	microloop-avoidance RIB-update-delay time for OSPFv3 SRv6		Value range 1 to 60000(milliseconds).	
areas	Information of the areas	Sublist	The details of the sublist refer to areas table.	N/A
redistributes	Information of the redistributed routes	Sublist	The details of the sublist refer to redistributed route table.	N/A
srv6-locators	Information of the srv6 locators	Sublist	The details of the sublist refer to srv6-locators table.	N/A
filter-policy-exports	Information of the filter policy exports	Sublist	The details of the sublist refer to filter-policy-exports table.	N/A
filter-policy-import	Information of the filter policy imports	Subtable	The details of the subtable refer to filter-policy-imports table.	N/A
asbr-summary-entries	Information of the ASBR summary entries	Sublist	The details of the sublist refer to asbr-summary-entries table.	N/A
flex-algos	Information of the flex-algos	Sublist	The details of the sublist refer to flex-algos table.	N/A
affinity-maps	Information of the affinity maps	Sublist	The details of the sublist refer to affinity-maps table.	N/A
preferences	Information of the preferences	Sublist	The details of the sublist refer to preferences table.	N/A

ietf_ospfv3/areas

This table contains area configuration information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3

Item	Description
Table name	areas
Table type	Multi-instance table
Row name	area
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
area-id	Area ID	Index	String, dotted decimal notation.	N/A
area-type	Area type	N/A	Enumeration: • **0**—Normal. • **1**—Stub. • **2**—NSSA.	N/A
description	The description information of OSPFv3 area.	N/A	String, case-sensitive. Length: 1 to 80 characters.	N/A
keychain	Specify a keychain for authentication.	N/A	String: case sensitive. Length: 1 to 63 characters.	Keychain cannot be set at the same time as authentication.
authentication	Area authentication	Data structure	Members include: • mode • key-id • password-type • password	Authentication cannot be set at the same time as keychain.
mode	Authentication mode	N/A	String, case-sensitive. Supported strings: • hmac-sha-256 • hmac-sm3	N/A
key-id	Authentication key ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
password-type	Password type	N/A	Enumeration: • 1—Cipher. • 2—Plain.	N/A
password	Password string	N/A	String, case-sensitive. Length: • 1 to 255 characters for plain password. • 33 to 373 characters for cipher password.	N/A
interfaces	Information of the interfaces	Sublist	The details of the sublist refer to interfaces table.	N/A

ietf_ospfv3/areas/interfaces

This table contains interface information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
instance-id	Interface instance ID	N/A	Unsigned integer.	It must be an unsigned char in the range of 0 to 255.
interface-type	Specifies the network type of the interface.	N/A	String: case-sensitive: • broadcast. • non-broadcast. • point-to-multipoint. • point-to-multipoint-unicast. • point-to-point.	N/A
hello-interval	Hello interval.	N/A	Unsigned integer. Value range:1 to 65535.	N/A
dead-interval	Dead interval.	N/A	Unsigned integer. Value range:1 to 65535.	N/A
cost	Interface cost.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: • Loopback interfaces: 0 to 65535. • Other interfaces: 1 to 65535.	
mtu-ignore	Whether or not to check the MTU when interface exchanges the DD packet.	N/A	Boolean: • ture—Ignore the MTU check when interface exchanges the DD packet. • false—Check the MTU when interface exchanges the DD packet.	N/A
neighbors	Information of the neighbors	Sublist	The details of the sublist refer to neighbors table.	N/A
bfd	Support for BFD detection of OSPF neighbor reachability	Data structure	Members include: • enable.	N/A
enable	Enable bfd	N/A	Boolean: • true—enable bfd • false—disable bfd	
priority	Configure OSPF router priority	N/A	Unsigned char. Value range:0 to 255	N/A
prefix-suppression	Suppress advertisement of the prefixes associated with the interface.	N/A	Boolean: • true—enable suppress • false—disable suppress	N/A
poll-interval	Poll interval	N/A	Unsigned short. Value range:1 to 65535	N/A
retransmit-interval	Retransmit interval	N/A	Unsigned short. Value range:1 to 3600	N/A
transmit-delay	Transmit delay	N/A	Unsigned short. Value range:1 to 3600	N/A
keychain	Specify a keychain for authentication.	N/A	String: case sensitive. Length: 1 to 63 characters.	Keychain cannot be set at the same time as authentication.
authentication	Interface authentication	Data structure	Members include: • mode • key-id • password-type • password	Authentication cannot be set at the same time as keychain.
mode	Authentication mode	N/A	String, case-sensitive. Supported strings: • hmac-sha-256	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• hmac-sm3	
key-id	Authentication key ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
password-type	Password type	N/A	Enumeration: • 1—Cipher. • 2—Plain.	N/A
password	Password string	N/A	String, case-sensitive. Length: • 1 to 255 characters for plain password. • 33 to 373 characters for cipher password.	N/A
lfa-exclude	Prohibit the interface from participating in LFA calculation.	N/A	Boolean: • true—enable lfa-exclude. • false—disable lfa-exclude.	N/A
primary-path-detect	BFD session mode.	N/A	Enumeration: • 1—ctrl. • 2—echo.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
link-delay-average	Specify the link delay values	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A
link-delay-min	Specify the minimum delay value	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A
link-delay-max	Specify the maximum delay value	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A
link-delay-variation	Specify the delay variation	N/A	Unsigned integer. Value range:1 to 16777215us.	N/A
Frr	Fast reroute messages.	Data structure	Members include: • TiLfaDisable.	N/A
TiLfaDisable	Disable Ti-Lfa	N/A	Boolean: • true—Disable Ti-Lfa • false—Enable Ti-Lfa	N/A
neighbors	Information of the neighbors	Sublist	The details of the sublist refer to neighbors table.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
affinity-name	Set affinity attribute on the interface.	N/A	String, case-sensitive. Length: 1 to 32 characters.	Repeat supported for 32 times.
link-quality-adjust-cost	Set the value to be added to the interface cost when the link quality changes to LOW	N/A	Unsigned integer. Value range: 1 to 65535.	The value to be added to the interface cost is in the range of 1 to 65534. The maximum interface cost is 65535.
cost-adjust-track	Associate a track entry for interface cost adjustment	N/A	Unsigned integer. Value range: 1 to 1024.	cost-adjust-offset and cost-adjust-track must be set together.
cost-adjust-offset	Set the value to be added to the interface cost when the track status changes to Negative	N/A	Unsigned integer. Value range: 1 to 65535.	cost-adjust-offset and cost-adjust-track must be set together. The value to be added to the interface cost is in the range of 1 to 65534. If you set the value for cost-adjust-offset to 65535, the interface will use the maximum interface cost when the track status changes to Negative.
virtual-system	Information about virtual system configuration.	Data structure	Members include: • enable • router-id	N/A
enable	Whether to use virtual OSPFv3 nodes for neighbor relationship establishment	N/A	Boolean: • **true**—Use virtual OSPFv3 nodes for neighbor relationship establishment. • **false—**Do not use virtual OSPFv3 nodes for neighbor relationship establishment.	N/A
router-id	Set a virtual OSPFv3 router ID	N/A	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
silent	Suppress routing updates on the interface	N/A	Enumeration: • **0**—Do not suppress routing updates on the interface. • **1**—Suppress routing updates on the interface.	N/A
bfd-adjust-cost	Adjust the OSPFv3 interface cost according to the BFD session state.	N/A	Enumeration: • **1~65534**—Value to be added to the interface cost when the BFD session goes down. • **max**—Set the interface cost to the maximum value 65534 when the BFD session goes down. • **none**—Do not adjust cost (default).	N/A
bfd-adjust-cost-suppress	Suppress OSPFv3 interface cost adjustment upon BFD session state changes.	Data structure	Members include: • resume-interval. • detect-interval. • threshold	N/A
resume-interval	Specify the resume interval to delay restoring the interface cost.	N/A	Unsigned integer. Value range: 0 to 600 seconds.	N/A
detect-interval	Specify the detect interval for collecting statistics of BFD session down events.	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
threshold	Specify the number of BFD session down events that triggers an interface cost adjustment.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
peer-hold-maxcost-duration	Advertise the maximum link cost to neighbors within the specified period of time	N/A	Unsigned integer. Value range: 100 to1000000 (milliseconds)	N/A
database-filter	Filter outbound LSAs on the interface.	Data structure	Members include: • all • external • external-acl • nssa	The set operation is subject to the last issuance.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• nssa-acl • inter-prefix • inter-prefix-acl	
all	Filter all LSAs except the Grace LSAs	N/A	String: case-sensitive: • disable—Do not filter any LSA. • enable—Filter all LSAs except the Grace LSAs	Cannot be configured simultaneously with external, external-acl, nssa, nssa-acl, inter-prefix or inter-prefix-acl attributes.
external	Filter type-5 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-5 LSAs. • enable—Filters type-5 LSAs.	Cannot be configured simultaneously with the all attribute.
external-acl	Filter type-5 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the external attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
nssa	Filter type-7 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-7 LSAs. • enable—Filters type-7 LSAs.	Cannot be configured simultaneously with the all attribute.
nssa-acl	Filter type-7 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the nssa attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
inter-prefix	Filters type-3 LSAs.	N/A	String: case-sensitive: • disable- Do not filters Filters type-3 LSAs. • enable- Filters Filters type-3 LSAs.	Cannot be configured simultaneously with the all attribute.
inter-prefix-acl	Filters type-3 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String.	Must be configured with the inter-prefix attibute. If this attribute is

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
database-filter-peers	Information of the database-filter-peers on interface	Sublist	The details of the sublist refer to database-filter-peers table.	N/A

ietf-ospfv3/areas/interfaces/neighbors

This table contains neighbors information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	neighbors
Table type	Multi-instance table
Row name	neighbor
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-router-id	Neighbor router ID	Index	String, dotted decimal notation.	N/A
address	Neighbor IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
state	Neighbor state type	N/A	Enumeration: • **1**—Neighbor down state. • **2**—Neighbor attempt state. • **3**—Neighbor init state • **4**—Neighbor 2-Way state • **5**—Neighbor exchange	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			start state • **6**—Neighbor exchange state • **7**—Neighbor loading state • **8**—Neighbor full state	
priority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
state-change-count	Count of neighbor state changes.	N/A	Unsigned integer.	N/A
type	Neighbor identification method	N/A	Enumeration: • **1**—dynamic. **2**—permanent.	N/A
global-unicast-address	global-unicast-address	N/A	Hexadecimal string, colon-separated.	N/A

ietf_ospfv3/redistributes

This table contains redistributed route information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	redistributes
Table type	Multi-instance table
Row name	redistribute
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol	Protocol.	Index	String: case-sensitive: • bgp. • direct. • isisv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• ospfv3. • ripng. • static. • unr.	
redist-name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
allow-ibgp	Allow IBGP routes when importing BGP routes.	N/A	Boolean: • true—Import IBGP routes when importing BGP routes. • false—Does not import IBGP routes when importing BGP routes.	N/A
allow-direct	Allow direct routes when importing ISISv6, OSPFv3 or RIPng routes.	N/A	Boolean: • true—Import direct routes when importing ISISv6, OSPFv3 or RIPng routes. • false—Does not import direct routes when importing ISISv6, OSPFv3 or RIPng routes.	N/A
metric	Interface cost.	N/A	Unsigned integer. Value range:0 to 16777214.	N/A
metric-type	Specifies a metric type for the Type-7 LSA.	N/A	Enumeration: • 1—Type 1. • 2—Type 2.	N/A
inherit-cost	Whether or not to inherit the cost of the routes	N/A	Boolean: • true—Inherit the cost from protocol. • false—Does not inherit the cost from protocol.	N/A
nssa-only	Limits routes to NSSA areas.	N/A	Boolean: • true—Limits routes to NSSA areas. • false—Does not limit routes to NSSA areas.	N/A
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ietf_ospfv3/instance/srv6-locators

This table contains srv6 locator information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	srv6-locators
Table type	Multi-instance table
Row name	locator
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	SRv6 locator name.	Index	String. Length: 1 to 31 characters.	N/A

ietf_ospfv3/instance/filter-policy-exports

This table contains filter policy exports information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	filter-policy-exports
Table type	Multi-instance table
Row name	filter-policy-export
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-export	Protocol type.	Index	Enumeration: • 0—All. • 1—Direct. • 2—Static. • 3—RIPNG • 4—OSPFV3 • 5—ISISV6 • 6—BGP4+ • 9—UNR.	N/A
instance-name-export	Instance name.	Index	String. Length: 0 to 31 characters.	It will be empty when the protocol-export column is Direct, Static, BGP4+, UNR, or All.
ipv6-acl-num	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	N/A
prefix-list-name	Name of the prefix list.	N/A	String. Length: 1 to 63 characters.	N/A

ietf_ospfv3/instance/filter-policy-import

This table contains filter plicy import information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	filter-policy-import
Table type	Single-instance table
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ipv6-acl-num	IPV6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	N/A
prefix-list-name	Name of the prefix list	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
gateway	Name of the gateway prefix list	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A

ietf_ospfv3/instance/asbr-summary-entries

This table contains ASBR summary information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	asbr-summary-entries
Table type	Multi-instance table
Row name	asbr-summary-entrys
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	Destination IPv6 address.	Index	String, colon-separated hexadecimal string if AfType is ipv6.	Example: 123:1::
prefix-length	Mask length of prefix.	Index	Unsigned integer. Value range: 1 to 128.	No more than 128.
cost	Summary route cost.	N/A	Unsigned integer. Value range: 1 to 16777214.	If it is not configured, the largest cost among

Column name	Column description	Column type	Data type and restrictions	Remarks
				the summarized routes applies. If the routes in Type-5 LSAs translated from Type-7 LSAs are Type-2 external routes, the largest cost among the summarized routes plus 1 applies.
advertise	Advertise summary route.	N/A	Boolean: • true—Advertise summary route. • false—Dose Not advertises summary route.	N/A
nssa-only	Limits summary routes to NSSA areas.	N/A	Boolean: • true—Limits summary routes to NSSA areas. • false—Does not limit summary routes to NSSA areas.	N/A
tag	Summary route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

ietf_ospfv3/instance/flex-algos

This table contains flex-algos information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	Flex-algos
Table type	Multi-instance table
Row name	Flex-algo
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
algorithm-id	Flexible algorithm id	Index	Unsigned integer. Value range: 128 to 255.	N/A
advertise	Whether to advertise local algorithm.	N/A	Boolean: • true—Advertise local algorithm. • false—Does not advertise local algorithm.	N/A
priority	Priority value.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
frr-enable	Whether to enable fast-reroute.	N/A	Boolean: • true—Enable fast-reroute. • false—Does not enable fast-reroute.	N/A
exclude-any	Exclude-all affinity rules on the algorithm calculation.	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times. The members of AttributeName must be specified on the instance.
include-any	Include-any affinity rules on the algorithm calculation.	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times. The members of AttributeName must be specified on the instance.
include-all	Include-all affinity rules on the algorithm calculation.	N/A	String : case-sensitive: Length: 1 to 32 characters.	Repeat supported for 32 times. The members of AttributeName must be specified on the instance.
metric-type	Type of metric to be used during algorithm calculation.	N/A	Enumeration: • **0**—IGP metric. • **1**—Minimum unidirectional link delay. • **2**—TE default metric.	N/A
tilfa	TILFA for flexible algorithm.	Data structure	Members include: • enable. • per-prefix.	N/A
enable	Enable TILFA for flexible algorithm.	N/A	Boolean: • true—Enable TILFA for flexible algorithm. • false—Does not enable TILFA for flexible algorithm.	N/A
per-prefix	Calculate TILFA	N/A	Boolean: • true—Calculate TILFA	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	per-prefix.		per-prefix. • false—Does not calculate TILFA per-prefix.	
frr-tie-breaker	Priority of an FRR backup path selection policy for a flexible algorithm.	Data structure	Members include: • lowest-cost-pref. • node-protect-pref.	N/A
lowest-cost-pref	Preference of link protection.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	N/A
node-protect-pref	Preference of node protection.	N/A	Unsigned integer. Value range: 1 to 255. Default: 40.	N/A

ietf_ospfv3/instance/affinity-maps

This table contains affinity-maps information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	affinity-maps
Table type	Multi-instance table
Row name	affinity-map
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
attribute-name	Name of attribute.	Index	String : case-sensitive: Length: 1 to 32 characters.	N/A
bit-position	Bit position of attribute.	N/A	Unsigned integer. Value range: 0 to 255.	N/A

ietf_ospfv3/instance/preferences

This table contains preferences information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3
Table name	preferences
Table type	Multi-instance table
Row name	preference
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
route-type	Route type	Index	String: case-sensitive: • non-ase. • ase.	
value	Preference value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
route-policy-name	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A

ietf_ospfv3/areas/interfaces/database-filter-peers

This table contains database filter peer information of ietf-ospfv3.

XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

Table description

Item	Description
Feature name	ietf_ospfv3

Item	Description
Table name	database-filter-peers
Table type	Multi-instance table
Row name	database-filter-peer
Restrictions	This table supports only Layer 3 interfaces. You cannot modify the instance-id of the specified process on the interfaces after creating it. If you need do this, you must delete the row and then create it again.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peer-address	Neighbor IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
all	Filter all LSAs except the Grace LSAs	N/A	String: case-sensitive: • disable—Do not filter any LSA. • enable—Filter all LSAs except the Grace LSAs	Cannot be configured simultaneously with external, external-acl, nssa, nssa-acl, inter-prefix or inter-prefix-acl attributes.
external	Filter type-5 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-5 LSAs. • enable—Filters type-5 LSAs.	Cannot be configured simultaneously with the all attribute.
external-acl	Filter type-5 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the external attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
nssa	Filter type-7 LSAs.	N/A	String: case-sensitive: • disable—Do not filter type-7 LSAs. • enable—Filters type-7 LSAs.	Cannot be configured simultaneously with the all attribute.
nssa-acl	Filter type-7 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the nssa attibute. If this attribute is ACL number,it must be in the range of

Column name	Column description	Column type	Data type and restrictions	Remarks
				2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".
inter-prefix	Filters type-3 LSAs.	N/A	String: case-sensitive: • disable- Do not filters Filters type-3 LSAs. • enable- Filters Filters type-3 LSAs.	Cannot be configured simultaneously with the all attribute.
inter-prefix-acl	Filters type-3 LSAs with ACL.	N/A	Unsigned integer. Value range: 2000 to 3999. String. Length: 1 to 63 characters.	Must be configured with the inter-prefix attibute. If this attribute is ACL number,it must be in the range of 2000~3999. If this attribute is ACL name, it must start with [a-z,A-Z] and cannot be "all".

OSPFv3

ietf-network-instance/network-instances/vrf-root/routing/control-plane-protocols

Message	Explanation
Cannot delete the backbone area. The backbone area has a virtual link settings. 骨干区域存在虚连接配置，不允许删除骨干区域。	Delete virtual link settings before you delete the backbone area.
The area is a transit area. Please delete the virtual link first. 当前区域为传输区，请先删除虚连接。	Delete virtual link settings before you delete the area.
The OSPFv3 interface is being deleted. Please try again later. OSPFv3接口正在被删除，请稍后重试。	Please try again later
Insufficient memory resources. 内存资源不足。	Insufficient memory resources.
The specified OSPFv3 area does not exist. 指定的OSPFv3区域不存在。	Please create the ospfv3 area first.
The OSPFv3 process will enter or is in GR process. Please try again later. OSPFv3进程即将进入或正在进行平滑重启，请稍后重试。	Please try again later
The OSPFv3 process is in GR process. Please try again later. OSFPv3进程正在平滑，请稍后重试。	Please try again later
The specified VPN instance does not exist. 指定的VRF实例不存在。	Please config the VPN instance before you config an ospfv3 process with VPN instance.
The process ID already exists in another VPN instance. 进程ID已经存在于另一个VRF实例下。	Please delete the ospfv3 process and config it again if you want to change the VPN instance.
The specified VPN instance is being deleted. 指定VRF实例正在被删除。	Please try again later.
The interface must be in same VPN instance with the current process. 接口与关联的OSPFv3进程必须属于相同的VRF。	Please bind the same VPN instance to the interface with current process.
The number of OSPFv3 processes exceeds the limit. OSPFv3进程数超过最大限制。	The max number of ospfv3 processes is 65535.
The system is disabling the OSPFv3 process or clearing the OSPFv3 process data. Please try again later. 正在关闭OSPFv3进程或清除OSPFv3进程数据，请	Please try again later.

稍后重试。	
Lite OSPFv3 process cannot be modified to a normal OSPFv3 process. 轻量级OSPFv3进程不能修改为普通OSPFv3进程。	The lite OSPFv3 process already exists，the process cannot be modified to a normal OSPFv3 process. 轻量级进程已存在，不能配置为普通进程。
普通OSPFv3进程不能修改为轻量级OSPF进程。 Normal OSPFv3 process cannot be modified to a lite OSPF process.	The normal process ID already exists，the process cannot be modified to a lite OSPFv3 process. 普通进程已存在，不能重复配置轻量级进程。

ietf-network-instance/network-instances/vrf-root/routing/control-plane-protocols/ospfv3/instance

Message	Explanation
Invalid Router ID. 无效的Router ID。	The router ID can not be all zero.
The router ID already exists. Router ID已存在。	Can not change router ID, please delete it first.
The router ID already exists in another process. Router ID已配置在另一个进程。	The router ID already exists in another process.
OSPFv3 isn't configured. 没有配置OSPFv3。	OSPFv3 service has not been started.
The configuration is not allowed in current VSYS. Please try other interfaces or OSPFv3 processes. 当前VSYS下无法完成该配置，请尝试在其他接口或OSPFv3进程下执行该配置。	The specified OSPFv3 does not belong to this VSYS, or the interface is allocated to other VSYS.
The command applies only to an OSPFv3 process of the specified VPN instance. 只有VPN实例下的OSPFv3进程才允许执行本操作。	The command is applicable only to VPN OSPFv3 processes.
The lfa-enable and route-policy-name attributes are mutually exclusive. 属性列lfa-enable与route-policy-name是冲突列，不能同时存在。	The lfa-enable and route-policy-name attributes are mutually exclusive.
The abr-only and ecmp-type attributes are mutually exclusive. 属性列abr-only与ecmp-type是冲突列，不能同时存在。	The abr-only and ecmp-type attributes are mutually exclusive. 属性列abr-only与ecmp-type是冲突列，不能同时存在。
To configure this attribute, you must also configure the lfa-enable attribute. 配置当前属性列时需同时配置lfa-enable属性列。	To configure this attribute, you must also configure the lfa-enable attribute.
To configure this attribute, you must set the value of the lfa-enable attribute to true. 配置当前属性列时需同时配置lfa-enable属性列为TRUE。	To configure this attribute, you must set the value of the lfa-enable attribute to true.

The maximum time interval should not be less than the minimum time interval. 最大时间间隔应当不小于最小时间间隔。	OSPF Minimum interval should be not greater than maximum interval. OSPF协议最小时间不应当大于最大时间。
The maximum time interval should not be less than the penalty time interval. 最大时间间隔应当不小于惩罚时间间隔。	OSPF Incremental interval should be not greater than maximum interval. OSPF协议惩罚时间不应当大于最大时间。
The fixed time interval cannot be configured at the same time as the maximum time interval, minimum time interval, penalty time, and whether to configure according to the maximum time interval. 固定时间间隔不能和最大时间间隔，最小时间间隔，惩罚时间，及是否按最大时间间隔配置同时配置。	Msecintvl and maximum, minimum, incremental, bconservative are mutually exclusive. 固定时间间隔和最大时间间隔，最小时间间隔，惩罚时间，及是否按最大时间间隔配置不能同时配置。
Conservite can be delivered only when the maximum time interval, minimum time interval, and penalty time interval are all set. Conservite只有在最大时间间隔，最小时间间隔和惩罚时间间隔都设置时才能下发。	Conservite can be set only when the maximum time interval, minimum time interval and penalty time interval are all set. 当最大时间间隔，最小时间间隔和惩罚时间间隔都设置时才能下发Conservite。
The attribute columns of Spf-schedule need to be configured in sequence. Spf-schedule的属性列需要依次配置。	Need to be configured in the order of maximum, minimum, incremental, conservative. 需要依照maximum，minimum，incremental，conservative顺序配置。
不能单独删除Spf-schedule的属性列。 Cannot delete the attribute column of Spf-schedule alone.	The attribute columns of attribute group Spf-schedule must be deleted at the same time. 属性组Spf-schedule的属性列必须同时删除。
The attribute columns of attribute group metric-delay-suppress must be configured at the same time. 必须同时配置metric-delay-suppress属性组中的所有属性列。	Suppress-time, suppress-threshold-percent and suppress-threshold-absolute must be configured at the same time. 必须同时配置suppress-time、suppress-threshold-percent和suppress-threshold-absolute。
Other attribute column in this group cannot be configured at the same time when enable column is set as false. 当Enable为false时不能同时配置其他属性列。	Other attribute column in this group cannot be configured at the same time when enable column is set as false. 当Enable为false时不能同时配置其他属性列。
RoutePolicy and host attribute column cannot be configured at the same time. Host和RoutePolicy不能同时被配置。	RoutePolicy and host attribute column cannot be configured at the same time. Host和RoutePolicy不能同时被配置。
Lite OSPFv3 process cannot be modified to a normal OSPFv3 process. 轻量级OSPFv3进程不能修改为普通OSPFv3进程。	The lite OSPFv3 process already exists，the process cannot be modified to a normal OSPFv3 process.轻量级进程已存在，不能配置为普通进程。
Normal OSPFv3 process cannot be modified to a lite OSPF process. 普通OSPFv3进程不能修改为轻量级OSPF进程。	The normal process ID already exists，the process cannot be modified to a lite OSPFv3 process. 普通进程已存在，不能重复配置轻量级进程。
The column is only supported in non-default vSystem. 只有在非缺省vSystem下支持该配置。	The attribute columns is only supported in non-default vSystem. 该属性列只有在非缺省vSystem下支持操作。
maximum attribute column is required.	maximum attribute column is required.

需要补齐maximum属性列。	需要补齐maximum属性列。
minimum attribute column is required. 需要补齐minimum属性列。	minimum attribute column is required. 需要补齐minimum属性列。
incremental attribute column is required. 需要补齐incremental属性列。	incremental attribute column is required. 需要补齐incremental属性列。
Minimum interval should be not greater than maximum interval. minimum 属性列值不应该大于maximum 属性列值。	Minimum interval should be not greater than maximum interval. minimum 属性列值不应该大于maximum 属性列值。
Incremental interval should be not greater than maximum interval. incremental 属性列值不应该大于maximum 属性列值。	Incremental interval should be not greater than maximum interval. incremental 属性列值不应该大于maximum 属性列值。
The external-lsa attribute column is required and must be set to enable. external-lsa属性列需要赋值为true。	The external-lsa attribute column is required and must be set to enable. external-lsa属性列需要赋值为true。
The summary-lsa attribute column is required and must be set to enable. summary-lsa属性列需要赋值为true。	The summary-lsa attribute column is required and must be set to enable. summary-lsa属性列需要赋值为true。

ietf-network-instance/network-instances/vrf-root/routing/control-plane-protocols/ospfv3/instance/areas

Message	Explanation
The OSPFv3 area is being deleted or reset. Please try again later. 正在删除或重置OSPFv3区域，请稍后重试	Please try again later.
The interface already runs an instance with the same instance ID in another OSPFv3 process. 接口运行不同的OSPFv3进程时，不能为其指定相同的实例ID。	Please change the instance-id.
The interface already runs another instance of the specified OSPFv3 process. 将接口使能到同一OSPFv3进程时，不能为其指定不同的实例ID。	Please delete the row and then create it again.
The interface already runs the instance of the specified OSPFv3 process in another area. 将接口使能到同一OSPFv3进程的不同区域时，不能为其指定相同的实例ID。	Please change the instance-id.
Cannot configure the backbone area as a stub area. 不允许将骨干区域配置为Stub区域。	Cannot configure the backbone area as a stub area.
The area is a transit area. Please delete the virtual	The area is a transit area. Please delete the virtual link first.

link first. 当前区域通过虚连接作为传输区，请先删除虚连接。	
The area is a stub area and cannot be configured as an NSSA area. 当前区域类型为Stub区域，不支持配置为NSSA区域。	The area is a stub area and cannot be configured as an NSSA area.

OSPFv3 event stream

OSPFv3 stream description.

OSPFv3-peer-state-event

This event is used to report OSPFv3 neighbor state information.

XML structure for event subscription

```
<OSPFv3PeerStateEvent>
</OSPFv3PeerStateEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>OSPFv3</stream>
    <filter type="subtree">
      <OSPFv3PeerStateEvent xmlns="http://www.h3c.com/netconf/event:1.0/OSPFv3:1.0">
      </OSPFv3PeerStateEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	OSPFv3
Event name	OSPFv3PeerStateEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/OSPFv3:1.0
Support for extended query	No

</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
ProcId	Process ID	String, case-sensitive. Length: 1 to 31 characters.	N/A
AreaId	Area ID	String, dotted decimal notation.	N/A
IfIndex	Interface index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
NbrRouterId	Neighbour router identifier	String, dotted decimal notation.	N/A
NbrAddress	Neighbor IPv6 address	Hexadecimal string, colon-separated.	N/A
DrPriority	Router priority	Unsigned integer. Value range: 0 to 255.	N/A

CurrentState	Current neighbour state	Enumeration: • **0**—Neighbor down state. • **1**—Neighbor attempt state. • **2**—Neighbor init state • **3**—Neighbor 2-Way state • **4**—Neighbor exchange start state • **5**—Neighbor exchange state • **6**—Neighbor loading state • **7**—Neighbor full state	N/A
LastState	Last neighbour state	Enumeration: • **0**—Neighbor down state. • **1**—Neighbor attempt state. • **2**—Neighbor init state • **3**—Neighbor 2-Way state • **4**—Neighbor exchange start state • **5**—Neighbor exchange state • **6**—Neighbor loading state • **7**—Neighbor full state	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Mode	Neighbour mode	Enumeration: • **0**—Master. • **1**—Slave. • **2**—None.	N/A
NetType	Neighbor identification method	Enumeration: • 1—dynamic. • 2—permanent.	N/A
UpTime	Neighbor up time in seconds	Unsigned integer.	N/A
GlobalUnicastAddress	Global unicast IPv6 address	Hexadecimal string, colon-separated.	N/A
Sequence	Sequence	Unsigned integer. Value range: 1 to 4294967295.	N/A

Package

Package/SetBootImage

This table contains information to specify startup software image files for special node.

XML structure

```
<Package>
  <SetBootImage>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <ImageFiles>
        <Boot></Boot>
        <System></System>
        <Feature></Feature>
      </ImageFiles>
      <IPEFileName></IPEFileName>
      <Type></Type>
      <OverwriteLocalFile></OverwriteLocalFile>
      <DeleteIPEFile></DeleteIPEFile>
      <Undecompressed/>
   </SetBootImage>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	SetBootImage
Table type	Single-instance
Row name	None
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Specify a target node of the system.	Data structure	Members include: • Chassis. • Slot. • CPUID.	Optional column, specify a target node which to set all this image files as the startup software image files, if not specify, all suitable nodes will be set.
Chassis	Chassis of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
ImageFiles	.bin image file list to set as the startup image files.	Data structure	Members include: • Boot. • System. • Feature.	Column of Feature is optional, but both Boot and System must be included.
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specifie several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either IPEFileName or ImageFiles to speicify the startup software image files.
Type	Startup type to set.	N/A	Enumeration: • 1—main. • 2—backup.	Backup images are used only when main images are not available.
OverwriteLocalFile	Whether overwrite image files when copying.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after setting it as the next startup image.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Uncompressed	Decompress the IPE file when the device starts up instead of when the IPE file is specified as the startup file.	N/A	N/A	This column should be ignored when bin files are specified as startup files or the device does not support this function.

Package/SetExtendImage

This table contains information to specify startup software image files stored on the device for security engines or PEXs.

XML structure

```
<Package>
  <SetExtendImage>
    <ExtendImage>
      <Model></Model>
      <ImageFiles>
        <Boot></Boot>
        <System></System>
        <Feature></Feature>
      </ImageFiles>
      <IPEFileName></IPEFileName>
      <Type></Type>
      <OverwriteLocalFile></OverwriteLocalFile>
      <DeleteIPEFile></DeleteIPEFile>
    </ExtendImage>
  </SetExtendImage>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	SetExtendImage
Table type	Multi-instance
Row name	ExtendImage

Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Model	Specifies the PEX model or the security engine model.	Index	String. Length: 1 to 63 characters.	N/A
ImageFiles	.bin image files list to set as the model startup image files.	Data structure	Members include: • Boot. • System. • Feature.	Column of Feature is optional, but both Boot and System must be included.
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specifies several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either IPEFileName or ImageFiles to speicify the startup software image files.
Type	Model startup type.	N/A	Enumeration: • 1—main. • 2—backup.	Backup images are used only when main images are not available.
OverwriteLocalFile	Whether overwrite image file when copying.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after setting it as the model startup imge file.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

Package/InstallImage

This table contains information to activate or deactivate feature image files or patch file on special node.

XML structure

```
<Package>
  <InstallImage>
    <Action></Action>
    <ImageFiles>
      <Feature></Feature>
    </ImageFiles>
    <PatchFile></PatchFile>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeviceNode>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
    </DeviceNode>
  </InstallImage>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	InstallImage
Table type	Single-instance
Row name	None
Restrictions	This table only support patch image file and feature image file, only support fileupgrade and service upgrade for feature image file. Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify which action to handle all this image files.	N/A	Enumeration: • 1—activate. • 2—deactivate.	N/A
ImageFiles	Feature image files list to handle.	Data structure	Members include: • Feature.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specify several feature image files of up to 30.
PatchFile	Specifies the file path of a .bin patch image file.	N/A	String. Length: 1 to 127 characters.	You could choose either ImageFiles or PatchFile to do the specify action.
OverwriteLocalFile	Whether overwrite image file when copying.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
DeviceNode	Specify a target node of the system.	Data structure	Members include: • Chassis. • Slot. • CPUID.	Optional column, specify a target node which to activate or deactivate all images files, if not specify, all suitable nodes will do the action.
Chassis	Chassis of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A

Package/SetIssuMPUFile

This table contains information to set issu image files for MPUs to update the system.

XML structure

```
<Package>
  <SetIssuMPUFile>
    <ImageFiles>
      <Boot></Boot>
      <System></System>
```

```
      <Feature></Feature>
      <Patch></Patch>
    </ImageFiles>
    <IPEFileName></IPEFileName>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeleteIPEFile></DeleteIPEFile>
  </SetIssuMPUFile>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	SetIssuMPUFile
Table type	Single-instance
Row name	None
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. An image file path must in the format of storage-medium:/base-filename.bin or storage-medium:/base-filename.ipe, should not include the IRF member ID or slot number information in front of the storage medium segment.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ImageFiles	.bin image file list to set as the MPUs issu image files.	Data structure	Members include: • Boot. • System. • Feature.	N/A
Boot	Specifies the file path of a .bin boot image file	N/A	String. Length: 1 to 63 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 63 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 63 characters.	This column can repeat to specify several feature image files of up to 30.
Patch	Specifies the file path of a .bin patch image file.	N/A	String. Length: 1 to 63 characters.	This column can repeat to specify several patch image files of up to 30.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 63 characters.	You could choose either ImageFiles or IPEFileName to specify issu image files for MPUs .
OverwriteLocalFile	Whether overwrite images files when copying.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompressing it.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

Package/SetIssuExtendFile

This table contains information to set issu image files for security engines or PEXs to update the system.

XML structure

```
<Package>
  <SetIssuExtendFile>
    <IssuExtendFile>
      <Model></Model>
      <ImageFiles>
        <Boot></Boot>
        <System></System>
        <Feature></Feature>
      </ImageFiles>
      <IPEFileName></IPEFileName>

    </IssuExtendFile>
  </SetIssuExtendFile>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	SetIssuExtendFile
Table type	Multi-instance
Row name	IssuExtendFile

Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Model	Specifies the PEX model or the security engine model	Index	String. Length: 1 to 63 characters.	N/A
ImageFiles	.bin image file list to set as the issu image files for security engines or PEXs.	Data structure	Members include: • Boot. • System. • Feature.	N/A
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specify several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either ImageFiles or IPEFileName to specify issu image files for security engines or PEXs.
OverwriteLocalFile	Whether overwrite images files when copying.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
`DeleteIPEFile`	Whether delete the .ipe image package file after decompressing it.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

Package/IssuUpgrade

This table contains information to update system step by step. To update the system you can following steps below: firstly make sure the "Status" and the "Action" is all "none" in the table IssuUpgrade(See Comware V7 Package NETCONF XML API Data Reference.docx); secondly specify the ISSU image files for MPUs(see table SetIssuMPUFile), additionally you can also specify ISSU image files for security engines and PEXs if you want to update these devices(see table SetIssuExtendFile); thirdly test all the image files you set, then install after test successfully, after that you can wait until the updating all done or you can roll back to cancel all the updating.

XML structure

```
<Package>
  <IssuUpgrade>
    <Action></Action>
    <Timeout></Timeout>
    <Delay></Delay>
  </IssuUpgrade>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	IssuUpgrade
Table type	Single-instance
Row name	None
Restrictions	Mostly Action should following step test->install->done, "done" can only set after the previous action have finished successfully or failure.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify step to update the system, action of test must be done before install begin.	N/A	Enumeration: • 1—none • 2—test • 3—install • 4—rollback • 5—done	Action of "none" will be simply be ignored, "test" can collect all information about which way the system will be updated, "install" will start to update the system, "rollback" will cancel all the updating and roll back to the original software versions, "done" will clear all update information and

Column name	Column description	Column type	Data type and restrictions	Remarks
				set “Action” and “Status” to “none”.
Timeout	Specify the timeout time for an ISSU operation.		Unsigned integer. Value range: 0 to 120. Unit: minute.	Setting this field to 0 disables automatic rollback. The value for this field takes effect only on one ISSU operation. If this field is not set for an ISSU operation, the automatic rollback timer set by using the **issu rollback-timer** command (45 minutes by default) is used.
Delay	Time that the system waits before starting the ISSU.		Unsigned integer. Value range: 0 to 1440. Unit: minute.	N/A

Package/AddIPE

This table contains information to decompress a .ipe image file to several .bin image files.

XML structure

```
<Package>
  <AddIPE>
    <IPEFileName></IPEFileName>
    <StorageCard></StorageCard>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeleteIPEFile></DeleteIPEFile>
  </AddIPE>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	AddIPE
Table type	Single-instance
Row name	None
Restrictions	An .ipe image file must already exist in the root directory of storage medium. Mostly an image file path is in the format of storage-medium:/base-filename.ipe, you can also include the IRF member ID or slot number information in front of the storage

	medium segment to specify the node where the .ipe image file on.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	N/A
StorageCard	Target storage medium to store the .bin image files.	N/A	String. Length: 1 to 63 characters.	You can include the IRF member ID or slot number information in front of the storage medium segment.
OverwriteLocalFile	Whether overwrite image file if Target storage medium already exist the .bin image file.	N/A	Boolean: • true • false	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompress it.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

Package/ClearBootIPEResult

This table contains information to clear the upgrade result for an IPE file upgrade.

XML structure

```
<Package>
  <ClearBootIPEResult>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
    <ClearResult/>
  </ClearBootIPEResult>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	ClearBootIPEResult

Table type	Single-instance
Row name	None
Restrictions	If the device does not support IPE file decompression upon device startup, this table should be ignored.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Specify a target node of the system.	Data structure	Members include: • Chassis. • Slot. • CPUID.	Optional column, specify a target node which to set all this image files as the startup software image files, if not specify, all suitable nodes will be set.
Chassis	Chassis of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned short. Value range: 0 to 65535.	N/A
ClearResult	Clear the upgrade result	N/A	N/A	This column must be empty.

Package/PublishEvent

This table publish upgrade event to bras-vm/fwd-vm.

XML structure

```
<Package>
  <PublishEvent>
    <Event></Event>
    <Sequence></Sequence>
    <VmType></VmType>
    <Slot></Slot>
  </PublishEvent>
</Package>
```

Table description

Item	Description
Feature name	Package

Table name	PublishEvent
Table type	Single-instance
Row name	None
Restrictions	If the device does not support IPE file decompression upon device startup, this table should be ignored.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Event	Upgrade event.	N/A	Enumeration: • 0—can upgrade • 1—cancel upgrade • 2—can patch • 3—cancel patch • 4—before patch • 5—after patch • 6—before switchover • 7—after upgrade	N/A
Sequence	Msg sequence	N/A	Unsigned int.	N/A
VmType	Vm type	N/A	Unsigned int.	N/A
Slot	Vm Slot	N/A	Unsigned short. Value range: 0 to 65535.	This column must be empty.

ImageFiles	List of issu image files for security engines or PEXs.	Data structure	Members include: • FileName.	N/A
FileName	Name of a .bin image file.	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no image files have set yet, or can repeat of up to 32.

Package/IssuUpgrade

This table contains information of the ISSU operating status. After starting to update the system, you can obtain ISSU operating status from this table, you can also get detain information of the upgrading status of each node from the table IssuOpResult.

XML structure

```
<Package>
  <IssuUpgrade>
    <Action></Action>
    <Timeout></Timeout>
    <Status></Status>
    <FailedReason></FailedReason>
    <Delay></Delay>
  </IssuUpgrade>
</Package>
```

Table description

Item	Description
Feature name	Package
Table name	IssuUpgrade
Table type	Single-instance

Row name	None
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify step to update the system, action of test must be done before install begin.	N/A	Enumeration: • 1—none • 2—test • 3—install • 4—rollback	The Action “none” indicate the system has no did any ISSU operation, “test” means the system is testing all ISSU image files, “install” indicate the system is updating, “rollback” means the system is trying to roll back to the original software versions.
Timeout	Remaining time of the rollback timer for an ISSU operation.	N/A	Unsigned integer. Value range: 0 to 120.	If no ISSU operation is in progress, this field displays the value set by using the **issu rollback-timer** command.
Status	Upgrading status of the system.	N/A	Enumeration: • 1—none, system have not started to update. • 2—failed, Action is failure. • 3—inProgress, Action is in progress. • 4—success, Action have successfully done. • 5—rollbacking, roll back is in process. • 6—rollbacked, successfully roll back to the original software versions.	N/A
FailedReason	Failed reason of the ISSU operation.	N/A	String. Length: 0 to 6144 characters.	Usefully only in failure.For relevant information, see the XSD document of your product
Delay	Time that the system waits before starting the ISSU.	N/A	Unsigned integer. Value range: 0 to 1440. Unit: minute.	N/A

Package/IPEInfo

This table contains information of all .ipe image package files in the system.

XML structure

```
<Package>
  <IPEInfo>
    <InfoList>
      <IPEFileName></IPEFileName>
        <FileName></FileName>
      <Model></Model>
      <Type></Type>
      <Service></Service>

Contents

Package 2
Device/boot-loader 2

Package

Device/boot-loader

Message	Explanation
%s isn't the ipe file for the device. %s不适用于本设备。	
File corrupted. 文件损坏。	
The file doesn't exist. 文件不存在。	
Image file %s is incompatible with hardware. %s与硬件不兼容。	
Not enough storage space. 磁盘空间不足。	
One or more feature images are not compliant with the system image. 特性包与system包不兼容。	
This system image is not compliant with the boot image. system包与boot包不兼容。	
The patch image is not compliant with the image to be patched.	
Failed to decompress AP.ipe. 解压AP.ipe失败。	对于AC设备，在配置主控备板下次启动软件时， 用包含AP版本的IPE，出现AP解压失败时，提示“解压AP失败”。

    <Sequence></Sequence>
    <Result></Result>
  </CPUpgradeSyncEventResult>
</SyncCPUpgradeEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2020-07-21T09:10:51</eventTime>
  <SyncCPUpgradeEvent xmlns="http://www.h3c.com/netconf/event:1.0/Package:1.0">
    <CPUpgradeSyncEventResult>
      <Chassis>0</Chassis>
      <Slot><1/Slot>
      <Event>0</Event>
       <Sequence>1</Sequence>
      <Result>0</Result>
    </CPUpgradeSyncEventResult>
  </SyncCPUpgradeEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No	N/A
Event	Sync event type.	Enumeration: • 0—can upgrade • 1—cancel upgrade • 2—can patch • 3—cancel patch • 4—before patch • 5—after patch • 6—before switchover • 7—after upgrade	No	N/A
Sequence	Sequence of event	Unsigned integer. Value range: 0 to 65535.	No	N/A
Result	Event result	Unsigned integer. 0:success	No	N/A

CPUpgradeResultEvent event

This event is used to report cp upgrade result event information.

XML structure for event subscription

```
<CPUpgradeResultEvent>
  <CPUpgradeResultEvent>
    <Chassis></Chassis>
    <Slot></Slot>
    <Result></Result>
  </CPUpgradeResultEvent>
</CPUpgradeResultEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Package</stream>
    <filter type="subtree">
      <CPUpgradeResultEvent xmlns="http://www.h3c.com/netconf/event:1.0/Package:1.0">
        <CPUpgradeResultEvent>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <Result>0</Result>
        </CPUpgradeResultEvent>
      </CPUpgradeResultEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Feature name	PacketTrace
Table name	Profiles
Table type	Multi-instance table
Row name	Packet
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Profile name	Index	String. Length: 1 to 31 characters.	Different types of profiles cannot have the same name.
ProfileType	Profile type	Column	Enumeration: • **1**—RAW. • **2**—TCP. • **3**—UDP. • **4**—ICMP.	N/A
RawPacket	Configuration table of the raw packet content	Subtable	N/A	N/A
L2	Configuration table for the Layer 2 settings of traced packets	Subtable	N/A	N/A
L3	Configuration table for the Layer 3 settings of traced packets	Subtable	N/A	N/A
Port	Configuration table for the port settings of traced packets	Subtable	N/A	N/A
ICMP	Configuration table for the ICMP settings of traced packets	Subtable	N/A	N/A
Payload	Configuration table of the payload content	Subtable	• N/A	N/A

PacketTrace/Profiles/RawPacket

This table contains the raw packet content of a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	RawPacket
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HexStream	Raw packet content	N/A	String. Length: 128 to 3036 characters.	The string must contain an even number of hexadecimal characters.

PacketTrace/Profiles/L2

This table contains Layer 2 settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	L2
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceMac	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DestinationMac	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	VLAN ID or service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
DOT1P	802.1p priority value for the VLAN ID or service VLAN ID	N/A	Unsigned integer. Value range: 0 to 7. Default:0	N/A
CVLANID	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CDOT1P	802.1p priority value for the customer VLAN ID	N/A	Unsigned integer. Value range: 0 to 7. Default:0	N/A

PacketTrace/Profiles/L3

This table contains Layer 3 settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	L3
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIP	Source IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DestinationIP	Destination IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DSCP	DiffServ CodePoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A
TTL	Packet TTL	N/A	Unsigned integer. Value range: 1 to 255. Default: 255.	N/A

PacketTrace/Profiles/Port

This table contains the port settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	Port
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
SourcePort	Source port number	N/A	Unsigned integer. Value range: 0 to 65535.
DestinationPort	Destination port number	N/A	Unsigned integer. Value range: 0 to 65535.

PacketTrace/Profiles/ICMP

This table contains the ICMP settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	ICMP
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions
ICMPType	ICMP type	N/A	Unsigned integer. Value range: 0 to 255.
ICMPCode	ICMP code	N/A	Unsigned integer. Value range: 0 to 255.

PacketTrace/Profiles/Payload

This table contains the payload settings of traced packets for a traced packet profile..

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	Payload
Table type	Single -instance table
Row name	N/A

Item	Description
Restrictions	None
Support for row creation and deletion	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HexStream	Payload content	Column	String. Length: • **TCP**—20 to 2928 characters. • **UDP**—44 to 2952 characters. • **ICMP**—52 to 2960 characters.	The payload string must contain an even number of hexadecimal characters.

Payload	Packet payload	Column	String. Length: • **TCP**—20 to 2928 characters. • **UDP**—44 to 2952 characters. • **ICMP**—52 to 2960 characters.	The payload string must contain an even number of hexadecimal characters.

PacketTrace/Profiles/RawPacket

This table contains the raw packet content of a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	RawPacket
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HexStream	Raw packet content	N/A	String. Length: 128 to 3036 characters.	The string must contain an even number of hexadecimal characters.

PacketTrace/Profiles/L2

This table contains Layer 2 settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	L2
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceMac	Source MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DestinationMac	Destination MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
VLANID	VLAN ID or service VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
DOT1P	802.1p priority value for the VLAN ID or Service VLAN ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A
CVLANID	Customer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CDOT1P	802.1p priority value for the customer VLAN ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A

PacketTrace/Profiles/L3

This table contains Layer 3 settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	L3
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIP	Source IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationIP	Destination IP address	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DSCP	DiffServ CodePoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
TTL	Packet TTL	N/A	Unsigned integer. Value range: 1 to 255.	N/A

PacketTrace/Profiles/Port

This table contains the port settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	Port
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SourcePort	Source port number	N/A	Unsigned integer. Value range: 0 to 65535.
DestinationPort	Destination port number	N/A	Unsigned integer. Value range: 0 to 65535.

PacketTrace/Profiles/ICMP

This table contains the ICMP settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	ICMP
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ICMPType	ICMP type	N/A	Unsigned integer. Value range: 0 to 255.
ICMPCode	ICMP code	N/A	Unsigned integer. Value range: 0 to 255.

PacketTrace/Profiles/Payload

This table contains the payload settings of traced packets for a traced packet profile.

XML structure

Please refer to the XML structure of PacketTrace/Profiles.

Table description

Item	Description
Feature name	PacketTrace
Table name	Payload
Table type	Single -instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HexStream	Payload content	Column	String. Length: • **TCP**—20 to 2928	The payload string must contain an even number of hexadecimal

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters. • **UDP**—44 to 2952 characters. • **ICMP**—52 to 2960 characters.	characters.

PacketTrace/HistoryResults

This table contains history packet trace results.

XML structure

```
<PacketTrace>
  <HistoryResults>
    <HistoryResult>
      <ProfileName></ProfileName>
      <Interface></Interface>
      <Results>

PacketTrace/Profiles

Message	Explanation
Maximum number of profiles already reached. “创建的模板数已超过最大值。”	The number of traced packet profiles has reached the upper limit. 配置的模板数量超过最大值了。
The profile doesn’t exist. “模板不存在”	The obtained profile name does not exist. 获取的模板名不存在
The string must contain an even number of hex characters. 该字符串必须包含偶数个十六进制字符	The string must contain an even number of hexadecimal characters. 字符串必须包含偶数个十六进制字符
The profile name has been used. 该模板名已经被使用	The profile name must be unique. PacketTrace模板名必须唯一，即便是不同类型的PacketTrace模板，名称也不能相同
Configuration not supported of type raw RAW不支持此配置	Configuration not supported of type raw 此配置不支持RAW类型
The profile name cannot contain "-". 模板名不能包含“-”	The specified profile name cannot contain "-". 指定的模板名不能包含“-”

PacketTrace/HistoryResults

Message	Explanation
The profile doesn’t exist. “模板不存在”	The specified profile name does not exist. 指定的模板名不存在

PacketTrace/ExecuteProfile

Message	Explanation
The profile doesn’t exist. “模板不存在”	The specified profile name does not exist. 指定的模板名不存在
The profile lacks required parameters to construct traced packets. “配置文件缺少必需的参数”	The specified profile lacks required parameters to construct traced packets. 指定的模板缺失必要的配置参数
The current state of the specified interface has been down. 指定的接口当前状态已关闭	The current state of the specified interface has been down. 指定的接口当前状态已关闭

PacketTrace/Profiles/L2

Message	Explanation
The source and destination MAC addresses must	The source and destination MAC addresses must be configured

be configured together. “配置此命令时src-mac和dst-mac必须同时下发”	together. 创建表时源地址和目的地址必须绑定下发

PacketTrace/Profiles/L3

Message	Explanation
The source and destination IP addresses must be configured together. “配置源ip地址和目的ip地址必须同时下发”	The source and destination IP addresses must be configured together. 源ip地址和目的ip地址必须绑定下发

PacketTrace/Profiles/Port

Message	Explanation
The source and destination ports must be configured together. “配置端口和目的端口必须同时下发”	The source and destination ports must be configured together. 源端口和目的端口必须绑定下发

PacketTrace/Profiles/ICMP

Message	Explanation
The ICMP type and ICMP code must be configured together. “配置Icmp消息类型和消息码必须同时下发”	The ICMP type and ICMP code must be configured together. Icmp消息类型和消息码必须绑定下发

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalEnableState	Whether to enable password control for device management users.	N/A	Boolean: • true. • false.	In non-FIPS mode, the default is false. In FIPS mode, the default is true.
GlobalNetworkEnableState	Whether to enable password control for network access users.	N/A	Boolean: • true. • false.	The default is false, no matter in FIPS mode or in non-FIPS mode.
Length	Minimum password length restriction policy.	Data structure	Members include: • State. • MinLength.	N/A
State	Whether to enable the minimum password length restriction feature.	N/A	Boolean: • true. • false.	Default: true.
MinLength	Minimum password length.	N/A	Unsigned integer. • In non-FIPS mode, a password is a string of 4 to 32 characters. • In FIPS mode, a password is a string of 15 to 32 characters.	In non-FIPS mode, the default value is 10. In FIPS mode, the default value is 15.
Composition	Password composition policy.	Data structure	Members include: • State.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• TypeNumber. • PerTypeLen.	
State	Whether to enable the password composition restriction feature.	N/A	Boolean: • true. • false.	Default: true.
TypeNumber	Minimum number of character types that a password must contain.	N/A	Unsigned integer. • In non-FIPS mode, the value range is 1 to 4. • In FIPS mode, the value must be 4.	In non-FIPS mode, the default value is 2. In FIPS mode, the default value is 4.
PerTypeLen	Minimum number of characters from each character type in a password.	N/A	Unsigned integer. • In non-FIPS mode, the value range is 1 to 63. • In FIPS mode, the value range is 1 to 15.	Default: 1. This column must be set together with the TypeNumber column.
Aging	Password expiration policy.	Data structure	Members include: • State. • AgingTime.	It applies to device management users only.
State	Whether a password expires.	N/A	Boolean: • true. • false.	Default: true.
AgingTime	Password expiration time.	N/A	Unsigned integer. Value range: 1 to 365, in days.	Default: 90 days.
History	Password history record policy.	Data structure	Members include: • State. • MaxHistoryNumber.	N/A
State	Whether the device records previous passwords.	N/A	Boolean: • true. • false.	N/A
MaxHistoryNumber	Maximum number of history password records for each user.	N/A	Unsigned integer. Value range: 2 to 15.	Default: 4.
CheckSameChar	Whether to refuse a password that contains three or more consecutive identical characters.	N/A	Boolean: • true. • false.	Default: false.
CheckUserName	Whether to refuse a password that	N/A	Boolean: • true.	In non-FIPS mode, the default value is true. In FIPS mode, the

Column name	Column description	Column type	Data type and restrictions	Remarks
	contains the username or the reverse of the username.		• false.	default value is false.
AlertTime	Number of days before a user password expires during which the user is notified of the pending password expiration.	N/A	Unsigned integer. Value range: 1 to 30, in days.	Default: 7 days. It applies to device management users only.
IdleTime	Maximum account idle time.	N/A	Unsigned integer. Value range: 0 to 365, in days. The value 0 indicates that there is no restriction for the account idle time.	Default: 90 days. It applies to device management users only.
UpdateInterval	Minimum password update interval.	N/A	Unsigned integer. Value range: 0 to 168, in hours.	Default: 24 hours.
Expired	Maximum number of days and maximum number of times that a user can log in after the password expires.	Data structure	Members include: • DelayTime. • TryTimes.	It applies to device management users only.
DelayTime	Maximum number of days that a user can log in after the password expires.	N/A	Unsigned integer. Value range: 1 to 90, in days. This column must be set together with the TryTimes column.	Default: 30 days.
TryTimes	Maximum number of times that a user can log in after the password expires.	N/A	Unsigned integer. Value range: 0 to 10. The value 0 indicates that a user can't log in after the password expires. This column must be set together with the DelayTime column.	Default: 3.
Attempt	Login attempt limit information.	Data structure	Members include: • FailTimes. • Action. • LockTime.	It applies to device management users only.
FailTimes	Maximum number of consecutive login failures.	N/A	Unsigned integer. Value range: 2 to 10.	Default: 3.
Action	An action to be taken for the	N/A	Enumeration:	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	user who fails to log in after making the maximum number of attempts.		• **0**—lock. • **1**—lock-time. • **2**—unlock. This column must be set together with the FailTimes column. If the value is 1, the LockTime column must also be set.	
LockTime	Time period for disabling a user account.	N/A	Unsigned integer. Value range: 1 to 360, in minutes. This column takes effect only when the value of the Action column is 1 and the FailTimes column is set.	Default: 1 minute.
LockTimeMode	Mode of locking time	N/A	Enumeration: • **0**—fixed mode • **1**—addition mode. This column must be set together with the LockTime column. If the value is 1, the MaxLockTime column must also be set.	
MaxLockTime	Maximum lock time	N/A	Unsigned integer. Value range: 1 to 360, in minutes.	
WeakPwdForceChange	Whether to force the management user to change the weak password when the management user logs in.	N/A	Boolean: • true. • false.	In non-FIPS mode, the default value is false. In FIPS mode, the defa ultvalue is true.
BlackListUserInfo	Attributes of user credentials to be added to the password blacklist	N/A	Enumeration: • **0**—UserName and IP address. • **1**—UserName.	Default: 0
BlacklistLimit	Maximum number of the blacklists entries for each user.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default: 32. The default value supports customization.

PasswordControl/UserGroups

Password control configuration information table for user groups.

XML structure

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalEnableState	Whether to enable password control for device management users.	N/A	Boolean: • true. • false.	N/A
GlobalNetworkEnableState	Whether to enable password control for network access users.	N/A	Boolean: • true. • false.	The default is false, no matter in FIPS mode or in non-FIPS mode.
Length	Minimum password length policy.	Data structure	Members include: • State. • MinLength.	N/A
State	Whether to enable the minimum password length restriction feature.	N/A	Boolean: • true. • false.	N/A
MinLength	Minimum password length.	N/A	Unsigned integer. • In non-FIPS mode, a password is a string of 4 to 32 characters. • In FIPS mode, a password is a string of 15 to 32 characters.	N/A
Composition	Password composition policy.	Data structure	Members include: • State. • TypeNumber. • PerTypeLen.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Whether to enable the password composition restriction feature.	N/A	Boolean: • true. • false.	N/A
TypeNumber	Minimum number of character types that a password must contain.	N/A	Unsigned integer. • In non-FIPS mode, the value range is 1 to 4. • In FIPS mode, the value must be 4.	N/A
PerTypeLen	Minimum number of characters from each character type in a password.	N/A	Unsigned integer. • In non-FIPS mode, the value range is 1 to 63. • In FIPS mode, the value range is 1 to 15.	N/A
Aging	Password expiration policy.	Data structure	Members include: • State. • AgingTime.	It applies to device management users only.
State	Whether a password expires.	N/A	Boolean: • true. • false.	N/A
AgingTime	Password expiration time.	N/A	Unsigned integer. Value range: 1 to 365, in days.	N/A
History	Password history record policy.	Data structure	Members include: • State. • MaxHistoryNumber.	N/A
State	Whether the device records previous passwords.	N/A	Boolean: • true. • false.	N/A
MaxHistoryNumber	Maximum number of history password records for each user.	N/A	Unsigned integer. Value range: 2 to 15.	N/A
CheckSameChar	Whether to refuse a password that contains three or more consecutive identical characters.	N/A	Boolean: • true. • false.	N/A
CheckUserName	Whether to refuse a password that contains the username or the reverse of the	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	username.			
AlertTime	Number of days before a user password expires during which the user is notified of the pending password expiration.	N/A	Unsigned integer. Value range: 1 to 30, in days.	It applies to device management users only.
IdleTime	Maximum account idle time.	N/A	Unsigned integer. Value range: 0 to 365, in days. The value 0 indicates that there is no restriction for the account idle time.	It applies to device management users only.
UpdateInterval	Minimum password update interval.	N/A	Unsigned integer. Value range: 0 to 168, in hours.	N/A
Expired	Maximum number of days and maximum number of times that a user can log in after the password expires.	Data structure	Members include: • DelayTime. • TryTimes.	It applies to device management users only.
DelayTime	Maximum number of days that a user can log in after the password expires.	N/A	Unsigned integer. Value range: 1 to 90, in days. This column must be set together with the TryTimes column.	N/A
TryTimes	Maximum number of times that a user can log in after the password expires.	N/A	Unsigned integer. Value range: 0 to 10. The value 0 indicates that a user can't log in after the password expires. This column must be set together with the DelayTime column.	N/A
Attempt	Login attempt limit information.	Data structure	Members include: • FailTimes. • Action. • LockTime.	It applies to device management users only.
FailTimes	Maximum number of consecutive login failures.	N/A	Unsigned integer. Value range: 2 to 10.	N/A
Action	An action to be taken for the user who fails to log in after making the	N/A	Enumeration: • **0**—lock. • **1**—lock-time. • **2**—unlock.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	maximum number of attempts.		This column must be set together with the FailTimes column. If the value is 1, the LockTime column must also be set.	
LockTime	Time period for disabling a user account.	N/A	Unsigned integer. Value range: 1 to 360, in minutes. This column takes effect only when the value of the Action column is 1 and the FailTimes column is set.	N/A
LockTimeMode	Mode of locking time	N/A	Enumeration: • **0**—fixed mode • **1**—addition mode. This column must be set together with the LockTime column. If the value is 1, the MaxLockTime column must also be set.	
MaxLockTime	Maximum lock time	N/A	Unsigned integer. Value range: 1 to 360, in minutes.	
WeakPwdForceChange	Whether to force the management user to change the weak password when the management user logs in.	N/A	Boolean: • true. • false.	In non-FIPS mode, the default value is false.In FIPS mode, the default value is true.
BlackListUserInfo	Attributes of user credentials to be added to the password blacklist	N/A	Enumeration: • **0**—UserName and IP address. • **1**—UserName.	N/A
Blacklist-Limit	Maximum number of the blacklists entries for each user.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default: 32. The default value supports customization.

PasswordControl/UserGroups

Password control configuration information table for user groups.

XML structure

Row name	PolicyNode
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	A smaller number has a higher priority. The value range for the node-number argument depends on the device model.
Mode	Match mode.	N/A	Enumeration: • **1**—Permit (default). • **2**—Deny.	N/A
Description	Description of the policy node	N/A	String, case sensitive. Length: 1 to 127 characters.	N/A
ACLNumber	ACL match criterion by number.	N/A	Unsigned integer. Value range: 2000 to 3999.	To delete an ACL match criterion, you must configure the ACLNumber together with the ACLName column.
ACLName	ACL match criterion by name.	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter *a* to *z* or *A* to *Z*. The ACL name cannot be **all** in any combination of upper- and lower-case letters. To delete an ACL match criterion, you

Column name	Column description	Column type	Data type and restrictions	Remarks
				must configure the ACLName together with the ACLNumber column.
QoSLocalID	QoSLocalID	N/A	Unsigned integer. Value range: 1 to 4095 .	N/A
QoSLocalIDMode	Specify QPPB mode	N/A	Enumeration: • **0**—Normal (default). • **1**—QPPB	To delete QoSLocalIDMode column, you must configure the QosLocalID together with the QoSLocalIDMode column.
MatchVxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
MatchPacketLenMin	Minimum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	It must be configured together with the MatchPacketLenMax column. The packet length range includes boundary values. Support for this function depends on the device model.
MatchPacketLenMax	Maximum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	It must be configured together with the MatchPacketLenMin column. The value of MatchPacketLenMax must be no less than the value of MatchPacketLenMin. Support for this function depends on the device model.
MatchSourceIP	Source IP address match criterion	Data structure	Members include: • MatchSourceAddrVrfIndex. • MatchSourceAddress.	Support for this function depends on the device model. To delete a source IP address match criterion, you must configure the MatchSourceIP together with the MatchSourceAddrInterface column.
MatchSourceAddrVrfIndex	Index of the VPN instance.	N/A	Unsigned integer.	Some versions support VPN instance name. For relevant information, see the

Column name	Column description	Column type	Data type and restrictions	Remarks
				XSD document of your product . Support for this function depends on the device model. The value of 0 specifies the public network.
MatchSourceAddress	Source IP address	N/A	String, case insensitive. Length: 1 to 45 characters.	Support for this function depends on the device model.
MatchSourceAddrInterface	Specify an interface	N/A	Unsigned integer.	Support for this function depends on the device model. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*. To delete a source IP address match criterion, you must configure the MatchSourceAddrInterface together with the MatchSourceIP column.
ApplyPrecedence	Sets an IP precedence for matching packets.	N/A	Enumeration: • **0**—Routine. • **1**—Priority. • **2**—Immediate. • **3**—Flash. • **4**—Flash-override. • **5**—Critical. • **6**—Internet. • **7**—Network.	Support for this function depends on the device model.
ApplyIPDF	Sets the Don't Fragment (DF) bit in the IP header of matching packets.	N/A	Enumeration: • **0**—Allows packet fragmentation. • **1**—Prohibits packet fragmentation.	Support for this function depends on the device model.
ApplyRemarkVPN	Remarks the VPN instance for packets	N/A	Boolean: **true** **false** (default).	This function takes effects only when apply access-vpn is configured. Support for this

Column name	Column description	Column type	Data type and restrictions	Remarks
				function depends on the device model.
ApplyContinue	Compares packets with the next node upon failure on the current node.	N/A	Boolean: • **true** • **false** (default).	This function takes effect only when the match mode of the node is permit. Support for this function depends on the device model.
ApplyLoadShareNexthop	Apply load sharing mode to multiple next hops.	N/A	Boolean: • **true** • **false** (default).	Support for this function depends on the device model.
ApplyLoadShareDefNexthop	Apply load sharing mode to multiple default next hops.	N/A	Boolean: • **true** • **false** (default).	Support for this function depends on the device model.
ApplyLoadShareInterface	Apply load sharing mode to multiple output interfaces.	N/A	Boolean: • **true** • **false** (default).	Support for this function depends on the device model.
ApplyLoadShareDefInterface	Apply load sharing mode to multiple default output interfaces.	N/A	Boolean: • **true** • **false** (default).	Support for this function depends on the device model.
ApplyLoadShareSRv6Policy	Apply load sharing mode to multiple SRv6 Policy.	N/A	Boolean: • **true** • **false (default).**	Support for this function depends on the device model.
ApplyLoadShareDefSRv6Policy	Apply load sharing mode to multiple default SRv6 Policy.	N/A	Boolean: • **true** • **false (default).**	Support for this function depends on the device model.
ApplyStatistics	Whether PBR statistics is enabled	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	Support for this function depends on the device model.
ACLVersion	ACL type.	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6. • **4**—User-defined.	Support for this function depends on the device model.

PBR/PBRIfPolicy

This table contains interface PBR information.

XML structure

```
<PBR>
  <PBRIfPolicy>
```

```
    <IfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <ShareMode></ShareMode>
    </IfPolicy>
  </PBRIfPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRIfPolicy
Table type	Multi-instance table
Row name	IfPolicy
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist. The delete and remove operations do not support this column.
ShareMode	Whether or not to apply the policy in resource sharing mode.	N/A	Boolean: • **true** • **false** (default).	In this mode, all interfaces on an interface card with the same policy applied share one hardware resource. Support for this function

Column name	Column description	Column type	Data type and restrictions	Remarks
				depends on the device model. The delete and remove operations do not support this column.

PBR/PBRApplyNexthop

This table contains PBR next hop information.

XML structure

```
<PBR>
  <PBRApplyNexthop>
    <ApplyNexthop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <VrfIndex></VrfIndex>
      <IpAddress></IpAddress>
      <TrackID></TrackID>
      <NexthopDirect></NexthopDirect>
      <PathID></PathID>
      <PathIndex></PathIndex>
    </ApplyNexthop>
  </PBRApplyNexthop>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyNexthop
Table type	Multi-instance table
Row name	ApplyNexthop
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: • **0**—Next hop. • **1**—Default next hop. • **2**—Mirroring next hop.	Mirroring next hop not support NexthopDirect column.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network. The value of 65535 specifies the VPN instance where the inbound interface belongs. Support for setting 65535 depends on the device model.
IpAddress	IP address of the next hop.	Index	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.
TrackID	Track entry number	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.
NexthopDirect	Specifies whether the next hop must be directly connected.	N/A	Boolean: • **true** • **false** (default).	N/A
PathID	Service chain path ID	N/A	Unsigned integer. • Value range: 1 to 16777215.	N/A
PathIndex	Service chain path index	N/A	Unsigned integer. • Value range: 1 to 255.	This column must be configured together with the **PathID** column.

PBR/PBRApplyOutInterface

This table contains PBR output interface information.

XML structure

```
<PBR>
  <PBRApplyOutInterface>
    <ApplyOutInterface>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <IfIndex></IfIndex>
      <TrackID></TrackID>
    </ApplyOutInterface>
  </PBRApplyOutInterface>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyOutInterface
Table type	Multi-instance table
Row name	ApplyOutInterface
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Output interface mode.	Index	Enumeration: • **0**—Output interface. • **1**—Default output interface.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The output interface must be P2P type. Using a non-P2P output interface can result in forwarding failures when the interface has multiple next hops. Non-P2P interfaces include broadcast and NBMA interfaces such as Ethernet and virtual-template interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No track entry number as default.

PBR/PBRApplyAccessVPN

This table contains PBR access VPN instance information.

XML structure

```
<PBR>
  <PBRApplyAccessVPN>
    <ApplyAccessVPN>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
    </ApplyAccessVPN>
  </PBRApplyAccessVPN>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyAccessVPN

Row name	ApplyAccessVPN
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product.

PBR/PBRLocalPolicy

This table contains local PBR information.

XML structure

```
<PBR>
  <PBRLocalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
    <DualStackPolicyName></DualStackPolicyName>
  </PBRLocalPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRLocalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
DualStackPolicyName	Name of the policy used by dual-stack local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

PBR/PBRApplicationGroup

This table contains PBR application group information.

XML structure

```
<PBR>
  <PBRApplicationGroup>
    <ApplicationGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <AppGroupName></AppGroupName>
    </ApplicationGroup>
  </PBRApplicationGroup>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplicationGroup
Table type	Multi-instance table
Row name	ApplicationGroup
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	IPv6 is not supported.
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
AppGroupName	Application group name.	Index	String, case insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The name cannot be **invalid** or **other** in any combination of upper- and lower-case letters.

PBR/PBRObjectGroup

This table contains PBR object group information.

XML structure

```
<PBR>
  <PBRObjectGroup>
    <ObjectGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <ObjectGroupName></ObjectGroupName>
    </ObjectGroup>
  </PBRObjectGroup>
```

```
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRObjectGroup
Table type	Multi-instance table
Row name	ObjectGroup
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	IPv6 is not supported.
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
ObjectGroupName	Object group name.	Index	String, case insensitive. Length: 1 to 63 characters.	The specified object group must be a service object group type.

PBR/PBREgressIfPolicy

This table contains egress interface PBR information.

XML structure

```
<PBR>
  <PBREgressIfPolicy>
    <EgressIfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </EgressIfPolicy>
  </PBREgressIfPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBREgressIfPolicy
Table type	Multi-instance table
Row name	EgressIfPolicy
Restrictions	This table supports only VXLAN mode tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	IPv6 is not supported.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist. The delete and remove operations do not support this column.

PBR/PBRMatchServiceChain

This table contains PBR object match service chain information.

XML structure

```
<PBR>
  <PBRMatchServiceChain>
    <MatchServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <PathID></PathID>
```

```
      <PathIndex></PathIndex>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
VlanInterfaceNumberList	List of VLAN interface numbers.	N/A	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<VlanInterfaceNumberList h3c:incremental="true">”. If the value is true, the VLAN interface number list will be added or

Column name	Column description	Column type	Data type and restrictions	Remarks
			interface numbers of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	removed. Otherwise, it is the final result.

PBR/PBRGlobalPolicy

This table contains global PBR information.

XML structure

```
<PBR>
  <PBRGlobalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
    <DualStackPolicyName></DualStackPolicyName>
  </PBRGlobalPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRGlobalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
DualStackPolicyName	Name of the policy used by dual-stack global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

PBR/PBRApplyMirrorDestinationIp

This table contains PBR mirroring destination IP information.

XML structure

```
<PBR>
  <PBRApplyMirrorDestinationIp>
    <ApplyMirrorDestinationIp>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
      <DestIpAddress></DestIpAddress>
      <SourceIpAddress></SourceIpAddress>

    </ApplyMirrorDestinationIp>
  </PBRApplyMirrorDestinationIp>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyMirrorDestinationIp
Table type	Multi-instance table
Row name	ApplyMirrorDestinationIp
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	IPv6 is not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Dual-stack.	
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network.
DestIpAddress	IP address of the destination IP address.	Index	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
SourceIpAddress	IP address of the source IP address.	N/A	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
Dscp	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	The default DSCP value is 63.
EncapType	Encapsulation type	N/A	Enumeration: • **0**—GRE. • **1**—VXLAN.	VXLAN is not supported.

PBR/PBRApplySRv6Policy

This table contains PBR SRv6 policy information.

XML structure

```
<PBR>
  <PBRApplySRv6Policy>
    <ApplySRv6Policy>
      <AddressType></AddressType>
      <PolicyName></PolicyName>

Table description

Item	Description
Feature name	PBR
Table name	PBRApplySRPolicy
Table type	Multi-instance table
Row name	ApplySRPolicy
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	PBR Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	PBR Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	SR policy mode	Index	Enumeration: • **0**—SR-policy • **1**—Default-SR-policy.	N/A
Color	Color associated with the SR	Index	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy		4294967295	
Endpoint	IPv4 address of the SR policy endpoint	Index	IPv4: String, dotted decimal notation.	N/A

PBR/PBRApplySRv6BE

This table contains PBR SRv6 BE information.

XML structure

Table description

Item	Description
Feature name	PBR
Table name	PBRPolicyNode
Table type	Multi-instance table
Row name	PolicyNode
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2—**Dual-stack.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	A smaller number has a higher priority. The value range for the node-number argument depends on the device model.
Mode	Match mode.	N/A	Enumeration: • **1**—Permit. • **2**—Deny.	N/A
Description	Description of the policy node	N/A	String, case sensitive. Length: 1 to 127 characters.	N/A
ACLNumber	ACL match criterion by number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
ACLName	ACL match criterion by name.	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter *a* to *z* or *A* to *Z*. The ACL name cannot be **all** in any combination of upper- and lower-case letters.
QoSLocalID	QoSLocalID	N/A	Unsigned integer. Value range: 1 to 4095 .	N/A
QoSLocalIDMode	Specify QPPB mode	N/A	Enumeration: • **0**—Normal (default). • **1**—QPPB	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchVxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
MatchPacketLenMin	Minimum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	The packet length range includes boundary values. Support for this function depends on the device model.
MatchPacketLenMax	Maximum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	The value of MatchPacketLenMax must be no less than the value of MatchPacketLenMin. Support for this function depends on the device model.
MatchSourceIP	Source IP address match criterion	Data structure	Members include: • MatchSourceAddrVrfIndex. • MatchSourceAddress.	Support for this function depends on the device model.
MatchSourceAddrVrfIndex	Index of the VPN instance.	N/A	Unsigned integer.	Some versions support VPN instance name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network. Support for this function depends on the device model.
MatchSourceAddress	Source IP address match criterion	N/A	String, case insensitive. Length: 1 to 45 characters.	Support for this function depends on the device model.
MatchSourceAddrInterface	Specify an interface	N/A	Unsigned integer.	Support for this function depends on the device model. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
ApplyPrecedence	Sets an IP precedence for matching packets.	N/A	Enumeration: • **0**—Routine. • **1**—Priority. • **2**—Immediate.	Support for this function depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—Flash. • **4**—Flash-override. • **5**—Critical. • **6**—Internet. • **7**—Network.	
ApplyIPDF	Sets the Don't Fragment (DF) bit in the IP header of matching packets.	N/A	Enumeration: • **0**—Allows packet fragmentation. • **1**—Prohibits packet fragmentation. • **2**—DF bit is not set.	Support for this function depends on the device model.
ApplyRemarkVPN	Remarks the VPN instance for packets	N/A	Boolean: **true**—Apply. **false**—Not apply.	This function takes effects only when apply access-vpn is configured. Support for this function depends on the device model.
ApplyContinue	Compares packets with the next node upon failure on the current node.	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	This function takes effect only when the match mode of the node is permit. Support for this function depends on the device model.
ApplyLoadShareNexthop	Apply load sharing mode to multiple next hops.	N/A	Boolean: • **true—**Apply. • **false—**Not apply.	Support for this function depends on the device model.
ApplyLoadShareDefNexthop	Apply load sharing mode to multiple default next hops.	N/A	Boolean: • **true—**Apply. • **false**—Not apply.	Support for this function depends on the device model.
ApplyLoadShareInterface	Apply load sharing mode to multiple output interfaces.	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	Support for this function depends on the device model.
ApplyLoadShareDefInterface	Apply load sharing mode to multiple default output interfaces.	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	Support for this function depends on the device model.
ApplyLoadShareSRv6Policy	Apply load sharing mode to multiple SRv6 Policy.	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	Support for this function depends on the device model.
ApplyLoadShareDefSRv6Policy	Apply load sharing mode to multiple default SRv6 Policy.	N/A	Boolean: • **true**—Apply. • **false**—Not apply**.**	Support for this function depends on the device model.
ApplyStatistics	Whether PBR statistics is enabled	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	Support for this function depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLVersion	ACL type.	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6. • **4**—User-defined.	Support for this function depends on the device model.

PBR/PBRIfPolicy

This table contains interface PBR information.

XML structure

```
<PBR>
  <PBRIfPolicy>
    <IfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PolicyName></PolicyName>
      <ShareMode></ShareMode>
    </IfPolicy>
  </PBRIfPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRIfPolicy
Table type	Multi-instance table
Row name	IfPolicy
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.	N/A
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
ShareMode	Whether or not to apply the policy in resource sharing mode.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	In this mode, all interfaces on an interface card with the same policy applied share one hardware resource. Support for this function depends on the device model.

PBR/PBRApplyNexthop

This table contains PBR next hop information.

XML structure

```
<PBR>
  <PBRApplyNexthop>
    <ApplyNexthop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <VrfIndex></VrfIndex>
      <IpAddress></IpAddress>
      <Priority></Priority>
      <TrackID></TrackID>
      <NexthopDirect></NexthopDirect>
      <PathID></PathID>
      <PathIndex></PathIndex>
    </ApplyNexthop>
  </PBRApplyNexthop>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyNexthop
Table type	Multi-instance table

Row name	ApplyNexthop
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: • **0**—Next hop. • **1**—Default next hop. • **2**—Mirroring next hop.	Mirroring next hop not support NexthopDirect column.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network. The value of 65535 specifies the VPN instance where the inbound interface belongs. Support for setting 65535 depends on the device model.
IpAddress	IP address of the next hop.	Index	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.
Priority	Priority of the next hop.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.
NexthopDirect	Specifies whether the next hop must be directly	N/A	Boolean: • **true**—Apply. • **false**—Not apply.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	connected.			
PathID	Service chain path ID	N/A	Unsigned integer. • Value range: 1 to 16777215.	N/A
PathIndex	Service chain path index	N/A	Unsigned integer. • Value range: 1 to 255.	N/A

PBR/PBRApplyOutInterface

This table contains PBR output interface information.

XML structure

```
<PBR>
  <PBRApplyOutInterface>
    <ApplyOutInterface>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Priority></Priority>
      <TrackID></TrackID>
    </ApplyOutInterface>
  </PBRApplyOutInterface>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyOutInterface
Table type	Multi-instance table
Row name	ApplyOutInterface
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Output interface mode.	Index	Enumeration: • **0**—Output interface. • **1**—Default output interface.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The output interface must be P2P type. Using a non-P2P output interface can result in forwarding failures when the interface has multiple next hops. Non-P2P interfaces include broadcast and NBMA interfaces such as Ethernet and virtual-template interfaces.
IfName	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.	N/A
Priority	Priority of the output interface.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.

PBR/PBRApplyAccessVPN

This table contains PBR access VPN instance information.

XML structure

```
<PBR>
  <PBRApplyAccessVPN>
    <ApplyAccessVPN>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
```

```
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
      <Priority></Priority>
    </ApplyAccessVPN>
  </PBRApplyAccessVPN>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyAccessVPN

Row name	ApplyAccessVPN
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product.
Priority	Priority of the VPN instance.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.

PBR/PBRLocalPolicy

This table contains local PBR information.

XML structure

```
<PBR>
  <PBRLocalPolicy>
```

```
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
    <DualStackPolicyName></DualStackPolicyName>
  </PBRLocalPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRLocalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
DualStackPolicyName	Name of the policy used by dual-stack local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

PBR/PBRApplicationGroup

This table contains PBR application group information.

XML structure

```
<PBR>
  <PBRApplicationGroup>
    <ApplicationGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <AppGroupName></AppGroupName>
      <Priority></Priority>
    </ApplicationGroup>
  </PBRApplicationGroup>
```

```
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplicationGroup
Table type	Multi-instance table
Row name	ApplicationGroup
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
AppGroupName	Application group name.	Index	String, case insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The name cannot be **invalid** or **other** in any combination of upper- and lower-case letters.
Priority	Priority of the application group.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.

PBR/PBRObjectGroup

This table contains PBR object group information.

XML structure

```
<PBR>
  <PBRObjectGroup>
    <ObjectGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
```

```
      <NodeID></NodeID>
      <ObjectGroupName></ObjectGroupName>

Table description

Item	Description
Feature name	PBR
Table name	PBRSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportInboundVPNIpv4	Support for specifying the IPv4 VPN instance where the inbound interface belongs.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportOnlyNull0Ipv4	Supports only the NULL 0 interface as the IPv4 output interface.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportIPDFIpv4	Sets the Don't Fragment (DF) bit in the IP header of matching packets.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportPacketLenIpv4	Support for IPv4 packet length match criteria.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A

SupportPrecedenceIpv4	Support for setting the precedence for IPv4 packets.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportContinueIpv4	Support for comparing IPv4 packets with the next node upon failure on the current node.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportNextHopIpv4	Support for IPv4 next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefNextHopIpv4	Support for IPv4 default next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportInterfaceIpv4	Support for IPv4 output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefInterfaceIpv4	Support for IPv4 default output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportAccessVPNIpv4	Support for IPv4 VPN instances.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportMirrorDestinationIpv4	Support for mirroring destination IPv4.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportStatisticIpv4	Support for IPv4 Statistics.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportInboundVPNIpv6	Support for specifying the IPv6 VPN instance where the inbound interface belongs.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportOnlyNull0Ipv6	Supports only the NULL 0 interface as the IPv6 output interface.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportPacketLenIpv6	Support for IPv6 packet length match criteria.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportPrecedenceIpv6	Support for setting the precedence for IPv6 packets.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportContinueIpv6	Support for comparing IPv6 packets against the next node	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A

	upon failure on the current node.			
SupportNextHopIpv6	Support for IPv6 next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefNextHopIpv6	Support for IPv6 default next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportInterfaceIpv6	Support for IPv6 output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefInterfaceIpv6	Support for IPv6 default output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportAccessVPNIpv6	Support for IPv6 VPN instances.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
MaxNodeIDIpv4	Maximum number of IPv4 nodes.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxNodeIDIpv6	Maximum number of IPv6 nodes.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxNextHopIpv4	Maximum number of IPv4 next hops or default next hops.	N/A	Unsigned integer.	N/A
MaxInterfaceIpv4	Maximum number of IPv4 output interfaces or default output interfaces.	N/A	Unsigned integer.	N/A
MaxAccessVPNIpv4	Maximum number of IPv4 VPN instances.	N/A	Unsigned integer.	N/A
MaxNextHopIpv6	Maximum number of IPv6 next hops or default next hops.	N/A	Unsigned integer.	N/A
MaxInterfaceIpv6	Maximum number of IPv6 output interfaces or default output interfaces.	N/A	Unsigned integer.	N/A
MaxAccessVPNIpv6	Maximum number of IPv6 VPN instances.	N/A	Unsigned integer.	N/A
SupportMirrorDestinationIpv6	Support for mirroring destination IPv6.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportStatisticIpv6	Support for IPv6 Statistics.	N/A	Boolean: • **true**—Support.	N/A

			• **false**—Not support.	
SupportAppGroupIpv4	Support for IPv4 application group.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportObjectGroupIpv4	Support for IPv4 object group.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
MaxAppGroupIpv4	Maximum number of IPv4 application group.	N/A	Unsigned integer.	N/A
MaxObjectGroupIpv4	Maximum number of IPv4 object group.	N/A	Unsigned integer.	N/A
IfAclVPNCapability	VPN instance support of ACL rules	N/A	Unsigned integer: • **0x00000001**—Support. If the interface is in the VPN, the VPN instance must be carried. • **0x00000002**—Not support. • **0x00000004**—Supported in microsegment rules. If the interface is in the VPN, the VPN instance must be carried. • **0x00000008**—Supported in IP rules. If the interface is in the VPN, the VPN instance must be carried.	Value 0x00000001 or 0x00000002 cannot be used in bitwise OR operation with other values. The default value for the column is 0x00000001.
SupportShareModeIpv4	Support for enabling IPv4 policy sharemode on the interface.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportShareModeIpv6	Support for enabling IPv6 policy sharemode on the interface.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportSRv6PolicyIpv4	Support for enabling IPv4 SRv6 policy.	N/A	Boolean: • **true**—Support. • **false**—Not support	N/A
SupportDefSRv6PolicyIpv4	Support for enabling IPv4 default SRv6 policy.	N/A	Boolean: • **true**—Support. • **false**—Not support	N/A
MaxSRv6PolicyIpv4	Maximum number of IPv4 SRv6 policies or default SRv6 policies.	N/A	Unsigned integer.	N/A
SupportSRv6PolicyIpv6	Support for enabling IPv6	N/A	Boolean: • **true**—Support.	N/A

	SRv6 policy.		• **false**—Not support	
SupportDefSRv6PolicyIpv6	Support for enabling IPv6 default SRv6 policy.	N/A	Boolean: • **true**—Support. • **false**—Not support	N/A
MaxSRv6PolicyIpv6	Maximum number of IPv6 SRv6 policies or default SRv6 policies.	N/A	Unsigned integer.	N/A
SupportInboundVPNDualStack	Support for specifying the Dual-stack VPN instance where the inbound interface belongs.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportOnlyNull0DualStack	Supports only the NULL 0 interface as the Dual-stack output interface.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportPrecedenceDualStack	Support for setting the precedence for Dual-stack packets.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportNextHopDualStack	Support for Dual-stack next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefNextHopDualStack	Support for Dual-stack default next hops.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportInterfaceDualStack	Support for Dual-stack output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportDefInterfaceDualStack	Support for Dual-stack default output interfaces.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportMirrorDestinationDualStack	Support for mirroring destination Dual-stack.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
SupportStatisticDualStack	Support for Dual-stack Statistics.	N/A	Boolean: • **true**—Support. • **false**—Not support.	N/A
MaxNodeIDDualStack	Maximum number of Dual-stack nodes.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
MaxNextHopDualStack	Maximum number of Dual-stack next hops or default next hops.	N/A	Unsigned integer.	N/A
MaxInterfaceDualStack	Maximum number of Dual-stack output interfaces or default output	N/A	Unsigned integer.	N/A

	interfaces.			
SupportSRPolicyIpv4	Support for enabling IPv4 SR policy.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportDefSRPolicyIpv4	Support for enabling IPv4 default SR policy.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
MaxSRPolicyIpv4	Maximum number of IPv4 SR policies or default SR policies.	N/A	Unsigned integer.	N/A
SupportSRPolicyIpv6	Support for enabling IPv6 SR policy.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
SupportDefSRPolicyIpv6	Support for enabling IPv6 default SR policy.	N/A	Boolean: • **true**—Supported. • **false**—Not supported.	N/A
MaxSRPolicyIpv6	Maximum number of IPv6 SR policies or default SR policies.	N/A	Unsigned integer.	N/A

PBR/PBREgressIfPolicy

This table contains egress interface PBR information.

XML structure

```
<PBR>
  <PBREgressIfPolicy>
    <EgressIfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PolicyName></PolicyName>
    </EgressIfPolicy>
  </PBREgressIfPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBREgressIfPolicy
Table type	Multi-instance table
Row name	EgressIfPolicy

Restrictions	This table supports only VXLAN mode tunnel interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	IPv6 is not supported.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.	N/A
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

PBR/PBRMatchServiceChain

This table contains PBR object match service chain information.

