS4HostEx>
```

```
    <Host>
      <VrfIndex></VrfIndex>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <UDPPort></UDPPort>
    </Host>
  </NS4HostEx>
</NETSTREAM4>
```

Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4HostEx
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
AddressType	Type of the host IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	IP address of the host	Index	String, case insensitive. Length: 1 to 45 characters.	If the AddressType is IPv4,specify an IPv4 address. If the AddressType is IPv6,specify an IPv6 address.
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Netstream4 event

This event is used to report IPv4 NetStream information.

XML structure for event subscription

```
<Netstream4Event>
  <Netstream4>
  </Netstream4>
</Netstream4Event>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Netstream4</stream>
    <filter type="subtree">
      <Netstream4Event xmlns="http://www.h3c.com/netconf/event:1.0/Netstream4:1.0">
        <Netstream4>
        </Netstream4>
      </Netstream4Event>
    </filter>
  </create-subscription>
</rpc>
```

Table description

```

Columns

Column name	Column description	Data type and restrictions	Remarks
Bytes	Number of bytes of the flow	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Packets	Number of packets of the flow	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
StartTimeStamp	Absolute timestamp of the first packet of the flow	Unsigned integer.	N/A
EndTimeStamp	Absolute timestamp of the last packet of the flow	Unsigned integer.	N/A
InputInterface	Input interface index	Unsigned integer.	N/A
InputInterfaceName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
OutputInterface	Output interface index	Unsigned integer.	N/A
OutputInterfaceName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

Column name	Column description	Data type and restrictions	Remarks
InputVRFID	Unique identifier of the VRF that receives the packets of the flow	Unsigned integer. Value range: 0 to 65535.	N/A
OutputVRFID	Unique identifier of the VRF that sends the packets of the flow	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv4Address	IPv4 source address in the IP packet header	String, dotted decimal notation.	N/A
DstIpv4Address	IPv4 destination address in the IP packet header	String, dotted decimal notation.	N/A
SrcMask	Number of contiguous bits that are relevant in the source IPv4 prefix information element	Unsigned integer. Value range: 0 to 32.	N/A
DstMask	Number of contiguous bits that are relevant in the destination IPv4 prefix information element	Unsigned integer. Value range: 0 to 32.	N/A
Ipv4Nexthop	IPv4 address of the next IPv4 hop	String, dotted decimal notation.	N/A
BgpIpv4NextHop	IPv4 address of the next BGP hop	String, dotted decimal notation.	N/A
SrcASNumber	AS number of the source IP address	Unsigned integer.	N/A
DstASNumber	AS number of the destination IP address	Unsigned integer.	N/A
SrcPort	Source port in the transport header	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port in the transport header	Unsigned integer. Value range: 0 to 65535.	N/A
IpVersion	IP version field in the IP packet header	Unsigned integer. Value range: 0 to 16.	N/A
TcpFlags	TCP control bits observed for the packets of the flow	Unsigned integer. Value range: 0 to 64.	N/A
Protocol	Value of the protocol number in the IP packet header	Unsigned integer. Value range: 0 to 255.	N/A
Tos	ToS field in the IPv4 packet header	Unsigned integer. Value range: 0 to 255.	N/A
Direction	Direction of the flow	Enumeration:	N/A

Column name	Column description	Data type and restrictions	Remarks
		• 0 – Input. • 1 – Output.	
SamplingAlgorithm	Type of algorithm used for sampled flow	Enumeration: • 1 – Deterministic Sampling. • 2 – Random Sampling.	N/A
SamplingInterval	Sampling packet interval	Unsigned integer.	N/A
SrcMacAddress	Source MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
DstMacAddress	Destination MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
SrcVlanId	VLAN ID associated with ingress interface	Unsigned integer. Value range: 0 to 65535.	N/A
DstVlanId	VLAN ID associated with egress interface	Unsigned integer. Value range: 0 to 65535.	N/A
VXLANID	A 24-bit segment ID VXLAN network identifier (VNI)	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
APPID	Application ID	Unsigned integer.	N/A
MplsTopLabelType	Field identifies the control protocol that allocated the top-of-stack label	Enumeration: • 0 –Unknown: The MPLS label type is not known. [RFC3954][ipfix-iana_at_cisco.com] • 1 –TE-MIDPT: Any TE tunnel mid-point or tail label [RFC5102]. • 2 –Pseudowire: Any PWE3 or Cisco AToM based label [RFC5102] • 3 –VPN: Any label associated with VPN [RFC5102] • 4 –BGP: Any label associated with BGP or BGP routing [RFC5102] • 5 –LDP: Any label associated with dynamically assigned labels using LDP [RFC5102]	Values for this field are listed in the MPLS label type registry. See [http://www.iana.org/assignments/ipfix/ipfix.xhtml#ipfix-mpls-label-type].
MplsTopLabelIpv4Address	IPv4 address of the system that the MPLS top label will cause the flow to be forwarded to	String, dotted decimal notation.	N/A
MplsTopLabelIpv4Mask	Prefix length of the subnet of the MplsTopLabelIpv4Address that the MPLS top label will cause the flow to be forwarded to	Unsigned integer. Value range: 0 to 32.	N/A
MplsTopLabelIpv6Address	IPv6 address of the system that the MPLS top label will cause the flow to be forwarded to	Hexadecimal string, colon-separated.	N/A

Column name	Column description	Data type and restrictions	Remarks
MplsTopLabelIpv6Mask	Prefix length of the subnet of the MplsTopLabelIpv6Address that the MPLS top label will cause the flow to be forwarded to	Unsigned integer. Value range: 0 to 128.	N/A
MplsLabelStackSectionTop	Label, Exp, and S fields from the top MPLS label stack entry from the last label that was pushed	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection2	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSectionTop	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection3	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection2	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection4	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection3	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection5	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection4	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection6	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSecti	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A

NETSTREAM6

NETSTREAM6/NS6Enable

This table contains information about enabling IPv6 NetStream on an interface.

XML structure

```
<NETSTREAM6>
  <NS6Enable>
    <InterfaceEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </InterfaceEnable>
  </NS6Enable>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6Enable
Table type	Multi-instance table
Row name	InterfaceEnable
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Enable	Enabling IPv6 NetStream for traffic in different directions	N/A	Enumeration: • **0**—Disable IPv6 Netstream(default). • **1**—Enables IPv6 NetStream for incoming traffic.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Enables IPv6 NetStream for outgoing traffic. • **3**—Enables IPv6 NetStream for incoming and outgoing traffic.	

NETSTREAM6/NS6Sampler

This table contains information about enabling IPv6 NetStream sampling on an interface.

XML structure

```
<NETSTREAM6>
  <NS6Sampler>
    <InterfaceSampler>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <SamplerName></SamplerName>
    </InterfaceSampler>
  </NS6Sampler>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6Sampler
Table type	Multi-instance table
Row name	InterfaceSampler
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr*

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API Configuration Reference.
Direction	Traffic direction	Index	Enumeration: • **1**—Incoming traffic. • **2**—Outgoing traffic.	N/A
SamplerName	Sampler name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

NETSTREAM6/NS6Host

This table contains information about the destination hosts to which the IPv6 NetStream exports.

XML structure

```
<NETSTREAM6>
  <NS6Host>
    <Host>
      <VrfIndex></VrfIndex>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <UDPPort></UDPPort>
    </Host>
  </NS6Host>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6Host
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This supports name index.
AddressType	Type of the host IP address	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	IP address of the host	Index	String, case insensitive. Length: 1 to 45 characters.	If the AddressType is IPv4,specify an IPv4 address. If the AddressType is IPv6,specify an IPv6 address.
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

NETSTREAM6/NS6Source

This table contains information about the source interface for IPv6 NetStream data to be sent to NetStream servers.

XML structure

```
<NETSTREAM6>
  <NS6Source>
    <IfIndex></IfIndex>
  </NS6Source>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6Source
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Source interface index	N/A	Unsigned integer.	This supports name index.

NETSTREAM6/NS6ActiveTime

This table contains information about the aging time of active flows.

XML structure

```
<NETSTREAM6>
  <NS6ActiveTime>
    <ActiveTime></ActiveTime>
  </NS6ActiveTime>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6ActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ActiveTime	Aging time of active flows	N/A	Unsigned integer. Value range: 1 to 60 minutes. Default: 30 minutes.

NETSTREAM6/NS6InActiveTime

This table contains information about the aging time of inactive flows.

XML structure

```
<NETSTREAM6>
  <NS6InActiveTime>
    <InActiveTime></InActiveTime>
  </NS6InActiveTime>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6InActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
InActiveTime	Aging time of inactive flows	N/A	Unsigned integer. Value range: 10 to 600 seconds. Default: 30 senconds.

NETSTREAM6/NS6Version

This table contains information about the version that IPv6 NetSrteam uses to export data.

XML structure

```
<NETSTREAM6>
  <NS6Version>
    <Version></Version>
    <As></As>
    <Nexthop></Nexthop>
    <SerialNumber></SerialNumber>
  </NS6Version>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6Version
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Version	Version format	N/A	Enumeration: • 9 (default) • 10
As	Autonomous system	N/A	Enumeration: • **0**—peer-as (default) • **1**—origin-as
Nexthop	BGP nexthop	N/A	Boolean: • true • false (default)
SerialNumber	Device serial number	N/A	Boolean: • true • false (default)

NETSTREAM6/NS6SRv6PolicyEnable

This table contains information about enabling IPv6 NetStream on an SRv6 policy .

XML structure

```
<NETSTREAM6>
  <NS6SRv6PolicyEnable>
    <SRv6PolicyEnable>
      <Endpoint></Endpoint>
      <Color></Color>
      <Enable></Enable>
    </SRv6PolicyEnable>
  </NS6SRv6PolicyEnable>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6SRv6PolicyEnable
Table type	Multi-instance table
Row name	SRv6PolicyEnable
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Color	Color associated with the policy	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Endpoint	IPv6 address of the policy endpoint	Index	IPv6: hexadecimal string, colon-separated.	N/A
Enable	Whether to enable or disable IPv6 NetStream	N/A	Enumeration: • **0**—Disable • **1**—Enable	N/A

NETSTREAM6/NS6SRv6PolicySampler

This table contains information about enabling NetStream sampling in an SRv6 Policy.

XML structure

```
<NETSTREAM6>
  <NS6SRv6PolicySampler>
    <SRv6PolicySampler>
      <Endpoint></Endpoint>
      <Color></Color>
      <SamplerName></SamplerName>
    </SRv6PolicySampler>
  </NS6SRv6PolicySampler>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6SRv6PolicySampler
Table type	Multi-instance table
Row name	SRv6PolicySampler
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Endpoint	IPv6 address of the policy endpoint	Index	IPv6: hexadecimal string, colon-separated.	N/A
Color	Color associated with the policy	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
SamplerName	Sampler name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

NETSTREAM6/NS6GREInnerPacket

This table contains IPv6 NetStream statistics on GRE inner packets.

XML structure

```
<NETSTREAM6>
  <NS6GREInnerPacket>
    <InnerPacketEnable></InnerPacketEnable>
  </NS6GREInnerPacket>
</NETSTREAM6>
```

Table description

Item	Description
Feature name	NETSTREAM6
Table name	NS6GREInnerPacket
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
InnerPacketEnable	Whether to enable statistics on GRE inner packets.	N/A	Boolean: • true. • false(default)

Columns

Column name	Column description	Data type and restrictions	Remarks
Bytes	Number of bytes of the flow	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Packets	Number of packets of the flow	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
StartTimeStamp	Absolute timestamp of the first packet of the flow	Unsigned integer.	N/A
EndTimeStamp	Absolute timestamp of the last packet of the flow	Unsigned integer.	N/A
InputInterface	Input interface index	Unsigned integer.	N/A
InputInterfaceName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
OutputInterface	Output interface index	Unsigned integer.	N/A
OutputInterfaceName	Full name of an interface	String. Length: 2 to 47 characters. Example:	N/A

Column name	Column description	Data type and restrictions	Remarks
		GigabitEthernet2/0/2	
InputVRFID	Unique identifier of the VRF that receives the packets of the flow	Unsigned integer. Value range: 0 to 65535.	N/A
OutputVRFID	Unique identifier of the VRF that sends the packets of the flow	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv6Address	IPv6 source address in the IP packet header	Hexadecimal string, colon-separated.	N/A
DstIpv6Address	IPv6 destination address in the IP packet header	Hexadecimal string, colon-separated.	N/A
FlowLabelIpv6	IPv6 flow label field in the IP packet header	Unsigned integer. Value range: 0 to 2^{20}-1.	N/A
SrcMask	Number of contiguous bits that are relevant in the source IPv6 prefix information element	Unsigned integer. Value range: 0 to 128.	N/A
DstMask	Number of contiguous bits that are relevant in the destination IPv6 prefix information element	Unsigned integer. Value range: 0 to 128.	N/A
Ipv6Nexthop	IPv6 address of the next IPv6 hop	Hexadecimal string, colon-separated.	N/A
BgpIpv6NextHop	IPv6 address of the next BGP hop	Hexadecimal string, colon-separated.	N/A
SrcASNumber	AS number of the source IP address	Unsigned integer.	N/A
DstASNumber	AS number of the destination IP address	Unsigned integer.	N/A
SrcPort	Source port in the transport header	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port in the transport header	Unsigned integer. Value range: 0 to 65535.	N/A
IpVersion	IP version field in the IP packet header	Unsigned integer. Value range: 0 to 16.	N/A
TcpFlags	TCP control bits observed for the packets of the flow	Unsigned integer. Value range: 0 to 64.	N/A
Protocol	Value of the protocol number in the IP	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Data type and restrictions	Remarks
	packet header		
TrafficClass	Traffic class field in the IPv6 packet header	Unsigned integer. Value range: 0 to 255.	N/A
Direction	Direction of the flow	Enumeration: • 0 – Input. • 1 – Output.	N/A
SamplingAlgorithm	Type of algorithm used for sampled flow	Enumeration: • 1 – Deterministic Sampling. • 2 – Random Sampling.	N/A
SamplingInterval	Sampling packet interval	Unsigned integer.	N/A
SrcMacAddress	Source MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
DstMacAddress	Destination MAC address	Six groups of two hexadecimal digits, hyphen-separated.	N/A
SrcVlanId	V LAN ID associated with ingress interface	Unsigned integer. Value range: 0 to 65535.	N/A
DstVlanId	VLAN ID associated with egress interface	Unsigned integer. Value range: 0 to 65535.	N/A
APPID	Application ID	Unsigned integer.	N/A
MplsTopLabelType	Field identifies the control protocol that allocated the top-of-stack label	Enumeration: • 0 –Unknown: The MPLS label type is not known. [RFC3954][ipfix-iana_at_cisco.com] • 1 –TE-MIDPT: Any TE tunnel mid-point or tail label [RFC5102]. • 2 –Pseudowire: Any PWE3 or Cisco AToM based label [RFC5102] • 3 –VPN: Any label associated with VPN [RFC5102] • 4 –BGP: Any label associated with BGP or BGP routing [RFC5102] • 5 –LDP: Any label associated with dynamically assigned labels using LDP [RFC5102]	Values for this field are listed in the MPLS label type registry. See [http://www.iana.org/assignments/ipfix/ipfix.xhtml#ipfix-mpls-label-type].
MplsTopLabelIpv4Address	IPv4 address of the system that the MPLS top label will cause the flow to be forwarded to	String, dotted decimal notation.	N/A
MplsTopLabelIpv4Mask	Prefix length of the subnet of the MplsTopLabelIpv4Address that the MPLS top label will cause the flow to be forwarded to	Unsigned integer. Value range: 0 to 32.	N/A
MplsTopLabelIpv6Address	IPv6 address of the system that the	Hexadecimal string, colon-separated.	N/A

Column name	Column description	Data type and restrictions	Remarks
	MPLS top label will cause the flow to be forwarded to		
MplsTopLabelIpv6Mask	Prefix length of the subnet of the MplsTopLabelIpv6Address that the MPLS top label will cause the flow to be forwarded to	Unsigned integer. Value range: 0 to 128.	N/A
MplsLabelStackSectionTop	Label, Exp, and S fields from the top MPLS label stack entry from the last label that was pushed	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection2	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSectionTop	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection3	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection2	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection4	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection3	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection5	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack entry that would be reported by MplsLabelStackSection4	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A
MplsLabelStackSection6	Label, EXP, and S fields from the label stack entry that was pushed immediately before the label stack	Unsigned integer. Value range: 0 to 2^{24}-1.	N/A

Column name	Column description	Data type and restrictions	Remarks
	entry that would be reported by MplsLabelStackSection5

NQA

NQA/TwamplightSenderStarts

This table contains information about starting NQA TWAMP Light sessions on demand.

XML structure

```
<NQA>
  <TwamplightSenderStarts>
    <TwamplightSenderStart>
      <SessionID></SessionID>
      <Duration></Duration>
      <PacketCount></PacketCount>
      <TxInterval></TxInterval>
      <Timeout></Timeout>
      <StatisticsInterval></StatisticsInterval>
      <MonitorTime></MonitorTime>
    </TwamplightSenderStart>
  </TwamplightSenderStarts>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	TwamplightSenderStarts
Table type	Multi-instance table
Row name	TwamplightSenderStart
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. MinValue: 1	This parameter supports customization, so only the minimum value is limited.
Duration	Duration of the session running before being stopped, in seconds	N/A	Unsigned integer. Value range: 60 to 300.	N/A

PacketCount	Number of packets to send before the session being stopped	N/A	Unsigned integer. Value range: 100 to 30000.	N/A
TxInterval	Interval at which probe packets are sent	N/A	Enumeration: • **10**—10 milliseconds. • **100**—100 milliseconds. • **1000**—1000 milliseconds. • **10000**—10000 milliseconds. • **30000**—30000 milliseconds.	N/A
Timeout	Timeout time for reponse packets in seconds	N/A	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
StatisticsInterval	Statistics collection interval in milliseconds	N/A	Unsigned integer. Value range: 1000 to 6000000.	This parameter supports customization.
MonitorTime	Reaction entry threshold violation monitor time in milliseconds	N/A	Unsigned integer. Value range: 1000 to 86400000.	This parameter depend on StatisticsInterval.

NQA/TwamplightSenderStops

This table contains information about stopping NQA TWAMP Light sessions.

XML structure

```
<NQA>
  <TwamplightSenderStops>
    <TwamplightSenderStop>
      <SessionID></SessionID>
    </TwamplightSenderStop>
  </TwamplightSenderStops>
</NQA>
```

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type.	N/A	Enumeration: • **0**—ICMP-echo. • **1**—UDP-echo. • **2**—TCP. • **3**—DLSw. • **4**—FTP. • **5**—DHCP. • **6**—SNMP. • **7**—DNS. • **8**—HTTP. • **9**—UDP-jitter. • **10**—Voice. • **11**—Path-jitter. • **12**—UDP-tracert. • **13**—ARP. • **14**—IMAP. • **15**—POP3. • **16**—RADIUS. • **17**—RTSP. • **18**—SIP. • **19**—SMTP. • **20**—SSL. • **21**—HTTPS. • **22**—TCP half-open. • **23**—Throughput. • **24**—Latency. • **25**—Frame-loss. • **26**—ICMP-jitter. • **27**—SNMP-DCA. • **28**—WAP. • **29**—Y1564. • **30**—RADIUS-ACCOUNT. • **31**—TWAMP Light. • 32—ICMP. • 33—HTTP2. • 34—Diameter.	NQA templates are not available for the following types of operations: • DLSW. • DHCP. • UDP-jitter. • Voice. • Path-jitter. • UDP-tracert. • Throughput. • Latency. • Frame-loss. • ICMP-jitter. • Y1564. • TWAMP Light. • ICMP. You must specify an operation type when you create a template. You cannot specify an operation type when you remove or delete a template. The operation type of an NQA template cannot be modified.
Description	Description of the template.	N/A	String, case-sensitive. Length: 1 to 200 characters.	By default, no description is specified for an NQA template.
Frequency	Interval in milliseconds at	N/A	Unsigned integer. Value range: 0 to	If the operation is not completed when the interval expires, the next

Column name	Column description	Column type	Data type and restrictions	Remarks
	which the NQA operation repeats.		604800000. Default: 5000.	operation does not start.
ProbeTimeout	Probe timeout time in milliseconds.	N/A	Unsigned integer. Default: 3000.	The value range for the probe timeout time varies by the **Type** column. • FTP/HTTP/HTTPS/HTTP2/SNMP-DCA/WAP: 10 to 86400000. • ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/RADIUS/RTSP/SIP/SMTP/SSL/TCP half-open/RADIUS-ACCOUNT: 10 to 3600000.
TTL	TTL for probe packets.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	The ARP operation does not support this column.
ToS	ToS value in the IP packet header of probe packets.	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The ARP operation does not support this column.
VRF	VRF instance where the operation is performed.	N/A	String, case-sensitive. Length: 1 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
URL	URL of the destination server.	N/A	String. Length: 1 to 255 characters.	This column cannot be configured with the **DstIP** or **DstPort** column simultaneously, except for the WAP operation. Only the FTP, HTTP, HTTPS, HTTP2,RTSP, WAP, ICMP, WAP and TCP operations support this column. By default, no URL is specified for the destination server. Valid URL formats vary by the **Type** column: • For FTP operations, enter the URL in one of the following formats: ○ ftp:*//host/filename* ○ ftp:*//host:port/filename* When performing the get operation, the *filename* argument is required. When performing the put operation, the *filename* argument does not take effect, even if it is specified. The file name for the put operation is determined by the **filename** command. • For HTTP operations, enter the URL in one of the following formats:

Column name	Column description	Column type	Data type and restrictions	Remarks
				○ http://*host/resource* ○ http://*host:port/resource* • For HTTPS operations, enter the URL in one of the following formats: ○ https://*host/resource* ○ https://*host:port/resource* • For HTTP2 operations, enter the URL in one of the following formats: ○ http://*host/resource* ○ http://*host:port/resource* ○ https://*host/resource* ○ https://*host:port/resource* • For RTSP operations, enter the URL in one of the following formats: ○ rtsp://*host/resource* ○ rtsp://*host:port/resource* • For WAP operations, enter the URL in one of the following formats: ○ http://*host/resource* ○ http://*host:port/resourc*e ○ https://*host/resource* ○ https://*host:port/resource*
DstIP	Destination IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column cannot be configured with the **URL** column simultaneously, except for the WAP operation. The FTP, HTTP, HTTPS, HTTP2 and RTSP operations do not support this column. By default, no destination address is specified. Destination IP address examples: • 1.1.1.1. • 1:1::1:1. This column and the URL column cannot both be configured.
DstPort	Destination port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	This column cannot be configured with the **URL** column simultaneously, except in the WAP operation. The ICMP-echo, ARP, FTP, HTTP, HTTPS, HTTP2 and RTSP operations do not support this column. The default destination port number varies by the **Type** column: • UDP-echo: Not specified. • TCP: Not specified. • SNMP: 161. • DNS: 53.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• IMAP: 143. • POP3: 110. • RADIUS: 1812. • RTSP: 554. • SIP: 5060 (UDP) or 5061 (TCP). • SMTP: 25. • SSL: Not specified. • SNMP-DCA: 161. • WAP: 9201. • RADIUS-ACCOUNT: 1813.
SrcIP	Source IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	By default, no source IP address is specified. Source IP address examples: • 1.1.1.1. • 1:1::1:1. The source IP address must be the IP address of a local interface, and the interface must be up.
SrcPort	Source port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	Only the DNS operation supports this column. By default, no source port number is specified.
NextHop	Next hop IP address.	N/A	String. Length: 1 to 46 characters.	Only the ICMP-echo, TCP, DNS and TCP half-open operations support this column. Next hop IP address examples: • 1.1.1.1. • 1:1::1:1.
TriggerPass Count	Number of consecutive successful probes to determine a successful operation event.	N/A	Unsigned integer. Value range: 1 to 15. Default: 3.	In the same table, TriggerPassCount can be configured only when TiggerPerProbe is set to false. If TriggerPassCount and TiggerPerProbe are configured in different tables, the most recent configuration takes effect.
TriggerFailC ount	Number of consecutive probe failures to determine an operation failure.	N/A	Unsigned integer. Value range: 1 to 15. Default: 3.	In the same table, TriggerFailCount can be configured only when TiggerPerProbe is set to false. If TriggerFailCount and TiggerPerProbe are configured in different tables, the most recent configuration takes effect...
TriggerPerP robe	Report the result of each probe.	N/A	Boolean: • **true**—Report the result of each probe. • **false**—Report according to TriggerPassCount and TriggerFailCount	In the same table, TriggerPerProbe can be configured true only when both TriggerPassCount and TriggerFailCount are not set to false. If TriggerPerProbe and TriggerPassCount/TriggerFailCount are configured in different tables, the most recent configuration takes effect.

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default).	Only the ICMP-echo, DNS and TCP half-open operations support this column.
FrequencyAdjust	This frequency time will be adjusted to this value when the probe fails.	N/A	Unsigned integer. Value range: 0 to 604800000. Default: 0.	If the operation is not completed when the interval expires, the next operation does not start. If the value is 0, the frequency time will not be changed when the probe fails.

NQA/IcmpEchoTemplates

This table contains information about ICMP-echo templates.

XML structure

```
<NQA>
  <IcmpEchoTemplates>
    <IcmpEchoTemplate>
      <Name></Name>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <SrcIf></SrcIf>
      <OutIf></OutIf>
    </IcmpEchoTemplate>
  </IcmpEchoTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	IcmpEchoTemplates
Table type	Multi-instance table
Row name	IcmpEchoTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for each request.	N/A	String. Length: 1 to 200 characters.	The default payload fill string is the hexadecimal string 00010203040506070809.
DataSize	Payload size in each request.	N/A	Unsigned integer. Value range: 20 to 65507. Default: 100.	N/A
SrcIf	Source interface whose primary IP address will be used as the source IP address for the requests.	N/A	String. Length: 2 to 47 characters.	By default, no source IP address is specified. The requests use the primary IP address of the outgoing interface as their source IP address. If both the source IP address and source interface are specified, the most recent configuration takes effect. The specified source interface must be up. The following types of interfaces can be configured as the source interface for the operation: • VLAN interface. • Layer 3 Ethernet interface. • Layer 3 aggregate interface. • EFM interface. • Ethernet channel interface. • Management interface. • Layer 3 redundancy interface. Support for interface types depends on the device model.
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/UdpEchoTemplates

This table contains information about UDP-echo templates.

Table description

Item	Description
Feature name	NQA
Table name	HttpTemplates
Table type	Multi-instance table
Row name	HttpTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 32 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 32 characters.	By default, no login password is specified.
Operation	Operation type.	N/A	Enumeration: • **1**—Get operation (default). • **2**—Post operation. • **3**—Raw Operation.	By default, the operation type is get, which means obtaining files from the server. In the raw operation, use the raw-request command to specify the content of the HTTP request to be sent to the server.
Version	Version	N/A	Enumeration: • **0**—Version1.0 (default). • **1**—Version1.1.	HTTP2 operation do not support this column.
RawContent	Raw request content.	N/A	String. Length: 1 to 1023 characters.	This step is required for the raw operation. By default, no contents are specified. For HTTP and HTTPS operations, the following formats are not supported: Xq/qu/qui/quitX, XquitYaaaX, Xr/re/ret/retu/retur/returnX or XreturnYaaaX(X represents 0 to n spaces, Y represents 1 to n spaces and aaa represents a character

Column name	Column description	Column type	Data type and restrictions	Remarks
				string without spaces.) As a best practice, do not configure the alias. For HTTP2 operation, must be formatted hex string.and the length of the string must be an even length 2 to 512.
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 200,300-400,500. By default, No expected status code is configured.
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: • Data. • Offset. • StrictFlag.	By default, no expected data is specified. Both Data and Offset must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search the expected response string.	Offset in bytes after which the client starts to search for the expected string	Unsigned integer. Value range: 0 to 1000. Default: 0	N/A
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
SslClientPolicy	SSL client policy used to access the HTTPS server	N/A	String, case-insensitive. Length: 1 to 31 characters.	Only the HTTPS and HTTP2 operations support this column. By default, no SSL client policy is specified.
ProxyUrl	URL of the proxy server.	N/A	String. Length: 1 to 255 characters.	ProxyUrl is the address of proxy server,and the client to access the server through proxy server. By default, no ProxyUrl is specified for the proxy server.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Valid ProxyUrl formats vary by operations: • For HTTP operations, enter the URL in one of the following formats: ○ http://*host* ○ http://*host:port* • For HTTPS operations, enter the URL in one of the following formats: ○ https://*host* ○ https://*host:port* • For HTTP2 operations, enter the URL in one of the following formats: ○ http://*host* ○ http://*host:port* ○ https://host ○ https://*host:port*
ExpectFailed Status	List of expected failed- status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 200,300-400,500. By default, No expected failed-status code is configured.
ExpectFailed Data	Data expected in responses to determine a failed operation.	Data structure	Members include: • Data. • Offset. • StrictFlag.	By default, no expected data is specified. Both Data and Offset must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Data	Expected failed response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search for the expected failed response string.	N/A	Unsigned integer. Value range: 0 to 1000. Default: 0	N/A
StrictFlag	Whether the data is matched by exact matching method.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			offset.	
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 40 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 40 characters.	By default, no login password is specified.

NQA/RadiusTemplates

This table contains information about RADIUS and RADIUS-ACCOUNT templates.

XML structure

```
<NQA>
  <RadiusTemplates>
    <RadiusTemplate>
      <Name></Name>
      <UserName></UserName>
      <Password></Password>
      <Key></Key>
    </RadiusTemplate>
  </RadiusTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	RadiusTemplates
Table type	Multi-instance table
Row name	RadiusTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 253 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 64 characters.	The RADIUS-ACCOUNT operation does not support this column. By default, no login password is specified.
Key	Shared key.	N/A	String. Length: 1 to 64 characters.	N/A

NQA/RtspTemplates

This table contains information about RTSP templates.

XML structure

```
<NQA>
  <RtspTemplates>
    <RtspTemplate>
      <Name></Name>
      <ExpectStatus></ExpectStatus>
      <RequestMethod></RequestMethod>
    </RtspTemplate>
  </RtspTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	RtspTemplates
Table type	Multi-instance table
Row name	RtspTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 200,300-400,500. By default, no expected status code is configured.
RequestMethod	Request method.	N/A	Enumeration: • **1**—Options method (default). • **2**—Describe method.	By default, the request method is options, which means obtaining request methods that available on the server.

NQA/SipTemplates

This table contains information about SIP templates.

XML structure

```
<NQA>
  <SipTemplates>
    <SipTemplate>
      <Name></Name>
      <ExpectStatus></ExpectStatus>
      <TransProtocol></TransProtocol>
    </SipTemplate>
  </SipTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	SipTemplates
Table type	Multi-instance table
Row name	SipTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 200,300-400,500. By default, no expected status is specified.
TransProtocol	Transport layer protocol.	N/A	Enumeration: • **6**—TCP. • **17**—UDP (default).	N/A.

NQA/SslTemplates

This table contains information about SSL templates.

XML structure

```
<NQA>
  <SslTemplates>
    <SslTemplate>
      <Name></Name>
      <ClientPolicy></ClientPolicy>
    </SslTemplate>
  </SslTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	SslTemplates
Table type	Multi-instance table
Row name	SslTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ClientPolicy	SSL client policy	N/A	String, case-insensitive. Length: 1 to 31 characters.	By default, no SSL client policy is specified.

NQA/SnmpDcaTemplates

This table contains information about SNMP-DCA templates.

Reading of and modification to the table must follow the order of the column in the table.

XML structure

```
<NQA>
  <SnmpDcaTemplates>
    <SnmpDcaTemplate>
      <Name></Name>
      <Community></Community>
```

```
      <Version></Version>
      <AgentType></AgentType>
      <CPU>
        <Threshold></Threshold>
        <Weight></Weight>
      </CPU>
      <Memory>
        <Threshold></Threshold>
        <Weight></Weight>
      </Memory>
      <Disk>
        <Threshold></Threshold>
        <Weight></Weight>
      </Disk>
      <OID>
        <OidString></OidString>
        <Threshold></Threshold>
        <Weight></Weight>
      </OID>
    </SnmpDcaTemplate>
  </SnmpDcaTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	SnmpDcaTemplates
Table type	Multi-instance table
Row name	SnmpDcaTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Community	SNMP community name.	N/A	String. Length: 1 to 32 characters.	The default community name is **public**.
Version	SNMP version.	N/A	Enumeration: • **1**—SNMPv1 (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—SNMPv2c.	
AgentType	SNMP agent type.	N/A	Enumeration: • **0**—Net-Snmp (default). • **1**—Windows. • **2**—UserDefined.	N/A
CPU	CPU usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Threshold	CPU usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 80.	N/A
Weight	CPU usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 3.	N/A
Memory	Memory usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Threshold	Memory usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 70.	N/A
Weight	Memory usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 2.	N/A
Disk	Disk usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Threshold	Disk usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 90.	N/A
Weight	Disk usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 4.	N/A
OID	OID	Data	Members include:	This column can appear

Column name	Column description	Column type	Data type and restrictions	Remarks
	information of the MIB object whose statistics the SNMP DCA operation collects.	structure	• OidString. • Threshold. • Weight.	at most 8 times in this row. By default, no OID data is specified. All the members must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
OidString	MIB subtree by its root node's OID.	N/A	Dotted numeric string. Length: 1 to 255 characters	Example for OID: 1.3.6.1.4.1.2021.11.11.0.
Threshold	Threshold.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Weight	Weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A

NQA/WapTemplates

This table contains information about WAP templates.

XML structure

```
<NQA>
  <WapTemplates>
    <WapTemplate>
      <Name></Name>
      <ExpectData>
        <Data></Data>
        <Offset></Offset>
        <StrictFlag></StrictFlag>
        <HexFlag></HexFlag>
      </ExpectData>
    </WapTemplate>
  </WapTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	WapTemplates

Table type	Multi-instance table
Row name	WapTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: • Data. • Offset. • StrictFlag. • HexFlag.	By default, no expected data is specified. Both Data and Offset must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	When HexFlag is specified, the string must be a hexadecimal string and contain an even number of characters.
Offset	Offset in bytes after which the client starts to search for the expected string.	N/A	Unsigned integer. Value range: 0 to 1000. Default: 0	N/A
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string (default).	N/A

NQA/TcpHalfOpenTemplates

This table contains information about TCP half-open templates.

XML structure

```
<NQA>
  <TcpHalfOpenTemplates>
    <TcpHalfOpenTemplate>
      <Name></Name>
      <PortDetectEnable></PortDetectEnable>
      <OutIf></OutIf>
    </TcpHalfOpenTemplate>
  </TcpHalfOpenTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	TcpHalfOpenTemplates
Table type	Multi-instance table
Row name	TcpHalfOpenTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
PortDetectEnable	Whether the port detection mode is enabled.	N/A	Boolean: • **true**—Port detection mode is enabled. • **false**—Port detection mode is disabled (default).	N/A
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/DiameterTemplates

This table contains information about Diameter templates.

XML structure

```
<NQA>
  <DiameterTemplates>
    <DiameterTemplate>
      <Name></Name>
      <LocalHostName></LocalHostName>
      <LocalRealmName></LocalRealmName>
      <ProductName></ProductName>
      <VendorId></VendorId>
      <AuthAppId></AuthAppId>
      <AcctAppId></AcctAppId>
      <VendorSpecificAppId>
        <VendorId></VendorId>
        <AuthAppId></AuthAppId>
        <AcctAppId></AcctAppId>
      </VendorSpecificAppId>
      <ExpectStatus></ExpectStatus>
      <SslClientPolicy></SslClientPolicy>
      <OutIf></OutIf>
    </DiameterTemplate>
  </DiameterTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	DiameterTemplates
Table type	Multi-instance table
Row name	DiameterTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
LocalHostName	Local host name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	It can include letters, digits, hyphens (-) and dots (.). By default,no local host

Column name	Column description	Column type	Data type and restrictions	Remarks
				name is specified.
LocalRealmName	Local realm name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	It can include letters, digits, hyphens (-) and dots (.). By default, the local realm name is “h3c.com”.
ProductName	Product name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	By default, the local realm name is “H3C Diameter Health Monitoring”.
VendorId	Vendor identification number.	N/A	Unsigned integer. Value range: 0 to 4294967295.	By default, the vendor identification number is 0.
AuthAppId	Authentication and authorization application identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	By default, no authentication and authorization application identification number is specified.
AcctAppId	Accounting application identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	By default, no accounting application identification number is specified.
VendorSpecificAppId	Application identification number for specific vendor.	Data structure	Members include: • VendorId. • AuthAppId. • AcctAppId.	By default, no application identification number for specific vendor is specified. VendorId must be specified. Only one of AuthAppId and AcctAppId can be specified.
VendorId	Vendor identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
AuthAppId	Authentication and authorization application identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
AcctAppId	Accounting application identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 2000,3000-4000,5000. By default, No expected failed-status code is configured.
SslClientPolicy	SSL client policy used to access the	N/A	String, case-insensitive. Length: 1 to 31 characters.	By default, no SSL client policy is specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
	Diameter server			
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/Entries

This table contains information about NQA entries.

XML structure

```
<NQA>
  <Entries>
    <Entry>

```

Table description

Item	Description
Feature name	NQA
Table name	Entries
Table type	Multi-instance table
Row name	Entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type	N/A	Enumeration: • **0**—ICMP-echo • **1**—UDP-echo • **2**—TCP • **3**—DLSw • **4**—FTP • **5**—DHCP • **6**—SNMP • **7**—DNS • **8**—HTTP • **9**—UDP-jitter • **10**—VOICE • **11**—Path-jitter • **12**—UDP-tracert • **13**—ARP • **14**—IMAP • **15**—POP3 • **16**—Radius • **17**—RTSP • **18**—SIP • **19**—SMTP • **20**—SSL • **21**—HTTPS • **22**—TCP Half-open • **23**—Throughput • **24**—Latency • **25**—Frame-Loss • **26**—ICMP-jitter	Type ICMP-echo, ICMP-jitter, ARP, HTTP, HTTP2, UDP-echo, and UDP-jitter are supported. You must specify a type when you create an entry that does not exist. You cannot specify a type when you remove or delete an entry. The type cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **27**—SNMP-DCA • **28**—WAP • **29**—Y1564 • **30**—RADIUS-ACCOUNT • **31**—Twamp Light • **32**—ICMP • **33**—HTTP2 • **34**—Diameter	
Description	Entry description	N/A	String, case-sensitive. Length: 1 to 200 characters.	By default, no description is specified for an entry.
DstIP	Destination IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column and the URL column cannot be both configured. The type FTP, HTTP, HTTPS, HTTP2 and RTSP types do not support this column. Type ICMP-echo and UDP-jitter support IPv6 address. By default, no destination address is specified. IPv4 example: 1.1.1.1. IPv6 example: 1:1::1:1.
DstPort	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	The type ICMP-echo, ICMP-Jitter, ARP,HTTP, HTTP2 and FTP do not support this column. The default value of destination port depend on the Type column. • UDP-echo: none. • TCP: none. • SNMP: 161. • DNS: 53. • IMAP: 143. • POP3: 110. • Radius: 1812. • RTSP: 554. • SIP: 5060(UDP)

Column name	Column description	Column type	Data type and restrictions	Remarks
				or 5061(TCP). • SMTP: 25. • SSL: none. • UDP-jitter:none.
Frequency	Probe interval in milliseconds	N/A	Unsigned integer. Value range: 0 to 604800000.	The default value of probe interval depend on the Type column. • Voice/Path-jitter : 60000. • ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS/FTP/HTTP/HTTP2/SNMP/UDP-tracert/ICMP-jitter/UDP-jitter/ARP: 0.
HistoryEnable	Whether to enable the saving of history records	N/A	EnableState: • **enable**—Enable the saving of history records. • **disable**—Disable the saving of history records.	The default state depend on the Type column. • UDP-tracert: enable. • ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS/FTP/HTTP/HTTP2/SNMP/ARP: disable.
HistoryHoldTime	History records lifetime in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	The default value is 120.
HistoryNumber	Maximum number of history records that can be saved	N/A	Unsigned integer. Value range: 0 to 50.	The default value is 50.
NextHop	Next hop IPv4 or IPv6 address	N/A	String. Length: 1 to 46 characters.	Only the type ICMP-echo support this column. IPv4 example: 1.1.1.1. IPv6 example: 1:1::1:1.
ProbeCount	Probe times per operation	N/A	Unsigned integer. Value range: 1 to 15.	The default value of probe count depend on the Type column. • UDP-tracert: 3. • ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS/FTP/HTTP/HTTP2/SNMP/ICMP-jitter/UDP-jitter/ARP: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The value ranges of probe count depend on the Type column. • UDP-tracert: 1 to 10. • ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS//FTP/HTTP/HTTP2/SNMP/ICMP-jitter/UDP-jitter/ARP: 1 to 15.
ProbeTimeout	Probe timeout time in milliseconds	N/A	Unsigned integer. Default: 3000.	The value ranges of probe timeout depends on the Type column. • FTP/HTTP/HTTPS/HTTP2: 10 to 86400000. • ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/Radius/RTSP/SIP/SMTP/SSL/TCP Half-open/ARP: 10 to 3600000.
BypassRouteEnable	Whether to enable the routing table bypass feature to test the connectivity to the direct destination	N/A	EnableState: • **enable**—Enable the routing table bypass feature. • **disable**—Disable the routing table bypass feature.	The default state is disable. The type ARP does not support this column.
SrcIP	Source IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	Type ICMP-echo and UDP-jitter support IPv6 address. By default, no source address is specified. IPv4 example: 1.1.1.1. IPv6 example: 1:1::1:1. The source IPv4 or IPv6 address must be the IPv4 or IPv6 address of a local interface, and the interface must be up.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPort	Source port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	Type ICMP-echo, DHCP, DLSW, DNS, ICMP-jitter, Path-jitter, TCP, FTP, ARP, HTTP and HTTP2 do not support this column. The default source port number varies by operation type: • Frame-loss/Throughtput/Latency: 49184 • Udp-echo/Snmp/UDP-tracert/UDP-jitter/Voice: none
StatHoldTime	Statistics groups hold time in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	The default value is 120.
StatInterval	Statistics collection interval in minutes	N/A	Unsigned integer. Value range: 1 to 35791394.	The default value is 60.
StatMaxGroup	Maximum number of statistics groups	N/A	Unsigned integer. Value range: 0 to 100.	The default value is 2.
TTL	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 255.	Type ARP does not support this column. The default value of TTL depend on the Type column. • UDP-tracert: 30. • ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS/FTP/HTTP/HTTP2/SNMP/ICMP-jitter/UDP-jitter: 20.
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	Type ARP does not support this column.
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 0 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
URL	URL of the destination server	N/A	String. Length: 1 to 255 characters.	This column and the DstIP, DstPort column cannot be configured simultaneity.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Only the types of FTP, HTTP, HTTPS, HTTP2, ICMP-echo, UDP-jitter, and RTSP support this column. By default, no URL is specified for the destination server. The formats of URL depend on the Type column. • FTP Enter the URL in one of the following formats: ftp://host/filename ftp://host:port/filename When performing the get operation, the file name is required. When performing the put operation, the filename argument does not take effect, even if it is specified. The file name for the put operation is determined by the FileName column. • HTTP Enter the URL in one of the following formats: http://host/resource http://host:port/resource • HTTPS Enter the URL in one of the following formats: https://host/resource https://host:port/resource • HTTP2 Enter the URL in one of the following formats: http://host/resource http://host:port/reso

Column name	Column description	Column type	Data type and restrictions	Remarks
				urce https://host/resource https://host:port/resource • RTSP Enter the URL in one of the following formats: rtsp://host/resource rtsp://host:port/resource

NQA/IcmpEchoEntries

This table contains information about ICMP-Echo entries.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for probe packets	N/A	String, case-sensitive. Length: 1 to 200 characters.	The default payload fill string varies by device model.
DataSize	Payload size for each probe packet	N/A	Unsigned integer. Value range: 20 to 65507.	The default value is 100.
SrcIf	Source interface	N/A	String, case-insensitive. Length: 2 to 47 characters.	For successful operation, the specified source interface must be up.
OutIf	Output interface	N/A	String, case-insensitive. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.
RethMember Probe	Enabling status of probing on the Reth member interface	N/A	EnableState: • **enable**—Enabled. • **disable**—Disabled (default).	N/A

NQA/IcmpJitterEntries

This table contains information about ICMP-jitter entries.

XML structure

```
<NQA>
  <IcmpJitterEntries>
    <IcmpJitterEntry>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <PktInterval></PktInterval>
      <PktNumber></PktNumber>
      <PktTimeout></PktTimeout>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <JitterMode></JitterMode>
    </IcmpJitterEntry>
  </IcmpJitterEntries>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	IcmpJitterEntries
Table type	Multi-instance table
Row name	IcmpJitterEntry
Restrictions	The row creation and deletion of this table is along with table Entries.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
PktInterval	Packet sending interval in the probe in milliseconds	N/A	Unsigned integer. Value range: 10 to 60000. Default: 20	N/A
PktNumber	Number of packets to be sent per probe	N/A	Unsigned integer. Value range: 10 to 1000. Default: 10	N/A
PktTimeout	Packet time out in milliseconds	N/A	Unsigned integer. Value range: 10 to 3600000. Default: 3000	N/A
DataFill	Payload fill string for probe packets	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
DataSize	Payload size for each probe packet	N/A	Unsigned integer. Value range: 20 to 65507.	N/A
JitterMode	ICMP jitter mode	N/A	Enumeration: • **0**—ICMP timestamp(default). • **1**—ICMP echo.	Only IPv4 tests support this column.

NQA/UdpEchoEntries

This table contains information about UDP-echo entries.

XML structure

```
<NQA>
  <UdpEchoEntries>
    <UdpEchoEntry>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <DataFill></DataFill>
      <DataSize></DataSize>
    </UdpEchoEntry>
  </UdpEchoEntries>
</NQA>
```

Table description

        <Exp></Exp>
      </MplsSimulation>
    </UdpJitterEntry>
  </UdpJitterEntries>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	UdpJitterEntries
Table type	Multi-instance table
Row name	UdpJitterEntry
Restrictions	The row creation and deletion of this table is along with table Entries.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
PktInterval	Packet sending interval in the probe in	N/A	Unsigned integer. Value range: 10 to 60000. Default: 20	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	milliseconds			
PktNumber	Number of packets to be sent per probe	N/A	Unsigned integer. Value range: 10 to 1000. Default: 10	N/A
PktTimeout	Packet time out in milliseconds	N/A	Unsigned integer. Value range: 10 to 3600000. Default: 3000	N/A
DataFill	Payload fill string for probe packets	N/A	String, case-sensitive. Length: 1 to 200 characters.	The default payload fill string varies by device model.
DataSize	Payload size for each probe packet	N/A	Unsigned integer. Value range: 68 to 65507. Default: 100	N/A
OutIf	Output interface	N/A	String, case-insensitive. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.
HighPerformance	Enabling status of the high performance mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
MplsSimulation	MPLS emulation test information	Data structure	Members include: • Enable. • Exp.	The members must both be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Enable	Enabling status of MPLS emulation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
Exp	EXP value for each MPLS probe packet	N/A	Unsigned integer. Value range: 0 to 7. Default: 0	When the value for **Enable** is false, the system ignores the **Exp** value setting.

NQA/HttpEntries

This table contains information about HTTP and HTTP2 entries.

XML structure

```
<NQA>
  <HttpEntries>
    <HttpEntry>
      <AdminName></AdminName>
```

```
      <OperationTag></OperationTag>
      <UserName></UserName>
      <Password></Password>
      <Operation></Operation>
      <Version></Version>
      <RawContent></RawContent>
      <OutIf></OutIf>
    </HttpEntry>
  </HttpEntries>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	HttpEntries
Table type	Multi-instance table
Row name	HttpEntry
Restrictions	The row creation and deletion of this table is along with table Entries.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 32 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 32 characters.	By default, no login password is specified.
Operation	Operation type.	N/A	Enumeration: • **1**—Get operation (default). • **2**—Post operation. • **3**—Raw Operation.	By default, the operation type is get, which means obtaining files from the server. In the raw operation, use the raw-request command to specify the content of the HTTP request to be sent to the server.
Version	Version	N/A	Enumeration: • **0**—Version1.0 (default). • **1**—Version1.1.	HTTP2 operation do not support this column

Column name	Column description	Column type	Data type and restrictions	Remarks
RawContent	Raw request content.	N/A	String. Length: 1 to 1023 characters.	This step is required for the raw operation. By default, no contents are specified. For HTTP and HTTPS operations, the following formats are not supported: Xq/qu/qui/quitX, XquitYaaaX, Xr/re/ret/retu/retur/returnX or XreturnYaaaX(X represents 0 to n spaces, Y represents 1 to n spaces and aaa represents a character string without spaces.) As a best practice, do not configure the alias. For HTTP2 operation, must be formatted hex string.and the length of the string must be an even length 2 to 512.
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/Schedules

This table contains information about NQA entry schedules. You cannot edit a Schedules after it is configured.

XML structure

```
<NQA>
  <Schedules>
    <Schedule>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <StartTime>
        <StartNow></StartNow>
        <Time></Time>
      </StartTime>
      <Lifetime>
        <Forever></Forever>
        <Duration></Duration>
      </Lifetime>
      <Recurring></Recurring>
    </Schedule>
  </Schedules>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	Schedules
Table type	Multi-instance table
Row name	Schedule
Restrictions	The row creation and deletion of this table is along with table Entries.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
StartTime	Start time	N/A	Member include: • StartNow • Time	When StartNow is true, StartTime cannot be specified. When StartTime is specified, StartNow must be false.
StartNow	Start now	N/A	Boolean: • true • false	True means to start the operation immediately.
Time	Start time and date of an operation	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Lifetime	The duration of an operation	N/A	Member include: • Forever • Duration	When Forever is true, Duration cannot be specified. When Duration is specified, Forever must be false.
Forever	Forever	N/A	Boolean: • true • false	True means to perform the operation until you stop it.
Duration	The duration of an operation in seconds	N/A	Unsigned integer. Value range: 1 to 2147483647.	When Recurring is enabled, the value range for Duration is 1 to 86399.
Recurring	Recurring	N/A	EnableState: • **enable**—Run the operation automatically at the start time and for the specified duration. • **disable**—The operation	The default state is disable. When Recurring is enable, Forever must be designated as false.

Column name	Column description	Column type	Data type and restrictions	Remarks
			is performed only once at the specified date and time.	

NQA/ReactionTriggerFailItems

This table contains information about reaction trigger fail items. You cannot edit a reaction trigger failItem after it is configured.

XML structure

```
<NQA>
  <ReactionTriggerFailItems>
    <ReactionTriggerFailItem>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <ItemNumber></ItemNumber>
      <Occurrences></Occurrences>
    </ReactionTriggerFailItem>
  </ReactionTriggerFailItems>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	ReactionTriggerFailItems
Table type	Multi-instance table
Row name	ReactionTriggerFailItem
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ItemNumber	Item number	Index	Unsigned integer. Value range: 1 to 10.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Occurrences	Maximum number of consecutive probe failures	N/A	Unsigned integer. Value range: 1 to 16.	N/A

NQA/Reactions

This table contains information about reaction items. You cannot edit a reaction item after it is configured.

XML structure

```
<NQA>
  <Reactions>
    <Reaction>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <ItemNumber></ItemNumber>
      <CheckedElement></CheckedElement>
      <ThresholdType>
        <Type></Type>
        <Occurrences></Occurrences>
      </ThresholdType>
      <ThresholdValue>
        <UpperLimit></UpperLimit>
        <LowerLimit></LowerLimit>
      </ThresholdValue>
      <ActionType></ActionType>
    </Reaction>
  </Reactions>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	Reactions
Table type	Multi-instance table
Row name	Reaction
Restrictions	The reaction can be configured only when the corresponding NQA entry is created. If the NQA entry is deleted, all reactions within it will be deleted. To perform the create or merge operation for the table, make sure all attributes except action type are specified.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ItemNumber	Item number	Index	Unsigned integer. Value range: 1 to 10.	N/A
CheckedElement	Monitored element	N/A	Enumeration: • **1**—probe-duration • **2**—probe-fail • **3**—rtt • **4**—packet-loss • **5**—jitter-sd • **6**—jitter-ds • **7**—icpif • **8**—-mos • **9**—owd-sd • **10**—owd-ds	Support for the CheckedElement varies by NQA entry operation type. Details are as follow: • ICMP-echo/ARP: probe-duration/probe-fail • ICMP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt • UDP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt
ThresholdType	Threshold type	Data structure	Member include: • Type • Occurrences	The ThresholdType is valid if monitored element is jitter-sd, jitter-ds, packet-loss, probe-duration, probe-fail or rtt.
Type	Threshold violation type	N/A	Enumeration: • **1**—average • **2**—consecutive • **3**—accumulate	Support for the violation type varies by monitored element. Details are as follow: • jitter-sd/jitter-ds: average/accumulate • packet-loss: accumulate. • probe-duration: average/consecutive/accumulate. • probe-fail: consecutive/accumulate. • rtt: accumulate/average

Column name	Column description	Column type	Data type and restrictions	Remarks
Occurrences	Maximum number of threshold violations	N/A	Unsigned integer.	The value of Occurrences is valid if the Type is consecutive or accumulate. The value range of occurrences depends on the NQA entry operation type and the monitored element. Details are as follow: • jitter-ds/jitter-sd: The value range of accumulate-occurrences is 1 to 14999 for ICMP-jitter and UDP-jitter operations. • packet-loss: The value range of accumulate-occurrences is 1 to 15000 for ICMP-jitter and UDP-jitter operations. • probe-duration: The value range of accumulate-occurrences is 1 to 15. The value range of consecutive-occurrences is 1 to 16. • probe-fail: The value range of accumulate-occurrences is 1 to 15. The value range of consecutive-occurrences is 1 to 16. • rtt: The value range of accumulate-occurrences is 1 to 15000 for ICMP-jitter and UDP-jitter operations.
ThresholdValue	Value range of threshold	Data structure	Member include: • UpperLimit • LowerLimit	The value range of threshold is valid if the monitored element is jitter-sd, jitter-ds, owd-sd, owd-ds, icpif, mos, probe-duration or RTT.
UpperLimit	Upper limit of threshold	N/A	Unsigned integer.	The value range of threshold depends on the value of CheckedElement. Details are as follow: • jitter-ds/jitter-sd: 0 to 3600000. • owd-ds/owd-sd: 0 to

Column name	Column description	Column type	Data type and restrictions	Remarks
				3600000. • icpif: 1 to 100. • mos: 1 to 500. • probe-duration: 0 to 3600000. • rtt: 0 to 3600000.
LowerLimit	Lower limit of threshold	N/A	Unsigned integer.	The value range of threshold depends on the value of CheckedElement. Details are as follow: • jitter-ds/jitter-sd: 0 to 3600000. • owd-ds/owd-sd: 0 to 3600000. • icpif: 1 to 100. • mos: 1 to 500. • probe-duration: 0 to 3600000. • rtt: 0 to 3600000.
ActionType	Action to be triggered	N/A	Enumeration: • **0**—none • **1**—trap-only • **2**—trigger-only	Support for the action varies by monitored element. Details are as follow: • jitter-ds/jitter-sd/rtt: none/trap-only. The default action is none • owd-ds/owd-sd: not support. • icpif: none/trap-only. The default action is none. • mos: none/trap-only. The default action is none. • packet-loss: none/trap-only. The default action is none. • probe-duration: none/trap-only. The default action is none. • probe-fail(for trap): none/trap-only. The default action is none. • probe-fail(for trigger): trigger-only.

NQA/ClientStatus

This table contains information about NQA client enabling status.

