Table description

Item	Description
Feature name	UCM
Table name	IPoENASPortID
Table type	Multi-instance table
Row name	NASPortID
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
InsertNasInfo	Insert NAS information to NAS-PORT-ID.	N/A	Enumeration: • 1—Enable. • 2—Disable (default).	N/A
NASPortIDFormat	Format of NAS-PORT-ID.	N/A	Enumeration: • 1—Version1.0 (default). • 2—Version2.0. • 3—Version3.0. • 4—Version4.0.	N/A

UCM/IPoEDhcpAuthDomain

This table contains the information about configuring the IPoE DHCP authentication domain.

XML structure

```
<UCM>
  <IPoEDhcpAuthDomain>
    <DhcpAuthDomain>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
      <Force></Force>
    </DhcpAuthDomain>
```

```
  </IPoEDhcpAuthDomain>
</UCM>
```

Table description

Item	Description
Feature name	UCM
Table name	IPoEDhcpAuthDomain
Table type	Multi-instance table
Row name	DhcpAuthDomain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
DomainName	Domain name.	N/A	String length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A
Force	Forced domain	N/A	Enumeration: • 1—Enable. • 2—Disable (default).	N/A

UCM/IPoEUnclassifiedIPAuthDomain

This table contains the information about configuring the IPoE unclassified-IP authentication domain.

XML structure

```
<UCM>
  <IPoEUnclassifiedIPAuthDomain>
    <UnclassifiedIPAuthDomain>
      <IfIndex></IfIndex>
```

```
      <DomainName></DomainName>
    </UnclassifiedIPAuthDomain>

Table description

Item	Description
Feature name	UCM
Table name	IPoEUnclassifiedIPAuthDomain
Table type	Multi-instance table
Row name	UnclassifiedIPAuthDomain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
DomainName	Domain name.	N/A	String length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A

UCM/IPoEPassword

This table contains the information about configuring IPoE password.

XML structure

```
<UCM>
  <IPoEPassword>
    <Password>
      <IfIndex></IfIndex>
      <PswContext></PswContext>
```

```
      <MacSeparator></MacSeparator>
      <MacIsLowcase></MacIsLowcase>
      <IsCipherText></IsCipherText>
      <PswText></PswText>
    </Password>
  </IPoEPassword>
</UCM>
```

Table description

Item	Description
Feature name	UCM
Table name	IPoEPassword
Table type	Multi-instance table
Row name	Password
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PswContext	Context of password.	N/A	Enumeration: • 1—Use default string “vlan” as password (default). • 2—Use user’s MAC address as password. • 3—Use string as password.	
MacSeparator	Separator of MAC address.	N/A	Char.	Used when the “PswContext” column is 2.
MacIsLowcase	The MAC address is lowercase	N/A	Enumeration: • 1—True (default). • 2—False. • 3—Undefined.	Used when the “PswContext” column is 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
IsCipherText	The string is cipher text.	N/A	Enumeration: • 1—True (default). • 2—False.	Used when the “PswContext” column is 3.
PswText	Password text.	N/A	String.	Used when the “PswContext” column is 3.

UCM/IPoEDhcpPassword

This table contains the information about configuring IPoE Dhcp password.

XML structure

```
<UCM>
  <IPoEDhcpPassword>
    <DhcpPassword>
      <IfIndex></IfIndex>
      <PswContext></PswContext>
      <Option60Offset></Option60Offset>
      <Option60Length></Option60Length>
      <Option60Original></Option60Original>
    </DhcpPassword>
  </IPoEDhcpPassword>
</UCM>
```

Table description

Item	Description
Feature name	UCM
Table name	IPoEDhcpPassword
Table type	Multi-instance table
Row name	DhcpPassword
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PswContext	Context of password.	N/A	Enumeration: • 1—Default (default). • 2—Option60. • 3—MAC in Circuit-id option. • 4—User-class option.	
Option60Offset	Offset in DHCP option60.	N/A	Unsigned integer.	Used when the “PswContext” column is 2.
Option60Length	Length of password.	N/A	Unsigned integer.	Used when the “PswContext” column is 2.
Option60Original	Original mode of password.	N/A	Enumeration: • No (default). • Yes.	Used when the “PswContext” column is 2.

UCM/IPoEDhcp6Password

This table contains the information about configuring IPoE Dhcp v6 password.

XML structure

```
<UCM>
  <IPoEDhcp6Password>
    <Dhcp6Password>
      <IfIndex></IfIndex>
      <PswContext></PswContext>

      <InsertVxlanId></InsertVxlanId>
    </AccessLineId>
  </PppoesAccessLineId>
</UCM>
```

Table description

Item	Description
Feature name	UCM
Table name	PppoesAccessLineId
Table type	Multi-instance table
Row name	AccessLineId
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
InsertBasInfo	Insert BAS information.	N/A	Enumeration: • 1—Not insert (default). • 2—Insert cn-163 format infotmation. • 3—Insert cn-telecom format information.	N/A
CircuitIdParseMode	Parse mode of Circuit-id.	N/A	Enumeration: • 1—cn-telecom. • 2—tr-101 (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CircuitIdTransFormat	Transfer format of Circuit-id.	N/A	Enumeration: • 1—ASCII (default). • 2—HEX.	N/A
IncludeContent	Include content in access line id.	N/A	Enumeration: • 1—Include Circuit-id only (default). • 2—Include Remote-id only. • 3—Include Circuit-id and Remote-id.	N/A
IncludeContentSeparator	The separator between circuit-id and remote-id	N/A	Char	N/A
RemoteIdTransFormat	Transfer format of Remote-id.	N/A	Enumeration: • 1—ASCII (default). • 2—HEX.	N/A
TrustAccessLineId	Trust access line id in packets.	N/A	Enumeration: • 1—Trusted. • 2—Untrusted (default).	N/A
InsertVxlanId	Insert Vxlan information to access line id.	N/A	Enumeration: • 1—Enable. • 2—Disable (default).	N/A

UCM/InterfaceDownPolicy

This table contains the information about using the InterfaceDownPolicy.

XML structure

```
<UCM>
  <InterfaceDownPolicy>
    <DownPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </DownPolicy>
  </InterfaceDownPolicy>

Item	Description
Feature name	UCM
Table name	IPoEWebMacAuthDomain
Table type	Multi-instance table
Row name	MacAuthDomain
Restrictions	None

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
DomainName	Domain name.	N/A	String length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A

UCM/IPoEWebAuthDomain

This table contains the information about using the IPoEWebAuthDomain.

XML structure

```
<UCM>
  <IPoEWebAuthDomain>
    <WebAuthDomain>
      <IfIndex></IfIndex>
      <DomainName></DomainName>
    </WebAuthDomain>
  </IPoEWebAuthDomain>
</UCM>
```

IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
PswContext	Context of password.	N/A	Enumeration: • 1—Use default string “vlan” as password. (default) • 2—Use user’s MAC address as password. • 3—Use string as password.	
MacSeparator	Separator of MAC address.	N/A	Char.	Used when the “PswContext” column is 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
MacIsLowcase	The MAC address is lowercase	N/A	Enumeration: • 1—True. • 2—False. • 3—Undefined. (default)	Used when the “PswContext” column is 2.
IsCipherText	The string is cipher text.	N/A	Enumeration: • 1—True. • 2—False. (default)	Used when the “PswContext” column is 3.
PswText	Password text.	N/A	String.	Used when the “PswContext” column is 3.

UCM/IPoEDhcpPassword

This table contains the information about configuring IPoE Dhcp password.

XML structure

```
<UCM>
  <IPoEDhcpPassword>
    <DhcpPassword>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PswContext></PswContext>
      <Option60Offset></Option60Offset>
      <Option60Length></Option60Length>
      <Option60Original></Option60Original>
    </DhcpPassword>
  </IPoEDhcpPassword>
</UCM>
```

Table description

Item	Description
Feature name	UCM
Table name	IPoEDhcpPassword
Table type	Multi-instance table
Row name	DhcpPassword
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
PswContext	Context of password.	N/A	Enumeration: • 1—Default. (default) • 2—Option60. • 3—MAC in Circuit-id option. • 4—User-class option.	
Option60Offset	Offset in DHCP option60.	N/A	Unsigned integer.	Used when the “PswContext” column is 2.
Option60Length	Length of password.	N/A	Unsigned integer.	Used when the “PswContext” column is 2.
Option60Original	Original mode of password.	N/A	Enumeration: • No. (default) • Yes.	Used when the “PswContext” column is 2.

UCM/IPoEDhcp6Password

This table contains the information about configuring IPoE Dhcp v6 password.

XML structure

```
<UCM>
  <IPoEDhcp6Password>
    <Dhcp6Password>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <PswContext></PswContext>
      <Option16Offset></Option16Offset>
      <Option16Length></Option16Length>
      <Option16Original></Option16Original>
    </Dhcp6Password>
  </IPoEDhcp6Password>
</UCM>
```

Table description

Item	Description

Item	Description
Feature name	UCM
Table name	IPoEDualStackStaticUser
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIPAddr	Start IP address.	Index	String, dotted decimal notation.	N/A
EndIPAddr	End IP address.	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIPv6Addr	Start IPv6 address.	Index	String, dotted decimal notation.	N/A
EndIPv6Addr	End IPv6 address.	Index	String, dotted decimal notation.	N/A
VpnInstance	VPN instance name.	Index	String,Length: 1 to 31 characters.	N/A
UPid	UP ID.	Index	Unsigned integer. Value range: 1024 to 8192	N/A
MacAddr	MAC address.	N/A	String, form:H-H-H	N/A
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfName	Interface name.	N/A	String length: 1 to 47 characters.	The IfName column is read-only.
VlanId	VLAN id.	N/A	Unsigned integer. 1-4094	N/A
SecondVlanId	Secondary VLAN id.	N/A	Unsigned integer. 1-4094	N/A
GatewayIP	Gateway IP address.	N/A	String, dotted decimal notation.	N/A
GatewayIPv6	Gateway IPv6 address.	N/A	String, dotted decimal notation.	N/A
PswUseMac	Use MAC address to password.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A
RequestOnline	Request users logon.	N/A	Enumeration: • 1—Disable. (default) • 2—IPV4 . • 3—IPV6.	N/A
KeepOnline	Keep Online status.	N/A	Enumeration: • 1—Enable. • 2—Disable. (default)	N/A
DomainName	Domain name.	N/A	String, Length: 1 to 255 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A
Description	Description of static user.	N/A	String, Length: 1 to 31 characters. The domain name can't contain the following characters: \ | / : * ? " < > @	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NumInUse	Static user num in use.	N/A	Unsigned integer.	N/A
StaticType	Support static leased user.	N/A	Enumeration: • 1—Enable. • 2—Disable (default).	N/A

Message	Explanation
Domain name can't include \, |, /, :, *, ?, ", <, > or @. 域名不能包含\，|，/，:，*，?，“，<，>，@。	The <DomainName> column can’t include \, |, /, :, *, ?, ", <, > or @. <DomainName>列一定不能包含\，|，/，:，*，?，”，<，>，@。

UCM/IPoEIfEnable

Message	Explanation
Please disable the current IP subscriber access mode first. 请先删除当前IP subscriber access mode。	Please disable the current IP subscriber access mode first. 不能通过重复执行**ip subscriber** { **l2-connected** | **routed** } **enable** 命令修改IPoE的接入模式和协议栈类型。如需修改IPoE的接入模式或协议栈类型，请先通过**undo ip subscriber enable**命令关闭IPoE功能，再执行**ip subscriber enable**命令。

UCM/IPoEPassword

Message	Explanation
Used for MAC config when the PswContext column is 2.	当PswContext 值为2 时只能下发MAC相关属性列。
Used for STRING config when the PswContext column is 3.	当PswContext 值为3 时只能下发STRING相关属性列。
Failed when convert plain text to cipher text.	明文转密文失败。
Failed when check the cipher text.	密文检查失败。
Could not set related columns when the PswContext column is default.	当PswContext 值为缺省值时不能下发相关属性列。
Must set IsCipherText and PswText columns simultaneously when the PswContext column is 3.	当PswContext 值为3 时须同时下发IsCipherText 和PswText。
Could not set colums after PswContext when delete or remove.	当delete 或remove 操作时不能下发PswContext后面四个属性列。
Could not set offset or length colums when delete or remove and PswContext is 3 or 4.	当delete 或remove 操作且PswContext为3或4时不能下发Offset和Length列。

UCM/PppoesAccessLineId

Message	Explanation
Failed when the IncludeContent value is not 3. 在IncludeContent值为3时才能下发。	Failed when the IncludeContent value is not 3. 在IncludeContent值为3时才能下发。

UCM/IPoETrust6Option

Message	Explanation
Please remove the option17 first. 请先删除对OPTION17的配置。 Please remove the option16 first. 请先删除对OPTION16的配置。 option16 and option17 connot issue attribute columns at the same time. OPTION16和OPTION17不能同时下发属性列。	Please remove the option17 first. Option16和option17不能同时下发属性列，如果已经下了option17的属性列，还想下option16属性列，则必须先删除对option17的配置。 Please remove the option16 first. Option16和option17不能同时下发属性列，如果已经下了option16的属性列，还想下option17属性列，则必须先删除对option16的配置。 option16 and option17 connot issue attribute columns at the same time. Option16和option17不能同时下发属性列，由于netconf可以同时配置两个属性列，会显示不能同时配置option16 和option17

UCM/IPoEDhcpPassword&IPoEDhcp6Password

Message	Explanation
Set offset or length columns when the PswContext column is set and it's value is 2. 只有下发PswContext 列且值为2 时才能下发Offset或Length属性列。	Set offset or length columns when the PswContext column is set and it's value is 2. 只有下发<PswContext>列且值为2 时才能下发<Option16Length>或<Option16Offset>属性列。

UCM/IPoEStaticUser&IPoEDualStackStaticUser

Message	Explanation
The start IP address should be less than or equal to the end IP address. 起始IP地址应小于或等于结束IP地址。	The start IP address should be less than or equal to the end IP address. <StartIPAddr>地址应小于或等于<EndIPAddr>地址。

UCM/IPoEv6StaticUser&IPoEDualStackStaticUser

Message	Explanation
The start IPv6 address should be less than or equal to the end IPv6 address. 起始IPv6地址应小于或等于结束IPv6地址。 IPv6 is not support L3VE. IPv6不支持L3VE	The start IPv6 address should be less than or equal to the end IPv6 address. <StartIPv6Addr>地址应小于或等于<EndIPv6Addr>地址。 IPv6 is not support L3VE. IPv6不支持L3VE

UCM/IPoEDualStackStaticUser

Message	Explanation
The number of IPv4 is different from that of IPv6. IPv4的数量与IPv6的数量不同。	The number of IPv4 is different from that of IPv6. 配置IPv4的数量与配置IPv6的数量不同。

UCM/IPoEv6StaticUser&IPoEDualStackStaticUser&IPoEStaticUser

Message	Explanation
The total number of IP addresses in the specified IP address range cannot exceed 256. 指定IP地址范围内的IP地址总数不能超过256。 VPN-Instance does not exist. VPN-Instance不存在。 The IP address range contains an existing IP. IP地址范围包含现有IP。 operation failed. Please configure the VLAN first. 操作失败。请先下VLAN配置。 Please remove the static session configuration first. 操作失败。请先下子接口配置。 Please remove the subnet-leased configuration from the specified interface first. 如果指定了VLAN，则接口必须是子接口。 Please remove the static session configuration first. 请先删除静态会话配置。 Please remove the subnet-leased configuration first. 请先删除子网租用配置。 Please remove the interface-leased configuration from the specified interface first.	The total number of IP addresses in the specified IP address range cannot exceed 256. <StartIPAddr>和<EndIPv6Addr>所包含的IP地址不能超过256，IPoEv6StaticUser表同样如此。 VPN-Instance does not exist. 如果你输入的<VpnInstance>接口不是你配置的VPN-Instance，则会显示VPN-Instance不存在。 The IP address range contains an existing IP. IP地址范围包含现有IP。 operation failed. Please configure the VLAN first. 操作失败。请先下VLAN配置。 Please remove the static session configuration first. 操作失败。请先下子接口配置。 Please remove the subnet-leased configuration from the specified interface first. 如果指定了VLAN，则接口必须是子接口。 Please remove the static session configuration first. 请先删除静态会话配置。 Please remove the subnet-leased configuration first. 请先删除子网租用配置。 Please remove the interface-leased configuration from the specified interface first. 请先从指定接口删除子网租用配置。

请先从指定接口删除子网租用配置。 Please remove the interface-leased configuration first. 请先删除接口租用的配置。 Please remove the l2vpn-leased configuration from the specified interface first. 请先从指定接口删除l2vpn租用配置。 Please remove the l2vpn-leased configuration first. 请先删除l2vpn租用的配置。 Please remove the initiator unclassified-ip configuration first. 请先删除发起程序unclassified-ip配置。 Please remove the initiator unclassified-ipv6 configuration first. 请先删除发起程序unclassified-ipv6配置。 The sessions configured for an interface cannot contain sessions that already exist on the interface. 为接口配置的会话不能包含接口上已存在的会话。 Operation failed.Can't undo static config as Ucm thread is using! 操作失败。无法撤消静态配置，因为Ucm线程正在使用！ Operation failed. The static config failed to apply for IP address from the AM! 操作失败。静态配置无法从AM申请IP地址！ Operation failed. Please enable DHCP first. 操作失败。请先启用DHCP。 Operation failed.This configuration is supported only when IPoE works in dual-stack mode. 操作失败。仅当IPoE在双栈模式下工作时，才支持此配置。 Operation failed. 操作失败。 VPN name conflict when undo operation. undo操作时VPN名称冲突。 Operation failed.Please first forbid the IP addresses specified in the static session in AM. 操作失败。请先禁止AM中静态会话中指定的IP地址。 operation failed. Please configure the interface first. 操作失败。请先下接口配置。	Please remove the interface-leased configuration first. 请先删除接口租用的配置。 Please remove the l2vpn-leased configuration from the specified interface first. 请先从指定接口删除l2vpn租用配置。 Please remove the l2vpn-leased configuration first. 请先删除l2vpn租用的配置。 Please remove the initiator unclassified-ip configuration first. 请先删除发起程序unclassified-ip配置。 Please remove the initiator unclassified-ipv6 configuration first. 请先删除发起程序unclassified-ipv6配置。 The sessions configured for an interface cannot contain sessions that already exist on the interface. 为接口配置的会话不能包含接口上已存在的会话。 Operation failed.Can't undo static config as Ucm thread is using! 操作失败。无法撤消静态配置，因为Ucm线程正在使用！ Operation failed. The static config failed to apply for IP address from the AM! 操作失败。静态配置无法从AM申请IP地址！ Operation failed. Please enable DHCP first. 操作失败。请先启用DHCP。 Operation failed.This configuration is supported only when IPoE works in dual-stack mode. 操作失败。仅当IPoE在双栈模式下工作时，才支持此配置。 Operation failed. 操作失败。 VPN name conflict when undo operation. undo操作时VPN名称冲突。 Operation failed.Please first forbid the IP addresses specified in the static session in AM. 操作失败。请先禁止AM中静态会话中指定的IP地址。 operation failed. Please configure the interface first. 操作失败。请先下接口配置。

Message	Explanation
Failed to associate the track entry. Track绑定失败。	Invalid configuration, please modify configuration under the guidance.
Failed to get DBM handle. 获取UpBackup模块的配置数据库失败。	Invalid configuration, please modify configuration under the guidance.
Failed to remove association with the track entry. Track去绑定失败。	Invalid configuration, please modify configuration under the guidance.
Failed to notify CP device that the UP device and Track association had been removed. UP上去绑定Track后，上送消息给CP失败。	Invalid configuration, please modify configuration under the guidance.
This command only applies to the UP device. 在CP上进行绑定Track操作。	Invalid configuration, please modify configuration under the guidance.

UpBackup

UpBackup/Service

This table contains UP backup log information.

XML structure

```
<UpBackup>
  <Service>
    <Log></Log>
  </Service>
</UpBackup>
```

Table description

Item	Description
Feature name	UpBackup
Table name	Service
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Log	Whether or not to enable logging	N/A	Boolean: • true • false	N/A

UpBackup/Profiles

This table contains UP backup profile information.

