  </IPv4ServGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4ServGrp
Table type	Multi-instance table
Row name	ServGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the service object group list	Data structure	Members include: • NameItem

Column name	Column description	Column type	Data type and restrictions
NameItem	Name of the service object group	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/IPv6ServGrp

This table contains service object group information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6ServGrp>
    <ServGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </ServGrp>
  </IPv6ServGrp>
</SecurityPolicies>
```

Table description

Item	Description

  </IPv4User>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4User
Table type	Multi-instance table
Row name	User
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the user list	Data structure	Members include: • NameItem.
NameItem	Name of the user	N/A	String, case-sensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.

SecurityPolicies/IPv6User

This table contains user information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6User>
    <User>
      <ID></ID>
```

```
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </User>
  </IPv6User>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6User
Table type	Multi-instance table
Row name	User
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the user list	Data structure	Members include: • NameItem
NameItem	Name of the user	N/A	String, case-sensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.

SecurityPolicies/IPv4UserGrp

This table contains user group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv4UserGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4UserGrp
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the user group list	Data structure	Members include: • NameItem
NameItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must

Column name	Column description	Column type	Data type and restrictions
			enter the escape character (\) before the backslash (\) or at sign (@).

SecurityPolicies/IPv6UserGrp

This table contains user group information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv6UserGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6UserGrp
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.

Column name	Column description	Column type	Data type and restrictions
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the user group list	Data structure	Members include: • NameItem
NameItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

SecurityPolicies/AllocRuleID

This table contains an available rule ID.

XML structure

```
<SecurityPolicies>
  <AllocRuleID>
    <Rule>
      <Type></Type>
      <ID></ID>
    </Rule>
  </AllocRuleID>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AllocRuleID
Table type	Single-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule Type	Index	Enumeration: • 1—IPv4. • 2—IPv6.
ID	Rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.

SecurityPolicies/Accelerate

This table contains security policy rule matching acceleration information for security policies.

XML structure

```
<SecurityPolicies>
  <Accelerate>
    <Enable></Enable>
  </Accelerate>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable rule matching acceleration for the security policy.	N/A	Boolean: • true—Enable. • false—Disable.

SecurityPolicies/GetAccelerateCommitStatus

This table contains acceleration commit status information for the security policy.

XML structure

```
<SecurityPolicies>
  <GetAccelerateCommitStatus>
    <Status></Status>
  </GetAccelerateCommitStatus>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable rule acceleration for the security policy.	N/A	Boolean: • true—Enable. • false—Disable.	Optional.

SecurityPolicies/BaseProtocols

This table contains base protocol informations for the existing applications and application-groups within a security policy rule.

XML structure

```
<SecurityPolicies>
  <BaseProtocols>
    <Protocol>
      <Type></Type>
      <ID></ID>
      <ProtoNum></ProtoNum>
      <AppNum></AppNum>
      <ProtocolItem></ProtocolItem>
      <NameList>
        <AppItem></AppItem>
      </NameList>
```

```
    </Protocol>
  </BaseProtocols>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	BaseProtocols
Table type	Multi-instance table
Row name	Protocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule Type	Index	Enumeration: • 1—IPv4. • 2—IPv6.
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
ProtoNum	Protocol Number	Index	Unassigned integer. Value range: 1 to 1024.
AppNum	Application Number	Index	Unassigned integer. Value range: 1 to 1024.
ProtocolItem	Name of the protocol	N/A	String, case-insensitive. Length: 1 to 63 characters.
NameList	Name of the applicaton list	Data structure	Members include: • AppItem
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/RedundancyCheckStatus

This table contains status information for checking the redundant security policy rules.

XML structure

```
<SecurityPolicies>
```

```
  <RedundancyCheckStatus>
    <Status></Status>
    <Proportion></Proportion>
  </RedundancyCheckStatus>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RedundancyCheckStatus
Table type	Single-instance table
Row name	Status
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Status	The status for checking redundancy security policy rules	N/A	Enumeration: • 0—init. • 1—finished. • 2—checking.
Proportion	Percentage of progress	N/A	Unassigned integer. Value range: 0 to 100.

SecurityPolicies/ContainRedundancyRules

This table shows security policy rules that have redundant rules.

XML structure

```
<SecurityPolicies>
  <ContainRedundancyRules>
    <Rule>
      <Type></Type>
      <RuleID></RuleID>
      <RuleName></RuleName>

```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ContainRedundancyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule type	Index	Enumeration: • 1—IPv4. • 2—IPv6.
RuleID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
Action.	Action for the rule	N/A	Enumeration: • 1—Deny. • 2—Permit.
SrcZoneList	Name of the source zone list	Data structure	Members include: • SrcZoneItem. • SrcZoneStatus.
SrcZoneItem	Name of the source zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcZoneStatus	Status of the source zone	N/A	Boolean: • true—Effective. • false—Not effective.
DestZoneList	Name of the destination zone list	Data structure	Members include: • DestZoneItem. • DestZoneStatus.
DestZoneItem	Name of the destination zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestZoneStatus	Status of the destination zone	N/A	Boolean: • true—Effective. • false—Not effective.
SrcMacAddrList	Name of the source IPv4 MAC address list	Data structure	Members include: • SrcMacAddrItem. • SrcMacAddrStatus.
SrcMacAddrItem	Name of the source MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcMacAddrStatus	Status of the source MAC address	N/A	Boolean: • true—Effective. • false—Not effective.
SrcAddrList	Name of the source address list	Data structure	Members include: • SrcAddrItem. • SrcAddrStatus.
SrcAddrItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrStatus	Status of the source	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
	address		• true—Effective. • false—Not effective.
DestAddrList	Name of the destination address list	Data structure	Members include: • DestAddrItem. • DestAddrStatus.
DestAddrItem	Name of the destination address	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddrStatus	Status of the destination address	N/A	Boolean: • true—Effective. • false—Not effective.
ServGrpList	Name of the service group list	Data structure	Members include: • ServGrpItem. • ServGrpStatus.
ServGrpItem	Name of the service group	N/A	String, case-insensitive. Length: 1 to 31 characters.
ServGrpStatus	Status of the service group	N/A	Boolean: • true—Effective. • false—Not effective.
AppList	Name of the application list	Data structure	Members include: • AppItem. • AppStatus
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppStatus	Status of the application	N/A	Boolean: • true—Effective. • false—Not effective.
AppGrpList	Name of the application group list	Data structure	Members include: • AppGrpItem. • AppGrpStatus
AppGrpItem	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppGrpStatus	Status of the application group	N/A	Boolean: • true—Effective. • false—Not effective.
UserList	Name of the user list	Data structure	Members include: • UserItem. • UserStatus
UserItem	Name of the user	N/A	String, case-insensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.
UserStatus	Status of the user	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
			• true—Effective. • false—Not effective.
UserGrpList	Name of the user group list	Data structure	Members include: • UserGrpItem. • UserGrpStatus
UserGrpItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).
UserGrpStatus	Status of the user group	N/A	Boolean: • true—Effective. • false—Not effective.
TerminalList	Terminal list	Data structure	Members include: • TerminalItem • TerminalStatus
TerminalGrpItem	Name of the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.
TerminalStatus	Status of the terminal	N/A	Boolean: • true—Effective. • false—Not effective
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. false—Disable (default).

TerminalGrpList	Terminal group list	Data structure	Members include: • TerminalGrpItem • TerminalGrpStatus
TerminalGrpItem	Name of the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.
TerminalGrpStatus	Status of the terminal group	N/A	Boolean: • true—Effective. • false—Not effective
SrcSimpleAddrList	Source address list.	Data structure	Members include: • SrcSimpleAddrItem
SrcSimpleAddrItem	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated PrefixLength: IPv6 address prefix length.
DestSimpleAddrList	Destination address list.	Data structure	Members include: • DestSimpleAddrItem
DestSimpleAddrItem	Destination address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IP,StartIP, EndIP: dotted decimal notation. IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. MaskLength: IPv4 address mask length. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. PrefixLength: IPv6 address prefix length.
ServObjList	Service list.	Data structure	Members include: • ServObjItem
ServObjItem	Service information.	N/A	String, case-insensitive. Length: 1 to 255 characters.
URLList	URL category list	Data structure	Members include: • URLItem • URLStatus
URLItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.
URLStatus	URL category status	N/A	Boolean: • true—Effective. • false—Not effective

TerminalGrpList	Terminal group list	Data structure	Members include: • TerminalGrpItem • TerminalGrpStatus
SrcLocationList	Name of the source location list	Data structure	Members include: • SrcLocationItem. • SrcLocationStatus.
SrcLocationItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationStatus	Status of the source location	N/A	Boolean: • true—Effective. • false—Not effective.
DestLocationList	Name of the destination location list	Data structure	• Members include: • DestLocationItem. • DestLocationStatus.
DestLocationItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationStatus	Status of the destination location	N/A	Boolean: • true—Effective. • false—Not effective.
SrcLocationGrpList	Name of the source location group list	Data structure	Members include: • SrcLocationGrpItem. • SrcLocationGrpStatus.
SrcLocationGrpItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationStatus	Status of the source location group	N/A	Boolean: • true—Effective. • false—Not effective.
DestLocationGrpList	Name of the destination location group list	Data structure	Members include: • DestLocationGrpItem. • DestLocationGrpStatus.
DestLocationGrpItem	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationGrpStatus	Status of the destination location group	N/A	Boolean: • true—Effective. • false—Not effective.
TimeRange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.
VRF	VRF name	N/A	String, case-insensitive. Length: 1 to 31 characters.
Enable	Whether to enable the rule	N/A	Boolean: • true—Enable.

TerminalGrpList	Terminal group list	Data structure	Members include: • TerminalGrpItem • TerminalGrpStatus
			• false—Disable.
Comment	Description	N/A	String. Length: 1 to 127 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.

SecurityPolicies/ConfirmedRedundancyRules

This table shows redundant security policy rules.

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ConfirmedRedundancyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule type	Index	Enumeration: • 1—IPv4. • 2—IPv6.
RuleID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
ContainRedundancyRuleID	ID of the rule that contains this redundant rule	N/A	Unassigned integer. Value range: 0 to 4294967290.
Action.	Action for the rule	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
			• 1—Deny. • 2—Permit.
SrcZoneList	Name of the source zone list	Data structure	Members include: • SrcZoneItem. • SrcZoneStatus.
SrcZoneItem	Name of the source zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcZoneStatus	Status of the source zone	N/A	Boolean: • true—Effective. • false—Not effective.
DestZoneList	Name of the destination zone list	Data structure	Members include: • DestZoneItem. • DestZoneStatus.
DestZoneItem	Name of the destination zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestZoneStatus	Status of the destination zone	N/A	Boolean: • true—Effective. • false—Not effective.
SrcMacAddrList	Name of the source IPv4 MAC address list	Data structure	Members include: • SrcMacAddrItem. • SrcMacAddrStatus.
SrcMacAddrItem	Name of the source MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcMacAddrStatus	Status of the source MAC address	N/A	Boolean: • true—Effective. • false—Not effective.
SrcAddrList	Name of the source address list	Data structure	Members include: • SrcAddrItem. • SrcAddrStatus.
SrcAddrItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrStatus	Status of the source address	N/A	Boolean: • true—Effective. • false—Not effective.
DestAddrList	Name of the destination address list.	Data structure	Members include: • DestAddrItem. • DestAddrStatus.
DestAddrItem	Name of the destination address	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddrStatus	Status of the destination address	N/A	Boolean: • true—Effective. • false—Not effective.
ServGrpList	Name of the service	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
	group list		• ServGrpItem. • ServGrpStatus.
ServGrpItem	Name of the service group	N/A	String, case-insensitive. Length: 1 to 31 characters.
ServGrpStatus	Status of the service group	N/A	Boolean: • true—Effective. • false—Not effective.
AppList	Name of the application list	Data structure	Members include: • AppItem. • AppStatus
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppStatus	Status of the application	N/A	Boolean: • true—Effective. • false—Not effective.
AppGrpList	Name of the application group list	Data structure	Members include: • AppGrpItem. • AppGrpStatus
AppGrpItem	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppGrpStatus	Status of the application group.	N/A	Boolean: • true—Effective. • false—Not effective.
UserList	Name of the user list	Data structure	Members include: • UserItem. • UserStatus
UserItem	Name of the user	N/A	String, case-insensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.
UserStatus	Status of the user.	N/A	Boolean: • true—Effective. • false—Not effective.
UserGrpList	Name of the user group list	Data structure	Members include: • UserGrpItem. • UserGrpStatus
UserGrpItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the

Column name	Column description	Column type	Data type and restrictions
			backslash (\) or at sign (@).
UserGrpStatus	Status of the user group.	N/A	Boolean: • true—Effective. • false—Not effective.
TerminalList	Terminal list	Data structure	Members include: • TerminalItem • TerminalStatus
TerminalItem	Name of the terminal	N/A	String, case-insensitive. Length: 1 to 63 characters.
TerminalStatus	Status of the terminal	N/A	Boolean: • true—Effective. • false—Not effective
TerminalGrpList	Terminal group list	Data structure	Members include: • TerminalGrpItem • TerminalGrpStatus
TerminalGrpItem	Name of the terminal group	N/A	String, case-insensitive. Length: 1 to 63 characters.
TerminalGrpStatus	Status of the terminal group	N/A	Boolean: • true—Effective. • false—Not effective
SrcSimpleAddrList	Source address list.	Data structure	Members include: • SrcSimpleAddrItem
SrcSimpleAddrItem	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. PrefixLength: IPv6 address prefix length.
DestSimpleAddrList	Destination address list.	Data structure	Members include: • DestSimpleAddrItem
DestSimpleAddrItem	Destination address.	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP, IP,StartIP, EndIP: dotted decimal notation. IPv6,IPv6/PrefixLength, StartIPv6-EndIPv6. MaskLength: IPv4 address mask length. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. PrefixLength: IPv6 address prefix length.

Column name	Column description	Column type	Data type and restrictions
ServObjList	Service list.	Data structure	Members include: • ServObjItem
ServObjItem	Service information.	N/A	String, case-insensitive. Length: 1 to 255 characters.
URLList	URL category list	Data structure	Members include: • URLItem • URLStatus
URLItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.
URLStatus	URL category status	N/A	Boolean: • true—Effective. false—Not effective
SrcLocationList	Name of the source location list	Data structure	Members include: • SrcLocationItem. • SrcLocationStatus.
SrcLocationItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationStatus	Status of the source location	N/A	Boolean: • true—Effective. • false—Not effective.
DestLocationList	Name of the destination location list	Data structure	Members include: • DestLocationItem. • DestLocationStatus.
DestLocationItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationStatus	Status of the destination location	N/A	Boolean: • true—Effective. • false—Not effective.
SrcLocationGrpList	Name of the source location group list	Data structure	Members include: • SrcLocationGrpItem. • SrcLocationGrpStatus.
SrcLocationGrpItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
SrcLocationStatus	Status of the source location group	N/A	Boolean: • true—Effective. • false—Not effective.
DestLocationGrpList	Name of the destination location group list	Data structure	Members include: • DestLocationGrpItem. • DestLocationGrpStatus.

Column name	Column description	Column type	Data type and restrictions
DestLocationGrpItem	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
DestLocationGrpStatus	Status of the destination location group	N/A	Boolean: • true—Effective. • false—Not effective.
TimeRange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.
VRF	VRF name	N/A	String, case-insensitive. Length: 1 to 31 characters.
Enable	Whether to enable the rule.	N/A	Boolean: • true—Enable. • false—Disable.
Comment	Description.	N/A	String. Length: 1 to 127 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
Position	Rule position	N/A	Enumeration: • 1—Main (default). • 2—Pre. • 3—Post.
AnyVRF	Whether the rule support any VRF.	N/A	Boolean: • true—Enable. false—Disable (default).

SecurityPolicies/IPv4SrcSecZoneInfo

This table contains source security zone information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcSecZoneInfo>
    <SrcSecZoneInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </SrcSecZoneInfo>
```

```
  </IPv4SrcSecZoneInfo>
</SecurityPolicies>
```

Table description

Item	Description

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 0 to 1024.
NameList	Name of the service object group list	Data structure	Members include: • Name • Status
Name	Name of the service object group	N/A	String, case-insensitive. Length: 1 to 31 characters.
Status	Status of the service object group	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4AppInfo

This table contains application information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4AppInfo>
    <AppInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </AppInfo>
  </IPv4AppInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4AppInfo
Table type	Multi-instance table
Row name	AppInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 0 to 1024.
NameList	Name of the application list	Data structure	Members include: • Name • Status
Name	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the application	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv6AppInfo

This table contains application information for an IPv6 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv6AppInfo>
    <AppInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </AppInfo>
  </IPv6AppInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6AppInfo
Table type	Multi-instance table
Row name	AppInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 0 to 1024.
NameList	Name of the application list	Data structure	Members include: • Name • Status
Name	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

Column name	Column description	Column type	Data type and restrictions
Status	Status of the application.	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4AppGrpInfo

This table contains application group information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4AppGrpInfo>
    <AppGrpInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>

      </NameList>
    </AppGrpInfo>
  </IPv6AppGrpInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6AppGrpInfo
Table type	Multi-instance table
Row name	AppGrpInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 0 to 1024.
NameList	Name of the application group list	Data structure	Members include: • Name • Status
Name	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the application group.	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4UserInfo

This table contains user information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4UserInfo>
    <UserInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </UserInfo>
  </IPv4UserInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4UserInfo
Table type	Multi-instance table

Item	Description
Row name	UserInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
NameList	Name of the user list	Data structure	Members include: • Name • Status
Name	Name of the user.	N/A	String, case-sensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.
Status	Status of the user.	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv6UserInfo

This table contains user information for an IPv6 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv6UserInfo>
    <UserInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </UserInfo>
  </IPv6UserInfo>
</SecurityPolicies>
```

Table description

Item	Description

  </IPv6UserGrpInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6UserGrpInfo
Table type	Multi-instance table
Row name	UserGrpInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
UserGrpList	Name of the user group list	Data structure	Members include: • Name. • Status
Name	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

Column name	Column description	Column type	Data type and restrictions
Status	Status of the user group.	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/AppOptimized

This table contains application statistics for security policy rules.

XML structure

```
<SecurityPolicies>
  <AppOptimized>
    <AppFlux>
      <PolicyType></PolicyType>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <TotalFlux></TotalFlux>
      <Grade></Grade>
      <Count></Count>
      <IsOptimized></IsOptimized>
      <AppList>
        <AppInfo></AppInfo>
      </AppList>
      <RiskLevel></RiskLevel>
      <SecurityRisks></SecurityRisks>
    </AppFlux>
  </AppOptimized>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AppOptimized
Table type	Multi-instance table
Row name	AppFlux
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PolicyType	Rule type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
TotalFlux	Flux of statistics.	N/A	N/A
Grade	Security grade.	N/A	Unassigned integer. Value range: 0 to 100.
Count	The number of risky rules.	N/A	Unassigned integer. Value range: 0 to 4294967290.
IsOptimized	Whether to optimize.	N/A	Boolean: • true—Enable. • false—Disable.
AppList	Flux statistics of the application list.	Data structure	Members include: • AppInfo
AppInfo	Information of the application.	N/A	String, case-insensitive. Length: 1 to 255 characters.
RiskLevel	Risk level of the rule.	N/A	Unassigned integer. Value range: 1 to 5.
SecurityRisks	Security risks of the rule.	N/A	N/A

SecurityPolicies/RuleFlux

This table contains application statistics for security policy rule.

XML structure

```
<SecurityPolicies>
  <RuleFlux>
    <AppFlux>
      <PolicyType></PolicyType>
      <RuleID></RuleID>
      <QueryType></QueryType>
      <SeqNum></SeqNum>
```

```
      <AppCount></AppCount>
      <RuleName></RuleName>
      <ChildRuleID></ChildRuleID>
      <ChildRuleName></ChildRuleName>
      <TotalFlux></TotalFlux>
      <Profile></Profile>
      <AppList>
        <AppInfo></AppInfo>
      </AppList>
    </AppFlux>
  </RuleFlux>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RuleFlux
Table type	Multi-instance table
Row name	AppFlux
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PolicyType	Rule type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
QueryType	The time range.	Index	Enumeration: • 0—Today. • 1—Last Three Days. • 2—Last Week. • 3—Last Month.
SeqNum	Sequence number.	Index	Unassigned integer. Value range: 0 to 65535.
AppCount	The count of applications.	N/A	Unassigned integer. Value range: 0 to 65535.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.

Column name	Column description	Column type	Data type and restrictions
ChildRuleID	Child rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.
ChildRuleName	Child rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
TotalFlux	Flux of statistics.	N/A	N/A
Profile	Profile name.	N/A	String. Length: 1 to 63 characters.
AppList	Flux statistics of the application list.	Data structure	Members include: • AppInfo
AppInfo	Information of the application.	N/A	String, case-insensitive. Length: 1 to 255 characters.

SecurityPolicies/AppOptimizedStatus

This table contains the progress of batch application optimization.

XML structure

```
<SecurityPolicies>
  <AppOptimizedStatus>
    <Result></Result>
    <Description></Description>
    <Percent></Percent>
  </AppOptimizedStatus>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AppOptimizedStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Result	Optimization result.	N/A	Boolean: • true—Successful. • false—Failed.
Description	The case of failure.	N/A	String, case-insensitive. Length: 1 to 127 characters.
Percent	Progress in percentage.	N/A	Unassigned integer. Value range: 0 to 100.

SecurityPolicies/AppOptimizedAdvice

This table contains the advice of application optimization.

XML structure

```
<SecurityPolicies>
  <AppOptimizedAdvice>
    <PolicyType></PolicyType>
    <OptimizeType></OptimizeType>
    <RuleID></RuleID>
    <RuleName></RuleName>
    <NewRuleID></NewRuleID>
    <NewRuleName></NewRuleName>
    <AvAction></AvAction>
    <IpsAction></IpsAction>
    <UrlAction></UrlAction>
    <DFilterAction></DFilterAction>
    <FFilterAction></FFilterAction>
  </AppOptimizedAdvice>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AppOptimizedAdvice
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PolicyType	Rule type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.
OptimizeType	The time range of optimization.	Index	Enumeration: • 0—Today. • 1—Last Three Days. • 2—Last Week. • 3—Last Month.
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name.	Index	String, case-insensitive. Length: 1 to 127 characters.
NewRuleID	New rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.
NewRuleName	New rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
AvAction	AV action.	N/A	Boolean: • true—Enable. • false—Disable.
IpsAction	IPS action.	N/A	Boolean: • true—Enable. • false—Disable.
UrlAction	URL action.	N/A	Boolean: • true—Enable. • false—Disable.
DFilterAction	Data filter action.	N/A	Boolean: • true—Enable. • false—Disable.
FFilterAction	File filter action.	N/A	Boolean: • true—Enable. • false—Disable.

SecurityPolicies/IPv4RuleGroup

This table contains information about an IPv4 security policy rule group.

XML structure

```
<SecurityPolicies>
  <IPv4RuleGroup>
```

```
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Description></Description>
      <FromRuleName></FromRuleName>
      <ToRuleName></ToRuleName>
      <Enable></Enable>
      <IncludeMember></IncludeMember>
    </RuleGroup>
  </IPv4RuleGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.
Description.	Description	N/A	String. Length: 1 to 127 characters.
FromRuleName	The begin rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
ToRuleName	The end rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
IncludeMember	Delete all the rules under the rule group.	N/A	This column is used when a rule group is deleted. If this column is specified, the rules under the rule group will also be deleted.
Enable	Enable the rule group.	N/A	Boolean: • true—Enable. • false—Disable

SecurityPolicies/IPv6RuleGroup

This table contains information about an IPv6 security policy rule group.

XML structure

```
<SecurityPolicies>
  <IPv6RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Description></Description>
      <FromRuleName></FromRuleName>
      <ToRuleName></ToRuleName>
      <Enable></Enable>
      <IncludeMember></IncludeMember>
    </RuleGroup>
  </IPv6RuleGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.
Description.	Description	N/A	String. Length: 1 to 127 characters.
FromRuleName	The begin rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
ToRuleName	The end rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
IncludeMember	Delete all the rules under the rule group.	N/A	This column is used when a rule group is deleted. If this column is specified, the rules under

Column name	Column description	Column type	Data type and restrictions
			the rule group will also be deleted.
Enable	Enable the rule group.	N/A	Boolean: • true—Enable. • false—Disable

SecurityPolicies/ImportPercent

This table contains loading progress information of the security policy.

XML structure

```
<SecurityPolicies>
  <ImportStatus>
    <Result></Result>
    <LineID></LineID>
    <ConfigType></ConfigType>
    <Information></Information>
    <Percent></Percent>
  </ImportStatus>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	ImportStatus
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Result	The result of importing security policy	N/A	Enumeration: • 0—Success. • 1—Abnormal,command execution failed. • 2—Abnormal,out of spec. • 3—Unknown error. • 4—Illegal file.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—Illegal command.	
LineID	The line number of import file	N/A	Unsigned integer Value range: 0 to 2^{64}–1.	N/A
ConfigType	The type of configuration	N/A	String. Length: 0 to 1024 characters.	N/A
Information	The information of importing security policy	N/A	String. Length: 0 to 1024 characters.	The configuration file may have blank lines
Percent	Loading progress of the security policy	N/A	Unsigned integer. Value range: 0 to 100.	N/A

SecurityPolicies/IPv4SrcSimpleAddr

This table contains source address information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcSimpleAddr>
    <SrcSimpleAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <SimpleAddrList>
        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </SrcSimpleAddr>
  </IPv4SrcSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcSimpleAddr
Table type	Multi-instance table
Row name	SrcSimpleAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
SimpleAddrList	Source IPv4 address list	Data structure	Members include: • SimpleAddrItem
SimpleAddrItem	Source IPv4 address	N/A	String, case-insensitive. Length: 1 to 127 characters. Form:IP, IP/MaskLength, StartIP-EndIP. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length.

SecurityPolicies/IPv4DestSimpleAddr

This table contains destination address information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestSimpleAddr>
    <DestSimpleAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <SimpleAddrList>
        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </DestSimpleAddr>
  </IPv4DestSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestSimpleAddr
Table type	Multi-instance table
Row name	DestSimpleAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
SimpleAddrList	Destination IPv4 address list	Data structure	Members include: • SimpleAddrItem
SimpleAddrItem	Destination IPv4 address	N/A	String, case-insensitive. Length: 1 to 127 characters. Form: IP,IP/MaskLength, StartIP-EndIP. IP,StartIP, EndIP: dotted decimal notation. MaskLength: IPv4 address mask length.

SecurityPolicies/IPv4ServObj

This table contains service information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4ServObj>
    <ServObj>
      <ID></ID>
      <SeqNum></SeqNum>
```

```
      <IsIncrement></IsIncrement>
      <ServObjList>
        <ServObjItem></ServObjItem>
      </ServObjList>
    </ServObj>
  </IPv4ServObj>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4ServObj
Table type	Multi-instance table
Row name	ServObj
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
ServObjList	Service list	Data structure	Members include: • ServObjItem
ServObjItem	Service information	N/A	String, case-insensitive. Length: 1 to 255 characters. Form: { "Type": "", "StartSrcPort": "", "EndSrcPort": "", "StartDestPort": "", "EndDestPort": "", "ICMPType": "", "ICMPCode":"",

Column name	Column description	Column type	Data type and restrictions
			"Protocol":"", } **Type**: Enumeration: • **0**—TCP (protocol number 6). • **1**—UDP (protocol number 17). • **2**—ICMP (protocol number 1). • **3**—ICMPv6 (protocol number 58). • **4**—Protocol. • **5**—SCTP (protocol number 132). **StartSrcPort:** **EndSrcPort:** Unsigned integer. Value range: 0 to 65535. Required when the Type column is 0 or 1 or 5. **StartSrcPort** column and **EndSrcPort** column must be configured together with each other. **StartDestPort:** **EndDestPort:** Unsigned integer. Value range: 0 to 65535. Required when the Type column is 0 or 1 or 5. **StartDestPort** column and **EndDestPort** column must be configured together with each other. **ICMPType:** **ICMPCode:** Unsigned integer. Value range: 0 to 255. Required when the **Type** column is **2** or **3**. **ICMPCode** column must be configured together with **ICMPType**. **Protocol:** Unsigned integer. Value range: 0 to 255. Required when the Type column is **4**.

SecurityPolicies/IPv4Terminal

This table contains terminal information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4Terminal>
    <Terminal>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </Terminal>
  </IPv4Terminal>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4Terminal
Table type	Multi-instance table
Row name	Terminal
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Terminal list	Data structure	Members include: • NameItem

Column name	Column description	Column type	Data type and restrictions
NameItem	Name of the terminal	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv6Terminal

This table contains terminal information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6Terminal>
    <Terminal>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </Terminal>
  </IPv6Terminal>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6Terminal
Table type	Multi-instance table

        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </SrcSimpleAddr>
  </IPv6SrcSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6SrcSimpleAddr
Table type	Multi-instance table
Row name	SrcSimpleAddr
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
SimpleAddrList	Source IPv6 address list	Data structure	Members include: • SimpleAddrItem

Column name	Column description	Column type	Data type and restrictions
SimpleAddrItem	Source IPv6 address	N/A	String, case-insensitive. Length: 1 to 127 characters. Form: IP,IPv6/PrefixLength, StartIPv6-EndIPv6. IPv6,StartIPv6, EndIPv6: Hexadecimal string, colon-separated. MaskLength: IPv6 address prefix length.

SecurityPolicies/IPv6DestSimpleAddr

This table contains destination address information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6DestSimpleAddr>
    <DestSimpleAddr>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <SimpleAddrList>
        <SimpleAddrItem></SimpleAddrItem>
      </SimpleAddrList>
    </DestSimpleAddr>
  </IPv6DestSimpleAddr>
</SecurityPolicies>
```

Table description

Item	Description

ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	List of SSIDs	Data structure	Members include: • NameItem
NameItem	Name of the SSID	N/A	String, case-sensitive. Length: 1 to 32 characters.

SecurityPolicies/IPv4AP

This table contains access point (AP) information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4AP>
    <AP>
      <ID></ID>
```

```
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </AP>
  </IPv4AP>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4AP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	List of APs	Data structure	Members include: • NameItem
NameItem	Name of the AP	N/A	String, case-sensitive. Length: 1 to 64 characters.

SecurityPolicies/IPv4APGroup

This table contains AP group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4APGroup>
```

```
    <APGroup>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </APGroup>
  </IPv4APGroup>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4APGroup
Table type	Multi-instance table
Row name	APGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	List of AP groups	Data structure	Members include: • NameItem
NameItem	Name of the AP group	N/A	String, case-insensitive. Length: 1 to 31 characters.

SecurityPolicies/RuleThreshold

This table contains rule threshold information of security policy.

XML structure

```
<SecurityPolicies>
  <RuleThreshold>
    <PerTypeMaxRuleNum></PerTypeMaxRuleNum>
    <TotalMaxRuleNum></TotalMaxRuleNum>
  </RuleThreshold>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	RuleThreshold
Table type	Single-instance table
Row name	Status
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
PerTypeMaxRuleNum	Max number of each type of rules	N/A	Unassigned integer. Value range: 1 to 4294967290.
TotalMaxRuleNum	Max total number of rules	N/A	Unassigned integer. Value range: 1 to 8589934580.

SecurityPolicies/IPv4URL

This table contains URL category information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4URL>
    <URL>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </URL>
```

```
  </IPv4URL>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4URL
Table type	Multi-instance table
Row name	URL
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	URL category list	Data structure	Members include: • NameItem
NameItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv6URL

This table contains URL category information for an existing IPv6 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv6URL>
    <URL>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
```

```
      </NameList>
    </URL>
  </IPv6URL>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6URL
Table type	Multi-instance table
Row name	URL
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	URL category list	Data structure	Members include: • NameItem
NameItem	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv4URLInfo

This table contains URL category information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4URLInfo>
    <URLInfo>
      <ID></ID>
```

```
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </URLInfo>
  </IPv4URLInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4URLInfo
Table type	Multi-instance table
Row name	URLIInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.
NameList	URL category list	Data structure	Members include: • Name • Status
Name	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	URL category status	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv6URLIInfo

This table contains URL category information for an IPv6 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv6URLInfo>
    <URLInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </URLInfo>
  </IPv6URLInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6URLInfo
Table type	Multi-instance table
Row name	URLInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 64.
NameList	URL category list	Data structure	Members include: • Name • Status
Name	URL category name	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	URL category status	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4SrcLocation

This table contains source location information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcLocation>
    <SrcLocation>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcLocation>
  </IPv4SrcLocation>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcLocation
Table type	Multi-instance table
Row name	SrcLocation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source location list	Data structure	Members include: • NameItem

Column name	Column description	Column type	Data type and restrictions
NameItem	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv4DestLocation

This table contains destination location information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocation>
    <DestLocation>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestLocation>
  </IPv4DestLocation>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestLocation
Table type	Multi-instance table
Row name	DestLocation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to	N/A	This column is insignificant. Ignore the value in

Column name	Column description	Column type	Data type and restrictions
	increment the data		this column.
NameList	Name of the destination location list	Data structure	Members include: • NameItem
NameItem	Name of the destination location	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv4SrcLocationGrp

This table contains source location group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcLocationGrp>
    <SrcLocationGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcLocationGrp>
  </IPv4SrcLocationGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcLocationGrp
Table type	Multi-instance table
Row name	SrcLocationGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.

Column name	Column description	Column type	Data type and restrictions
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the source location group list	Data structure	Members include: • NameItem
NameItem	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv4DestLocationGrp

This table contains destination location group information for an existing IPv4 security policy rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocationGrp>
    <DestLocationGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestLocationGrp>
  </IPv4DestLocationGrp>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestLocationGrp
Table type	Multi-instance table
Row name	DestLocationGrp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the destination location group list	Data structure	Members include: • NameItem
NameItem	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.

SecurityPolicies/IPv4SrcLocationInfo

This table contains source location information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4SrcLocationInfo>
    <SrcLocationInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </SrcLocationInfo>
  </IPv4SrcLocationInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcLocationInfo
Table type	Multi-instance table
Row name	SrcLocationInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
NameList	Name of the source location list	Data structure	Members include: • Name • Status
Name	Name of the source location	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the location.	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4DestLocationInfo

This table contains destination location information for an IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocationInfo>
    <DestLocationInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </DestLocationInfo>
  </IPv4DestLocationInfo>
</SecurityPolicies>
```

Table description

Item	Description

Table name	IPv4SrcLocationGrpInfo
Table type	Multi-instance table
Row name	SrcLocationGrpInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
NameList	Name of the source location group list	Data structure	Members include: • Name • Status
Name	Name of the source location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the location.group	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4DestLocationGrpInfo

This table contains destination location group information for an existing IPv4 security policy rule that is redundant or has a redundant rule.

XML structure

```
<SecurityPolicies>
  <IPv4DestLocationGrpInfo>
    <DestLocationGrpInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </DestLocationGrpInfo>
```

```
  </IPv4DestLocationGrpInfo>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DestLocationGrpInfo
Table type	Multi-instance table
Row name	DestLocationGrpInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 4294967290.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
NameList	Name of the destination location group list	Data structure	Members include: • Name • Status
Name	Name of the destination location group	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the location.group	N/A	Boolean: • true—Effective. • false—Not effective.

SecurityPolicies/IPv4DefaultRule

This table contains IPv4 default rule information.

XML structure

```
<SecurityPolicies>
  <IPv4DefaultRule>
    <Action></Action>
    <Log></Log>
    <Counting></Counting>
  </IPv4DefaultRule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4DefaultRule
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Action	Action for the rule.	N/A	Enumeration: • **1**—Deny. • **2**—Permit.
Log	Whether to enable logging.	N/A	Boolean: • **true**—Enable. • **false**—Disable.
Counting	Whether to enable counting.	N/A	Boolean: • **true**—Enable. • **false—**Disable.

SecurityPolicies/IPv6DefaultRule

This table contains IPv6 default rule information.

XML structure

```
<SecurityPolicies>
  <IPv6DefaultRule>
    <Action></Action>
    <Log></Log>
    <Counting></Counting>
  </IPv6DefaultRule>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6DefaultRule
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Action	Action for the rule	N/A	Enumeration: • **1**—Deny. • **2**—Permit.
Log	Whether to enable logging	N/A	Boolean: • **true**—Enable. • **false**—Disable.
Counting	Whether to enable counting	N/A	Boolean: • **true**—Enable. • **false—Disable.**

SecurityPolicies/GetMonitorRecords

This table contains monitor records information of an learning security policy rule.

XML structure

```
<SecurityPolicies>
  <GetMonitorRecords>
    <Record>
      <RecordID></RecordID>
      <IPVer></IPVer>
      <RuleID></RuleID>
      <RuleName></RuleName>
      <SZone></SZone>
      <SrcAddr></SrcAddr>
      <DestZone></DestZone>
      <DestAddr></DestAddr>
      <DestPort></DestPort>
      <ProtocolNum></ProtocolNum>
      <ProtocolName></ProtocolName>
      <AllRecordsCount></AllRecordsCount>
    </Record>
  </GetMonitorRecords>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	GetMonitorRecords
Table type	Multi-instance table
Row name	Record
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RecordID	Record ID.	Index	Unassigned integer. Value range: 1 to 4000.
IPVer	IP version.	Index	Enumeration: • 1—IPv4. • 2—IPv6
RuleID	Rule ID.	N/A	Unassigned integer. Value range: 0 to 4294967290.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
SZone	Name of the source zone.	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddr	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters.
DestZone	Name of the destination zone.	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddr	Destination address.	N/A	String, case-insensitive. Length: 1 to 127 characters.
DestPort	Name of the destination port.	N/A	Unsigned integer. Value range: 0 to 65535
ProtocolNum	Protocol Number	N/A	Unassigned integer. Value range: 0 to 255.
ProtocolName	Name of the protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.
AllRecordsCount	Count of records.	N/A	Unassigned integer. Value range: 0 to 4000.

SecurityPolicies/AutoDeploy

This table contains information about security policy auto deployment.

XML structure

```
<SecurityPolicies>
  <AutoDeploy>
    <StudyDuration></StudyDuration>
    <ServerZones>
      <ServerZone></ServerZone>
    </ServerZones>
    <InternetZones>
      <InternetZone></InternetZone>
    </InternetZones>
    <IPv4MaskLen></IPv4MaskLen>
    <IPv6MaskLen></IPv6MaskLen>
  </AutoDeploy>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	AutoDeploy
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
StudyDuration	Study time.	N/A	Unassigned integer. Value range: 1 to 168.
ServerZones	Server zones.	Data structure	Members include: • **ServerZone**.
ServerZone	Server zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters.
InternetZones	Internet zones.	Data structure	Members include: • **InternetZone**.
InternetZone	Internet zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters.
IPv4MaskLen	Length of IPv4 mask.	N/A	Unassigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 1 to 32.
IPv6MaskLen	Length of IPv6 prefix.	N/A	Unassigned integer. Value range: 64 to 128.

SecurityPolicies/GetAutoDeployStatus

This table contains status information about security policy auto deployment.

XML structure

```
<SecurityPolicies>
  <GetAutoDeployStatus>
    <Status></Status>
    <Remainingtime></Remainingtime>
    <AllRecordsCount></AllRecordsCount>
  </GetAutoDeployStatus>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	GetAutoDeployStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Status	Status of auto deployment.	N/A	Options include: • **0**—Init. • **1**—Studying. • **2**—Ended.
Remainingtime	Remaining time for study in minute.	N/A	Unassigned integer. Value range: 1 to 10080 minutes.
AllRecordsCount	Total number of IPv4 and IPv6 records.	N/A	Unassigned integer. Value range: 1 to 4000.

SecurityPolicies/GetAutoDeployRecords

This table contains information about security policy auto deployment records.

XML structure

```
<SecurityPolicies>
  <GetAutoDeployRecords>
    <Record>
    <RecordID></RecordID>
    <IPVer></IPVer>
     <Mode></Mode>

Table name	GetAutoDeployRecords
Table type	Multi-instance table
Row name	Record
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RecordID	Record ID.	Index	Unassigned integer. Value range: 1 to 2000.

Column name	Column description	Column type	Data type and restrictions
IPVer	IP version.	Index	Unassigned integer. Value range: 1 to 2.
Mode	Aggregation mode.	N/A	Options include: • **1**—Internet-to-Server mode. • **2**—Server mode. • **3**—Server-to-Internet mode. • **4**—Internet mode. • **5**—Mutual mode.
RuleID	Rule ID.	N/A	Unassigned integer. Value range: 1 to 4294967290.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
SZoneList	List of source zones.	Data structure	Members include: • **SZone**.
SZone	Name of source zone.	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrList	List of source addresses.	Data structure	Members include: • **SrcAddr**.
SrcAddr	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters.
DestZone	Destination zone.	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddr	Destination address.	N/A	String, case-insensitive. Length: 1 to 127 characters.
DestPort	Destination port.	N/A	Unassigned integer. Value range: 1 to 65535.
ProtocolNum	Protocol number.	N/A	String, case-insensitive. Length: 1 to 255 characters.
ProtocolName	Name of the protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.
AllRecordsCount	Total number of records.	N/A	Unassigned integer. Value range: 1 to 4000.

SecurityPolicies/GetAutoDeploySrcAddr

This table contains information about source addresses for security policy auto deployment.

XML structure

```
<SecurityPolicies>
  <GetAutoDeploySrcAddr>
    <Record>
```

```
      <RecordID></RecordID>
      <IPVer></IPVer>
      <SeqNum></SeqNum>
      <SrcAddrList>
        <SrcAddr></SrcAddr>
      </SrcAddrList>
    </Record>
  </GetAutoDeploySrcAddr>
</SecurityPolicies>
```

Table description

Item	Description
Feature name	SecurityPolicies
Table name	GetAutoDeploySrcAddr
Table type	Multi-instance table
Row name	Record
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
RecordID	Record ID.	Index	Unassigned integer. Value range: 1 to 2000.
IPVer	IP version.	Index	Unassigned integer. Value range: 1 to 2.
SeqNum.	Sequence number.	Index	Unassigned integer. Value range: 1 to 1024.
SrcAddrList	List of source addresses.	Data structure	Members include: • SrcAddr.
SrcAddr	Source address.	N/A	String, case-insensitive. Length: 1 to 127 characters.

SecurityPolicies

SecurityPolicies/IPv4Rules

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the limit. 当执行create操作时，规则数必须在限制内。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	During executing create、merge、replace operation, the time range must exist. 当执行create、merge、replace操作时，指定的时间段必须存在。
Failed to create the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing create operation, the ID of the rule to be moved can’t be equal to the target one. 当执行create操作时，指定规则编号不能和目标规则相同。
Failed to merge the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing merge operation, the ID of the rule to be moved can’t be equal to the target one. 当执行merge操作时，指定规则编号不能和目标规则相同。
Failed to replace the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing replace operation, the ID of the rule to be moved can’t be equal to the target one. 当执行replace操作时，指定规则编号不能和目标规则相同。
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During executing create、merge、replace operation, the specified rule must exist. 当执行create、merge、replace操作时，指定规则或目标规则必须存在。
Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing create operation, the action of the rule must be specified. 当执行create操作时，必须指定规则动作。
Failed to merge the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing merge operation, the action of the rule must be specified. 当执行merge操作时，必须指定规则动作。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the maximum. 当执行create操作时，规则数不能达到上限值。
The app group does not exist. 指定的应用组不存在。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The application does not exist. 指定的应用不存在。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group and the application does not exist, the rule does not match packets. 指定的应用组和应用都不存在，该规则不会匹配报	During executing create、merge、replace operation, the app group and the application must exist.

文。	当执行create、merge、replace操作时，指定的应用或应用组必须存在。
The application does not exist, the rule does not match packets. 指定的应用不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group does not exist, the rule does not match packets. 指定的应用组不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The name is already used by another security policy rule. 规则名称已存在。	During executing create、merge、replace operation, the name of the new rule can't be exist. 当执行create、merge、replace操作时，新规则名称必须不存在。
Invalid rule name. 无效的规则名称。	During executing create、merge、replace operation, the name of the new rule must be valid. 当执行create、merge、replace操作时，规则名称必须有效。

SecurityPolicies/IPv6Rules

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the limit. 当执行create操作时，规则数必须在限制内。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	During executing create、merge、replace operation, the time range must exist. 当执行create、merge、replace操作时，指定的时间段必须存在。
Failed to create the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing create operation, the ID of the rule to be moved can't be equal to the target one. 当执行create操作时，指定规则编号不能和目标规则相同。
Failed to merge the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing merge operation, the ID of the rule to be moved can't be equal to the target one. 当执行merge操作时，指定规则编号不能和目标规则相同。
Failed to replace the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing replace operation, the ID of the rule to be moved can't be equal to the target one. 当执行replace操作时，指定规则编号不能和目标规则相同。
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During executing create、merge、replace operation, the specified rule must exist. 当执行create、merge、replace操作时，指定规则或目标规则必须存在。
Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing create operation, the action of the rule must be specified. 当执行create操作时，必须指定规则动作。
Failed to merge the rule because the action of the rule is not specified.	During executing merge operation, the action of the rule must be specified.

由于未指定规则动作，创建规则失败。	当执行merge操作时，必须指定规则动作。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the maximum. 当执行create操作时，规则数不能达到上限值。
The app group does not exist. 指定的应用组不存在。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The application does not exist. 指定的应用不存在。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group and the application does not exist, the rule does not match packets. 指定的应用组和应用都不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group and the application must exist. 当执行create、merge、replace操作时，指定的应用或应用组必须存在。
The application does not exist, the rule does not match packets. 指定的应用不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group does not exist, the rule does not match packets. 指定的应用组不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The name is already used by another security policy rule. 规则名称已存在。	During executing create、merge、replace operation, the name of the new rule can’t be exist. 当执行create、merge、replace操作时，新规则名称必须不存在。
Invalid rule name. 无效的规则名称。	During executing create、merge、replace operation, the name of the new rule must be valid. 当执行create、merge、replace操作时，规则名称必须有效。

SecurityPolicies/IPv4SrcSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source seczone already reached. 源安全域个数超过上限。	During executing create、merge、replace operation, the number of source seczone must be under the maximum. 当执行create、merge、replace操作时，源安全域个数必须在限制内。
The source seczone is already existed in the rule. 源安全域已存在。	During executing create、merge、replace operation, the new source zone can’t be existed. 当执行create、merge、replace操作时，源安全域不能存在。

SecurityPolicies/IPv6SrcSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source seczone already reached. 源安全域个数超过上限。	During executing create、merge、replace operation, the number of source seczone must be under the maximum. 当执行create、merge、replace操作时，源安全域个数必须在限制内。
The source seczone is already existed in the rule. 源安全域已存在。	During executing create、merge、replace operation, the new source zone can’t be existed. 当执行create、merge、replace操作时，源安全域不能存在。

SecurityPolicies/IPv4DestSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name of must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination seczone already reached. 目的安全域个数超过上限。	During executing create、merge、replace operation, the number of destination seczone must be under the maximum. 当执行create、merge、replace操作时，目的安全域个数必须在限制内。
The destination seczone is already existed in the rule. 目的安全域已存在。	During executing create、merge、replace operation, the new destination zone can’t be existed. 当执行create、merge、replace操作时，目的安全域不能存在。

SecurityPolicies/IPv6DestSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination seczone already reached. 目的安全域个数超过上限。	During executing create、merge、replace operation, the number of destination seczone must be under the maximum. 当执行create、merge、replace操作时，目的安全域个数必须在限制内。
The destination seczone is already existed in the rule. 目的安全域已存在。	During executing create、merge、replace operation, the new destination zone can’t be existed. 当执行create、merge、replace操作时，目的安全域不能存在。

SecurityPolicies/IPv4SrcAddr

Message	Explanation
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	During executing create、merge、replace operation, the source IP address object group type must be legal. 当执行create、merge、replace操作时，指定的源IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source ip already reached. 源地址个数超过上限。	During executing create、merge、replace operation, the number of source ip address must be under the maximum. 当执行create、merge、replace操作时，源地址个数必须在限制内。

SecurityPolicies/IPv6SrcAddr

Message	Explanation
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	During executing create、merge、replace operation, the source IP address object group type must be legal. 当执行create、merge、replace操作时，指定的源IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source ip already reached. 源地址个数超过上限。	During executing create、merge、replace operation, the number of source ip address must be under the maximum. 当执行create、merge、replace操作时，源地址个数必须在限制内。

SecurityPolicies/IPv4DestAddr

Message	Explanation
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	During executing create、merge、replace operation, the destination IP address object group type must be legal. 当执行create、merge、replace操作时，指定的目的IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination ip already reached. 目的地址个数超过上限。	During executing create、merge、replace operation, the number of destination ip address must be under the maximum. 当执行create、merge、replace操作时，目的地址个数必须在限制内。

SecurityPolicies/IPv6DestAddr

Message	Explanation
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	During executing create、merge、replace operation, the destination IP address object group type must be legal. 当执行create、merge、replace操作时，指定的目的IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination ip already reached. 目的地址个数超过上限。	During executing create、merge、replace operation, the number of destination ip address must be under the maximum. 当执行create、merge、replace操作时，目的地址个数必须在限制内。

SecurityPolicies/IPv4SrcMacAddr

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source MAC already reached. 源MAC地址组个数超过上限。	During executing create、merge、replace operation, the number of source MAC address must be under the maximum. 当执行create、merge、replace操作时，源MAC地址组个数必须在限制内。
Illegal source MAC address object group type. 指定的源MAC地址对象组类型不正确。	During executing create、merge、replace operation, the source MAC address object group type must be legal. 当执行create、merge、replace操作时，指定的源MAC地址对象组类型必须正确。

SecurityPolicies/IPv4ServGrp

Message	Explanation
Illegal service object group type. 指定的服务对象组类型不正确。	During executing create、merge、replace operation, the service object object group type must be legal. 当执行create、merge、replace操作时，指定的服务对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。

SecurityPolicies/IPv6ServGrp

Message	Explanation
Illegal service object group type. 指定的服务对象组类型不正确。	During executing create、merge、replace operation, the service object object group type must be legal. 当执行create、merge、replace操作时，指定的服务对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。

SecurityPolicies/IPv4App

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。
Maximum number of application already reached. 应用个数超过上限。	During executing create、merge、replace operation, the number of application must be under the maximum. 当执行create、merge、replace操作时，应用个数必须在限制内。

SecurityPolicies/IPv6App

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。
Maximum number of application already reached. 应用个数超过上限。	During executing create、merge、replace operation, the number of application must be under the maximum. 当执行create、merge、replace操作时，应用个数必须在限制内。

SecurityPolicies/IPv4AppGrp

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of application group already reached. 应用组个数超过上限。	During executing create、merge、replace operation, the number of application group must be under the maximum. 当执行create、merge、replace操作时，应用组个数必须在限制内。

SecurityPolicies/IPv6AppGrp

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of application group already reached. 应用组个数超过上限。	During executing create、merge、replace operation, the number of application group must be under the maximum. 当执行create、merge、replace操作时，应用组个数必须在限制内。

SecurityPolicies/IPv4User

Message	Explanation
Invalid username. 无效的用户名。	During executing create、merge、replace operation, the username must be valid. 当执行create、merge、replace操作时，用户名必须有效。
Maximum number of user already reached. 用户个数超过上限。	During executing create、merge、replace operation, the number of user must be under the maximum. 当执行create、merge、replace操作时，用户个数必须在限制内。

SecurityPolicies/IPv6User

Message	Explanation
Invalid username. 无效的用户名。	During executing create、merge、replace operation, the username must be valid. 当执行create、merge、replace操作时，用户名必须有效。
Maximum number of user already reached. 用户个数超过上限。	During executing create、merge、replace operation, the number of user must be under the maximum. 当执行create、merge、replace操作时，用户个数必须在限制内。

SecurityPolicies/IPv4UserGrp

Message	Explanation
Maximum number of user-group already reached. 用户组个数超过上限。	During executing create、merge、replace operation, the number of user-group must be under the maximum. 当执行create、merge、replace操作时，用户组个数必须在限制内。

SecurityPolicies/IPv6UserGrp

Message	Explanation
Maximum number of user-group already reached. 用户组个数超过上限。	During executing create、merge、replace operation, the number of user-group must be under the maximum. 当执行create、merge、replace操作时，用户组个数必须在限制内。

SecurityPolicies/AppOptimizedStatus

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	The number of rule must be under the maximum when create rules. 当创建规则时，规则个数必须在限制内。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	The number of rule must be under the maximum when create rules. 当创建规则时，规则个数必须在限制内。
Failed to reference the protection action during the auto batch optimization operation. 策略批量调优过程中引用策略防护动作失败。	During the auto batch optimization operation, the protection action must be referenced successfully. 策略批量调优过程中，引用策略防护动作必须成功。
Auto batch optimization failed. 策略批量调优失败。	Auto batch optimization failed. 策略批量调优失败。

SecurityPolicies/CommitCfgChange

Message	Explanation
The accelerate state of IPv4 or IPv6 is disable. IPv4或者IPv6的加速状态为不加速。	The accelerate state of IPv4 or IPv6 is disable. IPv4或者IPv6的加速状态为不加速。

SecurityPolicies/MoveIPv4Rule

Message	Explanation
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失败。	During the operation, the ID of the rule to be moved can’t be equal to the target one. 当执行该操作时，指定规则编号不能和目标规则相同。

Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During the operation, the specified rule must exist. 当执行该操作时，指定规则或目标规则必须存在。

SecurityPolicies/MoveIPv6Rule

Message	Explanation
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失败。	During the operation, the ID of the rule to be moved can’t be equal to the target one. 当执行该操作时，指定规则编号不能和目标规则相同。
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During the operation, the specified rule must exist. 当执行该操作时，指定规则或目标规则必须存在。

SecurityPolicies/SingleOptimized

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During the operation, the current number of the rule must under the limit. 当执行该操作时，规则数必须在限制内。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During the operation, the current number of the rule must under the maximum. 当执行该操作时，规则数必须在限制内。
The name is already used by another security policy rule. 规则名称已存在。	During the operation, the name of the new rule can’t be exist. 当执行该操作时，新规则名称必须不存在。
The policy has been optimized. 调优失败，此策略规则已调优，请刷新。	During the operation, the policy can’t have been optimized already. 当执行该操作时，规则必须还未调优过。

SecurityZone

SecurityZone/Zones

This table contains the information about a security zone.

XML structure

```
<SecurityZone>
  <Zones>
    <Zone>
      <Name></Name>
    </Zone>
  </Zones>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	Zones
Table type	Multi-instance table
Row name	Zone
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).

SecurityZone/ZonePairs

This table contains the information about a security zone pair.

XML structure

```
<SecurityZone>
  <ZonePairs>
    <ZonePair>
      <SrcZone></SrcZone>
```

```
      <DestZone></DestZone>
    </ZonePair>
  </ZonePairs>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ZonePairs
Table type	Multi-instance table
Row name	ZonePair
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
SrcZone	Source security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The source security name cannot contain hyphens (-).
DestZone	Destination security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The destination security name cannot contain hyphens (-).

SecurityZone/Interfaces

The table contains the interface member information of a security zone.

XML structure

```
<SecurityZone>
  <Interfaces>
    <Interface>
      <ZoneName></ZoneName>
      <IfIndex></IfIndex>
      <VlanList></VlanList>
    </Interface>
  </Interfaces>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
IfIndex	Interface index	Index	Unsigned integer.	Available interfaces include Layer 2 interfaces and layer 3 interfaces.
VlanList	The VLANs that the interface belongs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any spaces.	N/A

SecurityZone/VLANs

The table contains the VLAN interface information of a security zone.

XML structure

```
<SecurityZone>
  <VLANs>
    <VLAN>
      <ZoneName></ZoneName>
      <VlanList></VlanList>
    </VLAN>
  </VLANs>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
VlanList	List of VLAN	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any spaces.	N/A

SecurityZone/ServicePaths

The table contains the service path member information of a security zone.

XML structure

```
<SecurityZone>
  <ServicePaths>
    <ServicePath>
      <ZoneName></ZoneName>
      <ServicePathID></ServicePathID>
      <Reverse></Reverse>
    </ServicePath>
  </ServicePaths>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ServicePaths
Table type	Multi-instance table
Row name	ServicePath
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
ServicePathID	Service path ID	Index	Unsigned integer.	N/A
Reverse	Reverse tag	Index	Boolean: • true. • false.	N/A

SecurityZone/VsipFilterSwitch

This table contains information about traffic filtering based on virtual service IP address.

XML structure

```
<SecurityZone>
  <VsipFilterSwitch>
    <EnableVsipFilter></EnableVsipFilter>
  </VsipFilterSwitch>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	VsipFilterSwitch
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
EnableVsipFilter	Whether to enable filtering based on virtual service IP address	N/A	Boolean: • **true—**Enable the filtering feature. • **false—**Disable the filtering feature (default).

SecurityZone/IPv4Members

The table contains the IPv4 subnet member information of a security zone.

XML structure

```
<SecurityZone>
  <IPv4Members>
    <IPv4Member>
      <ZoneName></ZoneName>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <VRF></VRF>
    </IPv4Member>
  </IPv4Members>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	IPv4Members
Table type	Multi-instance table
Row name	IPv4Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-sensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
Ipv4Address	IPv4 subnet address	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IPv4 subnet mask	Index	Unsigned integer. Value range: 0 to 32.	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 0 to 31 characters.	You can specify a non-existent VPN instance.

SecurityZone/IPv6Members

The table contains the IPv6 subnet member information of a security zone.

XML structure

```
<SecurityZone>
  <IPv6Members>
    <IPv6Member>
      <ZoneName></ZoneName>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </IPv6Member>
  </IPv6Members>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	IPv6Members
Table type	Multi-instance table
Row name	IPv6Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-sensitive. Length: 1 to 31 characters.	The security zone name cannot contain hyphens (-).
Ipv6Address	IPv6 subnet address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 0 to 31 characters.	You can specify a non-existent VPN instance.

SecurityZone/ServiceManageProtocols

The table contains information about protocols allowed by an interface.

XML structure

```
<SecurityZone>
  <ServiceManageProtocols>
    <ServiceManageProtocol>
      <IfName></IfName>
      <Direction></Direction>
      <HTTP></HTTP>
      <HTTPS></HTTPS>
      <NETCONF-HTTP></NETCONF-HTTP>
      <NETCONF-HTTPS></NETCONF-HTTPS>
      <NETCONF-SSH></NETCONF-SSH>
      <PING></PING>
      <SNMP></SNMP>
      <SSH></SSH>
      <TELNET></TELNET>
    </ServiceManageProtocol>
  </ServiceManageProtocols>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ServiceManageProtocols
Table type	Multi-instance table

Row name	ServiceManageProtocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
IfName	Interface name	Index	String, case-insensitive. Length: 1 to 47 characters	Available interfaces include layer 3 interfaces.
Direction	Flow direction	Index	Boolean: • **false**—Inbound. • **true**—Outbound..	N/A
HTTP	HTTP protocol	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
HTTPS	HTTPS protocol	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-HTTP	NETCONF over SOAP over HTTP	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-HTTPS	NETCONF over SOAP over HTTPS	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-SSH	NETCONF over SSH	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
PING	Ping	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
SNMP	SNMP	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
SSH	SSH	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
TELNET	Telnet	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A

SecurityZone

SecurityZone/Capabilities

This table contains the capabilities information of a security zone.

XML structure

```
<SecurityZone>
  <Capabilities>
    <L3Interface></L3Interface>
    <L2Interface></L2Interface>
    <VLAN></VLAN>
    <IP></IP>
    <ServicePath></ServicePath>
  </Capabilities>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
L3Interface	Whether layer 3 interface member is supported	N/A	Boolean: • true. • False.	N/A
L2Interface	Whether layer 2 interface member is supported	N/A	Boolean: • true. • false.	N/A
VLAN	Whether VLAN member is supported	N/A	Boolean: • true. • false.	N/A
IP	Whether IP member is supported	N/A	Boolean: • true.	N/A

Column name	Column description	Column type	Data type and restrictions	Remark
			• false.	
ServicePath	Whether service path member is supported	N/A	Boolean: • true. • false.	N/A

SecurityZone/Zones

This table contains security zone information.

XML structure

```
<SecurityZone>
  <Zones>
    <Zone>
      <Name></Name>
      <ID></ID>
    </Zone>
  </Zones>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	Zones
Table type	Multi-instance table
Row name	Zone
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
ID	Security zone ID	N/A	Unsigned integer. Value range: 0 to 10100	N/A

SecurityZone/ZonePairs

This table contains security zone pair information.

XML structure

```
<SecurityZone>
  <ZonePairs>
    <ZonePair>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
    </ZonePair>
  </ZonePairs>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ZonePairs
Table type	Multi-instance table
Row name	ZonePair
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
SrcZone	Source security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The source security name cannot contain hyphens (-).
DestZone	Destination security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The destination security name cannot contain hyphens (-).

SecurityZone/Interfaces

The table contains the interface member information of a security zone.

XML structure

```
<SecurityZone>
  <Interfaces>
```

```
    <Interface>
      <ZoneName></ZoneName>
      <IfIndex></IfIndex>
      <VlanList></VlanList>
    </Interface>
  </Interfaces>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
IfIndex	Interface index	Index	Unsigned integer.	Available interfaces include Layer 2 interfaces and layer 3 interfaces.
VlanList	The VLANs that the interface belongs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A

SecurityZone/VLANs

The table contains the VLAN member information of a security zone.

XML structure

```
<SecurityZone>
  <VLANs>
    <VLAN>
      <ZoneName></ZoneName>
      <VlanList></VlanList>
    </VLAN>
  </VLANs>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
VlanList	List of VLANs	Index	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any spaces.	N/A

SecurityZone/ServicePaths

The table contains the service path member information of a security zone.

XML structure

```
<SecurityZone>
  <ServicePaths>
```

```
    <ServicePath>
      <ZoneName></ZoneName>
      <ServicePathID></ServicePathID>
      <Reverse></Reverse>
    </ServicePath>
  </ServicePaths>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ServicePaths
Table type	Multi-instance table
Row name	ServicePath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
ServicePathID	Service path ID	Index	Unsigned integer.	N/A
Reverse	Reverse tag	Index	Boolean: • true. • false.	N/A

SecurityZone/VsipFilterSwitch

This table contains information about traffic filtering based on virtual service IP address.

XML structure

```
<SecurityZone>
  <VsipFilterSwitch>
    <EnableVsipFilter></EnableVsipFilter>
  </VsipFilterSwitch>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	VsipFilterSwitch
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
EnableVsipFilter	Whether filtering based on virtual service IP address is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

SecurityZone/IPv4Members

The table contains the IPv4 subnet member information of a security zone.

XML structure

```
<SecurityZone>
  <IPv4Members>
    <IPv4Member>
      <ZoneName></ZoneName>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <VRF></VRF>
    </IPv4Member>
  </IPv4Members>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	IPv4Members
Table type	Multi-instance table
Row name	IPv4Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-insensitive. Length: 1 to 31 characters.	The security name cannot contain hyphens (-).
Ipv4Address	IPv4 subnet address	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IPv4 subnet mask	Index	Unsigned integer. Value range: 0 to 32.	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 0 to 31 characters.	You can specify a non-existent VPN instance.

SecurityZone/IPv6Members

The table contains the IPv6 subnet member information of a security zone.

XML structure

```
<SecurityZone>
  <IPv6Members>
    <IPv6Member>
      <ZoneName></ZoneName>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </IPv6Member>
  </IPv6Members>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	IPv6Members
Table type	Multi-instance table
Row name	IPv6Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String, case-sensitive. Length: 1 to 31 characters.	The security zone name cannot contain hyphens (-).
Ipv6Address	IPv6 subnet address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 0 to 31 characters.	You can specify a non-existent VPN instance.

SecurityZone/ServiceManageProtocols

The table contains information about protocols allowed by an interface.

XML structure

```
<SecurityZone>
  <ServiceManageProtocols>
    <ServiceManageProtocol>
      <IfName></IfName>
      <Direction></Direction>
      <HTTP></HTTP>
      <HTTPS></HTTPS>
      <NETCONF-HTTP></NETCONF-HTTP>
      <NETCONF-HTTPS></NETCONF-HTTPS>
      <NETCONF-SSH></NETCONF-SSH>
      <PING></PING>
      <SNMP></SNMP>
      <SSH></SSH>
      <TELNET></TELNET>
    </ServiceManageProtocol>
  </ServiceManageProtocols>
</SecurityZone>
```

Table description

Item	Description
Feature name	SecurityZone
Table name	ServiceManageProtocols
Table type	Multi-instance table

Row name	ServiceManageProtocol
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
IfName	Interface name	Index	String, case-insensitive. Length: 1 to 47 characters.	Available interfaces include layer 3 interfaces.
Direction	Flow direction	Index	Boolean: • **false**—Inbound. • **true**—Outbound.	N/A
HTTP	HTTP	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
HTTPS	HTTPS	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-HTTP	NETCONF over SOAP over HTTP	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-HTTPS	NETCONF over SOAP over HTTPS	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
NETCONF-SSH	NETCONF over SSH	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
PING	Ping	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
SNMP	SNMP	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A
SSH	SSH	N/A	Boolean: • **false**—Deny (default). • **true**—Allow.	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathID	Path ID of the service chain	Index	Unsigned integer. Value range: 1 to 8388606.	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	Choose the ACLNumber or ACLName column to specify an ACL to match locally generated packets. The two columns

Column name	Column description	Column type	Data type and restrictions	Remarks
				cannot be set together. Support for this column depends on the device model.
ACLName	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Choose the ACLNumber or ACLName column to specify an ACL to match locally generated packets. The two columns cannot be set together. Support for this column depends on the device model.
NextHop	IP address of the next service node	N/A	String, dotted decimal notation.	Default: 0.0.0.0. Example: 1.1.1.1.
PrevHop	IP address of the previous service node	N/A	String, dotted decimal notation.	Default: 0.0.0.0. Example: 1.1.1.1.

SRVCHN/IfMatchs

This table contains service chain policy information. Support for this table depends on the device model.

XML structure

```
<SRVCHN>
  <IfMatchs>
    <IfMatch>
      <PathID></PathID>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <ACLName></ACLName>
    </IfMatch>
  </IfMatchs>
</SRVCHN>
```

Table description

Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Moudle	Type of the module which created the session.	N/A	Enumeration: • 0—NAT. • 1—CONNECTION-LIMIT • 2—LB. • 3—ASPF. • 4—LOG. • **5**—ALG • 6—DS-Lite • 7—TCP MSS • 8—Application of statistical • 9—Inter-zone strategy • 10—WAAS • 11—TCP serial number to check • 12—AFT • 13—DIM Engine processing • 14—TCP Engine restructuring 15—Traffic log	N/A
SessionFwdType	Session forward type.	N/A	Unsigned integer. Enumeration: • 0—VRF instance name. • 1—VLAN ID. • 2—Inline ID.	N/A
InitVRF	Session forward value of the initiator.	N/A	String, case-sensitive. Length: 1 to 31 characters.	When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID. When SessionFwdType is Inline ID, the value for InitVRF is Inline ID. When SessionFwdType is

Column name	Column description	Column type	Data type and restrictions	Remarks
				VRF instance name, the value for InitVRF is the VRF instance name.
InitSourceIp	Source IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	N/A
InitSourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InitDestination Ip	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	N/A
InitDestination Port	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InitProtocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
InitEnProtocol	Transport layer protocol id of the packet from the initiator to the responder.	N/A	Enumeration: • 0—TCP. • 1—UDP • 2—ICMP • 3—ICMPv6. 4—UDP-Lite • 5—SCTP • 6—DCCP • 7—RAWIP	N/A
Clear	Resets counters.	N/A	This column must be empty.	N/A
StopTime	The time of stopping a specified session's flow.	N/A	Unsigned integer. Value range: 5 to 1000000 seconds.	N/A
TimeRangeSt art	Start time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TimeRangeEn d	End time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Application	Application layer protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Interface	Interface name.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Source security zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstZone	Destination security zone name.	N/A	String, case-insensitive. Length: 1 to 31 characters	N/A
EnState	Session state(Enumeration).	N/A	Enumeration: • 0—TCP_SYN_SENT. • 1—TCP_SYN_RECV. • 2—TCP_ESTABLISHED. • 3—TCP_FIN_WAIT. • 4—TCP_CLOSE_WAIT. • 5—TCP_LAST_ACK. • 6—TCP_TIME_WAIT. • 7—TCP_CLOSE. • 8—TCP_SYN_SENT2. • 9—DCCP_REQUEST. • 10—DCCP_RESPOND. • 11—DCCP_PARTOPEN. • 12—DCCP_OPEN. • 13—DCCP_CLOSEREQ. • 14—DCCP_CLOSING. • 15—DCCP_TIMEWAIT. • 18—ICMPV6_REQUEST. • 19—ICMPV6_REPLY. • 20—RAWIP_OPEN. • 21—RAWIP_READY. • 22—SCTP_CLOSED. • 23—SCTP_COOKIE_WAIT. • 24—SCTP_COOKIE_ECHOED. • 25—SCTP_ESTABLISHED. • 26—SCTP_SHUTDOWN_SENT. • 27—SCTP_SHUTDOWN_RECD. • 28—SCTP_SHUTDOWN_ACK_SENT. • 29—UDP_OPEN. • 30—UDP_READY. • 31—UDPLITE_OPEN. • 32—UDPLITE_READY.	N/A
RuleName	Security policy name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionDir	Direction of the session.	N/A	Enumeration: • 0—Initiator. • 1—Responder.	N/A

Session/ConnectionLimit/GlobalStatistics

This table contains connection limit global statistics.

XML structure

```
<Session>
  <ConnectionLimit>
    <GlobalStatistics>
      <GlobalStatistic>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Clear></Clear>
      </GlobalStatistic>
    </GlobalStatistics>
  </ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	GlobalStatistics
Table type	Multi-instance table
Row name	GlobalStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Clear	Resets counters.	N/A	This column must be empty.	N/A

Session/ConnectionLimit/ClearAllGlobalStatistics

Clear all connection limit global statistics.

XML structure

```
<Session>
  <ConnectionLimit>
    <ClearAllGlobalStatistics>
      <Clear></Clear>
    </ClearAllGlobalStatistics>
  </ConnectionLimit>
</Session>
```

      </InterfaceStatistic>
    </InterfaceStatistics>
  </ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	InterfaceStatistics
Table type	Multi-instance table
Row name	InterfaceStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Clear	Resets counters.	N/A	This column must be empty.	N/A

Session/ConnectionLimit/ClearAllInterfaceStatistics

Clear all connection limit statistics on an interface.

XML structure

```
<Session>
  <ConnectionLimit>
    <ClearAllInterfaceStatistics>
      <InterfaceStatistic>
        <IfIndex></IfIndex>
        <Clear></Clear>
      </InterfaceStatistic>
    </ClearAllInterfaceStatistics>
  </ConnectionLimit>
</Session>
```

Session

Session/Ipv4Persistent

This table contains IPv4 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv4Persistence table for IPv4 persistent configuration.

XML structure

```
<Session>
  <Ipv4Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv4Persistent>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4Persistent
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv4 persistent sessions (hours).	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can only be configured when *ACLNumber* is also configured.

Session/Ipv6Persistent

This table contains IPv6 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv6Persistence table for IPv6 persistent configuration.

XML structures

```
<Session>
  <Ipv6Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv6Persistent>
</Session>
```

Table description

Session/L4StateAgingTime

This table contains the aging time for the sessions in transport layer protocol states.

XML structure

```
<Session>
  <L4StateAgingTime>
    <AgingTime>
      <StateID></StateID>
      <TimeValue></TimeValue>
    </AgingTime>
  </L4StateAgingTime>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	L4StateAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StateID	Transport layer protocol state ID.	Index	Unsigned integer. Value range: 0 to 20. • **0—SYN-SENT and SYN-RCV (TCP)** • **1—ESTABLISHED (TCP).** • **2—FIN-WAIT (TCP).** • **3—UDP-OPEN.** • **4—UDP-READY.** • **5—ICMP -REQUEST.** • **6—ICMP -REPLY.** • **7—RAWIP-OPEN.** • **8—RAWIP-READY.** • **9—UDPLITE-OPNE.** • **10—UDPLITE-READY.** • **11—DCCP-REQUEST.** • **12—DCCP-EST.** • **13—DCCP-CLOSEREQ.** • **14—SCTP-INIT.** • **15—SCTP-EST.** • **16—SCTP-SHUTDOWN.** • **17—ICMPV6-REQUEST.** • **18—ICMPV6-REPLAY.** • **19—TCP-TIME-WAIT.** • **20—TCP-CLOSE.**	The aging time can be configured if is the protocol ID is 0 to 8, 19, or 20. The aging time for other protocols uses the default value.
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range: • **0-8—17-18—SYN-SENT or SYN-RCV (TCP)-RAWIP-READY —ICMPV6-REQUEST -ICMPV6-REPLAY: 1 to 100000 seconds.** • **19-20—TCP-TIME-WAIT - TCP-CLOSE: 0 to 100000 seconds** Default aging time for sessions in different protocol states is as follows: • **0—SYN-SENT or SYN-RCV (TCP) : 30** • **1—ESTABLISHED (TCP) : 3600** • **2—FIN-WAIT (TCP): 30** • **3—UDP -OPEN : 30** • **4—UDP -READY : 60** • **5—ICMP -REQUEST : 60** • **6—ICMP -REPLY : 30** • **7—RAWIP-OPEN : 30**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **8—RAWIP-READY : 60** • **9—UDPLITE-OPNE : 30** • **10—UDPLITE-READY : 60** • **11—DCCP-REQUEST : 30** • **12—DCCP-EST : 3600** • **13—DCCP-CLOSEREQ : 30** • **14—SCTP-INIT : 30** • **15—SCTP-EST : 3600** • **16—SCTP-SHUTDOWN: 30** • **17—ICMPV6-REQUEST :60** • **18—ICMPV6-REPLAY : 30** • **19—TCP-TIME-WAIT :2** • **20—TCP-CLOSE: 2**	

Session/AppAgingTime

This table contains the aging time for the sessions of application layer protocols.

XML structure

```
<Session>
  <AppAgingTime>
    <AgingTime>
      <AppID></AppID>
      <TimeValue></TimeValue>
    </AgingTime>
  </AppAgingTime>

Feature name	Session
Table name	AppAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Application layer protocol ID.	Index	Unsigned integer. Value range: 0 to 16. • **0—DNS.** • **1—FTP.** • **2—GTP.** • **3—H.225.** • **4—H.245.** • **5—RAS.** • **6—RTSP.** • **7—SIP.** • **8—TFTP.** • **9—ILS.** • **10—MGCP.** • **11—NBT.** • **12—PPTP.** • **13—RSH.** • **14—SCCP.** • **15—SQLNET.** • **16—XDMCP.**	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: • **0—DNS: 1 to 100000 seconds.** • **1-16—FTP-XDMCP: 5 to 100000 seconds** Default aging time: • **0—DNS: 1.** • **1—FTP: 3600.** • **2—GTP: 60.** • **3—H.225: 3600.** • **4—H.245: 3600.** • **5—RAS: 300.** • **6—RTSP: 3600.** • **7—SIP: 300.** • **8—TFTP: 60.** • **9—ILS: 3600.** • **10—MGCP: 60.** • **11—NBT: 3600.** • **12—PPTP: 3600.** • **13—RSH: 60.** • **14—SCCP: 3600.** • **15—SQLNET: 600.** • **16—XDMCP: 3600.**	N/A

Session/ApplicationAgingTime

This table contains the aging time for the sessions of application layer protocols.

XML structure

```
<Session>
  <ApplicationAgingTime>
    <AgingTime>
      <AppName></AppName>
      <TimeValue></TimeValue>
    </AgingTime>
  </ApplicationAgingTime>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ApplicationAgingTime
Table type	Multi-instance table
Row name	ApplicationAgingTime
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name.	Index	String, case-insensitive. Length: 1 to 63 characters.	This value can be pre-defined or user-defined application layer protocol name. Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other". The application layer protocol name must be standard and can be identified by the equipment.
TimeValue	Aging time (seconds).	N/A	• Unsigned integer. • Value range and default aging time for sessions of application layer protocols	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			are as follows: • Value range: • 1 to 100000 seconds. • Default aging time of pre-defined applications: • DNS: 1. • FTP: 3600. • GTP-CONTROL:60. • GTP-USER:60. • GPRSDATA:60. • GPRSSIG:60. • H225: 3600. • H245: 3600. • RAS: 300. • RTSP: 3600. • SIP: 300. • TFTP: 60. • ILS: 3600. • MGCP-CALLAGENT:60. • MGCP-GATEWAY:60. • PPTP: 3600. • RSH: 60. • SCCP: 3600. • SQLNET: 600. • XDMCP: 3600. • BOOTPC:120. • BOOTPS:120. • FTPDATA:240. • HTTPS:600. • L2TP:120. • NETBIOS-DGM:3600 • NETBIOS-NS:3600 • NETBIOS-SSN:3600. • NTP:120. • QQ:120. • RIP:120. • SNMP:120. • SNMPTRAP:120. • STUN:600. • SYSLOG:120. • TACACSDS:120. • WHO:120. • Default aging time of other pre-defined and user-defined applications: 1200s.Default aging time of other pre-defined and user-defined applications: 1200s.	

Session/LogThreshold

This table contains threshold for session logging.

XML structure

```
<Session>
  <LogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </LogThreshold>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	LogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based session logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based session logging threshold (minutes).	Data structure.	Members include: • Type. • Threshold.	
Type	Type of traffic-based session logging.	N/A	Enumeration: • 0—Packet-based threshold for traffic-based logging. • 1—Byte-based threshold for traffic-based logging.	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based	N/A	Unsigned integer.	If type is 0, the unit is mega-packets.

Column name	Column description	Column type	Data type and restrictions	Remarks
	logging.		Value range: 1 to 100000.	If type is 1, the unit is mega-bytes.

Session/Ipv4LogOnInterfaces

This table contains interfaces on which IPv4 session logging is enabled.

XML structure

```
<Session>
  <Ipv4LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv4LogOnInterfaces>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: • 0—Inbound. • 1—Outbound.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv4 sessions on the interface. This column can be null.

Session/Ipv6LogOnInterfaces

This table contains interfaces to which IPv6 session logging is enabled.

XML structure

```
<Session>
  <Ipv6LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv6LogOnInterfaces>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: • 0—Inbound. • 1—Outbound.	N/A
ACLNumber	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv6 sessions on the interface. This column can be null.

Session/HotBackup

This table contains session hot backuping configurations.

XML structure

```
<Session>
  <HotBackup>
    <EnableHotBackup></EnableHotBackup>
  </HotBackup>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	HotBackup
Table type	Single-instance table
Row name	None

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableHotBackup	Whether enable hot backuping for session tables.	N/A	Boolean: • true • false (default).	N/A

Session/ProtocolHotBackup

This table contains protocols which need hot backuping.

XML structure

```
<Session>
  <ProtocolHotBackup>
    <ProtocolInfo>
      <ProtocolID></ProtocolID>
      <EnableBackup></EnableBackup>
    </ProtocolInfo>
  </ProtocolHotBackup>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ProtocolHotBackup
Table type	Multi-instance table
Row name	ProtocolInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolID	ProtocolID.	Index	Enumeration: • 1—DNS. • 2—HTTP.	Default, sessions of these protocols are not synchronized.
EnableBackup	Whether enable protocol backup.	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/TopStatistics/Switch

This table contains session top statistics configuration of switch.

XML structure

```
<Session>
  <TopStatistics>
    <Switch>
      <Enable></Enable>
    </Switch>
  </TopStatistics>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session top statistics	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/DenySessionTopStat/Switch

This table contains the top packet dropping session statistics configuration.

XML structure

```
<Session>
  <DenySessionTopStat>
    <Switch>
      <Enable></Enable>
    </Switch>
  </DenySessionTopStat>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable the top packet dropping session statistics.	N/A	Boolean: • true—Enable • false—Disable (default).	N/A

Session/TrafficLogFlowBegin

This table contains traffic log flow begin configuration.

XML structure

```
<Session>
  <TrafficLogFlowBegin>
    <OutputCreateLog></OutputCreateLog>
  </TrafficLogFlowBegin>
```

```
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	TrafficLogFlowBegin
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputCreateLog	Whether enable traffic logging.	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/TrafficLogThreshold

This table contains threshold for traffic log threshold logging.

XML structure

```
<Session>
  <TrafficLogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </TrafficLogThreshold>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	TrafficLogThreshold
Table type	Single-instance table
Row name	None

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based traffic logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based traffic logging threshold (minutes).	Data structure.	Members include: • Type. • Threshold.	N/A
Type	Type of traffic-based Traffic logging.	N/A	Enumeration: • 0—Packet-based threshold for traffic-based logging. • 1—Byte-based threshold for traffic-based logging.	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 1000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

Session/Ipv4LogOnInterZones

This table contains session traffic log enable ipv4 configuration.

XML structure

```
<Session>
  <Ipv4LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
    </InterZone>
  </Ipv4LogOnInterZones>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4LogOnInterZones
Table type	Multi-instance table
Row name	InterZone
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceZone	Source Zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
DestinationZone	Destination Zone	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
EnableLog	Logging enable	N/A	Boolean: • true—YES • false—NO	N/A
Mode	Whether by-server	N/A	Boolean: • true—YES • false—NO	N/A
ACLNumber	ACL number	N/A	Unsigned integer. • Value range: 2000 to 3999.	N/A

Session/Ipv6LogOnInterZones

This table contains session traffic log enable ipv6 configuration.

XML structure

```
<Session>
  <Ipv6LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
```

```
    </InterZone>
  </Ipv6LogOnInterZones>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterZones
Table type	Multi-instance table
Row name	InterZone
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceZone	Source Zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
DestinationZone	Destination Zone	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
EnableLog	Logging enable	N/A	Boolean: • true—YES • false—NO	N/A
Mode	Whether by-server	N/A	Boolean: • true—YES • false—NO	N/A
ACLNumber	ACL number	N/A	Unsigned integer. • Value range: 2000 to 3999.	N/A

Session/ConnectionLimit/Ipv4Policies

This table contains IPv4 connection limit policy configurations..

XML structure

```
<Session>
  <ConnectionLimit>
```

```
    <Ipv4Policies>
      <Policy>
        <PolicyNumber></PolicyNumber>
        <Description></Description>
      </Policy>
    </Ipv4Policies>
  </ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv4 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A
Description	IPv4 connection limit policy description	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A

Session/ConnectionLimit/Ipv6Policies

This table contains IPv6 connection limit policy configurations..

XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv6Policies>
      <Policy>
        <PolicyNumber></PolicyNumber>
        <Description></Description>
      </Policy>
    </Ipv6Policies>
```

```
  </ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv6 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A
Description	IPv6 connection limit policy description	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A

Session/ConnectionLimit/Ipv4LimitRules

This table contains IPv4 connection limit rule configurations.

XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv4LimitRules>
      <Rule>
        <PolicyNumber></PolicyNumber>
        <RuleNumber></RuleNumber>
        <ACLNumber></ACLNumber>
        <ACLName></ACLName>
        <HighThreshold></HighThreshold>
        <LowThreshold></LowThreshold>
        <ClmRate></ClmRate>
        <LimitType>
          <PerSource></PerSource>
          <PerDestination></PerDestination>
```

```
        <PerService></PerService>
      </LimitType>
      <Description></Description>
      <PermitNew></PermitNew>
    </Rule>
  </Ipv4LimitRules>
</ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4LimitRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv4 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A
RuleNumber	IPv4 connection limit rule ID.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	Either *ACLNumber* or *ACLName* is required, and you cannot configure both.
ACLName	IPv4 ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Either *ACLNumber*or *ACLName* is required, and you cannot configure both.
HighThreshold	Upper connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	When user connections in a range or of a type exceed the upper connection limit, new connections cannot be created. This column is affirmatively chosen item.

Column name	Column description	Column type	Data type and restrictions	Remarks
LowThreshold	Lower connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	The lower connection limit cannot be greater than the upper connection limit. New connections cannot be created until the connection number goes below the lower connection limit. This column is affirmatively chosen item.
`ClmRate`	Maximum number of connections per second	N/A	Unsigned integer. Value range: 5 to 10000000.	When the number of connections per second greater than maximum number of connections per second, new connections cannot be created. This column is affirmatively chosen item.
LimitType	Connection limit type	Data structure.	Members include: • PerSource. • PerDestination. • PerService.	N/A
PerSource	Limits connections by source IP address.	N/A	Boolean: • true—YES • false—NO(default).	N/A
PerDestination	Limits connections by destination IP address.	N/A	Boolean: • true—YES • false—NO(default).	N/A
PerService	Limits connections by service port.	N/A	Boolean: • true—YES • false—NO(default).	N/A
Description	IPv4 connection limit rule description.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
PermitNew	Permit new connection establishment after user connections exceed the upper limit.	N/A	Unsigned integer. Value range: 0 to 2 • 0—Deny • 1—Permit • 2—Blocklist •	N/A

Session/ConnectionLimit/Ipv6LimitRules

This table contains IPv6 connection limit rule configurations.

XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv6LimitRules>
      <Rule>
        <PolicyNumber></PolicyNumber>
        <RuleNumber></RuleNumber>

IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
PolicyNumber	IPv6 connection limit policy number	N/A	Unsigned integer. Value range: 1 to 32.	N/A

Session/StatisticsSwitch

This table contains session statistics configuration of switch.

XML structure

```
<Session>
  <StatisticsSwitch>
    <Enable></Enable>
  </StatisticsSwitch>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	StatisticsSwitch
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session statistics	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/SessionLogFlowBegin

This table contains session log flow begin configuration.

XML structure

```
<Session>
  <SessionLogFlowBegin>
    <SessionCreateLog></SessionCreateLog>
  </SessionLogFlowBegin>
</Session>
```

Table description

Item	Description
Feature name	Session

Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionCreateLog	Whether enable session create logging.	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/SessionLogFlowEnd

This table contains session log flow end configuration.

XML structure

```
<Session>
  <SessionLogFlowEnd>
    <SessionDeleteLog></SessionDeleteLog>
  </SessionLogFlowEnd>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	SessionLogFlowEnd
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionDeleteLog	Whether enable session deletelogging.	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/DenySession

This table contains packet dropping session feature configuration.

XML structure

```
<Session>
  <DenySession>
    <Aspf></Aspf>
    <ConnLimit></ConnLimit>
    <TimeValue></TimeValue>
    <RatioValue></RatioValue>
    <IsManageMDC></IsManageMDC>
  </DenySession>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	DenySession
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Aspf	Whether enable packet dropping session feature in aspf module.	N/A	Boolean: • true—Enable • false—Disable(default).	N/A
ConnLimit	Whether enable packet dropping session feature in connection limit module.	N/A	Boolean: • true—Enable • false—Disable(default).	N/A
TimeValue	Deny session aging time (seconds)	N/A	Unsigned integer. Value range: 1 to 3.	N/A
RatioValue	The ratio of deny sessions to all sessions (permillage)	N/A	Unsigned integer. Value range: 1 to 20	N/A
IsManageMDC	Whether is manage context.	N/A	Boolean: • **true**—YES(default). • **false**—NO	N/A

Session/ContextLimitNumRate

This table is used to limit the number of concurrnt sessions of context

XML structure

```
<Session>
  <ContextLimitNumRate>
      <ContextID></ContextID>
      <MaxNumber></MaxNumber>
      <MaxRate></MaxRate>
  </ContextLimitNumRate>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ContextLimitNumRate
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	The ID of context.	Index	Unsigned integer Value range: 1~64	N/A
MaxNumber	The Maxnumber of concurrnt sessions of context.	N/A	Unsigned integer Value range: 1~4294967295.	N/A
MaxRate	The Maxrate of concurrnt sessions of context.	N/A	Unsigned integer Value range: 1~4294967295.	N/A

Session/LoadBalance

This table contains dual-active configuration.

XML structure

```
<Session>
  <LoadBalance>
    <LoadBalanceEnable></LoadBalanceEnable>
    <HashMode></HashMode>
    <UDPEnable></UDPEnable>
    <StateMachine></StateMachine>
  </LoadBalance>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	LoadBalance
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadBalanceEnable	Whether enable session dual-active mode.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
HashMode	Set the session create mode.	N/A	Enumeration: • **0**—local. • **1**—hash.	When asymmetric-path traffic exists in a hot backup system operating in session active/standby mode, set the mode of session state machine to loose to avoid abnormal traffic loss.
UDPEnable	Whether enable transparent transmission for UDP pachets.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
StateMachine	Set the mode of session state machine to compact	N/A	Enumeration: • **0**—compact. **1**—loose	N/A

SESSION/IPv4topCountEnable

This table contains top IPv4 session statistics.

XML structure

```
<Session>
  <IPv4TopCountSwitch>
    <EnableTop></EnableTop>
  </IPv4TopCountSwitch>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	IPv4TopCountSwitch

Row name	
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableTop	Whether to enable top IPv6 session statistics	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/IPv4TopCountPolicy

This table contains information about the top IPv4 session statistics policy.

XML structure

```
<Session>
  <IPv4TopCountPolicy>
    <SourceSubnetIP></SourceSubnetIP>
    <SourceSubnetMask></SourceSubnetMask>
    <DestinationSubnetIP></DestinationSubnetIP>
    <DestinationSubnetMask></DestinationSubnetMask>
    <SaveMode></SaveMode>
  </IPv4TopCountPolicy>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	IPv4TopCountPolicy
Table type	Singel-instance table
Row name	
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceSubnetIP	Source IPv4 subnet address	N/A	IPv4: String, dotted decimal notation.	N/A
SourceSubnetMask	Mask length of the subnet	N/A	Unsigned integer. Value range: 16 to 32.	N/A
DestinationSubnetIP	Destination IPv4 subnet address	N/A	IPv4: String, dotted decimal notation.	N/A
DestinationSubnetMask	Mask length of the subnet	N/A	Unsigned integer. Value range: 16 to 32.	N/A
SaveMode	Save mode	N/A	Unsigned integer. Enumeration: 0— disk	N/A

Session/IPv6TopCountPolicy

This table contains information about the top IPv6 session statistics policy.

XML structure

```
<Session>
  <IPv6TopCountPolicy>
    <SourceSubnetIPv6></SourceSubnetIPv6>
   <SourceSubnetPrefixLen></SourceSubnetPrefixLen>
    <DestinationSubnetIPv6></DestinationSubnetIPv6>
    <DestinationSubnetPrefixLen></DestinationSubnetPrefixLen>
    <SaveMode></SaveMode>
  </IPv6TopCountPolicy>
  </Session>
```

Table description

Session

Session/Ipv4Persistent

This table contains IPv4 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv4Persistence table for IPv4 persistent configuration.

XML structure

```
<Session>
  <Ipv4Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv4Persistent>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4Persistent
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv4 persistent sessions (hours).	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can only be configured when *ACLNumber* is also configured.

Session/Ipv6Persistent

This table contains IPv6 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv6Persistence table for IPv6 persistent configuration.

XML structures

```
<Session>
  <Ipv6Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv6Persistent>
</Session>
```

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv6 ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv6 persistent sessions, in hours	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can be configured only when *ACLNumber* is configured.

Session/L4StateAgingTime

This table contains the aging time for the sessions in transport layer protocol states.