XML structure

```
<PBR>
  <PBRMatchServiceChain>
    <MatchServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <PathID></PathID>
      <PathIndex></PathIndex>
      <Priority></Priority>
    </MatchServiceChain>
  </PBRMatchServiceChain>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRMatchServiceChain
Table type	Multi-instance table
Row name	MatchServiceChain
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
PathID	Service-Chain Path-ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the service chain.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.

PBR/PBRApplyServiceChain

This table contains PBR object apply service chain information.

XML structure

```
<PBR>
  <PBRApplyServiceChain>
    <ApplyServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
```

```
      <PathID></PathID>
      <PathIndex></PathIndex>
    </ApplyServiceChain>
  </PBRApplyServiceChain>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyServiceChain
Table type	Multi-instance table
Row name	ApplyServiceChain
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
PathID	Service-Chain Path-ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	N/A	Unsigned integer. Value range: 1 to 255.	N/A

PBR/PBRApplyFailActionDrop

This table contains PBR failure action drop information.

XML structure

```
<PBR>
  <PBRApplyFailActionDrop>
```

```
    <ApplyFailActionDrop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <Drop></Drop>
    </ApplyFailActionDrop>
  </PBRApplyFailActionDrop>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyFailActionDrop
Table type	Multi-instance table
Row name	ApplyFailActionDrop
Restrictions	Support for this table depends on the device model

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: • **0**—Next hop.	N/A
Drop	Whether to drop matching packets when all next hops specified by column Mode become unreachable.	N/A	Boolean: • true. • false.	N/A

PBR/PBRVlanInterfacesPolicy

This table contains VLAN interface PBR information.

XML structure

```
<PBR>
  <PBRVlanInterfacesPolicy>
    <VlanInterfacesPolicy>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <VlanInterfaceNumberList></VlanInterfaceNumberList>
    </VlanInterfacesPolicy>
  </PBRVlanInterfacesPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRVlanInterfacesPolicy
Table type	Multi-instance table
Row name	VlanInterfacesPolicy
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
VlanInterfaceNumberList	List of VLAN interface numbers.	N/A	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN interface numbers of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<VlanInterfaceNumberList h3c:incremental="true">”. If the value is true, the VLAN interface number list will be added or removed. Otherwise, it is the final result.

PBR/PBRGlobalPolicy

This table contains global PBR information.

XML structure

```
<PBR>
  <PBRGlobalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
    <DualStackPolicyName></DualStackPolicyName>
  </PBRGlobalPolicy>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRGlobalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
DualStackPolicyName	Name of the policy used by dual-stack global PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

PBR/PBRApplyMirrorDestinationIp

This table contains PBR mirroring destination IP information.

XML structure

```
<PBR>
  <PBRApplyMirrorDestinationIp>
    <ApplyMirrorDestinationIp>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
      <DestIpAddress></DestIpAddress>
      <Priority></Priority>
      <SourceIpAddress></SourceIpAddress>
      <Dscp></Dscp>
      <EncapType></EncapType>
    </ApplyMirrorDestinationIp>
  </PBRApplyMirrorDestinationIp>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRApplyMirrorDestinationIp
Table type	Multi-instance table
Row name	ApplyMirrorDestinationIp
Restrictions	Support for this table depends on the device model.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	IPv6 is not supported.
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The value of 0 specifies the public network.
DestIpAddress	IP address of the destination IP address.	Index	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
Priority	Priority of the next hop.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.
SourceIpAddress	IP address of the source IP address.	N/A	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
Dscp	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	The default DSCP value is 63.
EncapType	Encapsulation type	N/A	Enumeration: • **0**—GRE. • **1**—VXLAN.	VXLAN is not supported.

PBR/PBRIfPolicyStatistics

This table contains interface PBR statistics information.

XML structure

```
<PBR>
  <PBRIfPolicyStatistics>
    <IfPolicyStatistics>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <IfName></IfName>
      <Matches></Matches>
      <Bytes></Bytes>
    </IfPolicyStatistics>
  </PBRIfPolicyStatistics>
</PBR>
```

Table description

Item	Description
Feature name	PBR
Table name	PBRIfPolicyStatistics

Table type	Multi-instance table
Row name	IfPolicyStatistics
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—Dual-stack.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
IfName	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2.	N/A
Matches	Number of successful matches on the node.	N/A	N/A	Unsigned integer. Value range: 0 to 2^{64} - 2.
Bytes	Number of bytes of successful matches on the node.	N/A	N/A	Unsigned integer. Value range: 0 to 2^{64} - 2.

PBR/PBRLocalPolicyStatistics

This table contains local PBR statistics information.

XML structure

```
<PBR>
  <PBRLocalPolicyStatistics>
    <LocalPolicyStatistics>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Matches></Matches>
      <Bytes></Bytes>
    </LocalPolicyStatistics>
```

```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
VlanInterfaceNumber	VLAN interface number.	Index	Number of VLAN interface number items.	Example: 1,2,3
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Matches	Number of successful matches on the node.	N/A	N/A	Unsigned integer. Value range: 0 to 2^{64} - 2.
Bytes	Number of bytes of successful matches on the node.	N/A	N/A	Unsigned integer. Value range: 0 to 2^{64} - 2.

PBR/PBRGlobalPolicyStatistics

This table contains global PBR statistics information.

XML structure

```

PBR event stream

PBRNexthopUnreachable event

This event is used to report nexthop unreachable information.

XML structure for event subscription

```
<PBRNexthopUnreachableEvent>
  <PBRNexthopUnreachable>
    <AddressType></AddressType>
  </PBRNexthopUnreachable>
</PBRNexthopUnreachableEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PBR</stream>
    <filter type="subtree">
      <PBRNexthopUnreachableEvent xmlns="http://www.h3c.com/netconf/event:1.0/PBR:1.0">
        <PBRNexthopUnreachable>
          <AddressType>0</AddressType>
        </PBRNexthopUnreachable>
      </PBRNexthopUnreachableEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	PBR
Event name	PBRNexthopUnreachableEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/PBR:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
AddressType	Address type.	Enumeration: • **0**—IPv4. • **1**—IPv6.	No

XML structure for event report

```
<PBRNexthopUnreachableEvent>
  <PBRNexthopUnreachable>
    <AddressType></AddressType>
    <PolicyName></PolicyName>
    <NodeID></NodeID>
    <VrfIndex></VrfIndex>
    <VrfName></VrfName>
    <IpAddress></IpAddress>
  </PBRNexthopUnreachable>
</PBRNexthopUnreachableEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-11-13T14:22:21</eventTime>
  <PBRNexthopUnreachableEvent xmlns="http://www.h3c.com/netconf/event:1.0/PBR:1.0">
    <PBRNexthopUnreachable>
      <AddressType>0</AddressType>
      <PolicyName>aaa</PolicyName>
      <NodeID>0</NodeID>
      <VrfIndex>0</VrfIndex>
       <VrfName>vpna</VrfName>
      <IpAddress>1.1.1.1</IpAddress>
    </PBRNexthopUnreachable>
  </PBRNexthopUnreachableEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Remarks
AddressType	Address type	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number	Unsigned integer. Value range: 0 to 65535.	N/A
VrfIndex	Index of the VPN instance	Unsigned integer.	0 means public network.
VrfName	The name of Vpn Instance.	String. Length: 1 to 31 characters.	N/A
IpAddress	IP address of the next hop	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.

PBRHardwareNoResource event

This event is used to report insufficient acl resource information for interface.

XML structure for event subscription

```
<PBRHardwareNoResourceEvent>
  <PBRHardwareNoResource>
    <AddressType></AddressType>
  </PBRHardwareNoResource>
</PBRHardwareNoResourceEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PBR</stream>
    <filter type="subtree">
      <PBRHardwareNoResourceEvent xmlns="http://www.h3c.com/netconf/event:1.0/PBR:1.0">
        <PBRHardwareNoResource>
          <AddressType>0</AddressType>
        </PBRHardwareNoResource>
      </PBRHardwareNoResourceEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Columns

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration: • **0**—PBR_XMLEVTMSG_NORES_NORMAL • **1**—PBR_XMLEVTMSG_NORES_SHAREMODE • **2**—PBR_XMLEVTMSG_NORES_EGRESS • **3**—PBR_XMLEVTMSG_NORES_VLANRANGE • **4**—PBR_XMLEVTMSG_NORES_GLOBAL • **5**—PBR_XMLEVTMSG_NORES_NODE • **6**—PBR_XMLEVTMSG_NORES_MATCHACL • **7**—PBR_XMLEVTMSG_NORES_MATCHLOCALID • **8**—PBR_XMLEVTMSG_NORES_MATCHSERVICECHAIN • **9**—PBR_XMLEVTMSG_NORES_MATCHVXLANID • **10**—PBR_XMLEVTMSG_NORES_APPLYACCESSVPN • **11**—PBR_XMLEVTMSG_NORES_APPLYDEFAULTOUTIF • **12**—PBR_XMLEVTMSG_NORES_APPLYFAILDROP • **13**—PBR_XMLEVTMSG_NORES_APPLYDF	N/A

Column name	Column description	Data type and restrictions	Remarks
		• **14**—PBR_XMLEVTMSG_NORES_APPLYLOADSHARE • **15**—PBR_XMLEVTMSG_NORES_APPLYOUTIF • **16**—PBR_XMLEVTMSG_NORES_APPLYPRECEDENCE • **17**—PBR_XMLEVTMSG_NORES_APPLYSERVICECHAIN • **18**—PBR_XMLEVTMSG_NORES_APPLYSTATISTIC • **19**—PBR_XMLEVTMSG_NORES_APPLYNEXTHOP • **20**—PBR_XMLEVTMSG_NORES_APPLYDEFAULTNEXTHOP • **21**—PBR_XMLEVTMSG_NORES_APPLYMIRRORNEXTHOP • **22**—PBR_XMLEVTMSG_NORES_APPLYMIRRORDESTIP • **23**—PBR_XMLEVTMSG_NORES_ACLEVENTRULE • **24**—PBR_XMLEVTMSG_NORES_VXLANMODE	
AddressType	Address type	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
PolicyName	Policy name	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number	Unsigned integer. Value range: 0 to 65535.	N/A
Chassis	Member ID of the member device where the entity	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	N/A
HardwareNoResourceOld	The old infomation of no enough hardware resource	Members include: • VlanInterfaceNumberList • IfIndex • IfName • ACLName • ACLNumber • QoSLocalID • QoSLocalIDMode • PathID • PathIndex • LoadShareType	

Column name	Column description	Data type and restrictions	Remarks
		• NexthopIpAddress • VrfIndex • VrfName • TrackID • NexthopDirect • DestIpAddress • SourceIpAddress • Dscp • EncapType • ACLRuleNum	
VlanInterfaceNumberList	List of VLAN interface numbers.	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN interface numbers of a range.	Example: 1,2,3,5-8,10-20.
IfIndex	Interface index.	Unsigned integer.	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters.	Example: GigabitEthernet 2/0/2
ACLName	ACL name.	String, case insensitive. Length: 1 to 63 characters.	N/A
ACLNumber	ACL number	Unsigned integer. Value range: 2000 to 3999.	N/A
QoSLocalID	QoSLocalID	Unsigned integer. Value range: 1 to 4095 .	N/A
QoSLocalIDMode	Specify QPPB mode	Enumeration: • **0**—Normal (default). • **1**—QPPB	N/A
PathID	Service-Chain Path-ID	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	Unsigned integer. Value range: 1 to 255.	N/A
LoadShareType	Setsharing mode device node	Enumeration: • **1**—next hops. • **2**—output interfaces. • **4**—default next hops. • **8**—default output interfaces.	Support common settings. Example: 3 meams next hops and default next hops.
NexthopIpAddress	IP address of the next hop	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on

Column name	Column description	Data type and restrictions	Remarks
			AddressType.
VrfIndex	Index of the VPN instance.	Unsigned integer.	0 means public network.
VrfName	The name of Vpn Instance.	String. Length: 1 to 31 characters.	N/A
TrackID	Track entry number	Unsigned integer. Value range: 1 to 1024.	N/A
NexthopDirect	Specifies whether the next hop must be directly connected.	Boolean: • **True** • **false** (default).	N/A
DestIpAddress	IP address of the destination IP address.	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
SourceIpAddress	IP address of the source IP address.	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
Dscp	DSCP value	Unsigned integer. Value range: 0 to 63.	The default DSCP value is 63.
EncapType	Encapsulation type	Enumeration: • **0**—GRE. • **1**—VXLAN.	VXLAN is not supported.
ACLRuleID	ACL rule ID	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	N/A
HardwareNoResourceNew	The new infomation of no enough hardware resource	Members include: • VlanInterfaceNumberList • IfIndex • ACLName • ACLNumber • QoSLocalID • QoSLocalIDMode • PathID • PathIndex • LoadShareType • NexthopIpAddress • VrfIndex • VrfName	N/A

Column name	Column description	Data type and restrictions	Remarks
		• TrackID • NexthopDirect • DestIpAddress • SourceIpAddress • Dscp • EncapType • ACLRuleNum	
VlanInterfaceNumberList	List of VLAN interface numbers.	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN interface numbers of a range.	Example: 1,2,3,5-8,10-20.
IfIndex	Interface index.	Unsigned integer.	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters.	Example: GigabitEthernet 2/0/2
ACLName	ACL name.	String, case insensitive. Length: 1 to 63 characters.	N/A
ACLNumber	ACL number	Unsigned integer. Value range: 2000 to 3999.	N/A
QoSLocalID	QoSLocalID	Unsigned integer. Value range: 1 to 4095 .	N/A
QoSLocalIDMode	Specify QPPB mode	Enumeration: • **0**—Normal (default). • **1**—QPPB	N/A
PathID	Service-Chain Path-ID	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	Unsigned integer. Value range: 1 to 255.	N/A
LoadShareType	Setsharing mode device node	Enumeration: • **1**—next hops. • **2**—output interfaces. • **4**—default next hops. • **8**—default output interfaces.	Support common settings. Example: 3 meams next hops and default next hops.
NexthopIpAddress	IP address of the next hop	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.
VrfIndex	Index of the VPN	Unsigned integer.	0 means public network.

Column name	Column description	Data type and restrictions	Remarks
	instance.		
VrfName	The name of Vpn Instance.	String. Length: 1 to 31 characters.	N/A
TrackID	Track entry number	Unsigned integer. Value range: 1 to 1024.	N/A
NexthopDirect	Specifies whether the next hop must be directly connected.	Boolean: • **True** • **false** (default).	N/A
DestIpAddress	IP address of the destination IP address.	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
SourceIpAddress	IP address of the source IP address.	String, dotted decimal notation or colon hexadecimal notation.	Specify an IPv4 address or IPv6 address depending on AddressType.
Dscp	DSCP value	Unsigned integer. Value range: 0 to 63.	The default DSCP value is 63.
EncapType	Encapsulation type	Enumeration: • **0**—GRE. • **1**—VXLAN.	VXLAN is not supported.
ACLRuleID	ACL rule ID	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	N/A

PCAPWARE

PCAPWARE/StartCapture

This table contains information about starting the packet capture.

XML structure

```
<PCAPWARE>
  <StartCapture>
    <ACL>
      <ACLType></ACLType>
      <ACLNumber></ACLNumber>
    </ACL>
    <Interface></Interface>
  </StartCapture>
</PCAPWARE>
```

Table description

Item	Description
Feature name	PCAPWARE
Table name	StartCapture
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ACL	Capture packets that match the specified ACL.	Data structure	Members include: • ACLType. • ACLNumber.
ACLType	ACL type.	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.
ACLNumber	ACL number.	N/A	Unsigned integer.
Interface	Capture packets on the specified interface.	N/A	String. Length: 2 to 47 characters.

PCAPWARE/StopCapture

This table contains information about stopping the packet capture.

XML structure

```
<PCAPWARE>
  <StopCapture>
    <Stop><Stop/>
  </StopCapture>
</PCAPWARE>
```

Table description

Item	Description
Feature name	PCAPWARE
Table name	StopCapture
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stop	Stop the capture	N/A	Enumeration: • **0**—Stops the packet capture normally. • **1**—Stops the packet capture immediately.	If this column is empty, packet capture is stopped normally.

PCAPWARE/DelCapFiles

This table contains information about deleting specific .cap files.

XML structure

```
<PCAPWARE>
  <DelCapFiles>
    <DelCapFile>
      <FileName></FileName>
    </DelCapFile>
  </DelCapFiles>
</PCAPWARE>
```

Table description

Item	Description

Item	Description
Feature name	PCAPWARE
Table name	CaptureState
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Packet capture status.	N/A	Boolean: • **true**—Started. • **false**—Stopped.
StateDetail	Detailed packet capture status.	N/A	Enumeration: • **0**—Stopped. • **1**—Started. • **2**—Saving captured packets.

PCAPWARE/CaptureProgress

This table contains information about the packet capture progress.

XML structure

```
<PCAPWARE>
  <CaptureProgress>
    <Percent></Percent>
  </CaptureProgress>
</PCAPWARE>
```

Table description

Item	Description
Feature name	PCAPWARE
Table name	CaptureProgress
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Percent	Percent of captured packets that have been saved.	N/A	Unsigned integer.

PCAPWARE/LocalFileCount

This table contains the number of local .cap files.

XML structure

```
<PCAPWARE>
  <LocalFileCount>
    <Count></Count>
  </LocalFileCount>
</PCAPWARE>
```

Table description

Item	Description
Feature name	PCAPWARE
Table name	LocalFileCount
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Count	Number of local .cap files	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.

State	Global PFC state.	N/A	Enumeration: • enable.(default) • disable.	N/A

PFC/DeadLockIntervals

This table contains the detection interval information of the specified CoS.

XML structure

```
<PFC>
  <DeadLockIntervals>
    <DeadLockInterval>
```

```
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Cos></Cos>
      <Interval></Interval>
      <PauseRecover></PauseRecover>
    </DeadLockInterval>
   </DeadLockIntervals>
</PFC>
```

Table description

Item	Description
Feature name	PFC
Table name	DeadLockIntervals
Table type	Multi-instance table
Row name	DeadLockInterval
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current device's type is centralized.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current device's type is centralized.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current device's type is centralized.
Cos	Class of service	Index	Unsigned integer. Value range: 0 to 7.	N/A
Interval	Detection interval configuration	N/A	Unsigned integer. Value range: 1 to 15	N/A
PauseRecover	Automatically recover PFC configuration based on PFC pause frames	N/A	Boolean: • **true**—Enable • **false**—Disable	The function is disabled by default.

PFC/DeadLockPrecisions

This table contains the timer precision configuration.

XML structure

```
<PFC>
  <DeadLockPrecisions>
    <DeadLockPrecision>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Precision></Precision>
    </DeadLockPrecision>
  </DeadLockPrecisions>
</PFC>
```

Table description

Item	Description

</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table supports only default VRF.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance	Index	String.	An empty string

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 0 to 31 characters	indicates the public network
RegWholeChks	Checksum calculating rule for PIM register messages	N/A	Boolean: • **true**—Calculates the checksum based on an entire register message. • **false**—Calculates the checksum based on the header of a register message (default)	N/A
SsmPolicy	ACL number or ACL name	N/A	ACL number: • Unsigned integer Value range: • 2000 to 2999. ACL name: • String. • Length: 1 to 63 characters.	N/A
RegisterPolicy	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 3000 to 3999. ACL name: • String. Length: 1 to 63 characters.	N/A
HelloInterval	Interval of sending Hello message in PIM view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds. Default: 30.	N/A
JoinPruneInterval	Interval for sending join / prune message in PIM view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds. Default: 60.	N/A
HelloHoldTime	Time of keep the reachable state of PIM neighbors in PIM view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 105.	N/A
HelloLanDelay	Transmission delay of PIM message in shared network segment in PIM view	N/A	Unsigned integer. Value range: 1 to 32767, in milliseconds. Default: 500.	N/A
HelloOverrideInterval	Time of pruning veto in PIM view	N/A	Unsigned integer. Value range: 1 to 65535, in milliseconds. Default: 2500.	N/A
JoinPruneHoldTime	Hold time of joining / pruning state in PIM view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 210.	
SourcePolicy	Source policy	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. • Length: 1 to 63 characters.	N/A
RpfFrrEnable	Enabling status of PIM FRR.	N/A	Boolean. • **true**—Enabled. • **false—**Disabled (default).	N/A
RpfFrrAcl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. • Length: 1 to 63 characters.	This column can be specified only when the RpfFrrEnable column is true.

PIM/Ipv4Interfaces

This table contains IPv4 PIM interface information.

XML structure

```

</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Mode	PIM Mode	N/A	Enumeration: • **1**—PIM-SM • **2**—PIM-DM	N/A
Distributed Dr	Whether to configure this VSI interface as a distributed DR interface	N/A	Boolean: • **true**—Configures the VSI interface as a distributed DR interface. • **false**—Not to configure the VSI interface as a distributed DR interface (default).	N/A
HelloInterval	Interval of sending Hello message in interface view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds. Default: 30.	N/A
JoinPruneInterval	Interval for sending join/prune message in interface view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds. Default: 60.	N/A
HelloHold Time	Time of keep the reachable	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	state of PIM neighbors in interface view		Value range: 1 to 65535, in seconds. Default: 105.	
HelloLanDelay	Transmission delay of PIM message in shared network segment in interface view	N/A	Unsigned integer. Value range: 1 to 32767, in milliseconds. Default: 500.	N/A
HelloOverrideInterval	Time of pruning veto in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in milliseconds. Default: 2500.	N/A
JoinPruneHoldTime	Hold time of joining/pruning state in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 210.	N/A
Passive	PIM passive mode	N/A	Boolean. • **true**—Enabled. **false**—Disabled (default).	PIM-DM PIM-SM
NeighborPolicy	ACL to filter Hello messages by source address	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. Length: 1 to 63 characters.	N/A
JoinPolicy	Filtering rules for adding information to PIM join/prune message.	Data structure	Members include: • GeneralAcl. • AsmAcl. SsmAcl.	N/A
GeneralAcl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. Length: 1 to 63 characters.	This command does not take effect on PIM-DM
AsmAcl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. Length: 1 to 63 characters.	This command does not take effect on PIM-DM
SsmAcl	ACL number or ACL name	N/A	ACL number: Unsigned integer. Value range: 2000 to 3999.	This command does not take effect on PIM-DM

Column name	Column description	Column type	Data type and restrictions	Remarks
			ACL name: String. Length: 1 to 63 characters.	
BsrBoundary	Configure a PIM-SM domain border (a bootstrap message boundary).	N/A	Boolean. • true—Enabled. • false—Disabled (default).	N/A
TriggeredHelloPortDown	PIM hello triggered by port-down events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled (default).	N/A
TriggeredHelloPortUp	PIM hello triggered by port-up events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled (default).	N/A
TriggeredHelloDelay	Time of PIM triggered hello Delay	N/A	Unsigned integer. Value range: 1 to 60, in seconds. Default: 5.	N/A

PIM/Ipv4CBsrs

This table contains IPv4 PIM C-BSR information.

XML structure

```
<PIM>
  <Ipv4CBsrs>
    <Ipv4CBsr>
      <VRF></VRF>
      <SpecifyScope></SpecifyScope>
      <Scope></Scope>
      <MaskLen></MaskLen>
      <IpAddr></IpAddr>
      <HashLen></HashLen>
      <Priority></Priority>
    </Ipv4CBsr>
  </Ipv4CBsrs>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4CBsrs

Item	Description
Table type	Multi-instance table
Row name	Ipv4CBsr
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	Empty string indicates the public network.
SpecifyScope	Whether to specify a multicast group address	Index	Boolean. • **true**—Enabled. • **false**—Disabled (default).	If scope wasn't specified, it will work on the scope of 224.0.0.0/4.
Scope	Admin-scoped zone	Index	String, dotted decimal notation. Value range: 239.0.0.0 to 239.255.255.255.	N/A
MaskLen	Mask length	Index	Unsigned integer. Value range: 8 to 32.	N/A
IpAddr	IP address of a C-BSR	N/A	String, dotted decimal notation.	During a create or merge operation, you must specify an IP address. If you specify an IP address during a delete or remove operation, the corresponding configuration is deleted. If you do not specify an IP address during a replace operation, the corresponding configuration is deleted.
HashLen	Hash mask length	N/A	Unsigned integer. Value range: 0 to 32. Default: 30.	N/A
Priority	Priority of the C-BSR	N/A	Unsigned integer. Value range: 0 to 255. Default: 64.	N/A

PIM/Ipv4CRps

This table contains IPv4 PIM C-RP information.

XML structure

```
<PIM>
  <Ipv4CRps>
    <Ipv4CRp>
      <VRF></VRF>
      <IpAddr></IpAddr>
      <AdvInterval></AdvInterval>
      <GroupPolicy></GroupPolicy>
      <HoldTime></HoldTime>
      <Priority></Priority>
      <BidirPim></BidirPim>
    </Ipv4CRp>
  </Ipv4CRps>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4CRps
Table type	Multi-instance table
Row name	Ipv4CRp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
IpAddr	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
AdvInterval	Interval of sending advertisement message	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 60.	N/A
GroupPolicy	ACL number	N/A	ACL number: • Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63 characters.	
HoldTime	Hold timer of the IPv4 PIM C-RP	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 150.	N/A
Priority	Priority of the IPv4 PIM C-RP	N/A	Unsigned integer. Value range: 0 to 255. Default: 192.	N/A
BidirPim	Whether to use the IPv4 PIM C-RP for BIDIR-PIM	N/A	Boolean. • **true**—Uses the IPv4 PIM C-RP for BIDIR-PIM. • **false**—Uses the IPv4 PIM C-RP for PIM-SM (default).	N/A

PIM/Ipv4StaticRps

This table contains IPv4 PIM static RP information.

XML structure

```
<PIM>
  <Ipv4StaticRps>
    <Ipv4StaticRp>
      <VRF></VRF>
      <IpAddr></IpAddr>

      <Preferred></Preferred>
      <BidirPim></BidirPim>
    </Ipv6StaticRp>
  </Ipv6StaticRps>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv6StaticRps
Table type	Multi-instance table
Row name	Ipv6StaticRp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
IpAddr	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1111::11.
GroupPolicy	ACL number. or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63.	N/A
Preferred	Whether to select the static RP preferentially	N/A	Boolean: • **true**—The static RP is preferred. • **false**—The dynamic RP is preferred(default).	N/A
BidirPim	Whether to use the static RP for BIDIR-PIM	N/A	Boolean: • **true**—Uses the static RP for BIDIR-PIM. • **false**—Uses the static RP for PIM-SM(default).	N/A

PIM/Ipv4Globals

This table contains global IPv4 PIM configtion information.

XML structure

```
<PIM>
  <Ipv4Globals>
    <Ipv4Global>
      <NsrEnable></NsrEnable>
    </Ipv4Global>
  </Ipv4Globals>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
Mode	PIM mode	N/A	Enumeration: • **1**—PIM-SM. • **2**—PIM-DM.	N/A
DistributedDr	Whether to configure this VSI interface as a distributed DR interface	N/A	Boolean: • **true**—Configures the VSI interface as a distributed DR interface. • **false**—Not to configure the VSI interface as a distributed DR interface.	N/A
HelloInterval	Interval of sending hello message in interface view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds.	N/A
JoinPruneInterval	Interval for sending join/prune message in interface view	N/A	Unsigned integer. Value range: 0 to 18000, in seconds.	N/A
HelloHoldTime	Time of keep the reachable state of PIM neighbors in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds.	N/A
HelloLanDelay	Transmission delay of PIM message in shared network segment in	N/A	Unsigned integer. Value range: 1 to 32767, in milliseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface view			
HelloOverrideInterval	Time of pruning veto in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in milliseconds.	N/A
JoinPruneHoldTime	Hold time of joining/pruning state in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds.	N/A
Passive	PIM passive mode	N/A	Boolean. • **true**—Enabled. • **false**—Disabled.	PIM-DM PIM-SM
NeighborPolicy	ACL to filter hello messages by source address	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63 characters.	N/A
BsrBoundary	Configure a PIM-SM domain border (a bootstrap message boundary).	N/A	Boolean. • true—Enabled. • false—Disabled .	N/A
TriggeredHelloPortDown	PIM hello triggered by port-down events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled .	N/A
TriggeredHelloPortUp	PIM hello triggered by port-up events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled.	N/A
TriggeredHelloDelay	Time of PIM triggered hello Delay	N/A	Unsigned integer. Value range: 1 to 60, in seconds. Default: 5.	N/A
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

PIM/Ipv4Nbrs

This table contains IPv4 PIM neighbor information.

XML structure

```
<PIM>
```

```
  <Ipv4Nbrs>
    <Nbr>
      <IfIndex></IfIndex>
      <NbrAddr></NbrAddr>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </Nbr>
  </Ipv4Nbrs>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4Nbrs
Table type	Multi-instance table
Row name	Nbr
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
NbrAddr	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Uptime	Length of time the PIM neighbor has been up	N/A	Unsigned integer (in seconds).	N/A
Expires	Remaining lifetime of the PIM neighbor	N/A	Unsigned integer (in seconds).	The value of 0xFFFFFFFF means that the PIM neighbor is always up and reachable.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

PIM/Ipv4CBsrs

This table contains IPv4 PIM C-BSR information.

XML structure

```
<PIM>
  <Ipv4CBsrs>
    <Ipv4CBsr>
      <VRF></VRF>
      <SpecifyScope></SpecifyScope>
      <Scope></Scope>
      <MaskLen></MaskLen>
      <IpAddr></IpAddr>
      <HashLen></HashLen>
      <Priority></Priority>
    </Ipv4CBsr>
  </Ipv4CBsrs>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4CBsrs
Table type	Multi-instance table
Row name	Ipv4CBsr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicatesthe public network.
SpecifyScope	Whether to specify a multicast group address	Index	Boolean. • **true**—Specifies a multicast group address. • **false**—Does not specify a multicast group address.	N/A
Scope	Admin-scoped zone	Index	String, dotted decimal notation. Value range: 239.0.0.0 to 239.255.255.255.	N/A
MaskLen	Mask length	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 8 to 32.	
IpAddr	IP address of the C-BSR	N/A	String, dotted decimal notation.	During a create or merge operation, you must specify an IP address. If you specify an IP address during a delete or remove operation, the corresponding configuration is deleted. If you do not specify an IP address during a replace operation, the corresponding configuration is deleted.
HashLen	Hash mask length	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Priority	Priority of the C-BSR	N/A	Unsigned integer. Value range: 0 to 255.	N/A

PIM/Ipv4CRps

This table contains IPv4 PIM C-RP information.

XML structure

```
<PIM>
  <Ipv4CRps>
    <Ipv4CRp>
      <VRF></VRF>
      <IpAddr></IpAddr>
      <AdvInterval></AdvInterval>

al	join/prune message in interface view		Value range: 0 to 18000, in seconds. Default: 60.	
HelloHoldTime	Time of keep the reachable state of IPv6 PIM neighbors in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 105.	N/A
HelloLanDelay	Transmission delay of IPv6 PIM message in shared network segment in interface view	N/A	Unsigned integer. Value range: 1 to 32767, in milliseconds. Default: 500.	N/A
HelloOverrideInterval	Time of pruning veto in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in milliseconds. Default: 2500.	N/A
JoinPruneHoldTime	Hold time of joining/pruning state in interface view	N/A	Unsigned integer. Value range: 1 to 65535, in seconds. Default: 210.	N/A
Passive	IPv6 PIM passive mode	N/A	Boolean. • **true**—Enabled. **false**—Disabled (default).	IPv6 PIM-DM IPv6 PIM-SM
NeighborPolicy	ACL to filter Hello messages by source address	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. Length: 1 to 63 characters.	N/A
JoinPolicy	Filtering rules for adding information to IPv6 PIM join/prune message.	Data structure	Members include: • GeneralAcl. • AsmAcl. SsmAcl.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GeneralAcl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. Length: 1 to 63 characters.	This command does not take effect on IPv6 PIM-DM
AsmAcl	ACL number or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 3999. ACL name: • String. Length: 1 to 63 characters.	This command does not take effect on IPv6 PIM-DM
SsmAcl	ACL number or ACL name	N/A	ACL number: Unsigned integer. Value range: 2000 to 3999. ACL name: String. Length: 1 to 63 characters.	This command does not take effect on IPv6 PIM-DM
BsrBoundary	Configure a IPv6 PIM-SM domain border (a bootstrap message boundary).	N/A	Boolean. • true—Enabled. • false—Disabled (default).	N/A
TriggeredHelloPortDown	IPv6 PIM hello triggered by port-down events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled (default).	N/A
TriggeredHelloPortUp	IPv6 PIM hello triggered by port-up events	N/A	Boolean. • **true**—Enabled. • **false**—Disabled (default).	N/A
TriggeredHelloDelay	Time of IPv6 PIM triggered hello delay	N/A	Unsigned integer. Value range: 1 to 60, in seconds. Default: 5.	N/A

PIM/Ipv6Nbrs

This table contains IPv6 PIM neighbor information.

XML structure

```
<PIM>
  <Ipv6Nbrs>
    <Nbr>
      <IfIndex></IfIndex>
      <NbrAddr></NbrAddr>
      <Uptime></Uptime>
      <Expires></Expires>
      <IfName></IfName>
    </Nbr>
  </Ipv6Nbrs>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv6Nbrs
Table type	Multi-instance table
Row name	Nbr
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
NbrAddr	IPv6 address of an IPv6 PIM neighbor	Index	Hexadecimal string, colon-separated.	Example: 2100::1.
Uptime	Length of time the IPv6 PIM neighbor has been up	N/A	Unsigned integer (in seconds).	N/A
Expires	Remaining lifetime of the IPv6 PIM	N/A	Unsigned integer (in seconds).	The value of 0xFFFFFFFF means that the IPv6 PIM

Column name	Column description	Column type	Data type and restrictions	Remarks
	neighbor			neighbor is always up and reachable.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

PIM/Ipv6CBsrs

This table contains IPv6 PIM C-BSR information.

XML structure

```
<PIM>
  <Ipv6CBsrs>
    <Ipv6CBsr>
      <VRF></VRF>
      <ScopeId></ScopeId>
      <IpAddr></IpAddr>
      <HashLen></HashLen>
      <Priority></Priority>
    </Ipv6CBsr>
  </Ipv6CBsrs>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv6CBsrs
Table type	Multi-instance table
Row name	Ipv6CBsr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicatesthe public network.
ScopeId	ID of admin-scoped zone	Index	Unsigned integer. Value range: 0, 3 to 15.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddr	IPv6 address of the C-BSR	N/A	Hexadecimal string, colon-separated.	N/A
HashLen	Hash mask length	N/A	Unsigned integer. Value range: 0 to 128.	N/A
Priority	Priority of the C-BSR	N/A	Unsigned integer. Value range: 0 to 255.	N/A

PIM/Ipv6CRps

This table contains IPv6 PIM C-RP information.

XML structure

```
<PIM>
  <Ipv6CRps>
    <Ipv6CRp>
      <VRF></VRF>
      <IpAddr></IpAddr>
      <AdvInterval></AdvInterval>
      <GroupPolicy></GroupPolicy>
      <HoldTime></HoldTime>
      <Priority></Priority>
      <BidirPim></BidirPim>
      <ScopeId></ScopeId>
    </Ipv6CRp>
  </Ipv6CRps>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv6CRps
Table type	Multi-instance table
Row name	Ipv6CRp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance	Index	String.	An empty string

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 0 to 31 characters.	indicates the public network.
IpAddr	IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1111::11.
AdvInterval	Interval of sending advertisement messages	N/A	Unsigned integer. Value range: 1 to 65535, in seconds.	N/A
GroupPolicy	ACL number. or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63.	N/A
HoldTime	Hold timer of the IPv6 PIM C-RP	N/A	Unsigned integer. Value range: 1 to 65535, in seconds.	N/A
Priority	Priority of the IPv6 PIM C-RP	N/A	Unsigned integer. Value range: 0 to 255.	N/A
BidirPim	Whether to use the IPv6 PIM C-RP for BIDIR-PIM	N/A	Boolean. • **true**—Use the C-RP for BIDIR-PIM. • **false**—Uses the C-RP for PIM-SM.	N/A
ScopeId	ID of an admin-scope zone	N/A	Unsigned integer. Value range: 3 to 15.	N/A

PIM/Ipv6StaticRps

This table contains IPv6 PIM static RP information.

XML structure

```
<PIM>
  <Ipv6StaticRps>
    <Ipv6StaticRp>
      <VRF></VRF>
      <IpAddr></IpAddr>
      <GroupPolicy></GroupPolicy>
      <Preferred></Preferred>
      <BidirPim></BidirPim>
    </Ipv6StaticRp>
  </Ipv6StaticRps>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv6StaticRps
Table type	Multi-instance table
Row name	Ipv6StaticRp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
IpAddr	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1111::11.
GroupPolicy	ACL number. or ACL name	N/A	ACL number: • Unsigned integer. • Value range: 2000 to 2999. ACL name: • String. • Length: 1 to 63.	N/A
Preferred	Whether to select the static RP preferentially	N/A	Boolean: • **true**—The static RP is preferred. • **false**—The dynamic RP is preferred.	N/A
BidirPim	Whether to use the static RP for BIDIR-PIM	N/A	Boolean: • **true**—Uses the static RP for BIDIR-PIM. • **false**—Uses the static RP for PIM-SM.	N/A

PIM/Ipv4Globals

This table contains global IPv4 PIM configtion information.

XML structure

```
<PIM>
  <Ipv4Globals>
    <Ipv4Global>
      <NonStopRoutingEnable></NonStopRoutingEnable>
```

```
      <NbrDownStatistics></NbrDownStatistics>
    </Ipv4Global>
  </Ipv4Globals>
</PIM>
```

Table description

Item	Description
Feature name	PIM
Table name	Ipv4Globals
Table type	Single-instance table
Row name	Ipv4Global
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NsrEnable	Whether to enable the PIM NSR	N/A	Boolean: • **true**—Enable PIM NSR. • **false**—Disnable PIM NSR.	N/A
NbrDownStatistics	The total count of PIM neighbour down	N/A	Unsigned integer.	N/A

PIM/Ipv6Globals

This table contains global IPv6 PIM configtion information.

XML structure

```

PIM

PIM/Instances

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM does not fully start up. 对该表进行配置时，PIM还未完全启动。
PIM is not enabled. PIM协议尚未开启。	During executing set operation, the system failed to create PIM view because of insufficient resources. 对该表进行配置时，资源不足，导致创建PIM视图失败。
VPN instance does not exist. 该VPN不存在。	During executing set operation，the VPN instance does not exist. 对该表进行配置时，指定的VPN不存在。
ACL is input illegally. ACL输入不合法。	During executing set operation, ACL is input illegally. 对该表进行配置时，ACL输入不合法。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the configured VPN instance was not found in the existing VPNs, resulting in configuration failure. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
The RpfFrrEnable column must first be configured to TRUE. RpfFrrEnable 列必须首先配置为 TRUE。	The RpfFrrEnable column must first be configured to TRUE. RpfFrrEnable列必须首先配置为TRUE。

PIM/Interfaces

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM does not fully start up. 对该表进行配置时，PIM还未完全启动。
PIM-DM and PIM-SM can't coexist in the same VRF. 同一VRF内不能同时配置PIM-SM和PIM-DM。	The PIM mode of this interface must be the same as the PIM mode on other interfaces that belong to the same VPN instance. If no other interface exists or the PIM mode of other interfaces is not set, you can set the desired PIM mode on this interface as you want. 该接口的mode只能跟同一VRF下所属的其他接口mode保持一致。若此VRF下不存在其他接口或存在接口但没有设置mode，则该接口的mode可以任意设置；若存在已设置mode的接口， 只能跟其保持一致。
PIM is not enabled on this interface. 接口上的PIM协议尚未开启。	Failed to enable PIM on the interface because of resource insufficiency.

	资源不足，导致接口上使能PIM协议失败。
ACL is input illegally. ACL输入不合法。	During executing set operation, ACL is input illegally. 对该表进行配置时，ACL输入不合法。
General-policy in the join-policy group cannot be configured with other members in the meantime. join-policy组内general-policy不能与其他成员同时下发。	During executing set operation, general-policy in the join-policy group cannot be configured with other members in the meantime. 对该表进行配置时，join-policy组内general-policy不能与其他成员同时下发。
The current interface does not support TriggerHelloPortDown or TriggerHelloPortUp. 当前接口不支持配置TriggerHelloPortDown和TriggerHelloPortUp。	Only VLAN interfaces support TriggerHelloPortDown and TriggerHelloPortUp. 只有VLAN虚接口支持配置TriggerHelloPortDown和TriggerHelloPortUp。

PIM/Ipv4Nbrs

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM does not fully start up. 对该表进行配置时，PIM还未完全启动。

PIM/Ipv4CBsrs

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, the specified PIM view does not exist, resulting in configuration failure. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the configured VPN instance was not found in the existing VPNs, resulting in configuration failure. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
IP address is not configured. IP地址未配置。	During executing create or merge operation, you must specify an IP address. 下发create、merge操作时未指定IpAddr属性列和属性值。

PIM/Ipv4CRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, the specified PIM view does not exist , resulting in configuration failure. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the configured VPN instance was not found in the existing VPNs, resulting in configuration failure. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致

	配置失败。
Ip address is illegal. ip地址不合法。	During executing set operation, the IP address specified for the RP is not in the given IP address range. 对该表进行配置时，下发的ip地址不符合ip地址的下发范围，导致配置失败。
ACL is input illegally. ACL 输入不合法。	During executing set operation, ACL is input illegally. 对该表进行配置时，ACL输入不合法。

PIM/Ipv4StaticRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, The specified PIM view does not exist, resulting in configuration failure. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, the configured VPN instance was not found in the existing VPNs, resulting in configuration failure. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
Ip address is illegal. ip地址不合法。	During executing set operation, the IP address specified for the RP is not in the given IP address range, resulting in configuration failure. 对该表进行配置时，下发的ip地址不符合ip地址的下发范围，导致配置失败。
Both ACL number and RP IP address are already in use. ACL和RP ip地址均被占用。	During executing set operation, both the ACL number and the RP IP address are already in use, resulting in configuration failure. 对该表进行配置时，下发的ACL和RP ip地址都已经在使用中，导致配置失败。
ACL is input illegally. ACL输入不合法。	During executing set operation, ACL is input illegally. 对该表进行配置时，ACL输入不合法。

PIM/Ipv6Instances

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM does not fully start up. 对该表进行配置时，PIM还未完全启动。
PIM is not enabled. PIM协议尚未开启。	During executing set operation, the system failed to create PIM view because of insufficient resources. 对该表进行配置时，资源不足，导致创建PIM视图失败。
VPN instance does not exist. 该VPN不存在。	During executing set operation，the VPN instance does not exist. 对该表进行配置时，指定的VPN不存在。

VPN instance does not exist. VPN实例不存在。	During executing set operation, the configured VPN instance was not found in the existing VPNs, resulting in configuration failure. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
The RpfFrrEnable column must first be configured to TRUE. RpfFrrEnable 列必须首先配置为 TRUE。	The RpfFrrEnable column must first be configured to TRUE. RpfFrrEnable列必须首先配置为TRUE。

PIM/Ipv6Interfaces

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM does not fully start up. 对该表进行配置时，PIM还未完全启动。
PIM-DM and PIM-SM can't coexist in the same VRF. 同一VRF内不能同时配置PIM-SM和PIM-DM。	During executing replace or merge operation for the PIM mode on this interface, PIM-SM or PIM-DM mode is already configured. Before setting the new mode, you must delete or remove the previous mode. 通过replace或者merge操作更改接口下mode时，接口下已经配置了PIM-SM或者PIM-DM。更改时需要先去使能之前的mode，再配置新的mode。
PIM is not enabled on this interface. 接口上的PIM协议尚未开启。	The system failed to enable PIM on this interface because of insufficient resources. 资源不足，导致接口上使能PIM协议失败。
The ACL is input illegally. ACL输入不合法。	During a set operation, the ACL is input illegally. 对该表进行配置时，ACL输入不合法。
the general policy in the join-policy group cannot be configured with other members in the meantime. join-policy组内general-policy不能与其他成员同时下发。	During a set operation, the general policy in the join-policy group cannot be configured with other members in the meantime. 对该表进行配置时，join-policy组内general-policy不能与其他成员同时下发。
The current interface does not support TriggerHelloPortDown or TriggerHelloPortUp. 当前接口不支持配置TriggerHelloPortDown和TriggerHelloPortUp。	Only VLAN interfaces support TriggerHelloPortDown and TriggerHelloPortUp. 只有VLAN接口支持配置TriggerHelloPortDown和TriggerHelloPortUp。

PIM/Ipv6Nbrs

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready.	During executing set operation, PIM does not fully start up.

PIM尚未就绪。	对该表进行配置时，PIM还未完全启动。

PIM/Ipv6CRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, configuration failed because the specified PIM view does not exist. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, configuration failed because the VPN instance does not exist. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
Ip address is illegal. ip地址不合法。	During executing set operation, the IP address specified for the RP is not in the valid IP address range. 对该表进行配置时，下发的IP地址不符合IP地址的下发范围，导致配置失败。
ACL is input illegally. ACL 输入不合法。	During executing set operation, the specified ACL is invalid. 对该表进行配置时，ACL输入不合法。
GroupPolicy and ScopeId column cannot be configured at the same time. 无法同时配置 GroupPolicy 和 ScopeId 属性列。	During executing set operation, the GroupPolicy and ScopeId column cannot be configured at the same time. 对该表进行配置时，不能同时配置 GroupPolicy 和 ScopeId 属性列。

PIM/Ipv6CBsrs

Message	Explanation
The specified PIM view does not exist.指定的PIM视图不存在。	During executing set operation, configuration failed because the specified PIM view does not exist. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, configuration failed because the VPN instance does not exist. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
IP address is not configured. IP地址未配置。	During executing create or merge operation, you must specify an IP address. 下发create、merge操作时未指定IpAddr属性列和属性值。

PIM/Ipv6StaticRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, configuration failed because the specified PIM view does not exist. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist.	During executing set operation, configuration failed because the

VPN实例不存在。	VPN instance does not exist. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
Ip address is illegal. ip地址不合法。	During executing set operation, configuration failed because the IP address specified for the RP is not in the valid IP address range. 对该表进行配置时，下发的ip地址不符合ip地址的下发范围，导致配置失败。
Both ACL number and RP IP address are already in use. ACL和RP ip地址均被占用。	During executing set operation, configuration failed because both the ACL number and the RP IP address are already in use 对该表进行配置时，下发的ACL和RP ip地址都已经在使用中，导致配置失败。
ACL is input illegally. ACL输入不合法。	During executing set operation, the specified ACL is invalid. 对该表进行配置时，ACL输入不合法。

PIM/Ipv4AnycastRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During executing set operation, configuration failed because the specified PIM view does not exist. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
VPN instance does not exist. VPN实例不存在。	During executing set operation, configuration failed because the VPN instance does not exist. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
Ip address is illegal. ip地址不合法。	During executing set operation, the IP address specified for the RP is not in the valid IP address range. 对该表进行配置时，下发的IP地址不符合IP地址的下发范围，导致配置失败。
The Anycast-RP member address can't be equal to the Anycast-RP address. Anycast RP成员地址不能等于Anycast RP地址。	The Anycast-RP member address can't be equal to the Anycast-RP address. Anycast RP成员地址不能等于Anycast RP地址。

PIM/Ipv6AnycastRps

Message	Explanation
The specified PIM view does not exist. 指定的PIM视图不存在。	During a set operation, configuration failed because the specified PIM view does not exist. 对该表进行配置时，指定的PIM视图不存在，导致配置失败。
The VPN instance does not exist. VPN实例不存在。	During a set operation, configuration failed because the VPN instance does not exist. 对该表进行配置时，配置的VPN实例在已有的VPN里未找到，导致配置失败。
The IP address is illegal. ip地址不合法。	During a set operation, the IP address specified for the RP is not in the valid IP address range. 对该表进行配置时，下发的IP地址不符合IP地址的下发范围，导致

	配置失败。
The Anycast-RP member address cannot be the same as the Anycast-RP address. Anycast RP成员地址不能等于Anycast RP地址。	The Anycast-RP member address cannot be the same as the Anycast-RP address. Anycast RP成员地址不能等于Anycast RP地址。

PIMSnooping/Ipv4VLANs

This table contains Ipv4 PIM Snooping for VLANs.

XML structure

```
<PIMSnooping>
  <Ipv4VLANs>
    <VLAN>
      <VLANID></VLANID>
      <Enabled></Enabled>
      <JoinAgingTime></JoinAgingTime>
      <NeighborPortAgingTime></NeighborPortAgingTime>
    </VLAN>
  </Ipv4VLANs>
</PIMSnooping>
```

Table description

Item	Description
Feature name	PIMSnooping
Table name	Ipv4VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Set PIM snooping state for specified VLAN.	N/A	Enumeration: • **disable**(default) • **enable**	N/A
JoinAgingTime	Set the aging time for global downstream ports and global router ports on the new active MPU after an active/standby switchover.	N/A	Unsigned integer. Value range: 210 to18000.	N/A
NeighborPortAgingTime	Set the aging time for global neighbor ports on the new active MPU after an active/standby switchover	N/A	Unsigned integer. Value range: 105 to18000.	N/A

PIMSnooping/ Ipv4VSIs

This table contains Ipv4 PIM Snooping VSIs.

XML structure

</Ping>
```

Table description

Item	Description
Feature name	Ping
Table name	IPv4Ping
Table type	Multi-instance table
Row name	PingTest
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address or host name of a remote system	Index	String. Length: 1 to 253 characters.	Example: 1.1.1.1 or hostname.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OutputInterface	Name of the outgoing interface	N/A	String. Length: 0 to 46 characters.	An empty string indicates that no outgoing interface is specified.
SourceIpAddress	Source IPv4 address of echo requests	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
SendInterval	Interval for sending echo requests	N/A	Unsigned integer. Value range: 1 to 65535 milliseconds.	Default: 200 milliseconds.
TTLValue	TTL value of echo requests	N/A	Unsigned integer. Value range: 1 to 255.	Default: 255.
SendPacketsNum	Number of echo requests that are sent to the destination	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default: 5. If the value is larger than 1000, the system might fail to return the probe result because of packet timeout or fail to perform the ping operation.
PacketSize	Payload length	N/A	Unsigned integer. Value range: 20 to 9600 bytes.	Default: 56 bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
TosValue	ToS value of echo requests	N/A	Unsigned integer. Value range: 0 to 255.	Default: 0.
PatternString	Value of the **pad** field in an echo request, in hexadecimal format	N/A	String. Length: 1 to 8 hexadecimal characters.	If the specified value is less than 8 bits, 0s are added in front of the value to extend it to 8 bits. For example, if this column is configured as 2f, then the packets are padded with 0000002f to make the total length of the packet meet the requirements of the device.
ReplyTimeOut	Timeout time of the reply to an echo request	N/A	Unsigned integer. Value range: 0 to 65535 milliseconds.	Default: 2000 milliseconds.
UnreachableReturn	Whether to return the unreachable probe result immediately after the system detects that the destination is unreachable through the first echo request	N/A	Unsigned integer: • 1—Returns the unreachable result immediately. • 0—Returns the unreachable result after all echo results time out.	Default:0 If OutputInterface is specified, this configuration will not take effect.

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address of the remote system	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
PayloadLength	Payload length	N/A	Unsigned integer. Value range: 20 to 9600 bytes.	N/A
EchoReply	Echo reply information	Data structure	Members include: • IcmpSequence. • TTLValue. • ReplyTime.	N/A
IcmpSequence	Sequence of an echo reply	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
TTLValue	TTL value of an echo reply	N/A	Unsigned integer. Value range: 1 to 255.	N/A
ReplyTime	Response time of an echo reply	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If the value is 4294967295, the echo reply has timed out.
TotalTransmit	Number of sent ICMP echo	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Packet	requests		Value range: 1 to 4294967295.	
TotalReceivePacket	Number of received ICMP echo replies	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SendFailPacket	Number of ICMP echo requests that failed to be sent	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
TimeoutPacket	Number of timeout ICMP echo replies	N/A.	Unsigned integer. Value range: 0 to 4294967295.	N/A
TotalLossPacket	Number of ICMP echo requests that do not have ICMP echo replies	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
LossRate	Percentage of unacknowledged packets to the total sent packets	N/A	Unsigned integer. Value range: 0 to 100.	N/A
MinReplyTime	Minimum response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
MaxReplyTime	Maximum response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
AvgReplyTime	Average response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
StandardDeviation	Standard deviation response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.

Table description

Item	Description
Feature name	Ping6
Table name	IPv6Ping
Table type	Multi-instance table
Row name	PingTest
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv6 address or host name of a remote system	Index	String. Length: 1 to 253 characters.	Example: 1::1 or host name.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OutputInterface	Name of the outgoing interface	N/A	String. Length: 0 to 46 characters.	An empty string indicates that no outgoing interface is specified.
SourceIpv6Address	Source IPv6 address of echo requests	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
SendInterval	Interval for sending echo requests	N/A	Unsigned integer. Value range: 1 to 65535 milliseconds.	Default: 200 milliseconds.
SendPacketsNum	Number of echo requests that are sent to the destination	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default: 5. If the value is larger than 1000, the system might fail to return the probe result because of packet timeout or fail to perform the ping operation.
PacketSize	Payload length	N/A	Unsigned integer. Value range: 20 to 9600 bytes.	Default: 56 bytes.
TrafficClass	Traffic class value in an echo request	N/A	Unsigned integer. Value range: 0 to 255.	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
ReplyTimeOut	Timeout time of the reply to an echo request	N/A	Unsigned integer. Value range: 0 to 65535 milliseconds.	Default: 2000 milliseconds.
Unreachable Return	Whether to return the unreachable probe result immediately after the system detects that the destination is unreachable through the first echo request	N/A	Unsigned integer: • **1**—Returns the unreachable result immediately. • **0**—Returns the unreachable result after all echo results time out.	Default: 0. If OutputInterface is specified, this configuration will not take effect.

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv6 address of the remote system	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
SrcAddr	IPv6 source address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
PayloadLength	Payload length	N/A	Unsigned integer. Value range: 20 to 9600 bytes.	N/A
EchoReply	Echo reply information	Data structure	Members include: • IcmpSequence. • HopLimitValue. • ReplyTime.	N/A
IcmpSequence	Sequence of an echo reply	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
HopLimitValue	Hop limit value of an echo reply	N/A	Unsigned integer. Value range: 1 to 255.	N/A
ReplyTime	Response time of an echo reply	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If the value is 4294967295, the echo reply has timed out.
TotalTransmitPacket	Number of sent ICMPv6 echo requests	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
TotalReceivePacket	Number of received ICMPv6 echo replies	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SendFailPacket	Number of ICMP echo requests that failed to be sent	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeoutPacket	Number of timeout ICMP echo replies	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
TotalLossPacket	Number of ICMP echo requests that do not have ICMP echo replies	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
LossRate	Percentage of unacknowledged packets to the total sent packets	N/A	Unsigned integer. Value range: 0 to 100.	N/A
MinReplyTime	Minimum response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
MaxReplyTime	Maximum response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
AvgReplyTime	Average response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.
StandardDeviation	Standard deviation response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If LossRate is 100, the value in this column is insignificant.

Ping6/IPv6PingDisable

Use this table to stop IPv6 ping operations.

Ping6

Ping6/IPv6Ping

Message	Explanation
Unknown host. 未知主机。	The specified host must exist.
The VPN instance doesn't exist. VPN不存在。	The specified VPN instance name must exist.
The outgoing interface is invalid. 出接口不合法。	The specified outgoing interface must be valid.
Unknown source host. 未知源主机。	The specified source host must exist.
No route to destination. 目标路由不可达。	No route to destination.
Destination port unreachable. 目的端口不可达。	Destination port unreachable.
Destination unreachable. 目标不可达。	Destination unreachable.
An outgoing interface is required for the ping of a multicast address. 主机地址类型是组播本地地址时，需要指定出接口。	An outgoing interface is required for the ping of a multicast address.
An outgoing interface is required for the ping of a link local address. 主机地址类型是链路本地地址时，需要指定出接口。	An outgoing interface is required for the ping of a link local address.
The source IPv6 address is invalid. 非法的IPv6地址。	The source IPv6 address is invalid.
Destination host unreachable. 目的主机不可达。	Destination host unreachable.
The source IPv6 address does not exist. 源地址不存在。	The source IPv6 address does not exist.

Ping6/IPv6PingDisable

Message	Explanation
The specified object doesn't exist. 指定的对象不存在。	The specified object does not exist.

Ping6/Ping6Event

Message	Explanation
Unknown host. 未知主机.	The specified host must exist.
The VPN instance doesn't exist. VPN不存在。	The specified VPN instance name must exist.
The outgoing interface is invalid. 出接口不合法。	The specified outgoing interface must be valid.
Destination network unreachable. 目标网络不可达。	Destination network unreachable.
Destination host unreachable. 目的主机不可达。	Destination host unreachable.
Destination protocol unreachable. The protocol number is unknown. 目标协议不可达（未知的协议号）。	Destination protocol unreachable. The protocol number is unknown.
Destination port unreachable. 目标端口不可达。	Destination port unreachable.
Source routing failed. 源路由失败。	Source routing failed.
Communication administratively prohibited by filtering policies. 通信被过滤策略禁止。	Communication administratively prohibited by filtering policies.
Destination unreachable. 目标不可达。	Destination unreachable.
Packet fragmentation is needed but the "Don’t Fragment" bit is set on an intermediate device. 需要进行分片但中间设备设置了不分片导致的不可达。	Packet fragmentation is needed but the "Don’t Fragment" bit is set on an intermediate device.
Unknown source host. 未知的源主机。	The specified source host must exist.
The specified object already exists. 指定的对象已存在。	The specified object already exists.
An outgoing interface is required for the ping of a multicast address. 主机地址类型是组播本地地址时，需要指定出接口。	An outgoing interface is required for the ping of a multicast address.
An outgoing interface is required for the ping of a link local address. 主机地址类型是链路本地地址时，需要指定出接口。	An outgoing interface is required for the ping of a link local address.

Ping6

Ping6 event

This table is used to report ping6 information for an IPv6 ping operation.

XML structure for event subscription

```
<Ping6Event>
  <Ping6Info>
    <Name></Name>
    <Sequence></Sequence>
    <Host></Host>
    <VRF></VRF>
    <OutputInterface></OutputInterface>
    <SourceIpv6Address></SourceIpv6Address>
    <SendInterval></SendInterval>
    <SendPacketsNum></SendPacketsNum>
    <PacketSize></PacketSize>
    <TrafficClass></TrafficClass>
    <ReplyTimeOut></ReplyTimeOut>
  </Ping6Info>
</Ping6Event>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PING6</stream>
    <filter type="subtree">
      <Ping6Event xmlns="http://www.h3c.com/netconf/event:1.0/ping6:1.0">
        <Ping6Info>
          <Name>aaa</Name>
          <Sequence>23</Sequence>
          <Host>1::11</Host>
          <VRF>vpn1</VRF>
          <OutputInterface>GigabitEthernet0/0/1</OutputInterface>
          <SourceIpv6Address>1::1</SourceIpv6Address>
          <SendInterval>666</SendInterval>
          <SendPacketsNum>50</SendPacketsNum>
          <PacketSize>60</PacketSize>
          <TrafficClass>255</TrafficClass>
          <ReplyTimeOut>555</ReplyTimeOut>
        </Ping6Info>
      </Ping6Event>
    </filter>
```

```
  </create-subscription>
</rpc>
```

PKEY

PKEY/ExportPublicKeys

This table is used to export local public key in SSH format.

XML structure

```
<PKEY>
  <ExportPublicKeys>
    <Export>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <FormatID></FormatID>
      <FileName></FileName>
      <ReplaceFile></ReplaceFile>
    </Export>
  </ExportPublicKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	ExportPublicKeys
Table type	Multi-instance table
Row name	Export
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
FormatID	Identity of SSH format	N/A	Unsigned integer. Value range: 1 to 2^32-1.	See table SSHFormats for supported algorithm.

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	User path of the file ,which the public key will be exported to.	N/A	String. Length: 1 to 128 characters. Case insensitive.	The path can't be the followed value: • "hostkey" • "serverkey" • "dsakey" • "ecdsakey" • path which only contain "."". • path which first character is '/' • path which contains "./" or "../"
ReplaceFile	If replace existed file	N/A	Boolean: • **true** • **false** Default value is false	N/A

PKEY/ImportPeerKeys

This table is used to import peer public key pairs.

XML structure

```
<PKEY>
  <ImportPeerKeys>
    <Import>
      <PeerKeyName></PeerKeyName>
      <FileName></FileName>
      <ReplaceKey></ReplaceKey>
    </Import>
  </ImportPeerKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	ImportPeerKeys
Table type	Multi-instance table
Row name	Import
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerKeyName	Name of peer pubilc key	Index	String. Length: 1 to 31 characters. Case sensitive	N/A
FileName	Path of peer key file	N/A	String. Length: 1 to 128 characters. Case insensitive.	The path can't be the followed value: • "hostkey" • "serverkey" • "dsakey" • "ecdsakey" • path which only contain "."".." • path which first character is '/' • path which contains "./" or "../"
ReplaceKey	If replace existed peer key	N/A	Boolean: • **true** • **false** Default value is false	N/A

PKEY/CreateLocalKeys

This table is used to create local asymmetric key pairs.

XML structure

```
<PKEY>
  <CreateLocalKeys>
    <Create>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <Length></Length>
      <ReplaceKey></ReplaceKey>
      <DeviceName></DeviceName>
    </Create>
  </CreateLocalKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	CreateLocalKeys

Item	Description
Table type	Multi-instance table
Row name	Create
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
Length	Length of public key	N/A	Unsigned integer.	See table PKEYCapabilities for supported length.
ReplaceKey	If replace existed local asymmetric key	N/A	Boolean: • **true** • **false** Default value is false.	N/A
DeviceName	This means that the private key of the generated asymmetric key pair is stored on the inserted third-party encryption card device.Comware cannot obtain the private key, and achieves the function of keeping the private key confidential.	N/A	String. Length: 1 to 31 characters.	N/A

PKEY/DestroyLocalKeys

This table is used to destroy local asymmetric key pairs.

XML structure

```
<PKEY>
  <DestroyLocalKeys>
    <Destroy>
      <AlgID></AlgID>
```

```
      <KeyName></KeyName>
    </Destroy>
  </DestroyLocalKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	DestroyLocalKeys
Table type	Multi-instance table
Row name	Destroy
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.

PKEY/ImportLocalKeys

This table is used to import local asymmetric key pairs.

XML structure

```
<PKEY>
  <ImportLocalKeys>
    <Import>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <ReplaceKey></ReplaceKey>
      <FileName></FileName>

      <KeyName></KeyName>
      <Length></Length>
      <CreatedTime></CreatedTime>
      <Value></Value>
    </Key>
  </LocalKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	LocalKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithm.
KeyName	Name of local asymmetric key	Index	String. Length: 1 to 64 characters. Case insensitive	N/A
Length	Length of local asymmetric key	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CreatedTime	When is the key created	N/A	DateTime. Format:HH:MM:SS YYYY/MM/DDT	N/A
Value	The value of public key	N/A	PKCS#1 formatted hex string.	N/A

PKEY/DefaultLocalKeys

This table is used to get default local public keys.

XML structure

```
<PKEY>
  <DefaultLocalKeys>
    <Key>
      <AlgID></AlgID>
      <Usage></Usage>
      <Length></Length>
      <CreatedTime></CreatedTime>
      <Value></Value>
    </Key>
  </DefaultLocalKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	DefaultLocalKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithm.
Usage	Key Usage	Index	Enumeration:	ServerKey is only

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—HostKey. • 2—ServerKey	meaningful for RSA，while HostKey is meaningful for all supported algorithms.
Length	Length of local asymmetric key	N/A	Unsigned integer.	N/A
CreatedTime	When is the key created	N/A	DateTime. Format:HH:MM:SS YYYY/MM/DDT	N/A
Value	The value of key	N/A	PKCS#1 formatted hex string.	N/A

PKEY/PeerKeys

This table is used to get peer public keys.

XML structure

```
<PKEY>
  <PeerKeys>
    <Key>
      <PeerKeyName></PeerKeyName>
      <AlgID></AlgID>
      <Length></Length>
      <Value></Value>
    </Key>
  </PeerKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	PeerKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerKeyName	Name of peer pubilc key	Index	String. Length: 1 to 31 characters. Case sensitive	N/A
AlgID	Identity of algorithm	N/A	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithm.
Length	Length of asymmetric key	N/A	Unsigned integer.	N/A
Value	The value of key	N/A	PKCS#1 formatted hex string.	N/A

PKEY/GetSSHPublicKeys

This table is used to export local public key to SSH formatted data.

XML structure

```
<PKEY>
  <GetSSHPublicKeys>
    <Key>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <FormatID></FormatID>
      <Value></Value>
    </Key>
  </GetSSHPublicKeys>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	GetSSHPublicKeys
Table type	Multi -instance table
Row name	Key
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table PKEYCapabilities for supported algorithm.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
FormatID	Identity of SSH format	Index	Unsigned integer. Value range: 1 to 2^32-1.	See table SSHFormats for supported algorithm.
Value	Information of SSH format key	N/A	String. Length: 1 to 2048 characters.	N/A

PKEY/SSHFormats

This table described supported SSH format

XML structure

```
<PKEY>
  <SSHFormats>
    <SSHFormat>
      <FormatID></FormatID>
      <FormatName></FormatName>
    </SSHFormat>
  </SSHFormats>
</PKEY>
```

Table description

Item	Description

Table name	SSHFormats
Table type	Multi -instance table
Row name	SSHFormat
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FormatID	Identity of SSH format	Index	Unsigned integer.	N/A
FormatName	Name of supported SSH format	N/A	String. Length: 1 to 255 characters Case insensitive	N/A

PKEY/PKEYCapabilities

This table contains supported PKEY algorithm information

XML structure

```
<PKEY>
  <PKEYCapabilities>
    <PKEYCapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <MinLength></MinLength>
      <MaxLength></MaxLength>
      <DefaultLength></DefaultLength>
      <ExportFormatIDList>
        <IDItem></IDItem>
      </ExportFormatIDList>
    </PKEYCapability>
  </PKEYCapabilities>
</PKEY>
```

Table description

Item	Description
Feature name	PKEY
Table name	PKEYCapabilities
Table type	Multi-instance table
Row name	PKEYCapability
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	N/A
AlgName	Name of algorithm	N/A	String. Length: 1 to 255 characters. Case insensitive.	The name of supported algorithm
MinLength	Minimal length of supported algorithm	N/A	Unsigned integer.	N/A
MaxLength	Maximal length of supported algorithm	N/A	Unsigned integer.	N/A
DefaultLength	Default length of supported algorithm	N/A	Unsigned integer.	N/A
ExportFormatList	Supported export SSH format list	Data structure	Members include: • IDItem.	N/A
IDItem	Identity of SSH format	N/A	Unsigned integer. Value range: 1 to 2^32-1	Contains up to 3 IDItem in ExportFormatList .

PKEY/PKEYStorageDevice

This table contains supported PKEY device list

XML structure

```
<PKEY>
  <PKEYStorageDevice>
    <DeviceList>
      <DeviceItem></DeviceItem>
    </DeviceList>
  </PKEYStorageDevice>
</PKEY>
```

Table description

PKI

PKI/ImportCertificates

This table is used to import the certificate to device.

XML structure

```
<PKI>
  <ImportCertificates>
    <Import>
      <Domain></Domain>
       <CertificateType></CertificateType>
      <FilePath></FilePath>
      <Password></Password>
      <NewPubKeyName></NewPubKeyName>
    </Import>
  </ImportCertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	ImportCertificates
Table type	Multi-instance table
Row name	Import
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","."," <"," >","""","`","/".
CertificateType	The type of certificate	Index	Enumeration: • **1**—CA • **2**—Local.	N/A
FilePath	The path of certificate file to be imported	N/A	String	The file must be existed in the device
Password	Password used to	N/A	String	**Case sensitive.** **The password is**

Column name	Column description	Column type	Data type and restrictions	Remarks
	decrypt the certificate, which can be PKCS#12 or PEM formatted.			**necessary as follow:** • **The file format is PKCS#12 and the certificate type is local** • **The file format is PEM, and there is local certificate and private key in the file**
NewPubKeyName	The name of new public key.	N/A	String. Length: 1 to 64 characters.	• **Case insensitive.** • **Only contain letters, number and "-".** • **If the name is empty and there is no key name in the domain, it will use the domain name as the key name.**

PKI/ExportCACertficates

This table is used to export the CA certificate.

XML structure

```
<PKI>
  <ExportCACertificates>
    <Export>
      <Domain></Domain>
      <FileFormat></FileFormat>
      <IsWithCertsChain></IsWithCertsChain>
      <FilePath></FilePath>
      <ReplaceFile></ReplaceFile>
    </Export>
  </ExportCACertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI

Table name	ExportCACertificates
Table type	Multi-instance table
Row name	Export
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
FileFormat	The file format	N/A	Enumeration: • **1**—DER • **2**—PEM	N/A
IsWithCertsChain	If exported certificate contains CA certicate chain	N/A	Boolean: • **true**—Yes. • **false**—No. Defalut value is false	N/A
FilePath	The path of the file will export ceritificate to	N/A	String	The path must be existed in the device
ReplaceFile	If replace when the file is existed.	N/A	Boolean: • **true**—Yes. • **false**—No. Defalut value is false	N/A

PKI/ExportLocalCertficates

This table is used to export the local certificate.

XML structure

```
<PKI>
  <ExportLocalCertificates>
    <Export>
      <Domain></Domain>
      <FileFormat></FileFormat>
      <IsWithCertsChain></IsWithCertsChain>
      <IsWithKey></IsWithKey>
      <EncAlgID></EncAlgID>
      <Password></Password>
      <FilePath></FilePath>
      <ReplaceFile></ReplaceFile>
    </Export>
```

```
  </ExportLocalCertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	ExportLocalCertificates
Table type	Multi-instance table
Row name	Export
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
FileFormat	The file format	N/A	Enumeration: • **1**—DER • **2**—PKCS#12 • **3**—PEM	N/A
IsWithCerts Chain	If exported certificate contains CA certicate chain	N/A	Boolean: • **true**—Yes. • **false**—No. Defalut value is false	N/A
IsWithKey	If exported certificate contains private key	N/A	Boolean: • **true**—Yes. • **false**—No. Defalut value is false	N/A
EncAlgID	Identity of encryption algorithm	N/A	Unsigned integer. Value range: 1 to 2^32-1.	See table PKICapabilities for supported encryption algothrim.
Password	Password which will be used to encrypt the file when exported certificate contains private key	N/A	String **Case sensitive.**	**The password is required as follow:** • **The file format is PKCS12 and the certificate type is local** • **The file format is PEM, and it will export both local certificate and private key to the file**

Column name	Column description	Column type	Data type and restrictions	Remarks
FilePath	The path of the file	N/A	String	The directory must be existed in the device
ReplaceFile	If replace when the file is existed.	N/A	Boolean: • **true**—Yes. • **false**—No. Defalut value is false	N/A

PKI/DeleteCertificates

This table is used to delete the certificates.

XML structure

```
<PKI>
  <DeleteCertificates>
    <Delete>
      <Domain></Domain>
      <CertificateType></CertificateType>
    </Delete>
  </DeleteCertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DeleteCertificate
Table type	Multi-instance table
Row name	Delete
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:”~”,”*”,”\”,”|”,”:”,”.”,”<”,”>”,”””,”`”,”/”.
CertificateType	The type of certificate	Index	Enumeration: • **1**—CA • **2**—Local. • **3**—Peer.	It will delete local certificate,peer certificate,CRL,and CA certificate when the type is CA.

PKI/RequestCerificates

This table is used to request a certificate on line.

XML structure

```
<PKI>
  <RequestCertificates>
    <Request>
      <Domain></Domain>
      <Password></Password>
      <Filename></Filename>
      <FileMerge></FileMerge>
    </Request>
  </RequestCertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	RequestCertificates
Table type	Multi-instance table
Row name	Request
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
Password	The password value of certificate revocation.	N/A	String. Length: 1 to 31 characters. Case sensitive.	N/A
Filename	The file name for saving request with PKCS#10 format	N/A	String. Length: 1 to 256 characters. Case sensitive.	N/A
FileMerge	If the public-key is configured with both signature and	N/A	Boolean: • **true**—Yes. • **false**—No. • Defalut value is false	Phenomenon: There are three files ccc.txt-encryption / ccc.txt-signature / ccc.txt (the content is

Column name	Column description	Column type	Data type and restrictions	Remarks
	encryption, signature encryption and merging will be performed in the background.			a combination of encryption and signature)

PKI/AbortCertRequests

This table is used to abort the certificate request for a PKI domain.

XML structure

```
<PKI>
  <AbortCertRequests>
    <Abort>
      <Domain></Domain>
    </Abort>
  </AbortCertRequests>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	AbortCertRequests
Table type	Multi-instance table
Row name	Abort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".

PKI/RetrieveCerificates

This table is used to obtain a certificate from the certificate distribution server.

XML structure

```
<PKI>
  <RetrieveCertificates>
    <Retrieve>
      <Domain></Domain>
      <CertificateType></CertificateType>
      <PeerEntity></PeerEntity>
    </Retrieve>
  </RetrieveCertificates>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	RetrieveCertificates
Table type	Multi-instance table
Row name	Retrieve
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","."<">"""`"/".
CertificateType	The certificate type	Index	Enumeration: • **1**—CA • **2**—Local. • **3**—Peer.	N/A
PeerEntity	The peer entity name	N/A	String. Length: 1 to 31 characters. Case insensitive.	The column can be valid only when The certificate type is peer

PKI/RetrieveCRLs

This table is used to obtain CRLs.

XML structure

```
<PKI>
  <RetrieveCRLs>
```

```
    <Retrieve>
      <Domain></Domain>
    </Retrieve>
  </RetrieveCRLs>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	RetrieveCRLs
Table type	Multi-instance table
Row name	Retrieve
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:”~”,”*”,”\”,”|”,”:”,”.”,”<”,”>”,”"”,”`”,”/”.

PKI/DelPeerCertBySerialNumber

This table is used to delete the certificates by SerialNumber.

XML structure

```
<PKI>
  <DelPeerCertBySerialNumber>
    <Delete>
      <Domain></Domain>
      <SerialNumber></SerialNumber>
    </Delete>
  </DelPeerCertBySerialNumber>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DelPeerCertBySerialNumber

Table type	Multi-instance table
Row name	Delete
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
SerialNumber	The serial number of the peer ceritificate	Index	String. Length: 1 to 127 characters. Case insensitive.	N/A

PKI/ImportEncryptionKeyPair

This table is used to import an encryption key pair.Decrypt the encryption key depending on the existing signature secret key.

XML structure

```
<PKI>
  <ImportEncryptionKeyPair>
    <Import>
      <Domain></Domain>
      <Standard></Standard>
      <FileName></FileName>
      <DigitalEnvelope></DigitalEnvelope>
    </Import>
  </ImportEncryptionKeyPair>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	ImportEncryptionKeyPair
Table type	Multi-instance table
Row name	Import
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
Standard	Cryptographic algorithm usage specification	Index	Enumeration: • **1**—GBT35276-2017	N/A
FileName	Name of the file that contains the encryption key pair to be imported	N/A	String.	N/A
DigitalEnvelope	The contents of digital envelope	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PKI entity for the PKI domain		Case insensitive. Length: 1 to 31 characters.	
CertRequestFrom	The type of certificate request reception authority.	N/A	Enumeration: 1—CA. 2—RA.	N/A
CertRequestURL	The URL of the certificate request reception authority (CA or RA)	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	N/A
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CertRequestMode	The certificate request mode.	Data structure	Members include: Mode PWDType Password RenewBeforeExpire RenewReusePubKey RenewAutoAppendCN	N/A
Mode	The mode of certificate request	N/A	Enumeration: 1—Auto. 2—Manual. Default value is 2.	N/A
PWDType	The password type of certificate revocation.	N/A	Enumeration: 1—simple. 2—cipher.	The column can be valid only when Mode is Auto
Password	The password value of certificate revocation.	N/A	String. Length: 1 to 73 characters. Case sensitive.	The column can be valid only when Mode is Auto. Type simple string length is 1 to 31. Type cipher string length is 1 to 73.
RenewBeforeExpire	The minimum interval in days for certificate renewal request before expiraiton.	N/A	Unsigned integer: Value range:0 to 365.	The unit is day. The column can be valid only when Mode is Auto.
RenewReus	Reuse public	N/A	Boolean:	The column can be

Column name	Column description	Column type	Data type and restrictions	Remarks
ePubKey	key.		• **true**—Enable. • **false**—Disable. Default value is false.	valid only when Mode is Auto and RenewBeforeExpire is present.
RenewAuto AppendCN	Automatically append Common Name.	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	The column can be valid only when Mode is Auto and RenewBeforeExpire is present.
RootCertFin gerprint	The fingerprint for verifying the validity of the CA root certificate.	Data structure	Members include: Type Value	N/A
Type	The fingerprint type.	N/A	Enumeration: 1—MD5. 2—SHA1.	N/A
Value	The fingerprint value.	N/A	String: Length:32 or 40 hex characters Case sensitive.	Type MD5 is 32 hex string length. Type SHA1 is 40 hex string length.
LDAPServer	An LDAP server for a PKI domain	Data structure	Members include: Host PortNumber VRF	N/A
Host	The hostname of the LDAP server	N/A	String: Length:1 to 255 characters Case sensitive.	The string can be IPv4 address, IPv6 address, or domain name.
PortNumber	The port number of the LDAP server	N/A	Unsigned integer: Value range:1 to 65535 Default value is 389.	N/A
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLURL	the URL of the CRL repository.	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	The URL format is ldap://server_location or http://server_location, Server_location can be an IP address or a domain name.
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
CRLCheck	If check whether the certificate has been revoked by CRL	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is true.	N/A
Usage	Certificate usage for requesting certificate	Data structure	Members include: • IKE • SSLServer • SSLClient.	Can include one or more certificate usage at the same time.
IKE	Use certificate as the IKE	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
SSLServer	Use certificate as the SSL server certificates	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
SSLClient	Use certificate as the SSL client certificates	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
CertRequestPoll	The polling interval and the maximum number of attempts to query certificate request status.	Data structure	Members include: Count Interval	N/A
Count	The value of the maximum number	N/A	Unsigned integer: Value range:1 to 100 Default value is 50.	N/A
Interval	The value of the polling interval	N/A	Unsigned integer: Value range:5 to 168, in minutes Default value is 20.	N/A
SourceIP	The source IP address for PKI protocol packets.	Data structure	Members include: AddressType Address IfIndex	N/A
AddressType	The type of IP Address	N/A	Enumeration: 1—IPv4 2—IPv6	AddressType must be configured together with Address or IfIndex.
Address	The value of IP Address	N/A	IPv4 or IPv6	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Can not be configured together with Address. Some versions support interface name. For relevant information,

Column name	Column description	Column type	Data type and restrictions	Remarks
				see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
pkcs7EncryType	Encryption algorithm for the PKI domain	N/A	Unsigned integer.	See the PKICapabilities table in Comware V7 PKI NETCONF XML API Data Reference for supported encryption algorithms.
CRLUpdatePeriod	Update period of certificate revocation list(CRL)	N/A	Unsigned integer. Value range:1 to 720	Unit is hour When user designated a value , the CRL function is opened ,and PKI will get CRL from CDP every period. Default CRL update function is closed Delete the configuration to close CRL update function
RevocationMethodList	The method of certificate revocation.	Data structure	Members include: • Method.	N/A
Method	Certificate revocation name	N/A	String. Length: 1 to 10 characters.	Contains up to 2 Method in RevocationMethodList.
CRLUpdatePrefetch	Delayed crl update with random timer	Data structure	Members include: • CRLUpdatePrefetchMinutes • CRLUpdatePrefetchRandomly	N/A
CRLUpdatePrefetchMinutes	Update prefetch of certificate revocation list(CRL)	N/A	Unsigned integer. Value range:0 to 65535	N/A
CRLUpdatePrefetchRandomly	Whether to allowed to configure random values to get updated integer revocation list	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
TrustLocalCert	If check whether trust certificate for importing the Local certificate	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
BindSmartToken	Use certificate from	N/A	Boolean: • **true**—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Smarttoken		• **false**—Disable. Default value is false.	

PKI/DomainPubkeys

This table is used to reference the asymmetric keys for PKI domain.

XML structure

```
<PKI>
  <DomainPubkeys>
    <Pubkey>
      <Domain></Domain>
      <Type></Type>
      <Purpose></Purpose>
      <Name></Name>
      <Length></Length>
    </Pubkey>
  </DomainPubkeys>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainPubkeys
Table type	Multi-instance table
Row name	Pubkey
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can’t include:”~”,”*”,”\”,”|”,”:”,”.”,”<”,”>”,”””,”`”,”/”.
Type	Type of algorithm	Index	Enumeration: • **1**—RSA. • 2—DSA. • 3—ECDSA.	See the PKI/AuthorityAlgs table in Comware V7 PKI NETCONF XML API Data Reference for

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4—SM2 • 5—WAPI	supported algothrims.
Purpose	Key purpose	Index	Enumeration: • **1**—General • 2—Signature • 3—Encryption	ECDSA key and DSA key can be used for signature purpose, while RSA key can be used for all purpose.
Name	Key name	N/A	String. Length: 1 to 64 characters Case insensitive.	Only contain letters, number and “-“.
Length	Length of public key	N/A	Unsigned integer.	See table PKI/AuthorityAlgs for supported length.

PKI/Entities

This table is used to configure the PKI entities.

XML structure

```
<PKI>
  <Entities>
    <Entity>
      <EntityName></EntityName>
      <CommonName></CommonName>
      <Country></Country>
      <State></State>
      <Locality></Locality>
      <Organization></Organization>
      <OrganizationUnit></OrganizationUnit>
      <FQDN></FQDN>
      <IP>
        <Ipv4Address></Ipv4Address>
        <IfIndex></IfIndex>
      </IP>
      <Title></Title>
    </Entity>
  </Entities>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	Entities

Table type	Multi-instance table
Row name	Entity
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EntityName	PKI entity name	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
CommonName	The common name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Country	The country code	N/A	Text. Length: 2 to 2 characters.	Country code is decribed in ISO 3166-1
State	The state name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Locality	The locality name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Organization	The organization name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
OrganizationUnit	The unit name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
FQDN	The FQDN name	N/A	String. Length: 1 to 255 characters Case sensitive.	N/A
IP	The IP address	Data structure	Members include: • Ipv4Address. • IfIndex..	Either Ipv4Address or IfIndex can be specified.
Ipv4Address	Ipv4 address	N/A	Ipv4Address	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Get the primary Ipv4 address of the interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Title	Title name	N/A	Text, case sensitive. Length: 1 to 63 characters.	The value cannot contain a comma.

PKI/CertAccessPolicies

This table is used to configure the certificate access control policies.

XML structure

```
<PKI>
  <CertAccessPolicies>
    <Policy>
      <Name></Name>
    </Policy>
  </CertAccessPolicies>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAccessPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAccessRules

This table is used to configure the rules of the certificate access control policy.

XML structure

```
<PKI>
  <CertAccessRules>
    <Rule>
      <Policy></Policy>
      <RuleID></RuleID>
      <Action></Action>
      <AttributeGroup></AttributeGroup>
    </Rule>
  </CertAccessRules>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAccessRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
RuleID	Index of the rule in the access control policy.	Index	Unsigned integer. Value range:1 to 16	The smaller the RuleID is, the higher the priority is.
Action	How to operate the certificate that match the rule	N/A	Enumeration: • **1**—Permit • **2**—Deny	N/A
AttributeGroup	The name of certificate attribute group	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAttributeGroups

This table is used to configure the certificate attribute groups.

XML structure

```
<PKI>
  <CertAttributeGroups>
    <Group>
      <Name></Name>
    </Group>
  </CertAttributeGroups>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAttributeGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAttributes

This table is used to configure the attributes of the certificate attribute groups.

XML structure

```
<PKI>
  <CertAttributes>
    <Attribute>
      <Group></Group>
      <AttributeID></AttributeID>
      <Object></Object>
      <Item></Item>
      <Operator></Operator>
      <Value></Value>
    </Attribute>
```

```
  </CertAttributes>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAttributes
Table type	Multi-instance table
Row name	Attribute
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
AttributeID	Index of the attribute in the certificate attribute group	Index	Unsigned integer. Value range:1 to 16	The smaller the AttributeID is, the higher the priority is.
Object	The object which to be matched	N/A	Enumeration: • **1**—alt-subject-name • **2**—issuer-name • **3**—subject-name	N/A
Item	The item in the object	N/A	Enumeration: • **1**—DN • **2**—FQDN • **3**—IpAddress	It's can be each value when the object is subject-name or issuer-name, but only can be FQDN or IpAddress when the object is alt-subject-name.
Operator	How to operate the item	N/A	Enumeration: • **1**—contain • **2**—equal • **3**—not contain • **4**—not equal	N/A
Value	The value that be used to match with item.	N/A	String. Length: 1 to 255 characters. Case insensitive.	N/A

PKI/StoragePath

This table is used to configure the PKI storage path.

XML structure

```
<PKI>
  <StoragePath>
    <StorageCertPath></StorageCertPath>
    <StorageCRLPath></StorageCRLPath>
  </StoragePath>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	StoragePath
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StorageCert Path	The PKI certificate storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"
StorageCRL Path	The PKI CRL storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"

PKI/GlobalConfiguration

This table is used to configure IKE global configuration.