XML structure

```
<UpBackup>
  <Profiles>
    <Profile>
      <Id></Id>
      <Mode></Mode>
      <IfBackupMode></IfBackupMode>
      <LoadBalanceMode></LoadBalanceMode>

Table description

Item	Description
Feature name	UpBackup
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Id	Profile ID	Index	Unsigned integer. Value range: 1 to 16384.	N/A
Mode	Profile mode	N/A	Enumeration: String, case-insensitive. Values include: • hot-standby • warm-standby • load-balance	N/A
IfBackupMode	Interface backup mode	N/A	Enumeration: String, case-insensitive. • inherit-main • no-inherit	N/A
LoadBalanceMode	Load balancing mode	N/A	Enumeration: String, case-insensitive. • device • slot • interface	N/A
WarmStandbyIf	Backup interface in warm-standby mode	N/A	String. Length: 2 to 47 characters.	N/A

WarmStandbyIfState	Backup interface state	N/A	Enumeration: • 0—master • 1—backup • 2—failed	N/A
Interfaces	Interface configuration	Sublist	N/A	For more information, see the Interfaces table.
BackupRouteAdvertise	Route advertisement configuration	Subtable	N/A	For more information, see the BackupRouteAdvertise table.
NasLogicPort	NAS logical interface name	N/A	String. Length: 2 to 47 characters.	N/A
FailureRecoverySwitch	Interface state switchover upon failure recovery	N/A	Boolean: • true • false	N/A
FailureRecoverySwitchDelay	Switchover delay time	N/A	Unsigned integer. Value range:1 to 1800 seconds	N/A
UPs	UP peer Track and CUSP configuration	Sublist	N/A	For more information, see the UPs table.

UpBackup/Profiles/Interfaces

This table contains interface information about a UP backup profile.

XML structure

Please refer to the XML structure of UpBackup/Profiles.

Table description

Item	Description
Feature name	UpBackup

Item	Description
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Master	Master interface name	N/A	String. Length: 2 to 47 characters.	N/A
MasterState	Master interface state	N/A	Enumeration: • 0—master • 1—backup	N/A
Standby	Backup interface name	N/A	String. Length: 2 to 47 characters.	N/A
StandbyState	Backup interface state	N/A	Enumeration: • 0—master • 1—backup	N/A
VRID	Virtual router ID	N/A	Unsigned integer. Value range: 1 to 255.	N/A
ResourceID	Resource ID	N/A	Unsigned integer. Value range:1 to 65535.	N/A

UpBackup/Profiles/BackupRouteAdvertises

This table contains route advertisement information about a UP backup profile.

XML structure

Please refer to the XML structure of UpBackup/Profiles.

Table description

Item	Description
Feature name	UpBackup
Table name	BackupRouteAdvertise
Table type	Multi-instance table
Row name	BackupRouteAdvertise
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable backup route advertisement	N/A	Boolean: • True • false	N/A
MasterCost	Route cost for the master interface	N/A	Unsigned integer. Value range: 0 to 4261412863	N/A
BackupCost	Route cost for the backup interface	N/A	Unsigned integer. Value range: 1 to 4261412864	N/A

UpBackup/Profiles/UPs

This table contains Control-Tunnel and peer UP Track association information.

XML structure

Please refer to the XML structure of UpBackup/Profiles.

Table description

Item	Description
Feature name	UpBackup
Table name	UPs
Table type	Multi-instance table
Row name	UP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpId	UP ID	Index	Unsigned integer.	N/A
UpLinkName	The name of UP link group	N/A	String. Length: 1 to 31 characters.	N/A
CuspSwitch	Interface state switchover upon CUSP connection failure	N/A	Boolean: • true • false	N/A
CuspSwitchDelay	Switchover delay time	N/A	Unsigned integer. Value range: 1 to 1800 seconds.	N/A
UpPeerId	UP peer ID	Index	Unsigned integer.	N/A
UpPeerName	The name of UP peer	N/A	String. Length: 1 to 31 characters.	N/A

UpBackup/Switchover

This table contains Control-Tunnel and Track association information.

XML structure

```
<UpBackup>
  <Switchover>
    <ControlDownSwitchTrackID></ControlDownSwitchTrackID>
  </Switchover>
</UpBackup>
```

Table description

Item	Description
Feature name	UpBackup
Table name	Switchover
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlDownSwitchTrackID	ID of the track entry used to determine whether or not to perform interface state switchover upon CUSP connection failure	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

UpBackup/TrackSwitchs

This table contains UP device and Track association information.

XML structure

```
<UpBackup>
  <TrackSwitchs>
    <TrackSwitch>
      <TrackEntryID></TrackEntryID>
      <TrackEntryName></TrackEntryName>
    </TrackSwitch>
  </TrackSwitchs>
</UpBackup>
```

Table description

Item	Description
Feature name	UpBackup
Table name	TrackSwitchs
Table type	Multi-instance table
Row name	TrackSwitch
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackEntryID	Track entry ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackEntryName	The Group Name of Track entry ID	N/A	String. Length: 1 to 31 characters.	N/A

UpBackup/TrackUpPeers

This table contains UP device and peer UP Track association information.

XML structure

```
<UpBackup>
  <TrackUpPeers>
    <TrackUpPeer>
      <TrackEntryID></TrackEntryID>
      <UpPeerName></UpPeerName>
    </TrackUpPeer>
  </TrackUpPeers>
</UpBackup>
```

Table description

Item	Description
Feature name	UpBackup
Table name	TrackUpPeers
Table type	Multi-instance table
Row name	TrackUpPeer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackEntryID	Track entry ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
UpPeerName	Name of peer UP	N/A	String. Length: 1 to 31 characters.	N/A

UpBackup

UpBackup/Service

Message	Explanation
Service failed to start. UpBackup进程未启动失败。	Invalid configuration, please modify configuration under the guidance.
Incorrect length of received data. 接受数据长度不正确。	Invalid configuration, please modify configuration under the guidance.

UpBackup/Profiles

Message	Explanation
When creating a profile, you must specify the backup mode. 创建Profile时没有携带Mode参数（Mode为创建Profile必须配置参数）。	Invalid configuration, please modify configuration under the guidance.
Modifying backup mode is not allowed. 不允许修改UP备份Profile的备份模式。	Invalid configuration, please modify configuration under the guidance.
Cannot delete a UP backup profile that has online users.删除有上线用户的Profile。	Invalid configuration, please modify configuration under the guidance.
Failed to create the profile. 创建Profile失败。	Invalid configuration, please modify configuration under the guidance.
Cannot set ControlDownSwitchDelay column when ControlDownSwitch column is false.当ControlDownSwitch属性列值为false时不能设置ControlDownSwitchDelay属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set FailureRecoverySwitchDelay column when FailureRecoverySwitch column is false. 当FailureRecoverySwitch属性列值为false时不能设置FailureRecoverySwitchDelay属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set IfBackupMode column when the profile isn't hot standby mode. 非热备模式不能设置IfBackupMode属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set LoadBalanceMode column when the profile is hot standby mode. 热备模式不能设置LoadBalanceMode属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set WarmStandbyIf column when the profile isn't warm standby mode. 非温备模式下不能设置WarmStandbyIf属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set FailureRecoverySwitch and FailureRecoverySwitchDelay columns when the profile is load balancing mode.	Invalid configuration, please modify configuration under the guidance.

负载分担模式下不能设置FailureRecoverySwitch和FailureRecoverySwitchDelay属性列。	
Cannot set NasLogicPort column when the profile is load balancing mode. 负载分担模式下不能设置NasLogicPort属性列。	Invalid configuration, please modify configuration under the guidance.
Invalid NAS logical interface. 无效的NAS逻辑接口。	Invalid configuration, please modify configuration under the guidance.
Cannot set ControlDownSwitch and ControlDownSwitchDelay columns when the profile is load balancing mode. 负载分担模式下不能设置ControlDownSwitch和ControlDownSwitchDelay。	Invalid configuration, please modify configuration under the guidance.
The VRID cannot be changed. VRID不能改变。	Invalid configuration, please modify configuration under the guidance.

UpBackup/Profiles/Interfaces

Message	Explanation
Cannot create or delete an interface that has online users.删除有上线用户的备份关系。	Invalid configuration, please modify configuration under the guidance.
The specified remote interface is not ready.远程接口还未就绪。	Invalid configuration, please modify configuration under the guidance.
The master interface cannot be on the same UP device as the backup interface. 不能在同一个UP上配置备份关系。	Invalid configuration, please modify configuration under the guidance.
The backup interface cannot be modified. 不能修改备接口配置。	Invalid configuration, please modify configuration under the guidance.
The VRID must be unique for each master interface in a UP backup profile in warm-standby mode. 同一温备profile下，VRID不能相同。	Invalid configuration, please modify configuration under the guidance.
All master or backup interfaces in a profile must be on the same UP device. 所有主接口或备接口必须在同一个UP上。	Invalid configuration, please modify configuration under the guidance.
Please configure the backup interface first. 温备模式必须先配置备接口。	Invalid configuration, please modify configuration under the guidance.
Backup interface configuration is not supported in a UP backup profile with load-balance mode. 负载分担模式不支持配置备接口。	Invalid configuration, please modify configuration under the guidance.
Cannot configure VRID in a UP backup profile with load-balance mode. 负载分担模式不支持配置VRID。	Invalid configuration, please modify configuration under the guidance.
Cannot delete the backup interface because the master interface has already been configured. 温备模式下配置主接口后不能删除备接口。	Invalid configuration, please modify configuration under the guidance.
The master and backup interfaces must be both	Invalid configuration, please modify configuration under the

main interfaces or subinterfaces. 主备接口必须全是主接口或者子接口。	guidance.
Cannot specify subinterfaces in inherit-main interface backup mode. inherit-main接口模式下不能配置子接口。	Invalid configuration, please modify configuration under the guidance.
The VRID of interface pair and its subinterface pairs must be same. 主接口和子接口的VRID必须相同。	Invalid configuration, please modify configuration under the guidance.
The master and backup interfaces cannot be on the same UP device. 主备接口不能在同一个up上。	Invalid configuration, please modify configuration under the guidance.
The interface is in use。 接口已被使用。	Invalid configuration, please modify configuration under the guidance.
The master or backup subinterfaces must belong to the same main interface. 主接口之间的主备关系和其子接口之间的主备关系需保持一致。	Invalid configuration, please modify configuration under the guidance.
Cannot change interface backup mode when master and backup interfaces configuration exist. 当主备接口配置已存在时不能改变接口模式。	Invalid configuration, please modify configuration under the guidance.
Cannot delete the master interface that has been taken over by a backup interface. 不能删除被备接口接管工作的主接口。	Invalid configuration, please modify configuration under the guidance.
You must set the Standby column when the profile is hot standby mode. 热备模式必须设置Standby属性列。	Invalid configuration, please modify configuration under the guidance.
You must set the VRID column when the profile is hot or warm standby mode. 热备或者温备模式下必须设置VRID属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set the Standby column when the profile isn't hot standby mode. 非热备模式下不能设置Standby属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set the VRID column when the profile is load balancing mode. 负载分担模式下不能设置VRID属性列。	Invalid configuration, please modify configuration under the guidance.
All interfaces in a UP backup profile must be in the same UP backup group. 主备接口必须在同一个UP备份组中。	Invalid configuration, please modify configuration under the guidance.
The backup interface is not in a UP backup group. 备接口不再UP备份组中。	Invalid configuration, please modify configuration under the guidance.
The master interface is not in a UP backup group. 主接口不再UP备份组中	Invalid configuration, please modify configuration under the guidance.
Only main interfaces are supported. 只支持主接口。	Invalid configuration, please modify configuration under the guidance.
Cannot set the ResourceID column when the	Invalid configuration, please modify configuration under the

profile isn't hot standby mode. 非热备模式下不能设置ResourceID属性列。	guidance.
The resource ID cannot be changed. resource ID不能改变。	Invalid configuration, please modify configuration under the guidance.
The resource ID must be unique for each pair of master and backup interfaces. resource ID不能相同。	Invalid configuration, please modify configuration under the guidance.
The subinterface of the main interface has already been specified for another profile in no-inherit mode. 接口的子接口已经被配置在其他profile中。	Invalid configuration, please modify configuration under the guidance.
The main interface of the subinterface has already been specified for another profile in inherit-main mode. 子接口的主接口已经被配置在其他profile中。	Invalid configuration, please modify configuration under the guidance.

UpBackup/Profiles/BackupRouteAdvertises

Message	Explanation
Master's route cost must be lower than the backup's route cost. 主接口路由cost值必须低于备接口路由cost值。	Invalid configuration, please modify configuration under the guidance.
Cannot set the BackupRouteAdvertise column when the profile is load balancing mode. 负载分担模式下不能设置BackupRouteAdvertise属性列。	Invalid configuration, please modify configuration under the guidance.
Cannot set the MasterCost and BackupCost columns when the Enable column is false. 当Enable属性列值为false时，不能设置MasterCost和BackupCost属性列。	Invalid configuration, please modify configuration under the guidance.

UpBackup/Profiles/UPs

Message	Explanation
The specified UPs must belong to the same UP backup group. Up-id和监控的up-id，必须在同一个备份组下面，否则提示错误。	Invalid configuration, please modify configuration under the guidance.
Duplicate IDs for the UPs. 配置中两个up-id不能重复。	Invalid configuration, please modify configuration under the guidance.
The UP has not been added to any UP backup group. up-id未加入备份组。	Invalid configuration, please modify configuration under the guidance.
The peer UP or peer name has already been specified.	Invalid configuration, please modify configuration under the guidance.

对端UP或对端track名已被使用。	

UpBackup/TrackSwitchs

Message	Explanation
The number of track entries associated with the UP device has reached the upper limit. UP设备关联的TRACK项达到上限。	Invalid configuration, please modify configuration under the guidance.

UpBackup/TrackUpPeers

Message	Explanation
The number of track entries associated with the UP device has reached the upper limit. UP设备关联的TRACK项达到上限。	Invalid configuration, please modify configuration under the guidance.

Table description

Item	Description
Feature name	Upmgr
Table name	UPs

Item	Description
Table type	Multi-instance table
Row name	UP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	UP ID.	Index	Unsigned integer. Value range: 1024 to 1279.	N/A
Capacity	UP capacity.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of UP.	N/A	String, Length: 1 to 255 characters. Not configured by default.	N/A
SlotID	UP slot ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RemoteInterfaces	Remote interface list of UP.	Sublist	N/A	See the table Upmgr/UPs/RemoteInterfaces
CPProtocolTunnels	Protocol tunnel list of CP.	Sublist	N/A	See the table Upmgr/UPs/CPProtocolTunnels
UPProtocolTunnels	Protocol tunnel list of UP.	Sublist	N/A	See the table Upmgr/UPs/UPProtocolTunnels

Upmgr/UPs/RemoteInterfaces

This table contains the remote interface list of a UP ID in a CP.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	RemoteInterfaces
Table type	Multi-instance table
Row name	RemoteInterface

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
RemoteIfName	Remote interface name	Index	String, Length: 1 to 47 characters. Not configured by default.

Upmgr/UPs/CPProtocolTunnels

This table contains configuration of CUPS vBNG CP interfaces.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	CPProtocolTunnels
Table type	Multi-instance table
Row name	CPProtocolTunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID of the VM's protocol tunnel.	Index	Unsigned integer. Value range: 1 to 16777215.	
SourceIpAddress	Source address of the VM's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::

DestIpAddress	Destination address of the VM's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
VpnName	Configured VPN name of the VM's protocol tunnel.	N/A	String, Length: 1 to 31 characters. Not configured by default.	

Upmgr/UPs/UPProtocolTunnels

This table contains configuration of CUPS vBNG UP interfaces.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPProtocolTunnels
Table type	Multi-instance table
Row name	UPProtocolTunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID of the UP's protocol tunnel.	Index	Unsigned integer. Value range: 1 to 16777215.	
SourceIpAddres s	Source address of the UP's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
DestIpAddress	Destination address of the UP's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::

VpnName	Configured VPN name of the UP's protocol tunnel.	N/A	String, Length: 1 to 31 characters. Not configured by default.	

Upmgr/BrasScale

This table contains BRAS scaling information.

XML structure

```
<Upmgr>
  <BrasScale>
    <Enable></Enable>
  </BrasScale>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	BrasScale
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Automatic expansion and reduction of BRAS VM users.	N/A	Boolean: • true • false	N/A

Upmgr/DelayTime

This table contains BRAS scaling delay time information.

XML structure

```
<Upmgr>
  <DelayTime>
    <Interval></Interval>
```

```
  </DelayTime>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	DelayTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Delay time interval for automatic expansion and reduction of BRAS VM users.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UPCountThreshold

This table contains the UP count threshold information.

XML structure

```
<Upmgr>
  <UPCountThreshold>
    <HighThreshold></HighThreshold>
  </UPCountThreshold>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPCountThreshold
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThreshold	UP count upper threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UserCountThreshold

This table contains the user count threshold information.

XML structure

```
<Upmgr>
  <UserCountThreshold>
    <HighThreshold></HighThreshold>
    <LowThreshold></LowThreshold>
    <AlertThreshold></AlertThreshold>
  </UserCountThreshold>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UserCountThreshold
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThreshold	UP user count upper threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
LowThreshold	UP user count lower threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
AlertThreshold	UP user count alert threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UPBackupGroups

This table contains UP backup group information.

XML structure

```
<Upmgr>
  <UPBackupGroups>
    <UPBackupGroup>
      <GroupName></GroupName>
      <VsrpPort></VsrpPort>
      <UPs>

Table description

Item	Description
Feature name	Upmgr

Item	Description
Table name	UPs
Table type	Multi-instance table
Row name	UP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	UP ID.	Index	Unsigned integer. Value range: 1024 to 1279.	N/A
Capacity	UP capacity.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of UP.	N/A	String, Length: 1 to 255 characters. Not configured by default	N/A
SlotID	UP slot ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPProtocolTunnels	Protocol tunnel list of CP.	Sublist	N/A	See the table Upmgr/UPs/CPProtocolTunnels
UPProtocolTunnels	Protocol tunnel list of UP.	Sublist	N/A	See the table Upmgr/UPs/UPProtocolTunnels
RemoteInterfaces	Remote interface list of UP.	Sublist	N/A	See the table Upmgr/UPs/RemoteInterfaces

Upmgr/UPs/RemoteInterfaces

This table contains the remote interface list of a UP ID in a CP.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	RemoteInterfaces
Table type	Multi-instance table
Row name	RemoteInterface

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
RemoteIfName	Remote interface name.	Index	String, Length: 1 to 47 characters. Not configured by default.
IfName	Local interface name.	N/A	String, Length: 1 to 47 characters. Not configured by default.

Upmgr/UPs/CPProtocolTunnels

This table contains configuration of CUPS vBNG CP interfaces.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	CPProtocolTunnels
Table type	Multi-instance table
Row name	CPProtocolTunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID of the VM's protocol tunnel.	Index	Unsigned integer. Value range: 1 to 16777215.	
SourceIpAddress	Source IP address of the VM's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::

DestIpAddress	Destination IP address of the VM's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
VpnName	Configured VPN name of the VM's protocol tunnel.	N/A	String, Length: 1 to 31 characters. Not configured by default.	
State	State of VM's protocol tunnel.	N/A	String, Length: 1 to 31 characters.	Example: Up,or Down

Upmgr/UPs/UPProtocolTunnels

This table contains configuration of CUPS vBNG UP interfaces.

XML structure

```
Please refer to the XML structure of Upmgr/UPs.
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPProtocolTunnels
Table type	Multi-instance table
Row name	UPProtocolTunnel
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID of the UP's protocol tunnel.	Index	Unsigned integer. Value range: 1 to 16777215.	
SourceIpAddres s	Source address of the UP's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::

DestIpAddress	Destination address of the UP's protocol tunnel.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
VpnName	Configured VPN name of the UP's protocol tunnel.	N/A	String, Length: 1 to 31 characters. Not configured by default.	

Upmgr/BrasScale

This table contains BRAS scaling information.

XML structure

```
<Upmgr>
  <BrasScale>
    <Enable></Enable>
  </BrasScale>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	BrasScale
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Automatic expansion and reduction of BRAS VM users.	N/A	Boolean: • true • false	N/A

Upmgr/DelayTime

This table contains BRAS scaling delay time information.

XML structure

```
<Upmgr>
  <DelayTime>
    <Interval></Interval>
  </DelayTime>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	DelayTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Delay time interval for automatic expansion and reduction of BRAS VM users.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UPCountThreshold

This table contains the UP count threshold information.

XML structure

```
<Upmgr>
  <UPCountThreshold>
    <HighThreshold></HighThreshold>
  </UPCountThreshold>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPCountThreshold
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThreshold	UP count upper threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UserCountThreshold

This table contains the user count threshold information.