XML structure

```
<NQA>
  <ClientStatus>
    <Enable></Enable>
  </ClientStatus>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	ClientStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of the NQA client	N/A	Enabling status: • **enable**—NQA client is enabled. • **disable**—NQA client is disabled.	By default, the NQA client is enabled.

NQA/TwamplightClientEnable

This table contains information about TWAMP Light client enabling status.

XML structure

```
<NQA>
  <TwamplightClientEnable>
  <ClientEnable></ClientEnable>
  </TwamplightClientEnable>
</NQA>
```

Table description

Table description

Item	Description
Feature name	NQA
Table name	TwamplightClientSessions
Table type	Multi-instance table
Row name	TwamplightClientSession
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
SrcIpAddress	Source IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIpAddress	Destination IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	By default, no destination address is specified.
SrcPortNumber	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DstPortNumber	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 1 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
DscpValue	DSCP value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Description	Session description	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
PaddingLength	Payload size	N/A	Unsigned integer. Value range: 44 to 1518.	N/A
DataFill	Packet payload fill string for probe packets	Data structure	Members include: • Data. • HexFlag.	By default, no expected data is specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed. Both Data and HexFlag must be specified.
Data	Packet payload fill string	N/A	String. Length: 1 to 200 characters	When HexFlag is specified, the string must be a hexadecimal string and contain an even number of characters.
HexFlag	Whether the data is a hexadecimal string	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string (default).	N/A
SrcInterface	Source interface	N/A	String, case-insensitive. Length: 2 to 47 characters.	For successful operation, the specified source interface must be up.
ServiceID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DesMacAddress	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMacAddress	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Timestamp Format	Timestamp format of packets	N/A	Enumeration: • 1—NTP format. • 2—PTP format (default).	N/A
VLANID	VLAN ID	Data structure	Members include: • Service. • Customer.	N/A
Service	Service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Customer	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The server VLAN must be specified first before the customer VLAN.
Priority8021p	Priority of the packet	N/A	Unsigned integer. Value range: 0 to 7. Default: 0.	N/A
ReactionEntries	Reaction entry statistics	SubLists	N/A	N/A
BindInterface	Specify an interface by its type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A
AdjustChecksum	Enabing status of the adjust UDP checksum mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LinkBundleIf	Specify an bundle interface by its type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A
OneWayDelayMeasure	Enabing status of the One Way Delay-Measure mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

NQA/TwamplightClientSessions/ReactionEntries

This table contains information about TWAMP Light client sessions.

Table description

Item	Description
Feature name	NQA
Table name	TwamplightSenderSessions
Table type	Multi-instance table
Row name	TwamplightSenderSession
Restrictions	The row creation and deletion of this table is along with table TwamplightClientSessions.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
TxInterval	Interval at which probe packets are sent	N/A	Enumeration: • **10**—10 milliseconds. • **100**—100 milliseconds. • **1000**—1000 milliseconds. • **10000**—10000 milliseconds. • **30000**—30000 milliseconds.	N/A
Timeout	Timeout time for reponse packets in seconds	N/A	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
StatisticsInterval	Statistics collection interval in milliseconds	N/A	Unsigned integer. Value range: 1000 to 6000000.	N/A
MonitorTime	Reaction entry threshold violation monitor time in milliseconds	N/A	Unsigned integer. Value range: 1000 to 86400000.	N/A

NQA

NQA/Templates

This table contains information about NQA templates.

XML structure

```
<NQA>
  <Templates>
    <Template>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <Frequency></Frequency>
      <ProbeTimeout></ProbeTimeout>
      <TTL></TTL>
      <ToS></ToS>
      <VRF></VRF>
      <URL></URL>
      <DstIP></DstIP>
      <DstPort></DstPort>
      <SrcIP></SrcIP>
      <SrcPort></SrcPort>
      <NextHop></NextHop>
      <TriggerPassCount></TriggerPassCount>
      <TriggerFailCount></TriggerFailCount>
      <TriggerPerProbe></TriggerPerProbe>
      <TestDestination></TestDestination>
      <FrequencyAdjust></FrequencyAdjust>
    </Template>
  </Templates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	Templates
Table type	Multi-instance table
Row name	Template
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type	N/A	Enumeration: • **0**—ICMP-echo. • **1**—UDP-echo. • **2**—TCP. • **3**—DLSw • **4**—FTP. • **5**—DHCP • **6**—SNMP. • **7**—DNS. • **8**—HTTP. • **9**—UDP-jitter • **10**—Voice • **11**—Path-jitter • **12**—UDP-tracert • **13**—ARP. • **14**—IMAP. • **15**—POP3. • **16**—RADIUS. • **17**—RTSP. • **18**—SIP. • **19**—SMTP. • **20**—SSL. • **21**—HTTPS. • **22**—TCP Half-open. • **23**—Throughput. • **24**—Latency. • **25**—Frame-loss. • **26**—ICMP-jitter. • **27**—SNMP-DCA. • **28**—WAP. • **29**—Y1564. • **30**—RADIUS-ACCOUNT. • **31**—TWAMP Light. • **32**—ICMP. • **33**—HTTP2. • **34**—Diameter	NQA templates are not available for the following types of operations: • DLSW. • DHCP. • UDP-jitter. • Voice. • Path-jitter. • UDP-tracert. • Throughput. • Latency. • Frame-loss. • ICMP-jitter. • Y1564 • TWAMP Light. • ICMP.
Description	Description of the template.	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
Frequency	Interval in milliseconds at which the NQA operation	N/A	Unsigned integer. Value range: 0 to 604800000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	repeats.			
ProbeTimeout	Probe timeout time in milliseconds	N/A	Unsigned integer.	The value range for the probe timeout time varies by the **Type** column. • FTP/HTTP/HTTPS/HTTP2/SNMP-DCA/WAP: 10 to 86400000. • ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/RADIUS/RTSP/SIP/SMTP/SSL/TCP half-open/RADIUS-ACCOUNT: 10 to 3600000.
TTL	TTL for probe packets	N/A	Unsigned integer. Value range: 1 to 255.	The ARP operation does not support this column..
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255.	The ARP operation does not support this column.
VRF	VRF instance where the operation is performed.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
URL	URL of the destination server.	N/A	String. Length: 1 to 255 characters.	This column cannot be configured with the **DstIP** or **DstPort** column simultaneously, except for the WAP operation. Only the FTP, HTTP, HTTPS, HTTP2, RTSP, ICMP, WAP and TCP operations support this column.
DstIP	Destination IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column cannot be configured with the **URL** column simultaneously, except for the WAP operation. The FTP, HTTP, HTTPS, HTTP2 and RTSP operations do not support this column.
DstPort	Destination port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	• This column and the **URL** column will not be available simultaneity. • Type ICMP-echo, ARP, FTP, HTTP, HTTPS, HTTP2 and RTSP do not support this column.
SrcIP	Source IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
SrcPort	Source port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	Only the DNS operation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
NextHop	Next hop IP address	N/A	String. Length:1 to 46 characters.	Only the ICMP-echo, TCP, DNS and TCP half-open operations support this column.
TriggerPass Count	Number of consecutive successful probes to determine a successful operation event.	N/A	Unsigned integer. Value range: 1 to 15.	N/A
TriggerFailC ount	Number of consecutive probe failures to determine an operation failure.	N/A	Unsigned integer. Value range: 1 to 15.	N/A
TriggerPerP robe	Report the result of each probe.	N/A	Boolean: • **true**—Report for each probe. • **false**—Report according to TriggerPassCount and TriggerFailCount.	Only the ICMP-echo, DNS and TCP half-open operations support this column.
TestDestinat ion	Destination of the operation.	N/A	String. Length: 1 to 255 characters.	The value can be either of the following: • Destination IP address. • Destination IP address and port number. • Destination URL. This column is not supported currently.
FrequencyA djust	This frequency time will be adjusted to this value when the probe fails.	N/A	Unsigned integer. Value range: 0 to 604800000. Default: 0.	If the operation is not completed when the interval expires, the next operation does not start. If the value is 0, the frequency time will not be changed when the probe fails.

NQA/IcmpEchoTemplates

This table contains information about ICMP-echo templates.

XML structure

```
<NQA>
  <IcmpEchoTemplates>
    <IcmpEchoTemplate>
```

```
      <Name></Name>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <SrcIf></SrcIf>
      <OutIf></OutIf>
    </IcmpEchoTemplate>
  </IcmpEchoTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	IcmpEchoTemplates
Table type	Multi-instance table
Row name	IcmpEchoTemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for each reques.	N/A	String. Length: 1 to 200 characters.	N/A
DataSize	Payload size in each request.	N/A	Unsigned integer. Value range: 20 to 65507.	N/A
SrcIf	Full name of an interface, including the interface type and number. Source interface whose primary IP address will be used as the source IP address for the requests.	N/A	String. Length: 2 to 47 characters.	If both the source IP address and source interface are specified, the most recent configuration takes effect.
OutIf	Output interface including the interface type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

NQA/UdpEchoTemplates

This table contains information about UDP-echo templates.

XML structure

```
<NQA>
  <UdpEchoTemplates>
    <UdpEchoTemplate>
      <Name></Name>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <ExpectData>
        <Data></Data>
        <Offset></Offset>
        <StrictFlag></StrictFlag>
        <HexFlag></HexFlag>
      </ExpectData>
      <ExpectFailedData>
        <Data></Data>
        <Offset></Offset>
        <StrictFlag></StrictFlag>
        <HexFlag></HexFlag>
      </ExpectFailedData>
      <RequestDataFill>
        <Data></Data>
        <HexFlag></HexFlag>
        <RawFlag></RawFlag>
      </RequestDataFill>
      <ReleaseDataFill>
        <Data></Data>
        <HexFlag></HexFlag>
      </ReleaseDataFill>
      <PortDetectEnable></PortDetectEnable>
    </UdpEchoTemplate>
  </UdpEchoTemplates>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	UdpEchoTemplates
Table type	Multi-instance table
Row name	UdpEchoTemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for each request.	N/A	String. Length: 1 to 200 characters.	N/A
DataSize	Payload size in each request.	N/A	Unsigned integer. Value range: 20 to 65507.	N/A
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: • Data. • Offset. • StrictFlag. • HexFlag.	Both Data and Offset must be specified.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search for the expected string.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string.	N/A
ExpectFailedData	Data expected in responses to determine a failed operation.	Data structure	Members include: • Data. • Offset. • StrictFlag. • HexFlag.	Both Data and Offset must be specified.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters.	N/A
Offset	Offset in bytes after which the	N/A	Unsigned integer. Value range: 0 to 1000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	client starts to search for the expected string.			
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string.	N/A
RequestDataFill	Payload fill string for each request.	Data structure	Members include: • Data. • HexFlag. • RawFlag.	All the members must be specified.
Data	Payload fill string.	N/A	String. Length: 1 to 200 characters	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string.	N/A
RawFlag	Whether the raw mode is used.	N/A	Boolean: • true—Raw mode. • false—General mode.	N/A
ReleaseDataFill	String to be filled in the payload of resource release notification packets.	Data structure	Members include: • Data. • HexFlag.	Both Data and HexFlag must be specified.
Data	Payload fill string.	N/A	String. Length: 1 to 200 characters.	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string.	N/A
PortDetectEnable	Whether the port detection mode is enabled.	N/A	Boolean: • true—Port detection mode is enabled. • false—Port detection mode is	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			disabled (default).	

NQA/TcpTemplates

This table contains information about TCP templates.

XML structure

```
<NQA>
  <TcpTemplates>
    <TcpTemplate>

```

Table description

Item	Description
Feature name	NQA
Table name	DnsTemplates
Table type	Multi-instance table
Row name	DnsTemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ResolveTarget	Domain name that needs to be translated.	N/A	String. Length: 1 to 255 characters.	N/A
ResolveType	Domain name resolution type.	N/A	Enumeration: • **1**—Type A query. • **28**—Type AAAA query.	N/A
ExpectIP	IPv4 or IPv6 address that is expected to be returned.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
OutIf	Output interface including the interface type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

NQA/HttpTemplates

This table contains information about HTTP, HTTPS and HTTP2 templates.

XML structure

```
<NQA>
  <HttpTemplates>
    <HttpTemplate>
      <Name></Name>
```

```
      <UserName></UserName>
      <Password></Password>

Table description

Item	Description
Feature name	NQA
Table name	HttpTemplates
Table type	Multi-instance table
Row name	HttpTemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 32 characters.	N/A
Password	Login password.	N/A	String. Length: 1 to 32 characters.	N/A
Operation	Operation type.	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Get operation. • **2**—Post operation. • **3**—Raw Operation.	
Version	Version	N/A	Enumeration: • **0**—Version1.0. • **1**—Version1.1.	HTTP2 operation do not support this column.
RawContent	Raw request content.	N/A	String. Length: 1 to 1023 characters.	N/A
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	N/A
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: • Data. • Offset. • StrictFlag.	Both Data and Offset must be specified.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search for the expected string.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
SslClientPolicy	SSL client policy used to access the HTTPS. server	N/A	String, case-insensitive. Length: 1 to 31 characters.	Only HTTPS and HTTP2 operations supports this column. By default, no SSL client policy is specified.
ProxyUrl	URL of the proxy server.	N/A	String. Length: 1 to 255 characters.	N/A
ExpectFailedStatus	List of expected failed-status codes.	N/A	Numeric string. It is a comma-separated list of failed-status items. Length: 1 to 4000 characters.	N/A
ExpectFailedData	Data expected in responses to determine a failed	Data structure	Members include: • Data. • Offset.	Both Data and Offset must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
	operation.		• StrictFlag.	
Data	Expected failed response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search for the expected failed string.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
StrictFlag	Whether the data is matched by exact matching method.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.	N/A
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/ImapTemplates

This table contains information about IMAP templates.

XML structure

```
<NQA>
  <ImapTemplates>
    <ImapTemplate>
      <Name></Name>
      <UserName></UserName>
      <Password></Password>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Community	SNMP community name.	N/A	String. Length: 1 to 32 characters.	N/A
Version	SNMP version.	N/A	Enumeration: • **1**—SNMPv1. • **2**—SNMPv2c.	N/A
AgentType	SNMP agent type.	N/A	Enumeration: • **0**—Net-Snmp. • **1**—Windows. • **2**—UserDefined.	N/A
CPU	CPU usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified.
Threshold	CPU usage threshold.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Weight	CPU usage weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Memory	Memory usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified.
Threshold	Memory usage threshold.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Weight	Memory usage weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Disk	Disk usage information.	Data structure	Members include: • Threshold. • Weight.	Both Threshold and Weight must be specified.
Threshold	Disk usage threshold.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Weight	Disk usage weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
OID	OID information of the MIB object whose statistics the SNMP DCA operation collects.	Data structure	Members include: • OidString. • Threshold. • Weight.	This column can appear at most 8 times in this row. When the get, get-bulk, get-config, or get-bulk-config operation is issued, the **OID** column cannot repeat. All the members must be specified.
OidString	MIB subtree by its root node's OID.	N/A	Dotted numeric string. Length: 1 to 255 characters	Example for OID, 1.3.6.1.4.1.2021.11.11.0.
Threshold	Threshold.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 100.	
Weight	Weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A

NQA/WapTemplates

This table contains information about WAP templates.

XML structure

```
<NQA>
  <WapTemplates>
    <WapTemplate>
      <Name></Name>
      <ExpectData>
        <Data></Data>
        <Offset></Offset>
        <StrictFlag></StrictFlag>

	identification number.			
AcctAppId	Accounting application identification number.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	N/A
SslClientPolicy	SSL client policy used to access the Diameter server	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/Histories

This table contains information about the history records of NQA operations.

XML structure

```
<NQA>
  <Histories>
    <History>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <HistoryRecords>
        <Index></Index>
        <TTL></TTL>
        <Response></Response>
        <HopIP></HopIP>
        <Status></Status>
        <Time></Time>
      </HistoryRecords>
    </History>
  </Histories>
</NQA>
```

Table description

Item	Description
Feature name	NQA

Table name	Histories
Table type	Multi-instance table
Row name	History
Restrictions	This table is not available for frame loss, ICMP jitter, latency, path jitter, throughput, UDP jitter, or voice operations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
HistoryRecords	N/A	Data structure	Members include: • Index. • TTL. • Response. • HopIP. • Status. • Time.	This column can appear at most 50 times in this row. The most recent operation result is displayed first.
Index	History record ID.	N/A	Unsigned integer. Value range: 1 to 4294967295.	The history records in one UDP tracert operation have the same ID.
TTL	TTL value in the probe packet.	N/A	Unsigned integer. Value range: 1 to 255.	This column is available only for the UDP tracert operation.
Response	Round-trip time for the probe packets in the operation, in milliseconds.	N/A	Unsigned integer.	N/A
HopIP	IP address of the node that sent the reply packet.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column is available only for the UDP tracert operation.
Status	Operation result status.	N/A	Enumeration: • **1**—Succeeded. • **2**—Unknown error. • **3**—Internal error. • **4**—Timeout.	N/A
Time	Time when the operation was completed.	N/A	DateTime.	Example: 2015-09-09T 14:23:24.500.

NQA/Entries

This table contains information about NQA entries.

XML structure

```
<NQA>

Column name	Column description	Column type	Data type and restrictions	Remarks
	for the probe packets		colon-separated. Length: 1 to 46 characters.	not be available simultaneity. The FTP, HTTP, HTTP2, HTTPS and RTSP types do not support this column.
DstPort	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	This column and the URL column will not be available simultaneously. The types of ICMP-echo, ICMP-Jitter, ARP, FTP, HTTP, HTTP2, HTTPS, ARP and RTSP do not support this column.
Frequency	Probe interval in milliseconds	N/A	Unsigned integer. Value range: 0 to 604800000.	N/A
HistoryEnable	Whether to enable the saving of history records	N/A	EnableState: • **enable**—Enable the saving of history records. • **disable**—Disable the saving of history records.	Type ICMP-echo, DHCP, DLSw, DNS, FTP, HTTP, HTTP2, SNMP, TCP, UDP-echo, ARP, and UDP-tracert are supported.
HistoryHoldTime	History records lifetime in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	N/A
HistoryNumber	Maximum number of history records that can be saved	N/A	Unsigned integer. Value range: 0 to 50.	N/A
NextHop	Next hop IPv4 or IPv6 address	N/A	String. Length: 1 to 46 characters.	Only the type ICMP-echo support this column. IPv4 example: 1.1.1.1. IPv6 example: 1:1::1:1.
ProbeCount	Probe times per operation	N/A	Unsigned integer. Value range: 1 to 15.	N/A
ProbeTimeout	Probe timeout time in milliseconds	N/A	Unsigned integer.	N/A
BypassRouteEnable	Whether to enable the routing table bypass feature to	N/A	EnableState: • **enable**—Enable the routing table bypass	The type ARP does not support this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
	test the connectivity to the direct destination		feature. • **disable**—Disable the routing table bypass feature.	
SrcIP	Source IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
SrcPort	Source port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	Type ICMP-echo, DHCP, DLSw, DNS, ICMP-jitter, Path-jitter, TCP, ARP, FTP, HTTP, HTTPS, HTTP2, ARP and RTSP do not support this column.
StatHoldTime	Statistics groups hold time in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	N/A
StatInterval	Statistics collection interval in minutes	N/A	Unsigned integer. Value range: 1 to 35791394.	N/A
StatMaxGroup	Maximum number of statistics groups	N/A	Unsigned integer. Value range: 0 to 100.	N/A
TTL	TTL for probe packets	N/A	Unsigned integer. Value range: 1 to 255.	The type ARP does not support this column.
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255.	The type ARP does not support this column.
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
URL	URL of the destination server	N/A	String. Length: 1 to 255 characters.	This column and the DstIP, DstPort column will not be available simultaneity. Only the types of FTP, HTTP, HTTP2, HTTPS, ICMP-echo, UDP-jitter and RTSP support this column.

NQA/IcmpEchoEntries

This table contains information about ICMP-Echo entries.

XML structure

```
<NQA>
  <IcmpEchoEntries>
    <IcmpEchoEntry>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <SrcIf></SrcIf>
      <OutIf></OutIf>
      <RethMemberProbe></RethMemberProbe>
    </IcmpEchoEntry>
  </IcmpEchoEntries>
</NQA>
```

Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
PktInterval	Packet sending interval in the probe in milliseconds	N/A	Unsigned integer. Value range: 10 to 60000.	N/A
PktNumber	Number of packets to be sent per probe	N/A	Unsigned integer. Value range: 10 to 1000.	N/A
PktTimeout	Packet time out in milliseconds	N/A	Unsigned integer. Value range: 10 to 3600000.	N/A
DataFill	Payload fill string for probe packets	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
DataSize	Payload size for each probe packet	N/A	Unsigned integer. Value range: 68 to 65507.	N/A
OutIf	Output interface, including the interface type and interface number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A
HighPerformance	Enabing status of the high performance mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MplsSimulation	MPLS emulation test information	Data structure	Members include: • Enable. • Exp.	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of MPLS emulation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Exp	EXP value for each MPLS probe packet	N/A	Unsigned integer. Value range: 0 to 7.	N/A

NQA/HttpEntries

This table contains information about HTTP entries.

XML structure

```
<NQA>
  <HttpEntries>
    <HttpEntry>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <UserName></UserName>
      <Password></Password>
      <Operation></Operation>
      <Version></Version>
      <RawContent></RawContent>
      <OutIf></OutIf>
    </HttpEntry>
  </HttpEntries>
</NQA>
```

Table description

Item	Description
Feature name	NQA
Table name	HttpEntries
Table type	Multi-instance table
Row name	HttpEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 32 characters.	
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 32 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 32 characters.	By default, no login password is specified.
Operation	Operation type.	N/A	Enumeration: • **1**—Get operation (default). • **2**—Post operation. • **3**—Raw Operation.	By default, the operation type is get, which means obtaining files from the server. In the raw operation, use the raw-request command to specify the content of the HTTP request to be sent to the server.
Version	Version	N/A	Enumeration: • **0**—Version1.0 (default). • **1**—Version1.1.	HTTP2 operation do not support this column.
RawContent	Raw request content.	N/A	String. Length: 1 to 1023 characters.	This step is required for the raw operation. By default, no contents are specified. For HTTP and HTTPS operations,the following formats are not supported: Xq/qu/qui/quitX, XquitYaaaX, Xr/re/ret/retu/retur/returnX or XreturnYaaaX(X represents 0 to n spaces, Y represents 1 to n spaces and aaa represents a character string without spaces.) As a best practice, do not configure the alias. For HTTP2 operation, must be formatted hex string.and the length of the string must be an even length 2 to 512.
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

NQA/Schedules

This table contains information about NQA entry schedules.

XML structure

```
<NQA>
  <Schedules>
    <Schedule>
      <AdminName></AdminName>
      <OperationTag></OperationTag>
      <StartTime>
        <StartNow></StartNow>
        <Time></Time>
      </StartTime>
      <Lifetime>
        <Forever></Forever>
        <Duration></Duration>
      </Lifetime>
      <Recurring></Recurring>
    </Schedule>
  </Schedules>
</NQA>
```

Table description

Item	Description

AvgSD	Average value of jitters from source to destination	N/A	Unsigned integer.	N/A
MinPosDS	Minimum positive jitter from destination to source	N/A	Unsigned integer.	N/A
MaxPosDS	Maximum positive jitter from destination to source	N/A	Unsigned integer.	N/A
PosNumDS	Number of positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosSumDS	Sum of positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosAvgDS	Average positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosSquareSumDS	Square sum of positive jitters from destination to source	N/A	Unsigned integer.	N/A
MinNegDS	Minimum absolute value among negative jitters from destination to source	N/A	Unsigned integer.	N/A
MaxNegDS	Maximum absolute value among negative jitters from destination to	N/A	Unsigned integer.	N/A

	source			
NegNumDS	Number of negative jitters from destination to source	N/A	Unsigned integer.	N/A
NegSumDS	Sum of absolute values of negative jitters from destination to source	N/A	Unsigned integer.	N/A
NegSquareSumDS	Square sum of negative jitters from destination to source	N/A	Unsigned integer.	N/A
AvgDS	Average value of jitters from destination to source	N/A	Unsigned integer.	N/A
OneWay	N/A	Data structure	Members include: • MaxDelaySD • MinDelaySD • NumOfDelaySD • SumOfDelaySD • SquareSumofDelaySD • LostPacketSD • MaxDelayDS • MinDelayDS • NumOfDelayDS • SumOfDelayDS • SquareSumOfDelayDS • LostPacketsDS • UnknownLostPackets	N/A
MaxDelaySD	Maximum delay from source to destination	N/A	Unsigned integer.	N/A
MinDelaySD	Minimum delay from source to destination	N/A	Unsigned integer.	N/A
NumOfDelaySD	Number of delays from source to destination	N/A	Unsigned integer.	N/A
SumOfDelaySD	Sum of delays from source to destination	N/A	Unsigned integer.	N/A
SquareSumofDelaySD	Square sum of delays from source to destination	N/A	Unsigned integer.	N/A

LostPacketSD	Number of lost packets from the source to the destination	N/A	Unsigned integer.	Only the UDP-jitter operation supports this column.
MaxDelayDS	Maximum delay from destination to source	N/A	Unsigned integer.	N/A
MinDelayDS	Minimum delay from destination to source	N/A	Unsigned integer.	N/A
NumOfDelay DS	Number of delays from destination to source	N/A	Unsigned integer.	N/A
SumOfDelayD S	Sum of delays from destination to source	N/A	Unsigned integer.	N/A
SquareSumOf DelayDS	Square sum of delays from destination to source	N/A	Unsigned integer.	N/A
LostPacketsD S	Number of lost packets from the destination to the source	N/A	Unsigned integer.	Only the UDP-jitter operation support this column.
UnknownLost Packets	Number of lost packets for unknown reasons	N/A	Unsigned integer.	N/A

NQA/Statistics

This table contains information about NQA operation statistics.

Table description

Item	Description
Feature name	NQA
Table name	Statistics
Table type	Multi-instance table
Row name	Statistic
Restrictions	This table is not available for UDP tracert, frame loss, latency, path jitter, throughput, Y1564, UDP-jitter, ICMP-jitter and voice operations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
GroupIndex	Index of statistics group	Index	Unsigned integer.	N/A
SendTimes	Number of times for the send operations	N/A	Unsigned integer.	N/A
ReceiveTimes	Number of times for receiving responses	N/A	Unsigned integer.	N/A
MinRtt	Minimum round-trip time in	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	milliseconds			
MaxRtt	Maximum round-trip time in milliseconds	N/A	Unsigned integer.	N/A
AvgRtt	Average round-trip time in milliseconds	N/A	Unsigned integer.	N/A
SquareSumRtt	Sum of squares of the round-trip time	N/A	Unsigned integer.	N/A
LossRatio	Packet loss ratio	N/A	Unsigned integer.	N/A
TimeOut	Number of timeout occurrences in an operation	N/A	Unsigned integer.	N/A
Disconnect	Number of disconnections by the peer	N/A	Unsigned integer.	Only the TCP, HTTP, HTTP2, DLSW, and FTP operations support this column.
NoConnection	Number of failures to connect to the peer	N/A	Unsigned integer	Only the TCP, HTTP, HTTP2, DLSW, and FTP operations support this column.
InternalError	Number of failures due to internal errors	N/A	Unsigned integer.	N/A
OtherErrors	Failures due to other unknown errors	N/A	Unsigned integer.	N/A
ReactionStatistics	Reaction statistics	Sublist	For details of the sublist, see the ReactionStatistics table.	N/A

NQA/Statistics/ReactionStatistics

This table contains reaction statistics information.

XML structure

Please refer to the XML Structure of NQA/ Statistics

Table description

Item	Description
Feature name	NQA
Table name	ReactionStatistics
Table type	Multi-instance table

Row name	ReactionStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReactionIndex	ID of a reaction entry.	Index	Unsigned integer. Value range: 1 to 10.	N/A
Checked Element	Monitored element.	N/A	Enumeration: • **1**—probe-duration • **2**—probe-fail • **3**—rtt • **4**—packet-loss • **5**—jitter-sd • **6**—jitter-ds • **7**—icpif • **8**—-mos • **9**—owd-sd • **10**—owd-ds	Support for the CheckedElement varies by NQA entry operation type. Details are as follow: • ICMP-echo/ARP: probe-duration/probe-fail • ICMP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt • UDP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt
ThresholdType	Threshold type.	N/A	Enumeration: • **1**—average • **2**—consecutive • **3**—accumulate	Support for the violation type varies by monitored element. Details are as follow: • jitter-sd/jitter-ds: average/accumulate • packet-loss: accumulate. • probe-duration: average/consecutive/accumulate. • probe-fail: consecutive/accumulate. • rtt: accumulate/average
CheckNum	Number of targets that have been monitored for data collection.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OverThreshold Num	Number of threshold violations.	N/A	Unsigned integer.	N/A

NegNumDS	Number of negative jitters from destination to source.	N/A	Unsigned integer.	N/A
NegSumDS	Sum of absolute values of negative jitters from destination to source.	N/A	Unsigned integer.	N/A
NegAvgDS	Average absolute value of negative jitters from destination to source.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NegSquareSumDS	Sum of squares of negative jitters from destination to source.	N/A	Unsigned integer.	N/A
AvgDS	Average jitter from destination to source.	N/A	Unsigned integer.	N/A
OneWay	Unidirectional delay result. This field is available only for the ICMP jitter, UDP jitter, and voice operations.	Data structure	Members include: • MaxDelaySD • MinDelaySD • NumOfDelaySD • SumOfDelaySD • SquareSumOfDelaySD • LostPacketSD • MaxDelayDS • MinDelayDS • NumOfDelayDS • SumOfDelayDS • SquareSumOfDelayDS • LostPacketsDS UnknownLostPackets	N/A
MaxDelaySD	Maximum delay from source to destination.	N/A	Unsigned integer.	N/A
MinDelaySD	Minimum delay from source to destination.	N/A	Unsigned integer.	N/A
NumOfDelaySD	Number of delays from source to destination.	N/A	Unsigned integer.	N/A
SumOfDelaySD	Sum of delays from source to destination.	N/A	Unsigned integer.	N/A
SquareSumOfDelaySD	Sum of squares of delays from source to destination.	N/A	Unsigned integer.	N/A
LostPacketSD	Number of lost packets from the source to the destination.	N/A	Unsigned integer.	N/A
MaxDelayDS	Maximum delay from destination	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	to source.			
MinDelayDS	Minimum delay from destination to source.	N/A	Unsigned integer.	N/A
NumOfDelayDS	Number of delays from destination to source.	N/A	Unsigned integer.	N/A
SumOfDelayDS	Sum of delays from destination to source.	N/A	Unsigned integer.	N/A
SquareSumOfDelayDS	Sum of squares of delays from destination to source.	N/A	Unsigned integer.	N/A
ReactionStatistics	Statistics about the reaction entry in the counting interval.	Sublist	The details of the sublist refer to ReactionStatistics table.	N/A

NQA/JitterStatistics/ReactionStatistics

This table contains reaction information of jitter statistics .

XML structure

Please refer to the XML Structure of NQA/ Statistics

Table description

Item	Description
Feature name	NQA
Table name	ReactionStatistics
Table type	Multi-instance table
Row name	ReactionStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReactionIndex	ID of a reaction entry.	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 10.	
Checked Element	Monitored element.	N/A	Enumeration: • **1**—probe-duration • **2**—probe-fail • **3**—rtt • **4**—packet-loss • **5**—jitter-sd • **6**—jitter-ds • **7**—icpif • **8**—-mos • **9**—owd-sd • **10**—owd-ds	Support for the CheckedElement varies by NQA entry operation type. Details are as follow: • ICMP-echo/ARP: probe-duration/probe-fail • ICMP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt • UDP-jitter: jitter-sd/jitter-ds/owd-sd/owd-ds/packet-loss/rtt
ThresholdType	Threshold type.	N/A	Enumeration: • **1**—average • **2**—consecutive • **3**—accumulate	Support for the violation type varies by monitored element. Details are as follow: • jitter-sd/jitter-ds: average/accumulate • packet-loss: accumulate. • probe-duration: average/consecutive/accumulate. • probe-fail: consecutive/accumulate. • rtt: accumulate/average
CheckNum	Number of targets that have been monitored for data collection.	N/A	Unsigned integer.	N/A
OverThresholdNum	Number of threshold violations.	N/A	Unsigned integer.	N/A

NQA/FrameLossResults

This table contains information about NQA frame loss operation result.

OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ResultIndex	Result history index.	Index	Unsigned integer. Value range: 1 to 5.	N/A
InitialSpeed	Initial sending speed in kbps	N/A	Unsigned integer.	N/A
ProbeDuration	Probe duration in seconds.	N/A	Unsigned integer. Value range: 10 to 172800.	N/A
ProbeInterval	Probe interval in seconds.	N/A	Unsigned integer. Value range: 1 to 60.	N/A
DetailResults	Detailed results	Sublist	N/A	N/A

NQA/LatencyResults/DetailResults

This table contains detailed information about NQA latency operation result.

XML structure

See the XML structure of NQA/LatencyResults.

Table description

Item	Description
Feature name	NQA
Table name	DetailResults
Table type	Multi-instance table
Row name	DetailResult
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FrameSize	Frame size	Index	Unsigned integer. Value range: 64 to 9600.	N/A
Latency	Frame latency in μs	Data structure	Members include: • MinValue. • MaxValue. • AvgValue	N/A
MinValue	Minimum latency value	N/A	Unsigned integer.	N/A
MaxValue	Maximum latency value	N/A	Unsigned integer.	N/A
AvgValue	Average latency value	N/A	Unsigned integer.	N/A
Jitter	Frame jitter in ns	Data structure	Members include: • MinValue. • MaxValue. • AvgValue	N/A
MinValue	Minimum jitter value	N/A	Unsigned integer.	N/A
MaxValue	Maximum jitter value	N/A	Unsigned integer.	N/A
AvgValue	Average jitter value	N/A	Unsigned integer.	N/A
SentPackets	Number of sent packets	N/A	Unsigned integer. Length:64bits	N/A

ReceivedPackets	Number of received packets	N/A	Unsigned integer. Length:64bits	N/A
Status	Operation result status	N/A	Enumeration: • **0**—Successful. • **1**—Continue • **2**—Abort. • **3**—Timeout • **4**—Failed.	The available values in latency operation are 0 and 3.
OperateTime	Time when the operation was completed	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A

NQA/Y1564Results

This table contains information about NQA Y1564 operation result.

Table description

Item	Description
Feature name	NQA
Table name	Y1564Results
Table type	Multi-instance table
Row name	Y1564Result
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ResultIndex	Result history index.	Index	Unsigned integer. Value range: 1.	Currently only the last probe is saved, so the ResultIndex is always 1.
Status	Global status of the current test	N/A	Enumeration: • **0**—Succeeded • **1**—In progress • **2**—Aborted • **3**—Timeout • **4—Failed** • **5—None** • **6—Unknown error**	The value 5 of **Status** is inaccessible.
LastCompletedTest	Last complete test type	N/A	Enumeration: • **0**—CIR test.	If test **status** is in progress, this column will not access.

			• **1**—PIR test. • **2**—Traffic policing test. • **3**—Service performance test.	
EstimatedTotalTime	Estimated total time of the whole test	N/A	Unsigned integer Unit:second	N/A
ActualTestTimeUsed	Actual test time used	N/A	Unsigned integer Unit:second	If test **status** is in progress, the value is for reference only.
DetailResults	Detailed results	Sublist	N/A	N/A

NQA/Y1564Results/DetailResults

This table contains detailed information about NQA Y1564 operation result.

XML structure

See the XML structure of NQA/Y1564Results.

Table description

Item	Description
Feature name	NQA
Table name	DetailResults
Table type	Multi-instance table
Row name	DetailResult
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TestType	Type of single test phase	Index	Enumeration: • **0**—CIR • **1**—PIRColorBlind • **2**—PIRColorGreen • **3**—PIRColorYellow • **4**—PIRColorSummary • **5**—TrafficColorBlind • **6**—TrafficColorGreen • **7**—TrafficColorYellow • **8**—TrafficColorSummar	N/A

			y • **9**—ServicePerformance	
Index	Step index of **TestType**	Index	Unsigned integer.	The index is only valid in CIR test.
StartTime	Start time of single test phase	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time single test phase	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
SendSpeed	Current send packet speed.	N/A	Unsigned integer.Unit: Kbps	It is not supported in **PIR Summary** and **Traffic Summary**.
Status	Status of single test phase	N/A	Enumeration: • **0**—Succeeded • **1**—In progress • **2**—Aborted • **3**—Timeout • **4**—Failed • **5**—None • **6**—Unknown error	The **Status** of **TestType** 3, 4, 7 is meaningless, so the **Status** value will be 5.
IR	Information rate	Data structure	Members include: • MinValue. • MaxValue. • AvgValue	N/A
MinValue	Minimum value	N/A	Unsigned integer. Unit:kbps	N/A
MaxValue	Maxmum value	N/A	Unsigned integer.	N/A
AvgValue	Average value	N/A	Unsigned integer.	N/A
FTD	Frame transmission delay	Data structure	Members include: • MinValue. • MaxValue. • AvgValue	N/A
MinValue	Minimum value	N/A	Unsigned integer. Unit:us	N/A
MaxValue	Maxmum value	N/A	Unsigned integer. Unit:us	N/A
AvgValue	Average value	N/A	Unsigned integer. Unit:us	N/A
FDV	Frame delay vibrate	Data structure	Members include: • MinValue. • MaxValue. • AvgValue	N/A
MinValue	Minimum value	N/A	Unsigned integer. Unit:us	N/A

MaxValue	Maxmum value	N/A	Unsigned integer. Unit:us	N/A
AvgValue	Average value	N/A	Unsigned integer. Unit:us	N/A
FLcount	Frame loss count	N/A	Unsigned integer.	N/A
FLR	Frame loss rate	N/A	String. Length: 15 characters	N/A
PacketsOutOf Order	Packets out of order count	N/A	Unsigned integer.	N/A
SeverelyErrS ecs	Severely errored second	N/A	Unsigned integer.	N/A
AVAIL	The ratio of available time to total time.	N/A	String. Length: 15 characters	N/A

Table description

Item	Description
Feature name	NQA

Table name	TwamplightClientSessions
Table type	Multi-instance table
Row name	TwamplightClientSession
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
SrcIpAddress	Source IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
DstIpAddress	Destination IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	By default, no destination address is specified.
SrcPortNumber	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DstPortNumber	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 1 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
DscpValue	Dscp value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Description	Session description	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
PaddingLength	Payload size	N/A	Unsigned integer. Value range: 44 to 1518.	N/A
DataFill	Packet payload fill string for probe packets	Data structure	Members include: • Data. • HexFlag.	By default, no expected data is specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Both Data and HexFlag must be specified.
Data	Packet payload fill string	N/A	String. Length: 1 to 200 characters	When HexFlag is specified, the string must be a hexadecimal string and contain an even number of characters.
HexFlag	Whether the data is a hexadecimal string	N/A	Boolean: • **true**—The data is a hexadecimal string. • **false**—The data is a general string.	N/A
SrcInterface	Source interface	N/A	String, case-insensitive. Length: 2 to 47 characters.	For successful operation, the specified source interface must be up.
ServiceID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
DesMacAddress	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMacAddress	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Timestamp Format	Timestamp format of packets	N/A	Enumeration: • 1—NTP format • 2—PTP format	N/A
VLANID	VLAN ID	Data structure	Members include: • Service. • Customer.	N/A
Service	Service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Customer	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The server VLAN must be specified first before the customer VLAN.
Priority8021p	Priority of the packet	N/A	Unsigned integer. Value range: 0 to 7.	N/A
ReactionEntries	Reaction entry statistics	SubLists	N/A	N/A
BindInterface	Specify an interface by its type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A
AdjustChecksum	Enabing status of the adjust UDP checksum mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LinkBundleIf	Specify an bundle interface by its	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	type and number.		Length: 2 to 47 characters.	
OneWayDelayMeasure	Enabing status of the One Way Delay-Measure mode	N/A	Boolean: • **true**—Enabled. **false—**Disabled.	N/A

NQA/TwamplightClientSessions/ReactionEntries

Table description

Item	Description
Feature name	NQA
Table name	TwamplightClients
Table type	Multi-instance table
Row name	TwamplightClient
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	Session ID	Index	Unsigned integer. Value range: 1 to 512.	N/A
Status	Session status	N/A	Enumeration: • **0**—Inactive. • **1—**Active.	N/A
SessionType	Session type	N/A	Enumeration: • **0**—Invalid. • **1**—Permanent. • **2—**Ondemand.	N/A
SrcInterface	Full name of an interface, including the interface type and number. Source interface whose primary IP address will be used as the source IP address for the requests	N/A	String. Length: 2 to 47 characters.	By default, no source IP address is specified. If both the source IP address and source interface are specified, the most recent configuration takes effect.
ServiceInstance	Service instance	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
SrcIpAddress	Source IPv4 or IPv6	N/A	String, dotted decimal	N/A

	address for the probe packets		notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	
DesIpAddress	Destination IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	By default, no destination address is specified.
SrcPortNumber	Source port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DesPortNumber	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
SrcMacAddress	Source MAC address of the probe packets	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DesMacAddress	Destination MAC address of the probe packets	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
ServiceVLANID	Service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CustomerVLANID	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255.	N/A
PaddingLength	Payload size in each request	N/A	Unsigned integer. Value range: 44 to 1518.	N/A
TimeStampFormat	Timestamp format of packets	N/A	Enumeration: • **1**—NTP format • **2**—PTP format	N/A
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 1 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
LastStartTimeStamp	Time when last probe started	N/A	Examples: 2018-08-05T16:41:05.900	By default, the value is Never.
LastStopTimeStamp	Time when last probe stopped	N/A	Examples: 2018-08-05T16:41:05.900	By default, the value is Never.
PacketInterval	Packet sending interval in the probe in milliseconds	N/A	Unsigned integer. Value range: 10, 100, 1000, 30000.	N/A

Timeout	Packet timeout in seconds	N/A	Unsigned integer. Value range: 1 to 10.	N/A
Duration	Duration time of the probe in seconds	N/A	Unsigned integer. Value range: 60 to 300.	N/A
PacketsSentCnt	Number of packets to be sent per probe	N/A	Unsigned integer. Value range: 100 to 30000.	N/A
StatisticsInterval	Statistics counting interval	N/A	The value is a multiple of 10 milliseconds	N/A
MonitorTime	Moniter time of the packet in milliseconds	N/A	The value is a multiple of the statistics time.	N/A
DelayMonitorTime	Moniter time of the packet's delay information, in milliseconds	N/A	The is a multiple of the statistics time.	N/A
JitterMonitorTime	Moniter time of the packet's jitter information, in milliseconds	N/A	The is a multiple of the statistics time.	N/A
LossMonitorTime	Moniter time of the packet's loss rate information, in milliseconds	N/A	The is a multiple of the statistics time.	N/A
Description	Description of the TWAMP Light template	N/A	String, case-sensitive. Length: 1 to 200 characters.	By default, no description is specified for a TWAMP Light template.
Priority8021p	Priority of the packet	N/A	Unsigned integer. Value range: 0 to 7.	N/A
AdjustChecksum	Enabing status of the adjust UDP checksum mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
OneWayDelayMeasure	Enabing status of the One Way Delay-Measure mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MemberIfResults	Result of member interfaces	SubLists	N/A	N/A

Message	Explanation
The value must not be less than %d or greater than %d. 参数范围从%d至%d。	The specified probe timeout must be within the legal range. 指定的探测超时时间必须在合法的范围内。
Incomplete NQA operation parameters. Can't start the NQA operation. 必配参数不全，无法启动调度。	When starting the NQA test, the selected test parameters must be configured. 启动NQA测试的时候，必选的测试参数必须配置。
The operation time has passed. 时间已是过去。	The start time for starting the NQA test should be less than the current system time. 启动NQA测试的开始时间应小于当前系统的时间。
Can't start the operation. Please enable the NQA client first. 启动测试失败，请先开启NQA客户端。	Before starting the NQA test, you need to start the NQA client first. 在启动NQA测试前，先需要先开启NQA客户端。
Can't modify any existing schedule. 调度已启动，不可以修改。	After the NQA test is started, the scheduling parameters of the scheduling test cannot be modified. NQA测试启动后，不能修改调度测试的调度参数。
Can't modify a scheduled operation. 测试项已启动调度，不可以修改配置。	After the test group starts the scheduling test, the configuration of the test group is not allowed to be modified. 测试组启动调度测试后，不允许对测试组的配置进行修改。
The lifetime for a recurring NQA operation can't be forever. 已配置recurring，必须配置有限的lifetime。	When the specified NQA test group is scheduled to run every day, the duration of the test cannot be unlimited. 指定NQA测试组每天都被调度运行时，测试的持续时间不能是无限的。
The lifetime for a recurring NQA operation must be less than one day. 已配置recurring，lifetime必须小于一天。	When the specified NQA test group is scheduled to run every day, the duration of the test must be the same day. 指定NQA测试组每天都被调度运行，测试的持续时间必须小于一天。
The start time is invalid. 配置测试组启动日期，不在有效时间范围内。	The start time of the NQA startup test should be within the valid range. NQA启动测试的开始时间要在有效的范围内。
No operation type is specified. 未配置当前测试组的测试类型。	The type of the specified NQA test group must be configured when the create, merge and replace operations are performed. 当执行create、merge、replace操作时，指定的NQA测试组类型必须已经配置。
The NQA reaction parameter can't be modified. 不支持修改监测参数。	Alarm parameters that already have the same threshold number are not allowed to be modified. 已存在的相同的阈值编号的告警参数不允许修改。
The test session exist on-demand test. 当前会话已经存在按需启动探测。	Test session that already have started on-demand is not allowed to be started. 已经按需启动过的会话，不允许再次启动。

The statistics time must be a multiple of %d. 统计周期必须是%d的整数倍。	The specified statistics time interval must be a multiple of the statistics granularity that get from the driver. 统计周期必须是从驱动获取的统计粒度的整数倍。
The monitor time must be a multiple of the statistics interval. 监控时间必须是统计周期的整数倍。	The monitor time value must be a multiple of the statistics interval. 监控时间必须是统计周期的整数倍。
Operation failed.The driving received wrong interface parameter. 启动探测失败，驱动返回参数错误。	Can't start the session because of the driving received wrong interface parameter. 无法启动会话探测，因为驱动发现接口参数配置错误。
Operation failed.The driving received wrong IP parameter. 启动探测失败，驱动返回IP参数错误。	Can't start the session because of the driving received wrong IP parameter. 无法启动会话探测，因为驱动发现IP参数配置错误。
Operation failed.The driving received wrong mac parameter. 启动探测失败，驱动返回MAC参数错误。	Can't start the session because of the driving received wrong mac parameter. 无法启动会话探测，因为驱动发现MAC参数配置错误。
Operation failed.The driving received wrong vlan parameter. 启动探测失败，驱动返回VLAN参数错误。	Can't start the session because of the driving received wrong vlan parameter. 无法启动会话探测，因为驱动发现VLAN参数配置错误。
Operation failed.The specified frame size is smaller than the minimum packet size.Please set a larger frame size. 启动探测失败，当前配置的帧范围小于系统要求的最小值。请设置更大的帧值。	Operation failed.The specified frame size is smaller than the minimum packet size.Please set a larger frame size. 启动探测失败。当前配置的帧范围小于系统要求的最小值。请设置更大的帧值。
The source and destination IP addresses must be of the same IP version. 源IP和目的IP的类型必须一致。	The configuration of source IP and destination IP addresses must be of the same IP version. 配置的源IP和目的IP的类型必须一致。
Operation failed.The source or out interface configuration is invalid. 启动探测失败，当前配置的源接口或出接口配置无效。	Can't start the session because of the source or destination interface configuration is invalid. 无法启动会话探测，因为当前配置的源接口或出接口配置无效。
Can't start the test session because required parameters are missing. 配置参数不全，启动探测失败。	When starting the test session, the selected test parameters must be configured. 启动会话测试的时候，必选的测试参数必须配置。
The test session is already running. 会话探测已经启动。	Can't start or modify the session that already started. 已经启动探测的会话，不允许再次启动或者修改参数。
Operation failed. Invalid configuration. 启动探测失败，因为配置参数无效。	Can't start the session because of the driving received invalid parameter. 无法启动会话探测，因为驱动发现有无效的配置信息。
Operation failed. Not enough resources. 资源不足，启动探测失败。	Can't start the session because of the driving received not enough resources. 无法启动会话探测，因为驱动发现硬件资源不足。
Can't create session. Please enable the TWAMP Light client first. 创建会话失败，请先开启twamp客户端视图。	Before creating the session, you need to start the TWAMP Light client first. 在启动会话测试前，需要先开启TWAMP Light客户视图。
Can't start session. Please enable the TWAMP Light sender first.	Before starting the session, you need to start the TWAMP Light sender first.

启动探测失败，请先开启TWAMP发送端视图。	在启动会话测试前，需要先开启TWAMP Light发送视图。
Duration and PacketCount must have one and only one configuration. 发送周期和发包个数有且只能配置一个。	When starting the test session on-demand, the Duration and PacketCount must have one and only one configuration. 当按需启动探测时，发送周期和发包个数有且只能配置一个。
VPN-Instance does not exist. 配置的VPN实例不存在。	Can't start the session because of the VPN-Instance does not exist. 启动探测失败，因为VPN实例不存在。
The device is not support config datafill. 当前设备不支持配置datafill。	Datafill is not supported by current device customization. 当前设备定制了不支持datafill功能。
Destination IP and destination port cannot coexist with the URL configuration. 目的IP和目的端口与URL不能同时配置。	Destination IP and destination port cannot coexist with the URL configuration. 目的IP和目的端口与URL不能同时配置。
Please configure or delete the srcinterface setting first 请先配置或删除SrcInterface信息Expect status and expect failed-status can’t be configured at the same time. 期望状态和期望失败状态不能同时配置。	Please configure or delete the srcinterface setting first 请先配置或删除SrcInterface信息Expect status and expect failed-status are mutually exclusive. 期望的应答状态码和期望失败的应答状态码的配置是互斥的。
Expect data and expect failed-data can’t be configured at the same time. 期望内容和期望失败的内容不能同时配置。	Expect data and expect failed-data are mutually exclusive. 期望的应答内容和期望失败的应答内容的配置是互斥的。
Please configureOperation failed. The tx-interval of 10 or delete100 ms is mutually exclusive with the servervlan data-fillsetting first. 请先配置或删除servervlan信息。Start指令下发失败，发包间隔为10或100ms和data-fill参数配置冲突。	Please configure or delete the servervlan setting first. 请先配置或删除servervlan信息。The tx-interval of 10 or 100 ms is mutually exclusive with the data-fill setting. Support for the data-fill setting depends on the device model. 如果当前已经配置了data-fill，再通过netconf下发start命令并指定发包间隔为10或100 ms，start命令下发失败。Data-fill命令的支持情况与设备型号有关，请以设备的实际情况为准。
You cannot modify a single attribute column when you distribute a sub table. 不能单独修改子表的某一个属性列 。	You cannot modify a single attribute column when you distribute a sub table. 不能单独修改子表的某一个属性列 。
The value of LowerLimit cannot be greater than the value of UpperLimit LowerLimit 值不能大于 UpperLimit 值 。	The value of LowerLimit cannot be greater than the value of UpperLimit LowerLimit 值不能大于 UpperLimit 值 。
Failed to start the test-session because no route is found. 启动探测失败，路由不可达。	Failed to start the test-session because no route is found. 启动探测失败，路由不可达。
This device does not support TWAMP Light. 当前设备不支持 TWAMP Light。	This device does not support TWAMP Light. 当前设备不支持 TWAMP Light。
The TWAMP Light test session is already running. 会话探测已经启动。	The TWAMP Light test session is already running. 会话探测已经启动。
The lifetime for a recurring NQA operation can't be forever. 已配置 recuring，必须配置有限的 lifetime。	The lifetime for a recurring NQA operation can't be forever. 已配置 recuring，必须配置有限的 lifetime。
The lifetime for a recurring NQA operation must be less than one day.	The lifetime for a recurring NQA operation must be less than one day.

已配置 recuring，lifetime 必须小于一天。	已配置 recuring，lifetime 必须小于一天。
The operation time has passed. 时间已过去。	The operation time has passed. 时间已过去。
Can't start the operation. Please enable the NQA client first. 启动失败，请先使能 NQA 客户端。	Can't start the operation. Please enable the NQA client first. 启动失败，请先使能 NQA 客户端。
The start time is invalid. 配置测试组启动日期，不在有效时间范围内。	The start time is invalid. 配置测试组启动日期，不在有效时间范围内。
Operation failed.The driving received wrong interface parameter. 启动探测失败，驱动返回接口参数错误。	Operation failed.The driving received wrong interface parameter. 启动探测失败，驱动返回接口参数错误。
Operation failed. Invalid configuration. 配置参数无效，启动探测失败。	Operation failed. Invalid configuration. 配置参数无效，启动探测失败。
Operation failed. The tx-interval of 10 or 100 ms is mutually exclusive with the data-fill setting. Start 指令下发失败，发包间隔为 10 或 100ms 和 data-fill 参数配置冲突。	Operation failed. The tx-interval of 10 or 100 ms is mutually exclusive with the data-fill setting. Start 指令下发失败，发包间隔为 10 或 100ms 和 data-fill 参数配置冲突。
The template name has been used. 此模板名称已被使用。	The template name has been used. 此模板名称已被使用。

NQA/Server

Message	Explanation
Can't configure session. Please enable the TWAMP Light responder first. 配置会话失败，请先开启responder视图。	Before configuring the session, you need to start the TWAMP Light responder first. 在启动会话测试前，需要先开启TWAMP Light反射端视图。
Can't configure session. Please configure the source IP, source port, destination IP, and destination port. 配置会话失败，请配置必选项源IP、源端口、目的IP、目的端口参数。	When configuring the test session, the source IP, source port, destination IP, and destination port must be configured. 配置会话时，参数源IP、源端口、目的IP、目的端口为必选项。
The interface and service instance setting of an existing reflector can't be modified. 配置会话后，接口和服务实例不允许被修改。	After configuring the test session, the interface and service instance setting of an existing reflector can't be modified。 当配置会话成功后，接口和服务实例不允许再被修改。
The source and destination IP addresses must be of the same IP version. 源IP和目的IP的类型必须一致。	The configuration of source IP and destination IP addresses must be of the same IP version. 配置的源IP和目的IP的类型必须一致。
Invalid port. 无效的端口号。	Can't configure the session because of the driving received invalid port parameter. 无法配置会话，因为驱动发现端口参数配置无效。
Invalid interface. 无效的接口信息	Can't configure the session because of the driving received invalid interface parameter. 无法配置会话，因为驱动发现接口参数配置无效。
Deleting a column separately is not allowed. 不允许单独删除某一列。	Only one full session is allowed to be deleted. 只允许删除一条完整会话。

The value must not be less than %d or greater than %d. 参数范围从%d至%d。	The specified probe timeout must be within the legal range. 指定的探测超时时间必须在合法的范围内。
Please configure the source interface setting first. 请先配置SrcInterface信息。	Please configure the srcinterface setting first. 请先配置 SrcInterface 信息。
Please configure the service VLAN setting first. 请先配置service vlan信息。	Please configure the service vlan setting first. 请先配置 service vlan 信息。
This device does not support TWAMP Light. 当前设备不支持TWAMP Light。	This device does not support TWAMP Light. 当前设备不支持TWAMP Light。
Operation failed because the port is already being used. Please specify another port. 监听端口已被占用，请修改为其它端口。	Operation failed because the port is already being used. Please specify another port. 监听端口已被占用，请修改为其它端口。

NQA event stream

ReactionEvent event

This event is used to report reaction status information.