XML structure

```
<PKI>
  <GlobalConfiguration>
    <LogSwitch>
      <LocalCertWillExpire></LocalCertWillExpire>
```

```
      <LocalCertHasExpired></LocalCertHasExpired>
    </LogSwitch>
  </GlobalConfiguration>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	GlobalConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogSwitch	Local certificate expiration reminder function	Data structure	Members include: • LocalCertWillExpire • LocalCertHasExpired	N/A
LocalCertWillExpire	Whether to print the log when the local certificate is about to expire	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
LocalCertHasExpired	Whether to print logs after the local certificate expires	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A

PKI/SmartTokenConfiguration

This table is used to configure smart token settings.

XML structure

```
<PKI>
  <SmartTokenConfiguration>
      <UserPin></UserPin>
  </SmartTokenConfiguration>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	SmartTokenConfiguration
Table type	Multi-instance table
Row name	SmartToken
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserPin	Unique user pin of the smart token.	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

Table description

Item	Description
Feature name	PKI
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can’t include:”~”,”*”,”\”,”|”,”:”,”.”,”<”,”>”,”””,”`”,”/”.
CAIdentifier	CA identifier name.	N/A	String. Length: 1 to 63 characters. Case sensitive.	N/A
Entity	Reference a PKI entity for the PKI domain	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CertRequestFrom	The type of certificate request reception authority.	N/A	Enumeration: 1—CA. 2—RA.	N/A
CertRequestURL	The URL of the certificate request reception authority (CA or RA)	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	N/A
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CertRequestMode	The certificate request mode.	Data structure	Members include: Mode RenewBeforeExpire RenewReusePubKey RenewAutoAppendCN	N/A
Mode	The type of Mode	N/A	Enumeration: 1—Auto. 2—Manual. Default value is 2.	N/A
RenewBeforeExpire	The minimum interval in days for certificate renewal request before expiraiton.	N/A	Unsigned integer: Value range:0 to 365.	The unit is day. The column can be valid only when Mode is Auto.
RenewReusePubKey	Reuse public key.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The column can be valid only when Mode is Auto and RenewBeforeExpire is present.
RenewAutoAppendCN	Automatically append Common Name.	N/A	Boolean: • **true**—Enable. • **false**—Disable.	The column can be valid only when Mode is Auto and RenewBeforeExpire is present.
RootCertFingerprint	The fingerprint for verifying the validity of the CA root certificate.	Data structure	Members include: Type Value	N/A
Type	The fingerprint type.	N/A	Enumeration: 1—MD5.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			2—SHA1.	
Value	The fingerprint value.	N/A	String: Length:32 or 40 hex characters Case sensitive.	Type MD5 is 32 hex string length. Type SHA1 is 40 hex string length.
LDAPServer	An LDAP server for a PKI domain	Data structure	Members include: Host PortNumber VRF	N/A
Host	The hostname of the LDAP server	N/A	String: Length:1 to 255 characters Case sensitive.	The string can be IPv4 address, IPv6 address, or domain name.
PortNumber	The port number of the LDAP server	N/A	Unsigned integer: Value range:1 to 65535 Default value is 389.	N/A
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLURL	The URL of the CRL repository.	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	The URL format is ldap://server_location or http://server_location, Server_location can be an IP address or a domain name.
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLCheck	If check whether the certificate has been revoked by CRL	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is true.	N/A
Usage	Certificate usage for requesting certificate	Data structure	Members include: • IKE • SSLServer • SSLClient.	Can include one or more certificate usage at the same time.
IKE	Use certificate as the IKE	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
SSLServer	Use certificate as the SSL server	N/A	Boolean: • **true**—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	certificates		• **false**—Disable.	
SSLClient	Use certificate as the SSL client certificates	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
CertRequestPoll	The polling interval and the maximum number of attempts to query certificate request status.	Data structure	Members include: Count Interval	N/A
Count	The value of the maximum number	N/A	Unsigned integer: Value range:1 to 100 Default value is 50.	N/A
Interval	The value of the polling interval	N/A	Unsigned integer: Value range:5 to 168, in minutes Default value is 20.	N/A
SourceIP	The source IP address for PKI protocol packets.	Data structure	Members include: AddressType Address IfIndex	N/A
AddressType	The type of IP Address	N/A	Enumeration: 1—IPv4 2—IPv6	N/A
Address	The value of IP Address	N/A	IPv4 or IPv6	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Get the primary IP address of the interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.	N/A
pkcs7EncryType	Encryption algorithm for the PKI domain	N/A	Unsigned integer.	See table PKICapabilities for supported encryption algorithms.
CRLUpdatePeriod	Update period of certificate revocation	N/A	Unsigned integer. Value range:1 to 720	Unit is hour When user designated

Column name	Column description	Column type	Data type and restrictions	Remarks
	list(CRL)			a value , the CRL function is opened ,and PKI will get CRL from CDP every period. Default CRL update function is closed Delete the configuration to close CRL update function
Revocation MethodList	The method of certificate revocation.	Data structure	Members include: • Method.	N/A
Method	Certificate revocation name	N/A	String. Length: 1 to 10 characters.	Contains up to 2 Method in RevocationMethodList.
CRLUpdate Prefetch	Delayed crl update with random timer	Data structure	Members include: • CRLUpdatePrefetchMinutes • CRLUpdatePrefetchRandomly	N/A
CRLUpdate PrefetchMinutes	Update prefetch of certificate revocation list(CRL)	N/A	Unsigned integer. Value range:0 to 65535	N/A
CRLUpdate PrefetchRandomly	Whether to allowed to configure random values to get updated integer revocation list	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
TrustLocalCert	If check whether trust certificate for importing the Local certificate	N/A	Boolean: • **true**—Enable. • **false**—Disable.	N/A
BindSmartToken	Use certificate from Smarttoken	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A

PKI/DomainPubkeys

This table is used to get the asymmetric keys of PKI domain.

XML structure

```
<PKI>
  <DomainPubkeys>
```

```
    <Pubkey>
      <Domain></Domain>
      <Type></Type>
      <Purpose></Purpose>
      <Name></Name>
      <Length></Length>
    </Pubkey>
  </DomainPubkeys>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainPubkeys
Table type	Multi-instance table
Row name	Pubkey
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:”~”,”*”,”\”,”|”,”:”,”.”,”<”,”>”,”””,”`”,”/”.
Type	Type of algorithm	Index	Enumeration: • **1**—RSA. • **2**—DSA. • 3—ECDSA. • 4—SM2. • 5—WAPI.	See table PKI/AuthorityAlgs for supported encryption algothrim.
Purpose	Key purpose	Index	Enumeration: • **1**—General • **2**—Signature • 3—Encryption	ECDSA key and DSA key can be used for signature purpose, while RSA key can be used for all purpose.
Name	Key name	N/A	String. Length: 1 to 64 characters Case insensitive.	Only contain letters, number and “-“.
Length	Length of public key	N/A	Unsigned integer.	See table PKI/AuthorityAlgs for supported length.

PKI/Entities

This table is used to get the PKI entities.

XML structure

```
<PKI>
  <Entities>
    <Entity>
      <EntityName></EntityName>
      <CommonName></CommonName>
      <Country></Country>
      <State></State>
      <Locality></Locality>
      <Organization></Organization>
      <OrganizationUnit></OrganizationUnit>
      <FQDN></FQDN>
      <IP>
        <Ipv4Address></Ipv4Address>
        <IfIndex></IfIndex>
        <IfName></IfName>
      </IP>
      <Title></Title>
    </Entity>
  </Entities>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	Entities
Table type	Multi-instance table
Row name	Entity
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EntityName	PKI entity name	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
CommonName	The common name	N/A	Text. Length: 1 to 63 characters.	Comma can not be contained.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Case sensitive.	
Country	The country code	N/A	Text. Length: 2 to 2 characters.	Country code is decribed in ISO 3166-1
State	The state name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Locality	The locality name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Organization	The organization name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
OrganizationUnit	The unit name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
FQDN	The FQDN name	N/A	String. Length: 1 to 255 characters Case sensitive.	N/A
IP	The IP address	Data structure	Members include: • Ipv4Address. • IfIndex..	Either Ipv4Address or IfIndex can be specified.
Ipv4Address	Ipv4 address	N/A	Ipv4Address	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Get the primary Ipv4 address of the interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface Name	N/A	String,Length: 1 to 47 characters.	N/A
Title	Title name	N/A	Text, case sensitive. Length: 1 to 63 characters.	The value cannot contain a comma.

PKI/CertAccessPolicies

This table is used to get the certificate access control policies.

XML structure

```
<PKI>
  <CertAccessPolicies>
    <Policy>
      <Name></Name>
    </Policy>
  </CertAccessPolicies>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAccessPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAccessRules

This table is used to get the rules of the certificate access control policy.

XML structure

```
<PKI>
  <CertAccessRules>
    <Rule>
      <Policy></Policy>
      <RuleID></RuleID>
      <Action></Action>
      <AttributeGroup></AttributeGroup>
    </Rule>
  </CertAccessRules>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAccessRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
RuleID	Index of the rule in the access control policy.	Index	Unsigned integer. Value range:1 to 16	The smaller the RuleID is, the higher the priority is.
Action	How to operate the certificate that match the rule	N/A	Enumeration: • **1**—Permit • **2**—Deny	N/A
AttributeGroup	The name of certificate attribute group	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAttributeGroups

This table is used to get the certificate attribute groups.

XML structure

```
<PKI>
  <CertAttributeGroups>
    <Group>
      <Name></Name>
    </Group>
  </CertAttributeGroups>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAttributeGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

PKI/CertAttributes

This table is used to get the attributes of the certificate attribute groups.

XML structure

```
<PKI>
  <CertAttributes>
    <Attribute>
      <Group></Group>
      <AttributeID></AttributeID>
      <Object></Object>
      <Item></Item>
      <Operator></Operator>
      <Value></Value>
    </Attribute>
  </CertAttributes>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertAttributes
Table type	Multi-instance table
Row name	Attribute

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
AttributeID	Index of the attribute in the certificate attribute group	Index	Unsigned integer. Value range:1 to 16	The smaller the AttributeID is, the higher the priority is.
Object	The object which to be matched	N/A	Enumeration: • **1**—alt-subject-name • **2**—issuer-name • **3**—subject-name	N/A
Item	The item in the object	N/A	Enumeration: • **1**—DN • **2**—FQDN • **3**—IpAddress	It's can be each value when the object is subject-name or issuer-name, but only can be FQDN o IpAddress when the object is alt-subject-name.
Operator	How to operate the item	N/A	Enumeration: • **1**—contain • **2**—equal • **3**—not contain • **4**—not equal	N/A
Value	The value that be used to match with item.	N/A	String. Length: 1 to 255 characters. Case insensitive.	N/A

PKI/StoragePath

This table is used to get the PKI storage path.

XML structure

```
<PKI>
  <StoragePath>
    <StorageCertPath></StorageCertPath>
    <StorageCRLPath></StorageCRLPath>
  </StoragePath>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	StoragePath
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StorageCert Path	The PKI certificate storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"
StorageCRL Path	The PKI CRL storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"

PKI/DomainCACerts

This table is used to get the CA certificates of the PKI domain

XML structure

```
<PKI>
  <DomainCACerts>
    <Cert>
      <Domain></Domain>
      <SerialNumber></SerialNumber>
      <Issuer></Issuer>
      <Subject></Subject>
      <Validity>
        <NotBefore></NotBefore>
        <NotAfter></NotAfter>
      </Validity>
      <IsLowestCA></IsLowestCA>
      <DetailInfoText></DetailInfoText>
    </Cert>
  </DomainCACerts>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainCACerts
Table type	Multi-instance table
Row name	Cert
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|","-","","<",">","""","`","/".
SerialNumber	The serial number of the ceritificate	Index	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A
Validity	The validity date of the certificate	Data structure	Members include: • NotBefore. • NotAfter.	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
IsLowestCA	If the CA certificate is the lowest in the PKI domain	N/A	Boolean: • **true**—The CA certificate is lowest. • **false**—The CA certificate isn't lowest.	N/A
DetailInfoText	The text of the ca certificate or the certificate chain.	N/A	String	N/A

PKI/DomainLocalCerts

This table is used to get the local certificates of the PKI domain

XML structure

```
<PKI>
  <DomainLocalCerts>
    <Cert>
      <Domain></Domain>
      <KeyUsage></KeyUsage>
      <SerialNumber></SerialNumber>
      <Issuer></Issuer>
      <Subject></Subject>
      <Validity>
        <NotBefore></NotBefore>
        <NotAfter></NotAfter>
      </Validity>
      <DetailInfoText></DetailInfoText>
    </Cert>
  </DomainLocalCerts>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainLocalCerts
Table type	Multi-instance table
Row name	Cert
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","| ","·" ," · ," <",">" ,"""" ,"` ","/".
KeyUsage	The key usage of the certificate	Index	Enumeration: • **1**—General. • **2**—Signature. • 3—Encryption.	There is only one special usage certificate in one domain, and general usage certificate can't appear with signature/encryption certificate at the same time.
SerialNumber	The serial number of the	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ceritificate			
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A
Validity	The validity date of the certificate	Data structure	Members include: • NotBefore. • NotAfter.	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
DetailInfoText	The text of the local certificate or the certicicate chain	N/A	String	N/A

PKI/CertificateRequests

This table is used to get the certificate requests for the domain

XML structure

```
<PKI>
  <CertificateRequests>
    <Request>
      <Domain></Domain>
      <Password></Password>
      <Value></Value>
    </Request>
  </CertificateRequests>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertificateRequests
Table type	Multi-instance table
Row name	Request
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|","·","·","<",">","""","`","/".
Password	The challenge word which is needed when revoke the certificate	N/A	String. Length: 1 to 31 characters. Case sensitive.	N/A
Value	The certificate request value	N/A	String	N/A

PKI/ImportCertStatus

This table is used to get the status when import certificate to a domain

XML structure

```
<PKI>
  <ImportCertStatus>
    <Status>
      <Domain></Domain>
      <CertificateType></CertificateType>
      <FilePath></FilePath>
      <Password></Password>
      <NewPubKeyName></NewPubKeyName>
      <IsNewPubKeyExist></IsNewPubKeyExist>
      <IsPubKeyConfiged></IsPubKeyConfiged>
      <IsCorrectFormat></IsCorrectFormat>
      <IsNoCA></IsNoCA>
      <IsKeyPairExist></IsKeyPairExist>
      <IsKeyPairMatched></IsKeyPairMatched>
      <CertFingerprint></CertFingerprint>
      <DomainFingerprint></DomainFingerprint>
      <IsFingerprintMatched></IsFingerprintMatched>
      <NeedReplaceCACert></NeedReplaceCACert>
      <NeedReplaceLocalCert></NeedReplaceLocalCert>
      <NeedReplaceKeyPair></NeedReplaceKeyPair>
      <CertVerifyErrStr></CertVerifyErrStr>
    </Status>
  </ImportCertStatus>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	ImportCertStatus
Table type	Multi-instance table
Row name	Status
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","·","<",">","""","`","/".
CertificateType	The type of certificate	Index	Enumeration: • **1**—CA • **2**—Local.	N/A
FilePath	The path of the file contain certificate	Index	String	The file must be existed in the device
Password	Password which will be used to encrypt the file when the certificate contains private key.	N/A	String **Case sensitive.**	**The password is required as follow:** • **The file format is PKCS#12 and the certificate type is local** • **The file format is PEM, and there is local certificate and private key in the file**
NewPubKeyName	The name of new public key.	N/A	String. Length: 1 to 64 characters. Case insensitive.	Only contain letters, number and "-". If the name is empty and there is no key name in the domain, it will use the domain name as the key name.
IsNewPubKeyExist	If the new public key is existed	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
IsPubKeyConfiged	If there is public key configure in	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the domain			
IsCorrectFormat	If the file format is correct	N/A	Boolean: • **true**—Yes. • **false**—No.	Error information
IsNoCA	If thers is no any CA certificate when import	N/A	Boolean: • **true**—Yes. • **false**—No.	Error information
IsKeyPairExisted	If the key pair is existed	N/A	Boolean: • **true**—Yes. • **false**—No.	If there isn't key pair in both file and device, the value is false, otherwise it is true Error information
IsKeyPairMatched	If the key pair is matched with the ceritificate	N/A	Boolean: • **true**—Yes. • **false**—No.	Error information
CertFingerprint	The fingerprint of the root certificate	N/A	String. Length: 1 to 127 characters.	The column is appended only when there is new root certificate be imported to device Confirm informtion
DomainFingerprint	The fingerprint configed in the PKI domain	N/A	String. Length: 1 to 127 characters.	The column is appended only when the PKI domain configured the root fingerprint
IsFingerprintMatched	If the root fingerprint is matched	N/A	Boolean: • **true**—Yes. • **false**—No.	Error information
NeedReplaceCACert	If the ca certificate need to be replaced	N/A	Boolean: • **true**—Yes. • **false**—No.	Confirm informtion
NeedReplaceLocalCert	If the local certificate need to be replaced	N/A	Boolean: • **true**—Yes. • **false**—No.	Confirm informtion
NeedReplaceKeyPair	If the key pair need to be replaced	N/A	Boolean: • **true**—Yes. • **false**—No.	Confirm informtion
CertVerifyErrStr	The result of the validate when import	N/A	String. Length: 1 to 255 characters.	The column is appended only when it is failed to verify the certificate

PKI/AuthorityAlgs

This table is used to get the authority algorithm

XML structure

```
<PKI>
  <AuthorityAlgs>
    <Alg>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <MinLength></MinLength>
      <MaxLength></MaxLength>
      <DefaultLength></DefaultLength>
    </Alg>
  </AuthorityAlgs>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	AuthorityAlgs
Table type	Multi-instance table
Row name	Alg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	
AlgName	Name of algorithm	N/A	String. Length: 1 to 255 characters Case insensitive.	The name of supported algorithm
MinLength	Minimal length of supported algorithm	N/A	Unsigned integer.	N/A
MaxLength	Maximal length of supported algorithm	N/A	Unsigned integer.	N/A
DefaultLength	Default length of supported	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm			

PKI/PKICapabilities

This table is used to get the PKI capabilities

XML structure

```
<PKI>
  <PKICapabilities>
    <PKICapability>
      <EncAlgID></EncAlgID>
      <Name></Name>
    </PKICapability>
  </PKICapabilities>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	PKICapabilities
Table type	Multi-instance table
Row name	PKICapability
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EncAlgID	Identity of encryption algorithm	Index	Unsigned integer. Value range: 1 to 2^32-1.	N/A
Name	Name of encryption algorithm	N/A	String. Length: 1 to 255 characters. Case insensitive.	The name of supported encryption algorithm

PKI/CertRequestStatus

This table is used to get the certificate request status.

XML structure

```
<PKI>
  <CertRequestStatus>
    <Status>
      <Domain></Domain>
      <KeyUsage></KeyUsage>
      <PollingInterval></PollingInterval>
      <LastPollingTime></LastPollingTime>
      <RemainPollingCount></RemainPollingCount>
    </Status>
  </CertRequestStatus>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	CertRequestStatus
Table type	Multi-instance table
Row name	Status
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|",":","."","<",">","""","`","/".
KeyUsage	Key usage for requesting certificate.	Index	Enumeration: • 1—general. • 2—signature. • 3—encryption.	N/A.
PollingInterval	The polling interval	N/A	Unsigned integer: Value range:5 to 168, in minutes	N/A
LastPollingTime	The last polling time	N/A	DateTime	N/A
RemainPollingCount	Remain polling attempts	N/A	Unsigned integer: Value range:1 to 100.	N/A

PKI/DomainPeerCerts

This table is used to get the peer certificates of the PKI domain.

XML structure

```
<PKI>
  <DomainPeerCerts>
    <Cert>
      <Domain></Domain>
      <SerialNumber></SerialNumber>
      <Issuer></Issuer>
      <Subject></Subject>
      <Validity>
        <NotBefore></NotBefore>
        <NotAfter></NotAfter>
      </Validity>
      <DetailInfoText></DetailInfoText>
    </Cert>
  </DomainPeerCerts>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainPeerCerts
Table type	Multi-instance table
Row name	Cert
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:”~”,”*”,”\”,”|”,”-”,”.”,”<”,”>”,”“”,”`”,”/”.
SerialNumber	The serial number of the ceritificate	Index	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Validity	The validity date of the certificate	Data structure	Members include: • NotBefore. • NotAfter.	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
DetailInfoText	The text of the peer certificate .	N/A	String	N/A

PKI/DomainsCRL

This table is used to get the CRL saved at the local for a PKI domain.

XML structure

```
<PKI>
  <DomainsCRL>
    <DomainCRL>
      <Domain></Domain>
      <Issuer></Issuer>
      <LastUpdate></LastUpdate>
      <NextUpdate></NextUpdate>
    </DomainCRL>
  </DomainsCRL>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	DomainsCRL
Table type	Multi-instance table
Row name	DomainCRL
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI	Index	String.	Can't include:"~","*","\","|

Column name	Column description	Column type	Data type and restrictions	Remarks
	domain name		Length: 1 to 31 characters. Case insensitive.	”,”:”,”.”,”<”,”>”,”””,”`”,”/”.
Issuer	The issuer name	N/A	String	N/A
LastUpdate	The last update time.	N/A	DateTime	N/A
NextUpdate	The next update time.	N/A	DateTime	N/A

PKI/PKIValidateResults

This table is used to get the validity of certificates.

XML structure

```
<PKI>
  <PKIValidateResults>
    <Result>
      <Domain></Domain>
      <CertType></CertType>
      <SerialNum></SerialNum>
      <Issuer></Issuer>
      <Subject></Subject>
      <ErrCode></ErrCode>
      <ErrDescription></ErrDescription>
    </Result>
  </PKIValidateResults>
</PKI>
```

Table description

Item	Description
Feature name	PKI
Table name	PKIValidateResults
Table type	Multi-instance table
Row name	Result
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~","*","\","|","·","·","<",">","""","`","/".
CertType	The certificate type.	Index	Enumeration: • **1**—CA • **2**—Local	N/A
SerialNum	The serial number of the ceritificate	Index	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The subject name	N/A	String	N/A
ErrCode	The error code.	N/A	Unsigned integer: Value range: 0 to 255.	0 means verification through,others fail.
ErrDescription	The error description.	N/A	String. Length: 1 to 127 characters.	N/A

PKI/GlobalConfiguration

This table displays PKI global configuration information.

XML structure

```
<PKI>
  <GlobalConfiguration>
    <LogSwitch>
      <LocalCertWillExpire></LocalCertWillExpire>
      <LocalCertHasExpired></LocalCertHasExpired>
    </LogSwitch>
  </GlobalConfiguration>
</PKI>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogSwitch	Local certificate expiration reminder function	Data structure	Members include: • LocalCertWillExpire • LocalCertHasExpired	N/A
LocalCertWillExpire	Whether to print the log when the local certificate is about to expire	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A
LocalCertHasExpired	Whether to print logs after the local certificate expires	N/A	Boolean: • **true**—Enable. • **false**—Disable. Default value is false.	N/A

PKI/SmartTokenConfiguration

This table is used to get smart token configuration.

XML structure

```
<PKI>
  <SmartTokenConfiguration>
     <UserPin></UserPin>
  </SmartTokenConfiguration>
</PKI>
```

Table description

Item	**Description**
Feature name	PKI
Table name	SmartTokenConfiguration
Table type	Multi-instance table
Row name	SmartToken
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserPin	Unique user pin of the smart token.	N/A	String, case sensitive. Length: 1 to 31 characters.	If PIN is configured, return all asterisks.

PKI/SmartTokenInfo

This table is used to get smart token information.

XML structure

```
<PKI>
  <SmartTokenInfo>
      <SignatureCertificate>
        <SerialNumber></SerialNumber>
        <Issuer></Issuer>
        <Subject></Subject>
      </SignatureCertificate>
      <EncryptionCertificate>
        <SerialNumber></SerialNumber>
        <Issuer></Issuer>
        <Subject></Subject>
      </EncryptionCertificate>
  </SmartTokenInfo>
</PKI>
```

  <PriorityPolicy>
    <PSEPolicyMode></PSEPolicyMode>
    <PDPolicyMode></PDPolicyMode>
  </PriorityPolicy>
</PoE>
```

Table description

Item	Description
Feature name	PoE
Table name	PriorityPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEPolicyMode	Mode of PSE power policy.	N/A	Enumeration. • **1 – disabled (default).** • **2 – priority.**	The PSE policy only applies to the situation that when a new board (PSE) is inserted, and the power is overload. A value of priority(2) means that the power will stop supplying to the low priority PSE. A value of disabled(1) means that the power will stop supplying to the new inserted PSE.

Column name	Column description	Column type	Data type and restrictions	Remarks
PDPolicyMode	Mode of PD power policy	N/A	Enumeration. • **1 – disabled (default).** • **2 – priority.**	The PD policy only applies to the situation that when a new PD is inserted, and the power of PSE is overload. A value of priority(2) means that the power will stop supplying to the low priority port PD. A value of disabled(1) means that the slot stop supplying to the new inserted PD.

PoE/Powers

This table contains PoE Power information.

XML structure

```
<PoE>
  <Powers>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see *Ifmgr NETCONF XML API Configuration Reference*.
AdminEnable	The admin enable status of an interface which can provide PSE functions	N/A	Boolean:. • **1 – true.** • **2 – false.**	N/A
PairsControlAbility	The capability of controlling the power pairs functionality to switch pins for sourcing power	N/A	Boolean:. • **1 – true.** • **2 – false.**	N/A
Pairs	The power pairs in use.	N/A	Enumeration. • **1 – signal.** • **2 – spare.**	signal means that the signal pairs only are in use. spare means that the spare pairs only are in use.

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectionStatus	The operational status of the port PD detection	N/A	Enumeration. • **1 – disabled.** • **2 – searching.** • **3 – deliveringPower.** • **4 – fault.** • **5 – test.** • **6 – otherFault.** • **7 – pdDisconnected.**	disabled indicates that the PSE State diagram is in the state DISABLED. deliveringPower indicates that the PSE State diagram is in the state POWER_ON for a duration greater than the limit max (see IEEE Std 802.3af Table 33-5 tlim). fault indicates that the PSE State diagram is in the state TEST_ERROR. test indicates that the PSE State diagram is in the state TEST_MODE. otherFault indicates that the PSE State diagram is in the state IDLE due to the variable error_conditions. searching indicates the PSE State diagram is in a state other than those listed above. pdDisconnected indicates that the PSE State diagram is in the state DISCONNECTED.
Priority	The power priority	N/A	Enumeration. • **1 – critical.** • **2 – high.** • **3 – low.**	N/A
MPSAbsentCounter	The counter for interface state diagram transitions directly from the state POWER_ON to the state IDLE	N/A	Unsigned integer.	N/A
PDDescription	The description for the Pd that is connected to the port.	N/A	String. Length: 1 to 80 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PowerClassifications	The Classification of the PD connected to the PoE interface	N/A	Enumeration. • **1 – class0.** • **2 – class1.** • **3 – class2.** • **4 – class3.** • **5 – class4.** • **6 – class5.** • **7 – class6.** • **8 – class7.** • **9 – class8.**	N/A
InvalidSignatureCounter	This counter is incremented when the PSE state diagram enters the state SIGNATURE_INVALID	N/A	Unsigned integer.	N/A
PowerDeniedCounter	This counter is incremented when the PSE state diagram enters the state POWER_DENIED	N/A	Unsigned integer.	N/A
OverLoadCounter	This counter is incremented when the PSE state diagram enters the state ERROR_DELAY_OVER	N/A	Unsigned integer.	N/A
ShortCounter	This counter is incremented when the PSE state diagram enters the state ERROR_DELAY_SHORT	N/A	Unsigned integer.	N/A
FaultDescription	The fault category	N/A	String. Length: 1 to 255 characters.	N/A
PeakPower	The peak power (mW)	N/A	Unsigned integer.	N/A
AveragePower	The average power (mW)	N/A	Unsigned integer.	N/A
CurrentPower	The current power (mW)	N/A	Unsigned integer.	N/A
PowerLimit	The max power (mW)	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PowerModeDefault	The default mode of PoE port power mode	N/A	Enumeration. • **1 – signal.** • **2 – spare.**	N/A
ProfileIndex	The profile index applied to the Poe port	N/A	Unsigned integer.	N/A
ForcePower	The force power status of an interface which can provide PSE functions	N/A	Boolean: • **1 – true.** • **2 – false.**	N/A

PoE/Profiles

This table contains PoE profile information.

XML structure

```
<PoE>
  <Profiles>
    <Profile>
      <ProfileIndex></ProfileIndex>
      <ProfileName></ProfileName>
      <PowerMode></PowerMode>
      <PowerLimit></PowerLimit>
      <Priority></Priority>
      <Pairs></Pairs>
      <ApplyNumber></ApplyNumber>
    </Profile>
  </Profiles>
</PoE>
```

Table description

Item	Description
Feature name	PoE
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileIndex	Index of the profile	Index	Unsigned integer.	N/A
ProfileName	The name of profile	N/A	String. Length: 1 to 15 characters.	N/A
PowerMode	The power status of an interface which can provide PSE functions	N/A	Enumeration. • **1 – disabled.** • **2 – enabled.**	N/A
PowerLimit	The max power (mW)	N/A	Unsigned integer.	N/A
Priority	The power priority of the specified interface	N/A	Enumeration. • **1 – critical.** • **2 – high.** • **3 – low.**	N/A
Pairs	The power pairs in use.	N/A	Enumeration. • **1 – signal.** • **2 – spare.**	signal means that the signal pairs only are in use. spare means that the spare pairs only are in use.
ApplyNumber	The number of this profile which has been applied.	N/A	Unsigned integer.	N/A

PoE event stream

PoE stream description.

PSEPower event

This event is used to report PSE usage power over threshold usage. Only supported on the default MDC.

XML structure for event subscription

```
<PSEPowerEvent>
  <PSEPower>
    <PSEID></PSEID>
  </PSEPower>
</PSEPowerEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PoE</stream>
    <filter type="subtree">
      <PSEPowerEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
        <PSEPower>
        <PSEID>1</PSEID>
        </PSEPower>
      </PSEPowerEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	PoE
Event name	PSEPowerEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/PoE:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions
PSEID	Index of the PSE which the port belongs to	Unsigned integer.

XML structure for event report

```
<PSEPowerEvent>
  <PSEPower>
    <PSEID></PSEID>
    <Chassis></Chassis>
    <Slot></Slot>
    <SubSlot></SubSlot>
    <Event></Event>
    <CurrentPower></CurrentPower>
  </PSEPower>
</PSEPowerEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PSEPowerEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
    <PSEPower>
      <PSEID >1</PSEID>
      <Chassis>1</Chassis>
      <Slot>1</Slot>
      <SubSlot>65535</SubSlot>
      <Event>2</Event>
      <CurrentPower>3000</CurrentPower>
    </PSEPower>
  </PSEPowerEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Unsigned integer.	
Chassis	ID of the member where the power supply resides	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 65535.
Slot	The number of slot where the power supply resides	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535.
SubSlot	The number of Subslot where the PSE resides	Unsigned integer. Value range: 1 to 65535.	If there is no subslot number, return 65535.
Event	Indicate what happens on PSE port.	Enumeration: • 1 - Power consumption exceed threshold • 2 - Power consumption recede below threshold	
CurrentPower	The current power (mW)	Unsigned integer.	

PoEPort event

This event is used to report PSE port detection status change.

XML structure for event subscription

```
<PoEPortEvent>
  <PoEPort>
    <PSEID></PSEID>
    <InterfaceName></InterfaceName>
  </PoEPort>
</PoEPortEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PoE</stream>
    <filter type="subtree">
      <PoEPortEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
        <PoEPort>
          <PSEID>1</PSEID>
          <InterfaceName>GigabitEthernet1/0/1</InterfaceName>
        </PoEPort>
      </PoEPortEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	PoE
Event name	PoEPortEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/PoE:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
PSEID	Index of the PSE which the port belongs to	Unsigned integer.	No
Interface Name	Interface name	String. Length: 2 to 47 characters. Example:	No

Column name	Column description	Data type and restrictions	Support for extended queries
		GigabitEthernet2/0/2	

XML structure for event report

```
<PoEPortEvent>
  <PoEPort>
    <PSEID></PSEID>

</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether port security is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
MACMove	Whether to enable port security MAC move	N/A	Boolean: • **true**—Yes. • **false**—No (default).	N/A
MoveType	MAC move type	N/A	Enumeration: • **0**—All (default). • **1**—Port move on a device. • **2**—VLAN move on a port.	This column must be empty when you disable MAC move. The following MAC move types are available: • **All**—This type combines port move on a device and VLAN move on a port. • **Port move on a device**—The device allows an online user authenticated through 802.1X or MAC authentication on one port to be reauthenticated and come online on another port without going offline first. • **VLAN move on a port**—The device allows an online user authenticated through 802.1X or MAC authentication in one VLAN to be reauthenticated and come online in another VLAN on the same port without going offline first.
AuthorStrict	Whether to log off 802.1X or MAC authenticated users that have failed authorization	N/A	Boolean: • **true**—Logs off the users. • **false**—Keeps the users online (default).	N/A
SecMACAgingInterval	Value for the secure MAC address aging timer	N/A	Unsigned integer. Value range: 0 to 129600 minutes. Default: 0 minutes.	N/A
IntrusionShutdownInterval	Value for intrusion protection's port shutdown timer	N/A	Unsigned integer Value range: 20 to 300 seconds. Default: 20 seconds.	N/A
DrniLoadSharingMode	Load sharing mode of users on DR interfaces	N/A	Enumeration: • **0**—Centralized. • **1**—Distributed-local(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Distributed-odd-mac. • **3**—Distributed-even-mac.	
MLagLoadSharingMode	Load sharing mode of users on MLAG interfaces	N/A	Enumeration: • Centralized. • Distributed-local(default). • Distributed-odd-mac. • Distributed-even-mac.	N/A
MacMoveOverwritLocal	Whether to overwrite the local entry for a MAC address that has been moved to a remote device with the entry of that MAC address synchronized from the remote device	N/A	Boolean: • **true**—Yes (default). • **false**—No.	N/A
FailDomainReauthInterval	Value for the Auth-Fail domain user reauthentication timer	N/A	Unsigned integer Value range:0, 30 to 7200 seconds. Default: 600 seconds.	N/A
PreDomainReauthInterval	Value for the preauthentication domain user reauthentication timer	N/A	Unsigned integer Value range: 0,30 to 7200 seconds. Default: 600 seconds.	N/A
FailDomainAgingInterval	Value for the Auth-Fail domain user aging timer	N/A	Unsigned integer Value range:0, 60 to 4294860. Default: 82800 seconds.	N/A
PreDomainAgingInterval	Value for the preauthentication domain user aging timer	N/A	Unsigned integer Value range:0, 60 to 4294860. Default: 82800 seconds.	N/A
CriticalDomainAgingInterval	Value for the critical on domain user aging timer	N/A	Unsigned integer Value range: 0,60 to 4294860. Default: 82800 seconds.	N/A
StaticUserA	Layer 2 ACL	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CLNumber	number for matching MAC addresses that can only be authenticated as static users		Value range: 4000 to 4999	
StpTcMacMove	Whether to permit MAC move without authentication among ports in the same TC BPDU group	N/A	Boolean: • true—Yes (default). • false—No.	N/A
StpTcDetectPeriod	Value for the topology change detection period	N/A	Unsigned integer. Value range: 1 to 3600 seconds. Default: 5 seconds.	N/A
StpTcDetectRetry	Maximum number of attempts for sending a detection packet	N/A	Unsigned integer. Value range: 1 to 10. Default: 3.	N/A

PortSecurity/OUIList

This table contains an OUI list for port security's OUI authentication.

XML structure

```
<PortSecurity>
  <OUIList>
    <OUIMAC>
      <Index></Index>
      <Address></Address>
    </OUIMAC>
  </OUIList>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	OUIList
Table type	Multi-instance table
Row name	OUIMAC
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	OUI index	Index	Unsigned integer. Value range: 1 to 16.	N/A
Address	An OUI string of a 48-bit MAC address	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	The system uses only the 24 high-order bits as the OUI value. The system does not limit the number of OUIs in the list.

PortSecurity/Interfaces

This table contains port security configuration on an interface.

XML structure

```
<PortSecurity>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <AuthenMode></AuthenMode>
      <AuthorIgnore></AuthorIgnore>
      <ProtectionMode></ProtectionMode>
      <SecMACAgeMode></SecMACAgeMode>
      <SecMACSticky></SecMACSticky>
      <SecMACMaxCnt></SecMACMaxCnt>
      <FreeVlanList></FreeVlanList>
      <NTKMode></NTKMode>
      <SecMACDynamic></SecMACDynamic>
      <AuthenOrder></AuthenOrder>
      <UrlUnavailableDomain></UrlUnavailableDomain>
      <PreAuthDomain></PreAuthDomain>
      <MaxStaticUser></MaxStaticUser>
    </Interface>
  </Interfaces>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
AuthenMode	Authentication mode	N/A	Enumeration: • **1**—noRestrictions (default). • **2**—autoLearn. • **3**—macAddressWithRadius. • **4**—macAddressElseUserLoginSecure. • **5**—macAddressElseUserLoginSecureExt. • **6**—secure. • **7**—userLogin. • **8**—userLoginSecure. • **9**—userLoginSecureExt. • **10**—macAddressOrUserLoginSecure. • **11**—macAddressOrUserLoginSecureExt. • **12**—userLoginWithOUI. • **13**—macAddressAndUserLoginSecureExt.	N/A
AuthorIgnore	Whether to ignore authorization information from the server for users	N/A	Boolean: • **true**—Yes. • **false**—No (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	logging on from the interface			
ProtectionMode	Protection action when an intrusion is detected	N/A	Enumeration: • **1**—Does not perform intrusion protection (default). • **2**—Adds the source MAC address of the illegal packet to the blocked MAC address list. • **3**—Shuts down the port that receives illegal packets permanently. • **4**—Shuts down the port that receives illegal packets for some time.	N/A
SecMACAgeMode	Secure MAC aging mode	N/A	Enumeration: • **0**—Time aging (default). • **1**—Inactivity aging.	N/A
SecMACSticky	Whether to save secure MAC addresses on the interface to the startup configuration file	N/A	Boolean: • **true**—Yes (default). • **false**—No.	This column does not take effect.
SecMACMaxCnt	Maximum number of secure MAC addresses on the interface	N/A	Unsigned integer. Value range: 1 to 2147483647. Default: Not configured.	N/A
NTKMode	Need to Know mode	N/A	Enumeration: • **1**—NTK is disabled (default). • **2**—Allows only unicast packets and broadcasts with authenticated destination MAC addresses. • **3**—Allows unicast packets, multicasts, and broadcasts with authenticated destination MAC addresses. • **4**—Allows only unicast packets with authenticated destination MAC addresses.	N/A
FreeVlanList	Authentication free VLAN list	N/A	Number string. The string is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any	This column supports incremental editing. You can set the flag like “<FreeVlanList base:incremental="true">”. If the value is true, the VLAN list will be incrementally added or removed. If the value is false or

Column name	Column description	Column type	Data type and restrictions	Remarks
			whitespace characters.	no flag is set, the free VLANs issued on the current operation are all the effective free VLANs.
SecMACDynamic	Whether to enable the dynamic secure MAC feature	N/A	Boolean: • true—Yes. • false—No (default).	N/A
AuthenOrder	Authentication order in triple authentication	N/A	Enumeration: • 1—dot1x-mac-web (default). • 2—mac-dot1x-web.	N/A
UrlUnavailableDomain	URL-unavailable domain for users on the interface	N/A	String. Length: 1 to 255 characters. Default: No URL-unavailable domain is specified for authentication users.	N/A
PreAuthDomain	Previous authentication domain	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
MaxStaticUser	Max number of online static users	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 4294967295	N/A

PortSecurity/InterfaceSecMAC

This table contains port security's secure MAC addresses on interfaces.

XML structure

```
<PortSecurity>
  <InterfaceSecMAC>
    <SecureMAC>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <MAC></MAC>
      <Sticky></Sticky>
    </SecureMAC>
  </InterfaceSecMAC>
</PortSecurity>
```

Table description

```

Table description

Item	Description
Feature name	PortSecurity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpType	Type of IP address	Index	Enumeration: • **0**—Ipv4. • **1**—Ipv6.	N/A
StartIP	Start IP address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.

Column name	Column description	Column type	Data type and restrictions	Remarks
EndIP	End IP address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Domain	ISP domain for static user authentication	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
IfIndex	Interface index	N/A	Unsigned integer.	This column need to be configured with VLANID.
Detect	Whether to send ARP messages to trigger authentication for static users that are not online	N/A	Boolean: • **true**—Yes. • **false**—No(default).	This column need to be configured with IfIndex.
MacAddr	Secure MAC address	N/A	MAC address.	N/A
VLANID	VLAN ID for static user access	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
KeepOnline	Whether to always allow the static users to stay online	N/A	Boolean: • **true**—Yes. • **false**—No(default).	N/A

PortSecurity/StaticUserCommon

This table contains port security static user information.

XML structure

Table description

Item	Description
Feature name	PortSecurity
Table name	StaticUserCommon
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserPassword	Password for static users.	N/A	String, case-sensitive. Length: 1 to 63 characters. Default is not configured.	N/A
UserNameFormat	Username format	N/A	Enumeration: • **1**—IP address. • **2**—MAC addres. • **3**—system name Default:System name + IP address.	N/A
UserNameFormatMAC	Mac address format	Data structure	Members include: • Section. • Delimiter. • LowerCase. • PasswordWithMAC.	N/A
Section	Section of Mac address	N/A	Enumeration: • **1**—one section. • **2**—three section. • **3**—six section	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Delimiter	Delimiter to separate the sections in a MAC address	N/A	Enumeration: • **0**—hyphen.(default) • **1**—colon.	When configuring this column, the value of section must be three section or six section.
LowerCase	Whether to use Lowercase letters	N/A	Boolean: • **true**—Yes(default). • **false**—No.	This column need to be configured with Section.
PasswordWithMAC	Whether to use the MAC address of a static user as its password	N/A	Boolean: • **true**—Yes. • **false**—No(default).	This column need to be configured with Section.
UpdateIP	Whether to update ip of a static user as its password	N/A	Boolean: • **true**—Yes. • **false**—No(default).	N/A
OfflineDetect	Static user offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647, in seconds.	Default: 300 seconds.
DetectPeriod	Static user ARP detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647, in seconds.	Default: 180 seconds.

    <StpTcDetectPeriod></StpTcDetectPeriod>
    <StpTcDetectRetry></StpTcDetectRetry>
  </Common>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether port security is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MACMove	Whether port security MAC move is enabled	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
MoveType	MAC move type	N/A	Enumeration: • **0**—All. • **1**—Port move on a device. • **2**—VLAN move on a port.	The following MAC move types are available: • **All**—This type combines port move on a device and VLAN move on a port. • **Port move on a device**—The device allows an online user authenticated through 802.1X or MAC authentication on one port to be reauthenticated and come online on another port without going offline first. • **VLAN move on a port**—The device allows an online user authenticated through 802.1X or MAC authentication in one VLAN to be reauthenticated and come online in another VLAN on the same port without going offline first.
AuthorStrict	Whether to log off 802.1X or MAC authenticated users that have failed authorization	N/A	Boolean: • **true**—Logs off the users. • **false**—Keeps the users online.	N/A
SecMACAgingInterval	Value for the secure MAC address aging timer	N/A	Unsigned integer. Value range: 0 to 129600 minutes.	N/A
IntrusionShutdownInterval	Value for intrusion protection's port shutdown timer	N/A	Unsigned integer. Value range: 20 to 300 seconds.	N/A
SecMACCnt	Number of secure MAC addresses in the system	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DrniLoadSharingMode	Load sharing mode of users on DR interfaces	N/A	Enumeration: • **0**—Centralized. • **1**—Distributed-local. • **2**—Distributed-odd-mac. • **3**—Distributed-even-mac.	N/A
MLagLoadSharingMode	Load sharing mode of users on MLAG interfaces	N/A	Enumeration: • Centralized. • Distributed-local. • Distributed-odd-mac. • Distributed-even-mac.	N/A
MacMoveOverwritLocal	Whether to overwrite the local entry for a MAC address that has been moved to a remote device with the entry of that MAC address synchronized from the remote device	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
FailDomainReauthInterval	Value for the Auth-Fail domain user reauthentication timer	N/A	Unsigned integer Value range:0, 30 to 7200 seconds.	N/A
PreDomainReauthInterval	Value for the preauthentication domain user reauthentication timer	N/A	Unsigned integer Value range: 0,30 to 7200 seconds.	N/A
FailDomainAgingInterval	Value for the Auth-Fail domain user aging timer	N/A	Unsigned integer Value range:0, 60 to 4294860.	N/A
PreDomainAgingInterval	Value for the preauthentication domain user aging timer	N/A	Unsigned integer Value range:0, 60 to 4294860.	N/A
CriticalDomainAgingInterval	Value for the critical on domain user aging timer	N/A	Unsigned integer Value range: 0,60 to 4294860.	N/A
StaticUserACLNumber	Layer 2 ACL number for matching MAC addresses **that can only be authenticated as static users**	N/A	Unsigned integer Value range: 4000 to 4999	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StpTcMacMove	Whether to permit MAC move without authentication among ports in the same TC BPDU group	N/A	Boolean: • true—Yes. • false—No.	N/A
StpTcDetectPeriod	Value for the topology change detection period	N/A	Unsigned integer. Value range: 1 to 3600 seconds.	N/A
StpTcDetectRetry	Maximum number of attempts for sending a detection packet	N/A	Unsigned integer. Value range: 1 to 10.	N/A

PortSecurity/OUIList

This table contains an OUI list for port security's OUI authentication.

XML structure

```
<PortSecurity>
  <OUIList>
    <OUIMAC>
      <Index></Index>
      <Address></Address>
    </OUIMAC>
  </OUIList>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	OUIList
Table type	Multi-instance table
Row name	OUIMAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	OUI index	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 16.	
Address	An OUI string of a 48-bit MAC address	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	The system uses only the 24 high-order bits as the OUI value. The system does not limit the number of OUIs in the list.

PortSecurity/Interfaces

This table contains port Security information on interfaces.

XML structure

```
<PortSecurity>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <AuthenMode></AuthenMode>
      <AuthorIgnore></AuthorIgnore>
      <ProtectionMode></ProtectionMode>
      <SecMACAgeMode></SecMACAgeMode>
      <SecMACSticky></SecMACSticky>
      <SecMACMaxCnt></SecMACMaxCnt>
      <SecMACCurrentCnt></SecMACCurrentCnt>
      <NTKMode></NTKMode>
      <FreeVlanList></FreeVlanList>
      <SecMACDynamic></SecMACDynamic>
      <AuthenOrder></AuthenOrder>
      <UrlUnavailableDomain></UrlUnavailableDomain>
      <PreAuthDomain></PreAuthDomain>
      <MaxStaticUser></MaxStaticUser>
    </Interface>
  </Interfaces>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
AuthenMode	Authentication mode	N/A	Enumeration: • **1**—noRestrictions. • **2**—autoLearn. • **3**—macAddressWithRadius. • **4**—macAddressElseUserLoginSecure. • **5**—macAddressElseUserLoginSecureExt. • **6**—secure. • **7**—userLogin. • **8**—userLoginSecure. • **9**—userLoginSecureExt. • **10**—macAddressOrUserLoginSecure. • **11**—macAddressOrUserLoginSecureExt. • **12**—userLoginWithOUI. • **13**—macAddressAndUserLoginSecureExt.	N/A
AuthorIgnore	Whether to ignore authorization information from the server for users logging on from the interface	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtectionMode	Protection action when an intrusion is detected	N/A	Enumeration: • **1**—Does not perform intrusion protection. • **2**—Adds the source MAC address of the illegal packet to the blocked MAC address list. • **3**—Shuts down the port that receives illegal packets permanently. • **4**—Shuts down the port that receives illegal packets for some time.	N/A
SecMACAgeMode	Secure MAC aging mode	N/A	Enumeration: • **0**—Time aging. • **1**—Inactivity aging.	N/A
SecMACSticky	Whether to save secure MAC addresses on the interface to the startup configuration file	N/A	Boolean: • **true**—Yes. • **false**—No.	This column does not take effect.
SecMACMaxCnt	Maximum number of secure MAC addresses on the interface	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
SecMACCurrentCnt	Current number of secure MAC addresses on the interface	N/A	Unsigned integer. Value range: 0 to 2147483647.	N/A
NTKMode	Need to Know mode	N/A	Enumeration: • **1**—NTK is disabled. • **2**—Allows only unicast packets and broadcasts with authenticated destination MAC addresses. • **3**—Allows unicast packets, multicasts, and broadcasts with authenticated destination MAC addresses. • **4**—Allows only unicast packets with authenticated destination MAC addresses.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FreeVlanList	Authentication free VLAN list	N/A	Number string. The string is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	This column supports incremental editing. You can set the flag like “<FreeVlanList base:incremental="true ">”. If the value is true, the VLAN list will be incrementally added or removed. If the value is false or no flag is set, the free VLANs issued on the current operation are all the effective free VLANs.
SecMACDynamic	Whether to enable the dynamic secure MAC feature	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
AuthenOrder	Authentication order in triple authentication	N/A	Enumeration: • 1—dot1x-mac-web. • 2—mac-dot1x-web.	N/A
UrlUnavailableDomain	URL-unavailable domain for users on the interface	N/A	String. Length: 1 to 255 characters.	N/A
PreAuthDomain	Previous authentication domain	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
MaxStaticUser	Max number of online static users	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

PortSecurity/InterfaceSecMAC

This table contains port security's secure MAC addresses on interfaces.

XML structure

```
<PortSecurity>
  <InterfaceSecMAC>
    <SecureMAC>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <MAC></MAC>
      <Sticky></Sticky>
      <TimeLeft></TimeLeft>
    </SecureMAC>
  </InterfaceSecMAC>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	InterfaceSecMAC
Table type	Multi-instance table
Row name	SecureMAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
VLANID	VLAN ID for this secure MAC address	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MAC	Secure MAC address	Index	MAC address in the HH-HH-HH-HH-HH-HH format.	N/A
Sticky	Whether this secure MAC address can age out	N/A	Boolean: • **true**—Can age out. • **false**—Cannot age out.	N/A
TimeLeft	Remaining aging time for this MAC address	N/A	Unsigned integer.	If the remaining aging time is less than 60 seconds, the aging time is counted in seconds. If the aging time is not less than 60 seconds, the aging time is counted in minutes.

PortSecurity/InterfaceBlkMAC

This table contains port security intrusion protection's blocked MAC addresses on interfaces.

XML structure

```
<PortSecurity>
  <InterfaceBlkMAC>
    <BlockMAC>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <MAC></MAC>
    </BlockMAC>
  </InterfaceBlkMAC>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	InterfaceBlkMAC
Table type	Multi-instance table
Row name	BlockMAC
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
VLANID	VLAN ID for this blocked MAC address	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MAC	MAC address blocked by intrusion protection	Index	MAC address in the HH-HH-HH-HH-HH-HH format.	N/A

PortSecurity/StaticUsers

This table contains port security static user configuration.

XML structure

```
<PortSecurity>
  <StaticUsers>
    <StaticUser>
      <IpType></IpType>
      <StartIP></StartIP>
      <EndIP></EndIP>
      <VRF></VRF>
      <Domain></Domain>
      <IfIndex></IfIndex>
      <Detect></Detect>
      <MacAddr></MacAddr>
      <VLANID></VLANID>
      <KeepOnline></KeepOnline>
    </StaticUser>
  </StaticUsers>
</PortSecurity>
```

Table description

Item	Description
Feature name	PortSecurity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpType	Type of IP address	Index	Enumeration: • **0**—Ipv4. • **1**—Ipv6.	N/A
StartIP	Start IP address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndIP	End IP address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Domain	ISP domain for static user authentication	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
IfIndex	Interface index	N/A	Unsigned integer.	N/A
Detect	Whether to send ARP messages to trigger authentication for static users that are not online	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A
MacAddr	Secure MAC address	N/A	MAC address.	N/A
VLANID	VLAN ID for static user access	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
KeepOnline	Whether to always allow the static users to stay online	N/A	Boolean: • **true**—Yes. • **false**—No.	N/A

PortSecurity/StaticUserCommon

This table contains port security static user information.

XML structure

```
<PortSecurity>
  <StaticUserCommon>
    <UserPassword></UserPassword>
    <UserNameFormat></UserNameFormat>
    <UserNameFormatMAC>
      <Section></Section>

Table description

Item	Description
Feature name	PortSecurity
Table name	InterfaceStaticUsers
Table type	Multi-instance table

Row name	InterfaceStaticUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
UserMAC	MAC address of the user on the interface	Index	MAC address.	N/A
Name	Username of the user	N/A	String. Length: 1 to 253 characters.	N/A
Domain	ISP domain used for MAC authentication	N/A	String. Length: 1 to 255 characters.	N/A
InitialVLAN	VLAN to which the user belongs before MAC authentication	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
AuthzVLAN	VLAN authorized to the authenticated user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
AuthzACLGroup	ACL authorized to the authenticated user	N/A	Unsigned integer.	N/A
AuthzUserProfile	User profile authorized to the authenticated user	N/A	String.	N/A
TermAction	Action attribute assigned by the AAA server when the session timeout timer expires	N/A	Enumeration: • **0**—Default. • **1—**Radius-request.	N/A
TimeoutPeriod	Value for the AAA server-assigned session timeout timer	N/A	Unsigned integer	N/A
LogonTime	Time at which the user logs into the device	N/A	String. Format: YYYY-MM-DD HH:MM:SS.	N/A
OnlineDuration	Online duration of the user	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthzVSI	VSI name allocated for authenticated user by the AAA server	N/A	String. Length: 1 to 31 characters.	N/A
AuthzMicroSegmentID	Microsegment ID authorized to the authenticated user	N/A	Unsigned integer. Value range: 1 to 65535	N/A
AuthzURL	URL assigned to the user after the user passes authentication	N/A	String. Length: 1 to 255 characters.	N/A
AuthzIPv6URL	IPv6 URL assigned to the user after the user passes authentication	N/A	String. Length: 1 to 255 characters.	N/A
DrniNasIpType	In DRNI networking, the nas ip address type used for user authentication on DR interface	N/A	Enumeration: • **1**—Local. • **2**—Peer.	N/A
DrniUserState	User status on DR interface in DRNI network	N/A	Enumeration: • **0**—Inactive. • **1**—Active.	N/A
MLagNasIpType	In an M-LAG system, the NAS IP address type used for user authentication on M-LAG interfaces	N/A	Enumeration: • Local. • Peer.	N/A
MLagUserState	User status on M-LAG interfaces	N/A	Enumeration: • Inactive. • Active.	N/A
OnlineType	Type of online users	N/A	Enumeration: • **1**—Successfull. • **2**—Preauth domain. • **3**—Auth-Fail domain. • **4**—Critical domain.	N/A

PortSecurity/AccessUsers

Portsec

Portsec/Init

Message	Explanation
Can't set the security mode to autoLearn before you set the maximum number of users. 不能设置端口安全为自动学习模式，因为最大MAC地址数没有设置。	Can't set the security mode to autoLearn before you set the maximum number of users. 不能设置端口安全为自动学习模式，因为最大MAC地址数没有设置。
Can't enable port security when 802.1X is already enabled. 使能端口安全失败，因为已经使能802.1X。	Can't enable port security when 802.1X is already enabled. 使能端口安全失败，因为已经使能802.1X。
Can't enable port security when MAC authentication is already enabled. 使能端口安全失败，因为已经使能MAC地址认证。	Can't enable port security when MAC authentication is already enabled. 使能端口安全失败，因为已经使能MAC地址认证。
Can't change the port security mode. Please change the mode to noRestriction first. 不能更改端口安全模式。请首先更改为noRestriction模式。	Can't change the port security mode. Please change the mode to noRestriction first. 不能更改端口安全模式。请首先更改为noRestriction模式。
The number can't be less than the current number of secure MAC addresses. 配置的最大MAC地址数不能小于当前MAC地址数。	The number can't be less than the current number of secure MAC addresses. 配置的最大MAC地址数不能小于当前MAC地址数。
The maximum number of secure MAC addresses is not configurable in autoLearn mode. 在autoLearn模式下不能配置最大MAC地址数。	The maximum number of secure MAC addresses is not configurable in autoLearn mode. 在autoLearn模式下不能配置最大MAC地址数。
Can't configure port security mode on an 802.1X-enabled port. 不能配置端口安全模式，因为已经使能端口的802.1X功能。	Can't configure port security mode on an 802.1X-enabled port. 不能配置端口安全模式，因为已经使能端口的802.1X功能。
Can't configure port security mode on the port when 802.1X access control is not MAC based. 不能配置端口安全模式，因为802.1X端口接入方式不是基于MAC认证。	Can't configure port security mode on the port when 802.1X access control is not MAC based. 不能配置端口安全模式，因为802.1X端口接入方式不是基于MAC认证。
Can't configure port security mode on the port when 802.1X port authorization state is not auto. 不能配置端口安全模式，因为802.1X端口授权状态不是自动识别。	Can't configure port security mode on the port when 802.1X port authorization state is not auto. 不能配置端口安全模式，因为802.1X端口授权状态不是自动识别。
Can't configure port security mode on a MAC authentication-enabled port. 不能配置端口安全模式，因为已经使能端口的MAC地址认证功能。	Can't configure port security mode on a MAC authentication-enabled port. 不能配置端口安全模式，因为已经使能端口的MAC地址认证功能。
Can't enable port security on a link aggregation member port. 不能使能端口安全，因为这是一个聚合成员接口。	Can't enable port security on a link aggregation member port. 不能使能端口安全，因为这是一个聚合成员接口。
Can't add secure MAC addresses when port	Can't add secure MAC addresses when port security is disabled.

security is disabled. 不能添加安全MAC地址，因为端口安全没有使能。	不能添加安全MAC地址，因为端口安全没有使能。
Can't add secure MAC addresses on the port when the port security mode is not autoLearn. 不能添加安全MAC地址，因为该接口上的端口不是autoLearn模式。	Can't add secure MAC addresses on the port when the port security mode is not autoLearn. 不能添加安全MAC地址，因为该接口上的端口不是autoLearn模式。
Can't add secure MAC addresses when the maximum number of secure MAC addresses on the port is already reached. 不能添加安全MAC地址，因为接口上的安全MAC地址数已经达到了最大值。	Can't add secure MAC addresses when the maximum number of secure MAC addresses on the port is already reached. 不能添加安全MAC地址，因为接口上的安全MAC地址数已经达到了最大值。
Invalid MAC address. 无效的MAC地址。	Invalid MAC address. 无效的MAC地址。
The MAC address already exists on another interface. MAC地址已经在其他接口上存在。	The MAC address already exists on another interface. MAC地址已经在其他接口上存在。
Sticky can not be modified. Sticky属性不能被修改。	Sticky can not be modified. Sticky属性不能被修改。
Can't add sticky MAC addresses when dynamic secure MAC is enabled. 在动态模式下不能添加静态MAC地址。	Can't add sticky MAC addresses when dynamic secure MAC is enabled. 在动态模式下不能添加静态MAC地址。
No security MAC address matches the specified condition. 安全MAC地址和指定的环境不匹配。	No security MAC address matches the specified condition. 安全MAC地址和指定的环境不匹配。
Please create the VLAN first. 请首先创建相应的VLAN。	Please create the VLAN first. 请首先创建相应的VLAN。
The port is not assigned to the VLAN, or the VLAN is not permitted on the port. 该接口没有绑定VLAN，或者VLAN不允许该接口。	The port is not assigned to the VLAN, or the VLAN is not permitted on the port. 该接口没有绑定VLAN，或者VLAN不允许该接口。
The OUI value already exists. OUI值已经存在。	The OUI value already exists. OUI值已经存在。
The OUI index already exists. OUI索引已经存在。	The OUI index already exists. OUI索引已经存在。
OUI value must be specified. 没有指定OUI值。	OUI value must be specified. 没有指定OUI值。
Can't enable port security when EAD assistant is already enabled. 使能端口安全失败，因为已经使能EAD快速部署。	Can't enable port security when EAD assistant is already enabled. 使能端口安全失败，因为已经使能EAD快速部署。
Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全，MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。	Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全，MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。
The NTK feature can't be configured on aggregate interfaces. 聚合接口不能配置NTK特性。	The NTK feature can't be configured on aggregate interfaces. 聚合接口不能配置NTK特性。

The free VLAN feature is not supported on the port. 该接口不支持配置FreeVlan	The free VLAN feature is not supported on the port. 该接口不支持配置FreeVlan
Can't enable port security on an IPP port. 不能使能端口安全，因为这是一个IPP接口。	Can't enable port security on an IPP port. 不能使能端口安全，因为这是一个IPP口。
This operation conflicts with Guest VLAN/VSI, Auth-fail VLAN/VSI and Critical VLAN/VSI/microsegment/profile of 802.1X, MAC authentication or Web authentication. 不能配置前域，因为已经存在802.1X、MAC认证或者Web认证的guest/fail/critical vlan/vsi/microsegment/profile配置。	This operation conflicts with Guest VLAN/VSI, Auth-fail VLAN/VSI and Critical VLAN/VSI/microsegment/profile of 802.1X, MAC authentication or Web authentication. 不能配置前域，因为已经存在802.1X、MAC认证或者Web认证的guest/fail/critical vlan/vsi/microsegment/profile配置。
This operation conflicts with the guest VLAN or VSI, Auth-Fail VLAN or VSI, and critical VLAN, VSI, microsegment, or profile settings of 802.1X, MAC authentication, or Web authentication. 此操作与802.1x、MAC地址认证或Web认证的Guest VLAN/VSI, Auth-fail VLAN/VSI和Critical VLAN/VSI/microsegment/profile冲突。	The URL-unavailable domain configuration conflicts with the guest VLAN or VSI, Auth-Fail VLAN or VSI, and critical VLAN, VSI, microsegment, or profile settings of 802.1X, MAC authentication, or Web authentication. URL逃生域配置与Guest VLAN/VSI、Auth-fail VLAN/VSI以及Critical VLAN/VSI/microsegment/profile配置互斥。
Port security only support configure mac move. 端口安全只支持Mac-Move命令的配置。	Port security only support configure mac move. 端口安全只支持Mac-Move命令的配置。
If both deployed, MLagLoadSharingMode and DrniLoadSharingMode must set the same load sharing mode. 新旧形式的MLagLoadSharingMode与DrniLoadSharingMode同时下发时，必须下发相同的负载分担模式。	You must set the same value for MLagLoadSharingMode and DrniLoadSharingMode if they are both configured. 新旧形式的MLagLoadSharingMode与DrniLoadSharingMode下发的负载分担模式必须相同。

Table description	Portal Server information table
Table type	Multi-instance table
Feature name	Portal
Table name	PortalServers
Row name	PortalServer
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	**Remarks**
Name	Portal server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal server address	Data structure	Members include: IPAddress VRF Key	The IPAddress must be set for this column.
IPAddress	IP address of the portal server	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal server is on the public network, the length of characters is 0.
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal server and the device. It supports only plaintext.
Port	Port number	N/A	Non-negative integer. Value range: 1 to 65534.	The default is 50100.
Detect	Portal server detection	Data structure	Members include: TimeOut Action	When you set the structure, the Action must be set. The timeout is 60 by default if not set.
TimeOut	Detection timeout	N/A	Non-negative integer. Value range: 10 to 3600 seconds.	The default is 60.
Action	Action to be performed when the detection times out.	N/A	Enumeration: • 1—log • 2—trap • 3—Both	N/A
UserSyncTime	User synchronization time	N/A	Non-negative integer. Value range: 60 to 18000 seconds.	The default is 1200.
ServerType	Server Type	N/A	Enumeration:	The default type of the server binding is IMC.

			• 0—IMC • 1—CMCC	
LogoutNotify	Portal logout notify	Data structure	Members include: • Retry • Interval	N/A
Retry	Maximum retransmission times	N/A	Non-negative integer. Value range: 1 to 5.	N/A
Interval	Retransmission times	N/A	Non-negative integer. Value range: 1 to 10.	N/A

Table information

Item	Description
Table description	Portal FreeRule information table
Table type	Multi-instance table
Feature name	Portal
Table name	FreeRules
Row name	FreeRule
Restrictions	Not support modify
Support for row creation and deletion	Yes

Columns

Column name	Description	Column type	Data type and restrictions	Remarks
RuleID	Portal-free rule number	Index	Non-negative integer.	N/A
IsAllotID	Whether ID is allocated automatically		Boolean: • true—Yes • false—No	N/A
Description	Description for the portal free rule		String, • Length: 1 to 255 characters.	N/A
Layer3	N/A	Data structure	Members include: • SrcIPAddr	N/A

			• SrcIPAddrLen SrcProtocolType • SrcPortStart • SrcPortEnd • DstIPAddr • DstIPAddrLen • DstProtocolType • DstPortStart • DstPortEnd • DstIPv4MicrosegmentID • DstIPv6MicrosegmentID • DstVpnName	
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPV6 address example: 2001:12::1:2
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: 0 to 128.	When the SrcIPAddr is the IPv4 address type, the value range is 0 to 32. When the SrcIPAddr is the IPv6 address type, the value range is 0 to 128.
SrcProtocolType	Source protocol type	N/A	Enumeration: • 6—TCP • 17—UDP	When SrcProtocolType is configured, SrcPortStart and SrcPortEnd must be configured and use the same protocol type. Currently, only one port is supported, so SrcPortStart and SrcPortEnd must be the same.
SrcPortStart	Start port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPV6 address example: 2001:12::1:2
DstIPAddrLen	Subnet mask length of the destination IP address	N/A	Non-negative integer. Value range: 0 to 128.	When DstIPAddr is IPv4 address type, the value range is 0 to 32. When DstPAddr is IPv6 address type, the value range is 0 to 128.

DstProtocolType	Destination protocol type	N/A	Enumeration: • 6—TCP • 17—UDP	When DstProtocolType is configured, DstPortStart and DstPortEnd must be configured and use the same protocol type. Currently, only one port is supported, so DstPortStart and DstPortEnd must be the same.
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstIPv4MicrosegmentID	Destination IPv4 microsegment ID	N/A	Non-negative integer. Value range: 1 to 65535.	When DstIPv4MicrosegmentID is configured, DstPAddr, DstPAddrLen, and DstIPv6MicrosegmentID cannot be configured.
DstIPv6MicrosegmentID	Destination Iv6 microsegment ID	N/A	Non-negative integer. Value range: 1 to 65535.	When DstIPv6MicrosegmentID is configured, DstPAddr, DstPAddrLen, and DstIPv4MicrosegmentID cannot be configured.
DstVpnName	Destination VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	When DstVpnName is configured, DstIPv4MicrosegmentID or DstIPv6MicrosegmentID must be configured.
Layer2	N/A	Data structure	Members include: • SrcIfIndex • SrcVlan • SrcMacAddr • SrcMacMask	N/A
SrcIfIndex	Source interface index	N/A	Source interface index.	N/A
SrcVlan	Source VLAN	N/A	Non-negative integer. Value range: 1 to 4094.	N/A
SrcMacAddr	Source MAC address	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	Example: 00-0c-af-e3-5d-c0.
SrcMacMask	Source MAC	N/A	MAC mask in the	Example:

	Mask		HH-HH-HH-HH-HH-HH format.	ff-ff-ff-ff-00-00.
ObjGroupName	Source object group		String, Length: 1 to 63 characters.	N/A
HostName	Host name	N/A	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), underscores (_), and wildcard(*). It must not be “ip” or “ipv6” or “i” or “ipv”.

Table description

Item	Description
Table description	Portal GlobalConf information table
Table type	Single-instance table
Feature name	Portal
Table name	GlobalConf
Row name	None
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Description	Column type	Data type and restrictions	Remarks
RoamEnable	Whether the portal roaming feature is enabled	N/A	Boolean: • true—Yes • false—No	N/A
NasPortIdFormat	Format of the NAS-Port-ID attribute	N/A	Enumeration: • 1—Format1 • 2—Format2 • 3—Format3 • 4—Format4	N/A
VsrpPort	TCP port for portal backup	N/A	Non-negative integer. Value range: 1 to 65535.	N/A
MaxUser	Maximum number of users on the device	N/A	Non-negative integer. The value range: 1 to 4294967295.	N/A
ClientGatewayIfIndex	Index of the gateway	N/A	Non-negative integer	N/A

	interface for clients to access the AC			
CaptiveOptDelay	The timeout time for optimized captive bypass feature	N/A	Non-negative integer Value rang: 6 to 60 seconds Default: 6 seconds	N/A
DhcpIdleCut	Whether the DHCP idle cut feature is enabled for portal users.	N/A	Boolean: ● true ● false Default: false	N/A
BasIPAddr	Source Ipv4 address of portal notification packets.	N/A	IPv4: String, dotted decimal notation.	IPv4 address example: 2.0.0.1
BasIPv6Addr	Source Ipv6 address of portal notification packets.	N/A	IPv6: Hexadecimal string, colon-separated.	IPv6 address example: 2001:12::1:2
TrustArp	Whether the device is configured to obtain user access information from ARP entries.	N/A	Boolean: • true • false	The default is false.
TrustNd	Whether the device is configured to obtain user access information from ND entries.	N/A	Boolean: • true • false	The default is false.
TrafficRateInterval	Time interval for calculating the portal user's average rate of traffic	N/A	Non-negative integer. Value range: 1 to 3600 seconds Default: 1 second.	N/A
DrniLoadSharingMode	Authentication load sharing mode for portal users on DR interfaces.	N/A	Enumeration: • 0—centralized (default). • 1—distributed odd-ip. • 2—distributed even-ip.	The default is centralized
DrniTrafficBackupInterval	DRNI traffic backup time interval for portal users	N/A	Non-negative integer. Value range: 0 to 1440 minutes.	The default is 10 minutes

	on DR interfaces.			
DrniTrafficBackupThreshold	DRNI traffic backup threshold for portal users on DR interfaces.	N/A	Non-negative integer. Value range: 0 to 100000MB	The default is 50 MB
DeviceId	Device id in Portal message	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
UserRuleAssignCheckEnable	The device will check the issuing of category-2 portal filtering rules	N/A	Boolean: • true • false (default)	N/A
MLagLoadSharingMode	Authentication load sharing mode for portal users on M-Lag interfaces	N/A	Enumeration: • 0—Centralized (default). • 1—Distributed odd-IP. • 2—Distributed even-IP.	The default is centralized.
MLagTrafficBackupInterval	M-Lag traffic backup time interval for portal users on M-Lag interfaces	N/A	Unsigned integer. Value range: 0 to 1440 minutes.	The default is 10 minutes.
MLagTrafficBackupThreshold	M-Lag traffic backup threshold for portal users on M-Lag interfaces	N/A	Unsigned integer. Value range: 0 to 100000 MB.	The default is 50 MB.
CriticalMicrosegmentAging	Aging time for users in critical microsegments	N/A	Non-negative integer. Value range: 1 to 60 minutes. Default: 10 minutes.	N/A

Columns

Column name	Description	Column type	Data type and restrictions	Remarks
Enable	Enable the portal proxy feature	N/A	Boolean: • true—Yes • false—No	N/A
SourceIP	Source IP address	N/A	IPv4: String, dotted decimal notation.	This column specifies the source address for the packets actively sent to the server. The IP address of the output interface is used if not specified.
PortalServerPort	Destination port	N/A	Non-negative integer. Value range: 1 to 65535.	This column specifies the destination port on the device. The default port is 2000.
MacTriggerServerIP	IP address of the MAC binding server	N/A	IPv4: String, dotted decimal notation.	By default, the device does not specify the IP address and port number of the MAC binding server.
MacTriggerServerPort	Port number of the MAC binding server	N/A	Non-negative integer. Value range: 1 to 65535.	The default port number is 50100.

</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	ExtendAuthServers
Table type	Multi-instance table
Row name	ExtendAuthServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Extended authentication service type	Index	Enumeration: • 0—QQ. • 1—Mail.	N/A
AuthUrl	Authentication URL	N/A	String. Length: 1 to 256 characters. Default: https://graph.qq.com (when the Type field is specified as 0).	This column takes effect only when the Type field is specified as 0.
AppId	App ID which supports for extended authentication	N/A	String. Length: 1 to 32 characters.	This column takes effect only when the Type field is specified as 0. The default value is the App ID of the Lvzhou application in the QQ open platform.

AppKey	The key of App ID	N/A	String. Length: 1 to 64 characters.	This column takes effect only when the Type field is specified as 0, and can only be used as plain text input and cannot return to users. The default value is the App key of the Lvzhou application in the QQ open platform.
RedirectUrl	Authentication redirect URL	N/A	String. Length: 1 to 256 characters.	This column takes effect only when the Type field is specified as 0. The default value is the callback address of the Lvzhou application in the QQ open platform.
MailProtocol	Mail authentication protocol type	N/A	Enumeration: • 1—POP3. • 2—IMAP. • 3—POP3 and IMAP.	This column takes effect only when the Type field is specified as 1.
MailDomain	Mail domain	Data structure	Members include: • MailDomainName	This column takes effect only when the Type field is specified as 1. MailDomainName must be set. You can specify 1 to 16 domain names.
MailDomainName	Mail domain name	N/A	String. Length: 1 to 255 characters	The value of the column must be the Email domain fomat. For example: @qq.com.

Portal/MacTriggerServers

```

Table description

Item	Description
Feature name	Portal
Table name	MacTriggerServers
Table type	Multi-instance table
Row name	MacTriggerServer
Restrictions	None

Columns

Column name	Description	Column type	Data type and restrictions	Remarks
Name	Portal mac-trigger server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal mac-trigger server address	Data structure	Members include: IPAddress VRF	The IPAddress must be set for this column.
IPAddress	IP address of the portal mac-trigger	N/A	IPv4: String, dotted decimal notation.	N/A

	server			
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal mac-trigger server is on the public network, the length of characters is 0.
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal mac-trigger server and the device. It supports only plaintext.
Threshold	the threshold for MAC-triggered authentication	N/A	Unsigned integer. Value range: 0 to 10240000	The default free-traffic threshold is 0 bytes.
NasType	NAS-Port-Type value	N/A	Unsigned integer. Value range: 1 to 255	The default NAS-Port-Type value carried in RADIUS requests is 0.
MacSvrPort	UDP port number	N/A	Unsigned integer. Value range: 1 to 65534	The default MAC binding server listens for MAC binding query packets on UDP port 50100.
Detect	Portal Mac-trigger server detection	Data structure	Members include: • Retry • Interval	N/A
MacSvrRetries	Maximum number of portal Mac-trigger server detection attempts	N/A	Unsigned integer. Value range: 1~10	The default maximum number of query attempts is 3.
MacSvrRetryInterval	Detection interval	N/A	Unsigned integer. Value range:1~60	The default maximum number of query interval is 1 second.
MacServerType	a MAC binding server type	N/A	Boolean: • 0.imc • 1.cmcc	The default type of a MAC binding server is IMC.
Version	Version number	N/A	Unsigned integer. Value range:1~3	The default version of the portal protocol is 1.
MacSvrAuthTimeOut	Set the timeout time the device waits for portal authentication to complete	N/A	Unsigned integer. Value range:1~15	The default portal authentication timeout time is 3 minutes.
AgingTime	Set the aging time for MAC-trigger entries	N/A	Unsigned integer. Value range:60~7200	The default aging time for MAC-trigger entries is 300 seconds.

LocalBindingEnable	enable portal MAC-Trigger local-binding	N/A	Boolean: • true–Yes • false–No	N/A
LocalBindingAgingTime	the aging time for MAC-trigger local-binding entry	N/A	Unsigned integer. Value range:1~2160	N/A
CloudBindingEnable	Enable portal MAC-Trigger cloud binding	N/A	Boolean: • true–Yes • false–No	N/A
CloudServerURL	URL of the cloud portal authentication server	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A

Table description

Item	Description
Feature name	Portal

Table name	ForbiddenRules
Table type	Multi-instance table
Row name	ForbiddenRule
Restrictions	Not support modify
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Portal-forbidden rule number	Index	Non-negative integer.	N/A
IsAllotID	Whether the rule number is allocated automatically	N/A	Boolean: • true—Yes • false—No	N/A
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: • 0 to 32 for a source IPv4 address. • 0 to 128 for a source IPv6 address.	N/A
SrcProtocolType	Source protocol type	N/A	Enumeration: • 6—TCP. • 17—UDP.	When SrcProtocolType is configured, SrcPortStart and SrcPortEnd must be configured and use the same protocol type.
SrcPortStart	Start port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
DstIPAddrLen	Subnet mask length of the destination IP address	N/A	Non-negative integer. Value range: • 0 to 32 for a destination IPv4 address. • 0 to 128 for a destination IPv6 address.	N/A
DstProtocolT	Destination	N/A	Enumeration:	When DstProtocolType

ype	protocol type		• 6—TCP. • 17—UDP.	is configured, DstPortStart and DstPortEnd must be configured and use the same protocol type.
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstHostName	Destination hostname	N/A	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), underscores (_), and wildcard(*). It must not be “ip” or “ipv6” or “i” or “ipv”.
SrcSsidName	Source SSID name	N/A	String. Length: 1 to 32 characters.	N/A

Portal/RedirectOriginalUrl

This table contains information about portal redirect match rules based on original URLs.

XMLstructure

```
<Portal>
  <RedirectOriginalUrls>
    <RedirectOriginalUrl>
      <Name></Name>
      <OriginalUrl></OriginalUrl>
      <RedirectUrl></RedirectUrl>
      <EncryParam></EncryParam>
      <Password></Password>
    </RedirectOriginalUrl>
  </RedirectOriginalUrls>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	RedirectOriginalUrls
Table type	Multi-instance table

Item	Description
Row name	RedirectOriginalUrl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the portal Web server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
OriginalUrl	Original URL	Index	String, case-sensitive. Length: 1 to 256 characters.	N/A
RedirectUrl	Redirect URL	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A
EncryParam	Encryption algorithm	N/A	Enumeration: • 0—NONE • 1—DES • 2—AES	The default encryption algorithm is 0
Password	Encryption key	N/A	String. Length: • DES plaintext key: 8 characters. • AES plaintext key: 1 to 31 characters.	N/A

Portal/RedirectUserAgent

This table contains information about portal redirect match rules based on user agents.

XMLstructure

```
<Portal>
  <RedirectUserAgents>
    <RedirectUserAgent>
      <Name></Name>
      <UserAgent></UserAgent>
      <RedirectUrl></RedirectUrl>
    </RedirectUserAgent>
  </RedirectUserAgents>
</Portal>
```

Table description

Item	Description
Feature name	Portal

Item	Description
Table name	RedirectUserAgents
Table type	Multi-instance table
Row name	RedirectUserAgent
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the portal Web server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
UserAgent	User agent	Index	String, case-sensitive. Length: 1 to 255 characters.	N/A
RedirectUrl	Redirect URL	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A

Portal/TempPassOriginalUrl

This table contains information about portal temp pass match rules based on original URLs.

XMLstructure

```
<Portal>
  <TempPassOriginalUrls>
    <TempPassOriginalUrl>
      <Name></Name>
      <OriginalUrl></OriginalUrl>
      <RedirectUrl></RedirectUrl>
      <IsOriginal></IsOriginal>
    </TempPassOriginalUrl>
  </TempPassOriginalUrls>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	TempPassOriginalUrls
Table type	Multi-instance table
Row name	TempPassOriginalUrl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the portal Web server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
OriginalUrl	Original URL	Index	String, case-sensitive. Length: 1 to 256 characters.	N/A
RedirectUrl	Redirect URL	N/A	String, case-sensitive. Length: 1 to 256 characters.	The RedirectUrl column takes effect only when the value of the IsOriginal column is false. If the value of the IsOriginal column is true, the RedirectUrl column can be an arbitrary URL starting with http://or https://.
IsOriginal	Redirect matching requests to the original URL	N/A	Boolean: • true • false	The default redirect matching is false

Portal/TempPassUserAgent

This table contains information about portal temp pass match rules based on user agents.

XMLstructure

```
<Portal>
  <TempPassUserAgents>
    <TempPassUserAgent>
      <Name></Name>
      <UserAgent></UserAgent>

CaptiveOptDelay	The timeout time for	N/A	Non-negative integer. Value range: 6 to 60	N/A

	optimized		seconds.	
DhcpIdleCut	Whether the DHCP idle cut feature is enabled for portal users	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
BasIPAddr	Source Ipv4 address of portal notification packets.	N/A	IPv4: String, dotted decimal notation.	N/A
BasIPv6Addr	Source Ipv6 address of portal notification packets.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
TrustArp	Whether the device is configured to obtain user access information from ARP entries.	N/A	Boolean: • true • false	N/A
TrustNd	Whether the device is configured to obtain user access information from ND entries.	N/A	Boolean: • true • false	N/A
TrafficRateInterval	Time interval for calculating the portal user's average rate of traffic	N/A	Non-negative integer. Value range: 1 to 3600 seconds.	N/A
DrniLoadSharingMode	Authentication load sharing mode for portal users on DR interfaces.	N/A	Enumeration: • 0—centralized. • 1—distributed odd-ip. • 2—distributed even-ip	N/A
DrniTrafficBackupInterval	DRNI traffic backup time interval for portal users on DR interfaces.	N/A	Non-negative integer. Value range: 0 to 1440 minutes.	N/A
DrniTrafficBackupThreshold	DRNI traffic backup threshold for portal users on DR interfaces.	N/A	Non-negative integer. Value range: 0 to 100000 MB.	N/A
DeviceId	Device id in Portal message	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
UserRuleAssignCheckEnable	The device will check the	N/A	Boolean: • true	N/A

	issuing of category-2 portal filtering rules		• false	
MLagLoadSharingMode	Authentication load sharing mode for portal users on M-Lag interfaces	N/A	Enumeration: • 0—Centralized. • 1—Distributed odd-IP. • 2—Distributed even-IP.	N/A
MLagTrafficBackupInterval	M-Lag traffic backup time interval for portal users on M-Lag interfaces	N/A	Unsigned integer. Value range: 0 to 1440 minutes.	N/A
MLagTrafficBackupThreshold	M-Lag traffic backup threshold for portal users on M-Lag interfaces	N/A	Unsigned integer. Value range: 0 to 100000 MB.	N/A
CriticalMicrosegmentAging	Aging time for users in critical microsegments	N/A	Non-negative integer. Value range: 1 to 60 minutes.	N/A

Portal/ProxyConf

Table description

Item	Description
Table description	Portal proxy configuration table
Table type	Single-instance table
Feature name	Portal
Table name	PorxyConf
Row name	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the portal proxy feature	N/A		N/A
SourceIP	Source IP address	N/A	IPv4: String, dotted decimal notation.	This column specifies the source address for the packets actively sent to the server. The IP address of the output interface is used if not specified.
PortalServerPort	Destination port	N/A	Non-negative integer. Value range: 1 to 65535.	This column specifies the destination port on the device. The default port is 2000.
MacTriggerServerIP	IP address of the MAC binding server	N/A	IPv4: String, dotted decimal notation.	By default, the device does not specify the IP address and port number of the MAC binding server.
MacTriggerServerPort	Port number of the MAC binding server	N/A	Non-negative integer. Value range: 1 to 65535.	The default port number is 50100.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex.	Index	Non-negative integer.	N/A
IPAddress	IP address of the user.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
IfName	IfName.	N/A	String, case-sensitive. Length: 1 to 47 characters.	N/A
UserName	User name.	N/A	String. Length: 1 to 253 characters.	N/A
MacAddress	MAC address of the user.	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	N/A
VLAN	VLAN where the user resides.	N/A	Value range: 1 to 4094.	N/A
VRF	MPLS L3VPN where the users resides.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
ServerName	Name of the portal server.	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A

LoginTime	Time when the user logged in	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OnlineDuration	User online duration.	N/A	Non-negative integer. The unit is second.	N/A
FlowStats	Flow statistics for the user.	Data structure	Members include: • SendPktNum • SendByteNum • RecvPktNum • RecvByteNum	N/A
SendPktNum	Number of packets sent by the user.	N/A	Value range: 0 to 2^{64}-1.	N/A
SendByteNum	Number of bytes sent by the user.	N/A	Value range: 0 to 2^{64}-1.	N/A
RecvPktNum	Number of packets received by the user.	N/A	Value range: 0 to 2^{64}-1.	N/A
RecvByteNum	Number of bytes received by the user.	N/A	Value range: 0 to 2^{64}-1.	N/A
ObjectGroup	Users belong to the group of object.	N/A	String. Length: 1 to 31 characters.	N/A
InboundFlowRate	Inbound Real time rate.	N/A	Value range: 0 to 2^{64}-1.	bytes per second
OutboundFlowRate	Outbound Real time rate.	N/A	Value range: 0 to 2^{64}-1.	bytes per second
AccessSwitch	Whether the user can access the network.	N/A	Boolean: • false—OFF • true—ON	N/A
LeaseTime	Lease time period for the IP address	N/A	String.	N/A
RemainingTime	Remaining lease time period for the IP address	N/A	String.	N/A
DeviceName	Device name of the user	N/A	String. Length: 1 to 127 characters.	N/A
MicrosegmentID	Microsegment ID authorized	N/A	Value range: 1 to 65535.	N/A

AckChallengeError	Number of erroneous challenge acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqAuth	Authentication request packet the portal server sent to the device	N/A		N/A
ReqAuthReceived	Number of received authentication request packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqAuthDrop	Number of	N/A	Value range: 0 to 2^{64}-1.	N/A

	dropped authentication request packets			
ReqAuthError	Number of erroneous authentication request packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckAuth	Authentication acknowledgment packet the device sent to the portal server	N/A		N/A
AckAuthReceived	Number of received authentication acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckAuthDrop	Number of dropped authentication acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckAuthError	Number of erroneous authentication acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AffAckAuth	Affirmation packet the portal server sent to the device after receiving an authentication acknowledgement packet	N/A		N/A
AffAckAuthReceived	Number of received affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AffAckAuthDrop	Number of dropped affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AffAckAuthError	Number of erroneous affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqLogout	Logout request packet the portal server sent to the device	N/A		N/A

ReqLogoutReceived	Number of received logout request packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqLogoutDrop	Number of dropped logout request packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqLogoutError	Number of erroneous logout request packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckLogout	Logout acknowledgment packet the device sent to the portal server	N/A		N/A
AckLogoutReceived	Number of received logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckLogoutDrop	Number of dropped logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckLogoutError	Number of erroneous logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfLogout	Forced logout notification packet the device sent to the portal server	N/A		N/A
NtfLogoutReceived	Number of received forced logout notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfLogoutDrop	Number of dropped forced logout notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfLogoutError	Number of erroneous forced logout notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckNtfLogout	Forced logout acknowledgment packet	N/A		N/A

	from the portal server			
AckNtfLogoutReceived	Number of received forced logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckNtfLogoutDrop	Number of dropped forced logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckNtfLogoutError	Number of erroneous forced logout acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqMacBind	MAC binding query the device sent to the MAC binding server	N/A		N/A
ReqMacBindReceived	Number of received MAC binding queries	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqMacBindDrop	Number of dropped MAC binding queries	N/A	Value range: 0 to 2^{64}-1.	N/A
ReqMacBindError	Number of erroneous MAC binding queries	N/A	Value range: 0 to 2^{64}-1.	N/A
AckMacBind	MAC binding query acknowledgment packet the MAC binding server sent to the device	N/A		N/A
AckMacBindReceived	Number of received MAC binding query acknowledgment packet	N/A	Value range: 0 to 2^{64}-1.	N/A
AckMacBindDrop	Number of dropped MAC binding query acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AckMacBindError	Number of erroneous MAC binding query acknowledgment packets	N/A	Value range: 0 to 2^{64}-1.	N/A

NtfMacBindLogon	User logon notification packet the device sent to the MAC binding server	N/A		N/A
NtfMacBindLogonReceived	Number of received user logon notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfMacBindLogonDrop	Number of dropped user logon notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfMacBindLogonError	Number of erroneous user logon notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfMacBindLogout	User logoff notification packet the device sent to the MAC binding server	N/A		N/A
NtfMacBindLogoutReceived	Number of received user logoff notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfMacBindLogoutDrop	Number of dropped user logoff notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
NtfMacBindLogoutError	Number of erroneous user logoff notification packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AffMacBindLogout	Forced logout affirmation packet sent by Mac-Trigger server	N/A		N/A
AffMacBindLogoutReceived	Number of received forced logout affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A
AffMacBindLogoutDrop	Number of dropped forced logout affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A

AffMacBindLogoutError	Number of erroneous forced logout affirmation packets	N/A	Value range: 0 to 2^{64}-1.	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Extended authentication service type	Index	Enumeration: • **0**—QQ. • **1**—Mail.	N/A
AuthUrl	Authentication URL	N/A	String. Length: 1 to 256 characters. Default: https://graph.qq.com (when the Type field is specified as 0).	N/A.

AppId	App ID which supports for extended authentication	N/A	String. Length: 1 to 32 characters.	The default value is the App ID of the Lvzhou application in the QQ open platform.
AppKey	The key of App ID	N/A	String. Length: 1 to 64 characters.	App key needs to be kept confidential and not returned to users.
RedirectUrl	Authentication redirect URL	N/A	String. Length: 1 to 256 characters.	The default value is the callback address of the Lvzhou application in the QQ open platform.
MailProtocol	Mail authentication protocol type	N/A	Enumeration: • **1**—POP3. • **2**—IMAP. • **3—**POP3 and IMAP.	N/A
MailDomain	Maildomain	Data structure	Members include: • **MailDomainName**	This column takes effect only when the type field is specified as 1. MailDomainName must be set. You can specify 1 to 16 domain names.
MailDomainName	Mail domain name	N/A	String. Length: 1 to 255 characters.	The value of the column must be the Email domain fomat. For example: @qq.com

Portal/HistoryOnlineUserNums

This table contains the statistics on the number of historical online users.

XML structure

```
<Portal>
  <HistoryOnlineUserNums>
    <HistoryOnlineUserNum>
      <Interval></Interval>
      <TimeStamp></TimeStamp>
      <Num></Num>
    </HistoryOnlineUserNum>
  </HistoryOnlineUserNums>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	HistoryOnlineUserNums

Table type	Multi-instance table
Row name	HistroyOnlineUserNum
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Time interval	Index	Enumeration: • 0—10 minute • 1—Hour	N/A
TimeStamp	Recording time.	Index	DateTime.Format: YYYY-MM-DDTHH:MM:SS.	N/A
Num	Online user number.	N/A	Value range: 0 to $2^{32} - 1$.	N/A

Portal/CurrentOnlineUserNums

This table shows the number of the current online users.