XML structure

```
<Session>
  <L4StateAgingTime>
    <AgingTime>
      <StateID></StateID>
      <StateName></StateName>
      <TimeValue></TimeValue>
    </AgingTime>
  </L4StateAgingTime>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	L4StateAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StateID	Transport layer protocol state ID.	Index	Unsigned integer. Value range: 0 to 20. • **0—SYN-SENT and SYN-RCV (TCP)** • **1—ESTABLISHED (TCP).** • **2—FIN-WAIT (TCP).** • **3—UDP-OPEN.** • **4—UDP-READY.** • **5—ICMP -REQUEST.** • **6—ICMP -REPLY.** • **7—RAWIP-OPEN.** • **8—RAWIP-READY.** • **9—UDPLITE-OPNE.** • **10—UDPLITE-READY.** • **11—DCCP-REQUEST.** • **12—DCCP-EST.** • **13—DCCP-CLOSEREQ.** • **14—SCTP-INIT.** • **15—SCTP-EST.** • **16—SCTP-SHUTDOWN.** • **17—ICMPV6-REQUEST.** • **18—ICMPV6-REPLAY.** • **19—TCP-TIME-WAIT.** • **20—TCP-CLOSE.**	The aging time can be configured if is the protocol ID is 0 to 8, 19, or 20. The aging time for other protocols uses the default value.
StateName	Transport layer protocol state name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range: • **0-8—17-18—SYN-SENT or SYN-RCV (TCP)-RAWIP-READY —ICMPV6-REQUEST -ICMPV6-REPLAY: 1 to 100000 seconds.** • **19-20—TCP-TIME-WAIT - TCP-CLOSE: 0 to 100000 seconds** Default aging time for sessions in different protocol states is as follows: • **0—SYN-SENT or SYN-RCV (TCP) : 30** • **1—ESTABLISHED (TCP) : 3600** • **2—FIN-WAIT (TCP): 30** • **3—UDP -OPEN : 30** • **4—UDP -READY : 60**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **5—ICMP -REQUEST : 60** • **6—ICMP -REPLY : 30** • **7—RAWIP-OPEN : 30** • **8—RAWIP-READY : 60** • **9—UDPLITE-OPNE : 30** • **10—UDPLITE-READY : 60** • **11—DCCP-REQUEST : 30** • **12—DCCP-EST : 3600** • **13—DCCP-CLOSEREQ : 30** • **14—SCTP-INIT : 30** • **15—SCTP-EST : 3600** • **16—SCTP-SHUTDOWN: 30** • **17—ICMPV6-REQUEST :60** • **18—ICMPV6-REPLAY : 30** • **19—TCP-TIME-WAIT :2** • **20—TCP-CLOSE : 2**	

Session/AppAgingTime

This table contains the aging time for the sessions of application layer protocols.

XML structure

```
<Session>
  <AppAgingTime>
    <AgingTime>
      <AppID></AppID>
      <AppName></AppName>
      <TimeValue></TimeValue>
    </AgingTime>
  </AppAgingTime>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	AppAgingTime
Table type	Multi-instance table

Row name	AgingTime
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Application layer protocol ID.	Index	Unsigned integer. Value range: 0 to 16. • **0—DNS.** • **1—FTP.** • **2—GTP.** • **3—H.225.** • **4—H.245.** • **5—RAS.** • **6—RTSP.** • **7—SIP.** • **8—TFTP.** • **9—ILS.** • **10—MGCP.** • **11—NBT.** • **12—PPTP.** • **13—RSH.** • **14—SCCP.** • **15—SQLNET.** • **16—XDMCP.**	N/A
AppName	Application layer protocol name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: • **0—DNS: 1 to 100000 seconds.** • **1-16—FTP-XDMCP: 5 to 100000 seconds** Default aging time: • **0—DNS: 1.** • **1—FTP: 3600.** • **2—GTP: 60.** • **3—H.225: 3600.** • **4—H.245: 3600.** • **5—RAS: 300.** • **6—RTSP: 3600.** • **7—SIP: 300.** • **8—TFTP: 60.** • **9—ILS: 3600.** • **10—MGCP: 60.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **11—NBT: 3600.** • **12—PPTP: 3600.** • **13—RSH: 60.** • **14—SCCP: 3600.** • **15—SQLNET: 600.** • **16—XDMCP: 3600.**	

Session/ApplicationAgingTime

This table contains the aging time for the sessions of application layer protocols.

XML structure

```
<Session>
  <ApplicationAgingTime>
    <AgingTime>
      <AppName></AppName>
      <AppID></AppID>
      <TimeValue></TimeValue>
    </AgingTime>
  </ApplicationAgingTime>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ApplicationAgingTime
Table type	Multi-instance table
Row name	ApplicationAgingTime
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name.	Index	String, case-insensitive. Length: 1 to 63 characters.	This value can be pre-defined or user-defined application layer protocol name. Valid characters include digits, letters, hyphens

Column name	Column description	Column type	Data type and restrictions	Remarks
				(-), and underlines (_), but can't be "invalid" and "other". The application layer protocol name must be standard and can be identified by the equipment.
AppID	Application layer protocol ID.	N/A	Unsigned integer. Value range: 0 to 2^{32}- 1	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: 1 to 100000 seconds. Default aging time of pre-defined applications: • DNS: 1. • FTP: 3600. • GTP-CONTROL:60. • GTP-USER:60. • GPRSDATA:60. • GPRSSIG:60. • H225: 3600. • H245: 3600. • RAS: 300. • RTSP: 3600. • SIP: 300. • TFTP: 60. • ILS: 3600. • MGCP-CALLAGENT:60. • MGCP-GATEWAY:60. • PPTP: 3600. • RSH: 60. • SCCP: 3600. • SQLNET: 600. • XDMCP: 3600. • BOOTPC:120. • BOOTPS:120. • FTPDATA:240. • HTTPS:600. • L2TP:120. • NETBIOS-DGM:3600 • NETBIOS-NS:3600 • NETBIOS-SSN:3600. • NTP:120. • QQ:120. • RIP:120. • SNMP:120.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• SNMPTRAP:120. • STUN:600. • SYSLOG:120. • TACACSDS:120. • WHO:120. Default aging time of other pre-defined and user-defined applications: 1200s.	

Session/LogThreshold

This table contains threshold for session logging.

XML structure

```
<Session>
  <LogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </LogThreshold>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	LogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based session logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshol	Traffic-based session logging	Data	Members include:	

Column name	Column description	Column type	Data type and restrictions	Remarks
d	threshold (minutes).	structure.	• Type. • Threshold.	
Type	Type of traffic-based session logging.	N/A	Enumeration: • 0—Packet-based threshold for traffic-based logging. • 1—Byte-based threshold for traffic-based logging.	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 100000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

Session/Ipv4LogOnInterfaces

This table contains interfaces on which IPv4 session logging is enabled.

XML structure

```
<Session>
  <Ipv4LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv4LogOnInterfaces>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only

Column name	Column description	Column type	Data type and restrictions	Remarks
				be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: • 0—Inbound. • 1—Outbound.	N/A
ACLNumber	IPv4 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv4 sessions on the interface. This column can be null.

Session/Ipv6LogOnInterfaces

This table contains interfaces to which IPv6 session logging is enabled.

XML structure

```
<Session>
  <Ipv6LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv6LogOnInterfaces>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterfaces
Table type	Multi-instance table
Row name	Interface

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: • 0—Inbound. • 1—Outbound.	N/A
ACLNumber	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv6 sessions on the interface. This column can be null.

Session/HotBackup

This table contains session hot backuping configurations.

XML structure

```
<Session>
  <HotBackup>
    <EnableHotBackup></EnableHotBackup>
  </HotBackup>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	HotBackup

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableHotBackup	Whether enable hot backuping for session tables.	N/A	Boolean: • true • false (default).	N/A

Session/ProtocolHotBackup

This table contains protocols which need hot backuping.

XML structure

```
<Session>
  <ProtocolHotBackup>
    <ProtocolInfo>
      <ProtocolID></ProtocolID>
      <ProtocolName></ProtocolName>
      <EnableBackup></EnableBackup>
    </ProtocolInfo>
  </ProtocolHotBackup>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ProtocolHotBackup
Table type	Multi-instance table
Row name	ProtocolInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolID	ProtocolID.	Index	Enumeration: • 1—DNS. • 2—HTTP.	Default, sessions of these protocols are not synchronized.
ProtocolName	Protocol name for which backup is enabled.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
EnableBackup	Whether enable protocol backup.	N/A	Boolean: • true—YES • false—NO(default).	N/A

Session/SessionStatistics

This table contains statistics of sessions.

XML structure

```
<Session>
  <SessionStatistics>
    <SessionStatistic>

Table description

Item	Description
Feature name	Session
Table name	SessionStatistics
Table type	Multi-instance table
Row name	SessionStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
SourceIpv4	Source IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
DestinationIpv4	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
SourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
DestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.

Protocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	Enumeration string: • dccp • icmp • raw-ip • sctp • tcp • udp • udp-lite	This column can be used as query condition.
CurSessionCount	Total number of current sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
CurRelationCount	Total number of current relation entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionCount	Number of sessions of different protocols.	Data structure.	Members include: • TCPCount. • UDPCount. • ICMPCount. • ICMPv6Count. • UDPLiteCount. • SCTPCount. • DCCPCount. • RawIPCount.	N/A
TCPCount	Number of TCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPCount	Number of UDP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPCount	Number of ICMP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPv6Count	Number of ICMPv6 sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPLiteCount	Number of UDP-Lite sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCTPCount	Number of SCTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DCCPCount	Number of DCCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RawIPCount	Number of Raw IP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DNSCount	Number of DNS sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
FTPCount	Number of FTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
GTPCount	Number of GTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
H323Count	Number of H323 sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
HTTPCount	Number of HTTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ILSCount	Number of ILS sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
MGCPCount	Number of MGCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
NBTCount	Number of NBT sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PPTPCount	Number of PPTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RSHCount	Number of RSH sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RTSPCount	Number of RTSP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCCPCount	Number of SCCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SIPCount	Number of SIP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SMTPCount	Number of SMTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SQLNETCount	Number of SQLNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SSHCount	Number of SSH sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TELNETCount	Number of TELNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TFTPCount	Number of TFTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
XDMCPCount	Number of XDMCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionEstablishedRate	Session establishment rate, and rates for establishing sessions of different protocols.	Data structure.	Members include: • TCPRate. • UDPRate. • ICMPRate. • ICMPv6Rate. • UDPLiteRate. • SCTPRate. • DCCPRate.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• RawIPRate.	
TCPRate	Establishment rate of TCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPRate	Establishment rate of UDP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPRate	Establishment rate of ICMP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPv6Rate	Establishment rate of ICMPv6 sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPLiteRate	Establishment rate of UDP-Lite sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCTPRate	Establishment rate of SCTP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DCCPRate	Establishment rate of DCCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RawIPRate	Establishment rate of Raw IP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ReceivedPkts Bytes	Number of received packets and packet bytes of different protocols.	Data structure.	Members include: • TCPBytes. • TCPPkts. • UDPBytes. • UDPPkts. • ICMPBytes. • ICMPPkts. • ICMPv6Bytes. • ICMPv6Pkts. • UDPLiteBytes. • UDPLitePkts. • SCTPBytes. • SCTPPkts. • DCCPBytes. • DCCPPkts. • RawIPBytes. • RawIPPkts.	N/A
TCPBytes	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received TCP packet bytes.		Value range: 0 to 2^{64} - 1.	
TCPPkts	Number of received TCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPBytes	Number of received UDP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPPkts	Number of received UDP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPBytes	Number of received ICMP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPPkts	Number of received ICMP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPv6Bytes	Number of received ICMPv6 packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPv6Pkts	Number of received ICMPv6 packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPLiteBytes	Number of received UDP-Lite packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPLitePkts	Number of received UDP-Lite packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SCTPBytes	Number of received SCTP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SCTPPkts	Number of received SCTP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DCCPBytes	Number of received DCCP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DCCPPkts	Number of received DCCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RawIPBytes	Number of received Raw IP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RawIPPkts	Number of received Raw IP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Session/TopStatistics/Switch

This table contains session top statistics configuration of switch.

XML structure

```
<Session>
  <TopStatistics>
    <Switch>
      <Enable></Enable>
    </Switch>
  </TopStatistics>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session top statistics	N/A	Boolean: • **true**. • **false**.	N/A

Session/TopStatistics/CountingByAddress

This table contains top statistics for sessions by addresses.

XML structure

```
<Session>
  <TopStatistics>
    <CountingByAddress>
      <Item>
        <Type></Type>
        <Period></Period>
```

```
        <Sequence></Sequence>
        <Address>
          <IPv4Addr></IPv4Addr>
          <IPv6Addr></IPv6Addr>
        </Address>
        <SumCount></SumCount>
        <EstablishedRate></EstablishedRate>
      </Item>
    </CountingByAddress>
  </TopStatistics>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	CountingByAddress
Table type	Multi-instance table
Row name	Item
Restrictions	None

Columns

Column name	**Column description**	**Column type**	**Data type and restrictions**	**Remarks**
Type	Type of top statistics	Index	Enumeration: • 0—Top statistics by source address. • 1—Top statistics by destination address.	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. • 0—1 hour. • 1—1 day. • 2—30 days.	N/A
Sequence	Sequence number for top statistics	Index	Unsigned integer. Value range: 1 to 10.	N/A
Address	Source or destination network layer address	Data structure	Members include: • IPv4Addr. • IPv6Addr.	N/A
IPv4Addr	IPv4 address	N/A	IPv4 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Addr	IPv6 address	N/A	IPv6 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
SumCount	Total number of sessions established in a period	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
EstablishedRate	Average establishment rate of sessions established between a pair of samples in a period	N/A	Unsigned integer. Value range: 0 to 2^{32} – 1.	N/A

Session/TopStatistics/SampleTime

This table contains sample time for the top statistics in a period.

XML structure

```
<Session>
  <TopStatistics>
    <SampleTime>
      <Item>
        <Type></Type>
        <Period></Period>
        <SampleTime></SampleTime>
      </Item>
    </SampleTime>
  </TopStatistics>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	SampleTime
Table type	Multi-instance table
Row name	Item
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top statistics	Index	Enumeration: • 0—Top statistics by source address. • 1—Top statistics by destination address.	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. • 0—1 hour. • 1—1 day. • 2—30 days.	N/A
SampleTime	Sample time in a period	N/A	String. Length: 1 to 32 characters.	Example: 2000-04-25 21:23:23.

Session/HistoryStatistics

This table contains session history statistics.

XML structure

```
<Session>
  <HistoryStatistics>
    <Item>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Period></Period>
      <Sequence></Sequence>
      <Time></Time>
      <SessionCount></SessionCount>
      <EstablishedRate></EstablishedRate>
    </Item>
  </HistoryStatistics>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	HistoryStatistics

Table type	Multi-instance table
Row name	`Item`
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
`Period`	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. • **0**—1 hour. • **1**—1 day. • **2**—30 days.	N/A
`Sequence`	Number of history statistics time point	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
`Time`	Current time	N/A	String. Length: 1 to 32 characters.	N/A
`SessionCount`	Number of history session count	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1	N/A
`EstablishedRate`	Number of history new established rate	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Session/TrafficLogFlowBegin

This table contains traffic log flow begin configuration.

XML structure

```
<Session>
  <TrafficLogFlowBegin>
    <OutputCreateLog></OutputCreateLog>
  </TrafficLogFlowBegin>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	TrafficLogFlowBegin
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputCreateLog	Whether enable traffic logging.	N/A	Boolean: • **true**. • **false**.	N/A

Session/TrafficLogThreshold

This table contains threshold for traffic threshold logging.

XML structure

```
<Session>
  <TrafficLogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </TrafficLogThreshold>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	TrafficLogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based traffic logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based traffic logging threshold (minutes).	Data structure.	Members include: • Type. • Threshold.	N/A
Type	Type of traffic-based Traffic logging.	N/A	Enumeration: • 0—Packet-based threshold for traffic-based logging. • 1—Byte-based threshold for traffic-based logging.	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 1000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

Session/Ipv4LogOnInterZones

This table contains session traffic log enable ipv4 configuration.

XML structure

```
<Session>
  <Ipv4LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
    </InterZone>
  </Ipv4LogOnInterZones>
</Session>
```

Table description

Item	Description
Feature name	Session

Table name	Ipv4LogOnInterZones
Table type	Multi-instance table
Row name	InterZone
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceZone	Source Zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
DestinationZone	Destination Zone	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
EnableLog	Logging enable	N/A	Boolean: • true—YES • false—NO	N/A
Mode	Whether by-server	N/A	Boolean: • true—YES • false—NO	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A

Session/Ipv6LogOnInterZones

This table contains session traffic log enable ipv6 configuration.

XML structure

```
<Session>
  <Ipv6LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
    </InterZone>
  </Ipv6LogOnInterZones>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterZones
Table type	Multi-instance table
Row name	InterZone
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceZone	Source Zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
DestinationZone	Destination Zone	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">" , ">>" and "|" can't be included.
EnableLog	Logging enable	N/A	Boolean: • true—YES • false—NO	N/A
Mode	Whether by-server	N/A	Boolean: • true—YES • false—NO	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A

Session/Ipv4Sessions

The table of IPv4 sessions.

XML structure

```
<Session>
  <Ipv4Sessions>
    <Session>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Handle></Handle>
      <PerChassis></PerChassis>
      <PerSlot></PerSlot>
```

    </Session>
  </Ipv4Sessions>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Ipv4Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Handle	Session Handle	Index	Unsigned integer. Value range: 0 to 2^{64} - 1.	This column has no practical sense, it's only the index of the table.
PerChassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerSlot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerCPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	This column is for several times to get
PerHandle	Handle	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	This column is for several times to get
LocalCreate	Mark of the session that Local board Created	N/A	Unsigned integer. Value range: 0 to 1. • 0—All boards • 1—Local board	N/A
SessionMax	The number of one time get	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the module which created the session.	N/A	Unsigned integer. Enumeration: • 0—NAT. • 1—CONNECTION-LIMIT. • 2—LB. • 3—ASPF. • 4—LOG. • 5—ALG. • 6—DS-Lite. • 7—TCP MSS. • 8—Application of statistical. • 9—Inter-zone strategy. • 10—WAAS. • 11—TCP serial number to check. • 12—AFT. • 13—DIM Engine processing. • 14—TCP Engine restructuring. • 15—Traffic log.	This column can be used as query condition.
SessionFwdType	Session forward type.	N/A	Unsigned integer. Enumeration: • 0—VRF instance name. • 1—VLAN ID. • 2—Inline ID.	This column can be used as query condition.
InitVRF	Session forward value of the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	1 This column can be used as query condition. 2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID. When SessionFwdType is Inline ID, the value for InitVRF is Inline ID. When SessionFwdType is VRF instance name, the value for InitVRF is the VRF instance name.
InitSourceIp	Source IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
InitSourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
InitDestinationIp	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
InitDestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitDSLiteTunnelPeer	Address of the DS-Lite tunnel peer of the initiator. When the session does not belong to any DS-Lite tunnel, this field is NULL.	N/A	String, case-insensitive. Length: 1 to 46 characters.	N/A
InitProtocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
ResponseVRF	Session forward value of the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	1 This column can be used as query condition. 2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID. When SessionFwdType is Inline ID, the value for InitVRF is Inline ID. When SessionFwdType is VRF instance name, the value for InitVRF is the VRF instance name.
ResponseSourceIp	Source IP address of the packet from the responder to the initiator.	N/A	Ipv4 Address.	This column can be used as query condition.
ResponseSourcePort	Source port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDestinationIp	Destination IP address of the packet from the responder to the initiator.	N/A	Ipv4 Address.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
ResponseDestinationPort	Destination port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDSLiteTunnelPeer	Address of the DS-Lite tunnel peer of the responder. When the session does not belong to any DS-Lite tunnel, this field is NULL.	N/A	String, case-insensitive. Length: 1 to 46 characters.	N/A
ResponseProtocol	Transport layer protocol name of the packet from the responder to the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Application	Application layer protocol. The value of OTHER indicates an unknown protocol with a non-well-known port.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be used as query condition.
State	Session state(String).	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
StartTime	Session establishment time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TTL	Remaining lifetime of the session, in seconds.v	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1 seconds.	N/A
RecvInterface	Interface name of the packet receiver.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
RecvSecurityZone	SecurityZone name of the packet receiver	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
SendInterface	Interface name of the packet sender.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
SendSecurityZone	SecurityZone name of the packet sender	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
InitToResponsePackets	Number of packets from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
InitToResponseBytes	Number of packet bytes from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ResponseToInitPackets	Number of packets from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ResponseToInitBytes	Number of packet bytes from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
InitEnProtocol	Transport layer protocol id of the packet from the initiator to the responder.	N/A	Enumeration: • 0—TCP. • 1—UDP. • 2—ICMP. • 3—ICMPv6. • 4—UDP-Lite. • 5—SCTP. • 6—DCCP. • 7—RAWIP. • 8—ALL.	This column can be used as query condition.
StopTime	Remaining time of stopping a specified session's flow	N/A	Unsigned integer.	N/A
Backupflag	Session state's mask: owner, director, etc	N/A	Unsigned Char. 0x40—OWNER 0x80—DIRECTOR	N/A
InitRuleName	The name of rule of which is matched by zone checking	N/A	String, case-insensitive. Length: 1 to 127 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnState	Session state(Enumeration).	N/A	Enumeration: • 0—TCP_SYN_SENT. • 1—TCP_SYN_RECV. • 2—TCP_ESTABLISHED. • 3—TCP_FIN_WAIT. • 4—TCP_CLOSE_WAIT. • 5—TCP_LAST_ACK. • 6—TCP_TIME_WAIT. • 7—TCP_CLOSE. • 8—TCP_SYN_SENT2. • 9—DCCP_REQUEST. • 10—DCCP_RESPOND. • 11—DCCP_PARTOPEN. • 12—DCCP_OPEN. • 13—DCCP_CLOSEREQ. • 14—DCCP_CLOSING. • 15—DCCP_TIMEWAIT. • 16—ICMP_REQUEST. • 17—ICMP_REPLY. • 20—RAWIP_OPEN. • 21—RAWIP_READY. • 22—SCTP_CLOSED. • 23—SCTP_COOKIE_WAIT. • 24—SCTP_COOKIE_ECHOED. • 25—SCTP_ESTABLISHED. • 26—SCTP_SHUTDOWN_SENT. • 27—SCTP_SHUTDOWN_RECD. • 28—SCTP_SHUTDOWN_ACK_SENT. • 29—UDP_OPEN. • 30—UDP_READY. • 31—UDPLITE_OPEN. • 32—UDPLITE_READY.	This column can be used as query condition.
TimeRangeStart	Start time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
TimeRangeEnd	End time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
SessionDir	Direction of the session.	N/A	Enumeration: • 0—Initiator. • 1—Responder. • 2—Both.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
PageNum	Page number.	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	This column can be used as query condition.
PageCnt	Number of sessions per page.	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	This column can be used as query condition.
TotalCnt	Total number of sessions.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionType	Session type.	N/A	Unsigned integer. • **0**—Normal session. • **1**—Deny session.	N/A

Session/Ipv6Sessions

This table is used to display the ipv6 session details.

Table description

Item	Description
Feature name	Session
Table name	Ipv6Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Handle	Handle.	Index	Unsigned integer. Value range: 0 to 2^{64} - 1.	This column has no practical sense, it's only the index of the table.
PerChasis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerSlot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65534	This column is for several times to get
PerCPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7	This column is for several times to get
PerHandle	Handle	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1	This column is for several times to get
LocalCreate	Mark of the session that Local board Created	N/A	Unsigned integer. Value range: 0 to 1. • 0—All boards • 1—Local board	N/A
SessionMax	The number of one time get	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Type	Type of the module which created the session.	N/A	Unsigned integer. Enumeration: • 0—NAT. • 1—CONNECTION-LIMIT • 2—LB. • 3—ASPF. • 4—LOG. • 5—ALG • 6—DS-Lite • 7—TCP MSS • 8—Application of statistical • 9—Inter-zone strategy • 10—WAAS • 11—TCP serial number to check • 12—AFT • 13—DIM Engine processing • 14—TCP Engine restructuring • 15—Traffic log	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionFwdType	Session forward type.	N/A	Unsigned integer. Enumeration: • 0—VRF instance name. • 1—VLAN ID. • 2—Inline ID.	This column can be used as query condition.
InitVRF	Session forward value of the initiator.	N/A	String, case-sensitive. Length: 1 to 31 characters.	1 This column can be used as query condition. 2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID; SessionFwdType is Inline ID, the value for InitVRF is Inline ID, SessionFwdType is VRF instance name, the value for InitVRF is VRF instance name.
InitSourceIp	Source IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	This column can be used as query condition.
InitSourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitDestinationIp	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	This column can be used as query condition.
InitDestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitProtocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
ResponseVRF	Session forward value of the responder.	N/A	String, case-sensitive. Length: 1 to 31 characters.	1 This column can be used as query condition. 2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID; SessionFwdType is Inline ID, the value for InitVRF is Inline ID, SessionFwdType is VRF instance name, the value for InitVRF is VRF instance name.
ResponseSourceIp	Source IP address of the packet from the responder to the initiator.	N/A	Ipv6 Address.	This column can be used as query condition.
ResponseSourcePort	Source port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDestinationIp	Destination IP address of the packet from the responder to the initiator.	N/A	Ipv6 Address.	This column can be used as query condition.
ResponseDestinationPort	Destination port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseProtocol	Transport layer protocol name of the packet from the responder to the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Application	Application layer protocol. The value of OTHER indicates an unknown protocol with a non-well-known port.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be used as query condition.
State	Session state(String).	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
StartTime	Session establishment time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TTL	Remaining lifetime of the session, in seconds.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1 seconds.	N/A
RecvInterface	Interface name of the packet receiver.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
RecvSecurityZone	SecurityZone name of the packet receiver	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
SendInterface	Interface name of the packet sender.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
SendSecurity Zone	SecurityZone name of the packet sender	N/A	String, case-insensitive. Length: 1 to 31 characters	This column can be used as query condition.
InitToRespons ePackets	Number of packets from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
InitToRespons eBytes	Number of packet bytes from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ResponseToIn itPackets	Number of packets from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ResponseToIn itBytes	Number of packet bytes from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
InitEnProtocol	Transport layer protocol id of the packet from the initiator to the responder.	N/A	Enumeration: • 0—TCP. • 1—UDP. • 2—ICMP. • 3—ICMPv6. • 4—UDP-Lite. • 5—SCTP. • 6—DCCP. • 7—RAWIP. • 8—ALL.	This column can be used as query condition.
StopTime	Remaining time of stopping a specified session's flow	N/A	Unsigned integer..	N/A
Backupflag	Session state's mask: owner, director, etc	N/A	Unsigned Char. • 0x40—OWNER • 0x80—DIRECTOR	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InitRuleName	The name of rule of which is matched by zone checking	N/A	String, case-insensitive. Length: 1 to 127 characters.	This column can be used as query condition.
EnState	Session state(Enumeration).	N/A	Enumeration: • 0—TCP_SYN_SENT. • 1—TCP_SYN_RECV. • 2—TCP_ESTABLISHED. • 3—TCP_FIN_WAIT. • 4—TCP_CLOSE_WAIT. • 5—TCP_LAST_ACK. • 6—TCP_TIME_WAIT. • 7—TCP_CLOSE. • 8—TCP_SYN_SENT2. • 9—DCCP_REQUEST. • 10—DCCP_RESPOND. • 11—DCCP_PARTOPEN. • 12—DCCP_OPEN. • 13—DCCP_CLOSEREQ. • 14—DCCP_CLOSING. • 15—DCCP_TIMEWAIT. • 18—ICMPV6_REQUEST. • 19—ICMPV6_REPLY. • 20—RAWIP_OPEN. • 21—RAWIP_READY. • 22—SCTP_CLOSED. • 23—SCTP_COOKIE_WAIT. • 24—SCTP_COOKIE_ECHOED. • 25—SCTP_ESTABLISHED. • 26—SCTP_SHUTDOWN_SENT. • 27—SCTP_SHUTDOWN_RECD. • 28—SCTP_SHUTDOWN_ACK_SENT. • 29—UDP_OPEN. • 30—UDP_READY. • 31—UDPLITE_OPEN. • 32—UDPLITE_READY.	This column can be used as query condition.
TimeRangeStart	Start time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
TimeRangeEnd	End time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionDir	Direction of the session.	N/A	Enumeration: • 0—Initiator. • 1—Responder. • 2—Both.	This column can be used as query condition.
PageNum	Page number.	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	This column can be used as query condition.
PageCnt	Number of sessions per page.	N/A	Unsigned integer. Value range: 1 to 2^{32} - 1.	This column can be used as query condition.
TotalCnt	Total number of sessions.	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionType	Session type.	N/A	Unsigned integer. • **0**—Normal session. • **1**—Deny session.	N/A

Table description

Item	Description
Feature name	Session
Table name	Ipv4LimitRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv4 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A
RuleNumber	IPv4 connection limit rule ID.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	Either *ACLNumber* or *ACLName* is required, and you cannot configure both.
ACLName	IPv4 ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Either *ACLNumber*or *ACLName* is required, and you cannot configure both.
HighThreshold	Upper connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	When user connections in a range or of a type exceed the upper connection limit, new connections cannot be created. This column is affirmatively chosen item.
LowThreshold	Lower connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	The lower connection limit cannot be greater than the upper connection limit. New connections cannot be created until the connection number goes below the lower connection limit. This column is affirmatively chosen item.
`ClmRate`	Maximum number of connections per second	N/A	Unsigned integer. Value range: 5 to 10000000.	When the number of connections per second greater than maximum number of connections per second, new connections cannot be created. This column is affirmatively chosen item.
LimitType	Connection limit type	Data structure.	Members include: • PerSource. • PerDestination. • PerService.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PerSource	Limits connections by source IP address.	N/A	Boolean: • true—YES • false—NO(default).	N/A
PerDestination	Limits connections by destination IP address.	N/A	Boolean: • true—YES • false—NO(default).	N/A
PerService	Limits connections by service port.	N/A	Boolean: • true—YES • false—NO(default).	N/A
Description	IPv4 connection limit rule description.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
PermitNew	Permit new connection establishment after user connections exceed the upper limit.	N/A	Unsigned integer. Value range: 0 to 2 • 0—Deny • 1—Permit • 2—Blocklist •	N/A

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv6 connection limit policy number	N/A	Unsigned integer. Value range: 1 to 32.	N/A

Session/ConnectionLimit/Ipv4PolicyOnInterfaces

This table contains interfaces to which IPv4 connection limit policy is applied.

XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv4PolicyOnInterfaces>
      <Interface>
        <IfIndex></IfIndex>
        <PolicyNumber></PolicyNumber>
      </Interface>
    </Ipv4PolicyOnInterfaces>
  </ConnectionLimit>
</Session>
```

Table description

Item	Description
Feature name	Session

Table name	Ipv4PolicyOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
PolicyNumber	IPv4 connection limit policy number	N/A	Unsigned integer. Value range: 1 to 32.	N/A

Session/ConnectionLimit/Ipv6PolicyOnInterfaces

This table contains interfaces to which IPv6 connection limit policy is applied.

XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv6PolicyOnInterfaces>
      <Interface>
        <IfIndex></IfIndex>
        <PolicyNumber></PolicyNumber>
      </Interface>
    </Ipv6PolicyOnInterfaces>
  </ConnectionLimit>
</Session>
```

Table description

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Ipv4DroppedPackets	Number of dropped IPv4 packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Number of IPv4 packets that are dropped because the upper connection limit is exceeded when an IPv4 connection limit policy is configured on an interface.
Ipv6DroppedPackets	Number of dropped IPv6 packets	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	Number of IPv6 packets that are dropped because the upper connection limit is exceeded when an IPv6 connection limit policy is configured on an interface.

Session/StatisticsSwitch

This table contains session statistics configuration of switch.

XML structure

```
<Session>
```

```
  <StatisticsSwitch>
    <Enable></Enable>
  </StatisticsSwitch>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	StatisticsSwitch
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session statistics	N/A	Boolean: • **true**. • **false**.	N/A

Session/SessionLogFlowBegin

This table contains session log flow begin configuration.

XML structure

```
<Session>
  <SessionLogFlowBegin>
    <SessionCreateLog></SessionCreateLog>
  </SessionLogFlowBegin>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	SessionLogFlowBegin
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionCreateLog	Whether enable session create logging.	N/A	Boolean: • true—YES • false—NO	N/A

Session/SessionLogFlowEnd

This table contains session log flow end configuration.

XML structure

```
<Session>
  <SessionLogFlowEnd>
    <SessionDeleteLog></SessionDeleteLog>
  </SessionLogFlowEnd>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	SessionLogFlowEnd
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionDeleteLog	Whether enable session delete logging.	N/A	Boolean: • true—YES • false—NO	N/A

Session/DenySession

This table contains packet dropping session feature configuration.

XML structure

```
<Session>
```

```
  <DenySession>
    <Aspf></Aspf>
    <ConnLimit></ConnLimit>
    <TimeValue></TimeValue>
    <RatioValue></RatioValue>
    <IsManageMDC></IsManageMDC>
  </DenySession>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	DenySession
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Aspf	Status of packet dropping session feature in aspf module.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
ConnLimit	Status of packet dropping session feature in connection limit module.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
TimeValue	Packet dropping session aging time (seconds)	N/A	Unsigned integer. Value range: 1 to 3.	N/A
RatioValue	The ratio of packet dropping sessions to all sessions (permillage)	N/A	Unsigned integer. Value range: 1 to 20	N/A
IsManageMDC	Whether is manage context.	N/A	Boolean: • **true**—YES • **false**—NO	N/A

Session/DenySessionTopStat/Switch

This table contains the status of top packet dropping session statistics.

XML structure

```
<Session>
  <DenySessionTopStat>
    <Switch>
      <Enable></Enable>
    </Switch>
  </DenySessionTopStat>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Status of top packet dropping session statistics	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

Session/DenySessionTopStat/CountByAddress

This table contains top statistics for packet dropping sessions by addresses.

XML structure

```
<Session>
  <DenySessionTopStat>
    <CountByAddress>
      <Item>
        <Type></Type>
        <Period></Period>
        <Sequence></Sequence>
        <Address>
          <IPv4Addr></IPv4Addr>
          <IPv6Addr></IPv6Addr>
```

```
        </Address>
        <SumCount></SumCount>
        <EstablishedRate></EstablishedRate>
      </Item>
    </CountByAddress>
  </DenySessionTopStat>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	CountByAddress
Table type	Multi-instance table
Row name	Item
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top packet dropping session statistics	Index	Enumeration: • 0—Top statistics by source address. • 1—Top statistics by destination address.	N/A
Period	Period of history packet dropping session statistics	Index	Unsigned integer. Value range: 0 to 2. • 0—1 hour. • 1—1 day. • 2—30 days.	N/A
Sequence	Sequence number for top statistics	Index	Unsigned integer. Value range: 1 to 10.	N/A
Address	Source or destination network layer address	Data structure	Members include: • IPv4Addr. • IPv6Addr.	N/A
IPv4Addr	IPv4 address	N/A	IPv4 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
IPv6Addr	IPv6 address	N/A	IPv6 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
SumCount	Total number of packet dropping sessions	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	established in a period			
EstablishedRate	Average establishment rate of packet dropping sessions established between a pair of samples in a period	N/A	Unsigned integer. Value range: 0 to 2^{32} – 1.	N/A

Session/DenySessionTopStat/SampleTime

This table contains sample time for the top packet dropping session statistics in a period.

XML structure

```
<Session>
  <DenySessionTopStat>
    <SampleTime>
      <Item>
        <Type></Type>
        <Period></Period>
        <SampleTime></SampleTime>
      </Item>
    </SampleTime>
  </DenySessionTopStat>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	SampleTime
Table type	Multi-instance table
Row name	Item
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top packet dropping session statistics	Index	Enumeration: • 0—Top statistics by source address. • 1—Top statistics by destination address.	N/A
Period	Period of history packet dropping session statistics	Index	Unsigned integer. Value range: 0 to 2. • 0—1 hour. • 1—1 day. • 2—30 days.	N/A
SampleTime	Sample time	N/A	String. Length: 1 to 32 characters.	Example: 2000-04-25 21:23:23.

Session/DenySessionHistoryStat

This table contains packet dropping session history statistics.

XML structure

```
<Session>
  <DenySessionHistoryStat>
    <Item>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Period></Period>
      <Sequence></Sequence>
      <Time></Time>
      <DenySessionCount></DenySessionCount>
      <EstablishedRate></EstablishedRate>
    </Item>
  </DenySessionHistoryStat>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	DenySessionHistoryStat
Table type	Multi-instance table

Row name	Item
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the chassis where the entity resides	Index	Unsigned integer. • Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. • Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Period	Period of history packet dropping session statistics	Index	Unsigned integer. Value range: 0 to 2. • **0**—1 hour. • **1**—1 day. • **2**—30 days.	N/A
Sequence	Number of history statistics time point	Index	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
Time	Current time	N/A	String. Length: 1 to 32 characters.	N/A
DenySession Count	Number of history packet dropping session count	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1	N/A
EstablishedRate	Number of history new established rate	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Session/DenyStatisticsSummary

This table contains statistics summary for packet dropping sessions.

XML structure

```
<Session>
  <DenyStatisticsSummary>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <EstDenySession>
      <EstCount></EstCount>
      <EstTCPCount></EstTCPCount>
```

```
      <EstUDPCount></EstUDPCount>
      <EstRate></EstRate>
      <EstTCPRate></EstTCPRate>
      <EstUDPRate></EstUDPRate>
    </EstDenySession>
    <TryDenySession>
      <TryCount></TryCount>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the chassis where the entity resides	Index	Unsigned integer. • Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. • Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
EstDenySession	Number of established packet dropping sessions of different protocols	Data structure.	Members include: • Count • Rate	N/A
EstCount	The tatal number of established packet dropping	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sessions			
EstTCPCount	The number of established packet dropping sessions for TCP	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
EstUDPCount	The number of established packet dropping sessions for UDP	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
EstRate	Establishment rate packet dropping sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
EstTCPRate	Establishment rate of TCP packet dropping sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
EstUDPRate	Establishment rate of UDP packet dropping sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TryDenySession	Number of attempts to create packet dropping sessions for different protocols	Data structure.	Members include: • Count Rate	N/A
TryCount	The total number of attempts to create packet dropping sessions	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
TryTCPCount	The number of attempts to create packet dropping sessions for TCP	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
TryUDPCount	The number of attempts to create packet dropping sessions for UDP	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
TryRate	Rate of attempts to create packet dropping sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TryTCPRate	Rate of attempts to create packet dropping	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sessions for TCP (per second).			
TryUDPRate	Rate of attempts to create packet dropping sessions for UDP (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Session/DenySessionStatistics

This table contains statistics of packet dropping sessions.

XML structure

```
<Session>
  <DenySessionStatistics>
    <DenySessionStatistic>
      <Chassis></Chassis>

NBTCount	Number of NBT sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PPTPCount	Number of PPTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RSHCount	Number of RSH sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RTSPCount	Number of RTSP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCCPCount	Number of SCCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SIPCount	Number of SIP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SMTPCount	Number of SMTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SQLNETCount	Number of SQLNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SSHCount	Number of SSH	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sessions.		Value range: 0 to 2^{32} - 1.	
TELNETCount	Number of TELNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TFTPCount	Number of TFTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
XDMCPCount	Number of XDMCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DenySessionEstablishedRate	Packet dropping session establishment rate, and rates for establishing packet dropping sessions of different protocols..	Data structure.	Members include: • TCPRate. • UDPRate. • ICMPRate. • ICMPv6Rate. • UDPLiteRate. • SCTPRate. • DCCPRate. • RawIPRate.	N/A
TCPRate	Establishment rate of TCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPRate	Establishment rate of UDP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPRate	Establishment rate of ICMP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPv6Rate	Establishment rate of ICMPv6 sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPLiteRate	Establishment rate of UDP-Lite sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCTPRate	Establishment rate of SCTP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DCCPRate	Establishment rate of DCCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RawIPRate	Establishment rate of Raw IP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ReceivedPktsBytes	Number of received packets and bytes of different protocols.	Data structure.	Members include: • DenyTCPBytes. • DenyTCPPkts. • DenyUDPBytes. • DenyUDPPkts. • DenyICMPBytes. • DenyICMPPkts. • DenyICMPv6Bytes. • DenyICMPv6Pkts. • DenyUDPLiteBytes. • DenyUDPLitePkts. • DenySCTPBytes. • DenySCTPPkts. • DenyDCCPBytes. • DenyDCCPPkts. • DenyRawIPBytes. • DenyRawIPPkts.	N/A
DenyTCPBytes	Number of received TCP bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyTCPPkts	Number of received TCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyUDPBytes	Number of received UDP bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyUDPPkts	Number of received UDP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyICMPBytes	Number of received ICMP bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyICMPPkts	Number of received ICMP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyICMPv6Bytes	Number of received ICMPv6 bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyICMPv6Pkts	Number of received ICMPv6 packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyUDPLiteBytes	Number of received UDP-Lite bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyUDPLitePkts	Number of received UDP-Lite packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenySCTPBy	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
tes	received SCTP bytes.		Value range: 0 to 2^{64} - 1.	
DenySCTPPkts	Number of received SCTP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyDCCPBytes	Number of received DCCP bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyDCCPPkts	Number of received DCCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyRawIPBytes	Number of received Raw IP bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DenyRawIPPkts	Number of received Raw IP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Table description

Item	Description
Feature name	Session
Table name	SessionStatistics
Table type	Multi-instance table
Row name	SessionStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
SourceIpv4	Source IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
DestinationIpv4	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
SourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
DestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.

Protocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	Enumeration string: • dccp • icmp • raw-ip • sctp • tcp • udp • udp-lite	This column can be used as query condition.
CurSessionCount	Total number of current sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
CurRelationCount	Total number of current relation entries.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionCount	Number of sessions of different protocols.	Data structure.	Members include: • TCPCount. • UDPCount. • ICMPCount. • ICMPv6Count. • UDPLiteCount. • SCTPCount. • DCCPCount. • RawIPCount.	N/A
TCPCount	Number of TCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPCount	Number of UDP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPCount	Number of ICMP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPv6Count	Number of ICMPv6 sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPLiteCount	Number of UDP-Lite sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCTPCount	Number of SCTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DCCPCount	Number of DCCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RawIPCount	Number of Raw IP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DNSCount	Number of DNS sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
FTPCount	Number of FTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
GTPCount	Number of GTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
H323Count	Number of H323 sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
HTTPCount	Number of HTTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ILSCount	Number of ILS sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
MGCPCount	Number of MGCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
NBTCount	Number of NBT sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
PPTPCount	Number of PPTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RSHCount	Number of RSH sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RTSPCount	Number of RTSP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCCPCount	Number of SCCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SIPCount	Number of SIP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SMTPCount	Number of SMTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SQLNETCount	Number of SQLNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SSHCount	Number of SSH sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TELNETCount	Number of TELNET sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
TFTPCount	Number of TFTP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
XDMCPCount	Number of XDMCP sessions.	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SessionEstablishedRate	Session establishment rate, and rates for establishing sessions of different protocols.	Data structure.	Members include: • TCPRate. • UDPRate. • ICMPRate. • ICMPv6Rate. • UDPLiteRate. • SCTPRate. • DCCPRate.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• RawIPRate.	
TCPRate	Establishment rate of TCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPRate	Establishment rate of UDP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPRate	Establishment rate of ICMP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ICMPv6Rate	Establishment rate of ICMPv6 sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
UDPLiteRate	Establishment rate of UDP-Lite sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
SCTPRate	Establishment rate of SCTP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
DCCPRate	Establishment rate of DCCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
RawIPRate	Establishment rate of Raw IP sessions (per second).	N/A	Unsigned integer. Value range: 0 to 2^{32} - 1.	N/A
ReceivedPkts Bytes	Number of received packets and packet bytes of different protocols.	Data structure.	Members include: • TCPBytes. • TCPPkts. • UDPBytes. • UDPPkts. • ICMPBytes. • ICMPPkts. • ICMPv6Bytes. • ICMPv6Pkts. • UDPLiteBytes. • UDPLitePkts. • SCTPBytes. • SCTPPkts. • DCCPBytes. • DCCPPkts. • RawIPBytes. • RawIPPkts.	N/A
TCPBytes	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received TCP packet bytes.		Value range: 0 to 2^{64} - 1.	
TCPPkts	Number of received TCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPBytes	Number of received UDP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPPkts	Number of received UDP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPBytes	Number of received ICMP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPPkts	Number of received ICMP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPv6Bytes	Number of received ICMPv6 packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ICMPv6Pkts	Number of received ICMPv6 packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPLiteBytes	Number of received UDP-Lite packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
UDPLitePkts	Number of received UDP-Lite packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SCTPBytes	Number of received SCTP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SCTPPkts	Number of received SCTP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DCCPBytes	Number of received DCCP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DCCPPkts	Number of received DCCP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RawIPBytes	Number of received Raw IP packet bytes.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RawIPPkts	Number of received Raw IP packets.	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Session/ContextLimitNumRate

This table is used to limit the number of concurrnt sessions of context

XML structure

```
<Session>
  <ContextLimitNumRate>
      <ContextID></ContextID>
      <MaxNumber></MaxNumber>
      <MaxRate></MaxRate>
  </ContextLimitNumRate>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ContextLimitNumRate
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	The ID of context.	Index	Unsigned integer Value range: 1~64	N/A
MaxNumber	The Maxnumber of concurrnt sessions of context.	N/A	Unsigned integer Value range: 1~4294967295.	N/A
MaxRate	The Maxrate of concurrnt sessions of context.	N/A	Unsigned integer Value range: 1~4294967295.	N/A

Session/ExportIpv4Table

This table exports ipv4 session information to a file according to the specified conditions.

XML structure

```
<Session>
```

```
  <ExportIpv4Table>
    <Session_Export>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
    </Session_Export>
  </ExportIpv4Table>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	ExportIpv4Table
Table type	Multi-instance table
Row name	Session_Export
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A

Session/ExportIpv6Table

This table exports ipv6 session information to a file according to the specified conditions.

XML structure

```
<Session>
  <ExportIpv6Table>
    <Session_Export>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
    </Session_Export>
  </ExportIpv6Table>
```

```
</Session>
```

Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A

Session/LoadBalance

This table contains dual-active configuration.

XML structure

```
<Session>
  <LoadBalance>
    <LoadBalanceEnable></LoadBalanceEnable>
    <HashMode></HashMode>
    <UDPEnable></UDPEnable>
    <StateMachine></StateMachine>
  </LoadBalance>
</Session>
```

Table description

Item	Description
Feature name	Session
Table name	LoadBalance

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadBalanceEnable	Whether enable session dual-active mode.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
HashMode	Set the session create mode.	N/A	Enumeration: • **0**—local. • **1**—hash.	When asymmetric-path traffic exists in a hot backup system operating in session active/standby mode, set the mode of session state machine to loose to avoid abnormal traffic loss.
UDPEnable	Whether enable transparent transmission for UDP pachets.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
StateMachine	Set the mode of session state machine to compact	N/A	Enumeration: • **0**—compact. • **1**—loose	N/A

Session/ExportTableByWeb

This table exports ipv4/6 session information to a file according to the specified conditions.

XML structure

```
<Session>
  <ExportTableByWeb>
    <Session_Export>
      <Type></Type>
      <FileName></FileName>
      <ExpEnable></ExpEnable>
    </Session_Export>

Comware 7 Session NETCONF XML API Error Message Reference

Session/ConnectionLimit/Ipv4LimitRules

Message	Explanation
ACL name must start with an English letter, and it can't be the word 'all'. ACL名称不能为'all',且必须以字母开头。	ACL ipv4 name must start with an English letter, and it can't be the word 'all'(not case sensitive). ACL ipv4名称不能为'all'(不区分大小写),且必须以英文字母开头。
A number or a name is required for the ACL. ACL编号和ACL名称必须且只能配置其中一个。	**1.** A number or a name is required for the ACL ACL 编号和 ACL 名称有且只能有一个。 **2.** Operation Replace not allowed to replace from ACL number to ACL name or from ACL name to ACL number. Replace 操作不能从 ACL 编号替换到 ACL 名称，也不能从 ACL 名称切换到 ACL 编号。
The low and high thresholds are required. 触发阈值和恢复阈值都必须配置。	HighThreshold and LowThreshold are required and not equal to zero. 触发阈值和恢复阈值都必须配置且不能配为 0。
Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。	Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。
Another connection limit rule is using the ACL. 此ACL已经被其它规则引用。	An ACL rule can only be applied by one connection limit rule. 一个ACL只允许被一个连接数限制规则所引用。

Session/ConnectionLimit/Ipv6LimitRules

Message	Explanation
ACL name must start with an English letter, and it can't be the word 'all'. ACL名称不能为'all',且必须以字母开头。	ACL ipv6 name must start with an English letter, and it can't be the word 'all'(not case sensitive). ACL ipv6名称不能为'all'(不区分大小写),且必须以英文字母开头。
A number or a name is required for the ACL. ACL编号和ACL名称必须且只能配置其中一个。	**1.** A number or a name is required for the ACL. ACL 编号和 ACL 名称有且只能有一个。 **2.** Operation Replace not allowed to replace from ACL number to ACL name or from ACL name to ACL number. Replace 操作不能从 ACL 编号替换到 ACL 名称，也不能从 ACL 名称切换到 ACL 编号。
The low and high thresholds are required. 触发阈值和恢复阈值都必须配置。	HighThreshold and LowThreshold are required and not equal to zero. 触发阈值和恢复阈值都必须配置且不能配为 0。
Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。	Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。
Another connection limit rule is using the ACL. 此ACL已经被其它规则引用。	An ACL rule can only be applied by one connection limit rule. 一个ACL只允许被一个连接数限制规则所引用。

Session/TopStatistics/Switch

Message	Explanation
The operation is not supported on this the device. 该设备不支持此操作。	Session top statistics not be supported by this device. 该设备不支持头部会话统计功能。
The stop process is running. Please try it later. 关闭操作尚未执行完毕，请稍后重试。	Operation undo enable is processing. Undo 操作正在处理中。

Session/Ipv4LogOnInterZones

Message	Explanation
The specified source security zone doesn't exist. 指定的源安全域并不存在。	The security zone must exist before being configured as source zone. 指定的源安全域必须已经存在。
The specified destination security zone doesn't exist. 指定的目的安全域并不存在。	The security zone must exist before being configured as destination zone. 指定的目的安全域必须已经存在。
This device doesn't support session traffic log enable { ipv4 | ipv6 }. 当前设备不支持更改会话日志流开关。	This device doesn't support session traffic log. 当前设备不支持会话日志流功能。

Session/Ipv6LogOnInterZones

Message	Explanation
The specified source security zone doesn't exist. 指定的源安全域并不存在。	The security zone must exist before being configured as source zone. 指定的源安全域必须已经存在。
The specified destination security zone doesn't exist. 指定的目的安全域并不存在。	The security zone must exist before being configured as destination zone. 指定的目的安全域必须已经存在。
This device doesn't support session traffic log enable { ipv4 | ipv6 }. 当前设备不支持更改会话日志流开关。	This device doesn't support session traffic log. 当前设备不支持会话日志流功能。

Session/TrafficLogFlowBegin

Message	Explanation
This device doesn't support session traffic log flow-begin. 当前设备不支持输出会话新建日志。	This device doesn't support session traffic log flow-begin. 当前设备不支持输出会话新建日志。

Session/TrafficLogThreshold

Message	Explanation
This device doesn't support session traffic log threshold. 当前设备不支持更改会话日志输出阈值。	This device doesn't support modify session traffic log threshold. 当前设备不支持更改会话日志输出阈值。

Session/HotBackup

Message	Explanation
This device doesn't support hotbackup function. 当前设备不支持热备功能。	Some devices dose not support backup session or eim entries. 有一部分设备不支持会话和Eim表项备份功能。

Session/ProtocolHotBackup

Message	Explanation
This device doesn't support hotbackup function. 当前设备不支持热备功能。	Some devices dose not support backup session or eim entries (for dns and http). 有一部分设备不支持会话和Eim表项备份功能（对于dns和http协议的表项）。

</SFLOW>
```

Table description

Item	Description
Feature name	SFLOW
Table name	sFlowCollector
Table type	Multi-instance table
Row name	Collector
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector-id	Index	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
VRF	VRF instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	If the SFLOW host is on the public network, the length of characters is 0.
IpAddress	The IPv4 address or IPv6 address of sFlow Collector	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.	For the create and replace operations, IpAddress must be configured. For the merge operation, IpAddress must be configured only when the instance is not exist. For the delete and remove operations, IpAddress cannot be configured.
Port	UDP port of sFlow Collector	N/A	Unsigned integer. Value range: 1 to 65535. Default: 6343.	N/A
MaxDatagramSize	The max size of sFlow datagram	N/A	Unsigned integer. Value range: 200 to 3000. Default: 1400.	N/A
Timeout	The aging time of sFlow Collector	N/A	Unsigned integer. Value range: 0 to 2147483647. Default: 0.	0 means the instance is static.

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of sFlow Collector	N/A	String, case insensitive. Length: 1 to 127 characters.	For the create and replace operations, Description must be configured. For the merge operation, Description must be configured only when the instance is not exist.
Dscp	DSCP value of the sFlow packets	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A

SFLOW/sFlowFlowSampler

This table contains SFLOW sampler configuration information.

XML structure

```
<SFLOW>
  <sFlowFlowSampler>
    <FlowSampler>
      <IfIndex></IfIndex>

SIB

SIB/TotalBroadcast

This table contains the total maximum broadcast throughput for contexts in the inbound direction.

XML structure

```
<SIB>
  <TotalBroadcast>
    <Value></Value>
  </TotalBroadcast>
</SIB>
```

Table description

Item	Description
Feature name	SIB
Table name	TotalBroadcast
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Value	Total maximum broadcast throughput for contexts in the inbound direction, in pps	N/A	Unsigned integer. Value range: 0 and 1000 to 100000.

SIB/SingleBroadcasts

This table contains the maximum broadcast throughput per context in the inbound direction.

XML structure

```
<SIB>
  <SingleBroadcasts>
    <SingleBroadcast>
      <ContextID></ContextID>
      <ConfigValue></ConfigValue>
    </SingleBroadcast>
  </SingleBroadcasts>
</SIB>
```

Table description

      <Verify></Verify>
    </ProtectionPolicy>
  </ProtectionPolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ProtectionPolicies
Table type	Multi-instance table
Row name	ProtectionPolicy
Restrictions	Only protection policies can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the protection policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the protection policy.	N/A	Enumeration: • 0—HTTP	When a protection policy is created, the column must be specified. Once created, this column cannot be changed.

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description for the protection policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Warning	Enable warning action of the protection policy.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Drop	Enable drop action of the protection policy.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	This column cannot be configured with Verify together.
Verify	Enable verify action of the protection policy	N/A	Enumeration: • 0—Not configured. • 1—Insert header. • 2—Inject JS.	This column cannot be configured with Drop together.

SLB/HTTPRules

This table contains information about HTTP protection policy rules.

XML structure

```
<SLB>
  <HTTPRules>
    <HTTPRule>
      <Name></Name>
      <RuleID></RuleID>
      <URL></URL>

      <JsidReqThreshold></JsidReqThreshold>
      <CookieName></CookieName>
    <HTTPRule>
  </HTTPRules>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPRules
Table type	Multi-instance table

Row name	HTTPRule
Restrictions	Only protection policy rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the protection policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	ID of the protection policy rule	Index	Unsigned integer. Value range: 1 to 65535.	N/A
URL	Regular expression of the protection URL.	N/A	String. Length: 1 to 255 characters.	N/A
StatTime	Statistical duration	N/A	Unsigned integer. Value range: 1 to 900. By default, the value is 120.	N/A
IPReqThreshold	IP threshold of triggering protection	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
JsidReqThreshold	Jsessionid threshold of triggering protection	N/A	Unsigned integer. Value range:1 to 4294967295.	This column and CookieName must be configured together.
CookieName	Cookie name of the Jsessionid	N/A	String. Length: 0 to 63 characters.	This column and Jsid-ReqThreshold must be configured together.

SLB/VirtualServerWhiteDomains

This table contains white domain information.

XML structure

```
<SLB>
  <VirtualServerWhiteDomains>
    <VirtualServerWhiteDomain>
      <Name></Name>
      <WhiteDomain></WhiteDomain>
    </VirtualServerWhiteDomain>
  </VirtualServerWhiteDomains>
```

```
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	VirtualServerWhiteDomains
Table type	Multi-instance table
Row name	VirtualServerWhiteDomain
Restrictions	Only skylight exernal link rewrite white domain can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhiteDomain	White domain of the skylight external link	Index	String, case-insensitive. Length: 1 to 253 characters.	Example:a.com The string can contain letters, numbers, hyphens (-), underscores (_), and dot (.). This column can only be configured when the Type is HTTP (0)

SLB/HTTPTrustedProxy

This table contains information about HTTP trusted proxy.

XML structure

```
<SLB>
  <HTTPTrustedProxy>
    <Proxy>
      <Name></Name>
      <Type></Type>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <Policy></Policy>
      <TCPParameter></TCPParameter>
      <TCPParameterClientSide></TCPParameterClientSide>
      <TCPParameterServerSide></TCPParameterServerSide>
```

```
      <MaxConnectionLimit></MaxConnectionLimit>
      <RateLimitConnection></RateLimitConnection>
      <SSLServerPolicy></SSLServerPolicy>
      <SSLClientPolicy></SSLClientPolicy>
      <ServiceEnable></ServiceEnable>
      <LimitPolicy></LimitPolicy>
      <AppProfile></AppProfile>
      <HTTPProtectionPolicy></HTTPProtectionPolicy>
      <TrustedAccessController></TrustedAccessController>
      <TrustedAccessControllerType></TrustedAccessControllerType>
    </Proxy>
  </HTTPTrustedProxy>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPTrustedProxy
Table type	Multi-instance table
Row name	Proxy
Restrictions	Only HTTP trusted proxy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the trusted proxy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the trusted proxy.	N/A	Enumeration: • 0—SP-APP. • 1—SP-API	When a trusted proxy is created, the column must be specified. Once created, this column cannot be changed.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses, and link local addresses are not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 80.	N/A
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the trusted proxy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0, which indicates no limit.	N/A
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can be configured only when the type is HTTP (0).
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can only be configured when the type is HTTP (0).
ServiceEnable	Enable the trusted proxy.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
TrustedAccessController	Name of the trusted access controller.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TrustedAccessControllerType	Type of the trusted access controller	N/A	Enumeration: • 0—None(default) • 1—IAM	When a trusted access controller is created, the column must be specified. Once created, this column cannot be changed.

SLB/GenericActionPayloadRewrites

This table contains information about the payload rewrite generic action.

XML structure

```
<SLB>
  <GenericActionPayloadRewrites>
    <GenericActionPayloadRewrite>
      <ActionName></ActionName>
      <PayloadRewriteDirection></PayloadRewriteDirection>
      <PayloadRewriteExpress></PayloadRewriteExpress>
      <PayloadRewritePattern></PayloadRewritePattern>
    <GenericActionPayloadRewrite>
  </GenericActionPayloadRewrites>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	GenericActionPayloadRewrites
Table type	Multi-instance table
Row name	GenericActionPayloadRewrite
Restrictions	Only generic action payload rewrite information can be configured by this table.

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionName	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	The type of the action must be generic.
PayloadRewriteDirection	The direction of payload rewrite.	Index	Enumeration: • 0—Both. • 1—Request. • 2—Response.	N/A
PayloadRewriteExpress	The value will be rewritten in TCP payload.	Index	String. Length: 0 to 127 characters.	N/A
PayloadRewritePattern	The value will replace the designated TCP payload content.	N/A	String. Length: 0 to 127 characters. Support carrying the following variables: • %[variable], variable with which the variable server farm member is associated. • %[1-9], the content that matched PayloadRewriteExpress will be replaced by the corresponding %[1-9] (), for example: PayloadRewriteExpress = (Wel)(co)(me) PayloadRewritePattern= %2, the result will be “Welcome” is replaced by “co”	When a payload rewrite generic action is created, the column must be specified.

SLB/RealServerExternalMonitors

This table contains information about Real Server Probe that only uses External Monitor template.

XML structure

```
<SLB>
  <RealServerExternalMonitors>
    <RealServerExternalMonitor>
      <RealServer></RealServer>
      <ExternalMonitor></ExternalMonitor>
    </RealServerExternalMonitor>
  </RealServerExternalMonitors>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	RealServerExternalMonitors
Table type	Multi-instance table
Row name	RealServerExternalMonitor
Restrictions	Only Real server external monitor can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RealServer	Name of the real server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ExternalMonitor	External monitor for the real server.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

SLB/VirtualServerSSLServerPolicies

This table contains information about Virtual Server SSL server policy

XML structure

```
<SLB>
  <VirtualServerSSLServerPolicies>
    <VirtualServerSSLServerPolicy>
      <VirtualServer></VirtualServer>
      <SSLServerPolicy></SSLServerPolicy>
      <SNI></SNI>
```

```
    </VirtualServerSSLServerPolicy>
  </VirtualServerSSLServerPolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	VirtualServerSSLServerPolicies
Table type	Multi-instance table
Row name	VirtualServerSSLServerPolicy
Restrictions	Only Virtual server ssl server policy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServer	Name of the virtual server	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SSLServerPolicy	Name of the SSL server policy.	Index	String, case-insensitive. Length: 0 to 31 characters.	N/A
SNI	Name of server name indication	N/A	String, case-insensitive. Length: 0 to 253 characters.	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhiteDomain	White domain of the skylight external link	Index	String, case-insensitive. Length: 1 to 253 characters.	Example: a.com This column can only be configured when the Type is HTTP (0)

SLB/HTTPTrustedProxy

This table contains information about HTTP trusted proxy.

XML structure

```
<SLB>
  <HTTPTrustedProxy>
    <Proxy>
      <Name></Name>
      <Type></Type>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <Policy></Policy>
      <TCPParameter></TCPParameter>
      <TCPParameterClientSide></TCPParameterClientSide>
      <TCPParameterServerSide></TCPParameterServerSide>
      <MaxConnectionLimit></MaxConnectionLimit>
      <RateLimitConnection></RateLimitConnection>
      <SSLServerPolicy></SSLServerPolicy>
      <SSLClientPolicy></SSLClientPolicy>
```

```
      <ServiceEnable></ServiceEnable>
      <LimitPolicy></LimitPolicy>
      <AppProfile></AppProfile>
      <HTTPProtectionPolicy></HTTPProtectionPolicy>
      <TrustedAccessController></TrustedAccessController>
      <TrustedAccessControllerType></TrustedAccessControllerType>
    </Proxy>
  </HTTPTrustedProxy>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPTrustedProxy
Table type	Multi-instance table
Row name	Proxy
Restrictions	Only HTTP trusted proxy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the trusted proxy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the trusted proxy.	N/A	Enumeration: • 0—SP-APP. • 1—SP-API	When a trusted proxy is created, the column must be specified. Once created, this column cannot be changed.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast addresses, and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
Policy	Name of the	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy.		case-insensitive. Length: 1 to 63 characters.	
TCPParameter	Parameter profile whose type is TCP for the trusted proxy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This colume is conflicted with TCPParameter colume,they cannot be confirgured both.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can be configured only when the type is HTTP (0).
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can only be configured when the type is HTTP (0).
ServiceEnable	Enable the trusted proxy.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
AppProfile	App profile name	N/A	String. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
TrustedAccessController	Name of the trusted access controller.	N/A	String, case-insensitive. Length: 1 to 63	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
TrustedAccessController Type	Type of the trusted access controller	N/A	Enumeration: • 0—None • 1—IAM	When a trusted access controller is created, the column must be specified. Once created, this column cannot be changed.

SLB/GenericActionPayloadRewrites

This table contains information about the payload rewrite generic action.

XML structure

```
<SLB>
  <GenericActionPayloadRewrites>
    <GenericActionPayloadRewrite>
      <ActionName></ActionName>
      <PayloadRewriteDirection></PayloadRewriteDirection>
      <PayloadRewriteExpress></PayloadRewriteExpress>
      <PayloadRewritePattern></PayloadRewritePattern>
    <GenericActionPayloadRewrite>
  </GenericActionPayloadRewrites>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	GenericActionPayloadRewrites
Table type	Multi-instance table
Row name	GenericActionPayloadRewrite
Restrictions	Only generic action payload rewrite information can be configured by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionName	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PayloadRewriteDirection	The direction of payload rewrite.	Index	Enumeration: • 0—Both. • 1—Request. • 2—Response.	N/A
PayloadRewriteExpress	The value will be rewritten in TCP payload.	Index	String. Length: 0 to 127 characters.	N/A
PayloadRewritePattern	The value will replace the designated TCP payload content.	N/A	String. Length: 0 to 127 characters. Support carrying the following variables: • %[variable], variable with which the variable server farm member is associated. • %[1-9], the content that matched PayloadRewriteExpress will be replaced by the corresponding %[1-9] (), for example: PayloadRewriteExpress = (Wel)(co)(me) PayloadRewritePattern= %2, the result will be “Welcome” is replaced by “co”	N/A

SLB/VirtualServerStatsSummeries

This table contains statistics about a virtual server.

XML structure

```
<SLB>
  <VirtualServerStatsSummeries>
    <VirtualServerStatsSummery>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <TenSecTotalConnections></TenSecTotalConnections>
```

```
      <TenSecActiveConnections></TenSecActiveConnections>
      <TenSecTrafficBytes></TenSecTrafficBytes>
      <FiveMinTotalConnections></FiveMinTotalConnections>
      <FiveMinActiveConnections></FiveMinActiveConnections>
      <FiveMinTrafficBytes></FiveMinTrafficBytes>
    </VirtualServerStatsSummery>
  </VirtualServerStatsSummeries>
</SLB>
```

Table description

Item	Description
Feature name	LB
Table name	VirtualServerStats
Table type	Multi-instance table
Row name	VirtualServerStat
Restrictions	Only stats of virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
TenSecTotalConnections	Total connections that the virtual server received during the last 10 seconds.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
TenSecActiveConnections	Active connections that the virtual server received during the last 10 seconds.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TenSecTrafficBytes	Total traffic that the virtual server received during the last 10 seconds.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
FiveMinTotalConnections	Total connections that the virtual server received during the last five minutes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
FiveMinActiveConnections	Active connections that the virtual server received during the last five minutes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
FiveMinTrafficBytes	Total traffic that the virtual server received during the last five minutes.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A

SLB/RealServerExternalMonitors

This table contains information about Real Server Probe that only uses External Monitor template.

XML structure

```
<SLB>
  <RealServerExternalMonitors>
    <RealServerExternalMonitor>
      <RealServer></RealServer>
      <ExternalMonitor></ExternalMonitor>
      <ExternalMonitorState></ExternalMonitorState>
    </RealServerExternalMonitor>
  </RealServerExternalMonitors>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	RealServerExternalMonitors

Table type	Multi-instance table
Row name	RealServerExternalMonitor
Restrictions	Only Real server external monitors can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RealServer	Name of the real server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ExternalMonitor	External monitor for the real server.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ExternalMonitorState	State of the real server external-monitor.	N/A	Enumeration: • 0—Not exist. • 1—Success. • 2—Failed. • 3—In the process.	N/A

SLB/VirtualServerSSLServerPolicies

This table contains information about Virtual Server SSL server policy

XML structure

```
<SLB>
  <VirtualServerSSLServerPolicies>
    <VirtualServerSSLServerPolicy>
      <VirtualServer></VirtualServer>
      <SSLServerPolicy></SSLServerPolicy>
      <SNI></SNI>
    </VirtualServerSSLServerPolicy>
  </VirtualServerSSLServerPolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	VirtualServerSSLServerPolicies
Table type	Multi-instance table

Row name	VirtualServerSSLServerPolicy
Restrictions	Only Virtual server ssl server policy can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServer	Name of the virtual server	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
SSLServerPolicy	Name of the SSL server policy.	Index	String, case-insensitive. Length: 0 to 31 characters.	N/A
SNI	Name of server name indication	N/A	String, case-insensitive. Length: 0 to 253 characters.	N/A

SLB/EvalutionsLinks

This table contains information about evaluation link score.

XML structure

```
<SLB>
  <EvaluationsLinks>
    <EvaluationsLink>
      <Type></Type>
      <Quality></Quality>
      <Score></Score>
      <EvaluationNameList>
       <LinkName></LinkName>
       <Status></Status>
      </EvaluationNameList>
    </EvaluationsLink>
  </EvaluationsLinks>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	EvaluationsLinks

Table type	Multi-instance table
Row name	EvaluationsLink
Restrictions	Only evaluation link score can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the real server.	Index	Enumeration: • 0—RS. • 1—LINK	N/A
Quality	Quality of the link	N/A	Enumeration: • 0—Bad. • 1—Fine • 2—Excellent	N/A
Score	Score of the link.	N/A	Unsigned integer. Value range: 0 to100.	N/A
LinkName	Name of the link.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
Status	Status of the link.	N/A	Enumeration: • 1—Normal. • 2—Busy • 3—NoData. • 4—Fault	N/A

Table type	Multi-instance table
Row name	SLBGGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupId	Service loopback group ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceType	Service type of the service loopback group	N/A	Unsigned integer. Default: 1.	Required. You cannot change the service type of a service loopback group. You can configure only one service loopback group for a service type. A service loopback group supports one of the following services: • **1**—Tunnel service. • **2**—Multicast tunnel service. • **3**—Tunnel service and multicast tunnel service. • **4**—Multiport service. • **8**—VSI gateway service. • **16**—Telemetry stream service. • **32**—Inter-VPN forwarding service. • **64**—Telemetry mod service. • **128**—Mirror service.

SLBG/Members

This table contains member port information for service loopback groups.

XML structure

```
<SLBG>
  <SLBGMembers>
    <SLBGMember>
      <IfIndex></IfIndex>
      <GroupId></GroupId>
    </SLBGMember>
  </SLBGMembers>
</SLBG>
```

Table description

Item	Description
Feature name	SLBG.
Table name	SLBGMembers.

Table type	Multi-instance table.
Row name	SLBGMember.
Restrictions	This table supports only Layer 2 Ethernet interfaces and IRF physical interfaces.
Support for row creation and deletion	No.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Member port index	Index	Unsigned integer.	Interface name or index Some versions support interface name. For more information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
GroupId	Service loopback group ID	N/A	Unsigned integer. Value range: 1 to 1024.	Required. You can add a port to only one service loopback group.

				rules, no NMS in this community can access the SNMP agent. IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

SNMP/Contexts

This table contains SNMP context information.

XML structure

```
<SNMP>
  <Contexts>
    <Context>
      <Name></Name>
    </Context>
  </Contexts>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxContexts in data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Context name	Index	String. Length:1 to 32	An NMS and an SNMP agent can communicate with each other if the

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	following conditions exist: • No SNMP context is configured on the NMS and the SNMP agent. • The NMS and the SNMP agent use the same SNMP context.

SNMP/CommunityMappings

This table contains SNMP communities information.

XML structure

```
<SNMP>
  <CommunityMappings>
    <Mapping>
      <Community></Community>
      <Context></Context>
    </Mapping>
  </CommunityMappings>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	CommunityMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxCommunityMappings in data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Community	Community name	Index	String. Length: 1 to 32 characters.	An NMS and an SNMP agent communicate with community, this community can map to a context name of processes in system, and then the NMS can communicate with specified process.
Context	Context name	N/A	String. Length:1 to 32 characters.	This column must be specified.

SNMP/MIBViews

This table contains SNMP MIB view information.

XML structure

```
<SNMP>
  <MIBViews>
    <View>
      <Name></Name>
      <SubTree></SubTree>
      <Type></Type>
      <Mask></Mask>
    </View>
  </MIBViews>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	MIBViews
Table type	Multi-instance table
Row name	View
Restrictions	The system creates the **ViewDefault** view when the SNMP

	agent is enabled. In this default MIB view, all MIB objects in the **iso** subtree but the **snmpUsmMIB**, **snmpVacmMIB**, and **snmpModules.18** subtrees are accessible. The max number of tables depends on SNMP/Capabilities/MaxMIBViews in data namespace, including the 4 default MIB view records. After deleting, the default MIB view records will be restored after the system reboots, and the max number of rows can be created do not change.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	View name.	Index	String. Length:1 to 32 characters.	N/A
SubTree	A MIB subtree by its root node's OID or object name.	Index	String or dotted decimal notation string. Length:1 to 255 characters.	Example for OID, 1.3.6.1.2.1.1. Example for object name, iso. When creating a row with OIDs, the 'SubTree' will be transform to object name automatic if the whole MIB tree in the system contained these OIDs.
Type	Access type to any node in the subtree.	N/A	Enumeration: • 1 – included • 2 – excluded	This column must be specified.
Mask	A MIB subtree mask	N/A	Hex String. Length: 1 to 32 characters. Default: no value is specified.	N/A

SNMP/Groups

This table contains SNMP group information.

XML structure

```
<SNMP>
  <Groups>
    <Group>
      <Name></Name>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <ReadView></ReadView>
      <WriteView></WriteView>
      <NotifyView></NotifyView>
      <IPv4BasicACL>
        <Number></Number>
      </IPv4BasicACL>
      <IPv4AdvancedACL>
        <Number></Number>

      <IPv6BasicACL>
        <Number></Number>
      </IPv6BasicACL>
      <IPv6AdvancedACL>
        <Number></Number>
      </IPv6AdvancedACL>
    </Group>
  </Groups>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxGroups in data namespace. ‘Number’ and ‘Name’ are two configuration ways. Only one way can take effect at the same time for both ‘IPv4BasicACL’, ‘IPv4AdvancedACL’, ‘IPv6BasicACL’ and ‘IPv6AdvancedACL’.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name.	Index	String. • Length:1 to 32 characters.	N/A
SecurityMode	The security model by this group is provided.	Index	Enumeration: • 1 – v1 • 2 – v2c 3 – v3	N/A
SecurityLevel	Security Level.	Index	Enumeration: • 1 – noAuthNoPriv • 2 – authNoPriv • 3 – authPriv	When ‘SecurityMode’ is ‘1 – v2’ and ‘2 – v2c’, the applicable value is just ‘1 - noAuthNoPriv’.
ReadView	MIB view for read-only access.	N/A	String. Length:1 to 32 characters. Default: ViewDefault.	N/A
WriteView	MIB view for read and write access.	N/A	String. Length:1 to 32 characters. Default: no value is specified.	If no read and write view is specified, this group cannot set any MIB object.
NotifyView	MIB view for notify access.	N/A	String. Length:1 to 32 characters. Default: no value is specified.	The SNMP agent sends notifications to the NMS in this group only for the MIB objects included in the notify view. If no notify view is specified, the SNMP agent does not send any notification to the NMS in this group.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP

Column name	Column description	Column type	Data type and restrictions	Remarks
				agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent. IPv4BasicACL and IPv4AdvancedACL can't be configured simultaneously.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent. IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

SNMP/Users

This table contains SNMP user information.

XML structure

Table description

Item	Description
Feature name	SNMP
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxUsers in data namespace.

	‘Group’ and ‘Role’ are two configuration ways. Only one way can take effect at the same time. ‘Number’ and ‘Name’ are two configuration ways. Only one way can take effect at the same time for both ‘IPv4BasicACL’, ‘IPv4AdvancedACL’, ‘IPv6BasicACL’ and ‘IPv6AdvancedACL’. ‘Remote/Address’ and ’ Remote/VPN’ only applicable when creating a row.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SecurityMode	The security model by this user is provided.	Index	Enumeration: • 1 – v1 • 2 – v2c • 3 – v3	N/A
Name	User name.	Index	String. Length:1 to 32 characters.	N/A
EngineId	SNMP engine ID.	Index	Hex String. Length: 0 or 10 to 64 characters.	There are 2 ways to create a row: The first way is without engine ID for SNMPv3 local user or SNMPv1 and SNMPv2c user . In this way, the ‘EngineId’and ‘Adress’and ‘VRF’must be zero-length. The second way is using the engine ID of remote SNMP manage. In this way, the ‘EngineId’ must be zero-length, then both the Remote/Address and Remode/VPN in this row must be included. The number of characters must be even. All-zero and all-F strings are invalid.
Address	Address of the remote manage.	index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string,	Only for remote SNMP manage.

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF instance name.	index	String. Length: 0 to 31 characters.	Only for remote SNMP manage VRF'must be zero-length if the remote manage is on the public network.
GroupControl	Group control of this user.	Data structure	Members include: • Group • Role	'Group' and 'Role' can not be specified together.
Group	Group name.	N/A	String. Length:1 to 32 characters.	N/A
Role	User role name.	N/A	String. Length:1 to 63 characters.	Multi-instance. Applicable only when 'SecurityMode' is '3 – v3'.
SecurityParam	Security parameters of this user.	Data structure	Members include: • AuthProtocol • AuthKey • PrivProtocol • PrivKey Default: no value is specified.	Applicable only when 'SecurityMode' is '3 – v3'. 'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm.	N/A	Enumeration: • 1 – MD5 • 2 – SHA • 3—SHA224 • 4—SHA256 • 5—SHA384 • 6—SHA512	N/A
AuthKey	Authentication key.	N/A	String. Length:1 to 128 characters.	Plaintext key string. Must be specified with 'AuthProtocol'.
PrivProtocol	Encryption algorithm for privacy.	N/A	Enumeration: • 1 – DES • 2 – AES • 3 – 3DES • 4 – AES192 • 5 – AES256	N/A
PrivKey	Privacy key.	N/A	String. Length:1 to 128 characters.	Plaintext key string. Must be specified with 'PrivProtocol.
IPv4BasicACL	Specifies an IPv4	Data	Members include:	If no ACL is specified, or

Column name	Column description	Column type	Data type and restrictions	Remarks
	basic ACL to filter NMSs.	structure	Number	the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent. IPv4BasicACL and IPv4AdvancedACL can't be configured simultaneously.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access

Column name	Column description	Column type	Data type and restrictions	Remarks
				the SNMP agent. IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

SNMP/RemoteManages

This table contains SNMP remote manage information.

XML structure

```
<SNMP>
  <RemoteManages>
    <Manage>
      <Address></Address>
      <VRF></VRF>
      <EngineId></EngineId>
    </Manage>
  </RemoteManages>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	RemoteManages
Table type	Multi-instance table
Row name	Manage
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxRemoteManages in data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1 IPv6 example:

Column name	Column description	Column type	Data type and restrictions	Remarks
			IPv6: Hexadecimal string, colon-separated.	1:2:3:4:5:6:7:8
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
EngineId	SNMP engine ID of the remote manage.	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.

SNMP/TargetHosts

This table contains SNMP target host information.

XML structure

```
<SNMP>
  <TargetHosts>
    <UdpHost>
      <TargetType></TargetType>
      <SecurityName></SecurityName>
      <Address></Address>
      <VRF></VRF>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <Port></Port>
      <AddressType></AddressType>
      <SourceIP></SourceIP>
    </UdpHost>
  </TargetHosts>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	TargetHosts
Table type	Multi-instance table
Row name	UdpHost
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxTargetHosts in data namespace.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetType	Notifications type.	Index	Enumeration: • 1 – InformRequest • 2 – Trap	N/A
SecurityName	Authentication parameter.	Index	String. Length: 1 to 32 characters.	For SNMPv3, ‘SecurityName’ specifies an username.
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www. example.com
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
SecurityMode	The Security model to be used when generating SNMP notifications.	N/A	Enumeration: • 1 – v1 • 2 – v2c • 3 – v3	If ‘TargetType’ is ‘1 – InformRequest’, only ‘2 - v2c’ and ‘3 - v3’ are applicable.
SecurityLevel	Security level.	N/A	Enumeration: • 1 – noAuthNoPriv • 2 – authNoPriv • 3 – authPriv	Applicable only when ‘SecurityMode’ is ‘3 – v3’.
Port	UDP port for SNMP notifications	N/A	Unsigned integer. Value range: 0 to 65535. Default: 162.	N/A
AddressType	Host name type.	N/A	Enumeration: • 1 – IPv4 host name • 2 – IPv6 host name	If this column is not included, the Address column is an IPv4 or IPv6 address.
SourceIP	Source IP address for traps or informs.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2

SNMP/TrapConfigs

This table contains SNMP trap switch.

XML structure

```
<SNMP>
  <TrapConfigs>
    <TrapConfig>
      <FeatureName></FeatureName>
      <TrapSwitch></TrapSwitch>
    </TrapConfig>
  </TrapConfigs>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Notification
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColdStart	Status of SNMP coldStart notification.	N/A	Boolean: • **true** • **false**	N/A
WarmStart	Status of SNMP warmStart notification.	N/A	Boolean: • **true** • **false**	N/A
AuthenticationFailure	Status of SNMP authenticationFailure notification.	N/A	Boolean: • **true** • **false**	N/A
QueueSize	Notification queue size.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
QueueLifeTime	Lifetime of notifications in the SNMP notification queue. Unit: second.	N/A	Unsigned integer. Value range: 1 to 2592000.	N/A
TrapSource	An interface name, of which primary IP address as the source IP address for the traps.	N/A	String. Length: 2 to 47 characters.	Only the interface which can be assigned an IP address. (The interface type is layer 3 but not NULL or controller.) The configuration will fail if the interface has not been created and will take effect only after a valid IP address is assigned to the specified interface.
InformSource	An interface name, of which primary IP address as the source IP address	N/A	String. Length: 2 to 47 characters.	Only the interface which can be assigned an IP address. (The interface type is layer 3 but not

Column name	Column description	Column type	Data type and restrictions	Remarks
	for the informRequests.			NULL or controller.) The configuration will fail if the interface has not been created and will take effect only after a valid IP address is assigned to the specified interface.
EnableModules	Modules of notification function status is enable.	N/A	Members include: • Module	For a module that has sub-modules, the status is **enable** if the notification function of one of its sub-modules is enabled.
Module	Module name.	N/A	String. Length: 1 to 127 characters.	N/A
DisableModules	Modules of notification function status is disable.	N/A	Members include: • Module	For a module that has sub-modules, the status is **disable** if the notification function of any of its sub-modules is disabled.
Module	Module name.	N/A	String. Length: 1 to 127 characters.	N/A

SNMP/Communities

This table contains SNMP community information.

XML structure

```
<SNMP>
  <Communities>
    <Community>

      </IPv6AdvancedACL>
      <Context></Context>
    </Community>
  </Communities>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Communities
Table type	Multi-instance table
Row name	Community
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxCommunities. ‘Number’ and ‘Name’ are two configuration ways. Only one way can take effect at the same time for both ‘IPv4BasicACL’, ’IPv4AdvancedACL’, ‘IPv6BasicACL’ and ‘IPv6AdvancedACL’.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Community name	Index	String. Length:1 to 32 characters.	N/A
Type	Community type	N/A	Enumeration: • 0 – read-only • 1 – read-write • 2 – use-RBAC	If specified ‘2 - use-RBAC’, then a ‘Role’ must be included together. For the other enumerations, ‘Role’ is meaningless, and must not be included.
Role	User role name for the community.	N/A	String. Length:1 to 63 characters.	Applicable only when ‘Type’ is ‘2 - use-RBAC’.
MIBView	MIB view name available for the community.	N/A	String. Length:1 to 32 characters.	Applicable only when‘Type’ is‘0 – read-only

Column name	Column description	Column type	Data type and restrictions	Remarks
				’or ‘1 – read-write’.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: • Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: • Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.

Column name	Column description	Column type	Data type and restrictions	Remarks
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Context	The context mapped to a community.	N/A	String. Length:1 to 32 characters.	If no mapping between an SNMP community and an SNMP context exists, this field is not included.

SNMP/Contexts

This table contains SNMP context information.

XML structure

```
<SNMP>
  <Contexts>
    <Context>
      <Name></Name>
    </Context>
  </Contexts>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxContexts.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Context name	Index	String. Length: 1 to 32 characters.	An NMS and an SNMP agent can communicate with each other if the following conditions exist: • No SNMP context is configured on the

Column name	Column description	Column type	Data type and restrictions	Remarks
				NMS and the SNMP agent. • The NMS and the SNMP agent use the same SNMP context.

SNMP/CommunityMappings

This table contains SNMP communities information.

XML structure

```
<SNMP>
  <CommunityMappings>
    <Mapping>
      <Community></Community>
      <Context></Context>
    </Mapping>
  </CommunityMappings>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	CommunityMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxCommunityMappings.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Community	Community name	Index	String. Length: 1 to 32 characters.	An NMS and an SNMP agent communicate with community, this community can map to a context name of processes in system, then the NMS can communicate with specified process.

Column name	Column description	Column type	Data type and restrictions	Remarks
Context	Context name	N/A	String. Length:1 to 32 characters.	N/A

SNMP/MIBViews

This table contains SNMP MIB view information.

XML structure

```
<SNMP>
  <MIBViews>
    <View>
      <Name></Name>
      <SubTree></SubTree>
      <Type></Type>
      <Mask></Mask>
      <Status></Status>
    </View>
  </MIBViews>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	MIBViews
Table type	Multi-instance table
Row name	View
Restrictions	The system creates the **ViewDefault** view when the SNMP agent is enabled. In this default MIB view, all MIB objects in the **iso** subtree but the **snmpUsmMIB**, **snmpVacmMIB**, and **snmpModules.18** subtrees are accessible. The max number of tables depends on SNMP/Capabilities/MaxMIBViews, including the 4 default MIB view records. After deleting, the default MIB view records will be restored after the system reboots, and the max number of rows can be created do not change.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	View name.	Index	String. Length:1 to 32 characters.	N/A
SubTree	A MIB subtree by its root node's OID or object name.	Index	String or dotted decimal notation string. Length: 1 to 255 characters.	Example for OID, 1.3.6.1.2.1.1. Example for object name, iso. When creating a row with OIDs, the 'SubTree' will be transform to object name automatic if the whole MIB tree in the system contained these OIDs.
Type	Access type to any node in the subtree.	N/A	Enumeration: • 1 – included • 2 – excluded	N/A
Mask	A MIB subtree mask	N/A	Hex String. Length: 1 to 32 characters.	N/A
Status	Status of the MIB view.	N/A	Enumeration: • 1 – active • 2 - inactive	Only SNMP set operation can temporarily disable a MIB view without deleting it.

SNMP/Groups

This table contains SNMP group information.

XML structure

```
<SNMP>
  <Groups>
    <Group>
      <Name></Name>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <ReadView></ReadView>
      <WriteView></WriteView>
      <NotifyView></NotifyView>
      <IPv4BasicACL>
```

```
      <Number></Number>
    </IPv4BasicACL>
    <IPv4AdvancedACL>
      <Number></Number>
    </IPv4AdvancedACL>

```

Table description

Item	Description
Feature name	SNMP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxGroups. ‘Number’ and ‘Name’ are two configuration ways. Only one way can take effect at the same time for both ‘IPv4BasicACL’, ’IPv4AdvancedACL’, ‘IPv6BasicACL’ and ‘IPv6AdvancedACL’.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name.	Index	String. Length:1 to 32 characters.	N/A
SecurityMode	The security model by this group is provided.	Index	Enumeration: • 1 – v1 • 2 – v2c 3 – v3	N/A
SecurityLevel	Security Level.	Index	Enumeration: • 1 – noAuthNoPriv • 2 – authNoPriv • 3 – authPriv	When ‘SecurityMode’ is ‘1 – v2’ and ‘2 – v2c’, the applicable value is just ‘1 - noAuthNoPriv’.
ReadView	MIB view for	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	read-only access.		Length:1 to 32 characters.	
WriteView	MIB view for read and write access.	N/A	String. Length:1 to 32 characters.	If no read and write view is specified, this group cannot set any MIB object.
NotifyView	MIB view for notify access.	N/A	String. Length:1 to 32 characters.	The SNMP agent sends notifications to the NMS in this group only for the MIB objects included in the notify view. If no notify view is specified, the SNMP agent does not send any notification to the NMS in this group.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: • Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: • Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.

Column name	Column description	Column type	Data type and restrictions	Remarks
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

SNMP/Users

This table contains SNMP user information.

XML structure

```
<SNMP>
  <Users>
    <User>
      <SecurityMode></SecurityMode>
      <Name></Name>
      <EngineId></EngineId>
      <Address></Address>
      <VRF></VRF>
      <GroupControl>
        <Group></Group>
        <Role></Role>
      </GroupControl>
      <SecurityParam>
        <AuthProtocol></AuthProtocol>
        <AuthKey></AuthKey>
        <PrivProtocol></PrivProtocol>
        <PrivKey></PrivKey>
      </SecurityParam>
      <IPv4BasicACL>
        <Number></Number>
      </IPv4BasicACL>
      <IPv4AdvancedACL>
        <Number></Number>
```

```
      </IPv4AdvancedACL>
      <IPv6BasicACL>
        <Number></Number>
      </IPv6BasicACL>
      <IPv6AdvancedACL>
        <Number></Number>
      </IPv6AdvancedACL>
      <Status></Status>
    </User>
  </Users>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxUsers. ‘Group’ and ‘Role’ are two configuration ways. Only one way can take effect at the same time. ‘Number’ and ‘Name’ are two configuration ways. Only one way can take effect at the same time for both ‘IPv4BasicACL’, ’IPv4AdvancedACL’, ‘IPv6BasicACL’ and ‘IPv6AdvancedACL’.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SecurityMode	The security model by this user is provided.	Index	Enumeration: • 1 – v1 • 2 – v2c • 3 – v3	N/A
Name	User name.	Index	String. Length:1 to 32 characters.	N/A
EngineId	SNMP engine ID.	Index	Hex String. Length: 0 or 10 to 64 characters.	There are 2 ways to create a row: The first way is without engine ID for SNMPv3 local user or SNMPv1 and SNMPv2c user .

Column name	Column description	Column type	Data type and restrictions	Remarks
				In this way, the 'EngineId'and 'Adress'and 'VRF'must be zero-length. The second way is using the engine ID of remote SNMP manage. In this way, the 'EngineId''Address' and 'VPN' in this row must be included.
				The number of characters must be even. All-zero and all-F strings are invalid.
Address	Address of the remote manage.	index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	Only for remote SNMP manage. IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF instance name.	index	String. Length: 0 to 31 characters.	Only for remote SNMP manage VRF'must be zero-length if the remote manage is on the public network.
GroupControl	Group control of this user.	Data structure	Members include: • Group • Role	'Group' and 'Role' can not be specified together.
Group	Group name.	N/A	String. Length:1 to 32 characters.	N/A
Role	User role name.	N/A	String. Length:1 to 63 characters.	Multi-instance.
SecurityParam	Security parameters of this user.	Data structure	Members include: • AuthProtocol • AuthKey • PrivProtocol • PrivKey	Applicable only when 'SecurityMode' is '3 – v3'. Applicable only when 'SecurityMode' is '3 – v3'. 'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm.	N/A	Enumeration: • 1 – MD5 • 2 – SHA	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—SHA224 • 4—SHA256 • 5—SHA384 • 6—SHA512	
AuthKey	Authentication key.	N/A	String. Length:1 to 128 characters.	Plaintext key string. Must be specified with ‘AuthProtocol’.
PrivProtocol	Encryption algorithm for privacy.	N/A	Enumeration: • 1 – DES • 2 – AES • 3 – 3DES • 4 – AES192 • 5 – AES256	N/A
PrivKey	Privacy key.	N/A	String. Length:1 to128 characters.	Plaintext key string. Must be specified with ‘PrivProtocol.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: • Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this

Column name	Column description	Column type	Data type and restrictions	Remarks
				community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Status	Status of the user.	N/A	Enumeration: • 1 – active • 2 - inactive	Only SNMP set operation can temporarily disable a user without deleting it.

SNMP/RemoteManages

This table contains SNMP remote manage information.

XML structure

```
<SNMP>
  <RemoteManages>
    <Manage>
      <Address></Address>
      <VRF></VRF>
      <EngineId></EngineId>
    </Manage>
  </RemoteManages>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	RemoteManages

Table type	Multi-instance table
Row name	Manage
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxRemoteManages.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
EngineId	SNMP engine ID of the remote manage.	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.

SNMP/TargetHosts

This table contains SNMP target host information.

XML structure

```
<SNMP>
  <TargetHosts>
    <UdpHost>
      <TargetType></TargetType>
      <SecurityName></SecurityName>
      <Address></Address>
      <VRF></VRF>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <Port></Port>
      <AddressType></AddressType>
      <SourceIP></SourceIP>
    </UdpHost>
  </TargetHosts>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	TargetHosts
Table type	Multi-instance table
Row name	UdpHost
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxTargetHosts.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetType	Notifications type.	Index	Enumeration: • 1 – InformRequest • 2 – Trap	N/A
SecurityName	Authentication parameter.	Index	String. Length: 1 to 32 characters.	For SNMPv3, 'SecurityName' specifies an username.
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www. example.com
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
SecurityMode	The Security model to be used when generating SNMP notifications.	N/A	Enumeration: • 1 – v1 • 2 – v2c • 3 – v3	If 'TargetType' is '1 – InformRequest', only '2 - v2c' and '3 - v3' are applicable.
SecurityLevel	Security Level.	N/A	Enumeration: • 1 – noAuthNoPriv • 2 – authNoPriv • 3 – authPriv	Applicable only when 'SecurityMode' is '3 – v3'.
Port	UDP port for SNMP notifications	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
AddressType	Host name type.	N/A	Enumeration: • 1 – IPv4 host name • 2 – IPv6 host name	If this column is not included, the Address column is an IPv4 or IPv6 address.

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIP	Source IP address for traps or informs.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2

SNMP/Capabilities

This table contains capabilities information.