XML structure

```
<Upmgr>
  <UserCountThreshold>
    <HighThreshold></HighThreshold>
    <LowThreshold></LowThreshold>
    <AlertThreshold></AlertThreshold>
  </UserCountThreshold>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UserCountThreshold
Table type	Single-instance table
Row name	None
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HighThreshold	UP user count upper threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
LowThreshold	UP user count lower threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
AlertThreshold	UP user count alert threshold for automatic expansion and reduction.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Upmgr/UPBackupGroups

This table contains UP backup group information.

XML structure

```
<Upmgr>
  <UPBackupGroups>
    <UPBackupGroup>
      <GroupName></GroupName>
      <VsrpPort></VsrpPort>
      <UPs>
        <UP>
          <ID></ID>
          <IpAddress></IpAddress>
        </UP>
      </UPs>
    </UPBackupGroup>
  </UPBackupGroups>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPBackupGroups
Table type	Multi-instance table
Row name	UPBackupGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	UP backup group name.	N/A	String. Length: 1 to 32 characters.	N/A
VsrpPort	VSRP port of the UP backup group.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
UPs	UP information.	Sublist	N/A	See the table Upmgr/UPBackupGroups/UPs

Upmgr/UPBackupGroups/UPs

This table contains UP information.

XML structure

```
<Upmgr>
  <UPBackupGroups>
    <UPBackupGroup>
      <UPs>
        <UP>
          <ID></ID>
          <IpAddress></IpAddress>
        </UP>
      </UPs>
    </UPBackupGroup>
  </UPBackupGroups>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UPBackupGroups/UPs
Table type	Multi-instance table
Row name	UP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	UP ID.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
IpAddress	Address of the UP.	N/A	String, dotted decimal notation.	N/A

Upmgr/UpAssociateInfos

This table contains information about associated UPs.

XML structure

```
<Upmgr>
  <UpAssociateInfos>
    <UpAssociateInfo>
      <SlotID></SlotID>
      <UpList></UpList>
    </UpAssociateInfos>
  </UpAssociateInfos>
</Upmgr>
```

Table description

Item	Description
Feature name	Upmgr
Table name	UpAssociateInfos
Table type	Multi-instance table
Row name	UpAssociateInfo
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SlotID	Main slot number of a BRAS-VM.	Index	Unsigned integer. Value range: 0 to 65535.	Example: 97
UpList	Specify UP devices by their IDs.	N/A	String. Length: 0 to 511 characters.	Example: 2000, 2002, 2009

Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
Location	Location of the file.	N/A	Enumeration: • 0—Local • 1—remote	If Location is set to 0, the device deletes the signature file when the signature library update is completed.
Sort	Sort of the update signature	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/SignatureRollback

This table is used to rollback signature file.

XML structure

```
<UFLT>
  <SignatureRollback>
    <Rollback></Rollback>
    <Sort></Sort>
  </SignatureRollback>
</UFLT>
```

Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureRollback
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	Rollback flag	N/A	Enumeration: • 0—Roll back to the original version • 1—Roll back to the last version	N/A
Sort	Sort of the rollback	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/PolicyCopy

This table is used to copy a policy to create a new policy

XML structure

```
<UFLT>
  <PolicyCopy>
    <Policy>
```

```
      <SrcPolicy></SrcPolicy>
      <DstPolicy></DstPolicy>
    </Policy>
  </PolicyCopy>
</UFLT>
```

Table description

Feature name	UFLT
Table name	PolicyCopy
Table type	Single-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPolicy	Source policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstPolicy	Destination policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

UFLT/PolicyRename

This table is used to rename a policy.

XML structure

```
<UFLT>
  <PolicyRename>
    <Policy>
      <PolicyOldName></PolicyOldName>
      <PolicyNewName></PolicyNewName>
    </Policy>
  </PolicyRename>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT

Table name	PolicyRename
Table type	Single-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyOldName	Old name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
PolicyNewName	New name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

UFLT/CategoryRename

This table is used to rename a category.

XML structure

```
<UFLT>
  <CategoryRename>
    <Category>
      <CategoryOldName></CategoryOldName>
      <CategoryNewName></CategoryNewName>
    </Category>
  </CategoryRename>
</UFLT>
```

Table name	CategoryRename
Table type	Single-instance table
Row name	Category
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryOldName	Old name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
CategoryNewName	New name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

UFLT/StatisticReset

This table is used to reset URL filter statistics

XML structure

```
<UFLT>
  <StatisticReset>
    <Reset/>
  </StatisticReset>
</UFLT>
```

Table description

Item	Description
Feature name	URL
Table name	StatisticReset
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reset	Reset statistics information	N/A	This column must be empty.	N/A

UFLT/SignatureAutoUpgradeNow

This table is used to update signature automatically now.

XML structure

```
<UFLT>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
    <Sort></Sort>
  </SignatureAutoUpgradeNow>
</UFLT>
```

Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgradeNow	Immediate auto upgrade	N/A	This column must be empty.	N/A
Sort	Sort of the auto update	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

RuleID	RuleID	Index	Unsigned Integer Value range: 1 to 65535	N/A
HostType	Host type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
HostName	Host name	N/A	If host type is text: • String, case-insensitive • Length: 3 to 224 characters If host type is regex: • OctectString • Length: 3 to 224 characters	N/A
URIType	URI type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
URIString	URI string	N/A	If URI type is text: • String, case-insensitive • Length: 3 to 255 characters If URI type is regex: • OctectString • Length: 3 to 253 characters	N/A

UFLT/BlackWhiteList

This table contains information about blacklist and whitelist.

XML structure

```
<UFLT>
  <BlackWhiteList>
    <PolicyRule>
      <PolicyName></PolicyName>
      <BlackOrWhite></BlackOrWhite>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIString></URIString>
    </PolicyRule>
  </BlackWhiteList>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	BlackWhiteList
Table type	Multi-instance table
Row name	PolicyRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String, case-insensitive Length: 1 to 31 characters	Case insensitive
BlackOrWhite	Blacklist or whitelist	Index	Enumeration: • **1**—Whitelist • **2**—Blacklist	N/A
RuleID	Rule ID	Index	Unsigned Integer: 1-65535	N/A
HostType	Host type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
HostName	Host name	N/A	If host type is text: • String, case-insensitive • Length: 3 to 224 characters If URI type is regex: • OctectString	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• Length: 3 to 224 characters	
URIType	URI type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
URI String	URI string	N/A	If URI type is text: • String, case-insensitive • Length: 3 to 245 characters If URI type is regex: • OctectString • Length: 3 to 245 characters	N/A

UFLT/SignatureAutoUpgrading

This table contains information about auto upgrading of URL filter signatures.

XML structure

```
<UFLT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
    <Sort></Sort>
  </SignatureAutoUpgrading>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true	Default is false

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false	
StartTime	Time when the system performs auto upgrading	N/A	Time. Format: HH:MM:SS	Default: 02:00:00.
Type	Type of the system auto upgrading	N/A	Enumeration: • **0**—Week • **1**—Periodic	Default is 1.
Day	Days	N/A	Unsigned integer Value range: 0 to 6	When Type is **0**, the value range is 0 to 6. Otherwise, the value is invalid.
Sort	Sort of the system auto upgrading	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/CacheConfig

This table contains information about the cache configuration.

XML structure

```
<UFLT>
  <CacheConfig>
    <DomainName></DomainName>
  </CacheConfig>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	CacheConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	N/A	String, case-insensitive Length: 1 to 255 characters	N/A

UFLT/ActionInstance

This table contains action instance information.

XML structure

```
<UFLT>
  <ActionInstance>
    <InstanceConfig>
      <ActionType></ActionType>
      <InstanceName></InstanceName>
    </InstanceConfig>
  </ActionInstance>
</UFLT >
```

Table description

Item	Description
Feature name	UFLT
Table name	ActionInstance
Table type	Multi -instance table
Row name	InstanceConfig
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionType	Action	Index	Enumeration: • **1**—Logging • **2**—Redirect • **3**—Block	N/A
InstanceName	Instance name	N/A	String, case-insensitive Length: 1 to 63 characters	N/A

UFLT/CloudQueryConfig

This table contains cloud query configure information.

XML structure

```
<UFLT>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	CloudQueryConfig
Table type	Single -instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Cache size	N/A	Unsigned Integer. Value range: 8192 to 65535.	Default is 16384.
CacheTime	Aging time of cache entries	N/A	Unsigned Integer. Value range: 10 to 720 minutes.	Default is 10 minutes.

UFLT/Status

This table contains URL reputation status information.

XML structure

```
<UFLT>
  <Status>
    <ServiceEnable></ServiceEnable>
    <StatisticsEnable></StatisticsEnable>
```

```
  </Status>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	Status
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceEnable	Enabling status of the URL reputation feature	Index	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
StatisticsEnable	Enabling status of the statistic collection feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

UFLT/AttackCategory

This table contains attack category information.

XML structure

```
<UFLT>
  <AttackCategory>
    <AttackConfig>
      <PolicyName></PolicyName>
      <AttackID></AttackID>
      <AttackName></AttackName>
      <Action></Action>
      <Logging></Logging>
      <Instance></Instance>
    </AttackConfig>
  </AttackCategory>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	AttackCategory
Table type	Multi-instance table
Row name	AttackConfig
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
AttackID	ID of the attack category	Index	Unassigned integer. Value range: 0 to 65535.	N/A
AttackName	Name of the attack category	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Action for the attack category	N/A	Enumeration: • **1**—Permit. • **2**—Deny.	N/A
Logging	Enabling status of the logging feature	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
Instance	Action Instance	N/A	String, case-insensitive Length: 1 to 63 characters	N/A

Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String: case-insensitive Length: 1 to 31 characters	N/A
DefaultAction	Default action	N/A	Enumeration: • **0**—Permit • **1**—Drop	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Reset • **3**—Redirect • 4—Block	
DefaultActInstance	Default action Instance	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
DefaultActLoggingEnable	Default action logging switch	N/A	Enumeration: • **0**—Disable • **1**—Enable	N/A
DefaultActLogging	Default action logging instance	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
CloudQuery	CloudQuering	N/A	Enumeration: • **1**—Enable • **2**—Disable	N/A
HttpsFilter	Enabling status of the HTTPS filter	N/A	Enumeration: • **0**—Disable • **1**—Enable	Default is 0
RefererWhitelist	Enabling status of RefererWhite	N/A	Enumeration: • **0**—Disable • **1**—Enable	Default is 1
WhitelistOnly	Enabling status of WhiteOnly	N/A	Enumeration: • **0**—Disable • **1**—Enable	Default is 0

UFLT/PolicyFilter

This table contains information about URL filter category in a policy

XML structure

```
<UFLT>
  <PolicyFilter>
    <Filter>
      <PolicyName></PolicyName>
      <CategoryName></CategoryName>
      <Action></Action>
      <Instance></Instance>
      <LoggingEnable></LoggingEnable>
      <Logging></Logging>
    </Filter>
  </PolicyFilter>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	PolicyFilter
Table type	Multi-instance table
Row name	Filter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String, case-insensitive Length: 1 to 31 characters	N/A
CategoryName	Name of the URL filter category	Index	String, case-insensitive Length: 1 to 63 characters	N/A
Action	Action type	N/A	Enumeration: • **0**—Permit • **1**—Drop • **2**—Reset • **3**—Redirect • **4**—Block	N/A
Instance	Instance name	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
LoggingEnable	Whether logging is enabled or disabled	N/A	Enumeration: • **0**—Disable • **1**—Enable	N/A
Logging	Logging instance	N/A	String, case-insensitive Length: 1 to 63 characters	N/A

UFLT/PolicyInProfile

This table contains information about a URL filter policy used by an APP profile.

XML structure

```
<UFLT>
  <PolicyInProfile>
    <Policy>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Policy>
  </PolicyInProfile>
```

```
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	PolicyInProfile
Table type	Single-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive Length: 1 to 63 characters	N/A
PolicyName	Name of the URL filter policy	N/A	String, case-insensitive Length: 1 to 31 characters	N/A

UFLT/Categories

This table contains information about the URL filter category.

XML structure

```
<UFLT>
  <Categories>
    <Category>
      <CategoryName></CategoryName>
      <Critical></Critical>
      <CategoryType></CategoryType>
      <Description></Description>

    </Category>
  </Categories>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT

Table name	Categories
Table type	Multi-instance table
Row name	Category
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name of the URL filter category	Index	String: case-insensitive Length: 1 to 63 characters	N/A
Critical	Critical	N/A	UnsignedShort	N/A
CategoryType	Category type	N/A	Enumeration: • **0**—Pre-define • **1**—User-define	N/A
Description	Description	N/A	String, case-insensitive Length: 1 to 255 characters	N/A
PreCategoryReferred	Referenced previous defined category	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
PreCategoryID	Previous defined category ID	N/A	UnsignedShort	N/A

UFLT/RuleInCategory

This table contains information about the URL filter rule in a category.

XML structure

```
<UFLT>
  <RuleInCategory>
    <Rule>
      <CategoryName></CategoryName>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIString></URIString>
    </Rule>
  </RuleInCategory>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	RuleInCategory
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name	Index	String, case-insensitive Length: 1 to 63 characters	N/A
RuleID	RuleID	Index	Unsigned Integer Value range: 1 to 65535	N/A
HostType	Host type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
HostName	Host name	N/A	If host type is text: • String, case-insensitive • Length: 3 to 224 characters If host type is regex: • OctectString • Length: 3 to 224 characters	N/A
URIType	URI type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
URIString	URI string	N/A	If URI type is text: • String, case-insensitive • Length: 3 to 255 characters If URI type is regex: • OctectString • Length: 3 to 253 characters	N/A

UFLT/Statistic

This table contains the information about URL filter statistic.

XML structure

```
<UFLT>
  <Statistic>
```

```
    <TotalRequests></TotalRequests>
    <PermittedRequests></PermittedRequests>
    <DeniedRequests></DeniedRequests>
    <MatchedBlacklist></MatchedBlacklist>
    <MatchedWhitelist></MatchedWhitelist>
    <MatchedUDEFCategory></MatchedUDEFCategory>
    <MatchedPDEFCategory></MatchedPDEFCategory>
    <MatchedCacheAction></MatchedCacheAction>
    <MatchedDefaultAction></MatchedDefaultAction>
    <MatchedURLReputation></MatchedURLReputation>
    <PDEFURLNumbers></PDEFURLNumbers>
  </Statistic>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT

      <URIType></URIType>
      <URIString></URIString>
    </PolicyRule>
  </BlackWhiteList>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	BlackWhiteList
Table type	Multi-instance table
Row name	PolicyRule
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String, case-insensitive Length: 1 to 31 characters	Case insensitive
BlackOrWhite	Blacklist or whitelist	Index	Enumeration: • **1**—Whitelist • **2**—Blacklist	N/A
RuleID	Rule ID	Index	Unsigned Integer: 1-65535	N/A
HostType	Host type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
HostName	Host name	N/A	If host type is text: • String, case-insensitive • Length: 3 to 224 characters If URI type is regex: • OctectString • Length: 3 to 224 characters	N/A
URIType	URI type	N/A	Enumeration: • **1**—Text • **2**—Regex	N/A
URI String	URI string	N/A	If URI type is text: • String, case-insensitive • Length: 3 to 245 characters If URI type is regex: • OctectString • Length: 3 to 245 characters	N/A

UFLT/CacheConfig

This table contains information about the cache configuration.

XML structure

```
<UFLT>
  <CacheConfig>
    <DomainName></DomainName>
  </CacheConfig>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT

Table name	CacheConfig
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	N/A	String, case-insensitive Length: 1 to 255 characters	N/A

UFLT/SignatureAutoUpgrading

This table contains information about auto upgrading of URL filter signatures.

XML structure

```
<UFLT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
    <Sort></Sort>
  </SignatureAutoUpgrading>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: • true • false	Default is false
StartTime	Time when the system performs auto upgrading	N/A	Time. Format: HH:MM:SS	Default is 02:00:00.
Type	Type of the system auto upgrading	N/A	Enumeration: • **0**—Week • **1**—Periodic	Default is 1.
Day	Days	N/A	Unsigned integer Value range: 0 to 6	When Type is **0**, the value range is 0 to 6. Otherwise, the value is invalid.
Sort	Sort of the system auto upgrading	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/UpdatePercentage

This table contains the information of the percent of upgrading.

XML structure

```
<UFLT>
  <UpdatePercentage>
    <Percentage></Percentage>
    <ErrorCode></ErrorCode>
    <Sort></Sort>
  </UpdatePercentage>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	UpdatePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	The percentage of updating	N/A	Unsigned integer Value range: 0~100	When the value range is 0 to 100,it means in upgrading, Otherwise, means error
ErrorCode	Error of update	N/A	Enumeration: • **0**—Success • **1**—License check error • **2**—SigFile check error • **3**—Server connect error	N/A
Sort	Sort of the update percentage	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/SignatureFileInfos

This table contains the signature file information.

XML structure

```
<UFLT>
  <SignatureFileInfos>
    <FileInfo>
      <Version></Version>
      <FileName></FileName>
      <PublishedTime></PublishedTime>
      <Updates></Updates>
      <Sort></Sort>
    </FileInfo>
  </SignatureFileInfos>
</UFLT>
```

Table description

Item	Description
Feature name	UFLT
Table name	SignatureFileInfos
Table type	Multi-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Version	Version	Index	Enumeration: • **1**—current • **2**—last • **3**—factory	N/A
FileName	File Name	N/A	String: case-insensitive Length: 1 to 255 characters	N/A
PublishedTime	Published Time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
Updates	Update information	N/A	String: case-insensitive Length: 1 to 255 characters	N/A
Sort	Sort of the signature file information	N/A	Enumeration: • **0**—UFLT • **1**—Url Reputation	N/A

UFLT/ActionInstance

This table contains URL filter action instance information.

XML structure

```
<UFLT>
  <ActionInstance>
    <InstanceConfig>
      <ActionType></ActionType>
      <InstanceName></InstanceName>
    </InstanceConfig>
  </ActionInstance>

UserAccounts

UserAccounts/ImportGuestAccount

Import guest user accounts.

XML structure

```
<UserAccounts>
  <ImportGuestAccount>
    <Url></Url>
    <ValidityDateTime>
      <StartValidityDateTime></StartValidityDateTime>
      <EndValidityDateTime></EndValidityDateTime>
    </ValidityDateTime>
    <AutoCreateGroup></AutoCreateGroup>
    <Override></Override>
    <StartLine></StartLine>
  </ImportGuestAccount>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	ImportGuestAccount
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Url	Name of the source .csv file to import guest account information	N/A	String, case-insensitive. Length: 1 to 255 characters.	The import path depends on the Web service frame. Select the filename on the webpage. The .csv file must use correct data format that complies with the export guest template.

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidityDateTime	Account validity time period	Data structure	Members include: • StartValidtyDateTime • EndValidtyDateTime	N/A
StartValidtyDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidtyDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AutoCreateGroup	Whether to create groups automatically	N/A	Boolean: • true • false	Default: false
Override	Whether to override existing guest accounts with the same name	N/A	Boolean: • true • false	Default: false
StartLine	Start line to import users	N/A	Unsigned integer. Value range: 1 to 1048576.	Default: 1

UserAccounts/ExportGuestAccount

Export guest accounts.

StartLine	Start line to import users	N/A	Unsigned integer. Value range: 1 to 1048576.	Default: 1

UserAccounts/ExportNetworkUser

Export network user accounts, excluding guest accounts.

XML structure

```
<UserAccounts>
  <ExportNetworkUser>
    <FileName></FileName>
    <GroupName></GroupName>
    <UserName></UserName>
    <Description></Description>
  </ExportNetworkUser>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	ExportNetworkUser
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export user accounts to	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.
GroupName	Name of the group the user belongs to	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	User account name	N/A	String, case-sensitive. Length: 1 to 55 characters.	The user name cannot be **a**, **al**, or **all**, and cannot include a domain name or \ | / : * ? < > @, either.
Description	Description of the local user	N/A	String. Length: 1 to 127 characters.	N/A

UserAccounts/ExportTemplet

Template for exporting network user accounts.

XML structure

```
<UserAccounts>
  <ExportTemplet>
    <FileName></FileName>
  </ExportTemplet>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export network user accounts to	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.

UserAccounts/OldPasswordCheck

Template for checking the old password of a user.