XML structure

```
<Portal>
  <CurrentOnlineUserNums>
    <CurrentOnlineUserNum>
      <Num></Num>
    </CurrentOnlineUserNum>
  </CurrentOnlineUserNums>
</Portal>
```

Table description

Item	Description

Table name	CurrentOnlineUserNums
Table type	Single-instance table
Row name	CurrentOnlineUserNum
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Num	Online user number	N/A	Value range: 0 to $2^{32} - 1$.	N/A

Portal/ObjectGroupStatistics

This table shows the number of online users per object group.

XML structure

```
<Portal>
  <ObjectGroupStatistics>
    <ObjectGroup>
      <GroupName></GroupName>
      <OnlineUserNum></OnlineUserNum>
    </ObjectGroup>
  </ObjectGroupStatistics>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	ObjectGroupStatistics
Table type	Multi-instance table
Row name	ObjectGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of group.	Index	String. Length: 1 to 31 characters.	N/A
OnlineUserNum	Online user num.	N/A	Value range: 0 to $2^{32} - 1$.	N/A

Portal/MacTriggerServers

This table contains information about portal mac trigger servers.

XML structure

```
<Portal>
  <MacTriggerServers>
    <MacTriggerServer>
      <Name></Name>
      <IPAddressInfo>
        <IPAddress></IPAddress>
        <VRF></VRF>
        <Key></Key>
      </IPAddressInfo>
      <Threshold></Threshold>
      <NasType></NasType>
      <MacSvrPort></MacSvrPort>
      <Detect>
        <MacSvrRetries></MacSvrRetries>
        <MacSvrRetryInterval></MacSvrRetryInterval>
      </Detect>
      <MacServerType></MacServerType>
      <Version></Version>
      <MacSvrAuthTimeOut></MacSvrAuthTimeOut>
      <AgingTime></AgingTime>
      <LocalBindingEnable></LocalBindingEnable>
      <LocalBindingAgingTime></LocalBindingAgingTime>
      <CloudBindingEnable></CloudBindingEnable>
      <CloudServerURL></CloudServerURL>
    </MacTriggerServer>
  </MacTriggerServers>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	MacTriggerServers
Table type	Multi-instance table
Row name	MacTriggerServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Portal mac-trigger server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal mac-trigger server address	Data structure	Members include: IPAddress VRF	N/A
IPAddress	IP address of the portal mac-trigger server	N/A	IPv4: String, dotted decimal notation.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal mac-trigger server is on the public network, the length of characters is 0.
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal mac-trigger server and the device. It supports only plaintext.
Threshold	the threshold for MAC-triggered authentication	N/A	Unsigned integer. Value range: 0 to 10240000	The default free-traffic threshold is 0 bytes.
NasType	NAS-Port-Type value	N/A	Unsigned integer. Value range: 1 to 255	The default NAS-Port-Type value carried in RADIUS requests is 0.
MacSvrPort	UDP port number	N/A	Unsigned integer. Value range: 1 to 65534	The default MAC binding server listens for MAC binding query packets on UDP port 50100.
Detect	Portal Mac-trigger server detection	Data structure	Members include: • Retry Interval	N/A
MacSvrRetries	Maximum number of portal Mac-trigger server detection attempts	N/A	Unsigned integer. Value range: 1~10	The default maximum number of query attempts is 3.
MacSvrRetryInterval	Detection interval	N/A	Unsigned integer. Value range:1~60	The default maximum number of query interval is 1 second.
MacServerType	a MAC binding server type	N/A	Boolean: • 0.imc 1.cmcc	The default type of a MAC binding server is IMC.

Version	Version number	N/A	Unsigned integer. Value range:1~3	The default version of the portal protocol is 1.
MacSvrAuthTimeOut	Set the timeout time the device waits for portal authentication to complete	N/A	Unsigned integer. Value range:1~15	The default portal authentication timeout time is 3 minutes.
AgingTime	Set the aging time for MAC-trigger entries	N/A	Unsigned integer. Value range:60~7200	The default aging time for MAC-trigger entries is 300 seconds.
LocalBindingEnable	enable portal MAC-Trigger local-binding	N/A	Boolean: • true–Yes false–No	N/A
LocalBindingAgingTime	the aging time for MAC-trigger local-binding entry	N/A	Unsigned integer. Value range:1~2160	N/A
CloudBindingEnable	Enable portal MAC-Trigger cloud binding	N/A	Boolean: • true–Yes false–No	N/A
CloudServerURL	URL of the cloud portal authentication server	N/A	String, case-sensitive. Length: 1 to 256 characters.	N/A

Portal/ForbiddenRule

This table contains information about portal-forbidden rules.

XML structure

```
<Portal>
  <ForbiddenRules>
    <ForbiddenRule>
      <RuleID></RuleID>
      <IsAllotID></IsAllotID>
      <SrcIPAddr></SrcIPAddr>

      <SrcProtocolType></SrcProtocolType>
      <SrcPortStart></SrcPortStart>
      <SrcPortEnd></SrcPortEnd>
      <DstIPAddr></DstIPAddr>
      <DstIPAddrLen></DstIPAddrLen>
      <DstProtocolType></DstProtocolType>
      <DstPortStart></DstPortStart>
```

```
      <DstPortEnd></DstPortEnd>
      <DstHostName></DstHostName>
      <SrcSsidName></SrcSsidName>
    </ForbiddenRule>
  </ForbiddenRules>
</Portal>
```

Table description

Item	Description
Feature name	Portal
Table name	ForbiddenRules
Table type	Multi-instance table
Row name	ForbiddenRule
Restrictions	Not support modify

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Portal-forbidden rule number	Index	Non-negative integer.	N/A
IsAllotID	Whether the rule number is allocated automatically	N/A	Boolean: • **true—Yes** • **false—No**	N/A
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: 0 to 128.	N/A
SrcProtocolType	Source protocol type	N/A	Enumeration: • 6—TCP. • 17—UDP.	N/A
SrcPortStart	Start port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer Value range:0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4:String,dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A

DstIPAddrLen	Subnet mask of the destination IP address	N/A	Non-negative integer. Value range: 0 to 128.	N/A
DstProtocolType	Destination protocol type	N/A	Enumeration: • 6—TCP. • 17—UDP.	N/A
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535,	N/A
DstHostName	Destination hostname	N/A	String. Length: 1 to 253 characters.	N/A
SrcSsidName	Source SSID name	N/A	String. Length: 1 to 32 characters	N/A

Portal/RedirectOriginalUrl

This table contains information about portal redirect match rules based on original URLs.

XMLstructure

```
<Portal>
  <RedirectOriginalUrls>
    <RedirectOriginalUrl>
      <Name></Name>
      <OriginalUrl></OriginalUrl>

PORTAL event stream

Portal event stream description.

Portal user trace event

This event is used to report PORTAL authentication information, including user login time and logoff time, and authentication failure time and reason.

XML structure for event subscription

```
<PortalUserTraceEvent>
</PortalUserTraceEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Portal</stream>
    <filter type="subtree">
      <PortalUserTraceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Portal:1.0">
      </PortalUserTraceEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	PORTAL
Event name	PortalUserTraceEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Portal:1.0
Support for extended query	No

XML structure for event report

```
<PortalUserTraceEvent>
  <IpAddress></IpAddress>
  <MacAddress></MacAddress>
  <UserName></UserName>
  <UserID></UserID>
```

```
  <EventType></EventType>
  <ReqInfoTime></ReqInfoTime>
  <AckInfoTime></AckInfoTime>
  <ReqChallengeTime></ReqChallengeTime>
  <AckChallengeTime></AckChallengeTime>
  <ReqAuthTime></ReqAuthTime>
  <AckAuthTime></AckAuthTime>
  <ReqLogoutTime></ReqLogoutTime>
  <AckLogoutTime></AckLogoutTime>
  <NtfLogoutTime></NtfLogoutTime>
  <ReqMacBindingTime></ReqMacBindingTime>
  <AckMacBindingTime></ReqMacBindingTime>
  <AccessRequestTime></AccessRequestTime>
  <AccessResponseTime></AccessResponseTime>
  <Reason></Reason>
</PortalUserTraceEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2021-08-29T09:10:51</eventTime>
  <PortalUserTraceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Portal:1.0">

PortalProxy/ProxyEnable

This table contains global enabling portal proxy function.

XML structure

```
<PortalProxy>
  <ProxyEnable>
    <Enable></Enable>
  </ProxyEnable>
</PortalProxy>
```

Table description

Item	Description
Feature name	PortalProxy
Table name	ProxyEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether the portal proxy feature is enabled	N/A	Boolean: • true. • false.	Default value: false.

PortalProxy/ProxyPort

This table contains port for receiving portal packet.

XML structure

```
<PortalProxy>
  <ProxyPort>
    <Port></Port>
```

```
  </ProxyPort>
</PortalProxy>
```

Table description

Item	Description
Feature name	PortalProxy
Table name	ProxyPort
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Port for receiving portal packet	N/A	Non-negative integer. Value range: 1 to 65535.	Example: 2000.

PortalProxy/AddrEntries

This table contains ipv4 address about portal proxy bas.and user-ip range.

XML structure

```
<PortalProxy>
  <AddrEntries>
    <AddrEntry>
      <AddrGrpName></AddrGrpName>
      <BasIP></BasIP>
      <UserAddrRang>

PPP/PPPAuth/Table

This table contains the information about using **ppp authentication-mode** to configure PPP authentication.

XML structure

```
<PPP>
  <PPPAuth>
    <AuthMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <Callin></Callin>
      <Domain></Domain>
      <DefaultDomain></DefaultDomain>
    </AuthMode>
  </PPPAuth>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPAuth
Table type	Multi-instance table
Row name	AuthMode
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Mode	Authentication mode.	N/A	Enumeration: • **1**—pap. • **2**—chap. • **4**—ms-chap. • **8**—**ms-chap-v2.**	PPP authentication includes the following categories: PAP and CHAP and ms-chap and ms-chap-v2. You can configure multiple authentication modes. For example the Mode is 10 when Authentication mode types are chap and ms-chap-v2
Callin	Authenticates the call-in users only.	N/A	Boolean: • **true** • **false**	Authenticates the call-in users only. This keyword can be configured when the local end acts as the receiving end of DDR calls.
Domain	ISP domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	Specifies the ISP domain name for authentication.
DefaultDomain	ISP default domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	N/A

PPP/PPPUserPap/Table

This table contains the information about PPP Pap.

XML structure

```
<PPP>
  <PPPUserPap>
    <UserPap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
```

```
    </UserPap>
  </PPPUserPap>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPUserPap
Table type	Multi-instance table
Row name	UserPap
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface pos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of Pap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of Pap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

PPP/PPPDNS/Table

This table contains the information of PPP DNS server IP addresses.

XML structure

```
<PPP>
  <PPPDNS>
    <IpcpDNS>
      <IfIndex></IfIndex>
      <PriAddr></PriAddr>
      <SecAddr></SecAddr>
    </IpcpDNS>
  </PPPDNS>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPDNS
Table type	Multi-instance table
Row name	IpcpDNS
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PriAddr	Specifies a primary DNS server IP address.	N/A	String, dotted decimal notation.	N/A
SecAddr	Specifies a secondary DNS server IP address.	N/A	String, dotted decimal notation.	N/A

PPP/PPPUserChap/Table

This table contains the information about using PPP authentication-mode chap to configure PPP authentication.

XML structure

```
<PPP>
  <PPPUserChap>
    <UserChap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserChap>
  </PPPUserChap>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPUserChap
Table type	Multi-instance table
Row name	UserChap
Restrictions	This table supports interface types: virtual-template interface

	virtual-ppp interface/subinterface analogmodem interface isdn bri interface pos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of chap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of chap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

PPP/PPPIpPool/Table

This table contains ip pool of PPP configuration information.

XML structure

```
<PPP>
  <PPPIpPool>
    <IpPool>
      <GroupName></GroupName>
      <PoolName></PoolName>
      <StartIPaddr></StartIPaddr>
      <EndIPaddr></EndIPaddr>
    </IpPool>
  </PPPIpPool>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPIpPool
Table type	Multi-instance table
Row name	IpPool
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	PPP ip pool group name	Index	String, case sensitive. Length: 1 to 31 characters.	Group name must be "default" when you set the default group.
PoolName	PPP ip pool name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
StartIPaddr	Start IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	N/A
EndIPaddr	End IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	It is equal with the StartIPaddr when it is empty. EndIPaddr must be no less than the StartIPaddr.

PPP/PPPRmtAddr/Table

This table contains PPP remote address configuration information.

XML structure

```
<PPP>
  <PPPRmtAddr>
    <RmtAddr>
      <IfIndex></IfIndex>
      <IPaddress></IPaddress>
      <PoolName></PoolName>
    </RmtAddr>
```

```
  </PPPRmtAddr>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPRmtAddr
Table type	Multi-instance table
Row name	RmtAddr
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
IPaddress	Start IP address of IP address range in a PPP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
PoolName	PPP ip pool name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

PPP/PPPDNSAccept/Table

This table contains PPP ipcp dns admit-any configuration information.

XML structure

```
<PPP>
  <PPPDNSAccept>
    <DNSAdmitAny>
      <IfIndex></IfIndex>
```

```
      <AdmitAny></AdmitAny>
    </DNSAdmitAny>
  </PPPDNSAccept>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPDNSAccept
Table type	Multi-instance table
Row name	DNSAdmitAny
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AdmitAny	Configure an interface to accept the DNS server IP address assigned by the peer.	N/A	Boolean: • **true** • false	You can config an interface to accept the DNS server IP address assigned by the peer,through which domain names can be resolved for the device.

PPP/PPPDNSRequest/Table

This table contains PPP ipcp dns admit-any configuration information.

XML structure

```
<PPP>
  <PPPDNSRequest>
    <DNSRequest>
      <IfIndex></IfIndex>
      <Request></Request>
    </DNSRequest>
  </PPPDNSRequest>

Row name	DNSRequest
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Request	Configure an interface to actively request the DNS server IP address its peer.	N/A	Boolean: • **true** • false	If a device is connected to a provider's access server through a PPP link, you can use this command. Then, the device can obtain the specified DNS server IP address from the access server during IPCP negotiation.

PPP/PPPAuthFailurePolicy/Table

This table contains the information about configuring PPP Auth Failure Policy.

XML structure

```
<PPP>
  <PPPAuthFailurePolicy>
    <ChastenAuthFailedTimes></ChastenAuthFailedTimes>
    <ChastenPeriod></ChastenPeriod>
    <BlockPeriod></BlockPeriod>
    <CheckEnable></CheckEnable>
  </PPPAuthFailurePolicy>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPAuthFailurePolicy

Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChastenAuthFailedTimes	Allow times of authentication failure.	N/A	Unsigned integer. 1~1000.	Custom defaults vary by product
ChastenPeriod	Check period of authentication failure chasten in second.	N/A	Unsigned integer.1~3600.	Custom defaults vary by product
BlockPeriod	Block period of authentication in second.	N/A	Unsigned integer.1~3600.	Custom defaults vary by product
CheckEnable	Enable chasten.	N/A	Enumeration: • 1—Enable chasten function. (default) • 2—Disable chasten function.	Custom defaults vary by product

PPP/PPPGlobalCfg/Table

This table contains the information about configuring PPP GlobalCfg.

XML structure

```
<PPP>
  <PPPGlobalCfg>
    <GlobalCfg>
      <ChassisId></ChassisId>
      <SlotId></SlotId>
      <KeepaliveFastReply></KeepaliveFastReply>
    </GlobalCfg>
  </PPPGlobalCfg>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPGlobalCfg
Table type	Multi-instance table
Row name	GlobalCfg
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis id	Index	Unsigned integer.	0 means non-stacked environment
Slot	Slot id	Index	Unsigned integer.	N/A
KeepaliveFastReply	To enable fast reply keepalive pkt.	N/A	Enumeration: • true.(default) • false.	N/A

PPP/PPPMruCheck/Table

This table shows PPP Mru Check information.

XML structure

```
<PPP>
  <PPPMruCheck>
    <MruCheck></MruCheck>
  </PPPMruCheck>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPMruCheck
Table type	Single-instance table

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MruCheck	To enable mru-check.	N/A	Enumeration: • true. • false.(default)	N/A

PPP/PPPAccountStatistic/Table

This table contains the information about using ppp account-statistics enable to configure PPP accounting.

XML structure

```
<PPP>
  <PPPAccountStatistic>
    <AccountStatistic>
      <IfIndex></IfIndex>
      <Account></Account>
      <Acl></Acl>
    </AccountStatistic>
  </PPPAccountStatistic>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPAccountStatistic
Table type	Multi-instance table
Row name	AccountStatistic
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface

	pos interface async interface aux interface serial interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Account	Enable PPP accounting	N/A	Enumeration: • true. • false (default).	N/A
Acl	ACL number or ACL name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

PPP/PPPAuth/Table

This table contains the information about using ppp authentication-mode to configure PPP authentication.

XML structure

```
<PPP>
  <PPPAuth>
    <AuthMode>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Mode></Mode>
      <Callin></Callin>
      <Domain></Domain>
      <DefaultDomain></DefaultDomain>
    </AuthMode>
  </PPPAuth>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPAuth
Table type	Multi-instance table
Row name	AuthMode
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
Mode	Authentication mode.	N/A	Enumeration: • 1—pap. • **2**—chap. • **4**—ms-chap. • **8—ms-chap-v2.**	N/A
Callin	Authenticates the call-in users only.	N/A	Boolean: • **true** • **false**	N/A
Domain	ISP domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	N/A
DefaultDomain	ISP default domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	N/A

PPP/PPPUserPap/Table

This table contains the information about PPP Pap.

XML structure

```
<PPP>
  <PPPUserPap>
    <UserPap>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <UserName></UserName>

    </IpcpDNS>
  </PPPDNS>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPDNS
Table type	Multi-instance table
Row name	IpcpDNS
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
PriAddr	Specifies a primary DNS server IP address.	N/A	String, dotted decimal notation.	N/A
SecAddr	Specifies a secondary DNS server IP address.	N/A	String, dotted decimal notation.	N/A

PPP/PPPUserChap/Table

This table contains the information about using PPP authentication-mode Chap to configure PPP authentication.

XML structure

```
<PPP>
  <PPPUserChap>
    <UserChap>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserChap>
  </PPPUserChap>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPUserChap
Table type	Multi-instance table
Row name	UserChap
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface pos interface async interface

			aux interface serial interface	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
UserName	Username of chap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of chap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

PPP/PPPOEUserNumInfo/Table

This table contains the number of PPPoE user information.

XML structure

```
<PPP>
  <PPPOEUserNumInfo>
    <Num></Num>
  </PPPOEUserNumInfo>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPOEUserNumInfo
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Num	PPPoE user number.	N/A	Unsigned integer.	N/A

PPP/PPPOEUserInfo/Table

This table contains PPPoE user information.

XML structure

```
<PPP>
  <PPPOEUserInfo>
    <PPPOEUser>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <MacAddr></MacAddr>

    </PPPUser>
  </PPPUserInfo>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPUserInfo
Table type	Multi-instance table
Row name	PPPUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PPPIndex	PPP index.	Index	Unsigned integer.	Unsigned integer. Value range: 0 to 2^{64} - 1.
UserType	User Type	N/A	Enumeration: • 1—LAC. • 2—LNS. • 3—PPPOA. • **4—PPPOE** • **5—PPPPHY**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	PPP Phase	N/A	Enumeration: • 0—PHASE_DEAD. • 1—PHASE_ESTABLISH • 2—PHASE_AUTHENTICATE • 3—PHASE_DDRAUTH • 4—PHASE_MULTILINK • 5—PHASE_NETWORK • 6—PHASE_TERMINATE	N/A
UserName	User name.	N/A	String. Length: 1 to 80 characters.	N/A
MacAddr	MAC address .	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IpAddr	Ip address.	N/A	String, dotted decimal notation.	N/A
IPv6Addr	IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
AuthenDomain	Domain name for authentication	N/A	String. Length: 1 to 255 characters.	N/A
AuthorDomain	Domain name for authorization	N/A	String. Length: 1 to 255 characters.	N/A
VPNInstanceName	Authorized VPN instance name	N/A	Length: 1 to 31 characters.	N/A
UserID	User ID assigned to an user in online state	N/A	Unsigned integer	N/A
ServiceVLAN	Service provider VLAN	N/A	Unsigned short.	N/A
CustomerVLAN	Customer VLAN	N/A	Unsigned short.	N/A
IPv4Pool	PPP IPCP address pool name	N/A	String. Length: 1 to 31 characters.	N/A
IPv6Pool	PPP IPV6 address pool name	N/A	String, Length: 1 to 63 characters.	N/A
IPv6NDPool	PPP IPV6 ND prefix address pool name	N/A	String, Length: 1 to 63 characters.	N/A
VxLANID	VXLAN ID	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LoginTime	User login time	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss
OnlineTime	User online time	N/A	DateTime.	Example: hh:mm:ss
RemainTime	Session duration from AAA	N/A	Unsigned integer.	Unit: seconds
UserProfile	Authorized User profile name from AAA	N/A	String. Length: 1 to 31 characters.	N/A
GroupUserProfile	Authorized Group user profile name from AAA	N/A	String. Length: 1 to 31 characters.	N/A
InboundCAR	Authorized inbound average rate value	N/A	Unsigned integer.	Unit: kbps
OutboundCAR	Authorized outbound average rate value	N/A	Unsigned integer.	Unit: kbps
InboundPIR	Authorized inbound peak rate value	N/A	Unsigned integer.	Unit: kbps
OutboundPIR	Authorized outbound peak rate value	N/A	Unsigned integer.	Unit: kbps
IPv4FlowStat	IPv4 flow statistics	N/A	String. Length: 1 to 128 characters.	Include uplink packets/bytes and downlink packets/bytes
IPv6FlowStat	IPv6flow statistics	N/A	String. Length: 1 to 128 characters.	Include uplink packets/bytes and downlink packets/bytes
AccessInterface	Access interface	N/A	Unsigned integer	N/A
BasInterface	Bas interface	N/A	Unsigned integer	N/A
CfgInterface	Configuration interface	N/A	Unsigned integer	N/A
InboundFlowRate	InboundFlowRate	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A
OutboundFlowRate	OutboundFlowRate	N/A	Unsigned integer Value range: 0 to 2^{64}-1	N/A

PPP/PPPIpPool/Table

This table contains ip pool of PPP configuration information.

XML structure

```
<PPP>
  <PPPIpPool>
    <IpPool>
      <GroupName></GroupName>
      <PoolName></PoolName>
      <StartIPaddr></StartIPaddr>
      <EndIPaddr></EndIPaddr>
    </IpPool>
  </PPPIpPool>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPIpPool
Table type	Multi-instance table
Row name	IpPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	PPP ip pool group name	Index	String, case sensitive. Length: 1 to 31 characters.	Group name must be "default" when you set the default group.
PoolName	PPP ip pool name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
StartIPaddr	Start IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndIPaddr	End IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	It is equal with the StartIPaddr when it is empty. EndIPaddr must be no less than the StartIPaddr.

PPP/PPPRmtAddr/Table

This table contains PPP remote address configuration information.

XML structure

```
<PPP>
  <PPPRmtAddr>
    <RmtAddr>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <IPaddress></IPaddress>
      <PoolName></PoolName>
    </RmtAddr>
  </PPPRmtAddr>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPRmtAddr
Table type	Multi-instance table
Row name	RmtAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
IPaddress	Start IP address of IP address range in a PPP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
PoolName	PPP ip pool name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

PPP/PPPDNSAccept/Table

This table contains PPP ipcp dns admit-any configuration information.

XML structure

```
<PPP>
  <PPPDNSAccept>
    <DNSAdmitAny>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <AdmitAny></AdmitAny>
    </DNSAdmitAny>
  </PPPDNSAccept>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPDNSAccept
Table type	Multi-instance table
Row name	DNSAdmitAny
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
AdmitAny	Configure an interface to accept the DNS server IP address assigned by the peer.	N/A	Boolean: • **true.** • **false.**	You can config an interface to accept the DNS server IP address assigned by the peer,through which domain names can be resolved for the device.

PPP/PPPDNSRequest/Table

This table contains PPP ipcp dns admit-any configuration information.

XML structure

```
<PPP>
  <PPPDNSRequest>
    <DNSRequest>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Request></Request>
    </DNSRequest>
  </PPPDNSRequest>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	PPPDNSRequest
Table type	Multi-instance table
Row name	DNSRequest
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
Request	Configure an interface to actively request the DNS server IP address its peer.	N/A	Boolean: • **true** • **false**	If a device is connected to a provider's access server through a PPP link, you can use this command. Then, the device can obtain the specified DNS server IP address from the access server during IPCP negotiation.

PPP/HistoryUserInfo/Table

This table contains PPP history user information.

XML structure

```
<PPP>
  <HistoryUserInfo>
    <HistoryUser>
      <Interval></Interval>
      <Index></Index>
      <TimeStamp></TimeStamp>
      <Num></Num>
    </HistoryUser>
  </HistoryUserInfo>
</PPP>
```

Table description

Item	Description
Feature name	PPP
Table name	HistoryUserInfo

Table type	Multi-instance table
Row name	HistoryUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	The time interval of getting user information	Index	Enumeration: • 0—hour. • 1—day.	When Interval = 0,obtain ppp user information at a time every ten minutes. When Interval = 1,obtain ppp user information at a time every one hour.
Index	The serial number of information	Index	Unsigned integer. Value range: 1 to 60.	The smaller the Index,obtained information from the closer now.
TimeStamp	The time when getting information	N/A	Date time	N/A
Num	PPP user total	N/A	Unsigned integer.	N/A

PPP/PPPAuthFailurePolicy/Table

This table contains the information about configuring PPP Auth Failure Policy.

XML structure

```
<PPP>
  <PPPAuthFailurePolicy>
    <ChastenAuthFailedTimes></ChastenAuthFailedTimes>
    <ChastenPeriod></ChastenPeriod>
    <BlockPeriod></BlockPeriod>
    <CheckEnable></CheckEnable>
  </PPPAuthFailurePolicy>
</PPP>
```

Table description

Item	Description
Feature name	PPP

Table name	PPPAuthFailurePolicy
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChastenAuthFailedTimes	Allow times of authentication failure.	N/A	Unsigned integer. 1~1000.	N/A
ChastenPeriod	Check period of authentication failure chasten in second.	N/A	• Unsigned integer.1~3600.	N/A
BlockPeriod	Block period of authentication in second.	N/A	• Unsigned integer.1~3600.	N/A
CheckEnable	Enable chasten.	N/A	Enumeration: • 1—Enable chasten function. • 2—Disable chasten function.	N/A

PPP/ChastenStatistics/Table

This table shows PPP chasten statistics information.

XML structure

```
<PPP>
  <ChastenStatistics>
    <BlockedUserNum></BlockedUserNum>
    <AuthfailedUserNum></AuthfailedUserNum>
  </ChastenStatistics>
</PPP>
```

Table description

Item	Description
Feature name	PPP

Table name	ChastenStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BlockedUserNum	Blocked users total	N/A	• Unsigned integer.	N/A
AuthfailedUserNum	Auth-failed users total	N/A	Unsigned integer.	N/A

PPP/PPPGlobalCfg/Table

This table contains the information about configuring PPP GlobalCfg.

XML structure

```
<PPP>
  <PPPGlobalCfg>
    <GlobalCfg>
      <ChassisId></ChassisId>

PPP/PPPAuthMode

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	The <Mode> column has been set and the < Callin > column has been set to true,but the < Domain > column and the < DefaultDomain > don't been set. <Mode>列存在设置，<Callin>设为真，但<Domain>和<DefaultDomain>行没有设置。
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发
Domain cannot be set as "default". Domain列不能被设置为"default"。	Avoid to conflict with command. 防止与命令行冲突。

PPP/PPPUserPap

Message	Explanation
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

PPP/PPPDNS

Message	Explanation
Invalid start IPv4 address. 非法的IPv4开始地址。	The <PriAddr> column should be a valid IP address. <PriAddr>列必须是合法的IP地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	The <SecAddr> column should be a valid IP address. <SecAddr>列必须是合法的IP地址。
Configuration items don't meet the requirements. 不符合配置要求。	The <PriAddr> column doesn't been set, but the <SecAddr> column has bee set. <PriAddr>列没有进行配置，但<SecAddr>列存在配置
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

PPP/PPPUserChap

Message	Explanation
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

PPP/PPPIpPool

Message	Explanation
Invalid start IPv4 address. 非法的IPv4开始地址。	The <StartIPaddr> column should be a valid IP address. <StartIPaddr>列必须是合法的IP地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	The <EndIPaddr> column should be a valid IP address. <EndIPaddr>列必须是合法的IP地址。
Total IP address number in this range exceeds 65535. 该IP范围内IP地址个数已达上限。	Total IP address number in this range exceeds 65535. 该IP范围内IP地址个数已达上限。
Total IP address number in this pool exceeds 65535. 该IP地址池内IP地址个数已达上限。	Total IP address number in this pool exceeds 65535. 该IP地址池内IP地址个数已达上限。
This pool is not allowed, because the pool is already in another group. 该IP地址池已存在其他组内	This pool is not allowed, because the pool is already in another group. 该IP地址池已存在其他组内
The IP address range overlaps with existing IP address ranges in other group. 该IP地址范围与其他组内的IP地址范围相互覆盖。	The IP address range overlaps with existing IP address ranges in other group. 该IP地址范围与其他组内的IP地址范围相互覆盖。
The start IP address should be less than or equal to the end IP address. 开始IP地址必须小于等于结束IP地址。	The start IP address should be less than or equal to the end IP address. 开始IP地址必须小于等于结束IP地址。
Operation failed, The pool is being used. 操作失败，地址池正在使用。	Operation failed, The pool is being used. 操作失败，地址池正在使用。

PPP/PPPRmtAddr

Message	Explanation
Invalid IPv4 address. 非法的IPv4地址。	The <Paddress> column should be a valid IP address. <IPaddress>列必须是合法的IP地址。
Configuration items don't meet the requirements. 不符合配置要求。	The <Paddress> column and <PoolName > column can't be set at the same time. <Paddress> 和<PoolName >不能同时配置。

PPP/PPPDNSAccept

Message	Explanation
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

PPP/PPPDNSRequest

Message	Explanation
In aux interface,async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

PPPOES

PPPOES/PppoesBind/Table

This table contains the information about using pppoe-server bind to enable the PPPoE server on an interface and bind the interface to a VT interface.

XML structure

```
<PPPOES>
  <PppoesBind>
    <BindVT>
      <IfIndex></IfIndex>
      <VTNum></VTNum>
    </BindVT>
    </PppoesBind>
</PPPOES>
```

Table description

Item	Description
Feature name	PPPOES
Table name	PppoesBind
Table type	Multi-instance table
Row name	BindVT
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 GigabitEthernet interface/subinterface Layer 3 Ten-GigabitEthernet interface/subinterface Layer 3 Forty-GigEthernet interface/subinterface Layer 3 Hundred-GigEthernet interface/subinterface Layer 3 Virtual-Ethernet interface/subinterface Layer 3 VE L3VPN interface/subinterface Layer 3 Smartrate-Ethernet interface/subinterface Layer 3 EFM interface/subinterface Layer 3 reth interface/subinterface VLAN interface
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
VTNum	VT number.	N/A	Unsigned integer.	The value of VTNum depends on the device model.

PPPOES/PppoesIfLimit/Table

This table contains PPPOE server sessions limit on interface configuration information.

XML structure

```
<PPPOES>
  <PppoesIfLimit>
    <IfLimit>
      <IfIndex></IfIndex>
      <LimitIf></LimitIf>
      <LimitClnMac></LimitClnMac>

PPPOES

PPPOES/PppoesBind/Table

This table contains the information about using pppoe-server bind to enable the PPPoE server on an interface and bind the interface to a VT interface.

XML structure

```
<PPPOES>
   <PppoesBind>
      <BindVT>
        <IfIndex></IfIndex>
        <IfName></IfName>
        <VTNum></VTNum>
      </BindVT>
   </PppoesBind>
</PPPOES>
```

Table description

Item	Description
Feature name	PPPOES
Table name	PppoesBind
Table type	Multi-instance table
Row name	BindVT
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 GigabitEthernet interface/subinterface Layer 3 Ten-GigabitEthernet interface/subinterface Layer 3 Forty-GigEthernet interface/subinterface Layer 3 Hundred-GigEthernet interface/subinterface Layer 3 Virtual-Ethernet interface/subinterface Layer 3 VE L3VPN interface/subinterface Layer 3 Smartrate-Ethernet interface/subinterface Layer 3 EFM interface/subinterface Layer 3 reth interface/subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
VTNum	VT number.	N/A	Unsigned integer.	The value of VTNum depends on the device model.

PPPOES/PppoesIfLimit/Table

This table contains PPPOE server sessions limit on interface configuration information.

XML structure

```
<PPPOES>
  <PppoesIfLimit>
    <IfLimit>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <LimitIf></LimitIf>
      <LimitClnMac></LimitClnMac>
      <LimitPerVlan></LimitPerVlan>
    </IfLimit>
  </PppoesIfLimit>
</PPPOES>
```

Table description

Item	Description
Feature name	PPPOES
Table name	PppoesIfLimit
Table type	Multi-instance table
Row name	IfLimit
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 GigabitEthernet interface/subinterface

Item	Description
	Layer 3 Ten-GigabitEthernet interface/subinterface Layer 3 Forty-GigEthernet interface/subinterface Layer 3 Hundred-GigEthernet interface/subinterface Layer 3 Virtual-Ethernet interface/subinterface Layer 3 VE L3VPN interface/subinterface Layer 3 Smartrate-Ethernet interface/subinterface Layer 3 EFM interface/subinterface Layer 3 reth interface/subinterface VLAN interface

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
LimitIf	The maximum number of PPPoE sessions on an interface.	N/A	Unsigned integer. Value range: 1 to 65534.	N/A
LimitClnMac	The maximum number of PPPoE sessions for a user	N/A	Unsigned integer. Value range: 1 to 65534.	N/A
LimitPerVlan	The maximum number of PPPoE sessions for a VLAN on an interface	N/A	Unsigned integer. Value range: 1 to 65534.	N/A

PPPOES/PppoesSpecification/Table

This table contains the information about specification of VT number.

XML structure

```
<PPPOES>
  <PppoesSpecification>
    <MinVTNum></MinVTNum>
    <MaxVTNum></MaxVTNum>
```

```
  </PppoesSpecification>
</PPPOES>
```

Table description

Item	Description
Feature name	PPPOES
Table name	PppoesSpecification
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinVTNum	Min VT number	N/A	Unsigned intege	N/A
MaxVTNum	Max VT number	N/A	Unsigned intege	N/A

PPPOES/PppoesAccessDelay/Table

This table contains information about setting the response delay time on an interface.

XML structure

```
<PPPOES>
  <PppoesAccessDelay>
    <AccessDelay>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Mode></Mode>
      <DelayTime></DelayTime>
    </AccessDelay>
  </PppoesAccessDelay>
</PPPOES>
```

Table description

Item	Description
Feature name	PPPOES
Table name	PppoesAccessDelay
Table type	Multi-instance table
Row name	AccessDelay

Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
Mode	The mode of delaytime	Index	Enumeration: • 0—all • 1—even-mac • 2—odd-mac	N/A
DelayTime	Specifies the response delay time	N/A	Unsigned integer. Value range: 10 to 25500.	Unit: milliseconds

PPPOES/PppoesConnChastenGlbPolicy/Table

This table contains the information about configuring Pppoes Conn Chasten Glb Policy.

XML structure

```
<PPPOES>
  <PppoesConnChastenGlbPolicy>
    <BlockPeriod></BlockPeriod>
    <CheckType></CheckType>
    <RequestTimes></RequestTimes>
    <RequestPeriod></RequestPeriod>

PPPOES/PppoesIfLimit 1
PPPOES/PppoesBind 1
PPPOES/PppoesAccessDelay 2

Comware 7 PPPOES NETCONF XML API Error Message Reference

PPPOES/PppoesIfLimit

Message	Explanation
Config interface session limit failed. 配置接口上所能创建PPPoE会话的最大数目失败。	For some reasons like invalid parameter,Config interface session limit failed. 因为参数不在合法范围内等原因，配置接口下最大PPPoE会话限制失败。
Config session limit per client MAC failed. 配置接口上每个用户所能创建PPPoE会话的最大数目失败。	For some reasons like invalid parameter,Config session limit per client MAC failed. 因为参数不在合法范围内等原因，配置每个MAC地址对应的最大PPPoE会话数失败。

PPPOES/PppoesBind

Message	Explanation
Another virtual template is bound with the interface. To bind a new one, remove the existing binding first. 该接口已绑定其他VT口。如果想绑定新的VT口，先删除已经绑定的VT口。	The interface can bind one virtual template. To bind a new one, remove the existing binding first. 接口下只能绑定一个VT口，绑定新VT需要先删除旧的。
The operation is not supported on this interface. 接口上不支持该操作。	The operation is not supported on this interface. 接口上不支持该操作。
Failed to config PPPoE server. 配置失败。	Failed to config PPPoE server. 配置失败。
Operation failed. You can execute this command only after all users on the interface go offline. 操作失败。在此接口所有用户下线后你才能执行这条命令。	You can execute this command only after all users on the interface go offline. 有用户在线不能去捆绑VT口。
Failed to Craete Bas-interface. 创建Bas接口失败。	Failed to Craete Bas-interface. 创建Bas接口失败。
The specified virtual-template interface doesn't exist. 指定的VT口不存在。	You can execute this command only after the specified virtual-template interface exist. VT口存在才能做PPPOES捆绑。
The VTNum cannot be bigger than the supported max VTNum. 下发的VTNum不能大于设备支持的最大VTNum。	The VTNum is out of range. 配置的VTNum超出范围。

PPPOES/PppoesAccessDelay

Message	Explanation
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。

Table type	Multi-instance table
Row name	Port
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your

Column name	Column description	Column type	Data type and restrictions	Remarks
				product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrustMode	Port priority trust mode.	N/A	Enumeration: • **1**—Untrust. • **2**—Dot1p. • **3**—DSCP. • **4**—EXP. • **5**—IP precedence. • **6**—Dot11e. • **7**—Auto. • **8**—Inner-Dot1p	Required. The default priority trust mode on an interface varies by device.
Override	Whether overwrite the original priority carried in the packet	N/A	Boolean: • **false**—Do not overwrite the priority (default). • **true**—Overwrite the priority.	Both TrustMode and Override are specified, or both are not specified.

PRIMAP/GlobalTrustMode

This table contains information about global priority trust mode.

Vxlan mode is supported only.

XML structure

```
<PRIMAP>
  <GlobalTrustMode>
      <TunnelDscp></TunnelDscp>
  </GlobalTrustMode>
</PRIMAP>
```

Table description

Item	Description

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—SMPTE ST 2059-2 • **5**—AES67-2015. • **6**—ITU-T G.8275.2.	
Mode	Specify the PTP clock node type	N/A	Enumeration: • **0**—Invalid. • **1**—Boundary clock(BC). • **2**—Ordinary clock(OC). • **3**—Peer-to-peer transparent clock(P2PTC). • **4**—End-to-end transparent clock(E2ETC). • **5**—P2PTC-OC. • **6**—E2ETC-OC. • **7**—ITU-T G.8275.1 Telecom Boundary Clock(T-BC). • **8**—ITU-T G.8275.1 Telecom Transparent Clock(T-TC). • **9**—ITU-T G.8275.1 Telecom time slave clock(T-TSC). • **10**-- ITU-T G.8275.2 Partial-Support Telecom Boundary Clock (T-BC-P) • **11**-- ITU-T G.8275.2 Partial-Support Telecom Time Slave Clock(T-TSC-P)	Only BC, OC, P2PTC, E2ETC, P2PTC-OC or E2ETC-OC can be configured when the profile is IEEE 1588 version2. Only BC, OC, P2PTC or P2PTC-OC can be configured when the profile is IEEE 802.1AS. Only T-BC, T-TC or T-TSC can be configured when the profile is ITU-T G.8275.1. Only BC, OC, P2PTC or E2ETC can be configured when the profile is SMPTE ST 2059-2. Only BC, OC, P2PTC or E2ETC can be configured when the profile is AES67-2015. In B64 Trunk, T-BC and T-TC are not supported.
Domain	Specify a PTP domain for the device.	N/A	Unsigned integer. Value range: 0 to 255. when the PTP profile is IEEE 1588 version 2 or IEEE 802.1AS, the default Value is 0. When the PTP profile is ITU-T G.8275.1,the default value is 24. When the PTP profile is SMPTE ST 2059-2,the default value is 127.	When the profile is IEEE 1588 version2 or IEEE 802.1AS, the value range for this column is 0 to 255. When the profile is ITU-T G.8275.1, the value range for this column is 24 to 43. When the profile is SMPTE ST 2059-2, the value range for this column is 0 to 127. When the profile is ITU-T G.8275.2, the value range for this column is 44 to 63.
SlaveOnly	Configure the OC to work as only a slave clock	N/A	Boolean: • true • false(default)	It is configurable only when the mode is OC.
ActiveForceState	Activate the role setting of the	N/A	Boolean: • true	It is not configurable when the mode is

Column name	Column description	Column type	Data type and restrictions	Remarks
	PTP port		• false (default)	T-TSC or T-TSC-P.
UtcOffset	The cumulative offset between UTC and TAI	N/A	Unsigned integer: Value range: value range depend on device customixation The unit is seconds. The default of utcoffset is 0.	N/A
MaxStepsRemoved	The max steps of two PTP device.	N/A	Unsigned integer: Value range: 1 to 255. The default of maxstepsremoved is 255.	N/A
PathTrace	PTP path trace	N/A	Boolean: • true—Enable(default) • false—Disable	N/A
TechnicalStandard	PTP technical standard	N/A	Enumeration: • **0**—Invalid(default). • **1**—oam. • **2**—unicom.	N/A
AbnormalOffsetThreshold	The threshold value of abnormal offset	N/A	Unsigned integer: Value range: value range depend on device customixation The default value depend on device customixation The unit is nanoseconds.	N/A
SuppressionTimesThreshold	The threshold value of suppression times	N/A	Unsigned integer: Value range: value range depend on device customixation The default value depend on device customixation You need to configure the abnormal offset first.	N/A

PTP/Sources

This table contains information about the PTP source VPN and source IPv4 address.

XML structure

```
<PTP>
  <Sources>
    <Source>
      <SourceVpn></SourceVpn>
      <SourceIpv4></SourceIpv4>
    </Source>
```

```
  </Sources>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	Sources
Table type	Multi-instance table
Row name	Source
Restrictions	This table contains only PTP Sources information.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceVpn	Specify a VPN instance	Index	String Length: 0 to 31.	An empty string indicates the public network. The SourceIPV4 and SourceVpn attributes are paired. There can be multiple groups. Each group cannot contain the same SourceVpn, but can contain the same SourceIPV4. The SourceVpn can be empty, but only one group can have an empty SourceVpn at most.
SourceIpv4	Specify the source IP address for outgoing PTP multicast packets encapsulated in UDP	N/A	IPv4: String, in dotted decimal notation.	Example:1.1.1.1.

PTP/ClockSource

This table contains information about clock source configuration.

XML structure

```
<PTP>
```

```
  <ClockSources>

      <TodDelayTime></TodDelayTime>
      <Class></Class>
      <Accuracy></Accuracy>
      <OffsetLogVariance></OffsetLogVariance>
      <TimeSource></TimeSource>
      <GrandMasterClockId></GrandMasterClockId>
    </ClockSource>
  </ClockSources>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	ClockSources
Table type	Multi-instance table
Row name	ClockSource
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockType	Specify a PTP clock source	Index	Enumeration: • **1**—Local. • **2**—Tod0. • **3**—Tod1.	N/A
Priority1	Set Priority1	N/A	Unsigned integer: Value range: 0 to 255. When the PTP profile is ITU-T G.8275.1,the default value is 128. When the PTP profile is IEEE 1588 version 2, the default value is 128. When the PTP profile is SMPTE ST 2059-2 , the default value is 128. When the PTP profile is IEEE	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			802.1AS,the default value is 246. When the PTP profile is ITU-T G.8275.2,the default value is 128.	
Priority2	Set Priority2	N/A	Unsigned integer. Value range: 0 to 255. When the PTP profile is IEEE 1588 version 2, the default value is 128. When the PTP profile is SMPTE ST 2059-2, the default value is 128. When the PTP profile is IEEE 802.1AS,the default value is 248. When the PTP profile is ITU-T G.8275.2,the mode is T-BC-P, the default value is 128. the mode is T-TSC-P, the default value is 255	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
TodDirection	Direction of time signels	N/A	Enumeration: • **0—**Invalid(default). • **1**—Input. • **2**—Output.	It is configurable only when the Clocktype is Tod0 or Tod1. TodDirection and TodDelayTime configured in the ClockSource table take effect in ClockSource under all Instance tables. The ClockSource table under the Instance table does not support TodDirection and TodDelayTime.
TodDelayTime	Delay compensation of time signels	N/A	Unsigned integer: Value range: 0 to 2000000. The unit is nanoseconds.	It is configurable only when the Clocktype is Tod0 or Tod1.
Class	Specify the clock class	N/A	Unsigned integer: Value range: 0 to 255. The Local default accuracy of Local source is 248,the default of ToD clock source is 6.	It is configurable only when the Clocktype is Tod0 or Tod1.
Accuracy	Specify the clock accuracy	N/A	Enumeration: • **32**—25ns. • **33**—100ns. • **34**—250ns.	It is configurable only when the Clocktype is Tod0 or Tod1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **35**—1us. • **36**—2.5us. • **37**—10us. • **38**—25us. • **39**—100us. • **40**—250us. • **41**—1ms. • **42**—2.5ms. • **43**—10ms. • **44**—25ms. • **45**—100ms. • **46**—250ms. • **47**—1S. • **48**—10s. • **49**—GT10s. • **254**—Unkown. When the mode is T-TSC or T-TSC-P,the default accuracy of clock source is 254; Otherwise the default accuracy of Local source is 254,the default of ToD clock source is 32.	
OffsetLogVariance	Offset scaled log variance	N/A	Unsigned integer. Value range: 0 to 65535.	It is configurable only when the Clocktype is Tod0 or Tod1.
TimeSource	Specify the clock attribute	N/A	Unsigned integer. Value range: 0 to 255. The default of ToD clock source is 32.	It is configurable only when the Clocktype is Tod0 or Tod1.
GrandMasterClockId	Grand master clockId	N/A	Octet string. Length: 18 characters.	It's a hexadecimal string. Example: 000FE2-FFFE-FF0000 The value 000000-0000-000000 is not allowed.

PTP/Interfaces

This table contains information about PTP interfaces.

```

Table description

Item	Description
Feature name	PTP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	In certain versions, this column supports interface name-to-index conversion.
Enable	Enable PTP on the port	N/A	Boolean: • true	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false(default)	
ForceState	Specify the role of the PTP port	N/A	Enumeration: • **0**—Invalid (default). • **6**—Master. • **7**—Passive. • **9**—Slave.	N/A
ClockStep	Specify the mode for carrying timestamps	N/A	Enumeration: • **0**—One step. • **1**—Two step(default).	N/A
SynInterval	Set the Sync message interval in seconds	N/A	Integer. Value range: -5 to 6. When the PTP profile is IEEE 1588 version 2, the default value is 0. When the PTP profile is SMPTE ST 2059-2, the default value is -3. When the PTP profile is IEEE 802.1AS, the default value is –3. When the PTP profile is AES67-2015 the default value is –3. When the PTP profile is ITU-T G.8275.1 or ITU-T G.8275.2, the default value is –4.	When the profile is IEEE 1588 version2, syncInterval range is -1 to 1. When the profile is IEEE 802.1AS or ITU-T G.8275.1, syncInterval range is -4 to 6. When the profile is SMPTE ST 2059-2, syncInterval range is -5 to -1.When the profile is AES67-2015, syncInterval range is -4 to 1. When the profile is ITU-T G.8275.2, syncInterval range is -5 to 0.
AnnounceInterval	Set the Announce message interval in seconds	N/A	Integer. Value range: –3 to 6. When the PTP profile is IEEE 1588 version 2 or AES67-2015, the default value is 1. When the PTP profile is IEEE 802.1AS, the default value is 0. When the PTP profile is SMPTE ST 2059-2, the default value is -2. When the PTP profile is ITU-T G.8275.1, the default value is –3. When the PTP profile is ITU-T G.8275.2, the default value is –3.	When the profile is IEEE 1588 version2 or AES67-2015, AnnounceInterval range is 0 to 4. When the profile is IEEE 802.1AS, AnnounceInterval range is 0 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -3 to 1. When the profile is ITU-T G.8275.1, AnnounceInterval range is -3 to 6. When the profile is ITU-T G.8275.2, AnnounceInterval range is -3 to 0.
AnnounceTimeout	Set the Announce message receiving timeout	N/A	Unsigned integer. Value range: 2 to 10. The default value is 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	time			
PdelayRequestInterval	Peer delay request interval (log mean)	N/A	Integer. Value range: –5 to 6. The default value is 0.	When the profile is IEEE 1588 version2 or AES67-2015, AnnounceInterval range is 0 to 5. When the profile is IEEE 802.1AS, AnnounceInterval range is -4 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -5 to 4.
MinDelayReqInterval	Set the minimum interval for sending Delay_Req messages in seconds	N/A	Integer. Value range: –5 to 6. When the PTP protocol is IEEE1588v2 or SMPTE ST 2059-2 or AES67-2015,the default value is 0. When the PTP protocol is ITU-T G.8275.1 or ITU-T G.8275.2,the default value is -4.	When the profile is IEEE 1588 version2, AnnounceInterval range is -4 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -5 to 4. When the profile is AES67-2015, AnnounceInterval range is -3 to 5. When the profile is ITU-T G.8275.1, AnnounceInterval range is -4 to 6. When the profile is ITU-T G.8275.2, AnnounceInterval range is -5 to 0.
DelayMechanism	Specify a delay measurement mechanism	N/A	Enumeration: • **0**—E2E. • **1**—P2P. When the PTP protocol is IEEE1588v2 or SMPTE ST 2059-2 or ITU-T G.8275.1 or AES67-2015 or ITU-T G.8275.2,the default Delay Measurement Mechanism is E2E. When the PTP protocol is IEEE 802.1AS,the default Delay Measurement Mechanism is P2P.	N/A
AsymmetryCorrection	Specify the delay correction value	N/A	Integer. Value range: –2000000 to 2000000. The default value is 0. The unit is nanoseconds.	N/A
PortMode	Configure the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	port type for a TC+OC		• **0**—TC (default). • **1**—OC.	
TransportProtocol	Specify the transport protocol for PTP packets	N/A	Enumeration: • **0**—ETH (default). • **1—**UDP.	When the profile is ITU-T G.8275.2,The default value is 1.
DestinationMac	Specify the destination MAC address for PTP messages	N/A	Six groups of two hexadecimal digits, hyphen-separated. For Pdelay Packets, the default destinationMac is 01-80-c2-00-00-0e. For Non Pdelay Packets, the default destinationMac is 01-1b-19-00-00-00.	Example: 00-0c-af-e3-5d-c0.
Dscp	DSCP	N/A	Unsigned integer. Value range: 0 to 63. The default value is 56.	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
UnicastDestination Ipv4	Specify the destination IP address for outgoing PTP unicast packets encapsulated in UDP	N/A	IPv4: String, dotted decimal notation.	It is configurable only when the port link-mode is route. Example: 1.1.1.1.
UnicastNegotiation	Unicast negotiation	N/A	Enumeration: • **0**—Invalid(default). • **1**—Grant-port. • **2**—Request-port	It is configurable only when the Profile is ITU-T G.8275.2 or IEEE 1588 version 2 Must configure the PTP unicast destination command to enable unicast negotiation. Configuration of grant port is not supported on t-tsc-p.
DelayRespInterval	Delay respond interval	N/A	Integer: Value range: -5 to 0	It is configurable only when the Profile is ITU-T G.8275.2 or IEEE 1588 version 2
NotSlave	Not slave	N/A	Boolean: • true(default) • false	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2 When the mode is T-BC, T-TC, or T-BC-P, the default value is true. When the mode is T-TSC or T-TSC-P, the default value is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Vlan	VLAN information	Data structure	Struct,include members: • VlanId. • Dot1pValue.	It is configurable only when the port link-mode is bridge.
VLANID	Specify a VLAN for PTP packets encapsulated by using IEEE 802.3/Ethernet	N/A	Unsigned integer. The value range depends on the device model.	N/A
Dot1p	Specify an 802.1p priority for PTP packets encapsulated by using IEEE 802.3/Ethernet	N/A	Unsigned integer. Value range: 0 to 7. The default value is 7.	N/A

PTP/Instances

PTP/Instances/ClockSources

This table contains information about clock sources.

XML structure

Please refer to the XML structure of "PTP/Instances".

Table description

Item	Description
Feature name	PTP
Table name	ClockSources
Table type	Multi-instance table
Row name	ClockSource
Restrictions	This table contains clock source information.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockType	Clock source type	Index	Enumeration: • **1**—Local. • **2**—Tod0. • **3**—Tod1.	N/A
Priority1	Value of Priority 1	N/A	Unsigned integer: Value range: 0 to 255. When the PTP profile is ITU-T G.8275.1,the default value is 128. When the PTP profile is IEEE 1588 version 2, the default value is 128. When the PTP profile is SMPTE ST 2059-2, the default value is 128. When the PTP profile is IEEE 802.1AS, the default value is 246. When the PTP profile is ITU-T G.8275.,the default value is 128.	N/A
Priority2	Value of Priority 2	N/A	Unsigned integer. Value range: 0 to 255. When the PTP profile is IEEE 1588 version 2, the default value is 128. When the PTP profile is SMPTE ST 2059-2, the default value is 128. When the PTP profile is IEEE 802.1AS,the default value is 248. When the PTP profile is ITU-T G.8275.,the mode is T-BC-P, the default value is 128. the mode is T-TSC-P, the default value is 255	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
Class	Clock class	N/A	Unsigned integer: Value range: 0 to 255. The Local default accuracy of Local source is 248,the default of ToD clock source is 6.	It is configurable only when the Clocktype is Tod0 or Tod1.
Accuracy	Clock accuracy	N/A	Enumeration: • **32**—25 ns. • **33**—100 ns.	It is configurable only when the Clocktype is Tod0 or Tod1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **34**—250 ns. • **35**—1 us. • **36**—2.5 us. • **37**—10 us. • **38**—25 us. • **39**—100 us. • **40**—250 us. • **41**—1 ms. • **42**—2.5 ms. • **43**—10 ms. • **44**—25 ms. • **45**—100 ms. • **46**—250 ms. • **47**—1 s. • **48**—10 s. • **49**—GT10 s. • **254**—Unkown. When the mode is T-TSC,the default accuracy of the clock source is 254; Otherwise the default accuracy of the local source is 254, the default accurancy of a ToD clock source is 32.	
OffsetLogVariance	Offset scaled log variance	N/A	Unsigned integer. Value range: 0 to 65535.	It is configurable only when the Clocktype is Tod0 or Tod1.
TimeSource	Time source	N/A	Unsigned integer. Value range: 0 to 255. The default of ToD clock source is 32.	It is configurable only when the Clocktype is Tod0 or Tod1.
GrandMasterClockId	Grand master clockId	N/A	Octet string. Length: 18 characters.	It's a hexadecimal string. Example: 000FE2-FFFE-FF0000 The value 000000-0000-000000 is not allowed.

  </Base>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table contains only global PTP information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	PTP profile	N/A	Enumeration: • **0**—Invalid. • **1**—IEEE 1588 version 2. • **2**—IEEE 802.1AS. • **3**—ITU-T G.8275.1. • **4**—SMPTE ST 2059-2 • **5**—AES67-2015	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **6**—ITU-T G.8275.2	
Mode	Specify the PTP clock node type	N/A	Enumeration: • **0**—Invalid. • **1**—Boundary clock(BC). • **2**—Ordinary clock(OC). • **3**—Peer-to-peer transparent clock(P2PTC). • **4**—End-to-end transparent clock(E2ETC). • **5**—P2PTC-OC. • **6**—E2ETC-OC. • **7**—ITU-T G.8275.1 Telecom Boundary Clock(T-BC). • **8**—ITU-T G.8275.1 Telecom Transparent Clock(T-TC). • **9**—ITU-T G.8275.1 Telecom time slave clock(T-TSC). • **10**-- ITU-T G.8275.2 Partial-Support Telecom Boundary Clock (T-BC-P) • **11**-- ITU-T G.8275.2 Partial-Support Telecom Time Slave Clock(T-TSC-P)	Only BC, OC, P2PTC, E2ETC, P2PTC-OC or E2ETC-OC can be configured when the profile is IEEE 1588 version2. Only BC, OC, P2PTC or P2PTC-OC can be configured when the profile is IEEE 802.1AS. Only T-BC, T-TC or T-TSC can be configured when the profile is ITU-T G.8275.1. Only BC, OC, P2PTC or E2ETC can be configured when the profile is SMPTE ST 2059-2.
Domain	Specify a PTP domain for the device.	N/A	Unsigned integer. Value range: 0 to 255**.**	When the profile is IEEE 1588 version2 or IEEE 802.1AS, the value range for this column is 0 to 255. When the profile is ITU-T G.8275.1, the value range for this column is 24 to 43. When the profile is SMPTE ST 2059-2, the value range for this column is 0 to 127. When the profile is ITU-T G.8275.2, the value range for this column is 44 to 63.
SlaveOnly	Configure the OC to work as only a slave clock	N/A	Boolean: • true • false	It is configurable only when the mode is OC.
ActiveForceState	Activate the role setting of the PTP port	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UtcOffset	The cumulative offset between UTC and TAI	N/A	Unsigned integer: Value range: value range depend on device customixation The unit is seconds.	N/A
MaxStepsRemoved	The max steps of two PTP device.	N/A	Unsigned integer: Value range: 1 to 255.	N/A
PathTrace	PTP path trace	N/A	Boolean: • true—Enable • false—Disable	N/A
TechnicalStandard	PTP technical standard	N/A	Enumeration: • **0**—Invalid. • **1**—oam. • **2**—unicom.	N/A
AbnormalOffsetThreshold	The threshold value of abnormal offset	N/A	Unsigned integer: Value range: value range depend on device customixation The default value depend on device customixation The unit is nanoseconds.	N/A
SuppressionTimesThreshold	The threshold value of suppression times	N/A	Unsigned integer: Value range: value range depend on device customixation The default value depend on device customixation	N/A

PTP/Sources

This table contains information about PTP sources.

XML structure

```
<PTP>
  <Sources>
    <Source>
      <SourceVpn></SourceVpn>
      <SourceIpv4></SourceIpv4>
    </Source>
  </Sources>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	Sources
Table type	Multi-instance table
Row name	Source
Restrictions	This table contains only PTP Sources information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceVpn	Specify a VPN instance	Index	String Length: 0 to 31.	An empty string indicates the public network. The SourceIPV4 and SourceVpn attributes are paired. There can be multiple groups. Each group cannot contain the same SourceVpn, but can contain the same SourceIPV4. The SourceVpn can be empty, but only one group can have an empty SourceVpn at most.
SourceIpv4	Specify the source IP address for outgoing PTP multicast packets encapsulated in UDP	N/A	IPv4: String, in dotted decimal notation.	Example:1.1.1.1.

PTP/ClockSources

This table contains information about clock sources.

XML structure

```
<PTP>
  <ClockSources>
    <ClockSource>
      <ClockType></ClockType>
      <Priority1></Priority1>
```

```
      <Priority2></Priority2>
      <LocalPriority></LocalPriority>
      <TodDirection></TodDirection>
      <TodDelayTime></TodDelayTime>
      <Class></Class>
      <Accuracy></Accuracy>
      <OffsetLogVariance></OffsetLogVariance>
      <TimeSource></TimeSource>
      <GrandMasterClockId></GrandMasterClockId>
    </ClockSource>
  </ClockSources>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	ClockSources
Table type	Multi-instance table
Row name	ClockSource
Restrictions	This table supports only global functions.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockType	Specify a PTP clock source	Index	Enumeration: • **1**—Local. • **2**—Tod0. • **3**—Tod1.	N/A
Priority1	Set Priority1	N/A	Unsigned integer: Value range: 0 to 255.	N/A
Priority2	Set Priority2	N/A	Unsigned integer. Value range: 0 to 255.	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
TodDirection	Direction of time signels	N/A	Enumeration: • **0—**Invalid. • **1**—Input. • **2**—Output.	It is configurable only when the Clocktype is Tod0 or Tod1.
TodDelayTime	Delay compensation of time signels	N/A	Unsigned integer: Value range: 0 to 2000000. The unit is nanoseconds.	It is configurable only when the Clocktype is Tod0 or Tod1.

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Specify the clock class	N/A	Unsigned integer: Value range: 0 to 255.	It is configurable only when the Clocktype is Tod0 or Tod1.
Accuracy	Specify the clock accuracy	N/A	Enumeration: • **32**—25ns. • **33**—100ns. • **34**—250ns. • **35**—1us. • **36**—2.5us. • **37**—10us. • **38**—25us. • **39**—100us. • **40**—250us. • **41**—1ms. • **42**—2.5ms. • **43**—10ms. • **44**—25ms. • **45**—100ms. • **46**—250ms. • **47**—1S. • **48**—10s. • **49**—GT10s. • **254**—Unkown.	It is configurable only when the Clocktype is Tod0 or Tod1.
OffsetLogVariance	Offset log variance	N/A	Unsigned integer: Value range: 0 to 65535.	N/A
TimeSource	Specify the clock attribute	N/A	Unsigned integer. Value range: 0 to 255.	It is configurable only when the Clocktype is Tod0 or Tod1.
GrandMasterClockId	Grand Master clockId	N/A	Octet string. Length: 18 characters.	It's a hexadecimal string. Example: 000FE2-FFFE-FF0000

PTP/Clock

This table contains PTP clock information.

XML structure

```
<PTP>
  <Clock>
    <ClockId></ClockId>
    <ClockType></ClockType>
    <PtpPortNumber></PtpPortNumber>
    <OffsetFromMaster></OffsetFromMaster>
    <MeanPathDelay></MeanPathDelay>
    <ReceiveIfIndex></ReceiveIfIndex>
```

```
    <ReceiveIfName></ReceiveIfName>
    <StepsRemoved></StepsRemoved>
    <TimeLockStatus></TimeLockStatus>
    <LocalTime></LocalTime>
  </Clock>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	Clock
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockId	Clock ID	N/A	Octet string. Length: 18 characters.	It's a hexadecimal string. Example: 18C2DF-FFFE-EA0100.
ClockType	Clock type	N/A	Enumeration: • **1**—Local. • **2**—Tod0. • **3**—Tod1.	N/A
PtpPortNumber	Number of PTP ports	N/A	Unsigned integer. Length: 32 bits.	N/A
OffsetFromMaster	Offset from master	N/A	Integer. Length: 64 bits.	N/A
MeanPathDelay	Mean path delay between master and slave	N/A	Unsigned integer. Length: 64 bits.	N/A
ReceiveIfIndex	Index of the receiving interface	N/A	Unsigned integer. Length: 32 bits.	N/A
ReceiveIfName	Name of the receiving interface	N/A	String. Length: 2 to 47 characters.	N/A
StepsRemoved	Hops from the GM to the device	N/A	Unsigned integer. Value range: 0 to 255, 65535.	The value 65535 is invalid. If the device is a TC node or is in Force state, this column takes this

Column name	Column description	Column type	Data type and restrictions	Remarks
				value.
TimeLockStatus	Whether the device is in locked state	N/A	Boolean: • true • false	N/A
LocalTime	Local clock time of the device	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

PTP/Parent

This table contains information about PTP functions for parent clock information.

XML structure

```
<PTP>
  <Parent>
    <ParentClock>
      <ClockId></ClockId>
      <PortNumber></PortNumber>
    </ParentClock>
    <GmClock>
      <ClockId></ClockId>
      <Class></Class>

Table description

Item	Description
Feature name	PTP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	In certain versions, this column supports interface name-to-index conversion.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
PortNum	Port number	N/A	Unsigned integer. Length: 16 bits.	N/A
Enable	Enable PTP on the port	N/A	Boolean: • true • false	N/A
PortState	Interface state	N/A	Enumeration: • **0**—Invalid. • **1**—Initializing. • **2**—Faulty. • **3**—Disabled. • **4**—Listening. • **5**—Premaster. • **6**—Master. • **7**—Passive. • **8**—Uncalibrated. • **9**—Slave.	N/A
ForceState	Specify the role of the PTP port	N/A	Enumeration: • **0**—Invalid. • **6**—Master. • **7**—Passive. • **9**—Slave.	N/A
ClockStep	Specify the mode for carrying timestamps	N/A	Enumeration: • **0**—One step. • **1**—Two step.	N/A
SynInterval	Set the Sync message interval in seconds	N/A	Integer. Value range: -5 to 6.	When the profile is IEEE 1588 version2, the value range for this column is –1 to 1. When the profile is IEEE 802.1AS or ITU-T G.8275.1, the value range for this column is –4 to 6. When the profile is SMPTE ST 2059-2, syncInterval range is -5 to -1. When the profile is AES67-2015, syncInterval range is -4 to 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When the profile is ITU-T G.8275.2, syncInterval range is -5 to 0.
AnnounceInterval	Set the Announce message interval in seconds	N/A	Integer. Value range: -3 to 6.	When the profile is IEEE 1588 version2 or AES67-2015, the value range for this column is 0 to 4. When the profile is IEEE 802.1AS, the value range for this column is 0 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -3 to 1. When the profile is ITU-T G.8275.1, the value range for this column is –3 to 6. When the profile is ITU-T G.8275.2, AnnounceInterval range is -3 to 0.
AnnounceTimeout	Set the Announce message receiving timeout time	N/A	Unsigned integer. Value range: 2 to 10.	N/A
PdelayRequestInterval	Peer delay request interval (log mean)	N/A	Integer. Value range: -5to 6.	When the profile is IEEE 1588 version2 or AES67-2015, the value range for this column is 0 to 5. When the profile is IEEE 802.1AS, the value range for this column is –4 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -5 to 4.
MinDelayReqInterval	Set the minimum interval for sending Delay_Req messages in seconds	N/A	Integer. Value range: -5to 6.	When the profile is IEEE 1588 version2, AnnounceInterval range is -4 to 6. When the profile is SMPTE ST 2059-2, AnnounceInterval range is -5 to 4. When the profile is AES67-2015, AnnounceInterval range is -3 to 5. When the profile is

Column name	Column description	Column type	Data type and restrictions	Remarks
				ITU-T G.8275.1, AnnounceInterval range is -4 to 6. When the profile is ITU-T G.8275.2, AnnounceInterval range is -5 to 0.
DelayRequestInterval	Delay request interval (log mean)	N/A	Integer. Value range: -5to 6.	N/A
DelayMechanism	Specify a delay measurement mechanism	N/A	Enumeration: • **0**—E2E. • **1**—P2P.	N/A
AsymmetryCorrection	Specify the delay correction value	N/A	Integer. Value range: -2000000 to 2000000. The unit is nanoseconds.	N/A
PortMode	Configure the port type for a TC+OC	N/A	Enumeration: • **0**—TC. • **1**—OC.	N/A
TransportProtocol	Specify the transport protocol for PTP packets	N/A	Enumeration: • **0**—ETH. • **1—**UDP.	N/A
DestinationMac	Specify the destination MAC address for PTP messages	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Dscp	Specify a DSCP value for PTP packets encapsulated by using UDP	N/A	Unsigned integer. Value range: 0 to 63.	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
UnicastDestinationIpv4	Specify the destination IP address for outgoing PTP unicast packets encapsulated in UDP	N/A	IPv4: String, dotted decimal notation.	It is configurable only when the port link-mode is route. Example: 1.1.1.1.
UnicastNegotiation	Unicast negotiation	N/A	Enumeration: • **0**—Invalid • **1**—Grant-port. • **2**—Request-port	It is configurable only when the Profile is ITU-T G.8275.2 or IEEE 1588 version 2 Must configure the PTP unicast destination command to enable unicast negotiation.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Configuration of grant port is not supported on t-tsc-p.
DelayRespInterval	Delay respond interval	N/A	Integer: Value range: -5 to 0	It is configurable only when the Profile is ITU-T G.8275.2 or IEEE 1588 version 2
NotSlave	Not slave	N/A	Boolean: • true • false	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2 When the mode is T-BC, T-TC, or T-BC-P, the default value is true. When the mode is T-TSC or T-TSC-P, the default value is false.
Vlan	Vlan information	Data structure	Members include: • VlanId. • Dot1p.	It is configurable only when the port link-mode is bridge.
VLANID	Specify a VLAN for PTP packets encapsulated by using IEEE 802.3/Ethernet	N/A	Unsigned integer. Different device have different value range.	N/A
Dot1p	Specify a 802.1p priority for PTP packets encapsulated by using IEEE 802.3/Ethernet	N/A	Unsigned integer. Value range: 0 to 7.	N/A
MeanPathDelay	Mean path delay between master and slave	N/A	Unsigned integer. Length: 64 bits.	N/A

PTP/Corrections

This table contains information about PTP corrections.

XML structure

Table description

Item	Description
Feature name	PTP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table contains PTP instance information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	PTP instance ID	Index	Unsigned integer.	The value range depends on capability of the device.
Name	PTP instance name	N/A	String, case-insensitive. Length: 0 to 31.	N/A
Base	Global PTP information	Subtable	N/A	For more information, see "PTP/Base."

Column name	Column description	Column type	Data type and restrictions	Remarks
Sources	Information about the PTP source VPN and source IPv4 address	Sublist	N/A	For more information, see "PTP/Sources."
ClockSources	Clock source information	Sublist	N/A	For more information, see "PTP/ClockSources."
Clock	PTP clock information.	Subtable	N/A	For more information, see "PTP/Clock."
Interfaces	PTP interface information.	Sublist	N/A	For more information, see "PTP/Interfaces."
InterfacesStatistics	PTP packet statistics on a PTP interface.	Subtable	N/A	For more information, see "PTP/InterfacesStatistics."
Slave	PTP slave port information.	Subtable	N/A	For more information, see "PTP/Instances/Slave."

PTP/Instances/Slave

This table contains PTP slave port information.

XML structure

Please refer to the XML structure of Instances.

Table description

Item	Description
Feature name	PTP
Table name	Slave
Table type	Single -instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlavePort	Slave port index	N/A	Unsigned integer. Length: 32 bits.	N/A
SyncState	Whether the current instance time can be used to synchronize	N/A	Enumeration: • **1**—Active. • **2**—Inactive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the system clock of this device			
Parent	PTP parent clock information.	Subtable	N/A	For more information, see "PTP/Parent."
Corrections	Information about PTP corrections.	Subtable	N/A	For more information, see "PTP/Corrections."

PTP/Instances/ClockSources

This table contains information about clock sources.

XML structure

Please refer to the XML structure of "PTP/Instances".

Table description

Item	Description
Feature name	PTP
Table name	ClockSources
Table type	Multi-instance table
Row name	ClockSource
Restrictions	This table contains Clock source information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockType	Clock source type	Index	Enumeration: • **1**—Local. • **2**—Tod0. • **3**—Tod1.	N/A
Priority1	Value of Priority 1	N/A	Unsigned integer: Value range: 0 to 255.	N/A
Priority2	Value of Priority 2	N/A	Unsigned integer. Value range: 0 to 255.	N/A
LocalPriority	Set local priority	N/A	Unsigned integer: Value range: 1 to 255	It is configurable only when the Profile is ITU-T G.8275.1 or ITU-T G.8275.2.
Class	Clock class	N/A	Unsigned integer.	It is configurable only when the Clocktype is

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 255.	Tod0 or Tod1.
Accuracy	Clock accuracy	N/A	Enumeration: • **32**—25 ns. • **33**—100 ns. • **34**—250 ns. • **35**—1 us. • **36**—2.5 us. • **37**—10 us. • **38**—25 us. • **39**—100 us. • **40**—250 us. • **41**—1 ms. • **42**—2.5 ms. • **43**—10 ms. • **44**—25 ms. • **45**—100 ms. • **46**—250 ms. • **47**—1 s. • **48**—10 s. • **49**—GT10 s. • **254**—Unkown.	It is configurable only when the Clocktype is Tod0 or Tod1.
OffsetLogVariance	Offset scaled log variance	N/A	Unsigned integer. Value range: 0 to 65535.	It is configurable only when the Clocktype is Tod0 or Tod1.
TimeSource	Time source	N/A	Unsigned integer. Value range: 0 to 255.	It is configurable only when the Clocktype is Tod0 or Tod1.
GrandMasterClockId	Grand master clockId	N/A	Octet string. Length: 18 characters.	It's a hexadecimal string. Example:000FE2-FFFE-FF0000 The value 000000-0000-000000 is not allowed.

PTP/GlobalStatus

This table contains information about global status of the device.

XML structure

```
<PTP>
  <GlobalStatus>
    <Enable></Enable>
    <LockThreshold></LockThreshold>
    <UnlockThreshold></UnlockThreshold>
```

```
  </GlobalStatus>
</PTP>
```

Table description

Item	Description
Feature name	PTP
Table name	GlobalStatus
Table type	Single-instance table
Row name	None
Restrictions	This table contains information about global status of the device.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	The PTP functional state of the device	N/A	Boolean: • true • false	N/A
LockThreshold	The threshold value of lock	N/A	Unsigned integer: Value range: value range depend on device customixation The unit is nanoseconds.	N/A
UnlockThreshold	The threshold value of unlock	N/A	Unsigned integer: Value range: value range depend on device customixation The unit is nanoseconds.	N/A

PTP

PTP/Base

Message	Explanation
“PTP profile not set yet.” “PTP协议未配置。”	配置命令前需要先配置 PTP 协议
"PTP clock node type not set yet." "未配置PTP时钟节点类型。"	配置 PTP 其他命令前需要先配置 PTP 时钟节点类型
"The current PTP profile supports only these clock node types: BC, E2ETC, E2ETC+OC, OC, P2PTC, and P2PTC+OC." "当前PTP协议仅支持以下时钟节点类型：bc、e2etc、e2etc-oc、oc、p2ptc和p2ptc-oc。"	IEEE 1588v2 协议标准仅支持配置 bc，e2etc，e2etc-oc，oc，p2ptc，p2ptc-oc 类型时钟节点
"The current PTP profile supports only these modes: t-bc, t-tc, t-tsc." "当前PTP协议仅支持以下时钟节点类型：t-bc，t-tc，t-tsc。"	ITU-TG.8275.1 协议标准仅支持配置 t-bc，t-tc，t-tsc 类型时钟节点
"The current PTP profile supports only these modes: bc, oc, p2ptc, p2ptc-oc." "当前PTP协议仅支持以下时钟节点类型：bc，oc，p2ptc，p2ptc-oc。"	IEEE 802.1as 协议标准仅支持配置 bc，oc，p2ptc，p2ptc-oc 类型时钟节点
"The current PTP profile supports only these modes: bc, oc, ptptc ,etetc." "当前PTP协议仅支持以下时钟节点类型：bc, oc, ptptc ,etetc。"	SMPTE ST 2059-2 协议标准仅支持配置 bc, oc, ptptc ,etetc 类型时钟节点
"PTP clock mode not set yet." "PTP时钟节点类型未配置。"	配置一般命令前需要先配置 PTP 时钟节点类型
"The device is not in OC mode." "设备时钟节点类型不是OC类型。"	只有 OC 的工作模式才能配置为 Slave-only
"The value is out of range for the current PTP profile." "当前PTP协议下配置值超出范围。"	配置值超出 Domain 允许配置的范围
"PTP profile value is invalid." "当前PTP协议下配置值无效"	Profile 配置值为无效值
"PTP clock mode value is invalid." "当前设备时钟节点下配置值无效"	当前时钟节点配置的 Mode 值无效
"The current PTP profile doesn't support this operation." "当前的PTP协议不支持此操作。"	不同的 PTP Profile 可以配置项不同
"The current PTP profile supports only the T-BC-P and T-TSC-P clock node types." "当前PTP协议仅支持以下时钟节点类型：t-bc-p和t-tsc-p。"	ITU-TG.8275.2 协议标准仅支持配置 t-bc-p，t-tsc-p 类型时钟节点
"The current PTP profile supports only the OC	当前协议标准仅支持配置 OC 类型时钟节点

clock node type." "当前PTP协议仅支持OC时钟节点类型。"	
“In the 1588v2 profile, the ptp unicast-negotiate command is mutually exclusive with the ptp slave-only command.” 在1588v2 协议中， ptp slave-only功能与单播协商功能不能同时使用	在 1588v2 协议中， ptp slave-only 功能与单播协商功能不能同时使用

PTP/Sources

Message	Explanation
“PTP profile not set yet.” “PTP协议未配置。”	配置命令前需要先配置 PTP 协议
"PTP clock node type not set yet." "未配置PTP时钟节点类型。"	配置 PTP 其他命令前需要先配置 PTP 时钟节点类型
"The number of IP addresses has reached the upper limit." "配置ip地址个数超过限制。"	配置 ip 地址个数过多，超过限制

PTP/ClockSources

Message	Explanation
“PTP profile not set yet.” “PTP协议未配置。”	配置命令前需要先配置 PTP 协议
"PTP clock node type not set yet." "未配置PTP时钟节点类型。"	配置 PTP 其他命令前需要先配置 PTP 时钟节点类型
"The value is out of range for the current PTP profile." "值超出当前PTP协议允许的范围。"	配置超出了允许范围
"This operation is not supported." "当前配置不支持。"	Tod的方向配置不成功时返回此错误
"TodDelayTime must be configured together with TodDirection." "配置TodDelayTime同时必须配置TodDirection。"	配置TodDelayTime的同时要求配置TodDirection
"The current PTP profile doesn't support this operation." "当前PTP协议不支持此操作。"	不同的PTP Profile可以配置项不同
“In the 1588v2 profile, the ptp unicast-negotiate command is mutually exclusive with the ptp force-state command on an interface.” 在1588v2 协议中，端口下不能同时配置单播协商功能和ptp force-state功能。	在 1588v2 协议中，端口下不能同时配置单播协商功能和 ptp force-state 功能。
“In the 1588v2 profile, unicast negotiation and the P2P delay mechanism are mutually exclusive on an interface.” 在1588v2 协议中，端口下不能同时配置单播协商功能和P2P时延机制	在 1588v2 协议中，端口下不能同时配置单播协商功能和 P2P 时延机制

Message	Explanation
“With unicast negotiation enabled, you cannot change the interface type from OC to TC.” “接口配置Unicast-negotiation 时，不支持接口模式切换为TC”	接口配置单播协商功能，不支持接口模式修改为 TC
The interface is in TC mode and does not support unicast negotiation. “接口处于TC 模式时，不支持配置Unicast-negotiation”	命令在处于 TC 模式的端口下，配置不成功

PTP/Interfaces

Message	Explanation
“PTP profile not set yet.” “PTP协议未配置。”	配置命令前需要先配置 PTP 协议
"PTP clock node type not set yet." "未配置PTP时钟节点类型。"	配置 PTP 其他命令前需要先配置 PTP 时钟节点类型
"The device supports only one PTP interface in OC or T-TSC mode for the current PTP profile." "OC或T-TSC类型时钟节点仅支持一个PTP接口。"	OC 或 T-TSC 类型时钟节点只能配置一个 PTP 接口
"A slave port already exists on the device for the current PTP profile." "当前设备已经存在一个从端口。"	一个 PTP 节点最多只能有一个从端口
"%s is not one-step capable." "接口%s不支持单步模式。"	该接口不支持单步模式
"The value is out of range for the current PTP profile." "值超出当前PTP协议允许的范围。"	配置超出了允许范围
"The device is not in P2PTC-OC or E2ETC-OC mode." "设备时钟节点类型不是P2PTC-OC或E2ETC-OC类型。"	只有当时钟节点类型是 P2PTC-OC 或 E2ETC-OC 时，才允许配置 ptp port-mode oc
"The delay mechanism can be changed only in BC or OC mode." "只有时钟类型是BC或OC才允许配置PTP延时测量机制。"	只有时钟类型是 BC 或 OC 才允许配置 PTP 延时测量机制
"The device already has an OC interface." "设备已经存在一个OC接口。"	只有当时钟节点类型是 P2PTC-OC 或 E2ETC-OC 时，只允许一个接口配置为 OC 类型
"Invalid destination MAC for PTP packets." "非法目的MAC地址。"	非法目的 MAC 地址
"The command can be configured only on a Layer 3 Ethernet interface." "当前配置仅支持3层以太网接口。"	命令只能在 3 层以太网接口配置
"The command can be configured only on a Layer 2 Ethernet interface." "当前配置仅支持2层以太网接口。"	命令只能在 2 层以太网接口配置
"%s doesn’t support PTP."	接口不支持 PTP 功能

Message	Explanation
"接口%s不支持PTP功能。"	
“Please specify a VLAN ID.” “配置Dot1p时,必须下发VLANID”	配置 Dot1p 时,必须下发 VLANID

PTP/Instances

Message	Explanation
“Please first set a PTP domain.” “PTP域未配置。”	配置命令需要同时配置 PTP 域
"This domain is already used by another PTP instance." "PTP域已经被其他实例使用。"	PTP 域值已经被其他实例使用，需要更换 PTP 域值
"System defined instance name can't be modified or deleted." "缺省PTP实例的名称不能修改和删除。"	缺省 PTP 实例的名称不允许修改和删除
“The name of PTP instance can’t be deleted.” “实例名称不允许删除”	PTP 实例名称不允许删除
"The name is already used by another PTP instance." "实例名称已被使用。"	PTP 实例名称已经被使用

PTP/GlobalStatus

Message	Explanation
“The time-unlock value must be larger than or equal to the time-lock value.” “请保证失锁阈值大于等于锁定阈值。”	失锁阈值需要大于等于锁定阈值

IfName	Interface name	Index	String • Length: 1 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FramePreemptionStates	A table containing a set of frame preemption parameters, one for each Port.	Sublist	N/A	For more information, see the QBU/Interfaces/Interface/FramePreemptionStates table.
HoldAdvance	The value of the holdAdvance parameter for the Port in nanoseconds.	N/A	Unsigned integer 32.	There is no default value; the holdAdvance is a property of the underlying MAC.
ReleaseAdvance	The value of the releaseAdvance parameter for the Port in nanoseconds.	N/A	Unsigned integer 32.	There is no default value; the releaseAdvance is a property of the underlying MAC.
PreemptionActive	TRUE if preemption is both supported by the MAC and currently active.	N/A	Boolean: ● true ● false	N/A
HoldRequest	The value is hold (1) when the sequence of gate operations for the Port has executed a Set-And-Hold-MAC operation, and release (2) when the sequence of gate operations has executed a Set-And-Release-MAC operation.	N/A	Enumeration: ● Hold – 0x1 ● Release - 0x2	The value of this object is release (2) on system initialization.

QCC

QCC/StreamIdentifications

This table provides QCC/StreamIdentifications configuration.

XML structure

```
<QCC>
  <StreamIdentifications>
    <StreamIdentification>
      <StreamId></StreamId>
      <IfName></IfName>
      <mac-addresses>
        <destination-mac-address></destination-mac-address>
        <source-mac-address></source-mac-address>
      </mac-addresses>
      <vlan-tag>
        <priority-code-point></priority-code-point>
        <vlan-id></vlan-id>
      </vlan-tag>
      <recos></recos>
    </StreamIdentification>
  </StreamIdentifications>
</QCC>
```

Table description

Item	Description
Feature name	QCC
Table name	StreamIdentifications
Table type	Multi-instance table
Row name	StreamIdentification
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StreamId	Stream ID	Index	Unsigned integer.	N/A
IfName	Interface name	Index	String Length: 1 to 47 characters.	N/A
mac-address	Group of MAC	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
es	addresses	structure	• destination-mac-address • source-mac-address	
destination-mac-address	Number of destination MAC addresses	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. This column does not support a multicast, all-zero, or all-F MAC address.
source-mac-address	Number of source MAC addresses	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. This column does not support a multicast, all-zero, or all-F MAC address.
vlan-tag	Group of VLAN tags	Data structure	Members include: • priority-code-point • vlan-id	N/A
priority-code-point	VLAN priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
vlan-id	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
recos	Class of service	N/A	Unsigned integer. Value range: 0 to 7.	N/A

QCC/BridgeDelay

This table provides QCC/BridgeDelay configuration.

XML structure

```
<QCC>
  <BridgeDelay>
    <IngressPort></IngressPort>
    <EgressPort></EgressPort>
    <TrafficClass></TrafficClass>
    <IndependentDelayMin></IndependentDelayMin>
    <IndependentDelayMax></IndependentDelayMax>
    <DependentDelayMin></DependentDelayMin>
    <DependentDelayMax></DependentDelayMax>
  </BridgeDelay>
</QCC>
```

Table description

Item	Description
Feature name	QCC
Table name	BridgeDelay
Table type	Single-instance table
Row name	BridgeDelay
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IngressPort	Ingress port name.	Index	String Length: 1 to 47 characters.	Interface Name
EgressPort	Egress port name.	Index	String Length: 1 to 47 characters.	Interface Name
TrafficClass	Class of traffic	Index	Unsigned32 (0..7)	N/A
Independent DelayMin	This attribute provides the minimum delay independent of the frame length for a frame to forward from ingress port to egress port. Note: This delay includes all aspects of length-independent delay for a frame that is forwarded, including handling of error conditions.	N/A	Unsigned integer.	N/A
Independent DelayMax	This attribute provides the maximum delay independent of the frame length for a frame to forward from ingress port to egress port	N/A	Unsigned integer.	N/A
DependentDelayMin	This attribute provides the minimum length-dependent delay from ingress port to	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	egress port. It provides the portion of delay that is dependent on frame length, where frame length is the number of octets that traverse the MAC Service interfaces			
DependentDelayMax	This attribute provides the maximum length-dependent delay from ingress port to egress port	N/A	Unsigned integer.	N/A

QCC/PropagationDelay

This table provides QCC/PropagationDelay configuration.

XML structure

```
<QCC>
  <PropagationDelay>
    <EgressPort></EgressPort>
    <txPropagationDelay></txPropagationDelay>
  </PropagationDelay>
</QCC>
```

Table description

Table description

Item	Description
Feature name	QCI
Table name	StreamGateInstances
Table type	Multi-instance table
Row name	StreamGateInstance
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GateIndex	Stream gate instance identifier	Index	Unsigned integer 32	N/A
EnableState	The GateEnabled parameter determines whether the stream gate is active (true) or inactive (false).	N/A	Boolean: true false	N/A
AdminIpv	The administrative internal priority value	N/A	Unsigned integer 32 Value range: 0 to 7.	N/A
AdminGateState	The administrative value of the GateStates parameter for the stream gate.	N/A	Enumeration. ● open 0x1 ● closed 0x2	N/A
AdminControlList	The AdminControlList and OperControlList are ordered lists containing AdminControlL	Sublist	N/A	For more information, see the QCI/StreamGateInstances/StreamGateInstance/AdminControlList table.

Column name	Column description	Column type	Data type and restrictions	Remarks
	istLength or OperControlListLength entries, respectively. Each entry represents a gate operation. Each entry in the list is structured as a GateControlEntry.			
AdminCycleTime	The administrative value of the numerator of the CycleTime parameter for the gate.The numerator and denominator together represent the cycle time asa rational number of seconds	Data structure	Members include: • Numerator. • Denominator.	N/A
Numerator	Numerator of the rational number	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Denominator	Denominator of the rational number	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
AdminCycleTimeExtension	An unsigned integer number of nanoseconds, defining the maximum amount of time by which the gating cycle for the gate is permitted to be extended when a new cycle configuration is being installed.	N/A	Unsigned integer. • Length: 32 bits.	N/A
AdminBaseTime	The administrative value of the BaseTime parameter for the gate.The value is a representation	Data structure	Members include: • Seconds. • Nanoseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of a PTPtime value,consisting of a 48-bit integer number of seconds and a 32-bit integer number of nanoseconds.			
Seconds	The integer portion of the timestamp in units of seconds	N/A	Unsigned integer 64. The upper 16 bits are always zero	N/A
Nanoseconds	This is the fractional portion of the timestamp in units of nanoseconds	N/A	Unsigned integer 32.	N/A
ConfigChange	The parameter signals the start of a configuration change happens whether the port is ready to be copied into their corresponding operational parameters. This should only be done when the various administrative parameters are all set to appropriate values.	N/A	Boolean: • true • false	
GateClosedDueToInvalidRxEnable	A value of TRUE indicates that the GateClosedDueToInvalidRx function is enabled; a value of FALSE indicates that the GateClosedDueToInvalidRx function is disabled.	N/A	Boolean: • true • false	N/A
GateClosedDue	The dropped	N/A	Boolean:	If

Column name	Column description	Column type	Data type and restrictions	Remarks
ToInvalidRx	action on frames		• true • false	GateClosedDueToInvalidRxEnable is TRUE, a value of TRUE in GateClosedDueToInvalidRx indicates that all frames are dropped (i.e., the gate behaves as if the operational stream gate state is Closed). If GateClosedDueToInvalidRx is FALSE, it has no effect. The default value of GateClosedDueToInvalidRx is FALSE; if any frame is discarded because the gate is in the Closed state, then GateClosedDueToInvalidRx is set TRUE.
GateClosedDueOctetsExceededEnable	A value of TRUE indicates that the GateClosedDueToOctetsExceeded function is enabled; a value of FALSE indicates that the GateClosedDueToOctetsExceeded function is disabled. The default value of GateClosedDueToOctetsExceed is FALSE.	N/A	Boolean: • true • false	N/A
GateClosedDueOctetsExceeded	The dropped action on frames	N/A	Boolean: • true • false	If GateClosedDueToOctetsExceededEnable is TRUE, a value of TRUE in GateClosedDueToOctetsExceeded indicates that all frames are dropped (i.e., the gate behaves as if the operational stream gate state is Closed). If GateClosedDueToOctetsExceeded is FALSE, it has no effect. The default value of GateClosedDueToOctetsExceeded is FALSE;

Column name	Column description	Column type	Data type and restrictions	Remarks
				if any frame is discarded because there are insufficient IntervalOctetsLeft, then GateClosedDueToOctetsExceeded is set TRUE

QCI/StreamGateInstances/StreamGateInstance/AdminControlList

Column name	Column description	Column type	Data type and restrictions	Remarks
nces	Flow Meter Instance Table per Bridge component. Each table row contains a set of parameters that defines a single Flow Meter Instance. Tables can be created or removed dynamically in implementations that support dynamic configuration of Bridge components. Rows in the table can be created or removed dynamically in implementations that support dynamic configuration of flow meters.			see the QCI/FlowMeters/FlowMeterInstances table.

QCI/FlowMeters/FlowMeterInstances

This table provides QCI/FlowMeter/FlowMeterInstances configuration.

XML structure

See the XML structure of QCI/FlowMeters.

Table description

Item	Description
Feature name	QCI
Table name	FlowMeterInstances
Table type	Multi-instance table
Row name	FlowMeterInstance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	An integer table index that allows the Flow Meter to be referenced from Stream Filter Instance Table entries.	index	Unsigned integer. Length: 32 bits.	N/A
CommittedInformationRate	Committed information rate (CIR), in bits per second.	N/A	Unsigned integer64	N/A
CommittedBurstSize	Committed burst size (CBS), in octets.	N/A	Unsigned integer. Length: 32 bits.	N/A
ExcessInformationRate	Excess Information Rate (EIR), in bits per second.	N/A	Unsigned integer64	N/A
ExcessBurstSize	Excess burst size (EBS) per bandwidth profile flow, in octets.	N/A	Unsigned integer. Length: 32 bits.	N/A
CouplingFlag	Coupling flag (CF), which takes the value 0 or 1.	N/A	Enumeration. ● Uncoupled - 0x0 ● Coupled - 0x1	N/A
ColorMode	Color mode (CM), which takes the value color-blind or color-aware, as specified in Bandwidth Profile Parameters and Algorithm in MEF 10.3.	N/A	Enumeration. ● ColorBlind - 0x0 ● ColorAware – 0x1	N/A
DropOnYellow	DropOnYellow, which takes the value TRUE or FALSE. A value of TRUE indicates that yellow frames are dropped (i.e., discarded); a	N/A	Boolean. ● true ● false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	value of FALSE indicates that yellow frames will have the drop_eligible parameter set to TRUE.			
MarkAllFrames RedEnable	A value of TRUE indicates that the MarkAllFrames Red function is enabled; a value of FALSE indicates that the MarkAllFrames Red function is disabled.	N/A	Boolean. ● true ● false	N/A
MarkAllFrames Red	The dropped action of frames.	N/A	Boolean. ● true ● false	MarkAllFramesRed, which takes the value TRUE or FALSE. If MarkAllFramesRedEnable is TRUE, a value of TRUE in MarkAllFramesRed indicates that all frames are dropped (i.e., discarded). If MarkAllFramesRed is False, it has no effect. The default value of MarkAllFramesRed is FALSE; if the operation of the flow meter causes any frame to be discarded, then MarkAllFramesRed is set TRUE.

QCI/GlobalApplyFilter

This table provides global application of Qci filter.

XML structure

```
<QCI>
   <GlobalApplyFilter>
     <FilterList></FilterList>
   </GlobalApplyFilter>
</QCI>
```

Table description

Item	Description
Feature name	QCI
Table name	GlobalApplyFilter
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterList	Filters to be applied	N/A	Number string. It is a comma-separated list of filter IDs. An item can be an individual filter ID or a filter ID range. Use a hyphen (-) to separate the start and end filters of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A

```

Table description

Item	Description
Feature name	QCI
Table name	StreamFilterInstances
Table type	Multi-instance table
Row name	StreamFilterInstance
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Stream filter instance identifier	Index	Unsigned integer 32	N/A
MatchingFrameCount	A count of frames matching both the stream handle and priority specifications.	N/A	Unsigned integer 64.	N/A
PassingFrameCount	A count of frames that passed the stream filter.	N/A	Unsigned integer 64.	N/A
NoPassingFrameCount	A count of frames that did not pass the stream filter.	N/A	Unsigned integer 64.	N/A
RedFramesCount	A count of frames that were discarded as a result of the operation of the flow meter.	N/A	Unsigned integer 64.	N/A
PassingSduCount	A count of frames that passed the Maximum SDU size filter.	N/A	Unsigned integer 64.	N/A
NoPassingSduCount	A count of frames that did not pass the Maximum SDU size filter.	N/A	Unsigned integer 64.	N/A
FlowMeterID	A reference to the flow meter associated with this filter.	N/A	Unsigned integer 32	N/A
FlowMeterState	If it is set to TRUE, flow-meter-ref identifies the flow meter instance associated with the stream filter. If it is set to FALSE, no flow meter instance is associated with the stream	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	filter.			
Priority	The Priority parameter contains a priority specification value.	N/A	Unsigned integer 32 Value range: 0 to 7.	N/A
StreamID	A reference to the Stream associated	N/A	Unsigned integer 32	N/A
GateID	The GateID identifies the stream gate that is associated with the stream filter.	N/A	Unsigned integer 32	N/A
MaxOverFrame Size	The max SDU size.	N/A	Unsigned integer 32	N/A
StreamBlocked DueToOverSize FrameEnable	A Boolean value that indicates whether the ieee8021PSFP StreamBlocke dDueToOversi zeFrame function is enabled (TRUE) or disabled (FALSE).	N/A	Boolean: • true • false	N/A
StreamBlocked DueToOverSize Frame	The ieee8021PSFP StreamBlocke dDueToOversi zeFrame object contains a Boolean value that indicates whether, if the ieee8021PSFP StreamBlocke dDueToOversi zeFrame function is enabled, all frames are to be discarded (TRUE)	N/A	Boolean: • true • false	If StreamBlockedDueToO verSizeFrameEnable is TRUE, a value of TRUE in StreamBlockedDueToO verSizeFrame indicates that all frames are dropped (i.e., the gate behaves as if the operational stream gate state is Closed). If StreamBlockedDueToO verSizeFrame is FALSE, it has no effect. The default value of StreamBlockedDueToO verSizeFrame is FALSE; if any frame is discarded because the gate is in the Closed state, then StreamBlockedDueToO verSizeFrame is set TRUE.