XML structure

```
<SNMP>
  <Capabilities>
    <MaxCommunities></MaxCommunities>
    <MaxContexts></MaxContexts>
    <MaxCommunityMappings></MaxCommunityMappings>
    <MaxMIBViews></MaxMIBViews>
    <MaxGroups></MaxGroups>
    <MaxUsers></MaxUsers>
    <MaxRemoteManages></MaxRemoteManages>
    <MaxTargetHosts></MaxTargetHosts>
    <MaxV3Roles></MaxV3Roles>
  </Capabilities>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Capabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxCommunities	Maximum number of communities.	N/A	Unsigned integer.	N/A
MaxContexts	Maximum number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of contexts.			
MaxCommunity Mappings	Maximum number of community to context mappings.	N/A	Unsigned integer.	Each community can only mapping to one context.
MaxMIBViews	Maximum number of MIB views.	N/A	Unsigned integer.	N/A
MaxGroups	Maximum number of groups.	N/A	Unsigned integer.	N/A
MaxUsers	Maximum number of users.	N/A	Unsigned integer.	N/A
MaxRemoteMa nages	Maximum number of remote manages.	N/A	Unsigned integer.	N/A
MaxTargetHost s	Maximum number of target-hosts.	N/A	Unsigned integer.	N/A
MaxV3Roles	Maximum number of roles for one SNMPv3 user.	N/A	Unsigned integer.	Each SNMPv3 user can support multi-roles.

SNMP/Statistics

This table contains SNMP statistics information.

XML structure

```
<SNMP>
  <Statistics>
    <InPkts></InPkts>
    <OutPkts></OutPkts>
    <InBadVersions></InBadVersions>

    <OutTraps></OutTraps>
    <SilentDrops></SilentDrops>
  </Statistics>
</SNMP>
```

Table description

Item	Description
Feature name	SNMP
Table name	Statistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InPkts	The total number of Messages delivered to the SNMP entity from the transport service.	N/A	Unsigned integer.	N/A
OutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.	N/A	Unsigned integer.	N/A
InBadVersions	The total number of SNMP Messages which were delivered to the SNMP protocol entity and were for an unsupported SNMP version	N/A	Unsigned integer.	N/A
InBadCommunityNames	The total number of SNMP	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Messages delivered to the SNMP protocol entity which used a SNMP community name not known to said entity.			
InBadCommunityUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an SNMP operation which was not allowed by the SNMP community named in the Message.	N/A	Unsigned integer.	N/A
InASNParseErrs	The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding received SNMP Messages.	N/A	Unsigned integer.	N/A
InTooBigs	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is `tooBig'.	N/A	Unsigned integer.	N/A
InNoSuchNames	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is `noSuchName'.	N/A	Unsigned integer.	N/A
InBadValues	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is `badValue'.	N/A	Unsigned integer.	N/A
InReadOnlys	The total number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	valid SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is `readOnly'.			
InGenErrs	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is `genErr'	N/A	Unsigned integer.	N/A
InTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as the result of receiving valid SNMP Get-Request and Get-Next PDUs.	N/A	Unsigned integer.	N/A
InTotalSetVars	The total number of MIB objects which have been altered successfully by the SNMP protocol entity as the result of receiving valid SNMP Set-Request PDUs.	N/A	Unsigned integer.	N/A
InGetRequests	The total number of SNMP Get-Request PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InGetNexts	The total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InSetRequests	The total number of SNMP Set-Request	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PDUs which have been accepted and processed by the SNMP protocol entity.			
InGetResponses	The total number of SNMP Get-Response PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InTraps	The total number of SNMP Trap PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutTooBigs	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is `tooBig.'	N/A	Unsigned integer.	N/A
OutNoSuchNames	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status is `noSuchName'.	N/A	Unsigned integer.	N/A
OutBadValues	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is `badValue'.	N/A	Unsigned integer.	N/A
OutGenErrs	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is `genErr'.	N/A	Unsigned integer.	N/A
OutGetRequests	The total number of SNMP	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Get-Request PDUs which have been generated by the SNMP protocol entity.			
OutGetNexts	The total number of SNMP Get-Next PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutSetRequests	The total number of SNMP Set-Request PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutGetResponses	The total number of SNMP Get-Response PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutTraps	The total number of SNMP Trap PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
SilentDrops	The total number of Confirmed Class PDUs (such as GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	constraint or the maximum message size associated with the originator of the request.			

SNMP/TrapConfigs

This table contains SNMP trap switch.

XML structure

```
<SNMP>
  <TrapConfigs>
    <TrapConfig>
      <FeatureName></FeatureName>
      <TrapSwitch></TrapSwitch>
    </TrapConfig>
  </TrapConfigs>
</SNMP>
```

SNMP

SNMP/System

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。
Operation failed. Please separately set the AgentStatus column to Disable in the System table. 操作失败。请单独设置System表的AgentStatus列为Disable以关闭SNMP功能。	Disable snmp first. 请先去使能 SNMP 服务。

SNMP/Agent

Message	Explanation
The number of hexadecimal characters must be even for an engine ID. 引擎ID的16进制字符个数必须是偶数。	Engine ID set failed. 引擎 ID 的 16 进制字符个数必须是偶数。
The engine ID can't be all 0s or all Fs. 引擎ID不能为全零或者全F。	Engine ID set failed. 引擎 ID 不能为全零或者全 F。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Notification

Message	Explanation
The interface has no IP address now. Please configure an IP address for the interface first. 接口未设置IP 地址。 请先指定接口的IP地址。	Set the interface for trap succeed, but the interface has no IP address now. 接口未设置 IP 地址。 请设置接口的 IP 地址。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Communities

Message	Explanation
Column Role can't be deleted for RBAC-based SNMP communities. 基于RBAC方式配置的团体，不能删除Role列。	‘Delete’ operation failed. 基于 RBAC 方式配置的团体，不能删除 Role 列。
Column Role must be specified for RBAC-based SNMP communities. 基于RBAC方式配置的团体，必须指定Role列。	SNMP communities of VACM convert to RBAC-based failed. Please specify ‘Role’. 团体类型由 VACM 切换为 RBAC，请先指定团体角色。
When community type is read-only or read-write, column Role is invalid and can't be configured. 基于VACM方式配置团体时，Role列无效，且不能指定该列的值。	Column ‘Role’ is invalid for communities of VACM. VACM 类型团体，不需要配置‘Role’。
When community type is user-RBAC, column MIBView is invalid and can't be configured. 基于RBAC方式配置团体时，MIBView列无效，且不能指定该列的值。	Column ‘MIBView’ is invalid for communities of RBAC. RBAC 类型团体，不需要配置‘MIBView’。
Operation failed. The number of communities reached the upper limit. 创建的community数量已达到最大值。	Create community failed. 创建的 community 数量已达到最大值。
IPv4BasicACL and IPv4AdvancedACL can't be configured together. IPv4BasicACL和IPv4AdvancedACL不能同时配置。	Create or replace community failed. IPv4BasicACL 和 IPv4AdvancedACL 不能同时配置。
IPv6BasicACL and IPv6AdvancedACL can't be configured together. IPv6BasicACL和IPv6AdvancedACL不能同时配置。	Create or replace community failed. IPv6BasicACL 和 IPv6AdvancedACL 不能同时配置。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Contexts

Message	Explanation
Operation failed. The number of contexts reached the upper limit. 创建的上下文数量已达到上限最大值。	Failed to create context. 创建的上下文数量已达到上限最大值。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/CommunityMappings

Message	Explanation
Column Context can't be deleted. Context列不能删除。	Can't delete the default context. Context 列不能删除。
Operation failed.The number of maps reached the upper limit. 创建的community maps数量已达到最大值。	Create community map failed. 创建的 community maps 数量已达到最大值。
Value for column Context must be specified. 必须指定Context列的值。	Create community map failed. 必须指定 Context 列的值。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/MIBViews

Message	Explanation
Value for column Type must be specified. 必须指定Type列的值。	MIB view type must be specified. 必须指定 Type 列的值。
Operation failed. The number of user-defined MIB views reached the upper limit. 用户定义的MIB视图数量已达到最大值。	Failed to create MIB-view. 用户定义的 MIB 视图数量已达到最大值。
Invalid MIB sub-tree node name or OID. 指定的MIB节点名或OID无效。	Please specify ‘SubTree’ value in the message. 指定的 MIB 节点名或 OID 无效。
The number of hexadecimal characters must be even for a subtree mask. 子树掩码的16进制字符个数必须是偶数。	Failed to set MIB subtree mask. 子树掩码的 16 进制字符个数必须是偶数。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Groups

Message	Explanation
Security model of an SNMPv1 or SNMPv2c group can only be noAuthNoPriv. SNMPv1和SNMPv2c组不支持认证和加密。	Failed to set ‘SecurityLevel’. Please set ‘SecurityLevel’ to 2. SNMPv1 和 SNMPv2c 组不支持认证和加密。
Operation failed.The number of groups reached the upper limit. 创建的group数量已达到最大值。	Create group failed. 创建的 group 数量已达到最大值。

Columns Role and Mibviews can't be configured together. Role列和MIBView列不能同时配置。	Create group failed. Role 列和 MIBView 列不能同时配置。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Users

Message	Explanation
The engine ID can't be all 0s or all Fs. 引擎ID不能为全零或者全F。	Invalid engine ID. 引擎 ID 不能为全零或者全 F。
Operation failed.The number of users reached the upper limit. 创建的用户数量已达到最大值。	Failed create new user. 创建的用户数量已达到最大值。
Can't find the remote engine ID specified by the IP address. 未找到该IP地址对应的远端引擎ID。	Failed to get, merge, replace or delete the remote engine. 未找到该 IP 地址对应的远端引擎 ID。
The last user role can't be deleted. 最后一个用户角色不能删除。	The last user role can't be deleted. 最后一个用户角色不能删除。
Operation failed. The number of user role reached the upper limit. 添加的用户角色数量已达到最大值。	Failed to add new user role. 添加的用户角色数量已达到最大值。
Value for column Group or Role must be specified. 必须指定Group或者Role列的值。	Parameters not complete in the message. 必须指定 Group 或者 Role 列的值。
Values for columns AuthProtocol and AuthKey must be specified together. 必须同时指定AuthProtocol和AuthKey的值。	‘AuthProtocol’ and ‘AuthKey’ must be specified together or not together. 必须同时指定 AuthProtocol 和 AuthKey 的值。
Values for columns PrivProtocol and PrivKey must be specified together. 必须同时指定PrivProtocol和PrivKey的值。	‘PrivProtocol’ and ‘PrivKey’ must be specified together or not together. 必须同时指定 PrivProtocol 和 PrivKey 的值。
When columns PrivProtocol and PrivKey are issued, columns AuthProtocol and AuthKey must be issued too. 当下发了PrivProtocol和PrivKey列,，必须同时下发AuthProtocol和AuthKey列。	‘AuthProtocol’ and ‘AuthKey’, ‘PrivProtocol’ and ‘PrivKey’ must be specified together or not together. 当下发了 PrivProtocol 和 PrivKey 列,，必须同时下发 AuthProtocol 和 AuthKey 列。
Column Group or Role can't be deleted. 不能删除Group或者Role列。	Group control doesn't support delete operation. 不能删除 Group 或者 Role 列。
The engine ID mismatch the remote SNMP entity. 引擎ID和远端SNMP实体不匹配。	The engine ID mismatch with ‘VPN name’ and ‘Address’. 引擎 ID 和远端 SNMP 实体不匹配。
Invalid user. 无效用户。	The engine ID mismatch with ‘VPN name’ and ‘Address’. 引擎 ID 和‘VPN name’、‘Address’不匹配，无效用户。
Value for column Group must be specified.	Group must be specified in ‘create’ and ‘replace’ operation.

必须指定Group列的值。	缺少 group 值，操作失败。
Column Group can't be deleted. 不能删除Group列。	Users of SNMPv1 and SNMPv2c can't delete group column. SNMPv1 和 SNMPv2c 用户不能删除 group 列。
EngineID, IP address and VRF are invalid for an SNMPv1 or SNMPv2c user. 对SNMPv1和SNMPv2c引擎ID,IP地址和VRF无效。	SNMPv1 or SNMPv2c user doesn't need ‘EngineID’, ‘IP address’ and ‘VRF’. SNMPv1 和 SNMPv2c 用户没有引擎 ID,IP 地址和 VRF 等属性。
User role, authentication and privacy are all invalid for an SNMPv1 or SNMPv2c user. 对SNMPv1和SNMPv2c用户,用户角色，认证和加密都是无效的。	‘User role’, ‘authentication’ and ‘privacy’ are valid for SNMPv3 user. 用户角色，认证和加密是 SNMPv3 新增属性，对 SNMPv1 和 SNMPv2c 用户无效。
One user only support one Group. 一个用户仅支持一个组。	One user only support one Group. 一个用户仅支持一个组。
Values for columns AuthProtocol and AuthKey must be deleted together. 必须同时删除AuthProtocol和AuthKey的值。	‘AuthProtocol’ and ‘AuthKey’ can't be deleted separately. 必须同时删除 AuthProtocol 和 AuthKey 的值。
Values for columns PrivProtocol and PrivKey must be deleted together. 必须同时删除PrivProtocol和AuthKey的值。	‘PrivProtocol’ and ‘PrivKey’ can't be deleted separately. 必须同时删除 PrivProtocol 和 AuthKey 的值。
When columns AuthProtocol and AuthKey are deleted, PrivProtocol and PrivKey columns must be deleted too. 当删除AuthProtocol和AuthKey列,，必须同时删除PrivProtocol和PrivKey列。	‘AuthProtocol’ , ‘AuthKey’ and ‘PrivProtocol’ , ‘PrivKey’ can't be deleted separately. 当删除 AuthProtocol 和 AuthKey 列,，必须同时删除 PrivProtocol 和 PrivKey 列。
Values for indexs EngineId or Address must be assigned for an SNMPv3 remote user. SNMPV3远端用户必须指定引擎ID或IP地址。	Please specify ‘EngineId’ and ‘Address’ for SNMPv3 remote users. SNMPV3 远端用户必须指定引擎 ID 或 IP 地址。
The shared key must contain uppercase letters, lowercase letters, digits, and symbols. 公钥必须包含大小写字母，数字和符号。	Set key for user of SNMPv3 failed. 公钥必须同时包含大小写字母，数字和符号。
The shared key must contain at least 15 characters. 公钥至少包含15个字符。	Set key for user of SNMPv3 failed. 公钥至少包含 15 个字符，设置密码失败。
Only users with the network-admin user role can configure SNMPv3 features. 只能具有network-admin 角色的用户才能配置SNMPv3功能。	Set SNMPv3 feature failed. network-admin 角色的用户才能配置 SNMPv3 功能。
Value for index Address must be assigned for an SNMPv3 remote user. SNMPV3远端用户必须指定IP地址。	Value for index Address must be assigned for an SNMPv3 remote user. SNMPV3 远端用户必须指定 IP 地址。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/RemoteManages

Message	Explanation
Operation failed. The number of configured remote engines reached the upper limit. 可配置的远端引擎数量已达到最大值。	Failed to set new remote engine. 可配置的远端引擎数量已达到最大值。
Invalid IP address for the remote SNMP entity. 远端SNMP实体的IP地址无效。	Failed to set new remote engine or delete remote engine. 远端 SNMP 实体的 IP 地址无效。
When Column VPN is issued, Column Address must be issued too. 当下发了VPN列，Address列必须和VPN列同时下发。	'VPN' and 'Address' must be specified together or not together. 当下发了 VPN 列，Address 列必须和 VPN 列同时下发。
Column Address or Column VPN can't be changed. Address或者VPN列不能被修改。	'VPN' and 'Address' can't be changed. Address 或者 VPN 列不能被修改或删除。
Column Address or VPN can't be deleted. Address或者VPN列不能被删除。	'VPN' and 'Address' can't be deleted. Address 或者 VPN 列不能被删除或修改。
Value for column EngineId must be specified. 必须指定引擎ID。	Please specify the engine ID. 引擎 ID 是必配属性，请指定。
Column EngineId can't be deleted. 引擎ID列不能删除。	Can't delete the default engine ID. 引擎 ID 是必配属性，不能删除。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/TargetHosts

Message	Explanation
Value for column SecurityMode must be specified. 必须指定SecurityMode列的值。	The security model is used when generating SNMP notifications. SecurityMode 是必配属性，请指定。
Operation failed. The number of specified target hosts reached the upper limit. 指定的目标主机数量已达到最大值。	Failed to create target host. 指定的目标主机数量已达到最大值。
Invalid IP address for an SNMP target host. 无效的目标主机IP地址。	Invalid IP address in message. 无效的目标主机 IP 地址。
Column SecurityMode can't be deleted. SecurityMode列不能删除。	Please specify the security model to be deleted. SecurityMode 是必配属性，不能删除。
An SNMPv1 or SNMPv2c targethost can only receive notifications as traps. SNMPv1日志主机只能接收trap报文。	An SNMPv1 or SNMPv2c targethost can't receive notifications as inform. SNMPv1 日志主机只能接收 trap 报文。
Invalid target host IP address. 无效的目标主机IP地址。	Please confirm the IP address of the target host. 无效的目标主机 IP 地址。

Invalid host name. 无效的目标主机名。	Please confirm the valid host name. 无效的目标主机名。
Column AddressType can't be deleted. 不能删除AddressType列。	‘AddressType’ shows address is host name or IPv4, IPv6 address. ‘AddressType’ can't be deleted. ‘AddressType’是必配属性，不能删除。
Value for column AddressType must be specified. 必须指定AddressType列的值。	‘AddressType’ must be specified for replace operation. ‘AddressType’是必配属性，请指定。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/Statistics

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

SNMP/NotificationStatus

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

PQL	Priority queue list table.	Multi-instance table	N/A	For more information, see the PQL table.

SQ/PQLs/PQL

This table contains information about priority queue list.

Table description

Item	Description
Feature name	SQ
Table name	PQL
Table type	Multi-instance table,multi-level table
Row name	PQL
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PQLIndex	Priority queue list index.	Index	Unsigned integer. Value range: 1 to 16.	N/A
IPv4FragmentsQueue	Priority queue number for ipv4 fragmented packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv6FragmentsQueue	Priority queue number for ipv6 fragmented packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Queue	Priority queue number for ipv4 packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv6Queue	Priority queue number for ipv6 packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
InboundInterfaces	Configuration information about match inbound interface.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/InboundInterfaces table.
IPv4AclList	Match IPv4 ACL.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4AclList table.
IPv4GTLengths	Match IPv4 packet length larger than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4GTLengths table.
IPv4LSLengths	Match IPv4 packet length lesser than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4LSLengths table.
IPv4TcpPortList	Match IPv4 tcp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4TcpPortList table.
IPv4UdpPortList	Match IPv4 udp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4UdpPortList table.
IPv6AclList	Match IPv6 ACL.	Sublist	N/A	For more information, see the SQ/PQLs/IPv6AclList table.
IPv4GTLengths	Match IPv6 packet length larger than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6GTLengths table.
IPv4LSLengths	Match IPv6 packet length lesser than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6LSLengths table.
IPv4TcpPortList	Match IPv6 tcp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6TcpPortList table.
IPv4UdpPortList	Match IPv6 udp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6UdpPortList table.
MplsExpList	Match MPLS	Sublist	N/A	For more information, see the

Column name	Column description	Column type	Data type and restrictions	Remarks
	EXP value.			SQ/PQLs/PQL/MplsExpList table.
LocalPrecedences	Match local precedence.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/LocalPrecedences table.

SQ/PQLs/PQL/InboundInterfaces

This table contains information about the priority queue rule that matches the inbound interface.

Table description

Item	Description
Feature name	SQ
Table name	InboundInterfaces
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InboundInterface	Inbound interface list table.	Multi-instance table	N/A	For more information, see the InboundInterface table.

SQ/PQLs/PQL/InboundInterfaces/InboundInterface

This table contains information about the priority queue rule that matches the inbound interface.

Table description

Item	Description
Feature name	SQ
Table name	InboundInterface
Table type	Multi-instance table
Row name	InboundInterface

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4AclList

This table contains information about the priority queue rule that matches the ipv4 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv4AclList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Acl	IPv4 Acl list table.	Multi-instance table	N/A	For more information, see the IPv4Acl table.

SQ/PQLs/PQL/IPv4AclList/IPv4Acl

This table contains information about the priority queue rule that matches the ipv4 acl.

Table description

Item	Description
Feature name	SQ

Table name	IPv4Acl
Table type	Multi-instance table
Row name	IPv4Acl
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNumber	IPv4 Acl number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6AclList

This table contains information about the priority queue rule that matches the ipv6 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv6AclList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Acl	IPv6 Acl list table.	Multi-instance table	N/A	For more information, see the IPv6Acl table.

SQ/PQLs/PQL/IPv6AclList/IPv6Acl

This table contains information about the priority queue rule that matches the ipv6 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv6Acl
Table type	Multi-instance table
Row name	IPv6Acl
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNumber	IPv6 Acl number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4LSLengths

This table contains information about the priority queue rule that matches the ipv4 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4LSLengths
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4LSLengths	IPv4 Lesser PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv4LSLength table.

SQ/PQLs/PQL/IPv4LSLengths/IPv4LSLength

This table contains information about the priority queue rule that matches the ipv4 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4LSLength
Table type	Multi-instance table
Row name	IPv4LSLength
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Packet Length	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4GTLengths

This table contains information about the priority queue rule that matches the ipv4 packet's length greater than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4GTLengths
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4GTLengths	IPv4 Greater PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv4GTLength table.

SQ/PQLs/PQL/IPv4GTLengths/IPv4GTLength

This table contains information about the priority queue rule that matches the ipv4 packet's length greater than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4GTLength
Table type	Multi-instance table
Row name	IPv4GTLength
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Packet Length	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6LSLengths

This table contains information about the priority queue rule that matches the ipv6 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv6LSLengths

Table type	Single-instance table
Row name	None
Restrictions	None

IPv6GTLengths	IPv6 Greater PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv6GTLength table.

SQ/PQLs/PQL/IPv6GTLengths/IPv6GTLength

This table contains information about the priority queue rule that matches the ipv6 packet's length greater than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv6GTLength
Table type	Single-instance table
Row name	IPv6GTLength
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Packet Length	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4TcpPortList

This table contains information about the priority queue rule that matches the ipv4 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4TcpPortList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4TcpPort	IPv4 Tcp Port list table.	Multi-instance table	N/A	For more information, see the IPv4TcpPort table.

SQ/PQLs/PQL/IPv4TcpPortList/IPv4TcpPort

This table contains information about the priority queue rule that matches the ipv4 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4TcpPort
Table type	Multi-instance table
Row name	IPv4TcpPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4UdpPortList

This table contains information about the priority queue rule that matches the ipv4 tcp udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4UdpPortList
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4UdpPort	IPv4 Udp Port list table.	Multi-instance table	N/A	For more information, see the IPv4UdpPort table.

SQ/PQLs/PQL/IPv4UdpPortList/IPv4UdpPort

This table contains information about the priority queue rule that matches the ipv4 tcp udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4UdpPort

Table type	Single-instance table
Row name	IPv4UdpPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6UdpPortList

This table contains information about the priority queue rule information that matches the ipv6 udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6UdpPortList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6UdpPort	IPv6 Udp Port list table.	Multi-instance table	N/A	For more information, see the IPv6UdpPort table.

SQ/PQLs/PQL/IPv6UdpPortList/IPv6UdpPort

This table contains information about the priority queue rule information that matches the ipv6 udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6UdpPort
Table type	Multi-instance table
Row name	IPv6UdpPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6TcpPortList

This table contains information about the priority queue rule that matches the ipv6 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6TcpPortList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6TcpPort	IPv6 Tcp Port list table.	Multi-instance table	N/A	For more information, see the IPv6TcpPort table.

SQ/PQLs/PQL/IPv6TcpPortList/IPv6TcpPort

This table contains information about the priority queue rule that matches the ipv6 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6TcpPort
Table type	Multi-instance table
Row name	IPv6TcpPort
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/MplsExpList

This table contains information about the priority queue rule that matches the mpls exp number.

Table description

Item	Description
Feature name	SQ
Table name	MplsExpList
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MplsExp	Mpls exp value list table.	Multi-instance table	N/A	For more information, see the MplsExp table.

SQ/PQLs/PQL/MplsExpList/MplsExp

This table contains information about the priority queue rule that matches the mpls exp number.

Table description

Item	Description
Feature name	SQ
Table name	MplsExp
Table type	Multi-instance table
Row name	MplsExp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Exp	Mpls exp number	Index	Unsigned integer. Value range: 1 to 255.	Mpls exp bits set.
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/LocalPrecedences

This table contains information about the priority queue rule that matches the local precedence number.

Table description

Item	Description
Feature name	SQ
Table name	LocalPrecedences
Table type	Single-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalPrecedence	Local precedence value list table.	Multi-instance table	N/A	For more information, see the LocalPrecedence table.

SQ/PQLs/PQL/LocalPrecedences/LocalPrecedence

This table contains information about the priority queue rule that matches the local precedence number.

Table description

Item	Description
Feature name	SQ
Table name	LocalPrecedence
Table type	Multi-instance table
Row name	LocalPrecedence
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	Local precedence	Index	Unsigned integer. Value range: 1 to 255.	Local precedence bits set.
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLength

This table contains information about priority queue length.

XML structure

```
<SQ>
  <PQLength>
    <Queue>
      <PQLIndex></PQLIndex>
      <QueueId></QueueId>
      <QueueLength></QueueLength>
    </Queue>
  </PQLength>
</SQ>
```

Table description

Item	Description
Feature name	SQ
Table name	PQLength
Table type	Multi-instance table
Row name	Queue
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PQLIndex	Priority queue list index.	Index	Unsigned integer. Value range: 1 to 16.	N/A
QueueId	Queue ID.	Index	Unsigned integer. Value range: 0 to 7.	N/A
QueueLength	Queue length.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

SQ/PQDefaultQueue

This table contains information about default priority queues.

XML structure

```
<SQ>
  <PQDefaultQueue>
    <Queue>
      <PQLIndex></PQLIndex>
      <QueueId></QueueId>
```

```
    </Queue>
  </PQDefaultQueue>
</SQ>
```

Table type	Multi-instance table
Row name	PQL
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PQLIndex	Priority queue list index.	Index	Unsigned integer. Value range: 1 to 16.	N/A
IPv4FragmentsQueue	Priority queue number for ipv4 fragmented packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv6FragmentsQueue	Priority queue number for ipv6 fragmented packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv4Queue	Priority queue number for ipv4 packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPv6Queue	Priority queue number for ipv6 packets.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
InboundInterfaces	Configuration information about	Sublist	N/A	For more information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
	match inbound interface.			the SQ/PQLs/PQL/InboundInterfaces table.
IPv4AclList	Match IPv4 ACL.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4AclList table.
IPv4GTLengths	Match IPv4 packet length larger than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4GTLengths table.
IPv4LSLengths	Match IPv4 packet length lesser than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4LSLengths table.
IPv4TcpPortList	Match IPv4 tcp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4TcpPortList table.
IPv4UdpPortList	Match IPv4 udp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv4UdpPortList table.
IPv6AclList	Match IPv6 ACL.	Sublist	N/A	For more information, see the SQ/PQLs/IPv6AclList table.
IPv4GTLengths	Match IPv6 packet length larger than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6GTLengths table.
IPv4LSLengths	Match IPv6 packet length lesser than the specified length.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6LSLengths table.
IPv4TcpPortList	Match IPv6 tcp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6TcpPortList table.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4UdpPortList	Match IPv6 udp port number.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/IPv6UdpPortList table.
MplsExpList	Match MPLS EXP value.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/MplsExpList table.
LocalPrecedences	Match local precedence.	Sublist	N/A	For more information, see the SQ/PQLs/PQL/LocalPrecedences table.

SQ/PQLs/PQL/InboundInterfaces

This table contains information about the priority queue rule that matches the inbound interface.

Table description

Item	Description
Feature name	SQ
Table name	InboundInterfaces
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InboundInterface	Inbound interface list table.	Multi-instance table	N/A	For more information, see the InboundInterface table.

SQ/PQLs/PQL/InboundInterfaces/InboundInterface

This table contains information about the priority queue rule that matches the inbound interface.

Table description

Item	Description
Feature name	SQ
Table name	InboundInterface
Table type	Multi-instance table
Row name	InboundInterface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4AclList

This table contains information about the priority queue rule that matches the ipv4 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv4AclList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Acl	IPv4 Acl list table.	Multi-instance table	N/A	For more information, see the IPv4Acl table.

SQ/PQLs/PQL/IPv4AclList/IPv4Acl

This table contains information about the priority queue rule that matches the ipv4 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv4Acl
Table type	Multi-instance table
Row name	IPv4Acl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNumber	IPv4 Acl number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6AclList

This table contains information about the priority queue rule that matches the ipv6 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv6AclList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Acl	IPv6 Acl list table.	Multi-instance table	N/A	For more information, see the IPv6Acl table.

SQ/PQLs/PQL/IPv6AclList/IPv6Acl

This table contains information about the priority queue rule that matches the ipv6 acl.

Table description

Item	Description
Feature name	SQ
Table name	IPv6Acl
Table type	Multi-instance table
Row name	IPv6Acl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNumber	IPv6 Acl number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4LSLengths

This table contains information about the priority queue rule that matches the ipv4 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4LSLengths
Table type	Single-instance table
Row name	None

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4LSLengths	IPv4 Lesser PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv4LSLength table.

SQ/PQLs/PQL/IPv4LSLengths/IPv4LSLength

This table contains information about the priority queue rule that matches the ipv4 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4LSLength
Table type	Multi-instance table
Row name	IPv4LSLength
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Packet Length	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4GTLengths

This table contains information about the priority queue rule that matches the ipv4 packet's length greater than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4GTLengths
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4GTLengths	IPv4 Greater PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv4GTLength table.

SQ/PQLs/PQL/IPv4GTLengths/IPv4GTLength

This table contains information about the priority queue rule that matches the ipv4 packet's length greater than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv4GTLength
Table type	Multi-instance table
Row name	IPv4GTLength
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Packet Length	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6LSLengths

This table contains information about the priority queue rule that matches the ipv6 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv6LSLengths
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6LSLengths	IPv6 Lower PacketLength list table.	Multi-instance table	N/A	For more information, see the IPv6LSLengths table.

SQ/PQLs/PQL/IPv6LSLengths/IPv6LSLength

This table contains information about the priority queue rule that matches the ipv6 packet's length lesser than the specified length.

Table description

Item	Description
Feature name	SQ
Table name	IPv6LSLength
Table type	Multi-instance table
Row name	IPv6LSLength
Restrictions	None

SQ/PQLs/PQL/IPv4TcpPortList

This table contains information about the priority queue rule that matches the ipv4 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4TcpPortList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4TcpPort	IPv4 Tcp Port list table.	Multi-instance table	N/A	For more information, see the IPv4TcpPort table.

SQ/PQLs/PQL/IPv4TcpPortList/IPv4TcpPort

This table contains information about the priority queue rule that matches the ipv4 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4TcpPort
Table type	Multi-instance table
Row name	IPv4TcpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv4UdpPortList

This table contains information about the priority queue rule that matches the ipv4 tcp udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4UdpPortList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4UdpPort	IPv4 Udp Port list table.	Multi-instance table	N/A	For more information, see the IPv4UdpPort table.

SQ/PQLs/PQL/IPv4UdpPortList/IPv4UdpPort

This table contains information about the priority queue rule that matches the ipv4 tcp udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv4UdpPort
Table type	Multi-instance table
Row name	IPv4UdpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6UdpPortList

This table contains information about the priority queue rule that matches the ipv6 udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6UdpPortList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6UdpPort	IPv6 Udp Port list table.	Multi-instance table	N/A	For more information, see the IPv6UdpPort table.

SQ/PQLs/PQL/IPv6UdpPortList/IPv6UdpPort

This table contains information about the priority queue rule that matches the ipv6 udp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6UdpPort
Table type	Multi-instance table
Row name	IPv6UdpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/IPv6TcpPortList

This table contains information about the priority queue rule that matches the ipv6 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6TcpPortList
Table type	Single-instance table

Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6TcpPort	IPv6 Tcp Port list table.	Multi-instance table	N/A	For more information, see the IPv6TcpPort table.

SQ/PQLs/PQL/IPv6TcpPortList/IPv6TcpPort

This table contains information about the priority queue rule that matches the ipv6 tcp packet's port number.

Table description

Item	Description
Feature name	SQ
Table name	IPv6TcpPort
Table type	Multi-instance table
Row name	IPv6TcpPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port Number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/MplsExpList

This table contains information about the priority queue rule that matches the mpls exp number.

Table description

Item	Description
Feature name	SQ
Table name	MplsExpList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MplsExp	Mpls exp value list table.	Multi-instance table	N/A	For more information, see the MplsExp table.

SQ/PQLs/PQL/MplsExpList/MplsExp

This table contains information about the priority queue rule that matches the mpls exp number.

Table description

Item	Description
Feature name	SQ
Table name	MplsExp
Table type	Multi-instance table
Row name	MplsExp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Exp	Mpls exp number bits	Index	Unsigned integer. Value range: 1 to 255.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLs/PQL/LocalPrecedences

This table contains information about the priority queue rule that matches the local precedence number.

Table description

Item	Description
Feature name	SQ
Table name	LocalPrecedences
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalPrecedence	Local precedence value list table.	Multi-instance table	N/A	For more information, see the LocalPrecedence table.

SQ/PQLs/PQL/LocalPrecedences/LocalPrecedence

This table contains information about the priority queue rule that matches the local precedence number.

Table description

Item	Description
Feature name	SQ
Table name	LocalPrecedence
Table type	Multi-instance table
Row name	LocalPrecedence
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	Local precedence bits	Index	Unsigned integer. Value range: 1 to 255.	N/A
QueueId	Priority queue number	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/PQLength

This table contains information about priority queue length.

XML structure

```
<SQ>
  <PQLength>
    <Queue>
      <PQLIndex></PQLIndex>
      <QueueId></QueueId>
      <QueueLength></QueueLength>
    </Queue>
  </PQLength>
</SQ>
```

Table description

Item	Description
Feature name	SQ
Table name	PQLength
Table type	Multi-instance table
Row name	Queue
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PQLIndex	Priority queue list index	Index	Unsigned integer. Value range: 1 to 16.	N/A
QueueId	Queue ID	Index	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
QueueLength	Queue length	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

SQ/PQDefaultQueue

This table contains information about default priority queues.

XML structure

```
<SQ>
  <PQDefaultQueue>
    <Queue>
      <PQLIndex></PQLIndex>
      <QueueId></QueueId>
    </Queue>
  </PQDefaultQueue>
</SQ>
```

Table description

Item	Description
Feature name	SQ
Table name	PQDefaultQueue
Table type	Multi-instance table
Row name	Queue
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PQLIndex	Priority queue list index	Index	Unsigned integer. Value range: 1 to 16.	N/A
QueueId	Queue ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A

SQ/CQPQ

Message	Explanation
Please disable CBQ first. 请先删除接口的CBQ队列配置。	For a create,meger or replace operation, please disable CBQ first in the interface. 执行 create 或者 meger 或者 replace 操作时，请先删除接口上的 CBQ 相关配置。
IfName invalid. 接口名字错误。	IfName invalid. 相关操作的接口是无效的。
QueueId only support 4 to 7. 队列编号仅支持4到7。	For a create,meger or replace operation, only support config on queue 4~7. 执行create或者meger或者replace操作时，只支持配置在队列4~7。
Number of rules in the %s exceeded the limit. %s里的规则个数超过上限100。	For a create,meger or replace operation, the rules exceeded the limit. 执行create或者meger或者replace操作时，规则数量达到上限。

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppProto	Application protocol type	Index	Enumeration: • 0—SIP. • 1—H.225.	N/A
PortNumber	Listening port number	N/A	Unsigned integer. • Value range: 1 to 65534.	N/A

SQA/FilterAddress

This table contains informations about sqa filter address function for which protocol.

XML structure

```
<SQA>
  <FilterAddress>
    <AddressInfo>
      <AppProto></AppProto>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </AddressInfo>
  </FilterAddress>
</SQA>
```

Table description

Item	Description
Feature name	SQA
Table name	FilterAddress
Table type	Multi-instance table
Row name	AddressInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppProto	Application protocol type	Index	Enumeration: • 0—SIP. • 1—H.323.	N/A
StartIpv4Addr	Start IPv4	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppProto	Application protocol type	Index	Enumeration: • 0—SIP. • 1—H.323.	N/A
ess	address of filter protocal			The StartIpv4Address cannot be greater than the EndIpv4Address.
EndIpv4Address	End IPv4 address of filter protocal	N/A	String, dotted decimal notation	Example: 1.1.1.6.

SQA/SqaProfiles

This table contains the SQA profile information.

XML structure

```
<SQA>
  <SqaProfiles>
    <SqaProfile>
      <ProfileName></ProfileName>
      <SipEnable></SipEnable>
      <AppStatisticsEnable></AppStatisticsEnable>
      <AppInterval></AppInterval>
      <AppEnableLists>
        <AppEnableList>
          <AppEnable></AppEnable>
        </AppEnableList>
      </AppEnableLists>
    </SqaProfile>
  </SqaProfiles>
</SQA>
```

Table description

Item	Description

Comware 7 SQA NETCONF XML API Error Message Reference

SQA/Remark

Message	Explanation
The value range of dot1p is 0~7. Dot1p 的有效值范围为0~7。	When RemarkType is dot1p, the priority must be in the range of 0 to 7. 当RemarkType为dot1p时，优先级取值范围为0~7。
This device doesn't support sqa remark. 当前设备不支持remark功能。	The device does not support packet priority remarking for SQA. 这个提示说明当前设备不支持服务质量分析的重标记优先级功能。

SQA/SqaProfiles/SqaProfile

Message	Explanation
The device does not support the SQA application function. 当前设备不支持音视频应用流量的服务质量分析功能。	The device does not support the SQA-based analysing quality of service for applications. 这个提示说明当前设备不支持音视频应用流量的服务质量分析功能。

SQA/SqaProfiles/SqaProfile/AppEnableList/AppType

Message	Explanation
The device does not support analysing quality of service for this application. 当前设备音视频应用流量的服务质量分析功能不支持该应用。	The device does not support analysing quality of service for this application. 这个提示说明当前设备音视频应用流量的服务质量分析功能不支持该应用。

Table description

Item	Description
Feature name	sr-policy
Table name	policy-attributes
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service-class	Traffic statistic service-class enable	N/A	Boolean: • true. • false.	N/A
traffic-statistics-interval	Traffic statistics interval	N/A	Unsigned integer. Value range: 5 to 65535 seconds. Default: 30 seconds.	N/A
backup-hot-standby	Hot-standby backup	N/A	Boolean: • true. • false.	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • • 0—hot standby not enabled (default) , equal to backup-hot-standb false. • 1—enable policy hot standby, equal to backup-hot-standby true 2—enable policy hot standby with multilevel-backup	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
echo	SBFD echo	N/A	Boolean: • true. • false.	The echo column is finally effective when the sbfd column is configured at the same time
sbfd-proxy-reflector	SBFD proxy reflector function	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
sbfd-encapsulation-mode	Sbfd packets encaped with IPv4 mode for IPv6 Endpoint	N/A	Enumeration: • 0—IPv6 (default). • 1—IPv4.	N/A
sbfd-remotei	Remote	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
d	discriminator of a BFD session		Value range: 1 to 4294967295.	
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of the BFD template for the backup path	N/A	String. Length: 1 to 63 characters.	N/A
up-delay	All policy seglist up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
sbfd-detect-multiplier	Detection time multiplier.	N/A	Unsigned integer.	The value range for this parameter varies by device model.
sbfd-min-tx-interval	Minimum interval for transmitting SBFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this parameter varies by device model.
bgp-ls	Advertise link state information to BGP	N/A	**Boolean:** • **true.** • **false.**	N/A
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false(default).	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false(default).	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sourceipv4	Source IPv4 address for BFD echo sessions	N/A	IPv4: String, dotted decimal notation.	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo sessions	N/A	IPv6 address, hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
bfd-echo-template	BFD echo template name	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	BFD echo backup template name	N/A	String. Length: 1 to 63 characters.	N/A
switch-delay	Switchover delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds. Default: 5000 milliseconds.	N/A
delete-delay	Deletion delay	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	time interval		Value range: 0 to 600000 milliseconds. Default: 20000 milliseconds.	
bfd-first-fail-timer	Timer that delays reporting the first BFD session setup failure	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
segment-lists	Information of the segment-lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A
pce-delegation	Enable the PCE delegation function	N/A	Boolean: • **true.** **false.**	N/A
passive-delegate-report-only	Report path information without delegating paths to the PCE	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimization	Enable the PCE reoptimization function	N/A	Boolean: • true. false.	N/A
pce-reoptimization-frequency	Frequency for PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds. Default: 3600 seconds.	To configure this parameter, make sure the pce-reoptimization value is true.

sr-policy/policy-attributes/segment-lists

This table contains segment list configuration information for SR policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-lists
Table type	Multi-instance table
Row name	segment-list
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
name	Segment list name	Index	String. Length: 1 to 128 characters.
segments	Information of the segments	Sublist	For details of the sublist, refer to the segments table.

sr-policy/policy-attributes/segment-lists/segments

This table contains segment configuration information for SR policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segments
Table type	Multi-instance table
Row name	segment
Restrictions	When creating, merging or replacing,the corresponding child table must be brought with it, otherwise the result will be successful but will not actually take effect.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Segment ID	Index	Unsigned integer. Value range: 1 to 65535.	You must set index together with the sid-value.
type	Segment type	N/A	Enumeration: • 1—segment-type-1. • 2—segment-type-2. • 3—segment-type-3. • 4—segment-type-4. • 5—segment-type-5. • 6—segment-type-6. • 7—segment-type-7. • 8—segment-type-8.	Only 1 is supported now.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 9—segment-type-9. • 10—segment-type-10. • 11—segment-type-11.	
segment-types	Types of segments	Sublist	For details of the sublist, refer to the segment-types table.	N/A

sr-policy/policy-attributes/segment-lists/segments/segment-types

This table contains segment type configuration information for SR policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-types
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
segment-type-1	Segment declared by MPLS label	Sublist	For details of the sublist, refer to the segment-type-1 table.

sr-policy/policy-attributes/segment-lists/segments/segment-types/segment-type-1

This table contains segment-type-1 configuration information for SR policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-type-1
Table type	Multi-instance table
Row name	None
Restrictions	You must set segment-type-1 table together with the segments table. You can't delete segment-type-1 table only. When you delete segments table, segment-type-1 table is deleted at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
sid-value	MPLS label value	N/A	Unsigned integer. Value range: 0, 2, 3, 16 to 1048575.

sr-policy/policies

This table contains SR-TE policy configuration information.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	Sr-policy
Table name	policies
Table type	Multi-instance table
Row name	policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
endpoint	IP address of the policy endpoint	Index	- Dotted decimal notation for IPv4, or colon-separated hexadecimal string for IPv6.	N/A
name	SR-TE policy name	N/A	String. Length: 1 to 59 characters.	During a set operation, if the name column is not specified and no SR-TE policy associated with color and endpoint exists, an SR-TE policy named sr-color-endpoint will be automatically created. Once a policy name is created, it cannot be modified.
binding-sid	Binding SID information	Data structure	Members include: • dataplane. • value.	N/A
dataplane	Binding SID dataplane type	N/A	Enumeration: • 1—MPLS. • 2—SRv6.	Only 1 is supported now.
value	Binding SID value	N/A	Unsigned integer. Value range: 16 to 1048575.	N/A
admin-state	Administrative state of the policy	N/A	Enumeration: • 1—UP. • 2—DOWN	N/A
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service-class	Traffic statistic service-class enable	N/A	Boolean: • true. • false.	N/A
backup-hot-standby	Hot-standby backup	N/A	Boolean: • true. ——equal to backup-hot-standby-type 2 • false. ——equal to backup-hot-standby-type 1	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Use policy-attributes/backup-hot-standby-type configure (default).	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-typ

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—disable policy hot standby, equal to backup-hot-standby false. • 2—enable policy hot standby, equal to backup-hot-standby true. • 3—enable policy hot standby with multilevel-backup. .	e为准
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
echo	SBFD echo	N/A	Boolean: • true. • false.	The echo column is finally effective when the sbfd column is configured at the same time
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of the BFD template for the backup path	N/A	String. Length: 1 to 63 characters.	N/A
up-delay	Policy seglist up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
service-class	Service class for the policy	N/A	Unsigned integer. The value range varies by device model.	The smaller the value, the lower the priority.When service class no set, the default class is 255. Service class 255 means the lowest priority class.
drop-upon-inv alid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false	N/A
bfd-trigger-pa th-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sour ceipv4	Source IPv4 address for BFD echo sessions	N/A	IPv4: String, dotted decimal notation.	N/A
bfd-echo-sour ceipv6	Source IPv6 address for BFD echo sessions	N/A	IPv6: hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	Source address for srpolicy	N/A	IPv4: String, dotted decimal notation. IPv6: hexadecimal string, colon-separated.	Now source address onlyfor BFD echo, sbfd and sbfd echo packets
bfd-echo-template	Name of BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	Name of backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
candidate-paths	Information of the candidate paths	Sublist	For details of the sublist, refer to the candidate-paths table.	N/A
sbfd-proxy-reflector	SBFD proxy reflector function	N/A	Enumeration: • 0—Use global configuration(default). • 1—Enable. • 2—Disable.	N/A
sbfd-encapsulation-mode	Sbfd packets encaped with IPv4 mode for IPv6 Endpoint	N/A	Enumeration: • 0—Use global configuration(default). • 1—IPv4. • 2—IPv6.	N/A
pce-delegation	Enable the PCE delegation function	N/A	Boolean: • **true.** **false.**	N/A
passive-delegate-report-only	Report path information without delegating paths to the PCE	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimization	Enable the PCE reoptimization function	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimization-frequency	Frequency for PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds. Default: 3600 seconds.	To configure this parameter, make sure the pce-reoptimization value is true.

sr-policy/policies/candidate-paths

This table contains candidate path configuration for an SR policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	candidate-paths
Table type	Multi-instance table
Row name	candidate-path
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that signaled/instantiated the candidate path on the headend	Index	String. Length: 1 to 160 characters.	This column will be ignored when protocol-origin is 20 in some products and when protocol-origin is 30.
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Unsigned integer. Value range: 1 to 65535 in some products.	N/A
preference	Preference of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535	You must set preference equal to discriminator in some products.
segment-lists	Information of segment lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A
router-target	Router ID of the destinaton node	N/A	IPv4: String, dotted decimal notation.	N/A
name	Path name of the candidate path	N/A	String. Length: 1 to 59 characters.	N/A
bsid	Binding-SID of the candidate path	N/A	Unsigned integer. Value range: 16 to 1048575.	N/A

sr-policy/policies/candidate-paths/segment-lists

This table contains segment list information of an SR-TE policy candidate path.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-lists
Table type	Multi-instance table
Row name	segment-list
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name-ref	Segment list for an SR-TE policy candidate path	Index	String. Length: 1 to 128 characters.	Reference to segment list name.
weight	Weight of the segment list for weighted load sharing	N/A	Unsigned integer. Value range: 1 to 4294967295. Default: 1.	N/A

sr-policy/policygroups

This table contains SR-TE policy group configuration information.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	policygroups
Table type	Multi-instance table

Item	Description
Row name	policygroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
groupid	Policy group ID	Index	Unsigned integer. Value range: 1 to 4294967295.
endpoint	IP address of the policy group endpoint	N/A	IPv4: String, dotted decimal notation.
best-effort-ipv4-default	Use SR-BE as the default policy for IPv4 packets	N/A	Boolean: • true • false
best-effort-ipv6-default	Use SR-BE as the default policy for IPv6 packets	N/A	Boolean: • true • false
color-dscps	Color-DSCP mappings	Sublist	For more information about the sublist, refer to the color-dscps table.

sr-policy/policygroups/color-dscps

This table contains color-DSCP mappings for an SR-TE policy group.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	color-dscps
Table type	Multi-instance table
Row name	color-dscp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
dscp-ipv4	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a hyphen (-) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or hyphen. By default, an SR-TE policy group does not have an IPv4 DSCP list for a color value.	Example: 1,2,3,5-8,10-20. Available DSCP values are from 0 to 63.
dscp-ipv6	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a hyphen (-) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or hyphen. By default, an SR-TE policy group does not have an IPv6 DSCP list for a color value.	Example: 1,2,3,5-8,10-20. Available DSCP values are from 0 to 63.
dscp-ipv4-default	Whether to use this SR-TE policy as the default policy for IPv4 packets	N/A	Boolean: • true • false	N/A
dscp-ipv6-default	Whether to use this SR-TE policy as the default policy for IPv6 packets	N/A	Boolean: • true • false	N/A

Example

Configure an SR policy:

```
<v:segment-routing xc:operation="merge"
xmlns:v="urn:ietf:params:xml:ns:yang:ietf-sr-policy">
  <v:sr-policy>
    <v:policy-attributes>
      <v:traffic-statistics>true</traffic-statistics>
```

```
  <v:traffic-statistics-interval>100</traffic-statistics-interval>
  <v:backup-hot-standby>true</backup-hot-standby>
  <v:backup-hot-standby-type>1</backup-hot-standby-type>
  <v:sbfd>true</sbfd>
  <v:up-delay>100</up-delay>

Table description

Item	Description
Feature name	sr-policy
Table name	policy-attributes
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service-class	Traffic statistics service-class enable	N/A	Boolean: • true. • false.	N/A
traffic-statistics-interval	Traffic statistics interval	N/A	Unsigned integer. Value range: 5 to 65535 seconds. Default: 30 seconds.	N/A
backup-hot-standby	Hot-standby backup	N/A	Boolean: • true. ——equal to backup-hot-standby-type 1 • false. ——equal to backup-hot-standby-type 0	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—hot standby not enabled (default) , equal to backup-hot-standb false. • 1—enable policy hot standby, equal to backup-hot-standby true • 2—enable policy hot standby with multilevel-backup .	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
echo	SBFD echo	N/A	Boolean: • true. • false.	The echo column is finally effective when the sbfd column is configured at the same time
sbfd-proxy-reflector	SBFD proxy reflector function	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
sbfd-encapsulation-mode	Sbfd packets encaped with IPv4 mode for IPv6 Endpoint	N/A	Enumeration: • 0—IPv6 (default). • 1—IPv4.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of the BFD template for the backup path	N/A	String. Length: 1 to 63 characters.	N/A
up-delay	All policy segment list up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
sbfd-detect-multiplier	Detection time multiplier.	N/A	Unsigned integer.	The value range for this parameter varies by device model.
sbfd-min-tx-interval	Minimum interval for transmitting SBFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this parameter varies by device model.
bgp-ls	Advertise link state information to BGP	N/A	Boolean: • **true.** • **false.**	N/A
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false.	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sourceipv4	Source IPv4 address for BFD echo session	N/A	IPv4: String, dotted decimal notation.	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo session	N/A	IPv6 address, hexadecimal string, colon-separated.	N/A
bfd-echo-template	BFD echo template name	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	BFD echo backup template name	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
switch-delay	Switchoverdelay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds.	N/A
delete-delay	Deletion delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds.	N/A
bfd-first-fail-timer	Timer that delays reporting the first BFD session setup failure	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
segment-lists	Information of the segment-lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A
pce-delegation	Enable the PCE delegation function	N/A	Boolean: • **true.** **false.**	N/A
passive-delegate-report-only	Report path information without delegating paths to the PCE	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimization	Enable the PCE reoptimization function	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimization-frequency	Frequency for PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds.	N/A

sr-policy/policy-attributes/segment-lists

This table contains segment list configuration information for SR-TE policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-lists

Table description

Item	Description
Feature name	sr-policy
Table name	policies
Table type	Multi-instance table
Row name	policy
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
endpoint	IP address of the policy endpoint	Index	Dotted decimal notation for IPv4, or colon-separated hexadecimal string for IPv6.	N/A
name	SR-TE policy name	N/A	String. Length: 1 to 59 characters.	N/A
oper-state	SR-TE policy state	N/A	Enumeration: • 1—UP. • 2—DOWN.	N/A
forwarding-state	SR-TE policy forwarding-state	N/A	String. Length: 1 to 51 characters.	N/A
priority	Priority of the policy	N/A	Unsigned char.	N/A
up-time	Policy up time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
down-time	Policy down time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
down-reason	Policy down reason	N/A	String. Length: 1 to 51 characters.	N/A
binding-sid	Binding SID information	Data structure	Members include: • dataplane. • value. • alloc-mode • allocated-sid • oper-state	N/A
dataplane	Binding SID dataplane type	N/A	Enumeration: • 1—MPLS. • 2—SRv6.	N/A
value	Binding SID value	N/A	Unsigned integer.	N/A
alloc-mode	Binding SID type	N/A	Enumeration: • 1—explicit, explicitly specified BSID. • 2—dynamic, dynamically allocated BSID.	N/A
allocated-sid	Allocated SID value for the binding SID	N/A	Unsigned integer.	N/A
oper-state	Binding SID operational state	N/A	Enumeration: • 1—ALLOC-PENDING • 3—PROGRAMMED. • 4—CONFLICT.	N/A
counters	Forwarding statistics counters	Data structure	Members include: • pkts. • octets. • inpkts	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• inoctets • avg-bit-rate • avg-octet-rate • avg-packet-rate • rt-bit-rate • rt-octet-rate • rt-packet-rate	
pkts	Number of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
octets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
inpkts	Number of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
inoctets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
avg-bit-rate	Average rate of bits forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
avg-octet-rate	Average rate of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
avg-packet-rate	Average rate of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-bit-rate	Real-time rate of bits forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-octet-rate	Real-time rate of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-packet-rate	Real-time rate of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
admin-state	Administrative state of the policy	N/A	Enumeration: • 1—UP. • 2—DOWN	N/A
backup-hot-standby	Hot-standby backup	N/A	Boolean: • true. ——equal to backup-hot-standby-type 2 • false. ——equal to backup-hot-standby-type 1	当backup-hot-standby和backup-hot-standby-type同时存

Column name	Column description	Column type	Data type and restrictions	Remarks
				在时，以backup-hot-standby-type为准
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Use policy-attributes/backup-hot-standby-type configure (default). • 1—disable policy hot standby, equal to backup-hot-standby false. • 2—enable policy hot standby, equal to backup-hot-standby true. • 3—enable policy hot standby with multilevel-backup.	当backup-hot-standby和backup-hot-standby-type同时存在时，以backup-hot-standby-type为准
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
echo	SBFD echo	N/A	Boolean: • true. • false.	The echo column is finally effective when the sbfd column is configured at the same time
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backuptemplate	Name of the BFD template for the backup path	N/A	String. Length: 1 to 63 characters.	N/A
up-delay	Policy segment list up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
service-class	Service class for the policy	N/A	Unsigned integer. The value range varies by device model.	The smaller the value, the lower the priority.When service class no set, the default class is 255. Service class 255 means the lowest priority class.
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service-class	Traffic statistics service-class enable	N/A	Boolean: • true. • false.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false.	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sourceipv4	Source IPv4 address for BFD echo session	N/A	IPv4: String, dotted decimal notation.	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo session	N/A	IPv6: hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
source-address	Source address for srpolicy	N/A	IPv4: String, dotted decimal notation. IPv6: hexadecimal string, colon-separated.	Now source address only for BFD echo, sbfd and sbfd echo packets
bfd-echo-template	Name of BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	Name of backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
candidate-paths	Information of the candidate paths	Sublist	For details of the sublist, refer to the candidate-paths table.	N/A
sbfd-proxy-reflector	SBFD proxy reflector function	N/A	Enumeration: • 0—Use global configuration(default). • 1—Enable. • 2—Disable.	N/A
sbfd-encapsulation-mode	Sbfd packets encaped with IPv4 mode for IPv6 Endpoint	N/A	Enumeration: • 0—Use global configuration(default). • 1—IPv4. • 2—IPv6.	N/A
pce-delegation	Enable the PCE delegation function	N/A	Boolean: • **true.** **false.**	N/A
passive-delegate-report-only	Report path information without delegating paths to the PCE	N/A	Boolean: • **true.** **false.**	N/A
pce-reoptimi	Enable the PCE	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
zation	reoptimization function		• **true.** **false.**	
pce-reoptimization-frequency	Frequency for PCE reoptimization	N/A	Unsigned integer. Value range: 1 to 604800 seconds.	N/A

sr-policy/policies/candidate-paths

This table contains candidate path configuration information for an SR-TE policy.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	candidate-paths
Table type	Multi-instance table
Row name	candidate-path
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that signaled/instantiated the candidate path on the headend	Index	String. Length: 1 to 160 characters.	N/A
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535 in some products.	N/A
preference	Preference of the candidate path	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 65535	
name	SR policy candidate-path name	N/A	String. Length: 1 to 59 characters.	N/A
binding-sid	Binding SID infomation	Data structure	Members include: • dataplane. • value.	N/A
dataplane	Binding SID dataplane type	N/A	Enumeration: • 1—MPLS. • 2—SRv6.	N/A
value	Binding SID value	N/A	Unsigned integer.	N/A
is-best-candidate-path	Best candidate path	N/A	Boolean: • true • false	N/A
non-selection-reason	Reason when the candidate path was not selected	N/A	String. Length: 1 to 51 characters.	For instance: Candidate-path-not-selected-no-valid-segment-list. Candidate-path-not-selected-empty-segment-list. Candidate-path-not-selected-not-best. Candidate-path-not-selected-invalid-binding-sid.
is-valid	Validity of the segment list	N/A	Boolean: • true—Valid. • false—Invalid.	N/A
router-target	Router ID of the destinaton node	N/A	IPv4: String, dotted decimal notation.	N/A
bsid	Binding-SID of the candidate path	N/A	Unsigned integer.	N/A
segment-lists	Information of segment lists	Sublist	For the details of the sublist, refer to the segment-lists table.	N/A

sr-policy/policies/candidate-paths/segment-lists

This table contains segment list information of an SR-TE policy candidate path.

XML structure

Please refer to the XML Structure of sr-policy/policy-attributes.

Table description

Item	Description
Feature name	sr-policy
Table name	segment-lists
Table type	Multi-instance table
Row name	segment-list
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name-ref	Segment list for an SR-TE policy candidate path	Index	String. Length: 1 to 128 characters.	Reference to segment list name.
is-valid	Validity of the segment list	N/A	Boolean: • true—Valid. • false—Invalid.	N/A
weight	Weight of the segment list for weighted load sharing	N/A	Unsigned integer.	N/A
bfd-state	BFD state of the sid list	N/A	String. Length: 1 to 59 characters.	N/A
forwarding-state	SR-TE policy segment list forwarding-state	N/A	String. Length: 1 to 59 characters.	N/A
pkts	Number of packets forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
octets	Number of bytes forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
rate	Forwarding rate via the segment list	Data structure	Members include: • avg-bit-rate • avg-octet-rate • avg-packet-rate • rt-bit-rate • rt-octet-rate • rt-packet-rate	N/A
avg-bit-rate	Average rate of bits forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
avg-octet-rate	Average rate of bytes forwarded	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	via the segment list			
avg-packet-rate	Average rate of packets forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-bit-rate	Real-time rate of bits forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-octet-rate	Real-time rate of bytes forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-packet-rate	Real-time rate of packets forwarded via the segment list	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
service-classes	Service-class forwarding Information of the segment list	Sublist	For details of the sublist, refer to the segment-list service-classes table.	N/A
forwarding-paths	Information of the forwarding-paths	Sublist	For details of the sublist, refer to the forwarding-paths table.	N/A

sr-policy/policies/candidate-paths/segment-lists/service-classes

This table contains service-class forwarding information of an SR-TE policy segment-list.

XML structure

Please refer to the XML Structure of sr-policy.

Table description

Table name	color-dscps
Table type	Multi-instance table
Row name	color-dscp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
dscp-ipv4	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a hyphen (-) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or hyphen. By default, an SR-TE policy group does not have an IPv4 DSCP list for a color value.	Example: 1,2,3,5-8,10-20. Available DSCP values are from 0 to 63.
dscp-ipv6	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a hyphen (-) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or hyphen. By default, an SR-TE policy group does not have an IPv6 DSCP list for a color value.	Example: 1,2,3,5-8,10-20. Available DSCP values are from 0 to 63.
dscp-ipv4-default	Whether to use this SR-TE policy as the default policy for IPv4 packets	N/A	Boolean: • true • false	N/A
dscp-ipv6-default	Whether to use this SR-TE policy as the default	N/A	Boolean: • true	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy for IPv6 packets		• false	

Example

Get SR-TE policy information.

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <get-bulk>

ietf-sr-policy/policies

Message	Explanation
Segment Routing is not supported.. 不支持Segment Routing。	Segment Routing is not support. 不支持 SR 相关配置。
The SR policy is not configured. 没有配置SRPOLICY。	SRPOLICY process has not been started. SRPOLICY进程没有启动。
The SR policy name already exists and cannot be modified. SR Policy名字已存在不能修改。	During executing merge or replace operation, if the policy has configured name and both names are not same. 执行merge或者replace操作时，policy 已有name，并且下发的name和该name不同，则不能修改policy name。
SR policy name cannot be deleted. 不允许删除SR policy的名称。	During executing delete or remove operation, not permit deleting name of policy. 执行delete或者remove操作时，不允许删除name。
The dataplane attribute column is required. 需要配置dataplane属性列。	During executing create、merge or replace operation, the dataplane attribute column is required. 执行create 、merge或者replace操作时，下发bsid的配置需要同时下dataplane 和value。 Please configure dataplane attribute column.
The value attribute column is required. 需要配置value属性列。	During executing create、merge or replace operation, the value attribute column is required. 执行create 、merge或者replace操作时，下发bsid的配置需要同时下dataplane 和value。 Please configure value attribute column.
Invalid dataplane value. The value can only be 1. dataplane的值无效，目前仅支持1。	During executing create、merge or replace operation, the value of dataplane attribute column can only be 1. 执行create 、merge或者replace操作时，下发的dataplane只能为1。 Please set 1 for . dataplane attribute column.
Policy name is conflict with other policy. Policy name与其他policy名称冲突。	During executing create、merge or replace operation, policy name is conflict with other policy. 执行create 、merge或者replace操作时，下发的name已被其他policy配置。 Please try other name for .the policy name.
TE is not enable and cannot be configured. TE未使能，不允许配置。	During executing create、merge or replace operation, TE is not enable and cannot be configured. 执行create 、merge或者replace操作时，TE未使能，不允许配置。
SRP is doing reset and cannot be configured. SRP进程正在reset,不允许配置。	Can’t configure the router while SRP process is doing reset. SRP进程正在做reset，不允许配置。
Segment-routing isn’t configured. 未配置Segment-routing。	Segment-routing isn’t configured. Segment-routing配置未使能。
To configure traffic-service-class, you must	To configure traffic-service-class, you must configure the

configure the traffic-statistics column. 当配置traffic-service-class时，必须指定traffic-statistics列	traffic-statistics column. 当配置traffic-service-class时，必须指定traffic-statistics列
When an operation is delete or remove that carries the traffic-statistics column, traffic-service-class must be carried. 当delete、remove操作携带traffic-statistics列时，必须同时携带traffic-service-class列	When an operation is delete or remove that carries the traffic-statistics column, traffic-service-class must be carried. 当delete、remove操作携带traffic-statistics列时，必须同时携带traffic-service-class列
When you create, merge or replace, if you configure the traffic-statistics column as false, traffic-service-class column is not allowed to be configured. create、merge、replace操作时，如果traffic-statistics列配置为false，不允许traffic-service-class配置列	When you create, merge or replace, if you configure the traffic-statistics column as false, traffic-service-class column is not allowed to be configured. create、merge、replace操作时，如果traffic-statistics列配置为false，不允许traffic-service-class配置列
To configure BFD, you must configure the bfd-echo column. 当配置BFD时，必须指定bfd-echo列。	To configure BFD, you must configure the bfd-echo column. 当配置bfd时，必须携带bfd-echo列。
When you create, merge or replace, if you configure the bfd-echo column as false, other bfd-echo columns are not allowed to be configured. create、merge、replace操作时，如果bfd列配置为false，不允许配置其他bfd-echo列。	When you create, merge or replace, if you configure the bfd-echo column as false, other bfd-echo columns are not allowed to be configured. create、merge、replace操作时，如果bfd列配置为false，不允许配置其他bfd-echo列。
When an operation is delete or remove that carries the bfd-echo column, other bfd-echo columns (bfd-echo-sourceipv4, bfd-echo-template, and bfd-echo-backuptemplate) must be carried. 当delete、remove操作携带bfd-echo列时，必须携带bfd-echo-sourceipv4，bfd-echo-template，bfd-echo-backuptemplate列。	When an operation is delete or remove that carries the bfd-echo column, other bfd-echo columns (bfd-echo-sourceipv4, bfd-echo-template, and bfd-echo-backuptemplate) must be carried. 当delete、remove操作携带bfd-echo列时，必须携带bfd-echo-sourceipv4，bfd-echo-template，bfd-echo-backuptemplate列。
When you create, merge or replace, bfd-echo-sourceipv4 and bfd-echo-sourceipv6 cannot be set at the same time. Create、merge、replace操作时，bfd-echo-sourceipv4 和 bfd-echo-sourceipv6列不能同时配置。	When you create, merge or replace, bfd-echo-sourceipv4 and bfd-echo-sourceipv6 cannot be set at the same time. Create、merge、replace操作时，bfd-echo-sourceipv4 和 bfd-echo-sourceipv6列不能同时配置。
To configure SBFD, you must configure the sbfd column or echo column. 当配置SBFD时，必须指定sbfd列或echo列。	To configure SBFD, you must configure the sbfd column or echo column. 当配置 SBFD 时，必须指定 sbfd 列或 echo 列。
When you create, merge or replace, if you set the sbfd column to false, other sbfd related columns are not allowed to be configured. create、merge、replace操作时，如果sbfd列配置为false，不允许配置其他sbfd列。	When you create, merge or replace, if you set the sbfd column to false, other sbfd related columns are not allowed to be configured. create、merge、replace操作时，如果sbfd列配置为false，不允许配置其他sbfd列。
When you create, merge or replace, the sbfd-remoteid column must be set together with the sbfd column. Create、merge、replace操作时，sbfd-remoteid 需要和sbfd列同时配置。	When you create, merge or replace, sbfd-remoteid must be set together with sbfd column. Create、merge、replace操作时，sbfd-remoteid 需要和sbfd列同时配置。
SR-TE Policy with an IPv6 endpoint is not supported. 不支持endpoint为IPv6的SR-TE Policy。	SR-TE Policy with an IPv6 endpoint is not supported. 不支持endpoint为IPv6的SR-TE Policy。

The sbfd-proxy-reflector column must be set together with the sbfd column. The The Sbfd-proxy-reflector需要和sbfd同时配置。	The sbfd-proxy-reflector column must be set together with the sbfd column. 创建sbfd-proxy-reflector时，需要设置sbfd列。
The sbfd-encapsulation-mode column must be set together with the sbfd column. Sbfd-encapsulation-mode需要和sbfd同时配置。	The sbfd-encapsulation-mode column must be set together with the sbfd column. 创建Sbfd-encapsulation-mode时，需要设置sbfd列。

ietf-sr-policy/policies/candidate-paths

Message	Explanation
The path from BGP or PCEP cannot be created, modified, or deleted. 不支持创建、修改和删除BGP和PCEP类型的候选路径。	During executing set operation, the path from BGP or PCEP cannot be created, modified, or deleted. 执行set操作时，BGP和PCEP类型的候选路径不支持创建、修改和删除。
The preference already exists and can't be modified. Preference的值已存在不能修改。	During executing set operation, the preference already exists and can't be modified. 执行set操作时，如果Preference的值已存在，不能修改。
When cpath is created firstly, discriminator and preference must have same value. 首次创建cpath时，下发的discriminator和preference的值应该一致。	Please make sure that preference and discriminator have same value, when creating path. 创建path时，下发的discriminator和preference的值需要保持一致。

ietf-sr-policy/segment-lists/segments

Message	Explanation
The value of segment type can’t be deleted or removed. Segments表中type的值不支持delete、remove操作。	During executing delete or remove operation, the value of segment type can’t be deleted or removed. 执行delete、remove操作时，segments表中type的值不支持delete、remove操作。
The value of segment type is invalid. The value can only be 1. Segments表中type的值无效，目前仅支持1。	During executing set operation, please make sure that the value of segment type is 1. 执行set操作时，segments表中type的值必须为1。
Index must be the maximum value when label is 0, 2, or 3. 标签为0、 2或3时，索引必须为最大值。	Index must be the maximum value when label is 0, 2, or 3. 标签为0、 2或3时，索引必须为最大值。
Maximum label depth is already reached.The SID list is invalid on the device. 配置的标签已到最大标签深度。该SID列表在设备上无效。	Maximum label depth is already reached.The SID list is invalid on the device. 配置的标签已到最大标签深度。该SID列表在设备上无效。

ietf-sr-policy/segment-lists/segments/segment-type-1

Message	Explanation
The sid-value can't be deleted or removed. Sid-value的值不支持delete、remove操作。	During executing delete or remove operation, the sid-value can't be deleted or removed. 执行delete、remove操作时，sid-value的值不支持delete、remove操作。
When operation is set, sid-value must be together with index. Set操作，要求sid-value和index一起下发。	When operation is set, sid-value must be together with index. Set操作，要求sid-value和index一起下发。

ietf-sr-policy/policygroups

Message	Explanation
Policygroup is not supported. 不支持policygroup。	Policygroup is not support. 不支持 policygroup 的相关配置。
Another SR-TE policy is using the color value and end point. Different SR-TE policies cannot use the same color value and end point. 不同SR-TE Policy组中不能存在相同的Endpoint和Color.	A pair of color and endpoint identifies one policy, so it cannot be used in more than one policy-group during executing set operation. 修改或创建policy-groups表的end-point和color时，同一对color、endpoint标识了policy,所以不可以在其他policy-group中存在。

ietf-sr-policy/policygroups/color-dscps

Message	Explanation
Another SR-TE policy is using the color value and end point. Different SR-TE policies cannot use the same color value and end point. 不同SR-TE Policy组中不能存在相同的Endpoint和Color.	A pair of color and endpoint identifies one policy, so it cannot be used in more than one policy-group during executing set operation. 修改或创建policy-groups表的end-point和color时，同一对color、endpoint表识了policy,所以不可以在其他policy-group中存在。
The end DSCP value must be greater than the start DSCP value. DSCP结束值要大于DSCP起始值。	When operation is set, the end DSCP value must be greater than the start DSCP value. Set操作，DSCP end值要超过DSCP start的值。
The inputted DSCP value is incorrect. 输入的DSCP值错误。	When operation is set, the inputted DSCP value is incorrect. Set操作，输入的DSCP值错误。
The duplicate DSCP values canont be configured. 不能配置重复的DSCP值。	When operation is set, the duplicate DSCP values canont be configured. Set操作，输入的DSCP值重复。
The DSCP is already associated with another color. DSCP值已经与Color值关联。	The DSCP is already associated with another color. DSCP值已经与Color值关联。
Creating ColorDscpTable Need dscp or default.	Creating ColorDscpTable Need dscp or default.

创建colordscp表必须携带dscp值或者default属性。	创建colordscp表必须携带dscp值或者default属性。

down-reason	SR policy down reason	N/A	String. Length: 1 to 51 characters.	For instance: No-candidate-path. No-valid-candidate-path. Candidate-path-invalid-segment-list.
candidate-paths	Information of the candidate paths	Sublist	Members include: • protocol-origin • originator • discriminator • preference • name • is-best-candidate-path • non-selection-reason • is-valid • segment-lists	N/A
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that signaled/instantiated the candidate path on the headend	Index	String. Length: 1 to 160 characters.	N/A
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535.	N/A
preference	Preference of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535	N/A
name	SR policy candidate-path name	N/A	String. Length: 1 to 59 characters.	N/A
is-best-candidate-path	Best candidate path	N/A	Boolean: • true • false	N/A
non-selection-reason	Reason why the candidate path was not selected	N/A	String. Length: 1 to 51 characters.	N/A
is-valid	Validity of the candidate-paths	N/A	Boolean: • true—Valid. • false—Invalid.	N/A
segment-lists	Information of the segment-lists	Sublist	Members include: • list-id • name-ref • state	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• bfd-state • sid-list	
list-id	Segment list ID	Index	Unsigned integer.	N/A
name-ref	Segment list for an SR policy candidate path	Index	String. Length: 1 to 128 characters.	Reference to segment list name.
state	Segment list state	N/A	String. • Up • Down	N/A
bfd-state	Segment list BFD state	N/A	String. • No sbfd. • PathInactive. • Unknown. • Down • Up	N/A
sid-list	Information of the SID list	Sublist	Members include: • index • value	N/A
index	Index of SID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
sid-value	MPLS label value	N/A	Unsigned integer. Value range: 0, 3, 16 to 1048575.	N/A

Example ····· 44

ietf-srv6

The namespace of srv6 is "urn:ietf:params:xml:ns:yang:ietf-srv6-base".

The example on the end of the module sets an instance that the module can’t be under top node.

srv6

This table contains SRv6 configuration information.

Table description

Item	Description
Feature name	ietf_srv6
Table name	srv6
Table type	Single-instance table,multi-level table
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
encapsulation	Information of the encapsulation	Subtable	For details of the subtable, refer to the encapsulation table.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
path-mtu	Path MTU	N/A	Unsigned integer. The value range varies by device model.	N/A
path-mtu-reserved	Path MTU reserved	N/A	Unsigned integer. The value range varies by device model. Default: 72.	N/A
compress-enable	Whether to enable SRv6 compression	N/A	Boolean: • **true**—Enable SRv6. compression. • **false**—Disable SRv6 compression (default).	N/A
mirror-remote-sid-delete-delay	Delay time of mirror remote-SID deletion	N/A	Unsigned integer. Value range: 1 to 21845, in seconds. Default: 60.	N/A
proxy-peer-sid	Peer SID of the proxy node	N/A	String, IPv6 address string, END SID.	Example: 1::1.
diffserv-mode	DiffServ mode configuration	Data structure	Members include: • ingress-mode • egress-mode • service-class	N/A
ingress-mode	DiffServ mode in the inbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
egress-mode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
service-class	Service class value	N/A	Unsigned integer. Value range: 0 to 7.	This column will be ignored when ingress-mode is uniform.
locators	Information of the locators	Sublist	For details of the sublist, refer to locators table.	N/A
remote-end-op-prefixes	Information of remote-End.OP prefixes	Sublist	For more information about the sublist, see the remote-end-op-prefixes table.	N/A
sr-te-frr	SR-TE FRR	N/A	Boolean: • **true** • **false**	This column is ignored when sr-te-frr-mode is also configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
sr-te-frr-mode	Mode of SR-TE FRR	N/A	Enumeration: • disabled--SR-TE FRR is disabled (default). • enabled--SR-TE FRR is enabled. • downgrade—Enable SR-TE FRR downgrade.	N/A
srh-flag-check	Whether to check the SRH flag	N/A	Enumeration: • 0—Does not check (default). • 1—Check SRH flags.	N/A
icmpv6-error-relay	Whether to relay ICMPv6 error packets	N/A	Enumeration: • **disabled**—ICMPv6 error packets are not relayed (default). • **enabled**—ICMPv6 error packets are relayed.	N/A
EndXUpdateDelay	Delay time for issuing static End.X SIDs to the FIB	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds. Default: 0.	N/A

srv6/encapsulation

This table contains encapsulation configuration information of ietf srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	encapsulation
Table type	Single-instance table
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	IPv6 source address	N/A	IPv6 address.	N/A
hop-limit	Hop limit	Data structure	Members include: • value	N/A
value	Hop limit value	N/A	Unsigned integer. Value range: 1 to 255. Default: 255.	N/A

srv6/locators

This table contains SRv6 locator configuration information of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	locators
Table type	Multi-instance table,multi-level table
Row name	locator
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Locator name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
prefix	IPv6 address prefix and the prefix length.	Data structure	Members include: • address • length	N/A
address	IPv6 address prefix.	N/A	IPv6 address	N/A
length	Prefix length.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 32 to 120.	
coc32-enable	Whether to enable 32-bit G-SID compression	N/A	Boolean: • **true—**Enable 32-bit G-SID compression. • **false—**Disable 32-bit G-SID compression (default).	N/A
compress-mode	Compress mode	N/A	Enumeration • 0—non compression. • 1—coc32 compression. • 2—coc32 both compression.	N/A
common-prefix-length	G-SID common prefix length	N/A	Unsigned integer.	N/A
static-length	Static length.	N/A	Unsigned integer. Value range: 0 to 32. Default: 0.	N/A
noncompress-static-length	Non compress static length.	N/A	Unsigned integer. Value range: 0 to .56 Default: 0.	N/A
reserved-start-sid	Start IPv6 address of reserved sids.	N/A	IPv6 address	N/A
reserved-count	Count of reserved sids.	N/A	Unsigned integer.	N/A
args-length	Argument length.	N/A	Unsigned integer. Value range: 0 to 64. Default: 0.	N/A
anycast	Locator anycast	N/A	Boolean: • true • false	N/A
static	Information of the static SIDs.	Sublist	The details of the sublist refer to static local-sid table.	- You must make sure locator is not cocoboth.
staticsid	Information of the staticsid.	Sublist	The details of the sublist refer to staticsid local-sid table.	N/A

srv6/locators/static/local-sids

This table contains local SID configuration information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	local-sids
Table type	Multi-instance table,multi-level table
Row name	sid
Restrictions	If end-behavior-type is not End.OP or End_PSP when you create, merge, or replace an SID, you must bring the child table of the SID with the operation. If you do not bring the child table of the SID with the create, merge, or replace operation, the operation can succeed. However, the SID cannot take effect.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
opcode	Opcode of an SRv6 SID	Index	String, Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Eg: String: 1 String: ::1
end-behavior-type	SRv6 SID type	N/A	String, case-sensitive. Supported types: • End • End_COC32 • End_PSP • End_PSP_COC32 • End.X • End.X_COC32 • End.X_PSP • End.X_PSP_COC32 • End.OP • End.DT4 • End.DT6 • End.DT46 • End.DX2 • End.DT2U • End.DT2M • End.DX2L • End.DT2UL • End.DX4 • End.DX6 • End.M	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
end-x	Information of the End.X SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X.
paths	Paths of the End.X SID	Sublist	The details of the sublist refer to end-x paths table.	N/A
end-x_coc32	Information of the End.X (COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_COC32.
paths	Paths of the End.X (COC32) SID	Sublist	The details of the sublist refer to end-x_coc32 paths table.	N/A
end-x_psp	Information of the End.X (PSP) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSP.
paths	Paths of the End.X (PSP) SID	Sublist	The details of the sublist refer to end-x_psp paths table.	N/A
end-x_psp_coc32	Information of the End.X (PSP_COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSP_COC32.
paths	Paths of the End.X (PSP_COC32) SID	Sublist	The details of the sublist refer to end-x_psp_coc32 paths table.	N/A
end-dt4	Information of the End.DT4 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT4.
vrf	VPN instance name of the End.DT4 SID	N/A	String. Length: 0 to 31 characters.	If the SID belongs to the public network, do not include this column. An empty string indicates the public network.
evpn-enable	Whether to enable EVPN for the End.DT4 SID	N/A	Enumeration • 0—Disable • 1—Enable.	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT4 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt6	Information of the End.DT6 SID	Data structure	Members include: • vrf	This column is valid only when end-behavior-type is

Column name	Column description	Column type	Data type and restrictions	Remarks
			• evpn-enable • l3vpn-evpn-enable	End.DT6.
vrf	VPN instance name of the End.DT6 SID	N/A	String. Length: 0 to 31 characters.	If the SID belongs to the public network, do not include this column. An empty string indicates the public network.
evpn-enable	Whether to enable EVPN for the End.DT6 SID	N/A	Enumeration • 0—Disable • 1—Enable.	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT6 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt46	Information of the End.DT46 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT46.
vrf	VPN instance name of the End.DT46 SID	N/A	String. Length: 0 to 31 characters.	If the SID belongs to the public network, do not include this column. An empty string indicates the public network.
evpn-enable	Whether to enable EVPN for the End.DT46 SID	N/A	Enumeration • 0—Disable • 1—Enable.	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT46 type SID	N/A	Enumeration • 0—Disable • 1—Enable.	N/A
end-dx2	Information of the End.DX2 SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
end-dx2l	Information of the End.DX2L SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2L.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
end-dt2u	Information of the End.DT2U SID	Data structure	Members include: • vsi-name.	This column is valid only when end-behavior-type is End.DT2U.
vsi-name	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
end-dt2m	Information of the End.DT2M SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2M.
vsi-name	VSI name	N/A	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
end-dt2ul	Information of the End.DT2UL SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2UL.
vsi-name	VSI name	N/A	String. Length: 1 to 31characters.	N/A
end-dx4	Information of the End.DX4 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.DX4.
paths	Paths of the End.DX4 SID	Sublist	The details of the sublist refer to end-dx4 paths table.	N/A
end-dx6	Information of the End.DX6 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End. DX6.
paths	Paths of the End.DX6 SID	Sublist	The details of the sublist refer to end-dx6 paths table.	N/A
end-m	Information of the End.M SID	Data structure	Members include: • mirror-locators.	This column is valid only when end-behavior-type is End.M.
mirror-locators	Information of the End.M SID locators	Sublist	The details of the sublist refer to end-m mirror-locators table.	N/A

bypass	Enabling status of bypass	N/A	Enumeration: • disabled. • enabled.	N/A
bypass-sid	End.AS bypass SID value	N/A	String, IPv6 address string.	This column can be set only when bypass is enabled.
diffserv-mode	DiffServ mode	N/A	Enumeration: • Uniform. • Pipe.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
service-class	Pipe-mode service class	N/A	Enumeration: • be. • af1. • af2. • af3. • af4. • ef. • cs6. • cs7.	This column can be set only when diffserv-mode is pipe.
color	Color for packets of the specified pipe-mode service class	N/A	Enumeration: • Green. • Yellow. • Red.	This column can be set only when diffserv-mode is pipe.
ttl-mode	TTL processing mode	N/A	Enumeration: • Uniform. • Pipe.	N/A
ttl-value	Pipe-mode TTL value	N/A	Unsigned integer. Value range: 1 to 255	This column can be set only when ttl-mode is pipe.
l2-fwds	SFC Layer 2 Ethernet encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l2-fwds table.
l3-fwds	SFC Layer 3 IPv4 or IPv6 encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l3-fwds table.
cache	Cache configuration	Data structure	Members include: • cache-source-address. • ipv6addrs.	For more information, see the srv6/locators/staticsid/local-sids/cache table.
source-address	Source address used for SFF encapsulation	N/A	String, IPv6 address string.	Example: 1::1.
ipv6addrs	List of SIDs to be encapsulated	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/cache/ipv6addrs table.

srv6/locators/staticsid/local-sids/end-x/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table,multi-level table
Row name	path
Restrictions	You must set paths table together while end-behavior-type is End.X. You can’t delete paths table only. When you delete local-sids table, paths table is deleted at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path.	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address.	N/A	IPv6 address.	N/A

srv6/locators/staticsid/local-sids/end-x_coc32/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	You must set the paths table together while end-behavior-type is End.X_COC32. You cannot delete the paths table alone. When you delete the local-sids table, the paths table is deleted at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A

srv6/locators/staticsid/local-sids/end-x_psp/paths

This table contains paths information of ietf-srv6.

XML structure

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A
vrf	Information of VPN instance name	N/A	String. • Length: 0 to 31 characters.	If the path belongs to the public network, do not include this column. An empty string indicates the public network.
evpn-enable	Enable evpn for this SID	N/A	Enumeration • 0—Disable (default). • 1—Enable.	N/A

srv6/locators/staticsid/local-sids/end-m/mirror-locators

This table contains locator information for End.M SIDs of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	mirror-locators
Table type	Multi-instance table
Row name	locator
Restrictions	You must set the paths table together while end-behavior-type is End.M. You cannot delete the paths table alone. When you delete the local-sids table, the paths table is deleted at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	IPv6 prefix.	Index	IPv6 address.	N/A
prefix-length	Prefix length.	Index	Unsigned integer. Value range: 32 to 120.	N/A

srv6/locators/staticsid/local-sids/end-as/l2-fwds

This table contains Layer 2 encapsulation method parameters for SFC.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as.

Table description

Item	Description
Feature name	SRv6
Table name	l2-fwds
Table type	Multi-instance table
Row name	l2-fwd
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
out-interface	Outgoing interface	Index	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
out-s-vlan	Outer VLAN ID of the outgoing interface	Index	Unsigned integer. Value range: 1 to 4094.	N/A
out-c-vlan	Inner VLAN ID of the outgoing interface	Index	Unsigned integer. Value range: 1 to 4094.	N/A
in-interface	Incoming interface	N/A	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
in-s-vlan	Outer VLAN ID of the incoming interface	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
in-c-vlan	Inner VLAN ID of the incoming interface	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
dest-mac	Destination MAC address	N/A	String. Format: H-H-H.	N/A

srv6/locators/staticsid/local-sids/end-as/l3-fwds

This table contains Layer 3 encapsulation method parameters for SFC.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as.