XML structure

```
<UserAccounts>
  <OldPasswordCheck>
    <UserName></UserName>
    <EncryptionType></EncryptionType>
    <Password></Password>
  </OldPasswordCheck>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	OldPasswordCheck
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	String in the format of *localusername@domain* or *localusername*. Length: 1 to 311 characters. • *localusername*—Local user name, case-sensitive string of 1 to 55 characters. • @—Domain name delimiter. • *domain*—Domain name, case-insensitive string of 1 to 255 characters.	The local user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @
EncryptionType	Password encryption Type of the local user	N/A	Enumeration: • **0**—plaintext • **1**—private ciphertext	The default is 0.
Password	Old password	N/A	String, case-sensitive. Length: 1 to 63 characters.	

UserAccounts/ChangeMyPassword

This table changes the password of the current device management user and verifies the old password during the password change process.

XML structure

```
<UserAccounts>
  <ChangeMyPassword>
    <EncryptionType></EncryptionType>
    <OldPassword></OldPassword>
    <Password></Password>
  </ChangeMyPassword>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	ChangeMyPassword
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EncryptionType	Password encryption Type of the local user	N/A	Enumeration: • **0**—plaintext • **1**—private ciphertext	The default is 0.
OldPassword	Old password	N/A	String, case-sensitive. Length: 1 to 63 characters.	If the user has an old password, the old password must be provided. If the user does not have an old password, do not include the OldPassword column or do not set a value for the OldPassword column.
Password	New password	N/A	String, case-sensitive. Length: 1 to 63 characters.	In non-FIPS mode, the password is a plaintext string of 1 to 63 characters. In FIPS mode, the password is a plaintext string of 15 to 63 characters. The string must contain digits, uppercase letters, lowercase letters, and special characters.

UserAccounts/AutoPassword

This table creates a random password for a network user and sends a mail to the user's mailbox.

XML structure

```
<UserAccounts>
  <AutoPassword>
    <UserName></UserName>
    <EmailAddress></EmailAddress>
  </AutoPassword>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	AutoPassword
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	N/A	String. Length: 1 to 311 characters. The username is in the format of *localusername@domain* or *localusername*. • *localusername*—Local user name, case-sensitive string of 1 to 55 characters. • @—Domain name delimiter. • *domain*—Domain name, case-insensitive string of 1 to 255 characters.	The local user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @
EmailAddress	Email address of the user	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).

Table description

Item	Description
Feature name	UserAccounts
Table name	UserGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name	Index	String. Length: 1 to 32 characters.	The system has a predefined group named **system**.
AuthorizationInfo	Authorization information	Data structure	Members include: • AclNumber • CallbackNumber • FTPHomeDir • IdleTimeout • PrimaryDNSServer • SecondaryDNSServer • URL • UserProfile • VLANID • VRF • IpPool • Ipv6Pool • SSLVPNPolicy • SessTimeout • SubscriberID • SessGroupProfile	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	By default, the user can access the root directory of the device, which varies by device model.
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Name of the IP address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
SubscriberID	Subscriber ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
SessGroupProfile	Session group profile assigned to the local user	N/A	String. Length: 1 to 31 characters.	N/A
UserIsolation	User isolation policy	Data structure	Members include: • InterGroup • IntraGroup	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InterGroup	User isolation policy for the local users in the user group and the local users in other groups	N/A	Boolean: • **true**—Local users in the user group are isolated from local users in other groups. • **false**—Local users in the user group are not isolated from local users in other groups.	The default is false.
IntraGroup	User isolation policy for the local users in the user group	N/A	Boolean: • **true**—Local users in the user group are isolated from each other. • **false**—Local users in the user group are not isolated from each other.	The default is false.
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1. This column is valid only when the Ipv6PrefixLength column is configured at the same time.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	This column is valid only when the Ipv6Address column is configured at the same time.
Description	Description of the user group	N/A	String. Length: 1 to 127 characters.	N/A

UserAccounts/Management/Accounts

Management user information table.

XML structure

```
<UserAccounts>
  <Management>
    <Accounts>
      <Account>
        <Name></Name>
        <EncryptionType></EncryptionType>
        <Password></Password>
```

```
        <GroupName></GroupName>
        <FTP></FTP>
        <HTTP></HTTP>
        <HTTPS></HTTPS>
        <PAD></PAD>
        <SSH></SSH>
        <TELNET></TELNET>
        <Terminal></Terminal>
        <AccessLimit></AccessLimit>
        <FTPHomeDir></FTPHomeDir>
        <UserState></UserState>
      </Account>
    </Accounts>
  </Management>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	GroupName must be obtained from the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @. Dayou OEM device can’t create default user “admin”.
EncryptionType	Password encryption Type of the local user	N/A	Enumeration: • **0**—plaintext • **1**—private ciphertext	The default is 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Password	Password of the local user	N/A	String, case-sensitive. Length: 1 to 63 characters.	In non-FIPS mode, the password is a plaintext string of 1 to 63 characters. In FIPS mode, the password is a plaintext string of 15 to 63 characters. The string must contain digits, uppercase letters, lowercase letters, and special characters.
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is **system**.
FTP	Whether the FTP service is available for the local user	N/A	Boolean: • true • false	The default is false.
HTTP	Whether the HTTP service is available for the local user	N/A	Boolean: • true • false	The default is false.
HTTPS	Whether the HTTPS service is available for the local user	N/A	Boolean: • true • false	The default is false.
PAD	Whether the PAD service is available for the local user	N/A	Boolean: • true • false	The default is false.
SSH	Whether the SSH service is available for the local user	N/A	Boolean: • true • false	The default is false.
TELNET	Whether the telnet service is available for the local user	N/A	Boolean: • true • false	The default is false.
Terminal	Whether the Terminal service is available for the local user	N/A	Boolean: • true • false	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	The directory must already exist. By default, the user can access the root directory of the device, which varies by device model.
UserState	User state	N/A	Enumeration: • **0**—Blocked. • **1**—Active.	The default is active.

UserAccounts/Management/UserRoles

Management user role information table.

XML structure

```
<UserAccounts>
  <Management>
    <UserRoles>
      <UserRole>
        <UserName></UserName>
        <RoleName></RoleName>
      </UserRole>
    </UserRoles>
  </Management>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	UserRoles
Table type	Multi-instance table
Row name	UserRole
Restrictions	UserName must be obtained from the UserAccounts/Management/Accounts table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
RoleName	User role name	Index	String. Length: 1 to 63 characters.	N/A

UserAccounts/Network/Accounts

Network user information table.

XML structure

```
<UserAccounts>
  <Network>

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
Password	Password of the local user	N/A	String, case-sensitive. Length: 1 to 63 characters.	The password is set in plaintext form.
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is **system**.
ADVPN	Whether the ADVPN service is available for the local user	N/A	Boolean: • true • false	The default is false.
IKE	Whether the IKE service is available for the local user	N/A	Boolean: • true • false	The default is false.
IPoE	Whether the IPoE service is available for the local user	N/A	Boolean: • true • false	The default is false.
LanAccess	Whether the LAN access service is available for the local user	N/A	Boolean: • true • false	The default is false.
Portal	Whether the portal service is available for the local user	N/A	Boolean: • true • false	The default is false.
PPP	Whether the PPP service is available for the local user	N/A	Boolean: • true • false	The default is false.
SSLVPN	Whether the SSLVPN service is available for the local user	N/A	Boolean: • true • false	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthorizationInfo	Authorization information	Data structure	Members include: • AclNumber • CallbackNumber • IdleTimeout • PrimaryDNSServer • PrimaryDNSIpv6Server • SecondaryDNSServer • SecondaryDNSIpv6Server • URL • UserProfile • VLANID • VRF • Ipv4Address • Ipv6Address • IpPool • Ipv6Pool • SSLVPNPolicy • SubscriberID • WorkDirectory • SessGroupProfile • WlanVlanID • WlanVlanGroup • UserGroup	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information of the local user	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of the local user	N/A	String in dotted decimal notation.	For example, 1.1.1.1.
Ipv6Address	IPv6 address of the local user	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1.
IpPool	Name of the IP address pool available for the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available for the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SubscriberID	Subscriber ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
WorkDirectory	Work directory assigned to the local user	N/A	String. Length: 1 to 255 characters.	The default is flash:.
SessGroupProfile	Session group profile assigned to the local user	N/A	String. Length: 1 to 31 characters.	N/A
WlanVlanID	VLAN ID assigned to the local user in WLAN	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
WlanVlanGroup	Name of the VLAN group assigned to the local user in WLAN	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
UserGroup	User group assigned to the local user	N/A	String. Length: 1 to 32 characters	N/A
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1. This column is valid only when the Ipv6PrefixLength column is configured at the same time.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	This column is valid only when the Ipv6Address column is configured at the same time.
BindingInfo	Binding attributes of the local user	Data structure	Members include: • CallNumber • Interface • Ipv4Address • MacAddress • VLANID	N/A
CallNumber	Calling number of the local user	N/A	String. Length: 1 to 64 characters.	N/A
Interface	Interface of the local user	N/A	String. Length: 1 to 47 characters.	N/A
Ipv4Address	IPv4 address of the local user	N/A	String in dotted decimal notation.	For example, 1.1.1.1.
MacAddress	MAC address of the local user	N/A	String. Length: 17 characters.	For example, FF-FF-FF-FF-FF-FF.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
UserState	User state	N/A	Enumeration: • **0**—Blocked. • **1**—Active.	The default is active.
ValidityDateTime	Account validity time period	Data structure	Members include: • StartValidityDateTime • EndValidityDateTime	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidityDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of the local user	N/A	String. Length: 1 to 127 characters.	N/A
IdentityNumber	Identity number of the local user	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A

UserAccounts/Guest/Accounts

Table of network access guest information.

XML structure

```

GuestBody	Email body to send to the guest	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Subject	Email subject to send to the guest manager	N/A	String. Length: 1 to 127 characters.	N/A
GuestManager Body	Email body to send to the guest manager	N/A	String. Length: 1 to 255 characters.	N/A
GuestSponsorSubject	Email subject to send to the guest sponsor	N/A	String. Length: 1 to 127 characters.	N/A
GuestSponsorBody	Email body to send to the guest sponsor	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Email	Email address of the guest manager	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
EmailSender	Email address of the addresser	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
WaitApprovalTime	The maximum waiting time for account approval	N/A	Unsigned integer. Value range: 1 to 720, in hours.	The default is 24 hours.

UserAccounts/Identity/Users

Table of static user accounts for user identification.

XML structure

```
<UserAccounts>
  <Identity>
    <Users>
      <User>
        <Name></Name>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <MacAddress></MacAddress>
      </User>
    </Users>
  </Identity>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
IpType	IP address type	Index	Enumeration: • **0**—IPv4 • **1**—IPv6	N/A
IpAddress	IP address of the user	Index	IPv4 or IPv6 address	N/A
MacAddress	MAC address of the user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.

UserAccounts/Network/IdentityGroups

Table of identity groups associated with a user.

XML structure

```
<UserAccounts>
  <Network>
    <IdentityGroups>
      <IdentityGroup>
        <UserName></UserName>
        <GroupName></GroupName>
      </IdentityGroup>
    </IdentityGroups>
  </Network>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
GroupName	Group name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

UserAccounts/UserGroup/IdentityMembers

Table of member users in an identity group.

XML structure

```
<UserAccounts>
  <UserGroup>
    <IdentityMembers>
      <IdentityMember>
        <GroupName></GroupName>
        <UserName></UserName>
      </IdentityMember>
    </IdentityMembers>
  </UserGroup>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityMembers
Table type	Multi-instance table
Row name	IdentityMember
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Name of the member user	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @

UserAccounts/UserGroup/IdentityGroups

Table of member groups in an identity group.

XML structure

```
<UserAccounts>
  <UserGroup>
```

```
    <IdentityGroups>
      <IdentityGroup>
        <GroupName></GroupName>
        <IdentityGroup></IdentityGroup>
      </IdentityGroup>
    </IdentityGroups>
  </UserGroup>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityGroup	Name of the member group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

UserAccounts/IdentityEnable

Enable or disable the user identification feature.

XML structure

```
<UserAccounts>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the user identification feature	N/A	Boolean: • true • false	The default is false.

UserAccounts/ChangePasswords

Change user passwords.

XML structure

```
<UserAccounts>
  <ChangePasswords>
    <ChangePassword>
      <UserName></UserName>
      <EncryptionType></EncryptionType>
      <Password></Password>
    </ChangePassword>
  </ChangePasswords>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	ChangePasswords
Table type	Multi-instance table
Row name	ChangePassword
Restrictions	The UserName value must be included in the UserAccounts/ChangePasswords table.

Item	Description
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	String in the format of *localusername@domain* or *localusername*. Length: 1 to 311 characters. • *localusername*—Local user name, case-sensitive string of 1 to 55 characters. • @—Domain name delimiter. • *domain*—Domain name, case-insensitive string of 1 to 255 characters.	The local user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @
EncryptionType	Password encryption Type of the local user	N/A	Enumeration: • **0**—plaintext • **1**—private ciphertext	The default is 0.
Password	New password	N/A	String, case-sensitive. Length: 1 to 63 characters.	In non-FIPS mode, the password is a plaintext string of 1 to 63 characters. In FIPS mode, the password is a plaintext string of 15 to 63 characters. The string must contain digits, uppercase letters, lowercase letters, and special characters.

UserAccounts/NetworkMailConfigure

Global mail configuration table of local network access users.

XML structure

```
<UserAccounts>
  <NetworkMailConfigure>
    <EmailFormat>
      <Subject></Subject>
      <Body></Body>
    </EmailFormat>
    <EmailSender></EmailSender>
```

```
    <SmtpServer></SmtpServer>
    <SmtpAuthentication>
      <UserName></UserName>
      <Password></Password>
    </SmtpAuthentication>
  </NetworkMailConfigure>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	NetworkMailConfigure
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EmailFormat	Email address format	Data structure	Members include: • Subject. • Body.	N/A
Subject	Email subject to send	N/A	String. Length: 1 to 127 characters.	N/A
Body	Email body to send	N/A	String. Length: 1 to 255 characters.	N/A
EmailSender	Email address of the sender	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
SmtpAuthentication	SMTP server authentication configuration	Data structure	Members include: • UserName. • Password.	N/A
UserName	User name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Password	User password	N/A	String, case-sensitive. Length: 1 to 63 characters.	The password is set in plaintext form.

Table description

Item	Description
Feature name	UserAccounts
Table name	UserGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name	Index	String. Length: 1 to 32 characters.	N/A
AuthorizationInfo	Authorization information	Data structure	Members include: • AclNumber • CallbackNumber • FTPHomeDir • IdleTimeout • PrimaryDNSServer • SecondaryDNSServer • URL • UserProfile • VLANID • VRF • IpPool • Ipv6Pool • SSLVPNPolicy • SessTimeout • SubscriberID • SessGroupProfile	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	N/A
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120 minutes.	N/A
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible for the local user	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Name of the IP address pool available for the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
SubscriberID	Subscriber ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
SessGroupProfile	Session group profile assigned to the local user	N/A	String. Length: 1 to 31 characters.	N/A
UserIsolation	User isolation policy	Data structure	Members include: • InterGroup • IntraGroup	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InterGroup	User isolation policy for the local users in the user group and the local users in other groups	N/A	Boolean: • **true**—Local users in the user group are isolated from local users in other groups. • **false**—Local users in the user group are not isolated from local users in other groups.	The default is false.
IntraGroup	User isolation policy for the local users in the user group	N/A	Boolean: • **true**—Local users in the user group are isolated from each other. • **false**—Local users in the user group are not isolated from each other.	The default is false.
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Description	Description of the user group	N/A	String. Length: 1 to 127 characters.	N/A

UserAccounts/Management/Accounts

Management user information table.

XML structure

```
<UserAccounts>
  <Management>
    <Accounts>
      <Account>
        <Name></Name>
        <UID></UID>
        <GroupName></GroupName>
        <FTP></FTP>
        <HTTP></HTTP>
        <HTTPS></HTTPS>
        <PAD></PAD>
        <SSH></SSH>
```

```
        <TELNET></TELNET>
        <Terminal></Terminal>
        <PrivateAgent></PrivateAgent>
        <AccessLimit></AccessLimit>
        <CurrentAccessNum></CurrentAccessNum>
        <FTPHomeDir></FTPHomeDir>
        <UserState></UserState>
      </Account>
    </Accounts>
  </Management>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
UID	Local user ID	N/A	Unsigned integer. Value range: 1001 to 2^{32} – 1.	N/A
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is **system**.
FTP	Whether the FTP service is available for the local user	N/A	Boolean: • true • false	The default is false.
HTTP	Whether the HTTP service is available for the local user	N/A	Boolean: • true • false	The default is false.
HTTPS	Whether the HTTPS service is available for the local user	N/A	Boolean: • true • false	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
PAD	Whether the PAD service is available for the local user	N/A	Boolean: • true • false	The default is false.
SSH	Whether the SSH service is available for the local user	N/A	Boolean: • true • false	The default is false.
TELNET	Whether the Telnet service is available for the local user	N/A	Boolean: • true • false	The default is false.
Terminal	Whether the terminal service is available for the local user	N/A	Boolean: • true • false	The default is false.
PrivateAgent	Whether the private agent service is available for the local user	N/A	Boolean: • true • false	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
CurrentAccessNum	Current number of online users	N/A	Unsigned integer. Value range: 0 to 1024.	N/A
FTPHomeDir	FTP home directory of the local user	N/A	String. Length: 1 to 255 characters.	The directory must already exist. By default, the user can access the root directory of the device, which varies by device model.
UserState	User state	N/A	Enumeration: • **0**—Blocked. • **1**—Active.	N/A

UserAccounts/Management/UserRoles

Management user role information table.

XML structure

```
<UserAccounts>
  <Management>
    <UserRoles>
      <UserRole>
```

```
        <UserName></UserName>
        <RoleName></RoleName>
      </UserRole>
    </UserRoles>
  </Management>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	UserRoles
Table type	Multi-instance table
Row name	UserRole
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String. Length: 1 to 80 characters.	N/A
RoleName	User role name	Index	String. Length: 1 to 63 characters.	N/A

UserAccounts/Network/Accounts

Network user information table.

XML structure

```
<UserAccounts>

Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Network user name	Index	String. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
UID	Network user ID	N/A	Unsigned integer. Value range: 1 to 2^{32} – 1.	N/A
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is **system**.
ADVPN	Whether the ADVPN service is available for the local user	N/A	Boolean: • true • false	The default is false.
IKE	Whether the IKE service is available for the local user	N/A	Boolean: • true • false	The default is false.
IPoE	Whether the IPoE service is available for the local user	N/A	Boolean: • true • false	The default is false.
LanAccess	Whether the LAN access service is available for the local user	N/A	Boolean: • true • false	The default is false.
Portal	Whether the portal service is available for the local user	N/A	Boolean: • true • false	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
PPP	Whether the PPP service is available for the local user	N/A	Boolean: • true • false	The default is false.
SSLVPN	Whether the SSLVPN service is available for the local user	N/A	Boolean: • true • false	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
CurrentAccessNum	Current number of online users	N/A	Unsigned integer. Value range: 0 to 1024.	N/A
AuthorizationInfo	Authorization information of the local user	Data structure	Members include: • AclNumber • CallbackNumber • IdleTimeout • PrimaryDNSServer • PrimaryDNSIpv6Server • SecondaryDNSServer • SecondaryDNSIpv6Server • URL • UserProfile • VLANID • VRF • Ipv4Address • Ipv6Address • IpPool • Ipv6Pool • SSLVPNPolicy • SubscriberID • WorkDirectory • SessGroupProfile • WlanVlanID • WlanVlanGroup • UserGroup	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120 minutes.	N/A
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information of the local user	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of the local user	N/A	String in dotted decimal notation.	For example, 1.1.1.1.
Ipv6Address	IPv6 address of the local user	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1.
IpPool	Name of the IP address pool available for the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available for the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy group assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SubscriberID	Subscriber ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
WorkDirectory	Work directory assigned to the local user	N/A	String. Length: 1 to 255 characters.	N/A
SessGroupProfile	Session group profile assigned to the local user	N/A	String. Length: 1 to 31 characters.	N/A
WlanVlanID	VLAN ID assigned to the local user in WLAN	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
WlanVlanGroup	Name of the VLAN group assigned to the local user in WLAN	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
UserGroup	User group assigned to the local user	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: • Ipv6Address • Ipv6PrefixLength	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
BindingInfo	Binding attributes of the local user	Data structure	Members include: • CallNumber • Interface • Ipv4Address • MacAddress • VLANID	N/A
CallNumber	Calling number of the local user	N/A	String. Length: 1 to 64 characters.	N/A
Interface	Interface of the local user	N/A	String. Length: 1 to 47 characters.	N/A
Ipv4Address	IP address of the local user	N/A	String in the dotted decimal notation.	IPv4 example: 1.1.1.1.
MacAddress	MAC address of the local user	N/A	String. Length: 17 characters.	For example, FF-FF-FF-FF-FF-FF.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
UserState	User state	N/A	Enumeration: • **0**—Blocked. • **1**—Active.	The default is 1.
ValidityDateTime	Account validity time period	Data structure	Members include: • StartValidityDateTime • EndValidityDateTime	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndValidityDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Description	Description of the local user	N/A	String. Length: 1 to 127 characters.	N/A
IdentityNumber	Identity number of the local user	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
CreateTime	Time when the network user was created	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
LastSuccessfulLoginTime	Last time when the network user successfully logged in	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

UserAccounts/PasswordLimit

Password limit of the local user module.

XML structure

```
<UserAccounts>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	PasswordLimit
Table type	Single-instance table
Row name	UserRole

Restrictions	• The configuration takes effect on the following items:
	  ○ UserAccounts/Management/Accounts table
	  `<Password></Password>`
	  ○ UserAccounts/Network/Accounts table
	  `<Password></Password>`
	• Data restrictions acquired in FIPS mode are different from the data restrictions acquired in non-FIPS mode.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	The minimum length of a password	N/A	Unsigned integer.	N/A
MaxLen	The maximum length of a password	N/A	Unsigned integer.	N/A
MinTypeNum	The minimum number of character types that a password must contain	N/A	Unsigned integer.	Character types include digits, uppercase letters, lowercase letters, and special characters. For example, if the value is set to 3, the password string must include three or more character types.