QCI/StreamParameters

Table description

Item	Description
Feature name	QCI
Table name	StreamGateInstances
Table type	Multi-instance table
Row name	StreamGateInstance
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GateIndex	Stream gate instance identifier	Index	Unsigned integer 32	N/A
EnableState	The GateEnabled parameter determines whether the stream gate is active (true) or inactive (false).	N/A	Boolean: true false	N/A
AdminIpv	The administrative internal priority value	N/A	Unsigned integer 32 Value range: 0 to 7.	N/A
AdminGateState	The administrative value of the GateStates parameter for the stream gate.	N/A	Enumeration. ● open 0x1 ● closed 0x2	N/A
OperGateState	The current state of the gate. PSFPOperGateStates is set by the List Execute state machine, and its initial value is determined by the value of the PSFPAdminGateStates variable.	N/A	Enumeration. ● open 0x1 ● closed 0x2	N/A
OperIpv	The operational	N/A	Unsigned integer 32	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	internal priority value specification.		Value range: 0 to 7.	
AdminControlList	The AdminControlList and OperControlList are ordered lists containing AdminControlListLength or OperControlListLength entries, respectively. Each entry represents a gate operation. Each entry in the list is structured as a GateControlEntry.	Sublist	N/A	For more information, see the QCI/StreamGateInstances/StreamGateInstance/AdminControlList table.
OperControlList	The AdminControlList and OperControlList are ordered lists containing AdminControlListLength or OperControlListLength entries, respectively. Each entry represents a gate operation. Each entry in the list is structured as a GateControlEntry.	Sublist	N/A	For more information, see the QCI/StreamGateInstances/StreamGateInstance/OperControlList table.
AdminCycleTime	The administrative value of the numerator of the CycleTime parameter for the gate.The numerator and denominator together represent the cycle time asa rational number of seconds	Data structure	Members include: • Numerator. • Denominator.	N/A
Numerator	Numerator of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the rational number		Value range: 1 to 4294967295.	
Denominator	Denominator of the rational number	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
OperCycleTime	The operational value of the numerator of the CycleTime parameter for the gate.The numerator and denominator together represent the cycle time asa rational number of seconds	Data structure	Members include: • Numerator. • Denominator.	N/A
Numerator	Numerator of the rational number	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Denominator	Denominator of the rational number	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
AdminCycleTimeExtension	An unsigned integer number of nanoseconds, defining the maximum amount of time by which the gating cycle for the gate is permitted to be extended when a new cycle configuration is being installed.	N/A	Unsigned integer. • Length: 32 bits.	N/A
OperCycleTimeExtension	An unsigned integer number of nanoseconds, defining the maximum amount of time by which the gating cycle for the gate is permitted to be extended when a new cycle configuration is being installed.	N/A	Unsigned integer. Length: 32 bits.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminBaseTime	The administrative value of the BaseTime parameter for the gate.The value is a representation of a PTP time value,consisting of a 48-bit integer number of seconds and a 32-bit integer number of nanoseconds.	Data structure	Members include: • Seconds. • Nanoseconds.	N/A
Seconds	The integer portion of the timestamp in units of seconds	N/A	Unsigned integer 64. The upper 16 bits are always zero	N/A
Nanoseconds	This is the fractional portion of the timestamp in units of nanoseconds	N/A	Unsigned integer 32.	N/A
OperBaseTime	The operational value of the BaseTime parameter for the gate.The value is a representation of a PTP time value,consisting of a 48-bit integer number of seconds and a 32-bit integer number of nanoseconds.	Data structure	Members include: • Seconds. • Nanoseconds.	N/A
Seconds	The integer portion of the timestamp in units of seconds	N/A	Unsigned integer 64. The upper 16 bits are always zero.	N/A
Nanoseconds	This is the fractional portion of the timestamp in units of nanoseconds	N/A	Unsigned integer 32.	N/A
CurrentTime	The current time maintained by the local	Data structure	Members include: • Seconds. • Nanoseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	system, expressed as a PTP timescale (see IEEE Std 802.1AS-2011).			
Seconds	The integer portion of the timestamp in units of seconds	N/A	Unsigned integer 64. The upper16 bits arealways zero.	N/A
Nanoseconds	This is the fractional portion of the timestamp in units of nanoseconds	N/A	Unsigned integer 32	N/A
TickGranularity	Characteristics of an implementation's cycle timer clock.	N/A	Unsigned interger32	N/A
ConfigChange	The parameter signals the start of a configuration change happens whether the port is ready to be copied into their corresponding operational parameters. This should only be done when the various administrative parameters are all set to appropriate values.	N/A	Boolean: • true • false	N/A
ConfigChangeTime	The time at which the next configuration change is scheduled to occur	Data structure	Members include: • Seconds • Nanoseconds	N/A
Seconds	The integer portion of the timestamp in units of seconds	N/A	Unsigned integer 64. The upper 16 bits are always zero.	N/A
Nanoseconds	The fractional portion of the	N/A	Unsigned integer 32.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	timestamp in units of nanoseconds			
ConfigPending	The ConfigChange parameter signals the start of a configuration change when it is set to TRUE, indicating that the administrative parameters for the Port are ready to be copied into their corresponding operational parameters. This should only be done when the various administrative parameters are all set to appropriate values.	N/A	Boolean: • true • false	N/A
ConfigChangeError	An error counter that is incremented if AdminBaseTime specifies a time in the past, and the current schedule is running.	N/A	Unsigned integer 64.	N/A
GateClosedDueToInvalidRxEnable	A value of TRUE indicates that the GateClosedDueToInvalidRx function is enabled; a value of FALSE indicates that the GateClosedDueToInvalidRx function is disabled.	N/A	Boolean: • true • false	N/A
GateClosedDueToInvalidRx	The dropped action on	N/A	Boolean: • true	If GateClosedDueToInval

Column name	Column description	Column type	Data type and restrictions	Remarks
	frames		• false	idRxEnable is TRUE, a value of TRUE in GateClosedDueToInvalidRx indicates that all frames are dropped (i.e., the gate behaves as if the operational stream gate state is Closed). If GateClosedDueToInvalidRx is FALSE, it has no effect. The default value of GateClosedDueToInvalidRx is FALSE; if any frame is discarded because the gate is in the Closed state, then GateClosedDueToInvalidRx is set TRUE.
GateClosedDueOctetsExceededEnable	A value of TRUE indicates that the GateClosedDueToOctetsExceeded function is enabled; a value of FALSE indicates that the GateClosedDueToOctetsExceeded function is disabled. The default value of GateClosedDueToOctetsExceed is FALSE.	N/A	Boolean: • true • false	N/A
GateClosedDueOctetsExceeded	The dropped action on frames	N/A	Boolean: • true • false	If GateClosedDueToOctetsExceededEnable is TRUE, a value of TRUE in GateClosedDueToOctetsExceeded indicates that all frames are dropped (i.e., the gate behaves as if the operational stream gate state is Closed). If GateClosedDueToOctetsExceeded is FALSE, it has no effect. The default value of GateClosedDueToOctetsExceeded is FALSE; if any frame is discarded because

Column name	Column description	Column type	Data type and restrictions	Remarks
				there are insufficient IntervalOctetsLeft, then GateClosedDueToOctetsExceeded is set TRUE

QCI/StreamGateInstances/StreamGateInstance/AdminControlList

This table provides QCI/StreamGateInstances/StreamGateInstance/AdminControlList configuration.

XML structure

See the XML structure of QCI/StreamGateInstances.

Table description

Item	Description
Feature name	QCI
Table name	AdminControlList
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminControlList	The administrative value of the gate control list for the Port	Sublist	N/A	For more information, see the QBV/Interfaces table.

QCI/StreamGateInstances/StreamGateInstance/OperControlList

This table provides QCI/StreamGateInstances/StreamGateInstance/OperControlList configuration.

XML structure

See the XML structure of QCI/ StreamGateInstances.

Row name	GateControlEntry

Restrictions	None
Support for row creation and deletion	No

QCI/FlowMeters

This table provides Qci stream meter instance configuration.

XML structure

```
<QCI>
  <FlowMeters>
    <MaxFlowMeterInstances></MaxFlowMeterInstances>
    <FlowMeterInstances>
      <FlowMeterInstance>
        <Index></Index>
        <CommittedInformationRate></CommittedInformationRate>
        <CommittedBurstSize></CommittedBurstSize>
        <ExcessInformationRate></ExcessInformationRate>
        <ExcessBurstSize></ExcessBurstSize>
        <CouplingFlag></CouplingFlag>
        <ColorMode></ColorMode>
        <DropOnYellow></DropOnYellow>
        <MarkAllFramesRedEnable></MarkAllFramesRedEnable>
        <MarkAllFramesRed></MarkAllFramesRed>
      </FlowMeterInstance>
    </FlowMeterInstances>
  </FlowMeters>
</QCI>
```

Table description

Item	Description
Feature name	QCI
Table name	FlowMeters
Table type	Single-instance table
Row name	N/A
Restrictions	N/A
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxFlowMeterI	The maximum number of	N/A	Unsigned integer 32	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
nstances	Flow Meter instances supported by this Bridge component.			
FlowMeterInstances	There is one Flow Meter Instance Table per Bridge component. Each table row contains a set of parameters that defines a single Flow Meter Instance. Tables can be created or removed dynamically in implementations that support dynamic configuration of Bridge components. Rows in the table can be created or removed dynamically in implementations that support dynamic configuration of flow meters.	Sublist	N/A	For more information, see the QCI/FlowMeters/FlowMeterInstances table.

QCI/FlowMeters/FlowMeterInstances

This table provides QCI/FlowMeter/FlowMeterInstances configuration.

XML structure

See the XML structure of QCI/FlowMeters.

Table description

Item	Description
Feature name	QCI
Table name	FlowMeterInstances
Table type	Multi-instance table
Row name	FlowMeterInstance

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	An integer table index that allows the Flow Meter to be referenced from Stream Filter Instance Table entries.	index	Unsigned integer. Length: 32 bits.	N/A
CommittedInformationRate	Committed information rate (CIR), in bits per second.	N/A	Unsigned integer64	N/A
CommittedBurstSize	Committed burst size (CBS), in octets.	N/A	Unsigned integer. Length: 32 bits.	N/A
ExcessInformationRate	Excess Information Rate (EIR), in bits per second.	N/A	Unsigned integer64	N/A
ExcessBurstSize	Excess burst size (EBS) per bandwidth profile flow, in octets.	N/A	Unsigned integer. Length: 32 bits.	N/A
CouplingFlag	Coupling flag (CF), which takes the value 0 or 1.	N/A	Enumeration. ● Uncoupled - 0x0 ● Coupled - 0x1	N/A
ColorMode	Color mode (CM), which takes the value color-blind or color-aware, as specified in Bandwidth Profile Parameters and Algorithm in MEF 10.3.	N/A	Enumeration. ● ColorBlind - 0x0 ● ColorAware – 0x1	N/A
DropOnYellow	DropOnYellow, which takes the value TRUE or FALSE. A value of TRUE indicates that	N/A	Boolean.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	yellow frames are dropped (i.e., discarded); a value of FALSE indicates that yellow frames will have the drop_eligible parameter set to TRUE.			
MarkAllFrames RedEnable	A value of TRUE indicates that the MarkAllFrames Red function is enabled; a value of FALSE indicates that the MarkAllFrames Red function is disabled.	N/A	Boolean. true false	N/A
MarkAllFrames Red	The dropped action of frames.	N/A	Boolean. true false	MarkAllFramesRed, which takes the value TRUE or FALSE. If MarkAllFramesRedEnable is TRUE, a value of TRUE in MarkAllFramesRed indicates that all frames are dropped (i.e., discarded). If MarkAllFramesRed is False, it has no effect. The default value of MarkAllFramesRed is FALSE; if the operation of the flow meter causes any frame to be discarded, then MarkAllFramesRed is set TRUE.

QCI/GlobalApplyFilter

This table provides global application of Qci filter.

XML structure

```
<QCI>
   <GlobalApplyFilter>
     <FilterList></FilterList>
```

```
    </GlobalApplyFilter>
</QCI>
```

Table description

Item	Description
Feature name	QCI
Table name	GlobalApplyFilter
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterList	Filters to be applied	N/A	Number string. It is a comma-separated list of filter IDs. An item can be an individual filter ID or a filter ID range. Use a hyphen (-) to separate the start and end filter of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A

IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
StatType	Statistics type	N/A	Unsigned integer. Value range: 1 to 7.	The statistics types supported can be customized by the product. The value of each statistics type is as follows: • **1**—ECN. • **2**—DSCP. • **4**—DOT1P.

Column name	Column description	Column type	Data type and restrictions	Remarks
				To specify any combination of the three statistics types, enter the sum of their values.

Table description

Item	Description
Feature name	QSTAT
Table name	PacketStat
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
StatValue	Statistics type value	Index	Unsigned integer.	Currently only DSCP, ECN, and DSCP+ECN combined statistics types are supported. DSCP occupies 6 bits. ECN occupies 2 bits. DSCP+ECN: ECN is represented by lower 2 bits, and DSCP is represented by the higher 6 bits. If you have specified the DSCP+ECN combined statistics type, you can specify the following statistics type values: • 0—DSCP(value:0), ECN(value:0) • 1—DSCP(value:0),ECN(value:1) • 2—DSCP(value:0),ECN(value:2) • 3—DSCP(value:0),ECN(value:3) • 4—DSCP(value:1), ECN(0) • 5—DSCP(value:1),

Column name	Column description	Column type	Data type and restrictions	Remarks
				ECN(value:1) • 6—DSCP(value:1), ECN(value:2) • …… • 255—DSCP(value:63), ECN(value:3).
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
Bytes	Number of bytes	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
IfName	Interface name	N/A	String. Length: 1 to 47 characters.	N/A

QSTAT/UserStat

This table contains total queue statistics of users.

XML structure

```
<QSTAT>
  <UserStat>
    <Statistics>
      <UserID></UserID>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Direction></Direction>
      <PassPacket></PassPacket>
      <PassByte></PassByte>
      <DropPacket></DropPacket>
      <DropByte></DropByte>
      <Passpps></Passpps>
      <Passbps></Passbps>
      <Droppps></Droppps>
      <Dropbps></Dropbps>
      <AgingPacket></AgingPacket>
      <AgingByte></AgingByte>
      <CurrQueLenByte></CurrQueLenByte>
      <PeakQueSize></PeakQueSize>
    </Statistics>
  </UserStat>
</QSTAT>
```

Radius

Radius/AuthServerState

RADIUS authentication server status table.

XML structure

```
<Radius>
  <AuthServerState>
    <VRF></VRF>
    <IpType></IpType>
    <Host></Host>
    <Port></Port>
    <State></State>
  </AuthServerState>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AuthServerState
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the RADIUS authentication server address.	Index NULL is allowed.	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS authentication server.	Index NULL is allowed.	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1,

Column name	Column description	Column type	Data type and restrictions	Remarks
			HostName: String of 1 to 253 characters.	this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS authentication server.	Index NULL is allowed.	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
State	Status of the RADIUS authentication server.	N/A	Enumeration: • **0**—Active • **1**—Block	Default: 0.

Radius/AcctServerState

RADIUS accounting server status table.

XML structure

```
<Radius>
  <AcctServerState>
    <VRF></VRF>

      <AcctCacheLowerlimit></AcctCacheLowerlimit>
      <AcctCacheUpperlimit></AcctCacheUpperlimit>
    </Switchs>
  </Trap>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Trap
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthErrThreshold	The threshold for authentication failure notification	N/A	Unsigned integer. Value range: 1 to 100.	Default threshold: 30. An authentication failure notification will be sent if the number of authentication failures compared to the total number of

Column name	Column description	Column type	Data type and restrictions	Remarks
				authentication attempts exceeds the specified threshold. This column is not supported to configure at present.
Switchs	Whether to enable each type of notification	Data structure	Members include: • AuthServerDown. • AuthServerUp. • AcctServerDown. • AcctServerUp. • AuthErrReachThreshold. • AcctCacheDiscard. • AcctCacheLowerlimit. • AcctCacheUpperlimit.	N/A
AuthServerDown	Whether to send a notification after a RADIUS authentication server is down	N/A	Boolean: • true • false	Default: false.
AuthServerUp	Whether to send a notification after a RADIUS authentication server is up	N/A	Boolean: • true • false	Default: false.
AcctServerDown	Whether to send a notification after a RADIUS accounting server is down	N/A	Boolean: • true • false	Default: false.
AcctServerUp	Whether to send a notification after a RADIUS accounting server is up	N/A	Boolean: • true • false	Default: false.
AuthErrReachThreshold	Whether to send a notification when the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold	N/A	Boolean: • true • false	Default: false.
AcctCacheDiscard	Whether to send a notification when a RADIUS stop-accounting packet is discarded because the	N/A	Boolean: • true • false	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	memory usage has reached the minor alarm threshold			
AcctCacheLowerlimit	Whether to send a notification when the ratio of the number of buffered stop-accounting packets to the maximum number drops below the lower threshold	N/A	Boolean: • true • false	Default: false.
AcctCacheUpperlimit	Whether to send a notification when the ratio of the number of buffered stop-accounting packets to the maximum number reaches the upper threshold	N/A	Boolean: • true • false	Default: false.

Radius/Dscp

The DSCP priority of RADIUS packets.

XML structure

```
<Radius>
  <Dscp>
    <Ipv4></Ipv4>
    <Ipv6></Ipv6>
  </Dscp>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Dscp
Table type	Single-instance table
Row name	None
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4	DSCP priority of IPv4 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.
Ipv6	DSCP priority of IPv6 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.

Radius/RadiusServerPolicy

This table contains parameters for periodically checking the status of RADIUS authentication servers.

XML structure

```
<Radius>
  <RadiusServerPolicy>
    <AuthenStateCheckInterval></AuthenStateCheckInterval>
  </RadiusServerPolicy>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	RadiusServerPolicy
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthenStateCheckInterval	Interval for checking the status of RADIUS authentication servers	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	Default: 10 minutes.

Radius/StopAcctBuffer

This table contains information about discarding RADIUS stop-accounting packets.

XML structure

```
<Radius>
  <StopAcctBuffer>
    <MaxCacheNumber></MaxCacheNumber>
    <OverwriteOldest>
      <Exceed></Exceed>
      <MemoryThreshold></MemoryThreshold>
    </OverwriteOldest>
  </StopAcctBuffer>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	StopAcctBuffer
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxCacheNumber	Maximum number of RADIUS stop-accounting packets that can be buffered	N/A	Unsigned integer. Value range: 256 to 2147483647.	N/A
Exceed	Action to take after the number of buffered stop-accounting packets reaches the upper limit	N/A	Boolean: • **true**—Discards the oldest buffered packet to make room for a new buffered packet. • **false**—Discards new stop-accounting packets.	Default: false.
MemoryThreshold	Action to take after the memory usage reaches the minor alarm		Boolean: • **true**—Discards the oldest buffered packet to make room for a new	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	threshold		buffered packet. • **false**—Discards new stop-accounting packets.	

Radius/AcctCache

This table contains information about the thresholds for the ratio of the number of buffered stop-accounting packets to the maximum number.

XML structure

```
<Radius>
  <AcctCache>
    <CacheWarningThreshold>
      <UpperLimit></UpperLimit>
      <LowerLimit></LowerLimit>
    </CacheWarningThreshold>
  </AcctCache>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AcctCache
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
UpperLimit	Upper threshold for the ratio of the number of buffered RADIUS stop-accounting packets to the maximum number	N/A	Unsigned integer. Value range: 1 to 100.
LowerLimit	Lower threshold for the ratio of the number of buffered RADIUS stop-accounting packets to the maximum number	N/A	Unsigned integer. Value range: 0 to 99.

Radius/Client/GlobalNasIps

RADIUS global NAS IP information table.

XML structure

```
<Radius>
  <Client>
    <GlobalNasIps>
      <GlobalNasIp>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
      </GlobalNasIp>
    </GlobalNasIps>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIps
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	A maximum of 16 global NAS IP addresses are supported.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS servers are on the public network.
IpType	Type of the source IP address for outgoing RADIUS packets	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	Source IP address for outgoing RADIUS packets	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents an IPv4 address. For example, 1.0.0.1. If the IpType value is 1, this column represents an IPv6 address. For example, 2001:12::1:2.

Radius/Client/GlobalNasIpIf

This table contains the global source interface of outgoing RADIUS packets.

XML structure

```
<Radius>
  <Client>
    <GlobalNasIpIf>
      <IfIndex></IfIndex>
    </GlobalNasIpIf>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIpIf
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Index of the interface that provides the source IP address of outgoing RADIUS packets	N/A	Unsigned integer.

Radius/Client/ServerTestProfiles

The test profile table for RADIUS server status detection.

XML structure

```
<Radius>
  <Client>
    <ServerTestProfiles>
      <ServerTestProfile>
        <ProfileName></ProfileName>
        <UserName></UserName>
        <UserPassword></UserPassword>
```

```
      <TimeUnitage></TimeUnitage>
      <Interval></Interval>
      <IntervalSec></IntervalSec>
      <ProbeCount></ProbeCount>
    </ServerTestProfile>
  </ServerTestProfiles>
 </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ServerTestProfiles
Table type	Multi-instance table
Row name	ServerTestProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the RADIUS test profile	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
UserName	User name for the RADIUS test profile	N/A	String, case-sensitive. Length: 1 to 253 characters.	This column is required.
UserPassword	User password in the test packets	N/A	String, case-sensitive. Length: 1 to 63 characters.	The user password is in plain text.
TimeUnitage	Measurement unit of the interval for sending test packets	N/A	Enumeration: • **0**—Minute. • **1**—Second.	Default: 0.
Interval	Period for sending test packets	N/A	Unsigned integer. Value range: 1 to 3600, in minutes.	Default: 60 minutes.
IntervalSec	Period for sending test packets	N/A	Unsigned integer. Value range: 10 to 216000, in seconds.	N/A
ProbeCount	Number of consecutive probes used by the system to determine the	N/A	Unsigned integer. Value range: 1 to 10.	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	server status			

Radius/Client/Schemes

RADIUS scheme table.

XML structure

```
<Radius>
  <Client>
    <Schemes>
      <Scheme>
        <SchemeName></SchemeName>
        <TimeUnitage></TimeUnitage>

</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The device supports a maximum of 16 RADIUS schemes.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
TimeUnitage	Measurement unit of the	N/A	Enumeration:	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval for sending realtime accounting packets		• **0**—Minute. • **1**—Second.	
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 71582.	Default: 12 minutes. Zero indicates that the device does not send realtime accounting packets to the RADIUS accounting server. The unit of the realtime accounting interval is set through the TimeUnitage column. If the TimeUnitage column is not set, the unit is minute. After the realtime accounting interval is set, only deleting the TimeUnitage column does not affect the interval.
RealAcctIntervalMethod	Realtime accounting packet processing method	N/A	Enumeration: • **Keep**—Standard realtime accounting packet processing. **Hash**—Runs hash to scatter realtime-accounting packets.	Default: Keep.
TimeOut	RADIUS server response timeout period	N/A	Unsigned integer. Value range: 1 to 10, in seconds.	Default: 3 seconds.
QuietTime	Quiet timer for the servers specified in the RADIUS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes.
PktRetryTimes	Max number of attempts to send a RADIUS packet to a single RADIUS server	N/A	Unsigned integer. Value range: 1 to 20.	Default: 3.
RealAcctRetryTimes	Max number of realtime accounting attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 5.
StopAcctRetryTimes	Max number of stop accounting attempts	N/A	Unsigned integer. Value range: 10 to 65535.	Default: 500.
UserNameFormat	Format of user names to be sent to RADIUS servers	N/A	Enumeration: • **0**—keep-original. • **1**—with-domain. • **2**—without-domain.	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: • **0**—byte. • **1**—kilo-byte. • **2**—mega-byte. • **3**—giga-byte.	Default: 0.
PacketsUint	Packet measurement unit for traffic statistics	N/A	Enumeration: • **0**—one-packet. • **1**—kilo-packet. • **2**—mega-packet. • **3**—giga-packet.	Default: 0.
NasIpv4Address	NAS IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	NAS IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
SourceIpv4Address	Source IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
SourceIpv6Address	Source IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
AuthenKey	Authentication shared key	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
AcctKey	Accounting shared key	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
VRF	VPN instance name for the	N/A	String, case-sensitive.	If this column is empty, the RADIUS servers

Column name	Column description	Column type	Data type and restrictions	Remarks
	RADIUS scheme		Length: 0 to 31 characters.	are on the public network.
ClassType	Whether to interpret the RADIUS class attribute (attribute 25) as CAR parameters	N/A	Enumeration: • **0**—Standard. • **1**—CAR.	Default: 0.
AcctOnEnable	Whether to enable the accounting-on feature	N/A	Boolean: • true. • false.	Default: false.
AcctOnSendInterval	Interval for retransmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 15, in seconds.	Default: 3 seconds. Only when the AcctOnEnable column is true, this column is effective.
AcctOnSendTimes	Max number of accounting-on packet transmission attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 50. Only when the AcctOnEnable column is true, this column is effective.
ChangePassword	Whether to enable the online password change feature	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	Default: 0.
StopAcctPktSendForce	Whether to send stop-accounting packets when users for which no start-accounting packets are sent go offline	N/A	Boolean: • true. • false.	Default: false.
TranslateEnable	Whether to enable the attribute translation feature	N/A	Boolean: • true. • false.	Default: false.
StopAcctBufEnable	Whether to enable buffering of RADIUS stop-accounting requests to which no responses have been received	N/A	Boolean: • true. • false.	Default: true.
ThresholdRemanVol	Available data threshold	N/A	Unsigned integer. Value range: 0 to 4294967295.	Default: 0.
UserNameAuthorApply	Whether to use server-assigned usernames for AAA processes subsequent to	N/A	Boolean: • true. • false.	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	authentication			
AuthenRespPendLimit	Max number of authentication requests to which no responses have been received from the authentication servers	N/A	Unsigned integer. Value range: 1 to 255.	N/A
AcctRespPendLimit	Max number of accounting requests to which no responses have been received from the accounting servers	N/A	Unsigned integer. Value range: 1 to 255.	N/A
BlockAction	Request action after all RADIUS servers are in blocked state	N/A	Enumeration: • **0**—Attempts to connect to the server with the highest priority. **1**— Skips all servers in the scheme and turns to the backup method.	Default:0
LoadShareEnable	Whether to enable RADIUS server load sharing	N/A	Enumeration: • **0**—The feature is disabled. The device forwards traffic to the server selected based on primary and secondary server roles. **1**—The feature is enabled. The device distributes traffic among multiple servers for load sharing.	Default: 0.
LoadShareMode	Load sharing mode of RADIUS authentication servers	N/A	Enumeration: • **0**—Session-based. **1**—Packet-based.	Default: 0.
Attr5QinQ	Whether to enable QinQ encapsulation format for the RADIUS NAS-Port attribute (attribute 5)	N/A	Boolean: • true. false.	Default: false.
Attrs182ConvertVLAN	Whether to interpret the H3C-Microsegment-Id attribute as an authorization VLAN	N/A	Boolean: • true. • false.	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Attr15LooseCheck	Whether to enable loose check mode for RADIUS attribute 15	N/A	Boolean: • true. false.	Default: false.
Attr31MacFormat	MAC address format of RADIUS attribute 31	Data structure	Members include: • SectionNum. • SeparatorCharacter. UpperCase.	N/A
SectionNum	Number of sections that a MAC address contains	N/A	Enumeration: • **6**—Six. **3**—Three.	Default: 6.
SeparatorCharacter	Character that separates the sections in a MAC address	N/A	String, case-sensitive. Length: 1 character.	Default: Hyphen (-).
UpperCase	Whether letters in a MAC address are in upper case	N/A	Boolean: • true. false.	Default: true.
Attr85Priority	Configure the device to prefer the real-time accounting interval assigned by the RADIUS server through the RADIUS Acct-Interim-Interval attribute (attribute 85)	N/A	Boolean: • true. false.	Default: false.
DhcpOptionEnable	Whether to include the H3C-DHCP-Option attribute in RADIUS request packets	N/A	Boolean: • true. false	Default: true.
DhcpOptionFormat	H3C-DHCP-Option attribute format	N/A	Enumeration: • **0**—Format 1 of the attribute with a 1-byte Type field. • **1**—Format 2 of the attribute with a 2-byte Type field.	Default: 0.
Include DhcpOption55	Whether to include H3C-DHCP-Option attribute with DHCP option 55 information in RADIUS request packet	N/A	Boolean: • true. • false.	Default: false.
Include	Whether to	N/A	Boolean:	Default: true.

Column name	Column description	Column type	Data type and restrictions	Remarks
DhcpOption61	include H3C-DHCP-Option attribute with DHCP option 61 information in RADIUS request packet		• true. • false.	
DrniLocalNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of local DR users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
DrniLocalNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of local DR users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
DrniPeerNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of peer DR users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
DrniPeerNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of peer DR users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
MLagLocalNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of local MLAG users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
MLagLocalNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of local MLAG users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
MLagPeerNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of peer MLAG users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
MLagPeerNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of peer MLAG users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.

Radius/Client/AuthServers

RADIUS authentication server table.

XML structure

```
<Radius>
  <Client>
    <AuthServers>
      <AuthServer>
        <SchemeName></SchemeName>
        <Priority></Priority>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>
        <Port></Port>
        <Key></Key>
        <Weight></Weight>
        <SvrTestProfileName></SvrTestProfileName>
      </AuthServer>
    </AuthServers>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	You can create one primary authentication server and a maximum of 16 secondary servers in one RADIUS scheme. To change the primary server, you must remove the old primary server first, and then specify a new primary server.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: • **0**—Primary authentication	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			server. • **1**—Secondary authentication server.	
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS server is on the public network.
IpType	Type of the RADIUS authentication server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: String of 1 to 253 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
Key	Shared key of RADIUS authentication packets	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
Weight	Weight of the RADIUS server for load sharing	N/A	Unsigned short. Value range: 0 to 100.	Default: 0.
SvrTestProfileName	Name of the test profile	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

Radius/Client/AcctServers

RADIUS accounting server table.

XML structure

```
<Radius>
  <Client>
    <AcctServers>
      <AcctServer>
        <SchemeName></SchemeName>
        <Priority></Priority>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>
        <Port></Port>
        <Key></Key>
        <Weight></Weight>
      </AcctServer>
    </AcctServers>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AcctServers
Table type	Multi-instance table
Row name	AcctServer
Restrictions	You can create one primary accounting server and a maximum of 16 secondary servers in one RADIUS scheme. To change the primary server, you must remove the old primary server first, and then specify a new primary server.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: • **0**—Primary accounting server.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Secondary accounting server.	
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS server is on the public network.
IpType	Type of the RADIUS accounting server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS accounting server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: String of 1 to 253 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS accounting server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1813.
Key	Shared key of RADIUS accounting packets	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
Weight	Weight of the RADIUS server for load sharing	N/A	Unsigned short. Value range: 0 to 100.	Default: 0.

Radius/Client/MicroSegments

This table contains microsegment information for RADIUS schemes.

XML structure

```
<Radius>
  <Client>
    <MicroSegments>
      <MicroSegment>
        <SchemeName></SchemeName>
        <MicroSegmentID></MicroSegmentID>
        <VSIName></VSIName>
      </MicroSegment>
    </MicroSegments>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	MicroSegments
Table type	Multi-instance table
Row name	MicroSegment
Restrictions	The device supports a maximum of 256 microsegments.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
MicroSegmentID	Microsegment ID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
VSIName	VSI name associated with the microsegment	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

Radius/Client/ConvertAttrs

This table contains parameters about RADIUS attribute conversion rules. At one time, you can specify only one criterion from the following criteria: packet type (including Access-Accept packets, Access-Request packets, and accounting packets) or direction (including received and sent directions).

XML structure

```
<Radius>
  <Client>
    <ConvertAttrs>
      <ConvertAttr>
        <SchemeName></SchemeName>
        <SrcAttribute></SrcAttribute>
        <DesAttribute></DesAttribute>
        <AccessAccept></AccessAccept>
        <AccessRequest></AccessRequest>
        <Accounting></Accounting>
        <Received></Received>
        <Sent></Sent>
      </ConvertAttr>
    </ConvertAttrs>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ConvertAttrs
Table type	Multi-instance table
Row name	ConvertAttr
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeNam e	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	The scheme name must already exist.
SrcAttribute	Source attribute	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DesAttribute	Destination	N/A	String, case-insensitive.	This attribute cannot

Column name	Column description	Column type	Data type and restrictions	Remarks
	attribute		Length: 1 to 63 characters.	have the same name as the source attribute. The destination attribute cannot be deleted alone. To delete the destination attribute, you must delete the entire RADIUS attribute conversion rule.
AccessAccept	Access-Accept packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute conversion rule.
AccessRequest	Access-Request packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute conversion rule.
Accounting	Accounting packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute conversion rule.
Received	Received RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute conversion rule.
Sent	Sent RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute conversion rule.

Radius/Client/RejectAttrs

This table contains parameters about RADIUS attribute rejection rules for RADIUS schemes.

XML structure

```
<Radius>
  <Client>
    <RejectAttrs>
      <RejectAttr>
        <SchemeName></SchemeName>
        <Attribute></Attribute>
        <AccessAccept></AccessAccept>
        <AccessRequest></AccessRequest>
        <Accounting></Accounting>
        <Received></Received>
        <Sent></Sent>
      </RejectAttr>
    </RejectAttrs>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	RejectAttrs
Table type	Multi-instance table
Row name	RejectAttr
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	The scheme name must already exist.
Attribute	RADIUS attribute name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AccessAccept	Access-Accept packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute rejection rule.
AccessRequest	Access-Request packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent

Column name	Column description	Column type	Data type and restrictions	Remarks
				column in a RADIUS attribute rejection rule.
Accounting	Accounting packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute rejection rule.
Received	Received RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute rejection rule.
Sent	Sent RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute rejection rule.

Radius/Client/ReplyMessageRules

RADIUS Reply-Message attribute (attribute 18) parsing rule table.

XML structure

```
<Radius>
  <Client>
    <ReplyMessageRules>
      <ReplyMessageRule>
        <SchemeName></SchemeName>
        <MatchString></MatchString>
        <Action></Action>
      </ReplyMessageRule>
    </ReplyMessageRules>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ReplyMessageRules

Item	Description
Table type	Multi-instance table
Row name	ReplyMessageRule
Restrictions	A maximum of 16 rules are supported in a RADIUS scheme.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.
MatchString	Match criterion string	Index	String, case-sensitive. Length: 1 to 255 characters.
Action	Action to take when the Reply-Message attribute value matches the criterion string	N/A	Enumeration: • **0**—Requests a new password. • **1**—Requests the next authentication factor for double-factor authentication.

Radius/Server/SessCtrlService

RADIUS session-control feature table.

XML structure

```
<Radius>
  <Server>
    <SessCtrlService>
      <Status></Status>
      <Port></Port>
    </SessCtrlService>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	SessCtrlService
Table type	Single-instance table
Row name	None
Restrictions	None

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable the RADIUS session-control feature	N/A	Boolean: • true. • false.	Default: false.
Port	UDP port listening for RADIUS session-control packets	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 1812. The value is not supported to configure at present.

Radius/Server/SessCtrlClients

RADIUS session-control client table.

XML structure

```
<Radius>
  <Server>
    <SessCtrlClients>
      <SessCtrlClient>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <Key></Key>
      </SessCtrlClient>
    </SessCtrlClients>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	SessCtrlClients
Table type	Multi-instance table
Row name	SessCtrlClient
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the session-control client is on the public network.
IpType	Type of the session-control client IP address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	IP address of the session-control client	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.
Key	Shared key of RADIUS session-control packets	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.

Radius/Server/DaeService

RADIUS DAE server feature table.

XML structure

```
<Radius>
  <Server>
    <DaeService>
      <Status></Status>
      <Port></Port>
      <AgencyDialupReplyPort></AgencyDialupReplyPort>
    </DaeService>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	DaeService
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable the RADIUS DAE server feature	N/A	Boolean: • true. • false.	Default: false.
Port	UDP port listening for RADIUS DAE packets	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 3799. This column is effective only when the Status column is true.
AgencyDialup ReplyPort	UDP listening port of remote servers for PPPoE agency dialup responses	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 3799. This column takes effect only when the Status column is true.

Radius/Server/DaeClients

RADIUS DAE client table.

XML structure

```
<Radius>
  <Server>
    <DaeClients>
      <DaeClient>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <Key></Key>
        <Version></Version>
      </DaeClient>
    </DaeClients>
  </Server>
```

```
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	DaeClients
Table type	Multi-instance table
Row name	DaeClient
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the DAE client is on the public network.
IpType	Type of the DAE client IP address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	IP address of the DAE client	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.
Key	Shared key of RADIUS DAE packets	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character types. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
Version	Version number	N/A	Enumeration: • **0**—1.0. • **1**—1.1.	This column applies to the DAE client with a vendor ID of 2011.The default is 0.

Radius/ReportDualNasIp

This table contains information about whether to enable the feature of including both NAS IPv4 and IPv6 addresses in RADIUS packets sent to RADIUS servers.

XML structure

```
<Radius>
  <ReportDualNasIp>
    <Status></Status>
  </ReportDualNasIp>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ReportDualNasIp
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable the feature of including both NAS IPv4 and IPv6 addresses in RADIUS packets sent to RADIUS servers	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Default: false.

Radius

Radius/Trap

SNMP notification information table of RADIUS.

XML structure

```
<Radius>
  <Trap>
    <AuthErrThreshold></AuthErrThreshold>
    <Switchs>
      <AuthServerDown></AuthServerDown>
      <AuthServerUp></AuthServerUp>
      <AcctServerDown></AcctServerDown>
      <AcctServerUp></AcctServerUp>
      <AuthErrReachThreshold></AuthErrReachThreshold>
      <AcctCacheDiscard></AcctCacheDiscard>
      <AcctCacheLowerlimit></AcctCacheLowerlimit>
      <AcctCacheUpperlimit></AcctCacheUpperlimit>
    </Switchs>
  </Trap>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Trap
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthErrThreshold	The threshold for authentication failure notification	N/A	Unsigned integer. Value range: 1 to 100.	Default: 30. An authentication failure notification will be sent if the number of authentication failures compared to the total number of authentication attempts

Column name	Column description	Column type	Data type and restrictions	Remarks
				exceeds the specified threshold. This column is not supported to configure at present.
Switchs	Whether to enable each type of notification	Data structure	Members include: • AuthServerDown. • AuthServerUp. • AcctServerDown. • AcctServerUp. • AuthErrReachThreshold. • AcctCacheDiscard. • AcctCacheLowerlimit. • AcctCacheUpperlimit.	N/A
AuthServerDown	Whether to send a notification after a RADIUS authentication server is down	N/A	Boolean: • true • false	Default: false.
AuthServerUp	Whether to send a notification after a RADIUS authentication server is up	N/A	Boolean: • true • false	Default: false.
AcctServerDown	Whether to send a notification after a RADIUS accounting server is down	N/A	Boolean: • true • false	Default: false.
AcctServerUp	Whether to send a notification after a RADIUS accounting server is up	N/A	Boolean: • true • false	Default: false.
AuthErrReachThreshold	Whether to send a notification when the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold	N/A	Boolean: • true • false	Default: false.
AcctCacheDiscard	Whether to send a notification when a RADIUS stop-accounting packet is discarded because the memory usage has reached the	N/A	Boolean: • true • false	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	minor alarm threshold			
AcctCacheLowerlimit	Whether to send a notification when the ratio of the number of buffered stop-accounting packets to the maximum number drops below the lower threshold	N/A	Boolean: • true • false	Default: false.
AcctCacheUpperlimit	Whether to send a notification when the ratio of the number of buffered stop-accounting packets to the maximum number reaches the upper threshold	N/A	Boolean: • true • false	Default: false.

Radius/Dscp

The DSCP priority of RADIUS packets.

XML structure

```
<Radius>
  <Dscp>
    <Ipv4></Ipv4>
    <Ipv6></Ipv6>
  </Dscp>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Dscp
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4	DSCP priority of IPv4 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.
Ipv6	DSCP priority of IPv6 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.

Radius/RadiusServerPolicy

This table contains parameters for periodically checking the status of RADIUS authentication servers.

XML structure

```
<Radius>
  <RadiusServerPolicy>
    <AuthenStateCheckInterval></AuthenStateCheckInterval>
  </RadiusServerPolicy>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	RadiusServerPolicy
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthenStateCheckInterval	Interval for checking the status of RADIUS authentication servers	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A

Radius/StopAcctBuffer

This table contains information about discarding RADIUS stop-accounting packets.

XML structure

```
<Radius>
  <StopAcctBuffer>
    <MaxCacheNumber></MaxCacheNumber>
    <OverwriteOldest>
      <Exceed></Exceed>
      <MemoryThreshold></MemoryThreshold>
    </OverwriteOldest>
  </StopAcctBuffer>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	StopAcctBuffer
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxCacheNumber	Maximum number of RADIUS stop-accounting packets that can be buffered	N/A	Unsigned integer. Value range: 256 to 2147483647.	N/A
Exceed	Action to take after the number of buffered stop-accounting packets reaches the upper limit	N/A	Boolean: • **true**—Discards the oldest buffered packet to make room for a new buffered packet. • **false**—Discards new stop-accounting packets.	Default: false.
MemoryThreshold	Action to take after the memory usage reaches the minor alarm threshold	N/A	Boolean: • **true**—Discards the oldest buffered packet to make room for a new buffered packet. • **false**—Discards new	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
			stop-accounting packets.	

Radius/AcctCache

This table contains information about the thresholds for the ratio of the number of buffered stop-accounting packets to the maximum number.

XML structure

```
<Radius>
  <AcctCache>
    <CacheWarningThreshold>
      <UpperLimit></UpperLimit>
      <LowerLimit></LowerLimit>
    </CacheWarningThreshold>
  </AcctCache>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AcctCache
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
UpperLimit	Upper threshold for the ratio of the number of buffered RADIUS stop-accounting packets to the maximum number	N/A	Unsigned integer. Value range: 1 to 100.
LowerLimit	Lower threshold for the ratio of the number of buffered RADIUS stop-accounting packets to the maximum number	N/A	Unsigned integer. Value range: 0 to 99.

Radius/Client/GlobalNasIps

RADIUS global NAS IP information table.

XML structure

```
<Radius>
  <Client>
    <GlobalNasIps>
      <GlobalNasIp>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
      </GlobalNasIp>
    </GlobalNasIps>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIps
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	A maximum of 16 global NAS IP addresses are supported.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the NAS IP is on the public network.
IpType	Type of the source IP address for outgoing RADIUS packets	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	Source IP address for outgoing RADIUS packets	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents an IPv4 address. For example, 1.0.0.1. If the IpType value is 1, this column represents an IPv6 address. For example, 2001:12::1:2.

Radius/Client/GlobalNasIpIf

This table contains the global source interface of outgoing RADIUS packets.

XML structure

```
<Radius>
  <Client>
    <GlobalNasIpIf>
      <IfIndex></IfIndex>
    </GlobalNasIpIf>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIpIf
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Index of the interface that provides the source IP address of outgoing RADIUS packets	N/A	Unsigned integer.

Radius/Client/ServerTestProfiles

The test profile table for RADIUS server status detection.

XML structure

```
<Radius>
  <Client>
    <ServerTestProfiles>
      <ServerTestProfile>
        <ProfileName></ProfileName>
        <UserName></UserName>
        <TimeUnitage></TimeUnitage>
        <Interval></Interval>
        <IntervalSec></IntervalSec>
```

```
      <ProbeCount></ProbeCount>
    </ServerTestProfile>
  </ServerTestProfiles>
 </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ServerTestProfiles
Table type	Multi-instance table
Row name	ServerTestProfile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the RADIUS test profile	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
UserName	User name for the RADIUS test profile	N/A	String, case-sensitive. Length: 1 to 253 characters.	This column is required.
TimeUnitage	Measurement unit of the interval for sending test packets	N/A	Enumeration: • **0**—Minute. • **1**—Second.	N/A
Interval	Period for sending test packets	N/A	Unsigned integer. Value range: 1 to 3600, in minutes.	Default: 60 minutes.
IntervalSec	Period for sending test packets	N/A	Unsigned integer. Value range: 10 to 216000, in seconds.	N/A
ProbeCount	Number of consecutive probes used by the system to determine the server status	N/A	Unsigned integer. Value range: 1 to 10.	Default: 1.

Radius/Client/Schemes

RADIUS scheme table.

XML structure

```
<Radius>
  <Client>
    <Schemes>
      <Scheme>
        <SchemeName></SchemeName>
        <TimeUnitage></TimeUnitage>
        <RealAcctInterval></RealAcctInterval>
        <RealAcctIntervalMethod></RealAcctIntervalMethod>
        <TimeOut></TimeOut>
        <QuietTime></QuietTime>
        <PktRetryTimes></PktRetryTimes>
        <RealAcctRetryTimes></RealAcctRetryTimes>
        <StopAcctRetryTimes></StopAcctRetryTimes>
        <UserNameFormat></UserNameFormat>
        <BytesUnit></BytesUnit>
        <PacketsUint></PacketsUint>
        <NasIpv4Address></NasIpv4Address>
        <NasIpv6Address></NasIpv6Address>
        <SourceIpv4Address></SourceIpv4Address>
        <SourceIpv6Address></SourceIpv6Address>
        <VRF></VRF>
        <ClassType></ClassType>
        <AcctOnEnable></AcctOnEnable>
        <AcctOnSendInterval></AcctOnSendInterval>
        <AcctOnSendTimes></AcctOnSendTimes>

      <MLagLocalNasIpv6Address></MLagLocalNasIpv6Address>
      <MLagPeerNasIpv4Address></MLagPeerNasIpv4Address>
      <MLagPeerNasIpv6Address></MLagPeerNasIpv6Address>
    </Scheme>
  </Schemes>
 </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	A maximum of 16 RADIUS schemes are supported.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
TimeUnitage	Measurement unit of the interval for sending realtime accounting packets	N/A	Enumeration: • **0**—Minute. • **1**—Second.	Default: 0.
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 71582, in seconds.	The device converts the interval value to a value in seconds even if the configured measurement unit is minute. Zero indicates that the device doesn't send realtime accounting packets to the RADIUS accounting server.
RealAcctIntervalMethod	Realtime accounting	N/A	Enumeration: • **Keep**—Standard realtime	Default: Keep.

Column name	Column description	Column type	Data type and restrictions	Remarks
	packet processing method		accounting packet processing. **Hash**—Runs hash to scatter realtime-accounting packets.	
TimeOut	RADIUS server response timeout period	N/A	Unsigned integer. Value range: 1 to 10, in seconds.	Default: 3 seconds.
QuietTime	Quiet timer for the servers specified in the RADIUS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes.
PktRetryTimes	Max number of attempts to send a RADIUS packet to a single RADIUS server	N/A	Unsigned integer. Value range: 1 to 20.	Default: 3.
RealAcctRetryTimes	Max number of realtime accounting attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 5.
StopAcctRetryTimes	Max number of stop accounting attempts	N/A	Unsigned integer. Value range: 10 to 65535.	Default: 500.
UserNameFormat	Format of user names to be sent to RADIUS servers	N/A	Enumeration: • **0**—keep-original. • **1**—with-domain. • **2**—without-domain.	Default: 1.
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: • **0**—byte. • **1**—kilo-byte. • **2**—mega-byte. • **3**—giga-byte.	Default: 0.
PacketsUint	Packet measurement unit for traffic statistics	N/A	Enumeration: • **0**—one-packet. • **1**—kilo-packet. • **2**—mega-packet. • **3**—giga-packet.	Default: 0.
NasIpv4Address	NAS IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	NAS IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
SourceIpv4Address	Source IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIpv6Address	Source IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
VRF	VPN instance name for the RADIUS scheme	N/A	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS servers are on the public network.
ClassType	Whether to interpret the RADIUS class attribute (attribute 25) as CAR parameters	N/A	Enumeration: • **0**—Standard. • **1**—CAR.	Default: 0.
AcctOnEnable	Whether to enable the accounting-on feature	N/A	Boolean: • true. • false.	Default: false.
AcctOnSendInterval	Time interval for retransmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 15, in seconds.	Default: 3 seconds. This column is effective only when the AcctOnEnable value is true.
AcctOnSendTimes	Max number of attempts for transmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 255.	Default: 50. This column is effective only when the AcctOnEnable value is true.
ChangePassword	Enabling status of the online password change feature	N/A	Enumeration: • **0**—Disabled. • **1**—Enabled.	N/A
StopAcctPktSendForce	Whether to send stop-accounting packets when users for which no start-accounting packets are sent go offline	N/A	Boolean: • true. • false.	Default: false.
TranslateEnable	Whether to enable the attribute translation feature	N/A	Boolean: • true. • false.	Default: false.
StopAcctBufEnable	Whether to enable buffering of RADIUS stop-accounting requests to which no responses have been received	N/A	Boolean: • true. • false.	Default: true.
ThresholdRe	Available data	N/A	Unsigned integer.	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
manVol	threshold		Value range: 0 to 4294967295.	The measurement unit is determined by the **attribute remanent-volume unit** command.
UserNameAuthorApply	Whether to use server-assigned usernames for AAA processes subsequent to authentication	N/A	Boolean: • true. • false.	Default: false.
AuthenRespPendLimit	Max number of authentication requests to which no responses have been received from the authentication servers	N/A	Unsigned integer. Value range: 1 to 255.	N/A
AcctRespPendLimit	Max number of accounting requests to which no responses have been received from the accounting servers	N/A	Unsigned integer. Value range: 1 to 255.	N/A
BlockAction	Request action after all RADIUS servers are in blocked state	N/A	Enumeration: • **0**—Attempts to connect to the server with the highest priority. • **1**— Skips all servers in the scheme and turns to the backup method.	Default:0
LoadShareEnable	Whether RADIUS server load sharing is enabled	N/A	Enumeration: • **0**—The feature is disabled. The device forwards traffic to the server selected based on primary and secondary server roles. • **1**—The feature is enabled. The device distributes traffic among multiple servers for load sharing.	Default: 0.
LoadShareMode	Load sharing mode of RADIUS authentication servers	N/A	Enumeration: • **0**—Session-based. • **1**—Packet-based.	Default: 0.
Attrs182ConvertVLAN	Whether to interpret the H3C-Microsegment-Id attribute	N/A	Boolean: • true. • false.	Default: false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	as an authorization VLAN			
Attr5QinQ	Whether to enable QinQ encapsulation format for the RADIUS NAS-Port attribute (attribute 5)	N/A	Boolean: • true. • false.	N/A
Attr15LooseCheck	Whether loose check mode is enabled for RADIUS attribute 15	N/A	Boolean: • true. • false.	Default: false.
Attr31MacFormat	MAC address format of RADIUS attribute 31	Data structure	Members include: • SectionNum. • SeparatorCharacter. UpperCase.	N/A
SectionNum	Number of sections that a MAC address contains	N/A	Enumeration: • **6**—Six. • **3**—Three.	Default: 6.
SeparatorCharacter	Character that separates the sections in a MAC address	N/A	String, case-sensitive. Length: 1 character.	Default: Hyphen (-).
UpperCase	Whether letters in a MAC address are in upper case	N/A	Boolean: • true. • false.	Default: true.
Attr85Priority	Configure the device to prefer the real-time accounting interval assigned by the RADIUS server through the RADIUS Acct-Interim-Interval attribute (attribute 85)	N/A	Boolean: • true. • false.	N/A
DhcpOptionEnable	Whether to include the H3C-DHCP-Option attribute in RADIUS request packets	N/A	Boolean: • true. • false.	Default: true.
DhcpOptionFormat	H3C-DHCP-Option attribute format	N/A	Enumeration: • **0**—Format 1 of the attribute with a 1-byte Type field. • **1**—Format 2 of the	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
			attribute with a 2-byte Type field.	
Include DhcpOption55	Whether to include H3C-DHCP-Option attribute with DHCP option 55 information in RADIUS request packet	N/A	Boolean: • true. • false.	Default: false.
Include DhcpOption61	Whether to include H3C-DHCP-Option attribute with DHCP option 61 information in RADIUS request packet	N/A	Boolean: • true. • false.	Default: true.
DrniLocalNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of local DR users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
DrniLocalNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of local DR users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
DrniPeerNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of peer DR users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
DrniPeerNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of peer DR users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
MLagLocalNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of local MLAG users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
MLagLocalNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of local MLAG users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
MLagPeerNasIpv4Address	Source IPv4 address for outgoing RADIUS packets of peer MLAG users	N/A	String in dotted decimal notation.	For example, 10.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
MLagPeerNasIpv6Address	Source IPv6 address for outgoing RADIUS packets of peer MLAG users	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.

Radius/Client/AuthServers

RADIUS authentication server table.

XML structure

```
<Radius>
  <Client>
    <AuthServers>
      <AuthServer>
        <SchemeName></SchemeName>
        <Priority></Priority>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>
        <Port></Port>
        <SvrTestProfileName></SvrTestProfileName>
        <State></State>
        <Weight></Weight>
      </AuthServer>
    </AuthServers>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	You can specify one primary authentication server and a maximum of 16 secondary servers in one RADIUS scheme. To change the primary server, you must remove the old primary server first, and then specify a new primary server.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: • **0**—Primary authentication server. • **1**—Secondary authentication server.	N/A
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS server is on the public network.
IpType	Type of the RADIUS authentication server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: String of 1 to 253 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
SvrTestProfileName	Name of the test profile	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
State	Status of the RADIUS authentication server	N/A	Enumeration: • **0**—Active. • **1**—Blocked.	N/A
Weight	Weight of the RADIUS server for load sharing	N/A	Unsigned short. Value range: 0 to 100.	Default: 0.

Radius/Client/AcctServers

RADIUS accounting server table.

XML structure

Table type	Multi-instance table
Row name	ConvertAttr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	The scheme name must already exist.
SrcAttribute	Source attribute	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DesAttribute	Destination attribute	N/A	String, case-insensitive. Length: 1 to 63 characters.	This attribute cannot have the same name as the source attribute. The destination attribute cannot be deleted alone. To delete the destination attribute, you must delete the entire RADIUS attribute conversion rule.
AccessAccept	Access-Accept packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute conversion rule.
AccessRequest	Access-Request packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS

Column name	Column description	Column type	Data type and restrictions	Remarks
				attribute conversion rule.
Accounting	Accounting packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute conversion rule.
Received	Received RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute conversion rule.
Sent	Sent RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute conversion rule.

Radius/Client/RejectAttrs

This table contains parameters about RADIUS attribute rejection rules for RADIUS schemes.

XML structure

```
<Radius>
  <Client>
    <RejectAttrs>
      <RejectAttr>
        <SchemeName></SchemeName>
        <Attribute></Attribute>
        <AccessAccept></AccessAccept>
        <AccessRequest></AccessRequest>
        <Accounting></Accounting>
        <Received></Received>
        <Sent></Sent>
      </RejectAttr>
    </RejectAttrs>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	RejectAttrs
Table type	Multi-instance table
Row name	RejectAttr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	The scheme name must already exist.
Attribute	RADIUS attribute name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AccessAccept	Access-Accept packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute rejection rule.
AccessRequest	Access-Request packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute rejection rule.
Accounting	Accounting packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the Received or Sent column in a RADIUS attribute rejection rule.
Received	Received RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute rejection rule.
Sent	Sent RADIUS packets	N/A	Boolean: • true. • false.	Default: false. This column cannot be issued together with the AccessAccept, AccessRequest, or Accounting column in a RADIUS attribute

Column name	Column description	Column type	Data type and restrictions	Remarks
				rejection rule.

Radius/Client/ReplyMessageRules

RADIUS Reply-Message attribute (attribute 18) parsing rule table.

XML structure

```
<Radius>
  <Client>
    <ReplyMessageRules>
      <ReplyMessageRule>
        <SchemeName></SchemeName>
        <MatchString></MatchString>
        <Action></Action>
      </ReplyMessageRule>
    </ReplyMessageRules>
  </Client>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	ReplyMessageRules
Table type	Multi-instance table
Row name	ReplyMessageRule
Restrictions	A maximum of 16 rules are supported in a RADIUS scheme.

Columns

Column name	Column description	Column type	Data type and restrictions
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.
MatchString	Match criterion string	Index	String, case-sensitive. Length: 1 to 255 characters.
Action	Action to take when the Reply-Message attribute value matches the criterion string	N/A	Enumeration: • **0**—Requests a new password. • **1**—Requests the next authentication factor for double-factor authentication.

Radius/Server/SessCtrlService

RADIUS session-control feature table.

XML structure

```
<Radius>
  <Server>
    <SessCtrlService>
      <Status></Status>
      <Port></Port>
    </SessCtrlService>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	SessCtrlService
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable the RADIUS session-control feature	N/A	Boolean: • true. • false.	Default: false.
Port	UDP port listening for RADIUS session-control packets	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 1812. The value is not supported to configure at present.

Radius/Server/SessCtrlClients

RADIUS session-control client table.

XML structure

```
<Radius>
  <Server>
    <SessCtrlClients>
      <SessCtrlClient>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
      </SessCtrlClient>
    </SessCtrlClients>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	SessCtrlClients
Table type	Multi-instance table
Row name	SessCtrlClient
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the session-control client is on the public network.
IpType	Type of the session-control client address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	IP address of the session-control client	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.

Radius/Server/DaeService

RADIUS DAE server feature table.

XML structure

```
<Radius>
  <Server>
    <DaeService>
      <Status></Status>
      <Port></Port>
      <AgencyDialupReplyPort></AgencyDialupReplyPort>
    </DaeService>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	DaeService
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable the RADIUS DAE server feature	N/A	Boolean: • true. • false.	Default: false.
Port	UDP port listening for RADIUS DAE packets	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 3799. This column is effective only when the Status column is true.
AgencyDialup ReplyPort	UDP listening port of remote servers for PPPoE agency dialup responses	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 3799. This column takes effect only when the Status column is true.

Radius/Server/DaeClients

RADIUS DAE client table.

XML structure

```
<Radius>
  <Server>
    <DaeClients>
      <DaeClient>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <Version></Version>
      </DaeClient>
    </DaeClients>
  </Server>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	DaeClients
Table type	Multi-instance table
Row name	DaeClient
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the DAE client is on the public network.
IpType	Type of the DAE client IP address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	IP address of the DAE client	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.
Version	Version number	N/A	Enumeration: • **0**—1.0. • **1**—1.1.	This column applies to the DAE client with a vendor ID of 2011.

Radius/Statistic/AuthServers

RADIUS authentication server statistics table.

XML structure

```
<Radius>
  <Statistic>
    <AuthServers>
      <AuthServer>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>
        <Port></Port>
        <Request></Request>
        <ReTrans></ReTrans>
        <Accept></Accept>
        <Reject></Reject>
        <Challenge></Challenge>
        <Malformed></Malformed>
        <BadAuthenticator></BadAuthenticator>
        <PendingRequest></PendingRequest>
        <TimeOut></TimeOut>
        <UnKnownType></UnKnownType>
        <Dropped></Dropped>
        <LastRoundTripTime></LastRoundTripTime>
      </AuthServer>
    </AuthServers>
  </Statistic>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance	Index	String, case-sensitive.	If this column is empty,

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 31 characters.	the RADIUS server is on the public network.
IpType	Type of the RADIUS authentication server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: String of 1 to 253 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number for the RADIUS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
Request	Number of RADIUS Access-Request packets sent to this server	N/A	Unsigned integer.	Only valid Access-Request packets are counted. This column does not include retransmissions.
ReTrans	Number of times that RADIUS Access-Request packets were retransmitted	N/A	Unsigned integer.	N/A
Accept	Number of RADIUS Access-Accept packets (valid or invalid) received from this server	N/A	Unsigned integer.	N/A
Reject	Number of RADIUS Access-Reject packets (valid or invalid) received from this server	N/A	Unsigned integer.	N/A
Challenge	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	RADIUS Access-Challenge packets (valid or invalid) received from this server			
Malformed	Number of malformed RADIUS authentication responses received from this server	N/A	Unsigned integer.	The BadAuthenticator and UnknownType statistics are not included. Malformed packets include packets with an invalid length.
BadAuthenticator	Number of RADIUS authentication responses received from this server	N/A	Unsigned integer.	The packets contain invalid authenticators or Signature attributes.
PendingRequest	Number of RADIUS Access-Request packets waiting for responses	N/A	Unsigned integer.	This variable is incremented when an Access-Request is sent. This variable is decremented because of the receipt of an Access-Accept, Access-Reject, or Access-Challenge, or because of a request timeout or retransmission.
TimeOut	Number of authentication timeouts to this server	N/A	Unsigned integer.	After a timeout, the client may retransmit the authentication request to the same server, send a new request to another server, or give up.
UnKnownType	Number of unknown-type RADIUS packets that were received from this server on the authentication port	N/A	Unsigned integer.	N/A
Dropped	Number of RADIUS packets that were received from this server on the authentication port and dropped for some other reason	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LastRoundTripTime	Time interval (in hundredths of a second) between the most recent authentication response and request exchanged with the RADIUS authentication server	N/A	Unsigned integer.	N/A

Radius/Statistic/AcctServers

RADIUS accounting server statistics table.

XML structure

```
<Radius>
  <Statistic>
    <AcctServers>
      <AcctServer>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>

        <Request></Request>
        <ReTrans></ReTrans>
        <Response></Response>
        <Malformed></Malformed>
        <BadAuthenticator></BadAuthenticator>
        <PendingRequest></PendingRequest>
        <TimeOut></TimeOut>
        <UnKnownType></UnKnownType>
        <Dropped></Dropped>
        <LastRoundTripTime></LastRoundTripTime>
        <AcctStartRequest></AcctStartRequest>
        <AcctStartResponse></AcctStartResponse>
        <AcctUpdateRequest></AcctUpdateRequest>
        <AcctUpdateResponse></AcctUpdateResponse>
        <AcctStopRequest></AcctStopRequest>
        <AcctStopResponse></AcctStopResponse>
      </AcctServer>
    </AcctServers>
  </Statistic>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	AcctServers
Table type	Multi-instance table
Row name	AcctServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the RADIUS server is on the public network.
IpType	Type of the RADIUS accounting server	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—HostName.	The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS accounting server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: String of 1 to 253 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS accounting server	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Request	Number of RADIUS Accounting-Request packets sent to this server	N/A	Unsigned integer.	Only valid Accounting-Request packets are counted. This column does not include retransmissions.
ReTrans	Number of times	N/A	Unsigned integer.	Retransmissions

Column name	Column description	Column type	Data type and restrictions	Remarks
	that RADIUS Accounting-Request packets were retransmitted			include the retries in which the Identifier and Acct-Delay have been updated, as well as the retries in which the Identifier and Acct-Delay have not been updated.
Response	Number of RADIUS packets received on the accounting port from this server	N/A	Unsigned integer.	N/A
Malformed	Number of malformed RADIUS Accounting-Response packets received from this server	N/A	Unsigned integer.	The BadAuthenticator and UnknownType statistics are not included. Malformed packets include packets with an invalid length.
BadAuthenticator	Number of RADIUS Accounting-Response packets received from this server	N/A	Unsigned integer.	The packets contain invalid authenticators.
PendingRequest	Number of RADIUS Accounting-Request packets waiting for responses	N/A	Unsigned integer.	This variable is incremented when an Accounting-Request is sent. This variable is decremented because of the receipt of an Accounting-Response or a request timeout or retransmission.
TimeOut	Number of accounting timeouts to this server	N/A	Unsigned integer.	After a timeout, the client may retransmit the accounting request to the same server, send a new request to another server, or give up.
UnKnownType	Number of unknown-type RADIUS packets that were received from this server on the accounting port	N/A	Unsigned integer.	N/A
Dropped	Number of RADIUS packets that were received from this server on the accounting port	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	and dropped for some other reason			
LastRoundTripTime	Time interval between the most recent Accounting-Response and the Accounting-Request exchanged with the RADIUS accounting server	N/A	Unsigned integer.	N/A
AcctStartRequest	Number of start accounting requests sent to this server	N/A	Unsigned integer.	N/A
AcctStartResponse	Number of start accounting responses received from this server	N/A	Unsigned integer.	N/A
AcctUpdateRequest	Number of realtime accounting requests sent to this server	N/A	Unsigned integer.	N/A
AcctUpdateResponse	Number of realtime accounting responses received from this server	N/A	Unsigned integer.	N/A
AcctStopRequest	Number of stop accounting requests sent to this server	N/A	Unsigned integer.	N/A
AcctStopResponse	Number of stop accounting responses received from this server	N/A	Unsigned integer.	N/A

Radius/Statistic/SessCtrl

The statistics table of the session-control feature.

XML structure

```
<Radius>
  <Statistic>
    <SessCtrl>
```

```
      <Request></Request>
      <Response></Response>
      <Dropped></Dropped>
      <CheckFail></CheckFail>
      <Terminate></Terminate>
      <SetPolicy></SetPolicy>
      <ReTrans></ReTrans>
      <UnKnownType></UnKnownType>
      <Malformed></Malformed>
    </SessCtrl>
  </Statistic>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	SessCtrl
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Request	Number of received session-control request packets	N/A	Unsigned integer.	Only valid session-control request packets are counted. This column does not include retransmissions.
Response	Number of sent session-control response packets	N/A	Unsigned integer.	N/A
Dropped	Number of discarded session-control request packets	N/A	Unsigned integer.	This column includes statistics for session-control request packets that were discarded for reasons other than CheckFail, UnknownType, and Malformed.
CheckFail	Number of check-failed session-control request packets	N/A	Unsigned integer.	Check-failed packets refer to packets that contain invalid authenticators.
Terminate	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	user-offline session-control request packets			
SetPolicy	Number of session-control request packets for modifying user permissions	N/A	Unsigned integer.	N/A
ReTrans	Number of times that session-control request packets were retransmitted	N/A	Unsigned integer.	N/A
UnKnownType	Number of unknown-type session-control request packets	N/A	Unsigned integer.	N/A
Malformed	Number of malformed session-control request packets	N/A	Unsigned integer.	Malformed packets refer to packets with an invalid length and packets received from clients not associated with the session-control server.

Radius/Statistic/Dae

The statistics table of the DAE server feature.

XML structure

```
<Radius>
  <Statistic>
    <Dae>
      <Request></Request>
      <ReTrans></ReTrans>
      <Response></Response>

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Request	Number of received DAE request packets	N/A	Unsigned integer.	Only valid DAE request packets are counted. This column does not include retransmissions.
ReTrans	Number of times that DAE request packets were retransmitted	N/A	Unsigned integer.	N/A
Response	Number of DAE response packets sent to the DAE clients	N/A	Unsigned integer.	N/A
Dropped	Number of discarded DAE request packets	N/A	Unsigned integer.	This column includes statistics for DAE request packets that were discarded for reasons other than CheckFail, UnknownType, and Malformed
CheckFail	Number of check-failed DAE request packets	N/A	Unsigned integer.	Check-failed packets refer to packets that contain invalid authenticators.
UnknownType	Number of unknown DAE request packets	N/A	Unsigned integer.	N/A
Disconnect	Number of user-offline DAE request packets	N/A	Unsigned integer.	N/A
Coa	Number of DAE request packets for modifying user permissions	N/A	Unsigned integer.	N/A
Malformed	Number of malformed DAE request packets	N/A	Unsigned integer.	Malformed packets refer to packets with an invalid length and

Column name	Column description	Column type	Data type and restrictions	Remarks
				packets received from clients not associated with the DAE server.

Radius/PasswordLimit

Requirements to meet when you configure passwords for the RADIUS module.

XML structure

```
<Radius>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
</Radius>
```

Table description

Item	Description
Feature name	Radius
Table name	PasswordLimit
Table type	Single-instance table
Row name	None
Restrictions	• The configuration takes effect on the following items: ○ Radius/Client/Schemes table: <AuthenKey></AuthenKey> <AcctKey></AcctKey> ○ Radius/Client/AuthServers table: <Key></Key> ○ Radius/Client/AcctServers table: <Key></Key> ○ Radius/Server/SessCtrlClients table: <Key></Key> ○ Radius/Server/DaeClients table: <Key></Key> ○ Radius/Proxy/DaeProxyClients table: <Key></Key> • Data restrictions acquired in FIPS mode are different from the data restrictions acquired in non-FIPS mode.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	Minimum password length	N/A	Unsigned integer.	N/A
MaxLen	Maximum password length	N/A	Unsigned integer.	N/A
MinTypeNum	Minimum number of character types that the password must contain	N/A	Unsigned integer.	Character types include digit, uppercase letter, lowercase letter, and special character. For example, if the value is set to 3, the password string must include three or more character types.

Radius/ReportDualNasIp

This table contains information about whether to enable the feature of including both NAS IPv4 and IPv6 addresses in RADIUS packets sent to RADIUS servers.

XML structure

```
<Radius>
  <ReportDualNasIp>
    <Status></Status>
  </ReportDualNasIp>
</Radius>
```

XML structure for event report 1

RADIUS event stream

RADIUS event stream description.

RADIUS event

This event is used to report information about a RADIUS server in a RADIUS scheme, including the server state.

XML structure for event subscription

```
<RadiusServerState >
</RadiusServerState >
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>RADIUS</stream>
    <filter type="subtree">
      <RadiusServerState xmlns="http://www.h3c.com/netconf/event:1.0/RADIUS:1.0">
      </RadiusServerState >
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	RADIUS
Event name	RadiusServerState
Event namespace	http://www.h3c.com/netconf/event:1.0/ RADIUS:1.0
Support for extended query	No

XML structure for event report

```
<RadiusServerState>
  <ServerState>
    <ServerType></ServerType>
    <IPAddress></IPAddress>
    <VRF></VRF>
    <Port></Port>
    <State></State>
  </ServerState>
</RadiusServerState>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
```

```
  <eventTime>2019-07-05T10:24:36</eventTime>
  <RadiusServer xmlns="http://www.h3c.com/netconf/event:1.0/RADIUS:1.0">
  <RadiusServerState>
    <SchemeName>rd1</SchemeName>
    <ServerType>1</ServerType>
    <IPAddress>1.2.3.4</IPAddress>
    <VRF>0</VRF>
    <Port>1812</Port>
    <State>1</State>
  </RadiusServerState>
</RadiusServer>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
ServerType	Server type	Enumeration: • **0**—Authentication • **1**—Accounting	No	N/A
IPAddress	Source IP address for outgoing RADIUS packets	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	This column represents an IPv4 address. For example, 1.0.0.1. Or this column represents an IPv6 address. For example, 2001:12::1:2.
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Port	UDP port number of the RADIUS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
State	Status of the RADIUS authentication server	Enumeration: • **0**—Active. • **1**—Blocked	No	N/A

      <ExecOperation></ExecOperation>
      <EntityType></EntityType>
      <Entity></Entity>
    </Rule>
  </Rules>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC

Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	When the EntityType value is **feature**, the Entity value must be selected from the RBAC/Features table, and the RoleName value must be selected from the RBAC/Roles table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
RuleIndex	Index of the rule	Index	Unsigned integer. Value range: 1 to 256.	The bigger the index, the higher the priority. RBAC rules are matched in descending order of priority.
Action	Action	N/A	Enumeration: • **0**—permit. • **1**—deny.	N/A
ReadOperation	Whether it is a read operation	N/A	Boolean: • true • false	Perform a read operation on the entity.
WriteOperation	Whether it is a write operation	N/A	Boolean: • true • false	Perform a write operation on the entity.
ExecOperation	Whether it is an execute operation	N/A	Boolean: • true • false	Perform an execute operation on the entity.
EntityType	Type of the entity	N/A	Enumeration: • **0**—Command. • **1**—Feature. • **2**—Feature group. • **3**—Web menu. • **4**—XML element. • **5**—SNMP OID.	The system ignores values of the ReadOperation, WriteOperation, and ExecOperation columns of entities of **command** type.
Entity	Entity	N/A	Command: String. Length: 1 to 128 characters. Feature: String. Length: 1 to 15 characters. Feature group:	For information about different types of entities, see the RBAC configuration in the user manual.

Column name	Column description	Column type	Data type and restrictions	Remarks
			String. Length: 1 to 31 characters. Web menu: String. Length: 1 to 255 characters. XML element: String. Length: 1 to 255 characters. SNMP OID: String. Length: 1 to 255 characters.	

RBAC/Policies/InterfacePolicies

RBAC interface policy table.

XML structure

```
<RBAC>
  <Policies>
    <InterfacePolicies>
      <Policy>
        <RoleName></RoleName>
        <InterfaceListPermitted></InterfaceListPermitted>
      </Policy>
    </InterfacePolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	InterfacePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllInterface to false in the RBAC/Roles table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
InterfaceListPermitted	A list of permitted interfaces specified by full names	N/A	String. Length: 0 to 32767 characters.	To specify an interface range, make sure the interfaces are located on the same chassis, slot, or subslot. Specify the interface range with the last portion of the interface number. For example, set the list the following: GigabitEthernet0/0/1, GigabitEthernet0/0/10 to GigabitEthernet0/0/20, GigabitEthernet0/0/25

RBAC/Policies/VLANPolicies

RBAC VLAN policy table.

XML structure

```
<RBAC>
  <Policies>
    <VLANPolicies>
      <Policy>
        <RoleName></RoleName>
        <VLANListPermitted></VLANListPermitted>
      </Policy>
    </VLANPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	VLANPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllVLAN to false in the RBAC/Roles table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
VLANListPermitted	A list of permitted VLANs	N/A	String. Length: 0 to 32767 characters.	The string can contain only numbers, minus signs, and commas, and cannot end with a comma or minus sign. The string does not support blank characters. For example, 1,2,3,5-8,10-20.

RBAC/Policies/VRFPolicies

RBAC VRF policy table.

XML structure

```
<RBAC>
  <Policies>
    <VRFPolicies>
      <Policy>
        <RoleName></RoleName>
        <VRFPermitted></VRFPermitted>
      </Policy>
    </VRFPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	VRFPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllVRF to false in the RBAC/Roles table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
VRFPermitted	Name of the permitted VRF instance	Index	String. Length: 1 to 31 characters.

RBAC/Policies/SecZonePolicies

RBAC security zone policy table.