Table description

Item	Description
Feature name	SRv6
Table name	l3-fwds
Table type	Multi-instance table
Row name	l3-fwd
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
nexthop-address	Layer 3 encapsulation next hop IPv4 or IPv6 address	Index	String, IPv4/IPv6 address string.	Example: 1.1.1.1. 1::1
out-interface	Layer 3 outgoing interface	Index	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
in-interface	Layer 3 incoming interface	N/A	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
symmetric-index	Outgoing and incoming traffic that travels through the same VM	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

srv6/locators/staticsid/local-sids/end-as/cache/ipv6addrs

This table contains a list of SIDs to be encapsulated in packets.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as

Table description

Item	Description
Feature name	SRv6
Table name	ipv6addrs
Table type	Multi-instance table
Row name	ipv6addr
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ipv6-address	List of SIDs to be encapsulated	Index	String, IPv6 address string.	Example: 1::1.

srv6/locators/Locator-algos

This table contains SRv6 locator algorithm configuration information of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	Locator-algos
Table type	Multi-instance table
Row name	Locator-algo
Restrictions	You must create the locator before you merge/replace/create this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Locator name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Algorithm	Algorithm of the locator	N/A	Unsigned integer. Value range: 128 to 255	N/A

srv6/remote-end-op-prefixes

This table contains remote-End.OP prefix information of ietf srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	remote-end-op-prefixes
Table type	Multi-instance table
Row name	remote-end-op-prefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	IPv6 prefix.	Index	IPv6 address.	N/A
prefix-length	Prefix length.	Index	Unsigned integer. Value range: 1 to 128.	N/A

Example

Get SRv6 locator information.

```

ietf_srv6

The namespace of srv6 is "urn:ietf:params:xml:ns:yang:ietf-srv6-base".

The example on the end of the module sets an instance that the module can’t be under top node.

srv6

This table contains SRv6 configuration information.

Table description

Item	Description
Feature name	ietf_srv6
Table name	srv6
Table type	Single-instance table,multi-level table
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
encapsulation	Information of the encapsulation	Subtable	For more information about the subtable, see the encapsulation table.	N/A
path-mtu	Path MTU	N/A	Unsigned integer. The value range varies by device model.	N/A
path-mtu-reserved	Path MTU reserved	N/A	Unsigned integer. The value range varies by device model.	N/A
compress-enable	Whether SRv6 compression is enabled	N/A	Boolean: • **true**—Enable SRv6. compression. • **false**—Disable SRv6 compression.	N/A
mirror-remote-sid-delete-delay	Delay time of mirror remote-SID deletion	N/A	Unsigned integer. Value range: 1 to 21845, in seconds.	N/A
proxy-peer-sid	Peer SID of the proxy node	N/A	String, IPv6 address string, END SID.	Example: 1::1.
diffserv-mode	DiffServ mode configuration	Data structure	Members include: • ingress-mode • egress-mode • service-class	N/A
ingress-mode	DiffServ mode in	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the inbound direction		• 1—Uniform. • 2—Pipe. • 3—Short-pipe.	
egress-mode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
service-class	Service class value	N/A	Unsigned integer. Value range: 0 to 7.	This column will be ignored when ingress-mode is uniform.
max-sid-list-depth	Maximum SID depth	N/A	Unsigned integer.	Only supports the get operation.
locators	Information of the locators	Sublist	For details of the sublist, refer to the locators table.	N/A
remote-end-op-prefixes	Information of remote-End.OP prefixes	Sublist	For more information about the sublist, see the remote-end-op-prefixes table.	N/A
sr-te-frr	SR-TE FRR	N/A	Boolean: • **true** • **false**	This column is ignored when sr-te-frr-mode is also configured.
sr-te-frr-mode	Mode of SR-TE FRR	N/A	Enumeration: • disabled--SR-TE FRR is disabled. • enabled--SR-TE FRR is enabled. • downgrade—Enable SR-TE FRR downgrade.	N/A
srh-flag-check	Whether to check SRH flag	N/A	Enumeration: • 0—Does not check. • 1—Check SRH flags.	N/A
icmpv6-error-relay	Whether to relay ICMPv6 error packets	N/A	Enumeration: • **disabled**—ICMPv6 error packets are not relayed. • **enabled**—ICMPv6 error packets are relayed.	N/A
EndXUpdateDelay	Delay time for issuing static End.X SIDs to the FIB	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds.	N/A

srv6/encapsulation

This table contains encapsulation configuration information of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	encapsulation
Table type	Single-instance table
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	IPv6 source address	N/A	IPv6 address.	N/A
hop-limit	Hop limit	Data structure	Members include: • value	N/A
value	Hop limit value	N/A	Unsigned integer. Value range: 1 to 255.	N/A

srv6/locators

This table contains SRv6 locator configuration information of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	locators
Table type	Multi-instance table,multi-level table
Row name	locator

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Locator name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
prefix	IPv6 address prefix and the prefix length.	Data structure	Members include: • address • length	N/A
address	IPv6 address prefix.	N/A	IPv6 address.	N/A
length	Prefix length.	N/A	Unsigned integer. Value range: 32 to 120.	N/A
coc32-enable	Enable 32-bit G-SID compression	N/A	Boolean: • **true**—Enable 32-bit G-SID compression. • **false**—Disable 32-bit G-SID compression.	N/A
compress-mode	Compress mode	N/A	Enumeration • 0—non compression. • 1—coc32 compression. • 2—coc32 both compression.	N/A
common-prefix-length	G-SID common prefix length	N/A	Unsigned integer.	N/A
node-length	Node length.	N/A	Unsigned integer.	N/A
csid-length	Compress sid length.	N/A	Unsigned integer.	N/A
static-length	Static length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
dynamic-length	Dynamic length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
noncompress-static-length	Non compress static length.	N/A	Unsigned integer. Value range: 0 to 56.	N/A
noncompress-dynamic-length	Non compress dynamic length.	N/A	Unsigned integer. Value range: 0 to 56.	N/A
reserved-start-sid	Start IPv6 address	N/A	IPv6 address	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of reserved sids.			
reserved-count	Count of reserved sids.	N/A	Unsigned integer.	N/A
args-length	Argument length.	N/A	Unsigned integer. Value range: 0 to 64.	N/A
anycast	Locator anycast	N/A	Boolean: • **true** • **false**	N/A
static	Information of the static SIDs.	Sublist	For more information about the sublist, see the static local-sids table.	N/A
staticsid	Information of the static SIDs.	Sublist	For more information about the sublist, see the staticsid local-sids table.	N/A

srv6/locators/static/local-sids

This table contains local SID configuration information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	local-sids
Table type	Multi-instance table,multi-level table
Row name	sid
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
opcode	Opcode of an SRv6 SID.	Index	String. Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Eg: String: 1 String: ::1

Column name	Column description	Column type	Data type and restrictions	Remarks
end-behavior-type	SRv6 SID type	N/A	String, case-sensitive. Supported types: • End • End_COC32 • End_PSP • End_PSP_COC32 • End.X • End.X_COC32 • End.X_PSP • End.X_PSP_COC32 • End.OP • End.DT4 • End.DT6 • End.DT46 • End.DX2 • End.DT2U • End.DT2M • End.DX2L • End.DT2UL • End.DX4 • End.DX6 • End.M	N/A
end-x	Information of the End.X SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X.
paths	Paths of the End.X SID	Sublist	The details of the sublist refer to end-x paths table.	N/A
end-x_coc32	Information of the End.X (COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_COC32.
paths	Paths of the End.X (COC32) SID	Sublist	The details of the sublist refer to end-x_coc32 paths table.	N/A
end-x_psp	Information of the End.X (PSP) SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X_PSP.
paths	Paths of the End.X (PSP) SID	Sublist	The details of the sublist refer to end-x_psp paths table.	N/A
end-x_psp_coc32	Information of the End.X (PSP_COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSP_COC32.
paths	Paths of the End.X (PSP_COC32) SID	Sublist	The details of the sublist refer to end-x_psp_coc32 paths table.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
end-dt4	Information of the End.DT4 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT4.
vrf	VPN instance name of the End.DT4 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled for the End.DT4 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT4 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt6	Information of the End.DT6 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT6.
vrf	VPN instance name of the End.DT6 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Information of the EVPN END.DT6 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT6 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt46	Information of the End.DT46 SID	N/A	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT46.
vrf	VPN instance name of the End.DT46 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Whether	N/A	Enumeration	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	EVPN is enabled for the End.DT46 SID		• 0—Disable • 1—Enable	
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT46 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dx2	Information of the End.DX2 SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
end-dx2l	Information of the End.DX2L SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2L.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface	N/A	Unsigned integer.	Some versions

Column name	Column description	Column type	Data type and restrictions	Remarks
	index.			support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
end-dt2u	Information of the End.DT2U SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2U.
vsi-name	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
end-dt2m	Information of the End.DT2M SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2M.
vsi-name	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
end-dt2ul	Information of the End.DT2UL SID	Data structure	Members include: • vsi-name.	This column is valid only when end-behavior-type is End.DT2UL.
vsi-name	VSI name	N/A	String. Length: 1 to 31characters.	N/A
end-dx4	Information of the End.DX4 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.DX4.
paths	Paths of the End.DX4 SID	Sublist	For more information about the sublist, see the end-dx4 paths table.	N/A
end-dx6	Information of the End.DX6 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End. DX6.
paths	Paths of the End.DX6 SID	Sublist	For more information about the sublist, see the end-dx6 paths table.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
end-m	Information of the End.M SID	Data structure	Members include: • mirror-locators.	This column is valid only when end-behavior-type is End.M.
mirror-locators	Information of the End.M SID locators	Sublist	For more information about the sublist, see the end-m mirror-locators table.	N/A

srv6/locators/static/local-sids/end-x/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	IPv6 prefix	Index	IPv6 address.	IPv6 address.
prefix-length	Prefix length	Index	Unsigned integer. Value range: 32 to	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions	Remarks
			120.	Value range: 32 to 120.

srv6/locators/staticsid/local-sids

This table contains local SID configuration information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	local-sids
Table type	Multi-instance table,multi-level table
Row name	sid
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
opcode	Opcode of an SRv6 SID.	Index	String. Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Eg: String: 1 String: ::1
end-behavior-type	SRv6 SID type	Index	String, case-sensitive. Supported types: • End • End_COC32 • End_PSP • End_PSP_COC32 • End_PSPUSPUSD • End_COCNONE • End_PSP_COCNONE • End_PSPUSPUSD_COCNONE • End.X • End.X_COC32 • End.X_PSP • End.X_PSP_COC32 • End.X_PSPUSPUSD • End.X_COCNONE	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• End.X_PSP_COCNONE • End.X_PSPUSPUSD_COCNONE • End.OP • End.DT4 • End.DT6 • End.DT46 • End.DX2 • End.DT2U • End.DT2M • End.DX2L • End.DT2UL • End.DX4 • End.DX6 • End.M • End.AS	
end-x	Information of the End.X SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X.
paths	Paths of the End.X SID	Sublist	The details of the sublist refer to end-x paths table.	N/A
end-x_coc32	Information of the End.X (COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_COC32.
paths	Paths of the End.X (COC32) SID	Sublist	The details of the sublist refer to end-x_coc32 paths table.	N/A
end-x_psp	Information of the End.X (PSP) SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X_PSP.
paths	Paths of the End.X (PSP) SID	Sublist	The details of the sublist refer to end-x_psp paths table.	N/A
end-x_psp_coc32	Information of the End.X (PSP_COC32) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSP_COC32.
paths	Paths of the End.X (PSP_COC32) SID	Sublist	The details of the sublist refer to end-x_psp_coc32 paths table.	N/A
end-x_pspuspusd	Information of the End.X (PSP USP USD) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSPUSPUSD.
paths	Paths of the	Sublist	The details of the sublist refer to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	End.X (PSP USP USD) SID		end-x_pspuspusd paths table.	
end-x_cocnone	Information of the End.X (COC-NONE) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_COCNONE.
paths	Paths of the End.X (COC-NONE) SID	Sublist	The details of the sublist refer to end-x_cocnone paths table.	N/A
end-x_psp_cocnone	Information of the End.X (PSP_COCNONE) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSP_COCNONE.
paths	Paths of the End.X (PSP_COCNONE) SID	Sublist	The details of the sublist refer to end-x_psp_cocnone paths table.	N/A
end-x_pspuspusd_cocnone	Information of the End.X (PSPUSPUSD_COCNONE) SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.X_PSPUSPUSD_COCNONE.
paths	Paths of the End.X (PSPUSPUSD_COCNONE) SID	Sublist	The details of the sublist refer to end-x_pspuspusd_cocnone paths table.	N/A
end-dt4	Information of the End.DT4 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT4.
vrf	VPN instance name of the End.DT4 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled for the End.DT4 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT4 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt6	Information of the End.DT6 SID	Data structure	Members include: • vrf • evpn-enable	This column is valid only when end-behavior-type is End.DT6.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• l3vpn-evpn-enable	
vrf	VPN instance name of the End.DT6 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Information of the EVPN END.DT6 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT6 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt46	Information of the End.DT46 SID	N/A	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT46.
vrf	VPN instance name of the End.DT46 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled for the End.DT46 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT46 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dx2	Information of the End.DX2 SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of

Column name	Column description	Column type	Data type and restrictions	Remarks
				your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
end-dx2l	Information of the End.DX2L SID	Data structure	Members include: • xconnect-group-name • connection-name	This column is valid only when end-behavior-type is End.DX2L.
xconnect-group-name	Cross-connect group name	N/A	String. Length: 1 to 31 characters.	N/A
connection-name	Cross-connect name	N/A	String. Length: 1 to 20 characters.	N/A
vsi-name	Specify a VSI name	N/A	String. Length: 1 to 31 characters.	N/A
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
service-instance	service-instance		Unsigned integer. Value range: 1 to 4096. Default: 0.	Some versions support max service instance ID not 4096.
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
end-dt2u	Information of the End.DT2U SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2U.
vsi-name	VSI name	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
end-dt2m	Information of the End.DT2M SID	Data structure	Members include: • vsi-name	This column is valid only when end-behavior-type is End.DT2M.
vsi-name	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
end-dt2ul	Information of the End.DT2UL SID	Data structure	Members include: • vsi-name.	This column is valid only when end-behavior-type is End.DT2UL.
vsi-name	VSI name	N/A	String. Length: 1 to 31characters.	N/A
end-dx4	Information of the End.DX4 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End.DX4.
paths	Paths of the End.DX4 SID	Sublist	For more information about the sublist, see the end-dx4 paths table.	N/A
end-dx6	Information of the End.DX6 SID	Data structure	Members include: • paths.	This column is valid only when end-behavior-type is End. DX6.
paths	Paths of the End.DX6 SID	Sublist	For more information about the sublist, see the end-dx6 paths table.	N/A
end-m	Information of the End.M SID	Data structure	Members include: • mirror-locators.	This column is valid only when end-behavior-type is End.M.
mirror-locators	Information of the End.M SID locators	Sublist	For more information about the sublist, see the end-m mirror-locators table.	N/A
end-as	Information of the End.AS SID	Data structure	Members include: • backup-value. • inner-type. • bypass. • bypass-sid. • service-class. • color. • diffserv-uniform. • ttl-value. • ttl-uniform. • l2-fwds. • l3-fwds. • cache.	This column is valid only when end-behavior-type is End.AS.
backup-value	Backup static SRv6 SID	N/A	String, Value range: 1 to $2^{static\text{-}length}$-1.	Example: String: 1

Column name	Column description	Column type	Data type and restrictions	Remarks
			String, IPv6 address string.	String: ::1
inner-type	Original message type	N/A	Enumeration: • None. • IPv4. • IPv6. • IPv4-IPv6.	N/A
bypass	Enabling status of bypass	N/A	Enumeration: • disabled. • enabled.	N/A
bypass-sid	End.AS bypass SID value	N/A	String, IPv6 address string.	This column can be set only when bypass is enabled.
diffserv-mode	DiffServ mode	N/A	Enumeration: • Uniform. • Pipe.	N/A
service-class	Pipe-mode service class	N/A	Enumeration: • be. • af1. • af2. • af3. • af4. • ef. • cs6. • cs7.	This column can be set only when diffserv-mode is pipe.
color	Color for packets of the specified pipe-mode service class	N/A	Enumeration: • Green. • Yellow. • Red.	This column can be set only when diffserv-mode is pipe.
ttl-mode	TTL processing mode	N/A	Enumeration: • Uniform. • Pipe.	N/A
ttl-value	Pipe mode TTL value	N/A	Unsigned integer. Value range: 1 to 255.	This column can be set only when ttl-mode is pipe.
l2-fwds	SFC Layer 2 Ethernet encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l2-fwds table.
l3-fwds	SFC Layer 3 IPv4 or IPv6 encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l3-fwds table.
cache	Cache configuration	Data structure	Members include: • cache-source-address. • sl-num. • ipv6addrs.	For more information, see the srv6/locators/staticsid/local-sids/cache table.

Column name	Column description	Column type	Data type and restrictions	Remarks
source-address	Source address used for SFF encapsulation	N/A	String, IPv6 address string.	Example: 1::1.
sl-num	Number of nodes that packets must visit before reaching the destination address	N/A	Unsigned integer.	N/A
ipv6addrs	List of SIDs to be encapsulated	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/cache/ipv6addrs table.

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

srv6/locators/staticsid/local-sids/end-x_psp_cocnone/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	You must set the paths table together while end-behavior-type is End.X_PSP_COCNONE. You cannot delete the paths table alone. When you delete the local-sids table, the paths table is deleted at the same time.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters. Example: GigabitEthernet2/0/2	

srv6/locators/staticsid/local-sids/end-x_pspuspusd_cocnone/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	You must set the paths table together while end-behavior-type is End.X_PSPUSPUSD_COCNONE. You cannot delete the paths table alone. When you delete the local-sids table, the paths table is deleted at the same time.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			GigabitEthernet2/0/2	

srv6/locators/staticsid/local-sids/end-x_pspuspusd/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	You must set the paths table together while end-behavior-type is End.X_PSPUSPUSD. You cannot delete the paths table alone. When you delete the local-sids table, the paths table is deleted at the same time.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

srv6/locators/staticsid/local-sids/end-dx4/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv4 nexthop address	N/A	IPv4 address.	N/A
vrf	Information of VPN instance name	N/A	String. Length: 0 to 31 characters.	If this column is not included, the path belongs to the public network. An empty string indicates the public network.
evpn-enable	Enable evpn for this SID	N/A	Enumeration • 0—Disable. • 1—Enable.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

srv6/locators/staticsid/local-sids/end-dx6/paths

This table contains paths information of ietf-srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	paths
Table type	Multi-instance table
Row name	path
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address	N/A	IPv6 address.	N/A
vrf	Information of VPN instance name	N/A	String. Length: 0 to 31 characters.	If this column is not included, the path belongs to the public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled	N/A	Enumeration • 0—Disabled. • 1—Enabled.	N/A
if-name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

srv6/locators/staticsid/local-sids/end-m/mirror-locators

This table contains locator information for End.M SIDs of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	mirror-locators
Table type	Multi-instance table
Row name	locator
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	IPv6 prefix	Index	IPv6 address.	IPv6 address.
prefix-length	Prefix length	Index	Unsigned integer. Value range: 32 to 120.	Unsigned integer. Value range: 32 to 120.

srv6/locators/staticsid/local-sids/end-as/l2-fwds

This table contains Layer 2 encapsulation method parameters for SFC.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as.

Table description

Item	Description
Feature name	SRv6
Table name	l2-fwds
Table type	Multi-instance table

Row name	l2-fwd
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
out-interface	Outgoing interface	Index	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
out-s-vlan	Outer VLAN ID of the outgoing interface	Index	Unsigned integer. Value range: 1 to 4094.	N/A
out-c-vlan	Inner VLAN ID of the outgoing interface	Index	Unsigned integer. Value range: 1 to 4094.	N/A
in-interface	Incoming interface	N/A	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
in-s-vlan	Outer VLAN ID of the incoming interface	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
in-c-vlan	Inner VLAN ID of the incoming interface	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
dest-mac	Destination MAC address	N/A	String. Format: H-H-H.	N/A

srv6/locators/staticsid/local-sids/end-as/l3-fwds

This table contains Layer 3 encapsulation method parameters for SFC.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as.

Table description

Item	Description
Feature name	SRv6
Table name	l3-fwds
Table type	Multi-instance table
Row name	l3-fwd
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
nexthop-address	Layer 3 encapsulation next hop IPv4 or IPv6 address	index	String, IPv4/IPv6 address string.	Example: 1.1.1.1. 1::1
out-interface	Layer 3 outgoing interface	Index	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
in-interface	Layer 3 incoming interface	N/A	String. Length: 1 to 47 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
symmetric-index	outgoing and incoming traffic that travels through the same VM	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

srv6/locators/staticsid/local-sids/end-as/cache/ipv6addrs

This table contains a list of SIDs to be encapsulated in packets.

XML structure

Please refer to the XML Structure of srv6/locators/staticsid/local-sids/end-as.

Table description

Item	Description
Feature name	SRv6
Table name	ipv6addrs
Table type	Multi-instance table
Row name	ipv6addr
Restrictions	No
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ipv6-address	List of SIDs to be encapsulated	Index	String, IPv6 address string.	Example: 1::1.

srv6/locators/Locator-algos

This table contains SRv6 locator algorithm configuration information of ietf_srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	Locator-algos
Table type	Multi-instance table

Item	Description
Row name	Locator-algo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Locator name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Algorithm	Algorithm of the locator	N/A	Unsigned integer. Value range: 128 to 255	N/A

srv6/remote-end-op-prefixes

This table contains remote-end-op-prefix information of ietf srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	ietf_srv6
Table name	remote-end-op-prefixes
Table type	Multi-instance table
Row name	remote-end-op-prefix
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Colum n type	Data type and restrictions	Remarks
prefix	IPv6 prefix	Index	IPv6 address.	N/A
prefix-length	Prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A

Example

Get SRv6 locator information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
path-index	Index of path.	Index	Unsigned integer. Value range: 0.	Only 0 is supported.
interface	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ifmgr NETCONF XML API Configuration Reference.
next-hop	IPv6 nexthop address.	N/A	IPv6 address.	N/A

srv6/locators/staticsid/local-sids

This table contains local SID configuration information of srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	SRv6
Table name	local-sids
Table type	Multi-instance table, multi-level table
Row name	sid
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
opcode	Opcode of an SRv6 SID.	Index	String. Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Example: String: 1 String: ::1
end-behavior-type	SRv6 SID type	Index	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Supported types: • End • End_PSP • End.X • End.X_PSP • End.OP • End.DT4 • End.DT6 • End.DT46 • End.AS	
end-x	Information of the End.X SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X.
paths	Paths of the End.X SID	Sublist	The details of the sublist refer to end-x paths table.	N/A
end-x_psp	Information of the End.X (PSP) SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X_PSP.
paths	Paths of the End.X (PSP) SID	Sublist	The details of the sublist refer to end-x_psp paths table.	N/A
end-dt4	Information of the End.DT4 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT4.
vrf	VPN instance name of the End.DT4 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
evpn-enable	Whether EVPN is enabled for the End.DT4 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT4 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt6	Information of the End.DT6 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT6.
vrf	VPN instance name of the End.DT6 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Information of the EVPN END.DT6 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT6 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt46	Information of the End.DT46 SID	N/A	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT46.
vrf	VPN instance name of the End.DT46 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the

Column name	Column description	Column type	Data type and restrictions	Remarks
				public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled for the End.DT46 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT46 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-as	Information of the End.AS SID	Data structure	Members include: • backup-value. • inner-type. • bypass. • bypass-sid. • service-class. • color. • diffserv-uniform. • ttl-value. • ttl-uniform. • l2-fwds. • l3-fwds. • cache.	This column is valid only when end-behavior-type is End.AS.
backup-value	Backup static SRv6 SID	N/A	String, Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Example: String: 1 String: ::1
inner-type	Original message type	N/A	Enumeration: • None. • IPv4. • IPv6. • IPv4-IPv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
bypass	Enabling status of bypass	N/A	Enumeration: • disabled. • enabled.	N/A
bypass-sid	End.AS bypass SID value	N/A	String, IPv6 address string.	This column can be set only when bypass is enabled.
diffserv-mode	DiffServ mode	N/A	Enumeration: • Iniform. • Pipe.	N/A
service-class	Pipe-mode service class	N/A	Enumeration: • be. • af1. • af2. • af3. • af4. • ef. • cs6. • cs7.	This column can be set only when diffserv-mode is pipe.
color	Color for packets of the specified pipe-mode service class	N/A	Enumeration: • Green. • Yellow. • Red.	This column can be set only when diffserv-mode is pipe.
ttl-mode	TTL processing mode.	N/A	Enumeration: • Uniform. • Pipe.	N/A
ttl-value	TTL value	N/A	Unsigned integer. Value range: 1 to 255.	This column can be set only when ttl-mode is pipe.
l2-fwds	SFC Layer 2 Ethernet encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l2-fwds table.

Column name	Column description	Column type	Data type and restrictions	Remarks
l3-fwds	SFC Layer 3 IPv4 or IPv6 encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l3-fwds table.
cache	Cache configuration	Data structure	Members include: • cache-source-address. • ipv6addrs.	For more information, see the srv6/locators/staticsid/local-sids/cache table.
source-address	Source address used for SFF encapsulation	N/A	String, IPv6 address string.	Example: 1::1.
ipv6addrs	List of SIDs to be encapsulated	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/cache/ipv6addrs table.

srv6/locators/staticsid/local-sids/end-x/paths

This table contains paths information of srv6-base.

srv6/locators/staticsid/local-sids

This table contains local SID configuration information of srv6.

XML structure

Please refer to the XML Structure of srv6.

Table description

Item	Description
Feature name	SRv6
Table name	local-sids
Table type	Multi-instance table, multi-level table
Row name	sid
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
opcode	Opcode of an SRv6 SID.	Index	String. Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Example: String: 1 String: ::1
end-behavior-type	SRv6 SID type	Index	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Supported types: • End • End_PSP • End.X • End.X_PSP • End.OP • End.DT4 • End.DT6 • End.DT46 • End.AS	
end-x	Information of the End.X SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X.
paths	Paths of the End.X SID	Sublist	The details of the sublist refer to end-x paths table.	N/A
end-x_psp	Information of the End.X (PSP) SID	Data structure	Members include: • paths	This column is valid only when end-behavior-type is End.X_PSP.
paths	Paths of the End.X (PSP) SID	Sublist	The details of the sublist refer to end-x_psp paths table.	N/A
end-dt4	Information of the End.DT4 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT4.
vrf	VPN instance name of the End.DT4 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
evpn-enable	Whether EVPN is enabled for the End.DT4 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT4 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt6	Information of the End.DT6 SID	Data structure	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT6.
vrf	VPN instance name of the End.DT6 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the public network. An empty string indicates the public network.
evpn-enable	Information of the EVPN END.DT6 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT6 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-dt46	Information of the End.DT46 SID	N/A	Members include: • vrf • evpn-enable • l3vpn-evpn-enable	This column is valid only when end-behavior-type is End.DT46.
vrf	VPN instance name of the End.DT46 SID	N/A	String. Length: 0 to 31 characters.	If this column is not included, the SID belongs to the

Column name	Column description	Column type	Data type and restrictions	Remarks
				public network. An empty string indicates the public network.
evpn-enable	Whether EVPN is enabled for the End.DT46 SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
l3vpn-evpn-enable	Information of L3VPN and EVPN END.DT46 type SID	N/A	Enumeration • 0—Disable • 1—Enable	N/A
end-as	Information of the End.AS SID	Data structure	Members include: • backup-value. • inner-type. • bypass. • bypass-sid. • service-class. • color. • diffserv-uniform. • ttl-value. • ttl-uniform. • l2-fwds. • l3-fwds. • cache.	This column is valid only when end-behavior-type is End.AS.
backup-value	Backup static SRv6 SID	N/A	String, Value range: 1 to $2^{static\text{-}length}$-1. String, IPv6 address string.	Example: String: 1 String: ::1
inner-type	Original message type	N/A	Enumeration: • None. • IPv4. • IPv6. • IPv4-IPv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
bypass	Enabling status of bypass	N/A	Enumeration: • disabled. • enabled.	N/A
bypass-sid	End.AS bypass SID value	N/A	String, IPv6 address string.	This column can be set only when bypass is enabled.
diffserv-mode	DiffServ mode	N/A	Enumeration: • Uniform. • Pipe.	N/A
service-class	Pipe-mode service class	N/A	Enumeration: • be. • af1. • af2. • af3. • af4. • ef. • cs6. • cs7.	This column can be set only when diffserv-mode is pipe.
color	Color for packets of the specified pipe-mode service class	N/A	Enumeration: • Green. • Yellow. • Red.	This column can be set only when diffserv-mode is pipe.
ttl-mode	TTL processing mode	N/A	Enumeration: • Uniform. • Pipe.	N/A
ttl-value	TTL value	N/A	Unsigned integer. Value range: 1 to 255.	This column can be set only when ttl-mode is pipe.
l2-fwds	SFC Layer 2 Ethernet encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l2-fwds table.

Column name	Column description	Column type	Data type and restrictions	Remarks
l3-fwds	SFC Layer 3 IPv4 or IPv6 encapsulation method	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/l3-fwds table.
cache	Cache configuration	Data structure	Members include: • cache-source-address. • sl-num. • ipv6addrs.	For more information, see the srv6/locators/staticsid/local-sids/cache table.
source-address	Source address used for SFF encapsulation	N/A	String, IPv6 address string.	Example: 1::1.
sl-num	Number of nodes that packets must visit before reaching the destination address	N/A	Unsigned integer.	N/A
ipv6addrs	List of SIDs to be encapsulated	Sublist	N/A	For more information, see the srv6/locators/staticsid/local-sids/cache/ipv6addrs table.

traffic-service-class	Traffic statistic service-class enable	N/A	Boolean: • true. • false.	N/A
traffic-statistics-interval	Traffic statistics interval	N/A	Unsigned integer. Value range: 5 to 65535 seconds. Default: 30 seconds.	N/A
backup-hot-standby	Hot-standby backup.	N/A	Boolean: • **true.** ——Hot standy is enabled. This value equals to backup-hot-standby-type 1 • **false.** ——Hot standby is not enabled. This value equals to backup-hot-standby-type 0	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Hot standby not enabled (default). This value equals to setting backup-hot-standby to false. • 1—Enable policy hot standby. This value equasl to setting backup-hot-standby to true • 2—Enable policy hot standby with multilevel-backup	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
sbfd	SBFD function	N/A	Boolean: • **true.** • **false.**	N/A
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-reverse-path-type	Reverse path for SBFD packets	N/A	Enumeration: • **0**—No reverse path is specified for SBFD packets (default). • **1**—Use the SID list associated with the reverse BSID as the reverse path for SBFD packets.	N/A
fwd-ignore-la st-sid	Ignore last sid when traffic forwarded	N/A	Enumeration: • disabled(default). • enabled	N/A
bfd-echo	BFD echo function	N/A	Boolean: • **true.** • **false.**	N/A
bfd-echo-sour ceipv6	Source IPv6 address for BFD echo session	N/A	IPv6 address, hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
bfd-echo-tem plate	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-bac kuptemplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-reve rse-path-bsid	Enable BFD echo reverse path using Binding SID function	N/A	Boolean: • true. • false.	N/A
bfd-type	BFD type	N/A	Enumeration: • 0—Bypass (default). • 1—No bypass.	N/A
switch-delay	Switchover delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds. Default: 5000 milliseconds.	N/A
delete-delay	Deletion delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds. Default: 20000 milliseconds.	N/A
bgp-ls	Advertise link state information to BGP	N/A	Boolean: • **true.** • **false.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
pce-delegation	Enable PCE delegation function	N/A	Boolean: • **true.** • **false.**	N/A
passive-delegate-report-only	Enable PCE passive-delegate report-only function	N/A	Boolean: • **true.** • **false.**	N/A
pce-reoptimization	Enable PCE reoptimization function	N/A	Boolean: • true. • false.	N/A
pce-reoptimization-frequency	Frequency of PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds. Default: 3600 seconds.	You must make sure pce-reoptimization is true.
path-verification	Enable path verification	N/A	Boolean: • true. • false.	N/A
path-verification-type	Path verification type	N/A	Enumeration: • 0—Path Verification is disabled(default). • 1—Enable path verification. • 2—Enable specified-sid path verification.	N/A
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false(default).	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false(default).	N/A
up-delay	All policy seglist up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
calc-schedule-interval	Time interval of calculation.	Data structure	Members include: • maximum. • minimum. • incremental. • conservative. • millisecond.	N/A
maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60 seconds. Default: 5 seconds.	When configuring minimum, incremental and conservative, maximum must be set; maximum cannot be set at the same time as millisecond.
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000	When configuring incremental and conservative, minimum

Column name	Column description	Column type	Data type and restrictions	Remarks
			milliseconds. Default: 50 milliseconds.	must be set; minimum cannot be set at the same time as millisecond.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000 milliseconds. Default: 200 milliseconds.	When configuring conservative, incremental must be set; minimum cannot be set at the same time as millisecond.
conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • true—Enable route calculation is based on the maximum time interval. • false—Disable route calculation is based on the maximum time interval.	Conservative cannot be set at the same time as millisecond.
millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000 milliseconds. Default: 0 milliseconds.	Millisecond cannot be set at the same time as maximum ,minimum, incremental and conservative.
suppress-flapping	Flapping suppression for srv6-policy sid.	Data structure	Members include: • enable. • detect-interval. • threshold. • resume-interval.	N/A
enable	Enable suppression flapping	N/A	Boolean: • true. • false. Default: true.	N/A
detect-interval	Detect interval of sid flapping suppression	N/A	Unsigned integer. Value range:1 to 300 seconds. Default:60 seconds.	When configuring minimum, resume-interval must be greater than detect-interval.
threshold	Threshold of sid flapping suppression	N/A	Unsigned integer. Value range:1 to 1000. Default:10.	N/A
resume-interval	Resume interval of sid flapping suppression	N/A	Unsigned integer. Value range:2 to 1000 seconds. Default:120 seconds.	When configuring minimum, resume-interval must be greater than detect-interval.
bfd-first-fail-timer	Timer that delays reporting the first BFD session setup failure	N/A	Unsigned integer. Value range: 1 to 600 seconds. Default: 60 seconds.	N/A
segment-lists	Information of the segment-lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A

segment-routing-ipv6/traffic-engineering/attributes/segment-lists

This table contains segment list configuration information for SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering/attributes.

Table description

Item	Description
Feature name	srv6-policy
Table name	segment-lists
Table type	Multi-instance table
Row name	segment-list
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Segment list name	Index	String. Length: 1 to 128 characters.	N/A
local-binding-sid	Local Binding SID value	N/A	IPv6: hexadecimal string, colon-separated.	N/A
reverse-binding-sid	Reverse Binding SID value	N/A	IPv6: hexadecimal string, colon-separated.	N/A
segments	Information of the segments	Sublist	For details of the sublist, refer to the segments table.	N/A

segment-routing-ipv6/traffic-engineering/attributes/segment-lists/segments

This table contains segment configuration information for SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	segments
Table type	Multi-instance table
Row name	segment
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Segment ID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
type	Segment type	N/A	Enumeration: • 2—segment-type-2.	Only 2 is supported now.
segment-types	Types of segments	Sublist	For details of the sublist, refer to the segment-types table.	N/A

segment-routing-ipv6/traffic-engineering/attributes/segment-lists/segments/segment-types

This table contains segment type configuration information for SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	segment-types
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
segment-type-2	SRv6 SIDs	Subtable	For details of the subtable, refer to the segment-type-2 table.	N/A

segment-routing-ipv6/traffic-engineering/attributes/segment-lists/segments/segment-types/segment-type-2

This table contains segment-type-2 configuration information for SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	segment-type-2
Table type	Single-instance table
Row name	None
Restrictions	You must set the segment-type-2 table together with the segments table. You can't delete the segment-type-2 table seperately. When you delete the segments table, the segment-type-2 table is deleted at the same time.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sid-value	SRv6 SID value	N/A	IPv6: hexadecimal string, colon-separated.	N/A
prefix-length	Common prefix length of the next G-SID	N/A	Unsigned char. Value range: 1 to 94	N/A
flags	Segment Flags	N/A	Unsigned char. Value range: 0 to 255	N/A

segment-routing-ipv6/traffic-engineering/policies

This table contains SRv6 policy configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	policies
Table type	Multi-instance table
Row name	policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
endpoint	IPv6 address of the policy endpoint	Index	IPv6: hexadecimal string, colon-separated.	N/A
name	SRv6 policy name	N/A	String. Length: 1 to 59 characters.	Once a policy name is created, it cannot be modified.
binding-sid	Binding SID information	Data structure	Members include: • dataplane. • value.	N/A
dataplane	Binding SID dataplane type	N/A	Enumeration: • 2—SRv6.	Only 2 is supported now.
value	Binding SID value	N/A	IPv6: hexadecimal string, colon-separated.	N/A
admin-state	Admin state of the policy	N/A	Enumeration: • 1—UP. • 2—DOWN	N/A
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service	Traffic statistic	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
-class	service-class enable		• true. • false.	
backup-hot-standby	Hot-standby backup.	N/A	Boolean: • **true**. ——Hot standy is enabled. This value equals to backup-hot-standby-type 2 • **false**. ——Hot standby is not enabled. This value equals to backup-hot-standby-type 1**.**	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Use policy-attributes/backup-hot-standby-type setting (default). • 1—Disable policy hot standby. This value equals to setting backup-hot-standby to false.. • 2—Enable policy hot standby. This value equals to setting backup-hot-standby to true • 3—Enable policy hot standby with multilevel-backup.	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false.	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-oam-sid	OAM SID for SBFD	N/A	IPv6: hexadecimal string, colon-separated.	Example: 12::21.
sbfd-encap	Encapsulation	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	mode		• 1—ENCAP • 2—INSERT • 3—INSERT NO ENDPOINT	
sbfd-reverse-path-type	Reverse path for SBFD packets	N/A	Enumeration: • **0**—No reverse path is specified for SBFD packets (default). • **1**—Use the SID list associated with the reverse BSID as the reverse path for SBFD packets.	N/A
fwd-ignore-last-sid	Ignore last sid when traffic forwarded	N/A	Enumeration: • disabled. • enabled	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo session	N/A	IPv6: hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
source-address	Source IPv6 address for srv6 policy	N/A	IPv6: hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value. Now Source IPv6 address only for BFD echo and sbfd packet
bfd-echo-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-oam-sid	OAM SID for BFD	N/A	IPv6: hexadecimal string, colon-separated.	Example: 12::21.
bfd-encap	Encapsulation mode	N/A	Enumeration: • 1—ENCAP • 2—INSERT	N/A
bfd-echo-reverse-path-bsid	Enable BFD echo reverse path using Binding SID function	N/A	Boolean: • true. • false.	N/A
bfd-type	BFD type	N/A	Enumeration: • 0—Using BFD-type configuration in attributes (default). • 1—No bypass. • 2—Bypass.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
service-class	Service class for the policy	N/A	Unsigned integer. The value range varies by device model.	The smaller the value, the lower the priority.When service class no set, the default class is 255. Service class 255 means the lowest priority class.
rate-limit	Rate limit for the policy	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
pce-delegation	Enable PCE delegation function	N/A	Boolean: • **true.** • **false.**	N/A
passive-delegate-report-only	Enable PCE passive-delegate report-only function	N/A	Boolean: • **true.** • **false.**	N/A
pce-reoptimization	Enable PCE reoptimization function	N/A	Boolean: • true. • false.	N/A
pce-reoptimization-frequency	Frequency of PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds. Default: 3600 seconds.	You must make sure pce-reoptimization is true.
path-verification	Enable path verification	N/A	Boolean: • true. • false.	N/A
path-verification-type	Path verification type	N/A	Enumeration: • 0—Using path-verification configuration in attributes (default). • 1—Disable path verification. • 2—Enable path verification. • 3—Enable specified-sid path verification.	N/A
autoroute	SRv6 Policy autoroute Information of IGP	Data structure	Members include: • protocol. • cost-absolute • cost-relative	N/A
protocol	IGP protocol	N/A	String. • all • isisv6 • ospfv3	N/A
cost-absolute	Absolute cost	N/A	Unsigned integer. Value range: 1 to 65535.	Cost-absolute and cost-relative cannot both be set at the same time

Column name	Column description	Column type	Data type and restrictions	Remarks
cost-relative	Relative cost	N/A	Integer. Value range: -10 to 10.	Cost-absolute and cost-relative cannot both be set at the same time
autoroute-parameters	Autoroute parameters	Sublist	For more information about the sublist, refer to the autoroute-parameters table.	N/A
bypassEnable	Enable midpoint protection	N/A	Boolean: • true. • false (default).	N/A
up-delay	Policy seglist up delay time	N/A	Unsigned integer. Value range: 1 to 600000.	N/A
candidate-paths	Information of the candidate paths	Sublist	For details of the sublist, refer to the candidate-paths table.	N/A

segment-routing-ipv6/traffic-engineering/policies/autoroute-parameters

This table contains SRv6 policy autoroute parameters.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	autoroute-parameters
Table type	Multi-instance table
Row name	autoroute-parameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol	IGP protocol	Index	String. • isisv6.	Specify both the index and non-index parameters for create,merge or replace

Column name	Column description	Column type	Data type and restrictions	Remarks
				operation. Specify only the index parameter for delete or remove operation.
type	Enable type	N/A	String: • host-only.	N/A
route-policy	Name of the routing policy	N/A	String. Length: 1 to 63 characters.	N/A
include-ipv4	Enable support ipv4 route autoroute	N/A	Enumeration: • true. • false.(default)	N/A

segment-routing-ipv6/traffic-engineering/policies/candidate-paths

This table contains candidate path configuration for an SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	candidate-paths
Table type	Multi-instance table
Row name	candidate-path
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that	Index	String. Length: 0 to 160 characters.	This column will be ignored when protocol-origin is 20 in some products and is 30.

Column name	Column description	Column type	Data type and restrictions	Remarks
	signaled/instantiated the candidate path on the headend			
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535 in some products.	N/A
preference	Preference of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535	You must set preference equal to discriminator in some products..
dynamic	Dynamic path	N/A	Boolean: • **true.** • **false.**	N/A
pcep	Enable PCE computed SID list function	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
router-target	Router ID of the destinaton node	N/A	IPv4: String, dotted decimal notation.	N/A
name	Path name of the candidate path	N/A	String. Length: 1 to 59 characters.	N/A
bsid	Binding-SID of the candidate path	N/A	IPv6: hexadecimal string, colon-separated.	N/A
strict-sid-only	Enable strict sid only function	N/A	Boolean: • true. • false.	You must make sure dynamic is true.
metric	Path metric	N/A	Boolean: • true. • false.	You must make sure dynamic is true.
metric-type	Path metric type	N/A	Enumeration: • 1—hop count. • 2—igp. • 3—latency. • 4—te.	You must make sure metric is true.
sid-limit	Limit number of SIDs in a SID list	N/A	Unsigned integer.	You must make sure metric is true.
constraints	Path constraints	N/A	Boolean: • true. • false.	N/A
segments	Path segments constraints	N/A	Boolean: • true. • false.	You must make sure constraints is true.
sid-algorithm	Prefix-sid algorithm.	N/A	Unsigned integer. Value range: 128 to 255	You must make sure segments is true.
affinity	Affinity constraints	N/A	Boolean: • true.	You must make sure constraints is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false.	
include-any-enable	Enable affinity attributes, at least one of which must be included.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
include-all-enable	Enable affinity attributes that must be all included.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
exclude-any-enable	Enable the affinity attributes to exclude.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
network-slice	Network slice instance information	Data structure	Members include: • slice-id.	N/A
slice-id	ID of a network slice instance	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
affinities-include-any	Information of affinities, at least one of which must be included.	Sublist	For details of the sublist, refer to the affinities-include-any table.	You must make sure include-any-enable is true.
affinities-include-all	Information of affinities that must be all included.	Sublist	For details of the sublist, refer to the affinities-include-all table.	You must make sure include-all-enable is true.
affinities-exclude-any	Information of affinities to exclude.	Sublist	For details of the sublist, refer to the affinities-exclude-any table.	You must make sure exclude-any-enable is true.
segment-lists	Information of segment lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A

segment-routing-ipv6/traffic-engineering/policies/candidate-paths/segment-lists

This table contains segment list information of an SRv6 policy candidate path.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy

segment-routing-ipv6/traffic-engineering/policygroups

This table contains SRv6 policy group configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	policygroups
Table type	Multi-instance table
Row name	policygroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
groupid	Policy group ID	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
endpoint	IPv6 address of the policy group endpoint	N/A	IPv6: hexadecimal string, colon-separated.	N/A
group-color	Group color value	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
drop-upon-mismatch	Enable dropping traffic when the policy or best-effort mismatch	N/A	Enumeration: • disabled(default). • enabled.	N/A
forward-type-dot1p	802.1p priority-based forwarding type	N/A	Boolean: • **true.** • **false.**	N/A
forward-type	Forwarding type	N/A	Enumeration: • dscp—Forward-type-dscp(default). • dot1p—802.1p priority-based forwarding type. • serviceclass—Class-based Tunnel Selection forwarding type.	N/A
best-effort-serviceclass	Serviceclass values for packets matching	N/A	String. It is a comma-separated list of serviceclass values. Each item can be an individual serviceclass value or a serviceclass value range. Use a tilde (~) to separate the start and end serviceclass values of a range. The string cannot include blank	Example: 1,2,3,5~8. Available serviceclass values are determined by product. You must make sure forward-type is serviceclass.

Column name	Column description	Column type	Data type and restrictions	Remarks
			spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an serviceclass list for best-effort.	
best-effort-default	Use SRv6-BE as the default policy for packets	N/A	Enumeration: • disabled(default). • enabled.	You must make sure forward-type is serviceclass.
best-effort-ipv4-default	Use SRv6-BE as the default policy for IPv4 packets	N/A	Boolean: • **true** • **false**	N/A
best-effort-ipv6-default	Use SRv6-BE as the default policy for IPv6 packets	N/A	Boolean: • **true** • **false**	N/A
autoroute	SRv6 policy autoroute information of IGP	Data structure	Members include: • protocol. • cost-absolute. • cost-relative.	N/A
protocol	IGP protocol	N/A	String. • isisv6.	N/A
cost-absolute	Absolute cost	N/A	Unsigned integer. Value range: 1 to 65535.	The absolute cost and relative cost cannot be set in pairs.
cost-relative	Relative cost	N/A	Integer. Value range: -10 to 10.	The absolute cost and relative cost cannot be set in pairs.
autoroute-parameters	Autoroute parameters	Sublist	For more information about the sublist, refer to the autoroute-parameters table.	N/A
color-dscps	Color-DSCP mappings	Sublist	For more information about the sublist, refer to the color-dscps table.	N/A
color-dot1ps	Color-802.1p priority mappings	Sublist	For more information about the sublist, refer to the color-dot1ps table.	N/A
color-serviceclasses	Color-serviceclass mappings	Sublist	For more information about the sublist, refer to the color-serviceclasses table.	You must make sure forward-type is serviceclass.

segment-routing-ipv6/traffic-engineering/policygroups/autoroute-parameters

This table contains SRv6 policy group autoroute parameters.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	autoroute-parameters
Table type	Multi-instance table
Row name	autoroute-parameter
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol	IGP protocol	Index	String. • isisv6.	Specify both the index and non-index parameters for create,merge or replace operation. Specify only the index parameter for delete or remove operation.
type	Enable type	N/A	String: • host-only.	N/A
route-policy	Name of the routing policy	N/A	String. Length: 1 to 63 characters.	N/A
include-ipv4	Enable support ipv4 route autoroute	N/A	Enumeration: • true. • false.(default)	N/A

segment-routing-ipv6/traffic-engineering/policygroups/color-dscps

This table contains color-DSCP mappings for an SRv6 policy group.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	color-dscps
Table type	Multi-instance table
Row name	color-dscp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
dscp-ipv4	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a tilde (~) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an IPv4 DSCP list for a color value.	Example: 1,2,3,5~8,10~20. Available DSCP values are from 0 to 63.
dscp-ipv6	DSCP values for IPv6 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a tilde (~) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an IPv6 DSCP list for a color value.	Example: 1,2,3,5~8,10~20. Available DSCP values are from 0 to 63.
dscp-ipv4-default	Whether to use this SRv6 policy as the default policy for IPv4 packets	N/A	Boolean: • **true** • **false**	N/A
dscp-ipv6-def	Whether to use	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ault	this SRv6 policy as the default policy for IPv6 packets		• **true** • **false**	

segment-routing-ipv6/traffic-engineering/policygroups/color-dot1ps

This table contains color-802.1p priority mappings for an SRv6 policy group.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	color-dot1ps
Table type	Multi-instance table
Row name	color-dot1p
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
dot1p	802.1p priority values for packets matching	N/A	String. It is a comma-separated list of 802.1p priority values. Each item can be an individual 802.1p priority value or a 802.1p priority value range. Use a tilde (~) to separate the start and end 802.1p priority values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an 802.1p	Example: 0,1,3,5~7. Available Dot1p values are from 0 to 7.

Column name	Column description	Column type	Data type and restrictions	Remarks
			priority list for a color value.	
dot1p-default	Whether to use this SRv6 policy as the default policy for packets	N/A	Boolean: • **true** • **false**	N/A

segment-routing-ipv6/traffic-engineering/policygroups/color-serviceclasses

This table contains color-serviceclass mappings for an SRv6 policy group.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	color-serviceclasses
Table type	Multi-instance table, multi-level table
Row name	color-serviceclass
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
serviceclass	Serviceclass values for packets matching	N/A	String. It is a comma-separated list of serviceclass values. Each item can be an individual serviceclass value or a serviceclass value range. Use a tilde (~) to separate the start and end serviceclass values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy	Example: 1,2,3,5~8. Available serviceclass values are determined by product.

Column name	Column description	Column type	Data type and restrictions	Remarks
			group does not have an serviceclass list for a color value.	
serviceclass-default	Whether to use this SRv6 policy as the default policy for packets	N/A	Enumeration: • disabled(default). • enabled.	N/A

segment-routing-ipv6/traffic-engineering/on-demands

This table contains SRv6 policy on-demand configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	on-demands
Table type	Multi-instance table
Row name	on-demand
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the dynamic policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
dynamic	Configure dynamic features for SRv6-TE ODN	N/A	Boolean: • **true.** • **false.**	N/A
pcep	Enable PCE computed SID list function	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
restrict-prefix-list	Name of a prefix-list	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
delete-delay	Deletion delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds. Default: 180000 milliseconds.	N/A
maximum-sid-depth	Limit number of SIDs in a SID list	N/A	Unsigned integer.	N/A
sid-algorithm	Prefix-sid algorithm.	N/A	Unsigned integer. Value range: 128 to 255	You must make sure dynamic is true.
strict-sid-only	Enable strict sid only function	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
metric	Path metric	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
metric-type	Path metric type	N/A	Enumeration: • 1—hop count. • 2—igp. • 3—latency. • 4—te.	You must make sure metric is true.
include-any-enable	Enable affinity attributes, at least one of which must be included.	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
include-all-enable	Enable affinity attributes that must be all included.	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
exclude-any-enable	Enable the affinity attributes to exclude.	N/A	Boolean: • **true.** • **false.**	You must make sure dynamic is true.
affinities-include-any	Information of affinities, at least one of which must be included.	Sublist	For details of the sublist, refer to the affinities-include-any table.	You must make sure include-any-enable is true.
affinities-include-all	Information of affinities that must be all included.	Sublist	For details of the sublist, refer to the affinities-include-all table.	You must make sure include-all-enable is true.
affinities-exclude-any	Information of affinities to exclude.	Sublist	For details of the sublist, refer to the affinities-exclude-any table.	You must make sure exclude-any-enable is true.

segment-routing-ipv6/traffic-engineering/on-demands/affinities-include-any

This table contains affinity information of a SRv6 policy on-demand.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	affinities-include-any
Table type	Multi-instance table
Row name	include-any
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name associated with the affinity-map	Index	String. Length: 1 to 32 characters.	N/A

segment-routing-ipv6/traffic-engineering/on-demands/affinities-include-all

This table contains affinity information of a SRv6 policy on-demand.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	affinities-include-all
Table type	Multi-instance table

Item	Description
Row name	include-all
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name associated with the affinity-map	Index	String. Length: 1 to 32 characters.	N/A

segment-routing-ipv6/traffic-engineering/on-demands/affinities-exclude-any

This table contains affinity information of a SRv6 policy on-demand.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	affinities-exclude-any
Table type	Multi-instance table
Row name	exclude-any
Restrictions	None.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name associated with the affinity-map	Index	String. Length: 1 to 32 characters.	N/A

segment-routing-ipv6/traffic-engineering/on-demand-groups

This table contains SRv6 policy on-demand-group configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	on-demand-groups
Table type	Multi-instance table
Row name	on-demand-group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	On-demand-group color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
description	ODN group description	N/A	String. Length: 1 to 242 characters.	N/A
drop-upon-mismatch	Enable dropping traffic when the policy or best-effort mismatch	N/A	Enumeration: • disabled(default). • enabled.	N/A
forward-type-dscp	Forward-type-dscp	N/A	Boolean: • **true.** • **false.**	N/A
forward-type	Forwarding type	N/A	Enumeration: • none—Not configured(default). • dscp—Forward-type-dscp. • serviceclass—Class-based Tunnel Selection forwarding type.	N/A
best-effort-serviceclass	Serviceclass values for	N/A	String. It is a comma-separated list of	Example: 1,2,3,5~8. Available serviceclass

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets matching best-effort		serviceclass values. Each item can be an individual serviceclass value or a serviceclass value range. Use a tilde (~) to separate the start and end serviceclass values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an serviceclass list for best-effort.	values are determined by product. You must make sure forward-type is serviceclass.
best-effort-default	Use SRv6-BE as the default policy for packets	N/A	Enumeration: • disabled(default). • enabled.	You must make sure forward-type is serviceclass.
color-dscps	Color-DSCP mappings	Sublist	For more information about the sublist, refer to the color-dscps table.	N/A
color-serviceclasses	Color-serviceclass mappings	Sublist	For more information about the sublist, refer to the color-serviceclasses table.	You must make sure forward-type is serviceclass.

segment-routing-ipv6/traffic-engineering/on-demand-groups/color-dscps

This table contains color-DSCP mappings for an SRv6 policy on-demand-group.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	color-dscps
Table type	Multi-instance table
Row name	color-dscp
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
dscp-ipv4	DSCP values for IPv4 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a tilde (~) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an IPv4 DSCP list for a color value.	Example: 1,2,3,5~8,10~20. Available DSCP values are from 0 to 63.
dscp-ipv6	DSCP values for IPv6 packets matching	N/A	String. It is a comma-separated list of DSCP values. Each item can be an individual DSCP value or a DSCP value range. Use a tilde (~) to separate the start and end DSCP values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an IPv6 DSCP list for a color value.	Example: 1,2,3,5~8,10~20. Available DSCP values are from 0 to 63.
dscp-ipv4-default	Whether to use this SRv6 policy as the default policy for IPv4 packets	N/A	Boolean: • **true.** • **false.**	N/A
dscp-ipv6-default	Whether to use this SRv6 policy as the default policy for IPv6 packets	N/A	Boolean: • **true.** • **false.**	N/A

segment-routing-ipv6/traffic-engineering/on-demand-groups/color-serviceclasses

This table contains color-serviceclass mappings for an SRv6 policy group.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	color-serviceclasses
Table type	Multi-instance table, multi-level table
Row name	color-serviceclass
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
serviceclass	Serviceclass values for packets matching	N/A	String. It is a comma-separated list of serviceclass values. Each item can be an individual serviceclass value or a serviceclass value range. Use a tilde (~) to separate the start and end serviceclass values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an serviceclass list for a color value.	Example: 1,2,3,5~8. Available serviceclass values are determined by product.
serviceclass-default	Whether to use this SRv6 policy as the default policyfor packets	N/A	Enumeration: • disabled(default). • enabled.	N/A

segment-routing-ipv6/traffic-engineering/affinity-maps

This table contains SRv6 policy affinity-map configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	affinity-maps
Table type	Multi-instance table
Row name	affinity-map
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Name associated with the affinity-map	Index	String. Length: 1 to 32 characters.	N/A
bit-position	Bitposion of attribute	N/A	Unsigned integer. Value range: 0 to 31.	Bit-position must be specified.

Example

Configure an SRv6 policy:

```
<rpc message-id="100" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>
    </target>
    <config xmlns:xc="urn:ietf:params:xml:ns:netconf:base:1.0">
      <top xmlns="http://www.h3c.com/netconf/config:1.0">
        <segment-routing-ipv6 xc:operation="merge">
          <traffic-engineering>
            <attributes>
              <segment-lists>
                <segment-list>
                  <name>abc</name>
                  <segments>
                    <segment>
                      <index>10</index>
```

```
            <type>2</type>

Table description

Item	Description
Feature name	srv6-policy
Table name	attributes
Table type	Single-instance table
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
locator	Locator name	N/A	String. Length: 1 to 31 characters.	N/A
traffic-statistics	Traffic statistics enable	N/A	Boolean: • **true.** • **false.**	N/A
traffic-service-class	Traffic statistics service-class enable	N/A	Boolean: • **true.** • **false.**	N/A
traffic-statistics-interval	Traffic statistics interval	N/A	Unsigned integer. Value range: 5 to 65535 seconds.	N/A
backup-hot-standby	Hot-standby backup.	N/A	Boolean: • **true.** ——Hot standy is enabled. This value equals to backup-hot-standby-type 1 • **false.** ——Hot standby is not enabled. This value equals to backup-hot-standby-type 0	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Hot standby not enabled	If both backup-hot-stand

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default). This value equals to setting backup-hot-standby to false. • 1—Enable policy hot standby. This value equasl to setting backup-hot-standby to true • 2—Enable policy hot standby with multilevel-backup	by and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
sbfd	SBFD function	N/A	Boolean: • **true.** • **false.**	N/A
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backuptemplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-reverse-path-type	Reverse path for SBFD packets	N/A	Enumeration: • **0**—No reverse path is specified for SBFD packets. • **1**—Use the SID list associated with the reverse BSID as the reverse path for SBFD packets.	N/A
fwd-ignore-last-sid	Ignore last sid when traffic forwarded	N/A	Enumeration: • disabled. • enabled	N/A
bfd-echo	BFD echo function	N/A	Boolean: • **true.** • **false.**	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo session	N/A	IPv6 address, hexadecimal string, colon-separated.	N/A
bfd-echo-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-reverse-path-bsid	Enable BFD echo reverse path using Binding SID function	N/A	Boolean: • true. • false.	N/A
bfd-type	BFD type	N/A	Enumeration: • 0—Bypass. • 1—No bypass**.**	N/A
switch-delay	Switchoverdelay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
delete-delay	Deletion delay time interval	N/A	Unsigned integer. Value range: 0 to 600000 milliseconds.	N/A
bgp-ls	Advertise link state information to BGP	N/A	Boolean: • **true.** • **false.**	N/A
pce-delegation	Enable PCE delegation function	N/A	Boolean: • **true.** • **false.**	N/A
passive-delegate-report-only	Enable PCE passive-delegate report-only function	N/A	Boolean: • **true.** • **false.**	N/A
pce-reoptimization	Enable PCE reoptimization function	N/A	Boolean: • true. • false.	N/A
pce-reoptimization-frequency	Frequency of PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds.	You must make sure pce-reoptimization is true.
path-verification	Enable path verification	N/A	Boolean: • **true.** • **false.**	N/A
path-verification-type	Path verification type	N/A	Enumeration: • 0—Path Verification is disabled(default). • 1—Enable path verification. • 2—Enable specified-sid path verification.	N/A
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false.	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
up-delay	All policy segment list up delay time	N/A	Unsigned integer. Value range: 0 to 600000.	N/A
calc-schedule-interval	Time interval of calculation.	Data structure	Members include: • maximum. • minimum. • incremental. • conservative. • millisecond.	N/A
maximum	Maximum time interval	N/A	Unsigned integer. Value range:1 to 60 seconds.	When configuring minimum, incremental and conservative,

Column name	Column description	Column type	Data type and restrictions	Remarks
				maximum must be set; maximum cannot be set at the same time as millisecond.
minimum	Minimum time interval.	N/A	Unsigned integer. Value range: 10～60000 milliseconds.	When configuring incremental and conservative, minimum must be set; minimum cannot be set at the same time as millisecond.
incremental	Time interval of penalty increment.	N/A	Unsigned integer. Value range: 10～60000 milliseconds.	When configuring conservative, incremental must be set; minimum cannot be set at the same time as millisecond.
conservative	Enable route calculation is based on the maximum time interval.	N/A	Boolean: • true—Enable route calculation is based on the maximum time interval. • false—Disable route calculation is based on the maximum time interval.	Conservative cannot be set at the same time as millisecond.
millisecond	Fixed time interval.	N/A	Unsigned integer. Value range: 0～10000 milliseconds.	Millisecond cannot be set at the same time as maximum ,minimum, incremental and conservative.
suppress-flapping	Flapping suppression for srv6-policy sid.	Data structure	Members include: • enable. • detect-interval. • threshold. • resume-interval.	N/A
enable	Enable suppression flapping	N/A	Boolean: • true. • false.	N/A
detect-interval	Detect interval of sid flapping suppression	N/A	Unsigned integer. Value range:1 to 300 seconds.	When configuring minimum, resume-interval must be greater than detect-interval.
threshold	Threshold of sid flapping suppression	N/A	Unsigned integer. Value range:1 to 1000.	N/A
resume-interval	Resume interval of sid flapping suppression	N/A	Unsigned integer. Value range:2 to 1000 seconds.	When configuring minimum, resume-interval must be greater

Column name	Column description	Column type	Data type and restrictions	Remarks
				than detect-interval.
bfd-first-fail-timer	Timer that delays reporting the first BFD session setup failure	N/A	Unsigned integer. Value range: 1 to 600 seconds.	N/A
segment-lists	Information of the segment-lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A

segment-routing-ipv6/traffic-engineering/attributes/segment-lists

This table contains segment list configuration information for SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
endpoint	IP address of the policy endpoint	Index	IPv6: hexadecimal string, colon-separated.	N/A
name	SRv6 policy name	N/A	String. Length: 0 to 59 characters.	N/A
oper-state	SRv6 policy state	N/A	Enumeration: • 1—UP. • 2—DOWN.	N/A
forwarding-state	SRv6 policy forwarding-state	N/A	String. Length: 1 to 51 characters.	N/A
priority	Priority of the policy	N/A	Unsigned char.	N/A
up-time	Policy up time	N/A	DateTime.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Format: YYYY-MM-DDTHH:MM:SS.	
down-time	Policy down time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
down-reason	Policy down reason	N/A	String. Length: 1 to 51 characters.	N/A
binding-sid	Binding SID information	Data structure	Members include: • dataplane. • value. • alloc-mode • allocated-sid • oper-state	N/A
dataplane	Binding SID dataplane type	N/A	Enumeration: • 2—SRv6.	N/A
value	Binding SID value	N/A	IPv6: hexadecimal string, colon-separated.	N/A
alloc-mode	Binding SID type	N/A	Enumeration: • 1—explicitly specified BSID. • 2—dynamically allocated BSID.	N/A
allocated-sid	Allocated SID value for the binding SID	N/A	Hexadecimal string, colon-separated.	N/A
oper-state	Binding SID operational state	N/A	Enumeration: • 1—ALLOC-PENDING • 3—PROGRAMMED. • 4—CONFLICT.	N/A
counters	Forwarding statistics counters	Data structure	Members include: • pkts. • octets. • inpkts • inoctets • avg-bit-rate • avg-octet-rate • avg-packet-rate • rt-bit-rate • rt-octet-rate • rt-packet-rate	N/A
pkts	Number of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
octets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
inpkts	Number of packets forwarded	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	via the policy			
inoctets	Number of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
avg-bit-rate	Average rate of bits forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
avg-octet-rate	Average rate of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
avg-packet-rate	Average rate of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-bit-rate	Real-time rate of bits forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-octet-rate	Real-time rate of bytes forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
rt-packet-rate	Real-time rate of packets forwarded via the policy	N/A	Unsigned integer. Value range: 0 to 2^{64} – 1.	N/A
admin-state	Admin state of the policy	N/A	Enumeration: • 1—UP. • 2—DOWN.	N/A
traffic-statistics	Traffic statistics enable	N/A	Boolean: • true. • false.	N/A
traffic-service-class	Traffic statistics service-class enable	N/A	Boolean: • true. • false.	N/A
backup-hot-standby	Hot-standby backup.	N/A	Boolean: • **true**. ——Hot standy is enabled. This value equals to backup-hot-standby-type 2 • **false**. ——Hot standby is not enabled. This value equals to backup-hot-standby-type 1**.**	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies.
backup-hot-standby-type	Hot-standby backup type	N/A	Enumeration: • 0—Use policy-attributes/backup-hot-standby-type setting (default). • 1—Disable policy hot standby. This value equals to setting backup-hot-standby to false.. • 2—Enable policy hot standby. This	If both backup-hot-standby and backup-hot-standby-type exist, the backup-hot-standby-type setting applies

Column name	Column description	Column type	Data type and restrictions	Remarks
			value equals to setting backup-hot-standby to true • 3—Enable policy hot standby with multilevel-backup.	
drop-upon-invalid	Enable dropping traffic when the policy is invalid	N/A	Boolean: • true. • false.	N/A
bfd-trigger-path-down	BFD triggers the policy path to be down	N/A	Boolean: • true. • false.	N/A
sbfd	SBFD function	N/A	Boolean: • true. • false.	N/A
sbfd-remoteid	Remote discriminator of a BFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
sbfd-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-backupt emplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
sbfd-oam-sid	OAM SID for SBFD	N/A	IPv6: hexadecimal string, colon-separated.	Example: 12::21.
sbfd-encap	Encapsulation mode	N/A	Enumeration: • 1—ENCAP • 2—INSERT • 3—INSERT NO ENDPOINT	N/A
sbfd-reverse-path-type	Reverse path for SBFD packets	N/A	Enumeration: • **0**—No reverse path is specified for SBFD packets. • **1**—Use the SID list associated with the reverse BSID as the reverse path for SBFD packets.	N/A
fwd-ignore-last-sid	Ignore last sid when traffic forwarded	N/A	Enumeration: • disabled. • enabled.	N/A
bfd-echo	BFD echo function	N/A	Boolean: • true. • false.	N/A
bfd-echo-sourceipv6	Source IPv6 address for BFD echo session	N/A	IPv6: hexadecimal string, colon-separated.	N/A
source-address	Source IPv6 address for srv6 policy	N/A	IPv6: hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value. Now Source IPv6

Column name	Column description	Column type	Data type and restrictions	Remarks
				address only for BFD echo and sbfd packet
bfd-echo-template	Name of a BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-echo-backuptemplate	Name of a backup path BFD template	N/A	String. Length: 1 to 63 characters.	N/A
bfd-oam-sid	OAM SID for BFD	N/A	IPv6: hexadecimal string, colon-separated.	Example: 12::21.
bfd-encap	Encapsulation mode	N/A	Enumeration: • 1—ENCAP • 2—INSERT	N/A
bfd-echo-reverse-path-bsid	Enable BFD echo reverse path using Binding SID function	N/A	Boolean: • true. • false.	N/A
bfd-type	BFD type	N/A	Enumeration: • 0—Using BFD-type configuration in attributes. • 1—No bypass. • 2—Bypass.	N/A
service-class	Service class for the policy	N/A	Unsigned integer. The value range varies by device model.	The smaller the value, the lower the priority.When service class no set, the default class is 255. Service class 255 means the lowest priority class.
rate-limit	Rate limit for the policy	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
pce-delegation	Enable PCE delegation function	N/A	Boolean: • **true.** • **false.**	N/A
passive-delegate-report-only	Enable PCE passive-delegate report-only function	N/A	Boolean: • **true.** • **false.**	N/A
pce-reoptimization	Enable PCE reoptimization function	N/A	Boolean: • true. • false.	N/A
pce-reoptimization-frequency	Frequency of PCE reoptimization	N/A	Unsigned integer. Value range:1 to 604800 seconds.	You must make sure pce-reoptimization is true.
path-verification	Enable path verification	N/A	Boolean: • **true.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false.**	
path-verification-type	Path verification type	N/A	Enumeration: • 0—Using path-verification configuration in attributes (default). • 1—Disable path verification. • 2—Enable path verification. • 3—Enable specified-sid path verification.	N/A
autoroute	SRv6 Policy autoroute Information of IGP	Data structure	Members include: • protocol. • cost-absolute • cost-relative	N/A
protocol	IGP protocol	N/A	String. • all • isisv6 • ospfv3	N/A
cost-absolute	Absolute cost	N/A	Unsigned integer. Value range: 1 to 65535	Cost-absolute and cost-relative cannot both be set at the same time
cost-relative	Relative cost	N/A	Integer. Value range: -10 to 10.	Cost-absolute and cost-relative cannot both be set at the same time
autoroute-parameters	Autoroute parameters	Sublist	For more information about the sublist, refer to the autoroute-parameters table.	N/A
bypassEnable	Enable midpoint protection	N/A	Boolean: • true. • false.	N/A
up-delay	Policy segment list up delay time	N/A	Unsigned integer. Value range: 0 to 600000.	N/A
candidate-paths	Information of the candidate paths	Sublist	For details of the sublist, refer to the candidate-paths table.	N/A

segment-routing-ipv6/traffic-engineering/policies/autoroute-parameters

This table contains SRv6 policy autoroute parameters.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol	IGP protocol	Index	String. • isisv6.	N/A
type	Enable type	N/A	String: • host-only.	N/A
route-policy	Name of the routing policy	N/A	String. Length: 1 to 63 characters.	N/A
include-ipv4	Enable support ipv4 route autoroute	N/A	Enumeration: • true. • false.	N/A

segment-routing-ipv6/traffic-engineering/policies/candidate-paths

This table contains candidate path configuration information for an SRv6 policy.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	candidate-paths
Table type	Multi-instance table
Row name	candidate-path
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that signaled/instantiated the candidate path on the headend	Index	String. Length: 0 to 160 characters.	N/A
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535 in some products..	N/A
preference	Preference of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535	You must set preference equal to discriminator in some products.
name	SRv6 policy candidate-path name	N/A	String. Length: 0 to 59 characters.	N/A
is-best-candidate-path	Best candidate path	N/A	Boolean: • true • false	N/A
non-selection-reason	Reason when the candidate path was not selected	N/A	String. Length: 1 to 51 characters.	For instance: Candidate-path-not-selected-no-valid-segment-list. Candidate-path-not-selected-empty-segment-list. Candidate-path-not-selected-not-best. Candidate-path-not-selected-invalid-binding-sid.
is-valid	Validity of the segment list	N/A	Boolean: • true—Valid. • false—Invalid.	N/A
dynamic	Dynamic path	N/A	Boolean • **true.** • **false.**	N/A
pcep	Enable PCE computed SID list function	N/A	Boolean • **true.** • **false.**	You must make sure dynamic is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
router-target	Router ID of the destinaton node	N/A	IPv4: String, dotted decimal notation.	N/A
bsid	Binding-SID of the candidate path	N/A	IPv6: hexadecimal string, colon-separated.	N/A
strict-sid-only	Enable strict sid only function	N/A	Boolean: • true. • false.	You must make sure dynamic is true.
metric	Path metric	N/A	Boolean: • true. • false.	You must make sure dynamic is true.
metric-type	Path metric type	N/A	Enumeration: • 1—hop count. • 2—igp. • 3—latency. • 4—te.	You must make sure metric is true.
sid-limit	Limit number of SIDs in a SID list	N/A	Unsigned integer.	You must make sure metric is true.
constraints	Path constraints	N/A	Boolean: • true. • false.	N/A
segments	Path segments constraints	N/A	Boolean: • true. • false.	You must make sure constraints is true.
sid-algorithm	Prefix-sid algorithm.	N/A	Unsigned integer. Value range: 128 to 255	You must make sure segments is true.
affinity	Affinity constraints	N/A	Boolean: • true. • false.	You must make sure constraints is true.
include-any-enable	Enable affinity attributes, at least one of which must be included.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
include-all-enable	Enable affinity attributes that must be all included.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
exclude-any-enable	Enable the affinity attributes to exclude.	N/A	Boolean: • true. • false.	You must make sure affinity is true.
network-slice	Network slice instance information	Data structure	Members include: • slice-id.	N/A
slice-id	ID of a network slice instance	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
affinities-inclu	Information of	Sublist	For details of the sublist, refer	You must make sure

Column name	Column description	Column type	Data type and restrictions	Remarks
de-any	affinities, at least one of which must be included.		to the affinities-include-any table.	include-any-enable is true.
affinities-include-all	Information of affinities that must be all included.	Sublist	For details of the sublist, refer to the affinities-include-all table.	You must make sure include-all-enable is true.
affinities-exclude-any	Information of affinities to exclude.	Sublist	For details of the sublist, refer to the affinities-exclude-any table.	You must make sure exclude-any-enable is true.
segment-lists	Information of the segment-lists	Sublist	For details of the sublist, refer to the segment-lists table.	N/A
forwarding-paths	Information of the forwarding-paths	Sublist	For details of the sublist, refer to the forwarding-paths table.	N/A

segment-routing-ipv6/traffic-engineering/policies/candidate-paths/affinities-include-any

Table type	Multi-instance table
Row name	sids
Restrictions	none

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
sid	SRv6 SID value	Index	IPv6:hexadecimal string, colon-separated.	N/A

segment-routing-ipv6/traffic-engineering/policygroups

This table contains SRv6 policy group configuration information.

XML structure

Please refer to the XML Structure of segment-routing-ipv6/traffic-engineering.

Table description

Item	Description
Feature name	srv6-policy
Table name	policygroups
Table type	Multi-instance table
Row name	policygroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
groupid	Policy group ID	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
endpoint	IPv6 address of the policy group endpoint	N/A	IPv6:hexadecimal string, colon-separated.	N/A
group-color	Group color value	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
group-origin	The origin of the policy group	N/A	String. Length: 1 to 32 characters.	N/A
drop-upon-mismatch	Enable dropping traffic when the policy or best-effort mismatch	N/A	Enumeration: • disabled. • enabled.	N/A
forward-type-dot1p	802.1p priority-based forwarding type	N/A	Boolean: • true • false	N/A
forward-type	Forwarding type	N/A	Enumeration: • dscp—Forward-type-dscp. • dot1p—802.1p priority-based forwarding type. • serviceclass—Class-based Tunnel Selection forwarding type	N/A
best-effort-serviceclass	Serviceclass values for packets matching	N/A	String. It is a comma-separated list of serviceclass values. Each item can be an individual serviceclass value or a serviceclass value range. Use a tilde (~) to separate the start and end	Example: 1,2,3,5~8. Available serviceclass values are determined by product.

Column name	Column description	Column type	Data type and restrictions	Remarks
			serviceclass values of a range. The string cannot include blank spaces or end with a comma or tilde. By default, an SRv6 policy group does not have an serviceclass list for best-effort.	
best-effort-default	Use SRv6-BE as the default policy for packets	N/A	Enumeration: • disabled. • enabled.	N/A
best-effort-ipv4-default	Use SRv6-BE as the default policy for IPv4 packets	N/A	Boolean: • true • false	N/A
best-effort-ipv6-default	Use SRv6-BE as the default policy for IPv6 packets	N/A	Boolean: • true • false	N/A
autoroute	SRv6 policy autoroute information of IGP	Data structure	Members include: • protocol. • cost-absolute. • cost-relative.	N/A
protocol	IGP protocol	N/A	String. • isisv6.	N/A
cost-absolute	Absolute cost	N/A	Unsigned integer. Value range: 1 to 65535.	The absolute cost and relative cost cannot be set in pairs.
cost-relative	Relative cost	N/A	Integer. Value range: -10 to 10.	The absolute cost and relative cost cannot be set in pairs.
autoroute-parameters	Autoroute parameters	Sublist	For more information about the sublist, refer to the autoroute-parameters table.	N/A
color-dscps	Color-DSCP mapping	Sublist	For more information about the color-dscps table.	N/A
color-dot1ps	Color-802.1p priority mappings	Sublist	For more information about the sublist, refer to the color-dot1ps table.	N/A
color-serviceclasses	Color-serviceclass mappings	Sublist	For more information about the sublist, refer to the color-serviceclasses table.	N/A

segment-routing-ipv6/traffic-engineering/policygroups/autoroute-parameters

This table contains SRv6 policy group autoroute parameters.

XML structure

Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
color	Color associated with the policy	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
endpoint	IP address of the policy endpoint	Index	IPv6: hexadecimal string, colon-separated.	N/A
name	SRv6 policy name	N/A	String. Length: 0 to 59 characters.	N/A
event	SRv6 policy event	N/A	Enumeration: • 1—Add. • 2—Update. • 3—Delete.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
oper-state	SRv6 policy state	N/A	Enumeration: • 1—UP. • 2—DOWN.	N/A
down-reason	SRv6 policy down reason	N/A	String. Length: 1 to 51 characters.	For instance: No-candidate-path. No-valid-candidate-path. Candidate-path-invalid-segment-list.
candidate-paths	Information of the candidate paths	Sublist	Members include: • protocol-origin • originator • discriminator • preference • name • is-best-candidate-path • non-selection-reason • is-valid • segment-lists	N/A
protocol-origin	Protocol origin of the candidate path	Index	Enumeration: • 10—PCEP • 20—BGP • 30—CLI	N/A
originator	Identifier (concatenation of ASN and node-address) of the node that signaled/instantiated the candidate path on the headend	Index	String. Length: 0 to 160 characters.	N/A
discriminator	Discriminator of the candidate path	Index	Unsigned integer. Value range: 1 to 65535.	N/A
preference	Preference of the candidate path	N/A	Unsigned integer. Value range: 1 to 65535	N/A
name	SRv6 policy candidate-path name	N/A	String. Length: 0 to 59 characters.	N/A
is-best-candidate-path	Best candidate path	N/A	Boolean: • true • false	N/A
non-selection-reason	Reason why the candidate path was not selected	N/A	String. Length: 1 to 51 characters.	N/A
is-valid	Validity of the segment list	N/A	Boolean: • true—Valid. • false—Invalid.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
segment-lists	Information of the segment-lists	Sublist	Members include: • list-id • name-ref • state • bfd-state • sid-list	N/A
list-id	Segment list ID	Index	Unsigned integer.	N/A
name-ref	Segment list for an SRv6 policy candidate path	Index	String. Length: 0 to 128 characters.	Reference to segment list name.
state	Segment list state	N/A	String. • Up • Down	N/A
bfd-state	Segment list BFD state	N/A	String. • No sbfd. • PathInactive. • Unkown. • Down • Up	N/A
sid-list	Information of the SID list	Sublist	Members include: • index • value	N/A
index	Index of SRv6 SID	Index	Unsigned integer.	N/A
sid-value	SRv6 SID value	N/A	Hexadecimal string, colon-separated.	N/A

Table description

Item	Description
Event stream name	SRV6PING
Event name	SRv6PingEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/srv6ping:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended query
PingSerial	Serial number of the ping operation	Unsigned integer. Value range: 1 to 4294967295.	No
Destination	Options for getting segment info from a policy or by input	N/A	No
Policy	SRv6-TE policy	N/A	No
PolicyName	SRv6-TE policy	String.	No

Column name	Column description	Data type and restrictions	Support for extended query
	name	Length: 1 to 59 characters.	
Endpoint	Endpoint address of the policy	IPv6: hexadecimal string, colon-separated.	No
Color	Color of the policy	Unsigned integer. Value range: 0 to 4294967295.	No
DestinationAddr	Destination IPv6 address	IPv6: hexadecimal string, colon-separated.	No
SegmentList	SID or SID list	N/A	No
Segment	SID information	N/A	No
SegmentID	SID	String. Length: 3 to 45 characters.	No
Behavior	SID behavior	Unsigned integer. Value range: 1 to 32767.	No
SIDStruct	SID structure	N/A	No
LBLength	Locator length	Unsigned integer. Value range: 0 to 4294967295.	No
LNLength	Node length	Unsigned integer. Value range: 0 to 4294967295.	No
FunLength	Function length	Unsigned integer. Value range: 0 to 4294967295.	No
ArgLength	Parameter length	Unsigned integer. Value range: 0 to 4294967295.	No
COC	Add COC logo	Enumeration: • **16**—COC16. • **32**—COC32.	Only 32 is supported now.
CommonPrefixLength	Common prefix length of the next G-SID	Unsigned integer. Value range: 1 to 94.	No
SourceIpAddress	Source IPv6 address of echo requests	IPv6: hexadecimal string, colon-separated.	No
SendInterval	Time interval for sending echo requests	Unsigned integer. Value range: 1 to 10000 milliseconds. Default is 1000 milliseconds.	No
SendPacketsNum	Number of sent echo requests	Unsigned integer. Value range: 1 to 1024. Default is 5.	No
PacketSize	Payload length	Unsigned integer. Value range: 20 to 9600 bytes. Default is 56.	No
TrafficClass	Traffic class	Unsigned integer.	No

Column name	Column description	Data type and restrictions	Support for extended query
	value in an echo request	Value range: 0 to 255. Default is 0.	
Timeout	Waiting time for each reply	Unsigned integer. Value range: 0 to 65535 milliseconds. Default is 2000 milliseconds.	No
HopLimit	Hop limit value in an echo request	Unsigned integer. Value range: 1 to 255. Default is 1.	No
SliceID	Network slice instance ID	Unsigned integer. Value range: 0 to 4294967295.	When Destination is specified as Policy, the SliceID column is not supported.
MatchSlice	Force matching network slices	Unsigned integer: • **1**—Indicates that the network slice discard flag bit is 1. • **0**—Indicates that the network slice discard flag bit is 0.	Default: 0.

Message	Explanation
Unknown host. 未知主机。	The specified host must exist.
The destination address can't be an IPv6 multicast address. 不支持IPv6组播地址。	The specified destination address cannot be an ipv6 multicast address.
The destination address can't be an IPv6 link local address. 不支持IPv6链路本地地址。	The specified destination address cannot be an ipv6 link local address.
The destination IPv6 address can't be all 0s. IPv6目的地址不能为全零。	The specified destination address cannot be all 0s.
First hop limit can’t be greater than the max hop limit. 报文的最大跳数必须大于或等于第一个报文的最大条数。	First hop limit can’t be greater than the max hop limit.
The specified object already exists. 指定的对象已存在。	The specified object already exists.
The source IPv6 address is invalid. 非法的IPv6地址。	The source IPv6 address is invalid.
The source IPv6 address does not exist. 源地址不存在。	The source IPv6 address does not exist.
SliceID is not supported. 不支持指定切片ID。	SliceID is not supported.
Please specify the SliceID first. 请先指定切片ID。	Please specify the SliceID first.

SRv6Tracert event stream

SRv6 tracert event stream description.

SRv6Tracert event

This table is used to report tracert information for an SRv6 tracert operation.

XML structure for event subscription

```
<SRv6TracertEvent>
  <SRv6TracertInfo>
    <TracertSerial></TracertSerial>
    <Destination>
      <Policy>
        <PolicyName></PolicyName>
        <Endpoint></Endpoint>
        <Color></Color>
        <DestinationAddr></DestinationAddr>
      </Policy>
      <SegmentList>
        <Segment>
          <SegmentID></SegmentID>
          <Behavior></Behavior>
          <SIDStruct>
            <LBLength></LBLength>
            <LNLength></LNLength>
            <FunLength></FunLength>
            <ArgLength></ArgLength>
          </SIDStruct>
          <COC></COC>
          <CommonPrefixLength></CommonPrefixLength>
        </Segment>
      </SegmentList>
    </Destination>
    <SourceIpAddress></SourceIpAddress>
    <FirstHop></FirstHop>
    <MaxHops></MaxHops>
    <Udpport></Udpport>
    <SendPacketsNum></SendPacketsNum>
    <PacketSize></PacketSize>
    <Timeout></Timeout>
    <TrafficClass></TrafficClass>
    <SliceID></SliceID>
    <MatchSlice></MatchSlice>
  </SRv6TracertInfo>
</SRv6TracertEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>SRV6TRACERT</stream>
    <filter type="subtree">
      <SRv6TracertEvent xmlns="http://www.h3c.com/netconf/event:1.0/srv6tracert:1.0">
        <SRv6TracertInfo>
          <TracertSerial>1</TracertSerial>
          <Destination>
            <Policy>
              <Endpoint>2409:8000::3</Endpoint>
              <Color>10</Color>
            </Policy>
          </Destination>
          <SourceIpAddress>2409:8000::1</SourceIpAddress>
          <FirstHop>1</FirstHop>
          <MaxHops>5</MaxHops>
          <Udpport>33434</Udpport>
          <SendPacketsNum>10</SendPacketsNum>
          <PacketSize>64</PacketSize>
          <Timeout>1000</Timeout>
          <TrafficClass>10</TrafficClass>
        </SRv6TracertInfo>
      </SRv6TracertEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	SRV6TRACERT
Event name	SRv6TracertEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/srv6tracert:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended query
TracertSerial	Serial number of the tracert operation	Unsigned integer. Value range: 1 to 4294967295.	No
Destination	Options for getting segment info from a policy or by input	N/A	No
Policy	SRv6-TE policy	N/A	No
PolicyName	SRv6-TE policy	String.	No

Column name	Column description	Data type and restrictions	Support for extended query
	name	Length: 1 to 59 characters.	
Endpoint	Endpoint address of the policy	IPv6: hexadecimal string, colon-separated.	No
Color	Color of the policy	Unsigned integer. Value range: 0 to 4294967295.	No
DestinationAddr	Destination IPv6 address	IPv6: hexadecimal string, colon-separated.	No
SegmentList	SID or SID list	N/A	No
Segment	SID information	N/A	No
SegmentID	SID	String. Length: 3 to 45 characters.	No
Behavior	SID behavior	Unsigned integer. Value range: 1 to 32767.	No
SIDStruct	SID structure	N/A	No
LBLength	Locator length	Unsigned integer. Value range: 0 to 4294967295.	No
LNLength	Node length	Unsigned integer. Value range: 0 to 4294967295.	No
FunLength	Function length	Unsigned integer. Value range: 0 to 4294967295.	No
ArgLength	Parameter length	Unsigned integer. Value range: 0 to 4294967295.	No
COC	Add COC logo	Enumeration: • 16—COC16. • 32—COC32.	Only 32 is supported now.
CommonPrefixLength	Common prefix length of the next G-SID	Unsigned integer. Value range: 1 to 94.	No
SourceIpAddress	Source IPv6 address of echo requests	IPv6: hexadecimal string, colon-separated.	No
MaxHops	Maximum hop limit for a probe packet	Unsigned integer. Value range: 1 to 255. Default is 30.	No
FirstHop	TTL value of the first probe packet	Unsigned integer. Value range: 1 to 255. Default is 1.	No
Udpport	UDP port number of the destination	Unsigned integer. Value range: 1 to 65535. Default is 33434.	No
SendPacketsNum	Number of probe packets sent each time	Unsigned integer. Value range: 1 to 65535.	No

Column name	Column description	Data type and restrictions	Support for extended query
		Default is 3.	
PacketSize	Payload length	Unsigned integer. Value range: 20 to 9600 bytes. Default is 56.	No
Timeout	Waiting time for each reply	Unsigned integer. Value range: 1 to 65535 milliseconds. Default is 5000 milliseconds.	No
TrafficClass	Traffic class value in an probe request	Unsigned integer. Value range: 0 to 255. Default is 0.	No
SliceID	Network slice instance ID	Unsigned integer. Value range: 0 to 4294967295.	When Destination is specified as Policy, the SliceID column is not supported.
MatchSlice	Force matching network slices	Unsigned integer: • **1**—Indicates that the network slice discard flag bit is 1. • **0**—Indicates that the network slice discard flag bit is 0.	Default: 0.

Table description

Column name	Column description	Data type and restrictions	Remarks
TracertSerial	Serial number of the tracert operation	Unsigned integer. Value range: 0 to 4294967295.	N/A
ResultList	Result list of the tracert operation	N/A	N/A
TracertResult	Result of a tracert request	N/A	N/A
CPath	Candidate path structure	N/A	N/A
ProtocolOrigin	Protocol origin	Unsigned integer. Value range: 0 to 4294967295.	N/A
Originator	Originator structure	N/A	N/A
ASN	ASN number	Unsigned integer. Value range: 0 to 4294967295.	N/A
NodeAddress	BGP node address	IPv6: Hexadecimal string, colon-separated.	N/A
Discriminator	Remote identifier	Unsigned integer. Value range: 0 to 4294967295.	N/A
Preference	Preference value	Unsigned integer. Value range: 1 to 65535.	N/A
Active	Candidate path state	Boolean: • **true**—Active. • **false**—Inactive.	N/A
RSegmentList	Segment ID list	N/A	N/A
RSegment	SID structure.	N/A	N/A
SegmentID	SID	IPv6: Hexadecimal string, colon-separated.	N/A
PacketSize	PayloadLength include IPv6 Header，UDP Header and Payload	Unsigned integer. Value range: 20 to 9600 bytes.	N/A
Maxhops	Maximum hop limit	Unsigned integer. Value range: 1 to 255.	N/A
ProbeResult	Probe result information	Boolean: • true • false	N/A
HopList	Probe information of multiple probe packets	N/A	N/A
HopInfo	Probe information of a probe packet	N/A	N/A
HopIndex	Index of a hop	Unsigned integer.	N/A

Column name	Column description	Data type and restrictions	Remarks
		Value range: 1 to 4294967295.	
ProbeList	Information about multiple probe packets for the hop	N/A	N/A
ProbeIndex	Index of a probe request	Unsigned integer. Value range: 1 to 4294967295.	N/A
HopAddress	SID of the reply to the probe request	IPv6: Hexadecimal string, colon-separated.	N/A
ProbeTime	Probe duration	Unsigned integer. Value range: 0 to 4294967295 microseconds.	N/A

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
STelnetState	Global Stelnet server feature	N/A	Boolean: • **true**—Enables the Stelnet server. • **false**—Disables the Stelnet server(default).
SFTPState	Global SFTP server feature	N/A	Boolean: • **true**—Enables the SFTP server. • **false**—Disables the SFTP server(default).
SCPState	Global SCP server feature	N/A	Boolean: • **true**—Enables the SCP server. • **false**—Disables the SCP server(default).
DSCP	Set the IPv4 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48
DSCP6	Set the IPv6 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48.
Ipv4ACLNum	Specify an IPv4 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv6ACLNum	Specify an IPv6 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv4ACLName	Specify the name of the ACL. acl-name represents the name of the ACL. It is a string of 1 to 63 characters. It is not case sensitive and must start with the English letters a to z or A to Z. To avoid confusion, the English word all is not allowed in the name of ACL.	N/A	String, case insensitive. Length: 1 to 63 characters. Case insensitive

Column name	Column description	Column type	Data type and restrictions
Ipv6ACLName	Specify the name of the ACL. acl-name represents the name of the ACL. It is a string of 1 to 63 characters. It is not case sensitive and must start with the English letters a to z or A to Z. To avoid confusion, the English word all is not allowed in the name of ACL.	N/A	String, case insensitive. Length: 1 to 63 characters. Case insensitive
Ipv4ACLVersion	When Ipv4version is 1, it corresponds to the name of the Ipv4 type. When Ipv4version is 3, it corresponds to the name of the mac type.	N/A	Enumeration: • **1**-ACL_VERSION_ACL4 • **3**-ACL_VERSION_MAC.
Ipv6ACLVersion	When Ipv6version is 2, it corresponds to the name of the Ipv6 type. When Ipv6version is 3, it corresponds to the name of the mac type.	N/A	Enumeration: • **2**-ACL_VERSION_ACL6 • **3**-ACL_VERSION_MAC.
SFTPIdleTimeout	Specify SFTP connection idle timeout timer in minutes	N/A	Unsigned integer. Value range: 1 to 35791. Default value: 10.
RekeyInterval	Specify the SSH server key rekey-interval(hour)	N/A	Unsigned integer. Value range: 1 to 24.
AuthRetries	Specify authentication retry times	N/A	Unsigned integer. Value range: 1 to 5. Default value: 3.
AuthTimeout	Specify authentication timeout timer in seconds	N/A	Unsigned integer. Value range: 1 to 120. Default value: 60
CompatibleSSH1XState	SSH server compatibility with ssh1x	N/A	Boolean: • **true**—Enables the compatibility with ssh1x. • **false**—Disables the compatibility with ssh1x (default).

Column name	Column description	Column type	Data type and restrictions
STelnetIpv4State	Global IPv4 Stelnet server feature	N/A	Boolean: • **true**—Enables the IPv4 Stelnet server. • **false**—Disables the IPv4 Stelnet server (default).
STelnetIpv6State	Global IPv6 Stelnet server feature	N/A	Boolean: • **true**—Enables the IPv6 Stelnet server. • **false**—Disables the IPv6 Stelnet server (default).
SFTPIpv4State	Global IPv4 Stelnet server feature	N/A	Boolean: • **true**—Enables the IPv4 SFTP server. • **false**—Disables the IPv4 SFTP server (default).
SFTPIpv6State	Global IPv6 SFTP server feature	N/A	Boolean: • **true**—Enables the IPv6 SFTP server. • **false**—Disables the IPv6 SFTP server (default).
SCPIpv4State	Global IPv4 SCP server feature	N/A	Boolean: • **true**—Enables the IPv4 SCP server. • **false**—Disables the IPv4 SCP server (default).
SCPIpv6State	Global IPv6 SCP server feature	N/A	Boolean: • **true**—Enables the IPv6 SCP server. • **false**—Disables the IPv6 SCP server (default).
ExceptionRecordNum	Global maximum number of records for SSH user online exceptions	N/A	Unsigned integer. Value range: 10 to 1000. Default value: 10.

Ipv6ACLNum	Specify an IPv6 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv4ACLName	Specify the name of the ACL. acl-name represents the name of the ACL. It is a string of 1 to 63 characters. It is not case sensitive and must start with the English letters a to z or A to Z. To avoid confusion, the English word all is not allowed in the name of ACL.	N/A	String, case insensitive. Length: 1 to 63 characters. Case insensitive
Ipv6ACLName	Specify the name of the ACL. acl-name represents the name of the ACL. It is a string of 1 to 63 characters. It is not case sensitive and must start with the English letters a to z or A to Z. To avoid confusion, the English word all is not allowed in the name of ACL.	N/A	String, case insensitive. Length: 1 to 63 characters. Case insensitive

Column name	Column description	Column type	Data type and restrictions
Ipv4ACLVersion	When Ipv4version is 1, it corresponds to the name of the Ipv4 type. When Ipv4version is 3, it corresponds to the name of the mac type.	N/A	Enumeration: • **1-**ACL_VERSION_ACL4 • **3-**ACL_VERSION_MAC.
Ipv6ACLVersion	When Ipv6version is 2, it corresponds to the name of the Ipv6 type. When Ipv6version is 3, it corresponds to the name of the mac type.	N/A	Enumeration: • **2-**ACL_VERSION_ACL6 • **3-**ACL_VERSION_MAC.
SFTPIdleTimeout	Specify SFTP connection idle timeout timer in minutes	N/A	Unsigned integer. Value range: 1 to 35791. Default value: 10.
RekeyInterval	Specify the SSH server key rekey-interval in hours	N/A	Unsigned integer. Value range: 1 to 24.
AuthRetries	Specify authentication retry times	N/A	Unsigned integer. Value range: 1 to 5. Default value: 3.
AuthTimeout	Specify authentication timeout timer in seconds	N/A	Unsigned integer. Value range: 1 to 120. Default value: 60
CompatibleSSH1XState	SSH server compatibility with ssh1x	N/A	Boolean: • **true**—Enables the compatibility with ssh1x. • **false**—Disables the compatibility with ssh1x(default).
STelnetIpv4State	Global IPv4 Stelnet server feature	N/A	Boolean: • **true**—Enables the IPv4 Stelnet server. • **false**—Disables the IPv4 Stelnet server (default).
STelnetIpv6State	Global IPv6 Stelnet server feature	N/A	Boolean: • **true**—Enables the IPv6 Stelnet server. • **false**—Disables the IPv6 Stelnet server (default).
SFTPIpv4State	Global IPv4 SFTP server feature	N/A	Boolean: • **true**—Enables the IPv4 SFTP server. • **false**—Disables the IPv4 SFTP server (default).
SFTPIpv6State	Global IPv6 SFTP server feature	N/A	Boolean: • **true**—Enables the IPv6 SFTP server. • **false**—Disables the IPv6 SFTP server (default).

Column name	Column description	Column type	Data type and restrictions
SCPIpv4State	Global IPv4 SCP server feature	N/A	Boolean: • **true**—Enables the IPv4 SCP server. • **false**—Disables the IPv4 SCP server (default).
SCPIpv6State	Global IPv6 SCP server feature	N/A	Boolean: • **true**—Enables the IPv6 SCP server. • **false**—Disables the IPv6 SCP server (default).
ExceptionRecordNum	Global maximum number of records for SSH user online exceptions	N/A	Unsigned integer. Value range: 10 to 1000.

SSH

SSH/Server

Message	Explanation
There is the same configuration, failed to create. 存在相同配置无法创建。	If the current operation type is “create”, it does not support the existing configuration to be created again.
SSH Listens on port failed to open. SSH侦听端口使能失败	When the SSH service port number has been used by other services, it does not support to enable SSH server.
Failed to connect the SSH process. 连接SSH进程失败	If the daemon of SSH failed to connect, it will prompt this information.
The existence of default configuration, failed to delete. 删除时已经是默认配置	If the current operation type is “delete”, it does not support the default configuration to be deleted.
Acl number cannot be issued. Acl name和Acl number不能一起下发。	Under all operations.Acl number cannot be issued.
The Ipv4 acl-name and Ipv4 acl-version must be issued together.And the Ipv6 acl-name and Ipv6 acl-version must be issued together. Ipv4 acl-name和Ipv4 acl-version必须一起下发,Ipv6 acl-name和Ipv6 acl-version必须一起下发。	Under all operations.The Ipv4 acl-name and Ipv4 acl-version must be issued together.And the Ipv6 acl-name and Ipv6 acl-version must be issued together.

```

Table description

Item	Description
Feature name	SSL
Table name	ServerPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SSL server policy	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
SessionCacheSize	Maximum number of cached sessions	N/A	Unsigned integer. Value range: 100 to 20480 Default value is 500	N/A
SessionTimeout	Session timeout value	N/A	Unsigned integer. Value range: 1 to 4294967295 Default value is 3600	N/A
PKIDomain	Specify an PKI domain for the SSL server policy	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
PKIDomainList	PKI domain list for the SSL server policy	Data structure	Members include: • DomainItem.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainItem	PKI domain name	N/A	String, case insensitive. Length: 1 to 31 characters.	A maximum of two PKI domain names can be specified in PKIDomainList.
CipherSuite List	Cipher suite list for the SSL server policy	Data structure	Members include: • CipherItem.	N/A
CipherItem	Cipher suite ID	N/A	Unsigned integer. Value range: 1 to 31. The cipher suite ID is defined by SSLCapabilities table.	A maximum of 11 CipherItems can be specified in CipherSuiteList. Default: All cipher suites are supported.
ClientVerify	Whether to verify the SSL client	N/A	Boolean: • **true**—Verify the SSL client. • **false**—Don't verify the SSL client (default).	N/A
ClientVerify Mode	Client authentication mode	N/A	Unsigned integer. • **0**—SSL client authentication is disabled. • **1**—Mandatory SSL client authentication . • **2**—Optional SSL client authentication.	N/A
SSLVersion Control	SSL version control	Data structure	Members include: • SSL3Enabled • TLS1Dot0Enabled • TLS1Dot1Enabled • TLS1Dot2Enabled • GMTLS1Dot1Enabled	N/A
SSL3Enabled	Enable SSL3.0	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A
TLS1Dot0Enabled	Enable TLS1.0	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A
TLS1Dot1Enabled	Enable TLS1.1	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A
TLS1Dot2Enabled	Enable TLS1.2	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A
GMTLS1 Dot1Enabled	Enable GM TLS 1.1	N/A	Boolean: • **true**—Enable. • **false**—Disable(default)**.**	This configuration is supported only by the devices that support the GM algorithm.
ServerCipherPrefer	Whether to prefer the SSL server cipher	N/A	Boolean: • **true**—Prefer the SSL server cipher.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Prefer the SSL client cipher(default).	
ServerCertChainEnable	Whether to send the complete certificate chain	N/A	Boolean: • **true**—Send the complete certificate chain. • **false**—Don't send the complete certificate chain (default).	N/A
EmsEnable	Whether to enable the SSL Extended Master Secret	N/A	Boolean: • **true**—Enable the SSL Extended Master Secret. **false**—Disable the SSL Extended Master Secret.	N/A

SSL/SSLGlobalConfig

This table is used to operate SSL global config.