UserAccounts/Guest/Accounts

Table of network access guest information.

XML structure

```
<UserAccounts>
  <Guest>
    <Accounts>
      <Account>
        <WaitApproval></WaitApproval>
        <Name></Name>
        <GroupName></GroupName>
        <FullName></FullName>
        <Phone></Phone>
        <Email></Email>
        <Company></Company>
        <Description></Description>
        <SponsorFullName></SponsorFullName>
        <SponsorEmail></SponsorEmail>
        <SponsorDepartment></SponsorDepartment>
        <ValidityDateTime>
          <StartValidityDateTime></StartValidityDateTime>
          <EndValidityDateTime></EndValidityDateTime>
        </ValidityDateTime>
      </Account>
    </Accounts>
  </Guest>
```

```
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
WaitApproval	Whether the guest is waiting for approval	Index	Boolean: • true • false	N/A
Name	User name	Index	String. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
GroupName	User group to which the guest belongs	N/A	String. Length: 1 to 32 characters.	The default setting is **system**.
FullName	Guest name	N/A	String. Length: 1 to 255 characters.	N/A
Phone	Guest phone	N/A	String. Length: 1 to 32 characters.	N/A
Email	Guest phone	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
Company	Guest company	N/A	String. Length: 1 to 255 characters.	N/A
Description	Guest description	N/A	String. Length: 1 to 255 characters.	N/A
SponsorFullName	Sponsor name	N/A	String. Length: 1 to 255 characters.	N/A
SponsorEmail	Sponsor Email	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SponsorDepartment	Sponsor department	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidityDateTime	Account validity time period	Data structure	Members include: • StartValidityDateTime • EndValidityDateTime	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidityDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

UserAccounts/GuestConfigure

Global control of guest accounts table.

XML structure

```
<UserAccounts>
  <GuestConfigure>
    <AutoDelete></AutoDelete>
    <EmailFormat>
      <GuestSubject></GuestSubject>
      <GuestBody></GuestBody>
      <GuestManagerSubject></GuestManagerSubject>
      <GuestManagerBody></GuestManagerBody>
      <GuestSponsorSubject></GuestSponsorSubject>
      <GuestSponsorBody></GuestSponsorBody>
    </EmailFormat>
    <GuestManagerEmail></GuestManagerEmail>
    <EmailSender></EmailSender>
    <SmtpServer></SmtpServer>
    <WaitApprovalTime></WaitApprovalTime>
  </GuestConfigure>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	GuestConfigure
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoDelete	Whether to enable automatic deletion	Column	Boolean: • true • false	The default is false.
EmailFormat	Email address format	Data structure	Members include: • GuestSubject • GuestBody • GuestManagerSubject • GuestManagerBody • GuestSponsorSubject • GuestSponsorBody	N/A
GuestSubject	Email subject to send to the guest	N/A	String. Length: 1 to 127 characters.	N/A
GuestBody	Email body to send to the guest	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Subject	Email subject to send to the guest manager	N/A	String. Length: 1 to 127 characters.	N/A
GuestManager Body	Email body to send to the guest manager	N/A	String. Length: 1 to 255 characters.	N/A
GuestSponsorS ubject	Email subject to send to the guest sponsor	N/A	String. Length: 1 to 127 characters.	N/A
GuestSponsorB ody	Email body to send to the guest sponsor	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Email	Email address of the guest manager	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
EmailSender	Email address of the addresser	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
WaitApprovalTi me	The maximum waiting time for account approval	N/A	Unsigned integer. Value range: 1 to 720, in hours.	The default is 24 hours.

UserAccounts/Identity/Users

Table of static user accounts for user identification.

XML structure

```
<UserAccounts>
  <Identity>
    <Users>
      <User>
        <Name></Name>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <MacAddress></MacAddress>
      </User>
    </Users>
  </Identity>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
IpType	IP address family	Index	Enumeration: • **0**—IPv4 • **1**—IPv6	N/A
IpAddress	The IP address of user	Index	IPv4 or IPv6 address.	N/A
MacAddress	The MAC address of user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.

UserAccounts/Network/IdentityGroups

Table of identity groups associated with a user.

XML structure

```
<UserAccounts>
  <Network>
    <IdentityGroups>
      <IdentityGroup>
        <UserName></UserName>
        <GroupName></GroupName>
      </IdentityGroup>
    </IdentityGroups>
  </Network>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @
GroupName	Group name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

UserAccounts/UserGroup/IdentityMembers

Table of member users in an identity group.

XML structure

```
<UserAccounts>
  <UserGroup>
    <IdentityMembers>
      <IdentityMember>
        <GroupName></GroupName>
        <UserName></UserName>
      </IdentityMember>
    </IdentityMembers>
  </UserGroup>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityMembers
Table type	Multi-instance table
Row name	IdentityMember
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Name of the member user	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be **a**, **al**, or **all**, and cannot contain any of the following characters: \ | / : * ? < > @

UserAccounts/UserGroup/IdentityGroups

Table of member groups in an identity group.

XML structure

```
<UserAccounts>
  <UserGroup>
    <IdentityGroups>
```

```
      <IdentityGroup>
        <GroupName></GroupName>
        <IdentityGroup></IdentityGroup>
      </IdentityGroup>
    </IdentityGroups>
  </UserGroup>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityGroup	Name of the member group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

UserAccounts/IdentityUser

Table of online user information for user identification.

XML structure

```
<UserAccounts>
  <Identity>
    <IdentityUsers>
      <IdentityUser>
        <UserName></UserName>
        <IpAddress></IpAddress>
        <MacAddress></MacAddress>
        <Type></Type>
      </IdentityUser>
    </IdentityUsers>
```

```
  </Identity>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityUsers
Table type	Multi-instance table
Row name	IdentityUser
Restrictions	N/A
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	N/A
IpAddress	IP address of the user	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.
Type	User type	N/A	Unsigned integer: • **1**—Static. • **2**—Portal. • **3**—IPoE. • **4**—PPP.	The online user can have various types at the same time. Obtain the value by displacement calculation.

UserAccounts/IdentityEnable

Enable or disable the user identification feature.

XML structure

```
<UserAccounts>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the user identification feature	N/A	Boolean: • true • false	The default is false.

UserAccounts/ChangePasswords

Change user passwords.

XML structure

```
<UserAccounts>
  <ChangePasswords>
    <ChangePassword>
      <UserName></UserName>
    </ChangePassword>
  </ChangePasswords>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	ChangePasswords
Table type	Multi-instance table
Row name	ChangePassword
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	String in the format of *localusername@domain* or *localusername*. Length: 1 to 311 characters. • *localusername*—Local user name, case-sensitive string of 1 to 55 characters. • @—Domain name delimiter. • *domain*—Domain name, case-insensitive string of 1 to 255 characters.	The local user name cannot be **a**, **al**, or **all**, and it cannot contain any of the following characters: \ | / : * ? < > @

UserAccounts/NetworkMailConfigure

Global mail configuration table of local network access users.

XML structure

```
<UserAccounts>
  <NetworkMailConfigure>
    <EmailFormat>
      <Subject></Subject>
      <Body></Body>
    </EmailFormat>
    <EmailSender></EmailSender>
    <SmtpServer></SmtpServer>
    <SmtpAuthentication>
      <UserName></UserName>
    </SmtpAuthentication>
  </NetworkMailConfigure>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	NetworkMailConfigure
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EmailFormat	Email address format	Data structure	Members include: • Subject. • Body.	N/A
Subject	Email subject to send	N/A	String. Length: 1 to 127 characters.	N/A
Body	Email body to send	N/A	String. Length: 1 to 255 characters.	N/A
EmailSender	Email address of the sender	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
SmtpAuthentication	SMTP server authentication configuration	Data structure	Members include: • UserName. • Password.	N/A
UserName	User name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

UserAccounts/Network/AccountsCount

This table contains the number of network access users filtered by user description.

XML structure

```
<UserAccounts>
  <Network>
    <AccountsCount>
      <Count></Count>
      <DescFilter></DescFilter>
    </AccountsCount>
  </Network>
</UserAccounts>
```

Table description

Item	Description
Feature name	UserAccounts
Table name	AccountsCount
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Count	Number of network access users	N/A	Unsigned integer.	N/A
DescFilter	User description	N/A	String. Length: 0 to 127 characters.	This column supports only the following descriptions: • **user_from_server**—The **Count** column displays the number of users whose description is **user_from_server**. • **not_user_from_server**—The **Count** column displays the number of users whose description is **not_user_from_server**. If you do not specify a description, the **Count** column displays the total number of network access users.

Message	Explanation
Username can't contain characters \\ | / : * ? < > @ and can't be a, al, or all. 用户名不能包含\\，|，/，:，*，?，<，>，@，并且不能是a，al，all。	Username can't contain characters \\ | / : * ? < > @ and can't be a, al, or all. 用户名不能包含\\，|，/，:，*，?，<，>，@，并且不能是a，al，all。
Invalid IP address. 错误的IP地址。	Invalid IP address. 错误的IP地址。
Not enough resources. 没有足够的资源。	Not enough resources. 没有足够的资源。
Invalid MAC address. 错误的MAC地址。	Invalid MAC address. 错误的MAC地址。
Invalid IP type.	Invalid IP type.

IP地址类型错误。	IP地址类型错误。
The IP or MAC address is already bound to an identity user. IP和MAC地址已经与其他身份识别用户绑定。	The IP or MAC address is already bound to an identity user. IP和MAC地址已经与其他身份识别用户绑定。
Operation failed. 操作失败。	Operation failed. 操作失败。
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/Management/UserRoles

Message	Explanation
Can't remove the security-audit user role from the user: This user is the only user with the security-audit user role in the system. 系统中的最后一个安全日志管理员角色不可被取消。	Can't remove the security-audit user role from the user: This user is the only user with the security-audit user role in the system. 系统中的最后一个安全日志管理员角色不可被取消。
Maximum number of user roles for the user already reached. 本地用户的授权用户角色数目已经到达上限。	Maximum number of user roles for the user already reached. 本地用户的授权用户角色数目已经到达上限。
Not enough resources. 没有足够的资源。	Not enough resources. 没有足够的资源。
Insufficient right to perform the operation. 没有足够的权限执行本操作。	Insufficient right to perform the operation. 没有足够的权限执行本操作。
Can't configure the system predefined role. 系统预定义角色不能被配置。	Can't configure the system predefined role. 系统预定义角色不能被配置。
The user role isn't assigned to the user. 用户角色未被授权。	The user role isn't assigned to the user. 用户角色未被授权。

UserAccounts/UserGroups

Message	Explanation
The user group doesn't exist. 指定的用户组不存在。	The user group doesn't exist. 指定的用户组不存在。
Invalid IP address. 错误的IP地址。	Invalid IP address. 错误的IP地址。
Can't delete the user group: It has one or more local users. 拥有一个或者多个本地用户的用户组不能被删除。	Can't delete the user group: It has one or more local users. 拥有一个或者多个本地用户的用户组不能被删除。
Can't delete the default user group system. 缺省用户组不能被删除。	Can't delete the default user group system. 缺省用户组不能被删除。

Maximum number of users roles for the user group already reached. 用户组下的用户角色的数目已经达到上限。	Maximum number of users roles for the user group already reached. 用户组下的用户角色的数目已经达到上限。
Invalid path or nonexistent directory. 错误的路径或者不存在的目录。	Invalid path or nonexistent directory. 错误的路径或者不存在的目录。
Insufficient right to perform the operation. 没有足够的权限执行本操作。	Insufficient right to perform the operation. 没有足够的权限执行本操作。
Maximum number of user groups already reached. 用户组的数目达到上限。	Maximum number of user groups already reached. 用户组的数目达到上限。
The user role isn't assigned to the user. 用户角色未被授权。	The user role isn't assigned to the user. 用户角色未被授权。

UserAccounts/Guest/Accounts

Message	Explanation
The user group doesn't exist. 指定的用户组不存在。	The user group doesn't exist. 指定的用户组不存在。

UserAccounts/ApproveGuest

Message	Explanation
Insufficient right to perform the operation. 没有足够的权限。	Insufficient right to perform the operation. 没有足够的权限。
The user doesn't exist. 指定的用户不存在。	The user doesn't exist. 指定的用户不存在。
Maximum number of users already reached. 用户的数目达到上限。	Maximum number of users already reached. 用户的数目达到上限。
Insufficient right to perform the operation. 没有足够的权限执行本操作。	Insufficient right to perform the operation. 没有足够的权限执行本操作。
This user already exists. 该用户已存在。	This user already exists. 该用户已存在。
Invalid Email address. 非法邮箱地址。	Invalid Email address. 非法邮箱地址。
Username conflicted. Please change the name configuration. 用户名被占用，请修改用户名配置。	Username conflicted. Please change the name configuration. 用户名被占用，请修改用户名配置。
Validity date and time configuration is not complete. 有效期配置不完整。	Validity date and time configuration is not complete. 有效期配置不完整。

UserAccounts/GenerateGuestAccount

Message	Explanation
Insufficient right to perform the operation. 没有足够的权限。	Insufficient right to perform the operation. 没有足够的权限。
The user doesn't exist. 指定的用户不存在。	The user doesn't exist. 指定的用户不存在。
Maximum number of users already reached. 用户的数目达到上限。	Maximum number of users already reached. 用户的数目达到上限。
Insufficient right to perform the operation. 没有足够的权限执行本操作。	Insufficient right to perform the operation. 没有足够的权限执行本操作。
Insufficient suffixes to assign to users. Please pad the start suffix with leading zeros or reduce the user count. 指定的编号后缀不能满足生成足够数目的用户，请增加编号后缀长度或减少用户数目。	Insufficient suffixes to assign to users. Please pad the start suffix with leading zeros or reduce the user count. 指定的编号后缀不能满足生成足够数目的用户，请增加编号后缀长度或减少用户数目。
The expiration date and time should be later than the current date and time. 生效结束时间必须晚于生效起始时间。	The expiration date and time should be later than the current date and time. 生效结束时间必须晚于生效起始时间。
This user already exists. 该用户已存在。	This user already exists. 该用户已存在。
Username conflicted. Please change the name configuration. 用户名被占用，请修改用户名配置。	Username conflicted. Please change the name configuration. 用户名被占用，请修改用户名配置。
The suffix will exceed the maximum number. Please change the start suffix or the user count. 递增后的编号后缀将会超过最大值，请调整编号后缀或者用户数目。	The suffix will exceed the maximum number. Please change the start suffix or the user count. 递增后的编号后缀将会超过最大值，请调整编号后缀或者用户数目。
Validity date and time configuration is not complete. 有效期配置不完整。	Validity date and time configuration is not complete. 有效期配置不完整。

UserAccounts/ChangeMyPassword

Message	Explanation
The user doesn't exist. 指定的用户不存在。	The user doesn't exist. 指定的用户不存在。
The new password is not set. 新密码未设置。	The new password is not set. 新密码未设置。
Wrong Password. 密码不正确。	Wrong Password. 密码不正确。
The new password is too short. It must contain at least %u characters.	The new password is too short. It must contain at least %u characters.

新密码长度不足，至少需要包含%u个字符。	新密码长度不足，至少需要包含%u个字符。
Invalid password composition. The new password must contain at least %u types and at least %u characters for each type. 无效的密码组合，新密码至少包含%u类字符，并且每类字符的个数不能少于%u个。	Invalid password composition. The new password must contain at least %u types and at least %u characters for each type. 无效的密码组合，新密码至少包含%u类字符，并且每类字符的个数不能少于%u个。
The new password cannot contain 3 or more repeated characters. 新密码不能包含3个及以上的重复字符。	The new password cannot contain 3 or more repeated characters. 新密码不能包含3个及以上的重复字符。
The new password cannot contain the username or reversed username. 新密码中不能包含与用户名或逆转的用户名一样的字符串。	The new password cannot contain the username or reversed username. 新密码中不能包含与用户名或逆转的用户名一样的字符串。
The new password must contain at least 4 different characters different from any previous password. 新密码中应该至少包含4个不同于之前密码的字符。	The new password must contain at least 4 different characters different from any previous password. 新密码中应该至少包含4个不同于之前密码的字符。
Cannot change password until the update-wait time expires. 在密码更新限制时间内不能修改密码。	Cannot change password until the update-wait time expires. 在密码更新限制时间内不能修改密码。
The new password must contain at least 4 different characters. 新密码必须包含至少4个不同的字符。	The new password must contain at least 4 different characters. 新密码必须包含至少4个不同的字符。
Operation failed. The system resource is not enough. 操作失败，系统资源不足。	Operation failed. The system resource is not enough. 操作失败，系统资源不足。
The new password is too long. It can't contain more than %u characters. 新密码超长，不能超过%u个字符。	The new password is too long. It can't contain more than %u characters. 新密码超长，不能超过%u个字符。
The new password must be different from the old password or any passwords stored in the history records. 新密码不能与旧密码以及所有记录的历史密码相同。	The new password must be different from the old password or any passwords stored in the history records. 新密码不能与旧密码以及所有记录的历史密码相同。
The new password must be different from the old password by a minimum of four different characters. 新密码至少要与旧密码存在4个不同字符的差异。	The new password must be different from the old password by a minimum of four different characters. 新密码至少要与旧密码存在4个不同字符的差异。

UserAccounts/OldPasswordCheck

Message	Explanation
The user doesn't exist. 指定的用户不存在。	The user doesn't exist. 指定的用户不存在。
Wrong Password. 密码不正确。	Wrong Password. 密码不正确。

UserAccounts/ImportGuestAccount

Message	Explanation
Maximum number of users already reached. 用户的数目达到上限。	Maximum number of users already reached. 用户的数目达到上限。
Number of imported users: %d. Failed to import other users because of an error in line %d. 成功导入用户数：%d。因第%d行的错误导致导入中断。	Number of imported users: %d. Failed to import other users because of an error in line %d. 成功导入用户数：%d。因第%d行的错误导致导入中断。
Validity date and time configuration is not complete. 有效期配置不完整。	Validity date and time configuration is not complete. 有效期配置不完整。

UserAccounts/ImportNetworkUser

Message	Explanation
Maximum number of users already reached. 用户的数目达到上限。	Maximum number of users already reached. 用户的数目达到上限。
Number of imported users: %d. Failed to import other users because of an error in line %d. 成功导入用户数：%d。因第%d行的错误导致导入中断。	Number of imported users: %d. Failed to import other users because of an error in line %d. 成功导入用户数：%d。因第%d行的错误导致导入中断。
Import failed. Please check the configuration. 导入用户操作失败。	Import failed. Please check the configuration. 导入用户操作失败。
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/ExportNetworkUser

Message	Explanation
The user account doesn't exist. 用户不存在。	The user account doesn't exist. 用户不存在。
The group doesn't exist. 用户组不存在。	The group doesn't exist. 用户组不存在。
The user and user group columns can't exist at the same time. 用户和用户组不能同时指定。	The user and user group columns can't exist at the same time. 用户和用户组不能同时指定。
The .csv file name must be specified. csv文件名必须指定。	The .csv file name must be specified. csv文件名必须指定。
The device doesn't support the user identification feature.	The device doesn't support the user identification feature.