XML structure

```
<RBAC>
  <Policies>
    <SecZonePolicies>
      <Policy>
        <RoleName></RoleName>
        <SecZonePermitted></SecZonePermitted>
      </Policy>
    </SecZonePolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	SecZonePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllSecZone to false in the RBAC/Roles table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
SecZonePermitted	Name of the permitted security zone	Index	String. Length: 1 to 13 characters.

RBAC/Policies/LocationPolicies

RBAC location policy table.

XML structure

```
<RBAC>
  <Policies>
    <LocationPolicies>
      <Policy>
        <RoleName></RoleName>
        <LocationPermitted></LocationPermitted>
      </Policy>
    </LocationPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	LocationPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllLocation to false in the RBAC/Roles table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
LocationPermitted	Name of the permitted locations	Index	String. Length: 1 to 31 characters.

RBAC/FeatureGroups

RBAC feature group table.

XML structure

```
<RBAC>
  <FeatureGroups>
    <FeatureGroup>
      <Name></Name>
    </FeatureGroup>
  </FeatureGroups>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	FeatureGroups
Table type	Multi-instance table
Row name	FeatureGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the feature group	Index	String. Length: 1 to 31 characters.	The predefined feature groups named **L2** and **L3** cannot be modified.

RBAC/FeaturesInGroup

RBAC Feature In Group table.

XML structure

```
<RBAC>
  <FeaturesInGroup>
    <Feature>
      <GroupName></GroupName>
      <FeatureName></FeatureName>
    </Feature>
  </FeaturesInGroup>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	FeaturesInGroup
Table type	Multi-instance table
Row name	Feature
Restrictions	The value of FeatureName must be selected from the RBAC/Features table. The value of GroupName must be selected from the RBAC/FeatureGroups table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Name of the group	Index	String. Length: 1 to 31 characters.
FeatureName	Name of the feature	Index	String. Length: 1 to 15 characters.

PermitAllInterface	Whether to allow access to all interfaces	N/A	Boolean: • true • false	The default value is true.
PermitAllVLAN	Whether to allow access to all VLANs	N/A	Boolean: • true • false	The default value is true.
PermitAllVRF	Whether to allow access to all VRFs	N/A	Boolean: • true • false	The default value is true.
PermitAllSecZone	Whether to allow access to all security zones	N/A	Boolean: • true • false	The default value is true.
PermitAllLocation	Whether to allow access to all locations	N/A	Boolean: • true • false	The default value is true.
IsPreDefined	Whether it is a predefined role	N/A	Boolean: • true • false	Predefined roles include network-admin, network-operator, and level-0 to level-15 users.
CanAddRules	Whether to allow users to add rules	N/A	Boolean: • true • false	All user-defined roles, and part of the predefined roles allow users to add rules.

RBAC/Rules

RBAC rule table.

XML structure

```
<RBAC>
  <Rules>
    <Rule>
      <RoleName></RoleName>
      <RuleIndex></RuleIndex>
      <IsPreDefined></IsPreDefined>
      <Action></Action>
      <ReadOperation></ReadOperation>
      <WriteOperation></WriteOperation>
      <ExecOperation></ExecOperation>
      <EntityType></EntityType>
      <Entity></Entity>
    </Rule>
  </Rules>
```

```
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
RuleIndex	Index of the rule	Index	Unsigned integer. Value range: 1 to 256.	The bigger the index, the higher the priority. RBAC rules are matched in descending order of priority.
IsPreDefined	Whether it is a predefined rule	Index	Boolean: true false	Predefine rules can not be modified.
Action	Action	N/A	Enumeration: • **0**—permit. • **1**—deny.	N/A
ReadOperation	Whether it is a read operation	N/A	Boolean: • true • false	Perform a read operation on the entity.
WriteOperation	Whether it is a write operation	N/A	Boolean: • true • false	Perform a write operation on the entity.
ExecOperation	Whether it is an execute operation	N/A	Boolean: • true • false	Perform an execute operation on the entity.
EntityType	Type of the entity	N/A	Enumeration: • **0**—Command. • **1**—Feature. • **2**—Feature group. • **3**—Web menu. • **4**—XML element. • **5**—SNMP OID.	The system ignores values of the ReadOperation, WriteOperation, and ExecOperation columns of entities of **command** type.
Entity	Entity	N/A	Command:	For information about different types of

Column name	Column description	Column type	Data type and restrictions	Remarks
			String. Length: 1 to 128 characters. Feature: String. Length: 1 to 15 characters. Feature group: String. Length: 1 to 31 characters. Web menu: String. Length: 1 to 255 characters. XML element: String. Length: 1 to 255 characters. SNMP OID: String. Length: 1 to 255 characters.	entities, see the RBAC configuration in the user manual.

RBAC/Policies/InterfacePolicies

RBAC interface policy table.

XML structure

```
<RBAC>
  <Policies>
    <InterfacePolicies>
      <Policy>
        <RoleName></RoleName>
        <InterfaceListPermitted></InterfaceListPermitted>
      </Policy>
    </InterfacePolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	InterfacePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
InterfaceListPermitted	A list of permitted interfaces specified by full names	N/A	String. Length: 0 to 32767 characters.	To specify an interface range, make sure the interfaces are located on the same chassis, slot, or subslot. Specify the interface range with the last portion of the interface number. For example, set the list the following: GigabitEthernet0/0/1, GigabitEthernet0/0/10 to GigabitEthernet0/0/20, GigabitEthernet0/0/25

RBAC/Policies/VLANPolicies

RBAC VLAN policy table.

XML structure

```
<RBAC>
  <Policies>
    <VLANPolicies>
      <Policy>
        <RoleName></RoleName>
        <VLANListPermitted></VLANListPermitted>
      </Policy>
    </VLANPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	VLANPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
VLANListPermitted	A list of permitted VLANs	N/A	String. Length: 0 to 32767 characters.	The string can contain only numbers, minus signs, and commas, and cannot end with a comma or minus sign. The string does not support blank characters. For example, 1,2,3,5-8,10-20.

RBAC/Policies/VRFPolicies

RBAC VRF policy table.

XML structure

```
<RBAC>
  <Policies>
    <VRFPolicies>
      <Policy>
        <RoleName></RoleName>
        <VRFPermitted></VRFPermitted>
      </Policy>
    </VRFPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	VRFPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
VRFPermitted	Name of the permitted VRF instance	Index	String. Length: 1 to 31 characters.

RBAC/Policies/SecZonePolicies

RBAC security zone policy table.

XML structure

```
<RBAC>
  <Policies>
    <SecZonePolicies>
      <Policy>
        <RoleName></RoleName>
        <SecZonePermitted></SecZonePermitted>
      </Policy>
    </SecZonePolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	SecZonePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
SecZonePermitted	Name of the permitted	Index	String.

Column name	Column description	Column type	Data type and restrictions
	security zone		Length: 1 to 31 characters.

RBAC/Policies/LocationPolicies

RBAC location policy table.

XML structure

```
<RBAC>
  <Policies>
    <LocationPolicies>
      <Policy>
        <RoleName></RoleName>
        <LocationPermitted></LocationPermitted>
      </Policy>
    </LocationPolicies>
  </Policies>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	LocationPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
LocationPermitted	Name of the permitted location	Index	String. Length: 1 to 31 characters.

RBAC/Features

RBAC feature table.

XML structure

```
<RBAC>
  <Features>
    <Feature>
      <Name></Name>
      <Description></Description>
    </Feature>
  </Features>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	Features
Table type	Multi-instance table
Row name	Feature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the feature group	Index	String. Length: 1 to 31 characters.	The predefined feature groups named L2 and L3 cannot be modified.

RBAC/FeatureGroups

RBAC feature group table.

XML structure

```
<RBAC>
  <FeatureGroups>
    <FeatureGroup>
      <Name></Name>
      <IsPreDefined></IsPreDefined>
    </FeatureGroup>
  </FeatureGroups>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	FeatureGroups
Table type	Multi-instance table
Row name	FeatureGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the group	Index	String. Length: 1 to 31 characters.
IsPreDefined	Whether it is a predefined group	N/A	Boolean: • true • false

RBAC/FeaturesInGroup

RBAC Feature In Group table.

XML structure

```
<RBAC>
  <FeaturesInGroup>
    <Feature>
      <GroupName></GroupName>
      <FeatureName></FeatureName>
    </Feature>
  </FeaturesInGroup>
</RBAC>
```

Table description

Item	Description
Feature name	RBAC
Table name	FeaturesInGroup
Table type	Multi-instance table
Row name	Feature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Name of the group	Index	String. Length: 1 to 31 characters.
FeatureName	Name of the feature	Index	String. Length: 1 to 15 characters.

RDDC

RDDC/RedundancyInterfaceMember

This table contains member interface information in redundancy interface.

XML structure

```
<RDDC>
  <RedundancyInterfaceMember>
    <MemberInterface>
      <IfIndex></IfIndex>
      <MemberIfIndex></MemberIfIndex>
      <Priority></Priority>
    </MemberInterface>
  </RedundancyInterfaceMember>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyInterfaceMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	This table supports member interface types: Layer 3 Ethernet interface Layer 3 aggregate interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported.
MemberIfIndex	Member interface index.	Index	Unsigned integer.	N/A
Priority	Priority of the member interface	N/A	Unsigned integer. Value range: 1 to 255.	Required. The higher the value, the greater the priority.

RDDC/RedundancyGroup

This table contains redundancy group information.

XML structure

```
<RDDC>
  <RedundancyGroup>
    <Group>
      <GroupName></GroupName>
      <PreemptDelay></PreemptDelay>
      <HoldDownInterval></HoldDownInterval>
    </Group>
  </RedundancyGroup>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
PreemptDelay	Preempt delay time of redundancy group node	N/A	Unsigned integer. Value range: 0 to 12 minutes. Default: 1 minute.	0 means no switchover.
HoldDownInterval	Hold-down time	N/A	Unsigned integer. Value range: 0 to 1800 seconds. Default: 1 second	0 means not to hold down in switchover.

RDDC/RedundancyGroupMember

This table contains redundancy interface information in redundancy group.

XML structure

```
<RDDC>
  <RedundancyGroupMember>
    <MemberInterface>
      <GroupName></GroupName>
      <IfIndex></IfIndex>
    </MemberInterface>
  </RedundancyGroupMember>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

RDDC/RedundancyFailoverGroup

This table contains failover group information in redundancy group.

XML structure

```
<RDDC>
  <RedundancyFailoverGroup>
    <FailoverGroup>
      <GroupName></GroupName>
      <FailoverGroupName></FailoverGroupName>
    </FailoverGroup>
  </RedundancyFailoverGroup>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyFailoverGroup
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
FailoverGroupName	Failover group name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A

RDDC/RedundancyGroupNode

This table contains redundancy group node information in redundancy group.

XML structure

```
<RDDC>
  <RedundancyGroupNode>
    <Node>
      <GroupName></GroupName>
```

```
      <NodeID></NodeID>
      <Priority></Priority>
      <BindChassis></BindChassis>
    </Node>
  </RedundancyGroupNode>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNode
Table type	Multi-instance table
Row name	Node
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.	N/A
Priority	Priority of this redundancy group node	N/A	Unsigned integer. Value range: 1 to 255. Default: 1.	The higher the value, the greater the priority.
BindChassis	The bound chassis ID	N/A	Unsigned integer.	N/A

RDDC/RedundancyGroupTrack

This table contains track information of redundancy group node.

XML structure

```
<RDDC>
  <RedundancyGroupTrack>
    <Track>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <TrackID></TrackID>
      <ReducePriority></ReducePriority>
```

```
      <IfIndex></IfIndex>
    </Track>
  </RedundancyGroupTrack>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupTrack
Table type	Multi-instance table
Row name	Track
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.	N/A
TrackID	The track ID	Index	Unsigned integer. Value range: 1to 1024.	N/A
ReducePriority	Reduce priority of redundancy group node	N/A	Unsigned integer. Value range: 1to 255. Default: 255.	N/A
IfIndex	Track interface index.	N/A	Unsigned integer.	N/A

RDDC/RedundancyGroupNodeMember

This table contains member interface information in redundancy group node.

XML structure

```
<RDDC>
  <RedundancyGroupNodeMember>
    <MemberInterface>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <IfIndex></IfIndex>
    </MemberInterface>
```

```
  </RedundancyGroupNodeMember>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNodeMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	Bind redundancy group node with chassis first. This table supports member interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The interface must belong to the chassis bound with the redundancy group node. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PreemptDelay	Preempt delay time of redundancy group node	N/A	Unsigned integer. Value range: 0 to 12 minutes.	0 means no switchover.
HoldDownInterval	Hold-down time	N/A	Unsigned integer. Value range: 0 to 1800 seconds.	0 means not to hold down in switchover.
HoldDownTimeRemained	Remained hold-down time when a switchover occurred or a failover recovery.	N/A	Unsigned integer. Value range: 0 to 1800 seconds.	N/A
PreemptDelayRemained	Preempt delay time remained when a failover recovery.	N/A	Unsigned integer. Value range: 0 to 12 minutes.	N/A
SwitchoverRequest	Whether request a switchover to the low-priority node or not.	N/A	Boolean: • **true** • **false(default)**	N/A

RDDC/RedundancyGroupMember

This table contains redundancy interface information in redundancy group.

XML structure

```
<RDDC>
  <RedundancyGroupMember>
    <MemberInterface>
      <GroupName></GroupName>
      <IfIndex></IfIndex>
    </MemberInterface>
  </RedundancyGroupMember>
</RDDC>
```

Table description

Item	Description

Row name	MemberInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	**N/A**
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported.

RDDC/RedundancyFailoverGroup

This table contains failover group information in redundancy group.

XML structure

```
<RDDC>
  <RedundancyFailoverGroup>
    <FailoverGroup>
      <GroupName></GroupName>
      <FailoverGroupName></FailoverGroupName>
    </FailoverGroup>
  </RedundancyFailoverGroup>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyFailoverGroup
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
FailoverGroupName	Failover group name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A

RDDC/RedundancyGroupNode

This table contains the information of redundancy group node.

XML structure

```
<RDDC>
  <RedundancyGroupNode>
    <Node>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <Priority></Priority>
      <BindChassis></BindChassis>
      <TrackWeight></TrackWeight>
      <Status></Status>
    </Node>
  </RedundancyGroupNode>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNode
Table type	Multi-instance table
Row name	Node
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.	N/A
Priority	Priority of this redundancy group node	N/A	Unsigned integer. Value range: 1 to 255.	The higher the value, the greater the priority.
BindChassis	The bound chassis ID	N/A	Unsigned integer.	N/A
TrackWeight	The current weight of this redundancy group node.	N/A	Integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	The current status of this redundancy group node.	N/A	Enumeration: • **1**—Secondary. • **2**—Primary.	N/A

RDDC/RedundancyGroupTrack

This table contains track information of redundancy group node.

XML structure

```
<RDDC>
  <RedundancyGroupTrack>
    <Track>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <TrackID></TrackID>
      <ReducePriority></ReducePriority>
      <Status></Status>
      <IfIndex></IfIndex>
      <FailInterface></FailInterface>
      <HoldStatus></HoldStatus>
    </Track>
  </RedundancyGroupTrack>
</RDDC>
```

Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupTrack
Table type	Multi-instance table
Row name	Track
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.

Column name	Column description	Column type	Data type and restrictions
TrackID	The track ID	Index	Unsigned integer. Value range: 1to 1024.
ReducePriority	Reduce priority of redundancy group node	N/A	Unsigned integer. Value range: 1to 255.
Status	Track Status	N/A	Enumeration: • **1**—Positive. • **2**—Negative.
IfIndex	Track interface index.	N/A	Unsigned integer.
FailInterface	Whether the trace interface is fault.	N/A	Boolean: • true • false
HoldStatus	The trace interface status.	N/A	Enumeration: • **0**—Absend. • **1**—Normal.

RDDC/RedundancyGroupNodeMember

This table contains member interface information in redundancy group node.

XML structure

```
<RDDC>
  <RedundancyGroupNodeMember>
    <MemberInterface>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <IfIndex></IfIndex>
      <RedundancyDown></RedundancyDown>
    </MemberInterface>
  </RedundancyGroupNodeMember>
</RDDC>
```

Table description

Item	Description

Columns 2

REDISDBM

REDISDBM/ServerVpn

This table is used to specify the VRF used to connect to the Redis servers.

XML structure

```
<REDISDBM>
  <ServerVpn>
    <VRF></VRF>
  </ServerVpn>
</REDISDBM>
```

Table description

Item	Description
Feature name	REDISDBM
Table name	ServerVpn
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Public instances don't support the column.

REDISDBM/ResumeWaiting

This table is used to set the delay time before resuming data from the Redis servers.

XML structure

```
<REDISDBM>
  <ResumeWaiting>
    <ResumeWaitTime></ResumeWaitTime>
  </ResumeWaiting>
</REDISDBM>
```

Table description

Item	Description
Feature name	REDISDBM
Table name	ResumeWaiting
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResumeWaitTime	Resumption delay time	N/A	Unsigned integer. Value range: 0 to 20. Unit: minutes.	0 represents that automatic data resumption is disabled. The default value is 3.

    </RfpingTest>
  </RfpingInformation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RfpingInformation
Table type	Multi-instance table
Row name	RfpingTest
Group name	Rfping
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC Address of station	index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ErrCode	Rfping Result code	column	unsigned int 0 indicates success 1 indicates STA is offline 2 indicates RF ping conflict 3 indicates STA is sleeping 4 indicates Rf ping fail	Flag of the rfping result.
StaMode	Wireless mode	column	unsigned int . 1: 802.11b 2: 802.11a 4: 802.11g 16: 802.11gn 32: 802.11an 64: 802.11ac	N/A
McsIdx	Index of 11n-MCS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11n mode. This field belong to group of Rfping.
Nss	Index of 11ac-NSS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11ac mode. This field belong to group of Rfping.
VhtMcsIdx	Index of 11ac-VHT-MCS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11ac mode. This field belong to group of Rfping.
TxRate	Transmit rate	column	unsigned int, range: 0-65535. Unit: 100Kbps.	This field belong to group of Rfping.
TxPktCnt	Transmit package count	column	unsigned int, 5 is expected.	This field belong to group of Rfping.
RxPktCnt	Received packet count	column	unsigned int, range: 0-5.	This field belong to group of Rfping.
Rssi	Received signal strength indication	column	unsigned int	This field belong to group of Rfping.
RetryPktCnt	Retried packet count	column	unsigned int, range: 0-15	This field belong to group of Rfping.

Rtt	Round trip time	column	unsigned int. Unit: ms.	This field belong to group of Rfping.

```

```
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an Instance first before you merge or create networks for it. Only unsigned integer ranging from 1 to 65535 is supported now.
NetworkAddr	Network address.	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask.	N/A	String, dotted decimal notation.	N/A

RIP/Redistributes

This table contains RIP route redistribution information.

XML structure

```
<RIP>
  <Redistributes>
    <Redist>
      <Name></Name>
      <Protocol></Protocol>
      <RedistName></RedistName>
      <Cost></Cost>
      <RoutePolicyName></RoutePolicyName>
      <AllowIBGP></AllowIBGP>
      <AllowDirect></AllowDirect>
```

```
      <Tag></Tag>
    </Redist>
  </Redistributes>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance first before you merge or create redistribute lists for it. Only unsigned integer ranging from 1 to 65535 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: • 1—Direct • 2—Static • 3—RIP • 4—OSPF • 5—ISIS • 6—BGP • **7—**EIGRP. • **9—**UNR.	N/A
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the Protocol column is Direct, Static, Guard, or UNR. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is ISIS, OSPF, EIGRP,or RIP.

Column name	Column description	Column type	Data type and restrictions	Remarks
				It must be empty or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.
Cost	Cost for redistributed routes.	N/A	Unsigned integer. Value range: 0 to 16.	N/A
RoutePolicyName	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
AllowIBGP	Allow redistribution of IBGP routes.	N/A	Boolean: • **true—**Allow redistribution of IBGP routes. • **false—**Do not redistribute IBGP routes (default).	This column can be specified only when the protocol is BGP.
AllowDirect	Allow direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	N/A	Boolean: • **true—**Import direct routes when importing ISIS, OSPF, RIP or EIGRP routes. • **false—**Does not import direct routes when importing ISIS, OSPF, RIP or EIGRP routes (default).	This column can be specified only when the Protocol is 3, 4, 5 or 7.
Tag	Redistribute tag.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0	N/A

RIP/Interfaces

This table contains RIP interface information.

XML structure

```
<RIP>
  <Interfaces>
    <If>
      <IfIndex></IfIndex>
      <Version></Version>
      <IfEnable>
        <Name></Name>

      <MetricInPolicy></MetricInPolicy>
      <BfdEnable></BfdEnable>
      <BfdMode></BfdMode>
      <BfdDestination></BfdDestination>
      <Input></Input>
      <Output></Output>
      <Authentication>
        <AuthType></AuthType>
        <PasswordType></PasswordType>
        <Password></Password>
        <KeyId></KeyId>
      </Authentication>
    </If>
  </Interfaces>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Interfaces
Table type	Multi-instance table
Row name	If
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Version	Interface version.	N/A	Enumeration: • 1—RIPV1 • 2—RIPV2 • 3—RIPV2 Broadcast	N/A
IfEnable	Interface enable messages.	N/A	Members include: • Name.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• ExcludedSubIp.	
Name	Instance name.	N/A	String. Length: 1 to 31 characters.	Only unsigned integer ranging from 1 to 65535 is supported now.
ExcludedSubIp	Whether to exclude secondary IP addresses.	N/A	Boolean: • **true**—Exclude secondary IP addresses. • **false—**Does not exclude secondary IP addresses(default).	N/A
MetricIn	Metric to be added to inbound routes	N/A	Unsigned integer. Value range:0 to 16. Default: 0.	N/A
MetricInPolicy	Name of the routing policy	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
BfdEnable	Whether or not to enable BFD for RIP on the interface.	N/A	Enumeration: • 0—Inherit from RIP instance (default). • 1—Enable BFD. • 2—Disable BFD.	N/A
BfdMode	BFD session mode.	N/A	Enumeration: • 0—Not specified. Control-mode BFD is used for indirect neighbors and echo-mode BFD is used for direct neighbors. • 1—Ctrl. Control-mode BFD is used for both indirect neighbors and direct neighbors.	This column can be specified only when BfdEnable is true. You can only set BfdMode or BfdDestination at the same time.
BfdDestination	Destination IP address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	This column can be specified only when BfdEnable is true. You can only set BfdMode or BfdDestination at the same time.
Input	Whether to receive RIPpackets.	N/A	Boolean: • true—Receive RIP packets (default). • false—Does not receive RIP packets.	N/A
Output	Whether to send RIPpackets.	N/A	Boolean: • true—Send RIP packets (default). • false—Does not send RIP packets.	N/A
Authentication	Authentication	N/A	Members include:	The members of AuthType,

Column name	Column description	Column type	Data type and restrictions	Remarks
	messages.		• AuthType. • PasswordType. • Password. • KeyId.	PasswordType and Password must be specified. If AuthType column is Md5Rfc2082, KeyId must be specified.
AuthType	Authentication type.	N/A	Enumeration: • 1—Simple. • 2—Md5Rfc2082. • 3—Md5Rfc2453.	N/A
PasswordType	Password type.	N/A	Enumeration: • 1—Ciphertext. • 2—Plaintext.	N/A
Password	Password.	N/A	String. Length: • 1 to 16 characters for plain password. • 33 to 53 characters for cipher password.	N/A
KeyId	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	This column is available when the AuthType column is Md5Rfc2082. It must be empty when the AuthType column is Simple or Md5Rfc2453.

RIP/FilterPolicyExports

This table contains redistributed route filtering policy information.

XML structure

```
<RIP>
  <FilterPolicyExports>
    <FilterPolicyExport>
      <Name></Name>
      <IfIndex></IfIndex>
      <ProtocolExport></ProtocolExport>
      <InstanceNameExport></InstanceNameExport>
      <AclNum></AclNum>
      <PrefixListName></PrefixListName>
    </FilterPolicyExport>
  </FilterPolicyExports>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	FilterPolicyExports
Table type	Multi-instance table
Row name	FilterPolicyExport
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create distributebgplses for it. It must be an unsigned integer in the range of 1 to 65535.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*. You can only set IfIndex or ProtocolExport at the same time.
ProtocolExport	Protocol type.	Index	Enumeration: • **0**—All. • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6—**BGP. • **7—**EIGRP.	You can only set IfIndex or ProtocolExport at the same time.

InstanceNameExport	Instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the ProtocolExport column is Direct, Static, BGP, All, or empty.
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	You can only set AclNum or PrefixListName at the same time.
PrefixListName	Name of the prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	You can only set AclNum or PrefixListName at the same time.

RIP/FilterPolicyImports

This table contains received route filtering policy information.

XML structure

```
<RIP>
  <FilterPolicyImports>
    <FilterPolicyImport>
      <Name></Name>
      <IfIndex></IfIndex>
      <AclNum></AclNum>

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create distributebgplses for it. It must be an unsigned integer in the range of 1 to 65535.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum cannot be specified when PrefixListName or Gateway is set.
PrefixListName	Name of the prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	PrefixListName cannot be specified when AclNum is set.
Gateway	Name of the prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Gateway cannot be specified when AclNum is set.

RIP

RIP/Instances

This table contains RIP instances information.

XML structure

```
<RIP>
  <Instances>
    <Instance>
      <Name></Name>
      <VRF></VRF>
      <Summary></Summary>
      <Version></Version>
      <GarbageCollectTimer></GarbageCollectTimer>
      <SuppressTimer></SuppressTimer>
      <TimeoutTimer></TimeoutTimer>
      <UpdateTimer></UpdateTimer>
      <BfdAllInterfaces></BfdAllInterfaces>
    </Instance>
  </Instances>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
VRF	Vrf name.	N/A	String. Length: 1 to 31 characters.	N/A
Summary	Enable route summarization.	N/A	Boolean: • **true**—Enable route	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			summarization. • **false—**Disable route summarization	
Version	Version of RIP.	N/A	Enumeration: • 0—Not specified. • 1—Version 1. • 2—Version 2.	N/A
GarbageCollectTimer	RIP garbage-collect interval	N/A	Unsigned integer. Value range: 1 to 3600, in seconds.	N/A
SuppressTimer	RIP suppress interval.	N/A	Unsigned integer. Value range: 0 to 3600, in seconds.	N/A
TimeoutTimer	RIP timeout time.	N/A	Unsigned integer. Value range: 1 to 3600, in seconds.	N/A
UpdateTimer	RIP update interval.	N/A	Unsigned integer. Value range: 1 to 3600, in seconds.	N/A
BfdAllInterfaces	Whether to enable BFD on all interfaces of a RIP process.	N/A	Enumeration: • 0—Disabled. • 1—Enabled echo. • 2—Enabled control.	N/A

RIP/Networks

This table contains RIP network lists information.

XML structure

```
<RIP>
  <Networks>
    <Network>
      <Name></Name>
      <NetworkAddr></NetworkAddr>
      <WildcardMask></WildcardMask>
    </Network>
  </Networks>
</RIP>
```

Table description

Item	Description
Feature name	RIP

Item	Description
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
NetworkAddr	Network IPv4 address.	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask.	N/A	String, dotted decimal notation.	N/A

RIP/Redistributes

This table contains RIP redistribute lists information.

XML structure

```
<RIP>
  <Redistributes>
    <Redist>
      <Name></Name>
      <Protocol></Protocol>
      <RedistName></RedistName>
      <Cost></Cost>
      <RoutePolicyName></RoutePolicyName>
      <AllowIBGP></AllowIBGP>
      <AllowDirect></AllowDirect>
      <Tag></Tag>
    </Redist>
  </Redistributes>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Redistributes

Item	Description
Table type	Multi-instance table
Row name	Redist
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
Protocol	Redistribute protocol.	Index	Enumeration: • 1—Direct • 2—Static • 3—RIP • 4—OSPF • 5—ISIS • 6—BGP • 7—EIGRP. • 9—UNR.	N/A
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the Protocol column is Direct, Static, Guard, or UNR. It must be “all” or an unsigned integer in the range of 1 to 65535 if protocol is ISIS, OSPF, EIGRP,or RIP. It must be empty or an unsigned integer in the range of 1 to 4294967295 if protocol is BGP. “all” means all the process of the protocol.
Cost	Cost for redistributed routes.	N/A	Unsigned integer. Value range: 0 to 16.	N/A
RoutePolicyName	Name of the routing policy.	N/A	String : case-sensitive: Length: 1 to 63 characters.	N/A
AllowIBGP	Allow redistribution of IBGP routes	N/A	Boolean: • **true—**Allow redistribution of IBGP routes. • **false—**Do not redistribute IBGP routes.	This column can be specified only when the protocol is BGP.

Column name	Column description	Column type	Data type and restrictions	Remarks
AllowDirect	Allow direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	N/A	Boolean: • **true—**Import direct routes when importing ISIS, OSPF, RIP or EIGRP routes. • **false—**Does not import direct routes when importing ISIS, OSPF, RIP or EIGRP routes.	This column can be specified only when the Protocol is 3, 4, 5 or 7.
Tag	Redistribute tag.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

RIP/Interfaces

This table contains RIP interface information.

XML structure

```
<RIP>
  <Interfaces>
    <If>
      <IfIndex></IfIndex>
      <Version></Version>
      <IfEnable>
       <Name></Name>
       <ExcludedSubIp></ExcludedSubIp>
      </IfEnable>
      <MetricIn></MetricIn>
      <MetricInPolicy></MetricInPolicy>
      <BfdEnable></BfdEnable>
      <BfdMode></BfdMode>
      <BfdDestination></BfdDestination>
      <Input></Input>
      <Output></Output>
      <Authentication>
       <AuthType></AuthType>
       <PasswordType></PasswordType>
       <Password></Password>
       <KeyId></KeyId>
      </Authentication>
      <IfName></IfName>
    </If>
  </Interfaces>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	Interfaces
Table type	Multi-instance table
Row name	If
Restrictions	This table supports only Layer 3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Version	Interface version.	N/A	Enumeration: • 1—RIPV1 • 2—RIPV2 • 3—RIPV2 Broadcast	N/A
IfEnable	Interface enable messages.	N/A	Members include: • Name. • ExcludedSubIp.	N/A
Name	Instance name.	N/A	String. Length: 1 to 31 characters.	N/A
ExcludedSubIp	Whether to exclude secondary IP addresses.	N/A	Boolean: • **true**—Exclude secondary IP addresses. • **false—**Does not exclude secondary IP addresses.	N/A
MetricIn	Metric to be added to inbound routes	N/A	Unsigned integer. Value range:0 to 16.	N/A
MetricInPolicy	Name of the routing policy	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
BfdEnable	Whether or not to enable BFD for RIP on the interface.	N/A	Enumeration: • 0—Inherit from RIP instance. • 1—Enable BFD.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Disable BFD.	
BfdMode	BFD session mode.	N/A	Enumeration: • 0—Not specified. Control-mode BFD is used for indirect neighbors and echo-mode BFD is used for direct neighbors. • 1—Ctrl. Control-mode BFD is used for both indirect neighbors and direct neighbors.	This column can be specified only when BfdEnable is true. You can only set BfdMode or BfdDestination at the same time.
BfdDestination	Destination IP address of the BFD session.	N/A	IPv4: String, dotted decimal notation.	This column can be specified only when BfdEnable is true. You can only set BfdMode or BfdDestination at the same time.
Input	Whether to receive RIPpackets.	N/A	Boolean: • true—Receive RIP packets. • false—Does not receive RIP packets.	N/A
Output	Whether to send RIPpackets.	N/A	Boolean: • true—Send RIP packets. • false—Does not send RIP packets.	N/A
Authentication	Authentication messages.	N/A	Members include: • AuthType. • PasswordType. • Password. • KeyId.	N/A
AuthType	Authentication type.	N/A	Enumeration: • 1—Simple. • 2—Md5Rfc2082. • 3—Md5Rfc2453.	N/A
PasswordType	Password type.	N/A	Enumeration: • 1—Ciphertext. • 2—Plaintext.	N/A
Password	Password.	N/A	String. Length: • 1 to 16 characters for plain password. • 33 to 53 characters for cipher password.	N/A
KeyId	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
IfName	Interface name	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 2 to 47 characters.	

RIP/FilterPolicyExports

This table contains redistributed route filtering policy information.

XML structure

```
<RIP>
  <FilterPolicyExports>
    <FilterPolicyExport>
      <Name></Name>
      <IfIndex></IfIndex>
      <ProtocolExport></ProtocolExport>
      <InstanceNameExport></InstanceNameExport>
      <AclNum></AclNum>
      <PrefixListName></PrefixListName>
      <IfName></IfName>
    </FilterPolicyExport>
  </FilterPolicyExports>
</RIP>
```

Table description

Item	Description
Feature name	RIP
Table name	FilterPolicyExports
Table type	Multi-instance table
Row name	FilterPolicyExport
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create distributebgplses for it. It must be an unsigned integer

				in the range of 1 to 65535.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*. You can only set IfIndex or ProtocolExport at the same time.
ProtocolExport	Protocol type.	Index	Enumeration: • **0**—All. • **1**—Direct. • **2**—Static. • **3**—RIP. • **4**—OSPF. • **5**—ISIS. • **6—**BGP. • **7—**EIGRP.	You can only set IfIndex or ProtocolExport at the same time.
InstanceNameExport	Instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the ProtocolExport column is Direct, Static, BGP, All or empty.
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999	You can only set AclNum or PrefixListName at the same time.
PrefixListName	Name of the prefix list.	N/A	String, case-sensitive. Length: 1 to 63 characters.	You can only set AclNum or PrefixListName at the same time.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	IfName

RIP/FilterPolicyImports

This table contains received route filtering policy information.

XML structure

```
<RIP>
  <FilterPolicyImports>
    <FilterPolicyImport>
      <Name></Name>
      <IfIndex></IfIndex>
      <AclNum></AclNum>
      <PrefixListName></PrefixListName>
      <Gateway></Gateway>
      <IfName></IfName>
    </FilterPolicyImport>
  </FilterPolicyImports>
</RIP>

RIR/RirProbeConn

This table contains RIR link connectivity probe parameters.

XML structure

```
<RIR>
  <RirProbeConn>
    <Interval></Interval>
    <ConnTimeOut></ConnTimeOut>
  </RirProbeConn>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirProbeConn
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Probe interval	N/A	Unsigned integer. Value range: 0 to 604800000 milliseconds. Default:100
ConnTimeOut	Timeout time for waiting for a response to a probe packet	N/A	Unsigned integer. Value range: 10 to 3600000 milliseconds.

Column name	Column description	Column type	Data type and restrictions
			Default:3000

RIR/RirConfig

This table contains RIR configuration parameters.

XML structure

```
<RIR>
  <RirConfig>
    <Enable></Enable>
    <HubEnable></HubEnable>
    <SpokeEnable></SpokeEnable>
    <PortNum></PortNum>
    <LinkSelectDelay></LinkSelectDelay>
    <LinkSelectSuppressPeriod></LinkSelectSuppressPeriod>
    <PerSessionAdjustLoadBalance>
      <Enable></Enable>
      <AdjustPeriod></AdjustPeriod>
      <UpperThreshold></UpperThreshold>
      <LowerThreshold></LowerThreshold>
    </PerSessionAdjustLoadBalance>
    <FlowPriorityBasedScheduling>
      <Enable></Enable>
      <SchedulingPeriod></SchedulingPeriod>
      <LowerThreshold></LowerThreshold>
      <UpperThreshold></UpperThreshold>
    </FlowPriorityBasedScheduling>
    <LogEnable></LogEnable>
  </RirConfig>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable RIR	N/A	Boolean: • true. • false (default).	N/A
HubEnable	Whether to enable RIR server	N/A	Boolean: • true. • false (default)	N/A
SpokeEnable	Whether to enable RIR client	N/A	Boolean: • true. • false (default).	N/A
PortNum	Port for RIR client to synchronize probe information to RIR server	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
LinkSelectDelay	Link selection delay for RIR	N/A	Unsigned integer. Value range: 1 to 65535 seconds. Default: 60	N/A
LinkSelectSuppressPeriod	Link selection suppression period for RIR	N/A	Unsigned integer. Value range: 1 to 131070 seconds.	N/A
PerSessionAdjustLoadBalance	Per-session periodic-adjust load-balancing parameters	Data structure	Members include: • Enable. • AdjustPeriod. • UpperThreshold. • LowerThreshold.	N/A
Enable	Whether to enable dynamic load balancing	N/A	Boolean: • true. • false (default).	N/A
AdjustPeri	Scheduling period	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
od	for dynamic load balancing		Value range: 15 to 65535 seconds.	
UpperThreshold	Upper threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template exceeds the upper threshold, dynamic load balancing is triggered.
LowerThreshold	Lower threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template drops below the lower threshold, dynamic load balancing stops.
FlowPriorityBasedScheduling	Parameters for RIR flow priority-based traffic scheduling	Data structure	Members include: • Enable. • SchedulingPeriod. • LowerThreshold. • UpperThreshold.	When the bandwidth utilization of a link exceeds the upper threshold, traffic scheduling is triggered. Within each scheduling period, RIR redistributes the lowest priority flow on this link to other links until the bandwidth utilization of all links is below the lower threshold or only the highest priority flow is left on this link.
Enable	Whether to enable RIR flow priority-based traffic scheduling	N/A	Boolean: • true. • false.(default)	N/A
SchedulingPeriod	Scheduling period	N/A	Unsigned integer. Value range: 15 to 65535 seconds. Default: 30	RIR can redistribute a maximum of one flow on one link to other links in each scheduling period.
LowerThreshold	Bandwidth utilization lower threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 20	The lower threshold cannot be specified alone. If the lower threshold is specified, the upper threshold must also be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperThreshold	Bandwidth utilization upper threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 90	The upper threshold cannot be specified alone. If the upper threshold is specified, the lower threshold must also be specified.
LogEnable	Whether to enable RIR logging	N/A	Boolean: • **true**. • **false** (default).	N/A

RIR/RirSla

This table contains SLA configuration parameters.

XML structure

```
<RIR>
  <RirSla>
    <RirSlaID>
      <SlaId></SlaId>
      <Jitter></Jitter>
      <Loss></Loss>
      <Delay></Delay>
    </RirSlaID>
  </RirSla>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirSla
Table type	Single-instance table
Row name	RirSlaID
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlaId	SLA ID	Index	Unsigned integer. Value range: 0 to 128.	
Jitter	Jitter threshold value	N/A	Unsigned integer. Value range: 0 to 3600000 milliseconds. Default: 100	N/A
Loss	Packet loss threshold value	N/A	Unsigned integer. Value range: 0 to 1000 in millesimals. Default: 100	N/A
Delay	Delay threshold value	N/A	Unsigned integer. Value range: 10 to 60000 milliseconds. Default: 10	N/A

RIR/RirNqa

This table contains NQA configuration parameters.

XML structure

```
<RIR>
  <RirNqa>
    <RirNqaID>
      <NqaId></NqaId>
      <Dscp></Dscp>
      <Interval></Interval>
      <PacketNum></PacketNum>
      <PktInter></PktInter>
      <PrioTimeOut></PrioTimeOut>
      <Port></Port>
    </RirNqaID>
  </RirNqa>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirNqa
Table type	Single-instance table
Row name	RirNqaID
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NqaId	NQA ID	Index	Unsigned integer. Value range: 0 to 128	
Dscp	DSCP value of probe packets	N/A	Unsigned integer. Value range: 0 to 63. Default: 63	N/A
Interval	Probe interval	N/A	Unsigned integer. Value range: 0 to 604800000 milliseconds. Default: 100	N/A
PacketNum	Number of packets sent per probe	N/A	Unsigned integer. Value range: 10 to 1000. Default: 100	N/A
PktInter	Packet sending interval in the probe	N/A	Unsigned integer. Value range: 10 to 60000. Default: 20	N/A
PrioTimeOut	Timeout time for waiting for a response to a probe packet	N/A	Unsigned integer. Value range: 10 to 3600000 milliseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 3000	
Port	Destination port for NQA probes	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A

RIR/RirFlow

This table contains flow configuration parameters.

XML structure

```
<RIR>
  <RirFlow>
    <RirFlowID>
      <FlowId></FlowId>
      <ExpectBandwidth></ExpectBandwidth>
      <FlowLoadBalancingMode></FlowLoadBalancingMode>
      <NoOptimalLinkDrop></NoOptimalLinkDrop>
      <RirPolicys>
        <RirPolicy>
          <Linktype></Linktype>
          <Number></Number>
          <Priority></Priority>
        </RirPolicy>
      </RirPolicys>
      <RirProbePolicys>
        <RirProbePolicy>
          <SlaID></SlaID>
          <NqaID></NqaID>
        </RirProbePolicy>
      </RirProbePolicys>
    </RirFlowID>
  </RirFlow>
</RIR>
```

Table description

Item	Description
Feature name	RIR

Table name	RirFlow
Table type	Multi-instance table
Row name	RirFlowID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
FlowId	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.
ExpectBandwidth	Bandwidth that a session is expected to occupy	N/A	Unsigned integer. Value range: 1 to 400000000 kbps.
FlowLoadBalancingMode	Flow load balancing mode	N/A	Enumeration: **0**—None. **1**—Per-packet load balancing.
NoOptimalLinkDrop	Whether to drop packets if no optimal link is available	N/A	Boolean: • true. • false (default).
RirPolicys	RIR policy information	Sublist	• The details of the sublist refer to RirPolicys table.
RirProbePolicys	RIR probe policy information	Sublist	• The details of the sublist refer to RirProbePolicys table.

RIR/RirFlow/RirPolicys

This table contains RIR policy configuration information of RIR flow.

XML structure

```
Please refer to the XML Structure of RIR/RirFlow
```

Table description

Item	Description
Feature name	RIR
Table name	RirPolicys
Table type	Multi-instance table
Row name	RirPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Linktype	Link type	Index	Enumeration string: • mpls • mstp • internet. • 4g • vpdn
Number	Link index	Index	Unsigned integer. Value range: 1 to 65535.
Priority	Link preference	N/A	Unsigned integer. Value range: 1 to 255.

RIR/RirFlow/RirProbePolicys

This table contains RIR probe policy configuration information of RIR flow.

XML structure

```
Please refer to the XML Structure of RIR/RirFlow
```

Table description

Item	Description
Feature name	RIR
Table name	RirProbePolicys
Table type	Multi-instance table
Row name	RirProbePolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
SlaID	SLA bound to the flow	N/A	Unsigned integer. Value range: 0 to 128
NqaID	NQA link-quality operation bound to the flow	N/A	Unsigned integer. Value range: 0 to 128.

RIR/RirVsiLinkType

This table contains link type configuration parameters about VSI interfaces.

XML structure

```
<RIR>
  <RirVsiLinkType>
    <VsiIf>
      <VsiIndex></VsiIndex>
      <VsiLinkType></VsiLinkType>
      <Number></Number>
    </VsiIf>
  </RirVsiLinkType>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirVsiLinkType
Table type	Single-instance table
Row name	VsiIf
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiIndex	VSI interface index	Index	Unsigned integer.	The specified VSI interface must already exist
VsiLinkType	Link type	N/A	Enumeration string: • mpls • mstp • internet • 4g • vpdn	N/A
Number	Link index	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

RIR/RirTunnelCfg

This table contains RIR backup tunnel interface information.

XML structure

```
<RIR>
  <RirTunnelCfg>
```

```
    <Tunnel>
      <TunnelNo></TunnelNo>
      <BackupStatus></BackupStatus>
      <Role></Role>
      <CooperationGroup></CooperationGroup>
      <DedicatedFlows>
        <DedicatedFlow>
          <FlowId></FlowId>
        </DedicatedFlow>
      </DedicatedFlows>
      <BindInterface></BindInterface>
    </Tunnel>
  </RirTunnelCfg>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirTunnelCfg
Table type	Single-instance table
Row name	Tunnel
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelNo	Tunnel interface number	Index	Unsigned integer.	The specified tunnel interface must already exist
BackupStatus	Whether to configure the tunnel interface as a backup tunnel interface for RIR	N/A	Boolean: • true. • false (default).	N/A
Role	Role type	N/A	Enumeration string: • client. • server	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Cooperation Group	Cooperation group ID	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DedicatedFlows	RIR dedicated flow information	Sublist	For more information about the sublist, see the DedicatedFlows table.	N/A
BindInterface	Interface bound to the tunnel interface	N/A	Length: 2 to 47 characters.	N/A

RIR/RirTunnelCfg/DedicatedFlows

This table contains RIR dedicated flow configuration information for an RIR tunnel.

XML structure

Please refer to the XML Structure of RIR/RirTunnelCfg

Table description

Item	Description
Feature name	RIR
Table name	DedicatedFlows
Table type	Multi-instance table
Row name	DedicatedFlow
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
FlowId	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.

RIR/RirCollaborations

This table contains RIR collaboration configuration parameters.

XML structure

```
<RIR>
  <RirCollaborations>
    <RirCollaboration>
      <PeerVRF></PeerVRF>
      <PeerAddress></PeerAddress>
      <LocalAddress></LocalAddress>
      <SyncPort></SyncPort>
    </RirCollaboration>
  </RirCollaborations>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirCollaborations
Table type	Multi-instance table
Row name	RirCollaboration
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerVRF	Peer VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
PeerAddress	Peer IPv4 address	Index	IPv4 address string.	N/A
LocalAddress	Local IPv4 address	N/A	IPv4 address string.	N/A
SyncPort	Synchronization	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	port number		Value range: 1024 to 65535.	

RIR/RirCollaborationRedirections

This table contains RIR collaboration redirection configuration parameters.

XML structure

```
<RIR>
  <RirCollaborationRedirections>
    <RirCollaborationRedirection>
      <PeerVRF></PeerVRF>
      <PeerAddress></PeerAddress>
      <RedirectionVRF></RedirectionVRF>
      <RedirectionAddress></RedirectionAddress>
    </RirCollaborationRedirection>
  </RirCollaborationRedirections>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirCollaborationRedirections
Table type	Multi-instance table
Row name	RirCollaborationRedirection
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerVRF	Peer VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public

Column name	Column description	Column type	Data type and restrictions	Remarks
				network.
PeerAddress	Peer IPv4 address	Index	IPv4 address string.	N/A
RedirectionVRF	Local redirection VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
RedirectionAddress	Local redirection IPv4 address	N/A	IPv4 address string.	N/A

RIR/SdwanConfig

This table contains RIR-SDWAN configuration parameters.

XML structure

```
<RIR>
  <SdwanConfig>
    <Enable></Enable>
    <LinkQualInterval></LinkQualInterval>
    <LinkSelectDelay></LinkSelectDelay>
    <LinkSelectSuppressPeriod></LinkSelectSuppressPeriod>
    <PerSessionAdjustLoadBalance>
      <Enable></Enable>
      <AdjustPeriod></AdjustPeriod>
      <UpperThreshold></UpperThreshold>
      <LowerThreshold></LowerThreshold>
    </PerSessionAdjustLoadBalance>
    <FlowPriorityBasedScheduling>
      <Enable></Enable>
      <SchedulingPeriod></SchedulingPeriod>
      <LowerThreshold></LowerThreshold>
      <UpperThreshold></UpperThreshold>
    </FlowPriorityBasedScheduling>
  </SdwanConfig>
</RIR>
```

Table description

Item	Description
Feature name	RIR

Table name	RirSdwanConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable RIR-SDWAN	N/A	Boolean: • true. • false (default).	N/A
LinkQualInterval	Link quality iNQA probe interval	N/A	Enumeration: • 60. • 600. Default: 60 seconds.	N/A
LinkSelectDelay	Link selection delay for RIR-SDWAN	N/A	Unsigned integer. Value range: 1 to 65535 seconds. Default: 60 seconds.	N/A
LinkSelectSuppressPeriod	Link selection suppression period for RIR-SDWAN	N/A	Unsigned integer. Value range: 1 to 131070 seconds.	N/A
PerSessionAdjustLoadBalance	Per-session periodic-adjust load-balancing parameters	Data structure	Members include: • Enable. • AdjustPeriod. • UpperThreshold. LowerThreshold.	N/A
Enable	Whether to enable dynamic load balancing	N/A	Boolean: • true. false (default).	N/A
AdjustPeri	Scheduling period	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
od	for dynamic load balancing		Value range: 15 to 65535 seconds.	
UpperThreshold	Upper threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template exceeds the upper threshold, dynamic load balancing is triggered.
LowerThreshold	Lower threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template drops below the lower threshold, dynamic load balancing stops.
FlowPriorityBasedScheduling	Parameters for RIR-SDWAN flow priority-based traffic scheduling	Data structure	Members include: • Enable. • SchedulingPeriod. • LowerThreshold. • UpperThreshold.	When the bandwidth utilization of a link exceeds the upper threshold, traffic scheduling is triggered. Within each scheduling period, RIR-SDWAN redistributes the lowest priority flow on this link to other links until the bandwidth utilization of all links is below the lower threshold or only the highest priority flow is left on this link.
Enable	Whether to enable RIR-SDWAN flow priority-based traffic scheduling	N/A	Boolean: • true. • false (default).	N/A
SchedulingPeriod	Scheduling period	N/A	Unsigned integer. Value range: 15 to 65535 seconds. Default: 30 seconds.	RIR-SDWAN can redistribute a maximum of one flow on one link to other links in each scheduling period.
LowerThreshold	Bandwidth utilization lower threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 20%.	The lower threshold and the upper threshold must be specified in pairs.

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperThreshold	Bandwidth utilization upper threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 90%.	The lower threshold and the upper threshold must be specified in pairs.

RIR/SdwanSlas

This table contains RIR-SDWAN SLA configuration parameters.

XML structure

```
<RIR>
  <SdwanSlas>
    <SdwanSla>
      <SlaID></SlaID>
      <LossThreshold></LossThreshold>
      <DelayThreshold></DelayThreshold>
      <JitterThreshold></JitterThreshold>
    </SdwanSla>
  </SdwanSlas>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	SdwanSlas
Table type	Multi-instance table
Row name	SdwanSla
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlaID	SLA ID	Index	Unsigned integer. Value range: 0 to 128.	N/A
LossThreshold	Packet loss threshold value	N/A	Unsigned integer. Value range: 0 to 1000 per thousand. Default: 100 per thousand.	N/A
DelayThreshold	Delay threshold value	N/A	Unsigned integer. Value range: 10 to 60000 milliseconds. Default: 1000 milliseconds.	N/A
JitterThreshold	Jitter threshold value	N/A	Unsigned integer. Value range: 0 to 3600000 milliseconds. Default: 1000 milliseconds.	N/A

RIR/SdwanFlows

This table contains RIR-SDWAN flow template configuration parameters.

XML structure

```
<RIR>
  <SdwanFlows>
    <SdwanFlow>
      <FlowID></FlowID>
      <ExpectBandwidth></ExpectBandwidth>

Table description

Item	Description
Feature name	RIR
Table name	SdwanApplicationQuality
Table type	Single-instance table
Row name	SdwanApplicationQuality
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable application quality probe and enter application quality probe view	N/A	N/A
Instances	Probe instance information	Sublist	The details of the sublist refer to Instances table.

RIR/SdwanAppQuality/Instances

This table contains application quality probe instance parameters for RIR-SDWAN.

Table description

Item	Description
Feature name	RIR
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name	Index	String Length: 1 to 63 characters.
ProbeInterval	Application quality probe interval	N/A	Enumeration: • 30. • 60. • 300. • 600. Default: 60 seconds.
Peer	Peer configuration information	Data structure	Members include: • Role. • SiteID. • DeviceID.
Role	Source or destination	N/A	Enumeration: • **1**—Source. • **2**—Destination.
SiteID	Peer site ID	N/A	Unsigned short. Value range: 1 to 65535.
DeviceID	Peer device ID	N/A	Unsigned char. Value range: 1 to 255.
Signature	Application signature	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
	information		• SourceIP. • SourceIPMask. • DestIP. • DestIPMask.
SourceIP	Source IP address	N/A	IPv4 address string.
SourceIPMask	Mask length of source IP address	N/A	Unsigned char. Value range: 1 to 32.
DestIP	Destination IP address	N/A	IPv4 address string.
DestIPMask	Mask length of destination IP address	N/A	Unsigned char. Value range: 1 to 32.
SourceIPv6	Source IPv6 address	N/A	IPv6 address string.
SourceIPv6Prefix	Prefix length of source IPv6 address	N/A	Unsigned char. Value range: 1 to 128.
DestIPv6	Destination IPv6 address	N/A	IPv6 address string.
DestIPv6Prefix	Prefix length of destination IPv6 address	N/A	Unsigned char. Value range: 1 to 128.
ProbeFlows	Application flow ID information	Sublist	The details of the sublist refer to ProbeFlows table.

RIR/SdwanAppQuality/Instances/ProbeFlows

This table contains flow ID information for RIR-SDWAN application quality probe instances.

XML structure

Please refer to the XML Structure of RIR/RirApplicationQuality.

Table description

Item	Description
Feature name	RIR
Table name	ProbeFlows
Table type	Multi-instance table

Row name	ProbeFlow
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
FlowID	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.

RIR/Redirects

This table contains redirection interface paramaters for RIR.

XML structure

```
<RIR>
  <Redirects>
    <Redirect>
      <PeerAddress></PeerAddress>
      <RedirectIfName></RedirectIfName>
    </Redirect>
  </Redirects>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	Redirects
Table type	Multi-instance table
Row name	Redirect
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
PeerAddress	Peer device IP address	Index	N/A
RedirectIfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2

RIR/RedirectGroups

This table contains redirection interface group parameters for RIR.

XML structure

```
<RIR>
  <RedirectGroups>
    <RedirectGroup>
      <IfName></IfName>
      <GroupId></GroupId>
    </RedirectGroup>
  </RedirectGroups>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RedirectGroups
Table type	Multi-instance table
Row name	RedirectGroup
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
GroupId	Interface group ID	N/A	N/A

RIR

RIR/RirProbeConn

This table contains RIR link connectivity probe parameters.

XML structure

```
<RIR>
  <RirProbeConn>
    <Interval></Interval>
    <ConnTimeOut></ConnTimeOut>
  </RirProbeConn>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirProbeConn
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Probe interval	N/A	Unsigned integer. Value range: 0 to 604800000 milliseconds. Default:100
ConnTimeOut	Timeout time for waiting for a response to a probe packet	N/A	Unsigned integer. Value range: 10 to 3600000 milliseconds. Default:3000

RIR/RirConfig

This table contains RIR configuration parameters.

XML structure

```
<RIR>
  <RirConfig>
    <Enable></Enable>
    <HubEnable></HubEnable>
    <SpokeEnable></SpokeEnable>
    <PortNum></PortNum>
    <LinkSelectDelay></LinkSelectDelay>
    <LinkSelectSuppressPeriod></LinkSelectSuppressPeriod>
    <PerSessionAdjustLoadBalance>
      <Enable></Enable>
      <AdjustPeriod></AdjustPeriod>
      <UpperThreshold></UpperThreshold>
      <LowerThreshold></LowerThreshold>
    </PerSessionAdjustLoadBalance>
    <FlowPriorityBasedScheduling>
      <Enable></Enable>
      <SchedulingPeriod></SchedulingPeriod>
      <LowerThreshold></LowerThreshold>
      <UpperThreshold></UpperThreshold>
    </FlowPriorityBasedScheduling>
    <LogEnable></LogEnable>
  </RirConfig>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable RIR	N/A	Boolean: • true. • false. (default).	N/A
HubEnable	Whether to enable RIR server	N/A	Boolean: • true. • false (default).	N/A
SpokeEnable	Whether to enable RIR client	N/A	Boolean: • true. • false. (default).	N/A
PortNum	Port for RIR client to synchronize probe information to RIR server	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
LinkSelectDelay	Link selection delay for RIR	N/A	Unsigned integer. Value range: 1 to 65535 seconds. Default: 60	N/A
LinkSelectSuppressPeriod	Link selection suppression period for RIR	N/A	Unsigned integer. Value range: 1 to 131070 seconds.	N/A
PerSessionAdjustLoadBalance	Per-session periodic-adjust load-balancing parameters	Data structure	Members include: • Enable. • AdjustPeriod. • UpperThreshold. • LowerThreshold.	N/A
Enable	Whether to enable dynamic load balancing	N/A	Boolean: • true. • false (default).	N/A
AdjustPeriod	Scheduling period for dynamic load balancing	N/A	Unsigned integer. Value range: 15 to 65535 seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UpperThreshold	Upper threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template exceeds the upper threshold, dynamic load balancing is triggered.
LowerThreshold	Lower threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template drops below the lower threshold, dynamic load balancing stops.
FlowPriorityBasedScheduling	Parameters for RIR flow priority-based traffic scheduling	Data structure	Members include: • Enable. • SchedulingPeriod. • LowerThreshold. • UpperThreshold.	When the bandwidth utilization of a link exceeds the upper threshold, traffic scheduling is triggered. Within each scheduling period, RIR redistributes the lowest priority flow on this link to other links until the bandwidth utilization of all links is below the lower threshold or only the highest priority flow is left on this link.
Enable	Whether to enable RIR flow priority-based traffic scheduling	N/A	Boolean: • true. • false (default)	N/A
SchedulingPeriod	Scheduling period	N/A	Unsigned integer. Value range: 15 to	RIR can redistribute a maximum of one flow

Column name	Column description	Column type	Data type and restrictions	Remarks
			65535 seconds. Default: 30	on one link to other links in each scheduling period.
LowerThreshold	Bandwidth utilization lower threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 20	N/A
UpperThreshold	Bandwidth utilization upper threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 90	N/A
LogEnable	Whether RIR logging is enabled	N/A	Boolean: • **true**. • **false** (default).	N/A

RIR/RirSla

This table contains SLA configuration parameters.

XML structure

```
<RIR>
  <RirSla>
    <RirSlaID>
      <SlaId></SlaId>
      <Jitter></Jitter>
      <Loss></Loss>
      <Delay></Delay>
    </RirSlaID>
  </RirSla>
</RIR>
```

Table description

Item	Description
Feature name	RIR

Table name	RirSla
Table type	Single-instance table
Row name	RirSlaID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlaId	SLA ID	Index	Unsigned integer. Value range: 0 to 128.	N/A
Jitter	Jitter threshold value	N/A	Unsigned integer. Value range: 0 to 3600000 milliseconds. Default: 100	N/A
Loss	Packet loss threshold value	N/A	Unsigned integer. Value range: 0 to 1000 in millesimals. Default: 100	N/A
Delay	Delay threshold value	N/A	Unsigned integer. Value range: 10 to 60000 milliseconds. Default: 10	N/A

RIR/RirNqa

This table contains NQA configuration parameters.

XML structure

```
<RIR>
  <RirNqa>
    <RirNqaID>
      <NqaId></NqaId>
      <Dscp></Dscp>
      <Interval></Interval>
```

```
      <PacketNum></PacketNum>
      <PktInter></PktInter>
      <PrioTimeOut></PrioTimeOut>
      <Port></Port>
    </RirNqaID>
  </RirNqa>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirNqa
Table type	Single-instance table
Row name	RirNqaID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NqaId	NQA ID	Index	Unsigned integer. Value range: 0 to 128	N/A
Dscp	DSCP value of probe packets	N/A	Unsigned integer. Value range: 0 to 63. Default: 63	N/A
Interval	Probe interval	N/A	Unsigned integer. Value range: 0 to 604800000 milliseconds. Default: 100	N/A
PacketNum	Number of packets sent per probe	N/A	Unsigned integer. Value range: 10 to 1000. Default: 100	N/A
PktInter	Packet sending interval in the probe	N/A	Unsigned integer. Value range: 10 to 60000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 20	
PrioTimeOut	Timeout time for waiting for a response to a probe packet	N/A	Unsigned integer. Value range: 10 to 3600000 milliseconds. Default: 3000	N/A
Port	Destination port for NQA probes	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A

RIR/RirFlow

This table contains flow configuration parameters.

XML structure

```
<RIR>
  <RirFlow>
    <RirFlowID>
      <FlowId></FlowId>
      <ExpectBandwidth></ExpectBandwidth>
      <FlowLoadBalancingMode></FlowLoadBalancingMode>
      <NoOptimalLinkDrop></NoOptimalLinkDrop>
      <RirPolicys>
        <RirPolicy>
          <Linktype></Linktype>
          <Number></Number>
          <Priority></Priority>
        </RirPolicy>
      </RirPolicys>
      <RirProbePolicys>
        <RirProbePolicy>
          <SlaID></SlaID>
          <NqaID></NqaID>
        </RirProbePolicy>
      </RirProbePolicys>
    </RirFlowID>
  </RirFlow>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirFlow
Table type	Multi-instance table
Row name	RirFlowID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FlowId	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.
ExpectBandwidth	Bandwidth that a session is expected to occupy	N/A	Unsigned integer. Value range: 1 to 400000000 kbps.
FlowLoadBalancingMode	Flow load balancing mode	N/A	Enumeration: • 0—None. • **1**—Per-packet load balancing.
NoOptimalLinkDrop	Whether to drop packets if no optimal link is available	N/A	Boolean: • true. • false (default).
RirPolicys	RIR policy information	Sublist	• The details of the sublist refer to RirPolicys table.
RirProbePolicys	RIR probe policy information	Sublist	• The details of the sublist refer to RirProbePolicys table.

RIR/RirFlow/RirPolicys

This table contains RIR policy configuration information of RIR flow.

XML structure

```
Please refer to the XML Structure of RIR/RirFlow
```

Table description

Item	Description
Feature name	RIR
Table name	RirPolicys
Table type	Multi-instance table
Row name	RirPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Linktype	Link type	Index	Enumeration string: • mpls • mstp • internet • 4g • vpdn
Number	Link index	Index	Unsigned integer. Value range: 1 to 65535.
Priority	Link preference	N/A	Unsigned integer. Value range: 1 to 255.

RIR/RirFlow/RirProbePolicys

This table contains RIR probe policy configuration information of RIR flow.

XML structure

```
Please refer to the XML Structure of RIR/RirFlow
```

Table description

Item	Description
Feature name	RIR
Table name	RirProbePolicys
Table type	Multi-instance table
Row name	RirProbePolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SlaID	SLA bound to the flow	N/A	Unsigned integer. Value range: 0 to 128
NqaID	NQA link-quality operation bound to the flow	N/A	Unsigned integer. Value range: 0 to 128.

RIR/RirVsiLinkType

This table contains link type configuration parameters about VSI interfaces.

XML structure

```
<RIR>
  <RirVsiLinkType>
    <VsiIf>
      <VsiIndex></VsiIndex>
      <VsiLinkType></VsiLinkType>
      <Number></Number>
    </VsiIf>
  </RirVsiLinkType>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirVsiLinkType
Table type	Single-instance table
Row name	VsiIf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiIndex	VSI interface index	Index	Unsigned integer.	The specified VSI interface must already exist
VsiLinkType	Link type	N/A	Enumeration string: • mpls • mstp • internet • 4g • vpdn	N/A
Number	Link index	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

RIR/RirTunnelCfg

This table contains RIR tunnel interface configuration information.

XML structure

```
<RIR>
  <RirTunnelCfg>
    <Tunnel>
      <TunnelNo></TunnelNo>
```

```
      <BackupStatus></BackupStatus>
      <Role></Role>
      <CooperationGroup></CooperationGroup>
      <DedicatedFlows>
        <DedicatedFlow>
          <FlowId></FlowId>
        </DedicatedFlow>
      </DedicatedFlows>
      <BindInterface></BindInterface>
    </Tunnel>
  </RirTunnelCfg>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirTunnelCfg
Table type	Single-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelNo	Tunnel interface number	Index	Unsigned integer.	The specified tunnel interface must already exist
BackupStatus	Whether to configure the tunnel interface as a backup tunnel interface for RIR	N/A	Boolean: • true. • false. (default).	N/A
Role	Role type	N/A	Enumeration string: • client • server	N/A
Cooperation	Cooperation group ID	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Group			Value range: 1 to 65535.	
DedicatedFlows	RIR dedicated flow information	Sublist	For more information about the sublist, see the DedicatedFlows table.	N/A
BindInterface	Interface bound to the tunnel interface	N/A	Length: 2 to 47 characters.	N/A

RIR/RirTunnelCfg/DedicatedFlows

This table contains RIR dedicated flow configuration information for an RIR tunnel.

XML structure

Please refer to the XML Structure of RIR/RirTunnelCfg

Table description

Item	Description
Feature name	RIR
Table name	DedicatedFlows
Table type	Multi-instance table
Row name	DedicatedFlow
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
FlowId	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.

RIR/RirTunnelQuality

This table contains RIR tunnel quality information.

XML structure

```
<RIR>
  <RirTunnelQuality>
    <Tunnel>
      <TunnelNo></TunnelNo>
      <ConnProbeResult></ConnProbeResult>
      <PrioProbeInfos>
        <PrioProbeInfo>

          <ProbeResult></ProbeResult>
        </PrioProbeResult>
      </PrioProbeResults>
    </Tunnel>
  </RirTunnelQuality>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirTunnelQuality
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelNo	Tunnel interface number	Index	Unsigned integer.	The specified tunnel interface must already exist
ConnProbeResult	Nqa connect probe result	N/A	Boolean: • true. • false.	N/A
PrioProbeInfos	Information of the PrioProbeInfos	Sublist	The details of the sublist refer to PrioProbeInfos table.	N/A
PrioProbeResults	Information of the PrioProbeResults	Sublist	The details of the sublist refer to PrioProbeResults table.	N/A

RIR/RirTunnelQuality/PrioProbeInfos

This table contains priority probe information of RIR tunnel quality.

XML structure

```
Please refer to the XML Structure of RIR/RirTunnelQuality
```

Table description

Item	Description
Feature name	RIR
Table name	PrioProbeInfos
Table type	Multi-instance table
Row name	PrioProbeInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
NqaID	Priority probe NQA ID	Index	Unsigned integer. Value range: 0 to 128
Jitter	Priority probe jitter value	N/A	Unsigned integer. Value range: 0 to 3600000 milliseconds. Default: 100.
Delay	Priority probe delay value	N/A	Unsigned integer. Value range: 10 to 60000 milliseconds. Default: 10
Loss	Priority probe packet loss	N/A	Unsigned integer. Value range: 0 to 1000 percent. Default: 100

RIR/RirTunnelQuality/PrioProbeResults

This table contains priority probe result information of RIR tunnel quality.

XML structure

```
Please refer to the XML Structure of RIR/RirTunnelQuality
```

Table description

Item	Description
Feature name	RIR
Table name	PrioProbeResults
Table type	Multi-instance table
Row name	PrioProbeResult
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FlowId	Flow ID	Index	Unsigned integer. Value range: 1 to 65535.
ProbeResult	NQA priority probe result	N/A	Boolean: • true. • false.

RIR/RirCollaborations

This table contains RIR collaboration configuration parameters.

XML structure

```
<RIR>
  <RirCollaborations>
    <RirCollaboration>
      <PeerVRF></PeerVRF>
      <PeerAddress></PeerAddress>
      <LocalAddress></LocalAddress>
      <SyncPort></SyncPort>
    </RirCollaboration>
  </RirCollaborations>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirCollaborations
Table type	Multi-instance table
Row name	RirCollaboration
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerVRF	Peer VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
PeerAddress	Peer IPv4 address	Index	IPv4 address string.	N/A
LocalAddress	Local IPv4 address	N/A	IPv4 address string.	N/A
SyncPort	Synchronization port number	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A

RIR/RirCollaborationRedirections

This table contains RIR collaboration redirection configuration parameters.

XML structure

```
<RIR>
  <RirCollaborationRedirections>
    <RirCollaborationRedirection>
      <PeerVRF></PeerVRF>
      <PeerAddress></PeerAddress>
      <RedirectionVRF></RedirectionVRF>
      <RedirectionAddress></RedirectionAddress>
    </RirCollaborationRedirection>
  </RirCollaborationRedirections>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RirCollaborationRedirections
Table type	Multi-instance table
Row name	RirCollaborationRedirection
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerVRF	Peer VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
PeerAddress	Peer IPv4 address	Index	IPv4 address string.	N/A
RedirectionVRF	Local redirection VPN instance	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
RedirectionAddress	Local redirection IPv4 address	N/A	IPv4 address string.	N/A

RIR/SdwanConfig

This table contains RIR-SDWAN configuration parameters.

XML structure

```
<RIR>
  <SdwanConfig>
    <Enable></Enable>
    <LinkQualInterval></LinkQualInterval>
    <LinkSelectDelay></LinkSelectDelay>
    <LinkSelectSuppressPeriod></LinkSelectSuppressPeriod>
    <PerSessionAdjustLoadBalance>
      <Enable></Enable>
      <AdjustPeriod></AdjustPeriod>
      <UpperThreshold></UpperThreshold>
      <LowerThreshold></LowerThreshold>
    </PerSessionAdjustLoadBalance>
    <FlowPriorityBasedScheduling>
      <Enable></Enable>
      <SchedulingPeriod></SchedulingPeriod>
      <LowerThreshold></LowerThreshold>
      <UpperThreshold></UpperThreshold>
    </FlowPriorityBasedScheduling>
```

```
  </SdwanConfig>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	SdwanConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable RIR-SDWAN	N/A	Boolean: • true. • false (default).	N/A
LinkQualInterval	Link quality iNQA probe interval	N/A	Enumeration: • 60. • 600. Default: 60 seconds.	iNQA probe interval.
LinkSelectDelay	Link selection delay for RIR-SDWAN	N/A	Unsigned integer. Value range: 1 to 65535 seconds. Default: 60 seconds.	N/A
LinkSelectSuppressPeriod	Link selection suppression period for RIR-SDWAN	N/A	Unsigned integer. Value range: 1 to 131070 seconds.	N/A
PerSessionAdjustLoadBalance	Per-session periodic-adjust load-balancing parameters	Data structure	Members include: • Enable. • AdjustPeriod. • UpperThreshold.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			LowerThreshold.	
Enable	Whether to enable dynamic load balancing	N/A	Boolean: • true. false (default).	N/A
AdjustPeriod	Scheduling period for dynamic load balancing	N/A	Unsigned integer. Value range: 15 to 65535 seconds.	N/A
UpperThreshold	Upper threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template exceeds the upper threshold, dynamic load balancing is triggered.
LowerThreshold	Lower threshold for the maximum difference in remaining bandwidth among links	N/A	Unsigned integer. Value range: 1 to 100 in percentage.	If the maximum difference in remaining bandwidth among the links that have the same preference in a flow template drops below the lower threshold, dynamic load balancing stops.
FlowPriorityBasedScheduling	Parameters for RIR-SDWAN flow priority-based traffic scheduling	Data structure	Members include: • Enable. • SchedulingPeriod. • LowerThreshold. • UpperThreshold.	When the bandwidth utilization of a link exceeds the upper threshold, traffic scheduling is triggered. Within each scheduling period, RIR-SDWAN redistributes the lowest priority flow on this link to other links until the bandwidth utilization of all links is below the lower threshold or only the highest priority flow is left on this link.
Enable	Whether to enable RIR-SDWAN flow priority-based traffic scheduling	N/A	Boolean: • true. • false (default).	N/A
SchedulingPeriod	Scheduling period	N/A	Unsigned integer. Value range: 15 to 65535 seconds.	RIR-SDWAN can redistribute a maximum of one flow on one link to other links in each scheduling

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 30 seconds.	period.
LowerThreshold	Bandwidth utilization lower threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 20%.	The lower threshold and the upper threshold must be specified in pairs.
UpperThreshold	Bandwidth utilization upper threshold	N/A	Unsigned integer. Value range: 1 to 100 in percentage. Default: 90%.	The lower threshold and the upper threshold must be specified in pairs.

RIR/SdwanSlas

This table contains RIR-SDWAN SLA configuration parameters.

XML structure

```
<RIR>
  <SdwanSlas>
    <SdwanSla>
      <SlaID></SlaID>
      <LossThreshold></LossThreshold>
      <DelayThreshold></DelayThreshold>
      <JitterThreshold></JitterThreshold>
    </SdwanSla>

Instances	Probe instance information	Sublist	The details of the sublist refer to Instances table.

RIR/SdwanAppQuality/Instances

This table contains application quality probe instance parameters for RIR-SDWAN.

Table description

Item	Description
Feature name	RIR
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name	Index	String Length: 1 to 63 characters.
ProbeInterval	Application quality probe interval	N/A	Enumeration: • 30. • 60. • 300. • 600. Default: 60 seconds.
Peer	Peer configuration information	Data structure	Members include: • Role. • SiteID. • DeviceID.
Role	Source or destination	N/A	Enumeration : • **1**—Source. • **2**—Destination.
SiteID	Peer site ID	N/A	Unsigned short. Value range: 1 to 65535.
DeviceID	Peer device IDs	N/A	Unsigned char. Value range: 1 to 255.
Signature	Application signature information	Data structure	Members include: • SourceIP. • SourceIPMask. • DestIP. • DestIPMask.
SourceIP	Source IP address	N/A	IPv4 address string.
SourceIPMask	Mask length of source IP address	N/A	Unsigned char Value range: 1 to 32.
DestIP	Destination IP address	N/A	IPv4 address string.
DestIPMask	Mask length of destination IP address	N/A	Unsigned char. Value range: 1 to 32.
SourceIPv6	Source IPv6 address	N/A	IPv6 address string.

Column name	Column description	Column type	Data type and restrictions
SourceIPv6Prefix	Prefix length of source IPv6 address	N/A	Unsigned char. Value range: 1 to 128.
DestIPv6	Destination IPv6 address	N/A	IPv6 address string.
DestIPv6Prefix	Prefix length of destination IPv6 address	N/A	Unsigned char. Value range: 1 to 128.
ProbeFlows	Application flow ID information	Sublist	The details of the sublist refer to ProbeFlows table.

RIR/SdwanAppQuality/Instances/ProbeFlows

This table contains flow ID information for RIR-SDWAN application quality probe instances.

XML structure

Please refer to the XML Structure of RIR/SdwanAppQuality

PeerTTEs	Peer tunnel information	Sublist	N/A

RIR/SdwanAppQualityResults/ProbeFlows/Tunnels/PeerTTEs

This table contains peer tunnel information for a tunnel bound to a flow template in an RIR-SDWAN application quality probe instance.

XML structure

Please refer to the XML Structure of RIR/SdwanAppQualityResults.

Table description

Item	Description
Feature name	RIR
Table name	PeerTTEs
Table type	Multi-instance table
Row name	PeerTTE
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SiteID	Site ID	Index	Unsigned short. Value range: 1 to 65535.
DeviceID	Device ID	Index	Unsigned char. Value range: 1 to 255.
InterfaceID	Interface ID	Index	Unsigned char. Value range: 1 to 255.
ProbeResults	Probe result information	Sublist	N/A

RIR/SdwanAppQualityResults/ProbeFlows/Tunnels/PeerTTEs/ProbeResults

This table contains probe result information for the peer of a tunnel bound to a flow template in an RIR-SDWAN application quality probe instance.

XML structure

Please refer to the XML Structure of RIR/SdwanAppQualityResults.

Table description

Item	Description
Feature name	RIR
Table name	ProbeResults
Table type	Multi-instance table
Row name	ProbeResult
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PeriodID	Period identifier	Index	Unsigned integer. Value range: 0 to 2^{64}- 1.
PktCount	Packet count	N/A	Unsigned integer. Value range: 0 to 2^{64}- 1.
Timestamp	Timestamp	N/A	Unsigned integer. Value range: 0 to 2^{64}- 1.

RIR/Redirects

This table contains redirection interface information for RIR.

XML structure

```
<RIR>
  <Redirects>
    <Redirect>
      <PeerAddress></PeerAddress>
      <RedirectIfName></RedirectIfName>
    </Redirect>
  </Redirects>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	Redirects
Table type	Multi-instance table
Row name	Redirect
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
PeerAddress	Peer device IP address	Index	N/A
RedirectIfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2

RIR/RedirectGroups

This table contains information about redirection interface groups for RIR.

XML structure

```
<RIR>
  <RedirectGroups>
    <RedirectGroup>
      <IfName></IfName>
      <GroupId></GroupId>
    </RedirectGroup>
  </RedirectGroups>
</RIR>
```

Table description

Item	Description
Feature name	RIR
Table name	RedirectGroups
Table type	Multi-instance table
Row name	RedirectGroup
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
GroupId	Interface group ID	N/A	N/A

RIR

RIR/RirConfig

Message	Explanation
Global server function already configured. 全局服务器功能已配置。	在已开启RIR全局服务器功能时开启RIR全局客户端功能失败。 Failed to enable the global RIR client function when the global RIR server function is enabled.
Global client function already configured. 全局客户端功能已配置。	在已开启RIR全局客户端功能时开启RIR全局服务器功能失败。 Failed to enable the global RIR server function when the global RIR client function is enabled.
Failed to close daemon because other columns exist. 关闭进程失败，因为有其他列存在。	因为有其他列存在导致RIR进程关闭失败。 Failed to close daemon because other columns exist.
The synchronization port is in use. 同步端口号已被占用。	设置的同步端口号已被占用。 The synchronization port is in use.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.
The upper threshold for dynamic load balancing must be larger than the lower threshold. 动态负载均衡的阈值上限比下限小。	配置动态负载均衡阈值的下限值大于上限值。 The lower threshold for dynamic load balancing can't be larger than the upper threshold.
The lower threshold can't be larger than the upper threshold. 带宽利用率下限阈值不应该大于上限阈值。	配置带宽的利用率下限值大于带宽利用率上限值。 The lower bandwidth usage threshold is can't be larger than the upper bandwidth usage threshold.
The lower or upper threshold can't be specified alone. If one threshold is specified, the other threshold must also be specified. 带宽利用率上下限阈值需要同时指定或者同时不指定。	带宽利用率上下限阈值需要同时指定或者同时不指定。 The upper and lower bandwidth usage thresholds must be both specified or left unspecified.

RIR/RirFlow

Message	Explanation
Number of flow templates reaches the upper limit. 业务流量模板数达到最大值。	RIR下业务流量模板数目达到上限。 Number of flow templates reaches the upper limit.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.

RIR/RirFlow/RirPolicys

Message	Explanation
Number of link preferences reaches the upper limit. 链路优先级配置数达到最大值。	链路优先级配置数达到上限。 Number of link preferences reaches the upper limit.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.

RIR/RirFlow/RirProbePolicys

Message	Explanation
The SLA doesn't exist. 该SLA不存在。	为流量模板质量策略绑定的SLA不存在。 The SLA bound to the flow template quality policy does not exist.
The NQA operation doesn't exist. 该NQA链路质量探测不存在。	为流量模板质量策略绑定的NQA不存在。 The NQA operation bound to the flow template quality policy does not exist.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.

RIR/RirTunnelCfg

Message	Explanation
Failed to configure server because client is configured on the tunnel interface. 配置服务器功能失败，该Tunnel接口下已配置客户端功能。	Tunnel接口下不能同时开启RIR客户端功能和RIR服务器功能。 Cannot enable both RIR client and server functions for a tunnel interface.
Failed to configure client because server is configured on the tunnel interface. 配置客户端功能失败，该Tunnel接口下已配置服务器功能。	Tunnel接口下不能同时开启RIR客户端功能和RIR服务器功能。 Cannot enable both RIR client and server functions for a tunnel interface.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.
The tunnel is not a VXLAN tunnel. 只有VXLAN模式的隧道支持配置RIR功能。	Invalid configuration. Please modify configuration under the guidance.
Failed to specify the flow ID because another flow ID has been specified for the tunnel interface. 一条隧道只能配置为一条业务流量的专用链路。	Tunnel接口下不能同时配置在多个Flow。 Cannot configure more than one flow on the same tunnel interface.

RIR/RirNqa

Message	Explanation
Number of NQA operations reaches the upper limit. NQA 链路质量探测数已达到最大值。	配置的NQA链路质量探测数达到上限。 Number of NQA operations reaches the upper limit.
The probe port already exists. 探测端口号已存在。	不能在同一个NQA链路质量探测下重复配置探测端口号。 The probe port number has already been configured.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR未使能导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.

RIR/RirSla

Message	Explanation
Number of SLAs reaches the upper limit. SLA数已达到最大值。	配置的SLA数量达到上限。 Number of SLAs reaches the upper limit.
Operation failed. The daemon didn't start. 操作失败，守护进程未启动。	因RIR进程未启动导致下发配置操作失败。 Failed to deploy the configuration because the daemon has not started.

RIR/RirVsiLinkType

Message	Explanation
Link-type and link-index already exists. 链路类型和索引已经存在。	已在其他VSI虚接口下同时配置了该链路类型和索引。 The link type and link index has already been configured for another VSI interface.

RIR/RirCollaborations

Message	Explanation
The peer address and local address can't be the same one. 对端IP地址与本端IP地址不能相同。	配置本端设备与对端设备建立选路协同关系时，协同选路的对端设备IP地址与本端设备IP地址不能相同。 When you configure an RIR collaboration relationship, the IP addresses cannot be the same for the local and peer devices.
The peer address is invalid. 对端IP地址无效。	配置本端设备与对端设备建立选路协同关系时，协同选路的对端设备IP地址无效。 When you configure an RIR collaboration relationship, the peer device IP address is invalid.
The local address is invalid. 本端IP地址无效。	配置本端设备与对端设备建立选路协同关系时，本端设备IP地址无效。 When you configure an RIR collaboration relationship, the local device IP address is invalid.
The parameter is incomplete.	配置本端设备与对端设备建立选路协同关系时，没有同时配置本端

参数不全。	设备IP地址和同步端口号，返回参数不全。 When you configure an RIR collaboration relationship, the local device IP address and synchronization port number are not configured. The returned parameter is incomplete.
The peer VPN instance does not exist. 对端VPN实例不存在。	配置本端设备与对端设备建立选路协同关系时，与对端设备建立的选路协同关系所属的VPN实例不存在。 When you configure an RIR collaboration relationship, its VPN instance does not exist.

RIR/RirCollaborationRedirections

Message	Explanation
The peer address is invalid. 对端IP地址无效。	配置协同选路对端设备的报文重定向地址时，协同选路对端设备IP地址无效。 When you configure the redirect IP address for packets redirected to the peer device, the peer device IP address is invalid.
The redirect address is invalid. 重定向IP地址无效。	配置协同选路对端设备的报文重定向地址时，协同选路对端设备的报文重定向IP地址无效。 When you configure the redirect IP address for packets redirected to the peer device, the redirect IP address is invalid.
The peer VPN instance does not exist. 对端VPN实例不存在。	配置协同选路对端设备的报文重定向地址时，与对端设备建立选路协同关系所属的VPN实例不存在。 When you configure the redirect IP address for packets redirected to the peer device, the VPN instance of the RIR collaboration relationship does not exist.
The redirect VPN instance does not exist. 重定向VPN实例不存在。	配置协同选路对端设备的报文重定向地址时，协同选路对端设备报文重定向IP地址所属的VPN实例不存在。 When you configure the redirect IP address for packets redirected to the peer device, the VPN instance of the redirect IP address does not exist.

RIR/SdwanFlows

Message	Explanation
延时、抖动、丢包率权重没有同时下发。	延时、抖动、丢包权重必须同时下发。

RIR/SdwanAppQuality

Message	Explanation
应用质量探测未使能。	当用户需要探测某种应用业务基于隧道的质量时，首先要配置应用质量探测使能。

RIR/RIRSdwanTunnelCfg

Message	Explanation
The tunnel is not a VXLAN or SDWAN tunnel. 只有VXLAN或者SDWAN模式的隧道支持配置RIR功能。	Invalid configuration. Please modify configuration under the guidance.

RIR/Redirects

Message	Explanation
Maximum number of Redirect Peer already reached. 透传通道只支持配置一个	Maximum number of Redirect Peer already reached.
The peer address is invalid. 对端IP地址无效	The peer address is invalid.

RIR/RedirectGroups

Message	Explanation
The VPN instances are inconsistent for the local and peer devices that have interfaces in the same redirection interface group. 本端和远端协同设备groupid一致时，vpn信息也需要一致	The VPN instances are inconsistent for the local and peer devices that have interfaces in the same redirection interface group.

RIR/SdwanFlows/Paths

Message	Explanation
Maximum number of paths already reached for this command in a flow template. 该业务流量模板下的此命令配置数量已达到最大值。	该业务流量模板下的此命令配置数量已达到最大值。 Maximum number of paths already reached for this command in a flow template.
SDWAN based RIR process has not been enabled. RIR-SDWAN守护进程未启动。	RIR-SDWAN守护进程未启动。 SDWAN based RIR process has not been enabled.

RIR/SdwanFlows/PathExs

Message	Explanation
Maximum number of paths already reached for this command in a flow template. 该业务流量模板下的此命令配置数量已达到最大值。	该业务流量模板下的此命令配置数量已达到最大值。 Maximum number of paths already reached for this command in a flow template.
SDWAN based RIR process has not been enabled.	RIR-SDWAN守护进程未启动。

RIR-SDWAN守护进程未启动。	SDWAN based RIR process has not been enabled.

TunnelQuality event

This event is used to report RIR tunnel quality information when the tunnel quality is updated.

XML structure for event subscription

```
<SdwanTunnelQualityEvent>
  <TunnelNO></TunnelNO>
</SdwanTunnelQualityEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>RIR</stream>
    <filter type="subtree">
    <SdwanTunnelQualityEvent xmlns="http://www.h3c.com/netconf/event:1.0/rir:1.0">
      <SdwanTunnelQuality>
        <TunnelNO>257</TunnelNO>
      </SdwanTunnelQuality>
    </SdwanTunnelQualityEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	RIR
Event name	SdwanTunnelQualityEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/rir:1.0
Support for extended query	No

Columns

Column name	**Column description**	**Data type and restrictions**	**Support for extended queries**
TunnelNO	Local tunnel interface number	Unsigned integer.	N/A

XML structure for event report

```
<TunnelQualityEvent>
  <SdwanTunnelQuality>
```

```
    <TunnelNO></TunnelNO>
    <SiteID></SiteID>
    <DeviceID></DeviceID>
    <InterfaceID></InterfaceID>
    <ConnProbeResult></ConnProbeResult>
    <PeriodID></PeriodID>
    <Delay></Delay>
    <Jitter></Jitter>
    <PktLoss></PktLoss>
  </SdwanTunnelQuality>
</TunnelQualityEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <TunnelQualityEvent xmlns="http://www.h3c.com/netconf/event:1.0/advpn:1.0">
    <SdwanTunnelQualityEvent>
      <TunnelNO>257</TunnelNO>
      <SiteID>100</SiteID>

      <InterfaceID>120</InterfaceID>
      <ConnProbeResult>1</ConnProbeResult>
      <PeriodID>26780169</PeriodID>
      <Delay>1000</Delay>
      <Jitter>1000</Jitter>
      <PktLoss>100</PktLoss>
    </SdwanTunnelQuality>
  </SdwanTunnelQualityEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TunnelNO	Tunnel ID	Unsigned integer	No
SiteID	Site ID	Unsigned integer. Value range: 1 to 65535.	No
DeviceID	Device ID	Unsigned integer. Value range: 1 to 255.	No
InterfaceID	Interface ID	Unsigned in. Value range: 1 to 255.	No

Column name	Column description	Data type and restrictions	Support for extended queries
ConnProbeResult	ConnProbeResult	N/A	Boolean: • True. • False.
PeriodID	Period identifier	Unsigned integer. Value range: 0 to 2^{64}- 1.	No practical significance, reserved for compatibility.
Delay	Quality probe delay value	Unsigned integer. • Unit: Millisecond.	No
Jitter	Quality probe jitter value	Unsigned integer. • Unit: Millisecond.	No
PktLoss	Quality probe packet loss	Unsigned integer. Value range: 0 to 1000 per thousand.	No

AppQuality event

This event is used to report RIR application quality information when have new application quality probe

XML structure for event subscription

```
<SdwanAppQualityEvent>
  <InstanceName></InstanceName>
  <FlowID></FlowID>
<SdwanAppQualityEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>RIR</stream>
    <filter type="subtree">
      <SdwanAppQualityEvent xmlns="http://www.h3c.com/netconf/event:1.0/rir:1.0">
        <InstanceName>abc</InstanceName>
        <FlowID>1</FlowID>
      </SdwanAppQualityEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

RMON

RMON/EtherStats

This table contains ethernet statistics information.