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

SSLVPN/LogoutUsers

This table contains is used to log out all SSL VPN users.

XML structure

```
<SSLVPN>
  <LogoutUsers>
    <LogoutUser>
```

```
      <ContextName></ContextName>
      <UserName></UserName>
    </LogoutUser>
  </LogoutUsers>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	LogoutUsers
Table type	Multi-instance table
Row name	LogoutUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
Username	Username	Index	String. Length: 1 to 63 characters.

SSLVPN/LogoutSessions

This table contains information about force logout of SSL VPN users by session ID.

XML structure

```
<SSLVPN>
  <LogoutSessions>
    <LogoutSession>
      <ContextName></ContextName>
      <SessionID></SessionID>
    </LogoutSession>
  </LogoutSessions>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	LogoutSessions
Table type	Multi-instance table
Row name	LogoutSession
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.

SSLVPN/ClearAllIpacStats

This table contains information about resetting IP access statistics of all SSLVPN users.

XML structure

```
<SSLVPN>
  <ClearAllIpacStats>
    <Clear></Clear>
  </ClearAllIpacStats>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ClearAllIpacStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clears IP access statistics on all users.	N/A	This column must be empty.	Clear

SSLVPN/ClearIpacStatsContexts

This table contains information about resetting IP access statistics of SSL VPN users within specific SSLVPN context.

XML structure

```
<SSLVPN>
  <ClearIpacStatsContexts>
    <ClearIpacStatsContext>
      <ContextName></ContextName>
    </ClearIpacStatsContext>
  </ClearIpacStatsContexts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ClearIpacStatsContexts
Table type	Multi-instance table
Row name	ClearIpacStatsContext
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A

SSLVPN/ClearIpacStatsSessions

This table contains information about resetting IP access statistics of SSL VPN users by session ID.

XML structure

```
<SSLVPN>
  <ClearIpacStatsSessions>
    <ClearIpacStatsSession>
      <ContextName></ContextName>
      <SessionID></SessionID>
    </ClearIpacStatsSession>
  </ClearIpacStatsSessions>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ClearIpacStatsSessions
Table type	Multi-instance table
Row name	ClearIpacStatsSession
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.

SSLVPN/GlobalCustoms

This table is used to customize SSL VPN user access clients.

XML structure

```
<SSLVPN>
  <GlobalCustoms>
    <GlobalCustom>
      <IPClientName></IPClientName>
    </GlobalCustom>
  </GlobalCustoms>
```

```
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalCustoms
Table type	Multi-instance table
Row name	GlobalCustom
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPClientName	Name of the custom IP access client	Column	String, case insensitive. Length: 0 to 63 characters. The string cannot contain colons (:), question marks (?), asterisks (*), angle brackets (< >), ditto marks (“), slashes (/), backslashes (\), vertical bars (|).	When the string length is 0, this column deletes the custom IP access client.

SSLVPN/UITemplateOperates

This table is used to load or unload an SSL VPN UI template.

XML structure

```
<SSLVPN>
  <UITemplateOperates>
    <UITemplateOperate>
      <TemplateName></TemplateName>
      <ActionType></ActionType>
    </UITemplateOperate>
  </UITemplateOperates>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UITemplateOperates
Table type	Multi-instance table

Row name	UITemplateOperate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TemplateName	UI template name.	Index	String. Length: 1 to 35 characters. The string cannot contain the following characters: / \ | : * “ ? < >.
ActionType	Action type.	N/A	Enumeration: • 1—Load. • 2—Unload.

SSLVPN/UITemplateChecks

This table is used to check whether an SSL VPN UI template path exists.

XML structure

```
<SSLVPN>
  <UITemplateChecks>
    <UITemplateCheck>
      <TemplatePaths></TemplatePaths>
    </UITemplateCheck>
  </UITemplateChecks>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UITemplateChecks
Table type	Multi-instance table
Row name	UITemplateCheck
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TemplatePath	UI template	Index	String.

s	path.		Length: 1 to 511 characters. The string cannot contain the following characters: / \ | : * “ ? < >.

SSLVPN/SSOUserFiles

This table instructs SSL VPN to load the username and password file.

XML structure

```
<SSLVPN>
  <SSOUserFiles>
    <SSOUserFile>
      <FileName></FileName>
    </SSOUserFile>
  </SSOUserFiles>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SSOUserFiles
Table type	Multi-instance table
Row name	SSOUserFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the username and password file	Column	String, case insensitive. Length: 0 to 31 characters.	N/A

SSLVPN/DomainCheckFiles

This table is used to upload or delete the WeChat Work domain name ownership verification file.

XML structure

```
<SSLVPN>
  <DomainCheckFiles>
    <DomainCheckFile>
```

```
      <FileName></FileName>
    </DomainCheckFile>
  </DomainCheckFiles>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ResFileOperates
Table type	Multi-instance table
Row name	DomainCheckFile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the domain name ownership verification file	Column	String, case insensitive. Length: 0 to 63 characters. The string cannot contain colons (:), question marks (?), asterisks (*), angle brackets (< >), ditto marks (“), slashes (/), backslashes (\), or vertical bars (|).	When the string length is 0, this column deletes all WeChat Work domain name ownership verification file.

SSLVPN/UnFreezeIPs

This table is used to unfreeze the frozen IP addresses.

```
XML structure<SSLVPN>
  <UnFreezeIPs>
    <UnFreezeIP>
      <ContextName></ContextName>
      <UserIPv4></UserIPv4>
      <UserIPv6></UserIPv6>
    </UnFreezeIP>
  </UnFreezeIPs>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UnFreezeIPs

Table type	Multi-instance table
Row name	UnFreezeIP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
UserIPv4	IPv4 address to unfreeze	N/A	String,dotted decimal notation.
UserIPv6	IPv6 address to unfreeze	N/A	Hexadeccimal string, colon-separated.

SSLVPN/ResFileOperates

This table is used to set or delete the SSL VPN resource file for users to download..

XML structure

```
<SSLVPN>
  <ResFileOperates>
    <ResFileOperate>
      <ContextName></ContextName>
      <Languages></Languages>
      <FileName></FileName>
      <FilePath></FilePath>
    </ResFileOperate>
  </ResFileOperates>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ResFileOperates
Table type	Multi-instance table
Row name	ResFileOperate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Languages	Language of the Web interface that provides the file	Index	Enumeration: • 0—English. • 1—Chinese.	• N/A
FileName	Name of the file	N/A	String. Length: 1 to 31 characters.	N/A
FilePath	Path of the file	N/A	String. Length: 1 to 512characters.	N/A

SSLVPN

SSLVPN/Gateways

This table contains SSL VPN gateway configuration information.

XML structure

```
<SSLVPN>
  <Gateways>
    <Gateway>
      <Name></Name>
      <AddressType></AddressType>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <VRF></VRF>
      <SSLServerPolicy></SSLServerPolicy>
      <HTTPRedirect></HTTPRedirect>
      <RedirectPort></RedirectPort>
      <QuantumEnable></QuantumEnable>
      <Enable></Enable>
    </Gateway>
  </Gateways>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Gateways
Table type	Multi-instance table
Row name	Gateway
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN gateway name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The string can contain only letters, digits, and underscores (_).	
AddressType	Whether the SSL VPN gateway address is an IPv6 address	N/A	Boolean: • false—IPv4. • true—IPv6.	N/A
Ipv4Address	IPv4 address of the SSL VPN gateway	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address of the SSL VPN gateway	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
PortNumber	Port number of the SSL VPN gateway	N/A	Unsigned integer. Value range: 443, 1025 to 65535. Default: 443.	N/A
VRF	Name of the VRF instance associated with the SSL VPN gateway	N/A	String. Length: 0 to 31 characters.	If the gateway is on the public network, the length of characters is 0.
SSLServerPolicy	Name of the SSL server policy used by the SSL VPN gateway	N/A	String, case insensitive. Length: 1 to 31 characters.	By default, no SSL server policy is used by the SSL VPN gateway.
HTTPRedirect	Whether HTTP traffic is redirected	N/A	Boolean: • true—Redirected. • false—Not redirected.	N/A
RedirectPort	Port number of the redirected HTTP traffic	N/A	Unsigned integer. Value range: 80, 1025 to 65535. Default: 80.	N/A
QuantumEnable	Whether the quantum cipher service is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	QuantumEnable
Enable	Whether the SSL VPN gateway is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/Contexts

This table contains SSL VPN context configuration information.

XML structure

```
<SSLVPN>
```

```
  <Contexts>
    <Context>
      <Name></Name>
      <Gateway>
        <Name></Name>
        <AccessType></AccessType>
        <Domain></Domain>
        <VirtualHost></VirtualHost>
      </Gateway>
      <VRF></VRF>
      <MaxUsers></MaxUsers>
      <IdleTimeout></IdleTimeout>
      <AAADomain></AAADomain>
      <EMOServer>
        <Address></Address>
        <PortNumber></PortNumber>
      </EMOServer>
      <DefaultPolicyGroup></DefaultPolicyGroup>
      <Enable></Enable>
    </Context>
  </Contexts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The Contexts table does not support multiple links. Tables ContextGateways and contexts_v2 are added to support multiple links, and new features are added in the these two tables. The Contexts table is included only for compatibility. No new features will be added to this table. Use new tables ContextGateway and contexts_v2 instead of this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			(_).	
Gateway	Associated gateway	Data structure	Members include: • Name. • AccessType. • Domain. • VirtualHost.	N/A
Name	Associated gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: • 1—domain. • 2—virtual host.	N/A
Domain	Domain specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	N/A
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A
VRF	Name of the VRF instance associated with the SSL VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
MaxUsers	Maximum number of SSL VPN user connections	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 1 to 1440, in minutes. Default: 30 minutes.	N/A
AAADomain	SSL VPN context AAA domain	N/A	String, case insensitive. Length: 1 to 255 characters. The string cannot contain the following characters: / \ | " : * ? < > @ The string cannot be any of the following values: d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EMOServer	EMO server	Data structure	Members include: • Address. • PortNumber.	N/A
Address	IPv4 address or host name of the EMO server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the EMO server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
DefaultPolicy Group	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/Contexts_v2

This table contains SSL VPN context_v2 configuration information.

XML structure

```

			letters, digits, hyphens (-), underscores (_), and dots (.).	
PortNumber	Port number of the Message server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
SmsImcServer	Short Message Service of IMC server	Data structure	Members include: • AddressType. • Address. • Ipv6Address. • PortNumber. • VRF.	New feature, not compatible with the old table.
AddressType	Type of the IP address	N/A	Enumeration: • 1—IPv4 (default). • 2—IPv6	N/A
Address	IPv4 address of the IMC server	N/A	String, dotted decimal notation.	New feature, not compatible with the old table. Available when AddressType is 1. Example: 1.1.1.1.
Ipv6Address	IPv6 address of the IMC server	N/A	Hexadecimal string, colon-separated.	Available when AddressType is 2. Example: 1:1::1:1.
PortNumber	Port number of the IMC server	N/A	Unsigned integer. Value range: 1 to 65535.	New feature, not compatible with the old table.
VRF	Name of the VRF instance associated with the IMC server	N/A	String: Length: 0 to 31 characters.	If the IMC server is on the public network, the length of characters is 0.
SmsImc	Whether the SMS-IMC message authentication of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	New feature, not compatible with the old table.
SelfImcServer	User self modify password service of IMC server	Data structure	Members include: • AddressType. • Address. • Ipv6Address. • PortNumber. • VRF.	New feature, not compatible with the old table.
AddressType	Type of the IP address	N/A	Enumeration: • 1—IPv4 (default). • 2—IPv6	N/A
Address	IPv4 address or host name of the IMC server	N/A	String, dotted decimal notation.	New feature, not compatible with the old table.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Available when AddressType is 1. Example: 1.1.1.1.
Ipv6Address	IPv6 address of the IMC server	N/A	Hexadecimal string, colon-separated.	Available when AddressType is 2. Example: 1:1::1:1.
PortNumber	Port number of the IMC server	N/A	Unsigned integer. Value range: 1 to 65535.	New feature, not compatible with the old table.
VRF	Name of the VRF instance associated with the IMC server	N/A	String: Length: 0 to 31 characters.	If the IMC server is on the public network, the length of characters is 0.
DefaultPolicyGroup	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
SSLClientPolicy	Name of the SSL client policy used by the SSL VPN context	N/A	String, case insensitive. Length: 1 to 31 characters.	New feature, not compatible with the old table.
AllowChangePWD	Allow users to change passwords	N/A	Boolean: • true—Enabled (default). • false—Disabled.	N/A
Enable	Whether the SSL VPN context is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/ContextGateways

This table contains information about the SSL VPN gateway associated with the context.

XML structure

```
<SSLVPN>
  <ContextGateways>
    <ContextGateway>
      <ContextName></ContextName>
      <GatewayName></GatewayName>
      <AccessType></AccessType>
      <Domain></Domain>
      <VirtualHost></VirtualHost>
    </ContextGateway>
  </ContextGateways>
</SSLVPN>
```

Table description

Item	Description

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcContexts

Table type	Multi-instance table
Row name	IpAcContext
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AcIfIndex	Index of the referenced SSL VPN access interface	N/A	Unsigned integer.	N/A
KeepAlive	Keepalive interval	N/A	Unsigned integer. Value range: 0 to 600, in seconds. Default: 30 seconds.	N/A
Ipv4AddressPool	Referenced address pool	Data structure	Members include: • Name. • Ipv4PrefixLength.	N/A
Name	SSL VPN IP address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv4PrefixLength	SSL VPN IPv4 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
Ipv6AddressPool	Referenced IPv6 address pool	Data structure	Members include: • Name. • Ipv6PrefixLength.	N/A
Name	SSL VPN IPv6 address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv6PrefixLength	SSL VPN IPv6 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DNSServer	DNS server	Data structure	Members include: • Primary. • Secondary.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Primary	IPv4 address of primary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DNSServerIPv6	IPv6 DNS server information	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv6 address of the primary DNS server	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Secondary	IPv6 address of the secondary DNS server	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
WINSServer	WINS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ConnCloseLog	Enabling status of IP access connection close logging.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
PacketDropLog	Enabling status of packet drop logging.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
AllocAddressLog	Enabling status of IP access address allocation logging.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
IPClientAutoActive	Enabling status of automatic startup of the IP access client after Web login.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
WebResourceAutoPush	Enabling status of automatic pushing of accessible resources through Web after IP access client login.	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
RateLimitUp	Upstream rate	Data	Members include:	“Unit” and “value” must

Column name	Column description	Column type	Data type and restrictions	Remarks
	limit	structure	• Unit. • Value.	both be configured.
Unit	Unit for the rate limit	N/A	Enumeration: • 1—kbps • 2—pps	N/A
Value	Rate limit value	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A
RateLimitDown	Downstream rate limit	Data structure	Members include: • Unit. • Value.	“Unit” and “value” must both be configured.
Unit	Unit for the rate limit	N/A	Enumeration: • 1—kbps • 2—pps	N/A
Value	Rate limit value	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A

SSLVPN/UISettings

This table contains SSL VPN context UI configuration information.

Table description

Item	Description
Feature name	SSLVPN
Table name	UISettings
Table type	Multi-instance table
Row name	UISetting
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
VerifyCode	Whether the verify code is	N/A	Boolean: • true—Enabled.

Column name	Column description	Column type	Data type and restrictions
	enabled		• false—Disabled (default).
DPWD	Whether the dynamic password is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).
DisplayLogo	Whether the logo is displayed	N/A	Boolean: • true—Displayed (default). • false—Not displayed.
HidePasswordInput	Whether to hide the password input box	N/A	Boolean: • true—Hide the password box. • false—Not hide the password box (default).
LogoFile	Logo file path	N/A	String, case insensitive. Length: 1 to 255 characters.
LoginMsg	Web login message	Data structure	Members include: • English. • Chinese.
English	English login message string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese login message string	N/A	String. Length: 1 to 255 characters.
Title	Web title	Data structure	Members include: • English. • Chinese.
English	English title string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese title string	N/A	String. Length: 1 to 255 characters.
PwdComplexMsg	Password complexity message configuration	Data structure	Members include: • English. Chinese.
English	Password complexity message in English	N/A	String. Length: 1 to 255 characters.
Chinese	Password complexity message in Chinese	N/A	String. Length: 1 to 255 characters.
LoginPageNotifyMsg	Configure the login page notification message	Data structure	Members include: • English. Chinese.
English	Login page notification message in English	N/A	String. Length: 1 to 255 characters.

Column name	Column description	Column type	Data type and restrictions
Chinese	Login page notification message in Chinese	N/A	String. Length: 1 to 255 characters.
ResourcePageNotifyMsg	Configure the resource page notification message	Data structure	Members include: • English. Chinese.
English	Resource page notification message in English	N/A	String. Length: 1 to 255 characters.
Chinese	Resource page notification message in Chinese	N/A	String. Length: 1 to 255 characters.
CertificateAuthen	Whether certificate authentication of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).
CertUserNameAttr	Username attribute configuration when the certificate authentication is enabled.	N/A	Enumeration: • 0—CN (default). • 1—Email-prefix. • 2—OID.
OID	The OID string input for the username attribute when CertUserNameAttr is OID.	N/A	String. Length: 1 to 96 characters.
ResourcerLog	Whether Resource logging of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).
Filter	Whether resource access log filtering is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).
Brief	Whether brief logging for resource access is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).
UserLog	Whether user logging of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled (default).
PasswordAuthen	Whether password	N/A	Boolean: • true—Enabled(default).

Column name	Column description	Column type	Data type and restrictions
	authentication of the SSL VPN context is enabled.		• false—Disabled.
AuthenUse	The authentication methods required for user login.	N/A	Enumeration: • 0—all(default). • 1—any-one.
UITemplate	UI template used by the SSL VPN context.	Data structure	Members include: • Name. • Status.
Name	Template name.	N/A	String. Length: 1 to 31 characters. The string cannot contain the following characters: / \ | : * “ ? < >.
AccessDisableFlag	Flags that indicate what types of clients are limited to access SSL VPN.	N/A	Unsigned integer. Value range: 0 to 7. Default: 0 Bit0: • 0—Browsers are allowed to access SSL VPN. • 1—Browsers are denied access to SSL VPN. Bit1: • 0—PC iNode clients are allowed to access SSL VPN. • 1—PC iNode clients are denied access to SSL VPN. Bit2: • 0—Mobile iNode clients are allowed to access SSL VPN. • 1—Mobile iNode clients are denied access to SSL VPN.

SSLVPN/PortForwardLists

This table contains SSL VPN port forwarding list configuration information.

XML structure

```
<SSLVPN>
  <PortForwardLists>
    <PortForwardList>
      <ContextName></ContextName>
      <ListName></ListName>
    </PortForwardList>
  </PortForwardLists>
</SSLVPN>
```

Table description

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcPolicys
Table type	Multi-instance table
Row name	IpAcPolicy
Restrictions	The IpacPolicys table does not support multiple user groups. The IpacPolicys_v2 table is added to support multiple user groups. The IpacPolicys table is included only for compatibility. No new features will be added to this table. Use the new table IpacPolicys_v2 instead of this table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
KeepAlive	Keepalive interval	N/A	Unsigned integer. Value range: 0 to 600, in seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 30 seconds.	
Ipv4AclNumber	Referenced IPv4 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Ipv4AddressPool	Referenced address pool	Data structure	Members include: • Name. • Ipv4PrefixLength.	N/A
Name	SSL VPN IP address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv4PrefixLength	SSL VPN IPv4 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
AccessRoute	Route issued to the client	Data structure	Members include: • RouteType. • RouteList. • Ipv4Address. • Ipv4PrefixLength.	N/A
RouteType	The way how the route is specified	N/A	Enumeration: • 1—Route list. • 2—IPv4 address. • 3—All.	N/A
RouteList	SSL VPN route list name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Available when RouteType is 1.
Ipv4Address	Destination IPv4 address of the route	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Available when RouteType is 2.
Ipv4PrefixLength	IPv4 address prefix length	N/A	Unsigned integer. Value range: 0 to 32.	Available when RouteType is 2.
DNSServer	DNS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
WINSServer	WINS server	Data structure	Members include: • Primary. • Secondary.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Primary	IPv4 address of primary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

SSLVPN/IpAcPolicys_v2

    </SnatResource>
  </SnatResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SnatResources
Table type	Multi-instance table
Row name	SnatResource
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SnatPoolName	SSL VPN SNAT pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

SSLVPN/UserControls

This table contains SSL VPN user control configuration information.

XML structure

```
<SSLVPN>
  <UserControls>
    <UserControl>
      <ContextName></ContextName>
      <MaxOnlineNum></MaxOnlineNum>
      <ForceLogout></ForceLogout>
      <SessionConnectionNum></SessionConnectionNum>
      <RateLimit>
         <RateLimitUp></RateLimitUp>
         <RateLimitDown></RateLimitDown>
      </RateLimit>
      <VerifyCodeAutoEnable>
        <Enable></Enable>
        <FailedTimes></FailedTimes>
      </VerifyCodeAutoEnable>
      <SameIpUser>
        <Enable></Enable>
        <FailedTimes></FailedTimes>
        <FreezeTime></FreezeTime>
      </SameIpUser>
    </UserControl>
  </UserControls>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UserControls
Table type	Multi-instance table
Row name	UserControl
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
MaxOnlineNum	Maximum online number of each SSL VPN user for the context	N/A	Unsigned integer. Value range: 0 to 1048575. Default: 32.	If the maxOnlineNum is 0, the context doesn't control the maximum online number of each SSL VPN user.
ForceLogout	Whether the force logout is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
SessionConnectionNum	Maximum number of connections for each session	N/A	Unsigned integer. Value range: 0, 10 to 1000. Default: 64.	If the MaxSessionConnNum is 0, the context doesn't control the maximum number of connections for each session.
RateLimit	Bandwidth rate limit	Data structure	Members include: • RateLimitUp. • RateLimitDown	N/A
RateLimitUp	Upstream rate limit	N/A	Unsigned integer. Value range: 1000 to 100000000, in kbps.	N/A
RateLimitDown	Downstream rate limit	N/A	Unsigned integer. Value range: 1000 to 100000000, in kbps.	N/A
VerifyCodeAutoEnable	Perform code verifiction to prevent login cracking	Data structure	Member include: • Enable. • FailedTimes.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable code verification for cracking prevention	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
FailedTimes	Max number of login failures allowed before performing code verification	N/A	Unsigned integer. Value range:1 to 63. Default:5.	N/A
SameIpUser	Freeze the IP address to prevent login cracking	Data structure	Member include: • Enable. • FailedTimes. • FreezeTime.	N/A
Enable	Enable IP address freezing for cracking prevention	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
FailedTimes	Max number of login failures allowed before freezing the IP address	N/A	Unsigned integer. Value range: 64 to 2048. Default: 64.	N/A
FreezeTime	Period of time to freeze the IP address	N/A	Unsigned integer. Value range: 30 to 1800, in seconds. Default: 30.	N/A

SSLVPN/GlobalLog

This table contains SSL VPN global log configuration information.

XML structure

```
<SSLVPN>
  <GlobalLog>
    <GlobalLogEnable></GlobalLogEnable>
  </GlobalLog>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalLog
Table type	Single-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLogEnable	Whether the global log is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/PortForwardCtxItems

This table contains SSL VPN port forwarding items control configuration information.

XML structure

```
<SSLVPN>
  <PortForwardCtxItems>
    <PortForwardCtxItem>
      <ContextName></ContextName>
      <ItemName></ItemName>
      <LocalPortNumber></LocalPortNumber>
      <LocalName></LocalName>
      <RemoteServer></RemoteServer>
      <RemotePortNumber></RemotePortNumber>
      <Description></Description>
      <Execution></Execution>
    </PortForwardCtxItem>
  </PortForwardCtxItems>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	PortForwardCtxItems
Table type	Multi-instance table
Row name	PortForwardCtxItem
Restrictions	None
Support for row creation and	Yes

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ItemName	Port forwarding item name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
LocalPortNumber	Port number of the local server	N/A	Unsigned integer. Value range: 1 to 65535.
LocalName	Domain name of the local server	N/A	String, case insensitive. Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemoteServer	Domain name of the remote server	N/A	String, case insensitive. Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemotePortNumber	Port number of the remote server	N/A	Unsigned integer. Value range: 1 to 65535.
Description	Description for the port forwarding entry	N/A	String. Length: 1 to 63 characters.
Execution	Configure the script to execute for the port forwarding item	N/A	String, case insensitive. Length: 1 to 255 characters.

SSLVPN/PortForwardItemResources

This table contains SSL VPN port forwarding item resource configuration information.

XML structure

```
<SSLVPN>
  <PortForwardItemResources>
    <PortForwardItemResource>
      <ContextName></ContextName>
```

```
      <PortForwardName></PortForwardName>
      <ItemName></ItemName>
    </PortForwardItemResource>
  </PortForwardItemResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	PortForwardItemResource
Table type	Multi-instance table
Row name	PortForwardItemResourc
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
PortForwardName	SSL VPN port forwarding list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ItemName	Port forwarding item name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/Shortcuts

This table contains SSL VPN short cut configuration information.

XML structure

```
<SSLVPN>
  <Shortcuts>
    <Shortcut>
      <ContextName></ContextName>
```

```
      <ShortcutName></ShortcutName>
      <Description></Description>
      <Execution></Execution>
    </Shortcut>
  </Shortcuts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Shortcuts
Table type	Multi-instance table
Row name	Shortcut
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Context Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Shortcut Name	SSL VPN short cut name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Description	Description for the port forwarding entry	N/A	String. Length: 1 to 63 characters.	N/A
Execution	Configure the script to execute for the shortcut	N/A	String, case insensitive. Length: 1 to 255 characters.	Example: if choose resource-link,shoulde be url(‘http://www.baidu.com’).If choose application resource,should be app(‘C:\Windows\System32\notepad.exe’).

SSLVPN/ShortcutLists

This table contains SSL VPN short cut list configuration information.

XML structure

```
<SSLVPN>
  <ShortcutLists>
    <ShortcutList>
      <ContextName></ContextName>
      <ShortcutListName></ShortcutListName>
    </ShortcutList>
  </ShortcutLists>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ShortcutLists
Table type	Multi-instance table
Row name	ShortcutList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ShortcutListName	SSL VPN short cut list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/ShortcutResources

This table contains SSL VPN short cut list resource configuration information.

XML structure

```
<SSLVPN>
  <ShortcutResources>
    <ShortcutResource>
      <ContextName></ContextName>
      <ShortcutListName></ShortcutListName>
      <ShortcutName></ShortcutName>
    </ShortcutResource>
  </ShortcutResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ShortcutRefers
Table type	Multi-instance table
Row name	ShortcutRefer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ShortcutListName	SSL VPN short cut list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ShortcutName	SSL VPN short cut name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/ShortcutPolicys

This table contains SSL VPN short cut information for policy groups.

XML structure

```
<SSLVPN>
  <ShortcutPolicys>
    <ShortcutPolicy>
      <ContextName></ContextName>
      <PGroupName></PGroupName>
      <ShortcutListName></ShortcutListName>
    </ShortcutPolicy>
  </ShortcutPolicys>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ShortcutPolicys
Table type	Multi-instance table
Row name	ShortcutPolicy
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ShortcutListName	SSL VPN short cut list name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/Users

This table contains SSL VPN user bind address information.

XML structure

```
<SSLVPN>
  <Users>
    <User>
      <ContextName></ContextName>
      <UserName></UserName>
      <BindAddress></BindAddress>
      <AutoBindAddressNum></AutoBindAddressNum>
      <BindIPv6Address></BindIPv6Address>
      <AutoBindIPv6AddressNum></AutoBindIPv6AddressNum>
      <AllowChangePWD></AllowChangePWD>
      <MobileNumber></MobileNumber>
    </User>
  </Users>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	SSLVPN user name	Index	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
BindAddress	IP address list	N/A	String, dotted decimal notation.	Example: 10.1.1.5,10.1.1.10-10.1.1.20
AutoBindAddr	Automatically	N/A	Unsigned integer.	This column is not

Column name	Column description	Column type	Data type and restrictions	Remarks
essNum	allocate available IP addresses to the user		Value range: 1 to 10	displayed by the GET operation
BindIPv6Address	List of IPv6 addresses to be bound to the user	N/A	Hexadecimal string, colon-separated. Length: 1 to 459 characters.	Example: 1234::1,1234::10-1234::20
AutoBindIPv6AddressNum	Number of IPv6 addresses that the device will automatically bind to the user	N/A	Unsigned integer. Value range: 1 to 10	This column cannot be displayed by the GET operation
AllowChangePWD	Allow the specified user to change password	N/A	Boolean: • true—Enabled (default). • false—Disabled.	N/A
MobileNumber	Mobile number to be bound to the user	N/A	String. Length: 1 to 31 characters. The string can contain only digits.	N/A

SSLVPN/CustomAuthRequests

This table contains SSL VPN custom authentication request information.

XML structure

```
<SSLVPN>
  <CustomAuthRequests>
    <CustomAuthRequest>
      <ContextName></ContextName>
      <Timeout></Timeout>
      <URL></URL>
      <Method></Method>
      <Template></Template>
    </CustomAuthRequest>
  </CustomAuthRequests>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthRequests
Table type	Multi-instance table

Row name	CustomAuthRequest
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Timeout	Custom auth request timeout	N/A	Unsigned integer. Value range: 5 to 60 seconds. Default value is 15 seconds.	N/A
URL	URL string	N/A	String, case insensitive. Length: 1 to 255 characters.	Example: http://192.168.55.1:80/path
Method	Request method	N/A	Enumeration: • 0—GET • 1—POST	N/A
Template	Request template	N/A	String, case sensitive. Length: 1 to 255 characters.	Example: username=$$USERNAME$$&password=$$ENCODE_MD5:PASSWORD$$&resid=1234

SSLVPN/CustomAuthReqHeaders

This table contains information about SSL VPN custom authentication request headers.

XML structure

```
<SSLVPN>
  <CustomAuthReqHeaders>
    <CustomAuthReqHeader>
      <ContextName></ContextName>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>
    </CustomAuthReqHeader>
  </CustomAuthReqHeaders>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthReqHeaders
Table type	Multi-instance table
Row name	CustomAuthReqHeader
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
HeaderName	Request header field name	Index	String, case insensitive. Length: 1 to 63 characters. Invalid characters are \t \r \n ? ( ) < > @ , ; : \ “ / [ ] = { } SP and the ASCII characters which greater than 127 and less than or equal to 31.
HeaderValue	Request header field value	N/A	String. Length: 1 to 255 characters. Invalid characters are ?.

SSLVPN/CustomAuthResponses

This table contains information about the content types of response packets from the custom authentication server.

XML structure

```
<SSLVPN>
  <CustomAuthResponses>
    <CustomAuthResponse>
      <ContextName></ContextName>
      <Type></Type>
      <SuccessValue></SuccessValue>
    </CustomAuthResponse>
  </CustomAuthResponses>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthResponses
Table type	Multi-instance table
Row name	CustomAuthResponse
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
Type	Content type of custom authentication response packets	N/A	Enumeration: • 0—JSON • **1**—XML • 2—Custom
SuccessValue	Value that represents successful authentication	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/CustomAuthRespFields

This table contains information about the primary fields of the response packets from the custom authentication server.

XML structure

```
<SSLVPN>
  <CustomAuthRespFields>
    <CustomAuthRespField>
      <ContextName></ContextName>
      <ResultField></ResultField>
      <GroupField></GroupField>
      <MessageField></MessageField>
    </CustomAuthRespField>
  </CustomAuthRespFields>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthRespFields
Table type	Multi-instance table
Row name	CustomAuthRespField
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ResultField	AName of authentication result field	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: success.
GroupField	Name of user group field	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	This field indicates which group the user belongs to. Example: company.
MessageField	Name of authentication result description field	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: description.

SSLVPN/CustomAuthRespTemplates

This table contains information about the field-value pair templates for the primary fields of the custom authentication responses.

XML structure

```
<SSLVPN>
  <CustomAuthRespTemplates>
```

```
    <CustomAuthRespTemplate>
      <ContextName></ContextName>
      <ResultTemplate></ResultTemplate>
      <GroupTemplate></GroupTemplate>
      <MessageTemplate></MessageTemplate>
    </CustomAuthRespTemplate>
  </CustomAuthRespTemplates>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthRespTemplates
Table type	Multi-instance table
Row name	CustomAuthRespTemplate
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ResultTemplate	Authentication result field-value pair template	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: success=$$value$$
GroupTemplate	User group field-value pair template	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: company=$$value$$
MessageTemplate	Authentication result description field-value pair template	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: description=$$value$$

SSLVPN/WebAcContexts

This table contains SSL VPN Web access configuration for contexts.

XML structure

```
<SSLVPN>
  <WebAcContexts>
    <WebAcContext>
      <ContextName></ContextName>
      <UrlMasking></UrlMasking>
    </WebAcContext>
  </WebAcContexts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	WebAcContexts
Table type	Multi-instance table
Row name	WebAcContext
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UrlMasking	Whether URL masking is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/SmsAuthSmsGws

This table contains configuration information for SMS gateway authentication.

XML structure

```
<SSLVPN>
  <SmsAuthSmsGws>
    <SmsAuthSmsGw>
      <ContextName></ContextName>
      <SmsGwName></SmsGwName>
      <AllowSelfBindMobileNum></AllowSelfBindMobileNum>
      <SmsSendInterval></SmsSendInterval>
      <ValidTime></ValidTime>
      <CountryCode></CountryCode>
      <SmsContent></SmsContent>
    </SmsAuthSmsGw>
  </SmsAuthSmsGws>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SmsAuthSmsGws
Table type	Multi-instance table
Row name	SmsAuthSmsGw
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SmsGwName	SMS gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
AllowSelfBind MobileNum	Allow user to bind a mobile number if the number is not bound to a user	N/A	Boolean: • true—Enabled. • false—Disabled (default).
SmsSendInte rval	SMS sending interval	N/A	Unsigned integer. Value range: 0 to 3600, in seconds.

Column name	Column description	Column type	Data type and restrictions
			Default: 60 seconds.
ValidTime	Verification code validity time period	N/A	Unsigned integer. Value range: 1 to 1440, in minutes. Default: 1 minute.
CountryCode	Country code	N/A	String. Length: 1 to 7 characters. The string can contain only digits. Default: “86”.
SmsContent	SMS content	N/A	String. Length: 1 to 127 characters. The value can contain Chinese characters. Default: "Hello, $$USER$$. The login verification code is $$VERIFYCODE$$ and is valid for $$VALIDTIME$$ minutes."

SSLVPN/SmsAuthSettings

This table contains configuration information for SMS authentication.

XML structure

```
<SSLVPN>
  <SmsAuthSettings>
    <SmsAuthSetting>
      <ContextName></ContextName>
      <SmsAuthType></SmsAuthType>
    </SmsAuthSetting>
  </SmsAuthSettings>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SmsAuthSettings
Table type	Multi-instance table
Row name	SmsAuthSetting
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SmsAuthType	Type of SMS authentication	N/A	Enumeration: • 0—IMC. • 1—SMS gateway.

SSLVPN/SSOAutoBuildParams

This table contains login parameter information for SSL VPN user Web access using SSO auto-build mode.

XML structure

```
<SSLVPN>
  <SSOAutoBuildParams>
    <SSOAutoBuildParam>
      <ContextName></ContextName>
      <ItemName></ItemName>
      <Type></Type>

Table description

Item	Description
Feature name	SSLVPN
Table name	WeChatWorkAuths
Table type	Multi-instance table
Row name	WeChatWorkAuth
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
WeChatEnable	Whether the WeChat Work authentication is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
URL	WeChat Work authentication URL	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
TimeOut	WeChat Work authentication timeout time	N/A	Unsigned integer. Value range: 5 to 50, in seconds. Default: 15 seconds.	N/A
CorpId	Enterprise ID	N/A	String. Length: 1 to 63 characters.	N/A
AppSecret	Application secret key	N/A	String. Length: 1 to 127 characters.	N/A
UserIdField	User ID field	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 63 characters.	
AuthorizeField	Authorization policy group field name	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
OpenUrlEnable	Whether the WeChat open platform is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A
OpenUrlType	Type of the WeChat open platform URL	N/A	Enumeration: • 0—Predefined. • 1—User defined.	N/A
OpenUrlValue	WeChat open platform URL	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A

SSLVPN/UiReplyMsgs

This table contains information about customizations for server reply messages.

XML structure

```
<SSLVPN>
  <UiReplyMsgs>
    <UiReplyMsg>
      <ContextName></ContextName>
      <ServerReplyMsg></ServerReplyMsg>
      <SelfDefineReplyMsg>
        <English></English>
        <Chinese></Chinese>
      </SelfDefineReplyMsg>
    </UiReplyMsg>
  </UiReplyMsgs>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UiReplyMsgs
Table type	Multi-instance table
Row name	UiReplyMsg
Restrictions	None
Support for row creation and	No

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ServerReplyMsg	Server reply message	Index	String. Length: 1 to 127 characters.
SelfDefineReplyMsg	Customize the server reply message	Data structure	Member include: • English. • Chinese.
English	Customized server reply message in English	N/A	String. Length: 1 to 127 characters.
Chinese	Customized server reply message in Chinese	N/A	String. Length: 1 to 127 characters.

SSLVPN/GlobalFlowRedirect

This table contains SSL VPN flow redirect configuration information.

XML structure

```
<SSLVPN>
  <GlobalFlowRedirect>
    <GlobalFlowRedirectEnable></GlobalFlowRedirectEnable>
  </GlobalFlowRedirect>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalFlowRedirect
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalFlowRedirectEnable	Whether the global flow redirect is enabled	N/A	Boolean: • true—Enabled. • false—Disabled (default).	N/A

SSLVPN/Quantum

This table contains SSL VPN quantum cipher service configuration.

XML structure

```
<SSLVPN>
  <Quantum>
    <CspId></CspId>
    <EcmId></EcmId>
    <ServiceIP></ServiceIP>
    <ServicePort></ServicePort>
    <AppId></AppId>
  </Quantum>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Quantum
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CspId	Cipher service platform ID	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
EcmId	Exchange cipher	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	machine ID			
ServiceIP	IPv4 address of exchange cipher machine	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ServicePort	Port number of exchange cipher machine	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
AppId	Application ID	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A

SSLVPN/ContextRoles

This table contains SSL VPN user role configuration.

XML structure

```
<SSLVPN>
  <ContextRoles>
    <ContextRole>
      <ContextName></ContextName>
      <RoleName></RoleName>
      <PolicyName></PolicyName>
      <AccessEnable></AccessEnable>
      <ContextRole>
  </ContextRoles>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ContextRoles
Table type	Multi-instance table
Row name	ContextRole
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
RoleName	User role name.	Index	String, case insensitive. Length: 1 to 63 characters.
PolicyName	SSL VPN policy group name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
AccessEnable	Whether user role-based authorization is enabled	N/A	Unsigned integer. Value range: 0 to 7. Default: 0 Bit0: • 0—IP access can be authorized based on user roles. • 1—IP access cannot be authorized based on user roles. Bit1: • 0—Web access can be authorized based on user roles. • 1—Web access cannot be authorized based on user roles. Bit2: • 0—TCP access can be authorized based on user roles. • 1—TCP access cannot be authorized based on user roles.

SSLVPN/ClientDownloads

This table customizes the download path of SSL VPN IP access clients.

XML structure

```
<SSLVPN>
  <ClientDownloads>
    <ClientDownload>
      <ClientPlatform></ClientPlatform>
      <DownloadType></DownloadType>
      <URL></URL>
    </ClientDownload>
```

```
  </ClientDownloads>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ClientDownloads
Table type	Multi-instance table
Row name	ClientDownload
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientPlatform	Platform of client	Index	Enumeration: • 1—Windows. • 2—Mac. • 3—Common Linux-X86 • 4—Common Linux-ARM • 5—Common Linux-MIPS • 6—Common Linux-Loongarch • 7—Kylin Linux-X86 • 8—Kylin Linux-ARM • 9—Kylin Linux-MIPS • 10—Kylin Linux-Loongarch • 11—UOS Linux-X86 • 12—UOS Linux-ARM • 13—UOS Linux-MIPS • 14—UOS	N/A

			Linux-Loongarch	
DownloadType	Client download method	N/A	Enumeration: • 1—Local (default for the Windows platform when the device is installed with IP client). • 2—Official (default for other platforms). • 3—Custom URL. Option **Local** is available only for the Windows platform.	N/A
URL	URL string, available only when the DownloadType is 3	N/A	String, case insensitive. Length: 1 to 255 characters.	Example: https://inode.h3c.com/download

SSLVPN

SSLVPN/Gateways

This table contains SSL VPN gateway information.

XML structure

```
<SSLVPN>
  <Gateways>
    <Gateway>
      <Name></Name>
      <AddressType></AddressType>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <VRF></VRF>
      <SSLServerPolicy></SSLServerPolicy>
      <HTTPRedirect></HTTPRedirect>
      <RedirectPort></RedirectPort>
      <Enable></Enable>
      <OperStatus></OperStatus>
      <DownReason></DownReason>
      <QuantumEnable></QuantumEnable>
    </Gateway>
  </Gateways>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Gateways
Table type	Multi-instance table
Row name	Gateway
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN gateway name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The string can contain only letters, digits, and underscores (_).	
AddressType	Whether the SSL VPN gateway address is an IPv6 address	N/A	Boolean: • false—IPv4. • true—IPv6.	N/A
Ipv4Address	IPv4 address of the SSL VPN gateway	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address of the SSL VPN gateway	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
PortNumber	Port number of the SSL VPN gateway	N/A	Unsigned integer. Value range: 443, 1025 to 65535.	N/A
VRF	Name of the VRF instance associated with the SSL VPN gateway	N/A	String. Length: 0 to 31 characters.	If the gateway is on the public network, the length of characters is 0.
SSLServerPolicy	Name of the SSL server policy used by the SSL VPN gateway	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
HTTPRedirect	Whether HTTP traffic is redirected	N/A	Boolean: • true—Redirected. • false—Not redirected.	N/A
RedirectPort	Port number of the redirected HTTP traffic	N/A	Unsigned integer. Value range: 80, 1025 to 65535.	N/A
Enable	Whether the SSL VPN gateway is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
OperStatus	SSL VPN gateway operation status	N/A	Enumeration: • 1—up. • 2—down.	N/A
DownReason	Reason why the operation status of the SSL VPN gateway is down	N/A	String. Length: 1 to 127 characters.	This column is available only when the SSL VPN gateway operation status is down.
QuantumEnable	Whether the quantum cipher service is enabled	N/A	Boolean:	QuantumEnable

SSLVPN/Contexts

This table contains SSL VPN context information.

XML structure

        <PortNumber></PortNumber>
      </EMOServer>
      <DefaultPolicyGroup></DefaultPolicyGroup>
      <Enable></Enable>
      <OperStatus></OperStatus>
      <DownReason></DownReason>
    </Context>
  </Contexts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The Contexts table does not support multiple links. Tables ContextGateways and contexts_v2 are added to support multiple links, and new features are added in the these two tables. The Contexts table is included only for compatibility. No new features will be added to this table. Use new tables ContextGateways and contexts_v2 instead of this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Gateway	Associated gateway	Data structure	Members include: • Name. • AccessType. • Domain. • VirtualHost.	N/A
Name	Associated gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: • 1—domain. • 2—virtual host.	N/A
Domain	Domain specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	N/A
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A
VRF	Name of the VRF instance associated with the SSL VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
MaxUsers	Maximum number of SSL VPN user connections	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
AAADomain	SSL VPN context AAA domain	N/A	String, case insensitive. Length: 1 to 255 characters. The string cannot contain the following characters: / \ | " : * ? < > @ The string cannot be any of the	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			following values: d, de, def, defa, defau, defaul, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.	
EMOServer	EMO server	Data structure	Members include: • Address. • PortNumber.	N/A
Address	IPv4 address or host name of the EMO server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the EMO server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
DefaultPolicy Group	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
OperStatus	SSL VPN context operation status	N/A	Enumeration: • 1—up. • 2—down.	N/A
DownReason	Reason why the operation status of the SSL VPN context is down	N/A	String. Length: 1 to 127 characters.	This column is available only when the SSL VPN context operation status is down.

SSLVPN/Contexts_v2

This table contains SSL VPN context information.

XML structure

```
<SSLVPN>
  <Contexts_v2>

Column name	Column description	Column type	Data type and restrictions	Remarks
			• PortNumber.	
Address	IPv4 address or host name of the Message server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the Message server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
SmsImcServer	Short Message Service of IMC server	Data structure	Members include: • AddressType • Address. • Ipv6Address • PortNumber. • VRF	New feature, not compatible with the old table.
AddressType	Type of the IP address	N/A	Enumeration: • 1—IPv4. • 2—IPv6	N/A
Address	IPv4 address or host name of the IMC server	N/A	String, dotted decimal notation.	New feature, not compatible with the old table. Available when AddressType is 1. Example: 1.1.1.1.
Ipv6Address	IPv6 address of the IMC server	N/A	Hexadecimal string, colon-separated.	Available when AddressType is 2. Example: 1:1::1:1.
PortNumber	Port number of the IMC server	N/A	Unsigned integer. Value range: 1 to 65535.	New feature, not compatible with the old table.
VRF	Name of the VRF instance associated with the IMC server	N/A	String: Length: 0 to 31 characters.	If the IMC server is on the public network, the length of characters is 0.
SmsImc	Whether the SMS-IMC message authentication of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	New feature, not compatible with the old table.
SelfImcServer	User self modify password service of IMC server	Data structure	Members include: • AddressType • Address. • Ipv6Address • PortNumber. • VRF.	New feature, not compatible with the old table.

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Type of the IP address	N/A	Enumeration: • 1—IPv4. • 2—IPv6	N/A
Address	IPv4 address of the IMC server	N/A	String, dotted decimal notation.	New feature, not compatible with the old table. Available when AddressType is 1. Example: 1.1.1.1.
Ipv6Address	IPv6 address of the IMC server	N/A	Hexadecimal string, colon-separated.	Available when AddressType is 2. Example: 1:1::1:1.
PortNumber	Port number of the IMC server	N/A	Unsigned integer. Value range: 1 to 65535.	New feature, not compatible with the old table.
VRF	Name of the VRF instance associated with the IMC server	N/A	String: Length: 0 to 31 characters.	If the IMC server is on the public network, the length of characters is 0.
DefaultPolicyGroup	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
SSLClientPolicy	Name of the SSL client policy used by the SSL VPN context	N/A	String, case insensitive. Length: 1 to 31 characters.	New feature, not compatible with the old table.
AllowChangePWD	Whether password changing function for all users of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
OperStatus	SSL VPN context operation status	N/A	Enumeration: • 1—up. • 2—down.	N/A
DownReason	Reason why the operation status of the SSL VPN context is down	N/A	String. Length: 1 to 127 characters.	This column is available only when the SSL VPN context operation status is down.

SSLVPN/ContextGateways

This table contains information about the SSL VPN gateway associated with the context.

XML structure

```
<SSLVPN>
  <ContextGateways>
    <ContextGateway>
      <ContextName></ContextName>
      <GatewayName></GatewayName>
      <AccessType></AccessType>
      <Domain></Domain>
      <VirtualHost></VirtualHost>
    </ContextGateway>
  </ContextGateways>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ContextGateways
Table type	Multi-instance table
Row name	ContextGateway
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
GatewayName	Associated gateway name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: • 1—domain. • 2—virtual host.	N/A
Domain	Domain specified for the	N/A	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	associated gateway		Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A

SSLVPN/IpAcContexts

This table contains SSL VPN IP access information for contexts.

```

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcContexts
Table type	Multi-instance table
Row name	IpAcContext
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AcIfIndex	Index of the referenced SSL VPN access interface	N/A	Unsigned integer.	N/A
KeepAlive	Keepalive interval	N/A	Unsigned integer. Value range: 0 to 600, in seconds. Default: 30 seconds.	N/A
Ipv4AddressPool	Referenced address pool	Data structure	Members include: • Name. • Ipv4PrefixLength.	N/A
Name	SSL VPN IP address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength	SSL VPN IPv4 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
Ipv6AddressPool	Referenced IPv6 address pool	Data structure	Members include: • Name. • Ipv6PrefixLength.	N/A
Name	SSL VPN IPv6 address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv6PrefixLength	SSL VPN IPv6 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 127.	N/A
DNSServer	DNS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DNSServerIPv6	IPv6 DNS server information	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv6 address of the primary DNS server	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Secondary	IPv6 address of the secondary DNS server	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
WINSServer	WINS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ConnCloseLog	Enabling status of IP access connection close logging.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
PacketDropLog	Enabling status of packet drop	N/A	Boolean: • true—Enabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	logging.		• false—Disabled.	
AllocAddressLog	Enabling status of IP access address allocation logging.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
IPClientAutoActive	Enabling status of automatic startup of the IP access client after Web login.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
WebResourceAutoPush	Enabling status of automatic pushing of accessible resources through Web after IP access client login.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
RateLimitUp	Upstream rate limit	Data structure	Members include: • Unit. • Value.	N/A
Unit	Unit for the rate limit	N/A	Enumeration: • 1—kbps • 2—pps	N/A
Value	Rate limit value	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A
RateLimitDown	Downstream rate limit	Data structure	Members include: • Unit. • Value.	N/A
Unit	Unit for the rate limit	N/A	Enumeration: • 1—kbps • 2—pps	N/A
Value	Rate limit value	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A

SSLVPN/UISettings

Table description

Item	Description
Feature name	SSLVPN
Table name	UISettings
Table type	Multi-instance table
Row name	UISetting
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
VerifyCode	Whether the verify code is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.
DPWD	Whether the dynamic password is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.
DisplayLogo	Whether the logo is displayed	N/A	Boolean: • true—Displayed. • false—Not displayed.
HidePasswordInput	Whether to hide the password input box	N/A	Boolean: • true—Hide the password box. • false—Not hide the password box (default).
LogoFile	Logo file path	N/A	String, case insensitive. Length: 1 to 255 characters.
LoginMsg	Web login message	Data structure	Members include: • English. • Chinese.
English	English login message string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese login message string	N/A	String. Length: 1 to 255 characters.
Title	Web title	Data structure	Members include: • English. • Chinese.
English	English title string	N/A	String. Length: 1 to 255 characters.

Column name	Column description	Column type	Data type and restrictions
Chinese	Chinese title string	N/A	String. Length: 1 to 255 characters.
PwdComplexMsg	Password complexity message configuration	Data structure	Members include: • English. Chinese.
English	Password complexity message in English	N/A	String. Length: 1 to 255 characters.
Chinese	Password complexity message in Chinese	N/A	String. Length: 1 to 255 characters.
LoginPageNotifyMsg	Login page notification message configuration	Data structure	Members include: • English. Chinese
English	Login page notification message in English	N/A	String. Length: 1 to 255 characters.
Chinese	Login page notification message in Chinese	N/A	String. Length: 1 to 255 characters.
ResourcePageNotifyMsg	Resource page notification message configuration	Data structure	Members include: • English. Chinese.
English	Resource page notification message in English	N/A	String. Length: 1 to 255 characters.
Chinese	Resource page notification message in Chinese	N/A	String. Length: 1 to 255 characters.
ResourcesFileName	Download file configuration for users	Data structure	Members include: • English. Chinese.
English	Name of the file to be provided on the English Web interface	N/A	String, case insensitive. Length: 1 to 31 characters.
Chinese	Name of the file to be provided on the Chinese Web interface	N/A	String, case insensitive. Length: 1 to 31 characters.
ResourcerLog	Whether Resource	N/A	Boolean: • true—Enabled.

Column name	Column description	Column type	Data type and restrictions
	logging of the SSL VPN context is enabled.		• false—Disabled.
Filter	Whether resource access log filtering is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.
Brief	Whether brief logging for resource access is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.
CertificateAuthen	Whether certificate authentication of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.
CertUserNameAttr	Username attribute configuration when certificate authentication is enabled.	N/A	Enumeration: • 0—CN. • 1—Email-prefix. • 2—OID.
OID	The OID string input for the username attribute when CertUserNameAttr is OID.	N/A	String. Length: 1 to 96 characters.
UserLog	Whether user logging of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.
PasswordAuthen	Whether password authentication of the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.
AuthenUse	The authentication methods required for user login.	N/A	Enumeration: • 0—all. • 1—any-one.
UITemplate	UI template used by the SSL VPN context.	Data structure	Members include: • Name. • Status.
Name	Template name.	N/A	String. Length: 1 to 31 characters. The string cannot contain the following characters: / \ | : * “ ? < >.
Status	Template status.	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
			• 0—Normal. • 1—The login.html file is missing. • 2—The home.html file is missing. • 3—The version is not matched.
AccessDisableFlag	Flags that indicate what types of clients are limited to access SSL VPN.	N/A	Unsigned integer. Value range: 0 to 7. Bit0: • 0—Browsers are allowed to access SSL VPN. • 1—Browsers are denied access to SSL VPN. Bit1: • 0—PC iNode clients are allowed to access SSL VPN. • 1—PC iNode clients are denied access to SSL VPN. Bit2: • 0—Mobile iNode clients are allowed to access SSL VPN. • 1—Mobile iNode clients are denied access to SSL VPN.

SSLVPN/PortForwardLists

This table contains SSL VPN port forwarding list information.

XML structure

```
<SSLVPN>
  <PortForwardLists>
    <PortForwardList>
      <ContextName></ContextName>
      <ListName></ListName>
    </PortForwardList>
  </PortForwardLists>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcPolicys
Table type	Multi-instance table
Row name	IpAcPolicy

Restrictions	The IpacPolicys table does not support multiple user groups. The IpacPolicys_v2 table is added to support multiple user groups. The IpacPolicy table is included only for compatibility. No new features will be added to this table. Use the new table IpacPolicys_v2 instead of this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
KeepAlive	Keepalive interval	N/A	Unsigned integer. Value range: 0 to 600, in seconds.	N/A
Ipv4AclNumber	Referenced IPv4 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Ipv4AddressPool	Referenced address pool	Data structure	Members include: • Name. • Ipv4PrefixLength.	N/A
Name	SSL VPN IP address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv4PrefixLength	SSL VPN IPv4 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
AccessRoute	Route issued to the client	Data structure	Members include: • RouteType. • RouteList. • Ipv4Address. • Ipv4PrefixLength.	N/A
RouteType	The way how the route is specified	N/A	Enumeration: • 1—Route list. • 2—IPv4 address. • 3—All.	N/A
RouteList	SSL VPN route	N/A	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	list name		Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	
Ipv4Address	Destination IPv4 address of the route	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 address prefix length	N/A	Unsigned integer. Value range: 0 to 32.	N/A
DNSServer	DNS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary DNS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
WINSServer	WINS server	Data structure	Members include: • Primary. • Secondary.	N/A
Primary	IPv4 address of primary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Secondary	IPv4 address of secondary WINS server	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

      <SendTotalBytes></SendTotalBytes>
      <ReceiveTotalBytes></ReceiveTotalBytes>
      <AllocatedIpv4Address></AllocatedIpv4Address>
      <AllocatedIpv6Address></AllocatedIpv6Address>
    </Session>
  </Sessions>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	Username	Index	String. Length: 1 to 63 characters.	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.
UserAddress Type	Whether the user address is an IPv6 address	N/A	Boolean: • false—IPv4. • true—IPv6.	N/A
UserIpv4Addr	User IPv4	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
ess	address			
UserIpv6Address	User IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ConnNumber	Number of connections for the user session	N/A	Unsigned integer.	N/A
PGroupName	SSL VPN policy group name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 60 to 86400, in seconds.	N/A
CreatedTime	Session creation time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
LastUsedTime	Session idle duration	N/A	Time. Format: HH:MM:SS.	N/A
TerminalInfo	TerminalInfo	N/A	String. Length: 1 to 20 characters.	N/A
MobileNum	Mobile number bound to user	N/A	String. Length: 1 to 31 characters. The string can contain only digits.	N/A
AuthMethod	Authentication method	N/A	String. Length: 1 to 127 characters.	N/A
SendRate	Send rate of the user	N/A	String. Length: 1 to 31 characters.	Example: • 128.53 Bps • 128.53 KBps • 1.53 MBps • 1.53 GBps • 1.53 TBps • 1.53 PBps
ReceiveRate	Receive rate of the user	N/A	String. Length: 1 to 31 characters.	Example: • 128.53 Bps • 128.53 KBps • 1.53 MBps • 1.53 GBps • 1.53 TBps • 1.53 PBps
SendTotalBytes	Total number of bytes sent	N/A	String. Length: 1 to 31 characters.	Example: • 200.50 Bytes • 200.50 KB • 200.50 MB • 200.50 GB

Column name	Column description	Column type	Data type and restrictions	Remarks
				• 200.50 TB • 200.50 PB
ReceiveTotal Bytes	Total number of bytes received	N/A	String. Length: 1 to 31 characters.	Example: • 200.50 Bytes • 200.50 KB • 200.50 MB • 200.50 GB • 200.50 TB • 200.50 PB
AllocatedIpv4 Address	Allocated IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
AllocatedIpv6 Address	Allocated IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

SSLVPN/ContextStatistics

This table contains SSL VPN context session statistics.

XML structure

```
<SSLVPN>
  <ContextStatistics>
    <ContextStatistic>
      <ContextName></ContextName>
      <SessionNumber></SessionNumber>
      <FrozenIPNumber></FrozenIPNumber>

Method	SSO method	N/A	Enumeration: • 1—basic.	N/A

			• 2—auto-build.	
AutoBuildReqMethod	Auto-build mode login request method	N/A	Enumeration: • 0—GET. • 1—POST.	N/A
AutoBuildCode	Auto-build mode parameter encoding	N/A	Enumeration: • 0—UTF-8. • 1—GB18030.	N/A
BasicCustom	Enable basic mode to use custom login parameters	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
AutoBuildEncryptFile	Auto-build mode parameter encryption file	N/A	String, case insensitive. Length: 0 to 255 characters.	N/A

SSLVPN/UrlItemResources

This table contains SSL VPN URL item resource configuration information.

XML structure

```
<SSLVPN>
  <UrlItemResources>
    <UrlItemResource>
      <ContextName></ContextName>
      <UrlListName></UrlListName>
      <ItemName></ItemName>
    </UrlItemResource>
  </UrlItemResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UrlItemResources
Table type	Multi-instance table
Row name	UrlItemResource
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context	Index	String, case insensitive.	N/A

	name		Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	
UrlListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
ItemName	URL item name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

SSLVPN/SnatPools

This table contains SSL VPN SNAT pool information for policy groups.

XML structure

```
<SSLVPN>
  <SnatPools>
    <SnatPool>
      <Name></Name>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Type></Type>
      <VrrpId></VrrpId>
    </SnatPool>
  </SnatPools>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SnatPools
Table type	Multi-instance table
Row name	SnatPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN SNAT pool name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The string can contain only letters, digits, and underscores (_).	
Ipv4AddressStart	Start IPv4 address of the SNAT pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4AddressStart cannot be higher than Ipv4AddressEnd.
Ipv4AddressEnd	End IPv4 address of the SNAT pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Type	Type of the SNAT pool	N/A	Enumeration: • 0—addr-split • 1—port-split	The virtual system supports only port splitting. Once created, this column cannot be edited.
VrrpId	VRRP group number	N/A	Unsigned integer. Value range: 1 to 255.	N/A

SSLVPN/Ipv6SnatPools

This table contains SSL VPN Ipv6 SNAT pool information for policy groups.

XML structure

```
<SSLVPN>
  <Ipv6SnatPools>
    <Ipv6SnatPool>
      <Name></Name>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
      <Type></Type>
    </Ipv6SnatPool>
  </Ipv6SnatPools>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Ipv6SnatPools
Table type	Multi-instance table
Row name	Ipv6SnatPool
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN SNAT pool name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Ipv6AddressStart	Start IPv6 address of the SNAT pool	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Ipv6AddressStart cannot be higher than Ipv6AddressEnd.
Ipv6AddressEnd	End IPv6 address of the SNAT pool	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Type	Type of the SNAT pool	N/A	Enumeration: • 0—addr-split • 1—port-split	The virtual system supports only port splitting. Once created, this column cannot be edited.

SSLVPN/UrlResources

This table contains SSL VPN URL resource information for policy groups.

XML structure

```
<SSLVPN>
  <UrlResources>
    <UrlResource>
      <ContextName></ContextName>
      <PGroupName></PGroupName>
      <ListName></ListName>
    </UrlResource>
  </UrlResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UrlResources
Table type	Multi-instance table
Row name	UrlResource

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/SnatResources

This table contains SSL VPN SNAT resource information for policy groups.

XML structure

```
<SSLVPN>
  <SnatResources>
    <SnatResource>
      <ContextName></ContextName>
      <SnatPoolName></SnatPoolName>
    </SnatResource>
  </SnatResources>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SnatResources
Table type	Multi-instance table
Row name	SnatResource
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SnatPoolName	SSL VPN SNAT pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

SSLVPN/UserControls

This table contains SSL VPN user control information for policy groups.

XML structure

```
<SSLVPN>
  <UserControls>
    <UserControl>
      <ContextName></ContextName>
      <MaxOnlineNum></MaxOnlineNum>
      <ForceLogout></ForceLogout>
      <SessionConnectionNum></SessionConnectionNum>
      <RateLimit>
         <RateLimitUp></RateLimitUp>
         <RateLimitDown></RateLimitDown>
      </RateLimit>
      <VerifyCodeAutoEnable>
        <Enable></Enable>
        <FailedTimes></FailedTimes>
      </VerifyCodeAutoEnable>
      <SameIpUser>
        <Enable></Enable>
        <FailedTimes></FailedTimes>
        <FreezeTime></FreezeTime>
      </SameIpUser>
    </UserControl>
  </UserControls>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UserControls
Table type	Multi-instance table
Row name	UserControl
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
MaxOnlineNum	Maximum online number of each SSL VPN user for the context	N/A	Unsigned integer. Value range: 0 to 1048575.	If the maxOnlineNum is 0, the context doesn't control the maximum online number of each SSL VPN user.
ForceLogout	Whether the force logout is enabled	N/A	Boolean: • true—Enabled. • false—Disabled .	N/A
SessionConnectionNum	Maximum number of connections for each session	N/A	Unsigned integer. Value range: 0, 10 to 1000.	If the SessionConnetionNum is 0, the context doesn't control the maximum number of connections for each session.
RateLimit	Bandwidth rate limit	Data structure	Members include: • RateLimitUp. • RateLimitDown	N/A
RateLimitUp	Upstream rate limit	N/A	Unsigned integer. Value range: 1000 to 100000000, in kbps.	N/A
RateLimitDown	Downstream rate limit	N/A	Unsigned integer. Value range: 1000 to 100000000, in kbps.	N/A
VerifyCodeAutoEnable	Perform code verifiction to prevent login cracking	Data structure	Member include: FailedTimes.	N/A
Enable	Enable code verification for cracking	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	prevention			
FailedTimes	Max number of login failures allowed before performing code verification	N/A	Unsigned integer. Value range: 1 to 63. Default value is 5.	N/A
SameIpUser	Freeze the IP address to prevent login cracking	Data structure	Member include: • Enable. • FailedTimes. • FreezeTime.	N/A
Enable	Enable freezing IP addresses for cracking prevention	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
FailedTimes	Max number of login failures allowed before freezing the IP address	N/A	Unsigned integer. Value range: 64 to 2048. Default value is 64.	N/A
FreezeTime	Period of time to freeze the IP address	N/A	Unsigned integer. Value range: 30 to 1800, in seconds. Default value is 30.	N/A

SSLVPN/Specification

This table contains information about the SSLVPN function specification.

XML structure

```
<SSLVPN>
  <Specifications>
    <ControllerType></ControllerType>
  </Specifications>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Specifications
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControllerType	SSL VPN ControllerType	Column	Enumeration: • 0—None. • 1—M9K.	N/A

SSLVPN/GlobalLog

This table contains SSLVPN global log configuration information.

XML structure

```
<SSLVPN>
  <GlobalLog>
    <GlobalLogEnable></GlobalLogEnable>
  </GlobalLog>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalLog
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLogEnable	Whether the global log is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

SSLVPN/IpAcStatistics

This table contains SSLVPN IP access packet statistics for each user .

XML structure

```
<SSLVPN>
```

```
  <IpAcStatistics>
    <IpAcStatistic>
      <ContextName></ContextName>
      <UserName></UserName>
      <SessionID></SessionID>
      <UserAddressType></UserAddressType>
      <UserIpv4Address></UserIpv4Address>
      <UserIpv6Address></UserIpv6Address>
      <RecvReqPkts></RecvReqPkts>
      <SendReqPkts></SendReqPkts>
      <DropReqPkts></DropReqPkts>
      <RecvReplyPkts></RecvReplyPkts>
      <SendReplyPkts></SendReplyPkts>
      <DropReplyPkts></DropReplyPkts>
      <KeepalivePkts></KeepalivePkts>
      <KeepaliveReplyPkts></KeepaliveReplyPkts>
      <RecvUpdateCfgPkts></RecvUpdateCfgPkts>
      <SendUpdateCfgPkts></SendUpdateCfgPkts>
    </IpAcStatistic>
  </IpAcStatistics>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcStatistics
Table type	Multi-instance table
Row name	IpAcStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	Username	Index	String. Length: 1 to 63 characters.	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.
UserAddress	Type of user	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	address		• 1—IPv4. • 2—IPv6.	
UserIpv4Address	User IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
UserIpv6Address	User IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
RecvReqPkts	Number of received IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SendReqPkts	Number of sent IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DropReqPkts	Number of dropped IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RecvReplyPkts	Number of received IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SendReplyPkts	Number of sent IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
DropReplyPkts	Number of dropped IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
KeepalivePkts	Number of keepalive packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
KeepaliveReplyPkts	Number of keepalive reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
RecvUpdateCfgPkts	Number of received configuration updating reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
SendUpdateCfgPkts	Number of sent configuration updating reply packets during a	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	specific period			

SSLVPN/IpAcContextStatistics

This table contains IP access packet statistics for each SSL VPN context.

XML structure

```
<SSLVPN>
  <IpAcContextStatistics>
    <IpAcContextStatistic>
      <ContextName></ContextName>
      <ClientInBytes></ClientInBytes>
      <ClientOutBytes></ClientOutBytes>
      <ServerInBytes></ServerInBytes>
      <ServerOutBytes></ServerOutBytes>
    </IpAcContextStatistic>
  </IpAcContextStatistics>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcContextStatistics
Table type	Multi-instance table
Row name	IpAcContextStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ClientInBytes	Number of IP access request bytes received from client during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientOutBytes	Number of IP access reply bytes sent to client during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ServerInBytes	Number of IP access reply bytes received from server during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
ServerOutBytes	Number of IP access request packet bytes sent to server during a specific period	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

SSLVPN/PortForwardCtxItems

This table contains SSL VPN port forwarding items control configuration information.

XML structure

```
<SSLVPN>
  <PortForwardCtxItems>
    <PortForwardCtxItem>
      <ContextName></ContextName>
      <ItemName></ItemName>
      <LocalPortNumber></LocalPortNumber>

ShortcutListName	SSL VPN short cut list name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/Users

This table contains SSL VPN user bind address information.

XML structure

```
<SSLVPN>
  <Users>
    <User>
      <ContextName></ContextName>
      <UserName></UserName>
      <BindAddress></BindAddress>
      <AutoBindAddressNum></AutoBindAddressNum>
      <BindIPv6Address></BindIPv6Address>
      <AutoBindIPv6AddressNum></AutoBindIPv6AddressNum>
      <AllowChangePWD></AllowChangePWD>
      <MobileNumber></MobileNumber>
    </User>
  </Users>
```

```
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	SSLVPN user	Index	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
BindAddress	IP address list	N/A	String, dotted decimal notation.	Example: 10.1.1.5,10.1.1.10-10.1.1.20
AutoBindAddressNum	Automatically allocate available IP addresses to the user	N/A	Unsigned integer. Value range: 1 to 10	This column is not displayed by the GET operation
BindIPv6Address	List of IPv6 addresses to be bound to the user	N/A	Hexadecimal string, colon-separated. Length: 1 to 459 characters.	Example: 1234::1,1234::10-1234::20
AutoBindIPv6AddressNum	Number of IPv6 addresses that the device will automatically bind to the user	N/A	Unsigned integer. Value range: 1 to 10	This column cannot be displayed by the GET operation
AllowChangePWD	Whether password changing function for the specified user is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
MobileNumber	Mobile number to be bound to the	N/A	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	user		The string can contain only digits.	

SSLVPN/GlobalCustomInfos

This table contains global customization information about SSL VPN user access clients.

XML structure

```
<SSLVPN>
  <GlobalCustomInfos>
    <GlobalCustomInfo>
      <CurrentIPClient></CurrentIPClient>
    </GlobalCustomInfo>
  </GlobalCustomInfos>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalCustomInfos
Table type	Multi-instance table
Row name	GlobalCustomInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CurrentIPClient	Type of the current IP access client of the SSL VPN user.	N/A	Enumeration: • 1—Default. • 2—Custom.	N/A

SSLVPN/CustomAuthRequests

This table contains SSL VPN custom authentication request information.

XML structure

```
<SSLVPN>
  <CustomAuthRequests>
    <CustomAuthRequest>
```

```
      <ContextName></ContextName>
      <Timeout></Timeout>
      <URL></URL>

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Timeout	Custom auth request timeout	N/A	Unsigned integer. Value range: 5 to 60 seconds. Default value is 15 seconds.	N/A
URL	URL string	N/A	String, case insensitive. Length: 1 to 255 characters.	Example: http://192.168.55.1:80/path
Method	Request method	N/A	Enumeration: • 0—GET • 1—POST	N/A
Template	Request template	N/A	String, case sensitive. Length: 1 to 255 characters.	Example: username=$$USERNAME$$&password=$$ENCODE_MD5:PASSWORD$$&resid=1234

SSLVPN/CustomAuthReqHeaders

This table contains information about SSL VPN custom authentication request headers.

XML structure

```
<SSLVPN>
  <CustomAuthReqHeaders>
    <CustomAuthReqHeader>
      <ContextName></ContextName>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>
    </CustomAuthReqHeader>
  </CustomAuthReqHeaders>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthReqHeaders
Table type	Multi-instance table
Row name	CustomAuthReqHeader
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
HeaderName	Request header field name	Index	String, case insensitive. Length: 1 to 63 characters. Invalid characters are \t \r \n ? ( ) < > @ , ; : \ “ / [ ] = { } SP and the ASCII characters which greater than 127 and less than or equal to 31.
HeaderValue	Request header field value	N/A	String, Length: 1 to 255 characters. Invalid characters are ?.

SSLVPN/CustomAuthResponses

This table contains information about the content types of response packets from the custom authentication server.

XML structure

```
<SSLVPN>
```

```
  <CustomAuthResponses>
    <CustomAuthResponse>
      <ContextName></ContextName>
      <Type></Type>
      <SuccessValue></SuccessValue>
    </CustomAuthResponse>
  </CustomAuthResponses>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthResponses
Table type	Multi-instance table
Row name	CustomAuthResponse
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
Type	Content type of custom authentication response packet	N/A	Enumeration: • 0—JSON • 1—XML • 2—Custom
SuccessValue	Value that represents successful authentication.	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

SSLVPN/CustomAuthRespFields

This table contains information about the primary fields of the response packets from the custom authentication server.

XML structure

```
<SSLVPN>
  <CustomAuthRespFields>
    <CustomAuthRespField>
```

```
      <ContextName></ContextName>
      <ResultField></ResultField>
      <GroupField></GroupField>
      <MessageField></MessageField>
    </CustomAuthRespField>
  </CustomAuthRespFields>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthRespFields
Table type	Multi-instance table
Row name	CustomAuthRespField
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ResultField	Name of authentication result field.	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: success
GroupField	Name of user group field.	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	This field indicates which group the user belongs to. Example: company
MessageField	Name of authentication result description field.	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: description

SSLVPN/CustomAuthRespTemplates

This table contains information about the field-value pair templates for primary fields of the custom authentication responses.

XML structure

```
<SSLVPN>
  <CustomAuthRespTemplates>
    <CustomAuthRespTemplate>
      <ContextName></ContextName>
      <ResultTemplate></ResultTemplate>
      <GroupTemplate></GroupTemplate>
      <MessageTemplate></MessageTemplate>
    </CustomAuthRespTemplate>
  </CustomAuthRespTemplates>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	CustomAuthRespTemplates
Table type	Multi-instance table
Row name	CustomAuthRespTemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ResultTemplate	Authentication result field-value pair template.	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: success=$$value$$
GroupTemplate	User group field-value pair template.	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: company=$$value$$
MessageTemplate	Authentication result description field-value pair template.	N/A	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Example: description=$$value$$

SSLVPN/GlobalUISetting

This table contains SSL VPN global UI configuration information.

XML structure

```
<SSLVPN>
  <GlobalUISetting>
    <TemplateName></TemplateName>
    <Status></Status>
  </GlobalUISetting>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalUISetting
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TemplateName	Name of the UI template used by global setting.	N/A	String. Length: 1 to 31 characters. The string cannot contain the following characters: / \ | : * “ ? < >.
Status	Template status.	N/A	Enumeration: • 0—Normal. • 1—The login.html file is missing. • 2—The home.html file is missing. • 3—The version is not matched.

SSLVPN/UITemplates

This table contains SSL VPN UI template information.

XML structure

```
<SSLVPN>
  <UITemplates>
```

```
    <UITemplate>
      <TemplateName></TemplateName>
      <TemplateType></TemplateType>
      <TemplateStatus></TemplateStatus>
      <TemplatePaths></TemplatePaths>
    </UITemplate>
  </UITemplates>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UITemplates
Table type	Multi-instance table
Row name	UITemplate
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TemplateName	UI template name.	Index	String. Length: 1 to 31 characters. The string cannot contain the following characters: / \ | : * “ ? < >.
TemplateType	UI template type.	N/A	Enumeration: • 0—Predefined. • 1—User-defined.
TemplateStatus	UI template status.	N/A	Enumeration: • 0—Normal. • 1—The login.html file is missing. • 2—The home.html file is missing. • 3—The version is not matched.
TemplatePaths	UI template path.	N/A	String. Length: 1 to 511 characters. The string cannot contain the following characters: / \ | : * “ ? < >.

SSLVPN/WebAcContexts

This table contains SSL VPN Web access information for contexts.

XML structure

```
<SSLVPN>
  <WebAcContexts>
    <WebAcContext>
      <ContextName></ContextName>
      <UrlMasking></UrlMasking>
    </WebAcContext>
  </WebAcContexts>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	WebAcContexts
Table type	Multi-instance table
Row name	WebAcContext
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UrlMasking	Whether URL masking is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

SSLVPN/FrozenIPInfos

This table contains configuration information for frozen IP address.

XML structure

```
<SSLVPN>
  <FrozenIPInfos>
    <FrozenIPInfo>
      <ContextName></ContextName>
      <IpAddress></IpAddress>
      <AuthMethod></AuthMethod>
```

```
      <FrozenTime></FrozenTime>
      <EstimateUnFreezeTime></EstimateUnFreezeTime>
    </FrozenIPInfo>
  </FrozenIPInfos>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	FrozenIPInfos
Table type	Multi-instance table
Row name	FrozenIPInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
IpAddress	Frozen IP address	N/A	IPv4: String, dotted decimal notation; IPv6: Hexadeccimal string, colon-separated. Example: 1.1.1.1;1; 1:1::1:1.
AuthMethod	Reason for the last login failure	N/A	String, Length: 1 to 63 characters.
FrozenTime	Time when the IP address was frozen	N/A	Time. Format: YY-MM-DD HH:MM:SS.
EstimateUnFreezeTime	Time when the IP address will be unfrozen	N/A	Time. Format: YY-MM-DD HH:MM:SS.

SSLVPN/UserNumberInfo

This table contains information about the number of SSL VPN users.

XML structure

```
<SSLVPN>
  <UserNumberInfo>
    <HistoryMaxUserNumber></HistoryMaxUserNumber>
    <LicenseUserNumber></LicenseUserNumber>
```

```
  </UserNumberInfo>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UserNumberInfo
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HistoryMaxUserNumber	Highest number of online users in history	N/A	Unsigned integer.	N/A
LicenseUserNumber	Number of licensed online users	N/A	Unsigned integer.	N/A

SSLVPN/SmsAuthSmsGws

This table contains configuration information for SMS gateway authentication.

XML structure

```
<SSLVPN>
  <SmsAuthSmsGws>
    <SmsAuthSmsGw>
      <ContextName></ContextName>
      <SmsGwName></SmsGwName>
      <AllowSelfBindMobileNum></AllowSelfBindMobileNum>
      <SmsSendInterval></SmsSendInterval>
      <ValidTime></ValidTime>
      <CountryCode></CountryCode>
      <SmsContent></SmsContent>
    </SmsAuthSmsGw>
  </SmsAuthSmsGws>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SmsAuthSmsGws
Table type	Multi-instance table
Row name	SmsAuthSmsGw
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SmsGwName	SMS gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
AllowSelfBindMobileNum	Allow user to bind a mobile number if the number is not bound to a user	N/A	Boolean: • true—Enabled. • false—Disabled.
SmsSendInterval	SMS sending interval	N/A	Unsigned integer. Value range: 0 to 3600, in seconds.
ValidTime	Verification code validity time period	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.
CountryCode	Country code	N/A	String. Length: 1 to 7 characters. The string can contain only digits.
SmsContent	SMS content	N/A	String. Length: 1 to 127 characters. The value can contain Chinese characters.

SSLVPN/SmsAuthSettings

This table contains configuration information for SMS authentication.

XML structure

```
<SSLVPN>
  <SmsAuthSettings>
    <SmsAuthSetting>
      <ContextName></ContextName>
      <SmsAuthType></SmsAuthType>
    </SmsAuthSetting>
  </SmsAuthSettings>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SmsAuthSettings
Table type	Multi-instance table
Row name	SmsAuthSetting
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SmsAuthType	Type of SMS authentication.	N/A	Enumeration: • 0—IMC. • 1—SMS gateway.

SSLVPN/SSOAutoBuildParams

This table contains login parameter information for SSL VPN user Web access using SSO auto-build mode.

XML structure

```
<SSLVPN>
  <SSOAutoBuildParams>
    <SSOAutoBuildParam>
      <ContextName></ContextName>
      <ItemName></ItemName>
```

```
      <Type></Type>
      <Name></Name>
      <Value></Value>
      <Encrypt></Encrypt>
    </SSOAutoBuildParam>
  </SSOAutoBuildParams>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	SSOAutoBuildParams
Table type	Multi-instance table
Row name	SSOAutoBuildParam
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
ItemName	URL item name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
Type	Auto-build mode login parameter type	Index	Enumeration: • 1—login-name. • 2—login-password. • 3—cert-title. • 4—cert-serial. • 5—cert-fingerprint. • 6—phone-num. • 7—user-group. • 8—custom-username. • 9—custom-password. • 10—custom.	N/A
Name	Auto-build mode attribute name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Value	Auto-build mode attribute value	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Encrypt	Auto-build mode attribute value encryption	N/A	Boolean: • true—Encrypt. • false—Not to encrypt.	N/A

SSLVPN/WeChatWorkAuths

This table contains WeChat Work authentication information.

XML structure

```
<SSLVPN>
  <WeChatWorkAuths>
    <WeChatWorkAuth>
      <ContextName></ContextName>
      <WeChatEnable></WeChatEnable>
      <URL></URL>
      <TimeOut></TimeOut>
      <CorpId></CorpId>
      <AppSecret></AppSecret>
      <UserIdField></UserIdField>
      <AuthorizeField></AuthorizeField>
      <OpenUrlEnable></OpenUrlEnable>
      <OpenUrlType></OpenUrlType>
      <OpenUrlValue></OpenUrlValue>
    </WeChatWorkAuth>
  </WeChatWorkAuths>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	WeChatWorkAuths
Table type	Multi-instance table
Row name	WeChatWorkAuth
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN	Index	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	context name		Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	
WeChatEnable	Whether the WeChat Work authentication is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
URL	WeChat Work authentication URL string	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
TimeOut	WeChat Work authentication timeout time	N/A	Unsigned integer. Value range: 5 to 50, in seconds. Default: 15 seconds.	N/A
CorpId	Enterprise ID	N/A	String. Length: 1 to 63 characters.	N/A
AppSecret	Application secret key	N/A	String. Length: 1 to 127 characters.	N/A
UserIdField	User ID field name	N/A	String. Length: 1 to 63 characters.	N/A
AuthorizeField	Authorization policy group field name	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
OpenUrlEnable	Whether the WeChat open platform is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
OpenUrlType	Type of the WeChat open platform URL	N/A	Enumeration: • 0—Predefined. • 1—User defined.	N/A
OpenUrlValue	WeChat open platform URL	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A

SSLVPN/UiReplyMsgs

This table contains information about customizations for server reply messages.

XML structure

```
<SSLVPN>
  <UiReplyMsgs>
    <UiReplyMsg>
```

```
      <ContextName></ContextName>
      <ServerReplyMsg></ServerReplyMsg>
      <SelfDefineReplyMsg>
        <English></English>
        <Chinese></Chinese>
      </SelfDefineReplyMsg>
    </UiReplyMsg>
  </UiReplyMsgs>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	UiReplyMsgs
Table type	Multi-instance table
Row name	UiReplyMsg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ServerReplyMsg	Server reply Message	Index	String. Length: 1 to 127 characters.
SelfDefineReplyMsg	Server reply message customization	Data structure	Member include: • English. • Chinese.
English	Customized server reply message in English	N/A	String. Length: 1 to 127 characters.
Chinese	Customized server reply message in Chinese	N/A	String. Length: 1 to 127 characters.

SSLVPN/GlobalFlowRedirect

This table contains SSL VPN flow redirect configuration information.

XML structure

```
<SSLVPN>
  <GlobalFlowRedirect>
    <GlobalFlowRedirectEnable></GlobalFlowRedirectEnable>
  </GlobalFlowRedirect>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalFlowRedirect
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalFlowRedirectEnable	Whether the global flow redirect is enabled	N/A	Boolean: • true—Enabled. • false—Disabled	N/A

SSLVPN/Quantum

This table contains SSL VPN quantum cipher service configuration.

XML structure

```
<SSLVPN>
  <Quantum>
    <CspId></CspId>
    <EcmId></EcmId>
    <ServiceIP></ServiceIP>
    <ServicePort></ServicePort>
    <AppId></AppId>
  </Quantum>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	Quantum
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CspId	Cipher service platform ID	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
EcmId	Exchange cipher machine ID	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
ServiceIP	IPv4 address of exchange cipher machine	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ServicePort	Port number of exchange cipher machine	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
AppId	Application ID	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A

SSLVPN/ContextRoles

This table contains SSL VPN user roles information.