XML structure for event subscription

```
<ReactionEvent>
  <Reaction>
    <AdminName></AdminName>
    <OperationTag></OperationTag>
    <ItemNumber></ItemNumber>
  </Reaction>
</ReactionEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>NQA</stream>
    <filter type="subtree">
      <ReactionEvent xmlns="http://www.h3c.com/netconf/event:1.0/NQA:1.0">
        <Reaction>
          <AdminName>admin</AdminName >
          <OperationTag>tag</OperationTag>
          <ItemNumber>1</ItemNumber>
        </Reaction>
      </ReactionEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Table description

Item	Description
Feature name	NQAS
Table name	TwamplightRespSessions
Table type	Multi-instance table
Row name	TwamplightRespSession
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
SrcInterface	Responser Interface	N/A	String. Length: 2 to 47 characters	This parameter can't be modified when configured.
ServiceID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
SrcIpAddress	Source IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This parameter must be specified.
DstIpAddress	Destination IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This parameter must be specified.
SrcPortNumber	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	This parameter must be specified.
DstPortNumber	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	This parameter must be specified.
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Description	Session description	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
DesMacAddress	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMacAddress	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
TimestampFormat	Timestamp format of packets	N/A	Enumeration: • 1—NTP format. • 2—PTP format.	N/A
VLANID	VLAN ID	Data structure	Members include: • Service. • Customer.	N/A
Service	Service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Customer	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The server VLAN must be specified first before the

Column name	Column description	Column type	Data type and restrictions	Remarks
				customer VLAN.
AdjustChecksum	Enabing status of the adjusting UDPchecksum mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled**.**	N/A
ExtendedPacket	Enabing status of the extended packet mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled**.**	N/A
LinkBundleIf	Specify an bundle interface by its type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Service type	Index	Enumeration: • **0**—TCP-connect • **1**—UDP-echo • **2**—ICMP-server	N/A
IPAddr	IPv4 or IPv6 address for the listening service	Index	String. Dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
Port	Port number for the listening service	Index	Unsigned integer. Value range: 1 to 65535.	If the type is ICMP-server, the port number can only be displayed as 0.
VRF	VRF instance where the server listens on	Index	String, case-sensitive. Length: 0 to 31 characters.	If the returned value is empty, the NQA server listens on the public network.
ToS	ToS value in the IP header for reply packets	N/A	Unsigned integer. Value range: 0 to 255.	N/A
HighPerformance	Enabling status of the high performance mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only supported on the NQA UDP echo server.

NQAS/TwamplightResponder

This table contains information about TWAMP Light responder enabling status.

XML structure

```
<NQAS>
  <TwamplightResponder>
    <ResponderEnable></ResponderEnable>
  </TwamplightResponder>
</NQAS>
```

Table description

Item	Description
Feature name	NQAS
Table name	TwamplightResponder
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResponderEnable	Enabling status of the TWAMP Light responder	N/A	Enabling status: • **enable**— TWAMP Light responder is enabled. • **disable**— TWAMP Light responder r is disabled.	By default, the TWAMP Light responder is disabled.

NQAS/TwamplightRespSessions

This table contains information about TWAMP Light responder session.

XML structure

```
<NQAS>
  <TwamplightRespSessions>
    <TwamplightRespSession>
      <SessionID></SessionID>
      <SrcInterface></SrcInterface>
```

```
      <ServiceID></ServiceID>
      <SrcIpAddress></SrcIpAddress>
      <DstIpAddress></DstIpAddress>

      <LinkBundleIf></LinkBundleIf>
    </TwamplightRespSession>
  </TwamplightRespSessions>
</NQAS>
```

Table description

Item	Description
Feature name	NQAS
Table name	TwamplightRespSessions
Table type	Multi-instance table
Row name	TwamplightRespSession
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	TWAMP Light session ID	Index	Unsigned integer. • MinValue: 1	This parameter supports customization, so only the minimum value is limited.
SrcInterface	Responser Interface	N/A	String. Length: 2 to 47 characters	N/A
ServiceID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
SrcIpAddress	Source IP address	N/A	String, dotted decimal notation. Or hexadecimal string,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated. Length: 1 to 46 characters.	
DstIpAddress	Destination IP address	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	By default, no destination address is specified.
SrcPortNumber	Source port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DstPortNumber	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Description	Session description	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
DesMacAddress	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMacAddress	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
TimestampFormat	Timestamp format of packets	N/A	Enumeration: • 1—NTP format • 2—PTP format	N/A
VLANID	VLAN ID	Data structure	Members include: • Service. • Customer.	N/A
Service	Service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Customer	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The server VLAN must be specified first before the customer VLAN.
AdjustChecksum	Enabing status of the adjusting UDP checksum mode	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
ExtendedPacket	Enabing status of the extend edpacket mode	N/A	Boolean: • **true**—Enabled. • **false—**Disabled.	N/A
LinkBundleIf	Specify an bundle interface by its type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

GroupValueList	Trend value list	Data structure	Members include: • GroupValue	N/A
GroupValue	Trend value	N/A	String, case insensitive Length: 1 to 63 characters	Contains up to 5 GroupValue in GroupValue List.
TimeFilter	Query time range	Data structure	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• StartTime • EndTime	
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A

NTOP/ExportTrafficHistogram

This table is used to get the traffic histogram information to PDF.

XML structure

```
<NTOP>
  <ExportTrafficHistogram>
    <Chart>
      <ContextID></ContextID>
      <AnalyType></AnalyType>
      <TrafficType></TrafficType>
      <FilterType></FilterType>
      <FilterCondition></FilterCondition>
      <FileName></FileName>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </Chart>
  </ExportTrafficHistogram>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	ExportTrafficHistogram
Table Type	Multi-instance table
Row name	Chart
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyType	Analysis type	Index	Unsigned integer • **0**—Traffic flow • **1**—Traffic flow rate	N/A
TrafficType	Type of the traffic	Index	Enumeration: • **0**—Total bytes • **1**—bytes • **2**—Reply bytes	N/A
FilterType	Filter type	N/A	Unsigned integer • **1**—SrcIP • **4**—Application • **8**—User • **64**—ContextName	For example, to filter the statistics by application, set the GroupType value to 4.
FilterCondition	Filter condition	N/A	String Length: 1 to 255 characters.	N/A
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
ContextID	Context ID	N/A	Unsigned integer	N/A
FileName	Name of the PDF	N/A	String, case insensitive Length: 1 to 63 characters	N/A

NTOP/ExportTrafficDistribution

This table is used to get the traffic distribution statistics to PDF.

XML structure

```
<NTOP>
  <ExportTrafficDistribution>
    <Chart>
      <ContextID></ContextID>
      <FilterType></FilterType>
      <FilterCondition></FilterCondition>
      <TrafficType></TrafficType>
      <TimeRange></TimeRange>
```

```
      <FileName></FileName>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </Chart>
  </ExportTrafficDistribution>
</NTOP>
```

Row name	Chart
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: • **1**—Period report • **2**—Comparison report • **3**—Intelligent report • **4**—Integrated report This column is supported only on Comware 7 in the current software version.	N/A
TopCount	Top count	N/A	Enumeration: • **5** • **10** • **15** • **20** • **25** This column is supported only on Comware 7 in the current software version.	Get the top count iterms when exporting the report.
ReportCustomization	Report customization	N/A	Unsigned integer: • **1**—Chapter 1 • **2**—Chapter 2 • **4**—Chapter 3 • **8**—Chapter 4 … • **2^{31}**—Chapter 32 This column is supported only on Comware 7 in the current software version.	Report output selected chapter. By default, all chapters are selected. The chapter name is taken from NETCONF table: NTOP/ReportChapter.
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime • CompStartTime • CompEndTime	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
CompStartTime	Comparison Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS This column is supported only on Comware 7 in the current software version.	N/A
CompEndTime	Comparison End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS This column is supported only on Comware 7 in the current software version.	N/A
ContextID	Context ID	N/A	Unsigned integer	N/A
FileName	Name of the PDF	N/A	String, case insensitive Length: 1 to 63 characters	N/A
Lang	Language	N/A	Enumeration: • **0**—English • **1**—Chinese (default).	N/A
ReportTitle	Report title	N/A	String, case-insensitive. Length: 1 to 42 characters. This column is supported only on Comware 9 in the current software version.	N/A
Templates	Templates	N/A	Members include: • TemplateName. This column is supported only on Comware 9 in the current software version.	Currently only supports single instance.
TemplateName	Name of a template for exporting reports	N/A	String, case-insensitive. Length: 1 to 63 characters. This column is supported only on Comware 9 in the current software version.	N/A
ReportContent	Report content	Data structure	Members include: • ContentType. • ContentTypeCfg. This column is supported only on Comware 9 in the current software version.	N/A
ContentType	Type of exported report content	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			This column is supported only on Comware 9 in the current software version.	
ContentTypeCfg	Content configuration in JSON format	N/A	String, case-insensitive. Length: 1 to 2047 characters. This column is supported only on Comware 9 in the current software version.	N/A
SN	UUID	N/A	String, case-insensitive. Length: 1 to 39 characters. This column is supported only on Comware 9 in the current software version.	N/A
OperationPercentage	Operation percentage	N/A	Unsigned integer. This column is supported only on Comware 9 in the current software version.	N/A
IsStopOperation	Whether the operation is a stop operation	N/A	Boolean: • true. • false (default). This column is supported only on Comware 9 in the current software version.	N/A
FileTypes	File types	N/A	Members include: • FileType. This column is supported only on Comware 9 in the current software version.	N/A
FileType	File type	N/A	Enumeration: • **0**—PDF (default). • **1**—HTML. This column is supported only on Comware 9 in the current software version.	N/A

NTOP/StorageDevice

This table is used to operate the Top N storage devices.

XML structure

```
<NTOP>
  <StorageDevice>
    <OperationType></OperationType>
  </StorageDevice>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	StorageDevice
Table Type	Single -instance table
Row name	None
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OperationType	Type of the operation	N/A	Enumeration: • **0**—Unload the storage device	N/A

NTOP/PlatformLogAction

This table is used to delete or export the platform log data.

XML structure

```
<NTOP>
  <PlatformLogAction>
    <LogAction>
      <FeatureName></FeatureName>
      <SubName></SubName>

NTOP

NTOP/TrafficLog

This table contains Traffic log information. When a session ends, a traffic log will be stored locally. This table contains these logs. If there is no hard-disk on device, only 10,000 entries can be stored, and new logs will overwrite the oldest.

XML structure

```
<NTOP>
  <TrafficLog>
    <Log>

Pkts	Packets	N/A	Unsigned integer	N/A
ReplyPkts	Reply packets	N/A	Unsigned integer	N/A
SrcInterface	Source interface	N/A	String, case insensitive Length: 1 to 47 characters	N/A
DstInterface	Destination interface	N/A	String, case insensitive Length: 1 to 47 characters	N/A
SrcVrfIndex	Source VRF index	N/A	Unsigned integer	N/A
UAppSubCategory	Application category of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A

NTOP/TrafficTop

This table is used to get the top information of TrafficLog table.

The attributes in GroupValue must match the GroupType. For example, if the group-type is SrcIP, the value in GroupValue should be:

```
<SrcIP>1.2.3.4</SrcIP>
```

Other columns in GroupValue must not exist. The ConnCounter is the number of sessions that include this IP as an initiator and BytesCounter is the number of bytes sent and received by this IP. TopNo means the BytesCounter’s order in all BytesCounter values.

Row name	Top
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TopNo	Ranking No	Index	Unsigned integer Value range: 1 to 2^{32}-1	N/A
GroupType	Ranking type	Index	Unsigned integer • **1**—SrcIP • **4**—Application • **8**—User • **64**—ContextName	For example, to rank the statistics by application, set the GroupType value to 4.
TrafficType	Type of the traffic	Index	Enumeration: • **0**—Total bytes • **1**—Bytes • **2**—Reply bytes	N/A
UserID	User ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to distinguish different requests.
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime.	N/A
StartTime	Start statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
MatchFilter	Group value	Data structure	Members include: • SrcIP • DstIP • Application • UAppSubCategory • User	N/A
SrcIP	Source IP address of the session	N/A	String, case insensitive Length: 1 to 46 characters	IPv4 or IPv6 address.
DstIP	Destination IP address of the session	N/A	String, case insensitive Length: 1 to 46 characters	IPv4 or IPv6 address.
Application	Application of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A
UAppSubCategory	Application category of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A
User	User of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A
GroupValue	Group value	Data structure	Members include: • SrcIP	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• DstIP • Application • UAppSubCategory. • User • BandWidth • SrcRegion • DestRegion • ContextName.	
SrcIP	Source IP address of the session	N/A	String, case insensitive Length: 1 to 46 characters	IPv4 or IPv6 address.
DstIP	Destination IP address of the session	N/A	String, case insensitive Length: 1 to 46 characters	IPv4 or IPv6 address.
Application	Application of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A
UAppSubCategory	Application category of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A
User	User of the session	N/A	String, case insensitive Length: 1 to 127 characters	N/A
Bandwidth	Bandwidth	N/A	String, case insensitive Length: 1 to 63 characters	N/A
SrcRegion	Source region	N/A	String, case insensitive Length: 1 to 127 characters	N/A
DestRegion	Destination region	N/A	String, case insensitive Length: 1 to 127 characters	N/A
ContextName	Name of the context	N/A	String, case insensitive Length: 1 to 15 characters	N/A
GroupCounters	Group counters	Data structure	Members include: • Bytes • TotalBytes • ReplyBytes • ConnCounter.	N/A
BytesCounter	Bytes within the statistical time of the GroupValue.	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
TotalBytes	Total bytes within the statistical time of the GroupValue.	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
ReplyBytes	Reply bytes within the statistical time of the GroupValue.	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
ConnCounter	Session count within the	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	statistical time of the GroupValue.		Value range: 0 to 2^{32}-1	
BytesTotal	All bytes within the statistical time.	N/A	Unsigned integer Value range: 0 to 2^{64}-1	If TrafficType is 1, the BytesTotal is the total number of ReplyBytes. If TrafficType is 2, the BytesTotal is the total number of Bytes. Otherwise BytesTotal is the total number of TotalBytes.
ConnTotal	All session count within the statistical time.	N/A	Unsigned integer Value range: 0 to 2^{32}-1	N/A

GroupValue	Group value	Data structure	Members include: • FileType.	N/A
FileType	Application	N/A	String, case insensitive Length: 1 to 63 characters	N/A
GroupCounters	Group counters	Data structure	Members include: • HitCounter	N/A
HitCounter	Hit counter within the statistical time of the GroupValue.	N/A	Unsigned integer Value range: 0 to 2^{32}-1	N/A
HitCounterTotal	All hit count within	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the statistical time.		Value range: 0 to 2^{32}-1	

NTOP/FileTopChart

This table is used to get the FileLog's byte distribution every hour or five minutes.

XML structure

```
<NTOP>
  <FileTopChart>
    <Chart>
      <GroupValue>
        <FileType></FileType>
      </GroupValue>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
      <GroupCounters>
        <Time></Time>
        <HitCounter></HitCounter>
      </GroupCounters>
    <Chart>
  </FileTopChart>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	FileTopChart
Table Type	Multi-instance table
Row name	Chart
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupValue	Group value	Data structure	Members include: • 1—FileFilter	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FileType	File type	Index	String, case insensitive Length: 1 to 8 characters	N/A
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
GroupCounters	Statistic data	Data structure	Members include: • Time • HitCounter.	When the TimeFilter is less than 1 day, the data is collected at an interval of 5 minutes. Otherwise, the interval is 1 hour. Up to one month's data can be collected.
Time	Time of the data	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	Multiple values.
HitCounter	Hit count	N/A	Unsigned integer Value range: 0 to 2^{32}-1	Multiple values.

NTOP/LogAggregations

This table is used to get the log aggregation information.

XML structure

```
<NTOP>
  <LogAggregations>
    <LogAggregation>
      <LogType></LogType>
      <Enabled></Enabled>
      <Time></Time>
    </LogAggregation>
  </LogAggregations>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	LogAggregations
Table Type	Multi-instance table
Row name	LogAggregation
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogType	Log type	Index	Enumeration: • **1**—ThreatLog • **2**—TrafficLog • **3**—URLLog • **4**—FFilterLog	N/A
Enabled	Whether aggregation is enabled or not	N/A	Boolean: • true • false	N/A
Time	Aggregation time in seconds	N/A	Unsigned integer Value range: 10 to 60	Default is 60 seconds.

NTOP/LogPaging

This table is used to get the log paging information.

XML structure

```
<NTOP>
  <LogPaging>
    <Log>
      <LogType></LogType>
      <UserID></UserID>
      <ID></ID>
      <PageNo></PageNo>
      <PageCount></PageCount>
      <CountPerPage></CountPerPage>
      <TotalCounts></TotalCounts>
      <IsActualNum></IsActualNum>
      <InputJSON></InputJSON>
      <OutputJSON></OutputJSON>
      <CacheJSON></CacheJSON>
```

```
      <ResultCacheJSON></ResultCacheJSON>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </Log>
  </LogPaging>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	LogPaging
Table Type	Multi-instance table
Row name	Log
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogType	Log type	Index	Enumeration: • 1—ThreatLog • 2—TrafficLog • 3—URLLog • 4—FFilterLog	N/A
UserID	User ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to distinguish different requests.
ID	Reserve column	Index	Unsigned integer Value range: 1 to 2^{32}-1	N/A
PageNo	Current page number	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
PageCount	Number of pages to display	N/A	Unsigned integer	N/A
CountPerPage	Number of logs per page	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
TotalCounts	Log total counts	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
IsActualNum	Whether the TotalCounts is the actual total number of logs	N/A	Boolean: • True • false	N/A
InputJSON	Input parameter to	N/A	String	When LogType is 1,

Column name	Column description	Column type	Data type and restrictions	Remarks
	get log		Length: 1 to 2048 characters.	InputJSON uses ThreatLog Filter conditions. When LogType is 2, InputJSON uses TrafficLog Filter conditions. When LogType is 3, InputJSON uses URLLog Filter conditions. When LogType is 4, InputJSON uses FFilterLog Filter conditions.
OutputJSON	Log information	N/A	String Length: 1 to 2048 characters.	When LogType is 1, OutputJSON uses ThreatLog output structure. When LogType is 2, OutputJSON uses TrafficLog output structure. When LogType is 3, OutputJSON uses URLLog output structure. When LogType is 4, OutputJSON uses FFilterLog output structure.
CacheJSON	Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
ResultCacheJSON	Result of Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A

NTOP/PersistCfg

This table is used to get the persistence configuration

XML structure

```
<NTOP>
  <PersistCfg>
    <DBCfg>
      <ServiceType></ServiceType>
      <AutoDeleteEnable></AutoDeleteEnable>
      <LimitTime></LimitTime>
      <DiskEnable></DiskEnable>
      <LogLimit></LogLimit>
      <TrendLimit></TrendLimit>
      <DBSoftware></DBSoftware>
    </DBCfg>
  </PersistCfg>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	PersistCfg
Table Type	Multi-instance table
Row name	DBCfg
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Service type	Index	Enumeration: • **1**—Global service • **2**—Audit service • **3**—Traffic service • **4**—Threat service • **5**—URLFilter service • **6**—Filefilter service	N/A
AutoDeleteEnable	Whether delete files on disk automatically or not	N/A	Boolean: • true • false	N/A
LimitTime	Maximum number of days that the data can be stored	N/A	Unsigned integer Value range: 1 to 2^{32}-1	Multiple values.
DiskEnable	Whether the device mounts the hard disk	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LogLimit	Log records limit	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
TrendLimit	Trend Records limit	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
DBSoftware	Database software of this service	N/A	Enumeration: • **1**—Sqlite • **2**—Fastbit	N/A

NTOP/TrafficHistogram

This table is used to get the traffic flow histogram information.

XML structure

```
<NTOP>
  <TrafficHistogram>
    <Histogram>
      <FilterType></FilterType>
      <FilterCondition></FilterCondition>
      <ContextID></ContextID>
      <AnalyType></AnalyType>
      <TrafficType></TrafficType>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
      <AnalyVlaues>
        <Percent></Percent>
        <AnalyValue></AnalyValue>
      </AnalyVlaues>
      <UserID></UserID>
    </Histogram>
  </TrafficHistogram>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	TrafficHistogram
Table Type	Multi-instance table
Row name	Histogram
Restrictions	This table is supported only on Comware 7 in the current software

	version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyType	Analysis type	Index	Unsigned integer • 0—Traffic flow • 1—Traffic flow rate	N/A
TrafficType	Type of the traffic	Index	Enumeration: • 0—Total bytes • 1—bytes • 2—Reply bytes	N/A
UserID	User ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to distinguish different requests.
FilterType	Filter type	N/A	Unsigned integer • 1—SrcIP • 4—Application • 8—User • 64—ContextName	For example, to filter the statistics by application, set the GroupType value to 4.
FilterCondition	Filter condition	N/A	String Length: 1 to 255 characters.	N/A
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
AnalyValues	Analysis value list	Data structure	Members include: • Percent • AnalyValue	N/A
Percent	Percent of an analysis value	N/A	Unsigned integer Value range: 0 to 100	N/A
AnalyValue	Analysis value	Traffic or BandWidth	Unsigned integer Value range: 1 to 2^{64}-1	N/A
ContextID	Context ID	N/A	Unsigned integer	N/A

NTOP/TrafficDistribution

This table is used to get the traffic time distribution information.

XML structure

```
<NTOP>
  <TrafficDistribution>
    <Distribution>
      <ContextID></ContextID>
      <FilterType></FilterType>
      <FilterCondition></FilterCondition>
      <TrafficType></TrafficType>
      <TimeRange></TimeRange>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
      <DistributeVlaues>
        <Time></Time>
        <Bytes></Bytes>
      </DistributeVlaues>
      <UserID></UserID>
    </Distribution>
  </TrafficDistribution>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	TrafficDistribution
Table Type	Multi-instance table
Row name	Distribution
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterType	Filter type	N/A	Unsigned integer • 1—SrcIP • 4—Application • 8—User • 64—ContextName	For example, to filter the statistics by application, set the GroupType value to 4.
FilterCondition	Filter condition	N/A	String Length: 1 to 255 characters.	N/A
TrafficType	Type of the traffic	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 0—Total bytes • 1—Bytes • 2—Reply bytes	
TimeRange	Time range	Index	Enumeration: • 0—Hour • 1—Day • 2—Week	N/A
UserID	User ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to distinguish different requests.
TimeFilter	Query time range	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
DistributeValues	Distribute value list	Data structure	Members include: • Time • Bytes	N/A
Time	Time values in this time range.	N/A	Unsigned integer Value range: 0 to 31	When TimeRange is 0, the time value range 0 to 23 represents 24 hours; When TimeRange is 1, the time value range 1 to 31 represents 31 days; When TimeRange is 2, the time value range 1 to 7 represents 7 days in a week.
Bytes	Traffic bytes in this time range.	Traffic	Unsigned integer Value range: 1 to 2^{64}-1	N/A
ContextID	Context ID	N/A	Unsigned integer	N/A

NTOP/TrafficConstant

This table is used to get the traffic information constantly.

XML structure

```
<NTOP>
  <TrafficConstant>
```

```
    <Constant>
      <ContextID></ContextID>
      <ConstantType></ConstantType>
      <SortType></SortType>
      <TopNumber></TopNumber>
      <ContextName></ContextName>
      <ConstantValues>
        <TotalBytes></TotalBytes>
        <Bytes></Bytes>
        <ReplyBytes></ReplyBytes>
        <ConstantName></ConstantName>
        <ConstantPercent></ConstantPercnet>
      </ConstantVlaues>
      <UserID></UserID>
    </Constant>
  </TrafficConstant>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	TrafficConstant
Table Type	Multi-instance table
Row name	Constant
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	User ID	Index	Unsigned integer. Value range: 1 to 2^{32}-1.	Used to distinguish different requests.
ConstantType	Type of the constant data	Index	Enumeration: • **0**—SrcIP • **1**—Application	N/A
SortType	The type of data sort	N/A	Enumeration: • **0**—TotalBytes • **1**—Bytes • **2**—ReplyBytes	
TopNumber	Display first N data	N/A	Unsigned integer Value range: 0 to 100	
ConstantValues	Constant value list	Data structure	Members include: • TotalBytes	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Bytes • ReplyBytes • ConstantName • ConstantPercent	
TotalBytes	Total bytes	N/A	Unsigned integer. Value range: 1 to 2^{64}-1	N/A
Bytes	Bytes	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
ReplyBytes	Reply bytes	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
ConstantName	The name of constant data	N/A	String. Length: 1 to 63 characters.	N/A
ConstantPercent	The percent of constant data in total data.	N/A	Unsigned integer Value range: 0 to 100	N/A
ContextID	Context ID	N/A	Unsigned integer. Value range: 1 to 2^{32}-1	N/A
ContextName	Context name	N/A	String Length: 1 to 15 characters.	N/A

NTOP/ReportRss

This table is used to get the report subscription configuration.

XML structure

```
<NTOP>
  <ReportRss>
    <Rss>
      <ReportType></ReportType>
      <MailId></ MailId >
      <MailAddr></MailAddr>
    </Rss>
  </ReportRss>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	ReportRss
Table type	Multi-instance table
Row name	Rss

Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: • **1**—Period report • **2**—Comparison report • **3**—Intelligent report • **4**—Integrated report	N/A
MailId	Mail Id	Index	Unsigned integer. Value range: 1 to 2^{32}-1	N/A
MailAddr	Mail address	N/A	String, case insensitive Length: 1 to 127 characters	N/A.

NTOP/PersistDiskCfg

This table is used to set the persistence disk configuration.

XML structure

```
<NTOP>
  <PersistDiskCfg>
    <DBCfg>
      <ServiceType></ServiceType>
      <ServiceUsed></ServiceUsed>
      <ServiceFree></ServiceFree>
      <ServiceDiskLimit></ServiceDiskLimit>
      <ServiceAlarmLimit></ServiceAlarmLimit>
    </DBCfg>
  </PersistDiskCfg>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	PersistDiskCfg
Table type	Multi-instance table
Row name	DBCfg
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceAlarmLimit	Alarm limit percent	N/A	Unsigned integer. Value range: 1 to 100	When disk usage reaches the alarm limit, the system deletes the oldest file.
ServiceType	Service type	Index	Enumeration: • **1**—Global service • **2**—Audit service • **3**—Traffic service • **4**—Threat service • **5**—URLFilter service • **6**—Filefilter service	N/A
ServiceUsed	Service disk used	N/A	Unsigned integer. Value range: 1 to 2^{64}-1.	N/A
ServiceFree	Service disk free	N/A	Unsigned integer. Value range: 1 to 2^{64}-1.	N/A
ServiceDiskLimit	Service disk limit percent	N/A	Unsigned integer. Value range: 1 to 100.	Global service disk limit is the maximum percentage of disk occupancy. Other service disk limit is the percentage occupancy in the Global service proportion.

NTOP/ReportChapter

This table contains informations about report chapter name.

XML structure

```
<NTOP>
  <ReportChapter>
    <Chapter>
      <ReportType></ReportType>
      <ChapterNo></ChapterNo>
      <ChapterNameEN></ChapterNameEN>
      <ChapterNameCN></ChapterNameCN>
    </Chapter>
  </ReportChapter>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	ReportChapter
Table type	Multi-instance table
Row name	Chapter
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: • **1**—Period report • **2**—Comparison report • **3**—Intelligent report • **4**—Integrated report	N/A
ChapterNo	The number of chapter	N/A	Unsigned integer. Value range: 1 to 32	N/A
ChapterNameEN	Chapter Chinese name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChapterNameCN	Chapter English name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

NTOP/SecurityScore

This table contains informations about security score.

XML structure

```
<NTOP>
  <SecurityScore>
    <Score>
      <ScoreType></ScoreType>
      <TotalScore></TotalScore>
      <DetailJSON></DetailJSON>
    </Score>
  </SecurityScore>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	SecurityScore
Table type	Multi-instance table
Row name	Score
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScoreType	Score type	N/A	Enumeration: • **0**—Using threat data	N/A
TotalScore	Total score	N/A	Unsigned integer. Value range: 10 to 100	Total security score.
DetailJSON	Detail JSON	N/A	String, case-insensitive. Length: 1 to 2048 characters.	JSON packeted by numbers of different levels.

NTOP/PlatformFeatureCfg

This table is used to get the platform feature configuration.

XML structure

```
<NTOP>
  <PlatformFeatureCfg>
    <FeatureCfg>
      <IsAll></IsAll>
      <Total></Total>
      <TotalUsed></TotalUsed>
      <TotalFree></TotalFree>

        <SubDescr></SubDescr>
        <CollectEnable></CollectEnable>
        <RealtimeEnable></RealtimeEnable>
        <AutoDeleteEnable></AutoDeleteEnable>
        <LimitTime></LimitTime>
        <DiskEnable></DiskEnable>
```

```
      <LogLimit></LogLimit>
      <TrendLimit></TrendLimit>
      <DBSoftware></DBSoftware>
      <ServiceUsed></ServiceUsed>
      <ServiceFree></ServiceFree>
      <ServiceDiskLimit></ServiceDiskLimit>
      <ServiceAlarmLimit></ServiceAlarmLimit>
      <AggEnable></AggEnable>
      <AggTime></AggTime>
    </Data>
  </FeatureCfg>
 </PlatformFeatureCfg>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	PlatformFeatureCfg
Table type	Multi-instance table
Row name	FeatureCfg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IsAll	Whether to get the configurations of all registered features	N/A	Boolean: • true • false	N/A
Total	Total space	N/A	Unsigned integer Value range: 1 to 2^{64}-1	N/A
TotalUsed	Total space used	N/A	Unsigned integer Value range: 1 to 2^{64}-1	N/A
TotalFree	Total free space	N/A	Unsigned integer Value range: 1 to 2^{64}-1	N/A
Data	Configuration values	Data structure	Members include: • FeatureName • SubName • Descr • SubDescr • CollectEnable • RealtimeEnable • AutoDeleteEnable • LimitTime	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• DiskEnable • LogLimit • TrendLimit • DBSoftware • ServiceUsed • ServiceFree • ServiceDiskLimit • ServiceAlarmLimit • AggEnable • AggTime	
FeatureName	Feature name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
SubName	Sub-feature name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
Descr	Description of feature	N/A	String, case insensitive Length: 1 to 31 characters	N/A
SubDescr	Description of sub-feature	N/A	String, case insensitive Length: 1 to 31 characters	N/A
CollectEnable	Whether to collect logs	N/A	Boolean: • true • false	N/A
RealtimeEnable	Whether to collect realtime logs	N/A	Boolean: • true • false	N/A
AutoDeleteEnable	Whether to delete files on disk automatically or not	N/A	Boolean: • true • false	N/A
LimitTime	Maximum number of days that the data can be stored	N/A	Unsigned integer Value range: 1 to 2^{32}-1	Default is 30 days.
DiskEnable	Whether the device mount the hard disk	N/A	Boolean: • true • false	N/A
LogLimit	Log records limit	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
TrendLimit	Trend records limit	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
DBSoftware	Database software of this service	N/A	Enumeration: • **1**—Sqlite • **2**—Fastbit	N/A
ServiceUsed	Service disk used	N/A	Unsigned integer Value range: 1 to 2^{64}-1	N/A
ServiceFree	Service disk free	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 2^{64}-1	
ServiceDiskLimit	Service disk limit percent	N/A	Unsigned integer Value range: 1 to 100	Global service disk limit is the maximum percentage of disk occupancy. Other service disk limit is the percentage occupancy in the Global service proportion.
ServiceAlarmLimit	Alarm limit percent	N/A	Unsigned integer Value range: 1 to 100	When disk usage reaches the alarm limit, the system deletes the oldest file.
AggEnable	Whether aggregation is enabled or not	N/A	Boolean: • true • false	N/A
AggTime	Aggregation time in seconds	N/A	Unsigned integer Value range: 10 to 60	Default is 60 seconds.

NTOP/PlatformLog

This table is used to get the platform log data.

XML structure

```
<NTOP>
  <PlatformLog>
    <Log>
      <ID></ID>
      <UserID></UserID>
      <FeatureName></FeatureName>

```

Table description

Item	Description
Feature name	NTOP
Table name	PlatformLog
Table Type	Multi-instance table
Row name	Log
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of log	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to get last position when turning page.
UserID	User ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	Used to distinguish different requests.
FeatureName	Feature name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
SubName	Sub-feature name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
PageNo	Current page number	N/A	Unsigned integer	N/A
PageCount	Number of pages to display	N/A	Unsigned integer	N/A
NumPerPage	Number of logs per page	N/A	Unsigned integer	N/A
IsAllContext	Whether to operate logs of all context	N/A	Boolean: • true • false	N/A
LogTotalNum	Total number of logs	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
IsActualNum	Whether the LogTotalNum is the actual total number of logs	N/A	Boolean: • true • false	N/A
FilterJSON	Filter conditions	N/A	String, case insensitive Length: 1 to 2048	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters	
TimeFilter	Query time range	N/A	Members include: • StartTime • EndTime	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
CacheJSON	Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
ResultJSON	Result of output	N/A	String, case insensitive Length: 1 to 65535 characters	N/A
ResultCacheJSON	Result of Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters This column is supported only on Comware 7 in the current software version.	N/A
OrderJSON	Conditions of extra sorting	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
GroupJSON	Conditions of group aggregation	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
CalculateJSON	Conditions of group calculation	N/A	String, case insensitive Length: 1 to 2048 characters	N/A

NTOP/PlatformTop

This table is used to get the platform top data.

XML structure

```
<NTOP>

Column name	Column description	Column type	Data type and restrictions	Remarks
leList	statistics.	structure	Exported statistics of real servers This column is supported only on Comware 7 in the current software version.	
RealServerName	Real server name	N/A	String, case-insensitive • Length: 1 to 63 characters This column is supported only on Comware 7 in the current software version.	N/A.
ServerFarmModuleList	Exported server farm statistics.	Data structure	Members include: Exported statistics of server farms This column is supported only on Comware 7 in the current software version.	N/A
ServeFarmName	Server farm name	N/A	String, case-insensitive. • Length: 1 to 63 characters This column is supported only on Comware 7 in the current software version.	N/A.
RealServeMemberModuleList	Exported real server member	Data structure	Members include: Exported statistics of real server members This column is supported only on Comware 7 in the current software version.	N/A
ServerFarm	Server farm name	N/A	String, case-insensitive • Length: 1 to 63 characters. This column is supported only on Comware 7 in the current software version.	N/A.
RealServer	Real server name	N/A	String, case-insensitive • Length: 1 to 63 characters This column is supported only on Comware 7 in the current software version.	N/A.
Port	Port number	N/A	Unsigned integer • Value range: 1 to 65535 This column is supported only on Comware 7 in the current software version.	N/A.

NTOP/AutoExportReports

This table contains report export configuration information.

XML structure

```
<NTOP>
  <AutoExportReports>
    <AutoExportReport>
      <Type></Type>
      <Subscriber></Subscriber>
      <Period></Period>
      <ExportTemplateName></ExportTemplateName>
      <EmailServer></EmailServer>
      <EmailRecipients></EmailRecipients>
    </AutoExportReport>
  </AutoExportReports>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	AutoExportReports
Table type	Multi-instance table
Row name	AutoExportReport
Restrictions	Only period export module static info can be gotten by this table.

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Type	Type of the subscriber	Index	Enumeration: • **0**—Local • **1**—Email	N/A
Period	Export frequency	Index	Enumeration: • **1**—Hour • **2**—Day • **3**—Week • **4**—Month • **5**—Quarter • **6**—Year	N/A
ExportTemplateName	Export template name	Index	String, case-insensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters This column is supported only on Comware 7 in the current software version.	
ExportTemplateName	Export template name	N/A	String, case-insensitive Length: 1 to 63 characters This column is supported only on Comware 9 in the current software version.	N/A
Subscriber	Email address for exporting reports	Index	String, case-sensitive Length: 3 to 63 characters This column is supported only on Comware 7 in the current software version.	N/A
EmailServer	Email server name	Index	case-insensitive. Length: 1 to 63 characters. This column is supported only on Comware 9 in the current software version.	This column has validity in subscriber process. You must configure if the type is Email.
EmailRecipients	Email address for exporting reports	Index	String, case-sensitive. Length: 3 to 303 characters. This column is supported only on Comware 9 in the current software version.	You can configure null if the type is Email.

NTOP/ReportFileList

This table contains exported report file list.

XML structure

```
<NTOP>
  <ReportFileList>
    <ReportFile>
     <UserID></UserID>
```

```
      <ID></ID>
      <ContextID></ContextID>
      <VsysID></VsysID>
      <FileName></FileName>
      <CreateTime></CreateTime>
      <Size></Size>
    </ReportFile>
  </ReportFileList>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	ReportFileList
Table type	Multi-instance table
Row name	ReportFile
Restrictions	Only exported report file list can be obtained by this table. This table is supported only on Comware 9 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the exported report file	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CreateTime	Creation time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Size	Size of the file	N/A	Unsigned Long. Value range: 0 to 2^64 -1 (bytes).	N/A
UserID	User ID	Index	Unsigned integer.	N/A
ID	File ID	Index	Unsigned integer.	N/A
ContextID	Context ID	N/A	Unsigned integer. Value range: 0 to 65535. Value 0, 1, or null represents the default context.	N/A
VsysID	vSystem ID	N/A	Unsigned integer. Value range: 0 to 4095. Value 0, 1, or null	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			represents the default vSystem.	

NTOP/CustomDisplayRules

This table contains the data range that can be obtained.

XML structure

```
<NTOP>
  <CustomDisplayRules>
    <CustomDisplayRule>
      <DataRange></DataRange>
    </CustomDisplayRule>
  </CustomDisplayRules>
</NTOP>
```

Table description

Item	Description
Feature name	NTOP
Table name	CustomDisplayRules
Table type	Multi-instance table
Row name	CustomDisplayRule
Restrictions	This table is supported only on Comware 9 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions
DataRange	Data range	N/A	Enumeration: • **0**—All vSystems. • **1**—The current vSystem.

NTOP/AuditLog

This table contains AuditLog information.

XML structure

```
<NTOP>
  <AuditLog>
    <Log>
      <ID></ID>
      <LogType></LogType>
      <UserID></UserID>

Table description

Item	Description
Feature name	NTOP
Table name	AuditLog
Table type	Multi-instance table
Row name	Log
Restrictions	This table is supported only on Comware 7 in the current software version.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Log ID	Index	Unsigned integer Value range: 1 to 2^{32}-1	N/A
LogType	Log Type	Index	Enumeration: • **1**—IM • **2**—Mail • **3**—Community • **4**—SearchEngine • **5**—FileTrans • **6**—Entertainment • **7**—Other.	N/A
UserID	User ID	Index	Unsigned integer	Used to distinguish different requests
Page	Current page number	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
PageCount	Number of pages to display	N/A	Unsigned integer	N/A
CountPerPage	A number of logs per page	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterCount	The number of times the filter is obtained.	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
TimeFilter	Statistic time interval	Data structure	Members include: • StartTime • EndTime	N/A
StartTime	Start statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End statistic time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
Time	Log time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
Action	Log handling Action	N/A	Unsigned integer Value range: 1 to 2^{32}-1	N/A
User	User of the Log	Data structure	String, case insensitive Length:1 to 55 characters	IPv4 or IPv6 address.
UserGroup	UserGroup of the Log	N/A	String: Length:1 to 63 characters Case insensitive	N/A
SrcIPAddr	Source IP Address	N/A	String, case insensitive Length:1 to 46 characters	IPv4 or IPv6 address.
DestIPAddr	Dest IP Address	N/A	String, case insensitive Length:1 to 46 characters	N/A
Terminal	Terminal	N/A	String, case insensitive Length:1 to 31 characters	N/A
System	System	N/A	String, case insensitive Length:1 to 31 characters	N/A
Application	Application	N/A	The application is defined By AUDIT/AppCategoryMembers table.	If there is no aplication in the AUDIT/AppCategoryMembers table,it will be represented by ApplicationName.
ApplicationName	Application Name	N/A	String, case insensitive Length: 1 to 63 characters	N/A
Behavior	Behavior	N/A	Unsigned integer Value range: 0 to 2^{32}-1. The Behavior is defined By AUDIT/Behaviors table	N/A
Account	Account	N/A	String, case insensitive Length:1 to 31 characters	If LogType is 2 and 4,This column dose not exist.
Content	Content	N/A	String, case insensitive Length:1 to 511 characters	If LogType is 3,This column dose not exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
Sender	Sender	N/A	String, case insensitive Length:1 to 63 characters	This column only exists when the LogType is 4.
Recipient	Recipient	N/A	String, case insensitive Length:1 to 127 characters	This column only exists when the LogType is 4.
Theme	Theme	N/A	String, case insensitive Length:1 to 127 characters	This column only exists when the LogType is 4.
FileName	FileName	N/A	String, case insensitive Length:1 to 63 characters	This column only exists when the LogType is 3.
FileSize	FileSize	N/A	String, case insensitive Length:1 to 15 characters	This column only exists when the LogType is 2.
Keyword	Keyword	N/A	String, case insensitive Length:1 to 95 characters	This column only exists when the LogType is 2.
KeywordGroup	Keyword Group	N/A	String, case insensitive Length:1 to 63 characters	This column only exists when the LogType is 2.
GroupValue	GroupValue	Data structure	Members include: • Account • Content • Sender • Recipient • Theme • FileName • Keyword • KeywordGroup	N/A
Account	Account	N/A	String, case insensitive Length:1 to 31 characters	N/A
Content	Content	N/A	String, case insensitive Length:1 to 511 characters	N/A
Sender	Sender	N/A	String, case insensitive Length:1 to 31 characters	N/A
Recipient	Recipient	N/A	String, case insensitive Length:1 to 127 characters	N/A
Theme	Theme	N/A	String, case insensitive Length:1 to 127 characters	N/A
FileName	FileName	N/A	String, case insensitive Length:1 to 63 characters	N/A.
Keyword	Keyword	N/A	String, case insensitive Length:1 to 95 characters	N/A
KeywordGroup	Keyword Group	N/A	String, case insensitive Length:1 to 63 characters	N/A
VNI	Vxlan ID	N/A	Unsigned integer Value range: 0 to 2^{32-1}	N/A
VlanID	Vlan ID	N/A	Unsigned integer Value range: 0 to 2^{32-1}	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcLocation	Source location	N/A	String, case insensitive Length:1 to 127 characters	N/A
SrcLocationCN	Source location chinese	N/A	String, case insensitive Length:1 to 127 characters	N/A
DstLocation	Destination location	N/A	String, case insensitive Length:1 to 127 characters	N/A
DstLocationCN	Destination location chinese	N/A	String, case insensitive Length:1 to 127 characters	N/A
TotalCount	Total Count of the Log.	N/A	Unsigned integer Value range: 0 to 2^{32}-1	N/A
FilterTotalCount	The total number of entries found according to the conditions	N/A	Unsigned integer Value range: 0 to 2^{32}-1	N/A
IsActualNum	Whether the TotalCount is the actual total number of logs	N/A	Boolean: • True • false	N/A
CacheJSON	Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters	N/A
ResultCacheJSON	Result of Cache JSON	N/A	String, case insensitive Length: 1 to 2048 characters	N/A

NTOP/UserStatistics

This table statistics the number of users of various types of log in the specified time.

XML structure

```
<NTOP>
  <UserStatistics>
    <Statistics>
      <User></User>
      <UserGroup></UserGroup>
      <UserID></UserID>

Comware 7 NTOP NETCONF XML API Error Message Reference

Ntop/PersistDiskCfg

Message	Explanation
Failed to set the usage limit because the system could not bring the storage usage below the limit. 操作失败，上限值低于当前已用值。	The specified usage limit value is less than the storage usage. 当配置的存储空间小于当前已用空间提示

Ntop /PlatformLogAction

Message	Explanation
Failed to export logs due to insufficient storage space. 设备空间不足，导出失败。	The size of the log file exported is larger than the storage space. 导出的日志文件大小大于设备空间大小。
Failed to export logs. Please check whether the service is enabled. 文件导出失败，请检查业务功能是否已启用。	The service may not start (cannot get the register information). 相关业务没有启动（无法获取注册信息）。
Failed to decompress file. 解压缩失败。	Decompressing file failed. 文件解压失败。
Failed to verify the file. 文件校验失败。	The log file exported is modified. 导出的日志文件被修改。
Failed to import logs. Please check whether the service is enabled. 文件导入失败，请检查业务功能是否已启用。	The service may not start (cannot get the register information). 相关业务没有启动（无法获取注册信息）。

NTP

NTP/Clients

This table contains NTP client information.

XML structure

```
<NTP>
  <Clients>
    <Client>
      <Service></Service>
      <VRF></VRF>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <HostName></HostName>
      <HostMode></HostMode>
      <IfIndex></IfIndex>
      <KeyID></KeyID>
      <Version></Version>
      <Priority></Priority>
      <MaxPollInterval></MaxPollInterval>
      <MinPollInterval></MinPollInterval>
    </Client>
  </Clients>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: • **1**—NTP**.** • **2**—SNTP.	N/A
VRF	VRF	Index	String. Length: 0 to 31 characters.	It can be empty when it represents a public VRF instance.
AddressType	Address type.	Index	Enumeration: • **1**—IPv4 • **2**—IPv6	N/A
IpAddress	Remote IPv4 or IPv6 address.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1::1.\ HostName and IP address cannot be specified at the same time.
HostName	Host name	Index	String. Length: 1 to 253 characters.	HostName and IP address cannot be specified at the same time .
HostMode	Client mode	Index	Enumeration: • **1**—Symmetric active. • **3**—Client.	The symmetric active mode is available only for NTP.
IfIndex	Source interface index.	N/A	Unsigned integer.	This column supports only Layer 3 interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column specifies the key used for calculating the packet digest when the local end sends NTP messages to the peer.
Version	NTP version	N/A	Unsigned integer. Value range: 1 to 4 Default value: 4	This column is available only for IPv4 address entries, and not available for IPv6 address entries.
Priority	Whether the specified peer is the first choice under the same condition.	N/A	Boolean: • true. • false (default).	Priority true is available only for NTP.
MaxPollInterval	Maximum polling interval	N/A	Unsigned integer. Value range: 4 to 17, in seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			NTP Default value: 10. SNTP Default value: 6	
MinPollInterval	Minimum polling interval	N/A	Unsigned integer. Value range: 4 to 17, in seconds. NTP Default value: 6 SNTP Default value: 6	N/A

NTP/AuthenticationKey

This table contains information about NTP authentication.

XML structure

```
<NTP>
  <AuthenticationKey>
    <Authentication>
      <Service></Service>
      <KeyID></KeyID>
      <AuthMode></AuthMode>
      <AuthKey></AuthKey>
      <AclNumber></AclNumber>
      <IPv6AclNumber></IPv6AclNumber>
      <Reliable></Reliable>
    </Authentication>
  </AuthenticationKey>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	AuthenticationKey
Table type	Multi-instance table
Row name	Authentication
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: • **1**—NTP. • **2**—SNTP.	N/A
KeyID	Key ID	Index	Unsigned integer. Value range: 1 to 4294967295.	This column is used to identify an authentication key.
AuthMode	Authentication mode	N/A	Enumeration: • **1**—MD5**.** • **2**—HMAC-SHA-1. • **3**—HMAC-SHA-256. • **4**—HMAC-SHA-384. • **5**—HMAC-SHA-512.	For the create,merge and replace operations, if the AuthMode is not configured and the AuthKey is configured, the AuthMode value is equivalently set to 1.
AuthKey	Key content	N/A	String. Length: 1 to 32 characters.	Plain text key calculated by using the MD5 algorithm for authentication.
AclNumber	ACL Number	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AclNumber	IPv6 ACL Number	N/A	Unsigned integer. Value range: 2000 to 2999..	N/A
Reliable	Whether the key is a trusted key.	N/A	Boolean: • true. • false (default).	For the delete and remove operations, if both the AuthMode and AuthKey are configured, the Reliable value will be deleted.

NTP/Service

This table contains NTP service information.

XML structure

```
<NTP>

Table description

Item	Description
Feature name	NTP
Table name	Service
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPEnable	Whether to enable the NTP service.	N/A	Boolean: • true. • false (default).	N/A
SNTPEnable	Whether to enable the SNTP service.	N/A	Boolean: • true. • false (default).	N/A
NTPAuthEnable	Whether to enable the NTP authentication function.	N/A	Boolean: • true. • false (default).	N/A
SNTPAuthEnable	Whether to enable the SNTP authentication function.	N/A	Boolean: • true. • false (default).	N/A
NTPSource	NTP source interface index	N/A	Unsigned integer	Available only for Layer 3 interfaces.
NTPIpv6Source	Source interface for IPv6 NTP Packet	N/A	Unsigned integer.	If no source interface is specified for IPv6 NTP packet the device automatically selects a source IPv6 address for the IPv6 NTP packets.For more information see RFC 3484.
NTPMaxDynamicSession	Maximum number of dynamic NTP sessions	N/A	Unsigned integer Value range: 0 to 100 Default: 100	The device can have a maximum of 128 concurrent associations, including static associations and dynamic associations.
NTPDscp	DSCP value for IPv4 NTP packets.	N/A	Unsigned integer. Value range: 0 to 63. Default: 48	The DSCP value is included in the ToS field of an IPv4 packet to identify the packet priority.
NTPIpv6Dscp	DSCP value for IPv6 NTP packets.	N/A	Unsigned integer. Value range: 0 to 63. Default: 56	The DSCP value is included in the Traffic Class field of an IPv6 packet to identify the packet priority.
NTPTimeOffsetThreshold	NTP time-offset	N/A	Options include: • LogThreshold	By default, when the time offset between an NTP

Column name	Column description	Column type	Data type and restrictions	Remarks
	thresholds for log and trap outputs.		• TrapThreshold	client and its reference source exceeds 128 ms, the NTP client synchronizes its time to its reference source.
LogThreshold	NTP time-offset thresholds for log output.	N/A	Unsigned integer. Value range: 128 to 60000	N/A
TrapThreshold	NTP time-offset thresholds for trap output.	N/A	Unsigned integer. Value range: 128 to 60000	N/A
SNTPTimeOffsetThreshold	SNTP time-offset thresholds for log and trap outputs.	Data structure	Options include: • LogThreshold • TrapThreshold	By default, when the time offset between an SNTP client and its reference source exceeds 128 ms, the SNTP client synchronizes its time to its reference source.
LogThreshold	SNTP time-offset thresholds for log output.	N/A	Unsigned integer. Value range: 128 to 60000	N/A
TrapThreshold	SNTP time-offset thresholds for trap output.	N/A	Unsigned integer. Value range: 128 to 60000	N/A
NTPAcl	Right for peer devices to access the NTP services on the local device.	N/A	Options include: • PeerAcl • ServerAcl • SyncAcl • QueryAcl • PeerAclName • ServerAclName • SyncAclName • QueryAclName	N/A
PeerAcl	Allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
ServerAcl	Allows time requests and NTP control queries from a peer device, but does not allow the local	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	device to synchronize itself to a peer device.			
SyncAcl	Allows only time requests from a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
QueryAcl	Allows only NTP control queries from a peer device to the local device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
PeerAclName	Specifies the peer access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The peer access right allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
ServerAclName	Specifies the server access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The server access right allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
SyncAclName	Specifies the synchronization access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The synchronization access right allows only time requests from a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
QueryAclName	Specifies the query access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The query access right allows only NTP control queries from a peer device to the local device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
NTPIpv6Acl	Right for peer devices to access the NTP services on the local device.	N/A	Members include: • PeerAcl • ServerAcl • SyncAcl • QueryAcl • PeerAclName	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• ServerAclName • SyncAclName • QueryAclName	
PeerAcl	Allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
ServerAcl	Allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
SyncAcl	Allows only time requests from a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
QueryAcl	Allows only NTP control queries from a peer device to the local device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
PeerAclName	Specifies the peer access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The peer access right allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
ServerAclName	Specifies the server access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The server access right allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
SyncAclName	Specifies the synchronizatio	N/A	String, case insensitive.	The synchronization access right allows only

Column name	Column description	Column type	Data type and restrictions	Remarks
	n access right and name of the IPv6 ACL applied for this access right.		Length: 1 to 63 characters.	time requests from a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
QueryAclName	Specifies the query access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The query access right allows only NTP control queries from a peer device to the local device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
NoQuery	Disable the NTP control queries permission.	N/A	Boolean: • true. • false (default).	The column provides a way to turn off NTP control query function in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).
NTPTimeServer	Enable the NTP time server	N/A	Boolean: • true • false	The column provides a way to turn off NTP time server in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).
NTPIpv6TimeServer	Enable the NTP Ipv6 time server	N/A	Boolean: • true • false	The column provides a way to turn off NTP Ipv6 time server in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).

NTP/RefClocks

This table contains NTP reference clock information.

XML structure

```
<NTP>
  <RefClocks>
    <RefClock>
      <RefID></RefID>
      <Stratum></Stratum>
    </RefClock>
  </RefClocks>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	RefClocks
Table type	Multi-instance table
Row name	RefClock
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RefID	Reference Clock ID.	Index	String, dotted decimal notation 127.127.1.u, where u is in the range of 0 to 3.	N/A
Stratum	Stratum level of the local clock.	N/A	Unsigned integer. Value range: 1 to 15.	A lower stratum level represents a higher clock accuracy.

NTP/MulticastClients

This table contains NTP multicastclients information.

XML structure

```
<NTP>
  <MulticastClients>
    <MulticastClient>
      <IfIndex></IfIndex>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
    </MulticastClient>
  </MulticastClients>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	MulticastClients
Table type	Multi-instance table

Item	Description
Row name	MulticastClient
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
AddressType	Address type	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
IpAddress	Remote IPv4 or IPv6 address.	Index	IPv4: String, dotted decimal notation. Default: 224.0.1.1. IPv6: Hexadecimal string, colon-separated.	N/A

NTP/MulticastServers

This table contains NTP multicastservers information.

XML structure

```
<NTP>
  <MulticastServers>
    <MulticastServer>
      <IfIndex></IfIndex>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <KeyID></KeyID>
      <Ttl></Ttl>
      <Version></Version>
    </MulticastServer>
  </MulticastServers>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	MulticastServers
Table type	Multi-instance table
Row name	MulticastServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
AddressType	Address type	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
IpAddress	Remote IPv4 or IPv6 address.	Index	Unsigned integer. Value range: IPv4 or IPv6.Default value: 224.0.1.1	N/A
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	If this parameter is not specified, the local device cannot synchronize the multicast client with authentication enabled.
Ttl	Lifetime of multicast packets.	N/A	Unsigned integer. Value range: 1 to 255. Default value: 16.	N/A
Version	NTP version number.	N/A	Unsigned integer. Value range: 1 to 4. Default value: 4.	N/A

NTP/Interfaces

This table contains NTP interfaces information.

XML structure

```
<NTP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Ipv4Inbound></Ipv4Inbound>
      <Ipv6Inbound></Ipv6Inbound>
      <BroadcastClient>
        <Enable></Enable>
      </BroadcastClient>
      <BroadcastServer>
        <Enable></Enable>
        <KeyID></KeyID>
        <Version></Version>
      </BroadcastServer>
    </Interface>
  </Interfaces>
</NTP>
```

Table description

Item	Description

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
Ipv4Inbound	Enable an interface to receive NTP	N/A	Boolean: • true (default). • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	messages			
Ipv6Inbound	Enable an interface to receive NTP messages.	N/A	Boolean: • true (default). • false.	N/A
BroadcastClient	Configures the device to operate in NTP broadcast client mode.	N/A	Options include: • Enable.	The device listens to NTP messages sent by the NTP broadcast server and is synchronized based on the received NTP messages.
Enable	Enables broadcast client mode.	N/A	Boolean: • true. • false (default)	N/A
BroadcastServer	Configure the device to operatein NTP broadcast server mode	N/A	Options include: • Enable • KeyID • Version	N/A
Enable	Enables broadcast server mode.	N/A	Boolean: • true . • false (default) .	N/A
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	If this parameter is not specified, the local device cannot synchronize the broadcast client with authentication enabled.
Version	NTP version number	N/A	Unsigned integer. Value range: 1 to 4. Default: 4.	N/A

NTP/SNTPInterfaces

This table contains SNTP interfaces information.

XML structure

```
<NTP>
  <SNTPInterfaces>
    <SNTPInterface>
      <IfName></IfName>
      <BroadcastClient>
        <Enable></Enable>
      </BroadcastClient>
    </SNTPInterface>
  </SNTPInterfaces>
</NTP>
```

      <Priority></Priority>
      <MaxPollInterval></MaxPollInterval>
      <MinPollInterval></MinPollInterval>
    </Client>
  </Clients>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: • **1**—NTP. • **2**—SNTP.	N/A
VRF	VRF	Index	String. Length: 0 to 31 characters.	It can be empty when it represents a public VRF instance.
AddressType	Address type.	Index	Enumeration: • **1**—IPv4 • **2**—IPv6	N/A
IpAddress	Remote IPv4 or IPv6 address.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1::1. HostName and IP address cannot be specified at the same time.
HostName	Host name	Index	String. Length: 1 to 253 characters.	HostName and IP address cannot be specified at the same time .
HostMode	Client mode	Index	Enumeration: • **1**—Symmetric active. • **3**—Client.	The symmetric active mode is supported only for NTP.
IfIndex	Source interface index.	N/A	Unsigned integer.	This column supports only Layer 3 interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column specifies the key used for calculating the packet digest when the local end sends NTP messages to the peer.
Version	NTP version	N/A	Unsigned integer. Value range: 1 to 4.	This column is available only for IPv4 address entries, and not available for IPv6 address entries.
Priority	Whether the specified peer is the first choice under the same condition.	N/A	Boolean: • true. • false.	Priority true is available only for NTP.
MaxPollInterv	Maximum	N/A	Unsigned integer.	Available only for NTP

Column name	Column description	Column type	Data type and restrictions	Remarks
al	polling interval		Value range: 4 to 17, in seconds.	(not available for SNTP).
MinPollInterval	Minimum polling interval	N/A	Unsigned integer. Value range: 4 to 17, in seconds.	Available only for NTP (not available for SNTP).

NTP/AuthenticationKey

This table contains information about NTP authentication.