该设备不支持用户身份识别功能。	该设备不支持用户身份识别功能。

UserAccounts/UserGroup/IdentityGroups

Message	Explanation
The group doesn't exist. 用户组不存在。	The group doesn't exist. 用户组不存在。
Failed to add the group because a conflict exists in group hierarchy. 用户组的从属关系发生冲突，添加组失败。	Failed to add the group because a conflict exists in group hierarchy. 用户组的从属关系发生冲突，添加组失败。
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/UserGroup/IdentityMembers

Message	Explanation
The group doesn't exist. 用户组不存在。	The group doesn't exist. 用户组不存在。
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/IdentityEnable

Message	Explanation
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/Network/IdentityGroups

Message	Explanation
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/IdentityUser

Message	Explanation
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/ExportTemplet

Message	Explanation
The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。	The device doesn't support the user identification feature. 该设备不支持用户身份识别功能。

UserAccounts/GuestConfigure

Message	Explanation
Invalid SMTP server URL. 非法SMTP服务器地址。	Invalid SMTP server URL. 非法SMTP服务器地址。

UserAccounts/Network/AccountsCount

Message	Explanation
Invalid description. 非法描述信息	Invalid description. 非法描述信息

Identity

Identity/ResetOnlineUser

This table deletes online identity users.

XML structure

```
<Identity>
  <ResetOnlineUser>
    <ResetType></ResetType>
    <DomainName></DomainName>
    <UserName></UserName>
    <IpAddress></IpAddress>
    <MacAddress></MacAddress>
  </ResetOnlineUser>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ResetOnlineUser
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResetType	Deletion scope.	Index	Enumeration: • **0**—Deletes all online identity users. • **1**—Deletes all online identity users in an identity domain. • **2**—Deletes an online identity user with a specific IP or MAC address. • **3**—Deletes an online identity user in an identity domain.	N/A
DomainName	Identity domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	If the index is empty, the domain is

Column name	Column description	Column type	Data type and restrictions	Remarks
			The domain name cannot contain a question mark (?).	null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

Identity/PolicyImportData

This table imports online identity users or identity user accounts from servers.

XML structure

```
<Identity>
  <PolicyImportData>
    <PolicyName></PolicyName>
    <ImportDataType></ImportDataType>
  </PolicyImportData>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	PolicyImportData
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ImportDataType	Type of imported data.	N/A	Enumeration: • **0**—User accounts.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Online users.	

Identity/ImportAccountUser

This table imports network access user accounts, excluding guest accounts.

XML structure

```
<Identity>
  <ImportAccountUser>
    <FileName></FileName>
    <AutoCreateGroup></AutoCreateGroup>
    <Override></Override>
    <StartLine></StartLine>
  </ImportAccountUser>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ImportAccountUser
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the source .csv file to import user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The import path depends on the Web service frame. Select the filename on the webpage. The .csv file must use correct data format that complies with the export network access user account template.
AutoCreateGroup	Whether to create nonexistent groups automatically.	N/A	Boolean: • true. • false.	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Override	Whether to override existing accounts with the same name.	N/A	Boolean: • true. • false.	The default is false.
StartLine	Start line to import user accounts.	N/A	Unsigned integer. Value range: 1 to 1048576.	The default is 1.

Identity/ExportAccountUser

This table exports network access user accounts, excluding guest accounts.

XML structure

```
<Identity>
  <ExportAccountUser>
    <FileName></FileName>
    <DomainName></DomainName>
    <UserName></UserName>
  </ExportAccountUser>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ExportAccountUser
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export user accounts to.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.
DomainName	Domain name.	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	Username.	N/A	String, case-sensitive. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

Identity/ExportTemplet

This table exports a network access user account template.

XML structure

```
<Identity>
  <ExportTemplet>
    <FileName></FileName>
  </ExportTemplet>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ExportTemplet
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export network access user accounts to.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.

Identity/ResetConfigGroup

This table deletes identity groups.

XML structure

```
<Identity>
  <ResetConfigGroup>
    <ResetConfigType></ResetConfigType>
    <DomainName></DomainName>
    <GroupName></GroupName>
  </ResetConfigGroup>
</Identity>
```

Table description

Identity

Identity/StaticUsers

This table contains static identity user information.

XML structure

```
<Identity>
  <StaticUsers>
    <StaticUser>
      <DomainName></DomainName>
      <Name></Name>
      <IpType></IpType>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
    </StaticUser>
  </StaticUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
Name	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpType	IP address family.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

Identity/IdentityEnable

This table enables or disables the user identification feature.

XML structure

```
<Identity>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enables or disables the user identification feature.	N/A	Boolean: • true. • false.	The default is false.

Identity/UserImportPolicies

This table contains identity user import policy information.

XML structure

```
<Identity>
  <UserImportPolicies>
    <UserImportPolicy>
      <PolicyName></PolicyName>
      <UpdateInterval></UpdateInterval>
      <ImportType></ImportType>
    </UserImportPolicy>
  </UserImportPolicies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	UserImportPolicies
Table type	Multi-instance table
Row name	UserImportPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
UpdateInterval	Interval for automatic user account import.	N/A	Unsigned integer. Value range: 1 to 65536 hours.	The default value is 24.
ImportType	Import type for automatic user account import.	N/A	Enumeration: • **1**—all. • **2**—group. • **3**—user.	N/A

Identity/Policies/RestfulPolicies

This table contains Restful server information in the identity user import policy.

XML structure

```
<Identity>
  <Policies>
    <RestfulPolicies>
      <RestfulPolicy>
        <PolicyName></PolicyName>
        <RestfulServerName></RestfulServerName>
      </RestfulPolicy>
    </RestfulPolicies>
  </Policies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	RestfulPolicies
Table type	Multi-instance table
Row name	RestfulPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RestfulServerName	Restful server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

Identity/Policies/LDAPPolicies

This table contains LDAP server information in the identity user import policy.

XML structure

```
<Identity>
  <Policies>
    <LDAPPolicies>
      <LDAPPolicy>
        <PolicyName></PolicyName>
        <LDAPSchemeName></LDAPSchemeName>
      </LDAPPolicy>
```

```
    </LDAPPolicies>
  </Policies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	LDAPPolicies
Table type	Multi-instance table
Row name	LDAPPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LDAPSchemeName	LDAP scheme name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

Identity/RestfulServers

This table contains information about the Restful server.

XML structure

```
<Identity>
  <RestfulServers>
    <RestfulServer>
      <ServerName></ServerName>
      <LoginName></LoginName>
      <Password></Password>
      <GetUserDatabase></GetUserDatabase>
      <GetUserGroupDatabase></GetUserGroupDatabase>
      <GetOnlineUser></GetOnlineUser>
      <PutOnlineUser></PutOnlineUser>
      <PutOfflineUser></PutOfflineUser>
      <DetectEnable></DetectEnable>
      <DetectInterval></DetectInterval>
      <DetectMaxCount></DetectMaxCount>
      <VpnName></VpnName>
    </RestfulServer>
```

```
  </RestfulServers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	RestfulServers
Table type	Multi-instance table
Row name	RestfulServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LoginName	Login name of the Restful server.	N/A	String. Length: 1 to 55 characters.	N/A
Password	Password of the Restful server.	N/A	Simple: String. Length: 1 to 63 characters.	N/A
GetUserDatabase	URI for requesting network access user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetUserGroupDatabase	URI for requesting user group information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetOnlineUser	URI for requesting online network access user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOnlineUser	URI for uploading online user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOfflineUser	URI for uploading offline user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectEnable	Enables or disables the connectivity detection feature of the Restful server.	N/A	Boolean: • true. • false.	The default is false.
DetectInterval	Interval for connectivity detection of the Restful server.	N/A	Unsigned integer. Value range: 1 to 10 minutes.	The default time is 5.
DetectMaxCount	Maximum number of probes per detection.	N/A	Unsigned integer. Value range: 1 to 5.	The default maximum number is 3.
VpnName	VPN instance name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

Identity/UserAccountsAutoImport

This table controls whether to automatically import identity user accounts.

XML structure

```
<Identity>
  <UserAccountsAutoImport>
    <UserAccountAutoImport>
      <PolicyName></PolicyName>
      <Auto></Auto>
    </UserAccountAutoImport>
  </UserAccountsAutoImport>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	UserAccountsAutoImport
Table type	Multi-instance table
Row name	UserAccountAutoImport
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Auto	Enables or disables automatic user account import.	N/A	Boolean: • true. • false.	The default is false.

Identity/OnlineUserDomFormat

This table contains username match mode information for online identity users.

XML structure

```
<Identity>
  <OnlineUserDomFormat>
    <DomainFormat></DomainFormat>
  </OnlineUserDomFormat>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	OnlineUserDomFormat
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainFormat	Username match mode.	N/A	Enumeration: • **1**—With domain. • **2**—Without domain. • **3**—Keep original.	The default is 3.

Identity/SecManageServers

This table contains security management server set information.

XML structure

```
<Identity>
  <SecManageServers>
    <SecManageServer>
      <ServerName></ServerName>
      <ListenPort></ListenPort>
      <EncrypAlgorithm></EncrypAlgorithm>
      <SharedKey></SharedKey>
      <Vendor></Vendor>
    </SecManageServer>
  </SecManageServers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	SecManageServers
Table type	Multi-instance table
Row name	SecManageServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ListenPort	Port to listen to the security management servers.	N/A	Unsigned integer. Value range: 1 to 65535.	The default value is 8001.
EncrypAlgorithm	Encryption method of the security management server set.	N/A	Enumeration: • **0**—3DES. • **1**—AES128.	N/A
SharedKey	Encryption secret key of	N/A	Simple: String. Length varies by	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the security management server set.		EncrypAlgorithm. • 3DES: 1 to 24 characters, • AES128: 1 to 16 characters.	
Vendor	Vendor	N/A	Enumeration: • **1**—H3C. • **2**—Huawei. • **3**—Drcom. • **4**—Srun.	N/A

Identity/SecManageIPs

This table contains IP address information for security management servers.

XML structure

```
<Identity>
  <SecManageIPs>
    <SecManageIP>
      <ServerName></ServerName>
      <Ipv4Address></Ipv4Address>
    </SecManageIP>
  </SecManageIPs>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	SecManageIPs
Table type	Multi-instance table
Row name	SecManageIP
Restrictions	ServerName can be chosen from Identity/SecManageServers
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address of a security management server.	Index	IPv4 address.	N/A

Identity/Roles

This table contains information about identity user roles.

XML structure

```
<Identity>
  <Roles>
    <Role>
      <RoleName></RoleName>
      <RoleUsers>
        <RoleUser>
          <UserName></UserName>
          <DomainName></DomainName>
        </RoleUser>
      </RoleUsers>
      <RoleUserGroups>
        <RoleUserGroup>
          <UserGroupName></UserGroupName>
          <DomainName></DomainName>
        </RoleUserGroup>
      </RoleUserGroups>
    </Role>
  </Roles>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	Roles
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Role	Identity user role table	Multi-instance table	N/A	For more information, see the Role table.

Identity/Roles/Role

This table contains information about identity user role.

XML structure

Please refer to the XML structure of Identity/Roles.

Table description

Item	Description
Feature name	Identity
Table name	Roles
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Identity user role name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
RoleUsers	Identity role user infomation	Sublist	N/A	For more information, see the RoleUsers table.
RoleUserGroups	Identity role usergroup infomation	Sublist	N/A	For more information, see the RoleUserGroups table.

Identity/Roles/Role/RoleUsers

This table contains information about identity users.

XML structure

Please refer to the XML structure of Identity/Roles/Role.

Table description

Item	Description
Feature name	Identity
Table name	RoleUsers
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleUser	Identity RoleUser table	Multi-instance table	N/A	For more information, see the RoleUser table.

Identity/Roles/Role/RoleUsers/RoleUser

This table contains information about identity users.

XML structure

Please refer to the XML structure of Identity/Roles/Role/RoleUsers.

Table description

Item	Description
Feature name	Identity
Table name	RoleUser
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	Identity user name	Index	String, case-insensitive. Length: 1 to 55 characters.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain question marks (?).	N/A

Identity/Roles/Role/RoleUserGroups

This table contains information about identity user groups.

XML structure

Please refer to the XML structure of Identity/Roles/Role.

Table description

Item	Description
Feature name	Identity
Table name	RoleUserGroups
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleUserGroup	Identity RoleUser group table	Multi-instance table	N/A	For more information, see the RoleUserGroup table.

Identity/Roles/Role/RoleUserGroups/RoleUserGroup

This table contains information about identity user groups.

XML structure

Please refer to the XML structure of Identity/Roles/Role/RoleUserGroups.

Table description

Item	Description
Feature name	Identity
Table name	RoleUserGroups
Table type	Multi-level and multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroupName	Identity user group name	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain question marks (?).	N/A

Identity

Identity/StaticUsers

This table contains static identity user information.

XML structure

```
<Identity>
  <StaticUsers>
    <StaticUser>
      <DomainName></DomainName>
      <Name></Name>
      <IpType></IpType>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
    </StaticUser>
  </StaticUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	If the index is empty, the domain is null-domain.
Name	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
IpType	IP address family.	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

Identity/OnlineUsers

This table contains online identity user information.

XML structure

```
<Identity>
  <OnlineUsers>
    <OnlineUser>
      <DomainName></DomainName>
      <UserName></UserName>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
      <Type></Type>
    </OnlineUser>
  </OnlineUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	OnlineUsers
Table type	Multi-instance table
Row name	OnlineUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The username cannot contain a question mark (?).	
IpAddress	IP address.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address.	Index	MAC address format: ff-ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.
Type	User type.	N/A	Unsigned integer.	An online identity user can have various types at the same time: • **1**—Static. • **2**—Dynamic. • **3**—Static and dynamic.

Identity/IdentityEnable

This table enables or disables the user identification feature.

XML structure

```
<Identity>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enables or disables the user identification feature.	N/A	Boolean: • true. • false.	The default is false.

Identity/AccountUsers

This table contains identity user account information.

XML structure

```
<Identity>
  <AccountUsers>
    <AccountUser>
      <DomainName></DomainName>
      <UserName></UserName>
    </AccountUser>
  </AccountUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	AccountUsers
Table type	Multi-instance table
Row name	AccountUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

Identity/AccountGroups

This table contains identity group information.

XML structure

```
<Identity>
```

```
  <AccountGroups>
    <AccountGroup>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <PureGroupName></PureGroupName>
      <Description></Description>
    </AccountGroup>
  </AccountGroups>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	AccountGroups
Table type	Multi-instance table
Row name	AccountGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupNam e	Name of the identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
Description	Description of the identity group	N/A	String. Length: 1 to 127 characters.	N/A

Identity/AccountUserRoles

This table contains information about identity users.

XML structure

```
<Identity>
  <AccountUserRoles>
```

```
    <AccountUserRole>
      <DomainName></DomainName>
      <UserName></UserName>
      <UserRoles>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Identity group role name	Index	String, case-sensitive. Length: 1 to 63 characters. The role name cannot contain a question mark (?).	N/A
RoleAttribute	Source of identity role	N/A	String: • CONFIG • INHERIT. • CONFIG, INHERIT	N/A

Identity/UserImportPolicies

This table contains identity user import policy information.

XML structure

```
<Identity>
  <UserImportPolicies>
    <UserImportPolicy>
      <PolicyName></PolicyName>
      <UpdateInterval></UpdateInterval>
      <ImportType></ImportType>
    </UserImportPolicy>
  </UserImportPolicies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	UserImportPolicies
Table type	Multi-instance table
Row name	UserImportPolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UpdateInterval	Interval for automatic user account import.	N/A	Unsigned integer. Value range: 1 to 65536 hours.	The default value is 24.
ImportType	Import type for automatic user account import.	N/A	Enumeration: • **1**—all. • **2**—group. • **3**—user.	N/A

Identity/Policies/RestfulPolicies

This table contains Restful server information in the identity user import policy.

XML structure

```
<Identity>
  <Policies>
    <RestfulPolicies>
      <RestfulPolicy>
        <PolicyName></PolicyName>
        <RestfulServerName></RestfulServerName>
      </RestfulPolicy>
    </RestfulPolicies>
  </Policies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	RestfulPolicies
Table type	Multi-instance table
Row name	RestfulPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RestfulServerN	Restful server	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ame	name.		Length: 1 to 31 characters.	

Identity/Policies/LDAPPolicies

This table contains LDAP server information in the identity user import policy.

XML structure

```
<Identity>
  <Policies>
    <LDAPPolicies>
      <LDAPPolicy>
        <PolicyName></PolicyName>
        <LDAPSchemeName></LDAPSchemeName>
      </LDAPPolicy>
    </LDAPPolicies>
  </Policies>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	LDAPPolicies
Table type	Multi-instance table
Row name	LDAPPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LDAPSchemeName	LDAP scheme name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

Identity/RestfulServers

This table contains information about the Restful server.

XML structure

```
<Identity>
  <RestfulServers>
    <RestfulServer>
      <ServerName></ServerName>
      <LoginName></LoginName>
      <GetUserDatabase></GetUserDatabase>
      <GetUserGroupDatabase></GetUserGroupDatabase>
      <GetOnlineUser></GetOnlineUser>
      <PutOnlineUser></PutOnlineUser>
      <PutOfflineUser></PutOfflineUser>
      <DetectEnable></DetectEnable>
      <DetectInterval></DetectInterval>
      <DetectMaxCount></DetectMaxCount>
      <VpnName></VpnName>
      <ConnectState></ConnectState>
    </RestfulServer>
  </RestfulServers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	RestfulServers
Table type	Multi-instance table
Row name	RestfulServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LoginName	Login name of the Restful server.	N/A	String. Length: 1 to 55 characters.	N/A
GetUserDatabase	URI for requesting network access user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetUserGroup	URI for	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Database	requesting user group information.		Length: 1 to 255 characters.	
GetOnlineUser	URI for requesting online network access user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOnlineUser	URI for uploading online user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOfflineUser	URI for uploading offline user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
DetectEnable	Enables or disables the connectivity detection feature of the Restful server.	N/A	Boolean: • true. • false.	The default is false.
DetectInterval	Interval for connectivity detection of the Restful server.	N/A	Unsigned integer. Value range: 1 to 10 minutes.	The default time is 5.
DetectMaxCount	Maximum number of probes per detection.	N/A	Unsigned integer. Value range: 1 to 5.	The default maximum number is 3.
VpnName	VPN instance name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ConnectState	Connectivity state between the device and the Restful server.	N/A	Boolean: • **true**—Reachable. • **false**—Unreachable.	The default is false.

Identity/UserAccountsAutoImport

This table controls whether to automatically import identity user accounts.

XML structure

```
<Identity>
  <UserAccountsAutoImport>
    <UserAccountAutoImport>
      <PolicyName></PolicyName>
      <Auto></Auto>
```

```
    </UserAccountAutoImport>
  </UserAccountsAutoImport>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	UserAccountsAutoImport
Table type	Multi-instance table
Row name	UserAccountAutoImport
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Auto	Enables or disables automatic user account import.	N/A	Boolean: • true. • false.	The default is false.

Identity/OnlineUserDomFormat

This table contains username match mode information for online identity users.

XML structure

```
<Identity>
  <OnlineUserDomFormat>
    <DomainFormat></DomainFormat>
  </OnlineUserDomFormat>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	OnlineUserDomFormat
Table type	Single-instance table
Row name	None

Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainFormat	Username match mode.	N/A	Enumeration: • **1**—With domain. • **2**—Without domain. • **3**—Keep original.	The default is 3.

Identity/SecManageServers

This table contains security management server set information.

XML structure

```
<Identity>
  <SecManageServers>
    <SecManageServer>
      <ServerName></ServerName>
      <ListenPort></ListenPort>
      <EncrypAlgorithm></EncrypAlgorithm>
      <Vendor></Vendor>
    </SecManageServer>
  </SecManageServers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	SecManageServers
Table type	Multi-instance table
Row name	SecManageServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ListenPort	Port to listen to security management servers.	N/A	Unsigned integer. Value range: 1 to 65535.	The default value is 8001.
EncrypAlgorithm	Encryption method of the security management server set.	N/A	Enumeration: • **0**—3DES. • **1**—AES128.	N/A
Vendor	Vendor	N/A	Enumeration: • **1**—H3C. • **2**—Huawei. • **3**—Drcom. • **4**—Srun.	N/A

Identity/SecManageIPs

This table contains IP address information for security management servers.

XML structure

```
<Identity>
  <SecManageIPs>
    <SecManageIP>
      <ServerName></ServerName>
      <Ipv4Address></Ipv4Address>
    </SecManageIP>
  </SecManageIPs>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	SecManageIPs
Table type	Multi-instance table
Row name	SecManageIP
Restrictions	ServerName can be chosen from Identity/SecManageServers.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of a security management server.	Index	IPv4 address.	N/A

Identity/TopUsers

This table contains top user information for user identification. Top users refer to identity users that do not belong to any identity groups.