XML structure

```
<SSLVPN>
  <ContextRoles>
    <ContextRole>
      <ContextName></ContextName>
      <RoleName></RoleName>
      <PolicyName></PolicyName>
      <AccessEnable></AccessEnable>
      <ContextRole>
```

```
  </ContextRoles>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ContextRoles
Table type	Multi-instance table
Row name	ContextRole
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
RoleName	Name of user role.	Index	String, case insensitive. Length: 1 to 63 characters.
PolicyName	SSL VPN policy group name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
AccessEnable	Whether authorization based on user role is enabled	N/A	Unsigned integer. Value range: 0 to 7. Default: 0 Bit0: • 0—IP tunnul are allowed to authorized by user roles. • 1—IP tunnul are denied to authorized by user roles. Bit1: • 0—Web access are allowed to authorized by user roles. • 1—Web access are denied to authorized by user roles. Bit2: • 0—TCP access are allowed to authorized by user roles. • 1—TCP access are denied to authorized by user roles.

SSLVPN/ClientDownloads

This table customizes the download path of SSL VPN IP access clients.

XML structure

```
<SSLVPN>
  <ClientDownloads>
    <ClientDownload>
      <ClientPlatform></ClientPlatform>
      <DownloadType></DownloadType>
      <URL></URL>
    </ClientDownload>
  </ClientDownloads>
</SSLVPN>
```

Table description

Item	Description
Feature name	SSLVPN
Table name	ClientDownloads
Table type	Multi-instance table
Row name	ClientDownload
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientPlatform	Platform of client	Index	Enumeration: • 1—Windows. • 2—Mac. • 3—Common Linux-X86 • 4—Common Linux-ARM • 5—Common Linux-MIPS • 6—Common Linux-Loongarch • 7—Kylin Linux-X86 • 8—Kylin Linux-ARM • 9—Kylin Linux-MIPS • 10—Kylin Linux-Loongarch • 11—UOS Linux-X86	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 12—UOS Linux-ARM • 13—UOS Linux-MIPS • 14—UOS Linux-Loongarch.	
DownloadType	Client download method	N/A	Enumeration: • 1—Local. • 2—Official. • 3—Custom URL. Option **Local** is available only for the Windows platform when the device is installed with IP client.	N/A
URL	URL string, available only when the DownloadType is 3	N/A	String, case insensitive. Length: 1 to 255 characters.	Example: https://inode.h3c.com/download

SSLVPN

SSLVPN/Gateways

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效。
Can't delete the gateway. It is associated with contexts. 指定的SSL VPN网关已经被SSL VPN访问实例引用，无法删除。	Delete the specified gateway,which is referenced by other access instances. 删除指定gateway时，此网关被其它访问实例引用。
The specified port number must be different from the HTTP redirection port number. 指定的端口号不能是HTTP重定向端口号。	Configuring the IP address port is the same as redirecting port. HTTPS的端口号不能与HTTP重定向端口相同。
The port has already been used. 此端口号已被占用。	Configuration redirection ports have been occupied by other configurations. 配置的重定向端口已被其它配置占用。
Can't enable the SSL VPN gateway: The gateway IP address is already used by another SSL VPN gateway. 开启当前的SSL VPN网关失败：该网关的IP地址已经被其它SSL VPN网关使用。	The address bound by the open gateway has been used by other gateways. 开启网关失败，此网关的IP地址被其它网关使用。
The specified IP address and port number can't be the same as those of other SSL VPN gateways. 指定IP地址和端口号不能与其他网关相同。	The configured IP address and port are the same as the existing gateway. 配置的IP地址和端口和已有的网关相同。
The specified IPv6 address and port number can't be the same as those of other SSL VPN gateways. 指定IPv6地址和端口号不能与其他网关相同。	The configured IPv6 address and port are the same as the existing gateway. 配置的IPv6地址和端口和已有的网关相同。

SSLVPN/Contexts

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加SSL VPN网关时，指定的名称不存在。

A context has already been associated with the gateway without specifying a domain name or virtual host name. 该SSL VPN网关已经被其他的SSL VPN访问实例引用，且引用时未指定域名和虚拟主机名。	Configure the gateway under the access instance,which has been monopolized by other access instances. 访问实例下配置网关，此网关已经被其它访问实例独占。
The domain name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的域名。	Configure the gateway and domain name under the access instance,which has been referenced by the same domain name as other access instances. 访问实例下配置网关和域名，此网关已经被其它访问实例以相同的域名引用。
The virtual host name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的虚拟主机名称。	Configure the gateway and virtual host name under the access instance,which has been referenced by the same virtual host name as other access instances. 访问实例下配置网关和虚拟主机名，此网关已经被其它访问实例以相同的虚拟主机名引用。
Invalid AAA domain name. AAA域名非法。	The name specified for configuring the AAA domain name is invalid. 配置AAA域名，指定的名称无效。
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。
Maximum number of associated gateways already reached. SSL VPN网关引用数已达上限。	The maximum number of reference gateways is reached. 引用网关数达到最大值。
The virtual host name is already used in the URL mapping configuration of an URL item in the SSL VPN context. 当前SSL VPN访问实例下的URL表项已经使用该虚拟主机名。	The reference gateway is a virtual host name, the same as the domain referenced by a resource map under a URL item in the current context. 引用网关为虚拟主机名方式，与当前Context中某个URL表项下URL资源映射所引用的域名相同。
The gateway is already used in the URL mapping configuration of an URL item. 该网关已被URL表项下的资源映射配置使用。	The reference gateway is an exclusive reference that has been referenced by the URL resource mapping under the context url table entry. 引用网关为独占式引用，而该网关已经被Context URL表项下的URL资源映射所引用。
The gateway is already associated with another SSL VPN context through a domain name or virtual host name. 该SSL VPN网关已经被其他SSL VPN访问实例以域名或虚拟主机名的方式引用。	Configure the gateway monopoly, which has been referenced by the domain name or virtual host name of other contexts. 配置网关独占方式，而该网关已经被其它Context已域名或虚拟主机名的方式引用。
The specified gateway name and virtual host name are already used in the URL mapping configuration of an URL item. 指定的网关及虚拟主机名已被URL表项使用。	The reference gateway is a virtual host name, gateway and virtual host names are already used in the URL mapping 引用网关为虚拟主机名方式，其网关及虚拟主机名已被URL表项使用。

SSLVPN/Contexts_v2

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
Invalid AAA domain name. AAA域名非法。	The name specified for configuring the AAA domain name is invalid. 配置AAA域名，指定的名称无效。
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。

SSLVPN/ContextGateways

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加网关时，指定名称的网关不存在。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
A context has already been associated with the gateway without specifying a domain name or virtual host name. 该SSL VPN网关已经被其他的SSL VPN访问实例引用，且引用时未指定域名和虚拟主机名。	Configure the gateway under the access instance,which has been monopolized by other access instances. 访问实例下配置网关，此网关已经被其它访问实例独占
The domain name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的域名。	Configure the gateway and domain name under the access instance,which has been referenced by the same domain name as other access instances. 访问实例下配置网关和域名，此网关已经被其它访问实例已相同的域名引用。
The virtual host name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的虚拟主机名称。	Configure the gateway and virtual host name under the access instance,which has been referenced by the same virtual host name as other access instances. 访问实例下配置网关和虚拟主机名，此网关已经被其它访问实例以相同的虚拟主机名引用。
Maximum number of associated gateways already reached. SSL VPN网关引用数已达上限。	The maximum number of reference gateways is reached. 引用网关数达到最大值。

The virtual host name is already used in the URL mapping configuration of an URL item in the SSL VPN context. 当前SSL VPN访问实例下的URL表项已经使用该虚拟主机名。	The reference gateway is a virtual host name, the same as the domain referenced by a resource map under a URL item in the current context. 引用网关为虚拟主机名方式，与当前Context中某个URL表项下URL资源映射所引用的域名相同。
The gateway is already used in the URL mapping configuration of an URL item. 该网关已被URL表项下的资源映射配置使用。	The reference gateway is an exclusive reference that has been referenced by the URL resource mapping under the context turl table entry. 引用网关为独占式引用，而该网关已经被Context URL表项下的URL资源映射所引用。
The gateway is already associated with another SSL VPN context through a domain name or virtual host name. 该SSL VPN网关已经被其他SSL VPN访问实例以域名或虚拟主机名的方式引用。	Configure the gateway monopoly, which has been referenced by the domain name or virtual host name of other contexts. 配置网关独占方式，而该网关已经被其它Context以域名或虚拟主机名的方式引用。
The specified gateway name and virtual host name are already used in the URL mapping configuration of an URL item. 指定的网关及虚拟主机名已被URL表项使用。	The reference gateway is a virtual host name, gateway and virtual host names are already used in the URL mapping 引用网关为虚拟主机名方式，其网关及虚拟主机名已被URL表项使用。

SSLVPN/IpAcContexts

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。

SSLVPN/UISettings

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid file name. 文件名非法。	When configuring a file name,the specified name is invalid. 配置文件名时，指定的名称无效
The logo file doesn't exist. logo文件不存在。	Configure the logo file,the specified file does not exist. 配置logo文件，指定的文件不存在。
File size should not exceed 100KB.	The length of the file exceeds 100KB.

文件大小不能超过100KB。	文件的大小超过100KB。

SSLVPN/PortForwardLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the port-forwarding list. It is associated with policy groups. 指定的端口转发列表已经被策略组引用，无法删除。	Delete the port forward list,which has been referenced by the policy group. 删除端口转发列表时，此列表已被策略组引用。

SSLVPN/PortForwardItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Remote server name is required. 需要输入远端服务器名称。	Create a port to publish entry,the remote server name is not issued. 创建端口转发表项，并没有指定远端服务器名称。
Remote server port is required. 需要输入远端服务器端口号。	Create a port to publish entry,the remote server port is not issued. 创建端口转发表项，并没有指定远端服务器端口没有下发。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the port forwarding item. Reason: The item has been assigned to a port forwarding list. 无法删除端口转发表项，因为此表项已端口转发列表引用	Delete the referenced port forwarding item. 删除已被引用的端口转发列表。

SSLVPN/Ipv4AddressPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The start IP address is required.	When configuring an address,there is no start IP.

需要输入地址池的起始地址。	配置地址时，没有指定起始地址。
The end IP address is required. 需要输入地址池的结束地址。	When configuring an address,there is no end IP. 配置地址时，没有指定结束地址。
The IP address range can't overlap with an existing IP address range. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IP地址范围和已有地址池中的地址范围重叠。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The start IP address must be smaller than or equal to the end IP address. 地址池的起始地址必须小于或等于结束地址。	When configuring an IP address, the starting address is greater than the ending address. 配置IP地址时，起始地址大于结束地址。
The IP address range can't include loopback addresses. 地址池的地址范围不能包含环回地址。	The configured IP address contains the loopback address. 配置的IP地址中包含回环地址。
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。

SSLVPN/RouteLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the route list. It is referenced by policy groups. 指定的路由列表已经被策略组引用，无法删除。	Delete the routing list referenced by the policy group. 删除已被策略组引用的路由列表。

SSLVPN/RouteItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。

SSLVPN/PolicyGroups

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the policy group. It is associated with contexts. 指定的策略组已经被SSL VPN访问实例引用，无法删除。	Delete the referenced policy group. 删除已经被SSLVPN 访问实例引用的策略组。

SSLVPN/TcpAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified port-forwarding list doesn't exist. 指定的端口转发列表不存在。	Configure a list of port forwarding references that do not exist. 配置引用不存在的端口转发列表。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

SSLVPN/IpAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The route list doesn't exist. 引用的路由列表不存在。	Configure routing lists that do not exist. 配置引用不存在的路由列表。

SSLVPN/IpAcPolicys_v2

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The route list doesn't exist. 引用的路由列表不存在。	Configure routing lists that do not exist. 配置引用不存在的路由列表。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

SSLVPN/Sessions

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/ContextStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/URIACLs

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The uri-acl is in use. URI ACL正在被使用。	Delete the referenced URI ACL. 删除已被引用的URI ACL。

SSLVPN/URIACLItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。
Invalid uri-acl rule ID. 无效的URI ACL规则ID。	When configuring an ID, the specified value is invalid. 配置URI ACL的ID时，指定的值无效。
Please input uri-acl rule action. 需要输入URI ACL规则动作。	When configuring data, no regular action is issued. 配置数据时，必须指定规则动作。
Please input uri-acl rule pattern. 需要输入URI ACL规则样式。	When configuring data, no rule style is issued. 配置数据时，必须指定规则样式。
Pattern string is invalid. 模式字符串不合法。	When configuring data, the specified pattern string is invalid. 配置数据时，指定的模式字符串无效。
Protocol string is invalid. 协议类型不合法	When configuring data, the specified protocol is invalid. 配置数据时，指定的协议无效。
Host name string is invalid. 主机地址或域名不合法。	When configuring data, the specified host address or domain name is invalid. 配置数据时，指定的主机地址或域名无效。
Port string is invalid. 端口不合法。	When configuring data, the specified port is invalid. 配置数据时，指定的端口无效。
Path string is invalid. 路径不合法。	When configuring data, the specified path is invalid. 配置数据时，指定的路径无效。

SSLVPN/WebAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

SSLVPN/UrlLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the url list: It is associated with policy groups. 指定的URL列表被策略组引用，无法删除。	Delete the URL list referenced by the policy group. 删除已被策略组引用的URL列表。

SSLVPN/UrlItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。
Can't delete the URL item because it has been assigned to a URL list. 无法删除URL表项，因为该表项已被URL列表引用。	Delete the URL item referenced by the URL list. 删除已被URL 列表引用的URL表项。
The URL is already specified for another URL item in the SSL VPN context. 当前SSL VPN访问实例下的其他URL表项中已存在该URL。	In the case of resource mapping, the URL item is configured with the same value as the other URL item. 资源映射情况下，配置的URL表项和其它URL表项相同。

SSLVPN/UrlCtxItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加网关时，指定的名称不存在。
The specified SSL VPN context doesn't exist.	When the configuration is added,the context instance does not exist.

指定的SSL VPN访问实例不存在。	添加配置时，访问实例不存在。
The specified URL item doesn't exist. 指定的URL表项不存在。	When configuring data, the specified URL item does not exist. 配置数据时，指定的URL表项不存在。
The domain name is already used in the URL mapping configuration of another URL item in the SSL VPN context. 当前SSL VPN访问实例下的其他URL表项下域名映射配置已使用该域名。	The configuration domain name is the same as the domain name mapped under other URL item. 配置域名和其它URL表项下域名映射的域名相同。
The domain name specified in the URL item is the same as the gateway's virtual host name specified for the SSL VPN context. 该URL表项配置的域名与当前SSL VPN访问实例下配置的网关虚拟主机名相同。	The configured domain name is the same as the gateway virtual host name under the current access instance. 配置域名和当前SSLVPN访问实例下的网关虚拟主机名相同。
The URL specified for the URL item is the same as the URL specified for another URL item (in the same SSL VPN context) that has URL mapping configured. 指定的URL与当前SSL VPN访问实例下的其他URL表项中配置的URL相同。	Configuring URL mapping ,the URL configured under the URL item is the same as other URL item configured with resource mapping under the current context. 配置资源映射时，该URL表项下配置的URL与当前Context下的其它配置了资源映射的URL表项的URL相同
The gateway is already used in the URL mapping configuration of another URL item. 其他URL表项下的端口映射已配置该网关。	The referenced gateway is called an exclusive reference, the gateway is already referenced by the URL resource map under the url table entry of the context. 引用的网关名为独占引用，而该网关已经被Context 的URL表项下URL资源映射所引用
The gateway name and virtual host name are already associated with an SSL VPN context. 该URL表项配置的网关及虚拟主机名已经被SSL VPN访问实例使用。	The reference gateway name and virtual host name are the same as the gateway and virtual host name referenced by the context. 引用的网关名和虚拟主机名与Context引用的网关和虚拟主机名都相同
The gateway name and virtual host name specified in the URL item are already used in the URL mapping of another URL item. 该URL表项配置的网关及虚拟主机名已被其他URL表项使用。	When configuring URL mapping ,the configured gateway and virtual host names under the url table item have been used by other URL table items. 配置资源映射时，该URL表项下配置的网关及虚拟主机名已经被其它URL表项使用。
The gateway name specified in the URL item is already associated with an SSL VPN context. 该URL表项引用的网关已经和SSL VPN访问实例关联。	When configuring URL mapping ,the referenced gateway is already associated with the SSLVPN access instance. 配置资源映射时，引用的网关已经和SSLVPN访问实例关联。
The file size cannot exceed 200 KB. 文件大小不能超过200KB。	The encryption file size exceeds 200 KB. 加密文件大小超过200KB。
Invalid file format. The file format must be js. 文件格式错误，必须为js格式。	The specified file format is invalid. 配置指定的文件格式非法。

SSLVPN/UrlItemResources

Message	Explanation
SSL VPN is not enabled.	Get or configuration data when the SSLVPN process is not started.

SSL VPN服务没有开启。	当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。
The specified URL item doesn't exist. 指定的URL表项不存在。	When configuring data, the specified URL item does not exist. 配置数据时，指定的URL表项不存在。

SSLVPN/SnatPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。
The end address must be greater than or equal to the start address. 地址池的结束地址必须大于或等于起始地址。	When configuring an IP address, the end address is less than the beginning address. 配置IP地址时，结束地址小于起始地址。
Number of addresses in the SNAT pool exceeded the limit. 地址池内的地址数量已达上限。	When configuring an IP address, the number of addresses exceeds the maximum. 配置IP地址时，地址数量超过最大值。
The specified SNAT pool member can't overlap with an existing member in another SNAT pool. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IP地址范围和已有地址池中的地址范围重叠。
The start IP address is required. 需要输入SNAT POOL的起始地址。	When configuring an address,there is no start IP. 配置地址时，没有指定起始地址。
The end IP address is required. 需要输入SNAT POOL的结束地址。	When configuring an address,there is no end IP. 配置地址时，没有指定结束地址。

SSLVPN/Ipv6SnatPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address.	When configuring an IP address,the specified address is invalid.

IP地址无效。	配置IPv6地址时，指定的地址无效
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address conflicts with the address in the device. 配置的IPv6地址池和设备中的地址有冲突。
The end address must be greater than or equal to the start address. 地址池的结束地址必须大于或等于起始地址。	When configuring an IP address, the end address is less than the beginning address. 配置IPv6地址时，结束地址小于起始地址。
Number of addresses in the SNAT pool exceeded the limit. 地址池内的地址数量已达上限。	When configuring an IP address, the number of addresses exceeds the maximum. 配置IPv6地址时，地址数量超过最大值。
The specified SNAT pool member can't overlap with an existing member in another SNAT pool. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IPv6地址范围和已有地址池中的地址范围重叠。
The start IP address is required. 需要输入SNAT POOL的起始地址。	When configuring an address,there is no start IP. 配置IPv6地址时，没有指定起始地址。
The end IP address is required. 需要输入SNAT POOL的结束地址。	When configuring an address,there is no end IP. 配置IPv6地址时，没有指定结束地址。

SSLVPN/UrlResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified policy group doesn't exist. 指定的策略组不存在。	When the configuration is added,the policy group instance does not exist. 添加配置时，策略组不存在。
The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。

SSLVPN/SnatResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified snat pool doesn't exist. 指定的SNAT地址池不存在。	When configuring data, the specified SNAT pool does not exist. 配置数据时，指定的SNAT地址池不存在。

SSLVPN/UserControls

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The freeze time is required for configuring IP address freezing to prevent login cracking. 需要配置防暴力破解冻结IP地址时间。	The IP address frozen period of time is not set for login cracking prevention. 配置防暴力破解功能时，没有指定冻结IP地址时间。
The login-failures times is required for configuring IP address freezing to prevent login cracking. 需要配置防暴力破解冻结IP地址功能允许的连续登陆失败的最大次数。	The max number of login failures allowed before freezing the IP address is not set for login cracking prevention. 配置防暴力破解功能时，没有配置防暴力破解冻结IP地址功能允许的连续登陆失败的最大次数。
You can specify one (IPv4 or IPv6) or none address. 只能下发一个Ip或者不下发Ip。	You can specify either an IPv4 or IPv6 address, but not both. 解冻被动结的Ip时，可以指定一个ipv4，或者一个ipv6或者都不指定，但是不能同时指定ipv4和ipv6。

SSLVPN/GlobalLog

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/IpAcStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/IpAcContextStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/PortForwardCtxItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 配置数据时，访问实例不存在。
Local name is required. 需要指定本地服务器名称.	Add the configuration and the local server name is not issued. 添加配置时，没有指定本地服务器名称。
Local port is required. 需要指定本地服务器端口号	Add the configuration and the local server port is not issued. 添加配置时，没有指定本地服务器端口。
The specified port forwarding item doesn't exist. 指定的端口转发表项不存在	When configuring data,the port forwarding list does not exist. 配置数据时，端口转发列表不存在。
Can't delete the port forwarding item. Reason: The item has been assigned to a port forwarding list. 无法删除端口转发表项，因为此表项已端口转发列表引用	Delete the referenced port forwarding item. 删除已被引用的端口转发列表。

SSLVPN/PortForwardItemResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified port forwarding item doesn't exist. 指定的端口转发表项不存在	When configuring data,the forwarding list does not exist. 配置数据时，端口转发列表不存在。

SSLVPN/Shortcuts

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。

Can't delete the shortcut. Reason: The shortcut has been assigned to a shortcut list. 无法删除快捷方式，因为此快捷方式已被快捷方式列表引用	Delete the referenced shortcut. 删除已被引用的快捷方式。

SSLVPN/ShortCutLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the shortcut list. Reason: The list has been assigned to a policy group. 无法删除快捷方式列表，因为此快捷方式列表已被策略组引用。	Delete the referenced shortcut list. 删除已被引用的快捷方式列表。

SSLVPN/ShortcutResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added, the context instance does not exist. 添加配置时，访问实例不存在。
The specified shortcut doesn't exist. 指定的快捷方式不存在。	When the configuration is added, the specified shortcut doesn't exist. 配置数据时，指定的快捷方式不存在。
The specified shortcut list doesn't exist. 指定的快捷方式列表不存在。	When the configuration is added, the specified shortcut list doesn't exist. 配置数据时，指定的快捷方式列表不存在。

SSLVPN/ShortcutPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Gets or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/Users

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Operation succeeded. However, invalid addresses are included: broadcast or network addresses, or addresses not in the IP access address pool. 操作成功，但是包含无效地址：广播地址、网络地址或不在地址池中的地址。	Binding IP addresses contain broadcast addresses, network addresses,or addresses that are not in the address pool. 绑定IP地址包含广播地址、网络地址或不在地址池中的地址。
Operation failed. Some of the addresses are already bound to other users. 操作失败，部分地址已经被其它用户绑定。	Bind IP addresses, some of which have been bound by other users. 绑定的IP地址，部分地址已经被其它用户绑定。
Operation failed. The available IP addresses in the address pool were not enough for auto allocation. 操作失败，地址池中可用于分配的地址已经不足以自动分配。	Configuration automatically assigns more addresses than the number of addresses remaining in the address pool. 配置自动分配地址数大于地址池中剩余地址数量。
Invalid IP address list. 无效的IP地址列表。	The configured IP address is illegal. 配置的IP地址无效。
The specified SSL VPN user doesn't exist. 指定的SSL VPN用户不存在。	The configured user does not exist. 配置下发的用户不存在。
The username cannot contain the following special characters: | / : * ? < > @. 用户名不能包含以下特殊字符: | / : * ? < > @。	The username configured to issue contains illegal characters. 配置下发的用户名包含非法字符。
Operation failed. No IP access address pool is available in the SSL VPN context. 操作失败，在SSL VPN访问实例中不存在有效的地址池。	The SSLVPN access instance does not reference the address pool. SSLVPN访问实例没有引用地址池。
Operation failed. Maximum number of bound addresses already reached." 操作失败，已经达到可绑定的最大地址数。	The number of addresses bound by the user exceeds the maximum. 用户绑定的地址数超过最大限制。
BindAddress and AutoBindAddrNum cannot both be configured. BindAddress 和 AutoBindAddrNum 不能同时配置。	Simultaneously issue the specified and automatic IP address binding. 不能同时下发指定和自动IP地址绑定。

SSLVPN/GlobalCustomInfos

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started.

	当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/LogoutAlls

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/LogoutUsers

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/LogoutSessions

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

SSLVPN/GlobalCustoms

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The file size cannot exceed 50000 KB. 文件大小不能超过50M。	The configuration file size exceeds 50M. 配置文件大小超过50M。
The file does not exist. 文件不存在。	The configuration specified file does not exist. 配置指定的文件不存在。
Invalid file format. The file format must be EXE. 文件格式错误，必须为exe格式。	Configuring the specified file format is illegal. 配置指定的文件格式非法。

SSLVPN/UITemplateChecks

Message	Explanation
The specified template doesn't exist. 指定的模板不存在。	Check the template data when the template is not exist. 当指定的模板不存在是时，检查模板是否存在。

SSLVPN/UITemplateOperates

Message	Explanation
Invalid file format. The file format must be ZIP. 文件格式错误，必须为zip格式。	Load the wrong template file. 加载的模板格式错误。
The file size cannot exceed 2 MB. 文件大小不能超过2M。	The file loaded exceed 2 MB. 加载的模板超过2M。
The template cannot be named the same with system-defined template. 加载的模板不允许与系统定义模板同名。	The template loaded is named the same with system-define template. 加载的模板与系统定义模板重名。
The system template cannot be removed. 系统模板不能被删除。	Delete the system-define template. 删除系统模板。
Add failed, the login.html file is not exist. 添加失败，login.html文件不存在。	Load template. 加载模板。
Add failed, the home.html file is not exist. 添加失败，home.html文件不存在。	Load template. 加载模板。
The file does not exist. 文件不存在。	The configuration specified file does not exist. 配置指定的文件不存在。

SSLVPN/SSOAutoBuildParams

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	The SSLVPN process is not started when you get data or set configuration. 当SSLVPN进程没有开启时，获取数据或下发配置。
The build type is custom. You must specify a value for it. 构建类型是自定义方式，必须指定value。	You set the build type to custom but did not specify a value for the type. 当配置数据时构建类型是自定义方式，没有指定value。
The build type is not custom. Cannot specify a value for it. 构建类型非自定义方式，不能指定value。	You set a non-custom build type but specified a value for the type. 当配置数据时构建类型为非自定义方式，指定了value。

SSLVPN/SSOUserFiles

Message	Explanation
Invalid file format. The file format must be csv. 文件格式错误，必须为csv格式。	The specified file format is invalid. 指定的文件格式非法。

SSLVPN/UISettings

Message	Explanation
The size of the resource file has exceeded the current memory limit of the device. 资源文件大小超过设备当前内存限制。	The size of the resource file cannot exceed that of the largest remaining contiguous memory block. 资源文件的大小不能超过设备当前剩余的最大连续内存。
Failed to read the resource file. 读取资源文件失败。	Failed to read the specified file because the file does not exist or cannot be read. 读取指定的资源文件失败。原因是资源文件不存在或者资源文件不可读。

Table description

Item	Description
Feature name	gsta-staticrt
Table name	srRoutes
Table type	Multi-instance table
Row name	srRoute
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	Name of the VPN to which a prefix belongs.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string or a _public_ string indicates the public instance.
afType	Address family type.	Index	String: case-sensitive: • ipv4unicast • ipv6unicast	N/A
prefix	Destination IP address.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
maskLength	Mask length of an IP address.	Index	Unsigned integer. Value range: 0 to 128.	No more than 32 if afType is ipv4unicast, and no more than 128 if afType is

Column name	Column description	Column type	Data type and restrictions	Remarks
				ipv6unicast.
ifName	Output interface of a route.	Index	String, case-insensitive. Length: 0 to 64 characters.	N/A
destVrfName	Name of the destination VPN instance.	Index	String, case-sensitive. Length: 1 to 31 characters.	A _public_ string indicates the public instance,and a null string indicates the invalid instance when ifName is not null.
nexthop	Next hop IP address of a route.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 1.1.1.1, or 1::1.
description	Description of a static route.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
preference	Set a priority for the static routing protocol. If no priority is specified, the global default priority is used.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
tag	Tag of a static route.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
sessionName	Bind a static BFD session to a static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	
isPermanent	Enables the static route to be active permanently.	N/A	Boolean: • true—Permanent route. • false—Not a permanent route.	Default value is false.

Example

Set an IPv6 static route: “ipv6 route-static vpn-instance test 2003:: 64 2001::1 preference 5 bfd static StaticRtBfd description Route to HZ”

```
<staticrt xc:operation="replace" xmlns="http://www.gsta.com/netconf/gsta-staticrt">
  <staticrtbase>
    <srRoutes>
      <srRoute>
        <vrfName>test</vrfName>
        <afType>ipv6unicast</afType>
```

```
        <prefix>2003::</prefix>
        <maskLength>64</maskLength>
        <ifName></ifName>
        <destVrfName></destVrfName>
        <nexthop>2001::1</nexthop>
        <description>Route to HZ</description>
        <preference>5</preference>
        <sessionName>StaticRtBfd</sessionName>
      </srRoute>
    </srRoutes>
  </staticrtbase>
</staticrt>
```

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when setting new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF name does not exist. 目的VRF索引不存在	Please create the VPN instance first.
The specified next hop VRF name does not exist. 下一跳VRF索引不存在	Please create the VPN instance first.
The interface is not supported. 接口不支持	Only routing interfaces are available.
Invalid destination address. 目的地址无效	Only class A, class B, and class C addresses are available.
Invalid next hop address. 下一跳无效	Only class A, class B, and class C addresses are available.
Next-hop address, outbound interface, or both must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Next-hop address, outbound interface, or both must be specified.
The specified interface requires configuring a next hop address. 该接口需要配置下一跳地址	The specified interface requires configuring a next hop address.
The specified interface does not require configuring a next hop address. 该接口不需要配置下一跳	The specified interface does not require configuring a next hop address.
BFD cannot coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD cannot coexist with backup attribute.
BFD cannot coexist with Track attribute. 静态路由的track属性不能与BFD共存	BFD cannot coexist with Track attribute.
Next hop VRF name should be set to (%s). 下一跳VRF名称应该填(%s)	Next hop VRF name should be set to the specified character string.
A valid output interface is required for a link-local address as the next hop.	A valid output interface is required for a link-local address as the next hop.

Link-local地址作为下一跳需要指定有效出接口	
BFD not supported. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD cannot be configured when the output interface is NULL0.
The specified interface name does not exist. 接口名称不存在	The specified interface name does not exist.
BFD cannot coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD cannot coexist with permanent attribute.
Track cannot coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track cannot coexist with permanent attribute.

Table description

Item	Description
Feature name	StaticRoute
Table name	Ipv4StaticRouteConfigurations
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None
Support for row creation and deletion	Yes
Support for vsys	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestVrfIndex	Destination VRF index.	Index	Unsigned integer.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
DestTopologyIndex	Destination topology index.	Index	Unsigned integer.	Public network index is 0.
Ipv4Address	Destination IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	Length of the destination IPv4 address prefix.	Index	Unsigned integer. Value range: 0 to 32.	N/A
NexthopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex,NexthopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
NexthopIpv4Addr	Nexthop IPv4	Index	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
ess	address.			0.0.0.0 is an invalid value. If inter-VPN static routing is configured, 0.0.0.0 is a valid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. If the next hop address is 0.0.0.0 for inter-VPN static routing, the IfIndex column must be empty or set the value of this column to 0.
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
Permanent	Permanent attribute.	N/A	Boolean: • true—Permanent route. • false—Not a Permanent route.	Default value is false.
BackupPathAttribute	Backup path attribute.	Data structure	Members include: • BackupIfIndex. • BackupNexthopIpv4Address.	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNexthopIpv4Address	Backup nexthop IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
BfdAttribute	BFD attribute.	Data structure	Members include: • BfdWorkMode. • BfdSourceIpv4Address. • BfdSessionName.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdWorkMode	BFD work mode.	N/A	Enumeration: • 0—Neither control-packet mode nor echo-packet mode(default). • 1—Control-packet mode. • 2—Echo-packet mode.	N/A
BfdSourceIpv4Address	BFD source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value. The value cannot be 0.0.0.0 when the BfdWorkMode column is 1 or 2.
BfdSessionName	Name of the static BFD session bound to the static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
TrackEntryID	Track entry ID.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
RecursiveHost	Recursive lookup for ARP host routes.	N/A	Boolean: • true—Looks up for only ARP host routes. • false—Looks up for not only ARP host routes, but also other routes.	Default value is false.
LdpSync	LDP-static route synchronization	N/A	Boolean: • true—Enable LDP-static route synchronization. • false—Disable LDP-static route synchronization.	Default value is false. When the configuration includes no valid ifIndex, LdpSync should be set to false.
Recursive-Lookup	Disable supernet check		Enumeration: • **0**—Disable(default). • **1**—Enable.	N/A
DHCP	Whether to use the default router designated by the DHCP server as the next hop	N/A	Boolean: • **true**—Uses the default router designated by the DHCP server as the next hop. • **false**—Does not use the default router designated by the DHCP server as the next hop.	To use the DHCP column, the NexthopIpv4Address column must be set to 0.0.0.0. Default value is false.
NoAdvertise	Configure the device to not advertise the specified route.		Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	Default value is false.
FIRType	Whether the static route is used as a primary link or secondary link in	N/A	Enumeration: • **1**—Primary. • **2**—Secondary.	Default: 0 (the static route is not used as a primary or secondary link in FIR mode).

Column name	Column description	Column type	Data type and restrictions	Remarks
	flexible intelligent routing (FIR) mode			
Threshold	Upper threshold for link bandwidth usage when the static route is used as a primary link in FIR mode	N/A	Unsigned integer. Value range: 1 to 100.	Default: 0 (no upper threshold is set for link bandwidth usage).
RecursiveLongestMatch	Recursive lookup for longest match route.	N/A	Enumeration: • **0**—Rely to direct route has a higher priority. (default) • **1**—Rely to longest match route has a higher priority.	N/A

StaticRoute/Ipv4Group

This table contains IPv4 group configuration information.

XML structure

```
<StaticRoute>
  <Ipv4Group>
    <GroupEntry>
      <Group></Group>
    </GroupEntry>
  </Ipv4Group>
</StaticRoute>
```

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestVrfIndex	Destination VRF index.	Index	Unsigned integer.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
DestTopologyIndex	Destination topology index.	Index	Unsigned integer.	Public network index is 0.
Group	Group name.	Index	String. Length: 1 to 31 characters.	After a group is created, it cannot be modified.
NexthopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex,NexthopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
NexthopIpv4Address	Nexthop IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value. If inter-VPN static routing is configured, 0.0.0.0 is a valid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
				If the next hop address is 0.0.0.0 for inter-VPN static routing, the IfIndex column must be empty or set the value of this column to 0.s
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
Permanent	Permanent attribute.	N/A	Boolean: • **true**—Permanent route. • **false**—Not a Permanent route.	Default value is false.
BackupPathAttribute	Backup path attribute.	Data structure	Members include: • BackupIfIndex. • BackupNexthopIpv4Address.	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNexthopIpv4Address	Backup nexthop IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
BfdAttribute	BFD attribute.	Data structure	Members include: • BfdWorkMode. • BfdSourceIpv4Address. • BfdSessionName.	N/A
BfdWorkMode	BFD work mode.	N/A	Enumeration: • 0—Neither control-packet mode nor echo-packet mode(default). • **1**—Control-packet mode. • **2**—Echo-packet mode.	N/A
BfdSourceIpv4Address	BFD source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value. The value cannot be 0.0.0.0 when the BfdWorkMode column is 1 or 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
BfdSessionName	Name of the static BFD session bound to the static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
TrackEntryID	Track entry ID.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
RecursiveHost	Recursive lookup for ARP host routes.	N/A	Boolean: • true—Looks up for only ARP host routes. • false—Looks up for not only ARP host routes, but also other routes.	Default value is false.
LdpSync	LDP-static route synchronization	N/A	Boolean: • true—Enable LDP-static route synchronization. • false—Disable LDP-static route synchronization.	Default value is false. When the configuration includes no valid ifIndex, LdpSync should be set to false.
DHCP	Whether to use the default router designated by the DHCP server as the next hop	N/A	Boolean: • **true**—Uses the default router designated by the DHCP server as the next hop. • **false**—Does not use the default router designated by the DHCP server as the next hop.	To use the DHCP column, the NexthopIpv4Address column must be set to 0.0.0.0. Default value is false.
NoAdvertise	Configure the device to not advertise the specified route.		Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	Default value is false.
RecursiveLongestMatch	Recursive lookup for longest match route.	N/A	Enumeration: • **0**—Rely to direct route has a higher priority. (default) • **1**—Rely to longest match route has a higher priority.	N/A

SrAfType	Address family type of segment routing.	Index	String: case-sensitive: • ipv4 • ipv6	Now not support ipv4,
PolicyName	Name of the SR or SRv6 policy.	Index	String, case-sensitive. Length: 1 to 59 characters.	PolicyName can not be set with Color Endpoint at the same time.
Color	Color associated with the policy	Index	Unsigned integer. 0 to 4294967295	Color and Endpoint must be set at the

Column name	Column description	Column type	Data type and restrictions	Remarks
				same time. PolicyName and Color can not be set at the same time.
Endpoint	IP address of the policy endpoint	Index	String, dotted decimal notation if SrAfType is ipv4, or colon-separated hexadecimal string if SrAfType is ipv6.	Color and Endpoint must be set at the same time. PolicyName and Endpoint can not be set at the same time.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
NoAdvertise	Configure the device to not advertise the specified route.		Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	Default value is false.

StaticRoute/Ipv4Configuration

This table contains IPv4 static route recursion configuration information.

XML structure

```
<StaticRoute>
  <Ipv4Configuration>
    <RecursiveSrv6></RecursiveSrv6>
    <RecursiveTunnel></RecursiveTunnel>
    <RecursiveTunnelPrefixList></RecursiveTunnelPrefixList>
    <RecursiveTunnelPolicy></RecursiveTunnelPolicy>
  </Ipv4Configuration>
</StaticRoute>
```

Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RecursiveSrv6	Whether to apply the SRv6 encapsulation information of the route obtained through recursive lookup to the static route.	N/A	Enumeration: • **disable**—Does not apply the SRv6 encapsulation information of the route obtained through recursive lookup to the static route (default). • **enable**—Applies the SRv6 encapsulation information of the route obtained through recursive lookup to the static route.	N/A
RecursiveTunnel	Static route recursive lookup to an LSP tunnel.	N/A	Enumeration: • **disable**—Disables static route recursive lookup to an LSP tunnel(default). • **enable**—Enables static route recursive lookup to an LSP tunnel.	N/A
RecursiveTunnel PrefixList	IPv4 address prefix list name.	N/A	String. Length: 1 to 63 characters.	Make sure RecursiveTunnel is enabled.
RecursiveTunnel Policy	Tunnel policy name.	N/A	String. Length: 1 to 126 characters.	Make sure RecursiveTunnel is enabled.

StaticRoute/Ipv6Configuration

This table contains IPv6 static route recursion configuration information.

XML structure

```
<StaticRoute>
  <Ipv6Configuration>
    <RecursiveSrv6></RecursiveSrv6>
  </Ipv6Configuration>
</StaticRoute>
```

Table description

Item	Description
Feature name	StaticRoute
Table name	Ipv4StaticRouteConfigurations
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None
Support for vsys	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestVrfIndex	Destination VRF index.	Index	Unsigned integer.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
DestTopologyIndex	Destination topology index.	Index	Unsigned integer.	Public network index is 0.
Ipv4Address	Destination IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	Length of the destination IPv4 address prefix.	Index	Unsigned integer. Value range: 0 to 32.	N/A
NexthopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex,NexthopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
NexthopIpv4Address	Nexthop IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid

Column name	Column description	Column type	Data type and restrictions	Remarks
				value. If inter-VPN static routing is configured, 0.0.0.0 is a valid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. If the next hop address is 0.0.0.0 for inter-VPN static routing, the IfIndex column is empty or the value for this column is 0.
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
Permanent	Permanent attribute.	N/A	Boolean: • true—Permanent route. • false—Not a permanent route.	Default value is false.
BackupPathAttribute	Backup path attribute.	Data structure	Members include: • BackupIfIndex. • BackupNexthopIpv4Address. • BackupIfName.	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNexthopIpv4Address	Backup nexthop IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
BackupIfName	Backup interface name.	N/A	String. Length: 2 to 47 characters. Example:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			GigabitEthernet2/0/1	
BfdAttribute	BFD attribute.	Data structure	Members include: • BfdWorkMode. • BfdSourceIpv4Address. • BfdSessionName.	N/A
BfdWorkMode	BFD work mode.	N/A	Enumeration: • 0—Neither control-packet mode nor echo-packet mode. • 1—Control-packet mode. • 2—Echo-packet mode.	N/A
BfdSourceIpv4Address	BFD source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
BfdSessionName	Name of the static BFD session bound to the static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
TrackEntryID	Track entry ID.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
RecursiveHost	Recursive lookup for ARP host routes.	N/A	Boolean: • true—Looks up for only ARP host routes. • false—Looks up for not only ARP host routes, but also other routes.	N/A
LdpSync	LDP-static route synchronization	N/A	Boolean: • true—Enable LDP-static route synchronization. • false—Disable LDP-static route synchronization.	Default value is false. When the configuration includes no valid ifIndex, LdpSync should be set to false.
Recursive-Lookup	Disable supernet check		Enumeration: • **0**—Disable. • **1**—Enable.	N/A
DHCP	Whether the default router designated by the DHCP server is used as the next hop	N/A	Boolean: • **true**—Uses the default router designated by the DHCP server as the next hop. • **false**—Does not use the default router designated by the DHCP server as the next hop.	To use the DHCP column, the NexthopIpv4Address column must be set to 0.0.0.0.
DestVrfName	Destination VRF name.	N/A	String. Length: 1 to 31 characters.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			GigabitEthernet2/0/2	
NoAdvertise	Configure the device to not advertise the specified route.		Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	Default value is false.
FIRType	Whether the static route is used as a primary link or secondary link in flexible intelligent routing (FIR) mode	N/A	Enumeration: • **1**—Primary. • **2**—Secondary.	Default: 0 (the static route is not used as a primary or secondary link in FIR mode).
Threshold	Upper threshold for link bandwidth usage when the static route is used as a primary link in FIR mode	N/A	Unsigned integer. Value range: 1 to 100.	Default: 0 (no upper threshold is set for link bandwidth usage).
RecursiveLongestMatch	Recursive lookup for longest match route.	N/A	Enumeration: • **0**—Rely to direct route has a higher priority. • **1**—Rely to longest match route has a higher priority.	N/A

StaticRoute/Ipv4Group

This table contains IPv4 group configuration information.

XML structure

Row name	RouteEntry
Restrictions	None
Support for vsys	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestVrfIndex	Destination VRF index.	Index	Unsigned integer.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
DestTopologyIndex	Destination topology index.	Index	Unsigned integer.	Public network index is 0.
Ipv6Address	Destination IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Ipv6PrefixLength	Length of the destination IPv6 address prefix.	Index	Unsigned integer. Value range: 0 to 128.	N/A
NexthopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex,NexthopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
NexthopIpv6Address	Nexthop IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. 0::0 is an invalid value.

Column name	Column description	Column type	Data type and restrictions	Remarks
				If inter-VPN static routing is configured, 0::0 is a valid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. If the next hop address is 0::0 for inter-VPN static routing, the IfIndex column is empty or the value for this column is 0.
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
Permanent	Permanent attribute.	N/A	Boolean: • true—Permanent route. • false—Not a Permanent route.	Default value is false.
BfdAttribute	BFD attribute.	Data structure	Members include: • BfdWorkMode. • BfdSourceIpv6Address. • BfdSessionName.	N/A
BfdWorkMode	BFD work mode.	N/A	Enumeration: • 0—Neither control-packet mode nor echo-packet mode. • 1—Control-packet mode. • 2—Echo-packet mode.	N/A
BfdSourceIpv6Address	BFD source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. 0::0 is an invalid value.
BfdSessionName	Name of the static BFD session bound to the static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A
TrackEntryID	Track entry ID.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
Recursive-Lookup	Disable supernet check	N/A	Enumeration: • **0**—Disable. • **1**—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Gateway	Whether to use the gateway router designated by address autoconfiguration as the next hop	N/A	Enumeration: • **0**—Does not use the gateway router designated by address autoconfiguration as the next hop. • **1**—Uses the gateway router designated by address autoconfiguration as the next hop.	To use the Gateway column, the NexthopIpv6Address column must be set to ::.
DestVrfName	Destination VRF name.	N/A	String. Length: 1 to 31 characters.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
NoAdvertise	Configure the device to not advertise the specified route.		Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	Default value is false.
FIRType	Whether the static route is used as a primary link or secondary link in flexible intelligent routing (FIR) mode	N/A	Enumeration: • **1**—Primary. • **2**—Secondary.	Default: 0 (the static route is not used as a primary or secondary link in FIR mode).
Threshold	Upper threshold for link bandwidth usage when the static route is used as a primary link in FIR mode	N/A	Unsigned integer. Value range: 1 to 100.	Default: 0 (no upper threshold is set for link bandwidth usage).
RecursiveLongestMatch	Recursive lookup for longest match route.	N/A	Enumeration: • **0**—Rely to direct route has a higher priority. • **1**—Rely to longest match route has a higher priority.	N/A

StaticRoute/SrPolicyRouteEntries

Table description

Item	Description
Feature name	StaticRoute
Table name	SrPolicyRouteEntries
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	Name of the VPN to which a prefix belongs.	Index	String, case-sensitive. Length: 1 to 31 characters.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
Prefix	Destination IPv4 address.	Index	String, dotted decimal notation.	Example: 17.0.0.0,
PrefixLength	Mask length of an IP address.prefix.	Index	Unsigned integer. Value range: 0 to 32.	No more than 32
SrAfType	Address family	Index	String: case-sensitive: • ipv4	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	type of segment routing.		• ipv6	
PolicyName	Name of the SR or SRv6 policy.	Index	String, case-sensitive. Length: 1 to 59 characters.	PolicyName can not be set with Color and Endpoint at the same time.
Color	Color associated with the policy	Index	Unsigned integer. 0 to 4294967295	Now not support Color if SrAfType is ipv4. Color and Endpoint must be set at the same time. PolicyName and Color can not be set at the same time.
Endpoint	IP address of the policy endpoint	Index	String, dotted decimal notation if SrAfType is ipv4, or colon-separated hexadecimal string if SrAfType is ipv6.	Now not support Endpoint if SrAfType is ipv4 Color and Endpoint must be set at the same time. PolicyName and Endpoint can not be set at the same time.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
NoAdvertise	Configure the device to not advertise the specified route.	N/A	Boolean: • **true**—not advertise the specified route. • **false**—advertise the specified route.	N/A
Sid	SRv6 SID	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

StaticRoute/Srv6PolicyRouteEntries

StaticRoute

StaticRoute/Ipv4StaticRouteConfigurations

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when set new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF index does not exist. 目的VRF索引不存在	Please create vpn-instance first.
The specified next hop VRF index does not exist. 下一跳VRF索引不存在	Please create vpn-instance first.
The interface is not supported. 接口不支持	Only routed ports are available.
Invalid destination address. 目的地址无效	Only class A,class B,class C addresses are available.
Invalid next hop address. 下一跳无效	Only class A,class B,class C addresses are available.
Nexthop address or outbound interface must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Nexthop address or outbound interface must be specified one.
The specified interface need to configure next hop address. 该接口需要配置下一跳地址	The specified interface need to configure next hop address.
The specified interface does not need to configure next hop address. 该接口不需要配置下一跳	The specified interface does not need to configure next hop address.
The backup interface is not supported. 备份接口不支持	Only routed ports are available.
The specified backup interface index need backup next hop address. 该备份出接口需要配置备份下一跳地址	The specified backup interface index need backup next hop address.
Invalid backup next hop address. 备份下一跳无效	The backup next hop address can not be all zero address.
Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured. 静态路由已配置出接口及下一跳，使能BFD检测无需配置BFD源地址	Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured.

Need bfd source address to enable bfd, if only nexthop address configured. 静态路由仅配置下一跳，使能BFD检测必须配置BFD源地址	Need bfd source address to enable bfd, if only nexthop address configured.
Invalid BFD source IP address. BFD源地址无效	Only class A,class B,class C addresses are available.
BFD can not coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD can not coexist with backup attribute.
Track can not coexist with backup attribute. 静态路由的备份路径属性不能与track共存	Track can not coexist with backup attribute.
BFD can not coexist with track attribute. 静态路由的track属性不能与BFD共存	BFD can not coexist with track attribute.
Next hop VRF index should be set to . 下一跳VRF索引应该填	Next hop VRF index should be set to specified value.
The specified backup interface index does not need backup next hop address. 该备份接口不需要备份下一跳	The specified backup interface index does not need backup next hop address.
Interface has to be valid for a link-local address of nexthop. Link-local地址作为下一跳需要指定有效出接口	Interface has to be valid for a link-local address of nexthop.
Can not enable bfd echo mode for a link-local address of nexthop. Link-local地址作为下一跳不能使能BFD echo检测	Can not enable bfd echo mode for a link-local address of nexthop.
Backup interface can not been configured. 不允许配置备份出接口	Backup interface can not been configured when out interface is NULL0.
Can not enable bfd echo mode, if only next hop address configured. 静态路由仅配置下一跳，BFD Echo检测不可用	Please specify out interface.
The backup interface and next hop address can't be the same with the main interface and next hop address. 备份出接口及下一跳不能与主出接口及下一跳相同	The backup interface and next hop address can't be the same with the main interface and next hop address.
Not support BFD. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD can not been configured when out interface is NULL0.
The specified interface index does not exist. 接口不存在	The specified interface index does not exist.
The specified backup interface index does not exist. 备份接口索引不存在	The specified backup interface index does not exist.
BFD can not coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD can not coexist with permanent attribute.

Track can not coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track can not coexist with permanent attribute.
Please input BFD source IP address. 请输入BFD源IP地址	Please input BFD source IP address.
The specified topology index does not exist. 目的MT索引不存在	The specified topology index does not exist.
The VRF does not support topology. 私网下不支持多拓扑配置	DestTopologyIndex should be specified as zero.
The topology route does not support VRF next hop. 多拓扑路由不支持私网下一跳	DestTopologyIndex should be specified as zero.
The topology route does not support BFD. 多拓扑路由不支持关联BFD配置	DestTopologyIndex should be specified as zero.
The topology route does not support track. 多拓扑路由不支持关联track配置	DestTopologyIndex should be specified as zero.
The topology route does not support permanent attribute. 多拓扑路由不支持配置永久属性	DestTopologyIndex should be specified as zero.
Interface and Recursive look up host-route can't both be configured 出接口和迭代主机路由不能同时配置	Interface and Recursive look up host-route can't both be configured
Interface has to be valid for static route-LDP synchronization. 静态路由和LDP同步需要指定有效出接口	Interface has to be valid for static route-LDP synchronization.
When a valid next hop address exists, a VPN instance with the same name as the VSYS cannot be specified as the source VPN of the static route under the root system. 存在合法的下一跳地址时，根系统下无法将与VSYS同名的VPN实例指定为静态路由的源VPN。	When a valid next hop address exists, a VPN instance with the same name as the VSYS cannot be specified as the source VPN of the static route under the root system.
The VSYS must designate a VPN instance with the same name as the current VSYS as the source VPN instance. VSYS系统下必须将与当前VSYS系统同名的VPN实例指定为源VPN实例。	The VSYS must designate a VPN instance with the same name as the current VSYS as the source VPN instance.
The VSYS does not support multi-topology. The DestTopologyIndex must be specified as 0. VSYS系统不支持多拓扑，DestTopologyIndex需要指定为0。	The VSYS does not support multi-topology. The DestTopologyIndex must be specified as 0.
The VSYS must designate a VPN instance with the same name as the current VSYS as the destination VPN instance. VSYS系统下必须将与当前VSYS系统同名的VPN实例指定为目的VPN实例。	The VSYS must designate a VPN instance with the same name as the current VSYS as the destination VPN instance.

When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the destination VPN for the static route. 存在合法的下一跳地址时，根系统下无法将与VSYS同名的VPN实例指定为静态路由的目的VPN。	When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the destination VPN for the static route.
The root system cannot specify the interface bound to the VSYS as the output interface. 根系统下无法将与VSYS系统绑定的接口指定为下一跳出接口。	The root system cannot specify the interface bound to the VSYS as the output interface.
The interface not bound to the VSYS cannot be specified as the output interface in the VSYS. VSYS系统下无法将未与VSYS系统绑定的接口指定为下一跳出接口。	The interface not bound to the VSYS cannot be specified as the output interface in the VSYS.
The root system cannot specify the interface bound to the VSYS as the backup output interface. 根系统下无法将与VSYS系统绑定的接口指定为备份下一跳出接口。	The root system cannot specify the interface bound to the VSYS as the backup output interface.
The VSYS cannot specify the interface that is not bound to the VSYS as the backup output interface. VSYS系统下无法将未与VSYS系统绑定的接口指定为备份下一跳出接口。	The VSYS cannot specify the interface that is not bound to the VSYS as the backup output interface.
For communication between VSYSs, you must specify the VPN instance of a VSYS as the source VPN instance. 配置 VSYS 互通的静态路由时，需要将源 VPN 实例指定为与 VSYS 同名的 VPN 实例。	For communication between VSYSs, you must specify the VPN instance of a VSYS as the source VPN instance.
For communication between VSYSs, you must specify the VPN instance of a VSYS as the destination VPN instance. 配置 VSYS 互通的静态路由时，需要将目的 VPN 实例指定为与 VSYS 同名的目的 VPN 实例。	For communication between VSYSs, you must specify the VPN instance of a VSYS as the destination VPN instance.
For communication between VSYSs, the source VPN instance and the destination VPN instance can't be the same. 配置 VSYS 互通的静态路由时，源 VSYS 与目的 VSYS 不能相同。	For communication between VSYSs, the source VPN instance and the destination VPN instance can't be the same.
For communication between VSYSs, the destination VPN instance must be specified as 0. 配置 VSYS 访问根系统的静态路由时，目的 VPN 实例必须指定为 0。	For communication between VSYSs, the destination VPN instance must be specified as 0.

For communication between VSYSs, the permanent parameter is not supported. 不支持将 VSYS 互通的静态路由指定为永久静态路由。	For communication between VSYSs, the permanent parameter is not supported.
For communication between VSYSs, BackupPathAttribute is not supported. 不支持为 VSYS 互通的静态路由指定备份出接口和备份下一跳。	For communication between VSYSs, BackupPathAttribute is not supported.
For communication between VSYSs, BfdAttribute is not supported. 不支持使用BFD对VSYS互通的静态路由的下一跳可达性进行检测。	For communication between VSYSs, BfdAttribute is not supported.
For communication between VSYSs, LdpSync is not supported. 不支持 VSYS 互通的静态路由与 LDP 同步。	For communication between VSYSs, LdpSync is not supported.
For communication between VSYSs, “RecursiveHost” is not supported. 不支持 VSYS 互通的静态路由迭代到主机路由。	For communication between VSYSs, “RecursiveHost” is not supported.
To use the DHCP column, the NexthopIpv4Address column must be set to 0.0.0.0, and the IfIndex column must be configured. 只有下一跳为0.0.0.0且指定出接口时，才可以设置DHCP属性列	To use the DHCP column, the NexthopIpv4Address column must be set to 0.0.0.0, and the IfIndex column must be configured.
Failed to generate static route 0.0.0.0/0 because mismatched destination address and mask were configured. 配置的静态路由目的地址与掩码不匹配，静态路由0.0.0.0/0创建失败。	Failed to generate static route 0.0.0.0/0 because mismatched destination address and mask were configured.
You must specify BfdWorkMode or BfdSessionName, not both. BfdWorkMode和BfdSessionName必须且只能设置一个。	You must specify BfdWorkMode or BfdSessionName, not both.
You do not need to specify the source IP address for BFD packets. 不需要为BFD数据包指定IP源地址。	You do not need to specify the source IP address for BFD packets.
Inter-VPN static routing supports only the tag, preference, and description parameters if no next hop is specified. CrossVPN 只支持配置tag，preference，description。	Inter-VPN static routing supports on the tag, preference, and description parameters if no next hop is specified.
Source and destination VPN instances can't be the same one if no next hop is specified. CrossVPN 配置下源 vrf 和目的 vrf 不能相同。	Source and destination VPN instances cannot be the same one if no next hop is specified.
Inter-VPN static routing is not supported if no next hop is specified. 不支持 CrossVPN。	Inter-VPN static routing is not supported if no next hop is specified.

To use the FIRType column, you must specify a valid value for the IfIndex column. 必须指定有效的出接口，才能配置该路由在等价路由FIR模式中的链路类型。	To use the FIRType column, you must specify a valid value for the IfIndex column.
To use the Threshold column, you must specify the primary type for the FIRType column. 必须指定静态路由为等价路由FIR模式类型的主用链路，才能配置threshold参数。	To use the Threshold column, you must specify the primary type for the FIRType column.
The Threshold column must also be specified when the FIRType column is specified as Primary. 当静态路由为等价路由FIR模式的主用链路时，链路带宽使用率上限阈值threshold参数必须同时配置。	The Threshold column must also be specified when the FIRType column is specified as Primary.
FIR is not supported. 设备不支持配置等价路由FIR模式。	FIR is not supported.
The BfdSourceIpv4Address column must be set to 0.0.0.0 when the BfdWorkMode column is 0. 当BfdWorkMode属性列设置为0时，BfdSourceIpv4Address属性列只能设置为0.0.0.0。	The BfdSourceIpv4Address column must be set to 0.0.0.0 when the BfdWorkMode column is 0. 当 BfdWorkMode 属性列设置为 0 时，BfdSourceIpv4Address 属性列只能设置为 0.0.0.0。
Interface and Recursive look up longest-match can't both be configured 出接口和迭代到最长前缀匹配路由不能同时配置	Interface and Recursive look up longest-match can't both be configured
Recursive look up host-route and recursive look up longest-match can't both be configured 迭代到主机路由和迭代到最长前缀匹配路由不能同时配置	Recursive look up host-route and recursive look up longest-match can't both be configured
The RecursiveLongestMatch and nexthop columns must be both specified. 下一跳和最长匹配必须同时配置	The RecursiveLongestMatch and nexthop columns must be both specified.

StaticRoute/Ipv6StaticRouteConfigurations

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when set new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF index does not exist. 目的VRF索引不存在	Please create vpn-instance first.
The specified next hop VRF index does not exist. 下一跳VRF索引不存在	Please create vpn-instance first.
The interface is not supported.	Only routed ports are available.

接口不支持	
Invalid destination address. 目的地址无效	Only class A,class B,class C addresses are available.
Invalid next hop address. 下一跳无效	Only class A,class B,class C addresses are available.
Nexthop address or outbound interface must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Nexthop address or outbound interface must be specified one.
The specified interface need to configure next hop address. 该接口需要配置下一跳地址	The specified interface need to configure next hop address.
The specified interface does not need to configure next hop address. 该接口不需要配置下一跳	The specified interface does not need to configure next hop address.
The backup interface is not supported. 备份接口不支持	Only routed ports are available.
The specified backup interface index need backup next hop address. 该备份出接口需要配置备份下一跳地址	The specified backup interface index need backup next hop address.
Invalid backup next hop address. 备份下一跳无效	The backup next hop address can not be all zero address.
Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured. 静态路由已配置出接口及下一跳，使能BFD检测无需配置BFD源地址	Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured.
Need bfd source address to enable bfd, if only nexthop address configured. 静态路由仅配置下一跳，使能BFD检测必须配置BFD源地址	Need bfd source address to enable bfd, if only nexthop address configured.
Invalid BFD source IP address. BFD源地址无效	Only class A,class B,class C addresses are available.
BFD can not coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD can not coexist with backup attribute.
Track can not coexist with backup attribute. 静态路由的备份路径属性不能与track共存	Track can not coexist with backup attribute.
BFD can not coexist with track attribute. 静态路由的track属性不能与BFD共存	BFD can not coexist with track attribute.
Next hop VRF index should be set to . 下一跳VRF索引应该填	Next hop VRF index should be set to specified value.
The specified backup interface index does not need backup next hop address. 该备份接口不需要备份下一跳	The specified backup interface index does not need backup next hop address.
Interface has to be valid for a link-local address of	Interface has to be valid for a link-local address of nexthop.

nexthop. Link-local地址作为下一跳需要指定有效出接口	
Can not enable bfd echo mode for a link-local address of nexthop. Link-local地址作为下一跳不能使能BFD echo检测	Can not enable bfd echo mode for a link-local address of nexthop.
Backup interface can not been configured. 不允许配置备份出接口	Backup interface can not been configured when out interface is NULL0.
Can not enable bfd echo mode, if only next hop address configured. 静态路由仅配置下一跳，BFD Echo检测不可用	Please specify out interface.
The backup interface and next hop address can't be the same with the main interface and next hop address. 备份出接口及下一跳不能与主出接口及下一跳相同	The backup interface and next hop address can't be the same with the main interface and next hop address.
Not support BFD. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD can not been configured when out interface is NULL0.
The specified interface index does not exist. 接口不存在	The specified interface index does not exist.
The specified backup interface index does not exist. 备份接口索引不存在	The specified backup interface index does not exist.
BFD can not coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD can not coexist with permanent attribute.
Track can not coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track can not coexist with permanent attribute.
Invalid next hop IPv6 address. It must be a global unicast address. 无效下一跳地址。下一跳必须是全球单播地址	Invalid next hop IPv6 address. It must be a global unicast address.
Invalid BFD source IPv6 address. BFD源IPv6地址无效	The BFD source IPv6 address cannot be all 0s ,multicast address or loopback address.,.
Please input BFD source IPv6 address. 请输入BFD源IPv6地址	Please input BFD source IPv6 address.
IPv6 address family does not support topology. IPv6地址族不支持多拓扑配置	DestTopologyIndex should be specified as zero.
Please input BFD source IP address. 请输入BFD源IP地址	Please input BFD source IP address.
The specified topology index does not exist. 目的MT索引不存在	The specified topology index does not exist.
The VRF does not support topology. 私网下不支持多拓扑配置	DestTopologyIndex should be specified as zero.
The topology route does not support VRF next hop.	DestTopologyIndex should be specified as zero.

多拓扑路由不支持私网下一跳	
The topology route does not support BFD. 多拓扑路由不支持关联BFD配置	DestTopologyIndex should be specified as zero.
The topology route does not support track. 多拓扑路由不支持关联track配置	DestTopologyIndex should be specified as zero.
The topology route does not support permanent attribute. 多拓扑路由不支持配置永久属性	DestTopologyIndex should be specified as zero.
Interface and Recursive look up host-route can't both be configured 出接口和迭代主机路由不能同时配置	Interface and Recursive look up host-route can't both be configured
When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the source VPN of the static route. 存在合法的下一跳地址时，根系统下无法将与VSYS同名的VPN实例指定为静态路由的源VPN。	When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the source VPN of the static route.
The VSYS must designate a VPN instance with the same name as the current VSYS as the source VPN instance. VSYS系统下必须将与当前VSYS系统同名的VPN实例指定为源VPN实例。	The VSYS must designate a VPN instance with the same name as the current VSYS as the source VPN instance.
The VSYS does not support multi-topology. The DestTopologyIndex must be specified as 0. VSYS系统不支持多拓扑，DestTopologyIndex需要指定为0。	The VSYS does not support multi-topology. The DestTopologyIndex must be specified as 0.
The VSYS must designate a VPN instance with the same name as the current VSYS as the destination VPN instance. VSYS系统下必须将与当前VSYS系统同名的VPN实例指定为目的VPN实例。	The VSYS must designate a VPN instance with the same name as the current VSYS as the destination VPN instance.
When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the destination VPN for the static route. 存在合法的下一跳地址时，根系统下无法将与VSYS同名的VPN实例指定为静态路由的目的VPN。	When a valid next hop address exists, the root system cannot specify a VPN instance with the same name as VSYS as the destination VPN for the static route.
The root system cannot specify the interface bound to the VSYS as the output interface. 根系统下无法将与VSYS系统绑定的接口指定为下一跳出接口。	The root system cannot specify the interface bound to the VSYS as the output interface.
The interface not bound to the VSYS cannot be specified as the output interface in the VSYS. VSYS系统下无法将未与VSYS系统绑定的接口指定为下一跳出接口。	The interface not bound to the VSYS cannot be specified as the output interface in the VSYS.
For communication between VSYSs, you must specify the VPN instance of a VSYS as the source VPN instance.	For communication between VSYSs, you must specify the VPN instance of a VSYS as the source VPN instance.

配置 VSYS 互通的静态路由时，需要将源 VPN 实例指定为与 VSYS 同名的 VPN 实例。。	
For communication between VSYSs, you must specify the VPN instance of a VSYS as the destination VPN instance. 配置 VSYS 互通的静态路由时，需要将目的 VPN 实例指定为与 VSYS 同名的 VPN 实例。	For communication between VSYSs, you must specify the VPN instance of a VSYS as the destination VPN instance.
For communication between VSYSs, the source VPN instance and the destination VPN Instance can't be the same. 配置 VSYS 互通的静态路由时，源 VSYS 与目的 VSYS 不能相同。	For communication between VSYSs, the source VPN instance and the destination VPN Instance can't be the same.
For communication between VSYSs, the destination VPN instance must be specified as 0. 配置 VSYS 访问根系统的静态路由时，目的 VPN 实例必须指定为 0。	For communication between VSYSs, the destination VPN instance must be specified as 0.
For communication between VSYSs, the permanent parameter is not supported. 不支持将 VSYS 互通的静态路由指定为永久静态路由。	For communication between VSYSs, the permanent parameter is not supported.
For communication between VSYSs, BfdAttribute is not supported. 不支持使用 BFD 对 VSYS 互通的静态路由的下一跳可达性进行检测。	For communication between VSYSs, BfdAttribute is not supported.
Failed to generate IPv6 static route ::/0 because mismatched IPv6 prefix and prefix length were configured. 配置的静态路由目的地址与掩码不匹配，静态路由::/0 创建失败。	Failed to generate IPv6 static route ::/0 because mismatched IPv6 prefix and prefix length were configured.
Inter-VPN static routing supports only the tag, preference, and description parameters if no next hop is specified. CrossVPN 只支持配置 tag，preference，description。	Inter-VPN static routing supports only the tag, preference, and description parameters if no next hop is specified.
Source and destination VPN instances can't be the same one if no next hop is specified. CrossVPN 配置下源 vrf 和目的 vrf 不能相同。	Source and destination VPN instances cannot be the same one if no next hop is specified.
Inter-VPN static routing is not supported if no next hop is specified. 不支持 CrossVPN。	Inter-VPN static routing is not supported if no next hop is specified.
To use the FIRType column, you must specify a valid value for the IfIndex column. 必须指定有效的出接口，才能配置该路由在等价路由FIR模式中的链路类型。	To use the FIRType column, you must specify a valid value for the IfIndex column.
To use the Threshold column, you must specify the primary type for the FIRType column.	To use the Threshold column, you must specify the primary type for the FIRType column.

必须指定静态路由为等价路由FIR模式类型的主用链路，才能配置threshold参数。	
The Threshold column must also be specified when the FIRType column is specified as Primary. 当静态路由为等价路由FIR模式的主用链路时，链路带宽使用率上限阈值threshold参数必须同时配置。	The Threshold column must also be specified when the FIRType column is specified as Primary.
FIR is not supported. 设备不支持配置等价路由FIR模式。	FIR is not supported.
The BfdSourceIpv6Address column must be set to 0::0 when the BfdWorkMode column is 0. 当BfdWorkMode属性列设置为0时，BfdSourceIpv6Address 属性列只能设置为0::0。	The BfdSourceIpv6Address column must be set to 0::0 when the BfdWorkMode column is 0. 当 BfdWorkMode 属性列设置为 0 时，BfdSourceIpv6Address 属性列只能设置为 0::0。
To use the Gateway column, the NexthopIpv6Address column must be set to :: , and the IfIndex column must be configured. 只有下一跳为:: 且指定出接口时，才可以设置Gateway属性列	To use the Gateway column, the NexthopIpv6Address column must be set to :: , and the IfIndex column must be configured.
The Permanent column can not coexist with the Gateway column. 静态路由的Permanent属性不能与Gateway属性共存	The Permanent column can not coexist with the Gateway column.
For communication between vSystems,the Gateway column is not supported. 不支持为VSYS互通的静态路由指定网关下一跳	For communication between vSystems,the Gateway column is not supported.
Interface and Recursive look up longest-match can't both be configured 出接口和迭代到最长前缀匹配路由不能同时配置	Interface and Recursive look up longest-match can't both be configured
The RecursiveLongestMatch and nexthop columns must be both specified. 下一跳和最长匹配必须同时配置	The RecursiveLongestMatch and nexthop columns must be both specified.

Openconfig-local-routing/local-routes/static-routes/static

Message	Explanation
It is not STATIC 不是静态路由协议号	The identifier should be specified as STATIC.
Instance name must be default 进程号必须为default	Instance name must be default when you configure a static route.

StaticRoute/SrPolicyRouteEntries

Message	Explanation
PolicyName and color+endpoint of srv6-policy can not be set at the same time. Srv6-policy的policyname和color+endpoint不能同时设置.	PolicyName and color+endpoint of srv6-policy can not be set at the same time.
Color and endpoint must be set at the same time. Color和endpoint必须同时设置	Color and endpoint must be set at the same time.
IPv4 static route does not support color+endpoint if SrAfType is IPv4. IPv4静态路由当SrAfType = IPv4时不支持color+endpoint	IPv4 static route does not support color+endpoint if SrAfType is IPv4.
SR-MPLS TE policy settings are not supported. 不支持SR-MPLS TE Policy的相关配置	SR-MPLS TE policy settings are not supported.
SRv6 TE policy settings are not supported. 不支持SRv6 TE Policy的相关配置	SRv6 TE policy settings are not supported.

StaticRoute/Srv6PolicyRouteEntries

Message	Explanation
PolicyName and color+endpoint of srv6-policy can not be set at the same time. Srv6-policy的policyname和color+endpoint不能同时设置.	PolicyName and color+endpoint of srv6-policy can not be set at the same time.
Color and endpoint must be set at the same time. Color和endpoint必须同时设置	Color and endpoint must be set at the same time.
Ipv6 static route only support ipv6 for SrAfType. ipv6静态路由，SrAfType仅支持ipv6	Ipv6 static route only support ipv6 for SrAfType.
IPv6 static route does not support color+endpoint if SrAfType is IPv4. IPv6静态路由当SrAfType = IPv4时不支持color+endpoint	IPv6 static route does not support color+endpoint if SrAfType is IPv4.
SRv6 TE policy settings are not supported. 不支持SRv6 TE Policy的相关配置	SRv6 TE policy settings are not supported.

StaticRoute/IPv4RouteRelySRv6BE

Message	Explanation
PolicyName and color+endpoint of srv6-policy can not be set at the same time. Srv6-policy的policyname和color+endpoint不能同时设置.	PolicyName and color+endpoint of srv6-policy can not be set at the same time.

Color and endpoint must be set at the same time. Color和endpoint必须同时设置	Color and endpoint must be set at the same time.
Ipv4 static route does not support color+endpoint if SrAfType is ipv4. Ipv4静态路由当SrAfType = ipv4时不支持color+endpoint	Ipv4 static route does not support color+endpoint if SrAfType is ipv4.
The RemoteSid and LocatorPrefixLen parameters must be specified in pairs. RemoteSid和LocatorPrefixLen必须同时设置	The RemoteSid and LocatorPrefixLen parameters must be specified in pairs.

StaticRoute/IPv6RouteRelySRv6BE

Message	Explanation
PolicyName and color+endpoint of srv6-policy can not be set at the same time. Srv6-policy的policyname和color+endpoint不能同时设置.	PolicyName and color+endpoint of srv6-policy can not be set at the same time.
Color and endpoint must be set at the same time. Color和endpoint必须同时设置	Color and endpoint must be set at the same time.
Ipv6 static route only support ipv6 for SrAfType. ipv6静态路由，SrAfType仅支持ipv6	Ipv6 static route only support ipv6 for SrAfType.
The RemoteSid and LocatorPrefixLen parameters must be specified in pairs. RemoteSid和LocatorPrefixLen必须同时设置	The RemoteSid and LocatorPrefixLen parameters must be specified in pairs.

StaticRoute/Ipv4Configuration

Message	Explanation
To configure static route recursion to an LSP tunnel, you must configure the RecursiveTunnel column. 当配置允许静态路由迭代LSP隧道功能时，必须指定RecursiveTunnel 属性列。	To configure static route recursion to an LSP tunnel, you must configure the RecursiveTunnel column.
If the RecursiveTunnel column is set to disabled, you are not allowed to configure the RecursiveTunnelPrefixList column. 如果配置RecursiveTunnel 属性列为disable，则不允许配置 RecursiveTunnelPrefixList 属性列。	If the RecursiveTunnel column is set to disabled, you are not allowed to configure the RecursiveTunnelPrefixList column.
If the RecursiveTunnel column is set to disabled, you are not allowed to configure the RecursiveTunnelPolicy column. 如果配置RecursiveTunnel 属性列为disable，则不允许配置RecursiveTunnelPolicy属性列。	If the RecursiveTunnel column is set to disabled, you are not allowed to configure the RecursiveTunnelPolicy column.

STP/ClearAllIfStatistics

This table clear the statistics of STP on all interfaces.

XML structure

```
<STP>
  <ClearAllIfStatistics>
    <Clear></Clear>
  </ClearAllIfStatistics>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	ClearAllIfStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear the STP statistics on all interfaces.	N/A	This column must be empty.

STP/ClearInterfacesStatistics

This table clears the STP statisitcs information per interface.

XML structure

```
<STP>
  <ClearInterfacesStatistics>
    <InterfaceStatistics>
      <IfIndex></IfIndex>
```

```
      <Clear></Clear>
    </InterfaceStatistics>
  </ClearInterfacesStatistics>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	ClearInterfacesStatistics
Table type	Multi-instance table
Row name	InterfaceStatistics
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Clear	Clears statistics on the the specified interface.	N/A	This column must be empty.

STP/MigrationCheck

This table performs the MCheck operation to migrate all ports back from STP mode to current configuration mode.

XML structure

```
<STP>
  <MigrationCheck>
      <MCheck></MCheck>
  </MigrationCheck>
</STP>
```

Table description

Item	Description
Feature name	STP

Table name	MigrationCheck
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
MCheck	Force all interfaces to send BPDUs according to the protocol verison while working in RSTP or MSTP mode.	N/A	This column must be empty

STP

STP/Base

This table contains information about global STP functions.

XML structure

```
<STP>
  <Base>
    <Enable></Enable>
    <BPDUProtect></BPDUProtect>
    <Mode></Mode>
    <TcProtect></TcProtect>
    <TcThreshold></TcThreshold>
    <PathCostMethod></PathCostMethod>
    <HelloTime></HelloTime>
    <MaxHops></MaxHops>
    <MaxAge></MaxAge>
    <ForwardDelay></ForwardDelay >
    <TcSnooping></TcSnooping>
    <DigestSnooping></DigestSnooping>
    <IgnoreVlanList></IgnoreVlanList>
  </Base>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global STP feature	N/A	Boolean: • **true**—Enables STP. • **false**—Disables STP.

Column name	Column description	Column type	Data type and restrictions
BPDUProtect	Global BPDU guard function	N/A	Boolean: • **true**—Enables BPDU guard. • **false**—Disables BPDU guard (default).
Mode	Working mode of the spanning tree protocol	N/A	Enumeration: • **0**—STP. • **2**—RSTP. • **3**—MSTP(default). • **4**—PVST.
TcProtect	Global TC-BPDU guard function	N/A	Boolean: • **true**—Enables TC guard • (default). • **false**—Disables TC guard.
TcThreshold	Maximum number of TC-BPDUs that can be processed within an interval	N/A	Unsigned integer. • **Value range:1-255**. • Default: 6.
PathCostMethod	Path cost calculation method	N/A	Enumeration: • **0**—Legacy (default). • **1**—`802.1D-1998`. • **2**—**802.1t**.
HelloTime	Hello timer in seconds	N/A	Unsigned integer. • **Value range:1-10**. • Default: 2.
MaxHops	Maximum hops of the MST region scope	N/A	Unsigned integer. • **Value range:1-40**. • Default: 20.
MaxAge	Maximum of message aging timer	N/A	Unsigned integer. • **Value range:6-40**. • Default: 20.
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. • **Value range:4-30**. • Default: 15.
TcSnooping	TC snooping function	N/A	**Boolean:** • **true—Enables TC snooping.** • **false—Disables TC snooping(default).**
DigestSnooping	Global MST digest snooping function	N/A	**Boolean:** • **true—Enables digest snooping.** • **false—Disables digest snooping(default).**

Column name	Column description	Column type	Data type and restrictions
IgnoreVlanList	List of VLANs ignored by stp	N/A	Number string. It is a comma-separated list of VLAN items. The string must not end with a comma or hyphen, or include any whitespace characters. • **`VLAN ID range:1-4094.`** • Default：All VLANs are allocated to spanning tree instance 0(CIST).

STP/Region

This table contains information about MST region configuration.

XML structure

```
<STP>
  <Region>
    <Name></Name>
    <RevisionLevel></RevisionLevel>
  </Region>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	Region
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	MST region name	N/A	String. Length: 1 to 32 characters. • Default: Hex-string of the bridge MAC address.	When a new region name is configured, the active region configuration will be changed.

Column name	Column description	Column type	Data type and restrictions	Remarks
RevisionLevel	Revision level of the MST region	N/A	Unsigned integer. • **Value range: 0-65535.** • **Default: 0.**	When a new revision level is configured, the active region configuration will be changed.

STP/StiVlans

This table contains information about the VLAN allocation of an MST region.

XML structure

```
<STP>
  <StiVlans>
    <StiVlan>
      <StiId></StiId>
      <VlanList></VlanList>
    </StiVlan>
  </StiVlans>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	StiVlans
Table type	Multi-instance table
Row name	StiVlan
Restrictions	All rows should be wrapped within a whole configuration message, following the region table above.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StiId	Spanning tree index	Index	Unsigned integer. • **Value range: 1-4094.**	

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanList	List of VLANs allocated to the MST instance	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters. • **Default:All VLANs are allocated to spanning tree instance 0(CIST).**	• Each VLAN can only be allocated to one MST instance. • Each item can be an individual VLAN ID or a VLAN ID range. A hyphen (-) indicates a VLAN range from the start VLAN ID to end VLAN ID. For example: 1, 2, 3, 5-8, and 10-20. • VLAN ID range: 1-4094

STP/STIs

This table contains information about STP functions for a spanning tree.

XML structure

```
<STP>
  <STIs>
    <STI>
      <StiId></StiId>
      <Priority></Priority>
      <RootType></RootType>
    </STI>
  </STIs>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	STIs
Table type	Multi-instance table
Row name	STI
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StiId	Spanning tree index	Index	Unsigned integer. • **Value range: 0-4094.**	
Priority	Bridge priority of the spanning tree	N/A	Unsigned integer. • **Value range: 0-61440, in** increments of 4096 (as in 0, 4096, 8192**).** • **Default: 32768.**	Configuration is not allowed when the root type is configured as primary root or secondary root, except for the following values combination: 1)priority is 0 when root type is ‘primary’. 2)priority is 4096 when root type is ‘secondary’'.
RootType	Root type of the bridge	N/A	Enumeration: • **0**—Normal(default). • **1**—Secondary root. • **2**—Primary root.	

STP/Interfaces

This table contains information about interface-level STP functions.

XML structure

```
<STP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <EdgedPort></EdgedPort>
      <PointToPoint></PointToPoint>
      <RootProtect></RootProtect>
      <LoopProtect></LoopProtect>
      <LoopbackProtect></LoopbackProtect>
      <RoleRestrict></RoleRestrict>
      <TcRestrict></TcRestrict>
      <DigestSnooping></DigestSnooping>
      <TransmitHoldCount></TransmitHoldCount>
    </Interface>
  </Interfaces>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. `Length: 32 bits.`	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
Enable	Interface STP feature	N/A	Boolean: • **true**—Enables STP (default). • **false**—Disables STP.	
EdgedPort	Interface edge port configuration	N/A	Boolean: • **true**—Configures the interface as an edge port. **It should not be configured while the loop protection is enabled.** • **false**—Configures the interface as a non-edge port (default).	
PointToPoint	Interface point-to-point configuration status	N/A	Enumeration: • **1**—Force-true. • **2**—Force-false. • **3**—**Auto** (default).	
RootProtect	Interface root guard function	N/A	Boolean: • **true**—Enables root protection. • **It should not be configured while the loop protection is enabled**.	

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Disables root protection • (default).	
LoopProtect	Interface loop guard function	N/A	Boolean: • **true**—Enables loop protection. • **It should not be configured whether the root protection or edge-port is enabled**. • **false**—Disables loop protection • (default).	
LoopbackProtect	Interface loopback guard function	N/A	Boolean: • **true**—Enables loopback protection. (default). • **false**—Disables loopback protection	
RoleRestrict	Interface role restriction function	N/A	**Boolean:** • **true**—Enables role restriction. • **false**—Disables role restriction (default).	
TcRestrict	Interface TC restriction function	N/A	**Boolean:** • **true**—Enables TC restriction. • **false**—Disables TC restriction (default).	
DigestSnooping	Interface MST digest snooping function	N/A	**Boolean:** • **true**—Enables digest snooping. • **false**—Disables digest snooping (default).	
TransmitHoldCount	Interface transmit hold count, which is the maximum number of BPDUs that can be transmitted per seconds	N/A	Unsigned integer. • **Value range:1-255.** • **Default: 10.**	

Table 1 Interface operation status

Value	Operation status	Remarks
1	Single interface	<IfIndex>1</IfIndex>

	index	
2	Single interface name	<IfIndex>GigabitEthernet 0/0/2</IfIndex>
3	Multiple interface names	<IfIndex>GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serail0/0/2</IfIndex>
4	Interface range name	<IfIndex>RangeName</IfIndex>
5	Mixture of interface range name and interface names	<IfIndex>RangeName ,GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serail0/0/2</IfIndex>

STP/StiInterfaces

This table contains information about interface-level STP functions for a spanning tree.

XML structure

```
<STP>
  <StiInterfaces>
    <StiInterface>
      <StiId></StiId>
      <IfIndex></IfIndex>
      <Priority></Priority>
      <PathCost></PathCost>
    </StiInterface>
  </StiInterfaces>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	StiInterfaces
Table type	Multi-instance table
Row name	StiInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
StiId	Spanning tree index	Index	Unsigned integer. • **Value range: 0-4094.**

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Priority	Spanning tree priority of an interface	N/A	Unsigned integer. • **Value range: 0-240, in** increments of 16 (as in 0, 16, 32**).** • **Default: 128.**
PathCost	Spanning tree path cost of an interface	N/A	**Unsigned integer.** • **Legacy value range: 0-200000.** • **802.1D-1998 value range: 0-65535.** • **802.1t value range: 0-200000000.** • **Default: 0. The actual cost will be automatically calculated according to the calculation method configured in STP Base table.**

STP/Vlans

This table contains information about PVST functions for a VLAN.

XML structure

```
<STP>
  <VLANs>
    <VLAN>
      <VlanId></VlanId>
      <Enable></Enable>
      <Priority></Priority>
      <RootType></RootType>
      <BridgeTimes>
        <HelloTime></HelloTime>
        <MaxAge></MaxAge>
        <ForwardDelay></ForwardDelay>
      </BridgeTimes>
    </VLAN>
  </VLANs>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN

Item	Description
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. • **Value range: 1-4094.**	The max VLAN ID of some product may be 4093.
Enable	PVST feature status	N/A	Boolean: • **true**—Enables PVST(default). • **false**—Disables PVST.	
Priority	Priority of the VLAN	N/A	Unsigned integer. • **Value range: 0-61440, in** increments of 4096 (as in 0, 4096, 8192**).** • **Default: 32768.**	Configuration is not allowed when the root type is configured as primary root or secondary root, except for the following values combination: 1)priority is 0 when root type is ‘primary’. 2)priority is 4096 when root type is ‘secondary’.
RootType	Root type of the VLAN	N/A	Enumeration: • **0**—Normal(default). • **1**—Secondary root. • **2**—Primary root.	
BridgeTimes	The bridge timers currently used	N/A	Struct, include members: • HelloTime. • MaxAge. • ForwardDelay.	
HelloTime	Hello timer in seconds	N/A	Unsigned integer. • **Value range:1-10**. • **Default: 2.**	
MaxAge	Maximum of message age	N/A	Unsigned integer. • **Value range:6-40**. • **Default: 20.**	
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. • **Value range:4-30**. • **Default: 15.**	

STP/VlanInterfaces

This table contains information about interface-level PVST functions for a VLAN.

XML structure

```
<STP>
  <VlanInterfaces>
    <VlanInterface>
      <VlanId></VlanId>
      <IfIndex></IfIndex>
      <Priority></Priority>
      <PathCost></PathCost>
    </VlanInterface>
  </VlanInterfaces>
</STP>
```

    <IgnoreVlanList></IgnoreVlanList>
  </Base>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global STP feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
BPDUProtect	Global BPDU guard function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
Mode	Working mode of the spanning tree protocol	N/A	Enumeration: • **0**—STP. • **2**—RSTP. • **3**—MSTP. • **4**—PVST.
TcProtect	Global TC-BPDU guard function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
TcThreshold	Maximum number of TC-BPDUs that can be processed within an interval	N/A	Unsigned integer. Value range: 1 to 255.
PathCostMethod	Path cost calculation method	N/A	Enumeration: • **0**—Legacy. • **1**—802.1D-1998. • **2**—802.1t.
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.
MaxHops	Maximum hops of the MST region scope	N/A	Unsigned integer. Value range: 1 to 40.
MaxAge	Maximum of message aging timer	N/A	Unsigned integer. Value range: 6 to 40.
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.
TcSnooping	TC snooping function	N/A	**Boolean:** • **true—Enables** TC **snooping.** • **false—**Dis**ables** TC **snooping**.
DigestSnooping	Global MST digest snooping function	N/A	**Boolean:** • **true—Enables digest snooping.** • **false—**Dis**ables digest snooping**.
IgnoreVlanList	List of VLANs ignored by stp	N/A	Number string. It is a comma-separated list of VLAN items. The string must not end with a comma or hyphen, or include any whitespace characters. • **VLAN ID range:1-4094.**

STP/Region

This table contains MST region configuration information.

XML structure

```
<STP>
  <Region>
    <Name></Name>
    <RevisionLevel></RevisionLevel>
    <FormatSelector></FormatSelector>
    <ConfigDigest></ConfigDigest>
  </Region>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	Region
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The active MST region name	N/A	String. Length: 1 to 32 characters.	N/A
RevisionLevel	The active revision level of the MST region	N/A	Unsigned integer Value range: 0 to 65535.	N/A
FormatSelector	The configuration Identifier Format selector	N/A	Enumeration: **0**—Indicates the format specified in 802.1Q**.**	N/A
ConfigDigest	Digest of VLAN-to-instance mappings for the MST region	N/A	Octet string. Length: 34 octets.	It's a hex-string with a prefix of 0x.

STP/StiVlans

This table contains information about the VLAN allocation of an MST region.

XML structure

```
<STP>
  <StiVlans>
    <StiVlan>
      <StiId></StiId>
      <VlanList></VlanList>
    </StiVlan>
  </StiVlans>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	StiVlans
Table type	Multi-instance table
Row name	StiVlan
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StiId	Spanning tree index	Index	Unsigned integer. **Value range: 0** to **4094.**	N/A
VlanList	List of VLANs allocated to the MST instance	N/A	Number string. It is a comma-separated list of VLAN items. The string must not end with a comma or hyphen, or include any whitespace characters.	• Each VLAN can only be allocated to one MST instance. • Each item can be an individual VLAN ID or a VLAN ID range. A hyphen (-) indicates a VLAN range from the start VLAN ID to the end VLAN ID. For example: 1, 2, 3, 5-8, and 10-20. • VLAN ID range: 1 to 4094.

STP/STIs

This table contains information about STP functions for a spanning tree.

XML structure

```
<STP>
  <STIs>
    <STI>
      <StiId></StiId>
      <Priority></Priority>
      <RootType></RootType>
      <BridgeId></BridgeId>
      <TCs>
        <ReceiveTcOrTcn></ReceiveTcOrTcn>
        <LastTcTime></LastTcTime>
      </TCs>
      <RootVector>
        <RootId></RootId>
        <ExtPathCost></ExtPathCost>
        <RegionRootId></RegionRootId>
        <IntPathCost></IntPathCost>
        <DesignateBridgeId></DesignateBridgeId>
        <DesignatePortId></DesignatePortId>
        <RootPort></RootPort>
      </RootVector>
    </STI>
  </STIs>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	STIs
Table type	Multi-instance table
Row name	STI
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StiId	Spanning tree index	Index	Unsigned integer. **Value range: 0** to **4094.**	If an instance is not in running state, and the values of the Priority and RootType columns are the default, the instance is not created, and data cannot be got.

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Bridge priority of the spanning tree	N/A	Unsigned integer. **Value range: 0** to 61440	N/A
RootType	Root type of the bridge	N/A	Enumeration: • **0**—Normal. • **1**—Secondary root. • **2**—Primary root.	N/A
BridgeId	Spanning tree bridge Identifier	N/A	Octet string. Length: 18 octets**.**	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, and the 2-4 hex-character s indicates the system ID, the other hex-string indicates the bridge MAC address.
TCs	Topology change information	N/A	Struct, include members: • **ReceiveTcOrTcn**. • **LastTcTime**.	N/A
ReceiveTcOrTcn	Count of received TC or TCN	N/A	Unsigned integer. Length: 32 bits**.**	N/A
LastTcTime	Time of last received TC or detected TC, in 10ms	N/A	Unsigned integer. Length: 64 bits**.**	N/A
RootVector	Root priority vector	N/A	Struct, include members: • **RootBridgeId**. • **ExtPathCost**. • **DesignateBridgeId**. • **IntPathCost**. • **RootPort**.	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets**.** Not used by MSTIs.	As the remark of BridgeId above.
ExtPathCost	External path cost.	N/A	Unsigned integer. Length: 32 bits**.** Not used by MSTIs.	N/A
RegionRootId	Region root bridge Identifier	N/A	Octet string. Length: 18 octets**.**	As the remark of BridgeId above.
IntPathCost	Internal path cost	N/A	Unsigned integer. Length: 32 bits**.**	N/A
DesignateBridgeId	Designated bridge Identifier	N/A	Octet string. Length: 18 octets**.**	As the remark of BridgeId above.
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets**.**	It's a hex-string with a prefix of 0x, and the first 2 hex-characters indicate a port priority, and the other hex-string indicates a port

Column name	Column description	Column type	Data type and restrictions	Remarks
				number.
RootPort	Interface index of root port	N/A	Unsigned integer. Length: 32 bits.	N/A

STP/Interfaces

This table contains interface-level STP information.

```

Table description

Item	Description
Feature name	STP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.
Enable	Interface STP feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
EdgedPort	Interface edge port configuration	N/A	Boolean: • **true**—Edge port. • **false**—Non-edge port.
OperEdgedPort	Interface operational edge port status	N/A	Boolean: • **true**—Edge port. • **false**—Non-edge port.
PointToPoint	Interface point-to-point configuration status	N/A	Enumeration: • **1**—Force-true. • **2**—Force-false. • **3**—Auto.
OperPointToPoint	Interface operational point-to-point status	N/A	Boolean: • **true**—Point-to-Point. • **false**—Not point-to-point.
RootProtect	Interface root guard function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
LoopProtect	Interface loop guard function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
LoopbackProtect	Interface loopback guard function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

Column name	Column description	Column type	Data type and restrictions
RoleRestrict	Interface role restriction function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
TcRestrict	Interface TC restriction function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
ProtectDown	Interface protection shutdown status	N/A	Enumeration: • **0**—Not shutdown. • **1**—Edge Port down. • **2**—PVST BPDU down.
DigestSnooping	Interface MST digest snooping function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
TransmitHoldCount	Interface transmission hold count	N/A	Unsigned integer. Value range: 1 to 255.
PortTimes	Interface protocol timers	N/A	Struct, include the following members: • **HelloTime**. • **ForwardDelay**. • **RemainHops**. • **MaxAge**. • **MessageAge**.
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.
ForwardDelay	Interface forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.
MaxAge	Interface maximum message age	N/A	Unsigned integer. Value range: 6 to 40.
MessageAge	Interface message age	N/A	Unsigned integer. Length: 32 bits.
PortBpduCount	Interface received or transmitted BPDU count per type	N/A	Struct, include the following members: • **TxMstBpdu**. • **RxMstBpdu**. • **TxRstpBpdu**. • **RxRstpBpdu**. • **TxConfigBpdu**. • **RxConfigBpdu**. • **TxTcn**. • **RxTcn**. • **RxInvalidBpdu**. • **LastInvalidBpduTime**.
TxMstBpdu	Count of transmitted MSTP BPDU	N/A	Unsigned integer. Length: 64 bits. Not used by PVST.

Column name	Column description	Column type	Data type and restrictions
RxMstBpdu	Count of received MSTP BPDUs	N/A	Unsigned integer. Length: 64 bits. Not used by PVST.
TxRstBpdu	Count of transmitted RSTP BPDUs	N/A	Unsigned integer. Length: 64 bits.
RxRstBpdu	Count of received RSTP BPDUs	N/A	Unsigned integer. Length: 64 bits.
TxConfigBpdu	Count of transmitted 802.1D configuration BPDUs	N/A	Unsigned integer. Length: 64 bits.
RxConfigBpdu	Count of received 802.1D configuration BPDUs	N/A	Unsigned integer. Length: 64 bits.
TxTcn	Count of transmitted TCN messages	N/A	Unsigned integer. Length: 64 bits.
RxTcn	Count of received TCN messages	N/A	Unsigned integer. Length: 64 bits.
RxInvalidBpdu	Count of received invalid BPDUs	N/A	Unsigned integer. Length: 64 bits.
LastInvalidBpduTime	Last time when an invalid BPDU was received, in seconds	N/A	Unsigned integer. Length: 64 bits.

Table description

Item	Description
Feature name	STP
Table name	StiInterfaces
Table type	Multi-instance table
Row name	StiInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StiId	Spanning tree index	Index	Unsigned integer. **Value range: 0** to **4094.**	If an instance is not in running state, and the values of the Priority and PathCost columns are the default, the instance is not created, and data cannot be got.
IfIndex	Interface index	Index	Unsigned integer.	N/A
IfName	Interface name	N/A	String Length: 2 to 47 characters	N/A
Priority	Spanning tree priority of an interface	N/A	Unsigned integer. **Value range: 0** to 240	N/A
PathCost	Administrative spanning tree path cost of an interface	N/A	Unsigned integer. **value range: 0** to **200000000**.	N/A
OperPathCost	Operational spanning tree path cost of an interface	N/A	Unsigned integer. **value range:** 1 to **200000000**.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Role	Port role of a spanning tree	N/A	Enumeration: • **0**—Disabled port. • **1**—Alternate port. • **2**—Backup port. • **3**—Root port. • **4**—Designated port. • **5**—Master port.	N/A
State	Port state of a spanning tree	N/A	Enumeration: • **1**—Discarding. • **2**—Learning. • **3**—Forwarding.	N/A
ProtectBlock	Reason for blocking a protection function	N/A	Unsigned integer. • **0x01**—Root protect. • **0x02**—Loop protect. • **0x04**—Loopback protect. • **0x08**—Dispute protect. • **0x10**—Port type inconsistent. • **0x20**—PVID inconsistent.	N/A
RapidTransit	Forwarding state transition	N/A	Boolean: • **true**—Rapid transition. • **false**—Slow transition.	N/A
RemainHops	Remaining hops	N/A	Unsigned integer. Length: 32 bits.	N/A
PortVector	Port priority vector	N/A	Struct, include members: • **RootBridgeId**. • **ExtPathCost**. • **DesignateBridgeId**. • **IntPathCost**. • **RootPort**.	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets**.**	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, and the 2-4 hex-character s indicates the system ID, the other hex-string indicates the bridge MAC address.
ExtPathCost	External path cost	N/A	Unsigned integer. Length: 32 bits**.**	N/A
RegionRootId	Region root bridge Identifier	N/A	Octet string. Length: 18 octets**.**	As the remark of RootId above.

Column name	Column description	Column type	Data type and restrictions	Remarks
IntPathCost	Internal path cost	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of RootId above.
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x, and the first hex-character indicates a port priority of 4 bits, the other hex-string indicates a port number.
RcvdPortId	Interface identifier	N/A	Octet string. Length: 8 octets.	As the remark of DesignatePortId above.

STP/Vlans

This table contains information about PVST functions for a VLAN.

XML structure

```
<STP>

Table description

Item	Description
Feature name	STP
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. **Value range:** 1 to **4094.**	If a VLAN is not in running state, and the values of the Priority and RootType columns are the default , the VLAN is not created, and data cannot be got.
Enable	PVST feature status	N/A	Boolean: • **true**—Enables PVST. • **false**—Disables PVST.	N/A
Priority	Priority of the VLAN	N/A	Unsigned integer. Length: 32 bits.	N/A
RootType	Root type of the VLAN	N/A	Enumeration: • **0**—Normal. • **1**—Secondary root. • **2**—Primary root.	N/A
BridgeTimes	Bridge timers per VLAN	N/A	Struct, include members: • **HelloTime**. • **MaxAge**. • **ForwardDelay**.	N/A
HelloTime	Hello timer per VLAN in seconds	N/A	Unsigned integer. Value range: 1 to 10.	N/A
MaxAge	Maximum of message age per VLAN	N/A	Unsigned integer. Value range: 6 to 40.	N/A
ForwardDelay	Forwarding delay timer per VLAN in seconds	N/A	Unsigned integer. Value range: 4 to 30.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BridgeId	Spanning tree bridge identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, the second through fourth hex-characters indicate the system ID, and the other hex-characters indicate the bridge MAC address.
TCs	Topology change information	N/A	Struct, include the following members: • **ReceiveTcOrTcn**. • **LastTcTime**.	N/A
ReceiveTcOrTcn	Count of received TC or TCN messages	N/A	Unsigned integer. Length: 32 bits.	N/A
LastTcTime	Time when the last TC message was received or detected, in 10 ms	N/A	Unsigned integer. Length: 64 bits.	N/A
RootVector	Root priority vector	N/A	Struct, include the following members: • **RootBridgeId**. • **PathCost**. • **DesignateBridgeId**. • **RootPort**.	N/A
RootBridgeId	Root bridge identifier	N/A	Octet string. Length: 18 octets.	Same as the remarks of the BridgeId column.
RootPathCost	Path cost to the root bridge	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge identifier	N/A	Octet string. Length: 18 octets.	Same as the remarks of the BridgeId column.
DesignatePortId	The transmitting port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x. The first two hex-characters indicate the port priority, and the other hex-characters indicate the port number.
RootPort	Interface index of the root port	N/A	Unsigned integer. Length: 32 bits.	N/A

STP/VlanInterfaces

This table contains information about interface-level PVST functions for a VLAN.

XML structure

```
<STP>
  <VlanInterfaces>
    <VlanInterface>
      <VlanId></VlanId>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <Priority></Priority>
      <PathCost></PathCost>
      <OperPathCost></OperPathCost>
      <Role></Role>
      <State></State>
      <ProtectBlock></ProtectBlock>
      <RapidTransit></RapidTransit>
      <PortTimes>
        <HelloTime></HelloTime>
        <ForwardDelay></ForwardDelay>
        <MaxAge></MaxAge>
        <MessageAge></MessageAge>
      </PortTimes>
      <PortVector>
        <RootId></RootId>
        <RootPathCost></RootPathCost>
        <DesignateBridgeId></DesignateBridgeId>
        <DesignatePortId></DesignatePortId>
        <RcvdPortId></RcvdPortId>
      </PortVector>
    </VlanInterface>
  </VlanInterfaces>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	VlanInterfaces
Table type	Multi-instance table
Row name	VlanInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. **Value range:** 1 to **4094.**	If a VLAN is not in running state, and the values of the Priority and PathCost columns are the default, the VLAN is not created, and data cannot be got.
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits	N/A
IfName	Interface name	N/A	String Length: 2 to 47 characters	N/A
Priority	Interface priority of a VLAN	N/A	Unsigned integer. **Value range: 0** to 240	N/A
PathCost	Interface path cost of a VLAN	N/A	Unsigned integer. **value range:** 0 to **200000000**.	N/A
OperPathCost	Interface path cost of a VLAN	N/A	Unsigned integer. **value range:** 1 to **200000000**.	N/A
Role	Port role of a spanning tree	N/A	Enumeration: • **0**—Disabled port. • **1**—Alternate port. • **2**—Backup port. • **3**—Root port. • **4**—Designated port.	N/A
State	Port state of a spanning tree	N/A	Enumeration: • **1**—Discarding. • **2**—Learning. • **3**—Forwarding.	N/A
ProtectBlock	Reason for blocking a protection function	N/A	Unsigned integer. • **0x01**—Root protect. • **0x02**—Loop protect. • **0x04**—Loopback protect. • **0x08**—Dispute protect. • **0x10**—Port type inconsistent. • **0x20**—PVID inconsistent.	N/A
RapidTransit	Forwarding state transition	N/A	Boolean: • **true**—Rapid transition. • **false**—Slow transition.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PortTimes	Interface protocol timers	N/A	Struct, include members: • **HelloTime**. • **ForwardDelay**. • **MaxAge**. • **MessageAge**.	N/A
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.	N/A
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.	N/A
MaxAge	Maximum message age	N/A	Unsigned integer. Value range: 6 to 40.	N/A
MessageAge	Message age	N/A	Unsigned integer. Length: 32 bits.	N/A
PortVector	Port priority vector	N/A	Struct, include members: • **RootBridgeId**. • **RootPathCost**. • **DesignateBridgeId**.	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, the other hex-string indicates the bridge MAC address.
RootPathCost	Path cost to the root	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of RootId above.
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x, and the first hex-character indicates a port priority of 4 bits, the other hex-string indicates a port number.
RcvdPortId	Interface identifier	N/A	Octet string. Length: 8 octets.	As the remark of DesignatePortId above.