XML structure

```
<NTP>
  <AuthenticationKey>
    <Authentication>
      <Service></Service>
      <KeyID></KeyID>
      <AuthMode></AuthMode>
      <AuthKey></AuthKey>
      <AclNumber></AclNumber>
      <IPv6AclNumber></IPv6AclNumber>
      <Reliable></Reliable>
    </Authentication>
  </AuthenticationKey>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	AuthenticationKey
Table type	Multi-instance table
Row name	Authentication
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: • **1**—NTP**.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—SNTP.	
KeyID	Key ID	Index	Unsigned integer. Value range: 1 to 4294967295.	This column is used to identify an authentication key.
AuthMode	Authentication mode	N/A	Enumeration: • **1**—MD5. • **2**—HMAC-SHA-1. • **3**—HMAC-SHA-256. • **4**—HMAC-SHA-384. • **5**—HMAC-SHA-512.	For the create,merge and replace operations, if the AuthMode is not configured and the AuthKey is configured, the AuthMode value is equivalently set to 1.
AuthKey	Key content	N/A	String. Length: 1 to 32 characters.	Plain text key calculated by using the MD5 algorithm for authentication.
AclNumber	ACL Number	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AclNumber	IPv6 ACL Number	N/A	Unsigned integer. Value range: 2000 to 2999..	N/A
Reliable	Whether the key is a trusted key.	N/A	Boolean: • true. • false.	For the delete and remove operations, if both the AuthMode and AuthKey are configured, the Reliable value will be deleted.

NTP/Service

This table contains NTP service information.

XML structure

```

Table description

Item	Description
Feature name	NTP
Table name	Service
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPEnable	Whether to enable the NTP service.	N/A	Boolean: • true. • false.	N/A
SNTPEnable	Whether to enable the SNTP service.	N/A	Boolean: • true. • false.	N/A
NTPAuthEnable	Whether to enable the NTP authentication function.	N/A	Boolean: • true. • false.	N/A
SNTPAuthEnable	Whether to enable the SNTP authentication function.	N/A	Boolean: • true. • false.	N/A
NTPSource	NTP source interface index.	N/A	Unsigned integer.	Available only for Layer 3 interfaces.
NTPIpv6Source	Specifies the source interface of IPv6 NTP Packet	N/A	Unsigned integer.	If the source interface of the IPv6 NTP packet is not specified, the device automatically selects the source IPv6 address of the packet. For details, see RFC 3484.
NTPMaxDynamicSession	Maximum number of dynamic NTP sessions.	N/A	Unsigned integer. Value range: 0 to 100.	The device can have a maximum of 128 concurrent associations, including static associations and dynamic associations.
NTPDscp	DSCP value for IPv4 NTP packets.	N/A	Unsigned integer. Value range: 0 to 63.	The DSCP value is included in the ToS field of an IPv4 packet to identify the packet priority.
NTPIpv6Dscp	DSCP value for IPv4 NTP packets.	N/A	Unsigned integer. Value range: 0 to 63.	It is used to reflect the priority level of the message itself and determine the priority of message transmission.
NTPTimeOffsetThreshold	NTP time-offset thresholds for log and trap outputs.	N/A	Options include: • LogThreshold. • TrapThreshold.	By default, when the time offset between an NTP client and its reference source exceeds 128 ms, the NTP client synchronizes its time to its reference source.
LogThreshold	NTP time-offset thresholds for	N/A	Unsigned integer. Value range: 128 to 60000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	log and trap outputs.			
TrapThreshold	NTP time-offset thresholds for trap outputs.	N/A	Unsigned integer. Value range: 128 to 60000.	N/A
SNTPTimeOffsetThreshold	SNTP time-offset thresholds for log and trap outputs.	Data structure	Options include: • LogThreshold. • TrapThreshold.	By default, when the time offset between an SNTP client and its reference source exceeds 128 ms, the SNTP client synchronizes its time to its reference source.
LogThreshold	SNTP time-offset thresholds for log output.	N/A	Unsigned integer. Value range: 128 to 60000.	N/A
TrapThreshold	SNTP time-offset thresholds for trap outputs.	N/A	Unsigned integer. Value range: 128 to 60000.	N/A
NTPAcl	Right for peer devices to access the NTP services on the local device.	N/A	Options include: • PeerAcl. • ServerAcl. • SyncAcl. • QueryAcl. • PeerAclName • ServerAclName • SyncAclName • QueryAclName	N/A
PeerAcl	Allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
ServerAcl	Allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
SyncAcl	Allows only time requests from a peer	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	device.			
QueryAcl	Allows only NTP control queries from a peer device to the local device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
PeerAclName	Specifies the peer access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The peer access right allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
ServerAclName	Specifies the server access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The server access right allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
SyncAclName	Specifies the synchronization access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The synchronization access right allows only time requests from a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
QueryAclName	Specifies the query access right and name of the ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The query access right allows only NTP control queries from a peer device to the local device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
NTPIpv6Acl	Right for peer devices to access the NTP services on the local device.	N/A	Options include: • PeerAcl. • ServerAcl. • SyncAcl. • QueryAcl. • PeerAclName • ServerAclName • SyncAclName • QueryAclName	N/A
PeerAcl	Allows time requests and NTP control queries from a	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	peer device and allows the local device to synchronize itself to a peer device.			
ServerAcl	Allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
SyncAcl	Allows only time requests from a peer device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
QueryAcl	Allows only NTP control queries from a peer device to the local device.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
PeerAclName	Specifies the peer access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The peer access right allows time requests and NTP control queries from a peer device and allows the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
ServerAclName	Specifies the server access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The server access right allows time requests and NTP control queries from a peer device, but does not allow the local device to synchronize itself to a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
SyncAclName	Specifies the synchronization access right and name of the IPv6 ACL applied for this access right.	N/A	String, case insensitive. Length: 1 to 63 characters.	The synchronization access right allows only time requests from a peer device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
QueryAclName	Specifies the query access	N/A	String, case insensitive.	The query access right allows only NTP control

Column name	Column description	Column type	Data type and restrictions	Remarks
	right and name of the IPv6 ACL applied for this access right.		Length: 1 to 63 characters.	queries from a peer device to the local device. The ACL name must start with a letter, and to avoid confusion, it cannot be **all**.
NoQuery	Disable the NTP control queries permission.	N/A	Boolean: • true • false	The column provides a way to turn off NTP control query function in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).
NTPTimeServer	Enable the NTP time server	N/A	Boolean: • true • false	The column provides a way to turn off NTP time server in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).
NTPIpv6TimeServer	Enable the NTP Ipv6 time server	N/A	Boolean: • true • false	The column provides a way to turn off NTP Ipv6 time server in addition to the existing four restrictions(PeerAcl/ServerAcl/SyncAcl/QueryAcl).

NTP/RefClocks

This table contains NTP reference clock information.

XML structure

```
<NTP>
  <RefClocks>
    <RefClock>
      <RefID></RefID>
      <Stratum></Stratum>
    </RefClock>
  </RefClocks>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	RefClocks
Table type	Multi-instance table
Row name	RefClock
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RefID	Reference Clock ID.	Index	String, dotted decimal notation 127.127.1.u, where u is in the range of 0 to 3.	N/A
Stratum	Stratum level of the local clock.	N/A	Unsigned integer. Value range: 1 to 15.	A lower stratum level represents a higher clock accuracy.

NTP/Status

This table contains NTP status information.

XML structure

```
<NTP>
  <Status>
    <NTPSynchronized></NTPSynchronized>
    <SNTPSynchronized></SNTPSynchronized>
  </Status>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	Status
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPSynchronized	Whether the NTP clock has been synchronized.	N/A	Boolean: • true. • false.	N/A
SNTPSynchronized	Whether the SNTP clock has been	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	synchronized			

NTP/MulticastClients

This table contains NTP multicastclients information.

XML structure

```
<NTP>
  <MulticastClients>
    <MulticastClient>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
    </MulticastClient>
  </MulticastClients>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	MulticastClients
Table type	Multi-instance table
Row name	MulticastClient
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
AddressType	Address type	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—IPv4. • **2**—IPv6.	
IpAddress	Remote IPv4 or IPv6 address.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A

NTP/MulticastServers

This table contains NTP multicastservers information.

XML structure

```
<NTP>
  <MulticastServers>
    <MulticastServer>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <KeyID></KeyID>
      <Ttl></Ttl>
      <Version></Version>
    </MulticastServer>
  </MulticastServers>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	MulticastServers
Table type	Multi-instance table
Row name	MulticastServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
AddressType	Address type	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
IpAddress	Remote IPv4 or IPv6 address.	Index	Unsigned integer. Value range: IPv4 or IPv6.	N/A
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	If this parameter is not specified, the local device cannot synchronize the multicast client with authentication enabled.
Ttl	Lifetime of multicast packets.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Version	NTP version number.	N/A	Unsigned integer. Value range: 1 to 4.	N/A

NTP/Interfaces

This table contains NTP interfaces information.

XML structure

```
<NTP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Ipv4Inbound></Ipv4Inbound>
      <Ipv6Inbound></Ipv6Inbound>
      <BroadcastClient>
        <Enable></Enable>
      </BroadcastClient>
      <BroadcastServer>
```

```
        <Enable></Enable>
        <KeyID></KeyID>
        <Version></Version>
      </BroadcastServer>
    </Interface>
  </Interfaces>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference.*
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
Ipv4Inbound	Enable an interface to receive NTP messages.	N/A	Boolean: • true. • false.	N/A
Ipv6Inbound	Enable an interface to receive NTP messages	N/A	Boolean: • true. • false.	N/A
BroadcastClient	Configures the device to operate in NTP broadcast client mode.	N/A	Options include: • Enable.	The device listens to NTP messages sent by the NTP broadcast server and is synchronized based on the received NTP messages.
Enable	Enables broadcast client mode.	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BroadcastServer	Configure the device to operatein NTP broadcast server mode.	N/A	Options include: • Enable. • KeyID. • Version.	N/A
Enable	Enables broadcast server mode.	N/A	Boolean: • true. • false.	N/A
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	If this parameter is not specified, the local device cannot synchronize the broadcast client with authentication enabled.
Version	NTP version number.	N/A	Unsigned integer. Value range: 1 to 4.	N/A

NTP/SNTPInterfaces

This table contains SNTP interfaces information.

XML structure

```
<NTP>
  <SNTPInterfaces>
    <SNTPInterface>
      <IfName></IfName>
      <BroadcastClient>
        <Enable></Enable>
      </BroadcastClient>
    </SNTPInterface>
  </SNTPInterfaces>
</NTP>
```

Table description

Item	Description
Feature name	NTP
Table name	SNTPInterfaces
Table type	Multi-instance table

NTP

NTP/Clients

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.
IPv6 addresses are not supported. 不支持IPv6地址。	NTP IPv6 addresses are not supported with NETCONF.
Failed to create an NTP association, because the maximum number is reached. 创建失败，NTP会话超过最大数量。	The maximum number of NTP sessions is 128.
Failed to create an SNTP association, because the maximum number is reached. 创建失败，SNTP会话超过最大数量。	The maximum number of SNTP sessions is 128.
Failed to create an NTP association, because the maximum polling interval is smaller than the minimum polling interval. 创建失败，最大轮询时间间隔小于最小轮询时间间隔	Maximum polling interval must be greater than minimum polling interval.
Invalid address or host name. 无效的IP地址或主机名。	Invalid address or host name.
Cannot specify a VPN instance for a link-local address. 不能为链路本地地址指定VPN实例。	Can't specify a VPN instance for a link-local address.
Interface must be specified for the link-local address. 必须为链路本地地址指定接口。	An outgoing interface must be specified for the link-local address.
The host name and IP address cannot be specified at the same time. 主机名和IP 地址不能同时配置	Do not specify both the host name and IP address.

NTP/AuthenticationKey

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.

Input a valid authentication key string. 请输入有效的认证字符串。	Please input a valid authentication key string when set new configuration.
Failed to create an NTP authentication key, because the maximum number is reached. 创建失败，NTP认证密钥超过最大数量。	The maximum number of NTP authentication key is 128.
You cannot delete only the authentication mode or key string. 不能只删除认证模式或者认证字符串。	You have to delete authentication mode and authentication key string at the same time.
Failed to create an SNTP authentication key, because the maximum number is reached. 创建失败，SNTP认证密钥超过最大数量。	The maximum number of SNTP authentication key is 128.

NTP/Service

Message	Explanation
Do not enable SNTP and NTP at the same time. SNTP和NTP不能同时使能。	Do not enable SNTP and NTP at the same time.
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.
You cannot specify both an ACL number and an ACL name in one operation. ACL名称和ACL编号不能一起下发。	You cannot specify both an ACL number and an ACL name in an operation.

NTP/RefClocks

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
IP address of the local clock must be 127.127.1.x, where x is in the range of 0 to 3. 本地时钟的IP地址127.127.1.x，x的取值范围为0～3。	The range of valid IP address of the local clock is 127.127.1.0 to 127.127.1.3

NTP/Interfaces

Message	Explanation
Cannot configure broadcast server properties	Cannot configure broadcast server properties when the broadcast

when the broadcast server is down. 广播服务器关闭时无法配置广播服务器属性。	server is down.
Invalid IP address. 无效的地址。	Multicast IP address of the NTP packet. The default value is 224.0.1.1. The multicast addresses configured on the multicast client and multicast server must be the same.
This configuration is not supported on interfaces of this type. 此类型的接口不支持此配置	The NTP-enabled interfaces are Layer 3 interfaces, including Layer 3 Ethernet interfaces/sub-interfaces, Layer 3 aggregate interfaces/sub-interfaces, VLAN interfaces, tunnel interfaces, and Layer 3 RPR logical interfaces.

Creating (deleting) row objects is not supported in this table. 本表不支持创建（删除）行对象。	Interface table does not support row creation.

NTP/MulticastServers

Message	Explanation
IPv6 NTP multicast server mode does not support switching NTP version number. IPv6 NTP组播服务器模式不支持切换NTP版本号。	IPv6 NTP multicast server mode does not support switching NTP version number.
Invalid IP address. 无效的地址。	Multicast IP address of the NTP packet. The default value is 224.0.1.1. The multicast addresses configured on the multicast client and multicast server must be the same.
This configuration is not supported on interfaces of this type. 此类型的接口不支持此配置。	The NTP-enabled interfaces are Layer 3 interfaces, including Layer 3 Ethernet interfaces/sub-interfaces, Layer 3 aggregate interfaces/sub-interfaces, VLAN interfaces, tunnel interfaces, and Layer 3 RPR logical interfaces.

NTP/MulticastClients

Message	Explanation
Invalid IP address. 无效的地址。	Multicast IP address of the NTP packet. The default value is 224.0.1.1. The multicast addresses configured on the multicast client and multicast server must be the same.
This configuration is not supported on interfaces of this type. 此类型的接口不支持此配置。	The NTP-enabled interfaces are Layer 3 interfaces, including Layer 3 Ethernet interfaces/sub-interfaces, Layer 3 aggregate interfaces/sub-interfaces, VLAN interfaces, tunnel interfaces, and Layer 3 RPR logical interfaces.

OAP

OAP/Base

This table contains global OAP information.

XML structure

```
<OAP>
  <Base>
    <ClockSyncTime></ClockSyncTime>
    <MonitorTime></MonitorTime>
  </Base>
</OAP>
```

Table description

Item	Description
Feature name	OAP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ClockSyncTime	Clock synchronization timer in minutes	N/A	Unsigned integer. Value range: 0 to 1440. Default: 5. Setting it to 0 disables the feature.
MonitorTime	Client monitoring timer in seconds	N/A	Unsigned integer. Value range: 0 to 10. Default: 5. Setting it to 0 disables the timer.

OAP/Interfaces

This table contains OAP interface information.

XML structure

```
<OAP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Interface>
  </Interfaces>
</OAP>
```

Table description

Item	Description
Feature name	OAP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Enable	Whether the interface is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Table 1 Methods for specifying interfaces

Value	Operation status	Remarks
1	Single interface index	<IfIndex>1</IfIndex>
2	Single interface name	<IfIndex>GigabitEthernet0/0/2</IfIndex>

3	Multiple interface names	<IfIndex>GigabitEthernet0/0/2 to GigabitEthernet0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet1/0/3, Bridge-Aggregation1</IfIndex>
4	Interface range name	<IfIndex>RangeName</IfIndex>
5	Interface range name and interface names	<IfIndex>GigabitEthernet0/0/2 to GigabitEthernet0/0/3, GigabitEthernet1/0/2 to GigabitEthernet1/0/3, Bridge-Aggregation1</IfIndex>

OAP

OAP/Base

This table contains global OAP information.

XML structure

```
<OAP>
  <Base>
    <ClockSyncTime></ClockSyncTime>
    <MonitorTime></MonitorTime>
  </Base>
</OAP>
```

Table description

Item	Description
Feature name	OAP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table contains only global settings.

Columns

Column name	Column description	Column type	Data type and restrictions
ClockSyncTime	Clock synchronization timer in minutes	N/A	Unsigned integer. Value range: 0 to 1440. Default: 5. Setting it to 0 disables the feature.
MonitorTime	Client monitoring timer in seconds	N/A	Unsigned integer. Value range: 0 to 10. Default: 5. Setting it to 0 disables the timer.

OAP/Interfaces

This table contains OAP interface information.

XML structure

```
<OAP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <ClientIDList></ClientIDList>
    </Interface>
  </Interfaces>
</OAP>
```

Table description

Item	Description
Feature name	OAP

Table description

Item	Description
Feature name	OBJP
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
DestZone	Name of the destination zone	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65535.	If you set this column to 65535, the device automatically assigns the rule an ID. Can not set this column to 65535 when the operation is “repleace”.
InsID	Inserts this rule before the rule identified by this ID	N/A	Unassigned integer. Value range: 0 to 65535.	When you create or modify a rule, this column determines the place for the rule. If you do not specify this column or set this column to 65535, the rule is put behind all rules. If you set this column to the ID of an existing rule, the rule is inserted before the specified rule. If you set this column to the ID of an nonexistent rule, the operation fails.
Action	Action for the rule	N/A	Enumeration: • **1**—Deny. • **2**—Permit.	Required when you create a rule or modify a rule.
SrcIPv4Group	Name of the source IPv4 address object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Optional.
DestIPv4Group	Name of the destination IPv4 address object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Optional.
ServGroup	Name of the service object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Optional.
VRF	VRF name	N/A	String, case sensitive. Length: 1 to 31 characters.	Optional.
TimeRange	Name of the time range	N/A	String, case insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Enable	Whether to enable the rule	N/A	Boolean: • **true**—Enable (default). • **false**—Disable.	Optional.
Log	Whether to enable logging	N/A	Boolean: • **true**—Enable. • **false**—Disable (default).	Optional.
Counting	Whether to	N/A	Boolean:	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
	enable Counting		• **true**—Enable. • **false—Disable (default).**	
Comment	Description	N/A	String. Length: 1 to 127 characters.	Optional.
AppGrp	Name of the application group	N/A	String, case insensitive. Length: 1 to 63 characters.	'A-Z','a-z', '0-9', '_', and '-'are permitted, but 'invalid' and 'other' are prohibited.
App	Name of the application	N/A	String, case insensitive. Length: 1 to 63 characters.	'A-Z','a-z', '0-9', '_', and '-'are permitted, but 'invalid' and 'other' are prohibited.
Profile	Profile	N/A	String. Length: 1 to 100 characters.	N/A.

OBJP/IPv6Policies

This table contains IPv6 security zone pair object policy information.

XML structure

```
<OBJP>
  <IPv6Policies>
    <Policy>
      <SrcZone></SrcZone>
      <DestZone></DestZone>

Feature name	OBJP
Table name	IPv4RuleApp
Table type	Multi-instance table
Row name	RuleApp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
SrcZone	Name of the source security zone	Index	String, case insensitive. Length: 1 to 31 characters.
DestZone	Name of the destination security zone	Index	String, case insensitive. Length: 1 to 31 characters.
ID	Rule ID	Index	Unsigned integer. Value range: 0 to 65534.
Type	Type of application	Index	Enumeration: • **1**—Application group. • **2**—Application.
Name	Name of application	Index	String, case insensitive. Length: 1 to 31 characters.

OBJP/IPv6RuleSrcAddr

This table contains source address of IPv6 object policy rule information.

XML structure

```
<OBJP>
  <IPv6RuleSrcAddr>
    <RuleSrcAddr>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <ID></ID>
      <Type></Type>
      <Name></Name>
    </RuleSrcAddr>
  </IPv6RuleSrcAddr>
</OBJP>
```

Table description

Item	Description
Feature name	OBJP
Table name	IPv6RuleSrcAddr
Table type	Multi-instance table

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	The number of rules configured by the object policy reaches the upper limit. 对象策略配置的规则数达到上限。
Source IP address object group does not exist. 指定的源IP地址对象组不存在。	The object-group referenced by the IPv4 source address of the rule does not exist. 规则中IPv4源地址引用的对象组不存在。
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	The object-group type referenced by the IPv4 source address is not the IPv4 type. 规则中IPv4源地址引用的对象组类型不是IPv4。
Destination IP address object group does not exist. 指定的目的IP地址对象组不存在。	The object-group referenced by the IPv4 destination address of the rule does not exist. 规则中IPv4目的地址引用的对象组不存在。
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	The object-group type referenced by the IPv4 destination address is not the IPv4 type. 规则中IPv4目的地址引用的对象组类型不是IPv4。
Source IPv6 address object group does not exist. 指定的源IPv6地址对象组不存在。	The object-group referenced by the IPv6 source address of the rule does not exist. 规则中IPv6源地址引用的对象组不存在。
Illegal source IPv6 address object group type. 指定的源IPv6地址对象组类型不正确。	The object-group type referenced by the IPv6 destination address is not the IPv6 type. 规则中IPv6源地址引用的对象组类型不是IPv6。
Destination IPv6 address object group does not exist. 指定的目的IPv6地址对象组不存在。	The object-group referenced by the IPv6 destination address of the rule does not exist. 规则中IPv6目的地址引用的对象组不存在。
Illegal destination IPv6 address object group type. 指定的目的IPv6地址对象组类型不正确。	The object-group type referenced by the IPv6 destination address is not the IPv6 type. 规则中IPv6目的地址引用的对象组类型不是IPv6。
Service object group does not exist. 指定的服务对象组不存在。	The object-group referenced by the service of the rule does not exist. 规则中服务引用的对象组不存在。
Illegal service object group type. 指定的服务对象组类型不正确。	The object-group type referenced by the service is not the service type. 规则中服务引用的对象组类型不是服务类型。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	The time range name referenced by the rule does not exist. 规则中引用的时间段名称不存在。
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失	The source rule number specified when moving the rule is the same as the destination number. 移动规则时指定的源规则编号与目的编号一样。

败。	
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist. 移动规则时指定的源规则编号不存在。
The rule does not exist. Please create the rule before adding a comment. 由于指定的规则不存在，添加规则描述信息失败。	The rule number specified when adding rule comment information does not exist. 添加规则评审信息时指定的规则编号不存在。
Failed to insert the rule because the specified rule does not exist. 由于指定的规则不存在，规则插入失败。	Specifies that the rule number to be inserted is not created. 指定要插入的规则编号没有被创建。
Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the create operation to fail to create a rule. 没有指定规则动作导致create操作创建规则失败。
Failed to merge the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the merge operation to fail to create a rule. 没有指定规则动作导致merge操作创建规则失败。
Failed to replace the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the replace operation to fail to create a rule. 没有指定规则动作导致replace操作创建规则失败。
Failed to create the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the create operation to fail. 移动规则时指定的源规则编号与目的编号一样导致create操作失败。
Failed to merge the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the merge operation to fail. 移动规则时指定的源规则编号与目的编号一样导致merge操作失败。
Failed to replace the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the replace operation to fail. 移动规则时指定的源规则编号与目的编号一样导致replace操作失败。
Failed to create the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the create operation to fail. 移动规则时指定的源规则编号不存在导致create操作失败。
Failed to merge the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the merge operation to fail. 移动规则时指定的源规则编号不存在导致merge操作失败。
Failed to replace the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the replace operation to fail. 移动规则时指定的源规则编号不存在导致replace操作失败。
Can not use 'all' as time range name. 时间段名称不能为“all”。	The time range name referenced by the rule cannot be “all”. 规则引用的时间段名称不能为“all”。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	Object policy configuration rules reach the upper limit. 对象策略配置的规则达到上限。

If the action is set to "inspect", you must specify an inspect profile. 指定动作为Inspect时，必须指定Profile。	The profile name is not specified when the specified rule action is inspect. 指定规则动作为Inspect时没有指定Profile名称。
If the profile is specified, the action should be set to "inspect". 指定Profile时，必须指定动作为Inspect。	Rule action is not inspect when specifying profile name. 指定Profile名称时规则动作不是Inspect。
The app group does not exist. 指定的应用组不存在。	The application group referenced by the rule has not been created. 规则引用的应用组没有被创建。
The application does not exist. 指定的应用不存在。	The application referenced by the rule has not been created. 规则引用的应用没有被创建。
The app group and the application does not exist, the rule does not match packets. 指定的应用组和应用都不存在，该规则不会匹配报文。	The application group and application referenced by the rule have not been created. 规则引用的应用组和引用都没有被创建。
The application does not exist, the rule does not match packets. 指定的应用不存在，该规则不会匹配报文。	The application referenced by the rule has not been created. 规则引用的应用没有被创建。
The app group does not exist, the rule does not match packets. 指定的应用组不存在，该规则不会匹配报文。	The application group referenced by the rule has not been created. 规则引用的应用组没有被创建。
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	The application group or application name referenced by the rule is “invalid” or “other”. 规则引用的应用组或引用名称为“invalid“或“other”。
Failed to create the interzone policy because the policy number exceeds the upper limit. 由于已经达到域间策略个数上限，创建策略失败。	The number of interzone policy applications has reached the upper limit. 域间策略应用个数达到上限。
The object policy does not exist. 指定的对象策略不存在。	The specified object policy name was not created. 指定的对象策略名称没有创建。
The specified source zone doesn't exist. 指定的源安全域不存在。	The specified source zone name was not created. 指定的源安全域名称没有创建。
The specified destination zone doesn't exist. 指定的目的安全域不存在。	The specified destination zone name was not created. 指定的目的安全域名称没有创建。

OMS/RenameGroups

This table contains information about the rename object groups.

XML structure

```
<OMS>
  <RenameGroups>
    <Group>
      <Name></Name>
      <NewName></NewName>
      <Rename></Rename>
    </Group>
  </RenameGroups>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	RenameGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Object group name.	Index	String. Length: 1 to 63 characters.	N/A
NewName	New object group name.	N/A	String. Length: 1 to 63 characters.	Required.
Rename	Rename an object group.	N/A	This column must be empty.	Required.

OMS/ImportGroupObjects

This table contains information about importing group objects.

XML structure

```
<OMS>
  <ImportGroupObjects>
    <FileName></FileName>
    <GroupName></GroupName>
    <ObjectType></ObjectType>
    <StartLine></StartLine>
  </ImportGroupObjects>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	ImportGroupObjects
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the source .csv file to be imported.	N/A	String, case-insensitive. Length: 1 to 255 characters.	Required. The .csv file must use correct data format as required in the export template.
GroupName	Name of the object group.	N/A	String. Length: 1 to 63 characters.	Required.
ObjectType	Type of the object.	N/A	Type of the address object. Enumeration: • **0**—IPv4 host address. • **1**—IPv6 host address.	Required.
StartLine	Name of the object	N/A	Unsigned integer. Value range: 1 to 1048576.	Default: 1

OMS/ExportGroupObjectsTemplate

This table contains information about the group objects template.

XML structure

```
<OMS>
  <ExportGroupObjectsTemplate>
    <FileName></FileName>
    <ObjectType></ObjectType>
  </ExportGroupObjectsTemplate>
</OMS>
```

</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	IPv4Objs
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv4 address object group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the IPv4 address object	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the IPv4 address object	N/A	Enumeration: • **0**—Nested group. • **1**—Subnet. • **2**—Range. • **3**—Host address. • **4**—Host name. • **5**—User. • **6**—User Group. • **7**—Wildcard.	Required.
SubnetIPv4Address	IPv4 subnet address	N/A	String, dotted decimal notation.	Required when the **Type** column is **1**. It must be configured together with the **IPv4Mask** column.
IPv4Mask	IPv4 subnet mask	N/A	String, dotted decimal notation.	Required when the **Type** column is **1**. It must be configured together with the **SubnetIPv4Address** column.
IPv4WildcardAddress	IPv4 wildcard address	N/A	String, dotted decimal notation.	Required when the **Type** column is **7**.
IPv4WildcardMask	IPv4 wildcard mask	N/A	String, dotted decimal notation.	Required when the **Type** column is **7**.
StartIPv4Address	Start IPv4 address	N/A	String, dotted decimal notation.	Required when the **Type** column is **2**. It must be configured together with the **EndIPv4Address** column.
EndIPv4Address	End IPv4 address	N/A	String, dotted decimal notation.	Required when the **Type** column is **2**. It must be configured together with the **StartIPv4Address** column.
HostIPv4Address	IPv4 address of the host	N/A	String, dotted decimal notation.	Required when the **Type** column is **3**.
HostName	Host name	N/A	String, case-insensitive. Length: 1 to 253 characters. Fuzzy matching is performed if the name starts or ends with an asterisk (*). An asterisk is a wildcard. Asterisks cannot be in the middle of the name.	Required when the **Type** column is **4**.

Column name	Column description	Column type	Data type and restrictions	Remarks
NestedGroup	Name of the nested IPv4 address object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.
VRFName	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid only when the Type column is 4 and the HostName column is specified.
User	User	N/A	String. Length: 1 to 55 characters.	Required when the **Type** column is **5**.
UserDomain	User domain	N/A	String. Length: 1 to 255 characters.	N/A
UserGroup	User group	N/A	String. Length: 1 to 32 characters.	Required when the **Type** column is **6**.
UserGroupDomain	User group domain	N/A	String. Length: 1 to 255 characters.	N/A
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/IPv6Groups

This table contains IPv6 address object group information.

XML structure

```
<OMS>
  <IPv6Groups>
    <Group>
      <Name></Name>
      <Description></Description>
      <SecurityZone></SecurityZone>
    </Group>
  </IPv6Groups>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	IPv6Groups
Table type	Multi-instance table

Item	Description
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the IPv4 address object group	Index	String, case-insensitive. Length: 1 to 63 characters.
Description	Description for the IPv4 address object group	N/A	String. Length: 1 to 127 characters.
SecurityZone	Security zone name	N/A	String, Case-insensitive and contains no midline(-). Length: 1 to 31 characters.

OMS/IPv6Objs

This table contains IPv6 address object information.

XML structure

```
<OMS>
  <IPv6Objs>
    <Obj>
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <SubnetIPv6Address></SubnetIPv6Address>
      <IPv6PrefixLen></IPv6PrefixLen>
      <StartIPv6Address></StartIPv6Address>
      <EndIPv6Address></EndIPv6Address>
      <HostIPv6Address></HostIPv6Address>
      <HostName></HostName>
      <VRF></VRF>
      <NestedGroup></NestedGroup>
      <User></User>
      <UserDomain></UserDomain>
      <UserGroup></UserGroup>
      <UserGroupDomain></UserGroupDomain>
      <ObjDescription></ObjDescription>
      </Obj>
    </IPv6Objs>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	IPv6Objs
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv6 address object group	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the IPv6 address object	Index	Unsigned integer. Value range: 1 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the IPv6 address object	N/A	Enumeration: • **0**—Nested group. • **1**—Subnet. • **2**—Range. • **3**—Host address. • **4**—Host name. • **5**—User. • **6**—User Group,	Required.
SubnetIPv6Address	IPv6 subnet address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the **Type** column is **1**. It must be configured together with the **IPv6PrefixLen** column.
IPv6PrefixLen	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when **Subnet** the **Type** column is **1**. It must be configured together with the **SubnetIPv6Address** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIPv6Address	Start IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the **Type** column is **2**. It must be configured together with the **EndIPv6Address** column.
EndIPv6Address	End IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the **Type** column is **2**. It must be configured together with the **StartIPv6Address** column.
HostIPv6Address	IPv6 address of the host	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the **Type** column is **3**.
HostName	Host name	N/A	String. Length: 1 to 253 characters. Fuzzy matching is performed if the name starts or ends with an asterisk (*). An asterisk is a wildcard. Asterisks cannot be in the middle of the name.	Required when the **Type** column is **4**.
VRF	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid only when the Type column is 4 and the HostName column is specified.
NestedGroup	Name of the nested IPv6 address object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.
User	User	N/A	String. Length: 1 to 55 characters.	Required when the **Type** column is **5**.
UserDomain	User domain	N/A	String. Length: 1 to 255 characters.	N/A
UserGroup	User group	N/A	String. Length: 1 to 32 characters.	Required when the **Type** column is **6**.
UserGroupDomain	User group domain	N/A	String. Length: 1 to 255 characters.	N/A
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/ServGroups

This table contains service object group information.

XML structure

```
<OMS>
  <ServGroups>
    <Group>
      <Name></Name>
      <Description></Description>
    </Group>
  </ServGroups>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	ServGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the service object group	Index	String, case insensitive. Length: 1 to 63 characters.
Description	Description for the service object group	N/A	String. Length: 1 to 127 characters.

OMS/ServObjs

This table contains system-defined service object information.

XML structure

```
<OMS>
  <ServObjs>
    <Obj>
```

```
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <Protocol></Protocol>
      <StartSrcPort></StartSrcPort>
      <EndSrcPort></EndSrcPort>
      <StartDestPort></StartDestPort>
      <EndDestPort></EndDestPort>
      <ICMPType></ICMPType>
      <ICMPCode></ICMPCode>
      <NestedGroup></NestedGroup>
      <ObjDescription></ObjDescription>
    </Obj>
  </ServObjs>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	ServObjs
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the service object group	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the service object	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the service object	N/A	Enumeration: • **0**—Nested group. • **1**—Protocol. This type specifies protocols other than the listed ones. • **2**—ICMP (protocol number 1). • **3**—TCP (protocol number 6). • **4**—UDP (protocol number 17). • **5**—ICMPv6 (protocol number 58). • **6**—SCTP (protocol number 132).	Required.
Protocol	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **1**.
StartSrcPort	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **EndSrcPort** column.
EndSrcPort	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **StartSrcPort** column.
StartDestPort	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **EndDestPort** column.
EndDestPort	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **StartDestPort** column.
ICMPType	Type of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **2** or **5**. It must be configured together with the **ICMPCode** column.
ICMPCode	Code of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **2** or **5**. It must be configured together with the **ICMPType** column.
NestedGroup	Name of the nested service object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/UserServObjs

This table contains user-defined service object information.

XML structure

This type specifies protocols other than the listed ones. • **2**—ICMP (protocol number 1). • **3**—TCP (protocol number 6). • **4**—UDP (protocol number 17). • **5**—ICMPv6 (protocol number 58). • **6**—SCTP (protocol number 132).	Required.
Protocol	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **1**.
StartSrcPort	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **EndSrcPort** column.
EndSrcPort	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **StartSrcPort** column.
StartDestPort	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **EndDestPort** column.
EndDestPort	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **3 4** or **6**. It must be configured together with the **StartDestPort** column.

Column name	Column description	Column type	Data type and restrictions	Remarks
ICMPType	Type of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **2** or **5**. It must be configured together with the **ICMPCode** column.
ICMPCode	Code of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the **Type** column is **2** or **5**. It must be configured together with the **ICMPType** column.
NestedGroup	Name of the nested service object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/PortGroups

This table contains port object group information.

XML structure

```
<OMS>
  <PortGroups>
    <Group>
      <Name></Name>
      <Description></Description>
    </Group>
  </PortGroups>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	PortGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the port object group	Index	String, case insensitive. Length: 1 to 63 characters.
Description	Description for the port object group	N/A	String. Length: 1 to 127 characters.

OMS/PortObjs

This table contains port object information.

XML structure

```
<OMS>
  <PortObjs>
    <Obj>
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <StartPort></StartPort>
      <EndPort></EndPort>
      <NestedGroup></NestedGroup>
      <ObjDescription></ObjDescription>
    </Obj>
  </PortObjs>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	PortObjs
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the port object group	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the port object	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the port object	N/A	Enumeration: • **0**—Nested group. • **1**—Range.	Required.
StartPort	Start port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **1**. It must be configured together with the **EndPort** column.
EndPort	End port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the **Type** column is **1**. It must be configured together with the **StartPort** column.
NestedGroup	Name of the nested port object group	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/MACGroups

This table contains MAC object group information.

XML structure

```
<OMS>
  <MACGroups>
    <Group>
      <Name></Name>
      <Description></Description>
    </Group>
  </MACGroups>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	MACGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the MAC object group.	Index	String, case-insensitive. Length: 1 to 63 characters.
Description	Description for the MAC object group.	N/A	String. Length: 1 to 127 characters.

OMS/MACObjs

This table contains MAC object information.

XML structure

```
<OMS>
  <MACObjs>
    <Obj>
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <MACAddress></MACAddress>
      <NestedGroup></NestedGroup>
      <ObjDescription></ObjDescription>
    </Obj>
  </MACObjs>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	MACObjs

Item	Description
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the MAC object group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the MAC object.	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object ID.
Type	Type of the MAC object.	N/A	Enumeration: • **0**—Nested group. • **1**—MAC address.	Required.
MACAddress	MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. Required when the **Type** column is **1**.
NestedGroup	Name of the nested MAC object group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Required when the **Type** column is **0**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/DnsAging

This table contains information about the aging function of IP address obtained through DNS resolution.

XML structure

```
<OMS>
  <DnsAging>
    <Enable></Enable>
    <AgingTime></AgingTime>
  </DnsAging>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	DnsAging
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether the function is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Not enabled.	Required. Defalut: Not enable
AgingTime	Aging time value in minutes	N/A	Unsigned integer. Value range: 1 to 70000000.	The value of this column is valid if Enable is **true**. Defalut value: 120

OMS/IPv4Exclude

This table contains IPv4 exclude address information.

XML structure

```
<OMS>
  <IPv4Exclude>
    <Address>
      <Group></Group>
      <ID></ID>
      <ExcludeIPv4Address></ExcludeIPv4Address>
    </Address>
  </IPv4Exclude>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	IPv4Exclude

Item	Description
Table type	Multi-instance table
Row name	Address
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv4 address object group	Index	String. Length: 1 to 63 characters.	N/A
ID	ID of the IPv4 address object	Index	Unsigned integer. Value range: 0 to 4294967294.	N/A
ExcludeIPv4Address	IPv4 exclude address	N/A	String. Dotted decimal notation.	Required

OMS/IPv6Exclude

This table contains IPv6 exclude address information.

XML structure

```
<OMS>
  <IPv6Exclude>
    <Address>
      <Group></Group>
      <ID></ID>
      <ExcludeIPv6Address></ExcludeIPv6Address>
    </Address>
  </IPv6Exclude>
</OMS>
```

Table description

Item	Description
Feature name	OMS
Table name	IPv6Exclude
Table type	Multi-instance table
Row name	Address
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv6 address object group	Index	String. Length: 1 to 63 characters.	N/A
ID	ID of the IPv6 address object	Index	Unsigned integer. Value range: 1 to 4294967294.	N/A
ExcludeIPv6Address	IPv6 exclude address	N/A	Hexadecimal string. Colon-separated.	Required.

```

Table description

Item	Description
Feature name	OMS
Table name	IPv4Objs
Table type	Multi-instance table
Row name	Obj
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv4 address object group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the IPv4 address object	Index	Unsigned integer. Value range: 0 to 4294967294.	N/A
Type	Type of the IPv4 address object	N/A	Enumeration: • **0**—Nested group. • **1**—Subnet. • **2**—Range. • **3**—Host address. • **4**—Host name. • **5**—User. • 6—User Group. • 7—Wildcard.	N/A
SubnetIPv4Address	IPv4 subnet address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **1**.
IPv4Mask	IPv4 subnet mask	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **1**.
IPv4WildcardAddress	IPv4 wildcard address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **7**.
IPv4WildcardMask	IPv4 wildcard mask	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **7**.
StartIPv4Address	Start IPv4 address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **2**.
EndIPv4Address	End IPv4 address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **2**.

Column name	Column description	Column type	Data type and restrictions	Remarks
HostIPv4Address	IPv4 address of the host	N/A	String, dotted decimal notation.	The value of this column is valid if Type is **3**.
HostName	Host name	N/A	String, case-insensitive. Length: 1 to 253 characters. Fuzzy matching is performed if the name starts or ends with an asterisk (*). An asterisk is a wildcard. Asterisks cannot be in the middle of the name.	The value of this column is valid if Type is **4**.
NestedGroup	Name of the nested IPv4 address object group	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if Type is **0**.
VRFName	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid only when the Type column is 4 and the HostName column is specified.
User	User	N/A	String. Length: 1 to 55 characters.	The value of this column is valid if Type is **5**.
UserDomain	User domain	N/A	String. Length: 1 to 255 characters.	The value of this column is valid if Type is **5**.
UserGroup	User group	N/A	String. Length: 1 to 32 characters.	The value of this column is valid if Type is **6**.
UserGroupDomain	User group domain	N/A	String. Length: 1 to 255 characters.	The value of this column is valid if Type is **6**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

Table description

Item	Description
Feature name	OMS
Table name	ServObjs
Table type	Multi-instance table
Row name	Obj
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the service object group	Index	String. Length: 1 to 63 characters.	N/A
ID	ID of the service object	Index	Unsigned integer. Value range: 0 to 4294967294.	N/A
Type	Type of the service object	N/A	Enumeration: • **0**—Nested group. • **1**—Protocol. This type specifies protocols other than the listed ones. • **2**—ICMP (protocol number 1). • **3**—TCP (protocol number 6). • **4**—UDP (protocol number 17). • **5**—ICMPv6 (protocol number 58). • **6**—SCTP (protocol number 132).	Required.
Protocol	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **1**.
StartSrcPort	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
EndSrcPort	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
StartDestPort	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
EndDestPort	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.

Column name	Column description	Column type	Data type and restrictions	Remarks
ICMPType	Type of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **2** or **5**.
ICMPCode	Code of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **2** or **5**.
NestedGroup	Name of the nested service object group	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if Type is **0**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A

OMS/UserServObjs

This table contains user-defined service object information.

XML structure

```

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the service object group	Index	String. Length: 1 to 63 characters.	N/A
Description	Description for the service object group	N/A	String. Length: 1 to 127 characters.	N/A
ObjNum	Number of service objects	N/A	Unsigned integer.	N/A
InUse	Whether the service object group is in use	N/A	Boolean: • **true**—The service object group is in use. • **false**—The service object group is not in use.	N/A
ServiceType	Type of the service object group	N/A	Enumeration: • **0**—System defined service object group. • **1**—User defined service object group.	N/A
ObjList	List of service objects	Data structure	Members include: • ID. • Type. • Protocol. • StartSrcPort.. • EndSrcPort. • StartDestPort. • EndDestPort. • ICMPType. • ICMPCode. • NestedGroup.	N/A
ID	ID of the service object	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
Type	Type of the service object	N/A	Enumeration: • **0**—Nested group. • **1**—Protocol. This type	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
			specifies protocols other than the listed ones. • **2**—ICMP (protocol number 1). • **3**—TCP (protocol number 6). • **4**—UDP (protocol number 17). • **5**—ICMPv6 (protocol number 58). • **6**—SCTP (protocol number 132).	
Protocol	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **1**.
StartSrcPort	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
EndSrcPort	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
StartDestPort	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
EndDestPort	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	The value of this column is valid if Type is **3 4** or **6**.
ICMPType	Type of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **2** or **5**.
ICMPCode	Code of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	The value of this column is valid if Type is **2** or **5**.
NestedGroup	Name of the nested service object group	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if Type is **0**.
ObjDescription	Description for the object	N/A	String. Length: 1 to 127 characters.	N/A
AllGroupsCount	Number of service groups	N/A	Unsigned integer.	N/A
InSecpUse	Whether the service object group is used	N/A	Boolean: • **true**—The service	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	by Security policy		object group is used by Security policy. • **false**—The service object group is not used by Security policy.	
InNATUse	Whether the service object group is used by NAT	N/A	Boolean: • **true**—The service object group is used by NAT. • **false**—The service object group is not used by NAT.	N/A

OMS/GetIPv4ObjData

Message	Explanation
The object group name is used by an object group of different type. 存在同名不同类型的对象组。	Object group name is occupied by other types of object groups. 对象组名称被其他类型的对象组占用。
The default object group can't be modified. 系统定义对象组不能修改。	Modify system predefined object groups. 修改系统预定义的对象组。
The default object group can't be deleted. 系统定义对象组不能删除。	Delete system predefined object groups. 删除系统预定义的对象组。
Deleting the group failed: Wrong group type. 对象组类型不匹配。	The specified type is incorrect when deleting an object group. 删除对象组时指定类型错误。
This object group is already referenced. 对象组正在被使用。	Deleted object groups are referenced by other modules. 删除的对象组被其他模块引用。
The ID can't be automatically assigned. Please specify a valid ID. 自动分配的对象编号超出了范围，请指定一个有效的对象编号。	Create a rule without specifying a number, the number of internal assignments exceeds the maximum value. 不指定编号创建规则，内部分配的编号超过最大值。
An object group can't reference an object group of different type. 被嵌套对象组类型不一致。	Nested object group types are inconsistent with parent object group types. 嵌套的对象组类型与父对象组类型不一致。
Maximum number of reference hierarchy layers (5) already reached. 嵌套层数最大支持5层。	The object group to be nested is already the sixth layer. 将要嵌套的对象组已经是第六层。
Two object groups can't reference each other. 不能形成循环引用。	A nested sub-object group cannot nest its parent object group. 被嵌套的子对象组不能嵌套其父对象组。
Invalid mask. 无效的掩码。	The address mask entered is incorrect. 输入的地址掩码错误。
Maximum number of objects already reached. 对象组中对象的个数超过了限制。	Object group configuration rules reach the upper limit. 对象组配置的规则达到上限。
The object already exists. 此对象已经存在。	The newly created rule content is the same as the other rule content that already exists. 新创建的规则内容与已存在的其他规则内容相同。
This object group can't be referenced. 此对象组不可以被引用。	System predefined object group “any” cannot be nested. 系统预定义的对象组any不能被嵌套。

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	Read.
neighbors	Neighbor information	Sublist	N/A	For more information, see the openconfig-lldp/lldp/interfaces/interface/neighbors table

lldp/interfaces/interface/neighbors

This table contains lldp/interfaces/interface/neighbors information.

XML structure

See the XML structure of openconfig-lldp/lldp.

Table description

Item	Description
Feature name	openconfig-lldp
Table name	neighbors
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor	Neighbor table	Sublist	N/A	For more information, see the openconfig-lldp/lldp/interfaces/interface/neighbors/neighbor table.

lldp/interfaces/interface/neighbors/neighbor

This table contains lldp/interfaces/interface/neighbors/neighbor information.

XML structure

See the XML structure of openconfig-lldp/lldp.

Table description

Item	Description
Feature name	openconfig-lldp
Table name	neighbor
Table type	Multi-instance table
Row name	neighbor
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	Neighbor index	Index	String. Only contains number character. Length: 0 to 255 characters. Example: 1	Read.
state	Neighbor information	Subtable	N/A	For more information, see the openconfig-lldp/lldp/interfaces/interface/neighbors/neighbor/state table.

lldp/interfaces/interface/neighbors/neighbor/state

This table contains lldp/interfaces/interface/neighbors/neighbor/state information.

XML structure

See the XML structure of openconfig-lldp/lldp.

Table description

Item	Description
Feature name	openconfig-lldp

Table description

Item	Description
Feature name	Openconfig-acl
Table name	acl
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
acl-sets	Access list entries variables enclosiong container	Subtable	N/A	N/A

acl/acl-sets

This table contains acl/acl-sets information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	openconfig-acl
Table name	acl-sets
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
acl-set	List of ACL sets, each comprising of a list of ACL entries	Sublist	N/A	For more information, see the acl/acl-sets/acl-set table.

acl/acl-sets/acl-set

This table contains acl/acl-sets/acl-set information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	acl-set
Table type	Multi-instance table
Row name	acl-set
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	The name of the access-list set	Index	String Length: 1 to 63 characters	N/A
type	The type determines the field allowed in the ACL entries belonging to the ACL set	Index	Enumeration string: • ACL_IPV4. • ACL_IPV6. • ACL_L2. • ACL_MIXED.	ACL_MIXED type is not supported at this time
config	Access list config	Subtable	N/A	N/A
acl-entries	Access list entries container	Subtable	N/A	N/A

acl/acl-sets/acl-set/config

This table contains acl/acl-sets/acl-set/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	The name of the access-list set	index	String Length: 1 to 63 characters	N/A
type	The type determines the field allowed in the ACL entries belonging to the ACL set	Index	Enumeration string: • ACL_IPV4. • ACL_IPV6. • ACL_L2. • ACL_MIXED.	ACL_MIXED type is not supported at this time
description	Description, or comment, for the ACL set	N/A	String, characters. Length: 1 to 127 characters.	N/A

acl/acl-sets/acl-set/acl-entries

This table contains acl/acl-sets/acl-set/acl-entries information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	acl-entries
Table type	Single -instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
acl-entry	List of ACL entries comprising an ACL set	Sublist	N/A	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry information.

XML structure

Please refer to the XML structure of acl

Table description

Item	Description
Feature name	Openconfig-acl
Table name	acl-entry
Table type	Multi -instance table
Row name	acl-entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sequence-id	references the list key	index	Uint32 Value range: 0 to 65534	N/A
config	Access list entries config	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/config table
l2	MAC-layer fields are valid when the ACL type is L2	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/l2 table.
ipv4	IPv4-layer fields are valid when the ACL type is IPv4	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/ipv4 table.
ipv6	IPv6-layer fields are valid when the ACL type is IPv6	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/ipv6 table.
transport	Transport fields are valid when the ACL type is IPv4 or IPv6	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/transport table.
actions	Enclosing container for list of ACL actions associated with an entry	Subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/actions table.

acl/acl-sets/acl-set/acl-entries/acl-entry/config

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/config information.

XML structure

Please refer to the XML structure of acl

Table description

Item	Description
Feature name	Openconfig-acl
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sequence-id	references the list key	index	Uint32 Value range: 0 to 65534	N/A
description	A user-defined description, or comment, for this Access List Entry.	N/A	string Length: 1 to 127 characters.	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry/l2

This table contains acl/acl-sets/acl-set acl-entries/acl-entry/l2 information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl

Item	Description
Table name	l2
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Configuration data for l2 fields	subtable	N/A	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry/l2/config

This table contains acl/acl-sets/acl-set acl-entries/acl-entry/l2/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-mac	Source IEEE 802 MAC address.	N/A	String	Example: ff: ff: ff: ff: ff: ff
source-mac-mask	Source IEEE 802 MAC address mask.	N/A	String	Example: ff: ff: ff: ff: ff: ff

Column name	Column description	Column type	Data type and restrictions	Remarks
destination-mac	Destination IEEE 802 MAC address mask.	N/A	String	Example: ff: ff: ff: ff: ff: ff
destination-mac-mask	Destination IEEE 802 MAC address mask.	N/A	String	Example: ff: ff: ff: ff: ff: ff
ethertype	Ethertype field to match in Ethernet packets	N/A	Union: 1.Uint16 Value range: 1536 to 65535 2. Enumeration string: • ETHERTYPE_IPV4. • ETHERTYPE_ARP. • ETHERTYPE_VLAN. • ETHERTYPE_IPV6. • ETHERTYPE_MPLS. • ETHERTYPE_LLDP. • ETHERTYPE_ROCE.	Support hexadecimal and decimal input

acl/acl-sets/acl-set/acl-entries/acl-entry/ipv4

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/ipv4 information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	Ipv4
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Configuration data for IPv4 match fields	Subtable	N/A	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry/ipv4/config

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/ipv4/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	acl-entry
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	Source IPv4 address prefix.	N/A	String An IPv4 prefix represented in dotted quad notation followed by a slash and a CIDR mask (0 <= mask <= 32).	Example: 1.1.1.1/32
destination-address	Destination IPv4 address prefix.	N/A	String An IPv4 prefix represented in dotted quad notation followed by a slash and a CIDR mask (0 <= mask <= 32).	Example: 1.1.1.1/32
dscp	Value of diffserv codepoint.	N/A	Uint8 Value range: 0 to 63.	
protocol	The protocol carried in the IP packet.	N/A	Union: 1.Uint8 Value range: 0 to 254 2. Enumeration string: • IP_TCP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• IP_UDP. • IP_ICMP. • IP_IGMP. • IP_PIM. • IP_RSVP. • IP_GRE. • IP_AUTH. • IP_L2TP.	
hop-limit	The IP packet's hop limit -- known as TTL (in hops) in IPv4 packets	N/A	Uint8; Value range: 0 to 255;	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry/ipv6

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/ipv6 information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	Ipv6
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Configuration data for IPv6 match fields	Subtable	N/A	

acl/acl-sets/acl-set/acl-entries/acl-entry/ipv6/config

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/ipv6/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	ipv6/config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	Source IPv6 address prefix.	N/A	String An IPv6 prefix represented in full, shortened, or mixed shortened format followed by a slash and CIDR mask (0 <= mask <= 128).	Example: ffff:ffff: ffff:ffff: ffff:ffff: ffff:ffff/128
source-flow-label	Destination IPv6 Flow label.	N/A	Uint32 Value range: 0 to 1048575.	
destination-address	Destination IPv6 address prefix.	N/A	String An IPv6 prefix represented in full, shortened, or mixed shortened format followed by a slash and CIDR mask (0 <= mask <= 128).	Example: ffff:ffff: ffff:ffff: ffff:ffff: ffff:ffff/128
dscp	Value of diffserv codepoint.	N/A	Uint8 Value range: 0 to 63.	N/A
protocol	The protocol carried	N/A	Union member:	IP_ICMP (1),

Column name	Column description	Column type	Data type and restrictions	Remarks
	in the IP packet, expressed either as its IP protocol number, or by a defined identity.		1.Uint8 Value range: 0 to 254 2. Enumeration string: • IP_TCP. • IP_UDP. • IP_ICMP. • IP_IGMP. • IP_PIM. • IP_RSVP. • IP_GRE. • IP_AUTH. • IP_L2TP.	IP_TCP (6) , IP_UDP (17) , IP_IGMP (2) , IP_RSVP (46) , IP_GRE (47) , IP_AUTH (51) , IP_PIM (103) , IP_L2TP (115)
hop-limit	The IP packet's hop limit in IPv6	N/A	Uint8; Value range: 0 to 255;	N/A

acl/acl-sets/acl-set/acl-entries/acl-entry/transport

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/transport information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	transport
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Configuration data for transport fields	Subtable	N/A	

acl/acl-sets/acl-set/acl-entries/acl-entry/transport/config

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/transport/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	transport/config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-port	Source port or range	N/A	Union: 1. Uint16: Value Range: 0 to 65535 2. String	Port numbers may be represented as a single value, an inclusive range as <lower>..<higher>, or as ”ANY” to mean all legal port numbersFor example: range: “55..66”
destination-port	Destination port or range	N/A	Union: 1. Uint16: Value Range: 0 to 65535 2. String	Port numbers may be represented as a single value, an inclusive range as <lower>..<higher>, or as ”ANY” to mean all legal port numbers
tcp-flags	List of TCP flags to match	N/A	Enumeration string: • TCP_SYN. • TCP_FIN. • TCP_RST. • TCP_PSH. • TCP_ACK. • TCP_URG. • TCP_ECE. • TCP_CWR.	Common TCP flags used in packet header matches. ECE and CWR are not support in this time. Implement as string, every members separated by commas.

acl/acl-sets/acl-set/acl-entries/acl-entry/actions

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/actions information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	actions
Table type	Single-instance table
Row name	action
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Config data for ACL actions	subtable	N/A	For more information, see the acl/acl-sets/acl-set/acl-entries/acl-entry/actions/config table.

acl/acl-sets/acl-set/acl-entries/acl-entry/actions/config

This table contains acl/acl-sets/acl-set/acl-entries/acl-entry/actions/config information.

XML structure

Please refer to the XML structure of acl.

Table description

Item	Description
Feature name	Openconfig-acl
Table name	config
Table type	single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
forwarding-action	Specifies the forwarding action.	N/A	Enumeration string: • ACCEPT. • DROP. • REJECT.	You must specify an action when you replace a entry, or when you merge or create a entry that does not exist. Reject action is not support at this time One forwarding action must be specified for each ACL entry.
log-action	Specifies the log action and destination for matched packets.	N/A	Enumeration string: • LOG_SYSLOG. • LOG_NONE.	The default log-action is LOG NONE

Item	Description
Feature name	openconfig-bgp
Table name	global
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Config infomation	Subtable	N/A	For more information, see the bgp/global/config table.
default-route-distance	default-route-distance infomation	Subtable	N/A	For more information, see the bgp/global/default-route-distance.
route-selection-options	route-selection-options infomation	Subtable	N/A	For more information, see the bgp/global/route-selection-options.
afi-safis	afi-safis infomation	Subtable	N/A	For more information, see the bgp/global/afi-safis.

bgp/global/config

This table contains bgp global config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
as	Local autonomous system number	N/A	32-bit as-number type from the model in RFC 6991.	N/A
router-id	Router id	N/A	IPv4 address string	N/A

bgp/global/default-route-distance

This table contains bgp global default-route-distance information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	default-route-distance
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/global/default-route-distance/config table.

bgp/global/default-route-distance/config

This table contains bgp global default-route-distance config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
external-route-distance	Administrative distance for routes learned from external	N/A	Unsigned int. Value range: 1 to 255	N/A
internal-route-distance	Administrative distance for routes learned from internal	N/A	Unsigned int. Value range: 1 to 255	N/A

bgp/global/route-selection-options

This table contains bgp global route-selection-options information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	route-selection-options
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/global/route-selection-options/config table.

bgp/global/route-selection-options/config

This table contains bgp global route-selection-options config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
always-compare-med	Compare multi-exit discriminator (MED) value from different ASes	N/A	Boolean: • true • false	N/A

bgp/global/afi-safis

This table contains bgp global afi-safis information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safis
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi	afi-saf information	Sublist	N/A	For more information, see the bgp/global/afi-safis/afi-safi table.

bgp/global/afi-safis/afi-safi

This table contains bgp global afi-safis afi-safi information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safi
Table type	Multi-instance table
Row name	afi-safi
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	N/A
config	config information	Subtable	N/A	For more information, see the bgp/global/afi-safis/afi-safi/config table.
use-multiple-paths	use-multiple-paths information	Subtable	N/A	For more information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				the bgp/global/afi-safis/afi-safi/use-multiple-paths table.

bgp/global/afi-safis/afi-safi/config

This table contains bgp global afi-safis afi-safi config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNIC	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			AST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	
enabled	indicates whether the AFI,SAFI is enabled	N/A	Boolean: • true • false	N/A

bgp/global/afi-safis/afi-safi/use-multiple-paths

This table contains bgp global afi-safis afi-safi use-multiple-paths information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	use-multiple-paths

maximum-paths	Maximum number of parallel paths to consider	N/A	Unsigned integer. Value range: 1 to 255	N/A

bgp/peer-groups

This table contains bgp peer-groups information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	Peer-groups
Table type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Peer-group	Peer-group information	Sublist	N/A	For more information, see the bgp/peer-groups/peer-group table.

bgp/peer-groups/peer-group

This table contains bgp peer-groups peer-group information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	peer-group
Table type	Multi-instance table
Row name	peer-group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peer-group-name	peer-group name	Index	String. Length: 1 to 47 characters.	N/A
config	Config infomation	Subtable	N/A	For more information, see the bgp/peer-roups/peer-group/config table.