XML structure

```
<RMON>
  <EtherStats>
    <Statistic>
      <Index></Index>
      <DataSource></DataSource>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Statistic>
  </EtherStats>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	EtherStats
Table type	Multi-instance table
Row name	Statistic
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEtherStats in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
DataSource	The particular ethernet interface to be sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configurated, which defined in RFC2836.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/EtherHistoryControls

This table contains ethernet history controls information.

XML structure

```
<RMON>
  <EtherHistoryControls>
    <Control>
      <Index></Index>
      <DataSource></DataSource>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </EtherHistoryControls>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	EtherHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxHistoryControls in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DataSource	The source of the data for which historical data was sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configurated, which defined in RFC2836.
BucketsRequested	The requested number of records to be saved for each interface.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	The max number depends on RMON/Capabilities/MaxEtherHistorySamples in the data namespace.
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 5 to 3600. Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/Alarms

This table contains alarms information.

XML structure

```
<RMON>
  <Alarms>
    <Alarm>
      <Index></Index>
      <Interval></Interval>
      <Variable></Variable>
      <SampleType></SampleType>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEventIndex></RisingEventIndex>
      <FallingEventIndex></FallingEventIndex>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </Alarms>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	Alarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxAlarms in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 5 to 65535.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: • 1—RisingAlarm. • 2—FallingAlarm. • 3—RisingOrFallingAlarm.	If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated. If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.
RisingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm. After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm. After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.
RisingEventIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
FallingEventIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/Events

This table contains events information.

XML structure

```
<RMON>
```

```
  <Events>
    <Event>
      <Index></Index>
      <Description></Description>
      <Type></Type>
      <Community></Community>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Event>
  </Events>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	Events
Table type	Multi-instance table
Row name	Event
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEvents in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	A comment describing this event entry.	N/A	String. Length: 1 to 127 characters.	N/A
Type	The type of notification that the probe will make about this event.	N/A	Enumeration: • 1—None. • 2—Log. • 3—SnmpTrap. • 4—LogAndTrap.	N/A
Community	If an SNMP trap is to be sent, it will be sent to the SNMP community specified by this octet string.	N/A	String. Length: 1 to 127 characters.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/UsrHistoryControls

This table contains user history controls information.

XML structure

```
<RMON>
  <UsrHistoryControls>
    <Control>
      <Index></Index>
      <MaxObjects></MaxObjects>
      <Objects>
        <Variable></Variable>
        <SampleType></SampleType>
      </Objects>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </UsrHistoryControls>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	UsrHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxUsrHistoryControls in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
MaxObjects	The number of objects to be sampled.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	The max number depends on RMON/Capabilities/MaxUsrHistoryObjects in the data namespace.
Objects	The objects to be sampled.	N/A	Members include: • Variable • SampleType	Multi-instance. Maximum occurrence is MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variables.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	For AbsoluteValue, the value of the selected variable will be copied directly into the history bucket. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference will be stored in the history bucket.
BucketsRequested	The requested number of records to be saved.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	N/A
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 1 to 2^{31} - 1. Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/ExtAlarms

This table contains extended alarms information.

XML structure

```

Table description

Item	Description
Feature name	RMON
Table name	ExtAlarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxExtAlarms in the data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 10 to 65535. Default: 1800.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation. Length: 1 to 255 characters.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Unsigned32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
Description	A comment describing this alarm entry.	N/A	String. Length: 1 to 127 characters.	N/A
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: • 1—RisingAlarm. • 2—FallingAlarm. • 3—RisingOrFallingAlarm.	If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated. If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.

Column name	Column description	Column type	Data type and restrictions	Remarks
RisingThreshold	A rising threshold for the sampled statistic.	N/A	Signed integer. Default: 1.	When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm. After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.
FallingThreshold	A falling threshold for the sampled statistic.	N/A	Signed integer. Default: 0.	When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm. After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.

Column name	Column description	Column type	Data type and restrictions	Remarks
RisingEvtIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists. In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
FallingEvtIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists. In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
StatType	Type of statistic period.	N/A	Enumeration: • 1—Forever. • 2—Cycle. Default: 1.	N/A
StatCycle	The lifetime starts when an alarm entry is set in valid state. Unit: second.	N/A	Unsigned integer. Value range: 0 to 4294967. Default: 0.	It must be zero when StatType is 1-Forever. Otherwise it must be greater than the value of Interval.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • true • false	N/A

Table description

Item	Description
Feature name	RMON
Table name	EtherStats
Table type	Multi-instance table
Row name	Statistic
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEtherStats.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
DataSource	The particular ethernet interface to be sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configurated, which defined in RFC2836.
DropEvents	The total number of events in which packets were dropped by the probe due to lack of resources.	N/A	Unsigned integer.	N/A
Octets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.	N/A	Unsigned integer.	N/A
BroadcastPkts	The total number of good packets received that were directed to the broadcast address.	N/A	Unsigned integer.	N/A
MulticastPkts	The total number of good packets received that were directed to a multicast address.	N/A	Unsigned integer.	N/A
CRCAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
UndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A
Fragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Jabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Collisions	The best estimate of the total number of collisions on this ethernet segment.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts64Octets	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts65to127Octets	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts128to255Octets	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts256to511Octets	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts512to1023Octets	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts1024to1518Octets	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/EtherHistoryControls

This table contains ethernet history controls information.

XML structure

Table description

Item	Description
Feature name	RMON
Table name	EtherHistorySamples
Table type	Multi-instance table
Row name	Sample
Restrictions	The max number of entrys depends on both RMON/Capabilities/MaxHistoryControls and RMON/Capabilities/MaxEtherHistorySamples.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlIndex	The controls index.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SampleIndex	The samples index.	Index	Unsigned integer. Value range: 1 to 2^{31} - 1.	This index starts at 1 and increases by one as each new sample is taken.
IntervalStart	Time at the start of the interval over which this sample was measured. Unit: second.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.

Column name	Column description	Column type	Data type and restrictions	Remarks
DropEvents	The total number of events in which packets were dropped by the probe due to lack of resources during this sampling interval.	N/A	Unsigned integer.	N/A
Octets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets) during this sampling interval.	N/A	Unsigned integer.	N/A
Pkts	The total number of packets (including bad packets) received during this sampling interval.	N/A	Unsigned integer.	N/A
BroadcastPkts	The total number of good packets received during this sampling interval that were directed to the broadcast address.	N/A	Unsigned integer.	N/A
MulticastPkts	The total number of good packets received during this sampling interval that were directed to a multicast address.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CRCAlignErrors	The number of packets received during this sampling interval that had a length (excluding framing bits but including FCS octets) between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
UndersizePkts	The number of packets received during this sampling interval that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A
OversizePkts	The number of packets received during this sampling interval that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Fragments	The total number of packets received during this sampling interval that were less than 64 octets in length (excluding framing bits but including FCS octets) had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Jabbers	The number of packets received during this sampling interval that were longer than 1518 octets (excluding framing bits but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Collisions	The best estimate of the total number of collisions on this ethernet segment during this sampling interval.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Utilization	The best estimate of the mean physical layer network utilization on this interface during this sampling interval. Unit: percent.	N/A	Unsigned integer. Value range: 0 to 100.	N/A

RMON/Alarms

Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxAlarms.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 5 to 65535.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
Value	The value of the statistic during the last sampling period.	N/A	Signed integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: • 1—RisingAlarm. • 2—FallingAlarm. • 3—RisingOrFallingAlarm.	If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated. If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.
RisingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm. After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm. After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.
RisingEventIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
FallingEventIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/Events

This table contains events information.

XML structure

```
<RMON>
```

```
  <Events>
    <Event>
      <Index></Index>
      <Description></Description>
      <Type></Type>
      <Community></Community>
      <LastTimeSent></LastTimeSent>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Event>
  </Events>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	Events
Table type	Multi-instance table
Row name	Event
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEvents.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	A comment describing this event entry.	N/A	String. Length: 1 to 127 characters.	N/A
Type	The type of notification that the probe will make about this event.	N/A	Enumeration: • 1—None. • 2—Log. • 3—SnmpTrap. • 4—LogAndTrap.	N/A
Community	If an SNMP trap is to be sent, it will be sent to the SNMP community specified by this octet string.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LastTimeSent	Time at the time this event entry last generated an event. Unit: second	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/Logs

This table contains logs information.

XML structure

```
<RMON>
  <Logs>
    <Log>
      <EventIndex></EventIndex>
      <LogIndex></LogIndex>
      <Time></Time>
      <Description></Description>
    </Log>
  </Logs>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	Logs
Table type	Multi-instance table
Row name	Log
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxLogs.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EventIndex	The event index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
LogIndex	The log index	Index	Unsigned integer. Value range: 1 to 2^{31} - 1.	N/A
Time	Time when this log entry was created.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Description	An implementation dependent description of the event that activated this log entry.	N/A	String. Length: 1 to 255 characters.	N/A

RMON/UsrHistoryControls

This table contains user history controls information.

XML structure

```
<RMON>
  <UsrHistoryControls>
    <Control>
      <Index></Index>
      <MaxObjects></MaxObjects>
      <Objects>
        <Variable></Variable>
        <SampleType></SampleType>
      </Objects>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </UsrHistoryControls>
</RMON>
```

Table description

Item	Description
Feature name	RMON

Table name	UsrHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxUsrHistoryControls.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
MaxObjects	The number of objects to be sampled.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	The max number depends on RMON/Capabilities/MaxUsrHistoryObjects.
Objects	The objects to be sampled.	N/A	Members include: • Variable • SampleType	Multi-instance. Maximum occurrence is MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variables.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue. • Default: DeltaValue	For AbsoluteValue, the value of the selected variable will be copied directly into the history bucket. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference will be stored in the history bucket.
BucketsRequested	The requested number of records to be saved in RMON/UsrHistorySamples.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	N/A
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 1 to 2^{31} - 1. Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: • **true** • **false**	N/A

RMON/UsrHistorySamples

This table contains user history samples information.

XML structure

```
<RMON>
  <UsrHistorySamples>
    <Sample>
      <ControlIndex></ControlIndex>
      <SampleIndex></SampleIndex>
      <IntervalStart></IntervalStart>
      <IntervalEnd></IntervalEnd>
      <Objects>
        <Variable></Variable>
        <SampleType></SampleType>
        <AbsValue></AbsValue>
        <ValStatus></ValStatus>
      </Objects>
    </Sample>
  </UsrHistorySamples>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	UsrHistorySamples
Table type	Multi-instance table
Row name	Sample
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxUsrHistoryControls, RMON/Capabilities/MaxUsrHistoryObjects and RMON/Capabilities/MaxUsrHistorySamples.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlIndex	The controls index.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SampleIndex	The samples index.	Index	Unsigned integer. Value range: 1 to 2147483647.	This index starts at 1 and increases by one as each new sample is taken.
IntervalStart	Time at the start of the interval over which this sample was measured.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
IntervalEnd	Time at the end of the interval over which this sample was measured.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Objects	The objects which was sampled.	N/A	Members include: • Variable • SampleType • Value • ValStatus	Multi-instance. Maximum occurrence is RMON/UsrHistoryControls/Control/MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	N/A
SampleType	The method of sampling the selected variables.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AbsValue	The absolute value (i.e., unsigned value) of the user-specified statistic during the last sampling period.	N/A	Unsigned integer.	The value during the current sampling period is not made available until the period is completed. To obtain the true value for this sampling interval, the associated instance of ValStatus must be checked, and AbsValue adjusted as necessary. If the MIB instance could not be accessed during the sampling interval, then this object will have a value of zero, and the associated instance of ValStatus will be set to NotAvailable. The access control check prescribed in the definition of RMON/UsrHistoryControls/Control/Objects/Variable SHOULD be checked for each sampling interval. If this check determines that access should not be allowed, then this object will have a value of zero, and the associated instance of ValStatus will be set to NotAvailable.
ValStatus	Validity and sign of the data.	N/A	Enumeration: • 1—NotAvailable. • 2—Positive. • 3—Negative.	If the MIB instance could not be accessed during the sampling interval, then NotAvailable will be returned. If the sample is valid and the actual value of the sample is greater than or equal to zero, then Positive is returned. If the sample is valid and the actual value of the sample is less than zero, Negative will be returned. The associated instance of AbsValue should be multiplied by -1 to obtain the true sample value.

RMON/ExtAlarms

This table contains extended alarms information.

XML structure

```
<RMON>
  <ExtAlarms>
    <Alarm>
      <Index></Index>
      <Interval></Interval>
      <Variable></Variable>
      <Description></Description>
      <SampleType></SampleType>
      <Value></Value>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEvtIndex></RisingEvtIndex>
      <FallingEvtIndex></FallingEvtIndex>
      <StatCycle></StatCycle>
      <StatType></StatType>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </ExtAlarms>
</RMON>
```

Table description

Item	Description
Feature name	RMON
Table name	ExtAlarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxExtAlarms.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 10 to 65535. Default: 1800.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation. Length: 1 to 255 characters.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Unsigned32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
Description	A comment describing this alarm entry.	N/A	String. Length: 1 to 127 characters.	N/A
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: • 1—AbsoluteValue. • 2—DeltaValue.	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
Value	The value of the statistic during the last sampling period.	N/A	Signed integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: • 1—RisingAlarm. • 2—FallingAlarm. • 3—RisingOrFallingAlarm.	If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated. If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.
RisingThreshold	A rising threshold for the sampled statistic.	N/A	Signed integer. Default: 1.	When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm. After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A falling threshold for the sampled statistic.	N/A	Signed integer. Default: 0.	When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated. A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm. After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.
RisingEvtIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists. In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
FallingEvtIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists. In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
StatType	Type of statistic period.	N/A	Enumeration: • 1—Forever. • 2—Cycle. Default: 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StatCycle	The lifetime starts when an alarm entry is set in valid state. Unit: second.	N/A	Unsigned integer. Value range: 0 to 4294967. Default: 0.	It must be zero when StatType is 1-Forever. Otherwise it must be greater than the value of Interval.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: • true • false	N/A

RMON/EtherStats

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Please enter a value for the DataSource column to create a new Ethernet statistics entry. 创建新的以太网统计表项，请指定DataSource列的值。	During executing create or replace operation, ‘DataSource’ must be specified. 采样以太网接口地址，必须指定。

RMON/EtherHistoryControls

Message	Explanation
The DataSource column can't be removed. DataSource列不能删除。	The DataSource column can't be removed. 采样以太网接口地址列不能删除。
Please enter a value for the DataSource column to create a new Ethernet history control entry. 创建新的以太网历史控制表项，请指定DataSource列的值。	During executing create or replace operation, ‘DataSource’ must be specified. 采样以太网接口地址，必须指定。
An entry with the same datasource and interval already exists. 同数据源相同采样间隔的表项已经存在。	No need to create a new table. 同数据源相同采样间隔的表项已经存在。
An entry with the same datasource already exists. 同数据源的表项已经存在。	No need to create a new table. 同数据源相同采样间隔的表项已经存在。

RMON/Alarms

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
The Variable column can't be removed.	‘Variable’ shows the object identifier of the particular variable to be sampled, and it can't be removed.

Variable列不能删除。	采样对象标识符不能被删除。
Please enter a value for the Variable column to create a new alarm. 创建新的告警，请指定Variable列的值。	‘Variable’ shows the object identifier of the particular variable to be sampled, and it must be specified. 创建新的告警，请指定采样对象标识符。

RMON/UsrHistoryControls

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Operation failed.The number of objects exceed the value of column Maxobjects. Objects的个数超出Maxobjects的值。	Create new object failed. Objects 的个数超出本地可维护最大值，创建失败。

RMON/ExtAlarms

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Please enter a value for the Variable column to create a new extalarm. 创建新的扩展告警，请指定Variable列的值。	Please specify a dotted decimal notation string. 创建新的扩展告警，请指定采样对象标识符。
Please enter a value for the Description column to create a new extalarm. 创建新的扩展告警，请指定Description列的值。	The ‘Description’ is a comment describing the alarm entry. 创建新的扩展告警，请指定告警描述。
The Variable column can't be removed. Variable列不能删除。	‘Variable’ shows the object identifier of the particular variable to be sampled, and it can't be removed. 采样对象标识符不能被删除。
The Description column can't be removed. Description列不能删除。	The ‘Description’ can't be removed. 告警描述不能删除。

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NexthopRecursiveRestrain	Time interval of next hop recursive lookup restraint.	Data structure	Members include: • Maximum. • Minimum. • Incremental. • Millisecond.	N/A
Maximum	The maximum restraint time for next hop recursive lookup in seconds.	N/A	Unsigned integer. Value range: 1 to 60.	When configuring Minimum and Incremental, Maximum must be set; Maximum cannot be set at the same time as Fixed.
Minimum	The minimum restraint time for next hop recursive lookup in milliseconds.	N/A	Unsigned integer. Value range: 10 to 60000.	When configuring Incremental, Minimum must be set; Minimum cannot be set at the same time as Fixed.When only configuring Maximum without Minimum, the default value of Minimum is 50.
Incremental	The incremental restraint time for next hop recursive lookup in	N/A	Unsigned integer. Value range: 10 to 60000.	Incremental cannot be set at the same time as Fixed. When configuring Maximum

Column name	Column description	Column type	Data type and restrictions	Remarks
	milliseconds.			and Minimum without Incremental, the default value of Incremental is 200.
Millisecond	The fixed restraint time for next hop recursive lookup in milliseconds.	N/A	Unsigned integer. Value range: 10 to 10000.	Fixed cannot be set at the same time as Maximum ,Minimum and Incremental.

Table description

Item	Description
Feature name	Route
Table name	Ipv4Routes
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes public network.
Topology	Destination topology.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes default topology.
Ipv4	Destination IPv4 prefix.	Data structure	Members include: • Ipv4Address. • Ipv4PrefixLength.	The two members must both be specified. Support filter, for more information, see Table 1
Ipv4Address	Destination IPv4 address.	index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	Length of the destination IPv4 address prefix.	index	Unsigned integer. Value range: 0 to 32.	N/A
Nexthop	Nexthop IPv4 or IPv6 address.	index	String, dotted decimal notation if nexthop is ipv4 address, or colon-separated hexadecimal string if nexthop is ipv6 address.	Example: 1.1.1.1 or 1::1. 0.0.0.0 and 0::0 are invalid values.
IfIndex	Interface index.	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllVRF	All VRF routing tables.	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	Get all routes from private network while index “VRF” is Null and “AllVRF” is Enable.

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	Routing protocol.	Data structure	Members include: • ProtocolID. • SubProtocolID.	N/A
ProtocolID	Routing protocol ID.	N/A	Enumeration: • **1**—DIRECT. • **2**—STATIC. • **3**—RIP. • **4**—OSPF. • **5**—IS-IS. • **6**—BGP. • **7**—LISP. • **8**—EIGRP. • **9**—OpenR. • **11**—UNR.	N/A
SubProtocolID	Routing sub-protocol ID.	N/A	Unsigned integer.	N/A
ProcessID	Process ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Age	Route alive time.	N/A	Unsigned integer. Unit is second.	N/A
Preference	Route preference.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Metric	Route metric.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Neighbor	Neighbor.	N/A	String, dotted decimal notation if neighbor is ipv4 address, or colon-separated hexadecimal string if neighbor is ipv6 address.	Example: 1.1.1.1 or 1::1.
FlushLabel	Route label flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
FlushNID	NHLFE ID flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
ASNumber	Autonomy system.	Data structure	Members include: • OriginAS. • LastAS.	N/A
OriginAS	Original AS.	N/A	Unsigned integer.	N/A
LastAS	Last AS.	N/A	Unsigned integer.	N/A
BackupPathAttribute	Backup path attribute.	Data structure	Members include: • BackupIfIndex. • BackupNexthop. • BackupFlushLabel. • BackupFlushNID.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• BackupIfName.	
BackupIfIndex	Backup interface index.	N/A	• Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNexthop	Backup nexthop IPv4 or IPv6 address.	N/A	• String, dotted decimal notation if backup nexthop is ipv4 address, or colon-separated hexadecimal string if backup nexthop is ipv6 address.	Example: 1.1.1.1 or 1::1. 0.0.0.0 and 0::0 are invalid values.
BackupFlushLabel	Backup label flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
BackupFlushNID	Backup NHLFE ID flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
BackupIfName	Backup interface name	N/A	String. Length: 2 to 47 characters.	N/A
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

Table 1 Route filter Type

Filter	Description	**Example**
Ip-address	Use ip-address to get matched route entries. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="IP *1.1.1.1*"> <RouteEntry base:filter="vrf *vpn1* IP *1.1.1.1*">
Ip-address longer	Use ip-address to get the route entry with the longest mask. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="IP *1.1.1.1* longer"> <RouteEntry base:filter="vrf *vpn1* IP *1.1.1.1* longer">
Ip-address MaskLen	Use ip-address MaskLen to get matched route entries. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="IP *1.1.1.0* MaskLen *24*"> <RouteEntry base:filter="vrf *vpn1* IP *1.1.1.0* MaskLen *24*">

Ip-address MaskLen Longer	Use ip-address MaskLen to get the route entry with the longest mask. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="IP *1.1.1.0* MaskLen *24* longer"> <RouteEntry base:filter="vrf *vpn1* IP *1.1.1.0* MaskLen *24* longer">
Ip-address 1 to Ip-address 2	Use ip-address1 to ip-address2 to get information about routes to a range of destination. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="IP *1.1.1.0* to *10.1.1.1*"> <RouteEntry base:filter="vrf *vpn1* IP *1.1.1.0* to *10.1.1.1*">
Prefix-List	Use prefix-list to get Routes permitted by an IP prefix list. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="Prefix-List *aaa*"> <RouteEntry base:filter="vrf *vpn1* Prefix-List *aaa*">
ACL	Use acl to get routes permitted by a basic ACL. Vrf keyword is not specified in the public network.	<RouteEntry base:filter="ACL *2000*"> <RouteEntry base:filter="vrf *vpn1* ACL *2000*">

ProcessID	Process ID.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535.	
Age	Route alive time.	N/A	Unsigned integer. Unit is second.	N/A
Preference	Route preference.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Metric	Route metric.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Neighbor	Neighbor.	N/A	Hexadecimal string, colon-separated.	Example: 1:2::1.
FlushLabel	Route label flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
FlushNID	NHLFE ID flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
ASNumber	Autonomy system.	Data structure	Members include: • OriginAS. • LastAS.	N/A
OriginAS	Original AS.	N/A	Unsigned integer.	N/A
LastAS	Last AS.	N/A	Unsigned integer.	N/A
BackupPathAttribute	Backup path attribute.	Data structure	Members include: • BackupIfIndex. • BackupNexthop. • BackupFlushLabel. • BackupFlushNID. • BackupIfName.	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNexthop	Backup nexthop IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:2::1. 0::0 is an invalid value.
BackupFlushLabel	Backup label flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
BackupFlushNID	Backup NHLFE ID flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
BackupIfName	Backup interface name	N/A	String. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A

Table 3 Route filter Type

Filter	Description	**Example**
Ipv6-address	Use ipv6-address to get matched route entries.	<RouteEntry base:filter="IPv6 *1::1*"> <RouteEntry base:filter="vrf *vpn2* IPv6 *1::1*">
Ipv6-address longer	Use ipv6-address to get the route entry with the longest prefix.	<RouteEntry base:filter="IPv6 *1::1* longer"> <RouteEntry base:filter="vrf *vpn2* IPv6 *1::1* longer">
Ipv6-address PrefixLen	Use ipv6-address PrefixLen to get matched route entries.	<RouteEntry base:filter="IPv6 *1::* PrefixLen *64*"> <RouteEntry base:filter="vrf *vpn2* IPv6 *1::* PrefixLen *64*">
Ipv6-address PrefixLen Longer	Use ipv6-address PrefixLen to get the route entry with the longest prefix.	<RouteEntry base:filter="IPv6 *1::* PrefixLen *64* longer"> <RouteEntry base:filter="vrf *vpn2* IPv6 *1::* PrefixLen *64* longer">
Ipv6-address 1 to Ipv6-address 2	Use ipv6-address1 to ipv6-address2 to get information about routes to a range of destination.	<RouteEntry base:filter="IPv6 *1::1* to *10::1*"> <RouteEntry base:filter="vrf *vpn2* IPv6 *1::1* to *10::1*">
Prefix-List	Use prefix-list to get routes permitted by an IPv6 prefix list.	<RouteEntry base:filter="Prefix-List *aaa*"> <RouteEntry base:filter="vrf *vpn2* Prefix-List *aaa*">
ACL	Use acl to get routes permitted by an IPv6 basic ACL.	<RouteEntry base:filter="ACL *2000*"> <RouteEntry base:filter="vrf *vpn2* ACL *2000*">

Table description

Item	Description
Feature name	Route
Table name	Ipv6RoutingTable
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF.	index	String, case-sensitive.	Null denotes public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 31 characters.	
Topology	Destination topology.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes default topology.
Ipv6Address	Destination IPv6 address.	index	Hexadecimal string, colon-separated.	Example: 1:2::1.
Ipv6PrefixLength	Length of the destination IPv6 address prefix.	index	Unsigned integer. Value range: 0 to 128.	N/A
Nexthop	Nexthop IPv6 address.	index	Hexadecimal string, colon-separated.	Example: 1:2::1. 0::0 is an invalid value.
IfIndex	Interface index.	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AllVRF	All VRF routing tables.	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	Get all routes from private network while index “VRF” is Null and “AllVRF” is Enable.
Protocol	Routing protocol.	Data structure	Members include: • ProtocolID. • SubProtocolID.	N/A
ProtocolID	Routing protocol ID.	N/A	Enumeration: • **1**—DIRECT. • **2**—STATIC. • **3**—RIPng. • **4**—OSPFv3. • **5**—IS-ISv6. • **6**—BGP4+. • **9**—OpenR. • **10**—SRv6. • **11**—UNR.	N/A
SubProtocolID	Routing sub-protocol ID.	N/A	Unsigned integer.	N/A
ProcessID	Process ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Age	Route alive time.	N/A	Unsigned integer. Unit is second.	N/A
Preference	Route preference.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Metric	Route metric.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Neighbor	Neighbor.	N/A	Hexadecimal string, colon-separated.	Example: 1:2::1.
FlushLabel	Route label flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
FlushNID	NHLFE ID flushed to the FIB	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
ASNumber	Autonomy system.	Data structure	Members include: • OriginAS. • LastAS.	N/A
OriginAS	Original AS.	N/A	Unsigned integer.	N/A
LastAS	Last AS.	N/A	Unsigned integer.	N/A

ROUTE event stream

Route stream description.

IPv4 Route Event

This event is used to report ipv4 route change information.

XML structure for event subscription

```
<Ipv4RouteEvent>
</Ipv4RouteEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>route_stream</stream>
    <filter type="subtree">
      <Ipv4RouteEvent xmlns="http://www.h3c.com/netconf/event:1.0/ROUTE:1.0">
      </Ipv4RouteEvent >
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	ROUTE
Event name	Ipv4RouteEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/ROUTE:1.0
Support for extended query	No

XML structure for event report

</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type	Enumeration 1 – Add 2 – Delete 3 – Update 4 – BatchStart 5 – Batch 6 – BatchEnd	The operation type specifies the operation that ROUTE should perform.
VRF	VRF name	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Topology	Topology name.	String, case-sensitive. Length: 0 to 31 characters.	An empty string indicates the default topology.
DestAddress	Destination address	String, dotted decimal notation.	An IPv4 address.
Mask	mask length	Unsigned integer. Value range: 0 to 32.	N/A
Nexthop	Next hop address of the route	String.	IPv4 address string or IPv6 address string.
IfIndex	Output interface index for packets to be forwarded along the route	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Token	LSP index number.	Unsigned integer.	N/A
RealNexthop	Real next hop of the route.	String.	IPv4 address string or IPv6 address string.
Protocol	Routing protocol ID	Enumeration: • **1**—DIRECT. • **2**—STATIC. • **3**—RIP. • **4**—OSPF. • **5**—IS-IS. • **6**—BGP. • **7**—LISP. • **8**—GUARD.	N/A
Preference	Preference of the route	Unsigned integer. Value range: 0 to 255.	N/A
Cost	Cost of the route	Unsigned integer. Value range: 0 to 4294967295	N/A
Flag	Flags of routes.	Each bit represents a route attribute. Values:	Examples: 6—means the frr backup route.

Column name	Column description	Data type and restrictions	Remarks
		• 2—Fast reroute. • 4—Backup route	
Label	Inner label.	Unsigned integer. Value range: 0 to 4294967295.	N/A
Sequence	Sequence	Unsigned integer. Value range: 1 to 4294967295.	N/A
IfName	Interface name	String. Length: 2 to 47 characters.	N/A

IPv6 Route Event

This event is used to report ipv6 route change information.

XML structure for event subscription

```
<Ipv6RouteEvent>
</Ipv6RouteEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">

      <Ipv4PrefixLength></Ipv4PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv4PrefixList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	IPv4PrefixList
Table type	Multi-instance table
Row name	PrefixList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListName	Name of prefix list.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of prefix list.		Enumeration: • **0**—permit.	To perform create or replace operation,

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—deny.	Mode can't be empty. To perform Merge operation to create a row, Mode can't be empty. Delete or remove operation is not supported.
Ipv4Address	IPv4 address.		IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1 To perform create or replace operation, Ipv4Address can't be empty. To perform Merge operation to create a row, Ipv4Address can't be empty. Delete or remove operation is not supported.
Ipv4PrefixLength	Mask length of IP address.		Unsigned integer. Value range: 0 to 32.	To perform create or replace operation, Ipv4PrefixLength can't be empty. To perform Merge operation to create a row, Ipv4PrefixLength can't be empty. Delete or remove operation is not supported.
MinPrefixLength	Greater than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength
MaxPrefixLength	Less than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength

RoutePolicy/IPv6PrefixList

This table contains route policy IPv6 prefix information.

XML structure

```
<RoutePolicy>
  <IPv6PrefixList>
    <PrefixList>
      <PrefixListName></PrefixListName>
      <Index></Index>
      <Mode></Mode>
      <Ipv6Address></Ipv6Address>
```

```
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv6PrefixList>
</RoutePolicy>
```

Table description

Item	Description

Table description

Item	Description
Feature name	RoutePolicy
Table name	Policy
Table type	Multi-instance table
Row name	Entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of route policy.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of Route Policy.		Enumeration: • 0—permit. • **1**—deny.	To perform create or replace operation, Mode can’t be empty. To perform Merge operation to create a row, Mode can’t be empty. Delete or remove operation is not supported.
Description	Description of route policy.		String, case-sensitive. Length: 1 to 80 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Match	If match condition.	Data structure	Members include: • IPv4AddressPrefixList. • IPv6AddressPrefixList. • ExtcommunityList • Tag • Interface • L3vni • RouteType • TagList • RdList • Cost • IPv4AddressAcl • IPv4NextHopAcl • IPv4NextHopPrefixList • IPv4RouteSourceAcl • IPv4RouteSourcePrefixList • IPv6AddressAcl • IPv6NextHopAcl • IPv6NextHopPrefixList • IPv6RouteSourceAcl • IPv6RouteSourcePrefixList • LocalPreference • MacList • MplsLabel • Rpki • ChildRoutePolicy • Protocol	N/A
IPv4AddressPrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressPrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
ExtcommunityList	Match BGP routes whose extended community attribute matches a specified extended community list		List number: Unsigned integer. Value range: 1 to 65535. List name: String, case-sensitive. Length: 1 to 63 characters.	Repeat supported for 32 times.
Tag	Match IGP routes with specified tag		Unsigned integer. Value range: 0 to 4294967295	N/A
Interface	Match routes with specified Interface.		Interface name: String, interface type and interface number.	Support interface name or interface index. Repeat supported for

Column name	Column description	Column type	Data type and restrictions	Remarks
			Interface index: Unsigned integer. Length: 32 bits.	16 times.
L3vni	Match the L3 VXLAN ID of BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
RouteType	Match route type.		Enumeration: • **1**—internal. • **2**—external-type1or2. • **3**—external-type1. • **4**—external-type2. • **5**—nssa-external-type1or2. • **6**—nssa-external- type1. • **7**—nssa-external- type2. • **8**—is-is-level-1. • **9**—is-is-level-2. • **10**—bgp-evpn-mac-ip. • **11**—bgp-evpn-imet. • **12**—bgp-evpn-ip-prefix. • **13**—eigrp-internal. • **14**—eigrp-external. • **15**—bgp-even-ad. • **16**—bgp-evpn-smet • **17**—bgp-evpn-spmsi	Repeat supported for 14 times. One route type cannot be configured twice in one command.
TagList	Match IGP routes with the specified tag list.		Unsigned integer. Value range: 1 to 65535.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	
IPv4Address Acl	Match the desination address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv4NextHop Acl	Match the next hop of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4NextHop PrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4RouteSourceAcl	Match the source address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4RouteSourcePrefixList	Match the source address of IPv4 routes using an IP prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6AddressAcl	Match the desination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv6NextHopAcl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6NextHopPrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6RouteSourceAcl	Match the source address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6RouteSourcePrefixList	Match the source address of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
LocalPreference	Match BGP routes that have the specified local preference.		Unsigned integer. Value range: 0 to 4294967295.	
MacList	Match MAC addresses that are contained in EVI IS-IS packets.		String, case-sensitive. Length: 1 to 63 characters.	
MplsLabel	Match routes with the specified MPLS labels.		Enumeration: • 0—Not configured. • 1—Configured.	
Rpki	Match routes with the specified RPKI validation state.		Enumeration: • 0—invalid • 1—not-found • 2—valid	
ChildRoutePolicy	Match child route policy		String, case-sensitive. Length: 1 to 63 characters.	Loop-nesting child policies are not supported.
Protocol	Match routes with protocol.		Enumeration: • 1—direct. • 2—static.	Repeat supported for 10 times. One protocol cannot be

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—bgp. • 4—ospf. • 5—ospfv3. • 6—isis. • 7—rip. • 8—ripng. • 9—eigrp. • 10—unr.	configured duplicately in one command.
MatchCommunityList	If match communitylist condition.	Data structure	Members include: • List. • WholeMatch	Repeat supported for 32 times.
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	List name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: • 0—Disable. • 1—Enable.	Not supported when specifying an advanced community list number.
MatchASPathList	If-match AS path list condition.	Data structure	Members include: AspathList.	Repeat supported for 32 times.
AspathList	Match BGP routes whose AS path attribute matches a specified AS path list.		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name: String, case-sensitive. • Length: 1 to 51 characters.	List name cannot be all made up of numbers.
MatchVlan	Match routes that contain the specified VLANs.	Data structure	Members include: • VlanId • VlanIdRangStart VlanIdRangeEnd.	A maximum of 16 VLAN ID items can be specified.
VlanId	Specify a VLAN ID.		Unsigned integer. Value range: 1 to 4094.	N/A
VlanIdRangeStart	Specify the start VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
VlanIdRangeEnd	Specify the end VLAN ID of a VLAN ID range.		Unsigned integer. Value range:	You must set both of VlanIdRangeStart and VlanIdRangeEnd, or set

Column name	Column description	Column type	Data type and restrictions	Remarks
			1 to 4094.	neither of them.
Apply	Apply action.	Data structure	Members include: • ExtCommunityRtValue. • ExtCommunityRtType. • ExtCommunityColorValue. • ExtCommunityColorType. • ExtCommunityBandWidthValue. • ExtCommunityBandWidthType. • ExtCommunitySooValue. • ExtCommunitySooType. • ExtCommunityPriorityColorValue. • ExtCommunityPriorityColorType. • VpnPeerId. • CostValue. • CostMode. • LocalPreference. • L3vni. • ASPath. • ASPathType. • CommunityNumber. • CommunityAttr. • CommunityType. • Exp. • CommListDelete. • CostType. • IPv6NextHop. • ISIS. • MplsLabel. • Preference. • PreferredValue. • PrefixPriority. • Tag. • IPv4NextHopPeerAddress • IPv6NextHopPeerAddress • FlexAlgo	N/A
ExtCommunityRtValue	The value of Ext Community Route Target (RT).		String. Length: 3 to 24 characters. • The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-6553	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
			5> or AS<X.Y>:NN<0-65535>.	
ExtCommunityRtType	The Ext Community RT additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityColorValue	The value of Ext Community color.		String. Length: 4 to 13 characters. The format is CO<00-11>:Color<0-4294967295>.	Example: 10:30.
ExtCommunityColorType	The Ext Community color type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityBandwidthValue	The value of Ext Community Link-bandwidth.		String. Length: 3 to 16 characters. The format is AS<0-65535>:NN<0-4294967295>	Example: 70000:3.
ExtCommunityBandwidthType	The Ext Community Link-bandwidth additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunitySooValue	The value of Ext Community Soo.		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for Get and Get-Bulk action.
ExtCommunitySooType	The Ext Community Soo additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityPriorityColorValue	Value of extended community priority color.		String. Length: 3 to 12 characters. The format is Priority<0-15>: SiteID <1-65535>:DeviceID<1-255> or Priority<0-15>: SiteID <1-65535>	Example: 10:30:10. A maximum of 32 entries can be specified.
ExtCommunityPriorityColorType	Extended community priority color additive type.		Enumeration: • 1—Additive • 2—Replace	N/A
VpnPeerId	Set vpn-peer-id		Unsigned integer. Value range: 1 to 134217727	N/A
CostValue	Route cost value		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 4294967295	
CostMode	Route cost change mode.		Enumeration: • 0—Update. • 1—Increase. • 2—Decrease.	N/A
LocalPreference	BGP route local preference		Unsigned integer. Value range: 0 to 4294967295	N/A
L3vni	Specify an L3 VXLAN ID for BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
ASPath	AS_PATH attribute value.		Unsigned integer. Value range: 1 to 4294967295	Repeat supported for 32 times.
ASPathType	AS_PATH attribute additive type.		Enumeration: • 1—Additive. • 2—Replace. • 3—Clear. • 4—Delete.	The ASPath column can't be configured when the ASPathType column is Clear.
CommunityNumber	Community number.		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>.	Example: 10 or 1:65535 Repeat supported for 32 times along with CommunityAttr.
CommunityAttr	Community attribute.		Enumeration: • 1—Internet. • 2—No-advertise. • 3—no-export. • 4—no-export-subconfed.	Repeat supported for 32 times along with CommunityNumber.
CommunityType	Community additive type.		Enumeration: • 0—Replace. • 1—Additive. • 2—None.	N/A
Exp	Specify an MPLS EXP value		Unsigned integer. Value range: 0 to 7	N/A
CommListDelete	Delete the COMMUNITY attributes from BGP routes.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	
CostType	Specify a cost type.		Enumeration: • 1—external. • 2—internal. • 3—type-1 • 4—type-2 • 5—inherit-link-cost • 6—med-plus-igp • 7—internal-inc-ibgp	N/A
IPv6NextHop	Specify a next hop for IPv6 routes.		Hexadecimal string, colon-separated.	N/A
ISIS	Specify an IS-IS level.		Enumeration: • 1—level-1. • 2—level-1-2. • 3—level-2.	N/A
MplsLabel	Specify whether to configure an MPLS label or not.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
Preference	Specify a preference for a routing protocol.		Unsigned integer. Value range: 1 to 255.	N/A
PreferredValue	Specify a preferred value for BGP routes.		Unsigned integer. Value range: 0 to 65535.	N/A
PrefixPriority	Specify a prefix priority.		Enumeration: • 1—critical. • 2—high. • 3—medium.	N/A
Tag	Specify a tag for IGP routes.		Unsigned integer. Value range: 0 to 4294967295.	N/A
IPv4NextHopPeerAddress	Apply IPv4 peer address as next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
IPv6NextHopPeerAddress	Apply IPv6 peer address as next hop		Enumeration: • 0—Not configured. • 1—Configured.	N/A
FlexAlgo	Specify the algorithm of		Unsigned integer. Value range: 128 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	route			
ApplyIpv4NextHop	Set the next hop of an IPv4 route.	Data structure	Members include: • NextHopAddr. • Public. • VrfName	N/A
NextHopAddr	Specify a next hop for IPv4 routes.		Hexadecimal string, colon-separated.	N/A
Public	Specify public network		Enumeration: • 0—Not configured. • 1—Configured.	N/A
VrfName	Specify the VPN instance name for the next hop of an IPv4 route		String. Length: 1 to 31 characters.	N/A
ApplyFastReroute	Set a backup link for IPv4 fast reroute.	Data structure	Members include: • InterfaceName. • IpAddress.	N/A
InterfaceName	Specify a backup output interface by its Name.		String. Length: 0 to 47 characters.	Example: • NULL0. M-GigabitEthernet0/0/0
IpAddress	Specify a backup next hop.		IPv4: String, dotted decimal notation.	N/A
ApplyIPv6FastReroute	Set a backup link for IPv6 fast reroute.	Data structure	Members include: • Ipv6InterfaceName. • Ipv6Address.	N/A
Ipv6InterfaceName	Specify a backup output interface by its Name.		String. Length: 0 to 47 characters.	Example: • NULL0. M-GigabitEthernet0/0/0
Ipv6Address	Specify a backup next hop.		Hexadecimal string, colon-separated.	N/A
ApplyOrigin	Set the ORIGIN attribute for BGP routes.	Data structure	Members include: • Origin • OriginAsNum	N/A
Origin	Specify an ORIGIN attribute.		Enumeration: • 1—egp. • 2—igp. • 3—incomplete.	N/A
OriginAsNum	Specify the AS number for EGP routes.		Unsigned integer. Value range: 1 to 4294967295.	The AsNumber can be set only when the Origin is set to egp.
ApplyIpPrecedence	Set an IP precedence.	Data structure	Members include: • IpPrecValue	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• IpPrecClear	
IpPrecValue	Specify an IP precedence.		Unsigned integer. Value range: 0 to 7.	You cannot set IpPrecValue and IpPrecClear at the same time.
IpPrecClear	Clear the IP precedence of matching routes.		Enumeration: • 0—Not configured. • 1—Configured..	You cannot set IpPrecValue and IpPrecClear at the same time.
ApplyQosLocId	Set a local QoS ID.	Data structure	Members include: • QosLocIdValue • QosLocIdClear	N/A
QosLocIdValue	Specify a local QoS ID.		Unsigned integer. Value range: 1 to 4095.	You can not set QosLocIdValue and QosLocIdClear at the same time.
QosLocIdClear	Clear the local QoS ID of matching routes.		Enumeration: • 0—Not configured. • 1—Configured..	You cannot set QosLocIdValue and QosLocIdClear at the same time.
ApplyTrafIndex	Set a traffic index.	Data structure	Members include: • TrafIndexValue • TrafIndexClear	N/A
TrafIndexValue	Specify a traffic index.		Unsigned integer. Value range: 1 to 64.	You cannot set TrafIndexValue and TrafIndexClear at the same time.
TrafIndexClear	Clear the traffic index of BGP routes.		Enumeration: • 0—Not configured. • 1—Configured..	You cannot set TrafIndexValue and TrafIndexClear at the same time.
Continue	Set the next node to be matched.		Unsigned integer. Value range: 0 to 65535.	N/A
ApplyAigp	Apply AIGP attribute.	Data structure	Members include: • TrafIndexValue • TrafIndexClear	N/A
CostValue	AIGP attribute value of BGP route.		Unsigned integer. Value range: 0 to 4294967295.	If IgpCost is set to 0, AIGP attribute value of BGP route is CostValue,else set AIGP attribute value of BGP route to IGP route cost.
IgpCost	Set AIGP attribute value of BGP route to IGP route cost.		Enumeration: • 0—Not configured. • 1—Configured.	If IgpCost is set to 0, AIGP attribute value of BGP route is CostValue,else set AIGP attribute value of BGP route to IGP route cost.

Column name	Column description	Column type	Data type and restrictions	Remarks
ApplyLabelValue	SID value		Unsigned integer. Value range: 16 to 1048575.	N/A
ApplyLabelIndex	Label index value of route.		Unsigned integer. Value range: 0 to 1048575.	N/A
ApplyIpv4GwNextHop	Set the next hop of an IPv4 route to the gateway IP address.	Data structure	Members include: • Type. • NextHopAddr.	N/A
Type	Specify the type of the next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
NextHopAddr	Specify the next hop address.		IPv4: String, dotted decimal notation.	An empty IPv4 address string indicates the gateway address.
ApplyIpv6GwNextHop	Set the next hop of an IPv6 route to the gateway IP address.	Data structure	Members include: • Type. • NextHopAddr.	N/A
Type	Specify the type of the next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
NextHopAddr	Specify the next hop address.		String, IPv6 address string.	An empty IPv6 address string indicates the gateway address.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListNum	List number	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of extcommunity list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Rt	Route Target		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with SoO and Bandwidth configuration.
SoO	Site of Origin		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with Rt and Bandwidth configuration.

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Link bandwidth		String. Length: 3 to 16 characters. Format: AS<0-65535>:NN<0-4294967295>.	Example: 6000:3. Repeat supported for 32 times along with Rt and SoO configuration.
PriorityColor	Priority color value		String. Length: 3 to 12 characters. The format is Priority<0-15>: SiteID <1-65535>:DeviceID<1-255> or Priority<0-15>: SiteID <1-65535>	Example: 1:150:1 A maximum of 32 entries can be specified.
PriorityColor Mode	Priority color match type		Enumeration: • 0—MatchPriority. • 1—NotMatchPriority.	The PriorityColorMode must be configured with the PriorityColor together.
PriorityColorRegExp	Regular expression.		String. Length: 1 to 63 characters.	Example: ^10

Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of extcommunity list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Rt	Route Target		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with SoO and Bandwidth configuration.
SoO	Site of Origin		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with Rt and Bandwidth configuration.
Bandwidth	Link bandwidth		String. Length: 3 to 16 characters. Format: AS<0-65535>:NN<0-4294967295>.	Example: 6000:3. Repeat supported for 32 times along with Rt and SoO configuration.

RoutePolicy/CommunityList

This table contains route policy community list information.

XML structure

```
<RoutePolicy>
```

```
  <CommunityList>
    <List>
      <ListName></ListName>
      <Level></Level>
      <Index></Index>

      <CommunityNumber></CommunityNumber>
      <CommunityAttr></CommunityAttr>
      <RegularExpression></RegularExpression>
    </List>
  </CommunityList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	CommunityList
Table type	Multi-instance table
Row name	List
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListName	List name	Index	Community list number: Unsigned integer. Value range: Basic:1 to 99. Advanced:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	Community list name cannot be all made up of numbers.
Level	List level.	Index	Enumeration: • **1**—Basic. • **2**—Advanced.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of community list.		Enumeration: • **0**—permit. • **1**—deny.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CommunityNumber	Community number.		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>	Example: 10 or 1:65535 Repeat supported for 32 times along with CommunityAttr. Only supported for basic community list.
CommunityAttr	Community attribute.		Enumeration: • **1**—Internet. • **2**—No-advertise. • **3**—no-export. • **4**—no-export-subconfed.	Repeat supported for 32 times along with CommunityNumber. Only supported for basic community list.
RegularExpression	Regular expression.		String. Length: 1 to 63 characters.	Example: ^10 Only supported for advanced community list.

RoutePolicy/TagList

This table contains route policy tag list information.

XML structure

```
<RoutePolicy>
  <TagList>
    <List>
      <ListNum></ListNum>
      <Index></Index>
      <Mode></Mode>
      <TagValue></TagValue>
    </List>
  </TagList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	TagList
Table type	Multi-instance table
Row name	List
Restrictions	None
Support for row creation and	Yes

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListNum	List number	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Mode	Operation type of tag list		Enumeration: • **0**—permit. • **1**—deny.	N/A
TagValue	Tag value		Unsigned integer. Value range: 0 to 4294967295.	Repeat supported for 32 times.

RoutePolicy/RdList

This table contains route policy Rd list information.

XML structure

```
<RoutePolicy>
  <RdList>
    <List>
      <ListNum></ListNum>
      <Index></Index>
      <Mode></Mode>
      <RdValue></RdValue>
    </List>
  </RdList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	RdList
Table type	Multi-instance table
Row name	List
Restrictions	None
Support for row creation and	Yes

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListNum	List number	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Mode	Operation type of RD list		Enumeration: • **0**—permit. • **1**—deny.	N/A
RdValue	Rd value		String. Length: 3 to 21 characters. Format: IP<X.X.X.X>:NN<0-65535> or IP<X.X.X.X>:* or AS<0-65535>:NN<0-4294967295> or AS<0-65535>:* or AS<65536-4294967295>:NN<0-65535> or AS<65536-4294967295>:*	Repeat supported for 10 times.

RoutePolicy/MacList

This table contains route policy MAC list information.

XML structure

```
<RoutePolicy>
  <MacList>
    <List>
      <MaclistName></MaclistName>
      <Index></Index>
      <Mode></Mode>
      <MacAddress></MacAddress>
      <MaskLength></MaskLength>
    </List>
  </MacList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	MacList
Table type	Multi-instance table
Row name	List
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaclistName	Name of the MAC list.	Index	String. Length: 1 to 63 characters.	N/A
Index	MAC list item index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of MAC list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
MacAddress	MAC address		Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
MaskLength	Mask length		Unsigned integer. Value range: 0 to 48.	N/A

RoutePolicy/TunnelSelector

This table contains tunnel selector information.

XML structure

```
<RoutePolicy>
  <TunnelSelector>
    <Entry>
      <TunnelSelectorName></TunnelSelectorName>
      <Index></Index>
      <Mode></Mode>
      <Match>
        <IPv4AddressPrefixList></IPv4AddressPrefixList>
        <IPv6AddressPrefixList></IPv6AddressPrefixList>
```

```
        <RdList></RdList>
        <Cost></Cost>
        <IPv4AddressAcl></IPv4AddressAcl>
        <IPv4NextHopAcl></IPv4NextHopAcl>
        <IPv4NextHopPrefixList></IPv4NextHopPrefixList>
        <IPv6AddressAcl></IPv6AddressAcl>
        <IPv6NextHopAcl></IPv6NextHopAcl>
        <IPv6NextHopPrefixList></IPv6NextHopPrefixList>
        <ExtcommunityList></ExtcommunityList>
      </Match>
      <MatchCommunityList>
        <List></List>
        <WholeMatch></WholeMatch>
      </MatchCommunityList>
      <ApplyTunnelPolicy></ApplyTunnelPolicy>
    </Entry>
  </TunnelSelector>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	TunnelSelector
Table type	Multi-instance table
Row name	Entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelSelectorName	Name of tunnel selector.	Index	String, case-sensitive. Length: 1 to 40 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of tunnel selector.		Enumeration: • 0—permit. • 1—deny.	To perform create or replace operation, Mode can’t be empty. To perform Merge operation to create a row, Mode can’t be empty. Delete or remove operation is not

Column name	Column description	Column type	Data type and restrictions	Remarks
				supported.
Match	If match condition.	Data structure	Members include: • IPv4AddressPrefixList. • IPv6AddressPrefixList. • RdList • IPv4AddressAcl • IPv4NextHopAcl • IPv4NextHopPrefixList • IPv6AddressAcl • IPv6NextHopAcl • IPv6NextHopPrefixList • ExtcommunityList	N/A
IPv4Address PrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6Address PrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	
IPv4Address Acl	Match the desination address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv4NextHop Acl	Match the next hop of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4NextHop PrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6Address Acl	Match the desination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv6NextHop Acl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6NextHop PrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	

Column name	Column description	Column type	Data type and restrictions	Remarks
ExtcommunityList	Match BGP routes whose extended community attribute matches a specified extended community list		List number: Unsigned integer. Value range: 1 to 65535. List name: String, case-sensitive. Length: 1 to 63 characters.	Repeat supported for 32 times. The value range is related to the model of the equipment. Please refer to the actual condition of the equipment.
MatchCommunityList	If match communitylist condition.	Data structure	Members include: • List. • WholeMatch	
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	A community list name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: • 0—Disable. 1—Enable.	
ApplyTunnelPolicy	Tunnel policy name.		String, case-sensitive. Length: 1 to 126 characters.	

RoutePolicy/Global

This table contains route policy configuration information.

XML structure

```
<RoutePolicy>
  <Global>
    <PrefixProtocolCheck></PrefixProtocolCheck>
  </Global>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	Global

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixProtocolCheck	Check the protocol consistency between a BGP route and the prefix list.		Enumeration: • 0—Not configured. • 1—Configured.

RoutePolicy

RoutePolicy/IPv4Prefix

This table contains route policy IPv4 prefix information.

XML structure

```
<RoutePolicy>
  <IPv4PrefixList>
    <PrefixList>
      <PrefixListName></PrefixListName>
      <Index></Index>
      <Mode></Mode>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv4PrefixList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	IPv4PrefixList
Table type	Multi-instance table
Row name	PrefixList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListName	Name of prefix list.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of prefix list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Ipv4Address	IPv4 address.		IPv4: String, dotted decimal	IPv4 example: 1.1.1.1

Column name	Column description	Column type	Data type and restrictions	Remarks
			notation.	
Ipv4PrefixLength	Mask length of IP address.		Unsigned integer. Value range: 0 to 32.	N/A
MinPrefixLength	Greater than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.
MaxPrefixLength	Less than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.

RoutePolicy/IPv6PrefixList

This table contains route policy IPv6 prefix information.

XML structure

```
<RoutePolicy>
  <IPv6PrefixList>
    <PrefixList>
      <PrefixListName></PrefixListName>
      <Index></Index>
      <Mode></Mode>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv6PrefixList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	IPv6PrefixList
Table type	Multi-instance table
Row name	PrefixList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListName	Name of prefix list.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of prefix list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Ipv6Address	IPv6 address.		IPv6: String, hexadecimal notation.	IPv6 example: 1:1::1:1
Ipv6PrefixLength	Prefix length of IP address.		Unsigned integer. Value range: 0 to 128.	N/A
MinPrefixLength	Greater than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 128	Ipv6PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.
MaxPrefixLength	Less than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 128.	Ipv6PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.

RoutePolicy/ASpathList

This table contains AS path list information.

XML structure

```
<RoutePolicy>
  <ASpathList>
    <List>
      <ListName></ListName>
      <Index></Index>
      <Mode></Mode>
      <RegularExpression></RegularExpression>
    </List>
  </ASpathList>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	ASpathList
Table type	Multi-instance table

Row name	List
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListName	List name	Index	AS path list number: Unsigned integer. Value range: 1 to 256. AS path list name: String, case-sensitive. Length: 1 to 51 characters.	An AS path list name cannot be all made up of numbers.
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of community list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
RegularExpression	Regular expression.		String. Length: 1 to 256 characters.	Example: ^10

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of route policy.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of Route Policy.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Description	Description of route policy.		String, case-sensitive. Length: 1 to 80 characters.	N/A
Match	If match condition.	Data structure	Members include: • IPv4AddressPrefixList. • IPv6AddressPrefixList • ExtcommunityList	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Tag • Interface • L3vni • RouteType • TagList • RdList • Cost • IPv4AddressAcl • IPv4NextHopAcl • IPv4NextHopPrefixList • IPv4RouteSourceAcl • IPv4RouteSourcePrefixList • IPv6AddressAcl • IPv6NextHopAcl • IPv6NextHopPrefixList • IPv6RouteSourceAcl • IPv6RouteSourcePrefixList • LocalPreference • MacList • MplsLabel • Rpki • ChildRoutePolicy • Protocol	
IPv4AddressPrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressPrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
ExtcommunityList	Match BGP routes whose extended community attribute matches a specified extended community list		List number: Unsigned integer. Value range: 1 to 65535. List name: String, case-sensitive. Length: 1 to 63 characters.	Repeat supported for 32 times.
Tag	Match IGP routes with specified tag		Unsigned integer. Value range: 0 to 4294967295	N/A
Interface	Match routes with specified Interface.		Interface name: String, interface type and interface number. Interface index: Unsigned integer. Length: 32 bits.	Support interface name or interface index. Repeat supported for 16 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
L3vni	Match the L3 VXLAN ID of BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
RouteType	Match route type.		Enumeration: • **1**—internal. • **2**—external-type1or2. • **3**—external-type1. • **4**—external-type2. • **5**—nssa-external-type1or2. • **6**—nssa-external- type1. • **7**—nssa-external- type2. • **8**—is-is-level-1. • **9**—is-is-level-2. • **10**—bgp-evpn-mac-ip. • **11**—bgp-evpn-imet. • **12**—bgp-evpn-ip-prefix. • **13**—eigrp-internal. • **14**—eigrp-external. • **15**—bgp-evpn-ad. • **16**—bgp-evpn-smet • **17**—bgp-evpn-spmsi	Repeat supported for 14 times. One route type cannot be configured twice in one command.
TagList	Match IGP routes with the specified tag list.		Unsigned integer. Value range: 1 to 65535.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	N/A
IPv4Address Acl	Match the desination address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	N/A
IPv4NextHop Acl	Match the next hop of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4NextHop PrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv4RouteSo urceAcl	Match the source address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4RouteSourcePrefixList	Match the source address of IPv4 routes using an IP prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressAcl	Match the desination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	N/A
IPv6NextHopAcl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6NextHopPrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
ExtcommunityList	Match BGP routes whose extended community attribute matches a specified extended community list		List number: Unsigned integer. Value range: 1 to 65535. List name: String, case-sensitive. Length: 1 to 63 characters.	Repeat supported for 32 times.
IPv6RouteSourceAcl	Match the source address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6RouteSourcePrefixList	Match the source address of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
LocalPreference	Match BGP routes that have the specified local preference.		Unsigned integer. Value range: 0 to 4294967295.	N/A
MacList	Match MAC addresses that are contained in EVI IS-IS packets.		String, case-sensitive. Length: 1 to 63 characters.	N/A
MplsLabel	Match routes with the specified MPLS labels.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
Rpki	Match routes with the specified RPKI validation state.		Enumeration: • 0—invalid • 1—not-found • 2—valid	N/A
ChildRoutePo	Match child route		String, case-sensitive.	Loop-nesting child

Column name	Column description	Column type	Data type and restrictions	Remarks
licy	policy		Length: 1 to 63 characters.	policies are not supported.
Protocol	Match routes with protocol.		Enumeration: • 1—direct. • 2—static. • 3—bgp. • 4—ospf. • 5—ospfv3. • 6—isis. • 7—rip. • 8—ripng. • 9—eigrp. • 10—unr.	Repeat supported for 10 times. One protocol cannot be configured duplicately in one command.
MatchCommunityList	If match communitylist condition.	Data structure	Members include: • List. • WholeMatch	Repeat supported for 32 times.
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	List name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: • 0—Disable. • 1—Enable.	Not supported when specifying an advanced community list number.
VlanId	Specify a VLAN ID.		Unsigned integer. Value range: 1 to 4094.	N/A
VlanIdRangeStart	Specify the start VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
VlanIdRangeEnd	Specify the end VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both of VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
MatchASPathList	If-match AS path list condition.	Data structure	Members include: List.	Repeat supported for 32 times.
AspathList	Match BGP routes whose AS path attribute matches a specified AS path list.		AS path list number: Unsigned integer. Value range:1 to 256. AS path list name:	List name cannot be all made up of numbers.

Column name	Column description	Column type	Data type and restrictions	Remarks
			String, case-sensitive. Length: 1 to 51 characters.	
Apply	Apply action.	Data structure	Members include: • ExtCommunityRtValue. • ExtCommunityRtType. • ExtCommunityColorValue. • ExtCommunityColorType. • ExtCommunityBandWidthValue. • ExtCommunityBandWidthType. • ExtCommunitySooValue. • ExtCommunitySooType. • ExtCommunityPriorityColorValue. • ExtCommunityPriorityColorType. • VpnPeerId. • CostValue. • CostMode. • LocalPreference. • L3vni. • ASPath. • ASPathType. • CommunityNumber. • CommunityAttr. • CommunityType. • Exp. • CommListDelete. • CostType. • IPv6NextHop. • ISIS. • MplsLabel. • Preference. • PreferredValue. • PrefixPriority. • Tag. • IPv4NextHopPeerAddress • IPv6NextHopPeerAddress • FlexAlgo	N/A
ExtCommunityRtValue	The value of Ext Community Route Target (RT).		String. Length: 3 to 24 characters. • The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
			IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	
ExtCommunityRtType	The Ext Community RT additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityColorValue	The value of Ext Community color.		String. Length: 4 to 13 characters. The format is CO<00-11>:Color<0-4294967295>.	Example: 10:30.
ExtCommunityColorType	The Ext Community color type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityBandwidthValue	The value of Ext Community Link-bandwidth.		String. Length: 3 to 16 characters. The format is AS<0-65535>:NN<0-4294967295>	Example: 70000:3.
ExtCommunityBandwidthType	The Ext Community Link-bandwidth additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunitySooValue	The value of Ext Community Soo.		String. Length: 3 to 21 characters. The format is IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for Get and Get-Bulk action.
ExtCommunitySooType	The Ext Community Soo additive type.		Enumeration: • 1—Additive. • 2—Replace.	N/A
ExtCommunityPriorityColorValue	Value of extended community priority color.		String. Length: 5 to 12 characters. The format is Priority<0-15>:SiteID <1-65535>:DeviceID<1-255>	Example: 10:30:10. A maximum of 32 entries can be specified.
ExtCommunityPriorityColorType	Extended community priority color additive type.		Enumeration: • 1—Additive • 2—Replace	N/A
VpnPeerId	Set vpn-peer-id		Unsigned integer. Value range: 1 to 134217727	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CostValue	Route cost value.		Unsigned integer. Value range: 0 to 4294967295	N/A
CostMode	Route cost change mode.		Enumeration: • 0—Update. • 1—Increase. • 2—Decrease.	N/A
LocalPreference	BGP route local preference.		Unsigned integer. Value range: 0 to 4294967295	N/A
L3vni	Specify an L3 VXLAN ID for BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
ASPath	AS_PATH attribute value.		Unsigned integer. Value range: 1 to 4294967295	Repeat supported for 32 times.
ASPathType	AS_PATH attribute additive type.		Enumeration: • 1—Additive. • 2—Replace. • 3—Clear. • 4—Delete.	The ASPath column can't be configured when the ASPathType column is Clear.
CommunityNumber	Community number.		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>.	Example: 10 or 1:65535 Repeat supported for 32 times along with CommunityAttr.
CommunityAttr	Community attribute.		Enumeration: • 1—Internet. • 2—No-advertise. • 3—no-export. • 4—no-export-subconfed.	Repeat supported for 32 times along with CommunityNumber.
CommunityType	Community additive type.		Enumeration: • 0—Replace. • 1—Additive. • 2—None.	N/A
Exp	Specify an MPLS EXP value		Unsigned integer. Value range: 0 to 7	N/A
CommListDelete	Delete the COMMUNITY attributes from BGP		Basic community list number: Unsigned integer. Value range:1 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes.		Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	
CostType	Specify a cost type.		Enumeration: • 1—external. • 2—internal. • 3—type-1 • 4—type-2 • 5—inherit-link-cost • 6—med-plus-igp • 7—internal-inc-ibgp	N/A
IPv6NextHop	Specify a next hop for IPv6 routes.		Hexadecimal string, colon-separated.	N/A
ISIS	Specify an IS-IS level.		Enumeration: • 1—level-1. • 2—level-1-2. • 3—level-2.	N/A
MplsLabel	Specify whether to configure an MPLS label or not.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
Preference	Specify a preference for a routing protocol.		Unsigned integer. Value range: 1 to 255.	N/A
PreferredValue	Specify a preferred value for BGP routes.		Unsigned integer. Value range: 0 to 65535.	N/A
PrefixPriority	Specify a prefix priority.		Enumeration: • 1—critical. • 2—high. • 3—medium.	N/A
Tag	Specify a tag for IGP routes.		Unsigned integer. Value range: 0 to 4294967295.	N/A
IPv4NextHopPeerAddress	Apply IPv4 peer address as next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
IPv6NextHopPeerAddress	Apply IPv6 peer address as next hop		Enumeration: • 0—Not configured.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Configured.	
FlexAlgo	Specify the algorithm of route		Unsigned integer. Value range:128 to 255.	N/A
ApplyIpv4NextHop	Set the next hop of an IPv4 route.	Data structure	Members include: • NextHopAddr. • Public. • VrfName	N/A
NextHopAddr	Specify a next hop for IPv4 routes.		Hexadecimal string, colon-separated.	N/A
Public	Specify public network		Enumeration: • 0—Not configured. • 1—Configured.	N/A
VrfName	Specify the VPN instance name for the next hop of an IPv4 route		String. Length: 1 to 31 characters.	N/A
ApplyFastReroute	Set a backup link for IPv4 fast reroute.	Data structure	Members include: • InterfaceName. • IpAddress.	N/A
InterfaceName	Specify a backup output interface by itsname.		String. Length: 0 to 47 characters.	Example: • NULL0. • M-GigabitEthernet0/0/0
IpAddress	Specify a backup next hop.		IPv4: String, dotted decimal notation.	N/A
ApplyIPv6FastReroute	Set a backup link for IPv6 fast reroute.	Data structure	Members include: • Ipv6InterfaceName. • Ipv6Address.	N/A
*Ipv6*InterfaceName	Specify a backup output interface by itsname.		String. Length: 0 to 47 characters.	Example: • NULL0. • M-GigabitEthernet0/0/0
Ipv6Address	Specify a backup next hop.		Hexadecimal string, colon-separated.	N/A
ApplyOrigin	Set the ORIGIN attribute for BGP routes.	Data structure	Members include: • Origin • OriginAsNum	N/A
Origin	Specify an ORIGIN attribute.		Enumeration: • 1—egp. • 2—igp. • 3—incomplete.	N/A
OriginAsNum	Specify the AS number for EGP routes.		Unsigned integer. Value range: 1 to 4294967295.	The AsNumber can be set only when Origin is set to egp.

Column name	Column description	Column type	Data type and restrictions	Remarks
ApplyIpPrecedence	Set an IP precedence.	Data structure	Members include: • IpPrecValue • IpPrecClear	N/A
IpPrecValue	Specify an IP precedence.		Unsigned integer. Value range: 0 to 7.	You cannot set IpPrecValue and IpPrecClear at the same time.
IpPrecClear	Clear the IP precedence off matching routes.		Enumeration: • 0—Not configured. • 1—Configured..	You cannot set IpPrecValue and IpPrecClear at the same time.
ApplyQosLocId	Set a local QoS ID.	Data structure	Members include: • QosLocIdValue • QosLocIdClear	N/A
QosLocIdValue	Specify a local QoS ID.		Unsigned integer. Value range: 1 to 4095.	You cannot set QosLocIdValue and QosLocIdClear at the same time.
QosLocIdClear	Clear the local QoS ID of matching routes.		Enumeration: • 0—Not configured. • 1—Configured..	You cannot set QosLocIdValue and QosLocIdClear at the same time.
ApplyTrafIndex	Set a traffic index.	Data structure	Members include: • TrafIndexValue • TrafIndexClear	N/A
TrafIndexValue	Specify a traffic index.		Unsigned integer. Value range: 1 to 64.	You cannot set TrafIndexValue and TrafIndexClear at the same time.
TrafIndexClear	Clear the traffic index of BGP routes.		Enumeration: • 0—Not configured. • 1—Configured.	You cannot set TrafIndexValue and TrafIndexClear at the same time.
Continue	Set the next node to be matched.		Unsigned integer. Value range: 0 to 65535.	N/A
ApplyAigp	Apply AIGP attribute.	Data structure	Members include: • TrafIndexValue • TrafIndexClear	N/A
CostValue	AIGP attribute value of BGP routes.		Unsigned integer. Value range: 0 to 4294967295.	If IgpCost is set to 0, AIGP attribute value of BGP routes is CostValue. If not, AIGP attribute value of BGP routes is set to the IGP route cost.
IgpCost	Set AIGP attribute value of BGP routes to the IGP route		Enumeration: • 0—Not configured(default). • 1—Configured.	If IgpCost is set to 0, AIGP attribute value of BGP routes is CostValue. If not, AIGP

Column name	Column description	Column type	Data type and restrictions	Remarks
	cost.			attribute value of BGP routes is set to the IGP route cost.
ApplyLabelValue	Set the SID value		Unsigned integer. Value range: 16 to 1048575.	N/A
ApplyLabelIndex	Set the label index value.		Unsigned integer. Value range: 0 to 1048575.	N/A
ApplyIpv4GwNextHop	Set the next hop of an IPv4 route to the gateway IP address.	Data structure	Members include: • Type. • NextHopAddr.	N/A
Type	Specify the type of the next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
NextHopAddr	Specify the next hop address.		IPv4: String, dotted decimal notation.	An empty IPv4 address string indicates the gateway address.
ApplyIpv6GwNextHop	Set the next hop of an IPv6 route to the gateway IP address.	Data structure	Members include: • Type. • NextHopAddr.	N/A
Type	Specify the type of the next hop.		Enumeration: • 0—Not configured. • 1—Configured.	N/A
NextHopAddr	Specify the next hop address.		String, IPv6 address string.	An empty IPv6 address string indicates the gateway address.

RoutePolicy/ExtcommunityList

Table description

Item	Description
Feature name	RoutePolicy
Table name	ExtcommunityList
Table type	Multi-instance table
Row name	List
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListNum	List number	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of extcommunity list.		Enumeration: • **0**—permit. • **1**—deny.	N/A
Rt	Route Target		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with SoO and Bandwidth configuration.
SoO	Site of Origin		String. Length: 3 to 24 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535> or IP<X.X.X.X/M>:NN<0-65535> or AS<X.Y>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for 32 times along with Rt and Bandwidth configuration.

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Link bandwidth		String. Length: 3 to 16 characters. Format: AS<0-65535>:NN<0-4294967295>.	Example: 6000:3. Repeat supported for 32 times along with Rt and SoO configuration.
PriorityColor	Priority color value		String. Length: 5 to 12 characters. The format is Priority<0-15>: SiteID <1-65535>:DeviceID<0-255>	Example: 1:150:1 A maximum of 32 entries can be specified.
PriorityColorMode	Priority color match type		Enumeration: • 0—MatchPriority. • 1—NotMatchPriority.	The PriorityColorMode must be configured with the PriorityColor together.
PriorityColorRegExp	Regular expression.		String. Length: 1 to 63 characters.	Example: ^10

        <IPv6NextHopPrefixList></IPv6NextHopPrefixList>
        <ExtcommunityList></ExtcommunityList>
      </Match>
      <MatchCommunityList>
        <List></List>
        <WholeMatch></WholeMatch>
      </MatchCommunityList>
      <ApplyTunnelPolicy></ApplyTunnelPolicy>
    </Entry>
  </TunnelSelector>
</RoutePolicy>
```

Table description

Item	Description
Feature name	RoutePolicy
Table name	TunnelSelector
Table type	Multi-instance table
Row name	Entry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelSelectorName	Name of tunnel selector.	Index	String, case-sensitive. Length: 1 to 40 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of tunnel selector.		Enumeration: • 0—permit. • 1—deny.	To perform create or replace operation, Mode can’t be empty. To perform Merge operation to create a row, Mode can’t be empty. Delete or remove operation is not supported.
Match	If match	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	condition.	structure	• IPv4AddressPrefixList. • IPv6AddressPrefixList. • RdList • IPv4AddressAcl • IPv4NextHopAcl • IPv4NextHopPrefixList • IPv6AddressAcl • IPv6NextHopAcl • IPv6NextHopPrefixList • ExtcommunityList	
IPv4Address PrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6Address PrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	
IPv4Address Acl	Match the desination address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv4NextHop Acl	Match the next hop of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4NextHop PrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6Address Acl	Match the desination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv6NextHop Acl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6NextHop PrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
Extcommunit yList	Match BGP routes whose		List number: Unsigned integer.	Repeat supported for 32 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
	extended community attribute matches a specified extended community list		Value range: 1 to 65535. List name: String, case-sensitive. Length: 1 to 63 characters.	The value range is related to the model of the equipment. Please refer to the actual condition of the equipment.
MatchCommunityList	If match communitylist condition.	Data structure	Members include: • List. • WholeMatch	
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	A community list name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: • 0—Disable. 1—Enable.	
ApplyTunnelPolicy	Tunnel policy name.		String, case-sensitive. Length: 1 to 126 characters.	

RoutePolicy/Global

This table contains route policy config information.

XML structure

Message	Explanation
Invalid MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最小前缀长度的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid MaxPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最大前缀长度的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid combination of mask length, MaxPrefixLength value and MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 前缀长度、最小前缀长度和最大前缀长度之间的大小关系非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid MaxPrefixLength value or MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最小前缀长度或最大前缀长度之间的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.

RoutePolicy/Aspath

Message	Explanation
Configuration already exists. 已有相同配置，此配置不能下刷。	Same configuration already exists when you create a new configuration.

RoutePolicy/Policy

Message	Explanation
ExtCommunityRtValue and ExtCommunityRtType must be configured together. 扩展团体属性值和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid or unusable interfaces. 无效的或不可下刷的接口索引。	Invalid configuration, please modify configuration under the guidance.

Configuration number has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.
Vpnpeer is not customized on this device. 设备没有定制vpnpeer特性。	Configuration is not supported.
Same value of List is not supported in current repeat-group. 当前可重复组中不支持配置相同的团体属性。	Invalid configuration, please modify configuration under the guidance.
The CostValue and CostMode column must be configured at the same time. 必须同时配置路由开销值和模式。	Invalid configuration, please modify configuration under the guidance.
The ASPath and ASPathType column must be configured together. AS路径访问列表和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Configuration failed. Multilevel references are not supported. 最多只能嵌套一层。	Invalid configuration, please modify configuration under the guidance.
The color and RT attributes cannot coexist. 扩展团体的Color属性不能与RT共存。	The color and RT attributes cannot coexist.
Can't configure the CommunityNumber or CommunityAttr column when the CommunityType column is None. 指定CommunityType为None时不允许携带CommunityNumber和CommunityAttr。	Invalid configuration, please modify configuration under the guidance.
You must configure the CommunityNumber or CommunityAttr column when the CommunityType column is Replace. 指定CommunityType为Replace时必须携带CommunityNumber或CommunityAttr。	Invalid configuration, please modify configuration under the guidance.
The next node number must be greater than current node number. 下一个执行节点序列号必须大于当前节点序列号。	Invalid configuration, please modify configuration under the guidance.
Invalid IPv4 address. 非法的IPv4地址。	Invalid configuration, please modify configuration under the guidance.
Invalid IPv6 address. 非法的IPv6地址。	Invalid configuration, please modify configuration under the guidance.
Need to specify the type of the next hop. 需要指定下一跳类型。	Invalid configuration, please modify configuration under the guidance.
This type can’t specify the IP address. 此类型不允许配置地址值。	Invalid configuration, please modify configuration under the guidance.
Need to specify the IP address of the next hop. 需要指定下一跳的地址。	Invalid configuration, please modify configuration under the guidance.
One protocol cannot be configured duplicately in one command.	One protocol cannot be configured duplicately in one command.

同一协议不能在一条命令中重复配置。	
The ASPath column can’t be configured when the ASPathType column is Clear. 当AS路径访问列表类型为Clear时，不能配置AS路径访问列表。	Invalid configuration, please modify configuration under the guidance.
Can't configure the NextHopAddr or NextHopPeerAddress at the same time. 不能同时配置NextHopAddr和NextHopPeerAddress。	Invalid configuration, please modify configuration under the guidance.
Can't configure the Public or VrfName at the same time. 不能同时配置Public和VrfName。	Invalid configuration, please modify configuration under the guidance.
The extended community attribute of PriorityColor can’t be configured with other extended community attributes together. 扩展团体属性PriorityColor不能和其他扩展团体属性一起配置。	Invalid configuration, please modify configuration under the guidance.
Invalid parameter. 参数不合法。	Invalid configuration, please modify configuration under the guidance.
The ExtCommunityColorValue and ExtCommunityColorType colum must be configured together. 扩展团体的Color属性值和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.
The ExtCommunityBandWidthValue and ExtCommunityBandWidthType colum must be configured together. 扩展团体的链路带宽属性值和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.
The ExtCommunitySooValue and ExtCommunitySooType colum must be configured together. 扩展团体的SoO属性值和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.

RoutePolicy/ExtcommunityList

Message	Explanation
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.
The configuration not supported on the specified target. 指定配置对象不支持对应配置。	The specified target does not support row creation and deletion.
The number of entries has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.
The PriorityColorMode column must be configured with the PriorityColor column together. PriorityColorMode字段一定要和PriorityColor字段一起配置。	Invalid configuration, please modify configuration under the guidance.

The PriorityColor or PriorityColorMode column can't be configured with the PriorityColorRegExp column together. PriorityColor和PriorityMode字段不能和PriorityColorRegExp字段一起配置。	Invalid configuration, please modify configuration under the guidance.
The PriorityColor or PriorityColorRegExp column can't be configured with Rt and SoO column together. PriorityColor和PriorityColorRegExp字段不能和Rt、SoO字段一起配置	Invalid configuration, please modify configuration under the guidance.
Wrong regular expression. 正则表达式不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid parameter. 参数不合法。	Invalid configuration, please modify configuration under the guidance.

RoutePolicy/ExtcommunityListName

Message	Explanation
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.
The configuration not supported on the specified target. 指定配置对象不支持对应配置。	The specified target does not support row creation and deletion.

RoutePolicy/CommunityList

Message	Explanation
Configuration number has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.
Configuration is not supported in current community-list level. 当前团体属性列表级别下不支持此配置。	Invalid configuration, check community-list level.
Invalid index of community-list. 团体属性列表索引列配置错误。	Invalid configuration, please modify configuration under the guidance.
Wrong format in current operation mode. 带非索引列删除时，必须同时下刷匹配模式及对应配置。	Invalid configuration, please modify configuration under the guidance.

RoutePolicy/TagList

Message	Explanation
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.

RoutePolicy/RdList

Message	Explanation
Configuration already exists. 已有相同配置，此配置不能下刷。	The new configuration conflicts with existing configuration.

RoutePolicy/MacList

Message	Explanation
Operation failed. The configuration already exists. 已有相同配置，此配置不能下刷。	Operation failed. The configuration already exists.

RoutePolicy/TunnelSelector

Message	Explanation
Configuration number has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.

Table name	BaselineSave
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Save	Save baseline	N/A	This column must be empty.	Required.

RRM/ApGroupBaselineSave

This table contains AP group baseline saving information.

XML structure

```
<RRM>
  <ApGroupBaselineSave>
    <BaselineName></BaselineName>
    <ApGroupName></ApGroupName>
    <ApModel></ApModel>
    <RadioID></RadioID>
    <Save></Save>
  </ApGroupBaselineSave>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ApGroupBaselineSave
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A
ApGroupName	AP group name	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
ApModel	AP model name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Save	Save baseline	N/A	This column must be empty.	Required.

RRM/GlobalBaselineSave

This table contains global baseline saving information.

XML structure

```
<RRM>
  <GlobalBaselineSave>
    <BaselineName></BaselineName>
    <Save></Save>
  </GlobalBaselineSave>
</RRM>
```

RRM

RRM/ClbInterval

This table contains channel and bandwidth calibration interval information.

XML structure

```
<RRM>
  <ClbInterval>
    <Interval></Interval>
    <BandwidthInterval></BandwidthInterval>
  </ClbInterval>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Channel calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 23.
BandwidthInterval	Bandwidth calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 13.

RRM/PwrClbInterval

This table contains power calibration interval information.

XML structure

```
<RRM>
  <PwrClbInterval>
    <Interval></Interval>
  </PwrClbInterval>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	PwrClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Power calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 180. Default: 11.

RRM/ApPowerCfg

This table contains the operation to set Ap radio's adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

XML structure

```
<RRM>
  <PowerCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
```

```
  </PowerCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	PowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16.	Optional
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20.	Optional
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 50 to 90.	Optional
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: • **0**—Disable auto power selection. • **1**—Enable auto power selection. • **2**—Inherit auto power selection.	Optional

RRM/ApGroupPowerCfg

This table contains the operation to set ApGroup radios' adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

XML structure

```
<RRM>
  <ApGroupPowerCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
  </ApGroupPowerCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ApGroupPowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP Group name	Index	String: case-insensitive Length: 1 to 31 characters	N/A
ApModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16.	Optional
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20.	Optional
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 1 to 196.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: • **0**—Disable auto power selection(default). • **1**—Enable auto power selection. • **2**—Inherit auto power selection.	Optional

RRM/ApChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one radio's current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically, and a switch to enable one radio calibrate bandwidth automatically.

XML structure

```
<RRM>
  <ChannelCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <CrcErrThreshold></CrcErrThreshold>
      <InterferenceThreshold></InterferenceThreshold>
      <ToleranceLevel></ToleranceLevel>
      <ChlClbMode></ChlClbMode>
      <BandwidthClbMode></BandwidthClbMode>
    </Radio>
  </ChannelCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ChannelCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 0 to 100.	Optional
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer. Value range: 0 to 100.	Optional
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value range: 0 to 100.	Optional
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: • **0**—Disable auto channel selection. • **1**—Enable auto channel selection. • **2**—Inherit auto channel selection.	Optional
BandwidthClbMode	Enable/Disable auto bandwidth selection of radio	N/A	Enumeration: • **0**—Disable auto bandwidth selection. • **1**—Enable auto bandwidth selection. • 2—Inherit auto bandwidth selection.	Optional

RRM/ApGroupChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one ApGroup radios' current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically, and a switch to enable one radio calibrate bandwidth automatically.

XML structure

```
<RRM>
  <ApGroupChannelCfg>
    <Radio>
```

```
      <ApGroupName></ApGroupName>
       <ApModel></ApModel>
      <RadioID></RadioID>
      <CrcErrThreshold></CrcErrThreshold>
      <InterferenceThreshold></InterferenceThreshold>
      <ToleranceLevel></ToleranceLevel>
      <ChlClbMode></ChlClbMode>
      <BandwidthClbMode></BandwidthClbMode>
    </Radio>
  </ApGroupChannelCfg>
</RRM>
```

Table description

Item	Description

CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 0 to 100.	Optional
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer. Value range: 0 to 100.	Optional
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value range: 0 to 100.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: • **0**—Disable auto channel selection(default). • **1**—Enable auto channel selection. • **2**—Inherit auto channel selection.	Optional
BandwidthClbMode	Enable/Disable auto bandwidth selection of radio	N/A	Enumeration: • **0**—Disable auto bandwidth selection(default). • **1**—Enable auto bandwidth selection. • 2—Inherit auto bandwidth selection.	Optional

RRM/ApWsaCfg

This table contains the operation to set a switch to enable radio responds to the event reported by WLAN Spectrum Analysis.

XML structure

```
<RRM>
  <ApWsaCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApWsaCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ApWsaCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Mode	Enable/Disable WSA collaboration of radio	N/A	Enumeration: • **0**—Disable WSA collaboration . • **1**—Enable WSA collaboration.	Optional

RRM/ApGroupWsaCfg

This table contains information about a switch to enable one ApGroup radio collaborates with WSA automatically.

XML structure

```
<RRM>
  <ApGroupWsaCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
       <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApGroupWsaCfg>
</RRM>
```

Table description

Item	Description

APModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Mode	Enable/Disable WSA collaboration o f radio	N/A	Enumeration: • **0**—Disable WSA collaboration (default). • **1**—Enable WSA collaboration.	Optional

RRM/ClbGroupCfg

This table contains calibration group

XML structure

```
<RRM>
  <ClbGroupCfg>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCfg
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Not support creation/merge/deletion/remove

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 720.	N/A
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

RRM/ClbGroupMemberCfg

This table contains calibration group member

XML structure

```
<RRM>
  <ClbGroupMemberCfg>
    <ClbGroupMember>
      <ApName></ApName>
      <RadioID></RadioID>
      <ClbGroupId></ClbGroupId>
    </ClbGroupMember>
  </ClbGroupMemberCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMemberCfg
Table type	Multi-instance table
Row name	ClbGroupMember
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Ap name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
RadioID	Radioid	Index	Unsigned short. Value range: 1 to 4.	N/A
ClbGroupId	Calibration group id	N/A	Unsigned integer.	N/A

RRM/ClbGroupCreate

This table contains the operation to create a calibration group.

XML structure

```
<RRM>
  <ClbGroupCreate>
    <ClbGroupId></ClbGroupId>
  </ClbGroupCreate>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCreate
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Just support for creation

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128	NA

RRM/ClbGroupDelete

This table contains the operation to delete a calibration group.

XML structure

```
<RRM>
  <ClbGroupDelete>
    <ClbGroup>
      <ClbGroupIdIndex></ClbGroupIdIndex>
      <ClbGroupIdColumn></ClbGroupIdColumn>
    </ClbGroup>
  </ClbGroupDelete>
</RRM>
```

Item	Description
Feature name	RRM
Table name	ClbGroupDelete
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for deletion/removing

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupIdIndex	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupIdColumn	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128	N/A

RRM/ClbGroupMerge

This table contains the operation to merge a calibration group.

XML structure

```
<RRM>
  <ClbGroupMerge>
    <ClbGroup>
```

```
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupMerge>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMerge
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for merging

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 720.	N/A
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

RRM/ApPwrClbModeCfg

This table contains radio power calibration mode information.