STP/StiStates

This table contains information about the VLAN state of ports.

XML structure

```
<STP>
  <StiStates>
```

```
    <StiState>
      <IfName></IfName>
      <VlanStateBitmap></VlanStateBitmap >
    </StiState>
  </StiStates>
</STP>
```

Table description

Item	Description
Feature name	STP
Table name	StiStates

STP event stream

STP event stream description.

IfStpEvent event

This event is used to report interface loop detection events.

XML structure for event subscription

```
<IfStpEvent>
</IfStpEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>STP</stream>
      <filter type="subtree">
      <IfStpEvent xmlns="http://www.h3c.com/netconf/event:1.0/STP:1.0">
      </IfStpEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	STP
Event name	IfStpEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/STP:1.0
Support for extended query	No

XML structure for event report

```
<IfStpEvent>
  <IfStpVlanState>
    <IfName></IfName>
    <ForwardVlanList></ForwardVlanList>
    <DiscardVlanList></DiscardVlanList>
  </IfStpVlanState>
</IfStpEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-11-13T14:22:21</eventTime>
  <IfStpEvent xmlns="http://www.h3c.com/netconf/event:1.0/STP:1.0">
```

```
    <IfStpVlanState>
      <IfName>GigabitEthernet0/0/3</IfName>
      <ForwardVlanList>1</ForwardVlanList>
    </IfStpVlanState>
  </IfStpEvent>
</notification>
```

Table description

Column name	Column description	Data type and restrictions	Remarks
IfName	Interface name	String. Length: 0 to 47 characters.	N/A
ForwardVlanList	New Forward VLANs on the interface	String. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.
DiscardVlanList	New Discard VLANs on the interface	String. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.

      <AuthenticationKey></AuthenticationKey>
      <AuthMode></AuthMode>
    </Trunk>
  </Trunks>
</STRUNK>
```

Table description

Item	Description
Feature name	STRUNK
Table name	Trunks
Table type	Multi-instance table
Row name	Trunk
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrunkID	Smart trunk ID	Index	Unsigned integer. Value range: 1 to 128.	N/A
LocalPriority	Role priority of the local smart trunk	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority. The default priority is 32768.
RevertDelayEnable	Whether the reversion delay is enabled	N/A	Boolean: • true • false	By default, the reversion delay is enabled.
RevertDelayT	Reversion delay	N/A	Unsigned integer.	The default reversion

Column name	Column description	Column type	Data type and restrictions	Remarks
ime	in seconds		Value range: 0 to 3600.	delay is 120 seconds.
BfdSessionName	BFD session name	N/A	String, case-sensitive. Length: 0 to 64 characters.	If no BFD session is bound, the name length is 0. To modify the BFD session association for a smart trunk, you must first remove the existing BFD session association.
Description	Description of the smart trunk	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
IPV4Addr	Source and destination IPv4 addresses of the S-Trunk peer link	Data structure	Members include: • DestinationIPV4 • SourceIPV4	N/A
DestinationIPV4	Destination IPv4 address of the S-Trunk peer link	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1 This column must be used with the **SourceIPV4** column.
SourceIPV4	Source IPv4 address of the S-Trunk peer link	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1 This column must be used with the **DestinationIPV4** column.
VpnInstance	VPN instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	By default, the local device is on the public network, and the length of the string is 0. This column must be used with the IPV4Addr column.
LocalInterval	Local device's S-Trunk protocol packet transmission interval in 100 milliseconds	N/A	Unsigned integer. Value range: 5 to 100.	The default interval is 1000 ms.
LocalTimeoutMultiplier	Local device's S-Trunk protocol packet timeout multiplier	N/A	Unsigned integer. Value range: 3 to 300.	The default timeout multiplier is 20. The S-Trunk protocol packet timeout equals the S-Trunk protocol packet transmission interval multiplied by the timeout multiplier.
SequenceCheckEnable	Whether sequence number check on packets is enabled	N/A	Boolean: • true • false	By default, sequence number check is disabled.

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthenticationKey	Encrypted authentication key of packets	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form. Only plaintext is supported To avoid authentication failure, you must configure the same authentication key for a smart trunk on the S-Trunk member devices.
AuthMode	Authentication Mode of packets	N/A	Enumeration: • **1**—sha256	The default value is 1.

STRUNK/Members

This table contains information about smart trunk member ports.

XML structure

```
<STRUNK>
  <Members>
    <Member>
      <IfIndex></IfIndex>

Feature name	STRUNK
Table name	Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index of the aggregate interface	Index	Unsigned integer.	Some versions support the interface name. For relevant information, see the XSD document of your product. For information about the interface index, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrunkID	Smart trunk ID	N/A	Unsigned integer. Value range: 1 to 128.	N/A
PeerMemberID	Peer aggregation group ID	N/A	Unsigned integer. Value range: 1 to 65535.	If you do not specify a peer aggregate interface number, the peer aggregate interface has the same number as the local aggregate interface.
ConfigRole	Manually configured member port role	N/A	Enumeration: • **0**—Auto. • **1**—Primary. • **2**—Secondary.	The default role of a smart trunk member interface is Auto.

Column name	Column description	Column type	Data type and restrictions	Remarks
TrunkID	Smart trunk ID	Index	Unsigned integer. Value range: 1 to 128.	N/A
LocalPriority	Role priority of the local smart trunk	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
PeerPriority	Role priority of the peer smart trunk	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
LocalBridgeMAC	Bridge MAC address of the local smart trunk	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
PeerBridgeMAC	Bridge MAC address of the peer smart trunk	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
DeviceRole	Role of the local smart trunk member device	N/A	Enumeration: • 0—init. • 1—primary. • 2—secondary.	N/A
RoleTrigger	The trigger for the current role	N/A	Enumeration: • 0—INIT. • 1—PRIORITY. • 2—TIMEOUT. • 3—BFD_DOWN. • 4—PEER_TIMEOUT. • 5—PEER_BFD_DOWN.	**INIT**: The S-Trunk system is initializing. **PRIORITY**: Calculated by priority. **TIMEOUT**: The local device has not received protocol packets from the peer when the timeout timer expires. **BFD_DOWN**: The BFD session on the local device detects that the link between the local and peer devices is down. **PEER_TIMEOUT**: The local device receives the peer timer expiration message.

Column name	Column description	Column type	Data type and restrictions	Remarks
				PEER_BFD_DOWN: The local device receives the BFD detection link down message from the peer device.
RevertDelayEnable	Whether the reversion delay is enabled	N/A	Boolean: • true • false	N/A
RevertDelayTime	Reversion delay in seconds	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BfdSessionName	BFD session name	N/A	String, case-sensitive. Length: 0 to 64 characters.	When no BFD session is bound, the name length is 0. To modify the BFD session association for a smart trunk, you must first remove the existing BFD session association.
Description	Description of the smart trunk	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A.
IPV4Addr	Source and destination IPv4 addresses of the S-Trunk peer link	Data structure	Members include: • DestinationIPV4 • SourceIPV4	N/A
DestinationIPV4	Destination IPv4 address of the S-Trunk peer link	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1 This column must be used with the **SourceIPV4** column.
SourceIPV4	Source IPv4 address of the S-Trunk peer link	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1 This column must be used with the **DestinationIPV4** column.
VpnInstance	VPN instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0. This column must be used with the IPV4Addr column.
LocalInterval	Local device's S-Trunk protocol packet transmission interval in 100 milliseconds	N/A	Unsigned integer. Value range: 5 to 100.	N/A
PeerInterval	Peer device's S-Trunk protocol packet transmission	N/A	Unsigned integer. Value range: 5 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval in 100 milliseconds			
LocalTimeout Multiplier	Local device's S-Trunk protocol packet timeout multiplier	N/A	Unsigned integer. Value range: 3 to 300.	N/A
PeerTimeout	Peer device's S-Trunk protocol packet timeout time.	N/A	Unsigned integer.	The S-Trunk protocol packet timeout equals the S-Trunk protocol packet transmission interval multiplied by the timeout multiplier
SequenceCheckEnable	Whether sequence number check on packets is enabled	N/A	Boolean: • true • false	N/A
AuthenticationKey	Encrypted authentication key of packets	N/A	String, case-sensitive. Length: 1 to 32 characters.	The authentication key is in plaintext form. Only plaintext is supported
AuthMode	Authentication Mode of packets	N/A	Enumeration: • 1—sha256.	N/A
MemberLists	Current S-Trunk member interface table	Sublist	N/A	For more information, see the STRUNK/TrunkTable/MemberList Table

STRUNK/Trunks/MemberLists

This table contains information about STRUNK/Trunk/MemberLists Table.

STRUNK/Base

Message	Explanation
Invalid TLV type. LIPC消息内无此TLV。	The LIPC message does not contain this TLV.

STRUNK/Trunks

Message	Explanation
Invalid TLV type. LIPC消息内无此TLV。	The LIPC message does not contain this TLV.
The smart trunk has been associated with another BFD session. STRUNK组已绑定了BFD会话。	Can’t associate the smart trunk with the BFD session because the smart trunk has been associated with another BFD session.
The smart trunk does not exist. 指定的STRUNK组不存在	Please first create the smart trunk.
The destination and source IP addresses cannot be the same. 目的IP地址和源IP地址不能相同。	The destination and source IP addresses must be different.
Invalid destination or source IP address. 无效的源/目的IP地址。	You must configure valid source and destination addresses.
You must specify the source and destination IP addresses when configuring the VPN instance. 操作VPN实例时，需要指定源IP地址和目的IP地址。	You cannot specify only the VPN instance. To configure the VPN instance, you must specify the source and destination IP addresses.

STRUNK/Members

Message	Explanation
Invalid TLV type. LIPC消息内无此TLV。	The LIPC message does not contain this TLV.
The Interface is already in another smart trunk. 该接口已是其他STRUNK组的成员口。	The interface has been assigned to a smart trunk.
The smart trunk does not exist. 指定的STRUNK组不存在	Please first create the smart trunk.
The local smart trunk member port has been configured with a peer. 接口已经绑定了指定组，但是新设置的对端ID与原先的不一致。	Can't specify the current peer interface for the smart trunk member port because it has been configured with a peer interface.

The interface must be set a Layer 2 aggregate interface or a Layer 3 aggregate interface. 接口必须为一个二层聚合口或是三层聚合口。	The interface must be set a Layer 2 aggregate interface or a Layer 3 aggregate interface.
Can't assign the interface to the smart trunk because the interface is a member of an S-MLAG group. 该接口已经是一个S-MLAG组的成员。	Can't assign the interface to the smart trunk because the interface is a member of an S-MLAG group.
The interface is not a member of a smart trunk. 该接口不是一个s-trunk组的成员接口。	The interface is not a member of a smart trunk.
You must specify the TrunkID parameter when configuring the PeerMemberID parameter. 操作 PeerMemberID时，需要同时指定TrunkID。	You cannot specify only the PeerMemberID parameter. To configure the PeerMemberID parameter, you must specify the TrunkID parameter.

STUN_SERVER/StunServers 2

STUN_SERVER

STUN_SERVER/StunServers

Message	Explanation
To modify STUN server information, you must disable the existing server and then configure a new server. 修改配置前，需要删除已经存在的配置。	STUN server information can’t be directly modified. 无法通过重复执行本操作修改 STUN 服务端的配置。
The primary and alternative IP addresses of the STUN server can't be the same. 主、从IP地址不能相同。	The primary and alternative IP addresses can’t be the same. 探测流程要求主、从IP地址不能相同。
The primary and alternative port numbers of the STUN server can't be the same. 主、从端口号不能相同。	The primary and alternative port numbers can’t be the same. 探测流程要求主、从端口号不能相同。
The global port number and the alternate global port number of the STUN server can't be the same. 公网端口号、公网从端口号不能相同。	The global port number and the alternate global port number of the STUN server can't be the same. 探测流程要求公网端口号、公网从端口号不能相同。
The primary and global IP addresses of the STUN server can't be the same. 主IP、公网IP地址不能相同。	The primary and global IP addresses of the STUN server can't be the same. 探测流程要求主IP、公网IP地址不能相同。
The primary IP address and the alternate global IP address of the STUN server can't be the same. 主IP、公网从IP地址不能相同。	The primary IP address and the alternate global IP address of the STUN server can't be the same. 探测流程要求主IP、公网从IP地址不能相同。
The alternate IP address and the global IP address of the STUN server can't be the same. 从IP、公网IP地址不能相同。	The alternate IP address and the global IP address of the STUN server can't be the same. 探测流程要求从IP、公网IP地址不能相同。
The alternate IP address and the alternate global IP address of the STUN server can't be the same. 从IP、公网从IP地址不能相同。	The alternate IP address and the alternate global IP address of the STUN server can't be the same. 探测流程要求可选IP、公网从IP地址不能相同。
The global IP address and the alternate global IP address of the STUN server can't be the same. 公网IP、公网从IP地址不能相同。	The global IP address and the alternate global IP address of the STUN server can't be the same. 探测流程要求公网IP、公网从IP地址不能相同。
The primary and alternative global IP addresses of the STUN server can't be the same. 经过地址转换后的STUN服务器主、从地址不能相同。	The primary and alternative global IP addresses can’t be the same. 探测流程要求地址转换后的STUN服务器主、从IP地址不能相同。
The primary and alternative global port numbers of the STUN server can't be the same. 经过地址转换后的STUN服务器主、从端口号不能相同。	The primary and alternative global port numbers can’t be the same. 探测流程要求地址转换后的STUN服务器主、从端口号不能相同。
Maximum number of STUN servers configured already reached. STUN服务器的数量已经超过上限。	Only eight STUN server can be configured. 只能存在八个STUN服务器配置。
The primary IP address has been configured for	The primary IP address has been configured for another STUN

another STUN server. 主IP地址已在另一条STUN服务器配置中配置。	server. 主IP地址已在另一条STUN服务器配置中配置。
The alternate IP address has been configured for another STUN server. 从IP地址已在另一条STUN服务器配置中配置。	The alternate IP address has been configured for another STUN server. 从IP地址已在另一条STUN服务器配置中配置。
The global IP address has been configured for another STUN server. 公网IP地址已在另一条STUN服务器配置中配置。	The global IP address has been configured for another STUN server. 公网IP地址已在另一条STUN服务器配置中配置。
The alternate global IP address has been configured for another STUN server. 公网从IP地址已在另一条STUN服务器配置中配置。	The alternate global IP address has been configured for another STUN server. 公网从IP地址已在另一条STUN服务器配置中配置。

    <DefaultRole></DefaultRole>
  </GlobalConfig>
</Super>
```

Table description

Item	Description
Feature name	Super
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModeType	Authentication mode for temporary user role authorization	N/A	Enumeration: • **0**—Local password authentication. • **1**—Remote AAA authentication. • **2**—Local-then-remote authentication mode. • **3**—Remote-then-local authentication mode.	The default is 0.
DefaultRole	The default target user role for temporary user role authorization	N/A	A case-sensitive string of 1 to 63 characters. The user role must exist in the system.	The default is as follows: • If you log into a device that does not support MDC or Context, the default target user role is network-admin.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• If you log in to the default MDC, the default target user role is network-admin. • If you log in to a non-default MDC, the default target user role is mdc-admin. • If you log in to the default Context, the default target user role is network-admin. • If you log in to a non-default Context, the default target user role is context-admin.

Super/Passwords

Passwords of roles.

XML structure

```
<Super>
  <Passwords>
    <Password>
      <RoleName></RoleName>
      <Password></Password>
    </Password>
  </Passwords>
</Super>
```

Column name	Column description	Column type	Data type and restrictions	
			63 characters. The user role can be predefined or user-defined.	

Super/PasswordLimit

As described in *Comware V7 Super NETCONF XML API Configuration Reference*, the value range of the Password column in the Super/Passwords table varies in FIPS mode and non-FIPS mode. To configure the Super/Passwords table, first obtain the value range of the Password column from the Super/PasswordLimit table.

XML structure

```
<Super>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
</Super>
```

Table description

Item	Description
Feature name	Super
Table name	PasswordLimit
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	Minimum password length	N/A	Unsigned integer.	N/A
MaxLen	Maximum password length	N/A	Unsigned integer.	N/A
MinTypeNum	Minimum composition types	N/A	Unsigned integer.	The composition types are as follows: • Uppercase letters A to Z. • Lowercase letters a to z.

Column name	Column description	Column type	Data type and restrictions	Remarks
				• Digits 0 to 9. • Special characters.

Syslog

Syslog/LogBuffer

This table contains information about the log buffer. vsys does not support this table.

XML structure

```
<Syslog>
  <LogBuffer>
    <State></State>
    <BufferSize></BufferSize>
  </LogBuffer>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	LogBuffer
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the log buffer	N/A	Enumeration: • enable **(default).** • disable**.**
BufferSize	Maximum log buffer size configured by the user	N/A	Unsigned integer. Value range: 0 to 65535.

Syslog/LogHosts

This table contains information about log hosts.

XML structure

```
<Syslog>
  <LogHosts>
    <Host>
      <Address></Address>
      <VRF></VRF>
      <Port></Port>
      <Facility></Facility>
      <FilterName></FilterName>
      <SourceIP></SourceIP>
      <Format></Format>
    </Host>
  </LogHosts>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	Up to four log hosts can be configured.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. HostName example: www.example.com.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Facility	Logging facility used by the log host	N/A	Enumeration: • **128**—local0. • **136**—local1. • **144**—local2. • **152**—local3. • **160**—local4. • **168**—local5. • **176**—local6. • **184**—local7.	N/A
FilterName	FilterName of the log host	N/A	String. Length: 0 to 8 characters.	N/A
SourceIP	Source IP address for system logs	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
Format	Log format	N/A	Enumeration: • **0**—Non-customized format . • **1**—cmcc. • **2**—unicom. • **3**—sgcc. • 4—rfc5424. • 5—damddos.	Support for the sgcc and damddos formats depends on the device model. By default, no format is specified and the log host uses the format specified by Syslog/Configuration/Format.

Syslog/Configuration

This table contains information about syslog (the information center).

XML structure

```
<Syslog>
  <Configuration>
    <State></State>
    <DuplicateLogSuppression></DuplicateLogSuppression>
    <Format></Format>
    <Synchronous></Synchronous>
    <Timestamp></Timestamp>
    <LoghostTimestamp></LoghostTimestamp>
    <LoghostSourceInterface></LoghostSourceInterface>
    <Encoding></Encoding>
    <MinAge></MinAge>
  </Configuration>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of syslog (the information center)	N/A	Enumeration: • enable **(default).** • disable**.**
DuplicateLogSuppression	Status of the duplicate log suppression feature	N/A	Enumeration: • enable**.** • disable **(default).**
Format	Log format	N/A	Enumeration: • **0**—Non-customized format **(default)**. • **1**—cmcc. • **2**—unicom. • **3**—sgcc. • 4—rfc5424. • 5—damddos.
Synchronous	Status of the	N/A	Enumeration: • enable**.** • disable **(default).**
Timestamp	Timestamp output format of log information (not include the log host)	N/A	Enumeration: • **0**—none**.** • **1**—date **(default).** • **2**—boot.
LoghostTimestamp	Timestamp output format of log information sent to the log host	N/A	Enumeration: • **0**—none. • **1**—date **(default)**. • **2**—date with milliseconds. • **3**—iso. • **4**—iso with milliseconds. • **5**—no-year-date.
LoghostSourceInterface	An interface name, of which primary IP address as the source IP address for the	N/A	String. Length: 2 to 47 characters. Default: no value is specified.

Column name	Column description	Column type	Data type and restrictions
	syslog.		
Encoding	Character encoding of the log	N/A	Enumeration: • **0**—GB18030 **(default)**. • **1**—UTF-8.
MinAge	Minimum life time for logs.	N/A	Unsigned integer. Value range: 0H to 8760H.

Syslog/OutputRules

This table contains information about syslog (the information center) output rules.

XML structure

```
<Syslog>
  <OutputRules>
    <OutputRule>
      <Destination></Destination>
      <MouduleName></MouduleName>
      <Rule></Rule>
    </OutputRule>
  </OutputRules>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	OutputRules
Table type	Multi-instance table
Row name	OutputRule
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Destination	Specifies syslog output destination	Index	Enumeration: • 1-Console • 2-Monitor terminal • 3-Log buffer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4-Log host • 5-Log file	
MouduleName	Specifies a module by its name.	Index	A case-insensitive string. Length: 1 to 8 characters.	For instance to output FTP information, specify this argument as FTP (or ftp for case-insensitive). Setting default: Specifies all modules. If you do not set an output rule for a module, the module uses the default output rule or the output rule set by using the default keyword.
Rule	A log output rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination.	N/A	Enumeration string: • emergency • alert • critical • error • warning • notification • informational • debugging • **deny**	Set the severity level above which the system suppresses logs to the specified module. Setting the level to errors, for example, allows logs with levels emergencies, alerts, critical and errors to display. alert: Action must be taken immediately (severity=1) critical : Critical conditions (severity=2) debugging: Debug-level messages (severity=7) emergency: System is unusable (severity=0) error: Error conditions (severity=3) informational: Informational messages (severity=6) notification: Normal but significant conditions (severity=5) warning: Warning conditions (severity=4) deny: Disable log output.

Syslog/IndependLogCfgs

This table contains the configurations about independent logs.

XML structure

```
<Syslog>
  <IndependLogCfgs>
    <IndependLogCfg>
```

```
      <ModuleName></ModuleName>
      <BufferSize></BufferSize>
      <AlarmThreshold></AlarmThreshold>
      <MinAge></MinAge>
      <SizeQuota></SizeQuota>
    </IndependLogCfg>
  </IndependLogCfgs>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	IndependLogCfgs
Table type	Multi-instance table
Row name	IndependLogCfg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MouduleName	Specifies a module by its name.	Index	A case-insensitive string. Length: 1 to 8 characters.	If you do not set an output rule for a module, the module uses the default output rule or the output rule set by using the default keyword.
BufferSize	Maximum log buffer size configured by the user	N/A	Unsigned integer. Value range: 0 to 65535.	Maximun log count.
AlarmThreshold	Set the alarm threshold of the log file usage	N/A	Unsigned integer. Value range: 0 to 100.	When the usage rate of log file reaches the threshold, an alarm log will be recorded.
MinAge	Minimum lifetime in hours	N/A	Unsigned integer. Value range: 0 to 8760.	Log file can not be deleted before minage.
SizeQuota	Specify the maximum storage space reserved for a log file	N/A	Unsigned integer. Value range: 1 to 10.	Maximum storage space reserved for a log file.

Syslog/Logfile

This table contains information about logfile.

XML structure

```
<Syslog>
  <Logfile>
    <State></State>
    <Directory></Directory>
    <Frequency></Frequency>
    <SizeQuota></SizeQuota>
    <OverwriteProtection></OverwriteProtection>
  </Logfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Logfile
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the log file	N/A	Enumeration: • enable **(default).** • disable**.**
Directory	The directory where the log files are stored	N/A	String. Length: 1 to 64 characters.
Frequency	The interval at which the system saves logs from the log file buffer to the log file	N/A	Unsigned integer. Value range: 1s to 86400s.

Column name	Column description	Column type	Data type and restrictions
SizeQuota	The maximum storage space reserved for a log file	N/A	Unsigned integer. Value range: 1M to 10M.
OverwriteProtection	Status log file overwrite-protection	N/A	Enumeration: • **0**—disable **(default)**. • **1**—enable. • **2**—enable with all-port-powerdown.

Syslog/DiagnosticLogfile

This table contains information about diagnostic logfile.

XML structure

```
<Syslog>
  <DiagnosticLogfile>
    <State></State>
    <Directory></Directory>
    <Frequency></Frequency>
    <SizeQuota></SizeQuota>
  </DiagnosticLogfile>
</Syslog>
```

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the security logfile	N/A	Enumeration: • enable. • disable **(default).**
Directory	The directory where the security logfiles are stored	N/A	String. Length: 1 to 64 characters.
Frequency	The interval at which the system saves logs from the security logfile buffer to the log file	N/A	Unsigned integer. Value range: 1s to 86400s.
`SizeQuota`	The maximum storage space reserved for a security logfile	N/A	Unsigned integer. Value range: 1M to 10M.

Column name	Column description	Column type	Data type and restrictions
AlarmThreshold	The alarm threshold of the security logfile usage	N/A	Unsigned integer. Value range: 0 to 100.

Syslog/TraceLogfile

This table contains information about trace logfile.

XML structure

```
<Syslog>
  <TraceLogfile>
    <SizeQuota></SizeQuota>
  </TraceLogfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	TraceLogfile
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
`SizeQuota`	The maximum storage space reserved for a trace logfile	N/A	Unsigned integer. Value range: 1M to 10M.

Syslog/Filter

This table contains information about syslog filter.

XML structure

```
<Syslog>
  <Filters>
    <Filter>
      <FilterName></FilterName>
      <FilterRules>
        <FilterRule>
          <ModuleName></ModuleName>
          <Rule></Rule>
        </FilterRule>
      </FilterRules>
    </Filter>
  </Filters>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Filters
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterName	Filter name	Index	String. • Length: 1 to 8 characters.	N/A
FilterRules	Filter rules	Data structure	Members include: ● ModuleName ● Rule	N/A
ModuleName	Module name	N/A	String. Length: 1 to 8 characters.	Modules registered to syslog. Please refer table “RegModule”

Column name	Column description	Column type	Data type and restrictions	Remarks
Rule	A log filter rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination	N/A	Enumeration string: • emergency • alert • critical • error • warning • notification • informational • debugging • deny	N/A

Syslog/VsysReservedLogBuffs

This table contains log buffer reserved size.

XML structure

```
<Syslog>
  <VsysReservedLogBuffs>
    <VsysReservedLogBuff>
      <VsysIndex></VsysIndex>
      <LogBuffReservedSize></LogBuffReservedSize>
    <VsysReservedLogBuff>
  </VsysReservedLogBuffs>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	VsysReservedLogBuffs
Table type	Multi-instance table
Row name	`VsysReservedLogBuff`
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsysIndex	Vsys index	Index	Unsigned integer. Value range: 2 to 4095	N/A
LogBuffReserved Size	Log buffer reserved size	N/A	Unsigned integer. • • Minimum value:1	N/A

Syslog/VsysToPublic

This table contains vsys log send to public.

XML structure

```
<Syslog>
  <VsysToPublic>
    <VsysLogSendPublicEnable></VsysLogSendPublicEnable>
  </VsysToPublic>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	VsysToPublic
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsysLogSendPublicEnable	Vsys log send to public .	N/A	Enumeration: • **enable** • **disable** • Default:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			disable

Syslog

Syslog/LogBuffer

This table contains log buffer information.

XML structure

```
<Syslog>
  <LogBuffer>
    <State></State>
    <BufferSize></BufferSize>
    <BufferSizeLimit></BufferSizeLimit>
    <LogsCount></LogsCount>
    <DroppedLogsCount></DroppedLogsCount>
    <OverwrittenLogsCount></OverwrittenLogsCount>
    <LogsCountPerSeverity>
      <Emergency></Emergency>
      <Alert></Alert>
      <Critical></Critical>
      <Error></Error>
      <Warning></Warning>
      <Notice></Notice>
      <Informational></Informational>
      <Debug></Debug>
    </LogsCountPerSeverity>
  </LogBuffer>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	LogBuffer
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Status of the log buffer	N/A	Enumeration: • enable. • disable.	N/A
BufferSize	Maximum log buffer size configured by the user	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
BufferSizeLimit	Maximum log buffer size supported by the device	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
LogsCount	Number of logs stored in the log buffer	N/A	Unsigned integer.	N/A
DroppedLogsCount	Number of dropped logs	N/A	Unsigned integer.	Number of logs dropped after the buffer size was decreased to a value that is smaller than the number of current logs.
OverwrittenLogsCount	Number of overwritten logs	N/A	Unsigned integer.	When the size of the log buffer exceeds the upper limit, new logs overwrites the earliest logs in the log buffer.
LogsCountPerSeverity	The number of each specified severity logs stored in the log buffer	Data structure	Members include: • Emergency • Alert • Critical • Error • Warning • Notice • Informational • Debug	N/A
Emergency	The number of emergency logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Alert	The number of alert logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Critical	The number of critical logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Error	The number of error logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Warning	The number of warning logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Notice	The number of notice logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Informational	The number of informational logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Debug	The number of debuglogs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Syslog/LogHosts

This table contains the log host information.

XML structure

```
<Syslog>
  <LogHosts>
    <Host>
      <Address></Address>
      <VRF></VRF>
      <Port></Port>
      <Facility></Facility>
      <FilterName></FilterName>
      <SourceIP></SourceIP>
      <Format></Format>
    </Host>
  </LogHosts>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. HostName example: www. example.com.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
Facility	Logging facility used by the log host	N/A	Enumeration: • **128**—local0. • **136**—local1. • **144**—local2. • **152**—local3. • **160**—local4. • **168**—local5. • **176**—local6. • **184**—local7.	N/A
FilterName	FilterName of the log host	N/A	String. Length: 1 to 8 characters.	N/A
SourceIP	Source IP address for system logs	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
Format	Log format	N/A	Enumeration: • **0**—Non-customized format . • **1**—cmcc. • **2**—unicom. • **3**—sgcc. • 4—rfc5424. • 5—damddos.	Support for the sgcc and damddos formats depends on the device model. By default, no format is specified and the log host uses the format specified by Syslog/Configuration/Format.

Syslog/Logs

This table contains information about the logs in the log buffer.

XML structure

```
<Syslog>
  <Logs>
    <Log>
      <Index></Index>
      <Time></Time>
      <Group></Group>
      <Digest></Digest>
      <Severity></Severity>
      <Content></Content>
    </Log>
  </Logs>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Logs
Table type	Multi-instance table
Row name	Log
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Index	Serial number of the log	N/A	Unsigned integer. Value range: 0 to 65535.
Time	Time when the log was generated	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
Group	Module that generated the log	N/A	String. Length: 1 to 8 characters.
Digest	Brief description of the log	N/A	String. Length: 1 to 32 characters.
Severity	Severity level of the log	N/A	Enumeration: • **0**—Emergency. • **1**—Alert. • **2**—Critical. • **3**—Error. • **4**—Warning. • **5**—Notification. • **6**—Informational. • **7**—Debugging.

Column name	Column description	Column type	Data type and restrictions
Content	Content of the log	N/A	String. Length: 0 to 1023 characters.

Syslog/Configuration

This table contains information about syslog (the information center).

XML structure

```
<Syslog>
  <Configuration>
    <State></State>
    <DuplicateLogSuppression></DuplicateLogSuppression>
    <Format></Format>
    <Synchronous></Synchronous>
    <Timestamp></Timestamp>
    <LoghostTimestamp></LoghostTimestamp>
    <LoghostSourceInterface></LoghostSourceInterface>
    <Encoding></Encoding>
    <MinAge></MinAge>
  </Configuration>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of syslog (the information center)	N/A	Enumeration: • enable. • disable.
DuplicateLogSuppression	Status of the duplicate log suppression feature	N/A	Enumeration: • enable. • Disable.
Format	Log format	N/A	Enumeration:

Column name	Column description	Column type	Data type and restrictions
			• **0**—Non-customized format (default). • **1**—cmcc. • **2**—unicom. • **3**—sgcc. • 4—rfc5424. • 5—damddos.
Synchronous	Status of the	N/A	Enumeration: • enable**.** • disable**.**
Timestamp	Timestamp output format of log information (not include the log host)	N/A	Enumeration: • **0**—none**.** • **1**—date(default)**.** • **2**—boot.
LoghostTimestamp	Timestamp output format of log information sent to the log host	N/A	Enumeration: • **0**—none. • **1**—date (default). • **2**—date with milliseconds. • **3**—iso. • **4**—iso with milliseconds. • **5**—no-year-date.
LoghostSourceInterface	An interface name, of which primary IP address as the source IP address for the syslog.	N/A	String. Length: 2 to 47 characters. Default: no value is specified.
Encoding	Character encoding of the log	N/A	Enumeration: • **0**—GB18030(default) . • **1**—UTF-8.
MinAge	Minimum life time of logs	N/A	Unsigned integer. Value range: 0H to 8760H.

Syslog/OutputRules

This table contains information about syslog (the information center) output rules.

XML structure

```
<Syslog>
  <OutputRules>
    <OutputRule>
      <Destination></Destination>
      <MouduleName></MouduleName>
      <Rule></Rule>
    </OutputRule>
  </OutputRules>
```

```
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	OutputRules
Table type	Multi-instance table
Row name	OutputRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Destination	Specifies syslog output destination	Index	Enumeration: • 1-Console • 2-Monitor terminal • 3-Log buffer • 4-Log host • 5-Log file	N/A
MouduleName	Specifies a module by its name.	Index	A case-insensitive string. Length: 1 to 8 characters.	If you do not set an output rule for a module, the module uses the default output rule or the output rule set by using the default keyword.
Rule	A log output rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination.	N/A	Enumeration string: • emergency • alert • critical • error • warning • notification • informational • debugging • **deny**	Set the severity level above which the system suppresses logs to the specified module. Setting the level to errors, for example, allows logs with levels emergencies, alerts, critical and errors to display. alert: Action must be taken immediately (severity=1) critical: Critical conditions (severity=2) debugging: Debug-level messages (severity=7) emergency: System is unusable (severity=0) error: Error conditions (severity=3) informational: Informational messages (severity=6) notification Normal but significant conditions

Column name	Column description	Column type	Data type and restrictions	Remarks
				(severity=5) warning: Warning conditions (severity=4) deny: Disable log output

Syslog/IndependLogCfgs

This table contains log configuration information about specific modules.

XML structure

```
<Syslog>
  <IndependLogCfgs>
    <IndependLogCfg>
      <ModuleName></ModuleName>
      <BufferSize></BufferSize>
      <AlarmThreshold></AlarmThreshold>
      <MinAge></MinAge>
      <SizeQuota></SizeQuota>
    </IndependLogCfg>
  </IndependLogCfgs>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	IndependLogCfgs
Table type	Multi-instance table
Row name	IndependLogCfg
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ModuleName	Name of a module	Index	String, case-insensitive. Length: 1 to 8 characters.
BufferSize	Maximum number of log entries that can be stored in the log buffer for this module	N/A	Unsigned integer. Value range: 0 to 65535.
AlarmThreshold	Log file usage alarm threshold.	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 0 to 100, in percentage.
MinAge	Minimum lifetime of syslogs	N/A	Unsigned integer. Value range: 0 to 8760, in hours.
SizeQuota	Maximum storage space reserved for a log file	N/A	Unsigned integer. Value range: 1 to 10, in MB.

Syslog/IndependLogInfos

This table contains information about logs in the log buffers of specific modules.

XML structure

```
<Syslog>
  <IndependLogInfos>
    <IndependLogInfo>
      <ModuleName></ModuleName>
      <SubModuleName></SubModuleName>
      <Index></Index>
      <Time></Time>
      <Digest></Digest>
      <Severity></Severity>
      <Content></Content>
    </IndependLogInfo>
  </IndependLogInfos>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	IndependLogInfos
Table type	Multi-instance table
Row name	IndependLogInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ModuleName	Name of the module	Index	String, case-insensitive. Length: 1 to 8 characters.
SubModuleName	Name of the sub module	Index	String, case-insensitive. Length: 1 to 8 characters.

Column name	Column description	Column type	Data type and restrictions
Index	Serial number of the log	Index	Unsigned integer. Value range: 0 to 65535.
Time	Time when the log was generated	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
Digest	Brief description of the log	N/A	String. Length: 1 to 32 characters.
Severity	Severity level of the log	N/A	Enumeration: • **0**—Emergency. • **1**—Alert. • **2**—Critical. • **3**—Error. • **4**—Warning. • **5**—Notification. • **6**—Informational. • **7**—Debugging.
Content	Content of the log	N/A	String. Length: 0 to 1023 characters.

Syslog/IndependLogCount

This table contains count of logs.

XML structure

```
<Syslog>
  <IndependLogCount>
    <ModuleName></ModuleName>
    <SubModuleName></SubModuleName>
    <CountFilter></CountFilter>
    <Count></Count>
  </IndependLogCount>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	IndependLogCount
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModuleName	Name of module	N/A	String, case-insensitive. Length: 1 to 8 characters.	N/A
SubModuleName	Name of sub module	N/A	String, case-insensitive. Length: 1 to 8 characters.	N/A
CountFilter	Filters for counting logs.	N/A	String. Length: 0 to 2047 characters.	Separate the filters with spaces. The general filters are Severity, TimeStart, and TimeEnd. Modules can define private filters.
Count	Count of the logs matching the filters.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Syslog/Logfile

This table contains information about logfile.

XML structure

```
<Syslog>
  <Logfile>
    <State></State>
    <Directory></Directory>
    <Frequency></Frequency>
    <SizeQuota></SizeQuota>
    <OverwriteProtection></OverwriteProtection>
  </Logfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	Logfile
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the log file	N/A	Enumeration: • enable. • disable.
Directory	The directory where the log files are stored	N/A	String. Length: 1 to 64 characters.
Frequency	The interval at which the system saves logs from the log file buffer to the log file	N/A	Unsigned integer. Value range: 1s to 86400s.
SizeQuota	The maximum storage space reserved for a log file	N/A	Unsigned integer. Value range: 1M to 10M.
OverwriteProtection	Status log file overwrite-protection	N/A	Enumeration: • **0**—disable. • **1**—enable. • **2**—enable with all-port-powerdown.

Syslog/DiagnosticLogfile

This table contains information about diagnostic logfile.

XML structure

```
<Syslog>
  <DiagnosticLogfile>
    <State></State>
    <Directory></Directory>
    <Frequency></Frequency>
    <SizeQuota></SizeQuota>
  </DiagnosticLogfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	DiagnosticLogfile

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the diagnostic logfile	N/A	Enumeration: • enable. • disable.
Directory	The directory where the diagnostic logfiles are stored	N/A	String. Length: 1 to 64 characters.
Frequency	The interval at which the system saves logs from the diagnostic logfile buffer to the log file	N/A	Unsigned integer. Value range: 10s to 86400s.
SizeQuota	The maximum storage space reserved for a diagnostic logfile	N/A	Unsigned integer. Value range: 1M to 10M.

Syslog/SecurityLogfile

This table contains information about security logfile.

XML structure

```
<Syslog>
  <SecurityLogfile>
    <State></State>
    <Directory></Directory>
    <Frequency></Frequency>
    <SizeQuota></SizeQuota>
    <AlarmThreshold></AlarmThreshold>
  </SecurityLogfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog

Table name	SecurityLogfile
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the security logfile	N/A	Enumeration: • enable. • disable.
Directory	The directory where the security logfiles are stored	N/A	String. Length: 1 to 64 characters.
Frequency	The interval at which the system saves logs from the security logfile buffer to the log file	N/A	Unsigned integer. Value range: 10s to 86400s.
SizeQuota	The maximum storage space reserved for a security logfile	N/A	Unsigned integer. Value range: 1M to 10M.
AlarmThreshold	The alarm threshold of the security logfile usage	N/A	Unsigned integer. Value range: 0 to 100. 80(default).

Syslog/TraceLogfile

This table contains information about trace logfile.

XML structure

```
<Syslog>
  <TraceLogfile>
    <SizeQuota></SizeQuota>
  </TraceLogfile>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	TraceLogfile
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
SizeQuota	The maximum storage space reserved for a trace logfile	N/A	Unsigned integer. Value range: 1M to 10M.

Syslog/Filter

This table contains information about syslog filter.

XML structure

```
<Syslog>
  <Filters>
    <Filter>
      <FilterName></FilterName>
      <FilterRules>
        <FilterRule>
          <ModuleName></ModuleName>
          <Rule></Rule>
        </FilterRule>
      </FilterRules>
    </Filter>
  </Filters>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog

Table name	Filters
Table type	Multi-instance table
Row name	Filter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
FilterName	Filter name	Index	String. • Length: 1 to 8 characters.
FilterRules	N/A	Data structure	Members include: ● ModuleName ● Rule
ModuleName	Module name	index	String. Length: 1 to 8 characters.
Rule	A log filter rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination	N/A	Enumeration string: • emergency • alert • critical • error • warning • notification • informational • debugging • deny

Syslog/RegModule

This table contains modules registered to syslog.

XML structure

```
<Syslog>
  <RegModule>
    <ModuleName></ModuleName>
  </RegModule>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	`RegModule`
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
`ModuleName`	Modules registered to syslog.	N/A	String. Length: 1 to 8 characters.

Syslog/VsysReservedLogBuffs

This table contains log buffer reserved size.

XML structure

```
<Syslog>
  <VsysReservedLogBuffs>
    <VsysReservedLogBuff>
      <VsysIndex></VsysIndex>
      <LogBuffReservedSize></LogBuffReservedSize>
    </VsysReservedLogBuff>
  </VsysReservedLogBuffs>
</Syslog>
```

Table description

Item	Description
Feature name	Syslog
Table name	VsysReservedLogBuffs
Table type	Multi-instance table
Row name	`VsysReservedLogBuff`
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
VsysIndex	Vsys index	Index	Unsigned integer. Value range: 2 to 4095.
LogBuffReservedSize	Log buffer reserved size.	N/A	Unsigned integer. Minimum value:1

Syslog/VsysToPublic

This table contains vsys log send to public.

XML structure

```
<Syslog>
  <VsysToPublic>
    <VsysLogSendPublicEnable></VsysLogSendPublicEnable>
  </VsysToPublic>
</Syslog>
```

Table description

Item	Description

Syslog/LogHosts

Message	Explanation
Maximum number of log hosts already reached. 日志主机数量已经达到最大值。	Create log host failed. 日志主机数量已经达到最大值，创建新日志主机失败。
Invalid address. 无效的地址。	Create log host failed. 请提供正确的日志主机地址。

Syslog/LogBuffer

Message	Explanation
The value of BufferSize can't exceed %u. 日志缓冲区设置的值不能超过%u。	The buffer size can't exceed the max size. 用户设置日志缓冲区大小不能超过最大值。

```

Table description

Item	Description
Feature name	Tacacs
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The maximum number of TACACS schemes is 16.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
RealAcctInterval	Realtime accounting	N/A	Unsigned integer.	Default: 12 minutes.

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval		Value range: 0 to 60, in minutes.	The value of 0 indicates that the device does not send realtime accounting information for online users to TACACS servers.
TimeOut	TACACS server response timeout timer	N/A	Unsigned integer. Value range: 1 to 300, in seconds.	Default: 5 seconds
QuietTime	Quiet timer for the servers specified in the TACACS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes
UserNameFormat	Format of user names to be sent to TACACS servers	N/A	Enumeration: • **0**—keep-original. • **1**—with-domain. • **2**—without-domain.	Default: 1
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: • **0**—byte. • **1**—kilo-byte. • **2**—mega-byte. • **3**—giga-byte.	Default: 0
PacketsUint	Packet measurement unit for traffic statistics	N/A	Enumeration: • **0**—one-packet. • **1**—kilo-packet. • **2**—mega-packet. • **3**—giga-packet.	Default: 0
NasIpv4Address	Source IPv4 IP address for outgoing TACACS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 IP address for outgoing TACACS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
AuthenKey	Shared key for secure TACACS authentication communicatio n	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character. In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthorKey	Shared key for secure HWTACACS authorization communicatio n	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character. In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A
AcctKey	Shared key for secure TACACS accounting communicatio n	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character. In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A
VRF	VRF name	N/A	String. Length: 1 to 31 characters.	If this column is empty, the TACACS servers are on the public network. Default: Public network

Tacacs/AuthServers

TACACS authentication server table.

XML structure

```
<Tacacs>

      <Key></Key>
      <SingleConn></SingleConn>
    </AuthServer>
```

```
  </AuthServers>
</Tacacs>
```

Table description

Item	Description
Feature name	Tacacs
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	You can configure one primary authentication server and a maximum of 16 secondary authentication servers for backup in each TACACS scheme. To change the primary authentication server, delete the existing primary server, and then configure a new primary server.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: • **0**—Primary authentication server. • **1**—Secondary authentication server.	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 1 to 31 characters.	If this column is empty, the TACACS server is on the public network.
IpType	Type of the TACACS authentication server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—FQDN.	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	TACACS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	When the IpType value is 0, this column represents the IPv4 address of the server. When the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType

Column name	Column description	Column type	Data type and restrictions	Remarks
				value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	Service port number of the TACACS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 49
Key	Shared key for secure TACACS authentication communication	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.In dayou OEM, the shared key must contain a minimum of 9 characters and a minimum of 4 character. In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A
SingleConn	Whether to use the same TCP connection for authentication packet exchange for all users	N/A	Boolean: • true • false	Default: false

</Tacacs>
```

Table description

Item	Description
Feature name	Tacacs
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The maximum number of TACACS schemes is 16.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 60, in minutes.	Default: 12 minutes. The value of 0 indicates that the device does not send realtime accounting information for online users to TACACS servers.

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeOut	TACACS server response timeout timer	N/A	Unsigned integer. Value range: 1 to 300, in seconds.	Default: 5 seconds
QuietTime	Quiet timer for the servers specified in the TACACS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes
UserNameFormat	Format of user names to be sent to TACACS servers	N/A	Enumeration: • **0**—keep-original. • **1**—with-domain. • **2**—without-domain.	Default: 1
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: • **0**—byte. • **1**—kilo-byte. • **2**—mega-byte. • **3**—giga-byte.	Default: 0
PacketsUint	Packet measurement unit for traffic statistics	N/A	Enumeration: • **0**—one-packet. • **1**—kilo-packet. • **2**—mega-packet. • **3**—giga-packet.	Default: 0
NasIpv4Address	Source IPv4 IP address for outgoing TACACS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 IP address for outgoing TACACS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
VRF	VRF name	N/A	String. Length: 1 to 31 characters.	If this column is empty, the TACACS servers are on the public network. Default: Public network

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name	Index	String. Length: 1 to 31 characters.	If this column is empty, the TACACS server is on the public network.
IpType	Type of the TACACS authorization server address	Index	Enumeration: • **0**—IPv4. • **1**—IPv6. • **2**—FQDN.	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	TACACS authorization server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	When the IpType value is 0, this column represents the IPv4 address of the server. When the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	Service port number of the TACACS	Index	Unsigned integer. Value range: 1 to 65535.	Default: 49

Column name	Column description	Column type	Data type and restrictions	Remarks
	authentication server			
LastRoundTripTime	Time interval between the most recent response and request packets exchanged with the TACACS authentication server	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PendingRequest	Number of requests waiting for responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Timeout	Number of requests for which no responses are received due to timeout	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Request	Number of requests sent	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Response	Number of received responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespPassAdd	Number of received responses that include more authorization attributes than the requests sent	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespPassRepl	Number of received responses with authorization attributes that cannot replace all the authorization attributes in the requests	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespFail	Number of failure responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespErr	Number of error responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespFollow	Number of Follow messages	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespMalformed	Number of invalid responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespUnknownType	Number of unknown types of responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RespDropped	Number of discarded responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Tacacs/Statistic/AcctServers

RespDropped	Number of discarded responses	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Tacacs/PasswordLimit

Requirements to meet when you configure passwords for the TACACS module.

XML structure

```
<Tacacs>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
```

```
</Tacacs>
```

Table description

Item	Description
Feature name	Tacacs
Table name	PasswordLimit
Table type	Single-instance table
Row name	None

Restrictions	• The configuration takes effect on the following items:
	○ Tacacs/Schemes table
	`<AuthenKey></AuthenKey>`
	`<AuthorKey></AuthorKey>`
	`<AcctKey></AcctKey>`
	○ Tacacs/AuthServers table
	`<Key></Key>`
	○ Tacacs/AuthorServers table
	`<Key></Key>`
	○ Tacacs/AcctServers table
	`<Key></Key>`
	• Data restrictions acquired in FIPS mode are different from the data restrictions acquired in non-FIPS mode.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	The minimum password length	N/A	Unsigned integer.	N/A
MaxLen	The maximum password length	N/A	Unsigned integer.	N/A
MinTypeNum	Minimum number of character types that the password must contain	N/A	Unsigned integer.	Character types include digit, uppercase letter, lowercase letter, and special character. For example, if the value is set to 3, the password string must include three or more character types.

Tacacs/Dscp

This table contains the DSCP priority configuration for TACACS packets.

Column name	Column description	Column type	Data type and restrictions	Remarks
	StartThreshold and StopThreshold			
StartThreshold	Packet sampling starts when the queue length reaches the start threshold	N/A	Unsigned integer. Unit: byte.	N/A
StopThreshold	Packet sampling stops when the queue length reaches the stop threshold	N/A	Unsigned integer. Unit: byte.	N/A
Freeze	Specifies that the parameter is relative to FreezeNum and FreezeTime	Data structure	Members include: • FreezeNum. • FreezeTime.	N/A
FreezeNum	The TCB function will be frozen when the number of packets lost reaches the FreezeNum	N/A	Unsigned integer.	N/A
FreezeTime	The TCB function will be frozen when packet loss continues for FreezeTime	N/A	Unsigned integer. Unit: microsecond.	N/A
Sample	Specifies that the Sample is relative to PreSample and PostSample	Data structure	Members include: • PreSample. • PostSample.	N/A
PreSample	Packet sampling rate when the queue length exceeds the start threshold value	N/A	Unsigned integer. Unit: byte.	N/A
PostSample	Packet sampling rate when packets loss occurs	N/A	Unsigned integer. Unit: byte.	N/A
PollFrequency	Event report times per minute	N/A	Unsigned integer.	N/A

Appendix

A string can contain multiple items that are separated by commas (,). An item can be in one of the following formats:

- *interface name*
- *interface range-name*
- *interface name A to interface name B*

When you use an item in the *interface name* format, follow these restrictions and guidelines:

- Spaces are not allowed between the interface type and interface number.

  Example:

  Correct: GigabitEthernet1/3/0/1

  Incorrect: GigabitEthernet 1/3/0/1

- If the interface name is the same as an existing interface range name, the system sends the request to interfaces in the interface range rather than the interface.

  Example:

  If you have configured the **interface range name** *Ten-Giga1/2/0/1* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1** as an item, the system sends the request to interfaces in the interface range named **Ten-Giga1/2/0/1**.

- If the interface range name is the same as an existing interface index, the system sends the request to the interface rather than interfaces in the interface range.

  Example:

  If you have configured the **interface range name** *111* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use *111* as an item, the system sends the request to the interface *GigabitEthernet1/2/0/2*.

  Note: the index of **interface** *GigabitEthernet1/2/0/2* is 111.

When you use an item in the *interface range name* format, follow these restrictions and guidelines:

- If the interface range name is in the *interface name A,interface name B* format, the system sends the request to interface A and interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1,Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1,Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 and Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

- If the interface range name is in the *interface name A* to *interface name B* format, the system sends the request to interfaces interface A through interface B rather than interfaces in the interface range.

  Example:

  After you configure the **interface range name** *Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 through Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

When you use an item in the *interface name A to interface name B* format, follow these restrictions and guidelines:

- The interfaces before and after the word **to** must be of the same type and reside on the same card and sub-card.
- If the interfaces are subinterfaces, they must also belong to the same main interface.
- The end interface number must be larger than the start interface number.

Example:

Incorrect:

Ten2/0/1 to Ten3/0/2 The start and end interfaces reside on different cards.

Ten2/0/1 to Ten2/1/2 The start and end interfaces reside on different sub-cards.

Ten2/0/1 to Ten2/0/1:3 The start and end interfaces are of different types.

Giga2/0/1 to Ten2/0/25 The start and end interfaces are of different types.

Ten2/0/3:1 to Ten2/0/4:2 The start and end subinterfaces belong to different main interfaces.

Ten2/0/3:4 to Ten2/0/3:1 The start interface number is larger than the end interface number.

Correct:

Ten2/0/1 to Ten2/0/5

Ten2/0/1:1 to Ten2/0/1:100

Table description

Item	Description
Feature name	TCB
Table name	PortConfigurations
Table type	Multi-instance table
Row name	PortConfiguration
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Type	Packet capture type	N/A	Enumeration: • **1**—Ingress • **2**—Egress	N/A
QueNum	Queue number for the egress type	N/A	Unsigned integer. Value range: 0 to 7.	To monitor all queues, don’t fill in the QueNum value. Otherwise, fill in the specific queue number.
IsLocalAnalysis	Whether local analysis or not	N/A	Boolean: • **true**—local-analysis • **false**—no-local-analysis	N/A
GroupIndex	ACL name or number	N/A	String. Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	The GroupIndex cannot be specified as an ACL name in GET operations for an ACL created by specifying both a number and a name. The value range are 3000 to 3999.
Threshold	Specifies that the threshold is relative to StartThreshold and StopThreshold	Data structure	Members include: • StartThreshold. • StopThreshold.	N/A
StartThreshold	Packet sampling starts when the queue length reaches the start threshold	N/A	Unsigned integer. Unit: byte.	N/A
StopThreshold	Packet sampling stops when the queue length reaches the stop threshold	N/A	Unsigned integer. Unit: byte.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Freeze	Specifies that the parameter is relative to FreezeNum and FreezeTime	Data structure	Members include: • FreezeNum. • FreezeTime.	N/A
FreezeNum	The TCB function will be frozen when the number of packets lost reaches the FreezeNum	N/A	Unsigned integer.	N/A
FreezeTime	The TCB function will be frozen when packet loss continues for FreezeTime	N/A	Unsigned integer. Unit: microsecond.	N/A
Sample	Specifies that the Sample is relative to PreSample and PostSample	Data structure	Members include: • PreSample. • PostSample.	N/A
PreSample	Packet sampling rate when the queue length exceeds the start threshold value	N/A	Unsigned integer. Unit: byte.	N/A
PostSample	Packet sampling rate when packets loss occurs	N/A	Unsigned integer. Unit: byte.	N/A
PollFrequency	Event report times per minute	N/A	Unsigned integer.	N/A

TCB/SlotConfigurations

This table is used to get the configuration data for the TCB function of slot.

XML structure

```
<TCB>
  <SlotConfigurations>
    <SlotConfiguration>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
```

```

        <FreezeNum></FreezeNum>
        <FreezeTime></FreezeTime>
      </Freeze>
      <Sample>
        <PreSampleRate></PreSampleRate>
        <PostSampleRate></PostSampleRate>
      </Sample>
      <PollFrequency></PollFrequency>
    </SlotConfiguration>
  </SlotConfigurations>
</TCB>
```

Table description

Item	Description
Feature name	TCB
Table name	SlotConfigurations
Table type	Multi-instance table
Row name	SlotConfiguration
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. • Value range: 0 to 65535.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. • Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. • Value range: 0 to 7.	N/A
Type	Packet capture type	N/A	Enumeration: • **1**—Ingress • **2**—Egress	N/A
IsLocalAnalys	Whether local	N/A	Boolean:	The default value is true

Column name	Column description	Column type	Data type and restrictions	Remarks
is	analysis or not		• **true**—local-analysis • **false**—no-local-analysis	
GroupIndex	ACL name or number	N/A	• String. • Length: 1 to 63 characters. • **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** String of digits in the range of 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it
Threshold	Specifies that the threshold is relative to StartThreshold and StopThreshold	Data structure	Members include: • StartThreshold. • StopThreshold.	N/A
StartThreshold	Packet sampling starts when the queue length reaches the start threshold	N/A	Unsigned integer. Unit: byte.	N/A
StopThreshold	Packet sampling stops when the queue length reaches the stop threshold	N/A	Unsigned integer. Unit: byte.	N/A
Freeze	Specifies that the parameter is relative to FreezeNum and FreezeTime	Data structure	Members include: • FreezeNum. • FreezeTime.	N/A
FreezeNum	The TCB function will be frozen when the number of packets lost reaches the FreezeNum	N/A	Unsigned integer.	N/A
FreezeTime	The TCB function will be frozen when packet loss continues for FreezeTime	N/A	Unsigned integer. Unit: microsecond.	N/A
Sample	Specifies that the Sample is relative to PreSample and PostSample	Data structure	Members include: • PreSample. • PostSample.	N/A
PreSample	Packet	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sampling rate when the queue length exceeds the start threshold value		Unit: byte.	
PostSample	Packet sampling rate when packets loss occurs	N/A	Unsigned integer. Unit: byte.	N/A
PollFrequency	Event report times per minute	N/A	Unsigned integer.	N/A

Columns

Column name	Column description	Data type and restrictions	Remarks
Global	Global data	Members include: • IfName • Type • QueNum • TupleFilterType • InterruptType • TupleTypeCount	N/A
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
Type	Packet capture type	Enumeration: • **1**—Ingress • **2**—Egress	N/A
QueNum	Queue number for the egress type	Unsigned integer. Value range: 0 to 7.	N/A
TupleFilterTyp e	Whether tuples are filtered	Boolean • **0**—False • **1**—True	N/A
InterruptType	Interrupt type	Enumeration: • **0**—Packet interrupt • **1**—Hardware timer interrupt • **2**—Software timer interrupt	N/A
TupleTypeCo	Count of quintuple types	Unsigned integer.	N/A

Column name	Column description	Data type and restrictions	Remarks
unt	in the TCBData group		
TCBData	TCB data	Members include: • StartTimeStamp • TupleID • DropReason • ProtocolNo • SourcePort • DestPort • SourceIP • DestIP • DropCount	N/A
StartTimeStamp	Timestamp of the lost packet Format: IEEE1588V1	Unsigned integer.	N/A
TupleID	Tuple ID	Unsigned integer.	N/A
DropReason	Packet loss reason. DropReason represented by digits	Each bit represents a drop reason as follows: 1- Ingress admission drop 2- Egress admission drop 4- Weighted random drop 8- Cell free allocations pool drop	N/A
ProtocolNo	Protocol number	Unsigned integer.	N/A
SourcePort	Source port of the lost packet	Unsigned integer.	N/A
DestPort	Destination port of the lost packet	Unsigned integer.	N/A
SourceIP	Source IP of the lost packet	IPv4: String, dotted decimal notation.	N/A
DestIP	Destination IP of the lost packet	IPv4: String, dotted decimal notation.	N/A
DropCount	Count of packets lost	Unsigned integer.	N/A
SourceQP	Source queue pair of the lost packet for RDMA	Unsigned integer.	N/A
DestQP	Destination queue pair of the lost packet for RDMA	Unsigned integer.	N/A
OPCode	Operation type of the lost packet for RDMA	Unsigned integer. Value range: **0 to 255**	N/A
ProtocolMask	Protocol mask	Unsigned integer. Value: • 0—The SourceQP is invalid for RDMA • 1—The SourceQP is valid for RDMA	N/A

TCBRawPacketInfoEvent event

This event is used to report raw packet loss information.

XML structure for event subscription

```
<TCBRawPacketInfoEvent>
  <TCBRawPacketInfo>

Table description

Item	Description
Feature name	TE
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
SignalingType	The signaling protocol for an MPLS TE tunnel interface.	N/A	Enumeration: • 0—STATIC. • 1—RSVP-TE(default). • 2—SEGMENT-ROUTING	N/A
SignaledName	The signaled name for an MPLS TE tunnel interface.	N/A	String. Length: 1 to 63 characters.	Case-sensitive
SRLspName	The static SRLSP name for an MPLS TE tunnel interface.	N/A	String. Length: 1 to 15 characters.	Case-sensitive
BackupSRLspName	The static Backup SRLSP name for an MPLS TE tunnel interface.	N/A	String. Length: 1 to 15 characters.	Case-sensitive
ServiceClass	The service class for an MPLS TE tunnel	N/A	Unsigned integer. The value range varies by device model.	When service class no set, get all statistics of the

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface.			TE tunnel. Service class 255 means the lowest priority class, also the default class of the TE tunnel.
SetupPriority	The setup priority for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to 7.	Setup priority can't be higher than holding priority.
HoldPriority	The holding priority for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to 7.	N/A
IGPShortcut	IGP that uses the MPLS TE tunnel in its enhanced SPF calculation.	N/A	Enumeration: • 0—ALL • 1—OSPF • 2—ISIS	N/A
IGPShortcutIPv6	Announce the tunnel for IPv6 routing	N/A	Boolean: • true. false (default).	IGPShortcut must be configured
IGPAdvertise	Use IGP to advertise the MPLS TE tunnel to IGP neighbors	N/A	Boolean: • true. false (default).	N/A
IGPAdvertiseHoldTime	Specify the time the IGP waits before notifying the down event of the TE tunnel	N/A	Unsigned integer. The range is 0 to 4294967295 ms.	IGPAdvertise must be configured
IGPAdvertiseIPv6	Announce the tunnel as an IPv6 FA	N/A	Boolean: • true. false (default).	IGPAdvertise must be configured
PCEDelegation	Enable delegation for an MPLS TE tunnel.	N/A	Boolean: • true. • false (default).	N/A
PCEReportOnly	Enable passive-delegate report-only for an MPLS TE tunnel.	N/A	Boolean: • true. • false (default).	N/A
RecordRoute	Enable record route for an MPLS TE tunnel.	N/A	Enumeration: • 0—NONE(default) • 1—RECORDROUTE • 2—RECORDROUTELAB	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			EL •	
Bandwidth	The bandwidth for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 1 to 4294967295 kbps.	N/A
CTType	The class type for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to 7. Default: 0	A class type must be created with the bandwidth.
HotStandbyEnable	Enable hot-standby backup for the SR-TE tunnel	N/A	Boolean: • true. • false (default).	N/A
HotStandbyWtr	Wait-to-Restore time for MPLS TE tunnel hot-standby backup.	N/A	Unsigned integer. The range is 0 to 2592000. Default:10.	HotStandby must be enabled.
PrimaryPaths	The primary paths for an MPLS TE tunnel interface.	Sublist	N/A	N/A
SecondaryPaths	The secondary paths for an MPLS TE tunnel interface.	Sublist	N/A	N/A
Statistic	Enable statistic for TE tunnel.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
ServiceClassStatistic	Enable statistic for TE tunnel based on service class.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
BindingSID	Binding segment ID for the TE tunnel.	N/A	Unsigned integer. The value range is 16 to 1048575.	N/A
ResvForBinding	Reserve the TE tunnel only for tunnel-destination IP binding.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
IGPMetricType	IGP MetricType for TE tunnel.	N/A	Enumeration: • 1—Relative • 2—Absolute(default)	The type can be changed only when the value ranges from 1 to 10.

Column name	Column description	Column type	Data type and restrictions	Remarks
RelativeIGPMetricValue	Value of Relative IGP Metric.	N/A	Integer. The range is -10 to 10. Default:0.	Absolute and relative can not be configured at the same time.
AbsoluteIGPMetricValue	Value of Absolute IGP Metric.	N/A	Unsigned integer. The range is 1 to 65535.	Absolute and relative can not be configured at the same time.
ForceForwarding	Forced forwarding of traffic by using the TE tunnel.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
LspTpOutbound	Enable LSP traffic policy in outbound direction.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
MplsBfdTriggerDown	BFD failure triggers the MPLS TE tunnel to be down	N/A	Enumeration: • 1—Enable • 2—Disable	The priority is higher than global configuration.
TunnelPaths	Paths configured for the MPLS TE tunnel interface	Sublist	N/A	N/A

TE/TunnelBundles

This table contains TE Bundle Signaling information.

XML structure

```
<TE>
  <TunnelBundles>
    <TunnelBundle>
      <BundleID></BundleID>
      <ProtType></ProtType>
      <DstAddr></DstAddr>
    </TunnelBundle>
  </TunnelBundles>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	TunnelBundles
Table type	Multi-instance table
Row name	TunnelBundle
Restrictions	NA
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BundleID	Tunnel-bundle ID.	Index	Unsigned integer.	N/A
ProtType	Tunnel protection switching mode.	N/A	Enumeration: • 0—balance(default). • 1—onetoone protection. • 2—oneplusone protection.	N/A
DstAddr	Tunnel destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.

TE/TunnelBundleMembers

This table contains TE Bundle Signaling information.

XML structure

```
<TE>
  <TunnelBundleMembers>
    <TunnelBundleMember>
      <BundleID></BundleID>
      <TunnelID></TunnelID>
      <Membership></Membership>
      <LoadShare></LoadShare>
    </TunnelBundleMember>
  </TunnelBundleMembers>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	TunnelBundleMembers
Table type	Multi-instance table
Row name	TunnelBundleMember
Restrictions	The member must be MPLS TE tunnel interfaces.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BundleID	Tunnel-bundle ID.	Index	Unsigned integer.	N/A
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Membership	The Protection Type of Member interface	N/A	Enumeration: • 0—primary member interface(default). • 1—backup member interface.	N/A
LoadShare	The weight for a member tunnel interface.	N/A	Unsigned integer. The range is 1 to 65535.	N/A

TE/Tunnels/Tunnel/PrimaryPaths

This table contains primary paths settings for TE tunnels. The table is a sublist of the TE Tunnels table.

XML structure

```
<PrimaryPaths>
  <PrimaryPath>
    <Preference></Preference>
    <ExplicitPathName></ExplicitPathName>
    <Dynamic></Dynamic>
    <Nocspf></Nocspf>
  </PrimaryPath>
</PrimaryPaths>
```

Table description

Item	Description
Feature name	TE
Table name	PrimaryPaths
Table type	Multi-instance table
Row name	PrimaryPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Preference	Preference of the path	index	Unsigned integer. The value range is 1 to 10.	N/A
ExplicitPathName	Name of an explicit path	N/A	String. Length: 1 to 31 characters.	N/A
Dynamic	Dynamically calculated path	N/A	Boolean: • true • false(default)	N/A
`Nocspf`	Disable CSPF calculation	N/A	Boolean: • true • false(default)	N/A

TE/Tunnels/Tunnel/SecondaryPaths

This table contains secondary paths settings for TE tunnels. The table is a sublist of the TE Tunnels table.

XML structure

```
<SecondaryPaths>
  <SecondaryPath>
    <Preference></Preference>
    <ExplicitPathName></ExplicitPathName>
    <Dynamic></Dynamic>
    <Nocspf></Nocspf>
  </SecondaryPath>
</SecondaryPaths>
```

Table description

Item	Description
Feature name	TE
Table name	SecondaryPaths
Table type	Multi-instance table
Row name	SecondaryPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Preference	Preference of the path	index	Unsigned integer. The value range is 1 to 10.	N/A
ExplicitPathName	Name of an explicit path	N/A	String. Length: 1 to 31 characters.	N/A
Dynamic	Dynamically calculated path	N/A	Boolean: • true • false(default)	N/A
`Nocspf`	Disable CSPF calculation	N/A	Boolean: • true false(default)	N/A

TE/ExplicitPaths

This table contains explicit paths settings.

XML structure

```
<TE>
  <ExplicitPaths>
    <ExplicitPath>
      <ExplicitPathName></ExplicitPathName>
      <ExplicitPathHops></ExplicitPathHops>
    </ExplicitPath>
  </ExplicitPaths>
</TE>
```

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ExplicitPathName	Name of an explicit path	index	String. Length: 1 to 31 characters.	N/A
ExplicitPathHops	Nodes of an explicit path	sublist	N/A	N/A

TE/ExplicitPaths/ExplicitPath/ExplicitPathHops

This table contains explicit path node settings for TE tunnels. The table is a sublist of the TE ExplicitPaths table.

XML structure

```
<ExplicitPathHops>
  <ExplicitPathHop>
    <HopIndex></HopIndex>
    <HopIpAddr></HopIpAddr>
    <HopType></HopType>
    <HopIntType></HopIntType>
    <NextSID></NextSID>
    <NextSIDType></NextSIDType>
  </ExplicitPathHop>
</ExplicitPathHops>
```

Table description

Item	Description
Feature name	TE
Table name	ExplicitPathHops
Table type	Multi-instance table
Row name	ExplicitPathHop
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HopIndex	Index for the node in the explicit path	index	Unsigned integer. The value range is 1 to 65535.	N/A
HopIpAddr	IP address of the node	N/A	String, dotted decimal notation.	N/A
HopType	Type of the node	N/A	Enumeration: • 0—include strict (default) • 1—include loose • 2—exclude	N/A
HopIntType	Direction of the next interface IP	N/A	Enumeration: • 0—none (default) • 1—incoming • 2—outgoing	N/A
NextSID	Segment ID for the node in the explicit path	N/A	Unsigned integer. The value range is 0, 3, 16 to 1048575.	N/A
NextSIDType	Type of the segment ID node	N/A	Enumeration: • 1—Adjacency • 2—Prefix • 3—Binding-SID	N/A

TE/BidirectionalReverseLsps

This table contains information about TE Bidirectional reverse-lsps settings.

XML structure

```
<TE>
  <BidirectionalReverseLsps>
    <BidirectionalReverseLsp>
      <TunnelID></TunnelID>
      <ReverseBindingSID></ReverseBindingSID>
    </BidirectionalReverseLsp>
  </BidirectionalReverseLsps>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	BidirectionalReverseLsps
Table type	Multi-instance table

Item	Description
Row name	BidirectionalReverseLsp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
ReverseBindingSID	Reverse LSP segment ID for TE tunnel.	N/A	Unsigned integer. 16 to 1048575	N/A

TE/Tunnels/Tunnel/TunnelPaths

This table contains path configuration of a tunnel. The table is a sublist of the TE Tunnels table.

XML structure

```
<TunnelPaths>
  <TunnelPath>
    <PathType></PathType>
     <ExcludeAffinity></ExcludeAffinity>
     <IncludeAffinityAny></IncludeAffinityAny>
     <IncludeAffinityAll></IncludeAffinityAll>
     <HopLimit></HopLimit>
  </TunnelPath>
</TunnelPaths>
```

Table description

Item	Description
Feature name	TE
Table name	TunnelPaths
Table type	Multi-instance table
Row name	TunnelPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathType	Role of a tunnel path	index	Enumeration: • 0—Primary LSP. • 1—Secondary LSP.	N/A
ExcludeAffinity	A 32-bit vector representing a set of attribute filters associated with a tunnel, any of which renders a link unacceptable	N/A	HexBinary. The range is 0 to 8.	A null set (all bits set to zero) automatically passes .
IncludeAffinityAny	A 32-bit vector representing a set of attribute filters associated with a tunnel, any of which renders a link acceptable	N/A	HexBinary. The range is 0 to 8.	A null set (all bits set to zero) automatically passes.
IncludeAffinityAll	A 32-bit vector representing a set of attribute filters associated with a tunnel, all of which must be present for a link to be acceptable	N/A	HexBinary. The range is 0 to 8.	A null set (all bits set to zero) automatically passes.
HopLimit	Hop limit for the TE LSP	N/A	Unsigned integer. The value range is 1 to 32.	N/A

TE

TE/Base

This table contains TE Base information.

XML structure

```
<TE>
  <Base>
      <Enable></Enable>
      <MplsBfdTriggerDown></MplsBfdTriggerDown>
  </Base>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable mpls te.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
MplsBfdTriggerDown	BFD failure triggers the MPLS TE tunnel to be down	N/A	Boolean: • **false**—Disabled. • **true**—Enabled.	N/A

TE/Interfaces

This table contains TE interface information.

XML structure

```

      <LinkAttribute></LinkAttribute>
      <MaxResvBandwidth></MaxResvBandwidth>
    </Interface>
  </Interfaces>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Enable	Enabling status of TE for the interface	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
Metric	Metric of the interface	N/A	Unsigned integer. The range is 1 to 4294967295.	N/A
MaxLinkBand	Maximum link	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
width	bandwidth for MPLS TE traffic		The range is 1 to 4294967295.	
LinkAttribute	A 32-bit vector representing a default of attribute filters associated with an interface, all of which must be present for a link to be acceptable	N/A	HexBinary. The range is 0 to 8	A null set (all bits set to zero) automatically passes.
MaxResvBandwidth	Maximum reservable bandwidth for MPLS TE traffic	N/A	Unsigned integer. The range is 1 to 4294967295.	N/A

Table description

Item	Description
Feature name	TE
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	Applicable to only MPLS TE tunnel interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
SignalingType	The signaling protocol for an MPLS TE tunnel interface.	N/A	Enumeration: • 0—STATIC. • 1—RSVP-TE(default). • 2—SEGMENT-ROUTING	N/A
SignaledName	The signaled name for an MPLS TE tunnel interface.	N/A	String. Length: 1 to 63 characters.	Case-sensitive
SRLspName	The static SRLSP name for an MPLS TE tunnel interface.	N/A	String. Length: 1 to 15 characters.	Case-sensitive
BackupSRLspName	The static Backup SRLSP name	N/A	String. Length: 1 to 15 characters.	Case-sensitive

Column name	Column description	Column type	Data type and restrictions	Remarks
	for an MPLS TE tunnel interface.			
ServiceClass	The service class for an MPLS TE tunnel interface.	N/A	Unsigned integer. The value range varies by device model.	When service class no set, get all statistics of the TE tunnel. Service class 255 means the lowest priority class, also the default class of the TE tunnel.
IGPShortcut	IGP that uses the MPLS TE tunnel in its enhanced SPF calculation.	N/A	Enumeration: • 0—ALL • 1—OSPF • 2—ISIS	N/A
IGPShortcutIPv6	Announce the tunnel for IPv6 routing	N/A	Boolean: • true. • false.	IGPShortcut must be configured
IGPAdvertise	Use IGP to advertise the MPLS TE tunnel to IGP neighbors	N/A	Boolean: • true. • false.	N/A
IGPAdvertiseHoldTime	Specify the time the IGP waits before notifying the down event of the TE tunnel	N/A	Unsigned integer. The range is 0 to 4294967295 ms.	IGPAdvertise must be configured
IGPAdvertiseIPv6	Announce the tunnel as an IPv6 FA		Boolean: • true. • false.	IGPAdvertise must be configured
SetupPriority	The setup priority for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to7.	N/A
HoldPriority	The holding priority for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to7.	N/A
PCEDelegation	Enable delegation for an MPLS TE tunnel.	N/A	Boolean: • **true.** • **false.**	N/A
PCEReportOnly	Enable passive-delegate report-only	N/A	Boolean: • **true.** • **false.**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for an MPLS TE tunnel			
RecordRoute	Enable record route for an MPLS TE tunnel.	N/A	Enumeration: • 0—NONE • 1—RECORDROUTE • 2—RECORDROUTELABEL	N/A
Bandwidth	The bandwidth for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 1 to 4294967295 kbps.	N/A
CTType	The class type for an MPLS TE tunnel interface.	N/A	Unsigned integer. The range is 0 to 7. Default: 0	N/A
HotStandbyEnable	Enable hot-standby backup for the SR-TE tunnel	N/A	Boolean: • **true.** • **false.**	N/A
HotStandbyWtr	Wait-to-Restore time for MPLS TE tunnel hot-standby backup.	N/A	Unsigned integer. The range is 0 to 2592000. Default:10.	HotStandby must be enabled.
PrimaryPaths	The primary paths for an MPLS TE tunnel interface.	Sublist	N/A	N/A
SecondaryPaths	The secondary paths for an MPLS TE tunnel interface.	Sublist	N/A	N/A
Statistic	Enable statistic for TE tunnel.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
ServiceClassStatistic	Enable statistic for TE tunnel based on service class.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
BindingSID	Binding segment ID for the TE tunnel.	N/A	Unsigned integer. The value range varies by device model.	N/A
ResvForBinding	Reserve the TE tunnel only for tunnel-destination IP binding	N/A	Boolean: • **true**—Enabled. • **false**—Disabled	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IGPMetricType	IGP MetricType for TE tunnel.	N/A	Enumeration: • 1—Relative • 2—Absolute	N/A
RelativeIGPMetricValue	Value of Relative IGP Metric.	N/A	Integer. **The range is -10 to 10.**	Absolute and relative can not be configured at the same time.
AbsoluteIGPMetricValue	Value of Absolute IGP Metric.	N/A	Unsigned integer. **The range is 1 to 65535.**	Absolute and relative can not be configured at the same time.
SRLspState	SRLSP state for an MPLS TE tunnel interface.	N/A	Boolean: • **true**—Up. • **false**—Down.	N/A
BackupSRLspState	Backup SRLSP state for an MPLS TE tunnel interface.	N/A	Boolean: • **true**—Up. • **false**—Down.	N/A
ForceForwarding	Forced forwarding of traffic by using the TE tunnel.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
LspTpOutbound	Enable LSP traffic policy in outbound direction.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MplsBfdTriggerDown	BFD failure triggers the MPLS TE tunnel to be down	N/A	Enumeration: • 0—None • 1—Enable • 2—Disable	The priority is higher than global configuration.
TunnelPaths	Paths configured for the MPLS TE tunnel interface	Sublist	N/A	N/A

TE/TunnelBundleCapabilities

This table contains TE Bundle Signaling information.

XML structure

```
<TE>
  <TunnelBundleCapabilities>
    <MaxBndNum></MaxBndNum>
    <MaxMembNum></MaxMembNum>
    <LoadBalancing></LoadBalancing>
```

```
    <ProtectionOnetoone></ProtectionOnetoone>
    <ProtectionOneplusone></ProtectionOneplusone>
  </TunnelBundleCapabilities>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	TunnelBundleCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBndNum	Support for the maxinum Bundle interface.	Index	Unsigned integer.	N/A
MaxMembNum	Support for the maxinum tunnel interface can be add to the same Tunnel-bundle interface.	N/A	Unsigned integer.	N/A
LoadBalancing	Support for load sharing mode.	N/A	Boolean: • true—Supported. • false—Not supported	N/A
ProtectionOnetoone	Support for onetoone protection mode	N/A	Boolean: • true—Supported. • false—Not supported	N/A
ProtectionOneplusone	Support for oneplusone protection mode	N/A	Boolean: • true—Supported. • false—Not supported	N/A

TE/TunnelBundles

This table contains TE Bundle Signaling information.

XML structure

```
<TE>
  <TunnelBundles>
    <TunnelBundle>
```

```
      <BundleID></BundleID>
      <ProtType></ProtType>
      <DstAddr></DstAddr>
    </TunnelBundle>

Item	Description
Feature name	TE
Table name	ExplicitPaths
Table type	Multi-instance table
Row name	ExplicitPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ExplicitPathName	The name of an explicit path.	index	String. Length: 1 to 31 characters.	N/A
ExplicitPathHops	The nodes of an explicit path.	sublist	N/A	N/A

TE/ExplicitPaths/ExplicitPath/ExplicitPathHops

This table contains explicit path node settings for TE tunnels. The table is a sublist of the TE ExplicitPaths table.

XML structure

```
<ExplicitPathHops>
  <ExplicitPathHop>
    <HopIndex></HopIndex>
    <HopIpAddr></HopIpAddr>
    <HopType></HopType>
    <HopIntType></HopIntType>
    <NextSID></NextSID>
    <NextSIDType></NextSIDType>
  </ExplicitPathHop>
</ExplicitPathHops>
```

Table description

Item	Description
Feature name	TE
Table name	ExplicitPathHops
Table type	Multi-instance table
Row name	ExplicitPathHop
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HopIndex	Index for the node in the explicit path	index	Unsigned integer. The value range is 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HopIpAddr	IP address of the node	N/A	String, dotted decimal notation.	N/A
HopType	Type of the node	N/A	Enumeration: • 0—include strict • 1—include loose • 2—exclude	N/A
HopIntType	Direction of the next interface IP	N/A	Enumeration: • 0—none (default) • 1—incoming • 2—outgoing	N/A
NextSID	Segment ID for the node in the explicit path	N/A	Unsigned integer. The value range is 0, 3, 16 to 1048575.	N/A
NextSIDType	Type of the segment ID node	N/A	Enumeration: • 1—Adjacency • 2—Prefix • 3—Binding-SID	N/A

TE/BidirectionalReverseLsps

This table contains information about TE Bidirectional reverse-lsps settings.

XML structure

```
<TE>
  <BidirectionalReverseLsps>
    <BidirectionalReverseLsp>
      <TunnelID></TunnelID>
      <ReverseBindingSID></ReverseBindingSID>
    </BidirectionalReverseLsp>
  </BidirectionalReverseLsps>
</TE>
```

Table description

Item	Description
Feature name	TE
Table name	BidirectionalReverseLsps
Table type	Multi-instance table
Row name	BidirectionalReverseLsp
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
ReverseBindingSID	Reverse LSP segment ID for TE tunnel.	N/A	Unsigned integer. 16 to 1048575	N/A

TE/Tunnels/Tunnel/TunnelPaths

This table contains path configuration of a tunnel. The table is a sublist of the TE Tunnels table.

XML structure

```
<TunnelPaths>
  <TunnelPath>
    <PathType></PathType>
     <ExcludeAffinity></ExcludeAffinity>
     <IncludeAffinityAny></IncludeAffinityAny>
     <IncludeAffinityAll></IncludeAffinityAll>
     <HopLimit></HopLimit>
  </TunnelPath>
</TunnelPaths>
```

Table description

Item	Description
Feature name	TE
Table name	TunnelPaths
Table type	Multi-instance table
Row name	TunnelPath
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathType	Role of a tunnel path	index	Enumeration: • 0—Primary LSP. • 1—Secondary LSP.	N/A
ExcludeAffinity	A 32-bit vector representing a set of attribute	N/A	HexBinary. The range is 0 to 8.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	filters associated with a tunnel, any of which renders a link unacceptable			
IncludeAffinityAny	A 32-bit vector representing a set of attribute filters associated with a tunnel, any of which renders a link acceptable	N/A	HexBinary. The range is 0 to 8.	A null set (all bits set to zero) automatically passes.
IncludeAffinityAll	A 32-bit vector representing a set of attribute filters associated with a tunnel, all of which must be present for a link to be acceptable	N/A	HexBinary. The range is 0 to 8.	A null set (all bits set to zero) automatically passes.
HopLimit	Hop limit for the TE LSP.	N/A	Unsigned integer. The value range is 1 to 32.	N/A

XML structure for event report 2

IfChange event

This event is used to report MPLS TE metric and max-link-bandwidth change information for links.

XML structure for event subscription

```
<IfChangeEvent>
    <Interface>
        <IfIndex></IfIndex>
    </Interface>
</IfChangeEvent>
```

Example:

```
<rpc message-id="100" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>TE_STREAM</stream>
    <filter type="subtree">
        <IfChangeEvent xmlns="http://www.h3c.com/netconf/event:1.0/te:1.0">
            <Interface>
                <IfIndex>2</IfIndex>
            </Interface>
        </IfChangeEvent>
    </filter>
  </create-subscription>
</rpc>]]>]]>
```

Table description

Item	Description
Event stream name	TE_STREAM
Event name	IfChangeEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/te:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
IfIndex	Interface index	Unsigned integer	N/A
Metric	TE metric for the interface.	Unsigned integer. The range is 1 to 4294967295.	N/A
MaxLinkBandWidth	Maximum bandwidth for MPLS TE traffic on the interface.	Unsigned integer. The range is 1 to 4294967295 kbps.	N/A
IfName	Interface name	String. Length: 2 to 47 characters.	IfName

XML structure for event report

```
<IfChangeEvent>
    <Interface>
        <IfIndex></IfIndex>
        <Metric></Metric>
        <MaxLinkBandWidth></MaxLinkBandWidth>
        <IfName>GigabitEthernet</IfName>
    </Interface>
</IfChangeEvent>
```

Example:

```
<?xml version="1.0" encoding="UTF-8"?><notification
xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
<eventTime>2019-01-04T07:23:20</eventTime>
    <IfChangeEvent xmlns="te:1.0">
        <Interface>
            <IfIndex>2</IfIndex>
            <Metric>1000</Metric>
            <MaxLinkBandWidth>1000</MaxLinkBandWidth>
            <IfName>GigabitEthernet0/0/2</IfName>
        </Interface>
    </IfChangeEvent>
</notification>]]>]]>
```

Columns

    </FlowGroup>
  </FlowGroups>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroups
Table type	Multi-instance table
Row name	FlowGroup

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Flow group ID	Index	Unsigned integer.	N/A
Name	Flow group name	N/A	String. Length: 1 to 63 characters.	N/A
Mode	Flow group mode	N/A	Enumeration: • **0**—MOD. • **1**—MOD simple. • **2**—Mice elephant flow.	N/A
Acl	ACL	Data structure	Members include: • IPv4Acl. • IPv6Acl. • MACAcl. • UserAcl.	N/A.
IPv4ACl	IPv4 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**.
IPv6ACl	IPv6 ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**.
MACAcl	MAC ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 4000 to 4999.	An ACL name must start with an English letter and cannot be **all**.
UserAcl	User-defined ACL.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range of 5000 to 5999.	An ACL name must start with an English letter and cannot be **all**.
Template	Template	N/A	Members include: • SrcIP. • DstIP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• SrcPort. • DstPort. • Protocol. • EncapType. • VxlanID. • InnerSrcIP. • InnerDstIP. • InnerSrcPort. • InnerDstPort. • InnerProtocol.	
SrcIP	Source address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstIP	Destination address	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
SrcPort	Source port	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DstPort	Destination port	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Protocol	Protocol	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
EncapType	Encapsulation type	N/A	Enumeration: • **0**—None. • **1**—VXLAN.	This column is available when the EncapType is specified.
VxlanID	VXLAN ID	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	Only the VXLAN encapsulation supports this column.
InnerSrcIP	Inner source address.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerDstIP	Inner destination address.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerSrcPort	Inner source port.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InnerDstPort	Inner destination port.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerProtocol	Inner protocol	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.

TelemetryFlowTrace/FlowGroupGlobal

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupGlobal>
    <AgingTime></AgingTime>
    <FlowRate></FlowRate>
    <FlowMaxEntry></FlowMaxEntry>
  </FlowGroupGlobal>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupGlobal
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Aging time	N/A	Unsigned integer.	The default values and ranges for this column are customized by the product.
FlowRate	Flow rate	N/A	Unsigned integer.	The ranges for this column are customized

Column name	Column description	Column type	Data type and restrictions	Remarks
				by the product.
FlowMaxEntry	Maximum flow entries	N/A	Unsigned integer.	The ranges for this column are customized by the product.

TelemetryFlowTrace/FlowGroupApplys

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupApplys>
    <FlowGroupApply>
      <GroupID></GroupID>
    </FlowGroupApply>
  </FlowGroupApplys>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupApplys
Table type	Multi-instance table
Row name	FlowGroupApply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Flow group ID	Index	Unsigned integer.	N/A

TelemetryFlowTrace/FlowGroupNameApplys

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupNameApplys>
    <FlowGroupNameApply>
      <Name></Name>
    </FlowGroupNameApply>
  </FlowGroupNameApplys>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupNameApplys
Table type	Multi-instance table
Row name	FlowGroupNameApply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of flow group	Index	String. Length: 1 to 63 characters.	The flow group names support two types: custom and predefined. The current system supports predefined names of protocol types in different modes as follows: • IP—system-defined-ip. • IP(Group-MOD mode)—system-defined-ip-group • VXLAN—system-defined-vxlan • VXLAN(Group-MOD mode)—system-defined-vxlan-group

TelemetryFlowTrace/MODEnable

This table contains information about mirror-on-drop reasons.

XML structure

```
<TelemetryFlowTrace>
  <MODEnable>
    <AllReasonFlag></AllReasonFlag>
    <DropReason></DropReason>
    <AllGroupReasonFlag></AllGroupReasonFlag>
    <DropGroupReason></DropGroupReason>
  </MODEnable>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	MODEnable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AllReasonFlag	All drop reasons	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	When create ,merge or replace MODEnable, you can only specify one between AllReasonFlag and DropReason.
DropReason	List of drop reasons.	N/A	Numeric string. It is a comma-separated list of drop reason items. Length: 1 to 4000 characters.	For example: 2,4-6,9-10,12,30. By default, no drop reasons are configured.
AllGroupReasonFlag	All drop group reasons	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	When create, merge, or replace MODEnable, you can only specify one of AllGroupReasonFlag and DropGroupReason.
DropGroupReason	List of drop group reason codes.	N/A	Numeric string. It is a comma-separated list of drop reason items. Length: 1 to 4000 characters.	For example: 100-107. By default, no drop group reasons are configured.

TelemetryFlowTrace/MOD

This table contains information about mirror-on-drop.

XML structure

```
<TelemetryFlowTrace>
  <MOD>
    <Encap>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VLANID></VLANID>
    </Encap>
    <SamplerName></SamplerName>
    <DeviceID></DeviceID>
    <ReportMode></ReportMode>
  </MOD>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	MOD
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Encap	Telemetry collector	N/A	Members include: • SrcIP. • DstIP. • SrcPort. • DstPort. • VLANID.	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete Encap. You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the Encap, or when you merge or create an Encap that does not exist.
SrcIP	Source IP	N/A	String, dotted decimal	Example: 10.153.93.60.

Column name	Column description	Column type	Data type and restrictions	Remarks
Encap	Telemetry collector	N/A	Members include: • SrcIP. • DstIP. • SrcPort. • DstPort. • VLANID.	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete Encap. You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the Encap, or when you merge or create an Encap that does not exist.
	address		notation. Length: 1 to 16 characters.	
DstIP	Destination IP address	N/A	String, dotted decimal notation. Length: 1 to 16 characters.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
SamplerName	Sampler name.	N/A	String. Length: 1 to 31 characters.	By default, no sampler name is specified.
DeviceID	Device ID.	N/A	String, dotted decimal notation. Length: 1 to 16 characters.	This column can only be configured with the IPv4. By default, no address is specified. IPv4 address examples: 1.1.1.1.
ReportMode	Report mode	N/A	Enumeration: • **1**—gRPC. • **2**—UDP.	The default mode is UDP.

TelemetryFlowTrace/ElephantFlow

This table contains information about mice elephant flows.

XML structure

```
<TelemetryFlowTrace>
  <ElephantFlow>
    <ElephantIdentify>
      <FlowRate></FlowRate>
      <RateUnit></RateUnit>
      <FlowSize></FlowSize>
      <SizeUnit></SizeUnit>
```

```
    </ElephantIdentify>
    <ElephantAction>
      <Type></Type>
      <Value></Value>
    </ElephantAction>
  </ElephantFlow>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	ElephantFlow
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ElephantIdentify	Elephant identity.	N/A	Members include: • FlowRate. • RateUnit. • FlowSize. • SizeUnit.	You must specify the FlowRate when you replace an ElephantIdentify, or when you merge or create an ElephantIdentify that does not exist.
FlowRate	Rate of the mice elephant flow.	N/A	Unsigned integer.	The value range of this column is customized by the product.
RateUnit	Rate unit.	N/A	Enumeration: • **0**—kbps. • **1**—mbps • **2**—gbps. Default: 0.	N/A
FlowSize	Size of the mice elephant flow.	N/A	Unsigned integer.	The value range of this column is customized by the product.
SizeUnit	Size unit.	N/A	Enumeration: • **0**—bytes. • **1**—kbytes • **2**—mbytes. Default: 0.	N/A

ElephantAction	Elephant action.	N/A	Members include: • Type. • Value.	You must specify the Type when you replace an ElephantAction, or when you merge or create an ElephantAction that does not exist.
Type	Action type.	N/A	Enumeration: • **1**—None. • **2**—Remark dp. • **3**—Remark dot1p. • **4**—Remark local precedence.	When the specified type is none, the Value column cannot be set. When the specified type is non-none, the Value column must be set.
Value	Action value.	N/A	Unsigned integer.	When the Type column is 2, the value range is 0 to 2. When the Type column is 3 or 4, the value range is 0 to 7.

TelemetryFlowTrace/TelemetryStream

This table contains information about telemetry stream.

XML structure

```
<TelemetryFlowTrace>
  <TelemetryStream>
    <DeviceID></DeviceID>
    <Collector>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VPN></VPN>
      <Truncation></Truncation>
    </Collector>
  </TelemetryStream>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	TelemetryStream
Table type	Single-instance table
Row name	N/A
Restrictions	None

Support for row creation and deletion	no

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Device address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
Collector	Telemetry collector	N/A	Members include: • SrcIP • DstIP • SrcPort • DstPort • VPN • Truncation	You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the telemetry collector, or when you merge or create the telemetry collector that does not exist.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DstIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VPN	VPN name	N/A	String. Length: 1 to 31 characters.	N/A
Truncation	Truncating packets	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A

TelemetryFlowTrace/TelemetryGlobalEnable

This table contains information about telemetry status.