Column name	Column description	Column type	Data type and restrictions	Remarks
timers	Timers infomation	Subtable	N/A	For more information, see the bgp/peer-roups/peer-group/timers table.
apply-policy	Apply-policy infomation	Subtable	N/A	For more information, see the bgp/peer-roups/peer-group/apply-policy table.
afi-safis	Afi-safis infomation	Subtable	N/A	For more information, see the bgp/peer-roups/peer-group/afi-afis table.

bgp/peer-groups/peer-group/config

This table contains bgp peer-groups peer-group config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peer-group-name	peer-group name	Index	String. Length: 1 to 47 characters.	N/A
peer-as	AS number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the peer		Value range: 1 to 4294967295	
peer-type	Explicitly designate the peer or peer group as internal (iBGP) or external (eBGP)	N/A	Enumeration: • EXTERNAL. • INTERNAL.	N/A
auth-password	MD5 authentication password	N/A	String. Length: 1 to 80 characters.	N/A
send-community	Specify which types of community should be sent to the neighbor or group. The default is to not send the community attribute	N/A	Enumeration: • STANDARD. • EXTENDED. • BOTH. • NONE.	N/A
description	textual description	N/A	String. Length: 1 to 79 characters.	N/A

bgp/peer-groups/peer-group/timers

This table contains bgp peer-groups peer-group timers information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi	afi-safi information	Sublist	N/A	For more information, see the bgp/peer-groups/peer-group/afi-safis/afi-safi table.

bgp/peer-groups/peer-group/afi-safis/afi-safi

This table contains bgp peer-groups peer-group afi-safis afi-safi information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safi
Table type	Multi-instance table
Row name	afi-safi
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/peer-groups/peer-group/afi-safis/afi-safi/config table.
apply-policy	apply-policy information	Subtable	N/A	For more information, see the bgp/peer-groups/peer-group/afi-safis/afi-safi/apply-policy table.

bgp/peer-groups/peer-group/afi-safis/afi-safi/config

This table contains bgp peer-groups peer-group afi-safis afi-safi config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. •	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	
enabled	indicates whether the AFI,SAFI is enabled	N/A	Boolean: • true • false	N/A

bgp/peer-groups/peer-group/afi-safis/afi-safi/apply-policy

This table contains bgp peer-groups peer-group afi-safis afi-safi apply-policy information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	apply-policy
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/peer-groups/peer-group/afi-safis/afi-safi/apply-policy/config table.

bgp/peer-groups/peer-group/afi-safis/afi-safi/apply-policy/config

This table contains bgp peer-groups peer-group afi-safis afi-safi apply-policy config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
import-policy	Import Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A
export-policy	Export Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A

bgp/neighbors

This table contains bgp neighbors information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	neighbors
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor	neighbor information	Sublist	N/A	For more information, see the bgp/neighbors/neighbor table.

bgp/neighbors/neighbor

This table contains bgp neighbors neighbor information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	neighbor
Table type	Multi-instance table

Row name	neighbor
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
config	Config infomation	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/config table.
timers	Timers infomation	Subtable	N/A	For more information, see the bgp/neighbors/neighbor /timers table.
apply-policy	Apply-policy infomation	Subtable	N/A	For more information, see the bgp/neighbors/neighbor /apply-policy table.
afi-safis	Afi-safis infomation	Subtable	N/A	For more information, see the bgp/neighbors/neighbor /afi-afis table.

bgp/neighbors/neighbor/config

This table contains bgp neighbors neighbor config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp

Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
enabled	Whether the BGP peer is enabled	N/A	Boolean: • true • false	N/A
peer-as	AS number of the peer	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
peer-group	The peer-group with which this neighbor is associated	N/A	String. Length: 1 to 16 characters.	N/A
auth-password	MD5 authentication password	N/A	String. Length: 1 to 80 characters.	N/A
send-community	Specify which types of community should be sent to the neighbor or group. The default is to not send the community attribute	N/A	Enumeration: • STANDARD. • EXTENDED. • BOTH. • NONE.	N/A
description	textual description	N/A	String. Length: 1 to 79 characters.	N/A

bgp/neighbors/neighbor/state

This table contains bgp neighbors neighbor state information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
enabled	Whether the BGP peer is enabled	N/A	Boolean: • true • false	N/A
peer-as	AS number of the peer	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
session-state	Operational state of the BGP peer	N/A	Enumeration: • IDLE • CONNECT • ACTIVE • OPENSENT • OPENCONFIRM • ESTABLISHED	N/A
peer-group	The peer-group with which this neighbor is associated	N/A	String. Length: 1 to 16 characters.	N/A
auth-password	MD5 authentication password	N/A	String. Length: 1 to 80 characters.	N/A
send-community	Specify which types of community should be sent to the neighbor or group. The default is to not send the community attribute	N/A	Enumeration: • STANDARD. • EXTENDED. • BOTH. • NONE.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
description	textual description	N/A	String. Length: 1 to 79 characters.	N/A

bgp/neighbors/neighbor/timers

This table contains bgp neighbors neighbor timers information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	timers
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/timers/config table.

bgp/neighbors/neighbor/timers/config

This table contains bgp neighbors neighbor timers config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
minimum-advertisement-interval	Minimum time which must elapse between subsequent UPDATE messages relating to a common set of NLRI being transmitted to a peer	N/A	Unsigned integer. Value range: 0 to 600	N/A

bgp/neighbors/neighbor/apply-policy

This table contains bgp neighbors neighbor apply-policy information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	apply-policy
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/apply-policy/config table.

bgp/neighbors/neighbor/apply-policy/config

This table contains bgp neighbors neighbor apply-policy config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
import-policy	Import Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A
export-policy	Export Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A

bgp/neighbors/neighbor/afi-safis

This table contains bgp neighbors neighbor afi-safis information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safis
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi	afi-safi information	Sublist	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi table.

bgp/neighbors/neighbor/afi-safis/afi-safi

This table contains bgp neighbors neighbor afi-safis afi-safi information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safi
Table type	Multi-instance table
Row name	afi-safi
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	N/A
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi/config table.
apply-policy	apply-policy information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi/ apply-policy table.

bgp/neighbors/neighbor/afi-safis/afi-safi/config

This table contains bgp neighbors neighbor afi-safis afi-safi config information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST • IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	N/A
enabled	indicates whether the AFI,SAFI is enabled	N/A	Boolean: • true • false	N/A

bgp/neighbors/neighbor/afi-safis/afi-safi/apply-policy

This table contains bgp neighbors neighbor afi-safis afi-safi apply-policy information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	apply-policy

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi	AFI/SAFI information	Sublist	N/A	For more information, see the bgp/bgp-rib/afi-safis/afi-safi.

bgp/bgp-rib/afi-safis/afi-safi

This table contains BGP RIB AFI-SAFI information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp/bgp-rib.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safi
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI and SAFI	Index	Enumeration: • IPV4_UNICAST. • IPV6_UNICAST. • L3VPN_IPV4_UNICAST • L3VPN_IPV6_UNICAST • L2VPN_VPLS • L2VPN_EVPN. • IPV4_LABELED_UNICAST	afi-safi-name

Column name	Column description	Column type	Data type and restrictions	Remarks
			• IPV6_LABELED_UNICAST • L3VPN_IPV4_MULTICAST • L3VPN_IPV6_MULTICAST	
ipv4-unicast	Include this container for IPv4 unicast RIB	Subtable	N/A	For more information, see the bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast.

bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast

This table contains BGP RIB AFI-SAFI IPv4 unicast information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp/bgp-rib.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	ipv4-unicast
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
loc-rib	Container for the IPv6 BGP LOC-RIB data	Subtable	N/A	For more information, see the bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib.

bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib

This table contains BGP RIB AFI-SAFI IPv4 unicast LOC-RIB information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp/bgp-rib.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	loc-rib
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
routes	Enclosing container for list of routes in the routing table.	Subtable	N/A	For more information, see the bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib/routes.

bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib/routes

This table contains BGP RIB AFI-SAFI IPv4 unicast LOC-RIB routes information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp/bgp-rib.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	routes

Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
route	List of routes in the table, keyed by the route prefix, the route origin, and path ID.	Sublist	N/A	For more information, see the bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib/routes/route.

bgp/bgp-rib/afi-safis/afi-safi/ipv4-unicast/loc-rib/routes/route

This table contains BGP RIB AFI-SAFI IPv4 unicast LOC-RIB route information.

XML structure

Please refer to the XML structure of openconfig-bgp/bgp/bgp-rib.

Table description

Item	Description
Feature name	openconfig-bgp
Table name	route
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	Prefix name	Index	IPv4 prefix: String, dotted decimal notation. Prefix length.	IPv4 example: 1.1.1.1/24.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1-18	
Origin	Indicates the origin of the route.	Index	String. IPv4 address or protocol type. Protocol type can only be: direct, static, rip, ospf, isis, lisp, bgp.	N/A
PathID	Path ID for the route.	Index	UINT32. Length:0-4294967295	Default: 0

openconfig-if-ip/ipv4/addresses/address/config

This table contains IPv4 address configuration information.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4/addresses/address.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	config
Table type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ip	IPv4 address of the interface	index	String, dotted decimal.	N/A
prefix-length	Length of the subnet prefix	No	Unsigned integer. Value range: 1 to 32	N/A

openconfig-if-ip/ipv4/state

This table contains the state information of the interface.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
counters	IPv4 statistics of the interface	Subtable	N/A.	For more information, see the ipv4/state/counters table.

openconfig-if-ip/ipv4/state/counters

This table contains IPv4 statistics of the interface.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4/state.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	counters
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
in-pkts	Received packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: in-pkts is not supported
in-octets	Received bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: in-octets is not supported
in-error-pkts	Received error packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: in-error-pkts is not supported
in-discarded-pkts	Received and discarded packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: in-discarded-pkts is not supported
out-pkts	Sent packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: out-pkts is not supported
out-octets	Sent bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: out-octets is not supported
out-error-pkts	Sent error packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: out-error-pkts is not supported
out-discarded-pkts	Sent and discarded packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	2^{64} - 1: out-discarded-pkts is not supported

openconfig-if-ip/ipv4/config

This table contains port layer of the interface..

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
enabled	Port layer of an interface.	N/A	Boolean: • **false**—Layer 2 • **true**—Layer 3	N/A.

openconfig-if-ip/ipv6

This table contains IPv6 address family configuration for interfaces. This table is a subtable of the interface management table and cannot be used alone.

XML structure

```
<ipv6>
  <addresses>
    <address>
      <ip></ip>
      <config>
        <ip></ip>
        <prefix-length></prefix-length>
      </config>
    </address>
  </addresses>
  <state>
    <counters>
```

```
        <in-pkts></in-pkts>
        <in-octets></in-octets>
        <in-error-pkts></in-error-pkts>
        <in-discarded-pkts></in-discarded-pkts>
        <out-pkts></out-pkts>
        <out-octets></out-octets>
        <out-error-pkts></out-error-pkts>
        <out-discarded-pkts></out-discarded-pkts>
      </counters>
    </state>
  </ipv6>
```

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	Ipv6
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
addresses	Enclose container for address list	Subtable	N/A	For more information, see the ipv6/addresses table.
state	State of the interface	Subtable	N/A	For more information, see the ipv6/state table.

openconfig-if-ip/ipv6/addresses

This table contains information about enclosing container for address list.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv6.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	addresses
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address	List of configured IPv6 addresses on the interface	sublist	N/A	For more information, see the ipv6/addresses/address table.

openconfig-if-ip/ipv6/addresses/address

This table contains IPv6 addresses config information.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv6/addresses.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	address
Table type	Multi-instance table
Row name	N/A
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ip	IPv6 address	index	Hexadecimal string,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated.	
config	IPv6 address configuration information	Subtable	N/A	For more information, see the ipv6/addresses/address/config table.

openconfig-if-ip/ipv6/addresses/address/config

This table contains IPv6 address configuration information.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv6/addresses/address.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ip	IPv6 address of the interface	index	Hexadecimal string, colon-separated.	N/A
prefix-length	Length of the subnet prefix	No	Unsigned integer. Value range: 1 to 128	N/A

openconfig-if-ip/ipv6/state

This table contains the state information of the interface.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv6.

Table description

Item	Description
Feature name	openconfig-if-ip
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
counters	IPv6 statistics of the interface	Subtable	N/A.	For more information, see the ipv6/state/counters table.

openconfig-if-ip/ipv6/state/counters

This table contains IPv6 statistics of the interface.

XML structure

Please refer to the XML structure of openconfig-if-ip/ipv6/state.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	interfaces
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
interface	Interface table	Sublist	N/A	For more information, see the interfaces/intreface table.

interfaces/interface

This table contains interfaces/interface information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	openconfig-interfaces
Table name	interface
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters.	Read-write.
config	Configuration item of interface	Subtable	N/A	For more information, see the interfaces/intreface/config table.
subinterfaces	Subinterfaces information of an interface	Sublist	N/A	For more information, see the interfaces/intreface/subinterfaces table.
ethernet	Ethernet of interface, ref-table to openconfig-vlan	Subtable	N/A	For more information, see the interfaces/intreface/ethernet table.

interfaces/interface/config

This table contains interfaces/interface/config information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters.	Refence to: interfaces/interface/name. For logic interface ,only Vlan-interface, Bridge-Aggregation, Route-Aggregation, VE-Bridge and Loopback interface are supported.
type	Interface type	N/A	Unsigned integer.	Read-write. Additional values for ifType are assigned by the Internet Assigned Numbers Authority (IANA), through updating the syntax of the IANA ifType textual convention.
mtu	Configured MTU of an interface	N/A	Unsigned integer.	Read-write. Applicable to only Layer 3 interfaces.
description	Interface description	N/A	String. Length: 1 to 255 characters. Default: *interface-name* **Interface**.	Read-write.
enabled	Enabling status of an interface	N/A	Boolean • **0**—Disabled • **1**—Enabled	Read-write.

interfaces/interface/state

This table contains interfaces/interface/state information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters.	Refer to interfaces/interface/name. For logical interfaces ,only Vlan-interface, Bridge-Aggregation, Route-Aggregation and Loopback interface are supported.
description	Interface description	N/A	String. Length: 1 to 255 characters. Default: *interface-name* **Interface**.	Read-only.
admin-status	Desired state of the interface	N/A	Enumeration: • UP • DOWN • TESTING	Read-only
oper-status	Current operational state of the interface	N/A	Enumeration: • UP • DOWN • TESTING • UNKNOWN	Read-only

Column name	Column description	Column type	Data type and restrictions	Remarks
			• DORMANT • NOT_PRESENT • LOWER_LAYER_DOWN	

interfaces/interface/subinterfaces

This table contains interfaces/interface/subinterfaces information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	subinterfaces
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
subinterface	Subinterface information table	sublist	N/A	For more information, see the interfaces/intreface/subinterfaces/subinterface table.
Ipv4	Portlayer information table	subtable	N/A	For more information, see the interfaces/intreface/subinterfaces/ipv4 table.

interfaces/interface/subinterfaces/subinterface

This table contains interfaces/interface/subinterfaces/subinterface information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	subinterface
Table type	Multi-instance table
Row name	subinterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Subinterface number	index	Unsigned integer Value range: 1 to 4094.	Read-write.
config	Configuration item of interface	subtable	N/A	For more information, see the interfaces/intreface/subinterfaces/ipv4/config table.
ipv4	IPv4 address family information table	subtable	N/A	Reference the table openconfig-if-ip/ipv4.
ipv6	IPv6 address family information table	subtable	N/A	Reference the table openconfig-if-ip/ipv6.

interfaces/interface/subinterfaces/subinterface/config

This table contains interfaces/interface/subinterfaces/subinterface/config information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Subinterface number	index	Unsigned integer Value range: 1 to 4094.	Refer to interface/subinterfaces/subinterface/index.
name	Full name of an subinterface	N/A	String. Length: 2 to 47 characters.	Read-write. For more information, see the ipv4 table.
description	Subinterface description	N/A	String. Length: 1 to 255 characters. Default: *interface-name* **Interface**.	Read-write.
enabled	Enabling status of subinterface	N/A	Boolean • **0**—Disabled • **1**—Enabled	Read-write.

interfaces/interfaces/interface/subinterfaces/ipv4

This table contains interfaces/interfaces/interface/subinterfaces/ipv4 information.

XML structure

Please refer to the XML structure of interfaces/interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	Ipv4

Item	Description
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
enabled	Portlayer of an interface	N/A	Boolean • **0**—Layer 2 • **1**—Layer 3	Read-write. Only applicable to Ethernet interfaces.

interfaces/interface/ethernet

This table contains interfaces/interface/ethernet information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	ethernet
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
switched-vlan	VLAN type of an interface	N/A	N/A	Reference the table openconfig-vlan/s

Column name	Column description	Column type	Data type and restrictions	Remarks
				witched-vlan.
state	State variables for Ethernet interfaces	N/A	N/A	N/A
config	Configuration item of interface	N/A	N/A	N/A.

interfaces/interface/ethernet/switched-vlan

This table contains interfaces/interface/ethernet/switched-vlan information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	switched-vlan
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Configured the VLAN type of an interface	subtable	N/A	See the openconfig-vlan/switched-vlan table.
state	Switched-vlan state information	subtable	N/A	See the openconfig-vlan/switched-vlan table.

interfaces/interface/ethernet/state

This table contains interfaces/interface/ethernet/state information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
port-speed	Interface speed	N/A	• SPEED_10MB • SPEED_100MB • SPEED_1GB • SPEED_2500MB • SPEED_5GB • SPEED_10GB • SPEED_25GB • SPEED_40GB • SPEED_50GB • SPEED_100GB • SPEED_UNKNOWN	N/A
negotiated-port-speed	Negotiated interface speed	N/A	• SPEED_10MB • SPEED_100MB • SPEED_1GB • SPEED_2500MB • SPEED_5GB • SPEED_10GB • SPEED_25GB • SPEED_40GB • SPEED_50GB • SPEED_100GB • SPEED_UNKNOWN	N/A

interfaces/interface/ethernet/config

This table contains interfaces/interface/ethernet/config information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	N/A
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
aggregate-id	Aggregation group ID	N/A	N/A	Unsigned integer. Value range: • Layer 2 aggregation group: 1 to 16384. • Layer 3 aggregation group: 16385 to 32768. • S-channel bundle group: 36865 to 40960. Default: 0. Not assigned to any link aggreagation group.

interfaces/interface/routed-vlan

This table contains interfaces/interface/routed-vlan information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	**Description**
Feature name	Openconfig-interfaces
Table name	routed-vlan

Item	Description
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ipv4	IPv4 address family information table	subtable	• N/A	Reference the table openconfig-if-ip/ipv4.
ipv6	IPv6 address family information table	subtable	• N/A	Reference the table openconfig-if-ip/ipv6.

interfaces/interface/aggregation

This table contains interfaces/interface/aggregation information.

XML structure

Please refer to the XML structure of interfaces.

Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	aggregation
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Aggregation config	subtable	• N/A	Reference the table openconfig-if-aggregate /aggregation.
state	Aggregation state	subtable	• N/A	Reference the table openconfig-if-aggregate

Column name	Column description	Column type	Data type and restrictions	Remarks
				/aggregation.
swtich-vlan	VLAN type of an interface	N/A	• N/A	Reference the table openconfig-vlan/switched-vlan.

timers	Timer information	Subtable	N/A	For more information, see the ospfv2/global/time

				rs.

ospfv2/global/config

This table contains global OSPFv2 configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
router-id	A 32-bit number represented in dotted decimal notation assigned to each router running the OSPFv2 protocol.	N/A	String: Length: 1 to 42 characters.	N/A

ospfv2/global/timers

This table contains global OSPFv2 timer information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	timers
Table type	Multi-instance table
Row name	timers
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
spf	SPF information	Subtable	N/A	For more information, see the ospfv2/global/timers/spf.
lsa-generation	LSA generation information	Subtable	N/A	For more information, see the ospfv2/global/timers/lsa-generation.

ospfv2/global/timers/spf/config

This table contains OSPFv2 SPF timer configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
initial-delay	The value specifies the time between a change in topology being detected and the first run of the SPF algorithm.	N/A	Unsigned integer: Value range: 10 to 60000.	N/A
maximum-delay	The value of this leaf specifies the maximum delay between a topology change being detected and running of the SPF algorithm.	N/A	Unsigned integer: Value range: 1 to 60.	N/A

ospfv2/global/timers/lsa-generation/config

This table contains OSPFv2 LSA-generation timer configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
initial-delay	The value specifies the time between the first time an LSA is generated and advertised and the subsequent generation of that LSA.	N/A	Unsigned integer: Value range: 10 to 60000	N/A
maximum-delay	The value specifies the maximum time between the generation of an LSA and the subsequent re-generation of that LSA.	N/A	Unsigned integer: Value range: 1 to 60	N/A

ospfv2/areas/area

This table contains OSPFv2 area information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	area
Table type	Multi-instance table
Row name	area
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
identifier	An identifier for the OSPFv2 area, represented as either a 32-bit unsigned integer or a dotted-quad.	Index	String: Length: 1 to 42 characters	For example: 32 or 1.1.1.1
interfaces	Interface information	Subtable	N/A	For more information, see the ospfv2/areas/area/interfaces.

ospfv2/areas/area/config

This table contains OSPFv2 area configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
identifier	An identifier for the OSPFv2 area, represented as either a 32-bit unsigned integer or a dotted-quad.	Index	String: Length: 1 to 42 characters	N/A

ospfv2/areas/area/interfaces/interface

This table contains OSPFv2 area interface information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	interface
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	A pointer to the identifier for the interface name	Index	String. Length: 2 to 47characters.	N/A
config	Configuration information	Subtable	N/A	For more information, see the ospfv2/areas/area/interfaces/interface/config.
timers	Timer information	Subtable	N/A	For more information, see the ospfv2/areas/area/interfaces/interface/timers.

ospfv2/areas/area/interfaces/interface/config

This table contains OSPFv2 area interface configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	An operator-specified string used to uniquely identify this interface	Index	String: Length: 2 to characters	N/A
network-type	The type of network that OSPFv2 must use for the specified interface.	N/A	Enumeration: • **1**—broadcast • **2**—NBMA. • **3**—P2P. • **4**—P2MP. • **5**—P2MP unicast	N/A
priority	The local system's priority to become the designated router	N/A	Unsigned integer: Value range: 0 to 255	N/A
metric	The metric for the interface	N/A	Unsigned integer: Value range: 0 to 65535 for loopback interfaces; 1 to 65535 for other types of interfaces.	N/A
passive	When this leaf is set to true, the interface must be advertised within the OSPFv2 area but OSPFv2 adjacencies must not be established over the interface.	N/A	Boolean: • **true**—The interface must be advertised within the OSPFv2 area. • **false—**The interface must not be advertised within the OSPFv2 area.	N/A

ospfv2/areas/area/interfaces/interface/timers/config

This table contains OSPFv2 area interface timer configuration information.

XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
dead-interval	The number of seconds that the local system must let elapse before declaring a silent router down	N/A	Unsigned integer: Value range: 1 to 2147483647	N/A
hello-interval	The number of seconds that the local system waits between the transmissions of subsequent Hello packets.	N/A	Unsigned integer: Value range: 1 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
name	**Full name of the component**	**N/A**	**String.**	**Read-only.**
type	Type of the component	N/A	Enumeration: • **CHASSIS** • **BACKPLANE** • **FABRIC** • **POWER_SUPPLY** • **FAN** • **SENSOR** • **FRU** • **LINECARD** • **CONTROLLER_CARD** • **PORT** • **TRANSCEIVER** • **CPU** • **STORAGE** • **INTEGRATED_CIRCUIT** • **CHIP** • **OPERATING_SYSTEM**	Read-only
id	Unique identifier assigned by the system for the component	N/A	String	Read-only
location	System-supplied description of the location of the component within the system.	N/A	String	Read-only
removable	Whether this component is removable	N/A	Boolean: • true • false	Read-only
oper-status	If applicable, this reports the current operational status of the component.	N/A	Enumeration: • **ACTIVE** • **INACTIVE** • **DISABLED**	Read-only
empty	Whether this component position	N/A	Boolean: • true	Read-only

Column name	Column description	Column type	Data type and restrictions	Remarks
name	**Full name of the component**	**N/A**	**String.**	**Read-only.**
	exists but is not populated.		• false	
parent	Reference to the name of the parent component.	N/A	String	Read-only
firmware-version	The version of associated firmware that is running on the component, if applicable.	N/A	String	Read-only
software-version	Running software version of the component	N/A	String	Read-only
boot-loader-software-version	Software version for the next boot	N/A	String	Read-only
serial-no	System assigned serial number	N/A	String	Read-only
allocated-power	Power allocated by the system for the component.	N/A	Unsigned integer.	Read-only
hardware-version	This is the hardware revision of the component.	N/A	String	Read-only
Temperature	Temperature of the component	Subtable	N/A	Read-only
Memory	Memory used by the component	Subtable	N/A	Read-only

components/component/state/temperature

This table contains temperature information about a component.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	temperature
Table type	Single-instance table

Item	Description
Row name	temperature
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current temperature of the component	N/A	Double.	Read-only. 2147483647 means the device doesn't support this feature.

components/component/state/memory

This table contains memory usage information about a component.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	memory
Table type	Single-instance table
Row name	memory
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
available	Amount of free memory(bytes).	N/A	Unsigned long.	Read-only.
utilized	Amount of memory space currently used by processes	N/A	Unsigned long.	Read-only.

Column name	Column description	Column type	Data type and restrictions	Remarks
	running on the component, excluding reserved memory that is not available for use(bytes).			

components/component/linecard

This table contains information about a card on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Linecard
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
state	Status information about a card	Subtable	N/A	For more information, see components/component/linecard/state table.

components/component/linecard/state

This table contains status information about a card.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Linecard State
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
slot-id	Location where the linecard is installed	N/A	String	Read-only

components/component/optical-channel

This table contains information about an optical-channel on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	optical-channel
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
	about an optical channel			components/component/optical-channel/config table.
state	Status information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state table.

components/component/optical-channel/config

This table contains optical-channel/config information.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Optical-channel Config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
frequency	Frequency of the optical channel, expressed in MHz	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1,default(193100000).	N/A
target-output-power	Target output optical power level of the optical channel, expressed in increments of 0.01 dBm (decibel-milliwats)	N/A	Double,default(-10.0).	N/A

components/component/optical-channel/state

This table contains status information about an optical-channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Optical-channel State
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
frequency	Frequency of the optical channel, expressed in MHz	N/A	Unsigned integer.	Read-only
target-output-power	Target output optical power level of the optical channel, expressed in increments of 0.01 dBm (decibel-milliwats)	N/A	Double.	Read-only
output-power	output-power information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/output-power table.
input-power	input-power information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/input-power table.
laser-bias-current	laser-bias-current information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/laser-bias-current table.
chromatic-dispersion	chromatic-dispersion information about	Subtable	N/A	For more information, see components/component/

Column name	Column description	Column type	Data type and restrictions	Remarks
	an optical channel			optical-channel/state/chromatic-dispersion table.
polarization-mode-dispersion	polarization-mode-dispersion information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/polarization-mode-dispersion table.
polarization-dependent-loss	polarization-dependent-loss information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/polarization-dependent-loss table.
osnr	osnr information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/osnr table.
carrier-frequency-offset	carrier-frequency-offset information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/carrier-frequency-offset table.
pre-fec-ber	pre-fec-ber information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/pre-fec-ber table.
esnr	esnr information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/esnr table.
fec-uncorrectable-blocks	The number of blocks or frames that were uncorrectable by the FEC	N/A	Unsigned integer.	Read-only
sop-roc	Sop-roc information about an optical channel	Subtable	N/A	For more information, see components/component/optical-channel/state/sop-roc table.

components/component/optical-channel/state/output-power

This table contains output-power information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Output-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current output-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
avg	Avg output-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
min	Min output-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
max	Max output-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/input-power

This table contains input-power information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Intput-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current input-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
avg	Avg input-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
min	Min input-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
max	Max input-power about an optical channel in units of 0.01dBm.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/laser-bias-current

This table contains laser-bias-current information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Laser-bias-current
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current laser-bias-current about an optical channel in uints of mA.	N/A	Double.	Read-only.
avg	Avg laser-bias-current about an optical channel in uints of mA.	N/A	Double.	Read-only.
min	Min laser-bias-current about an optical channel in uints of mA.	N/A	Double.	Read-only.
max	Max laser-bias-current about an optical channel in uints of mA.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/chromatic-dispersion

This table contains chromatic-dispersion information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Chromatic-dispersion
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current chromatic-dispersion about an optical channel in picoseconds / nanometer (ps/nm).	N/A	Double.	Read-only.
avg	Avg chromatic-dispersion about an optical channel in picoseconds / nanometer (ps/nm).	N/A	Double.	Read-only.
min	Min chromatic-dispersion about an optical channel in picoseconds / nanometer (ps/nm).	N/A	Double.	Read-only.

max	Max chromatic-dispersion about an optical channel in picoseconds / nanometer (ps/nm).	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/polarization-mode-dispersion

This table contains polarization-mode-dispersion information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Polarization-mode-dispersion
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current polarization-mode-dispersion about an optical channel in picosends (ps).	N/A	Double.	Read-only.
avg	Avg polarization-mode-dispersion about an optical channel in picosends (ps).	N/A	Double.	Read-only.

min	Min polarization-mode-dispersion about an optical channel in picosends (ps).	N/A	Double.	Read-only.
max	Max polarization-mode-dispersion about an optical channel in picosends (ps).	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/polarization-dependent-loss

This table contains polarization-dependent-loss information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Polarization-dependent-loss
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current polarization-dependent-loss about an optical channel in dB.	N/A	Double.	Read-only.

avg	Avg polarization-dependent-loss about an optical channel in dB.	N/A	Double.	Read-only.
min	Min polarization-dependent-loss about an optical channel in dB.	N/A	Double.	Read-only.
max	Max polarization-dependent-loss about an optical channel in dB.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer	Read-only.

components/component/optical-channel/state/osnr

This table contains osnr information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Osnr
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current osnr about an optical channel in dB.	N/A	Double.	Read-only.
avg	Avg osnr about an optical channel in dB.	N/A	Double.	Read-only.
min	Min osnr about an optical channel in dB.	N/A	Double.	Read-only.
max	Max osnr about an optical channel in dB.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer..	Read-only.

components/component/optical-channel/state/carrier-frequency-offset

This table contains carrier-frequency-offset information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Carrier-frequency-offset
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current carrier-frequency-offset about an optical channel in MHz.	N/A	Double.	Read-only.
avg	Avg carrier-frequency-offset about an optical channel in MHz.	N/A	Double.	Read-only.
min	Min carrier-frequency-offset about an optical channel in MHz.	N/A	Double.	Read-only.
max	Max carrier-frequency-offset about an optical channel in MHz.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/pre-fec-ber

This table contains pre-fec-ber information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Pre-fec-ber
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current pre-fec-ber about an optical channel.	N/A	Double.	Read-only.
avg	Avg pre-fec-ber about an optical channel.	N/A	Double.	Read-only.
min	Min pre-fec-ber about an optical channel.	N/A	Double.	Read-only.
max	Max pre-fec-ber about an optical channel.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/esnr

This table contains esnr information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Esnr
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current esnr about an optical channel in dB.	N/A	Double.	Read-only.
avg	Avg esnr about an optical channel in dB.	N/A	Double.	Read-only.
min	Min esnr about an optical channel in dB.	N/A	Double.	Read-only.
max	Max esnr about an optical channel in dB.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/optical-channel/state/sop-roc

This table contains sop-roc information about an optical channel.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Sop-roc
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current sop-roc about an optical channel in krad/s.	N/A	Double.	Read-only.
avg	Avg sop-roc about an optical channel in krad/s.	N/A	Double.	Read-only.
min	Min sop-roc about an optical channel in krad/s.	N/A	Double.	Read-only.
max	Max sop-roc about an optical channel in krad/s.	N/A	Double.	Read-only.
interval	Optical module historical performance data collection cycle,units is nanoseconds	N/A	Unsigned integer.	Read-only.

components/component/subcomponents

This table contains subcomponents information on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Subcomponents
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
subcomponent	subcomponent	Sublist	N/A	For more information, see components/component/subcomponents/subcomp

Column name	Column description	Column type	Data type and restrictions	Remarks
				onent table.

components/component/subcomponents/subcomponent

This table contains subcomponent information on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Subcomponent
Table type	Multi-instance table
Row name	Subcomponent
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Subcomponent name	Index	String.	Read-only.
state	Status information of the subcomponent	Subtable	N/A	For more information, see the components/component/subcomponents/subcomponent/state table.

components/component/subcomponents/subcomponent/state

This table contains status information about subcomponent

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Subcomponents State
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Subcomponent name	Index	String	Read-only

components/component/transceiver

This table contains transceiver module information.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Transceiver
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Config of the transceiver module	Subtable	N/A	For more information, see the components/component/transceiver/config table.
state	Status of the transceiver module	Subtable	N/A	For more information, see the components/component/transceiver/state table.
physical-channels	Status of the transceiver physical-channels module	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels table.

components/component/transceiver/config

This table contains config information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Transceiver config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
enabled	Turns power on / off to the transceiver	N/A	Boolean: • true (default). • false	
fec-mode	The FEC mode indicates the mode of operation for the transceiver's FEC.	N/A	Enumeration: • **FEC_ENABLED** • **FEC_DISABLED** • **FEC_AUTO** (default).	

components/component/transceiver/state

This table contains status information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Transceiver state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
enabled	Turns power on / off to the transceiver	N/A	Boolean: • true • false	Read-only.
fec-mode	The FEC mode indicates the mode of operation for the transceiver's FEC.	N/A	Enumeration: • **FEC_ENABLED** • **FEC_DISABLED** • **FEC_AUTO**	Read-only.
present	Whether a transceiver is present in the specified client port.	N/A	Enumeration: • **PRESENT** • **NOT_PRESENT**	Read-only.

form-factor	Type of the transceiver module	N/A	Enumeration: • **CFP** • **CFP2** • **CFP2_ACO** • **CFP4** • **QSFP** • **QSFP_PLUS** • **QSFP28** • **CPAK** • **SFP** • **SFP_PLUS** • **XFP** • **X2** • **NON_PLUGGABLE** • **OTHER**	Read-only.
connector-type	Connector type used on this port	N/A	Enumeration: • **SC_CONNECTOR** • **LC_CONNECTOR** • **MPO_CONNECTOR** • **AOC_CONNECTOR** • **DAC_CONNECTOR**	Read-only.
vendor	Full name of the transceiver vendor	N/A	String. Length: 1 to 16 characters.	Read-only. Applicable only to Ethernet interfaces.
vendor-part	Part number of the transceiver module vendor	N/A	String. Length: 1 to 16 characters.	Read-only.
vendor-rev	Revision number of the transceiver module vendor	N/A	String. Length: 0 to 255 characters.	Read-only.
ethernet-pmd	Ethernet PMD (physical medium dependent sublayer) that the transceiver supports.	N/A	Enumeration: • **ETH_10GBASE_LRM** • **ETH_10GBASE_LR** • **ETH_10GBASE_ZR** • **ETH_10GBASE_ER** • **ETH_10GBASE_SR** • **ETH_40GBASE_CR4** • **ETH_40GBASE_SR4** • **ETH_40GBASE_LR4** • **ETH_40GBASE_ER4** • **ETH_40GBASE_PSM4** • **ETH_4X10GBASE_LR** • **ETH_4X10GBASE_SR** • **ETH_100G_AOC** • **ETH_100G_ACC** • **ETH_100GBASE_SR10** • **ETH_100GBASE_SR4** • **ETH_100GBASE_LR4** • **ETH_100GBASE_ER4**	Read-only.

			• **ETH_100GBASE_CWDM4** • **ETH_100GBASE_CLR4** • **ETH_100GBASE_PSM4** • **ETH_100GBASE_CR4** • **ETH_100GBASE_FR** • **ETH_400GBASE_ZR** • **ETH_400GBASE_LR4** • **ETH_400GBASE_FR4** • **ETH_400GBASE_LR8** • **ETH_400GBASE_DR4** • **ETH_UNDEFINED**	
serial-no	Serial number of the transceiver module	N/A	String. Length: 0 to 64 characters.	Read-only.
date-code	Representation of the transceiver date code, typically stored as YYMMDD.	N/A	DateTime. Format:YYMMDD	Read-only.
fault-condition	Indicates if a fault condition exists in the transceiver	N/A	Boolean: • true • false	Read-only.
voltage	Voltage of the transceiver module	Subtable	N/A	For more information, see the components/component/transceiver/state/voltage table.
laser-bias-current	Current applied to the transmit laser to achieve the output power	Subtable	N/A	For more information, see the components/component/transceiver/state/laser-bias-current table.
output-power	Output optical power of a physical channel in units of 0.01dBm	Subtable	N/A	For more information, see the components/component/transceiver/state/output-power table.
input-power	Input optical power of a physical channel in units of 0.01dBm	Subtable	N/A	For more information, see the components/component/transceiver/state/input-power table.
supply-voltage	Supply voltage to the transceiver in volts with 2 decimal	Subtable	N/A	For more information, see the

	precision.			components/component/transceiver/state/supply-voltage table.

components/component/transceiver/state/voltage

This table contains voltage information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	voltage
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current voltage	N/A	Double.	Read-only. 2147483647 means the device doesn't support this feature.

components/component/transceiver/state/laser-bias-current

This table contains current information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Laser-bias-current
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current applied to the transmit laser to achieve the output power.	N/A	Double.	Read-only. 2147483647 means the device doesn't support this feature.

components/component/transceiver/state/output-power

This table contains output power information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Output-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Output optical power.	N/A	Double.	Read-only 2147483647 means the device doesn't support this feature.

components/component/transceiver/state/input-power

This table contains input power information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Input-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Input optical power.	N/A	Double.	Read-only 2147483647 means the device doesn't support this feature.

components/component/transceiver/state/supply-voltage

This table contains supply-voltage information about a transceiver module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Supply-voltage
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	The instantaneous value of supply-votage.	N/A	Double.	Read-only

components/component/transceiver/physical-channels

This table contains status information about a transceiver physical-channels module.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Transceiver physical-channels
Table type	Single-instance table
Row name	N/A
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
channel	channel table	Sublist	N/A	For more information, see the components/component/transceiver/physical-channels/channel table.

components/component/transceiver/physical-channels/channel

This table contains status information about a transceiver channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	channel
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Channel index	Index	Unsigned integer. Value range: 0 to 65535.	Read-only.

config	Config of the channel	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/config table.
state	Status of the channel	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state table.

components/component/transceiver/physical-channels/channel/config

This table contains config information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Channel index	Index	Unsigned integer. Value range: 0 to 65535.	Read-only.
associated-optical-channel	A physical channel may reference an optical channel component.	N/A	String. Component name.	

description	Text description for the client physical channel.	N/A	String.	
tx-laser	Enable (true) or disable (false) the transmit label for the Channel.	N/A	Boolean: • true(default) • false	

components/component/transceiver/physical-channels/channel/state

This table contains status information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Channel index	Index	Unsigned integer. Value range: 0 to 65535.	Read-only.
associated-optical-channel	A physical channel may reference an optical channel component.	N/A	String. Component name.	Read-only.
description	Text description for the client physical channel.	N/A	String.	Read-only.
tx-laser	Enable (true) or disable (false) the transmit label for the Channel.	N/A	Boolean: • true • false	Read-only.

laser-temperature	Laser temperature difference between the target laser temperature for a cooled laser, and the actual current temperature in degrees Celsius with 1 decimal precision.	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/laser-temperature table.
target-frequency-deviation	The difference in MHz with 1 decimal precision between the target center frequency and the actual current center frequency .	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/target-frequency-deviation table.
tec-current	The amount of current flowing to the TC of a cooled laser in percentage with 2 decimal precision.	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/tec-current table.
output-power	The output optical power unit of the physical channel with the specified index is 0.01dBm	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/output-power table.
input-power	The input optical power unit of the physical channel with the specified index is 0.01dBm	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/input-power table.
laser-bias-current	The current applied to the specified channel emitting laser to achieve the output power	Subtable	N/A	For more information, see the components/component/transceiver/physical-channels/channel/state/laser-bias-current table.

components/component/transceiver/physical-channels/channel/state/laser-temperature

This table contains laser-temperature information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Laser-temperature
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	The instantaneous value of laser-temperature.	N/A	Double.	Read-only

components/component/transceiver/physical-channels/channel/state/target-frequency-deviation

This table contains target-frequency-deviation information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Target-frequency-deviation

Item	Description
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	The instantaneous value of target-frequency-deviation.	N/A	Double.	Read-only

components/component/transceiver/physical-channels/channel/state/tec-current

This table contains tec-current information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Tec-current
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	The instantaneous value of tec-current.	N/A	Double.	Read-only

components/component/transceiver/physical-channels/channel/state/output-power

This table contains output power information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Output-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Output optical power.	N/A	Double.	Read-only 2147483647 means the device doesn't support this feature.

components/component/transceiver/physical-channels/channel/state/input-power

This table contains input power information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Input-power
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Input optical power.	N/A	Double.	Read-only 2147483647 means the device doesn't support this feature.

components/component/transceiver/physical-channels/channel/state/laser-bias-current

This table contains current information about a channel module.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Laser-bias-current
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
instant	Current applied to the transmit laser to achieve the output power.	N/A	Double.	Read-only. 2147483647 means the device doesn't support this feature.

components/component/power-supply

This table contains information about a power-supply on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Power-supply
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
state	Status information about a power-supply	Subtable	N/A	For more information, see components/component/power-supply/state table.

components/component/power-supply/state

This table contains status information about a card.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Power-supply State
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
capacity	Capacity of the power	N/A	String	Read-only
output-current	output-current of the power	N/A	String	Read-only
output-voltage	Output-voltage of the power	N/A	String	Read-only
output-power	Output-power of the power	N/A	String	Read-only

components/component/fan

This table contains information about a fan on the device.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Fan
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
state	Status information about a fan	Subtable	N/A	For more information, see components/component/fan/state table.

components/component/fan/state

This table contains status information about a fan.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Fan State
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
speed	Speed of fan	N/A	Unsigned integer	Read-only

components/component/cpu

This table contains CPU usage information about a component.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Cpu
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
utilization	CPU usage of the component	Subtable	N/A	For more information, see the components/component/cpu/utilization table.

components/component/cpu/utilization

This table contains CPU usage information about a component.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	utilization
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
state	Operational state variables relating to the utilization of the CPU.	Subtable	N/A	Read-only

components/component/cpu/utilization/state

This table contains openconfig-platform/components/component/cpu/utilization/state

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Instant	Current CPU usage(%).	N/A	Double.	Read-only.

components/component/integrated-circuit

This table contains openconfig-platform/components/component/integrated-circuit

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	integrated-circuit
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
chip	Statistics representing integrated-circuit/chip of the component.	Subtable	N/A	For more information, see the components/component/integrated-circuit/chip table.

components/component/integrated-circuit/chip

This table contains components/component/intrgrated-circuit/chip information.

XML structure

See the XML structure of components.

Table description

Item	Description
Feature name	Openconfig-platform
Table name	Chip
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Statistics representing integrated-circuit/chip/config of the component.	Subtable	N/A	For more information, see the components/component/integrated-circuit/chip/buffers/buffer/config .
input	Statistics representing integrated-circuit/chip/input of the component.	Subtable	N/A	For more information, see the components/component/integrated-circuit/chip/buffers/buffer/input.
output	Statistics representing integrated-circuit/chip/input of the component.	Subtable	N/A	For more information, see the components/component/integrated-circuit/chip/buffers/buffer/output.
interfaces	Statistics representing integrated-circuit/chip/interfaces of the component.	Subtable	N/A	For more information, see the components/component/integrated-circuit/chip/buffers/buffer/interfaces.

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Reference to the name of the queue instantiated on the interface. The NULL queue represents all queues.	N/A	String. Value:que0 to que7,NULL	Read-only.

qos/interfaces/interface/input/queues/queue/state

This table contains qos/interfaces/interface/input/queues/queue/state information.

XML structure

Please refer to the XML structure of qos.

Table description

Item	Description
Feature name	Openconfig-qos
Table name	state
Table type	Multi-instance table
Row name	state
Restrictions	None
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Reference to the name of the queue instantiated on the interface. The NULL queue represents all queues.	N/A	String. Value:que0 to que7,NULL	Read-only.
pfc-pkts	Number of PFC packets transmit by the queue. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
ecn-sign-pkts	Number of packets signed by ecn. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
wred-drop-pkts	Number of packets dropped by WRED. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
pfc-deadlock-detect	Notification for the detection of PFC deadlock. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
pfc-deadlock-recover	Notification for the recovery of PFC deadlock. This leaf is defined by Tencent	N/A	Boolean: • true • false	Read-only.
rocev2-nack-pkts	Number of RoCEv2 NACK packets. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
pfc-speed-threshold	Speed of PFC packets. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.
pfc-overspeed	PFC packets are overspeed. This leaf is defined by Tencent	N/A	Boolean: • true • false	Read-only.
cnp	The count of congestion notification packets. This leaf is defined by Tencent	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Read-only.

qos/interfaces/interface/output

This table contains qos/interfaces/interface/output information.

XML structure

Please refer to the XML structure of qos.

segment-routing/srlbs/config

This table contains SRLB configuration information.

XML structure

Please refer to the XML Structure of segment-routing/srlbs/config.

Table description

Item	Description
Feature name	openconfig-srlb
Table name	srlbs
Table type	Multi-instance table
Row name	Srlb/config
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
local-id	Local identifier for an SRLB	Index	String. Length: 1 to 31 characters.	Currently only “global” is supported.

dataplane-type	Dataplane being used to instantiate the SRLB	N/A	Enumeration: • MPLS	When MPLS is specified, the set of MPLS label block that are defined in the mpls-label-block list are used to make up the SRLB.
mpls-label-block	MPLS label blocks specified for the SRLB	N/A	String. Length: 1 to 127 characters.	A list of references to the label blocks that are used to make up the SRLB.

segment-routing/srlbs/state

This table contains SRLB state information.

XML structure

Please refer to the XML Structure of segment-routing/srlbs/state.

Table description

Item	Description
Feature name	openconfig-srlb
Table name	srlbs
Table type	Multi-instance table
Row name	srlb/state
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
local-id	Local identifier for an SRLB	Index	String. Length: 1 to 31 characters.	Currently only “global” is supported.
dataplane-type	Dataplane being used to instantiate the SRLB	N/A	Enumeration: • MPLS	When MPLS is specified, the set of MPLS label block that are defined in the mpls-label-block list are used to make up the SRLB.
mpls-label-block	MPLS label blocks specified for the SRLB	N/A	String. Length: 1 to 127 characters.	A list of references to the label blocks that are used to make up the SRLB.

Example

Bind the global MPLS label block through the merge operation:

```
<rpc message-id="100" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
<get>

openconfig-spanning-tree/stp/mstp/mst-instances/mst-instance

This table contains openconfig-spanning-tree/stp/mstp/mst-instances/mst-instance information.

XML structure

See the XML structure of openconfig-spanning-tree/stp.

Table description

Item	Description
Feature name	openconfig-spanning-tree
Table name	mst-instance
Table type	Multi-instance table
Row name	StiVlan
Restrictions	All rows should be wrapped within a whole configuration message, following the region table above.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
mst-id	Spanning tree index	Index	Unsigned integer. Value range: 1 to 4094.	N/A
config	Configuration items of the sti table	Subtable	N/A	For more information, see the openconfig-spanning-tree/stp/mstp/mst-instances/mst-instance/config table.

openconfig-spanning-tree/stp/mstp/mst-instances/mst-instance/config

This table contains openconfig-spanning-tree/stp/mstp/mst-instances/mst-instance/config information.

XML structure

See the XML structure of openconfig-spanning-tree/stp.

Table description

Item	Description
Feature name	openconfig-spanning-tree
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
mst-id	Spanning tree index	Index	Unsigned integer. Value range: 1 to 4094.	N/A
vlan	List of VLANs allocated to the MST instance	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters. • Default：All VLANs are allocated to spanning tree instance 0(CIST).	• Each VLAN can only be allocated to one MST instance. • Each item can be an individual VLAN ID or a VLAN ID range. A hyphen (-) indicates a VLAN range from the start VLAN ID to end VLAN ID. For example: 1, 2, 3, 5-8, and 10-20. • VLAN ID range: 1 to 4094.
bridge-priority	Bridge priority of the spanning tree	N/A	Unsigned integer. • Value range: 0 to 61440, in increments of 4096	Configuration is not allowed when the root type is configured as primary root or secondary root, except

Column name	Column description	Column type	Data type and restrictions	Remarks
			(as in 0, 4096, 8192). • Default: 32768.	for the following values combination: • Priority is 0 when the root type is primary. • Priority is 4096 when the root type is secondary.

openconfig-spanning-tree/stp/interfaces

te-policies/te-policy/state/counters

This table contains te-policies/te-policy/state/counters.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy

Item	Description
Table name	counters
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
in-pkts	Number of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
in-octets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
out-pkts	Number of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
out-octets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A

te-policies/te-policy/candidate-paths/candidate-path

This table contains te-policies/te-policy/candidate-paths/candidate-path.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	candidate-path
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CONFIG	N/A
Originator-asn	Originator-asn	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
Originator-addr	Originator-addr	Index	IPv6: hexadecimal string, colon-separated.	N/A
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535 in some products.	N/A
state	state table	Sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/state
segment-list	Segment-list table	Sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segmen

				t-list.

te-policies/te-policy/candidate-paths/candidate-path/state

This table contains te-policies/te-policy/candidate-paths/candidate-path/state.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	state
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	The candidate path name.	N/A	string	N/A
protocol-origin	Protocol origin of the candidate path	N/A	Enumeration: • 10—PCEP • 20—BGP • 30—CONFIG	N/A
Originator-asn	Originator-asn	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Originator-addr	Originator-addr	N/A	IPv6: hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
discriminator	Discriminator of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535 in some products.	N/A
preference	Preference of multiple candidate paths	N/A	Unsigned integer	N/A
valid	valid	N/A	Boolean: • true. • false.	N/A
active	SRv6 policy forwarding-state	N/A	Boolean: • true. • false.	N/A
active-since	Policy up time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	segment-list
Table type	Multi-instance table

Item	Description
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	Segment ID	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
state	state information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/state table.
sids	sids information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/sids table.
next-hops	state information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/next-hops table.

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/state

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/state information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	state
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	Segment ID	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
valid	Validity of the segment	N/A	Boolean: • true—Valid. • false—Invalid.	N/A
invalid-reason	Invalid reason of the segment-list	N/A	Enumeration: • EMPTY_SL • FIRST_SID_UNRESOLVABLE	N/A
weight	Weight of the segment list for weighted load sharing	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
counters	counters information table	Data structure	Members include: • out-pkts. • out-octets.	N/A
out-pkts	Cumulative counter of the outgoing packets steered to the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
out-octets	Cumulative counter of the total outgoing bytes steered to the segment	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A

	list			

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/sids/sid

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/sids/sid information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	sid
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Sid index	Index	Unsigned integer. Value range: 0 to $2^{64}-1$.	N/A
state	state information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/sids/si

				d table.

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/sids/sid/state

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/sids/sid/state information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	state
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Index of the SID	Index	Uint64	N/A
value	The value of the SID	N/A	Members include: • mpls-label. • ipv6-address.	N/A

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	next-hop
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Destination prefix for the static route.	Index	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
state	state information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/state table.
Interface-ref	Interface information table	Sublist	N/A	For details of the sublist,

				refer to the interface-ref table.

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop/state

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop/state information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description
Feature name	openconfig-srte-policy
Table name	state
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Destination prefix for the static route.	Index	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ip-address	The IP address of the next-hop system	N/A	Dotted decimal notation for IPv4, or colon-separated hexadecimal string for IPv6.	N/A

pushed-mpls-label-stack	The MPLS label stack imposed when forwarding packets to the next-hop	N/A	Unsigned integer. Value range:16 to 1048575	N/A
counters	counters information table	sublist	N/A	For more information, see the te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop/state/counters table.

te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop/state/counters

This table contains te-policies/te-policy/candidate-paths/candidate-path/segment-lists/segment-list/next-hops/next-hop/state/counters information.

XML structure

Please refer to the XML structure of openconfig-srte-policy.

Table description

Item	Description

openconfig-telemetry

telemetry-system

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。
A subscription with the same name already exists in a different mode. 创建gnmi模式的订阅时，订阅名与已存在的非gNMI模式订阅同名	Create a new subscription. Alternatively, delete the existing subscription in the other mode and then create the subscription. 请使用尚未创建的订阅名，或先取消订阅名冲突的订阅，再创建该订阅。

telemetry-system/sensor-groups

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gPRC first. 需要先启动 gRPC 服务，再提供相关服务。
The path doesn't exist, or it is invalid. path不存在或者格式错误。	Invalid sampling path. path不存在或者格式错误。
Path %s is not supported. 不支持指定的path。	实际产品不支持指定的path
The sensor-group is subscribing, please undo subscription first. 当前sensor-group正在被订阅，请先去使能相关订阅。	A user failed to delete a sensor group, failed to assign a sensor path to a sensor group, or failed to remove a sensor path from a sensor group. 用户删除sensor group失败，或者在当前sensor group下配置或移除sensor path失败。
A sensor group with the same name already exists in a different mode. 当前sensor-group已经有其它模式。	Create a new sensor group. Alternatively, delete the existing sensor group in the other mode and then create the sensor group. 使用尚未创建的传感器组名，或先取消组名冲突的传感器组，再创建该传感器组。
The number of sensor groups or sensor paths has reached the upper limit. 传感器组或路径已经达到最大个数。	The maximum number of sensor groups or sensor paths has already been reached. 传感器组或者path已经达到最大个数再创建传感器组或path，则打印此信息。

telemetry-system/destinations

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。

Message	Explanation
The destination group has been used by subscriptions. Please remove the destination group from the subscriptions first. 当前destination group正在被订阅使用，请先从相关订阅下移除。	A user failed to delete a destination group, failed to assign a collector to a destination group, or failed to remove a collector from a destination group. 用户删除destination group失败，或者在当前destination group下配置或移除采集器失败。
The number of collectors in the current destination group has reached the upper limit. 当前目标组下目标已经达到最大个数。	The maximum number of collectors in the destination group has already been reached. 每个目标组下能配置的目标有个数限制。

telemetry-system /subscriptions

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable gRPC first. 需要先启动gRPC服务，再提供相关服务。
The sensor group doesn't exist. 指定的sensor group不存在。	A user specified a non-existent sensor group. 用户指定了一个不存在的sensor group。
The destination group doesn't exist. 指定的destination group不存在。	A user specified a non-existent destination group. 用户指定了一个不存在的destination group。
Can't specify both SampleInterval and SampleIntervalInMSec at the same time. 不能同时输入SampleInterval和SampleIntervalInMSec。	A user specified both SampleInterval and SampleIntervalInMSec at the same time. 用户同时执行了SampleInterval和SampleIntervalInMSec。
Can’t delete the SampleInterval column separately. You must delete the SensorProfile sublist as a whole. 无法单独删除SampleInterval列，只能删除SensorProfile整个表的配置。	A user specified the SampleInterval column in a delete or remove request. 用户在删除操作中指定了 SampleInterval 列。
Can’t delete the SampleIntervalInMSec column separately. You must delete the SensorProfile sublist as a whole. 无法单独删除SampleIntervalInMSec列，只能删除SensorProfile整个表的配置。	A user specified the SampleIntervalInMSec column in a delete or remove request. 用户在删除操作中指定了 SampleIntervalInMSec 列。
The destination group is being used by a subscription in a different mode. 当前目标组已经被与当前订阅模式不同的订阅绑定。	Specify a destination group that is not used by a subscription in a different mode. Alternatively, remove the destination group from all subscriptions and then specify the destination group for a subscription. 使用未被不同订阅模式的订阅绑定的目标组，或者先取消绑定该目标组的所有订阅，再绑定当前订阅。
You must specify a sensor group in non-gNMI mode. 非gNMI 模式订阅必须绑定非gNMI模式的传感器组	You must specify a sensor group in non-gNMI mode. 绑定非gNMI模式的传感器组
You must specify a sensor group in gNMI mode. gNMI 模式订阅必须绑定gNMI模式的传感器组	You must specify a sensor group in gNMI mode. 绑定gNMI模式的传感器组

Message	Explanation
The sampling interval cannot be set in the condition-triggered mode. 条件触发模式下不能配置采样时间。	You cannot set the sampling interval in the condition-triggered mode. 配置了条件触发模式，再配置采样时间时打印该信息。
The suppression time can be set only in the condition-triggered mode. 抑制时间只能在条件触发模式下配置。	You can set the suppression time only in the condition-triggered mode. 没有配置条件触发模式，配置抑制时间时打印该信息。
The sampling interval cannot be changed for a sensor group being used by a subscription. 当前sensor-group正在被订阅，不支持修改sample-interval。	You cannot change the sampling interval for a sensor group if the sensor group is being used by a subscription. 订阅组正在订阅，修改关联的传感器组的采样时间时打印该信息.
The suppression interval cannot be changed for a sensor group being used by a subscription. 当前sensor-group正在被订阅，不支持修改suppress-interval。	You cannot change the suppression interval for a sensor group if the sensor group is being used by a subscription. 订阅组正在订阅，修改关联的传感器组的抑制时间时打印该信息。参考采样时间。
The type of a subscription cannot be modified if sensor groups have been specified for the subscription. 订阅组关联传感器组后不能修改type。	You cannot change the type of a subscription if sensor groups have been specified for the subscription. 订阅组已经关联传感器组，再修改Type打印该错误信息。
The number of subscriptions has reached the upper limit. 订阅组已经达到最大个数。	The maximum number of subscriptions has already been reached. 订阅组有个数限制。
The number of sensor groups in the current subscription has reached the upper limit. 当前订阅组下的传感器组已经达到最大个数。	The maximum number of sensor groups in the subscription has already been reached. 订阅组能用的传感器组有个数限制。
"The number of destination groups in the current subscription has reached the upper limit."当前订阅组下的目标组已经达到最大个数。"	The maximum number of destination groups in the subscription has already been reached. 订阅组能用的目标组有个数限制。

telemetry-system/subscriptions/persistent-subscriptions/persistent-subscription/sensor-profiles/sensor-profile

This table contains telemetry-system sensor profile information.

XML structure

Please refer to the XML structure of telemetry-system.

Table description

Item	Description
Feature name	telemetry-system
Table name	SensorProfile
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sensor-group	telemetry sensor group name	index	String. Length: 1 to 31 characters.	N/A
config	Sensor profile config table	Subtable	N/A	For more information, see the telemetry-system/subscriptions/persistent-subscriptions/persistent-subscription/sensor-profiles/sensor-profile/config table.
state	Sensor profile state table	Subtable	N/A	For more information, see the telemetry-system/subscriptions/persistent-subscriptions/persistent-subscription/sensor-profiles/sensor-profile /state table.

telemetry-system/subscriptions/persistent-subscriptions/persistent-subscription/sensor-profiles/sensor-profile/config

This table contains telemetry-system sensor profile config information.

XML structure

Please refer to the XML structure of telemetry-system.

Table description

Item	Description
Feature name	telemetry-system
Table name	config
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sensor-group	The name of sensor group that used in the profile	index	String. Length: 1 to 31 characters.	N/A
sample-interval	Sampling interval in milliseconds	N/A	uint64. Value range: 100 to 86400000.	This column is intended for periodic sensor paths and only for periodic sensor paths. • If this column is present for event-triggered sensor paths, the sensor paths do not take effect. If this column is absent for periodic sensor paths, the device does not sample or push data.
suppress-interval	the time of accumulate information in seconds	N/A	units64. Value range: 1 to 300.	Defaulte suppress-interval is 60s.
Heartbeat-interval	Maximum time interval in seconds that may pass between updates from a device to a telemetry collector	N/A	units64.	Not support
Suppress-redundant	Boolean flag to control suppression of redundant telemetry updates to the collector platform	N/A	boolen	Not support

telemetry-system/subscriptions/persistent-subscriptions/persistent-subscription/sensor-profiles/sensor-profile/state

This table contains telemetry-system sensor profile state information.

XML structure

Please refer to the XML structure of telemetry-system..

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan	Vlan information	Sublist	N/A	For more information, see the vlans/vlan table.

vlans/vlan

This table contains basic VLAN configuration information.

XML structure

Please refer to the XML structure of vlans.

Table description

Item	Description
Feature name	openconfig-vlan
Table name	vlan
Table type	Multi-instance table
Row name	vlan
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan-id	Vlan id	Index	Unsigned integer. Value range: 1 to 4094.	Read-write
config	Vlan config information	Subtable	N/A	For more information, see the vlans/config table.

vlans/vlan/config

This table contains basic VLAN configuration information.

XML structure

Please refer to the XML structure of vlans.

Table description

Item	Description
Feature name	openconfig-vlan
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan-id	Vlan id	Index	Unsigned integer. Value range: 1 to 4094.	Refer to vlans vlan-id.
name	Vlan name	N/A	String. Length: 1 to 32 characters. Default: **vlan** *vlan-id*. The *vlan id* argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	Read-write. Example: VLAN 0001.
tpid	Tag protocol identifier field	N/A	Unsigned integer. Value range: 1 to 65535.	Read-write. Default TPID_0x8100

switched-vlan

This table contains basic switched-vlan information.

XML structure