XML structure

```
<RRM>
  <PwrClbModeCfg>
    <Radio>
      <ApName></ApName>

  </GlobalCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Band2GCrcErrThreshold	CRC-error threshold of 2.4GHz radios	N/A	Unsigned integer. Value range: 0 to 100. Default value: 0.	N/A
Band5GCrcErrThreshold	CRC-error threshold of 5GHz radios	N/A	Unsigned integer. Value range: 0 to 100. Default value: 0.	N/A
Band2GToleranceLevel	Tolerance level of 2.4GHz radios, which is used to determine if the current channel needs to be changed	N/A	Unsigned integer. Value range: 0 to 100. Default value: 1.	N/A
Band5GToleranceLevel	Tolerance level of 5GHz radios, which is used to determine if the current channel needs to be changed	N/A	Unsigned integer. Value range: 0 to 100. Default value: 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ChlClbMode	Auto channel selection status.	N/A	Enumeration: • **0**—Disable auto channel selection (default) for both 2.4GHz and 5GHz radios. • **1**—Enable auto channel selection for 2.4GHz radios. • **2**—Enable auto channel selection for 5GHz radios. • **3**—Enable auto channel selection for both 2.4GHz and 5GHz radios.	N/A
Band2GAdjacencyFactor	Adjacency factor of 2.4GHz radios	N/A	Unsigned integer. Value range: 1 to 16. Default value: 1.	N/A
Band5GAdjacencyFactor	Adjacency factor of 5GHz radios	N/A	Unsigned integer. Value range: 1 to 16. Default value: 1.	N/A
Band2GPwrMin	Minimum transmit power of 2.4GHz radios	N/A	Unsigned integer. Value range: 1 to 20. Default value: 6.	N/A
Band5GPwrMin	Minimum transmit power of 5GHz radios	N/A	Unsigned integer. Value range: 1 to 20. Default value: 11.	N/A
Band2GPwrThreshold	Power threshold for 2.4GHz radio power calibration	N/A	Unsigned integer. Value range: 1 to 196. Default value: 75.	N/A
Band5GPwrThreshold	Power threshold for 5GHz radio power calibration	N/A	Unsigned integer. Value range: 1 to 196. Default value: 75.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PwrClbMode	Auto power selection status	N/A	Enumeration: • **0**—Disable auto power selection (default) for both 2.4GHz and 5GHz radios. • **1**—Enable auto power selection for 2.4GHz radios. • **2**—Enable auto power selection for 5GHz radios. • **3**—Enable auto power selection for both 2.4GHz and 5GHz radios	Optional
BandwidthClbMode	Auto bandwidth selection status	N/A	Enumeration: • 0—Disable auto bandwidth selection (default) for 5GHz radios. • 1—Enable auto bandwidth selection for 5GHz radios.	Optional

RRM

RRM/ClbInterval

This table contains channel and bandwidth calibration interval information.

XML structure

```
<RRM>
  <ClbInterval>
    <Interval></Interval>
    <BandwidthInterval></BandwidthInterval>
  </ClbInterval>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Channel calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 23.
Bandwidth Interval	Bandwidth calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 13.

RRM/PwrClbInterval

This table contains power calibration interval information.

XML structure

```
<RRM>
  <PwrClbInterval>
    <Interval></Interval>
  </PwrClbInterval>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	PwrClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Power calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 180. Default: 11.

RRM/ApPowerCfg

This table contains information about adjacency factor and the least transmit power and threshold of calibrating power and a switch to enable radio calibrate power automatically.

XML structure

```
<RRM>
  <PowerCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
```

```
  </PowerCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	PowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Name of specify ap	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Adjacency Factor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16.	N/A
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20.	N/A
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 1 to 196.	N/A
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: • **0**—Disable auto power selection. • **1**—Enable auto power selection. • **2**—Inherit auto power selection.	N/A

RRM/ApGroupPowerCfg

This table contains the operation to set ApGroup radio's adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

XML structure

```
<RRM>
  <ApGroupPowerCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
  </ApGroupPowerCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM

ApGroupName	AP Group name	Index	String: case-insensitive Length: 1 to 31 characters	N/A
APModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 0 to 100	Optional
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer. Value range: 0 to 100.	Optional
ToleranceLevel	The tolerance level of radio to determine if the radio	N/A	Unsigned integer. Value range: 0 to 100	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
	switch current channel			
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: • **0**—Disable auto channel selection(default). • **1**—Enable auto channel selection. • **2**—Inherit auto channel selection.	Optional
BandwidthClbMode	Enable/Disable auto bandwidth selection of radio	N/A	Enumeration: • **0**—Disable auto bandwidth selection(default). • **1**—Enable auto bandwidth selection. • 2—Inherit auto bandwidth selection.	Optional

RRM/ApWsaCfg

This table contains the operation to set a switch to enable radio responds to the event reported by WLAN Spectrum Analysis.

XML structure

```
<RRM>
  <ApWsaCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApWsaCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ApWsaCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Mode	Enable/Disable WSA collaboration of radio	N/A	Enumeration: • **0**—Disable WSA collaboration . • **1**—Enable WSA collaboration.	Optional

RRM/ApGroupWsaCfg

This table contains information about a switch to enable one ApGroup radio collaborates with WSA automatically.

XML structure

```
<RRM>
  <ApGroupWsaCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApGroupWsaCfg>
</RRM>
```

Table description

```

Table description

Item	Description
Feature name	RRM
Table name	History
Table type	Muti-instance table
Row name	RadioCount
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
HistoryCnt	The Nth history information	Index	Unsigned integer. Value range: 1 to 10.	N/A
BasicBSSID	Field of Radio Information	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ChangeTime	Date and time when change occurs.	N/A	String	Example: 2014-05-07T09:35:07.
ReasonBitMap	Field of History Information	N/A	Unsigned integer. Rewrite the unsigned integer to binary number. The Reason can be judged by whether the bits of this binary number is 1. the last bit is RadioDown; the second last bit is Interference; the third last bit is Noise; the forth last bit is PachetDisCard; the fifth last bit is Retransmission; the sixth last bit is Radar; the seventh last bit is Other;	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			the Reason can be the combination of 2 or more reasons.	
UtilBef	Utilization before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
UtilAft	Utilization after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
LoadBef	Load before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
LoadAft	Load after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfBef	Total Interference before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfAft	Total Interference after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrBef	Packet error rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrAft	Packet error rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
ChlNumBef	Channel number before calibration	N/A	Unsigned integer.	N/A
ChlNumAft	Channel number after calibration	N/A	Unsigned integer.	N/A
PwrLvlBef	Power level before calibration	N/A	Unsigned integer.	N/A
PwrLvlAft	Power level after calibration	N/A	Unsigned integer.	N/A
RetryBef	Retransmissio	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	n rate before calibration		Value range: 0 to 100. Unit: %.	
RetryAft	Retransmission rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
Bandwidth Bef	Radio bandwidth before calibration	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A
Bandwidth Aft	Radio bandwidth after calibration	N/A	Enumeration: • 1—20M • 2—40M • 3—80M • 4—160M • 5—80M + 80M • 17—5M • 18—10M	N/A

RRM/ClbGroupCfg

This table contains calibration group

XML structure

```
<RRM>
  <ClbGroupCfg>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>

</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ConfigureSpec
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Interval_Min	Smallest channel calibration interval	N/A	Unsigned integer. Value is 3.
Interval_Max	Largest channel calibration interval	N/A	Unsigned integer. Value is 1440.
Interval_Def	Default channel calibration interval	N/A	Unsigned integer. Value is 23.
PwrClbInterval_Min	Smallest power calibration interval	N/A	Unsigned integer. Value is 3.
PwrClbInterval_Max	Largest power calibration interval	N/A	Unsigned integer. Value is 180.
PwrClbInterval_Def	Default power calibration interval	N/A	Unsigned integer. Value is 11.
AdjacencyFactor_Min	The minimum adjacency factor of radio	N/A	Unsigned integer. Value is 1
AdjacencyFactor_Max	The maximum adjacency factor of radio	N/A	Unsigned integer. Value is 16
AdjacencyFactor_Def	The default adjacency factor of radio	N/A	Unsigned integer. Value is 1
PwrMin_Min	The minimum least transmit power of radio	N/A	Unsigned integer. Value is 1
PwrMin_Max	The maximum least transmit power of radio	N/A	Unsigned integer. Value is 20
PwrMin_Def	The default least transmit power of 2.4G radio	N/A	Unsigned integer. Value is 6
PwrThreshold_Min	The minimum threshold of calibrating radio's power	N/A	Unsigned integer. Value is 1
PwrThreshold_Max	The maximum threshold of calibrating radio's power	N/A	Unsigned integer. Value is 196

Column name	Column description	Column type	Data type and restrictions
PwrThreshold_Def	The default threshold of calibrating radio's power	N/A	Unsigned integer. Value is 75
CrcErrThreshold_Min	The minimum CRC-error threshold of radio	N/A	Unsigned integer. Value is 0
CrcErrThreshold_Max	The maximum CRC-error threshold of radio	N/A	Unsigned integer. Value is 100
CrcErrThreshold_Def	The default CRC-error threshold of radio	N/A	Unsigned integer. Value is 0
InterferenceThreshold_Min	The minimum Interference threshold of radio	N/A	Unsigned integer. Value is 0
InterferenceThreshold_Max	The maximum Interference threshold of radio	N/A	Unsigned integer. Value is 100
InterferenceThreshold_Def	The default Interference threshold of radio	N/A	Unsigned integer. Value is 0
ToleranceLevel_Min	The minimum tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 0
ToleranceLevel_Max	The maximum tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 100
ToleranceLevel_Def	The default tolerance level of 2.4G radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 1
ClbGroupDescription_MinLen	Minimum length of calibration group description	N/A	Unsigned integer. Value is 1
ClbGroupDescription_MaxLen	Maximum length of calibration group description	N/A	Unsigned integer. Value is 64
ChlHolddownTim	The minimum channel	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
e_Min	holddown time		Value is 10
ChlHolddownTime_Max	The maximum channel holddown time	N/A	Unsigned integer. Value is 1440
ChlHolddownTime_Def	The default channel holddown time	N/A	Unsigned integer. Value is 720
PwrHolddownTime_Min	The minimum power holddown time	N/A	Unsigned integer. Value is 10
PwrHolddownTime_Max	The maximum power holddown time	N/A	Unsigned integer. Value is 1440
PwrHolddownTime_Def	The default power holddown time	N/A	Unsigned integer. Value is 60
ClbGroupId_Min	The minimum Calibration group id	N/A	Unsigned integer. Value is 1
ClbGroupId_Max	The maximum Calibration group id	N/A	Unsigned integer. Value is 128
Coverage_AdjacencyFactor	The default adjacency factor of power coverage calibration mode	N/A	Unsigned integer. Value is 6
Coverage_PwrThreshold	The default power threshold of power coverage calibration mode	N/A	Unsigned integer. Value is 65
Coverage_PwrMin	The default minimum least transmit power of power coverage calibration mode	N/A	Unsigned integer. Value is 1
Density_AdjacencyFactor	The default adjacency factor of power density calibration mode	N/A	Unsigned integer. Value is 1
Density_PwrThreshold	The default power threshold of power density calibration mode	N/A	Unsigned integer. Value is 80

Column name	Column description	Column type	Data type and restrictions
Density_PwrMin	The default minimum transmit power of power density calibration mode	N/A	Unsigned integer. Value is 1
Band5GPwrMin_Def	Default minimum transmit power of 5G radios	N/A	Unsigned integer. Value is 11
Band5GTolerance Level_Def	Default tolerance level of 5G radios, which is used to determine if the current channel needs to be changed	N/A	Unsigned integer. Value is 0

RRM/ClbGroupCreate

This table contains the operation to create a calibration group.

XML structure

```
<RRM>
  <ClbGroupCreate>
    <ClbGroupId></ClbGroupId>
  </ClbGroupCreate>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCreate
Table type	Single-instance table
Row name	None
Restrictions	Just support for creation

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128.	N/A

RRM/ClbGroupDelete

This table contains the operation to delete a calibration group.

XML structure

```
<RRM>
  <ClbGroupDelete>
    <ClbGroup>
      <ClbGroupIdIndex></ClbGroupIdIndex>
      <ClbGroupIdColumn></ClbGroupIdColumn>
    </ClbGroup>
  </ClbGroupDelete>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupDelete
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for deletion/removing

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupIdIndex	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupIdColumn	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128	N/A

RRM/ClbGroupMerge

This table contains the operation to merge a calibration group.

XML structure

```
<RRM>
```

```
  <ClbGroupMerge>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupMerge>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMerge
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for merging

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440 Default value: 720.	N/A
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440 Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

RRM/ApPwrClbModeCfg

This table contains radio power calibration mode information.

XML structure

```
<RRM>
  <PwrClbModeCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <ClbMode></ClbMode>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
ScanMode	Channel scanning status	N/A	Enumeration: • **0**—Disable scan only • **1**—Enable scan only	Optional

RRM/ApGroupScanOnlyCfg

This table contains AP group channel scanning information.

XML structure

```
<RRM>
  <ApGroupScanOnlyCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <ScanMode></ScanMode>
    </Radio>
  </ApGroupScanOnlyCfg>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	ApGroupScanOnlyCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP group name	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
ApModel	AP model name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
ScanMode	Channel scanning status	N/A	Enumeration: • **0**—Disable scan only (default). • **1**—Enable scan only.	Optional

RRM/BaselineInfoHead

This table contains baseline table information.

XML structure

```
<RRM>
  <BaselineInfoHead>
    <Radio>
      <BaselineName></BaselineName>
      <Count></Count>
      <Description></Description>
      <CreateTime></CreateTime>
      <BaselineType></BaselineType>
      <BaselineRange></BaselineRange>
    </Radio>
  </BaselineInfoHead>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	BaselineInfoHead
Table type	Muti-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	Uppercase characters will be converted to lowercase forms automatically.
Count	Radio quantity	N/A	Unsigned integer.	N/A
Description	Baseline description	N/A	String. Length: 1 to 63 characters.	N/A
CreateTime	Creation time	N/A	String. Length: 1 to 19 characters.	N/A
BaselineType	Baseline type	N/A	String. Length: 1 to 9 characters.	N/A
BaselineRange	Baseline range	N/A	String. Length: 1 to 9 characters.	N/A

RRM/BaselineInfoBody

This table contains baseline information.

XML structure

```
<RRM>
  <BaselineInfoBody>
    <Radio>
      <BaselineName></BaselineName>
      <ApName></ApName>
      <RadioID></RadioID>

Feature name	RRM
Table name	RunningData
Table type	Multi-instance table
Row name	Radio
Restrictions	You can only get the table information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Name of specify ap	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer.	N/A
PwrMin	The least transmit power of radio	N/A	Unsigned integer.	N/A
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer.	N/A
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Unsigned integer.	N/A
PwrClbScen	Power calibration mode	N/A	Unsigned integer.	N/A
AdjFacRdSel	Adjacency-factor radio-selection	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer.	N/A
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer.	N/A
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer.	N/A
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Unsigned integer.	N/A
ChlClbOption	Channel calibration mode	N/A	Unsigned integer.	N/A
SuppressionStatus	Channel calibration suppression status	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A
ChlClbClientThres	Client number	N/A	Unsigned integer. Value range: 1 to 124. Default: 124.	N/A
ChlClbSnt	Channel calibration sensitivity mode	N/A	Enumeration: • **0**—Custom. • **1**—Low. • **2**—Medium. • **3**—High.	N/A
ClbGroupId	Calibration group index	N/A	Unsigned integer.	N/A
WsaFlag	WSA collaboration of radio	N/A	Unsigned integer.	N/A
TimeRangeName	Time range name	N/A	String: case-sensitive.	N/A
ScanMode	Channel scanning status	N/A	Unsigned integer.	N/A
ServiceType	Radio service type	N/A	Unsigned integer.	N/A
IsChlPronto	Channel pronto	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	calibration flag		true—Support. false—Not support.	
IsPwrPronto	Power pronto calibration flag	N/A	Boolean: true—Support. false—Not support.	N/A
IsRdScan	Whether a radio is set to scan	N/A	Boolean: true—Support. false—Not support.	N/A
BandwidthClbMode	Enable/Disable auto bandwidth selection of radio	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A

RRM/EnvQuality

This table contains information about environmental quality scores.

XML structure

```
<RRM>
  <EnvQuality>
    <EnvQualityScore>
      <RadioType></RadioType>
      <Score></Score>
    </EnvQualityScore>
  </EnvQuality>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	EnvQuality
Table type	Muti-instance table
Row name	EnvQualityScore
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioType	Radio type	Index	Enumeration: • 1—Radio type is 2.4G. • 2— Radio type is 5G.	N/A
Score	Environmental quality score	N/A	Unsigned integer.	N/A

RRM/RadioDetail

This table contains details about bad environmental quality radio.

XML structure

```
<RRM>
  <RadioDetail>
    <Radio>
      <RadioType></RadioType>
      <ApName></ApName>
      <RadioID></RadioID>
      <Reason></Reason>
    </Radio>
  </RadioDetail>
</RRM>
```

Table description

Item	Description

</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	LastHistoryRecord
Table type	Muti-instance table
Row name	RadioCount
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
BasicBSSID	Basic SSID	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ChangeTime	Date and time when change occurs	N/A	String	Example: 2014-05-07T09:35:07.
ReasonBitMap	Field of history information	N/A	Unsigned integer. Each bit in the string represents a reason. The changes were caused by reasons which bits are set to 1. Meaning of each bit: The last bit represents RadioDown; The second last bit represents Interference; The third last bit represents Noise; The forth last bit represents PachetDisCard; The fifth last bit represents Retransmission; The sixth last bit represents Radar; The seventh last bit represents Other;	N/A
UtilBef	Utilization before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
UtilAft	Utilization	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	after calibration		Value range: 0 to 100. Unit: %.	
LoadBef	Load before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
LoadAft	Load after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfBef	Total interference before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfAft	Total interference after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrBef	Packet error rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrAft	Packet error rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
ChlNumBef	Channel number before calibration	N/A	Unsigned integer.	N/A
ChlNumAft	Channel number after calibration	N/A	Unsigned integer.	N/A
PwrLvlBef	Power level before calibration	N/A	Unsigned integer.	N/A
PwrLvlAft	Power level after calibration	N/A	Unsigned integer.	N/A
RetryBef	Retransmission rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
RetryAft	Retransmission rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

RRM/HierarchyClbMode

This table contains hierarchy calibration mode information.

XML structure

```
<RRM>
  <HierarchyClbMode>
    <Mode></Mode>
  </HierarchyClbMode>
</RRM>
```

Table description

Item	Description
Feature name	RRM
Table name	HierarchyClbMode
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Hierarchy-calibration mode	N/A	Enumeration: • **0**—Local. • **1**—Central.	N/A

RRM/ApChlClbSntCfg

This table contains channel calibration sensitivity configuration information for radios of an AP.

XML structure

```
<RRM>
  <ChlClbSntCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <ChlClbSnt></ChlClbSnt>
    </Radio>
```

```
  </ChlClbSntCfg>
</RRM>
```

Table description

Item	Description

Band5GToleranceLevel	Tolerance level of 5GHz radios, which is used to determine if the current channel needs to be changed	N/A	Unsigned integer. Value range: 0 to 100. Default value: 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ChlClbMode	Auto channel selection status	N/A	Enumeration: • **0**—Disable auto channel selection (default) for both 2.4GHz and 5GHz radios. • **1**—Enable auto channel selection for 2.4GHz radios. • **2**—Enable auto channel selection for 5GHz radios. • **3**—Enable auto channel selection for both 2.4GHz and 5GHz radios.	N/A
Band2GAdjacencyFactor	Adjacency factor of 2.4GHz radios	N/A	Unsigned integer. Value range: 1 to 16. Default value: 1.	N/A
Band5GAdjacencyFactor	Adjacency factor of 5GHz radios	N/A	Unsigned integer. Value range: 1 to 16. Default value: 1.	N/A
Band2GPwrMin	Minimum transmit power of 2.4GHz radios	N/A	Unsigned integer. Value range: 1 to 20. Default value: 6.	N/A
Band5GPwrMin	Minimum transmit power of 5GHz radios	N/A	Unsigned integer. Value range: 1 to 20. Default value: 11.	N/A
Band2GPwrThreshold	Power threshold for 2.4GHz radio power calibration	N/A	Unsigned integer. Value range: 1 to 196. Default value: 75.	N/A
Band5GPwrThreshold	Power threshold for 5GHz radio power calibration	N/A	Unsigned integer. Value range: 1 to 196. Default value: 75.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PwrClbMode	Auto power selection status	N/A	Enumeration: • **0**—Disable auto power selection (default) for both 2.4GHz and 5GHz radios. • **1**—Enable auto power selection for 2.4GHz radios. • **2**—Enable auto power selection for 5GHz radios. • **3**—Enable auto power selection for both 2.4GHz and 5GHz radios	Optional
BandwidthClbMode	Auto bandwidth selection status	N/A	Enumeration: • 0—Disable auto bandwidth selection (default) for 5GHz radios. • 1—Enable auto bandwidth selection for 5GHz radios.	Optional

RSVP

RSVP/Base

This table contains RSVP Base information.

XML structure

```
<RSVP>
  <Base>
    <Enable></Enable>
    <Dscp></Dscp>
    <GracefulRestart></GracefulRestart>
    <KeepMultiplier></KeepMultiplier>
    <RefreshInterval></RefreshInterval>
    <HelloInterval></HelloInterval>
    <LostTimes></LostTimes>
    <Authentication></Authentication>
  </Base>
</RSVP>
```

Table description

Item	Description
Feature name	RSVP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable rsvp.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
Dscp	The DSCP value for RSVP packets.	N/A	Unsigned short. Value range: 0 to 63. Default:48.	N/A
GracefulRestart	RSVP graceful restart.	N/A	Boolean: • **true**—Enabled.	N/A

			• **false—**Disabled(default).	
KeepMultiplier	Specifies the PSB and RSB timeout multiplier.	N/A	Unsigned char. Value range:3 to 255. Default:3.	N/A
RefreshInterval	Set the refresh interval for Path and Resv messages.	N/A	Unsigned int. Value range:10 to 65535. Default:30.	N/A
HelloInterval	Specifies the interval at which RSVP sends hello requests.	N/A	Unsigned char. Value range:1 to 60s. Default:5s.	N/A
LostTimes	set the maximum number of consecutive lost or erroneous hellos.	N/A	Unsigned char. Value range:3 to 10. Default:4.	N/A
Authentication	The Authentication for RSVP SA.	Subtable	N/A	N/A

RSVP/Base/Authentication

This table contains RSVP Authentication information.

XML structure

```
<RSVP>
  <Base>
    <Authentication>
      <Challenge></Challenge>
      <PlainPassword></PlainPassword>
      <CipherPassword></CipherPassword>
      <LifeTime></LifeTime>
      <WindowSize></WindowSize>
    </Authentication>
  </Base>
</RSVP>
```

Table description

Item	Description
Feature name	RSVP
Table name	Authentication
Table type	Single-instance table

Row name	None
Restrictions	Applicable to only RSVP view.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Challenge	AuthenticationChallenge.	N/A	Boolean: • **true.** • **false (default).**	N/A
PlainPassword	Plaintext password string.	N/A	String. Length:1 to 16characters.	N/A
CipherPassword	Cipherpassword string.	N/A	String. Length:1 to 53characters.	N/A
LifeTime	Set the global idle timeout for RSVP security associations.	N/A	Unsigned integer. Value range:30 to 86400s. Default:1800s.	N/A
WindowSize	Set the global RSVP authentication window size.	N/A	Unsigned char. Value range:1 to 64. Default:1.	N/A

RSVP/Peers

This table contains RSVP Peer information.

XML structure

```
<RSVP>
  <Peers>
    <Peer>
      <PeerAddress></PeerAddress>
      <Authentication></Authentication>
    </Peer>

SaaS/Instances 2
SaaS/Instances/Urls 2
SaaS/Instances/AccessVpns 3

SaaS

SaaS/Base/DirectInterfaces

Message	Explanation
Maximum number of direct interface already reached. 配置的SaaS应用直访接口数量超过上限。	Up to 10 SaaS application direct access interfaces can be configured. 最多可以配置10个SaaS应用直访接口。

SaaS/Instances

Message	Explanation
Invalid SaaS application instance name. SaaS应用实例名称不合法。	SaaS application instance name is a string of 1-63 characters, which cannot include "\", "", "?" and spaces. It is case sensitive. SaaS应用实例名称，为1～63字符的字符串，不能包括“\”、“"”、“?”和空格，区分大小写。
Invalid health-check URL. 健康监测URL不合法。	The health monitoring URL is a string of 1-63 characters, which cannot include "\", "", "?" and spaces. It is case sensitive. 健康监测URL，为1～63的字符的字符串，不能包括“\”、“"”、“?”和空格，区分大小写。
A health monitoring URL is already used in another instance. 健康监测URL，已经在其他实例上被使用。	The health monitoring URL can only be used for detection on one instance. 健康监测URL仅可以在一个实例上使用。
The current saas already exists in the customization file, configuration is not allowed. 不能修改定制SaaS应用的健康监测URL。	The health monitoring URL of custom SaaS application is configured by default and cannot be modified. 定制SaaS应用的健康监测URL由系统缺省配置，不可以被修改。
Delay,jitter and packet loss cannot be configured separately. 不能单独配置时延、时延抖动和丢包率	Delay,jitter and packet loss cannot be configured separately。It must be distributed in full or not. 不能单独配置时延、时延抖动和丢包率。必须全部下发或者不下发。
The number of uncustomized SaaS application instance reaches the upon limit. 创建的非定制SaaS应用实例个数达到上限。	Up to 100 non custom SaaS application instances can be created. 最多可以创建100个非定制SaaS应用实例。

SaaS/Instances/Urls

Message	Explanation
Invalid URL. URL不合法。	URL name is a string of 1-63 characters, which cannot include "\", "", "?" and spaces. It is case sensitive. 访问指定SaaS应用的URL，为1～63的字符的字符串，不能包括“\”、“"”、“?”和空格，区分大小写。
The current saas already exists in the	The URL to access the custom SaaS application is created by

customization file, configuration is not allowed. 定制SaaS应用实例下不能配置URL。	default and cannot be added, modified or deleted. 访问定制SaaS应用的URL由系统缺省创建，不可以被添加、修改或删除。
URL configuration limit exceeded. 超过了URL配置上限	Beyond the URL configuration limit, each non custom SaaS application instance can add up to 100 URLs. 每个非定制SaaS应用实例最多可以添加100个URL。

SaaS/Instances/AccessVpns

Message	Explanation
The number of VPN instance reaches the upon limit. 进行SaaS优化的VPN实例个数达到上限	Enter the VPN instance name up to 8 times. 输入vpn实例名称最多8次。
Private network VPN type, must issue VPN name. 私网vpn类型，必须下发vpn名称。	Private network VPN type, must issue VPN name. 私网vpn类型，必须下发vpn名称。
Public network VPN type, no need to issue VPN name. 公网vpn类型，不用下发vpn名称。	Public network VPN type, no need to issue VPN name. 公网vpn类型，不用下发vpn名称。
Invalid VPN. VPN不合法。	VPN name is a string of 1-31 characters, which cannot include "\", "", "?" and spaces. It is case sensitive. 访问指定SaaS应用的URL，为1～31的字符的字符串，不能包括“\”、“"”、“?”和空格，区分大小写。

Restrictions	If you set the Operation column to **2**, other columns are not configurable. To set the Date column, you must also set the Time column. The Delay column is mutually exclusive with the Date and Time columns.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
At	Execution time	Data structure	Members include: • Time • Date	N/A
Time	Reboot time	N/A	String. Format: • HH:MM:SS	Value ranges: • **HH**—0 to 23. • **MM**—0 to 59.

				• **SS**—0 to 59. If you set this column but do not set the Date column, the system uses the following rules to determine the reboot time: • If the reboot time is later than the current time, a reboot will occur at the reboot time of the current day. • If the reboot time is earlier than the current time, a reboot will occur at the reboot time the next day.
Date	Reboot date	N/A	String. Format: • MM/DD/YYYY • YYYY/MM/DD	Value ranges: • **YYYY**—2000 to 2035. • **MM**—1 to 12. • **DD**—1 to the final day of the month. To set this column, you must also set the Time column.
Delay	Reboot delay time	N/A	String. Length: 1 to 6 characters. Format: • HH:MM • MM	The value can have up to six characters. When in the hh:mm format, mm must be in the range of 0 to 59.
Clear	Clear the system reboot time	N/A	N/A	This column must be empty.

Scheduler/SchedulerLogfile

This table is used to clear job execution log information.

XML structure

```
<Scheduler>
  <SchedulerLogfile>
    <Clear></Clear>
  </SchedulerLogfile>
</Scheduler>
```

Table description

Item	Description
Feature name	Scheduler

Item	Description
Table name	SchedulerLogfile
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears job execution log information	N/A	This column must be empty.

Scheduler/ScheduleOnces

This table is used to manage non-periodic schedules.

XML structure

```
<Scheduler>
  <ScheduleOnces>
    <ScheduleOnce>
      <ScheduleName></ScheduleName>
      <Operation></Operation>
      <Time></Time>
      <Once>
        <Date></Date>
        <MonthDay></MonthDay>
        <WeekDay></WeekDay>
      </Once>
      <Delay></Delay>
    </ScheduleOnce>
  </ScheduleOnces>
</Scheduler>
```

Table description

Item	Description
Feature name	Scheduler
Table name	ScheduleOnces
Table type	Multi-instance table
Row name	ScheduleOnce
Restrictions	If you set the Operation column to **2**, you can set only the

Item	Description
	ScheduleName column. The Delay column is mutually exclusive with the Time, Date, MonthDay, and WeekDay columns. After you set the Time column, you can also set the Date, MonthDay, or WeekDay column. However, the Date, MonthDay, and WeekDay columns are mutually exclusive. If you set the Time and Date columns, make sure the specified time (date plus time) is later than the current system time.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScheduleName	Schedule name	Index	String. Length: 1 to 47 characters.	N/A
Operation	Manages a job schedule	N/A	Enumeration: • **1**—Adds a job schedule. • **2**—Deletes a job schedule.	N/A
Time	Execution time	N/A	String. Format: HH:MM	Set this column to execute the schedule at the specified time. Value ranges: • **HH—**0 to 23. • **MM**—0 to 59.
Once	Execution date	Data structure	Members include: • Date • MonthDay • WeekDay	N/A
Date	Execution date	N/A	String. Format: • MM/DD/YYYY • YYYY/MM/DD	Value ranges: • **YYYY**—2000 to 2035. • **MM**—1 to 12. • **DD**—1 to the final day of the month.
MonthDay	Execution day in the current month	N/A	Unsigned integer. Value range: 1 to 31.	If you specify a day that does not exist in the current month, the configuration takes effect on that day in the next month.
WeekDay	Week days	N/A	String. Format: *Week-day*&<1-7> *Week-day*: • **1**—Mon. • **2**—Tue. • **3**—Wed. • **4**—Thu. • **5**—Fri. • **6**—Sat.	You can specify a space-separated list of up to seven week days for the schedule. Example: “1 2 3 4 5 6 7”

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **7**—Sun.	
Delay	Delay time	N/A	String. Length: 1 to 6 characters. Format: • HH:MM • MM	Set this column to execute the schedule after the delay time elapses. The *mm* in the *hh:mm* format must be in the range of 0 to 59.

SCM event stream

ProcessRestartEvent event

This event is used to report process restart information.

XML structure for event subscription

```
<ProcessRestartEvent>
  <Process>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <ServiceName></ServiceName>
    <InstanceID></InstanceID>
  </Process>
</ProcessRestartEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SCM</stream>
    <filter type="subtree">
      <ProcessRestartEvent t xmlns="http://www.h3c.com/netconf/event:1.0/SCM:1.0">
        <Process>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
           <ServiceName>SYSLOG</ServiceName>
          <InstanceID>0</InstanceID>
        </Process>
      </ProcessRestartEvent >
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	SCM
Event name	ProcessRestartEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/SCM:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No	N/A
ServiceName	The service name	String. Length: 1 to 64 characters.	No	N/A
InstanceID	Service instance ID	Unsigned integer. Value range: 0 to 65535.	No	N/A

XML structure for event report

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
InterfaceID	Tunnel interface index	N/A	Unsigned integer. Value range:1 to 255	N/A
RoutingDomain	Routing domain parameters	Data Structure	Members include:. • DomainName. • DomainID.	N/A
DomainName	Routing domain name	N/A	String, case sensitive. Length: 1 to 31 characters.	Default:NULL
DomainID	Routing domain ID	N/A	Unsigned integer. Value range:1 to 65535	Default:NULL
TransportNetwork	Transport network attributes	Data Structure	Members include:. • NetworkName. • NetworkID.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• NetworkRestrict.	
NetworkName	Transport network name	N/A	String, case sensitive. Length: 1 to 31 characters.	Default:NULL
NetworkID	Transport network ID	N/A	Unsigned integer. Value range:1 to 65535	Default:NULL
NetworkRestrict	Whether to allow only tunnel interfaces that are specified the same transport network ID to set up TTE connections	N/A	Boolean: • **true**—Allows only tunnel interfaces that are specified the same transport network ID to set up TTE connections. • **false**—Allows tunnel interfaces that are specified different transport network IDs to set up TTE connections.	Default:false
TunnelUDPPort	Port number used on SDWAN tunnel	N/A	Unsigned integer. Value range:1 to 65535	N/A
TunnelUDPPortDynamic	Enabling status of dynamic UDP port number allocation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Default: false.
TunnelUDPPortDynamicTime	Dynamic allocation timeout time	N/A	Unsigned integer. Value range: 30 to 1800 seconds. Default: 180 seconds.	N/A
NatPublicInfo	NAT public information	Data Structure	Members include:. • PublicIP • PublicPort	N/A
PublicIP	NAT public IP	N/A	String, dotted decimal notation.	Default:NULL
PublicPort	NAT public port	N/A	Unsigned integer. Value range:1 to 65535	Default:NULL
Keepalive	Keepalive parameters	Data structure	Members include: • Interval. • RetryTime.	N/A
Interval	Keepalive interval	N/A	Unsigned integer Value range: 1 to 32767 seconds Default: 10 seconds.	N/A
RetryTime	Maximum number of keepalive attempts.	N/A	Unsigned integer Value range: 1 to 255. Default: 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BFD	BFD settings	Data structure	Members include: • BFDEnable • Template	N/A
BFDEnable	Enable BFD for the SDWAN tunnel	N/A	Boolean: • **true**. • **false.**	N/A
Template	BFD template name	N/A	String, case sensitive. Length: 1 to 63 characters.	Default: NULL.
CollDevIDList	Collaboration device ID list	N/A	String.	A range of collaboration device IDs

SDWAN/SdwanExtensionCfg

This table contains SDWAN extension tunnel configuration information.

XML structure

```
<SDWAN>
  <SdwanExtensionCfg>
    <SdwanExtension>
      <TunnelID></TunnelID>
      <PeerDeviceID></PeerDeviceID>
      <PeerInterfaceID></PeerInterfaceID>
    </SdwanExtension>
  </SdwanExtensionCfg>
</SDWAN>
```

Table description

Item	Description

Table type	Multi-instance table
Row name	TunnelSdwan
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
InterfaceID	Tunnel interface index	N/A	Unsigned integer. Value range: 1 to 255.	N/A
RoutingDomain	Routing domain parameters	Data Structure	Members include:. • DomainName. • DomainID.	N/A
DomainName	Routing domain name	N/A	String, case sensitive. Length: 1 to 31 characters.	Default: NULL.
DomainID	Routing domain ID	N/A	Unsigned integer. Value range: 1 to 65535.	Default: NULL.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransportNetwork	Transport network attributes	Data Structure	Members include:. • NetworkName. • NetworkID. • NetworkRestrict.	N/A
NetworkName	Transport network name	N/A	String, case sensitive. Length: 1 to 31 characters.	Default: NULL.
NetworkID	Transport network ID	N/A	Unsigned integer. Value range: 1 to 65535.	Default: NULL.
NetworkRestrict	Whether to allow only tunnel interfaces that are specified the same transport network ID to set up TTE connections	N/A	Boolean: • **true**—Allows only tunnel interfaces that are specified the same transport network ID to set up TTE connections. • **false**—Allows tunnel interfaces that are specified different transport network IDs to set up TTE connections.	Default: false.
TunnelUDPPort	Port number used on SDWAN tunnel	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TunnelUDPPortDynamic	Enabling status of dynamic UDP port number allocation	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Default: false.
TunnelUDPPortDynamicTime	Dynamic allocation timeout time	N/A	Unsigned integer. Value range: 30 to 1800 seconds. Default: 180 seconds.	N/A
NatPublicInfo	NAT public infomation	Data Structure	Members include:. • PublicIP. • PublicPort.	N/A
PublicIP	NAT public IP	N/A	String, dotted decimal notation.	Default: NULL.
PublicPort	NAT public port	N/A	Unsigned integer. Value range: 1 to 65535.	Default:.NULL.
Keepalive	Keepalive parameters	Data structure	Members include: • Interval. • RetryTime.	N/A
Interval	Keepalive interval	N/A	Unsigned integer Value range: 1 to 32767 seconds. Default: 10 seconds	N/A
RetryTime	Maximum	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number of keepalive attempts		Value range: 1 to 255. Default :3.	
BFD	BFD parameters	Data structure	Members include: • BFDEnable • Template	N/A
BFDEnable	BFD enable	N/A	Boolean: • **true**—BFD Enable • **false—**BFD Disable	N/A
Template	Template name	N/A	String, case sensitive. Length: 1 to 63 characters.	Default: NULL.
CollDevIDList	Collaboration device ID list	N/A	String.	A range of collaboration device IDs.

SDWAN/SdwanExtensionCfg

This table contains SDWAN extension tunnel configuration information.

XML structure

```
<SDWAN>
  <SdwanExtensionCfg>
    <SdwanExtension>
      <TunnelID></TunnelID>
      <PeerDeviceID></PeerDeviceID>
      <PeerInterfaceID></PeerInterfaceID>
    </SdwanExtension>
  </SdwanExtensionCfg>
</SDWAN>
```

Table description

Comware 7 SDWAN NETCONF XML API Error Message Reference

SDWAN/Config

Message	Explanation
Please first install the license for the SDWAN feature. 请先安装SDWAN功能的许可证。	This feature is available only if a license for the SDWAN feature is installed. 只有先安装SDWAN的许可证，此功能才可用。

SDWAN/GlobalConfig

Message	Explanation
SDWAN server has already been enabled, sdwan status cannot be changed sdwan server已经使能，不能改变 SDWAN server 状态	SDWAN server has enabled, please.undo sdwan server and try again. SDWAN server已经使能，请去使能sdwan server 并再次尝试

SDWAN/SdwanServer

Message	Explanation
Failed to set SDWAN server status. 使能SDWAN服务失败。	The specified listening port is being used by antoher service.You need to specify another port . 指定的监听端口正在被另一个服务使用，您需要指定另一个端口。 Or, please check the server policy configuration and certificate. 或者请检查服务策略配置和证书。
SDWAN server has already been enabled, sdwan status cannot be changed sdwan server已经使能，不能改变 SDWAN server 状态	SDWAN server has enabled, please.undo sdwan server and try again. SDWAN server已经使能，请去使能sdwan server 并再次尝试
Role doesn't include rr, cannot enable server 由于当前站点角色不包括RR，无法使能SDWAN服务。	Need to set site role including RR 需要设置站点角色包括RR。

SDWAN/ClientSetServers

Message	Explanation
Invalid IP address. 无效的 IP 地址。	The loopback address or other invalid IP addresses may be used 可能使用了环回地址或其他的无效地址。

SdwanTunnelDown event

This event is used to report SDWAN tunnel information when an SDWAN tunnel goes down.

XML structure for event subscription

```
<SdwanTunnelDown>
  <Tunnel>
    <TunnelID></TunnelID>
  </Tunnel>
</SdwanTunnelDown>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTunnelDown xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
          <Tunnel>
            <TunnelID>1</TunnelID>
          </Tunnel>
        </SdwanTunnelDown>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	SDWAN
Event name	SdwanTunnelDownEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/sdwan:1.0
Support for extended query	No

Columns

Column name	**Column description**	**Data type and restrictions**	**Support for extended queries**
TunnelID	Tunnel ID	Unsigned integer. Value range: 0 to 1023.	No

XML structure for event report

```
<SdwanTunnelDown>
  <Tunnel>
    <TunnelID></TunnelID>
```

```
    <SiteID></SiteID>
    <DeviceID></DeviceID>
    <InterfaceID></InterfaceID>
    <DownReason></DownReason>
  </Tunnel>
</SdwanTunnelDown>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2020-09-30T09:10:51</eventTime>
  <SdwanTunnelDown xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
    <Tunnel>
      <TunnelID>1</TunnelID>
      <SiteID>1</SiteID>
      <DeviceID>1</DeviceID>
      <InterfaceID>1</InterfaceID>
      <DownReason>2</DownReason>
    </Tunnel>
  </SdwanTunnelDown>
</notification>
```

Columns

Column name	**Column description**	**Data type and restrictions**	**Support for extended queries**
TunnelID	Tunnel ID	Unsigned integer. Value range: 0 to 1023.	No
SiteID	Site ID	Unsigned integer. Value range: 1 to 65535.	No
DeviceID	Device ID	Unsigned integer. Value range: 1 to 255.	No
InterfaceID	Interface ID of SDWAN tunnel portal	Unsigned Integer. Value range: 1 to 255.	No
DownReason	Tunnel down reason	Enumeration: • **1**—The tunnel went down. • **2**—The tunnel was deleted. • **3**—Required configuration was removed from the tunnel.	No

SdwanTunnelUp event

This event is used to report SDWAN tunnel information when an SDWAN tunnel comes up..

XML structure for event subscription

```
<SdwanTunnelUp>
  <Tunnel>
```

```
    <TunnelID></TunnelID>
  </Tunnel>
</SdwanTunnelUp>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTunnelUp xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
        <Tunnel>
          <TunnelID>1</TunnelID>
        </Tunnel>
      </SdwanTunnelUp>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	SDWAN
Event name	SdwanTunnelUp
Event namespace	http://www.h3c.com/netconf/event:1.0/sdwan:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TunnelID	Tunnel ID	Unsigned integer Value range:0 to 1023	No

XML structure for event report

```
<SdwanTunnelUp>
  <Tunnel>
    <TunnelID></TunnelID>
    <SiteID></SiteID>
    <DeviceID></DeviceID>
    <InterfaceID></InterfaceID>
  </Tunnel>
</SdwanTunnelUp>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
```

```
  <SdwanTunnelUp xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
    <Tunnel>
      <TunnelID>1</TunnelID>
      <SiteID>1</SiteID>
      <DeviceID>1</DeviceID>
      <InterfaceID>1</InterfaceID>
    </Tunnel>
  </SdwanTunnelUp>
</notification>
```

Columns

Column name	**Column description**	**Data type and restrictions**	**Support for extended queries**
TunnelID	Tunnel ID	Unsigned integer. Value range: 0 to 1023.	No
SiteID	Site ID	Unsigned integer. Value range: 1 to 65535.	No
DeviceID	Device ID	Unsigned integer. Value range: 1 to 255.	No
InterfaceID	Interface ID of SDWAN tunnel portal	Unsigned Integer. Value range: 1 to 255.	No

SdwanTteConnectionsAdd event

This event is used to report SDWAN TTE connection information when SDWAN TTE connections are added.

XML structure for event subscription

```
<SdwanTteConnectionsAdd>
  <Tunnel>
    <TunnelID></TunnelID>
  </Tunnel>
</SdwanTteConnectionsAdd>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTteConnectionsAdd xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
          <Tunnel>
            <TunnelID>1</TunnelID>
          </Tunnel>
```

```
      </SdwanTteConnectionsAdd>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description

      <DstIP>1.1.1.2</DstIP>
      <DstIPFamily>2</DstIPFamily>
      <DstPrivateIP>1.1.1.2</DstPrivateIP>
      <DstPrivateIPFamily>2</DstPrivateIPFamily>
      <SrcPort>1</SrcPort>
      <DstPort>1</DstPort>
      <Status>false</Status>
      <BandWidth>64</BandWidth>
    </Tunnel>
  </SdwanTteConnectionsAdd>
</notification>
```

Columns

Column name	Column description	Column type	Data type and restrictions
DSiteID	ID of a remote site	Index	Unsigned integer. Value range: 1 to 65535.
DDevID	ID of a remote device	Index	Unsigned integer. Value range: 1 to 255.
DSysIP	System IP of the remote device	N/A	IPv4 address, dotted decimal notation.
NewDSysIP	System IP of the remote device	String.	IPv4 address IPv6 address
NewDSysIPFamily	Family of the System IP	Enumeration: • IPv4 • IPv6	N/A
SIfID	Source Interface ID	Index	Unsigned integer. Value range: 1 to 255.
DIfID	Destination Interface ID	Index	Unsigned integer. Value range: 1 to 255.
SrcIP	Encapsulated source IP address	String.	IPv4 address

Column name	Column description	Column type	Data type and restrictions
			IPv6 address
SrcIPFamily	Family of encapsulated source IP address	Enumeration: • **2—IPv4** • **10—IPv6**	N/A
DstIP	Encapsulated destination IP address	String.	IPv4 address IPv6 address
DstIPFamily	Family of encapsulated destination IP address	Enumeration: • **2—IPv4** • **10—IPv6**	N/A
DstPrivateIP	Encapsulated destination private IP address	String.	IPv4 address IPv6 address
DstPrivateIPFamily	Family of encapsulated destination private IP address	Enumeration: • **2—IPv4** • **10—IPv6**	N/A
SrcPort	Source port	N/A	Unsigned integer. Value range: 1 to 65535.
DstPort	Destination port	N/A	Unsigned integer. Value range: 1 to 65535.
Status	TTE connection status	Boolean: • **true**—Reachable • **false**—Unreachable	N/A
BandWidth	TTE connection bandwidth	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.

SdwanTteConnectionsDel event

This event is used to report SDWAN TTE connection information when SDWAN TTE connections are deleted..

XML structure for event subscription

```
<SdwanTteConnectionsDel>
  <Tunnel>
    <TunnelID></TunnelID>
  </Tunnel>
</SdwanTteConnectionsDel>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
```

```
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTteConnectionsDel xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
        <Tunnel>
          <TunnelID>1</TunnelID>
        </Tunnel>
      </SdwanTteConnectionsDel>
    </filter>
  </create-subscription>
</rpc>
```

Table description

    </SdwanTlsStatus>
  </SdwanTlsStatusEvent>
</notification>
```

Columns

Column name	**Column description**	**Data type and restrictions**	**Support for extended queries**	**Remarks**
SystemIP	System IP of a remote device	IPv4 address, dotted decimal notation.	No	N/A
NewSystemIP	System IP of a remote device	String.	No	N/A
NewSystemIPFamily	Family of the remote device system IP	Enumeration: • IPv4 • IPv6	No	N/A
PeerIP	IP of the remote device	String.	No	N/A
PeerIPFamily	Family of peer IP	Enumeration: • IPv4 • IPv6	No	N/A
PeerPort	Peer port	Unsigned integer Value range: 1 to 65535.	No	N/A
VPNInstance	VPN instance	String Length range: 1 to 31.	No	N/A
Status	TLS link status	Enumeration: • Connected • Disconnected	No	N/A
Reason	Disconnected Reason	Unsigned integer Value range: 1 to 3.	No	**1**—Other **2**—Failed to connect to the server **3**—Configuration change

SdwanTlsAddEvent event

This event is used to report SDWAN TLS information when an TLS added.

XML structure for event subscription

```
<SdwanTlsAddEvent>
</SdwanTlsAddEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTlsAddEvent xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
      </SdwanTlsAddEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	SDWAN
Event name	SdwanTlsAddEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/sdwan:1.0
Support for extended query	No

XML structure for event report

```
<SdwanTlsAddEvent>
  <SdwanTlsAdd>
    <SystemIP></SystemIP>
    <NewSystemIP></NewSystemIP>
    <NewSystemIPFamily></NewSystemIPFamily>
    <PeerIP></PeerIP>
    <PeerIPFamily></PeerIPFamily>
    <PeerPort></PeerPort>
    <VPNInstance></VPNInstance>
  </SdwanTlsAdd>
</SdwanTlsAddEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2022-03-12T09:10:51</eventTime>
  <SdwanTlsAddEvent xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
    <SdwanTlsAdd>
      <SystemIP>10.1.1.1</SystemIP>
      <NewSystemIP>10.1.1.1</NewSystemIP>
      <NewSystemIPFamily>IPv4</NewSystemIPFamily>
      <PeerIP>10.1.1.100</PeerIP>
      <PeerIPFamily>IPv4</PeerIPFamily>
      <PeerPort>2000</PeerPort>
      <VPNInstance>vpn1</VPNInstance>
    </SdwanTlsAdd>
  </SdwanTlsAddEvent>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
SystemIP	System IP of a remote device	IPv4 address, dotted decimal notation.	No
NewSystemIP	System IP of a remote device	String	No
NewSystemIPFamily	Family of the remote device system IP	Enumeration: • IPv4 • IPv6	No
PeerIP	IP of the remote device	String.	No
PeerIPFamily	Family of peer IP	Enumeration: • IPv4 • IPv6	No
PeerPort	Peer port	Unsigned integer Value range: 1 to 65535.	No
VPNInstance	VPN instance	String Length range: 1 to 31.	No

SdwanTlsDelEvent event

This event is used to report SDWAN TLS information when an TLS deleted.

XML structure for event subscription

```
<SdwanTlsDelEvent>
</SdwanTlsDelEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SDWAN</stream>
    <filter type="subtree">
      <SdwanTlsDelEvent xmlns="http://www.h3c.com/netconf/event:1.0/sdwan:1.0">
      </SdwanTlsDelEvent>
    </filter>
  </create-subscription>
</rpc>
```

SecDiag

SecDiag/ExportLogfile

This table is used to export log files of contexts.

XML structure

```
<SecDiag>
  <ExportLogfile>
    <ContextList>
      <ContextID></ContextID>
    </ContextList>
    <FileName></FileName>
    <IsOverwrite></IsOverwrite>
  </ExportLogfile>
</SecDiag>
```

Response XML structure

```
<SecDiag>
  <ExportLogfile>
    <Result></Result>
    <ErrorInfo></ErrorInfo>
  </ExportLogfile>
</SecDiag>
```

Table description

Item	Description
Feature name	SecDiag
Table name	ExportLogfile
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextList	List of contexts secleted on the Web.	Data structure	Members include: • ContextID	If no context is selected, information about all contexts is exported.

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	ID of the context.	N/A	Unsigned integer. Value range: 1 to 65535	N/A
FileName	Name for the export file.	N/A	String. Length: 1 to 255 characters. Format: **logfile***date***.tar.gz** Date format: YYYYMMDDhhmmss	Example: logfile20170424000000.tar.gz. The filename cannot be **..tar.gz** or **…tar.gz**, or contain any of the following characters: " / : \ ? \\ < > | *
IsOverwrite	Whether to overwrite the file if it already exists.	N/A	Boolean: • **true**—Overwrites the file. • **fasle**—Does not overwrite the file.	By default, the value of this column is **false**.

Response columns

Column name	Column description	Data type and restrictions	Remarks
Result	Export result.	Enumeration: • **0**—Succeeded. • **1**—File already exists.	N/A
ErrorInfo	Description for the export result.	String. Length: 1 to 255 characters.	This column carries the description for the enumeration value that represents the export result.

SecDiag/ExportConfiguration

This table is used to export configuration files of contexts.

XML structure

```
<SecDiag>
  <ExportConfiguration>
    <ContextList>
      <ContextID></ContextID>
    </ContextList>
    <FileName></FileName>
    <IsOverwrite></IsOverwrite>
  </ExportConfiguration>
</SecDiag>
```

Response XML structure

```
<SecDiag>
  <ExportConfiguration>
    <Result></Result>
    <ErrorInfo></ErrorInfo>
  </ExportConfiguration>
</SecDiag>
```

Table description

Item	Description
Feature name	SecDiag
Table name	ExportConfiguration
Table type	Single-instance table
Row name	None

SecurityPolicies

SecurityPolicies/ClearRuleStatistic

This table contains the operation information for a security policy rule.

XML structure

```
<SecurityPolicies>
  <ClearRuleStatistic>
    <Rule>
      <RuleID></RuleID>
      <ClearType></ClearType>
      <Clear></Clear>
    </Rule>
  </ClearRuleStatistic>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ClearRuleStatistic
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
ClearType	Type of statistics to be cleared.	N/A	Enumeration: • 1—IPv4 statistics. • 2—IPv6 statistics.	N/A
Clear	Clears security policy rule statistics.	N/A	This column must be empty.	Required.

SecurityPolicies/CommitCfgChange

This table contains the commit operation for configuration changes.

XML structure

```
<SecurityPolicies>
  <CommitCfgChange>
    <Commit></Commit>
  </CommitCfgChange>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	CommitCfgChange
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Commit	Commits configuration changes.	N/A	This column must be empty.	Required.

SecurityPolicies/MoveIPv4Rule

This table contains information about moving an IPv4 security policy rule within an IPv4 security policy.

XML structure

```
<SecurityPolicies>
  <MoveIPv4Rule>
    <Rule>
      <ID></ID>
      <MoveType></MoveType>
      <DestID></DestID>
    </Rule>
  </MoveIPv4Rule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv4Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
MoveType	Type of the move operation.	Index	Enumeration: • 1—Head. • 2—Before. • 3—After. • 4—Tail. • 5—Up. • 6—Down.	N/A
DestID	Destination rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.	N/A

SecurityPolicies/MoveIPv6Rule

This table contains information about moving an IPv6 security policy rule within an IPv6 security policy.

XML structure

```
<SecurityPolicies>
  <MoveIPv6Rule>
    <Rule>
      <ID></ID>
      <MoveType></MoveType>
      <DestID></DestID>
    </Rule>
  </MoveIPv6Rule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv6Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
MoveType	Type of the move operation.	Index	Enumeration: • 1—Head. • 2—Before. • 3—After. • 4—Tail. • 5—Up. • 6—Down.	N/A
DestID	Destination rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.	N/A

SecurityPolicies/RedundancyRulesCheck

This table contains information about checking redundant security policy rules.

XML structure

```
<SecurityPolicies>
  <RedundancyRulesCheck>
    <Action></Action>
  </RedundancyRulesCheck>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RedundancyRulesCheck
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action of checking redundant rules.	N/A	Enumeration: • 1—Start. • 2—Stop.	N/A

SecurityPolicies/SingleOptimized

This table contains the optimization operation for single risky security policy rule.

XML structure

```
<SecurityPolicies>
  <SingleOptimized>
    <PolicyType></PolicyType>
    <RuleID></RuleID>
    <RuleName></RuleName>
    <Profile></Profile>
    <ParentID></ParentID>
    <ParentName></ParentName>
    <IsAppTicked></IsAppTicked>
  </SingleOptimized>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	SingleOptimized
Table type	Single-instance table

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyType	Rule type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.	Required.
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.	Required.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Required.
Profile	Profile name.	N/A	String. Length: 1 to 63 characters.	Required.
ParentID	Parent rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.	Required.
ParentName	Parent rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Required.
IsAppTicked	Whether the application being ticked.	N/A	Boolean: • true—Enable. • false—Disable.	Required.

SecurityPolicies/BatchOptimized

This table contains the optimization operation for some risky security policy rules.

XML structure

```
<SecurityPolicies>
  <BatchOptimized>
    <OptimizeType></OptimizeType>
    <Commit></Commit>
  </BatchOptimized>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	BatchOptimized
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptimizeType	The time range of optimization.	Index	Enumeration: • 0—Today. • 1—Last Three Days. • 2—Last Week. • 3—Last Month.	Required
Commit	Commit batch optimization operation.	N/A	This column must be empty.	Required.

SecurityPolicies/MoveIPv4RuleGroup

This table contains information about moving a rule group within an IPv4 security policy.

XML structure

```
<SecurityPolicies>
  <MoveIPv4RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Direction></Direction>
      <DestinationType></DestinationType>
      <DestinationName></DestinationName>
    </RuleGroup>
  </MoveIPv4RuleGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv4RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Direction	Moving direction	Index	Enumeration: • 1—Before. • 2—After.	N/A
DestinationType	Type of destination	Index	Enumeration: • 1—Rule group. • 2—Rule.	N/A
DestinationName	Target rule group name or rule name	Index	String, case-insensitive. Length: 1 to 127 characters.	N/A

SecurityPolicies/MoveIPv6RuleGroup

This table contains information about moving a rule group within an IPv6 security policy.

XML structure

```
<SecurityPolicies>
  <MoveIPv6RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Direction></Direction>
      <DestinationType></DestinationType>
     <DestinationName></DestinationName>
    </RuleGroup>
  </MoveIPv6RuleGroup>
```

```
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv6RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Direction	Moving direction	Index	Enumeration: • 1—Before. • 2—After.	N/A
DestinationType	Type of destination	Index	Enumeration: • 1—Rule group. • 2—Rule.	N/A
DestinationName	Target rule group name or rule name	Index	String, case-insensitive. Length: 1 to 127 characters.	N/A

SecurityPolicies/RenameIPv4RuleGrp

This table contains information about renaming a rule group within an IPv4 security policy.

XML structure

```
<SecurityPolicies>
  <RenameIPv4RuleGrp>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <NewRuleGroupName></NewRuleGroupName>
    </RuleGroup>
  </RenameIPv4RuleGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RenameIPv4RuleGrp
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NewRuleGroupName	New rule group name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

SecurityPolicies/RenameIPv6RuleGrp

This table contains information about renaming a rule group within an IPv6 security policy.

XML structure

```
<SecurityPolicies>
  <RenameIPv6RuleGrp>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <NewRuleGroupName></NewRuleGroupName>
    </RuleGroup>
  </RenameIPv6RuleGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RenameIPv6RuleGrp
Table type	Multi-instance table
Row name	RuleGroup

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NewRuleGroupName	New rule group name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

SecurityPolicies/ExportSecurityPolicies

This table contains information about exporting security policy rules.

XML structure

```
<SecurityPolicies>
  <ExportSecurityPolicies>
    <FileName></FileName>
    <SecZone></SecZone>
    <AddrOMS></AddrOMS>
    <SrvOMS></SrvOMS>
    <App></App>
    <Terminal></Terminal>
    <Location></Location>
    <TimeRange></TimeRange>
    <VRF></VRF>
    <Profile></Profile>
    <Policy></Policy>
    <User></User>
    <Mac></Mac>
    <URL></URL>
  </ExportSecurityPolicies>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ExportSecurityPolicies

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the export file	N/A	String: Length: 1 to 255 characters.	N/A
SecZone	Whether the configuration of security zones needs to be exported	N/A	Boolean: • true • false	N/A
AddrOMS	Whether the configuration of address object groups needs to be exported	N/A	Boolean: • true • false	N/A
SrvOMS	Whether the configuration of service object groups needs to be exported	N/A	Boolean: • true • false	N/A
App	Whether the configuration of applications and application groups needs to be exported	N/A	Boolean: • true • false	N/A
Terminal	Whether the configuration of terminals and terminal groups needs to be exported	N/A	Boolean: • true • false	N/A
Location	Whether the configuration of locations and loc ation groups needs to be exported	N/A	Boolean: • true • false	N/A
TimeRange	Whether the configuration of time ranges needs to be exported	N/A	Boolean: • true • false	N/A
VRF	Whether the configuration of VRT need be export or not	N/A	Boolean: • true • false	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Whether the configuration of VPN instances needs to be exported	N/A	Boolean: • true • false	N/A
Policy	Whether the configuration of profiles needs to be exported	N/A	Boolean: • true • false	N/A
User	Whether the configuration of security policies needs to be exported	N/A	Boolean: • true • false	N/A
Mac	Whether the configuration of users and user groups needs to be exported	N/A	Boolean: • true • false	N/A
URL	Whether the configuration of URL category needs to be exported	N/A	Boolean: • true • false	N/A

SecurityPolicies/ImportSecurityPolicies

This table contains information about importing security policy rules.

XML structure

```
<SecurityPolicies>
  <ImportSecurityPolicies>
    <FileName></FileName>
  </ImportSecurityPolicies>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ImportSecurityPolicies
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the import file	N/A	String: Length: 1 to 255 characters.	N/A

SecurityPolicies/RenameRule

This table contains information about renaming a rule within an IPv4/ IPv6 security policy.

XML structure

```
<SecurityPolicies>
  <RenameRule>
    <Rule>
      <Type></Type>
      <RuleName></RuleName>
      <NewRuleName></NewRuleName>
    </Rule>
  </RenameRule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RenameRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Rule Type	Index	Enumeration: • 1—IPv4. • 2—IPv6.	Type
RuleName	Rule name.	Index	String, case-insensitive.	N/A

			Length: 1 to 127 characters.	
NewRuleName	New rule name	Index	String, case-insensitive. Length: 1 to 127characters.	N/A

SecurityPolicies/ClearDefaultRuleStatistic

This table contains the operation information for a security policy default rule.

XML structure

```
<SecurityPolicies>
  <ClearDefaultRuleStatistic>
    <ClearType></ClearType>
    <Clear></Clear>
  </ClearDefaultRuleStatistic>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ClearDefaultRuleStatistic
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClearType	Type of statistics to be cleared.	N/A	Enumeration: • 1—IPv4 statistics. • 2—IPv6 statistics.	Required.
Clear	Clears statistics for the security policy default rule.	N/A	This column must be empty.	Required.

SecurityPolicies/ClearLearningRecords

This table contains information about clearing the learning records of security policy rule.

XML structure

```
<SecurityPolicies>
  <ClearLearningRecords>
    <Reset></Reset>
  </ClearLearningRecords>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ClearLearningRecords
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reset	Clear the learning records of security policy rule.	N/A	This column must be empty.	Required.

SecurityPolicies/AutoDeployLearningSwitch

This table contains information about switching to security policy auto deployment.

XML structure

```
<SecurityPolicies>
  <AutoDeployLearningSwitch>
    <Switch></Switch>
  </AutoDeployLearningSwitch>
</SecurityPolicies>
```

Table description

Item	**Description**
Feature name	SecurityPolicies
Table name	AutoDeployLearningSwitch

Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Switch	Switching to security policy auto deployment learning.	N/A	Enumeration: • **0**—Stop. • **1**—Start.	N/A.

SecurityPolicies/ClearAutoDeployRecords

This table contains information about clearing auto deployment records.

XML structure

```
<SecurityPolicies>
  <ClearAutoDeployRecords>
    <Reset></Reset>
  </ClearAutoDeployRecords>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ClearAutoDeployRecords
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reset	Clear auto deployment records.	N/A	This column must be empty.	Required.

SecurityPolicies/RulesCounting

This table contains rule counting information for security policies.

XML structure

```
<SecurityPolicies>
  <RulesCounting>
    <Enable></Enable>
  </RulesCounting>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RulesCounting
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable rule counting for security policies.	N/A	Boolean: • **true**—Enable. • **false**—Disable.

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.	
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value cannot be the word default.
Action	Action for the rule.	N/A	Enumeration: • 1—Deny. • 2—Permit.	Required when you create a rule or modify a rule through the **replace** operation.
VRF	VRF name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.
TimeRange	Name of the time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Enable	Whether to enable the rule.	N/A	Boolean: • true—Enable (default). • false—Disable.	Optional.
Log	Whether to enable logging.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
Counting	Whether to enable counting.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
Comment	Description.	N/A	String. Length: 1 to 127 characters.	Optional.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.	Optional
SessAgingTimeSw	Whether to enable the session aging timer.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.	Optional.
SessPersistAgingTimeSw	Whether to enable the persistent session aging timer.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours.	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
			0 indicates that the timer never ages out.	
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.	when you create a new rule ,the rule position only can be **Main**; when you modify a rule, if cloud connect state is online, the rule position only can be **Main**; When you set the rule position to pre, the rule will be placed before main; When you set the rule position to post, the rule will be placed after main;
LearningSwitch	Switch of learning	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Optional.
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.

SecurityPolicies/IPv6Rules

This table contains IPv6 rule information.

XML structure

```
<SecurityPolicies>
  <IPv6Rules>
    <Rule>
      <ID></ID>
      <RuleName></RuleName>
      <Action></Action>
      <VRF></VRF>
      <TimeRange></TimeRange>
      <Enable></Enable>
      <Log></Log>
      <Counting></Counting>
      <Comment></Comment>
      <Profile></Profile>

      <SessAgingTime></SessAgingTime>
      <SessPersistAgingTimeSw></SessPersistAgingTimeSw>
      <SessPersistAgingTime></SessPersistAgingTime>
```

```
      <RuleGroupName></RuleGroupName>
      <Position></Position>
      <LearningSwitch></LearningSwitch>
      <AnyVRF></AnyVRF>
    </Rule>
  </IPv6Rules>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID.	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	
RuleName.	Rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value cannot be the word **default**.
Action.	Action for the rule	N/A	Enumeration: • 1—Deny. • 2—Permit.	Required when you create a rule or modify a rule through the **replace** operation.
VRF.	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.
TimeRange.	Name of the time range	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	It cannot be the word **all**.
Enable.	Whether to enable the rule	N/A	Boolean: • true—Enable (default). • false—Disable.	Optional.
Log.	Whether to enable logging	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
Counting.	Whether to enable	N/A	Boolean: • true—Enable.	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
	counting		• false—Disable (default).	
Comment.	Description	N/A	String. Length: 1 to 127 characters.	Optional.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.	Optional
SessAgingTimeSw.	Whether to enable the session aging timer	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
SessAgingTime.	Session aging time period	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.	Optional.
SessPersistAgingTimeSw.	Whether to enable the persistent session aging timer.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.
SessPersistAgingTime.	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.	Optional.
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.	when you create a new rule ,the rule position only can be **Main**; when you modify a rule, if cloud connect state is online, the rule position only can be **Main**; When you set the rule position to pre, the rule will be placed before main; When you set the rule position to post, the rule will be placed after main;
LearningSwitch	Switch of learning	N/A	Boolean: • **true**—Enable. • **false**—Disable.	Optional
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. • false—Disable (default).	Optional.

SecurityPolicies/IPv4SrcSecZone

This table contains source security zone information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcSecZone>
    <SrcSecZone>
      <ID></ID>
      <SeqNum></SeqNum>

Table type	Multi-instance table
Row name	User
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
NameList	Name of the user list	Data structure	Members include: • NameItem	N/A
NameItem	Name of user	N/A	String, case-sensitive. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.	Form: user-name, user-name@domain-name. The user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @. The domain name cannot contain any of the following characters: \ | / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be **d**, **de**, **def**, **defa**, **defau**, **defaul**, **default**, **i**, **if**, **if-**, **if-u**, **if-un**, **if-unk**, **if-unkn**, **if-unkno**, **if-unknow**, or **if-unknown**.

SecurityPolicies/IPv6User

This table contains user information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6User>
    <User>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
```

```
      </NameList>
    </User>
  </IPv6User>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6User

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
NameList	Name of the user list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the user	N/A	String, case-sensitive. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.	Form: user-name, user-name@domain-name. The user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @. The domain name cannot contain any of the following characters: \ | / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be **d**, **de**, **def**, **defa**, **defau**, **defaul**, **default**, **i**, **if**, **if-**, **if-u**, **if-un**, **if-unk**, **if-unkn**, **if-unkno**,

Column name	Column description	Column type	Data type and restrictions	Remarks
				if-unknow, or **if-unknown**.

SecurityPolicies/IPv4UserGrp

This table contains user group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
       <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv4UserGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4UserGrp
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
NameList	Name of the user group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the user group	N/A	String, case-insensitive. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters.	Form: user-group-name, user-group-name@domain-name. The domain name cannot contain any of the following characters: \ | / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be **d**, **de**, **def**, **defa**, **defau**, **defaul**, **default**, **i**, **if**, **if-**, **if-u**, **if-un**, **if-unk**, **if-unkn**, **if-unkno**, **if-unknow**, or **if-unknown**. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

SecurityPolicies/IPv6UserGrp

This table contains user group information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
       <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv6UserGrp>
</SecurityPolicies>
```

Table description

Item	Description

NameItem	Name of the user group	N/A	String, case-insensitive. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters.	Form: user-group-name, user-group-name@domain-name. The domain name cannot contain any of the following characters: \ | / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be **d**, **de**, **def**, **defa**, **defau**, **defaul**, **default**, **i**, **if**, **if-**, **if-u**, **if-un**, **if-unk**, **if-unkn**, **if-unkno**, **if-unknow**, or **if-unknown**. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

SecurityPolicies/Accelerate

This table contains rule matching acceleration information for security policies.

XML structure

```
<SecurityPolicies>
  <Accelerate>
    <Enable></Enable>
  </Accelerate>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable rule matching acceleration for the security policy.	N/A	Boolean: • true—Enable (default). • false—Disable.	Optional.

SecurityPolicies/IPv4RuleGroup

This table contains information about an IPv4 security policy rule group.

XML structure

```
<SecurityPolicies>
  <IPv4RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Description></Description>
```

```
      <FromRuleName></FromRuleName>
      <ToRuleName></ToRuleName><Enable></Enable>
      <IncludeMember></IncludeMember>
    </RuleGroup>
  </IPv4RuleGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description.	Description	N/A	String. Length: 1 to 127 characters.	Optional.
FromRuleName	The begin rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional.
ToRuleName	The end rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional.
IncludeMember	Delete all the rules under the rule group.	N/A	This column is used when a rule group is deleted. If this column is specified, the rules under the rule group will also be deleted.	Optional.
Enable	Enable the rule group.	N/A	Boolean: • true—Enable. • false—Disable.	Optional.

SecurityPolicies/IPv6RuleGroup

This table contains information about an IPv6 security policy rule group.

XML structure

```
<SecurityPolicies>
  <IPv6RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Description></Description>
      <FromRuleName></FromRuleName>
      <ToRuleName></ToRuleName>
      <Enable></Enable>
      <IncludeMember></IncludeMember>
    </RuleGroup>
  </IPv6RuleGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column descriptio n	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description.	Description	N/A	String. Length: 1 to 127 characters.	Optional
FromRuleName	The begin rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional
ToRuleName	The end rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional
IncludeMember	Delete all the rules under the rule group.	N/A	This column is used when a rule group is deleted. If this column is specified, the rules under the rule group will also be deleted.	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the rule group.	N/A	Boolean: • true—Enable. • false—Disable.	Optional

SecurityPolicies/IPv4SrcSimpleAddr

This table contains source address information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcSimpleAddr>
    <SrcSimpleAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <SimpleAddrList>
        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </SrcSimpleAddr>
  </IPv4SrcSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcSimpleAddr
Table type	Multi-instance table
Row name	SrcSimpleAddr
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			4294967290.	
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
SimpleAddrList	Source IPv4 address list	Data structure	Members include: • SimpleAddrItem	N/A
SimpleAddrItem	Source IPv4 address	N/A	String, case-insensitive. Length: 1 to 127 characters.	Form:IP, IP/MaskLength, StartIP-EndIP. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length.

SecurityPolicies/IPv4DestSimpleAddr

This table contains destination address information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestSimpleAddr>
    <DestSimpleAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <SimpleAddrList>
        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </DestSimpleAddr>
  </IPv4DestSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestSimpleAddr

Row name	DestSimpleAddr

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
SimpleAddrList	Destination IPv4 address list	Data structure	Members include: • SimpleAddrItem	N/A
SimpleAddrItem	Destination IPv4 address	N/A	String, case-insensitive.	Length: 1 to 127 characters. Form: IP,IP/MaskLength, StartIP-EndIP. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length.

SecurityPolicies/IPv4ServObj

This table contains service information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4ServObj>
    <ServObj>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <ServObjList>
        <ServObjItem></ServObjItem>
      </ServObjList>
    </ServObj>
```

```
  </IPv4ServObj>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4ServObj
Table type	Multi-instance table
Row name	ServObj
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • true—Yes. • false—No (default).	N/A
ServObjList	Service list	Data structure	Members include: • ServObjItem	N/A

ServObjItem	Service information	N/A	String, case-insensitive.
			Length: 1 to 255 characters.
				Form:
				{
				"Type": "",
				"StartSrcPort": "",
				"EndSrcPort": "",
				"StartDestPort": "",
				"EndDestPort": "",
				"ICMPType": "",
				"ICMPCode":"",
				"Protocol":"",
				}

				• **0**—TCP (protocol number 6).

Column name	Column description	Column type	Data type and restrictions	Remarks
				• **1**—UDP (protocol number 17). • **2**—ICMP (protocol number 1). • **3**—ICMPv6 (protocol number 58). • **4**—Protocol. • **5**—SCTP (protocol number 132). **StartSrcPort:** **EndSrcPort:** Unsigned integer. Value range: 0 to 65535. Required when the Type column is **0** or **1 or 5.** **StartSrcPort** column and **EndSrcPort** column must be configured together with each other. **StartDestPort:** **EndDestPort:** Unsigned integer. Value range: 0 to 65535. Required when the Type column is **0** or **1 or 5**. **StartDestPort** column and **EndDestPort** column must be configured together with each other. **ICMPType:** **ICMPCode:** Unsigned integer. Value range: 0 to 255. Required when the **Type** column is **2** or **3** **ICMPCode** column must be configured together with **ICMPType**. **Protocol:** Unsigned integer. Value range: 0 to 255.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Required when the Type column is **4**.

SecurityPolicies/IPv4SSID

This table contains service set identifier (SSID) information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SSID>
    <SSID>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SSID>
  </IPv4SSID>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SSID
Table type	Multi-instance table
Row name	SSID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence	Index	Unassigned integer.	This column is insignificant. Ignore the value in this

Column name	Column description	Column type	Data type and restrictions	Remarks
	number		Value range: 1 to 1024.	column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	List of SSIDs	Data structure	Members include: • NameItem	N/A
NameItem	Name of the SSID	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A

SecurityPolicies/IPv4AP

This table contains access point (AP) information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4AP>
    <AP>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </AP>
  </IPv4AP>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4AP
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	List of APs	Data structure	Members include: • NameItem	N/A
NameItem	Name of the AP	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A

SecurityPolicies/IPv4APGroup

This table contains AP group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4APGroup>
    <APGroup>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </APGroup>
  </IPv4APGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4APGroup

Item	Description
Table type	Multi-instance table
Row name	APGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	List of AP groups	Data structure	Members include: • NameItem	N/A
NameItem	Name of the ApGroup	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

SecurityPolicies/IPv4URL

This table contains URL category information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4URL>
    <URL>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>

      </NameList>
    </URL>
  </IPv4URL>
```

```
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4URL
Table type	Multi-instance table
Row name	URL
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	URL category list	Data structure	Members include: • NameItem	N/A
NameItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

SecurityPolicies/IPv6URL

This table contains URL category information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6URL>
    <URL>
      <ID></ID>
```

```
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </URL>
  </IPv6URL>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6URL
Table type	Multi-instance table
Row name	URL
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	URL category list	Data structure	Members include: • NameItem	N/A
NameItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

SecurityPolicies/IPv4SrcLocation

This table contains source location information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcLocation>
    <SrcLocation>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcLocation>
  </IPv4SrcLocation>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcLocation
Table type	Multi-instance table
Row name	SrcLocation
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NameList	Name of the source location list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.	It can not include -.

SecurityPolicies/IPv4DestLocation

This table contains destination location information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocation>
    <DestLocation>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestLocation>
  </IPv4DestLocation>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestLocation
Table type	Multi-instance table
Row name	DestLocation
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			4294967290.	
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	Name of the destination location list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.	It can not include -.

SecurityPolicies/IPv4SrcLocationGrp

This table contains source location group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcLocationGrp>
    <SrcLocationGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcLocationGrp>
  </IPv4SrcLocationGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcLocationGrp
Table type	Multi-instance table
Row name	SrcLocationGrp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	Name of the source location group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.	It can not include -.

SecurityPolicies/IPv4DestLocationGrp

This table contains destination location group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocationGrp>
    <DestLocationGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestLocationGrp>
  </IPv4DestLocationGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies

Item	Description
Table name	IPv4DestLocationGrp
Table type	Multi-instance table
Row name	DestLocationGrp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: • **true**—Yes. • **false—**No (default).	N/A
NameList	Name of the destiantion location group list	Data structure	Members include: • NameItem	N/A
NameItem	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.	It can not include -.

SecurityPolicies/IPv4DefaultRule

This table contains IPv4 default rule information.

XML structure

```
<SecurityPolicies>
  <IPv4DefaultRule>
    <Action></Action>
    <Log></Log>
    <Counting></Counting>
  </IPv4DefaultRule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DefaultRule
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action for the rule.	N/A	Enumeration: • **1**—Deny (default) • **2—Permit**	Required when you modify a rule through the **replace** operation.
Log	Whether to enable logging.	N/A	Boolean: • **true—Enable** • **false—Disable** (default)	Optional.
Counting	Whether to enable counting.	N/A	Boolean: • **true**—Enable • **false—**Disable (default)	Optional.

SecurityPolicies/IPv6DefaultRule

This table contains IPv6 default rule information.

XML structure

```
<SecurityPolicies>
  <IPv6DefaultRule>
    <Action></Action>
    <Log></Log>
    <Counting></Counting>
  </IPv6DefaultRule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies

Item	Description
Table name	IPv6DefaultRule
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action for the rule.	N/A	Enumeration: • 1—Deny (default) • **2—Permit**	Required when you modify a rule through the **replace** operation.
Log	Whether to enable logging.	N/A	Boolean: • **true—Enable** • false—Disable (default)	Optional.
Counting	Whether to enable counting.	N/A	Boolean: • **true**—Enable • false—Disable (default)	Optional.

SecurityPolicies/AutoDeploy

This table contains information about security policy auto deployment.

XML structure

```
<SecurityPolicies>
  <AutoDeploy>
    <StudyDuration></StudyDuration>
    <ServerZones>
      <ServerZone></ServerZone>
    </ServerZones>
    <InternetZones>
      <InternetZone></InternetZone>
    </InternetZones>
    <IPv4MaskLen></IPv4MaskLen>
    <IPv6MaskLen></IPv6MaskLen>
  </AutoDeploy>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AutoDeploy
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StudyDuration	Study time.	N/A	Unassigned integer. Value range: 1 to 168.	N/A.
ServerZones	Server zone list.	Data structure	Members include: • ServerZone.	N/A.
ServerZone	Server zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A.
InternetZones	Internet zone list.	Data structure	Members include: • InternetZone.	N/A.
InternetZone	Internet zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A.
IPv4MaskLen	Length of IPv4 mask.	N/A	Unassigned integer. Value range: 1 to 32.	N/A.
IPv6MaskLen	Length of IPv6 prefix.	N/A	Unassigned integer. Value range: 64 to 128.	N/A.

  </IPv4Rules>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
Action	Action for the rule.	N/A	Enumeration: • 1—Deny. • 2—Permit.
VRF	VRF name.	N/A	String, case-sensitive. Length: 1 to 31 characters.
TimeRange	Name of the time range.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.
TimeRangeState	Status of the time range.	N/A	Boolean: • true—Effective. • false—Not effective.
Enable	Whether to enable the rule.	N/A	Boolean: • true—Enable. • false—Disable.
Log	Whether to enable logging.	N/A	Boolean: • true—Enable. • false—Disable.
Counting	Whether to enable counting.	N/A	Boolean: • true—Enable. • false—Disable.
Comment	Description.	N/A	String. Length: 1 to 127 characters.
Count	Count of matches.	N/A	Unassigned integer. Value range: 0 to 2^{64}–1.
Byte	Bytes of packets	N/A	N/A
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
SessAgingTimeSw	Whether to enable the session aging timer.	N/A	Boolean: • true—Enable. • false—Disable.
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.
SessPersistAgingTimeSw	Whether to enable the persistent session aging timer.	N/A	Boolean: • true—Enable. • false—Disable.

Column name	Column description	Column type	Data type and restrictions
SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.
LearningSwitch	Switch of learning	N/A	Boolean: • true—Enable. • false—Disable.
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. • false—Disable (default).

SecurityPolicies/IPv6Rules

This table contains IPv6 rule information.

XML structure

Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule Type	Index	Enumeration: • 1—IPv4. • 2—IPv6.
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
Name	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
Action	Action for the rule.	N/A	Enumeration: • 1—Deny. • 2—Permit.
SrcZoneList	Name of the source zone list	Data structure	Members include: • SrcZoneItem
SrcZoneItem	Name of the source zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestZoneList	Name of the destination zone list	Data structure	Members include: • DestZoneItem
DestZoneItem	Name of the destination zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrList	Name of the source address list.	Data structure	Members include: • SrcAddrItem
SrcAddrItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddrList	Name of the destination address list.	Data structure	Members include: • DestAddrItem
DestAddrItem	Name of the destination address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcMacAddrList	Name of the source IPv4 MAC address list	Data structure	Members include: • SrcMacAddrItem
SrcMacAddrItem	Name of the source MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.
ServGrpList	Name of the service group list.	Data structure	Members include: • ServGrpItem
ServGrpItem	Name of the service group	N/A	String, case-insensitive. Length: 1 to 31 characters.
AppList	Name of the application list	Data structure	Members include: • AppItem
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

Column name	Column description	Column type	Data type and restrictions
AppGrpList	Name of the application group list	Data structure	Members include: • AppGrpItem
AppGrpItem	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
UserList	Name of the user list	Data structure	Members include: • UserItem
UserItem	Name of the user	N/A	String, case-insensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.
UserGrpList	Name of the user group list	Data structure	Members include: • UserGrpItem
UserGrpItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).
SrcSimpleAddrList	Source address list.	Data structure	Members include: • SrcSimpleAddrItem
SrcSimpleAddrItem	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IP,StartIP, EndIP: dotted decimal notation. IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. MaskLength: IPv4 address mask length. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. PrefixLength: IPv6 address prefix length.
DestSimpleAddrList	Destination address list.	Data structure	Members include: • DestSimpleAddrItem
DestSimpleAddrItem	Destination address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IP,StartIP, EndIP: dotted decimal notation. IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. MaskLength: IPv4 address mask length.

Column name	Column description	Column type	Data type and restrictions
			IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. PrefixLength: IPv6 address prefix length.
ServObjList	Service list.	Data structure	Members include: • ServObjItem
ServObjItem	Service information.	N/A	String, case-insensitive. Length: 1 to 255 characters.
TerminalList	Terminal list	Data structure	Members include: • TerminalItem
TerminalItem	Name of the terminal	N/A	String, case-insensitive. Length: 1 to 63 characters.
TerminalGrpList	Terminal group list	Data structure	Members include: • TerminalGrpItem
TerminalGrpItem	Name of the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.
URLList	URL category list	Data structure	Members include: URLItem.
URLItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationList	Name of the source location list	Data structure	Members include: • SrcLocationItem
SrcLocationItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationList	Name of the destination location list	Data structure	Members include: • DestLocationItem
DestLocationItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationGrpList	Name of the source location group list	Data structure	Members include: • SrcLocationGrpItem
SrcLocationGrpItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationGrpList	Name of the destination location group list	Data structure	Members include: • DestLocationGrpItem
DestLocationGr	Name of the	N/A	String, case-insensitive. Length: 1 to 63 characters.

Column name	Column description	Column type	Data type and restrictions
pItem	destination location group		
TimeRange	Name of the time range.	N/A	String. Length: 1 to 63 characters.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
Enable	Whether the rule is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
Log	Whether logging is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
Counting	Whether counting is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
Count	Count of matches.	N/A	Unassigned integer. Value range: 0 to 2^{64}–1.
Byte	Bytes of packets	N/A	N/A
SessAgingTimeSw	Whether the session aging timer is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.
SessPersistAgingTimeSw	Whether the persistent session aging timer is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.
AllRulesCount	The number of all security policy rules	N/A	N/A
Comment	Description.	N/A	String. Length: 1 to 127 characters.
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.
Valid	Whether the rule is valid.	N/A	Boolean: • true—Valid. • false—Invalid

Column name	Column description	Column type	Data type and restrictions
ValidStatus	Rule valid status.	N/A	Enumeration: • 1—Invalid. • 2—Within one day invalid. • 3—Within one week invalid. • 4—Within one month invalid. • 5—Valid/Over one month invalid.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.
LearningSwitch	Switch of learning	N/A	Boolean: • true—Enable. • false—Disable.
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. • false—Disable (default).

SrcLocationItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationList	Name of the destination location list	Data structure	Members include: • DestLocationItem
DestLocationItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationGrpList	Name of the source location group list	Data structure	Members include: • SrcLocationGrpItem
SrcLocationGrpItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationGrpList	Name of the destination location group list	Data structure	Members include: • DestLocationGrpItem
DestLocationGrpItem	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
TimeRange	Name of the time range.	N/A	String. Length: 1 to 63 characters.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
Enable	Whether the rule is enabled.	N/A	Boolean: • true—Enable.

Column name	Column description	Column type	Data type and restrictions
			• false—Disable.
Log	Whether logging is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
Counting	Whether counting is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
Count	Count of matches.	N/A	Unassigned integer. Value range: 0 to 2^{64}–1.
Byte	Bytes of packets	N/A	N/A
SessAgingTimeSw	Whether the session aging timer is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.
SessPersistAgingTimeSw	Whether the persistent session aging timer is enabled.	N/A	Boolean: • true—Enable. • false—Disable.
SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.
AllRulesCount	The number of all security policy rules	N/A	N/A
Comment	Description.	N/A	String. Length: 1 to 127 characters.
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.
Valid	Whether the rule is valid.	N/A	Boolean: • true—Valid. • false—Invalid.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.
LearningSwitch	Switch of learning	N/A	Boolean: • true—Enable. • false—Disable.
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. • false—Disable (default).

SecurityPolicies/IPv4SrcSecZone

This table contains source security zone information for an existing security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcSecZone>
    <SrcSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </IPv4SrcSecZone>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcSecZone
Table type	Multi-instance table
Row name	SrcSecZone
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 16.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
	security zone list		• NameItem
NameItem	Name of the source security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv6SrcSecZone

This table contains source security zone information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6SrcSecZone>
    <SrcSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </IPv6SrcSecZone>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6SrcSecZone
Table type	Multi-instance table
Row name	SrcSecZone
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 1 to 16.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source security zone list	Data structure	Members include: • NameItem
NameItem	Name of the source security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv4DestSecZone

This table contains destination security zone information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestSecZone>
    <DestSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestSecZone>
  </IPv4DestSecZone>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestSecZone
Table type	Multi-instance table
Row name	DestSecZone
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 16.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the destination security zone list	Data structure	Members include: • NameItem
NameItem	Name of the destination security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv6DestSecZone

This table contains destination security zone information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6DestSecZone>
    <DestSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestSecZone>
  </IPv6DestSecZone>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6DestSecZone

Row name	DestSecZone

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 16.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the destination security zone list	Data structure	Members include: • NameItem
NameItem	Name of the destination security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv4SrcAddr

This table contains source address object group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcAddr>
    <SrcAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcAddr>
  </IPv4SrcAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcAddr
Table type	Multi-instance table
Row name	SrcAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source IPv4 address list	Data structure	Members include: • NameItem
NameItem	Name of the source IPv4 address	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv6SrcAddr

This table contains source address object group information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6SrcAddr>
    <SrcAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcAddr>
```

```
  </IPv6SrcAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6SrcAddr
Table type	Multi-instance table
Row name	SrcAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source IPv6 address list	Data structure	Members include: • NameItem
NameItem	Name of the source IPv6 address	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv4DestAddr

This table contains destination address object group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestAddr>
    <DestAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
```

```
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestAddr>
  </IPv4DestAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestAddr
Table type	Multi-instance table
Row name	DestAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the destination IPv4 address list	Data structure	Members include: • NameItem
NameItem	Name of the destination IPv4 address	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv6DestAddr

This table contains destination address object group information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6DestAddr>
```

```
    <DestAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestAddr>
  </IPv6DestAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6DestAddr
Table type	Multi-instance table
Row name	DestAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the destination IPv6 address list	Data structure	Members include: • NameItem
NameItem	Name of the destination IPv6 address	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv4SrcMacAddr

This table contains source MAC address object group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcMacAddr>
    <SrcMacAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcMacAddr>
  </IPv4SrcMacAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcMacAddr
Table type	Multi-instance table
Row name	SrcMacAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source IPv4 MAC address list	Data structure	Members include: • NameItem
NameItem	Name of the source IPv4 MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv4ServGrp

This table contains service object group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4ServGrp>
    <ServGrp>