XML structure

```
<TelemetryFlowTrace>
  <TelemetryGlobalEnable>
    <Enable></Enable>
  </TelemetryGlobalEnable>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace

Table name	TelemetryGlobalEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	no

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable flowtrace	N/A	Boolean: • **true**—Enable(default). • **false**—Disable.	N/A

TelemetryFlowTrace/TelemetryActions

This table contains information about telemetry actions.

XML structure

```
<TelemetryFlowTrace>
  <TelemetryActions>
    <TelemetryAction>
      <IfIndex></IfIndex>
      <ActionId></ActionId>
      <Match>
        <AclType></AclType>
        <Acl></Acl>
      </Match>
      <Action>
        <SamplerName></SamplerName>
      </Action>
    </TelemetryAction>
  </TelemetryActions>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	TelemetryActions
Table type	Multi-instance table
Row name	TelemetryAction

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
ActionId	Action ID	Index	Unsigned integer. Value range: 1 to 32.	N/A
Match	Telemetry match	N/A	Members include: • AclType • Acl	N/A
AclType	ACL type	N/A	Enumeration: • **1—IPv4Acl.** • **2—IPv6Acl.** • **3—MACAcl.** • **4—UserAcl.**	You must specify the Acl when you specify the AclType.
Acl	ACL name or ACL number.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number:** An unsigned integer in the range based on AclType.	An ACL name must start with an English letter and cannot be **all**. You must specify the AclType when you specify the Acl.
Action	Telemetry action	N/A	Members include: • SamplerName	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	N/A

TelemetryFlowTrace/TimestampEnable

This table contains information about timestamp status.

XML structure

```

DstPort	Destination port.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
Protocol	Protocol	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
EncapType	Encapsulation type	N/A	Enumeration: • **0**—None. • **1**—VXLAN encapsulation.	This column is available when the EncapType is specified.
VxlanID	VXLAN ID	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	Only the VXLAN encapsulation supports this column.
InnerSrcIP	Inner source address.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerDstIP	Inner destination address.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerSrcPort	Inner source port.	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.
InnerDstPort	Inner destination port.	N/A	Boolean:	This column is available when the EncapType is

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **true**—Conform. • **false**—Not conform.	specified.
InnerProtocol	Inner protocol	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	This column is available when the EncapType is specified.

TelemetryFlowTrace/FlowGroupGlobal

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupGlobal>
    <AgingTime></AgingTime>
    <FlowRate></FlowRate>
    <FlowMaxEntry></FlowMaxEntry>
  </FlowGroupGlobal>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupGlobal
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Aging time	N/A	Unsigned integer.	N/A
FlowRate	Flow rate	N/A	Unsigned integer.	N/A
FlowMaxEntry	Maximum flow entries	N/A	Unsigned integer.	N/A

TelemetryFlowTrace/FlowGroupApplys

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupApplys>
    <FlowGroupApply>
      <GroupID></GroupID>
      <Status></Status>
    </FlowGroupApply>
  </FlowGroupApplys>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupApplys
Table type	Multi-instance table
Row name	FlowGroupApply
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Flow group ID	Index	Unsigned integer.	N/A
Status	Application status	N/A	Enumeration: • **1**—Successful. • **2**—Failed. • **3**—Incomplete.	N/A

TelemetryFlowTrace/FlowGroupNameApplys

This table contains information about flow group application.

XML structure

```
<TelemetryFlowTrace>
  <FlowGroupNameApplys>
    <FlowGroupNameApply>
```

```
      <Name></Name>
      <Status></Status>
    </FlowGroupNameApply>
  </FlowGroupNameApplys>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	FlowGroupNameApplys
Table type	Multi-instance table
Row name	FlowGroupNameApply
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Flow group name	Index	String. Length: 1 to 63 characters.	The flow group names support two types: custom and predefined. The current system supports predefined names of protocol types in different modes as follows: • IP—system-defined-ip. • IP(Group-MOD mode)—system-defined-ip-group • VXLAN—system-defined-vxlan • VXLAN(Group-MOD mode)—system-defined-vxlan-group
Status	Application status	N/A	Enumeration: • **1**—Successful. • **2**—Failed. • **3**—Incomplete.	N/A
SystemDefined	System defined	N/A	Boolean: • **true**—System-defined. • **false**—User-defined.	N/A

TelemetryFlowTrace/MODEnable

This table contains information about mirror-on-drop reasons.

XML structure

```
<TelemetryFlowTrace>
  <MODEnable>
    <AllReasonFlag></AllReasonFlag>
    <DropReason></DropReason>
    <AllGroupReasonFlag></AllGroupReasonFlag>
    <DropGroupReason></DropGroupReason>
  </MODEnable>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	MODEnable
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AllReasonFlag	All drop reasons	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DropReason	List of drop reason codes.	N/A	Numeric string. It is a comma-separated list of drop reason items. Length: 1 to 4000 characters.	For example: 2,4-6,9-10,12,30. By default, no drop reasons are configured.
AllGroupReasonFlag	All drop group reasons	N/A	Boolean: • **true**—Conform. • **false**—Not conform.	N/A
DropGroup Reason	List of drop group reason codes.	N/A	Numeric string. It is a comma-separated list of drop reason items. Length: 1 to 4000 characters.	For example: 100-107. By default, no drop group reasons are configured.

TelemetryFlowTrace/MOD

This table contains information about mirror-on-drop.

XML structure

```
<TelemetryFlowTrace>
  <MOD>
    <Encap>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VLANID></VLANID>
    </Encap>
    <SamplerName></SamplerName>
    <DeviceID></DeviceID>
    <ReportMode></ReportMode>
  </MOD>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace
Table name	MOD
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Encap	Telemetry collector	N/A	Members include: • SrcIP. • DstIP. • SrcPort. • DstPort. • VLANID.	N/A
SrcIP	Source IP address	N/A	String, dotted decimal notation. Length: 1 to 16 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIP	Destination IP address	N/A	String, dotted decimal notation. Length: 1 to 16 characters.	N/A
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
SamplerName	Sampler name.	N/A	String. Length: 1 to 31 characters.	N/A
DeviceID	Device ID.	N/A	String, dotted decimal notation. Length: 1 to 16 characters.	N/A
ReportMode	Report mode	N/A	Enumeration: • **1**—gRPC. • **2**—UDP.	N/A

TelemetryFlowTrace/ElephantFlow

This table contains information about mice elephant flows.

XML structure

```
<TelemetryFlowTrace>
  <ElephantFlow>
    <ElephantIdentify>
      <FlowRate></FlowRate>
      <RateUnit></RateUnit>
      <FlowSize></FlowSize>
      <SizeUnit></SizeUnit>
    </ElephantIdentify>
    <ElephantAction>
      <Type></Type>
      <Value></Value>
    </ElephantAction>
  </ElephantFlow>
</TelemetryFlowTrace>
```

Table description

Item	Description
Feature name	TelemetryFlowTrace

Table name	ElephantFlow
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ElephantIdentify	Elephant identity.	N/A	Members include: • FlowRate. • RateUnit. • FlowSize. • SizeUnit.	N/A
FlowRate	Rate of the mice elephant flow.	N/A	Unsigned integer.	N/A
RateUnit	Rate unit.	N/A	Enumeration: • **0**—kbps. • **1**—mbps • **2**—gbps.	N/A
FlowSize	Size of the mice elephant flow.	N/A	Unsigned integer.	N/A
SizeUnit	Size unit.	N/A	Enumeration: • **0**—bytes. • **1**—kbytes • **2**—mbytes.	N/A
ElephantAction	Elephant action.	N/A	Members include: • Type. • Value.	N/A
Type	Action type.	N/A	Enumeration: • **1**—None. • **2**—Remark dp. • **3**—Remark dot1p. • **4**—Remark local precedence.	N/A
Value	Action value.	N/A	Unsigned integer.	N/A

TelemetryFlowTrace/Flows

This table contains information about flow entry.

XML structure

TelemetryFlowTrace event stream

GenEvent event

This event is used to report reaction status information.

XML structure for event subscription

```
<GenEvent>
  <EventType></EventType>
</GenEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>TelemetryFTrace</stream>
    <filter type="subtree">
      <GenEvent xmlns="http://www.h3c.com/netconf/event:1.0/TelemetryFTrace:1.0">
      </GenEvent>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	TelemetryFTrace
Event name	GenEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/TelemetryFTrace:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Remarks
EventType	Event type.	Unsigned integer.	The value of each statistics type is as follows: • **1**—MOD event. • **2**—Elephant event. To specify both statistics types, enter the sum of their values.

XML structure for event report

```
<GenEvent>

TELNET

TELNET/Server

Message	Explanation
Failed to enable the Telnet server. 使能TELNET server失败.	When the Telnet service port number has been used by other services, enabling the Telnet server is not supported.
Failed to specify the ACL. 配置ACL失败.	If the ACL configuration cannot be processed by the daemon of Telnet, the specified ACL configuration will fail.
Failed to specify the DSCP. 配置DSCP失败.	If the DSCP configuration cannot be processed by the daemon of Telnet, the specified DSCP configuration will fail.
Failed to specify the port. 配置端口失败.	The port number used by any other service cannot be specified.
You cannot specify both an ACL number and an ACL name in one operation. ACL名称和ACL编号不能一起下发。	You cannot specify both an ACL number and an ACL name in one operation.
You must specify the ACL type and ACL name in pairs and make sure the type of the specified ACL is consistent with the specified type. ACL名称和ACL类型必须一起下发。	To specify an ACL by its name, you must specify both Ipv4ACLName and Ipv4ACLVersion, or both Ipv6ACLName and Ipv6ACLVersion.

Table description

Item	Description
Feature name	TimeRange
Table name	AbsRanges
Table type	Multi-instance table
Row name	AbsRange
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeRangeName	Time range name	Index	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	You must create a time range before you create, merge, or replace statements for it.
ID	Absolute statement ID	Index	Unsigned integer. Value range: 1 to 12.	If you set this column to 0, the system automatically assigns a new statement ID. This statement ID is the smallest available integer in the range of 1 to 12.

Column name	Column description	Column type	Data type and restrictions	Remarks
Start	Start time and date of an absolute statement	Data structure	Members include: • StartTime. • StartDate.	• You cannot specify a start time and date when you remove or delete a statement. • You must specify a start time and date when you create, merge, or replace a statement.
StartTime	Start time of an absolute statement	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 23:59:59.	N/A
StartDate	Start date of an absolute statement	N/A	String. Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A
End	End time and date of an absolute statement	Data structure	Members include: • EndTime. • EndDate.	• You cannot specify an end time and date when you remove or delete a statement. • You must specify an end time and date when you create, merge, or replace a statement.
EndTime	End time of an absolute statement	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 24:00:00.	N/A
EndDate	End date of an absolute statement	N/A	String. Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A

TimeRange/PerRanges

This table contains information about periodic time range statements.

XML structure

```
<TimeRange>

      <PeriodEndTime></PeriodEndTime>
      <PeriodType></PeriodType>
      <DayOfWeek>
        <Sun></Sun>
        <Mon></Mon>
        <Tue></Tue>
        <Wed></Wed>
        <Thu></Thu>
        <Fri></Fri>
        <Sat></Sat>
      </DayOfWeek>
    </PerRange>
  </PerRanges>
</TimeRange>
```

Table description

Item	Description
Feature name	TimeRange
Table name	PerRanges
Table type	Multi-instance table
Row name	PerRange
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remark
TimeRangeName	Time range name	Index	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	You must create a time range before you create, merge, or replace statements for it.
ID	Periodic statement ID	Index	Unsigned integer. Value range: 1 to 32.	If you set this column to 0, the system automatically assigns a new statement ID. This statement ID is the smallest available integer in the range of 1 to 32.

Column name	Column description	Column type	Data type and restrictions	Remark
StartTime	Start time of a periodic statement	N/A	String. Format: hh:mm or hh:mm:ss. Value range: 00:00 to 24:00 or 00:00:00 to 24:00:00.	• You cannot specify a start time when you remove or delete a statement. • You must specify a start time when you create, merge, or replace a statement. • Start time must be smaller than end time. • The value of this column is valid if PeriodType is not specifed.
EndTime	End time of a periodic statement	N/A	String. Format: hh:mm or hh:mm:ss. Value range: 00:00 to 24:00 or 00:00:00 to 24:00:00.	• You cannot specify an end time when you remove or delete a statement. • You must specify an end time when you create, merge, or replace a statement. • End time must be greater than start time. • The value of this column is valid if PeriodType is not specifed.
StartDay	Start day of a periodic statement	N/A	Unsigned integer. Value range: If **PeriodType** is week, the value range is 0 (0 is Sunday) to 6; if **PeriodType** is month, the value range is 1 to 31.	• The value of this column is valid if PeriodType is specifed.
EndDay	End day of a periodic statement	N/A	Unsigned integer. Value range: If **PeriodType** is week, the value range is 0 (0 is Sunday) to 6; if **PeriodType** is month, the value range is 1 to 31.	• The value of this column is valid if PeriodType is specifed.
PeriodStartTime	Start time of a periodic statement configured by week or month.	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 24:00:00.	• The value of this column is valid if PeriodType is specifed.
PeriodEndTime	End time of a periodic statement configured by week or month.	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 24:00:00.	• The value of this column is valid if PeriodType is specifed.

Column name	Column description	Column type	Data type and restrictions	Remark
PeriodType	Periodic time range type	N/A	Enumeration: • **1**—week. • **2**—month.	• If this column is not specifed, the periodic time type is day.
DayOfWeek	Day of the week	Data structure	Members include: • Sun. • Mon. • Tue. • Wed. • Thu. • Fri. • Sat.	• You cannot specify any day of the week when you remove or delete a statement. • You must specify at least one day of the week when you create, merge, or replace a statement. • The value of this column is valid if PeriodType is not specifed.
Sun	Sunday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Mon	Monday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Tue	Tuesday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Wed	Wednesday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Thu	Thursday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Fri	Friday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A
Sat	Saturday	N/A	Boolean: • **true**—Specified. • **false**—Not specified (default).	N/A

TimeRange

TimeRange

Message	Explanation
Invalid date or time settings. 配置中包含无效的日期和时间的设置。	The date or time entered is illegal. 输入的日期或时间是非法的。
The end time must be greater than the start time. 结束时间必须大于开始时间。	The end time entered is less than or equal to the start time. 输入的结束时间小于等于开始时间。
Maximum number of absolute statements already reached. 绝对时间段配置数达到上限。	The absolute number of configured times has reached the upper limit. 指配置的绝对时间数已经达到上限。
Maximum number of periodic statements already reached. 周期时间段配置数达到上限。	The periodic number of configured times has reached the upper limit. 配置的周期时间数已经达到上限。
Maximum number of time ranges already reached. 时间段配置数达到上限。	The configured number of time range names has reached the upper limit. 配置的时间段名称数已经达到上限。
At least one day of the week should be set for a periodic time range. 配置周期时间段时应至少指定一周中的一天。	The configured periodic time does not specify which day of the week. 配置周期时间时没有指定一周中哪天。
A time range with the same statements already exists. 相同的时间段配置已存在。	The same time range content has been configured. 已经配置了相同的时间段内容。

tnlm/tunnelPolicys/tunnelPolicy/PreferredPaths

This table contains preferred tunnel information in a tunnel policy.

Table description

Item	Description
Feature name	TNLM
Table name	PreferredPaths
Table type	Multi-instance table
Row name	PreferredPath
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrePathType	Preferred tunnel type.	Index	Enumeration: • 0—TUNNEL. • 1—TUNNEL-BUNDLE. • 2—SR-POLICY. • 3—SRV6-POLICY.	NA
PrePathName	Preferred path name.	index	String. Length: 1 to 59 characters.	When the tunnel type is TUNNEL or TUNNEL-BUNDLE, the PrePathName has to be a number
PriorityLevel	Priority level of preferred tunnel.	N/A	Unsigned integer. Value range: 0~65534	A smaller number has a higher priority.

tnlm/tunnelPolicys/tunnelPolicy/PreferredSRPolicys

This table contains preferred SR Policy information in a tunnel policy.

Table description

Item	Description
Feature name	TNLM
Table name	PreferredSRPolicys
Table type	Multi-instance table
Row name	PreferredSRPolicy
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EndPoint	IP address	Index	String,dotted decimal notation.	Example: 1.1.1.1.
Color	Color value	Index	Unsigned integer. Value range:0 to 4294967295.	N/A
PriorityLevel	Priority level of preferred tunnel.	N/A	Unsigned integer. Value range: 0~65534	A smaller number has a higher priority.

tnlm/tunnelPolicys/tunnelPolicy/PreferredSRv6Policys

This table contains preferred SRv6 Policy information in a tunnel policy.

Table description

Item	Description
Feature name	TNLM
Table name	PreferredSRv6Policys
Table type	Multi-instance table
Row name	PreferredSRv6Policy
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6EndPoint	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1::1.
Color	Color value	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
PriorityLevel	Priority level of preferred tunnel.	N/A	Unsigned integer. Value range: 0~65534	A smaller number has a higher priority.

tnlm/tunnelPolicys/tunnelPolicy/tpNexthops

This table contains destination-to-tunnels binding information of a tunnel policy. The table is a subtable of tunnelPolicy.

Table description

Item	Description
Feature name	tnlm
Table name	tpNexthops
Table type	Multi-instance table
Row name	tpNexthop
Restrictions	NA
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
nexthopIPaddr	Destination IP address	index	String,dotted decimal notation	N/A
`SRPolicyGroupID`	SR-TE policy group ID	index	Unsigned integer. Value range: 0 to 4294967295.	When the SRPolicyGroupID is 0 and the operation is create or merge or replace, tpTunnels list-table is necessary.
downSwitch	Enable tunnel switching	N/A	Boolean • true. • false (default)	After tunnel switching is enabled, if the bound TE tunnels are unavailable, the system will switch to an available tunnel using another tunnel selection method of the tunnel policy.
ignoreDestCheck	Do not check whether the destination address of the TE tunnel matches the bound destination address specified	N/A	Boolean • true • false (default)	
tpTunnels	List of tunnels bound to the specified destination IP address	Sublist	N/A	When the SRPolicyGroupID is 0 and the operation is create or merge or replace,this table is necessary.

tnlm/tunnelPolicys/tunnelPolicy/tpNexthops/tpNexthop/tpTunnels

This table contains information about the tunnels bound to a destination address. The table is a subtable of tpNexthop.

Table description

Item	Description
Feature name	tnlm
Table name	tpTunnels
Table type	Multi-instance table
Row name	tpTunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
tunnelName	Name of the tunnel	index	String. Length: 2 to 47 characters.	N/A

tnlm/tunnelPolicys/tunnelPolicy/tpIPv6Nexthops

This table contains destination-to-tunnels binding information of a tunnel policy. The table is a subtable of tunnelPolicy.

Table description

Item	Description
Feature name	tnlm
Table name	tpIPv6Nexthops
Table type	Multi-instance table
Row name	tpIPv6Nexthop
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
nexthopIPv6addr	Destination IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2::1.
`SRv6PolicyGroupID`	SRv6-TE policy group ID	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			4294967295.	
downSwitch	Enable tunnel switching	N/A	Boolean • true. • false (default)	After tunnel switching is enabled, if the bound SRv6 policy tunnels are unavailable, the system will switch to an available tunnel using another tunnel selection method of the tunnel policy.
ignoreDestCheck	Do not check whether the destination address of the SRv6 policy tunnel matches the bound destination address specified	N/A	Boolean • true • false(default)	N/A

Table description

Item	Description
Feature name	Tracert
Table name	IPv4Tracert
Table type	Multi-instance table
Row name	TracertTest
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address or host name of a remote system	Index	String. Length: 1 to 253 characters.	Example: 1.1.1.1 or host name.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OutputInterface	Name of the outgoing interface	N/A	String. Length: 0 to 46 characters.	An empty string indicates that no outgoing interface is specified.
SourceIpAddress	Source Ip address	N/A	String IPv4 address	Example: 1.1.1.1
ReplyTimeOut	Wait time for each reply	N/A	Unsigned integer. Value range: 1 to 65535 milliseconds. Default is 5000 milliseconds.	N/A
SendPacketsNum	Number of probe packets sent each time	N/A	Unsigned integer. Value range: 1 to 65535. Default is 3.	If the value is too big, the system might fail to return the probe result because of packet timeout or fail to perform the ping operation. As a best practice, use a value that does not exceed 1009.
MaxTTLValue	Maximum TTL value	N/A	Unsigned integer. Value range: 1 to 255. Default is 30.	Maximum TTL value must greater than or equal to TTL value for the first packet.
FirstTTLValu	TTL value for the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
e	first packet		Value range: 1 to 255. Default is 1.	
DestPort	Destination UDP port number	N/A	Unsigned integer. Value range: 1 to 65535. Default is 33434.	Destination UDP port must be greater or equal to 33434 when the destination is EID address of remote LISP site.
DestPortFixed	Whether to use a fixed destination port number	N/A	EnableState: • **true**—The destination port number is fixed. • **false**—The destination port number is not fixed.	Firewall evasion mode. Use fixed destination ports for UDP, UDP-Lite, TCP and SCTP probes. The destination port does not increment with each packet sent.

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address of the remote system	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
Hops	Maximum hop limit	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PayloadLength	Payload length	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
TracertReply	Tracert reply information	Data structure	Members include: • Sequence. • PassthroughRouter. • ReplyTime.	N/A
IcmpSequence	Reply sequence	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PassthroughRouter	Path that the packets pass through	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
ReplyTime	Response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If the value is 4294967295, the reply has timed out.
UnreachableReason	Reasons for destination unreachable	N/A	String. Length: 1 to 16 characters	An empty string indicates that the test result is normal. **!**N—Network unreachable. !H—Destination host unreachable. !**P**—Protocol

Column name	Column description	Column type	Data type and restrictions	Remarks
				unreachable. The protocol number is unknown. **!F**—Fragmentation needed. !W—Destination host unknown. !Q—Network unreachable for ToS. !T—Host unreachable for ToS. !X—Communication administratively prohibited by filtering policies. !V—Host precedence violation. !C—Precedence cutoff in effect. !S—Source route failed. !U—Unknown net. !I—Source host isolated. !A—Prohibited access net. !Z—Prohibited access host. !*Code*—Other reason. !—Port unreachable but ttl is bad
TestResult	Test result	N/A	Boolean: • **true**—Successful. • **false**—Failed.	If the tracert operator does not receive a reply within 25 seconds, the tracert operation fails. If the value is false, the destination is not reachable after the maximum number of hops has reached.
MPLS	MPLS information	Data structure	Members include: • Label. • Exp. • TTLValue. • Sign.	If the probe packets do not pass through an MPLS network, this structure is not available. If the MPLS network that the probe packets pass through supports multiple levels of labels, this structure will display information about each label.
Label	Label value that	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	is used to identify a forwarding equivalence class (FEC)		Value range: 0 to 1048575.	
Exp	Class of service (CoS)	N/A	Unsigned char.	N/A
TTLValue	TTL value	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Sign	Sign for the bottom label	N/A	Boolean: • **true**—The label is at the bottom of the label stack. • **false**—The label is not at the bottom of the label stack.	N/A

Tracert/IPv4TracertDisable

Use this table to stop IPv4 tracert operations.

Table description

Item	Description
Feature name	Tracert6
Table name	IPv6Tracert
Table type	Multi-instance table
Row name	TracertTest
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv6 address or host name of a remote system	Index	String. Length: 1 to 253 characters.	Example: 1::1 or host name.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OutputInterface	Name of the outgoing interface	N/A	String. Length: 0 to 46 characters.	An empty string indicates that no outgoing interface is specified.
SourceIpv6Address	Source IPv6 address of echo requests	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
ReplyTimeOut	Timeout time of the reply packet to a probe packet	N/A	Unsigned integer. Value range: 1 to 65535 milliseconds.	Default: 5000 milliseconds.
SendPacketsNum	Number of probe packets to send per hop	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 3. If the value is too big, the system might fail to return the probe result because of packet timeout or fail to perform the ping operation. As a best practice, use a value that does not exceed 817.
MaxHops	Maximum number of hops allowed for a probe packet	N/A	Unsigned integer. Value range: 1 to 255.	Default: 30. MaxHops must be greater than or equal to FirstHop.
FirstHop	TTL value of the first probe packet	N/A	Unsigned integer. Value range: 1 to 255.	Default: 1.
DestPort	Destination UDP port number	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 33434.

Column name	Column description	Column type	Data type and restrictions	Remarks
DestPortFixed	Whether to use a fixed destination port number	N/A	Boolean: • **true**—The destination port number is fixed. • **false**—The destination port number is not fixed.	Firewall evasion mode. Use fixed destination ports for UDP probes. The destination port does not increment with each packet sent.

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv6 address of the remote system	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
SrcAddr	IPv6 source address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
Hops	Maximum hop limit	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PayloadLength	Payload length	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
TracertReply	Tracert6 reply information	Data structure	Members include: • Sequence. • PassthroughRouter. • ReplyTime.	N/A
IcmpSequence	Reply sequence	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PassthroughRouter	Path that the packets pass through	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 1::1.
ReplyTime	Response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If the value is 4294967295, the reply has timed out.
UnreachableReason	Reasons for destination unreachable	N/A	String. Length: 1 to 16 characters	An empty string indicates that the test result is normal. **!**N—Network unreachable. !**P**—Protocol unreachable. The protocol number is unknown. !S—Beyond scope of source address. !A—Address unreachable.
TestResult	Test result	N/A	Boolean: • **true**—Successful.	If the tracert operator does not receive any reply within 25

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **false**—Failed.	seconds, the tracert operation fails. If the value is false, the destination is not reachable after the maximum number of hops has reached.

Tracert6/IPv6TracertDisable

This table is used to stop to trace the path that the IPv6 packets traverse from source to destination.

Table description

Item	Description
Feature name	TRACK
Table name	TrackEntries
Table type	Multi-instance table
Row name	TrackEntry
Restrictions	Only one tracked object type can be specified for a track entry. You cannot modify the settings of the track entry after creating it in this table. If you need do this, you must delete the track entry and then create it again.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TypeInterface	Associates the track entry with an interface.	Data structure	Members include: • IfIndex. • IfStateType.	All the members must be specified.
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfStateType	Type of the interface state.	N/A	Enumeration: • **1**—Link state (default).	N/A

			• **2**—Physical state. • **3**—IPv4 protocol state. • **4**—IPv6 protocol state.	
TypeBfd	Associates the track entry with a BFD session.	Data structure	Members include: • EchoIfIndex. • RemoteIp. • LocalIp. • StaticBfd.	All the members must be specified. You cannot configure the StaticBfd column together with the EchoIfIndex, RemoteIp, or LocalIp column.
EchoIfIndex	Specifies the outgoing interface of the BFD echo packets.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
RemoteIp	Specifies the destination IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
LocalIp	Specifies the source IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
StaticBfd	Static BFD session name	N/A	String Value range: 1 to 64.	Static session name, case sensitive
IgnoreRxIf	Whether to check the receiving interface for echo response packets	N/A	Boolean: • true false(default)	N/A
TypeCfd	Associates the track entry with CFD.	Data structure	Members include: • ServiceInstance. • MepId.	All the members must be specified.
ServiceInstance	Specifies a service instance ID.	N/A	Unsigned integer. Value range: 1 to 32767.	N/A
MepId	Specifies a MEP ID.	N/A	Unsigned integer. Value range: 1 to 8191.	N/A
TypeRoute	Associates the track entry with a route entry.	Data structure	Members include: • VRF. • IpAddress. • MaskLength.	The IpAddress member and MaskLength member must be specified.
VRF	VRF instance name.	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
IpAddress	IP address of the route entry.	N/A	IPv4: String, dotted decimal notation.	N/A
MaskLength	Mask length of the	N/A	Unsigned integer.	N/A

	route entry.		Value range: 0 to 32.	
Ipv6VRF	VPN instance name.	N/A	String. Length: 1 to 31 characters.	N/A
Ipv6Address	IPv6 address of the route entry.	N/A	• IPv6: String, dotted decimal notation.	N/A
Ipv6PrefixLength	IPv6 prefix length of the route entry.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
TypeNqa	Associates the track entry with an NQA operation.	Data structure	Members include: • AdminName. • OperationTag. • ReactionNum.	All the members must be specified.
AdminName	Administrator name of the NQA operation.	N/A	String, case insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag of the NQA operation.	N/A	String, case insensitive. Length: 1 to 32 characters.	N/A
ReactionNum	Reaction entry associated with the NQA entry.	N/A	Unsigned integer. Value range: 1 to 10.	N/A
TypeVrrp	Create a track entry associated with an IPv4 VRRP backup group.	Data structure	Members include: • IfIndex. • AddressType. • VrID.	All the members must be specified.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AddressType	Address type	N/A	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
VrID	Virtual router ID	N/A	Unsigned integer. Value range: 1 to 255.	VRRP backup group number.
TypeList	Associates the track entry with a tracked list.	Data structure	Members include: • ListType.	The ListType member must be specified.
ListType	Type of the tracked list.	N/A	Enumeration: • **1**—Boolean AND list. • **2**—Boolean OR list. • **3**—Percentage threshold list. • **4**—Weight threshold list.	N/A
TypeLldp	Associates the track entry with an	Data structure	Members include: • IfIndex.	The IfIndex member must be specified.

	LLDP neighbour.			
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TypeDrniMad Status	Associates the track entry with a tracked DRNI_MAD_STATUS event	N/A	Boolean: • **true** • **false(default)**	N/A
TypeMlagMad Status	Associates the track entry with a tracked MLAG_MAD_STATUS event	N/A	Boolean: • **true** • **false(default)**	N/A
NatInstance	Associates the track entry with a NAT instance	N/A	• String, case-sensitive. Length: 1 to 31 characters.	You can specify a NAT instance by its name, a case-sensitive string of 1 to 31 characters.

TRACK/ObjectList

This table contains information about objects in tracked lists.

XML structure

```
<TRACK>
  <ObjectList>
    <Object>
      <TrackIndex></TrackIndex>
      <ObjectIndex></ObjectIndex>
      <ObjectSign></ObjectSign>
      <ObjectWeight></ObjectWeight>
    </Object>
  </ObjectList>
</TRACK>
```

Table description

Item	Description
Feature name	TRACK
Table name	ObjectList
Table type	Multi-instance table

Row name	Object
Restrictions	You can configure objects for a track entry only when the track entry exists in the TRACKEntries table and has TrackType set to TypeList.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectIndex	Object index.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectSign	Whether or not to negate the state of the object.	N/A	Boolean: • true—Negates the state of the object. • false—Does not negate the state of the object (default).	This column can be specified only when the track entry is associated with a Boolean list.
ObjectWeight	Weight of the object.	N/A	Unsigned integer. Value range: 1 to 255. Default: 10.	This column can be specified only when the track entry is associated with a weight threshold list.

TRACK/TrackOper

This table contains operation information about track entries.

XML structure

```
<TRACK>
  <TrackOper>
    <Operation>
      <TrackIndex></TrackIndex>
      <PositiveDelay></PositiveDelay>
      <NegativeDelay></NegativeDelay>
      <PositiveThresholdPercent></PositiveThresholdPercent>
      <NegativeThresholdPercent></NegativeThresholdPercent>
      <PositiveThresholdWeight></PositiveThresholdWeight>
      <NegativeThresholdWeight></NegativeThresholdWeight>
    </Operation>
  </TrackOper>
</TRACK>
```

Table description

Item	Description
Feature name	TRACK
Table name	TrackOper
Table type	Multi-instance table
Row name	Operation
Restrictions	You can configure the operation information for a track entry only when the track entry exists in the TRACKEntries table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
PositiveDelay	Specifies the positive state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 6000. Default: 0.	N/A
NegativeDelay	Specifies the negative state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 6000. Default: 0.	N/A
PositiveThresholdPercent	Specifies the positive state threshold in percentage.	N/A	Unsigned integer. Value range: 1 to 100. Default: 1.	This column can be specified only when the track entry is associated with a percentage threshold list.
NegativeThresholdPercent	Specifies the negative state threshold in percentage.	N/A	Unsigned integer. Value range: 0 to 99. Default: 0.	This column can be specified only when the track entry is associated with a percentage threshold list.
PositiveThresholdWeight	Specifies the positive state threshold in weight.	N/A	Unsigned integer. Value range: 1 to 255. Default: 1.	This column can be specified only when the track entry is associated with a weight threshold list.
NegativeThresholdWeight	Specifies the negative state threshold in weight.	N/A	Unsigned integer. Value range: 0 to 254. Default: 0.	This column can be specified only when the track entry is associated with a weight threshold list.

Restrictions	Only one tracked object type can be specified for a track entry. You cannot modify the settings of the track entry after creating it in this table. If you need do this, you must delete the track entry and then create it again.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TypeInterface	Associates the track entry with an interface.	Data structure	Members include: • IfIndex. • IfStateType.	All the members must be specified.
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfStateType	Type of the interface state.	N/A	Enumeration: • 1—Link state. • 2—Physical state. • 3—IPv4 protocol state.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 4—IPv6 protocol state.	
TypeBfd	Associates the track entry with a BFD session.	Data structure	Members include: • EchoIfIndex. • RemoteIp. • LocalIp. • StaticBfd.	All the members must be specified. You cannot configure the StaticBfd column together with the EchoIfIndex, RemoteIp, or LocalIp column.
EchoIfIndex	Specifies the outgoing interface of the BFD echo packets.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
RemoteIp	Specifies the destination IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
LocalIp	Specifies the source IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
StaticBfd	Static BFD session name	N/A	String Value range: 1 to 64.	Static session name, case sensitive
IgnoreRxIf	Whether to check the receiving interface for echo response packets	N/A	Boolean: • true false	N/A
TypeCfd	Associates the track entry with CFD.	Data structure	Members include: • ServiceInstance. • MepId.	All the members must be specified.
ServiceInstance	Specifies a service instance ID.	N/A	Unsigned integer. Value range: 1 to 32767.	N/A
MepId	Specifies a MEP ID	N/A	Unsigned integer. Value range: 1 to 8191.	N/A
TypeRoute	Associates the track entry with a route entry.	Data structure	Members include: • VRF. • IpAddress. • MaskLength.	The IpAddress member and MaskLength member must be specified.
VRF	VRF instance name.	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
IpAddress	IP address of the	N/A	IPv4: String, dotted decimal	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	route entry.		notation.	
MaskLength	Mask length of the route entry.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6VRF	VPN instance name.	N/A	String. Length: 1 to 31 characters.	N/A
Ipv6Address	IPv6 address of the route entry.	N/A	• IPv6: String, dotted decimal notation.	N/A
Ipv6PrefixLength	IPv6 prefix length of the route entry.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
TypeNqa	Associates the track entry with an NQA operation.	Data structure	Members include: • AdminName. • OperationTag. • ReactionNum.	All the members must be specified.
AdminName	Administrator name of the NQA operation.	N/A	String, case insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag of the NQA operation.	N/A	String, case insensitive. Length: 1 to 32 characters.	N/A
ReactionNum	Reaction entry associated with the NQA entry.	N/A	Unsigned integer. Value range: 1 to 10.	N/A
TypeVrrp	Create a track entry associated with an IPv4 VRRP backup group.	Data structure	Members include: • IfIndex. • AddressType. • VrID.	All the members must be specified.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
AddressType	Address type	N/A	Enumeration: • 0—IPv4. • 1—IPv6.	N/A
VrID	Virtual router ID	N/A	Unsigned integer. Value range: 1 to 255.	VRRP backup group number.
TypeList	Associates the track entry with a tracked list.	Data structure	Members include: • ListType.	The ListType member must be specified.
ListType	Type of the tracked list.	N/A	Enumeration: • 1—Boolean AND list. • 2—Boolean OR list.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—Percentage threshold list. • 4—Weight threshold list.	
TypeLldp	Associates the track entry with an LLDP neighbour.	Data structure	Members include: • IfIndex.	The IfIndex member must be specified.
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TypeDrniMadStatus	Associates the track entry with a tracked DRNI_MAD_STATUS event	N/A	Boolean: • **true** • **false(default)**	N/A
TypeMlagMadStatus	Associates the track entry with a tracked MLAG_MAD_STATUS event	N/A	Boolean: • **true** • **false(default)**	N/A
NatInstance	Associates the track entry with a NAT instance	N/A	• String, case-sensitive. Length: 1 to 31 characters.	You can specify a NAT instance by its name, a case-sensitive string of 1 to 31 characters.

TRACK/ObjectList

This table contains information about objects in tracked lists.

XML structure

```
<TRACK>
  <ObjectList>
    <Object>
      <TrackIndex></TrackIndex>
      <ObjectIndex></ObjectIndex>
      <ObjectSign></ObjectSign>
      <ObjectWeight></ObjectWeight>
    </Object>
  </ObjectList>
</TRACK>
```

Table description

Item	Description
Feature name	TRACK
Table name	ObjectList
Table type	Multi-instance table
Row name	Object
Restrictions	You can configure objects for a track entry only when the track entry exists in the TRACKEntries table and has TrackType set to TypeList.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectIndex	Object index.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectSign	Whether or not to negate the state of the object.	N/A	Boolean: • true—Negates the state of the object. • false—Does not negate the state of the object.	This column can be specified only when the track entry is associated with a Boolean list.
ObjectWeight	Weight of the object.	N/A	Unsigned integer. Value range: 1 to 255.	This column can be specified only when the track entry is associated with a weight threshold list.

TRACK/TrackOper

This table contains operation information about track entries.

XML structure

```
<TRACK>
  <TrackOper>
    <Operation>
      <TrackIndex></TrackIndex>
      <TrackState></TrackState>
      <PositiveDelay></PositiveDelay>
      <NegativeDelay></NegativeDelay>
      <NotifyDelay></NotifyDelay>
      <PositiveThresholdPercent></PositiveThresholdPercent>
      <NegativeThresholdPercent></NegativeThresholdPercent>
```

```
      <PositivePercent></PositivePercent>
      <PositiveThresholdWeight></PositiveThresholdWeight>
      <NegativeThresholdWeight></NegativeThresholdWeight>
      <PositiveWeight></PositiveWeight>
    </Operation>
  </TrackOper>
</TRACK>
```

Table description

Item	Description
Feature name	TRACK
Table name	TrackOper
Table type	Multi-instance table
Row name	Operation
Restrictions	You can configure the operation information for a track entry only when the track entry exists in the TRACKEntries table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackState	State of the track entry.	N/A	Enumeration: • **1**—NotReady. • **2**—Positive. • **3**—Negative.	N/A
PositiveDelay	Specifies the positive state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 6000.	N/A
NegativeDelay	Specifies the negative state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 6000.	N/A
NotifyDelay	Remaining time of notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 300.	N/A
PositiveThresholdPercent	Specifies the positive state threshold in percentage.	N/A	Unsigned integer. Value range: 1 to 100.	This column can be specified only when the track entry is associated with a percentage threshold list.
NegativeThresholdPercent	Specifies the negative state threshold in percentage.	N/A	Unsigned integer. Value range: 0 to 99.	This column can be specified only when the track entry is associated with a

Column name	Column description	Column type	Data type and restrictions	Remarks
				percentage threshold list.
PositivePercent	Percentage of positive objects in the tracked list.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
PositiveThresholdWeight	Specifies the positive state threshold in weight.	N/A	Unsigned integer. Value range: 1 to 255.	This column can be specified only when the track entry is associated with a weight threshold list.
NegativeThresholdWeight	Specifies the negative state threshold in weight.	N/A	Unsigned integer. Value range: 0 to 254.	This column can be specified only when the track entry is associated with a weight threshold list.
PositiveWeight	Weight of positive objects in the tracked list.	N/A	Unsigned integer. Value range: 0 to 4080.	N/A

TRACK

TRACK/TrackEntries

Message	Explanation
Some required non-index columns are missing for the track entry of the specified type. Track类型中的非索引列不完整。	All the members of tracked object type must be specified
Only one tracked object type can be specified for a track entry. 只能为一个Track项指定一种类型。	Only one tracked object type can be specified for a track entry.
The tracked object type must be specified. 必须为一个Track项指定类型。	The tracked object type must be specified.
The interface doesn't exist or it doesn't support the configuration. 接口不存在或者接口不支持该配置。	The interface doesn't exist or it doesn't support the configuration.
The specified VPN instance doesn't exist. 指定的VRF不存在。	Please create the VPN instance first.
Invalid IP address. 无效的地址。	Only class A, class B, and class C addresses are available.
The specified track entry already exists." 指定的Track项已存在。	The specified track entry already exists.
The specified track entry doesn't exist. 指定的Track项不存在。	The specified track entry doesn't exist.
Failed to apply the configuration. 配置执行失败。	You cannot modify the settings of the track entry after creating it in this table. To do this, you must delete the track entry and then create it again.
Track is not configured. 未配置TRACK。	Track service has not been started.
Do not specify the non-index columns. 不能配置非索引列。	Do not specify the non-index columns when deleting it.
IPv4 and IPv6 route can't be issued at the same time. 不能同时下发IPv4和IPv6 route。	IPv4 and IPv6 route can't be issued at the same time.
Conflicting track entries exist. 存在相冲突的TRACK项	The ignore-rx-interface parameter settings must be consistent for one session in different track entries.
The specified Nat instance name cannot start with Sub. 指定的Nat实例名称不能以Sub开头。	The specified Nat instance name cannot start with Sub.
Not support Nat instance。 不支持Nat实例。	Not support Nat instance.

TRACK/ObjectList

Message	Explanation
Failed to apply the configuration. 配置执行失败。	Please create the track entry first.

TRACK/TrackOper

Message	Explanation
A minimum of one non-index column is required. 至少需配置一条非索引列。	Please specify at least one of non-index column.
Failed to apply the configuration. 配置执行失败。	Please create the track entry first.

      <ItemName></ItemName>
      <Result></Result>
      <Information></Information>
    </WebDiagnoseItem>
  </WebDiagnose>
</TroubleShoot>
```

Table description

Item	Description
Feature name	TroubleShoot
Table name	WebDiagnose
Table type	Multi-instance table
Row name	WebDiagnoseItem
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientIP	IP address of client	Index	IP address.	Example: 1.1.1.1.
WebUrl	URL of the Web server	Index	String. Length: 1 to 253 characters.	Example: http://www.example.com/index.html.

Response columns

Column name	Column description	Column type	Data type and restrictions
ItemID	Diagnosis item ID	Index	Unsigned integer.
ItemName	Diagnosis item name	N/A	String. Length: 1 to 63 characters.
Result	Diagnosis result	N/A	Boolean: • **true**—Succeeded. • **false**—Failed.
Information	Detailed diagnosis information	N/A	String. • Length: 1 to 1023 characters.

TroubleShoot/StartPktTrace

This table is used for starting packet trace diagnosis. All the columns are diagnosis arguments.

XML structure

```
<TroubleShoot>
  <StartPktTrace>
    <Type></Type>
    <IfIndex></IfIndex>
    <Protocol></Protocol>
    <IPAddrVer></IPAddrVer>
    <SrcIP></SrcIP>
    <DstIP></DstIP>
    <SrcPort></SrcPort>
    <DstPort></DstPort>
    <SrcMAC></SrcMAC>
    <DstMAC></DstMAC>
    <VlanID></VlanID>
    <FileName></FileName>
    <RealFlowDiagTime></RealFlowDiagTime>
```

```
  </StartPktTrace>
</TroubleShoot>
```

Table description

Item	Description
Feature name	TroubleShoot
Table name	StartPktTrace
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Diagnosis type.	N/A	Enumeration: • 1—Construct packet diagnosis. • 2—Real flow diagnosis. • 3—Import packet diagnosis.	Required.
IfIndex	Interface index	N/A	Unsigned integer.	Required when diagnosis type is 1 or 3.
Protocol	Packet protocol type	N/A	Unsigned integer. Value range: 0 to 255.	Required when diagnosis type is 1.
IPAddrVer	IP version	N/A	Enumeration: • 1—IPv4. • 2—IPv6.	Required.
SrcIP	Source IP address	N/A	IPv4 address or IPv6 address.	Required when diagnosis type is 1.
DstIP	Destination IP address	N/A	IPv4 address or IPv6 address.	Required when diagnosis type is 1.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	Required when diagnosis type is 1.
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	Required when diagnosis type is 1.
SrcMAC	Source MAC address	N/A	MAC address.	N/A
DstMAC	Destination MAC address	N/A	MAC address.	N/A
VlanID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
FileName	Selects a .pcap or .cap file to import	N/A	String. Length: 1 to 253 characters.	Required when diagnosis type is 3.

Column name	Column description	Column type	Data type and restrictions	Remarks
RealFlowDiagTime	Duration for service diagnosis based on real traffic (seconds)	N/A	Unsigned integer. Value range: 5 to 600.	Default value: 10 seconds.

TroubleShoot/StopPktTrace

This table is used to stop packet trace diagnosis.

XML structure

```
<TroubleShoot>
  <StopPktTrace>
    <Stop></Stop>
  </StopPktTrace>
</TroubleShoot>
```

Table description

Item	Description
Feature name	TroubleShoot
Table name	StopPktTrace
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stop	Stop packet trace diagnosis	N/A	N/A	This column must be empty.

TroubleShoot/ExportCapture

This table is used to export the captured packet to a file.

XML structure

```
<TroubleShoot>
  <ExportCapture>
    <Export/>
```

```
  </ExportCapture>
</TroubleShoot>
```

Table description

Item	Description
Feature name	TroubleShoot
Table name	ExportCapture
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Export	Export the captured packet to a file.	N/A	N/A	This column must be empty.

Table description

Item	Description
Feature name	TUNNEL
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID.	Index	Unsigned integer.	N/A
Mode	Tunnel mode.	N/A	Enumeration: • **1**—GRE tunnel with the transport protocol being IPv4. • **2**—GRE tunnel with the	Mode must be set when creating a tunnel, and cannot be

Column name	Column description	Column type	Data type and restrictions	Remarks
			transport protocol being IPv6. • **3**—IPv4 over IPv4 tunnel. • **4**—IPv6 over IPv4 manually configured tunnel. • **5**—IPv6 over IPv4 automatic tunnel. • **6**—IPv6 over IPv4 6to4 tunnel. • **7**—IPv6 over IPv4 ISATAP tunnel. • **8**—IPv6 tunnel. Encapsulates IPv6 or IPv4 packets in IPv6. • **9**—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **10**—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **11**—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **12**—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **13**—CRLSP tunnel. • **14**—Multicast GRE tunnel with the transport protocol being IPv4. • **15**—Multicast GRE tunnel with the transport protocol being IPv6. • **16**—IPsec tunnel with the transport protocol being IPv4. • **17**—IPsec tunnel with the transport protocol being IPv6. • **18**—EVI tunnel with the transport protocol being IPv4. • **19**—EVI tunnel with the transport protocol being IPv6. • **20**—EVI link with the transport protocol being IPv4. • **21**—EVI link with the transport protocol being IPv6. • **22**—DS-Lite AFTR tunnel.	modified after creating.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **23**—CRLSP automatic tunnel. • **24**—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **25**—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **26**—NVE tunnel with the transport protocol being IPv4. • **27**—NVE tunnel with the transport protocol being IPv6. • **28**—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **29**—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **30**—IPv6 over IPv6 tunnel. • **31**—IPv4 over IPv6 tunnel. • **32**—IPv6 over IPv4 6rd tunnel. • **33**—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **34**—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **35**—MGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **36**—IPv4 GRE P2MP tunnel. • **37**—IPv6 GRE P2MP tunnel. • **38**—TE P2MP tunnel. • **39**—IPv6 SRLSP tunnel. • **40**—EoGRE tunnel. • **41**—EoGRE in UDP tunnel. • **42**—SDWAN tunnel with the passenger protocol	

Column name	Column description	Column type	Data type and restrictions	Remarks
			being UDP and the transport protocol being IPv4. • **43**—SDWAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **44**—SDWAN extension tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **45**—SDWAN extension tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **46**—SDWAN tunnel with the passenger protocol being SRv6 and the transport protocol being IPv4. • **47**—SDWAN tunnel with the passenger protocol being SRv6 and the transport protocol being IPv6.	
IPv4Addr	IPv4 source and destination address of tunnel.	Data structure	Members include: • SrcAddr • SrcIfIndex • DstAddr	This column is available only for tunnels with the transport protocol being IPv4.
SrcAddr	Tunnel source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
IPv6Addr	IPv6 source and destination address of tunnel.	Data structure	Members include: • SrcAddr • SrcIfIndex • DstAddr	This column is available only for tunnels with the transport protocol being IPv6.
SrcAddr	Tunnel source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SrcIfIndex	Tunnel source	N/A	Unsigned integer.	This column

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface index.			is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
Tos	ToS value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The value 0 indicates that it is copied from the IP header of the inner layer. The value for the ToS column takes precedence over the value for the CopyInnerTos column.
CopyInnerTos	Whether to configure VXLAN tunneled packets to use the ToS of the original packets	N/A	Boolean: • **true**—VXLAN tunneled packets use the ToS of the original packets. • **false**—VXLAN tunneled packets do not use the ToS of the original packets.	The value for the ToS column takes precedence over the value for the CopyInnerTos column.
Dfbit	Indicates whether to set the DF bit in the IP header of the tunneled packet.	N/A	Boolean: • true—sets DF bit • false—does not set DF bit(default).	N/A
Ttl	TTL(Time to live) value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 1 to 255. Default: 255.	N/A
OutIfIndex	Tunnel outbound interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in I*fmgr NETCONF*

Column name	Column description	Column type	Data type and restrictions	Remarks
				XML API Configuration Reference.
Keepalive	Enable keepalive function of tunnel	Data structure	Members include: • interval. • times. • ReplyCheckOnly.	Currently, only GRE tunnel and EVI tunnel support this function.
ReplyCheckOnly	Response mode of keepalive	N/A	Boolean: • **true**—The keepalive mode is response mode, which detects only response packets for keepalive. • **false**—The keepalive mode is normal mode.	N/A
Interval	Interval of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767(second). For GRE tunnel, default value is 10, for EVI tunnel, default value is 5.	N/A
Times	Maximum times of retransmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 255. For GRE tunnel, default value is 3, for EVI tunnel, default value is 2.	N/A
EncapLimit	Maximum number of nested encapsulations of a packet allowed on a tunnel interface	N/A	Unsigned integer. Value range: 0 to 10. Default: no limit to the nested encapsulations of a packet	N/A
VRF	VRF to which the tunnel destination belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
GRE	Parameters of GRE tunnel	Data structure	Members include: • key. • checksum.	Only GRE tunnel support these parameters.
Key	Key to check for the validity of packets received on a GRE tunnel interface.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: no key is set.	N/A
Checksum	Whether to check GRE checksum	N/A	Boolean: • true—check GRE checksum. • false—does not check GRE checksum(default).	N/A
VpcEnable	Whether to carry VPC information in GRE packets.	N/A	Boolean: • true—Carry. • false—Not carry.	N/A
P2MPTemplate	GRE P2MP tunnel template.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceClass	Service class for a tunnel.	N/A	Unsigned integer. The value range varies by device model.	N/A
P2MP	GRE P2MP tunnel parameters	Data structure	Members include: • AgingTime. • BackupTunnel. • BrachIPv4NetMaskLength. • BrachIPv6NetMaskLength.	Only GRE P2MP tunnel support these parameters.
AgingTime	The aging time of the GRE P2MP tunnel	N/A	Unsigned integer. Value range: 1 to 86400. Default: 5s.	N/A
BackupTunnel	The backup tunnel interface for a GRE P2MP tunnel	N/A	Unsigned integer.	N/A
BrachIPv4NetMaskLength	GRE P2MP branch IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32. Default: 32.	N/A
BrachIPv6NetMaskLength	GRE P2MP branch IPv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128. Default: 128.	N/A
StaticRoute	Static routing parameters of tunnel	Data structure	Members include: • enabel. • preference.	Only TE and P2MP tunnel support these parameters.
Enable	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	enable automatic configuration of a static route on the tunnel		• true—Enable. • false—Disable(default).	
Preference	Preference of the static route	N/A	Unsigned integer. Value range: 1 to 255.	The default value of preference is 60. This column is configurable only if the enable column has a value of true.
SRV6	IPv6 SR tunnel parameters	Data structure	Members include: • SRv6SIDListName. • SRv6BackupSIDListName.	Only IPv6 SR tunnel support these parameters.
SRv6SIDListName	SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SRv6BackupSIDListName	Backup SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QosIncludeEncap	Apply QoS policy to encapsulated packets	N/A	Boolean: • true—Apply QoS policy to encapsulated packets false—Apply QoS policy to original packets	The default value is false. Only IPsec, IPsec-P2MP, IPsec IPv6, and IPsec-P2MP IPv6 tunnels support this feature.
PathMtu	Indicates whether to enable Path Mtu discovery for GRE tunnel or VXLAN tunnel.	N/A	Boolean: • true—enable pathmtu discovery false—disable pathmtu discovery.	The default value is false. Only GRE, GRE-P2MP, VXLAN IPv4, and ,VXLAN IPv6，IPSEC tunnels support this feature
EoGRE	EoGRE tunnel information	Data structure	Members include: • MapVEName. • EoGREPortNum. • NetworkPolicyID. APMAC.	N/A
MapVEName	Name of the virtual Ethernet bridge (VEB)	N/A	String, case-sensitive. Length: 1 to 47 characters.	Support interface name.

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface mapped to the tunnel interface			
EoGREPortNum	Destination UDP port number in EoGRE tunneled packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4754.	N/A
NetworkPolicyID	ID of the network policy used by the tunnel to forward user traffic	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
APMAC	AP MAC address carried in EoGRE tunneled packets	N/A	Enumeration: • **1**—Uses the bridge MAC address as the AP MAC address. **2—**Uses the BSSID as the AP MAC address.	N/A
BFD	BFD parameters	Data structure	Members include: • BFDEnable • **Template**	N/A
BFDEnable	BFD enable	N/A	Boolean: • **true**—BFD Enable • **false—BFD Disable**	N/A
Template	Template name	N/A	String, case sensitive. Length: 1 to 63 characters.	Default: NULL.

TUNNEL/GlobalConfig

This table contains global configuration information.

XML structure

```
<TUNNEL>
  <GlobalConfig>
    <VxlanUdpPort></VxlanUdpPort>
    <DropInvalidChksumPkt></DropInvalidChksumPkt>
    <DropInvalidVlanTagPkt></DropInvalidVlanTagPkt>
    <VxlanIpForward></VxlanIpForward>
    <VxlanMappingECNEnable></VxlanMappingECNEnable>
  </GlobalConfig>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	GlobalConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanUdpPort	UDP port on which tunnel receives VXLAN packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4789.	N/A
DropInvalidChksumPkt	Whether to drop VXLAN packets with invalid UDP checksum	N/A	Boolean: • true—drop • false—not drop (default)	N/A
DropInvalidVlanTagPkt	Whether to drop VXLAN packets with invalid VLAN tag after tunnel de-encapsulation	N/A	Boolean: • true—drop • false—not drop (default)	N/A
VxlanIpForward	Whether to use the L3 forwarding mode	N/A	Boolean: • true—Use L3 forwarding mode (default) • false—Use L2 forwarding mode	N/A
VxlanMappingECNEnable	Whether to enable VXLAN ECN Overlay	N/A	Boolean: • true—enable • false—disable	N/A

TUNNEL/GREP2MPTemplates

This table contains GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
  <GREP2MPTemplates>
    <GREP2MPTemplate>
      <TemplateName></TemplateName>
    </GREP2MPTemplate>
  </GREP2MPTemplates>
```

```
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	GREP2MPTemplates
Table type	Multi-instance table
Row name	GREP2MPTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A

TUNNEL/GREP2MPTemplateMaps

This table contains map information about tunnel mapping entries in GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
  <GREP2MPTemplateMaps>
    <GREP2MPTemplateMap>
      <TemplateName></TemplateName>
      <VrfIndex></VrfIndex>

      <BranchNetworkIPAddr></BranchNetworkIPAddr>
      <BranchNetworkIPAddrMask></BranchNetworkIPAddrMask>
      <TunnelDestIPAddr></TunnelDestIPAddr>
      <ChecksumFill></ChecksumFill>
    </GREP2MPTemplateMap>
  </GREP2MPTemplateMaps>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL

Item	Description
Table name	GREP2MPTemplateMaps
Table type	Multi-instance table
Row name	GREP2MPTemplateMap
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
VrfIndex	VPN index for a tunnel mapping.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
VpcId	VPC ID for a tunnel mapping	N/A	Unsigned integer.	Example: 123.
BranchNetworkIPAddr	Branch network IP address for a tunnel mapping.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
BranchNetworkIPAddrMask	Mask of the branch network IP address.	Index	String, dotted decimal notation.	The member of BranchNetworkIPAddr must also be specified.
TunnelDestIPAddr	Tunnel destination IP address for a tunnel mapping.	Index	String, dotted decimal notation.	Example: 2.2.2.2.
ChecksumFill	Checksum value.	N/A	String, dotted decimal notation.	Example: 3.3.3.3.

TUNNEL/IP6GREP2MPTemplates

This table contains information about IPv6 GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
  <IP6GREP2MPTemplates>
    <IP6GREP2MPTemplate>
```

```
      <TemplateName></TemplateName>

</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	IP6GREP2MPTemplateMaps
Table type	Multi-instance table
Row name	IP6GREP2MPTemplateMap
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	IPv6 GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
VrfIndex	VPN index for a tunnel mapping.	Index	Unsigned integer.	Some versions support VRF name (VPN instance name). For more information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
BranchNetworkIPAddr	Branch network IPv4 address for a tunnel mapping.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
BranchNetworkIPAddrMask	Mask of the branch network IPv4 address.	Index	String, dotted decimal notation.	BranchNetworkIPAddr must also be specified.
TunnelDestIPv6Addr	Tunnel destination IPv6 address for a tunnel mapping.	Index	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
ChecksumFill	Checksum value.	N/A	String, dotted decimal notation.	Example: 3.3.3.3.

TUNNEL/VXLANBFDs

This table contains VXLAN tunnel BFD information.

XML structure

```
<TUNNEL>
  <VXLANBFDs>
```

```
    <VXLANBFD>
      <ID></ID>
      <Enable></Enable>
      <DMAC></DMAC>
      <MinRx></MinRx>
      <MinTx></MinTx>
    </VXLANBFD>
  </VXLANBFDs>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	VXLANBFDs
Table type	Multi-instance table
Row name	VXLANBFD
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID	Index	Unsigned integer.	N/A
Enable	Whether BFD is enabled	N/A	Boolean: • true—Enabled • false—Disabled	N/A
DMAC	Destination MAC address	N/A	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	N/A
MinRx	The minimum receiving interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.
MinTx	The minimum sending interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.

TUNNEL/SRv6SIDLists

This table contains information about IPv6 tunnel mapping entries in GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
```

```
  <SRv6SIDLists>
    <SRv6SIDList>
      <SIDListName></SIDListName>
      <SIDAttribute>
        <Index></Index>
        <Sid></Sid>
      </SIDAttribute>
    </SRv6SIDList>
  </SRv6SIDLists>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6SIDLists
Table type	Multi-instance table
Row name	SRv6SIDList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SIDListName	IPv6 GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
SIDAttribute	IPv6 SR SID attribute.	Data structure	Members include: • Index. • Sid.	N/A
Index	The index of the noe in the IPv6 SR SID list.	N/A	Unsigned integer.	N/A
Sid	IPv6 address of the node.	N/A	Hexadecimal string, colon-separated.	Example: 1::1.

TUNNEL/SRv6TunnelIngressBfds

This table contains information about IPv6 tunnel mapping entries in GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
  <SRv6TunnelIngressBfds>
    <SRv6TunnelIngressBfd>
```

```
      <TunnelID></TunnelID>
      <SRv6BfdWorkMode></SRv6BfdWorkMode>
    </SRv6TunnelIngressBfd>
  </SRv6TunnelIngressBfds>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6TunnelIngressBfds
Table type	Multi-instance table
Row name	SRv6TunnelIngressBfd
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IPv6 SR tunnel template name.	Index	Unsigned integer.	N/A
SRv6BfdWorkMode	IPv6 SR tunnel work mode.	N/A	Unsigned integer. Value range: 1 to 2.	2-turn on the BFD detection feature.

TUNNEL/VXLANDefaultDecap

This table contains information about VXLAN tunnel default decap interface.

XML structure

```
<TUNNEL>
  <VXLANDefaultDecap>
    <SourceInterface></SourceInterface>
    <SourceInterfaceIPv6></SourceInterfaceIPv6>
    <DefaultDecapEnable></DefaultDecapEnable>
    <DefaultDecapEnableIPv6></DefaultDecapEnableIPv6>
  </VXLANDefaultDecap>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	VXLANDefaultDecap
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceInterface	Interface index.	N/A	Unsigned integer.	N/A
SourceInterfaceIPv6	Interface index for IPv6.	N/A	Unsigned integer.	N/A
DefaultDecapEnable	Whether default IPv4 VXLAN decapsulation is enabled	N/A	Boolean: • true—Enabled. • false—Disabled. (default)	N/A
DefaultDecapEnableIPv6	Whether default IPv6 VXLAN decapsulation is enabled	N/A	Boolean: • true—Enabled. • false—Disabled. (default)	N/A

EOGRE/EoGRE

This table contains EoGRE template information.

XML structure

```
<EOGRE>
  <EoGRE>
    <Eogre>
      <EoGREName></EoGREName>
      <Mode></Mode>
      <IPv4Addr>

    </Eogre>
  </EoGRE>
</EOGRE>
```

Table description

Item	Description
Feature name	EOGRE
Table name	EoGRE
Table type	Multi-instance table
Row name	Eogre
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EoGREName	EoGRE template name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A.
Mode	Tunnel mode	N/A	Enumeration: • **1**—EoGRE tunnel mode. • **2**—EoGRE in UDP tunnel mode. Default: 2.	N/A.
IPv4Addr	IPv4 address information of the EoGRE tunnel	Data structure	Members include: • DstAddr.	This column is available only for tunnels with the transport protocol being IPv4.
DstAddr	Tunnel destination IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
Tos	ToS value in the IP header of tunneled packets	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The value 0 indicates that it is copied from the IP header of the inner layer.
Keepalive	Keepalive parameters of the tunnel	Data structure	Members include: • Interval. • Times.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Interval for transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767, in seconds. Default: 10.	N/A
Times	Maximum times of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 255. Default: 3.	N/A
PathMtu	Whether to enable path MTU discovery for the EoGRE tunnel	N/A	Boolean: • **true**—Enables path MTU discovery. • **false**—Disables path MTU discovery.	The default value is false.
EoGREPortNum	Destination UDP port number in EoGRE tunneled packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4754.	N/A
Carry	Extension fields carried in EoGRE tunneled packets	Data structure	Members include: • NetworkPolicyID. • APMAC.	N/A
NetworkPolicyID	ID of the network policy used by the tunnel to forward user traffic	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
APMAC	AP MAC address carried in EoGRE tunneled packets	N/A	Enumeration: • **1**—Uses the bridge MAC address as the AP MAC address. • **2**—Uses the BSSID as the AP MAC address.	N/A
Mtu	Maximum transmission unit	N/A	Unsigned integer. Value range: 100 to 64000 in bytes. Default: 64000.	N/A

EOGRE/ServiceTemplatesMap

This table contains mappings between service templates and EoGRE templates.

XML structure

```
<EOGRE>
  <ServiceTemplatesMap>
    <TemplatesMap>
      <TemplateName></TemplateName>
      <EoGREName></EoGREName>
    </TemplatesMap>
```

```
  </ServiceTemplatesMap>
</EOGRE>
```

Table description

Item	Description
Feature name	FLEXSRV6
Table name	FlexSRV6Templates
Table type	Multi-instance table
Row name	Templates
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	Flex-SRv6 template name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A.
LocalLocator	Information of the local locator	Data structure	Members include: • LocatorIP6Addr. • CommonLen	N/A
LocatorIP6Addr	Local locator IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 2000::.
CommonLen	The srv6 common length	N/A	Unsigned integer. Value range: 32 to 90	N/A
RemoteLocator	Information of the remote locator	Data structure	Members include: • RemoteIP6Addr. • CommonLen	N/A
RemoteIP6Addr	Remote locator IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 3000::.
CommonLen	The srv6 common length	N/A	Unsigned integer. Value range: 32 to 90	N/A
DstAddr	Destination IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
Tos	ToS value in the IPV6 header of tunneled packets	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Mtu	Maximum transmission unit	N/A	Unsigned integer. Value range: 100 to 64000 in bytes. Default: 64000.	N/A
TCPMss	TCP max segment size	N/A	Unsigned integer. Value range: 128 to 63960	N/A

FLEXSRV6/FlexSRv6TemplatesMap

This table contains mappings between wlan ap and flex-srv6 templates.

XML structure

Table description

Item	Description
Feature name	TUNNEL
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID.	Index	Unsigned integer.	ID

Mode	Tunnel mode.	N/A	Enumeration: • **1**—GRE tunnel with the transport protocol being IPv4. • **2**—GRE tunnel with the transport protocol being IPv6. • **3**—IPv4 over IPv4 tunnel. • **4**—IPv6 over IPv4 manually configured tunnel. • **5**—IPv6 over IPv4 automatic tunnel. • **6**—IPv6 over IPv4 6to4 tunnel. • **7**—IPv6 over IPv4 ISATAP tunnel. • **8**—IPv6 tunnel. Encapsulates IPv6 or IPv4 packets in IPv6. • **9**—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **10**—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **11**—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **12**—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **13**—CRLSP tunnel. • **14**—Multicast GRE tunnel with the transport protocol being IPv4. • **15**—Multicast GRE tunnel with the transport protocol being IPv6. • **16**—IPsec tunnel with the transport protocol being IPv4. • **17**—IPsec tunnel with the transport protocol being IPv6. • **18**—EVI tunnel with the transport protocol being IPv4. • **19**—EVI tunnel with the transport protocol being IPv6. • **20**—EVI link with the transport protocol being IPv4. • **21**—EVI link with the transport protocol being	Mode

			IPv6. • **22**—DS-Lite AFTR tunnel. • **23**—CRLSP automatic tunnel. • **24**—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **25**—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **26**—NVE tunnel with the transport protocol being IPv4. • **27**—NVE tunnel with the transport protocol being IPv6. • **28**—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **29**—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **30**—IPv6 over IPv6 tunnel. • **31**—IPv4 over IPv6 tunnel. • **32**—IPv6 over IPv4 6rd tunnel. • **33**—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv4. • **34**—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **35**—MGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **36**—IPv4 GRE P2MP tunnel. • **37**—IPv6 GRE P2MP tunnel. • **38**—TE P2MP tunnel. • **39**—IPv6 SRLSP tunnel. • **40**—EoGRE tunnel. • **41**—EoGRE in UDP tunnel. • **42**—SDWAN tunnel with the passenger protocol being UDP and the	

			transport protocol being IPv4. • **43**—SDWAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6. • **44**—SDWAN extension tunnel with the passenger protocol being GRE and the transport protocol being IPv4. • **45**—SDWAN extension tunnel with the passenger protocol being GRE and the transport protocol being IPv6. • **46**—SDWAN tunnel with the passenger protocol being SRv6 and the transport protocol being IPv4. • **47**—SDWAN tunnel with the passenger protocol being SRv6 and the transport protocol being IPv6.	
IfIndex	Interface index of tunnel	N/A	Unsigned integer.	N/A
IPv4Addr	IPv4 source and destination address of tunnel.	Data structure	Members include: • SrcAddr • SrcIfIndex • DstAddr	This column is available only for tunnels with the transport protocol being IPv4.
SrcAddr	Tunnel source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
SrcIfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
IPv6Addr	IPv6 source and destination address of tunnel.	Data structure	Members include: • SrcAddr • SrcIfIndex • DstAddr	This column is available only for tunnels with the transport protocol

				being IPv6.
SrcAddr	Tunnel source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
SrcIfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
Connectivity	Tunnel connectivity	N/A	Enumeration: • 1—Connected. • 2—Disconnected. • 3—Detecting. • 4—Unknown.	Use “ping” to detect if tunnel remote is connected.
Tos	Tos value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 0 to 255.	The value 0 indicates that it is copied from the IP header of the inner layer. The value for the ToS column takes precedence over the value for the CopyInnerTo s column.
CopyInnerTos	Whether to configure VXLAN tunneled packets to use the ToS of the original packets	N/A	Boolean: • **true**—VXLAN tunneled packets use the ToS of the original packets. • **false**—VXLAN tunneled packets do not use the ToS of the original packets.	The value for the ToS column takes precedence over the value for the CopyInnerTo s column.
Dfbit	Indicates whether to set the DF bit in the IP header of the tunneled packet.	N/A	Boolean: • true—sets DF bit • false—does not set DF bit.	N/A
Ttl	TTL(Time to live) value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

OutIfIndex	Tunnel outbound interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in I*fmgr NETCONF XML API Configuration Reference*.
OutIfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in I*fmgr NETCONF XML API Configuration Reference*.
Keepalive	Enable keepalive function of tunnel	Data structure	Members include: • interval. • times. • ReplyCheckOnly.	Currently, only GRE tunnel and EVI tunnel support this function.
ReplyCheckOnly	Response mode of keepalive	N/A	Boolean: • **true**—The keepalive mode is response mode, which detects only response packets for keepalive. • **false**—The keepalive mode is normal mode.	N/A
Interval	Interval of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767(second).	N/A
Times	Maximum times of retransmitting keepalive	N/A	Unsigned integer. Value range: 1 to 255.	N/A

	packets			
EncapLimit	Maximum number of nested encapsulations of a packet allowed on a tunnel interface	N/A	Unsigned integer. Value range: 0 to 10.	N/A
VRF	VRF to which the tunnel destination belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
GRE	Parameters of GRE tunnel	Data structure	Members include: • key. • checksum.	Only GRE tunnel support these parameters.
Key	Key to check for the validity of packets received on a GRE tunnel interface.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Checksum	Whether to check GRE checksum	N/A	Boolean: • true—check GRE checksum. • false—does not check GRE checksum.	N/A
VpcEnable	Whether to carry VPC information in GRE packets.	N/A	Boolean: • true—Carry. • false—Not carry.	N/A
P2MPTemplate	GRE P2MP tunnel template.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceClass	Service class for a tunnel.	N/A	Unsigned integer. The value range varies by device model.	N/A
P2MP	GRE P2MP tunnel parameters	Data structure	Members include: • AgingTime. • BackupTunnel.	Only GRE P2MP tunnel support these parameters.

			• BrachIPv4NetMaskLength. • BrachIPv6NetMaskLength.	
AgingTime	The aging time of the GRE P2MP tunnel	N/A	Unsigned integer. Value range: 1 to 86400. Default: 5s.	N/A
BackupTunnel	The backup tunnel interface for a GRE P2MP tunnel	N/A	Unsigned integer.	N/A
BrachIPv4NetMaskLength	GRE P2MP branch IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32. Default: 32.	N/A
BrachIPv6NetMaskLength	GRE P2MP branch IPv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128. Default: 128.	N/A
StaticRoute	Static routing parameters of tunnel	Data structure	Members include: • Enable. • Preference.	Only TE and P2MP tunnel support these parameters.
Enable	Whether to enable automatic configuration of a static route on the tunnel	N/A	Boolean: • true—Enable. • false—Disable.	N/A
Preference	Preference of the static route	N/A	Unsigned integer. Value range: 1 to 255.	The default value of preference is 60. This column is configurable only if the enable column has a value of true.
SRV6	IPv6 SR tunnel parameters	Data structure	Members include: • SRv6SIDListName. • SRv6BackupSIDListName.	Only IPv6 SR tunnel support these parameters.
SRv6SIDListName	SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SRv6BackupSIDListName	SID list Backup name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QosIncludeEncap	Apply QoS policy to encapsulated packets	N/A	Boolean: • true—Apply QoS policy to encapsulated packets false—Apply QoS policy to original packets	Only IPsec, IPsec-P2MP, IPsec IPv6, and IPsec-P2MP IPv6 tunnels support this

				feature.
PathMtu	Indicates whether to enable Path Mtu discovery for GRE tunnel or VXLAN tunnel.	N/A	Boolean: • true—enable pathmtu discovery false—disable pathmtu discovery.	Only GRE, GRE-P2MP, VXLAN IPv4, and ,VXLAN IPv6，IPSEC tunnels support this feature
EoGRE	EoGRE tunnel information	Data structure	Members include: • MapVEName. EoGREPortNum.	N/A
MapVEName	Name of the virtual Ethernet bridge (VEB) interface bound to the tunnel interface	N/A	String, case-sensitive. Length: 1 to 47 characters.	Support interface name.
EoGREPortNum	Destination UDP port number in EoGRE tunneled packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4754.	N/A
NetworkPolicyID	ID of the network policy used by the tunnel to forward user traffic	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
APMAC	AP MAC address carried in EoGRE tunneled packets	N/A	Enumeration: • **1**—Uses the bridge MAC address as the AP MAC address. **2—**Uses the BSSID as the AP MAC address.	N/A
BFD	BFD parameters	Data structure	Members include: • BFDEnable • **Template**	N/A
BFDEnable	BFD enable	N/A	Boolean: • **true**—BFD Enable • **false—BFD Disable**	N/A
Template	Template name	N/A	String, case sensitive. Length: 1 to 63 characters.	Default: NULL.

TUNNEL/AvailableTunnelID

This table contains the available tunnel ID.

XML structure

```
<TUNNEL>
  <AvailableTunnelID>
    <ID></ID>
  </AvailableTunnelID>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	AvailableTunnelID
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Available tunnel ID	N/A	Unsigned integer.	N/A

TUNNEL/GlobalConfig

This table contains global configuration information.

XML structure

```
<TUNNEL>
  <GlobalConfig>
    <VxlanUdpPort></VxlanUdpPort>
    <DropInvalidChksumPkt></DropInvalidChksumPkt>
    <DropInvalidVlanTagPkt></DropInvalidVlanTagPkt>

</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	GlobalConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanUdpPort	Specifies the UDP port on which tunnel receive VXLAN packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DropInvalidChksumPkt	Specifies the action of whether or not to drop VXLAN packets with invalid UDP checksum.	N/A	Boolean: • true—drop • false—not drop	N/A
DropInvalidVlanTagPkt	Specifies the action of whether or not to drop VXLAN packets with invalid VLAN tag after tunnel de-encapsulation.	N/A	Boolean: • true—drop • false—not drop	N/A
VxlanIpForwarding	Specifies the action of whether or not to use the L3 forwarding mode.	N/A	Boolean: • true—using L3 forwarding mode • false—using L2 forwarding mode	N/A
SupportSRv6	Whether the IPv6 SR is supported.	N/A	Boolean: • true • false	N/A
SRv6MaxSidDepth	IPv6 SR SID list max index.	N/A	Unsigned integer.	N/A
VxlanMappingECNEnable	Whether to enable VXLAN ECN Overlay	N/A	Boolean: • true—enable • false—disable	N/A

TUNNEL/TotalNums

This table contains total number of tunnels.

XML structure

```
<TUNNEL>
  <TotalNums>
    <TotalNum>
      <Mode></Mode>
      <Num></Num>
    </TotalNum>
  </TotalNums>

Table description

Item	Description
Feature name	TUNNEL
Table name	GREP2MPTemplateMaps
Table type	Multi-instance table
Row name	GREP2MPTemplateMap
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
VrfIndex	VPN index for a tunnel map.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
VpcId	VPC ID for a tunnel mapping	N/A	Unsigned integer.	Example: 123.
BranchNetworkIPAddr	Branch network IP address for a tunnel map.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
BranchNetworkIPAddrMask	Mask of the branch network IP address.	Index	String, dotted decimal notation.	The member of BranchNetworkIPAddr must also be specified.
TunnelDestIPAddr	Tunnel destination IP address for a tunnel map.	Index	String, dotted decimal notation.	Example: 2.2.2.2.
ChecksumFill	Checksum value.	N/A	String, dotted decimal notation.	Example: 3.3.3.3.

TUNNEL/IP6GREP2MPTemplates

This table contains information about IPv6 GRE P2MP tunnel templates.

XML structure

```
<TUNNEL>
  <IP6GREP2MPTemplates>
    <IP6GREP2MPTemplate>
      <TemplateName></TemplateName>
```

```

      <ChecksumFill></ChecksumFill>
    </IP6GREP2MPTemplateMap>
  </IP6GREP2MPTemplateMaps>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL

Table name	IP6GREP2MPTemplateMaps
Table type	Multi-instance table
Row name	IP6GREP2MPTemplateMap
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	IPv6 GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
VrfIndex	VPN index for a tunnel mapping.	Index	Unsigned integer.	Some versions support VRF name (VPN instance name). For more information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in *L3vpn NETCONF XML API Data Reference*.
BranchNetworkIPAddr	Branch network IPv4 address for a tunnel mapping.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
BranchNetworkIPAddrMask	Mask of the branch network IPv4 address.	Index	String, dotted decimal notation.	The member of BranchNetworkIPAddr must also be specified.
TunnelDestIPv6Addr	Tunnel destination IPv6 address for a tunnel mapping.	Index	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
ChecksumFill	Checksum value.	N/A	String, dotted decimal notation.	Example: 3.3.3.3.

TUNNEL/VXLANBFDs

This table contains VXLAN tunnel BFD information.

XML structure

```
<TUNNEL>
  <VXLANBFDs>
    <VXLANBFD>
      <ID></ID>
      <Enable></Enable>
      <DMAC></DMAC>
      <MinRx></MinRx>
      <MinTx></MinTx>
    </VXLANBFD>
```

```
  </VXLANBFDs>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	VXLANBFDs
Table type	Multi-instance table
Row name	VXLANBFD
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID	Index	Unsigned integer.	N/A
Enable	Whether BFD is enabled	N/A	Boolean: • true—Enabled • false—Disabled	N/A
DMAC	Destination MAC address	N/A	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	N/A
MinRx	The minimum receiving interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.
MinTx	The minimum sending interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.

TUNNEL/SRv6SIDLists

This table contains SID list node information of IPv6 SR tunnel.

XML structure

```
<TUNNEL>
  <SRv6SIDLists>
    <SRv6SIDList>
      <SIDListName></SIDListName>
      <SIDAttribute>
        <Index></Index>
        <Sid></Sid>
      </SIDAttribute>
    </SRv6SIDList>
```

```
  </SRv6SIDLists>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6SIDLists
Table type	Multi-instance table
Row name	SRv6SIDList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SIDListName	IPv6 SR SID list name.	Index	String. Length: 1 to 31 characters.	N/A
SIDAttribute	IPv6 SR SID attribute.	Data structure	Members include: • Index. • Sid.	N/A
Index	The index of the noe in the IPv6 SR SID list.	N/A	Unsigned integer.	N/A
Sid	IPv6 address of the node.	N/A	Hexadecimal string, colon-separated.	Example: 1::1.

TUNNEL/SRv6TunnelIngressBfds

This table contains ingress information of the IPv6 SR tunnel.

XML structure

```
<TUNNEL>
  <SRv6TunnelIngressBfds>
    <SRv6TunnelIngressBfd>
      <TunnelID></TunnelID>
      <SRv6BfdWorkMode></SRv6BfdWorkMode>
    </SRv6TunnelIngressBfd>
  </SRv6TunnelIngressBfds>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6TunnelIngressBfds
Table type	Multi-instance table
Row name	SRv6TunnelIngressBfd
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IPv6 SR tunnel template name.	Index	Unsigned integer.	N/A
SRv6BfdWorkMode	IPv6 SR tunnel work mode.	N/A	Unsigned integer. Value range: 1 to 2.	2-turn on the BFD detection feature.

TUNNEL/Statistics

This table contains flow rate statistics for tunnels.

XML structure

```
<TUNNEL>
  <Statistics>
    <FlowStatistics>
      <FlowId></FlowId>
      <TunnelId></TunnelId>
      <Speedstatistics></Speedstatistics>
    </FlowStatistics>
  </Statistics>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL
Table name	Statistics
Table type	Multi-instance table
Row name	FlowStatistics

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FlowId	Flow ID	Index	Unsigned integer.	N/A
TunnelId	Tunnel ID	Index	Unsigned integer.	N/A
Speedstatistics	Flow rate statistics for the tunnel	N/A	Base64 string.	It can include multiple items. Each Item include the following information: • Flow ID, UnsignedInteger32, 4 characters. • Interface name, string, 48 characters. • Output packets per second, UnsignedInteger64, 8 characters. • Output octets per second, UnsignedInteger64, 8 characters.

TUNNEL/VXLANDefaultDecap

This table contains information about VXLAN tunnel default decap interface.

XML structure

```
<TUNNEL>
  <VXLANDefaultDecap>
    <SourceInterface></SourceInterface>
    <SourceInterfaceIPv6></SourceInterfaceIPv6>
    <SourceInterfaceName></SourceInterfaceName>
    <SourceInterfaceNameIPv6></SourceInterfaceNameIPv6>
    <DefaultDecapEnable></DefaultDecapEnable>
    <DefaultDecapEnableIPv6></DefaultDecapEnableIPv6>
  </VXLANDefaultDecap>
</TUNNEL>
```

Table description

Item	Description
Feature name	TUNNEL

Item	Description
Table name	VXLANDefaultDecap
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceInterface	Interface index.	N/A	Unsigned integer.	N/A
SourceInterfaceIPv6	Interface index for IPv6.	N/A	Unsigned integer.	N/A
SourceInterfaceName	Source interface name	N/A	String. Length: 2 to 47 characters.	N/A
SourceInterfaceNameIPv6	Source interface name for IPv6	N/A	String. Length: 2 to 47 characters.	N/A
DefaultDecapEnable	Whether default IPv4 VXLAN decapsulation is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
DefaultDecapEnableIPv6	Whether default IPv6 VXLAN decapsulation is enabled	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A

EOGRE/EoGRE

This table contains EoGRE template information.

XML structure

```
<EOGRE>
  <EoGRE>
    <Eogre>
      <EoGREName></EoGREName>
      <Mode></Mode>
      <IPv4Addr>
        <DstAddr></DstAddr>
      </IPv4Addr>
      <Tos></Tos>
      <Keepalive>
        <Interval></Interval>
```

```
      <Times></Times>
    </Keepalive>
    <PathMtu></PathMtu>
    <EoGREPortNum></EoGREPortNum>
    <Carry>
      <NetworkPolicyID></NetworkPolicyID>
      <APMac></APMac>
    </Carry>
    <Mtu></Mtu>
  </Eogre>
 </EoGRE>
</EOGRE>
```

Table description

Item	Description
Feature name	EOGRE
Table name	EoGRE
Table type	Multi-instance table
Row name	Eogre
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EoGREName	EoGRE template name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A.
Mode	Tunnel mode	N/A	Enumeration: • **1**—EoGRE tunnel mode. • **2**—EoGRE in UDP tunnel mode. Default: 2.	N/A.
IPv4Addr	IPv4 address information of the EoGRE tunnel	Data structure	Members include: • DstAddr.	This column is available only for tunnels with the transport protocol being IPv4.
DstAddr	Tunnel destination IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
Tos	ToS value in the IP header of tunneled packets	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The value 0 indicates that it is copied from the IP header of the inner layer.
Keepalive	Keepalive	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	parameters of the tunnel	structure	• Interval. • Times.	
Interval	Interval for transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767, in seconds. Default: 10.	N/A
Times	Maximum times of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 255. Default: 3.	N/A
PathMtu	Whether the path MTU discovery feature is enabled for the EoGRE tunnel	N/A	Boolean: • **true**—The path MTU discovery feature is enabled. • **false**—The path MTU discovery feature is disabled.	The default value is false.
EoGREPortNum	Destination UDP port number in EoGRE tunneled packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4754.	N/A
Carry	Extension fields carried in EoGRE tunneled packets	Data structure	Members include: • NetworkPolicyID. • APMAC.	N/A
NetworkPolicyID	ID of the network policy used by the tunnel to forward user traffic	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
APMAC	AP MAC address carried in EoGRE tunneled packets	N/A	Enumeration: • **1**—Uses the bridge MAC address as the AP MAC address. • **2**—Uses the BSSID as the AP MAC address.	N/A
Mtu	Maximum transmission unit	N/A	Unsigned integer. Value range: 100 to 64000 in bytes. Default: 64000.	N/A

EOGRE/ServiceTemplatesMap

This table contains mappings between service templates and EoGRE templates.

XML structure

```
<EOGRE>
  <ServiceTemplatesMap>
```

```
    <TemplatesMap>
      <TemplateName></TemplateName>
      <EoGREName></EoGREName>
    </TemplatesMap>
  </ServiceTemplatesMap>
</EOGRE>
```

Table description

Item	Description
Feature name	EOGRE
Table name	ServiceTemplatesMap
Table type	Multi-instance table
Row name	TemplatesMap
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
TemplateName	Service template name	Index	String, case-sensitive. Length: 1 to 63 characters.
EoGREName	EoGRE template name	N/A.	String, case-sensitive. Length: 1 to 63 characters.

FLEXSRV6/FlexSRV6Templates

This table contains flex-srv6 tunnel information.

XML structure

```
<FLEXSRV6>
  <FlexSRV6Templates>
    <Templates>
      <TemplateName></TemplateName>
      <LocalLocator>
        <LocalIP6Addr></LocalIP6Addr>
        <CommonLen></CommonLen>
      </LocalLocator>
      <RemoteLocator>
        <RemoteIP6Addr></RemoteIP6Addr>
        <CommonLen></CommonLen>
      </RemoteLocator>
```

```
      <DstAddr></DstAddr>
      <Tos></Tos>
      <Mtu></Mtu>
      <TCPMss></TCPMss>
    </Templates>
  </FlexSRV6Templates>
</FLEXSRV6>
```

Table description

Item	Description
Feature name	FLEXSRV6
Table name	FlexSRV6Templates
Table type	Multi-instance table
Row name	Templates
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	Flex-SRv6 template name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A.
LocalLocator	Information of the local locator	Data structure	Members include: • LocatorIP6Addr. • CommonLen	N/A
LocatorIP6Addr	Local locator IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 2000::.
CommonLen	The srv6 common length	N/A	Unsigned integer. Value range: 32 to 90	N/A
RemoteLocator	Information of the remote locator	Data structure	Members include: • RemoteIP6Addr. • CommonLen	N/A
RemoteIP6Addr	Remote locator IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 3000::.
CommonLen	The srv6 common length	N/A	Unsigned integer. Value range: 32 to 90	N/A
DstAddr	Destination IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
Tos	ToS value in the IPV6 header of tunneled packets	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Mtu	Maximum transmission unit	N/A	Unsigned integer. Value range: 100 to 64000 in bytes.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPMss	TCP max segment size	N/A	Unsigned integer. Value range: 128 to 63960	N/A

FLEXSRV6/FlexSRv6TemplatesMap

This table contains mappings between wlan ap and flex-srv6 templates.

XML structure

```
<FLEXSRV6>
  <FlexSRv6TemplatesMap>
    <TemplatesMap>
      <WlanAPName></WlanAPName>
      <TemplateName></TemplateName>
    </TemplatesMap>
  </FlexSRv6TemplatesMap>
</FLEXSRV6>
```

Table description

Item	Description

TunnelDown event

This table is used to report information about a tunnel when the tunnel goes down.

XML structure for event subscription

```
<TunnelDown>
  <Tunnel>
    <ID></ID>
    <Mode></Mode>
  </Tunnel>
</TunnelDown>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>TUNNEL</stream>
    <filter type="subtree">
      <TunnelDown xmlns="http://www.h3c.com/netconf/event:1.0/tunnel:1.0">
        <Tunnel>
          <ID>1</ID>
          <Mode>40</Mode>
        </Tunnel>
      </TunnelDown>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	TUNNEL
Event name	TunnelDownEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/tunnel:1.0
Support for extended query	No

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
ID	Tunnel ID	Unsigned integer.	No
Mode	Tunnel mode	Enumeration: • **40**—EoGRE tunnel. • **41**—EoGRE-in-UDP tunnel.	Only EoGRE and EoGRE-in-UDP tunnels are supported.

XML structure for event report

```
<TunnelDown>
  <Tunnel>
    <ID></ID>
    <Mode></Mode>
    <DownReason></DownReason>
  </Tunnel>
</TunnelDown>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2020-09-30T09:10:51</eventTime>
  <TunnelDown xmlns="http://www.h3c.com/netconf/event:1.0/tunnel:1.0">
    <Tunnel>
      <ID>1</ID>
      <Mode>40</Mode>
      <DownReason>2</DownReason>
    </Tunnel>
  </TunnelDown>
</notification>
```

Columns

Column name	Column description	Data type and restrictions	Support for extended queries
ID	Tunnel ID	Unsigned integer. Value range: 0 to 1023.	No
Mode	Tunnel mode	Enumeration: • **40**—EoGRE tunnel. • **41**—EoGRE-in-UDP tunnel.	Only EoGRE and EoGRE-in-UDP tunnels are supported.
DownReason	Tunnel down reason	Enumeration: • **1**—The tunnel went down. • **2**—The tunnel was deleted.	No

TunnelUp event

This table is used to report information about a tunnel when the tunnel comes up.

XML structure for event subscription

```
<TunnelUp>
  <Tunnel>
    <ID></ID>
    <Mode></Mode>
  </Tunnel>
```

```
</TunnelUp>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>TUNNEL</stream>
    <filter type="subtree">
      <TunnelUp xmlns="http://www.h3c.com/netconf/event:1.0/tunnel:1.0">
        <Tunnel>
          <ID>1</ID>
          <Mode>40</Mode>
        </Tunnel>
      </TunnelUp>
    </filter>
  </create-subscription>
</rpc>
```

Table description

UCC/WlanUccProfiles

This table contains information about UCC profiles applied to service templates.

XML structure

```
<UCC>
  <WlanUccProfiles>
    <WlanUccProfile>
      <WlanServiceTemp></WlanServiceTemp>
      <UccProfileName></UccProfileName>
```

```
    </WlanUccProfile>
  </WlanUccProfiles>
</UCC>
```

Table description

Item	Description
Feature name	UCC
Table name	WlanUccProfiles
Table type	Multi-instance table
Row name	WlanUccProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
WlanServiceTemp	Name of a service template	Index	String, case-insensitive Length: 1 to 63 characters.	N/A
UccProfileName	Name of the UCC profile applied to the service template	N/A	String, case-insensitive Length: 1 to 31 characters. Default: No UCC profile is applied to a service template.	N/A

UCC/WhiteListAPs

This table contains UCC white list information of APs.

XML structure

```
<UCC>
  <WhiteListAPs>
    <AP>
      <APName></APName>
    </AP>
  </WhiteListAPs>
</UCC>
```

Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
APName	AP name	Index	String. Length: 1 to 64 characters.	N/A

UCC/WhiteListAPGroups

This table contains UCC white list information of APGroups.

XML structure

```
<UCC>
  <WhiteListAPGroups>
    <APGroup>
      <APGroupName></APGroupName>
    </APGroup>
  </WhiteListAPGroups>
</UCC>
```

Table description

Item	Description
Feature name	UCC
Table name	WhiteListAPGroups
Table type	Multi-instance table
Row name	APGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
APGroupName	AP group name	Index	String. Length: 1 to 31 characters.	N/A

UCC/UccPolicies

This table contains the UCC policy information.

XML structure

```
<UCC>
  <UccPolicies>
    <UccPolicy>
      <ProfileName></ProfileName>
      <AppSubcateName></AppSubcateName>
      <AppName></AppName>

      <Ratelimit></Ratelimit>
      <Remark>
        <Dscp></Dscp>
        <Dot1p></Dot1p>
      <Remark>
    </UccPolicy>
  </UccPolicies>
</UCC>
```

Table description

Item	Description
Feature name	UCC
Table name	UccPolicies
Table type	Multi-instance table
Row name	UccPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of a UCC	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	profile		Length: 1 to 31 characters.	
AppSubcateName	Predefined application Subcate name	Index	String, case-insensitive. Length: 1 to 63 characters.	The application subcate name must be standard and can be identified by the equipment.
AppName	Predefined application name which is added to the application subcate	Index	String, case-insensitive. Length: 1 to 63 characters.	The application name must be standard and can be identified by the equipment. When AppName is "AllApplications", it indicates all applications in the specified AppSubcate.
Drop	Drop application packets	N/A	Boolean: • true. • false(default).	N/A
Ratelimit	Rate limit application traffic	N/A	Unsigned integer. Value range: 64 to 10000000	the default unit is kbps.
Remark	Specify marking function	Data structure	Members include: • Dscp • Dot1p	N/A
Dscp	Remark DSCP	N/A	Unsigned integer. Value range: 0 to 63	N/A
Dot1p	Remark 802.1p priority	N/A	Unsigned integer. Value range: 0 to 7	N/A