```
<openconfig-vlan>
  <switched-vlan>
    <config>
      <interface-mode></interface-mode>
      <native-vlan></native-vlan>
      <access-vlan></access-vlan>
      <trunk-vlans></trunk-vlans>
    </config>
    <state>
      <interface-mode></interface-mode>
      <native-vlan></native-vlan>
      <access-vlan></access-vlan>
      <trunk-vlans></trunk-vlans>
    </state>
  </switched-vlan>
</openconfig-vlan>
```

Row name	N/A
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Switched-vlan configuration information	Subtable	N/A	For more information, see the switched-vlan/config table.

switched-vlan/config

This table contains basic switched-vlan configuration information.

XML structure

Please refer to the XML structure of switched-vlan.

Table description

Item	Description
Feature name	openconfig-vlan
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
interface-mode	Set the interface mode to access or trunk for	N/A	Enumeration: • **TRUNK.** • **ACCESS.**	Read-write.

Column name	Column description	Column type	Data type and restrictions	Remarks
	VLANs.			
native-vlan	Set the port VLAN ID (PVID) for untagged frames arriving on a trunk interface.	N/A	Value range: 1 to 4094.	Read-write. You can configure this columns when the interface-mode is set to TRUNK.
access-vlan	Port VLAN ID	N/A	Value range: 1 to 4094.	Read-write. You can config this columns when interface-mode is set to "ACCESS"
trunk-vlans	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Read-write. You can config this columns when interface-mode is set to "TRUNK". Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<PermitVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

switched-vlan/state

This table contains basic switched-vlan state information.

XML structure

Please refer to the XML structure of switched-vlan.

Table description

Item	Description
Feature name	openconfig-vlan
Table name	state
Table type	Single-instance table

Table description

Item	Description
Feature name	OFP
Table name	LogicalSwitches
Table type	Multi-instance table
Row name	LogicalSwitch
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
InstanceID	Instance ID	Index	Unsigned integer. • **Value range: 1-4094**.
Description	Description of instance	N/A	String. • Length: 1 to 255 characters. Default is empty.
DatapathID	DatapathID of instance	N/A	Unsigned integer64. • Value range: 1 to 2^{64}-1. Default: Instance ID for high 16 bits, Bridge MAC for low 48 bits.
Enable	Enable status of instance	N/A	Boolean: • **true**—Yes. • **false**—No(Default).
Capabilities	Capabilities of instance	Data structure	Members include: • MaxEntries. • DynamicMacAware. • MacLearning. • TableMissDefaultPermit. • ForbiddenPort. • PermitPort. • DynamicArpPre. • TcpNsr.
MaxEntries	Maximum number of flow entry in instance	N/A	Unsigned integer. • **Value range: Depends on device type.** Default value depends on device type.
DynamicMacAware	Enable to query state of dynamic mac addresses	N/A	Boolean: • **true**—Yes. • **false**—No(Default).

Column name	Column description	Column type	Data type and restrictions
MacLearning	Enable mac learning in instance	N/A	Boolean: • **true**—Yes(Default). • **false**—No.
TableMissDefaultPermit	Assign “Permit” as the default table miss action of instance	N/A	Boolean: • **true**—Yes. • **false**—No(Default).
ForbiddenPort	Port type to be forbidden reporting port status to controller	N/A	Unsigned integer. 1st bit for VLAN interface. 2nd bit for VSI interface. 3rd bit for ROUTE interface. Default is 0.
PermitPort	Permit reporting ports of specific type	N/A	Unsigned integer. 1st bit for LAGG interface. Default is 0.
DynamicArpPre	Dynamic ARP will replace the conflicting openflow ARP	N/A	Boolean: • **true—**Yes**.** • **false—**No**(**Default**).**
TcpNsr	Enable controller tcp nsr in instance	N/A	Boolean: • **true—**Yes**(**Default**).** • **false—**No**.**
Resources	Resources of instance	Data structure	Members include: • ClassificationType. • ClassificationVLAN. • ClassificationVLANMask. • ClassificationVLANLoosen. • InbandManagementVLANList. • MACIPTableIDList. • MPLSTableIDList. • ExtensibilityFlowTableIDList.
ClassificationType	Classification type of instance	N/A	Enumeration: • **1**—VLANMask. • **2**—Global. • **3**—Port. • **6**—CUPS Default is not configured.
ClassificationVLAN	VLAN value when the type of classification is VLANMask	N/A	Unsigned integer. • Value **range: 1-4094**. Default is not configured. Classification VLAN can be configured only when the value of classification type is VLANMASK.

Column name	Column description	Column type	Data type and restrictions
ClassificationVLANMask	VLAN mask value when the type of classification is VLANMask	N/A	Unsigned integer. • Value **range: 0-4095**. Default is not configured. Classification VLAN mask can be configured only when the value of classification type is VLANMASK.
ClassificationVLANLoosen	Loosen mode when the type of classification is VLANMask	N/A	Boolean: • **true**—Yes. • **false**—No(Default).
InbandManagementVLANList	In band management VLAN list of the instance	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters. Default is not configured.
MACIPTableIDList	MAC-IP table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. • The string must not end with a comma or hyphen, or include any whitespace characters. Default is not configured.
MPLSTableIDList	MPLS table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. The string must not end with a comma or hyphen, or include any whitespace characters. Default is not configured.
ExtensibilityFlowTableIDList	Extensibility table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. • The string must not end with a comma or hyphen, or include any whitespace characters. Default is 0.
ConnectionCfg	Configuration of connection in instance	Data structure	Members include: • ConnectionMode. • ConnectionInterval. • EchoInterval. • LostConnectionBehavior. • TcpDscp. • ForbiddenPktInArpCtrl.
ConnectionMode	Connection mode for controller in instance	N/A	Enumeration: • **0**—Parallel(Default). • **1**—Serially.

Column name	Column description	Column type	Data type and restrictions
ConnectionInterval	Connection retry interval for connection with controller in instance	N/A	Unsigned integer. • Value **range: 1-120**. Default value depends on the type of openflow instance. When the type is CUPS instance, the default value is 1. When the other types of openflow instance, the default value is 60.
EchoInterval	Interval time value of echo packet sending to controller in instance	N/A	Unsigned integer. • Value **range: 1-10**. Default is 5.
LostConnectionBehavior	Behavior for connection failure with all controllers in instance	N/A	Enumeration: • **1**—Standalone. • **2**—Secure. • **4—Smart** **Default is secure mode**.
TcpDscp	Set the DSCP value for OpenFlow messages in an OpenFlow instance	N/A	Unsigned integer. • Value range: 0-63. Default is 64.
ForbiddenPktInArpCtrl	Specify controllers to which ARP packets are forbidden to be sent	N/A	Unsigned integer64. 1st bit for controller 0. 2nd bit for controller 1. 3rd bit for controller 2. …… 63rd bit for controller 62. 64th bit for controller 63. Default is 0.
DataPlane	Enable the data forwarding plane feature in an instance	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

OFP/Controller

This table contains information about OpenFlow controllers.

XML structure

```
<OFP>
  <Controllers>
    <Controller>
      <InstanceID></InstanceID>
      <ControllerID></ControllerID>
      <IPv4Address></IPv4Address>
      <IPv6Address></IPv6Address>
```

```
      <Port></Port>
      <LocalIPv4Address></LocalIPv4Address>
      <LocalIPv6Address></LocalIPv6Address>
      <LocalPort></LocalPort>

      <VRF></VRF>
      <SSLPolicy></SSLPolicy>
      <BFDEnable></BFDEnable>
      <AccessCtrlPolicy></AccessCtrlPolicy>
    </Controller>
  </Controllers>
</OFP>
```

Table description

Item	Description
Feature name	OFP
Table name	Controllers
Table type	Multi-instance table
Row name	Controller
Restrictions	Row creation is allowed only when the instance exists.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
InstanceID	Instance ID	Index	Unsigned integer. • **Value range: 1-4094**.
ControllerID	Controller ID	Index	Unsigned integer. **Value range: 0-63**.
IPv4Address	Controller‘s IPv4 address	N/A	String, dotted decimal notation. Default is not configured.
IPv6Address	Controller’s IPv6 address	N/A	String, semicolon hex notation. Default is not configured.
Port	Controller’s port	N/A	Unsigned integer. • Value **range: 1-65535**. Default is 6633.
LocalIPv4Address	Local IPv4 address for connection with controller	N/A	String, dotted decimal notation. Default is not configured.
LocalIPv6Address	Local IPv6 address for connection with controller	N/A	String, semicolon hex notation. Default is not configured.

Column name	Column description	Column type	Data type and restrictions
LocalPort	Local port for connection with controller	N/A	Unsigned integer. • Value **range: 1-65535**. Default is not configured.
Protocol	Protocol used for connection with controller	N/A	Enumeration: • **1**—TCP(Default). • **2**—SSL
VRF	VRF name for VPN connection with controller	N/A	String. Length: 1 to 31 characters. Default is not configured.
SSLPolicy	SSL policy name for SSL connection with controller	N/A	String, case insensitive. Length: 1 to 31 characters. Default is not configured. SSL policy can be configured only when the value of protocol is SSL.
BFDEnable	Whether to enable the BFD function for the connection to the OpenFlow controller	N/A	Boolean: • true • false(Default)
AccessCtrlPolicy	Access control SSL policy name for SSL connection with controller.	N/A	String, case insensitive. Length: 1 to 31 characters. Default is not configured. Access SSL policy can be configured only with SSL policy.

OFP/GlobalConfigurations

This table contains information about OpenFlow global configurations.

Capabilities	Capabilities of instance	Data structure	Members include: • MaxEntries. • DynamicMacAware. • MacLearning. • TableMissDefaultPermit. • ForbiddenPort. • PermitPort. • DynamicArpPre. • TcpNsr.
MaxEntries	Maximum number of flow entry in instance	N/A	Unsigned integer. • **Value range: Depends on device type.**
DynamicMacAware	Enable to query state of dynamic mac addresses	N/A	Boolean: • **true**—Yes. • **false**—No.
MacLearning	Enable mac learning in instance	N/A	Boolean: • **true**—Yes. • **false**—No.

Column name	Column description	Column type	Data type and restrictions
TableMissDefaultPermit	Assign “Permit” as the default table miss action of instance	N/A	Boolean: • **true**—Yes. • **false**—No.
ForbiddenPort	Port type to be forbidden reporting port status to controller	N/A	Unsigned integer. 1st bit for VLAN interface. 2nd bit for VSI interface. 3rd bit for ROUTE interface.
PermitPort	Permit reporting ports of specific type	N/A	Unsigned integer. 1st bit for LAGG interface.
DynamicArpPre	Dynamic ARP will replace the conflicting openflow ARP	N/A	Boolean: • **true—**Yes**.** • **false—**No**.**
TcpNsr	Enable controller tcp nsr in instance	N/A	Boolean: • **true—**Yes**.** • **false—**No**.**
Resources	Resources of instance	Data structure	Members include: • ClassificationType. • ClassificationVLAN. • ClassificationVLANMask. • ClassificationVLANLoosen. • InbandManagementVLANList. • MACIPTableIDList. • MPLSTableIDList. • ExtensibilityFlowTableIDList.
ClassificationType	Classification type of instance	N/A	Enumeration: • **1**—VLANMask. • **2**—Global. • **3**—Port. • **6**—CUPS
ClassificationVLAN	VLAN value when the type of classfication is VLANMask	N/A	Unsigned integer. • Value **range: 1-4094**.
ClassificationVLANMask	VLAN mask value when the type of classification is VLANMask	N/A	Unsigned integer. • Value **range: 0-4095**.
ClassificationVLANLoosen	Loosen mode when the type of classification is VLANMask	N/A	Boolean: • **true**—Yes. • **false**—No.

Column name	Column description	Column type	Data type and restrictions
InbandManagementVLANList	In band managment VLAN list of the instance	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters.
MACIPTableIDList	MAC-IP table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. • The string must not end with a comma or hyphen, or include any whitespace characters.
MPLSTableIDList	MPLS table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. The string must not end with a comma or hyphen, or include any whitespace characters.
ExtensibilityFlowTableIDList	Extensibility table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. • The string must not end with a comma or hyphen, or include any whitespace characters.
ConnectionCfg	Configuration of connection in instance	Data structure	Members include: • ConnectionMode. • ConnectionInterval. • EchoInterval. • LostConnectionBehavior. • TcpDscp. • ForbiddenPktInArpCtrl.
ConnectionMode	Connection mode for controller in instance	N/A	Enumeration: • **0**—Parallel. • **1**—Serially.
ConnectionInterval	Connection retry interval for connection with controller in instance	N/A	Unsigned integer. • Value **range: 1-120**.
EchoInterval	Interval time value of echo packet sending to controller in instance	N/A	Unsigned integer. • Value **range: 1-10**.
LostConnectionBehavior	Behavior for connection failure with all controllers in instance	N/A	Enumeration: • **1**—Standalone. • **2**—Secure. • **4—Smart**

Column name	Column description	Column type	Data type and restrictions
TcpDscp	Set the DSCP value for OpenFlow messages in an OpenFlow instance	N/A	Unsigned integer. • Value range: 0-63.
ForbiddenPktInArpCtrl	Specify controllers to which ARP packets are forbidden to be sent	N/A	Unsigned integer64. 1st bit for controller 0. 2nd bit for controller 1. 3rd bit for controller 2. …… 63rd bit for controller 62. 64th bit for controller 63.
DataPlane	Enable the data forwarding plane feature in an instance	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

OFP/Controller

This table contains information about OpenFlow controllers.

XML structure

```
<OFP>
  <Controllers>
    <Controller>
      <InstanceID></InstanceID>
      <ControllerID></ControllerID>
      <Role></Role>

Table type	Multi-instance table
Row name	Controller
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions
InstanceID	Instance ID	Index	Unsigned integer. • **Value range: 1-4094**.
ControllerID	Controller ID	Index	Unsigned integer. **Value range: 0-63**.
Role	Controller role	N/A	Enumeration: • **0**—Unknown. • **1**—Equal. • **2**—Master. • 3—Slave.
IPv4Address	Controller‘s IPv4 address	N/A	String, dotted decimal notation.
IPv6Address	Controller’s IPv6 address	N/A	String, semicolon hex notation.
Port	Controller’s port	N/A	Unsigned integer. • Value **range: 1-65535**.
LocalIPv4Address	Local IPv4 address for connection with controller	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address for connection with controller	N/A	String, semicolon hex notation.
LocalPort	Local port for connection with controller	N/A	Unsigned integer. • Value **range: 1-65535**.
Protocol	Protocol used for connection with controller	N/A	Enumeration: • **1**—TCP • **2**—SSL
VRF	VRF name for VPN connection with controller	N/A	String. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
SSLPolicy	SSL policy name for SSL connection with controller	N/A	String. Length: 1 to 31 characters.
ConnectionState	Connection state of controller	N/A	Enumeration: • **0**—Idle. • **1**—Established.
CurrentVersion	Wired version of OpenFlow protocol for the connection.	N/A	String. Length: 1 to 15 characters.
BFDEnable	Whether to enable the BFD function for the connection to the OpenFlow controller	N/A	Boolean: • true • false
AccessCtrlPolicy	Access control SSL policy name for SSL connection with controller	N/A	String. Length: 1 to 31 characters.

OFP/GlobalConfigurations

This table contains information about OpenFlow global configurations.

XML structure

```
<OFP>
  <GlobalConfigurations>
     <NormalForwardVLANList></NormalForwardVLANList>
  </GlobalConfigurations>
</OFP>
```

Table description

Item	Description
Feature name	OFP
Table name	GlobalConfigurations
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions
NormalForwardVLANList	Global support for normal forward VLAN list	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters.

OFP/Capability

This table contains OFP capability information, and it is used to obtain custom OFP parameters.

XML structure

```
<OFP>
  <Capability>
    <LostConnectionSmartMode></LostConnectionSmartMode>
    <SupportExtensibilityTableNum></SupportExtensibilityTableNum>
  </Capability>
</OFP>
```

Message	Explanation
Failed to configure OpenFlow. 配置Open Flow失败。	Invalid configuration, please modify configuration under the guidance. 无效的配置，请修改指导下的配置。
The Openflow process is busy. Please try again later. OpenFlow进程繁忙，请稍后尝试。	Receive message failure,connect server failure 接收消息失败或者与服务端建立连接失败。

OFP/Packet

Message	Explanation
Failed to configure OpenFlow. 配置Open Flow失败。	Invalid configuration, please modify configuration under the guidance. 无效的配置，请修改指导下的配置。
The Openflow process is busy. Please try again later. OpenFlow进程繁忙，请稍后尝试。	Receive message failure,connect server failure 接收消息失败或者与服务端建立连接失败。

OFP/LogicalSwitches

Message	Explanation
Failed to configure OpenFlow. 配置Open Flow失败。	Invalid configuration, please modify configuration under the guidance. 无效的配置，请修改指导下的配置。
The Openflow process is busy. Please try again later. OpenFlow进程繁忙，请稍后尝试。	Receive message failure,connect server failure 接收消息失败或者与服务端建立连接失败。
The value of VLAN ID should be specified when the type is VLAN Mask. 类型为VLAN掩码时必须指定VLAN ID。	The value of VLAN ID should be specified when the instance type is VLAN Mask. 实例类型为VLAN掩码时必须指定VLAN ID。
Configuration of VLAN should not be specified, when the type is global. 类型为全局时不能执行VLAN相关配置。	Configuration of VLAN should not be specified, when the instance type is global. 实例类型为全局时不能执行VLAN相关配置。
Configuration of VLAN failed, because the type is not specified 由于未指定类型，VLAN配置失败	The instance type should be specified,when existence the configuration of the VLAN. 当存在VLAN的相关的配置的时候，应该指定相应的实例类型。
The Extensibility TableID is not legal.	The value of extensibility Tabled ID is only number and the

扩展流表ID输入不合法。	extenbility table ID should be in the range of 0-254. 扩展流表ID的值只能是数字并且必须在0-254范围内。
Configuration of multiple MAC-IP flow table ID is not supported. 暂不支持配置多个MAC-IP流表ID	Only one MAC-IP flow table ID can be supported. 只能配置一个MAC-IP流表ID。
Configuration of multiple multiple Extensibility flow table ID is not supported. 暂不支持配置多个Extensibility流表ID。	Only one extensibility flow table ID can be supported. 只能配置一个Extensibility流表ID。
The MAC-IP TableID is not legal. MAC-IP流表ID的值不合法。	The value of MAC-IP Tabled ID is only number and the MAC-IP table ID should be in the range of 0-254. MAC-IP流表ID的值只能是数字且范围是0-254。.
Extensibility table ID and MAC-IP table ID should be in the range of 0-254. 扩展流表和MAC-IP流表的ID必须在0-254范围内。	The MAC-IP table ID and Extensibility table ID should be in the range of 0-254. 扩展流表和MAC-IP流表的ID应该在0-254范围内。
Can not delete the configuration of Vlan ID when the type is VLAN Mask. 类型为VLAN掩码时不允许删除VLAN ID。	If instance type is VLAN Mask ,the VLAN ID is not allowed to be deleted when an instance table is deleted、removed、replaced. 在对实例表进行delete、remove、replace时，如果实例类型是VLAN掩码则不允许删除VLAN ID
MAC-IP table ID and extensibility table ID should be deleted together. MAC-IP流表和扩展流表必须一起删除。	If the table type is MAC-IP table,,the MAC-IP table should be deleted with the extensibilty table when an instance table is deleted、removed、replaced. 在对实例表进行delete、remove、replace时，如果流表类型是MAC-IP表，则MAC-IP表应该和扩展表一起删除。
Extensibility Flow table ID should be larger than MAC-IP table ID. 扩展流表ID必须大于MAC-IP流表ID。	MAC-IP table ID should be less than extensibility flow table ID. MAC-IP流表的ID不能大于扩展流表的ID。
The instance is already active, please deactivate instance first. 实例已经激活，请首先去激活。	Modify the activated instance configuration is not allowed when the instance has been activated. 实例已经被激活，不允许去修改已经激活的配置。
Queue wait timeout. 队列等待超时。	Read queue failure 读取队列失败
The operation of instance activation/deactivation is running, please try later. 实例激活和去激活的操作正在运行中，请稍后尝试。	The operation of instance activation/deactivation is running. 实例激活或者去激活的操作正在进行。
Failed to activate instance, please configure classification first. 激活实例请先配置实例类型。	Please configure classification first before activate instance. 激活实例之前请先配置实例类型。
No openflow instance exists. 没有OpenFlow实例存在。	No openflow instance exists. 没有OpenFlow实例存在。

OFP/Controller

Message	Explanation
Please configure IPV4 or IPV6 unicast address.	IPV4 or IPV6 unicast address should be configured when the

请配置IPv4或IPv6的单播地址。	controller is created. 当创建控制器配置的时候，IPV4或者IPV6的单播地址应该被设置。
The instance does not exist. 指定的实例不存在。	The instance ID does not exist. 指定的实例不存在。
The specified controller can not be modified. 不支持修改控制器配置。	The specified controller is already exist when the current controller is create;the current controller has the same configure with others when the current controller is merged;the current controller is not line deletion when controller is deleted、removed. 控制器进行merge操作时，存在重复配置；进行creat操作时，指定的控制器已经存在；delete和remove操作时不是行删除。
SSL policy should not be specified when the value of protocol is TCP. 当使用TCP连接控制器时，不能配置SSL策略。	When the value of protocol is TCP ,ssl policy should not be specified. 当使用TCP连接控制器时，不能配置SSL策略。
SSL policy should be specified when the value of protocol is SSL. 当使用SSl连接控制器时，必须配置SSL策略。	When the value of protocol is SSL ,ssl policy should be specified. 当使用SSl连接控制器时，必须配置SSL策略。
Local IPv4 and IPv6 address can not be configured at the same time. 本地IPv4和IPv6地址不能同时配置。	Local IPv4 and IPv6 address can not be configured at the same time. 本地IPv4和IPv6地址不能同时配置。
IPv4 or IPv6 address must be configured. 配置控制器时必须指定IPv4或IPv6地址。	IPv4 or IPv6 address must be configured. 配置控制器时必须指定IPv4或IPv6地址。
The value of local IPv4 or IPv6 address should be configured when Local port is specified. 配置本地端口时必须指定本地IPV4或IPV6地址。	When Local port is specified, the value of local IPv4 or IPv6 address should be configured. 配置本地端口时必须指定本地IPV4或IPV6地址。
The specified controller ID exists. 指定的控制器号已经存在。	Cannot conflict with existing controller ID when creating controller configuration. 创建控制器配置时不能与已有的控制器ID冲突。
OpenFlow controller configuration conflicts with other one. 指定控制器的配置和其他控制器冲突。	The current controller configuration cannot config with other controllers when the current controller is created. 当控制器进行creat操作时，当前控制器的配置不能与其他控制相冲突。
BFD is not supported. 不支持BFD功能。	Cannot enable the BFD function because the device does not support BFD. 无法配置BFD功能，因为当前设备不支持BFD。
Access control policy should only be specified when the value of protocol is SSL. 当使用非SSL连接控制器时，不能配置证书访问控制策略。	When the value of protocol is not SSL, Access control policy should not be specified. 当使用非SSL连接控制器时，不能配置证书访问控制策略。

OFP/GlobalConfigurations

Message	Explanation
The global instance and VLAN instance can't take effect simultaneously. 全局实例和VLAN实例不可同时生效。	The global instance and VLAN instance can't be actived simultaneously. 全局实例和VLAN实例不可同时被激活生效。

This global classification already exists. 全局配置已经存在。	The current global classification conflict with others. 当前的全局配置与其他实例配置冲突。

Table description

Item	Description
Feature name	OSPF
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.	After an instance is created, its VRF cannot be modified. The column is not supported in VSYS.
RouterId	Router identifier.	N/A	String, dotted decimal notation.	N/A
Mode	Mode of the OSPF process.	N/A	Enumeration: • **0**—Normal process (default). • **1**—Lite process.	After a process is created, its mode cannot be modified. The column is only supported in non-defalut vSystem.
NSR	Nonstop routing.	N/A	Boolean: • **true**—Enable the nonstop routing feature. • **false**—Disable the nonstop routing feature.	Only supported on distributed devices or centralized IRF devices.

Column name	Column description	Column type	Data type and restrictions	Remarks
VpnInstance Capability	Route loop check for the OSPF process of the VPN instance.	N/A	Enumeration: • **0**—Normal, which indicates enabling route loop check. • **1**—Simple, which indicates disabling route loop check. Default: 0.	Only supported by an OSPF process of a specific VPN instance.
DefaultRoute Advertise	Default route redistribtution information.	Data structure	Members include: • CfgType. • Cost. • PolicyName. • Type.	N/A
CfgType	Default route redistribtution method	N/A	Enumeration: • **0**—Disable. • **1**—Normal. • **2**—Always. • **3**—Permit-Calculate-Other. • **4**—Summary	The CfgType of “Summary” is supported only by an OSPF process of a specific VPN instance.
Cost	Cost for the default route.	N/A	String. Length: 1 to 31 characters.	This column cannot be specified when the CfgType column is “Disable”. This column must be specified and cannot be “default” when the CfgType column is “Summary”. It must be “default” or an unsigned integer in the range of 0 to 16777214. "default" means the default cost specified by the **default-cost** command applies.
PolicyName	Specifies a routing policy to filter default routes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	This column cannot be specified when the CfgType column is “Disable” or “Summary”.
Type	Specifies a type for the Type-5 LSA.	N/A	Enumeration: • 0—Default. The value specified by the default type command applies. • 1—Type 1. • 2—Type 2.	This column cannot be specified when the CfgType column is “Disable” or “Summary”.
Spf-schedule	Time interval of OSPF route	Data structure	Members include: • Maximum.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	calculation.		• Minimum. • Incremental. • Conservative. Millisecond.	
Maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60.	When configuring minimum, incremental and conservative, maximum must be set; maximum cannot be set at the same time as millisecond.
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000.	When configuring incremental and conservative, minimum must be set; minimum cannot be set at the same time as millisecond.
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000.	When configuring conservative, incremental must be set; minimum cannot be set at the same time as millisecond.
Conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • ture—Enable route calculation is based on the maximum time interval. • false—Disable route calculation is based on the maximum time interval.	Conservative cannot be set at the same time as millisecond.
Millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000.	Millisecond cannot be set at the same time as maximum ,minimum, incremental and conservative.
Isolate	Whether to isolate OSPF from current network.	N/A	Boolean: • true—Isolate OSPF from current network. • false—Do not isolate OSPF from current network (default).	N/A
Shutdown	Whether to shutdown the OSPF process.	N/A	Boolean: • **true—**Shutdown the OSPF process. • **false—**Do not shutdown the OSPF process (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	The description information of OSPF instance.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A
VirtualSystem	Whether to use virtual OSPF nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPF nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPF nodes for neighbor relationship establishment.	N/A
LsaArrivalInterval	Time interval of OSPF arrival.	Data structure	Members include: • Maximum. • Minimum. • Incremental.	N/A
Maximum	Maximum time interval.	N/A	Unsigned integer. Value range:0 to 10000(milliseconds).	When configuring minimum or incremental, maximum must be set.
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 0～60000.(milliseconds)	When configuring maximum and incremental, minimum must be set.
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 1～5000(milliseconds).	N/A
LsaGenerationInterval	Time interval of OSPF lsa generation.	Data structure	Members include: • Maximum. • Minimum. • Incremental.	N/A
Maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60 (seconds).	N/A
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPF Minimum interval should not be greater than maximum interval.
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPF Incremental interval should not be greater than maximum interval.
RouteTagCheck	Whether to check the route tag of ASE and NSSA LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance

Column name	Column description	Column type	Data type and restrictions	Remarks
DnBitCheckSummary	Whether to check the DN bit in Summary LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance
DnBitCheckAse	Whether to check the DN bit in ASE LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance
DnBitCheckNssa	Whether to check the DN bit in NSSA LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance
DnBitSetSummary	Whether to set the DN bit in Summary LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance
DnBitSetAse	Whether to set the DN bit in ASE LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance
DnBitSetNssa	Whether to set the DN bit in NSSA LSA.	N/A	Enumeration: • disable • enable (default)	Cannot be configured in the public network instance

Table description

Item	Description
Feature name	OSPF
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it. It must be an unsigned integer in the range of 1 to 65535.
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6—**BGP. • **7—**EIGRP. • **8—**Guard. • **9—**UNR.	N/A
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the **Protocol** column is Direct, Static, Guard, or UNR. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is ISIS, OSPF,

Column name	Column description	Column type	Data type and restrictions	Remarks
				EIGRP,or RIP. It must be empty or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.
Cost	Redistribute metric.	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
InheritCost	Whether to use the original cost of redistributed routes.	N/A	Boolean: • **true**—Use the original cost of redistributed routes. • **false**—Do not use the original cost of redistributed routes.	This column cannot be specified when the Cost column exists.
RoutePolicyName	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
AllowIBGP	Allow IBGP routes when importing BGP routes.	N/A	Boolean: • **true—**Import IBGP routes when importing BGP routes. • **false—**Do not import IBGP routes when importing BGP routes (default).	This column can be specified only when the protocol is BGP.
MetricType	Specifies a metric type for redistribute.	N/A	Enumeration: • **1**—Type 1. • **2**—Type 2 (default)..	N/A
AllowDirect	Allow direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	N/A	Boolean: • **true—**Import direct routes when importing ISIS, OSPF, RIP or EIGRP routes. • **false—**Does not import direct routes when importing ISIS, OSPF, RIP or EIGRP routes (default).	This column can be specified only when the Protocol is 3, 4, 5 or 7.
NssaOnly	Limits routes to NSSA areas.	N/A	Boolean: • **true—**Limits routes to NSSA areas. • **false—**Does not limit routes to NSSA areas (default).	N/A
Tag	Redistribute tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

OSPF/Areas

This table contains OSPF area information.

XML structure

```
<OSPF>
  <Areas>
    <Area>
      <Name></Name>
      <AreaId></AreaId>
      <AreaType></AreaType>
      <Description></Description>
    </Area>
  </Areas>
</OSPF>

Table description

Item	Description
Feature name	OSPF
Table name	Interfaces
Table type	Multi-instance table

Item	Description
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfEnable	Interface enable messages.	Data structure	Members include: • Name. • AreaId. • ExcludedSubIp.	The members of Name and AreaId must be specified. Interface configuration takes precedence, and OSPF enabled on the interface is better than the configuration of the network command.
Name	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
AreaId	Area ID.	N/A	String, dotted decimal notation.	N/A
ExcludedSubIp	Whether to exclude secondary IP addresses.	N/A	Boolean: • **true**—Excludes secondary IP addresses. • **false**—Does not exclude secondary IP addresses (default).	N/A
Cost	Interface cost.	N/A	Unsigned integer. Value range: • Loopback interfaces: 0 to 65535. • Other interfaces: 1 to 65535. Default: • Loopback interfaces: 0. • Other interfaces: The cost values are calculated by using the formula: *Cost = Reference bandwidth value / Expected interface bandwidth*.	N/A
NetworkType	Interface network type.	N/A	Enumeration: • **1**—Broadcast. • **2**—NBMA.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—P2P. • **4**—P2MP. • **5**—P2MP unicast**.** • **6**—P2P multicast.	
HelloTimer	Hello interval.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DeadTimer	Dead interval.	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
DrPriority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255. Default: 1.	N/A
SimpleAuth	Simple authentication messages.	Data structure	Members include: • SimplePwdType. • SimplePwd.	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time. The members must both be specified when SimplePwdType is not None.
SimplePwdType	Simple password type.	N/A	Enumeration: • 1—Cipher. • 2—Plain. • 3—None.	OSPF will use empty string to authenticate packets when SimplePwdType is None.
SimplePwd	Simple password.	N/A	String. Length: • 1 to 8 characters for plain password. • 33 to 41 characters for cipher password.	It will not take effect when SimplePwdType is None.
NullAuth	Whether to use no authentication.	N/A	Boolean: • **true**—Use no authentication. • **false—**Do not use no authentication.	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time.
Keychain	Specify a keychain for authentication.	N/A	String: case sensitive. Length: 1 to 63 characters.	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time.
BfdEnable	BFD is enabled for OSPF.	N/A	Enumeration: • **1**—Enable control packet mode. • **2**—Enable echo packet mode.	N/A
Frr	Fast reroute configuration.	Data structure	Members include: • PrimaryPathDetect. • LfaDisable. • TiLfaDisable. • RemoteLfaDisable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryPathDetect	BFD session mode.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode.	N/A
LfaDisable	Whether to disable LFA.	N/A	Boolean: • **true**—LFA is disabled. • **false**—LFA is enabled (default).	N/A
TilfaDisable	Whether to disable TI-LFA.	N/A	Boolean: • **true**—TI-LFA is disabled. • **false**—TI-LFA is enabled (default).	N/A
RemoteLfaDisable	Whether to disable remote-LFA.	N/A	Boolean: • **true**—RemoteLFA is disabled. • **false**—RemoteLFA is enabled (default).	N/A
PrefixSid	Prefix Segment ID messages.	Data structure	Members include: • SidName. • SidType. • Sid. • ExplicitNull. • NFlagClear.	The members of SidName, SidType and Sid must be specified.
SidName	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
SidType	The type of Prefix-SID	N/A	Enumeration: • **1**—Absolute value of Prefix-SID. • **2**—Index value of Prefix-SID.	N/A
Sid	Prefix Segment ID	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
ExplicitNull	Explicit null label	N/A	Boolean: • **true**—The upstream neighbor replaces the prefix SID with an explicit null label. • **false—**The upstream neighbor does not replace the prefix SID with an explicit null label (default).	N/A
PHP	Penultimate hop popping flag	N/A	Boolean: • **true**—Pops the penulimate hop(default). • **false**—Does not pop the penulimate hop.	N/A
NFlagClea	Clear the	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
r	N-flag		• **true**—Clears the N-flag for the prefix SID. • **false**—Does not clear the N-flag for the prefix SID (default).	
Database Filter	Filter outbound LSAs on the interface.	Data structure	Members include: • All. • Ase. • AseAclNumber. • Nssa. • NssaAclNumber • Summary • SummaryAclNumber	The set operation is subject to the last issuance.
All	Filters all LSAs except the Grace LSAs.	N/A	Boolean: • **true**—Filters all LSAs except the Grace LSAs. • **false**—Do not filters all LSAs except the Grace LSAs (default).	This attribute cannot be configured simultaneously with Ase, AseAclNumber, Nssa, NssaAclNumber, Summary and SummaryAclNumber attributes. Merge and create cannot issue false.
Ase	Filters Type-5 LSAs.	N/A	Boolean: • **true**—Filters Type-5 LSAs. • **false**—Do not filters Type-5 LSAs (default)..	This attribute must be configured with the AseAclNumber attribute, and cannot be configured with the All attribute Merge and create cannot issue false.
AseAclNumber	Specifies an IPv4 ACL by its number in the range of 2000 to 3999.	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with Ase, and cannot be configured with the All attribute
Nssa	Filters Type-7 LSAs.	N/A	Boolean: • **true**—Filters Type-7 LSAs. • **false**—Do not filters Type-7 LSAs (default)..	Must be configured with the NssaAclNumber attribute, not with the All attribute Merge and create cannot issue false.
NssaAclNumber	Specifies an IPv4 ACL by its number in the range of 2000 to 3999.	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with Nssa, and cannot be configured with the All attribute
Summary	Filters Type-3 LSAs.	N/A	Boolean: • **true**—Filters Type-3 LSAs. • **false**—Do not filters Type-3 LSAs (default)..	Must be configured with the SummaryAclNumber attribute, not with the All attribute Merge and create cannot issue false.
SummaryAclNumber	Specifies an IPv4 ACL by its number in the	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with the Summary, and cannot be configured with

Column name	Column description	Column type	Data type and restrictions	Remarks
	range of 2000 to 3999.			the All attribute
MtuEnable	Enable the interface to add its MTU into DD packets.	N/A	Boolean: • true—Enable the interface to add its MTU into DD packets. • false—Disable the interface to add its MTU into DD packets (default)	N/A
PacketSize	Set the maximum length of OSPF packets that can be sent by an interface.	N/A	Unsigned integer. Value range: 500 to 10000. Default: the maximum length of OSPF packets that an interface can send equals the interface's MTU.	N/A
PrefixSuppression	Enable prefix suppression for the OSPF process.	N/A	Enumeration: • **0**—Not configured, inherit the enablement of the process (default).. • **1**—Enable prefix suppression on the interface. • **2**—Disable prefix suppression on the interface.	N/A
TimerPoll	Set the poll interval.	N/A	Unsigned integer. Value range: 1 to 2147483647. Default: Four times the hello interval.	N/A
TimerRetransmit	Set the retransmission interval.	N/A	Unsigned integer. Value range: 1 to 3600. Default: 5.	N/A
TransDelay	Set the LSA transmission delay.	N/A	Unsigned integer. Value range: 1 to 3600. Default: 1.	N/A
TtlSecurity	Configure GTSM for the interface.	Data structure	Members include: • HopsCount. • Disable.	HopsCount and Disable cannot be delivered at the same time.
HopsCount	Enable GTSM for the interface.	N/A	Unsigned integer. Value range: 1 to 254. Default:1 (configuring)	The default value of HopsCount is 1 when configured, and the result of the empty value is 1.
Disable	Disable GTSM for the interface.	N/A	Boolean: • **true**—Disable GTSM for the interface. • **false—**Enable GTSM for the interface (default).	Disable GTSM for an interface when the following conditions exist: —The area to which the interface belongs is enabled with GTSM. —The neighbor of the

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface does not support GTSM. Merge and create cannot issue false.
PeerSubAddrEnable	Establish OSPF neighbor adjacencies through the secondary IP address	N/A	Boolean: • **true**—Enable to establish OSPF neighbor adjacencies through the secondary IP address. • **false**—Unable to establish OSPF neighbor adjacencies through the secondary IP address (default).	PeerSubAddrEnable and PeerSubAddrSpecified are mutually exclusive.
PeerSubAddrSpecified	Establish OSPF neighbor adjacencies through the specified secondary IP address	N/A	IPv4 address string, dotted decimal notation.	PeerSubAddrEnable and PeerSubAddrSpecified are mutually exclusive.
CostAdjustTrack	Associate a track entry for interface cost adjustment	N/A	Unsigned integer. Value range: 1 to 1024.	CostAdjustTrack and CostAdjustOffset must be set together.
CostAdjustOffset	Set the value to be added to the interface cost when the track status changes to Negative	N/A	Unsigned integer. Value range: 1 to 65535.	CostAdjustTrack and CostAdjustOffset must be set together. The value to be added to the interface cost is in the range of 1 to 65534. If you set the value for CostAdjustOffset to 65535, the interface will use the maximum interface cost when the track status changes to Negative.
VirtualSystem	Information about virtual system configuration.	Data structure	Members include: • Enable • RouterId	N/A
Enable	Whether to use virtual OSPF nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPF nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPF nodes for neighbor relationship establishment (default).	N/A
RouterId	Set a virtual OSPF router ID	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Silent	Suppress routing updates on the interface	N/A	Enumeration: • **0**—Do not suppress routing updates on the interface. • **1**—Suppress routing updates on the interface.	N/A
BfdAdjustCost	Adjust the OSPF interface cost according to the BFD session state.	N/A	Enumeration: • **1~65534**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 65534 when the BFD session goes down. • **none**—Do not adjust cost (default).	N/A
BfdAdjustCostSuppress	Suppress OSPF interface cost adjustment upon BFD session state changes.	Data structure	Members include: • ResumeInterval. • DetectInterval. • Threshold	N/A
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds. Default: 0 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
Threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100. Default: 1.	N/A

OSPF/IfMd5s

This table contains OSPF interface cryptographic authentication information.

XML structure

```
<OSPF>
  <IfMd5s>
```

```
    <Md5>
      <IfIndex></IfIndex>
      <KeyId></KeyId>
      <Md5Type></Md5Type>
      <PasswordType></PasswordType>
      <Password></Password>
    </Md5>
  </IfMd5s>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	IfMd5s
Table type	Multi-instance table
Row name	Md5
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
KeyId	Key ID.	Index	Unsigned integer. Value range: 1 to 255.	OSPF will uses empty string to authenticate packets when KeyId is empty.Other Md5 configuration will be deleted when you create、merge or replace a Md5 that KeyId is empty.Empty string authentication configuration will be deleted when

Column name	Column description	Column type	Data type and restrictions	Remarks
				you create、merge or replace a Md5 that KeyId is not empty.
Md5Type	Cryptographic authentication type.	N/A	Enumeration: • **1**—MD5. • **2**—HMAC-MD5. • **3**—HMAC-SHA-256. • **4**—HMAC-SM3.	After a Md5 is created, its Md5Type cannot be modified when KeyId is not empty.
PasswordType	Password type.	N/A	Enumeration: • **1**—Cipher. • **2**—Plain.	After a Md5 is created, its PasswordType cannot be modified. It will not take effect when KeyId is empty.
Password	Password.	N/A	String. Length: • 1 to 255 characters for MD5/HMAC-MD5/HMAC-SHA-256/HMAC-SM3 plain password. • 33 to 373 characters for MD5/HMAC-MD5/HMAC-SHA-256/HMAC-SM3 cipher password.	After a Md5 is created, its Password cannot be modified. It will not take effect when KeyId is empty.

OSPF/Preferences

This table contains OSPF preference information.

XML structure

```
<OSPF>
  <Preferences>
    <Preference>
      <Name></Name>
      <TopoId></TopoId>
      <Type></Type>
      <Value></Value>
      <PolicyName></PolicyName>
    </Preference>
  </Preferences>
</OSPF>
```

Table description

Item	Description

Table type	Multi-instance table

Item	Description
Row name	StubRouter
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge, create, replace, delete, or remove StubRouter lists for it. It must be an unsigned integer in the range of 1 to 65535.
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
ExternalLsa	Configures the cost of external LSAs.	N/A	Boolean: • true—Specifies a cost for the external LSAs. • false—Does not specify a cost for the external LSAs (default).	For the create and merge operations, if you both configure the ExternalLsa and ExtMetric, you must specify the ExternalLsa as true. For the replace operation, if you configure the ExtMetric, you must configure the ExternalLsa too, and specify the ExternalLsa as true. For the delete and remove operations, if you configure the ExternalLsa, the ExtMetric value will be deleted.
ExtMetric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215. Default: 16711680.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IncludeStub	Sets the cost of the stub links.	N/A	Boolean: • true—Sets the cost of the stub links (link type 3) in Router LSAs to the maximum value 65535. • false—Does not set the cost of the stub links (link type 3) in Router LSAs (default).	N/A
OnStartup	Specifies the router as a stub router during reboot.	Data structure	Members include: • WaitForBgp. • Seconds.	At least one member must be specified.
WaitForBgp	Waits for BGP on-startup.	N/A	Boolean: • true—Specifies the router as a stub router during BGP route convergence after reboot. • false—Does not specify the router as a stub router during BGP route convergence after reboot (default).	N/A
Seconds	On-startup timeout time.	N/A	Unsigned integer. Value range: 5 to 86400. Default: 600 (when WaitForBgp is specified as true).	The unit is seconds. When WaitForBgp is specified as **true**, the default value for Seconds is 600.
SummaryLsa	Configures the cost of the summary LSAs.	N/A	Boolean: • true—Specifies a cost for the Type-3 LSAs. • false—Does not specify a cost for the Type-3 LSAs (default).	For the create and merge operations, if you both configure the SummaryLsa and SumMetric, you must specify the SummaryLsa as true. For the replace operation, if you configure the SumMetric, you must configure the SummaryLsa too, and specify the SummaryLsa as true. For the delete and remove operations, if you configure the SummaryLsa, the SumMetric value will be deleted.
SumMetric	Cost of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	summary LSAs.		Value range: 1 to 16777215. Default: 16711680.	

OSPF/Nssas

This table contains OSPF NSSA area information.

XML structure

```
<OSPF>
  <Nssas>
    <Nssa>
      <Name></Name>
      <TopoId></TopoId>
      <AreaId></AreaId>
      <DefaultRouteAdvertiseCfg>
        <DefaultRouteAdvertise></DefaultRouteAdvertise>
        <Cost></Cost>
        <NssaOnly></NssaOnly>
        <PolicyName></PolicyName>
        <Type></Type>
      </DefaultRouteAdvertiseCfg>
      <NoImportRoute></NoImportRoute>
      <NoSummary></NoSummary>
      <SuppressFa></SuppressFa>
      <Translate></Translate>
      <TranslatorStabilityInterval></TranslatorStabilityInterval>
    </Nssa>
  </Nssas>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	Nssas
Table type	Multi-instance table
Row name	Nssa
Restrictions	The row can be operated only when the AreaType of the corresponding area in the Areas table is configured as Nssa.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create areas for it. It must be an unsigned integer in the range of 1 to 65535.
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
AreaId	Area ID.	Index	String, dotted decimal notation.	
DefaultRoute AdvertiseCfg	Default route advertisement messages.	Data structure	Members include: • DefaultRouteAdvertise. • Cost. • NssaOnly. • PolicyName. • Type.	N/A
DefaultRoute Advertise	Whether to generate a Type-7 default into the NSSA area.	N/A	Boolean: • true—Generates a Type-7 default into the NSSA area. • false—Does not generate a Type-7 default into the NSSA area. (default).	For the create and merge operations, if you both configure the DefaultRouteAdvertise and the other members, you must specify the DefaultRouteAdvertise as true. For the replace operation, if you configure the other members, you must configure the DefaultRouteAdvertise too, and specify it as true. For the delete and remove operations, if you configure the DefaultRouteAdvertise, the values of the rest members will be deleted.
Cost	Metric for default route.	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
NssaOnly	Whether to limit the default route advertisement to the NSSA area.	N/A	Boolean: • true—Limits the default route advertisement to the NSSA area.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false—Does not limit the default route advertisement to the NSSA area (default).	
PolicyName	Specifies the routing policy to filter default route.	N/A	String. Length: 1 to 63 characters.	N/A
Type	Specifies a cost type for the Type-7 LSA.	N/A	Enumeration: • 1—Type 1. • 2—Type 2.	N/A
NoImportRoute	Whether to redistribute routes into the NSSA area.	N/A	Boolean: • true—Does not redistribute routes into the NSSA area. • false—Redistributes routes into the NSSA area (default).	N/A
NoSummary	Whether to send summary LSA into the NSSA area.	N/A	Boolean: • true—Does not send summary LSA into the NSSA area. • false—Sends summary LSA into the NSSA area (default).	N/A
SuppressFa	Whether to suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.	N/A	Boolean: • true—Suppresses the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs. • false—Does not suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs (default).	N/A
Translate	Whether to translate Type-7 LSAs to Type-5 LSAs.	N/A	Enumeration: • 1—Always translates Type-7 LSAs to Type-5 LSAs. • 2—Never translates Type-7 LSAs to Type-5 LSAs. • 3—Ignores checking the backbone area. • 4—Always translates Type-7 LSAs to Type-5 LSAs and ignores checking the backbone area.	N/A
TranslatorStabilityInterval	Specifies the stability interval of the translator.	N/A	Unsigned integer. Value range: 0 to 900.	The unit is seconds and the default value is 0.

OSPF/SilentAllInterfaces

This table contains all OSPF silent interface information.

XML structure

```
<OSPF>
  <SilentAllInterfaces>
    <SilentAllInterface>
      <Name></Name>
      <SilentAll></SilentAll>
    </SilentAllInterface>
  </SilentAllInterfaces>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create SilentAllInterfaces for it. It must be an unsigned integer in the range of 1 to 65535.
SilentAll	Whether to specify all interfaces	N/A	Boolean: • **true**—Specifies all interfaces. • **false**—Does not specify all interfaces(default).	N/A

OSPF/SilentInterfaces

This table contains OSPF silent interface information.

XML structure

```
<OSPF>
  <SilentInterfaces>
    <SilentInterface>
      <Name></Name>
      <IfName></IfName>
      <Silent></Silent>
    </SilentInterface>
  </SilentInterfaces>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create SilentInterfaces for it. It must be an unsigned integer in the range of 1 to 65535.
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Silent	Whether to specify the interface	N/A	Boolean: • **true**—Specifies the interface. • **false**—Does not specify the interface.	If SilentAll is true in the SilentAllInterfaces table, the default Silent value is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
				If SilentAll is false in the SilentAllInterfaces table, the default Silent value is false.

OSPF/SegmentRoutings

This table contains OSPF segment routing information.

XML structure

```
<OSPF>
  <SegmentRoutings>
    <SegmentRouting>
      <Name></Name>
      <MplsEnable></MplsEnable>
      <AdjacencyEnable></AdjacencyEnable>
      <SRGB>
        <Lowerbound></Lowerbound>
        <Upperbound></Upperbound>
      </SRGB>
      <SrPreferEnable></SrPreferEnable>
      <PrefixListName></PrefixListName>
      <SidMap>

      </SidMap>
      <LspTrigger>
        <Policy></Policy>
        <PrefixListName></PrefixListName>
      </LspTrigger>
      <MicroloopAvoid>
        <Enable></Enable>
        <RibUpdateDelay></RibUpdateDelay>
      </MicroloopAvoid>
    </SegmentRouting>
  </SegmentRoutings>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF

Item	Description
Table name	SegmentRoutings
Table type	Multi-instance table
Row name	SegmentRouting
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create segmentroutings for it. It must be an unsigned integer in the range of 1 to 65535.
MplsEnable	Whether to enable MPLS SR.	N/A	Boolean: • **true**—Enables MPLS SR. • **false—**Does not enable MPLS SR (default).	N/A
AdjacencyEnable	Whether to enable adjacency label allocation.	N/A	Boolean: • **true**—Enables adjacency label allocation. • **false—**Does not enable adjacency label allocation (default).	N/A
SRGB	Specifies range of SRGB.	Data structure	Members include: • Lowerbound. • Upperbound.	N/A
Lowerbound	Min value of SRGB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer.	N/A
SrPreferEnable	Whether to enable SR label preference.	N/A	Boolean: • **true**—Enables SR label preference. • **false—**Does not enable SR label preference (default).	N/A
PrefixListName	Name of the prefix list	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SidMap	Configure prefix-SID mapping.	Data structure	Members include: • AdvertiseLocal. • Receive.	N/A
AdvertiseLocal	Whether to advertise local prefix-SID mappings.	N/A	Boolean: • **true**—Advertise local prefix-SID mappings. • **false**—Does not advertise local prefix-SID mappings (default).	N/A
Receive	Whether to receive prefix-SID mappings.	N/A	Boolean: • **true**—Receives prefix-SID mappings. • **false**—Does not receive mapping server advertisements.	N/A
LspTrigger	Configure the SRLSP establishment triggering policy.	Data structure	Members include: • Policy. • PrefixListName.	N/A
Policy	SRLSP establishment triggering policy.	N/A	Enumeration: • **0**—Allows all FECs (default). • **1**—Allows host FECs. • **2**—Allows no FECs. • **3**—Allows FECs permitted by a prefix list.	N/A
PrefixListName	Prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
MicroloopAvoid	Microloop-avoidance information for OSPF SR.	Data structure	Members include: • Enable. • RibUpdateDelay.	N/A
Enable	Enable microloop-avoidance.	N/A	Boolean: • **true**—Enable microloop-avoidance. • **false**—Disable microloop-avoidance (default).	N/A
RibUpdateDelay	The microloop-avoidance RIB-update-delay time.	N/A	Unsigned integer. Value range: 1 to 60000.	N/A

OSPF/DistributeBgplses

This table contains information about OSPF link state advertisement to BGP.