XML structure

```
<Identity>
  <TopUsers>
    <TopUser>
      <DomainName></DomainName>
      <UserName></UserName>
    </TopUser>
  </TopUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	TopUsers
Table type	Multi-instance table
Row name	TopUser
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 55 characters. The username cannot contain a question mark (?).	

Identity/TopGroups

This table contains top user group information for user identification. Top groups refer to identity groups that do not belong to any parent identity groups.

XML structure

```
<Identity>
  <TopGroups>
    <TopGroup>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <PureGroupName></PureGroupName>
      <Description></Description>
    </TopGroup>
  </TopGroups>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	TopGroups
Table type	Multi-instance table
Row name	TopGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupNam e	Name of the identity group	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	at the lowest level		Length: 1 to 200 characters.	
Description	Description of the identity group	N/A	String. Length: 1 to 127 characters.	N/A

Identity/ParentGroups

This table contains information about identity groups to which an identity user belongs.

XML structure

```
<Identity>
  <ParentGroups>
    <ParentGroup>
      <DomainName></DomainName>
      <UserName></UserName>
      <GroupName></GroupName>
      <PureGroupName></PureGroupName>
      <Description></Description>
    </ParentGroup>
  </ParentGroups>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ParentGroups
Table type	Multi-instance table
Row name	ParentGroup
Restrictions	To perform the get operation, you must enter values for all index columns. To perform the get-bulk operation, you must enter values for at least the first two index columns.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupName	Name of the identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
Description	Description of the identity group	N/A	String. Length: 1 to 127 characters.	N/A

Identity/MemberUsers

This table contains information about member identity users in an identity group.

XML structure

```
<Identity>
  <MemberUsers>
    <MemberUser>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <UserName></UserName>
    </MemberUser>
  </MemberUsers>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	MemberUsers
Table type	Multi-instance table
Row name	MemberUser
Restrictions	To perform the get operation, you must enter values for all index columns. To perform the get-bulk operation, you must enter values for at least the first two index columns.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
UserName	Username.	Index	String. Length: 1 to 255 characters. The username cannot contain a question mark (?).	N/A

Identity/MemberGroups

This table contains information about member identity groups in an identity group.

XML structure

```
<Identity>
  <MemberGroups>
    <MemberGroup>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <MemberGroup></MemberGroup>
      <PureMemGroupName></PureMemGroupName>
      <MemGroupDescription></MemGroupDescription>
    </MemberGroup>
  </MemberGroups>
</Identity>
```

Table description

Item	Description

DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	N/A

Identity/ImportAccountProgress

This table contains import progress information for identity user accounts and groups when the device is importing identity user accounts from servers.

XML structure

```
<Identity>
  <ImportAccountProgress>
    <UsersCount></UsersCount>
    <GroupsCount></GroupsCount>
    <ImportState></ImportState>
  </ImportAccountProgress>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ImportAccountProgress
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UsersCount	Number of identity user accounts already imported	N/A	Unsigned integer.	N/A
GroupsCount	Number of identity groups already imported	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ImportState	Current import state	N/A	Enumeration: • **0**—Unimported. • **1**—Importing. • **2**—Imported.	N/A

Identity/ImportOnlineUserProgress

This table contains import progress information for online identity users when the device is importing online identity users from servers.

XML structure

```
<Identity>
  <ImportOnlineUserProgress>
    <UsersCount></UsersCount>
    <SucceedImportUsersCount></SucceedImportUsersCount>
    <ImportState></ImportState>
  </ImportOnlineUserProgress>
</Identity>
```

Table description

Item	Description
Feature name	Identity
Table name	ImportOnlineUserProgress
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UsersCount	Number of online identity users already imported	N/A	Unsigned integer.	N/A
SucceedImport UsersCount	Number of online identity users already successfully imported	N/A	Unsigned integer.	N/A
ImportState	Current import state	N/A	Enumeration: • **0**—Unimported.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Importing. • **2**—Imported.	

Identity/Roles

This table contains information about identity user roles.

XML structure

```
<Identity>
  <Roles>
    <Role>
      <RoleName></RoleName>
      <RoleUsers>
        <RoleUser>
          <UserName></UserName>
          <DomainName></DomainName>
        </RoleUser>
      </RoleUsers>
      <RoleUserGroups>
        <RoleUserGroup>
          <UserGroupName></UserGroupName>
          <DomainName></DomainName>
        </RoleUserGroup>

Table description

Item	Description
Feature name	UserLog
Table name	LogAttribute
Table type	Single-instance table

Row name	Host
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Userlog mode	Index	Enumeration: • 0—Userlog mode flow(Default). • 1—Userlog mode NAT. • 2—Userlog mode flow6. • 3—Userlog mode bin. • 4—Userlog mode 6to4. • 5—Userlog mode 4to6. • 6—Userlog mode traffic. • 7—Userlog mode traffic6.	N/A
Version	The version of NAT444 flow logs	N/A	Enumeration: • 0—Version 1.0(Default). • 1—Version 3.0. • 2—Version 5.0 • 3—Version 7.0	N/A
SourceIpAddress	The source IPv4 address for output NAT444 flow logs	N/A	String, dotted decimal notation.	Example: 1.1.1.1
SourceIpv6Address	The source Ipv6 address for output NAT444 flow logs	N/A	String, Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8
LoadBalance	The load balance function of log host	N/A	Boolean: • true • false(Default)	When the load balance function is disabled, a log UDP packet will be sent to each log host respectively. When the load balance function is enabled, a log UDP packet will only be sent to just one log host instead of all log hosts.
OutputToSyslog	Whether the flow log will be sent as syslog	N/A	Boolean: • true • false(Default)	By default, the flow logs will be sent to flow log hosts. When the flow log is sent to syslog, the flow logs will not be sent to flow log host anymore.

UserLog/FlowLog/LogHosts

This table contains NAT444 flow log hosts information.

XML structure

```
<UserLog>
  <FlowLog>
    <LogHosts>
      <Host>
        <Address></Address>
        <VRF></VRF>
        <Mode></Mode>
        <Port></Port>
        <LogCount></LogCount>
        <LogPacketCount></LogPacketCount>
      </Host>
    </LogHosts>
  </FlowLog>
</UserLog>
```

Table description

Item	Description
Feature name	UserLog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	The device supports up to 64 log hosts.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www. example.com

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Mode	Userlog mode	Index	Enumeration: • 0—Userlog mode flow. • 1—Userlog mode NAT. • 2—Userlog mode flow6. • 3—Userlog mode bin. • 4—Userlog mode 6to4. • 5—Userlog mode 4to6. • 6—Userlog mode traffic. • 7—Userlog mode traffic6.	N/A
Port	Port number of the log host	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LogCount	The logs count sent to current log host	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A
LogPacketCount	The UDP packets count of user logs sent to current log host	N/A	Unsigned integer. Value range: 0 to 2^{64} - 1.	N/A

UserLog/FlowLog/LogAttribute

This table contains global attributes about NAT444 flow log.

XML structure

```
<UserLog>
  <FlowLog>
    <LogAttribute>
      <Host>
        <Mode></Mode>
        <Version></Version>
        <SourceIpAddress></SourceIpAddress>
        <SourceIpv6Address></SourceIpv6Address>
        <LoadBalance></LoadBalance>
        <OutputToSyslog></OutputToSyslog>
      </Host>
    </LogAttribute>
  </FlowLog>
</UserLog>
```

UserProfile

UserProfile/UserProfiles

This table contains user profile information.

XML structure

```
<UserProfile>
  <UserProfiles>
    <Profile>
      <Name></Name>
      <Type></Type>
    </Profile>
  </UserProfiles>
</UserProfile>
```

Table description

Item	Description
Feature name	UserProfile
Table name	UserProfiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Type	User profile type	N/A	Enumeration: • **1**—User profile. • **2**—Session group profile.	N/A

ACL/UserProfilePfilter

This table contains information about packet filter application for user profile.

XML structure

```
<ACL>
  <UserProfilePfilter>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <AclType></AclType>

</ACL>
```

Table description

Item	Description
Feature name	ACL
Table name	UserProfilePfilter
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction.	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
AclType	ACL type.	N/A	Enumeration: • **1**—IPv4 ACL. • **2**—IPv6 ACL.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AclGroup	ACL name or number.	N/A	• **ACL name:** Case-insensitive string of 1 to 63 characters. • **ACL number**: An unsigned integer in the range of 2000 to 3999.	An ACL name must start with an English letter and cannot be **all**. Only Apply an ACL at one direction.If want to change the ACL, must to delete the item and create an new item.

CAR/UserProfileCAR

This table contains CAR application on user profile.

XML structure

```
<CAR>
  <UserProfileCAR>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <Type></Type>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
    </Apply>
  </UserProfileCAR>
</CAR>
```

Table description

Item	Description
Feature name	CAR
Table name	UserProfileCAR
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
Type	Match type	Index	Enumeration: • **4**—Any	N/A
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value range for CIR varies by device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	N/A
EBS	Excess burst size in bytes	N/A	Unsigned integer.	If **CBS** or PIR is not configured, **EBS** cannot be configured
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value range for PIR varies by device model.

CAR/UserProfileCAREx

This table contains CAR application on user profile.

XML structure

```
<CAR>
  <UserProfileCAREx>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <Type></Type>
      <Value></Value>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
    </Apply>
  </UserProfileCAREx>
</CAR>
```

Table description

Item	Description
Feature name	CAR
Table name	UserProfileCAREx
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus signs (-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
Type	Match type	Index	Enumeration: • **1**—IPv4Acl • **2**—IPv6Acl • **4**—Any	N/A
Value	Match type value	Index	Unsigned integer.	When **Type** is **1**, the value is 2000 to 5999. When **Type** is **2**, the value is 2000 to 3999. When **Type** is **4**, this column only can be configured as 0.
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value range for CIR varies by device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	N/A
EBS	Excess burst size in bytes	N/A	Unsigned integer.	If **CBS** or PIR is not configured, **EBS** cannot be configured
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value range for PIR varies by device model.

CAR/UserConnLimit

This table contains connection limits for a user profile.

XML structure

```
<CAR>
  <UserConnLimit>
    <ConnectionLimit>
      <Name></Name>
      <RateLimit></RateLimit>
      <NumLimit></NumLimit>
    </ConnectionLimit>
  </UserConnLimit>
</CAR>
```

Table description

Item	Description
Feature name	CAR
Table name	UserConnLimit
Table type	Multi-instance table
Row name	ConnectionLimit
Restrictions	None
Support for row creation and deletion	NO

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
RateLimit	Connection rate limit	N/A	Unsigned integer.	N/A
NumLimit	Connection count limit	N/A	Unsigned integer.	N/A

GTS/UserProfileGTS

This table contains GTS application on user profile.

XML structure

```
<GTS>
  <UserProfileGTS>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <Type></Type>
      <Value></Value>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <Queue-length></Queue-length>
    </Apply>
  </UserProfileGTS>
</GTS>
```

Table description

Item	Description
Feature name	GTS
Table name	UserProfileGTS
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	direction		• **0**—Inbound. • **1**—Outbound.	
Type	Match type	Index	Enumeration: • **1—**Any • **4—**Queue	N/A
Value	Match type value	Index	Unsigned integer.	When **Type** is **4**, the value range is 0 to 7. When **Type** is **1**, this column only can be configured as 0.
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value of this column depends on the device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	The value of this column depends on the device model.
EBS	Excess burst size in bytes	N/A	Unsigned integer.	The value of this column depends on the device model. If **CBS** or PIR is not configured, **EBS** cannot be configured
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value of this column depends on the device model.
Queue-length	Length of the buffer queue	N/A	Unsigned integer.	The value of this column depends on the device model.

HardwareQueue/UserProfileQMProfile

This table contains queue scheduling profile application on user profile.

XML structure

```
<HardwareQueue>
   <UserProfileQMProfile>
      <Apply>
         <UserProfileName></UserProfileName>
         <Direction></Direction>
         <SchedulingMode></SchedulingMode>
         <QMProfileName></QMProfileName>
      </Apply>
   </UserProfileQMProfile>
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	UserProfileQMProfile
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
SchedulingMode	Queue scheduling profile type	N/A	Enumeration: • **0**—Eight-queue. • **1—Four-queue.**	N/A
QMProfileName	Queue scheduling profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

HardwareQueue/UserProfileQueue

This table contains queue application on user profile.

XML structure

```
<HardwareQueue>
   <UserProfileQueue>
      <Apply>
         <Name></Name>
         <QueueID></QueueID>
      </Apply>
   </UserProfileQueue>
```

```
</HardwareQueue>
```

Table description

Item	Description
Feature name	HardwareQueue
Table name	UserProfileQueue
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
QueueID	Queue ID	N/A	Unsigned integer	The value of this column depends on the device model.

MQC/UserProfileQosPolicy

This table contains information about QoS policies applied to user profile.

XML structure

```
<MQC>
  <UserProfileQosPolicy>
    <Apply>
      <UserProfileName></UserProfileName>
      <Direction></Direction>
      <QoSPolicyName></QoSPolicyName>
    </Apply>
  </UserProfileQosPolicy>
</MQC>
```

Table description

Item	Description
Feature name	MQC
Table name	UserProfileQosPolicy
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **0**—Inbound. • **1**—Outbound.	N/A
QoSPolicyName	Qos policy name	N/A	String. Length: 1 to 31 characters.	N/A

USERQOS/SessionIdentify

This table contains information about identify a session group on an interface.

XML structure

```
<USERQOS>
  <SessionIdentify>
    <Identify>
      <IfIndex></IfIndex>
      <Type></Type>
    </Identify>
  </SessionIdentify>
</USERQOS>
```

Table description

Item	Description
Feature name	USERQOS
Table name	SessionIdentify
Table type	Multi-instance table
Row name	Identify
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
Type	Match type	N/A	Enumeration: • **1—Customer-VLAN** • **2—Service-VLAN** • **3—Customer-Service-VLAN** • **4—Subscriber-ID**	To configure a session group profile for users, you must first use the operation.

USERQOS/IfUserProfiles

This table contains information about a user profile applied to an interface.

XML structure

```
<USERQOS>
  <IfUserProfiles>
    <IfUserProfile>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <Name></Name>
    </IfUserProfile>
  </IfUserProfiles>
</USERQOS>
```

Table description

Item	Description
Feature name	USERQOS

Table name	IfUserProfiles
Table type	Multi-instance table
Row name	IfUserProfile
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
Direction	Application direction	Index	Enumeration: **0**—Inbound. • **1**—Outbound. • **2**—None.	N/A
Name	User profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.

USERQOS/UserProfileUserQueue

This table contains user queue scheduling parameters in a user profile.

XML structure

```
<USERQOS>
  <UserProfileUserQueue>
    <Apply>
      <UserProfileName></UserProfileName>
      <Direction></Direction>
      <LimitRate>
        <CIR></CIR>
        <CBS></CBS>
        <EBS></EBS>

        <Queue-length></Queue-length>
      </LimitRate>
      <QMProfileName></QMProfileName>
      <UserGroupProfileName></UserGroupProfileName>
    </Apply>
```

```
  </UserProfileUserQueue>
</USERQOS>
```

Table description

Item	Description
Feature name	USERQOS
Table name	UserProfileUserQueue
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: **0**—Inbound. **1**—Outbound.	N/A
LimitRate	Limit rate	N/A	Members include: CIR CBS EBS PIR Queue-length	N/A
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value range for this column varies by device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	The value range for this column varies by device model.
EBS	Excess burst size in bytes	N/A	Unsigned integer.	The value range for this column varies by device model. If the CBS or PIR is not configured, the EBS cannot be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value range for this column varies by device model.
Queue-length	Length of the buffer queue	N/A	Unsigned integer.	The value range for this column varies by device model.
QMProfileName	Queue scheduling profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
UserGroupProfileName	User group profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.

USERQOS/TunnelUserProfiles

This table contains information about the user profile applied to a tunnel.

XML structure

```
<USERQOS>
  <TunnelUserProfiles>
    <TunnelUserProfile>
      <IfName></IfName>
      <Direction></Direction>
      <Name></Name>
    </TunnelUserProfile>
  </TunnelUserProfiles>
</USERQOS>
```

Table description

Item	Description
Feature name	USERQOS
Table name	TunnelUserProfiles
Table type	Multi-instance table
Row name	TunnelUserProfile
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Direction	Application direction	Index	Enumeration: • **downstream**—The application direction is downstream.	N/A
Name	User profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.

SQ/UserProfilePQ

This table contains information about the priority queue list applied to a user profile.

XML structure

```
<SQ>
  <UserProfilePQ>
    <PQL>
      <Name></Name>
      <PQLIndex></PQLIndex>
    </PQL>

Row name	PQL
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
PQLIndex	Priority queue list index	N/A	Unsigned integer. Value range: 1 to 16.	N/A

LR/UserProfileLR

This table contains information about rate limit applied to a user profile.

XML structure

```
<LR>
  <UserProfileLR>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <PeerAdvertiseBandwidth></PeerAdvertiseBandwidth>
    </Apply>
  </UserProfileLR>
</LR>
```

Table description

Item	Description
Feature name	LR
Table name	UserProfileLR
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus (-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **outbound**—The application direction is outbound.	N/A
CIR	Committed information rate	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**. The value of this column depends on the device model.
CBS	Committed burst size	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**. The value of this column depends on the device model.
EBS	Excess burst size	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**. The value of this column depends on the device model. If **CBS** is not configured, **EBS** can not be configured
PIR	Peak information rate	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**. The value of this column depends on the device model.
PeerAdvertise Bandwidth	Use the bandwidth limit of the peer tunnel interface as the committed information rate	N/A	Boolean: • **true**—Yes. • **false**—No.	The CIR, CBS, EBS and PIR columns must be specified when the UsePeerBandwidth column is **false**.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: **0**—Inbound. **1**—Outbound.	N/A
LimitRate	Limit rate	N/A	Members include: CIR CBS EBS PIR Queue-length	N/A
CIR	Committed information rate in kbps	N/A	Unsigned integer.	The value range for this column varies by device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	The value range for this column varies by device model.
EBS	Excess burst size in bytes	N/A	Unsigned integer.	The value range for this column varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value range for this column varies by device model.
Queue-length	Length of the buffer queue	N/A	Unsigned integer.	The value range for this column varies by device model.
QMProfileName	Queue scheduling profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
UserGroupProfileName	User group profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.

USERQOS/TunnelUserProfiles

This table contains information about auser profile applied to a tunnel.

XML structure

```
<USERQOS>
  <TunnelUserProfiles>
    <TunnelUserProfile>
      <IfName></IfName>
      <Direction></Direction>
      <Name></Name>
    </TunnelUserProfile>
  </TunnelUserProfiles>
</USERQOS>
```

Table description

Item	Description
Feature name	USERQOS
Table name	TunnelUserProfiles
Table type	Multi-instance table
Row name	TunnelUserProfile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Direction	Application direction	Index	Enumeration: • **downstream**—The application direction is downstream.	N/A
Name	User profile name	N/A	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.

SQ/UserProfilePQ

This table contains information about priority queue applied to user profile.

XML structure

```
<SQ>
  <UserProfilePQ>
    <PQL>
      <Name></Name>
      <PQLIndex></PQLIndex>
    </PQL>
  </UserProfilePQ>
</SQ>
```

Table description

Item	Description
Feature name	SQ
Table name	UserProfilePQ
Table type	Multi-instance table
Row name	PQL
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
PQLIndex	Priority queue list index	N/A	Unsigned integer. Value range: 1 to 16.	N/A

LR/UserProfileLR

This table contains information about line-rate applied to user profile.

XML structure

```
<LR>
  <UserProfileLR>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <PeerAdvertiseBandwidth></PeerAdvertiseBandwidth>
    </Apply>
  </UserProfileLR>
</LR>
```

Table description

Item	Description
Feature name	LR
Table name	UserProfileLR
Table type	Multi-instance table
Row name	Apply
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: • **outbound**—The application direction is outbound.	N/A
CIR	Committed information rate	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**.The value of this column depends on the device model.
CBS	Committed burst size	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**.The value of this column depends on the device model.
EBS	Excess burst size	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**.The value of this column depends on the device model. If **CBS** is not configured, **EBS** can not be configured
PIR	Peak information rate	N/A	Unsigned integer.	It must be empty when the UsePeerBandwidth column is **true**.The value of this column depends on the device model.
PeerAdvertise Bandwidth	Using downstream bandwidth of the tunnel peer as committed information rate	N/A	Boolean: • **true**—Yes. • **false**—No.	The CIR, CBS, EBS and PIR columns must be specified when the UsePeerBandwidth column is **false**.