XML structure

```
<OSPF>
  <DistributeBgplses>
    <DistributeBgpls>
      <Name></Name>
      <TopoId></TopoId>
      <InstanceId></InstanceId>
      <StrictLinkCheck></StrictLinkCheck>
    </DistributeBgpls>
  </DistributeBgplses>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF

Table name	FilterPolicyExports
Table type	Multi-instance table
Row name	FilterPolicyExport
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String.	You must create

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	an instance before you merge or create distributebgplses for it. It must be an unsigned integer in the range of 1 to 65535.
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127 Default: 0.	Only 0 is supported currently.
ProtocolExport	Protocol type.	Index	Enumeration: • **0**—All. • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6—**BGP. • **7—**EIGRP. • **8—**Guard. • **9—**UNR.	N/A
InstanceNameExport	Instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the ProtocolExport column is Direct, Static, BGP, UNR, or All.
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	You can only set one of AclNum and PrefixListName at the same time. If you configure this column and a conflicting column one after another, the most recent column configuration will take effect.
PrefixListName	Name of the prefix list.	N/A	String. Length: 1 to 63 characters.	You can only set one of AclNum and PrefixListName at the same time. If you configure this column and a conflicting column one after another, the most recent column configuration will

Column name	Column description	Column type	Data type and restrictions	Remarks
				take effect.

OSPF/FilterPolicyImports

This table contains information about OSPF incoming route filter.

XML structure

```
<OSPF>
  <FilterPolicyImports>
    <FilterPolicyImport>
      <Name></Name>
      <TopoId></TopoId>
      <AclNum></AclNum>
      <PrefixListName></PrefixListName>
      <Gateway></Gateway>
      <RoutePolicyName></RoutePolicyName>
    </FilterPolicyImport>
  </FilterPolicyImports>
</OSPF>
```

Table description

Item	Description

```

Table description

Item	Description
Feature name	OSPF
Table name	FRRs
Table type	Multi-instance table
Row name	FRR
Restrictions	None
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create FRRs for it. It must be an unsigned integer in the range of 1 to 65535.
Enable	Enable OSPF Loop-Free Alternate FRR.	N/A	Boolean: • **true**—Enable FRR. • **false**—Does not enable FRR (default).	N/A
AbrOnly	Uses the next hop of the route to the ABR as the backup next hop.	N/A	Boolean: • **true**—Only the next hops of the route to the ABR are used as the backup next hop. • **false**—All next hops can be used as the backup next hop (default).	N/A
RoutePolicy	Uses a routing policy to designate a backup next hop.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
RemoteLfa	OSPF remote Loop-Free Alternate FRR.	Data structure	Members include: • Enable. • MaxCost. • PrefixList.	N/A
Enable	Enable OSPF remote LFA FRR.	N/A	Boolean: • **true**—Enable remote LFA	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			FRR. • **false**—Does not enable remote LFA FRR (default).	
MaxCost	Set the maximum cost from the source node of a protected link to a PQ node.	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 4294967295.	N/A
PrefixList	Specify a prefix list to filter remote LFA PQ nodes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
TiLfa	OSPF Topology-Independent Loop-Free Alternate FRR.	Data structure	Members include: • Enable. • PerPrefix. • Host. • RoutePolicy.	N/A
Enable	Enable OSPF TI-LFA FRR.	N/A	Boolean: • **true**—Enable TI-LFA FRR. • **false**—Does not enable TI-LFA FRR (default).	N/A
PerPrefix	Per-prefix calculation.	N/A	Boolean: • **true**—Calculates backup information for each advertising source of a route. • **false**—Calculates backup information for each route (default).	N/A
Host	Enable TI-LFA for host routes.	N/A	Boolean: • **true**—Enable TI-LFA for host routes. • **false**—Does not enable TI-LFA for host routes (default).	N/A
RoutePolicy	Enable TI-LFA FRR for prefixes identified by the routing policy.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
MicroloopAvoid	FRR microloop avoidance.	Data structure	Members include: • Enable. • RibUpdateDelay.	N/A
Enable	Enable FRR microloop avoidance.	N/A	Boolean: • **true**—Enable FRR microloop avoidance. • **false**—Does not enable FRR microloop avoidance (default).	N/A
RibUpdateDelay	Set the FRR microloop avoidance	N/A	Unsigned integer, in milliseconds. Value range: 1 to 60000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	RIB-update-delay time.		Default: 5000.	
TieBreaker	Set the priority for the node-protection or lowest-cost backup path selection policy.	Data structure	Members include: • LowestCostPref. • NodeProtectPref. • SrlgDisjointPref.	N/A
LowestCostPref	Set a priority value for the lowest-cost backup path selection policy.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	N/A
NodeProtectPref	Set a priority value for the node-protection backup path selection policy.	N/A	Unsigned integer. Value range: 1 to 255. Default: 40.	N/A
SrlgDisjointPref	Sets a priority value for the Shared Risk Link Group selection policy.	N/A	Unsigned integer. Value range: 1 to 255. Default: 10.	N/A

OSPF/AdjSids

This table contains OSPF adjacency-SID information.

XML structure

```
<OSPF>
  <AdjSids>
    <AdjSid>
      <IfIndex></IfIndex>
      <Nexthop></Nexthop>
      <SidType></SidType>
      <Sid></Sid>
    </AdjSid>
  </AdjSids>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	AdjSids
Table type	Multi-instance table

Row name	AdjSid
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Nexthop	Nexthop IPv4 address.	Index	String, dotted decimal notation.	This parameter applies only to broadcast interfaces. 0.0.0.0 is an invalid value which is used on P2P interfaces.
SidType	The type of prefix SID	N/A	Enumeration: • **1**—Absolute value of prefix SID. • **2**—Index value of prefix SID.	This command must be specified.
Sid	Prefix segment ID	N/A	Unsigned integer.	This command must be specified.

Table description

Item	Description
Feature name	OSPF
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
VRF	VRF name.	N/A	String. Length: 1 to 31 characters. The column is not supported in VSYS.	N/A
RouterId	Router identifier.	N/A	String, dotted decimal notation.	N/A
Mode	Mode of the OSPF process.	N/A	Enumeration: • **0**—Normal process (default). • **1**—Lite process.	After a process is created, its mode cannot be modified. The column is only supported in non-defalut vSystem.
NSR	Nonstop routing.	N/A	Boolean: • **true**—Enable the nonstop routing feature. • **false**—Disable the nonstop routing feature.	N/A
VpnInstance Capability	Route loop check for the OSPF process	N/A	Enumeration: • **0**—Normal, which indicates enabling	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of the VPN instance.		route loop check. • **1**—Simple, which indicates disabling route loop check.	
DefaultRouteAdvertise	Default route redistribtution information.	Data structure	Members include: • CfgType. • Cost. • PolicyName. • Type.	N/A
CfgType	Default route redistribtution method	N/A	Enumeration: • **0**—Disable. • **1**—Normal. • **2**—Always. • **3**—Permit-Calculate-Other. • **4**—Summary	N/A
Cost	Cost for the default route.	N/A	String. Length: 1 to 31 characters.	N/A
PolicyName	Specifies a routing policy to filter default routes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Type	Specifies a type for the Type-5 LSA.	N/A	Enumeration: • **0**—Default. The value specified by the **default type** command applies. • **1**—Type 1. • **2**—Type 2.	N/A
Spf-schedule	Time interval of OSPF route calculation.	Data structure	Members include: • Maximum. • Minimum. • Incremental. • Conservative. Millisecond.	Spf-schedule
Maximum	Maximum time interval.	N/A	Unsigned integer. Value range:1 to 60.	Maximum
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000.	Minimum
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000.	Incremental
Conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • ture—Enable route calculation is based on the maximum time interval. false—Disable route calculation is based on the maximum time interval.	Conservative
Millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000.	Millisecond
Isolate	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	isolate OSPF from current network.		• **true**—Isolate OSPF from current network. • **false**—Do not isolate OSPF from current network.	
Shutdown	Whether to shutdown the OSPF process.	N/A	Boolean: • **true**—Shutdown the OSPF process. • **false**—Do not shutdown the OSPF process.	N/A
Description	The description information of OSPF instance.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A
VirtualSystem	Whether to use virtual OSPF nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPF nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPF nodes for neighbor relationship establishment.	N/A
LsaArrivalInterval	Time interval of OSPF arrival.	Data structure	Members include: • Maximum. • Minimum. • Incremental.	N/A
Maximum	Maximum time interval.	N/A	Unsigned integer. Value range:0 to 10000(milliseconds).	When configuring minimum or incremental, maximum must be set.
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 0～60000 (milliseconds).	When configuring maximum and incremental, minimum must be set.
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 1～5000(milliseconds).	N/A
LsaGenerationInterval	Time interval of OSPF lsa generation.	Data structure	Members include: • Maximum. • Minimum. • Incremental.	N/A
Maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60 (seconds).	N/A
Minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPF Minimum interval should not be greater than maximum

Column name	Column description	Column type	Data type and restrictions	Remarks
				interval.
Incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPF Incremental interval should be not greater than maximum interval.
RouteTagCheck	Whether to check the route tag of ASE and NSSA LSA.	N/A	Enumeration: • Disable • enable	Cannot be configured in the public network instance
DnBitCheckSummary	Whether to check the DN bit in Summary LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance
DnBitCheckAse	Whether to check the DN bit in ASE LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance
DnBitCheckNssa	Whether to check the DN bit in NSSA LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance
DnBitSetSummary	Whether to set the DN bit in Summary LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance
DnBitSetAse	Whether to set the DN bit in ASE LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance
DnBitSetNssa	Whether to set the DN bit in NSSA LSA.	N/A	Enumeration: • disable • enable	Cannot be configured in the public network instance

OSPF/Redistributes

This table contains OSPF redistribute list information.

Item	Description
Feature name	OSPF
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	N/A
Protocol	Redistribute protocol.	Index	Enumeration: • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6**—BGP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **7—**EIGRP. • **8—**Guard. • **9—**UNR.	
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	N/A
RoutePolicy Name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
Cost	Redistribute metric.	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
InheritCost	Whether to use the original cost of redistributed routes.	N/A	Boolean: • **true**—Use the original cost of redistributed routes. • **false**—Do not use the original cost of redistributed routes.	This column cannot be specified when the Cost column exists.
AllowIBGP	Allow IBGP routes when importing BGP routes.	N/A	Boolean: • **true**—Import IBGP routes when importing BGP routes. • **false**—Do not import IBGP routes when importing BGP routes.	N/A
MetricType	Specifies a metric type for redistribute.	N/A	Enumeration: • **1**—Type 1. • **2**—Type 2.	N/A
AllowDirect	Allow direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	N/A	Boolean: • **true—**Import direct routes when importing ISIS, OSPF, RIP or EIGRP routes. • **false—**Does not import direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	This column can be specified only when the Protocol is 3, 4, 5 or 7.
NssaOnly	Limits routes to NSSA areas.	N/A	Boolean: • **true—**Limits routes to NSSA areas. • **false—**Does not limit routes to NSSA areas.	N/A
Tag	Redistribute tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

OSPF/Areas

This table contains OSPF area information.

Table description

Item	Description
Feature name	OSPF
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfEnable	Interface enable messages.	Data structure	Members include: • Name. • AreaId.	Interface configuration takes precedence, and OSPF enabled on the interface is better than the configuration of the network command.
Name	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
AreaId	Area ID.	N/A	String, dotted decimal notation.	N/A
ExcludedS	Whether to exclude	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ubIp	secondary IP addresses.		• **true**—Excludes secondary IP addresses. • **false**—Does not exclude secondary IP addresses.	
Cost	Interface cost.	N/A	Unsigned integer. Value range: • 0 to 65535 for loopback interfaces. • 1 to 65535 for other interfaces.	N/A
NetworkType	Interface network type.	N/A	Enumeration: • **1**—Broadcast. • **2**—NBMA. • **3**—P2P. • **4**—P2MP. • **5**—P2MP unicast. • **6**—P2P multicast.	N/A
HelloTimer	Hello interval.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DeadTimer	Dead interval.	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
DrPriority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SimpleAuth	Simple authentication messages.	Data structure	Members include: • SimplePwdType. • SimplePwd.	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time. The members must both be specified when SimplePwdType is not None.
SimplePwdType	Simple password type.	N/A	Enumeration: • 1—Ciphertext. • 2—Plaintext. • 3—None.	OSPF will use empty string to authenticate packets when SimplePwdType is None.
SimplePwd	Simple password.	N/A	String. Length: • 1 to 8 characters for plain password. • 33 to 41 characters for cipher password.	It will use empty string to authenticate packets when SimplePwdType is None.
NullAuth	Whether to use no authentication.	N/A	Boolean: • **true**—Use no authentication. • **false**—Do not use no authentication.	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time.
Keychain	Specify a keychain for	N/A	String: case sensitive. Length: 1 to 63 characters.	SimpleAuth, NullAuth, Keychain and IfMd5s are

Column name	Column description	Column type	Data type and restrictions	Remarks
	authentication.			mutually exclusive and cannot be set at the same time.
CurAuthType	Enabled authentication mode.	N/A	Enumeration: • **1**—Simple. • **2**—MD5. • **3**—HMAC-MD5. • 4—HMAC-SHA-256. • 5—HMAC-SM3. • 6—Keychain.	N/A
CurMd5KeyId	Last key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
State	Interface state.	N/A	Enumeration: • **0**—Down. • **1**—Waiting. • **2**—P-2-P. • **3**—DR. • **4**—BDR. • **5**—DROther. • **6**—Loopback**.**	N/A
BfdEnable	BFD is enabled for OSPF.	N/A	Enumeration: • **1**—Enable control packet mode. • **2**—Enable echo packet mode.	N/A
Frr	Fast reroute configuration.	Data structure	Members include: • PrimaryPathDetect. • LfaDisable. • TiLfaDisable. • RemoteLfaDisable.	N/A
PrimaryPathDetect	BFD session mode.	N/A	Enumeration: • **1**—Control-packet mode. • **2**—Echo-packet mode.	N/A
LfaDisable	Whether to disable LFA.	N/A	Boolean: • **true**—LFA is disabled. • **false**—LFA is enabled.	N/A
TilfaDisable	Whether to disable TI-LFA.	N/A	Boolean: • **true**—TI-LFA is disabled. • **false**—TI-LFA is enabled.	N/A
RemoteLfaDisable	Whether to disable remote-LFA.	N/A	Boolean: • **true**—Remote LFA is disabled. • **false**—Remote LFA is enabled.	N/A
PrefixSid	Prefix	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Segment ID messages.	structure	• SidName. • SidType. • Sid. • ExplicitNull. • NFlagClear.	
SidName	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SidType	The type of Prefix-SID	N/A	Enumeration: • **1**—Absolute value of Prefix-SID. • **2**—Index value of Prefix-SID.	N/A
Sid	Prefix Segment ID	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
ExplicitNull	Explicit null label	N/A	Boolean: • **true**—The upstream neighbor replaces the prefix SID with an explicit null label. • **false**—The upstream neighbor does not replace the prefix SID with an explicit null label.	N/A
PHP	Penultimate hop popping flag	N/A	Boolean: • **true**—Pops the penulimate hop. • **false**—Does not pop the penulimate hop.	N/A
NFlagClear	Whether to clear the N-flag	N/A	Boolean: • **true**—Clears the N-flag for the prefix SID. • **false**—Does not clear the N-flag for the prefix SID.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Database Filter	Filter outbound LSAs on the interface.	Data structure	Members include: • All. • Ase. • AseAclNumber. • Nssa. • NssaAclNumber • Summary • SummaryAclNumber	The set operation is subject to the last issuance.
All	Filters all LSAs except the Grace LSAs.	N/A	Boolean: • **true**—Filters all LSAs except the Grace LSAs.	This attribute cannot be configured simultaneously with Ase, AseAclNumber,

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Do not filters all LSAs except the Grace LSAs.	Nssa, NssaAclNumber, Summary and SummaryAclNumber attributes. Merge and create cannot issue false.
Ase	Filters Type-5 LSAs.	N/A	Boolean: • **true**—Filters Type-5 LSAs. • **false**—Do not filters Type-5 LSAs.	This attribute must be configured with the AseAclNumber attribute, and cannot be configured with the All attribute Merge and create cannot issue false.
AseAclNumber	Specifies an IPv4 ACL by its number in the range of 2000 to 3999.	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with Ase, and cannot be configured with the All attribute
Nssa	Filters Type-7 LSAs.	N/A	Boolean: • **true**—Filters Type-7 LSAs. • **false**—Do not filters Type-7 LSAs.	Must be configured with the NssaAclNumber attribute, not with the All attribute Merge and create cannot issue false..
NssaAclNumber	Specifies an IPv4 ACL by its number in the range of 2000 to 3999.	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with Nssa, and cannot be configured with the All attribute
Summary	Filters Type-3 LSAs.	N/A	Boolean: • **true**—Filters Type-3 LSAs. • **false**—Do not filters Type-3 LSAs.	Must be configured with the SummaryAclNumber attribute, not with the All attribute Merge and create cannot issue false.
SummaryAclNumber	Specifies an IPv4 ACL by its number in the range of 2000 to 3999.	N/A	Unsigned integer. Value range: 2000 to 3999.	This attribute must be configured with the Summary, and cannot be configured with the All attribute
MtuEnable	Enable the interface to add its MTU into DD packets.	N/A	Boolean: • **true**—Enable the interface to add its MTU into DD packets. • **false—**Disable the interface to add its MTU into DD packets.	N/A
PacketSize	Set the maximum length of OSPF packets that can be sent by an interface.	N/A	Unsigned integer. Value range: 500 to 10000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixSuppression	Enable prefix suppression for the OSPF process.	N/A	Enumeration: • **0**—Not configured, inherit the enablement of the process. • **1**—Enable prefix suppression on the interface. • **2—**Disable prefix suppression on the interface.	N/A
TimerPoll	Set the poll interval.	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
TimerRetransmit	Set the retransmission interval.	N/A	Unsigned integer. Value range: 1 to 3600.	N/A
TransDelay	Set the LSA transmission delay.	N/A	Unsigned integer. Value range: 1 to 3600.	N/A
TtlSecurity	Configure GTSM for the interface.	Data structure	Members include: • HopsCount. • Disable.	HopsCount and Disable cannot be delivered at the same time.
HopsCount	Enable GTSM for the interface.	N/A	Unsigned integer. Value range: 1 to 254.	The default value of HopsCount is 1 when configured, and the result of the empty value is 1.
Disable	Disable GTSM for the interface.	N/A	Boolean: • **true**—Disable GTSM for the interface. • **false—**Enable GTSM for the interface.	Disable GTSM for an interface when the following conditions exist: —The area to which the interface belongs is enabled with GTSM. —The neighbor of the interface does not support GTSM. Merge and create cannot issue false.
PeerSubAddrEnable	Establish OSPF neighbor adjacencies through the secondary IP address	N/A	Boolean: • **true**—Enable to establish OSPF neighbor adjacencies through the secondary IP address. • **false**—Unable to establish OSPF neighbor adjacencies through the secondary IP address.	PeerSubAddrEnable and PeerSubAddrSpecified are mutually exclusive.
PeerSubAddrSpecified	Establish OSPF neighbor adjacencies through the	N/A	IPv4 address string, dotted decimal notation.	PeerSubAddrEnable and PeerSubAddrSpecified are mutually exclusive.

Column name	Column description	Column type	Data type and restrictions	Remarks
	specified secondary IP address			
CostAdjustTrack	Associate a track entry for interface cost adjustment	N/A	Unsigned integer. Value range: 1 to 1024.	CostAdjustTrack and CostAdjustOffset must be set together.
CostAdjustOffset	Set the value to be added to the interface cost when the track status changes to Negative	N/A	Unsigned integer. Value range: 1 to 65535.	CostAdjustTrack and CostAdjustOffset must be set together. The value to be added to the interface cost is in the range of 1 to 65534. If you set the value for CostAdjustOffset to 65535, the interface will use the maximum interface cost when the track status changes to Negative.
VirtualSystem	Information about virtual system configuration.	Data structure	Members include: • Enable • RouterId	N/A
Enable	Whether to use virtual OSPF nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPF nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPF nodes for neighbor relationship establishment.	N/A
RouterId	Set a virtual OSPF router ID	N/A	String, dotted decimal notation.	N/A
Silent	Suppress routing updates on the interface	N/A	Enumeration: • **0**—Do not suppress routing updates on the interface. • **1**—Suppress routing updates on the interface.	N/A
BfdAdjustCost	Adjust the OSPF interface cost according to the BFD session state.	N/A	Enumeration: • **1~65534**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 65534 when the BFD session goes down. • **none**—Do not adjust cost (default).	N/A
BfdAdjustCostSuppr	Suppress OSPF	Data structure	Members include: • ResumeInterval.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ess	interface cost adjustment upon BFD session state changes.		• DetectInterval. • Threshold	
ResumeInterval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds.	N/A
DetectInterval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
Threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
PeerHoldMaxCostDuration	Advertise the maximum link cost to neighbors within the specified period of time	N/A	Unsigned integer. Value range: 100 to1000000 (milliseconds)	N/A

OSPF/IfMd5s

This table contains OSPF interface cryptographic authentication information.

XML structure

```
<OSPF>
  <IfMd5s>
    <Md5>
      <IfIndex></IfIndex>
      <KeyId></KeyId>
      <Md5Type></Md5Type>
      <PasswordType></PasswordType>
      <Password></Password>
      <IfName></IfName>
    </Md5>
  </IfMd5s>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	IfMd5s
Table type	Multi-instance table
Row name	Md5
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
KeyId	Key ID.	Index	Unsigned integer. Value range: 1 to 255.	OSPF will use empty string to authenticate packets when KeyId is empty.
Md5Type	Cryptographic authentication type.	N/A	Enumeration: • **1**—MD5. • **2**—HMAC-MD5. • **3**—HMAC-SHA-256. • **4**—HMAC-SM3.	N/A
PasswordType	Password type.	N/A	Enumeration: • **1**—Ciphertext. • **2**—Plaintext.	N/A
Password	Password.	N/A	String. Length: • 1 to 255 characters for MD5/HMAC-MD5/HMAC-SHA-256/HMAC-SM3 plain password. • 33 to 373 characters for MD5/HMAC-MD5/HMAC-SHA-256/HMAC-SM3 cipher password.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

OSPF/Neighbours

This table contains OSPF neighbour information.

XML structure

```
<OSPF>
  <Neighbours>
    <Nbr>
      <IfIndex></IfIndex>
      <NbrAddress></NbrAddress>
      <NbrRouterId></NbrRouterId>
      <Name></Name>
      <AreaId></AreaId>
      <DrPriority></DrPriority>
      <State></State>
      <IfName></IfName>
      <Mode></Mode>
      <UpTime></UpTime>
      <StateChangeCount></StateChangeCount>
      <Type></Type>
    </Nbr>
  </Neighbours>
</OSPF>
```

Table description

Row name	Nbr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
NbrAddre	Neighbour	Index	String, dotted decimal	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ss	IPv4 address.		notation.	
NbrRouterId	Neighbour router identifier.	N/A	String, dotted decimal notation.	N/A
Name	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
AreaId	Area ID.	N/A	String, dotted decimal notation.	N/A
DrPriority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
State	Neighbour state.	N/A	Enumeration: • **0**—Down. • **1**—Init. • **2**—Attempt. • **3**—2-way. • **4**—Exstart. • **5**—Exchange. • **6**—Loading. • **7**—Full.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Mode	Neighbour mode	N/A	Enumeration: • **0**—Master. • **1**—Slave. • **2**—None.	N/A
UpTime	Neighbour up time in seconds	N/A	Unsigned integer.	N/A
StateChangeCount	Count of neighbor state changes.	N/A	Unsigned integer.	N/A
Type	Neighbor identification method	N/A	Enumeration: • **1**—dynamic. **2**—permanent.	N/A

OSPF/Preferences

This table contains OSPF preference information.

XML structure

```
<OSPF>
  <Preferences>
```

```
    <Preference>
      <Name></Name>
      <TopoId></TopoId>
      <Type></Type>
      <Value></Value>
      <PolicyName></PolicyName>
    </Preference>
  </Preferences>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	Preferences
Table type	Multi-instance table
Row name	Preference
Restrictions	None
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	N/A
Type	Route type.	Index	Enumeration: • **1**—AS internal route. • **2**—AS external route.	N/A
Value	Preference value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PolicyName	Name of the routing policy.	N/A	String. Length: 1 to 63 characters.	N/A

OSPF/AsbrSummarys

This table contains OSPF ASBR summary route information.

XML structure

```
<OSPF>
```

```
  <AsbrSummarys>
    <AsbrSummary>
      <Name></Name>
      <TopoId></TopoId>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <Cost></Cost>
      <NotAdvertise></NotAdvertise>
      <NssaOnly></NssaOnly>
      <Tag></Tag>
    </AsbrSummary>
  </AsbrSummarys>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	AsbrSummarys
Table type	Multi-instance table
Row name	AsbrSummary
Restrictions	None
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127	N/A
Ipv4Address	IPv4 address.	Index	IPv4: String, dotted decimal notation.	N/A
Ipv4Mask	Mask of IP address	Index	Unsigned integer. Value range: 0 to 32.	N/A
Cost	Summary route cost.	N/A	Unsigned integer. Value range: 0 to 16777214.	If it is not configured, the largest cost among the summarized routes applies. If the routes in Type-5 LSAs translated from Type-7 LSAs are Type-2 external routes, the largest cost among the summarized routes

Column name	Column description	Column type	Data type and restrictions	Remarks
				plus 1 applies.
NotAdvertise	Does not advertise summary route.	N/A	Boolean: • **true—Does not** advertise summary route. • **false—**Advertises summary route.	N/A
NssaOnly	Limits summary routes to NSSA areas.	N/A	Boolean: • **true—**Limits summary routes to NSSA areas. • **false—Does not** limit summary routes to NSSA areas.	N/A
Tag	Summary route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	If it is not configured, the tag specified by the **default tag** command is used.

OSPF/StubRouters

This table contains OSPF stub router information.

XML structure

```
<OSPF>
  <StubRouters>
    <StubRouter>
      <Name></Name>
      <TopoId></TopoId>
      <ExternalLsa></ExternalLsa>
      <ExtMetric></ExtMetric>
      <IncludeStub></IncludeStub>
      <OnStartup>
      <WaitForBgp></WaitForBgp>
      <Seconds></Seconds>
      </OnStartup>
      <SummaryLsa></SummaryLsa>
      <SumMetric></SumMetric>
    </StubRouter>
  </StubRouters>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF

Item	Description
Table name	StubRouters
Table type	Multi-instance table
Row name	StubRouter
Restrictions	For the get or get-bulk operations, the data of the StubRouters table can be get only when the router is in stub state.
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	N/A
ExternalLsa	Configures the cost of external LSAs.	N/A	Boolean: • **true**—Specifies a cost for the external LSAs. • **false**—Does not specify a cost for the external LSAs.	N/A
ExtMetric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
IncludeStub	Sets the cost of the stub links.	N/A	Boolean: • **true**—Sets the cost of the stub links (link type 3) in Router LSAs to the maximum value 65535. • **false—**Does not set the cost of the stub links (link type 3) in Router LSAs.	N/A
OnStartup	Specifies the router as a stub router during reboot.	Data structure	Members include: • WaitForBgp. • Seconds.	N/A
WaitForBgp	Waits for BGP on startup.	N/A	Boolean: • **true**—Specifies the router as a stub router during BGP route convergence after reboot. • **false**—Does not specify the router as a stub router during BGP route convergence after reboot.	N/A
Seconds	On-startup timeout time.	N/A	Unsigned integer. Value range: 5 to 86400.	N/A
SummaryLsa	Configures the cost of the summary	N/A	Boolean: • **true**—Specifies a cost for the Type-3 LSAs.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	LSAs.		• **false**—Does not specify a cost for the Type-3 LSAs.	
SumMetric	Cost of the summary LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A

OSPF/Nssas

This table contains OSPF NSSA area information.

XML structure

```
<OSPF>
  <Nssas>
    <Nssa>
      <Name></Name>
      <TopoId></TopoId>
      <AreaId></AreaId>

        <DefaultRouteAdvertise></DefaultRouteAdvertise>
        <Cost></Cost>
        <NssaOnly></NssaOnly>
        <PolicyName></PolicyName>
        <Type></Type>
      </DefaultRouteAdvertiseCfg>
      <NoImportRoute></NoImportRoute>
      <NoSummary></NoSummary>
      <SuppressFa></SuppressFa>
      <Translate></Translate>
      <TranslatorStabilityInterval></TranslatorStabilityInterval>
    </Nssa>
  </Nssas>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	Nssas
Table type	Multi-instance table
Row name	Nssa
Restrictions	The row can be operated only when the AreaType of the corresponding area in the Areas table is configured as Nssa.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
TopoId	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	N/A
AreaId	Area ID.	Index	String, dotted decimal notation.	N/A
DefaultRouteAdvertiseCfg	Default route advertisement messages.	Data structure	Members include: • DefaultRouteAdvertise. • Cost. • NssaOnly. • PolicyName. • Type.	N/A
DefaultRouteAdvertise	Whether to generate a Type-7 default into the NSSA area.	N/A	Boolean: • **true**—Generates a Type-7 default into the NSSA area. • **false**—Does not generate a Type-7 default into the NSSA area.	N/A
Cost	Metric for default route.	N/A	Unsigned integer. Value range: 0 to 16777214.	Depends on the value specified by using the **default-cost** command and the default value of the **default-cost** command is 1.
NssaOnly	Whether to limit the default route advertisement to the NSSA area.	N/A	Boolean: • **true**—Limits the default route advertisement to the NSSA area. • **false**—Does not limit the default route advertisement to the NSSA area.	N/A
PolicyName	Specifies the routing policy to filter default route.	N/A	String. Length: 1 to 63 characters.	N/A
Type	Specifies a cost type for the Type-7 LSA.	N/A	Enumeration: • **1**—Type 1. • **2**—Type 2.	Depends on the value specified by using the **default type** command and the default value of the **default type** command is 2.
NoImportRoute	Whether to redistribute routes into the	N/A	Boolean: • **true**—Does not	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	NSSA area.		redistribute routes into the NSSA area. • **false**—Redistribute routes into the NSSA area.	
NoSummary	Whether to send summary LSA into the NSSA area.	N/A	Boolean: • **true**—Does not send summary LSA into the NSSA area. • **false**—Sends summary LSA into the NSSA area.	N/A
SuppressFa	Whether to suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.	N/A	Boolean: • **true**—Suppresses the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs. • **false**—Does not suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.	N/A
Translate	Whether to translate Type-7 LSAs to Type-5 LSAs.	N/A	Enumeration: • **1**—Always translates Type-7 LSAs to Type-5 LSAs. • **2**—Never translates Type-7 LSAs to Type-5 LSAs. • **3**—Ignores checking the backbone area. • **4**—Always translates Type-7 LSAs to Type-5 LSAs and ignores checking the backbone area.	N/A
TranslatorStabilityInterval	Specifies the stability interval of the translator.	N/A	Unsigned integer. Value range: 0 to 900.	N/A

OSPF/SilentAllInterfaces

This table contains all OSPF silent interface information.

XML structure

```
<OSPF>
  <SilentAllInterfaces>
    <SilentAllInterface>
      <Name></Name>
      <SilentAll></SilentAll>
```

```
    </SilentAllInterface>
  </SilentAllInterfaces>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
SilentAll	Whether to specify all interfaces	N/A	Boolean: • **true**—Specifies all interfaces. • **false**—Does not specify all interfaces.	N/A

OSPF/SilentInterfaces

This table contains OSPF silent interface information.

XML structure

```
<OSPF>
  <SilentInterfaces>
    <SilentInterface>
      <Name></Name>
      <IfName></IfName>
      <Silent></Silent>
    </SilentInterface>
  </SilentInterfaces>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	SilentInterfaces
Table type	Multi-instance table
Row name	SilentInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Silent	Whether to specify the interface	N/A	Boolean: • **true**—Specifies the interface. • **false**—Does not specify the interface.	If SilentAll is true in the SilentAllInterfaces table, the SilentInterfaces table gets data or configuration about interfaces that are not silent. If SilentAll is false in the SilentAllInterfaces table, the SilentInterfaces table gets data or configuration about silent interfaces.

OSPF/SegmentRoutings

This table contains OSPF segment routing information.

XML structure

```
<OSPF>
  <SegmentRoutings>
    <SegmentRouting>
      <Name></Name>
      <MplsEnable></MplsEnable>
      <AdjacencyEnable></AdjacencyEnable>
```

```

        <AdvertiseLocal></AdvertiseLocal>
        <Receive></Receive>
      </SidMap>
      <LspTrigger>
        <Policy></Policy>
        <PrefixListName></PrefixListName>
      </LspTrigger>
      <MicroloopAvoid>
        <Enable></Enable>
        <RibUpdateDelay></RibUpdateDelay>
      </MicroloopAvoid>
    </SegmentRouting>
  </SegmentRoutings>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	SegmentRoutings
Table type	Multi-instance table
Row name	SegmentRouting
Restrictions	None
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
MplsEnable	Whether to enable MPLS SR.	N/A	Boolean: • **true**—Enables MPLS SR. • **false—**Does not enable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			MPLS SR.	
AdjacencyEnable	Whether to enable adjacency label allocation.	N/A	Boolean: • **true**—Enables adjacency label allocation. • **false—**Does not enable adjacency label allocation.	N/A
SRGB	Specifies range of SRGB.	Data structure	Members include: • Lowerbound. • Upperbound.	N/A
Lowerbound	Min value of SRGB.	N/A	Unsigned integer. Value range: 16000 to 23999.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer. Value range: 16001 to 24000.	N/A
EffectedSRGB	Specifies range of SRGB.	Data structure	Members include: • Lowerbound. • Upperbound.	N/A
Lowerbound	Min value of SRGB.	N/A	Unsigned integer.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer.	N/A
SrPreferEnable	Whether to enable SR label preference.	N/A	Boolean: • **true**—Enables SR label preference. • **false—**Does not enable SR label preference.	N/A
PrefixListName	Name of the prefix list.	N/A	String. Length: 1 to 63 characters.	N/A
SidMap	Configure prefix-SID mapping.	Data structure	Members include: • AdvertiseLocal. • Receive.	N/A
AdvertiseLocal	Whether to advertise local prefix-SID mappings.	N/A	Boolean: • **true**—Advertise local prefix-SID mappings. • **false**—Does not advertise local prefix-SID mappings.	N/A
Receive	Whether to receive prefix-SID mappings.	N/A	Boolean: • **true**—Receives prefix-SID mappings. • **false**—Does not receive prefix-SID mappings.	N/A
LspTrigger	Configure the SRLSP establishment triggering policy.	Data structure	Members include: • Policy. • PrefixListName.	N/A
Policy	SRLSP establishment triggering policy.	N/A	Enumeration: • **0**—Allows all FECs. • **1**—Allows host FECs.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Allows no FECs. • **3**—Allows FECs permitted by a prefix list.	
PrefixListName	Prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
MicroloopAvoid	Microloop-avoidance information for OSPF SR.	Data structure	Members include: • Enable. • RibUpdateDelay.	N/A
Enable	Enable microloop-avoidance.	N/A	Boolean: • **true**—Enable microloop-avoidance. • **false**—Disable microloop-avoidance.	N/A
RibUpdateDelay	The microloop-avoidance RIB-update-delay time.	N/A	Unsigned integer. Value range 1 to 60000.	N/A

OSPF/DistributeBgplses

This table contains information about OSPF link state advertisement to BGP.

XML structure

```
<OSPF>
  <DistributeBgplses>
    <DistributeBgpls>
      <Name></Name>
      <TopoId></TopoId>
      <InstanceId></InstanceId>
      <StrictLinkCheck></StrictLinkCheck>
    </DistributeBgpls>
  </DistributeBgplses>
</OSPF>
```

Table description

Item	Description

Item	Description
Feature name	OSPF
Table name	FRRs
Table type	Multi-instance table
Row name	FRR
Restrictions	None
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create FRRs for it. It must be an unsigned integer in the range of 1 to 65535.
Enable	Enable OSPF Loop-Free	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Alternate FRR.		• **true**—Enable FRR. • **false**—Does not enable FRR.	
AbrOnly	Uses the next hop of the route to the ABR as the backup next hop.	N/A	Boolean: • **true**—Only the next hops of the route to the ABR are used as the backup next hop. • **false**—All next hops can be used as the backup next hop.	N/A
RoutePolicy	Uses a routing policy to designate a backup next hop.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
RemoteLfa	OSPF remote Loop-Free Alternate FRR.	Data structure	Members include: • Enable. • MaxCost. • PrefixList.	N/A
Enable	Enable OSPF remote LFA FRR.	N/A	Boolean: • **true**—Enable remote LFA FRR. • **false**—Does not enable remote LFA FRR.	N/A
MaxCost	Set the maximum cost from the source node of a protected link to a PQ node.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
PrefixList	Specify a prefix list to filter remote LFA PQ nodes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
TiLfa	OSPF topology independent Loop-Free Alternate FRR.	Data structure	Members include: • Enable. • PerPrefix. • Host. • RoutePolicy.	N/A
Enable	Enable OSPF TI-LFA FRR.	N/A	Boolean: • **true**—Enable TI-LFA FRR. • **false**—Does not enable TI-LFA FRR.	N/A
PerPrefix	Per-prefix calculation.	N/A	Boolean: • **true**—Calculates backup information for each advertising source of a route. • **false**—Calculates backup information for each route.	N/A
Host	Enable TI-LFA for host routes.	N/A	Boolean: • **true**—Enable TI-LFA for	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			host routes. • **false**—Does not enable TI-LFA for host routes.	
RoutePolicy	Enable TI-LFA FRR for prefixes identified by the routing policy.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
MicroloopAvoid	FRR microloop avoidance.	Data structure	Members include: • Enable. • RibUpdateDelay.	N/A
Enable	Enable FRR microloop avoidance.	N/A	Boolean: • **true**—Enable FRR microloop avoidance. • **false**—Does not enable SR microloop avoidance.	N/A
RibUpdateDelay	Set the FRR microloop avoidance RIB-update-delay time.	N/A	Unsigned integer, in milliseconds. Value range: 1 to 60000.	N/A
TieBreaker	Set the priority for the node-protection or lowest-cost backup path selection policy.	Data structure	Members include: • LowestCostPref. • NodeProtectPref. • SrlgDisjointPref.	N/A
LowestCostPref	Set a priority value for the lowest-cost backup path selection policy.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
NodeProtectPref	Set a priority value for the node-protection backup path selection policy.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
SrlgDisjointPref	Set a priority value for the Shared Risk Link Group selection policy.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

OSPF/AdjSids

This table contains OSPF adjacency-SID information.

XML structure

```
<OSPF>
  <AdjSids>
```

```
    <AdjSid>
      <IfIndex></IfIndex>
      <Nexthop></Nexthop>
      <SidType></SidType>
      <Sid></Sid>
      <IfName></IfName>
    </AdjSid>
  </AdjSids>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	AdjSids
Table type	Multi-instance table
Row name	AdjSid
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Nexthop	Nexthop IPv4 address.	Index	String, dotted decimal notation.	This parameter applies only to broadcast interfaces. 0.0.0.0 is an invalid value which is used on P2P interfaces.
SidType	The type of prefix SID	N/A	Enumeration: • **1**—Absolute value of prefix SID. • **2**—Index value of prefix SID.	This command must be specified.
Sid	Prefix segment ID	N/A	Unsigned integer.	This command must be specified.
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

OSPF/GlobalStatistics

This table contains OSPF global statistics.

XML structure

```
<OSPF>
  <GlobalStatistics>
    <GlobalStatistic>
      <PeerDropFromFull></PeerDropFromFull>
    </GlobalStatistic>
  </GlobalStatistics>
</OSPF>
```

Table description

Item	Description
Feature name	OSPF
Table name	GlobalStatistics
Table type	Multi-instance table
Row name	GlobalStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerDropFromFull	Statistics about neighbour state changes from Full	N/A	Unsigned integer.	N/A

OSPF

OSPF/Instances

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The specified VRF doesn't exist. 指定的VRF不存在。	The specified VRF doesn't exist, when set configuration. 配置时，指定的VRF不存在
The instance is already associated with another VRF. OSPF实例ID已经存在于另一个VRF实例。	The OSPF process has been configured with another VRF. OSPF进程已经配置在另一个VRF实例中。
The specified VRF is deleting. 指定VRF正在被删除。	The specified VRF is deleting, when set configuration. 配置时，指定VRF正在被删除。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
Invalid router ID. 无效的Router ID。	The router ID is invalid. Router ID配置不正确。
The router does not support NSR. 该设备不支持NSR。	The router does not support NSR. 该设备不支持NSR。
Can't configure NSR when GR configuration is present. 路由器已经使能GR，不允许配置NSR。	Can't configure NSR when GR configuration is present. 路由器已经使能GR，不允许配置NSR。
The command applies only to an OSPF process of the specified VPN instance. 只有VPN实例下的OSPF进程才允许执行本操作。	The command applies only to an OSPF process of the specified VPN instance. 只有VPN实例下的OSPF进程才允许执行本操作。。
The configuration is not allowed in current VSYS. Please try other interfaces or OSPF processes. 当前VSYS无法完成该配置，请尝试在其他接口或OSPF进程下执行该配置。	The specified OSPF does not belong to this VSYS, or the interface is allocated to other VSYS. 指定的OSPF进程或者接口不属于该VSYS。
The VPN instance has already been bound with VSYS.	Please specify another VPN instance or do not specify VPN instance.

VPN实例已经与其他VSYS绑定。	请指定该VSYS绑定的VPN实例或者请不要指定VPN实例。
The Cost attribute column cannot be specified when the CfgType attribute column is 0. 当CfgType属性值为0时，不能指定Cost属性列。	The Cost attribute column cannot be specified when the CfgType attribute column is “Disbale”. Set操作时，当CfgType属性值为Disbale时，不能指定Cost属性列。
The Cost attribute column is required and the value cannot be default when the CfgType attribute column is 4. 当CfgType属性值为4时，必须指定Cost属性列，且Cost属性值不能为default。	The Cost attribute column is required and the value cannot be default when the CfgType attribute column is “Summary”. 当CfgType属性值为Summary时，必须指定Cost属性列，且Cost属性值不能为default。
The PolicyName attribute column cannot be specified when the CfgType attribute column is 0 or 4. 当CfgType属性值为0或4时，不能指定PolicyName属性列。	The PolicyName attribute column cannot be specified when the CfgType attribute column is “Disable” or “Summary”. Set操作时，当CfgType属性值为Disbale或Summary时，不能指定PolicyName属性列。
The Type attribute column cannot be specified when the CfgType attribute column is 0 or 4. 当CfgType属性值为0或4时，不能指定Type属性列。	The Type attribute column cannot be specified when the CfgType attribute column is “Disable” or “Summary”. Set操作时，当CfgType属性值为Disbale或Summary时，不能指定Type属性列。
The maximum time interval should not be less than the minimum time interval. 最大时间间隔应当不小于最小时间间隔。	OSPFv3 Minimum interval should be not greater than maximum interval. OSPFv3协议最小时间不应当大于最大时间。
The maximum time interval should not be less than the penalty time interval. 最大时间间隔应当不小于惩罚时间间隔。	OSPFv3 Incremental interval should be not greater than maximum interval. OSPFv3协议惩罚时间不应当大于最大时间。
The fixed time interval cannot be configured at the same time as the maximum time interval, minimum time interval, penalty time, and whether to configure according to the maximum time interval. 固定时间间隔不能和最大时间间隔，最小时间间隔，惩罚时间，及是否按最大时间间隔配置同时配置。	Msecintvl and maximum, minimum, incremental, bconservative are mutually exclusive. 固定时间间隔和最大时间间隔，最小时间间隔，惩罚时间，及是否按最大时间间隔配置不能同时配置。
Conservite can be delivered only when the maximum time interval, minimum time interval, and penalty time interval are all set. Conservite只有在最大时间间隔，最小时间间隔和惩罚时间间隔都设置时才能下发。	Conservite can be set only when the maximum time interval, minimum time interval and penalty time interval are all set. 当最大时间间隔，最小时间间隔和惩罚时间间隔都设置时才能下发Conservite。
The attribute columns of Spf-schedule need to be configured in sequence. Spf-schedule的属性列需要依次配置。	Need to be configured in the order of maximum, minimum, incremental, conservative. 需要依照maximum，minimum，incremental，conservative顺序配置。
不能单独删除Spf-schedule的属性列。 Cannot delete the attribute column of Spf-schedule alone.	The attribute columns of attribute group Spf-schedule must be deleted at the same time. 属性组Spf-schedule的属性列必须同时删除。
轻量级OSPF进程不能修改为普通OSPF进程。 Lite OSPF process cannot be modified to a normal OSPF process.	轻量级进程已存在，不能配置为普通进程。 The lite OSPF process already exists，the process cannot be modified to a normal OSPF process.
普通OSPF进程不能修改为轻量级OSPF进程。 Normal OSPF process cannot be modified to a lite OSPF process.	普通进程已存在，不能重复配置轻量级进程。 The normal OSPF process already exists，the process cannot be modified to a lite OSPF process.

只有在非缺省vSystem下支持该配置。 The column is only supported in non-default vSystem.	该属性列只有在非缺省vSystem下支持操作 The attribute columns is only supported in non-default vSystem.
OSPF Minimum interval should not be greater than maximum interval. OSPF协议最小时间不应当大于最大时间。	OSPF Minimum interval should not be greater than maximum interval. OSPF协议最小时间不应当大于最大时间。
OSPF Incremental interval should not be greater than maximum interval. OSPF协议惩罚时间不应当大于最大时间。	OSPF Incremental interval should not be greater than maximum interval. OSPF协议惩罚时间不应当大于最大时间。
RouteTagCheck属性列不支持在公网下配置。 The RouteTagCheck column cannot configured in public network.	RouteTagCheck属性列不支持在公网下配置。 The RouteTagCheck column cannot configured in public network.
DnBitCheckSummary属性列不支持在公网下配置。 The DnBitCheckSummary column cannot configured in public network.	DnBitCheckSummary属性列不支持在公网下配置。 The DnBitCheckSummary column cannot configured in public network.
DnBitCheckAse属性列不支持在公网下配置。 The DnBitCheckAse column cannot configured in public network.	DnBitCheckAse属性列不支持在公网下配置。 The DnBitCheckAse column cannot configured in public network.
DnBitCheckNssa属性列不支持在公网下配置。 The DnBitCheckNssa column cannot configured in public network.	DnBitCheckNssa属性列不支持在公网下配置。 The DnBitCheckNssa column cannot configured in public network.
DnBitSetSummary属性列不支持在公网下配置。 The DnBitSetSummary column cannot configured in public network.	DnBitSetSummary属性列不支持在公网下配置。 The DnBitSetSummary column cannot configured in public network.
DnBitSetAse属性列不支持在公网下配置。 The DnBitSetAse column cannot configured in public network.	DnBitSetAse属性列不支持在公网下配置。 The DnBitSetAse column cannot configured in public network.
DnBitSetNssa属性列不支持在公网下配置。 The DnBitSetNssa column cannot configured in public network.	DnBitSetNssa属性列不支持在公网下配置。 The DnBitSetNssa column cannot configured in public network.
The maximum attribute column is required. 需要补齐maximum属性列。	The maximum attribute column is required. 需要补齐maximum属性列。
The minimum attribute column is required. 需要补齐minimum属性列。	The minimum attribute column is required. 需要补齐minimum属性列。
The incremental attribute column is required. 需要补齐incremental属性列。	The incremental attribute column is required. 需要补齐incremental属性列。
Minimum interval should not be greater than maximum interval. minimum 属性列值不应该大于maximum 属性列值。	Minimum interval should not be greater than maximum interval. minimum 属性列值不应该大于maximum 属性列值。
Incremental interval should not be greater than maximum interval incremental 属性列值不应该大于maximum 属性列值。	Incremental interval should not be greater than maximum interval incremental 属性列值不应该大于maximum 属性列值。

OSPF/Redistributes

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
RedistName attribute column must be empty when the value of Protocol attribute column is 1, 2, 6, or 9 当Protocol属性值为1、2、6或9时，RedistName属性列必须为空。	RedistName attribute column must be empty when the value of Protocol attribute column is 1,2,6,or 9, when set configuration. Set操作时，direct/static/bgp/unr协议不能带RedistName参数。
RedistName attribute column is required when the value of Protocol attribute column is 3,4,5 or 7. 当Protocol属性值为3、4、5或7时，RedistName属性列不能为空。	RedistName attribute column is required when the value of Protocol attribute column is 3,4,5 or 7, when set configuration. Set操作时，rip/ospf/isis/eigrp协议必须带RedistName参数。
Import isn’t allowed within the same instance. 不允许引入OSPF的当前实例	Can’t import the same process. 不能引入自己的进程ID。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
AllowIBGP column is configurable only when the protocol is BGP. 只有引入BGP协议的路由时，才可以配置AllowIBGP。	Allow-ibgp column is configurable only when the protocol is BGP. 非BGP协议不能配置AllowIBGP。
RedistName attribute column must be empty when the value of Protocol attribute column is 1, 2, or 8. 当Protocol属性值为1、2或8时，RedistName属性列必须为空。	RedistName attribute column must be empty when the value of Protocol attribute column is 1, 2, or 8. Set操作时，direct/static/guard协议不能带RedistName参数。
The value of RedistName column must be ‘all’ or an unsigned integer in the range of 1 to 65535 when the value of protocol column is 3, 4, 5, or 7. 当Protocol属性值为3、4、5或7时，RedistName列的值必须为’all’ 或者1到65535之间的整数。	The value of RedistName column must be ‘all’ or an unsigned integer in the range of 1 to 65535 when the value of protocol column is 3, 4, 5, or 7. 对于RIP、OSPF、ISIS、EIGRP协议，RedistName列的值必须为’all’ 或者1到65535之间的整数。
RedistName can't configure route to other processes while this protocol has redistributed all processes. 当该协议已经配置引入所有进程路由时，则不能再配置引入该协议其他进程路由。	RedistName can't configure route to other processes while this protocol has redistributed all processes. Set操作时，当该协议已经配置引入所有进程路由时，则不能再配置引入该协议其他进程路由。

The Cost attribute column cannot be specified when the InheritCost attribute column set to true. 当InheritCost属性值为true时，不能指定Cost属性列。	The Cost attribute column cannot be specified when the InheritCost attribute column set to true. 当InheritCost属性值为true时，不能指定Cost属性列。
The Cost attribute column cannot be specified with InheritCost attribute column at same time when unset configuration. 当下发unset操作时，InheritCost属性列和Cost属性列不允许被同时配置。	The Cost attribute column cannot be specified with InheritCost attribute column at same time when unset configuration. 当下发unset操作时，InheritCost属性列和Cost属性列不允许被同时配置。
RedistName attribute column must be empty when the value of Protocol attribute column is 1, 2 , or 9 当Protocol属性值为1、2或9时，RedistName属性列必须为空。	RedistName attribute column must be empty when the value of Protocol attribute column is 1,2,or 9, when set configuration. Set操作时，direct/static/unr协议不能带RedistName参数。
The value of RedistName column must be empty or an unsigned integer in the range of 1 to 4294967295 when the value of protocol column is 6. 对于BGP协议，RedistName列的值必须为空或者1到4294967295之间的整数。	The value of RedistName column must be empty or an unsigned integer in the range of 1 to 4294967295 when the value of protocol column is 6. 对于BGP协议，RedistName列的值必须为空或者1到4294967295之间的整数。

OSPF/Areas

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
Can't remove the backbone area when virtual links exist in the backbone area. OSPF骨干区存在虚连接配置。	Virtual link exists in the backbone, backbone cannot be removed. 如果进程下区域存在vlink配置则不允许删除骨干区。
The area doesn't exist. 区域不存在。	No such area. 没有此区域。

The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
The area must be a stub area. 当前区域不是Stub区域。	The area must be a stub area. 区域不是stub，则不许配置。
B64分支： Can't configure the backbone area as a stub area or totally stub area. 骨干区域不能配置成Stub区域或Totally Stub区域。 其他分支： The stub option is invalid for the backbone area. 骨干区不允许配置stub区域。	Stub option invalid for backbone. 骨干区不允许配置stub。
The area is already configured with a virtual link. Remove the virtual link first. 当前区域配置了虚连接，请先删除虚连接。	The area which is already configured with a virtual link cannot configured stub. 配置vlink区域不允许配置stub。
The area is already configured as an NSSA area. 当前为NSSA区域，不支持配置stub区域。	The area which is already configured with nssa cannot configured stub. Nssa区域不能配置stub。
B64分支： Can't configure the backbone area as an NSSA area or totally NSSA area. 骨干区域不能配置成NSSA区域或Totally NSSA区域。 其他分支： The nssa option is invalid for the backbone area. 骨干区不允许配置nssa区域。	Nssa option invalid for backbone. 骨干区不允许配置nssa。
The area must be an nssa area. 当前区域不是nssa区域。	The area must be an nssa area. 区域不是nssa，则不许配置。
The area is already configured as a stub area. 当前为stub区域，不支持配置nssa区域。	The area which is already configured with stub cannot configured nssa. stub区域不能配置nssa。

OSPF/Interfaces

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Name attribute column is required. 需要补齐Name属性列。	Process name is required. 缺少进程名称参数。
AreaId attribute column is required. 需要补齐AreaId属性列。	Area ID is required. 缺少区域ID参数。
Name and AreaId attribute columns are required. 需要补齐Name和AreaId属性列。	The interface doesn’t enable ospf. 接口没有使能ospf。
Not support Segment Routing configurations.	Segment Routing doesn’t support.

不支持SR相关配置。	不支持SR相关配置。
SidName and SidType attribute columns are required. 需要补齐SidName和SidType属性列。	Wrong configuration. 配置错误。
SidType and Sid attribute columns are required. 需要补齐SidType和Sid属性列。	Wrong configuration. 配置错误。
SidName and Sid attribute columns are required. 需要补齐SidName和Sid属性列。	Wrong configuration. 配置错误。
SidType attribute column is required. 需要补齐SidType属性列。	Wrong configuration. 配置错误。
SidName attribute column is required. 需要补齐SidName属性列。	Wrong configuration. 配置错误。
Sid attribute column is required. 需要补齐Sid属性列。	Wrong configuration. 配置错误。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
Another process is enabled in the current interface. 该接口已经使能其他进程，不能进行配置。	Another process is enabled in the current interface. 该接口已经使能其他进程。
The Sid is out of the SRGB range. Sid配置不合法.它的值应该在SRGB范围内。	The Sid is out of the SRGB range. Sid配置的值在SRGB范围外。
The Sid already exists. Sid配置冲突, 该Sid已存在。	The Sid already exists. 该Sid已存在。
Can't set the OSPF cost of a non-loopback interface to 0. 非LoopBack接口不允许配置OSPF的开销值为0。	Can't set the OSPF cost of a non-loopback interface to 0. 非LoopBack接口不允许配置OSPF的开销值为0。
Not support BFD. 不支持BFD。	BFD is not supported. 不支持BFD。
SimpleAuth can't be specified when NullAuth is true. 不进行验证配置与认证配置不能共存。	SimpleAuth can't be specified when NullAuth is true. 不进行验证配置与认证配置不能共存。
ExplicitNull and PHP attribute column cannot be configured at the same time.	ExplicitNull and PHP attribute column cannot be configured at the same time.

ExplicitNull和PHP属性列不允许同时进行配置。	当进行set操作时，ExplicitNull和PHP属性列不允许同时进行配置。
The configuration is not supported. 不支持相关配置。	The configuration is not supported. 不支持相关配置。
The configuration is not allowed in current VSYS. Please try other interfaces or OSPF processes. 当前VSYS无法完成该配置，请尝试在其他接口或OSPF进程下执行该配置。	The specified OSPF does not belong to this VSYS, or the interface is allocated to other VSYS. 指定的OSPF进程或者接口不属于该VSYS。
Summary,SummaryAclNum, Ase,AseAclNum, Nssa,NssaAclNum cannot be configured with all. Merge时Ase,AseAclNum,Nssa,NssaAclNum,Summary,SummaryAclNum不能和All一起下发。	Summary,SummaryAclNum, Ase,AseAclNum, Nssa,NssaAclNum cannot be configured with all. Merge时Ase,AseAclNum,Nssa,NssaAclNum,Summary,SummaryAclNum不能和All一起下发。
Every attribute must exist in group database-filter when delete and remove. 对databasefilter组进行Delete或Remove时，必须指定全部属性列。	Every attribute must exist in group database-filter when delete and remove. 对databasefilter组进行Delete或Remove时，必须指定全部属性列。
Cannot issue conflicting configurations when merge. Merge不能下发冲突配置。	Cannot issue conflicting configurations when merge. Merge不能下发冲突配置。
Cannot configure AclNum separately. 不能单独下发AclNum。	Cannot configure AclNum separately. 不能单独下发AclNum。
When merge or create, all, ase, nssa, summary and disable must be configured to true. Merge和create时,all,ase,nssa,summary和disable只能赋值为true。	When merge or create, all, ase, nssa, summary and disable must be configured to true. Merge和create时,all,ase,nssa,summary和disable只能赋值为true。
HopsCount and Disable cannot be configured at the same time. HopsCount和Disable不能同时下发。	HopsCount and Disable cannot be configured at the same time. HopsCount和Disable不能同时下发。
PeerSubAddrEnable and PeerSubAddrSpecified cannot be configured at the same time. PeerSubAddrEnable和PeerSubAddrSpecified不能同时下发。	PeerSubAddrEnable and PeerSubAddrSpecified cannot be configured at the same time. PeerSubAddrEnable和PeerSubAddrSpecified不能同时下发。
CostAdjustTrack and CostAdjustOffset must be configured together. 必须同时配置CostAdjustTrack和CostAdjustOffset。	CostAdjustTrack and CostAdjustOffset must be configured together. 必须同时配置CostAdjustTrack和CostAdjustOffset。
Enable attribute column is required and must be true. 必须包含Enable属性列，且该属性列必须设置为true。	Enable attribute column is required and must be true. 必须包含Enable属性列，且该属性列必须设置为true。
RouterId attribute column is required. 必须包含RouterId属性列。	RouterId attribute column is required. 必须包含RouterId属性列。
Can't set RouterId when Enable attribute column configuration is false. 当Enable属性列设置为false时，不允许指定RouterId属性列。	Can't set RouterId when Enable attribute column configuration is false. 当Enable属性列设置为false时，不允许指定RouterId属性列。
Configuration failed. Virtual nodes created on	Configuration failed. Virtual nodes created on interfaces of the

interfaces of the same node cannot use the same router ID. 配置失败，与本节点上其他虚拟节点的Router ID冲突。	same node cannot use the same router ID. 配置失败，与本节点上其他虚拟节点的Router ID冲突。
OSPF Invalid router ID. 无效的Router ID。	OSPF Invalid router ID. 无效的Router ID。
SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time. 不能同时配置SimpleAuth, NullAuth, Keychain和IfMd5s。	SimpleAuth, NullAuth, Keychain and IfMd5s are mutually exclusive and cannot be set at the same time. 不能同时配置SimpleAuth, NullAuth, Keychain和IfMd5s。

OSPF/Networks

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
WildcardMask attribute column is required. 需要补齐WildcardMask属性列。	WildcardMask attribute column is required. 获取子网掩码，必须制定掩码。
The network mask isn't contiguous. 网络掩码不连续。	The network mask is wrong. 网络掩码不对。
Network mask doesn't match network address. 网络掩码和当前网络地址不匹配。	The network mask is wrong. 网络掩码不对。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The area doesn't exist. 区域不存在。	No such area. 没有此区域。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
Network addresses of Class D and Class E in the format of 127.*.*.* are not allowed.	The network address is invalid.

127.*.*.*形式的D类、E类地址不允许配置。	网段不合法。
The network is already set in this instance. 指定网段已在当前实例使能。	The network is already set. 已在本进程使能。
The network is already set in another instance. 指定网段已在其他实例使能。	The network is already set in another process. 已在其他进程使能。
The network overlaps with the previously configured network. 网段配置重叠。	Network is duplicated or is the subset of the previous entry. 不允许配置的网段出现重叠。
Operation not supported. 不支持该操作。	WildcardMask doesn’t support delete and remove. 子网掩码不支持delete、remove操作。

OSPF/IfMd5s

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Operation not supported. 不支持该操作。	Not support operate object without attribute. 不支持操作不带属性的对象。
The interface doesn't exist. 接口不存在。	The interface doesn't exist. 接口不存在。
Md5Type attribute column is required. 需要补齐Md5Type属性列。	Wrong configuration. 配置错误。
PasswordType attribute column is required. 需要补齐PasswordType属性列。	Wrong configuration. 配置错误。
Password attribute column is required. 需要补齐Password属性列	Wrong configuration. 配置错误。
Invalid OSPF authentication password. OSPF认证密码不合法。	Wrong configuration. 配置错误。
The specified authentication mode is not supported. 不支持指定的认证模式。	The specified authentication mode is not supported. 不支持指定的认证模式。
The specified key already exists. 指定的key已存在	The specified key already exists. 指定的key已存在

OSPF/Neighbours

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。

OSPF/Preferences

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。

OSPF/AsbrSummarys

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
Can't configure a summary route as a default route on an ASBR. 聚合路由不能配置为缺省路由。	Wrong configuration. 配置错误。
无效的聚合地址。 Invalid summary address.	Wrong configuration. 配置错误。
Invalid network mask.	Wrong configuration.

无效的网络掩码。	配置错误。
The network mask isn't contiguous. 网络掩码不连续。	Wrong configuration. 配置错误。

OSPF/StubRouters

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
ExternalLsa attribute column is required and must be set to true. ExternalLsa属性列需要赋值为true。	Wrong configuration. 配置错误。
SummaryLsa attribute column is required and must be set to true. SummaryLsa属性列需要赋值为true。	Wrong configuration. 配置错误。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。

OSPF/Nssas

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
DefaultRouteAdvertise attribute column is required and must be set to true. DefaultRouteAdvertise属性列需要赋值为true。	Wrong configuration. 配置错误。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。

The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
The area doesn’t exist. 区域不存在。	No such area. 没有此区域。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
The area is already configured as an NSSA area. 当前为NSSA区域，不支持配置stub区域。	The area which is already configured with nssa cannot configured stub. Nssa区域不能配置stub。
The nssa option is invalid for the backbone area. 骨干区不允许配置nssa区域。	Nssa option invalid for backbone. 骨干区不允许配置nssa。
The area must be an nssa area. 当前区域不是nssa区域。	The area must be an nssa area. 区域不是nssa，则不许配置。
The area is already configured as a stub area. 当前为stub区域，不支持配置nssa区域。	The area which is already configured with stub cannot configured nssa. stub区域不能配置nssa。

OSPF/SilentAllInterfaces

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover.	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。

路由器正在主备进程倒换不能进行配置。	
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。

OSPF/SilentInterfaces

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。

OSPF/SegmentRoutings

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Not support Segment Routing configurations. 不支持SR相关配置。	Segment Routing doesn't support. 不支持SR相关配置。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart.	The router is performing Graceful Restart or normal restart, when set configuration.

路由器正在平滑或正在重启。	配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
Opaque-Capability is not enabled. Opaque-Capability 未使能。	Opaque-Capability is not enabled. Opaque-Capability 未使能。
The maximum value must be greater than the minimum value. 最大值一定要大于最小值。	Wrong configuration. 配置错误。
The SRGB is invalid. It must contain the configured prefix SIDs. SRGB配置不合法.它的配置范围应该包含已配置的前缀标签值。	Wrong configuration. 配置错误。
Lowerbound attribute column is required. 需要补齐Lowerbound属性列。	Wrong configuration. 配置错误。
Upperbound attribute column is required. 需要补齐Lowerbound属性列。	Wrong configuration. 配置错误。
The value of Lowerbound is invalid.The value must be in %u to %u. Lowerbound的值非法，该值有效范围是%u - %u。	Wrong configuration. 配置错误。
The value of Upperbound is invalid.The value must be in %u to %u. Upperbound的值非法，该值有效范围是%u - %u。	Wrong configuration. 配置错误。
SrPreferEnable属性列需要赋值为true。 SrPreferEnable attribute column is required and must be set to true.	Wrong configuration. 配置错误。
Policy attribute column is required and must be set to 3. Policy属性列需要赋值为模式3。	Wrong configuration. 配置错误。
PrefixListName attribute column is required when Policy is permitted by a prefix list. 当Policy属性列被配置为模式3时,需要同时指定PrefixListName属性列。	PrefixListName attribute column is required when Policy is permitted by a prefix list. 当进行set操作时，Policy属性列若被配置为模式3时,需要同时指定PrefixListName属性列。

OSPF/DistributeBgplses

Message	Explanation
OSPF isn’t configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn’t exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。

The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can’t configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can’t configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。

OSPF/FilterPolicyExports

Message	Explanation
OSPF is not configured. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
InstanceNameExport attribute column must be empty when the value of ProtocolExport attribute column is 0, 1, 2, or 6. 当ProtocolExport属性值为0、1、2或6时，InstanceNameExport属性列必须为空。	InstanceNameExport attribute column must be empty when the value of ProtocolExport attribute column is 0, 1, 2, or 6. 当ProtocolExport属性值为0、1、2或6时，InstanceNameExport属性列必须为空。
InstanceNameExport attribute column is required when the value of ProtocolExport attribute column is 3, 4, 5, or 7. 当ProtocolExport属性值为3、4、5或7时，InstanceNameExport属性列不能为空。	InstanceNameExport attribute column is required when the value of ProtocolExport attribute column is 3, 4, 5, or 7. 当ProtocolExport属性值为3、4、5或7时，InstanceNameExport属性列不能为空。
The AclNum and PrefixListName attributes cannot coexist. AclNum属性不能与PrefixListName共存。	The AclNum and PrefixListName attributes cannot coexist. AclNum属性不能与PrefixListName共存。
You cannot filter routes redistributed by the current process. 不允许对当前进程引入的路由信息进行过滤。	You cannot filter routes redistributed by the current process. 不允许对当前进程引入的路由信息进行过滤。

OSPF/FilterPolicyImports

Message	Explanation
OSPF is not configured. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The AclNum and PrefixListName attributes cannot coexist. AclNum属性不能与PrefixListName共存。	The AclNum and PrefixListName attributes cannot coexist. AclNum属性不能与PrefixListName共存。
The AclNum, PrefixListName, or Gateway attribute cannot coexist with the RoutePolicyName attribute. AclNum、PrefixListName、Gateway属性不能与RoutePolicyName共存。	The AclNum, PrefixListName, or Gateway attribute cannot coexist with the RoutePolicyName attribute. AclNum、PrefixListName、Gateway属性不能与RoutePolicyName共存。

OSPF/FRRs

Message	Explanation
RoutePolicy attribute column cannot be configured at the same time when enable is true. Enable为true时不能同时配置RoutePolicy属性列。	RoutePolicy attribute column cannot be configured at the same time when enable is true. 当进行set操作时，Enable属性列为true时不能同时配置RoutePolicy属性列。
Enable attribute column is required and must be set to true. Enable属性列需要赋值为true。	Enable attribute column is required and must be set to true. 当进行set操作时，Enable属性列需要赋值为true。
RoutePolicy and Host attribute column cannot be configured at the same time. Host属性列和RoutePolicy属性列不能同时被配置。	RoutePolicy and Host attribute column cannot be configured at the same time. 当进行set操作时，Host属性列和RoutePolicy属性列不能同时被配置。
RoutePolicy attribute column of Lfa is required. 需要补齐RoutePolicy属性列。	Wrong configuration. 配置错误。

OSPF/AdjSids

Message	Explanation
SidType attribute column is required. 需要补齐SidType属性列。	Wrong configuration. 配置错误。
Sid attribute column is required. 需要补齐Sid属性列。	Wrong configuration. 配置错误。

OSPF event stream

OSPF stream description.

OSPF peer state event

This event is used to report OSPF peer state information.

XML structure for event subscription

```
<OSPFPeerStateEvent>
</OSPFPeerStateEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ospf_stream</stream>
    <filter type="subtree">
      <OSPFPeerStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/OSPF:1.0">
      </OSPFPeerStateEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	ospf_stream
Event name	OSPFPeerStateEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/OSPF:1.0
Support for extended query	No

XML structure for event report

```
<OSPFPeerStateEvent>
  <OSPFPeerState>
    <IfIndex></IfIndex>
    <NbrAddress></NbrAddress>
    <NbrRouterId></NbrRouterId>
    <ProcId></ProcId>
    <AreaId></AreaId>
    <DrPriority></DrPriority>
    <CurrentState></CurrentState>
    <LastState></LastState>
    <IfName></IfName>
    <Mode></Mode>
    <UpTime></UpTime>
```

```
    <NetType></NetType>
    <Sequence></Sequence>
  </OSPFPeerState>
</OSPFPeerStateEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2021-09-29T09:10:51</eventTime>
  <OSPFPeerStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/OSPF:1.0">
    <OSPFPeerState>
      <IfIndex>285</IfIndex>
      <NbrAddress>1.1.1.2</NbrAddress>
      <NbrRouterId>2.2.2.2</NbrRouterId>
      <ProcId>1</ProcId>
      <AreaId>0.0.0.0</AreaId>
      <DrPriority>1</DrPriority>
      <CurrentState>7</CurrentState>
      <LastState>6</LastState>
      <IfName>GigabitEthernet2/0/2</IfName>
      <Mode>0</Mode>
      <UpTime>1542</UpTime>
      <NetType>1</NetType>
      <Sequence>16</Sequence>
    </OSPFPeerState>
  </OSPFPeerStateEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
IfIndex	Interface index.	Unsigned integer.	N/A
NbrAddress	Neighbour IPv4 address.	String, dotted decimal notation.	N/A
NbrRouterId	Neighbour router identifier.	String, dotted decimal notation.	N/A
ProcId	Process ID.	String, case-sensitive. Length: 1 to 31 characters.	N/A
AreaId	Area ID.	String, dotted decimal notation.	N/A
DrPriority	Router priority.	Unsigned integer. Value range: 0 to 255.	N/A
CurrentState	Current neighbour state.	Enumeration: • 0—Down. • 1—Init. • 2—Attempt. • 3—2-way. • 4—Exstart. • 5—Exchange. • 6—Loading.	N/A

Column name	Column description	Data type and restrictions	Remarks
		• 7—Full.	
LastState	Last neighbour state.	Enumeration: • 0—Down. • 1—Init. • 2—Attempt. • 3—2-way. • 4—Exstart. • 5—Exchange. • 6—Loading. • 7—Full.	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Mode	Neighbour mode	Enumeration: • 0—Master. • 1—Slave. • 2—None.	N/A
UpTime	Neighbour up time in seconds	Unsigned integer.	N/A
NetType	Neighbor identification method	Enumeration: • 1—dynamic. • 2—permanent.	N/A
Sequence	Sequence	Unsigned integer. Value range: 1 to 4294967295.	N/A

Example 35

OSPFv3

The namespace of ospfv3 is "urn:ietf:params:xml:ns:yang:ietf-ospfv3".

The Example on the end of the module sets an instance that the module can’t be under top node.

ietf_ospfv3

This table contains OSPFv3 configuration information.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	ospfv3
Table type	Multi-instance table
Row name	instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
af	Address type	Index	String: case-sensitive: • ipv4. • ipv6.	N/A
explicit-router-id	Router identifier	N/A	String, dotted decimal notation.	You cannot modify this column after this column is created or merged. If you need to do this, you must delete the column and then create it again.
isolate	Whether to isolate OSPFv3 from	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	current network.		• **true**—Isolate OSPFv3 from current network. • **false**—Do not isolate OSPFv3 from current network.	
shutdown	Whether to shutdown the OSPFv3 process.	N/A	Boolean: • **true—**Shutdown the OSPFv3 process. • **false—**Do not shutdown the OSPFv3 process (default).	N/A
nsr	Nonstop routing	Data structure	Members include: • enable.	All the members must be specified.
srv6-policy-autoroute	Enable SRv6 policy autoroute for OSPFv3	N/A	Boolean: • true—Enable SRv6 policy autoroute for OSPFv3. • false—Disable SRv6 policy autoroute for OSPFv3(default)	N/A
enable	Enable nonstop routing	N/A	Boolean: • ture—Enable the nonstop routing feature. • false—Disable the nonstop routing feature.	N/A
graceful-restart	Graceful OSPF Restart.	Data structure	Members include: • restarter-enable. • restarter-global. • restarter-planned-only. • restarter-interval. • helper-enable. • helper-planned-only. • helper-strict-lsa-checking.	N/A
restarter-enable	Enable graceful restart.	N/A	Boolean: • true—Enable graceful restart. • false—Disable graceful restart (default).	N/A
restarter-global	Enables global GR.	N/A	Boolean: • true—Enable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			global GR. • false—Disable global GR (default).	
restarter-planned-only	Enables planned GR only.	N/A	Boolean: • true—Enable global planned GR only. • false—Enable both planned GR and unplanned GR (default).	N/A
restarter-interval	Interval to attempt graceful restart prior to failing (seconds)	N/A	Unsigned short integer. Value range: 40 to 1800. Units: seconds. Default: 120.	N/A
helper-enable	Enable graceful restart helper support for restarting routers.	N/A	Boolean: • true—Enable graceful restart helper support (default). • false—Disable graceful restart helper support.	N/A
helper-planned-only	Enables only planned GR for the GR helper.	N/A	Boolean: • true—Enable planned GR for the GR helper only. • false—Enable both planned GR and unplanned GR for the GR helper (default).	N/A
helper-strict-lsa-checking	Terminate graceful restart when an LSA topology change is detected.	N/A	Boolean: • true—Enable graceful restart helper strict LSA checking support. • false—Disable graceful restart helper strict LSA checking support (default).	N/A
fast-reroute	OSPFv3 Loop-Free Alternate FRR	Data structure	Members include: • lfa-enable. • abr-only. • ecmp-type • router-policy-name	N/A
lfa-enable	Enable OSPFv3 Loop-Free Alternate FRR.	N/A	Boolean: • true—Enable FRR.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false—Does not enable FRR (default).	
abr-only	Uses the next hop of the route to the ABR as the backup next hop.	N/A	Boolean: • true—Only the next hops of the route to the ABR are used as the backup next hop. • false—All next hops can be used as the backup next hop (default).	The abr-only and ecmp-type attributes are mutually exclusive.
ecmp-type	Type of ecmp.	N/A	Enumeration: • default—Calculate the next hop by LFA algorithm.(default) • ecmp-shared—Select a shared backup next hop for ECMP routes.	The abr-only and ecmp-type attributes are mutually exclusive.
router-policy-name	Uses a routing policy to designate a backup next hop.	N/A	String: case sensitive. Length: 1 to 63 characters.	N/A
FrrMicroloopAvoid	Microloop avoidance FRR information for OSPFv3	Data structure	Members include: • Enable. RibUpdateDelay.	N/A
Enable	Whether to enable microloop avoidance for OSPFv3	N/A	Boolean: • true—Enable microloop avoidance for OSPFv3. false—Disable microloop avoidance for OSPFv3 **(default)**.	N/A
RibUpdateDelay	Microloop avoidance delay timer in milliseconds.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	The node updates its routing table after the specified delay timer expires.
vpn-instance-capability	Route loop check for the OSPFv3 process of the VPN instance.	N/A	Enumeration: • **0**—Normal, which indicates enabling route loop check. • **1**—Simple, which indicates disabling route loop check. Default: 0.	Only supported by an OSPFv3 process of a specific VPN instance.
description	The description information of OSPFv3 instance.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
spf-schedule	Time interval of OSPF route calculation.	Data structure	Members include: • maximum. • minimum. • incremental. • conservative. • millisecond.	N/A
maximum	Maximum time interval.	N/A	Unsigned integer. Value range:1 to 60.	When configuring minimum, incremental and conservative, maximum must be set; maximum cannot be set at the same time as millisecond.
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000.	When configuring incremental and conservative, minimum must be set; minimum cannot be set at the same time as millisecond.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000.	When configuring conservative, incremental must be set; minimum cannot be set at the same time as millisecond.
conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • ture—Enable route calculation is based on the maximum time interval. • false—Disable route calculation is based on the maximum time interval.	Conservative cannot be set at the same time as millisecond.
millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000.	Millisecond cannot be set at the same time as maximum ,minimum, incremental and conservative.
metric-bandwidth-advertise	Advertise link bandwidth metric information in LSAs	N/A	Boolean: • true—Enable OSPFv3 to advertise link bandwidth metric information in LSAs. • false—Disable OSPFv3 to advertise link bandwidth metric information in	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			LSAs (default).	
metric-bandwidth-suppress-time	Suppress advertisement time of link bandwidth metric information	N/A	Unsigned integer. Value range: 0 to 600s. Default: 120s.	N/A
metric-delay-advertise	Advertise link delay metric information in LSAs	N/A	Boolean: • true—Enable OSPFv3 to advertise link delay metric information in LSAs. • false—Disable OSPFv3 to advertise link delay metric information in LSAs (default).	N/A
metric-delay-suppress	Suppress advertisement of link delay.	Data structure	Members include: • suppress-time. • suppress-threshold-percent. • suppress-threshold-absolute.	N/A
suppress-time	Suppress advertisement time of link delay metric information	N/A	Unsigned integer. Value range: 0 to 600s. Default: 120s.	The attribute columns of attribute group metric-delay-suppress must be configured at the same time.
suppress-threshold-percent	Specify the percentage delay variation threshold	N/A	Unsigned integer. Value range: 0 to 100. Default: 10.	The attribute columns of attribute group metric-delay-suppress must be configured at the same time.
suppress-threshold-absolute	Specify the absolute delay variation threshold	N/A	Unsigned integer. Value range: 0 to 10000us. Default: 1000us.	The attribute columns of attribute group metric-delay-suppress must be configured at the same time.
FrrMirror	Fast reroute mirror.	Data structure	Members include: • Enable. • DeleteDelayTime.	N/A
Enable	Enable SRv6 path egress protection.	N/A	Boolean: • true—Enable SRv6 path egress protection • false—Does not enable SRv6 path egress protection (default).	N/A
DeleteDelayTime	Specify a delay for deleting the mirror	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	FRR path		21845s. • Default: 60s.	
TiLfa	Topology-Independent Loop-Free Alternate FRR.	Data structure	Members include: • Enable. • PerPrefix. • Host. • RoutePolicy.	N/A
Enable	Enable OSPFv3 TI-LFA FRR.	N/A	Boolean: • true—Enable TI-LFA FRR. • false—Does not enable TI-LFA FRR (default).	N/A
PerPrefix	Per-prefix calculation.	N/A	Boolean: • true—Calculates backup information for each advertising source of a route. • false—Calculates backup information for each route (default).	N/A
Host	Enable TI-LFA for host routes.	N/A	Boolean: • true—Enable TI-LFA for host routes. • false—Does not enable TI-LFA for host routes (default).	N/A
RoutePolicy	Enable TI-LFA FRR for prefixes identified by the routing policy.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
advertise-link-attributes-te	Advertise TE information in application link attributes.	N/A	Boolean: • **true**—Advertise TE information in application link attributes. **false**—Do not advertise TE information in application link attributes (default).	N/A
suppress-intra-te-link-attributes	Suppress advertisement of TE information by intra-TE LSAs.	N/A	Boolean: • **true**—Suppress advertisement of TE information by intra-TE LSAs. **false**—Do not suppress advertisement of TE information by intra-TE	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			LSAs. (default).	
virtual-system	Whether to use virtual OSPFv3 nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPFv3 nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPFv3 nodes for neighbor relationship establishment (default).	N/A
lsa-generation-interval	Time interval of OSPFv3 lsa generation.	N/A	Members include: • maximum. • minimum. • incremental.	N/A
maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60 (seconds).	N/A
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPFv3 Minimum interval should not be greater than maximum interval.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000 (milliseconds).	OSPFv3 Incremental interval should not be greater than maximum interval.
lsa-arrival-interval	Time interval of OSPF route lsa arrival.	Data structure	Members include: • maximum. • Minimum • incremental.	N/A
maximum	Maximum time interval.	N/A	Unsigned integer. Value range:0 to 10000 (milliseconds).	
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 0～1000 (milliseconds).	When configuring minimum and incremental, must be less than maximum.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 1～5000 (milliseconds).	When configuring minimum and incremental, must be less than maximum.
default-route-advertise	Default route redistribtution information.	Data structure	Members include: • cfg-type. • cost. • route-policy-name • type.	N/A
cfg-type	Default route redistribtution	N/A	String: case-sensitive: • disable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	method		• normal. • always. • permit-calculate-other.	
cost	Cost for the default route.	N/A	String. Length: 1 to 31 characters.	This column cannot be specified when the cfg-type column is “disable”. It must be “default” or an unsigned integer in the range of 0 to 16777214.
route-policy-name	Specifies a routing policy to filter default routes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	This column cannot be specified when the cfg-type column is “disable”.
type	Specifies a type for the Type-5 LSA.	N/A	String: case-sensitive: • default. • type1 • type2	This column cannot be specified when the cfg-type column is “disable”.
stub-router	Specifies the router as a stub router.	Data structure	Members include: • cfg-type. • on-startup • on-startup-timeout • include-stub. • external-lsa. • external-metric. • summary-lsa. • summary-metric.	N/A
cfg-type	Configures the type of stub-router.	N/A	String: case-sensitive: • r-bit. • max-metric.	N/A
on-startup	Specifies the router as a stub router during reboot.	N/A	String: case-sensitive: • disable(default). • enable. • wait-for-bgp.	N/A
on-startup-timeout	On-startup timeout time.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	Cannot be specified when on-startup is disable. When wait-for-bgp is specified, the default value for on-startup-timeout is 600 seconds.
include-stub	Sets the cost of the stub links.	N/A	String: case-sensitive: • disable (default). • enable.	N/A
external-lsa	Configures the cost of external LSAs.	N/A	String: case-sensitive: • disable (default).	For the create and merge operations, if you both configure the

Column name	Column description	Column type	Data type and restrictions	Remarks
			• enable.	external-lsa and external-metric, you must specify the external-lsa as enable. For the replace operation, if you configure the external-metric, you must configure the external-lsa too, and specify the external-lsa as enable. For the delete and remove operations, if you configure the external-lsa, the external-metric value will be deleted.
external-metric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215. Default: 16711680.	N/A
summary-lsa	Configures the cost of the summary LSAs.	N/A	String: case-sensitive: • disable (default). • enable.	For the create and merge operations, if you both configure the summary-lsa and summary-metric, you must specify the summary-lsa as true. For the replace operation, if you configure the summary-metric, you must configure the summary-lsa too, and specify the summary-lsa as true. For the delete and remove operations, if you configure the summary-lsa, the summary-metric value will be deleted.
summary-metric	Cost of the summary LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215. Default: 16711680.	N/A
srv6-microloop-avoid	Microloop-avoidance information for OSPFv3 SRv6.	Data structure	Members include: • enable. • rib-update-delay	N/A
enable	Enable microloop-avoidance for OSPFv3	N/A	Boolean: • **false**—Disable microloop-avoidan	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	SRv6		ce for OSPFv3 SRv6(default) • **true**—Enable microloop-avoidance for OSPFv3 SRv6	
rib-update-delay	The microloop-avoidance RIB-update-delay time for OSPFv3 SRv6	N/A	Unsigned integer. Value range 1 to 60000(milliseconds). Default: 5000(milliseconds)	N/A
areas	Information of the areas	Sublist	The details of the sublist refer to areas table.	N/A
redistributes	Information of the redistributed routes	Sublist	The details of the sublist refer to redistributed route table.	N/A
srv6-locators	Information of SRv6 locators	Sublist	The details of the sublist refer to srv6-locators table.	N/A
filter-policy-exports	Information of the filter policy exports	Sublist	The details of the sublist refer to filter-policy-exports table.	N/A
filter-policy-import	Information of the filter policy imports	Subtable	The details of the subtable refer to filter-policy-imports table.	N/A
asbr-summary-entries	Information of the ASBR summary entries	Sublist	The details of the sublist refer to asbr-summary-entries table.	N/A
flex-algos	Information of the flex-algos	Sublist	The details of the sublist refer to flex-algos table.	N/A
affinity-maps	Information of the affinity maps	Sublist	The details of the sublist refer to affinity-maps table.	N/A
preferences	Information of the preferences	Sublist	The details of the sublist refer to preferences table.	N/A

ietf_ospfv3/areas

This table contains area configuration information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	areas
Table type	Multi-instance table
Row name	area
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
area-id	Area ID	Index	String, dotted decimal notation.	N/A
area-type	Area type	N/A	Enumeration: • **0**—Normal. (default) • **1**—Stub. • **2**—NSSA.	If area-id is 0, area-type can only be set to 0.
description	The description information of OSPFv3 area.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A
keychain	Specify a keychain for authentication.	N/A	String: case sensitive. Length: 1 to 63 characters.	Keychain cannot be set at the same time as authentication.
authentication	Area authentication	Data structure	Members include: • mode • key-id • password-type • password	All the members must be specified. Authentication cannot be set at the same time as keychain.
mode	Authentication mode	N/A	String, case-sensitive. Supported strings: • hmac-sha-256 • hmac-sm3	N/A
key-id	Authentication key ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
password-type	Password type	N/A	Enumeration: • 1—Cipher. • 2—Plain.	N/A
password	Password string	N/A	String, case-sensitive. Length: • 1 to 255 characters for plain password. • 33 to 373 characters for	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			cipher password.	
interfaces	Information of the interfaces	Sublist	The details of the sublist refer to interfaces table.	N/A

ietf_ospfv3/areas/interfaces

This table contains interface information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	This table supports only Layer 3 interfaces. You cannot modify the instance-id of the specified process on the interfaces after creating it. If you need do this, you must delete the row and then create it again.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
instance-id	Interface instance ID	N/A	Unsigned integer.	It must be an unsigned char in the range of 0 to 255.
interface-type	Specifies the network type	N/A	String: case-sensitive:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of the interface.		• broadcast. • non-broadcast. • point-to-multipoint. • point-to-multipoint-unicast. • point-to-point.	
hello-interval	Hello interval.	N/A	Unsigned integer. Value range:1 to 65535.	N/A
dead-interval	Dead interval.	N/A	Unsigned integer. Value range:1 to 65535.	N/A
cost	Interface cost.	N/A	Unsigned integer. Value range: • Loopback interfaces: 0 to 65535. • Other interfaces: 1 to 65535. Default: • Loopback interfaces: 0. • Other interfaces: 1.	N/A
mtu-ignore	Whether or not to check the MTU when interface exchanges the DD packet.	N/A	Boolean: • ture—Ignore the MTU check when interface exchanges the DD packet. • false—Check the MTU when interface exchanges the DD packet (default).	N/A
bfd	Support for BFD detection of OSPF neighbor reachability	Data structure	Members include: • enable	N/A
enable	Enable bfd	N/A	Boolean: • true—enable bfd • false—disable bfd (default)	
priority	Configure OSPF router priority	N/A	Unsigned char. Value range:0 to 255 Default: 1.	N/A
prefix-suppression	Suppress advertisement of the prefixes associated with the interface.	N/A	Boolean: • true—enable suppress • false—disable suppress (default)	N/A
poll-interval	Poll interval	N/A	Unsigned short. Value range:1 to 65535	N/A
retransmit-interval	Retransmit interval	N/A	Unsigned short. Value range:1 to 3600 Default: 5.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
transmit-delay	Transmit delay	N/A	Unsigned short. Value range:1 to 3600 Default: 1.	N/A
keychain	Specify a keychain for authentication.	N/A	String: case sensitive. Length: 1 to 63 characters.	Keychain cannot be set at the same time as authentication.
authentication	Interface authentication	Data structure	Members include: • mode • key-id • password-type • password	All the members must be specified. Authentication cannot be set at the same time as keychain.
mode	Authentication mode	N/A	String, case-sensitive. Supported strings: • hmac-sha-256 • hmac-sm3	N/A
key-id	Authentication key ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
password-type	Password type	N/A	Enumeration: • 1—Cipher. • 2—Plain.	N/A
password	Password string	N/A	String, case-sensitive. Length: • 1 to 255 characters for plain password. • 33 to 373 characters for cipher password.	N/A
lfa-exclude	Prohibit the interface from participating in LFA calculation.	N/A	Boolean: • true—Enabled lfa-exclude. • false—Disable lfa-exclude (default).	N/A
primary-path-detect	BFD session mode.	N/A	Enumeration: • **1**—ctrl. • **2**—echo.	N/A
link-delay-average	Specify the link delay value	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A
link-delay-min	Specify the minimum delay value	N/A	Unsigned integer. Value range:1 to 16777215us.	Link-delay-min and link-delay-min must be configured at the same time.
link-delay-max	Specify the maximum delay value	N/A	Unsigned integer. Value range:1 to 16777215us.	Link-delay-min and link-delay-min must be configured at the same time.
link-delay-variation	Specify the delay variation	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Frr	Fast reroute messages.	Data structure	Members include: • TiLfaDisable.	N/A
TiLfaDisable	Disable Ti-Lfa	N/A	Boolean: • true—Disable Ti-Lfa • false—Enable Ti-Lfa (default)	N/A
affinity-name	Set affinity attribute on the interface.	N/A	String, case-sensitive. Length: 1 to 32 characters.	Repeat supported for 32 times.
link-quality-adjust-cost	Set the value to be added to the interface cost when the link quality changes to LOW	N/A	Unsigned integer. Value range: 1 to 65535.	The value to be added to the interface cost is in the range of 1 to 65534. The maximum interface cost is 65535.
cost-adjust-track	Associate a track entry for interface cost adjustment	N/A	Unsigned integer. Value range: 1 to 1024.	cost-adjust-offset and cost-adjust-track must be set together.
cost-adjust-offset	Set the value to be added to the interface cost when the track status changes to Negative	N/A	Unsigned integer. Value range: 1 to 65535.	cost-adjust-offset and cost-adjust-track must be set together. The value to be added to the interface cost is in the range of 1 to 65534. If you set the value for cost-adjust-offset to 65535, the interface will use the maximum interface cost when the track status changes to Negative.
virtual-system	Information about virtual system configuration.	Data structure	Members include: • enable • router-id	N/A
enable	Whether to use virtual OSPFv3 nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPFv3 nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPFv3 nodes for neighbor relationship establishment (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
router-id	Set a virtual OSPFv3 router ID	N/A	String, dotted decimal notation.	N/A
silent	Suppress routing updates on the interface	N/A	Enumeration: • **0**—Do not suppress routing updates on the interface. • **1**—Suppress routing updates on the interface.	N/A
bfd-adjust-cost	Adjust the OSPFv3 interface cost according to the BFD session state.	N/A	Enumeration: • **1~65534**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 65534 when the BFD session goes down. • **none**—Do not adjust cost (default).	N/A
bfd-adjust-cost-suppress	Suppress OSPFv3 interface cost adjustment upon BFD session state changes.	Data structure	Members include: • resume-interval. • detect-interval. • threshold	N/A
resume-interval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds. Default: 0 seconds.	N/A
detect-interval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100. Default: 1.	N/A
peer-hold-maxcost-duration	Advertise the maximum link cost to neighbors within the specified period of time	N/A	Unsigned integer. Value range: 100 to1000000 (milliseconds)	N/A
database-filter	Filter outbound LSAs on the interface.	Data structure	Members include: • all	The set operation is subject to the last issuance.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• external • external-acl • nssa • nssa-acl • inter-prefix • inter-prefix-acl	
all	Filter all LSAs except the Grace LSAs	N/A	String: case-sensitive: • disable—Do not filter any LSA. (default) • enable—Filter all LSAs except the Grace LSAs	Cannot be configured simultaneously with external, external-acl, nssa, nssa-acl, inter-prefix or inter-prefix-acl attributes.
external	Filter type-5 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-5 LSAs. • enable—Filters type-5 LSAs.	Cannot be configured simultaneously with the all attribute.
external-acl	Filter type-5 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the external attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
nssa	Filter type-7 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-7 LSAs. • enable—Filters type-7 LSAs.	Cannot be configured simultaneously with the all attribute.
nssa-acl	Filter type-7 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the nssa attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
inter-prefix	Filters type-3 LSAs.	N/A	String: case-sensitive: • disable- Do not filters Filters type-3 LSAs. • enable- Filters Filters type-3 LSAs.	Cannot be configured simultaneously with the all attribute.

Column name	Column description	Column type	Data type and restrictions	Remarks
inter-prefix-acl	Filters type-3 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the inter-prefix attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
database-filter-peers	Information of the database-filter-peers on interface	Sublist	The details of the sublist refer to database-filter-peers table.	N/A

ietf_ospfv3/redistributes

This table contains redistributed route information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	redistributes
Table type	Multi-instance table
Row name	redistribute
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol	Protocol.	Index	String: case-sensitive: • bgp. • direct. • isisv6. • ospfv3. • ripng.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• static. • unr.	
redist-name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the Protocol column is Direct, Static or Unr. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is isisv6, ospfv3, or ripng. It must be “all” or an unsigned integer in the range of 1 to 4294967295 if protocol is bgp. “all” means all the process of the protocol.
allow-ibgp	Allow IBGP routes when importing BGP routes.	N/A	Boolean: • true—Import IBGP routes when importing BGP routes. • false—Does not import IBGP routes when importing BGP routes.	This column can be specified only when the protocol is bgp.
allow-direct	Allow direct routes when importing ISISv6, OSPFv3 or RIPng routes.	N/A	Boolean: • true—Import direct routes when importing ISISv6, OSPFv3 or RIPng routes. • false—Does not import direct routes when importing ISISv6, OSPFv3 or RIPng routes.	This column can be specified only when the protocol is isisv6, ospfv3 or ripng.
metric	Interface cost.	N/A	Unsigned integer. Value range:0 to 16777214.	N/A
metric-type	Specifies a metric type for the Type-7 LSA.	N/A	Enumeration: • 1—Type 1. • 2—Type 2.	N/A
inherit-cost	Whether or not to inherit the cost of the routes	N/A	Boolean: • true—Inherit the cost from protocol. • false—Does not inherit the cost from protocol.	N/A
nssa-only	Limits routes to NSSA areas.	N/A	Boolean: • true—Limits routes to NSSA areas. • false—Does not limit routes to NSSA areas (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: refers to default tag	N/A

ietf_ospfv3/instance/srv6-locators

This table contains srv6 locator information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	srv6-locators
Table type	Multi-instance table
Row name	locator
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	SRv6 locator name.	Index	String. Length: 1 to 31 characters.	N/A

ietf_ospfv3/instance/filter-policy-exports

This table contains filter policy exports information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	filter-policy-exports
Table type	Multi-instance table
Row name	filter-policy-export
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-export	Protocol type.	Index	Enumeration: • 0—All. • 1—Direct. • 2—Static. • 3—RIPNG • 4—OSPFV3 • 5—ISISV6 • 6—BGP4+ • 9—UNR.	N/A
instance-name-export	Instance name.	Index	String. Length: 0 to 31 characters.	It must be empty when the protocol-export column is Direct, Static, BGP4+, UNR, or All.
ipv6-acl-num	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	You can only set one of ipv6-acl-num and prefix-list-name at the same time.
prefix-list-name	Name of the prefix list.	N/A	String. Length: 1 to 63 characters.	You can only set one of ipv6-acl-num and prefix-list-name at the same time.

ietf_ospfv3/instance/filter-policy-import

This table contains FilterPolicyImport information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	filter-policy-import
Table type	single-instance table
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ipv6-acl-num	IPV6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	You can only set one of ipv6-acl-num, prefix-lst-name and route-policy-name at the same time.
prefix-list-name	Name of the prefix list	N/A	String : case-sensitive: Length: 1 to 63 characters.	You can only set one of ipv6-acl-num, prefix-list-name and route-policy-name at the same time.
gateway	Name of the gateway prefix list	N/A	String : case-sensitive: Length: 1 to 63 characters.	You can only set one of gateway and route-policy-name at the same time.
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	You cannot set ipv6-acl-num, prefix-list-name, or gateway when setting route-policy-name.

ietf_ospfv3/instance/asbr-summary-entries

This table contains ASBR summary information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	asbr-summary-entries
Table type	Multi-instance table
Row name	asbr-summary-entrys
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	Destination IPv6 address.	Index	String, colon-separated hexadecimal string if AfType is ipv6.	Example: 123:1::
prefix-length	Mask length of prefix.	Index	Unsigned integer. Value range: 1 to 128.	No more than 128.
cost	Summary route cost.	N/A	Unsigned integer. Value range: 1 to 16777214.	N/A
advertise	Advertise summary route.	N/A	Boolean: • true—Advertise summary route (default). • false—Dose Not advertises summary route.	N/A
nssa-only	Limits summary routes to NSSA areas.	N/A	Boolean: • true—Limits summary routes to NSSA areas. • false—Does not limit summary routes to NSSA areas (default).	N/A
tag	Summary route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ietf_ospfv3/instance/flex-algos

This table contains flex-algos information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	Flex-algos
Table type	Multi-instance table
Row name	Flex-algo
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
algorithm-id	Flexible algorithm id	Index	Unsigned integer. Value range: 128 to 255.	N/A
advertise	Whether to advertise local algorithm.	N/A	Boolean: • true—Advertise local algorithm. • false—Does not advertise local algorithm (default).	N/A
priority	Priority value.	N/A	Unsigned integer. Value range: 0 to 255. Default: 128.	N/A
frr-enable	Whether to enable fast-reroute.	N/A	Boolean: • true—Enable fast-reroute(default). • false—Does not enable fast-reroute.	N/A
exclude-any	Exclude-all affinity rules on the algorithm calculation.	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times. The members of AttributeName must be specified on the instance.
include-any	Include-any affinity rules on the algorithm calculation.	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times. The members of AttributeName must be specified on the instance.
include-all	Include-all affinity rules on the	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm calculation.			The members of AttributeName must be specified on the instance.
metric-type	Type of metric to be used during the algorithm calculation.	N/A	Enumeration: • **0**—IGP metric (default). • **1**—Minimum unidirectional link delay. • **2**—TE default metric.	N/A
tilfa	TILFA for flexible algorithm.	Data structure	Members include: • enable. • per-prefix.	N/A
enable	Enable TILFA for flexible algorithm.	N/A	Boolean: • true—Enable TILFA for flexible algorithm. • false—Does not enable TILFA for flexible algorithm. (default).	N/A
per-prefix	Calculate TILFA per-prefix.	N/A	Boolean: • true—Calculate TILFA per-prefix. • false—Does not calculate TILFA per-prefix (default).	N/A
frr-tie-breaker	Priority of an FRR backup path selection policy for a flexible algorithm.	Data structure	Members include: • lowest-cost-pref. • node-protect-pref.	N/A
lowest-cost-pref	Preference of link protection.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	N/A
node-protect-pref	Preference of node protection.	N/A	Unsigned integer. Value range: 1 to 255. Default: 40.	N/A

ietf_ospfv3/instance/affinity-maps

This table contains affinity-maps information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	affinity-maps
Table type	Multi-instance table
Row name	affinity-map
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
attribute-name	Name of attribute.	Index	String : case-sensitive: Length: 1 to 32 characters.	N/A
bit-position	Bit position of attribute.	N/A	Unsigned integer. Value range: 0 to 255.	N/A

ietf_ospfv3/instance/preferences

This table contains preferences information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	preferences
Table type	Multi-instance table
Row name	preference
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
route-type	Route type	Index	String: case-sensitive: • non-ase. • ase.	
value	Preference value.	N/A	Unsigned integer. Value range: 1 to 255. Default: 10 for non-ase, 150 for ase.	N/A
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A

ietf_ospfv3/areas/interfaces/database-filter-peers

This table contains database filter peer information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	database-filter-peers
Table type	Multi-instance table
Row name	database-filter-peer
Restrictions	This table supports only Layer 3 interfaces. You cannot modify the instance-id of the specified process on the interfaces after creating it. If you need do this, you must delete the row and then create it again.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peer-address	Neighbor IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
all	Filter all LSAs except the Grace LSAs	N/A	String: case-sensitive: • disable—Do not filter any LSA. (default)	Cannot be configured simultaneously with external,

Column name	Column description	Column type	Data type and restrictions	Remarks
			• enable—Filter all LSAs except the Grace LSAs	external-acl, nssa, nssa-acl, inter-prefix or inter-prefix-acl attributes.
external	Filter type-5 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-5 LSAs. • enable—Filters type-5 LSAs.	Cannot be configured simultaneously with the all attribute.
external-acl	Filter type-5 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the external attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
nssa	Filter type-7 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-7 LSAs. • enable—Filters type-7 LSAs.	Cannot be configured simultaneously with the all attribute.
nssa-acl	Filter type-7 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the nssa attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
inter-prefix	Filters type-3 LSAs.	N/A	String: case-sensitive: • disable- Do not filters Filters type-3 LSAs. • enable- Filters Filters type-3 LSAs.	Cannot be configured simultaneously with the all attribute.
inter-prefix-acl	Filters type-3 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the inter-prefix attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".

Example

配置一个 ospfv3 实例，使能 nsr 功能，并在接口上使能

```

Example 35

OSPFv3

The namespace of ospfv3 is "urn:ietf:params:xml:ns:yang:ietf-ospfv3".

The Example on the end of the module sets an instance that the module can’t be under top node.

ietf_ospfv3

This table contains OSPFv3 configuration information.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	ospfv3
Table type	Multi-instance table
Row name	instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
af	Address type	Index	String: case-sensitive: • ipv4. • ipv6.	N/A
explicit-router-id	Router identifier	N/A	String, dotted decimal notation.	N/A
isolate	Whether to isolate OSPFv3 from current network.	N/A	Boolean: • **true**—Isolate OSPFv3 from current network. • **false**—Do not isolate OSPFv3 from current network.	N/A
shutdown	Whether to shutdown the OSPFv3 process.	N/A	Boolean: • **true—**Shutdown the OSPFv3 process. • **false—**Do not shutdown the OSPFv3 process.	N/A
nsr	Nonstop routing	Data structure	Members include: • enable.	All the members must be specified.
srv6-policy-autoroute	Enable SRv6 policy autoroute for OSPFv3	N/A	Boolean: • true—Enable SRv6 policy autoroute for OSPFv3. • false—Disable SRv6 policy autoroute for OSPFv3(default)	N/A
enable	Enable nonstop routing	N/A	Boolean: • ture—Enable the nonstop routing feature. • false—Disable the nonstop routing feature.	N/A
graceful-restart	Graceful OSPF Restart	Data structure	Members include: • restarter-enable. • restarter-global. • restarter-planned-only. • restarter-interval. • helper-enable. • helper-planned-only. • helper-strict-lsa-checking.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
restarter-enable	Enable graceful restart.	N/A	Boolean: • true—Enable graceful restart. • false—Disable graceful restart.	N/A
restarter-global	Enables global GR.	N/A	Boolean: • true—Enable global GR. • false—Disable global GR.	N/A
restarter-planned-only	Enables planned GR only.	N/A	Boolean: • true—Enable global planned GR only. • false—Enable both planned GR and unplanned GR.	N/A
restarter-interval	Interval to attempt graceful restart prior to failing (seconds)	N/A	Unsigned short integer. Value range: 40 to 1800.	N/A
helper-enable	Enable graceful restart helper support for restarting routers.	N/A	Boolean: • true—Enable graceful restart helper support. • false—Disable graceful restart helper support.	N/A
helper-planned-only	Enables only planned GR for the GR helper.	N/A	Boolean: • true—Enable planned GR for the GR helper only. • false—Enable both planned GR and unplanned GR for the GR helper.	N/A
helper-strict-lsa-checking	Terminate graceful restart when an LSA topology change is detected.	N/A	Boolean: • true—Enable graceful restart helper strict LSA checking support. • false—Disable graceful restart helper strict LSA checking support.	N/A
fast-reroute	OSPFv3 Loop-Free Alternate FRR	Data structure	Members include: • lfa-enable. • abr-only. • ecmp-type • router-policy-name	N/A
lfa-enable	Enable OSPFv3	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Loop-Free Alternate FRR.		• true—Enable FRR. • false—Does not enable FRR.	
abr-only	Uses the next hop of the route to the ABR as the backup next hop.	N/A	Boolean: • true—Only the next hops of the route to the ABR are used as the backup next hop. • false—All next hops can be used as the backup next hop.	The abr-only and ecmp-type attributes are mutually exclusive.
ecmp-type	Type of ecmp.	N/A	Enumeration: • default—Calculate the next hop by LFA algorithm. • ecmp-shared—Select a shared backup next hop for ECMP routes.	The abr-only and ecmp-type attributes are mutually exclusive.
router-policy-name	Uses a routing policy to designate a backup next hop.	N/A	String: case sensitive. Length: 1 to 63 characters.	N/A
FrrMicroloopAvoid	Microloop avoidance FRR information for OSPFv3.	Data structure	Members include: • Enable. RibUpdateDelay.	N/A
Enable	Whether to enable microloop avoidance for OSPFv3	N/A	Boolean: • true—Enable microloop avoidance for OSPFv3. false—Disable microloop avoidance for OSPFv3 **(default)**.	N/A
RibUpdateDelay	Microloop avoidance delay timer in milliseconds.	N/A	Unsigned integer. Value range 1 to 60000. Default: 5000.	The node updates its routing table after the specified delay timer expires.
vpn-instance-capability	Route loop check for the OSPFv3 process of the VPN instance.	N/A	Enumeration: • **0**—Normal, which indicates enabling route loop check. • **1**—Simple, which indicates disabling route loop check.	Only supported by an OSPFv3 process of a specific VPN instance.
description	The description information of OSPFv3 instance.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A
spf-schedule	Time interval of	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	OSPF route calculation.	structure	• maximum. • minimum. • incremental. • conservative. • millisecond.	
maximum	Maximum time interval.	N/A	Unsigned integer. Value range:1 to 60.	When configuring minimum, incremental and conservative, maximum must be set; maximum cannot be set at the same time as millisecond.
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000.	When configuring incremental and conservative, minimum must be set; minimum cannot be set at the same time as millisecond.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000.	When configuring conservative, incremental must be set; minimum cannot be set at the same time as millisecond.
conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • ture—Enable route calculation is based on the maximum time interval. • false—Disable route calculation is based on the maximum time interval.	Conservative cannot be set at the same time as millisecond.
millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000.	Millisecond cannot be set at the same time as maximum ,minimum, incremental and conservative.
metric-bandwidth-advertise	Advertise link bandwidth metric information in LSAs	N/A	Boolean: • true—Enable OSPFv3 to advertise link bandwidth metric information in LSAs. • false—Disable OSPFv3 to advertise link bandwidth metric information in LSAs (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
metric-bandwidth-suppress-time	Suppress advertisement time of link bandwidth metric information	N/A	Unsigned integer. Value range: 0 to 600s. Default: 120s.	NA
metric-delay-advertise	Advertise link delay metric information in LSAs	N/A	Boolean: • true—Enable OSPFv3 to advertise link delay metric information in LSAs. • false—Disable OSPFv3 to advertise link delay metric information in LSAs (default).	N/A
metric-delay-suppress	Suppress advertisement of link delay.	Data structure	Members include: • suppress-time. • suppress-threshold-percent. • suppress-threshold-absolute.	N/A
suppress-time	Suppress advertisement time of link delay metric information	N/A	Unsigned integer. Value range: 0 to 600s. Default: 120s.	N/A
suppress-threshold-percent	Specify the percentage delay variation threshold	N/A	Unsigned integer. Value range: 0 to 100. Default: 10.	N/A
suppress-threshold-absolute	Specify the absolute delay variation threshold	N/A	Unsigned integer. Value range: 0 to 10000us. Default: 1000us.	N/A
FrrMirror	Fast reroute mirror.	Data structure	Members include: • Enable. • DeleteDelayTime.	
Enable	Enable SRv6 path egress protection.	N/A	Boolean: • true—Enable SRv6 path egress protection • false—Does not enable SRv6 path egress protection.	N/A
DeleteDelayTime	Specify a delay for deleting the mirror FRR path	N/A	Unsigned integer. Value range: 1 to 21845s. Default: 60s.	N/A
TiLfa	Topology-Independent Loop-Free	Data structure	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Alternate FRR.		• Enable. • PerPrefix. • Host. • RoutePolicy.	
Enable	Enable OSPFv3 TI-LFA FRR.	N/A	Boolean: • true—Enable TI-LFA FRR. • false—Does not enable TI-LFA FRR.	N/A
PerPrefix	Per-prefix calculation.	N/A	Boolean: • true—Calculates backup information for each advertising source of a route. • false—Calculates backup information for each route.	N/A
Host	Enable TI-LFA for host routes.	N/A	Boolean: • true—Enable TI-LFA for host routes. • false—Does not enable TI-LFA for host routes.	
RoutePolicy	Enable TI-LFA FRR for prefixes identified by the routing policy.	N/A	String, case-sensitive. Length: 1 to 63 characters.	
advertise-link-attributes-te	Advertise TE information in application link attributes.	N/A	Boolean: • **true**—Advertise TE information in application link attributes. • **false**—Do not advertise TE information in application link attributes.	N/A
suppress-intra-te-link-attributes	Suppress advertisement of TE information by intra-TE LSAs.	N/A	Boolean: • **true**—Suppress advertisement of TE information by intra-TE LSAs. • **false**—Do not suppress advertisement of TE information by intra-TE LSAs.	N/A
virtual-system	Whether to use virtual OSPFv3 nodes for	N/A	Boolean: • **true**—Use virtual OSPFv3 nodes for	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	neighbor relationship establishment		neighbor relationship establishment. • **false—**Do not use virtual OSPFv3 nodes for neighbor relationship establishment.	
lsa-generation-interval	Time interval of OSPFv3 lsa generation.	N/A	Members include: • maximum. • minimum. • incremental.	N/A
maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60(seconds).	
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000(milliseconds).	OSPFv3 Minimum interval should not be greater than maximum interval.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000(milliseconds).	OSPFv3 Incremental interval should not be greater than maximum interval.
lsa-arrival-interval	Time interval of OSPF route lsa arrival.	Data structure	Members include: • maximum. • minimum. • incremental.	N/A
maximum	Maximum time interval.	N/A	Unsigned integer. Value range:0 to 10000 (milliseconds).	
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 0～1000 (milliseconds).	When configuring minimum and incremental, must be less than maximum.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 1～5000 (milliseconds).	When configuring minimum and incremental, must be less than maximum.
default-route-advertise	Default route redistribtution information.	Data structure	Members include: • cfg-type. • cost. • route-policy-name • type.	N/A
cfg-type	Default route redistribtution method	N/A	String: case-sensitive: • disable. • normal. • always. • permit-calculate-other.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
cost	Cost for the default route.	N/A	String. Length: 1 to 31 characters.	This column cannot be specified when the cfg-type column is “disable”. It must be “default” or an unsigned integer in the range of 0 to 16777214.
route-policy-name	Specifies a routing policy to filter default routes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	This column cannot be specified when the cfg-type column is “disable”.
type	Specifies a type for the Type-5 LSA.	N/A	String: case-sensitive: • default. • type1 • type2	This column cannot be specified when the cfg-type column is “disable”.
stub-router	Specifies the router as a stub router.	Data structure	Members include: • cfg-type. • on-startup • on-startup-timeout • include-stub. • external-lsa. • external-metric. • summary-lsa. • summary-metric.	N/A
cfg-type	Configures the type of stub-router.	N/A	String: case-sensitive: • r-bit. • max-metric.	N/A
on-startup	Specifies the router as a stub router during reboot.	N/A	String: case-sensitive: • disable. • enable. • wait-for-bgp.	N/A
on-startup-timeout	On-startup timeout time.	N/A	Unsigned integer. Value range: 5 to 86400, in seconds.	Cannot be specified when on-startup is disable. When wait-for-bgp is specified, the default value for on-startup-timeout is 600 seconds.
include-stub	Sets the cost of the stub links.	N/A	String: case-sensitive: • disable • enable.	N/A
external-lsa	Configures the cost of external LSAs.	N/A	String: case-sensitive: • disable. • enable.	For the create and merge operations, if you both configure the external-lsa and external-metric, you must specify the external-lsa as enable.

Column name	Column description	Column type	Data type and restrictions	Remarks
				For the replace operation, if you configure the external-metric, you must configure the external-lsa too, and specify the external-lsa as enable. For the delete and remove operations, if you configure the external-lsa, the external-metric value will be deleted.
external-metric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
summary-lsa	Configures the cost of the summary LSAs.	N/A	String: case-sensitive: • disable. • enable.	For the create and merge operations, if you both configure the summary-lsa and summary-metric, you must specify the summary-lsa as true. For the replace operation, if you configure the summary-metric, you must configure the summary-lsa too, and specify the summary-lsa as true. For the delete and remove operations, if you configure the summary-lsa, the summary-metric value will be deleted.
summary-metric	Cost of the summary LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
srv6-microloop-avoid	Microloop-avoidance information for OSPFv3 SRv6.	Data structure	Members include: • enable. • rib-update-delay	N/A
enable	Enable microloop-avoidance for OSPFv3 SRv6	N/A	Boolean: • **false**—Disable microloop-avoidance for OSPFv3 SRv6 • **true**—Enable microloop-avoidance for OSPFv3 SRv6	N/A
rib-update-delay	The	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