V2VTunnel

V2VTunnel/Tunnel

This table contains information about V2V tunnels.

XML structure

```
<V2VTunnel>
  <Tunnel>
    <Tunnels>
      <VsiName></VsiName>
      <ClientID></ClientID>
      <MacAddress></MacAddress>
      <ServerID></ServerID>
      <ServerDescription></ServerDescription>
      <LinkStatus></LinkStatus>
    </Tunnels>
  </Tunnel>
</V2VTunnel>
```

Table description

Item	Description
Feature name	V2VTunnel
Table name	Tunnel
Table type	Multi-instance table
Row name	Tunnels
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ClientID	V2V virtual terminal access ID	N/A	Unsigned integer. Value range: 1 to 99999.	N/A
MacAddress	V2V virtual terminal MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example:00-0c-af-e3-5d-c0.
ServerID	V2V virtual terminal	N/A	Unsigned integer. Value range: 1 to 99999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	convergence ID			
ServerDescription	Service name	N/A	String. Length: 1 to 31 characters.	N/A
LinkStatus	Link status	N/A	Boolean: • true—connected. • false—disconnected.	N/A

V2VTunnel/FrameType

This table contains information about V2Vtunnel frame type.

XML structure

```
<V2VTunnel>
  <FrameType>
    <IsArpFrameType></IsArpFrameType>
  </FrameType>
</V2VTunnel>
```

Table description

Item	Description
Feature name	V2VTunnel
Table name	FrameType
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IsArpFrameType	V2V tunnel frame type	N/A	Boolean: • true—ARP. • false—IP.	N/A

V2VTunnel/SpecIfMode

This table contains information about the interface link type.

XML structure

```
<V2VTunnel>
  <SpecIfMode>
    <SpecIfModes>
      <IfIndex></IfIndex>
      <LinkMode></LinkMode>
    </SpecIfModes>
  </SpecIfMode>
</V2VTunnel>
```

Table description

Item	Description
Feature name	V2VTunnel
Table name	SpecIfMode
Table type	Multi-instance table
Row name	SpecIfModes
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For moreinformation, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
LinkMode	Link type	N/A	Enumeration: • 1—Uplink interface. • 2—Downlinkinterface.	N/A

Table description

Item	Description
Feature name	NAT
Table name	GlobalPolicyRuleMembers
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT global policy	Index	String. Length: 1 to 63 characters.	N/A
RuleType	Type of the NAT global policy rule	N/A	Enumeration: • **0**—NAT44. • **1**—NAT64. • **2**—NAT66.	N/A
Description	Rule description	N/A	String. Length: 1 to 63 characters.	N/A
TransMode	Translation mode on packets matching the rule	N/A	Enumeration • **0**—SNAT. • **1**—DNAT. • **2**—TNAT.	You cannot specify a Translation mode when you remove or delete a rule. When you specify the SNAT Translation Mode, The columns of TransDstType, TransDstIP, and TransDstPort cannot be configured. When you specify the DNAT Translation mode, The columns of DstZone, TransSrcType, TransSrcAddrType, TransAddrGroupNumber, TransAddrGroupName, TransSrcIP, TransReversible, and TransPortPreserved cannot be configured.
SrcZoneList	Policy rule source zone	Data structure	Members include: • SrcZone.	N/A
SrcZone	Security zone to which the source IP of packet belongs before translation	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstZoneList	Policy rule destination zone	Data structure	Members include: • DstZone.	N/A
DstZone	Security zone to which the destination IP of the packet belongs before translation	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value of this column can be configured only when you specify the SNAT translation mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcType	Source translation Type on packets matching the rule	N/A	Enumeration • **0**—DynamicIP-Port. • **1**—DynamicIP. • **2**—StaticIP. • **3**—NO-NAT. • **4**—Prefix. • **5**—Nptv6.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist. When TransSrcType is DynamicIP and TransSrcAddrType is Address Group Number, the column of TransPortPreserved must be default . When TransSrcType is DynamicIP-Port and TransSrcAddrType is Address Group Number or Easy-IP, the column of TransReversible must be default. When you specify a NO-NAT action, the columns of TransAddrGroupNumber, TransAddrGroupName, TransReversible, and TransPortPreserved must be default. When TransSrcType is Prefix, TransSrcAddrType can only be Prefix-NAT64, Prefix-General-IPv4, Prefix-General-IPv6 or Prefix-Ivi. When TransSrcType is Nptv6, TransSrcAddrType can only be Nptv6.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcAddrType	Type of Source address	N/A	Enumeration • **0**—Address Group Name. • **1**—Address Group Number. • **2**—IP Address. • **3**—Easy-IP. • **4**—Subnet. • **5**—IPv4 Object Group. • **6**—IPv6 Address. • **7**—IPv6 Object Group. • **8**—Prefix-NAT64. • **9**—Prefix-General-IPv4. • **10**—Prefix-General-IPv6. • **11**—Prefix-Ivi. • **12**—Nptv6.	When you specify the SNAT or TNAT translation mode, the value of the column can be configured.
TransAddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 1 to 65535.	When you choose the Address Group mode, the value of the column can only be configured.
TransAddrGroupName	NAT address group name	N/A	String. Length: 1 to 63 characters.	When you choose the Address Group mode, the value of the column can only be configured.
TransSrcIP	IPv4 address of the global address	N/A	IPv4: String, dotted decimal notation.	When you choose the IP Address mode, the value of the column can be configured.
TransSrcSubnetAddr	IPv4 address of the global subnet	N/A	IPv4: String, dotted decimal notation.	When you choose the Subnet mode, the value of the column can be configured.
TransSrcSubnetMaskLength	Mask length of the global subnet	N/A	Unsigned integer. Value range: 24 to 31.	When you choose the Subnet mode, the value of the column can be configured.
TransSrcObjName	Name of the global object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv4 Object Group mode, the value of the column can be configured.
TransSrcIPv6	IPv6 address of the global address	N/A	Hexadecimal string, colon-separated.	When you choose the IPv6 Address mode, the value of the column can be configured.
TransSrcIPv6ObjName	Name of the global IPv6 object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv6 Object Group mode, the value of the column can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcIPv6 Prefix	IPv6 prefix of the global address	N/A	Hexadecimal string, colon-separated.	When you choose the Prefix-NAT64, Prefix-General-IPv6, Prefix-Ivi or Nptv6 mode, the value of the column can be configured.
TransSrcIPv6 PrefixLength	Length of TransSrcIPv6Prefix	N/A	Unsigned integer. Value range: 1 to 112.	When you choose the Prefix-NAT64, Prefix-General-IPv6 or Nptv6 mode, the value of the column can be configured. When RuleType is NAT64, TransSrcIPv6PrefixLength can only be 32, 40, 48, 56, 64 or 96.
TransReversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching	N/A	Boolean: • **true**—YES. • **false**—NO (default).	Support for this keyword depends on the device model. This column can only be configured when TransSrcType is DynamicIP and TransSrcAddrType is Address Group Number.
TransPortPreserved	Whether tries to preserve port number	N/A	Boolean: • **true**—YES • **false**—NO (default)	This column can only be configured when TransSrcType is DynamicIP-Port and TransSrcAddrType is Address Group Number or Easy-IP .
TransDstType	Destination translation type on packets matching the rule	N/A	Enumeratio: • **0**—IP-PORT. • **1**—NONAT. • **2**—IPv6-PORT. • **3**—StaticIP-IPv4. • **4**—StaticIP-IPv6. • **5**—Prefix-NAT64. • **6**—Prefix-General-IPv4. • **7**—Prefix-General-IPv6. • **8**—Prefix-Ivi. • **9**—Nptv6. • **10**—IPv4 Object Group.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
TransDstIP	IPv4 address of the internal address	N/A	IPv4: String, dotted decimal notation.	This column can only be configured in IP-PORT mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransDstObjName	Name of the global object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv4 Object Group mode, the value of the column can be configured.
TransDstPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	This column can only be configured in IP-PORT mode.
TransDstPortRangeList	A range list	Data structure	Members include: • TransDstStartPort. • TransDstEndPort	N/A
TransDstStartPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TransDstEndPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
StaticDnat	Configure static DNAT	N/A	Boolean: • **true**—YES. • **false**—NO.	N/A
OutVrfName	Name of the global VPN	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an exiting vpn or a new vpn
TransDstIPv6	IPv6 address of the internal address	N/A	Hexadecimal string, colon-separated.	This column can only be configured in IPv6-PORT mode.
TransDstIPv6Prefix	IPv6 prefix of the internal address	N/A	Hexadecimal string, colon-separated.	This column can only be configured in Prefix-General-IPv6, Prefix-Ivi or Nptv6 mode.
TransDstIPv6PrefixLength	Length of TransDstIPv6Prefix	N/A	Unsigned integer. Value range: 1 to 112.	When RuleType is NAT64, TransDstIPv6PrefixLength can only be 32, 40, 48, 56, 64 or 96.
Disable	Disable the rule	N/A	Boolean: • **true**—YES. • **false**—NO (default).	N/A
Counting	Enable matching statistics counting	N/A	Boolean: • **true**—YES. • **false**—NO (default).	N/A
VRID	Virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcVRID	Source virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A
DstVRID	Destination virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InVrfName	Name of the inbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf
SnatOutVrfName	Name of the snat outbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf
DnatOutVrfName	Name of the dnat outbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf

NAT/GlobalPolicyRuleSrcObj

Table description

Item	Description
Feature name	NAT.
Table name	GlobalPolicyRuleMembers.
Table type	Multi-instance table.
Row name	Rule.
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT global policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleType	Rule type	N/A	Enumeration: • **0**—NAT44. • **1**—NAT64. • **2**—NAT66.	N/A
Description	Rule description	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TransMode	Translation mode on packets matching the rule	N/A	Enumeration: • **0**—SNAT. • **1**—DNAT. • **2**—TNAT.	You cannot specify a Translation mode when you remove or delete a rule. When you specify the SNAT Translation Mode, The columns of TransDstType, TransDstIP, and TransDstPort cannot be configured. When you specify the DNAT Translation mode, The columns of DstZone, TransSrcType, TransSrcAddrType, TransAddrGroupNumber, TransAddrGroupName, TransSrcIP, TransReversible, and TransPortPreserved cannot be configured.
SrcObjGrpList	Policy rule source object group	Data structure	Members include: • SrcIpObjGroup. • SrcIpv6ObjGroup.	N/A
SrcIpObjGroup	Name of the source IP object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcIpv6ObjGroup	Name of the source IPv6 object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcIPList	Policy rule source IP	Data structure	Members include: • SrcIP. • SrcIPv6.	N/A
SrcIP	IPv4 address of the source IP	N/A	IPv4: String, dotted decimal notation.	N/A
SrcIPv6	IPv6 address of the source IP	N/A	Hexadecimal string, colon-separated.	N/A
SrcSubnetList	Source subnet list in the policy rule	Data structure	Members include: • SrcSubnetAddr. • SrcSubnetMaskLength. • SrcIPv6SubnetAddr. • SrcIPv6SubnetPrefixLength.	N/A
SrcSubnetAddr	IPv4 address of the source subnet	N/A	IPv4: String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcSubnetMaskLength	Mask length of the source subnet	N/A	Unsigned integer. Value range: 24 to 31.	N/A
SrcIPv6SubnetAddr	IPv6 address of the source IPv6 subnet	N/A	Hexadecimal string, colon-separated.	N/A
SrcIPv6SubnetPrefixLength	Prefix length of the source IPv6 subnet	N/A	Unsigned integer. Value range: 1 to 128.	N/A
DstObjGrpList	Policy rule destination object group	Data structure	Members include: • DstIpObjGroup. • DstIpv6ObjGroup.	N/A
DstIpObjGroup	Name of the Destination IP object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstIpv6ObjGroup	Name of the destination IPv6 object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DstIPList	Policy rule destination IP	Data structure	Members include: • DstIP. • DstIPv6.	N/A
DstIP	IPv4 address of the destination IP	N/A	IPv4: String, dotted decimal notation.	N/A
DstIPv6	IPv6 address of the destination IP	N/A	Hexadecimal string, colon-separated.	N/A
DstSubnetList	Destination subnet list in the policy rule	Data structure	Members include: • DstSubnetAddr. • DstSubnetMaskLength. • DstIPv6SubnetAddr. • DstIPv6SubnetPrefixLength.	N/A
DstSubnetAddr	IPv4 address of the destination subnet	N/A	IPv4: String, dotted decimal notation.	N/A
DstSubnetMaskLength	Mask length of the destination subnet	N/A	Unsigned integer. Value range: 24 to 31.	N/A
DstIPv6SubnetAddr	IPv6 address of the destination IPv6 subnet	N/A	Hexadecimal string, colon-separated.	N/A
DstIPv6SubnetPrefixLength	Prefix length of the destination IPv6 subnet	N/A	Unsigned integer. Value range: 1 to 128.	N/A
SrvObjGrpList	Policy rule service object group	Data structure	Members include: • ServiceIpObjGroup.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceObjGroup	Name of the Service object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SrcZoneList	Policy rule source zone	Data structure	Members include: • SrcZone.	N/A
SrcZone	Security zone to which the source IP of packet belongs before translation	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstZoneList	Policy rule Destination zone	Data structure	Members include: • DstZone.	N/A
DstZone	Security zone to which the destination IP of the packet belongs before translation	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value of this column can be configured only when you specify the SNAT translation mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcType	Source translation Type on packets matching the rule	N/A	Enumeration • **0**—DynamicIP-Port. • **1**—DynamicIP. • **2**—StaticIP. • **3**—NO-NAT. • **4**—Prefix. • **5**—Nptv6.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist. When TransSrcType is DynamicIP and TransSrcAddrType is Address Group Number, the column of TransPortPreserved must be default . When TransSrcType is DynamicIP-Port and TransSrcAddrType is Address Group Number or Easy-IP, the column of TransReversible must be default. When you specify a NO-NAT action, the columns of TransAddrGroupNumber, TransAddrGroupName, TransReversible, and TransPortPreserved must be default. When TransSrcType is Prefix, TransSrcAddrType can only be Prefix-NAT64 , Prefix-General-IPv4, Prefix-General-IPv6 or Prefix-Ivi. When TransSrcType is Nptv6, TransSrcAddrType can only be Nptv6.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcAddrType	Type of source address	N/A	Enumeration • **0**—Address Group Name. • **1**—Address Group Number. • **2**—IP Address. • **3**—Easy-IP. • **4**—Subnet. • **5**—IPv4 Object Group. • **6**—IPv6 Address. • **7**—IPv6 Object Group. • **8**—Prefix-NAT64. • **9**—Prefix-General-IPv4. • **10**—Prefix-General-IPv6. • **11**—Prefix-Ivi. • **12**—Nptv6.	When you specify the SNAT or TNAT translation mode, the value of the column can be configured.
TransAddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 1 to 65535.	When you choose the Address Group mode, the value of the column can only be configured.
TransAddrGroupName	NAT address group name	N/A	String, case-sensitive. Length: 1 to 63 characters.	When you choose the Address Group mode, the value of the column can only be configured.
TransSrcIP	IPv4 address of the global address	N/A	IPv4: String, dotted decimal notation.	When you choose the IP Address mode, the value of the column can be configured.
TransSrcSubnetAddr	IPv4 address of the global subnet	N/A	IPv4: String, dotted decimal notation.	When you choose the Subnet mode, the value of the column can be configured.
TransSrcSubnetMaskLength	Mask length of the global subnet	N/A	Unsigned integer. Value range: 24 to 31.	When you choose the Subnet mode, the value of the column can be configured.
TransSrcObjName	Name of the global object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv4 Object Group mode, the value of the column can be configured.
TransSrcIPv6	IPv6 address of the global address	N/A	Hexadecimal string, colon-separated.	When you choose the IPv6 Address mode, the value of the column can be configured.
TransSrcIPv6ObjName	Name of the global IPv6 object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv6 Object Group mode, the value of the column can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransSrcIPv6 Prefix	IPv6 prefix of the global address	N/A	Hexadecimal string, colon-separated.	When you choose the Prefix-NAT64 , Prefix-General-IPv6 , Prefix-Ivi or Nptv6 mode, the value of the column can be configured.
TransSrcIPv6 PrefixLength	Length of TransSrcIPv6Prefix	N/A	Unsigned integer. Value range: 1 to 112.	When you choose the Prefix-NAT64 , Prefix-General-IPv6 or Nptv6 mode, the value of the column can be configured. When RuleType is NAT64, TransSrcIPv6PrefixLength can only be 32, 40, 48, 56, 64 or 96.
TransReversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching	N/A	Boolean: • **true**—YES. • **false**—NO.	Support for this keyword depends on the device model. This column can only be configured when TransSrcType is DynamicIP and TransSrcAddrType is Address Group Number.
TransPortPreserved	Whether tries to preserve port number	N/A	Boolean: • **true**—YES. • **false**—NO.	This column can only be configured when TransSrcType is DynamicIP-Port and TransSrcAddrType is Address Group Number or Easy-IP.
TransDstType	Destination translation Type on packets matching the rule	N/A	Enumeratio: • **0**—IP-PORT. • **1**—NONAT. • **2**—IPv6-PORT. • **3**—StaticIP-IPv4. • **4**—StaticIP-IPv6. • **5**—Prefix-NAT64. • **6**—Prefix-General-IPv4. • **7**—Prefix-General-IPv6. • **8**—Prefix-Ivi. • **9**—Nptv6. • **10**—IPv4 Object Group.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
TransDstIP	IPv4 address of the internal address	N/A	IPv4: String, dotted decimal notation.	This column can only be configured in IP-PORT mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransDstObjName	Name of the global object group	N/A	String, case-insensitive. Length: 1 to 63 characters.	When you choose the IPv4 Object Group mode, the value of the column can be configured.
TransDstPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	This column can only be configured in IP-PORT mode.
TransDstPortRangeList	A range list	Data structure	Members include: • TransDstStartPort. • TransDstEndPort	N/A
TransDstStartPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TransDstEndPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
StaticDnat	Configure static DNAT	N/A	Boolean: • **true**—YES. • **false**—NO.	N/A
TransDstIPv6	IPv6 address of the internal address	N/A	Hexadecimal string, colon-separated.	This column can only be configured in IPv6-PORT mode.
TransDstIPv6Prefix	IPv6 prefix of the internal address	N/A	Hexadecimal string, colon-separated.	This column can only be configured in Prefix-General-IPv6 , Prefix-Ivi or Nptv6 mode.
TransDstIPv6PrefixLength	Length of TransDstIPv6Prefix	N/A	Unsigned integer. Value range: 1 to 112.	When RuleType is NAT64, TransDstIPv6PrefixLength can only be 32, 40, 48, 56, 64 or 96.
Disable	Disable the rule	N/A	Boolean: • **true**—YES. • **false**—NO.	N/A
Counting	Enable Matching statistics	N/A	Boolean: • **true**—YES. • **false**—NO.	N/A
MatchingCount	Total number of rule hits	N/A	Unsigned integer.	N/A
RuleTotalCount	Total rule number of the global policy rule.	N/A	Unsigned integer. Value range: 0 to 4096.	N/A
VRID	Virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcVRID	Source virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstVRID	Destination virtual router ID	N/A	Unsigned integer. Value range: 0 to 255.	N/A
InVrfName	Name of the inbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf
SnatOutVrfName	Name of the snat outbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf
DnatOutVrfName	Name of the dnat outbound VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify an existed vrf or a new vrf

NAT/GlobalPolicyRuleSrcObj

This table contains information about the NAT global policy rule source object group.

XML structure

```

```

Table description

Item	Description
Feature name	IPMAC
Table name	Ipv4MacBinding
Table type	Multi-instance table
Row name	IpMacBinding
Restrictions	Do not configure both VLAN ID and VRF settings.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	The value of 0.0.0.0 indicates that no IPv4 address is specified. Both Ipv4Address and MacAddress must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Where the IP-MAC binding entry takes effect.	Index	Enumeration: • 0—On a VRF instance. • 1—On a VLAN.	When the Type column is 0, the binding takes effect on a VPN instance. When the Type column is 1, the binding takes effect on a VLAN.
Value	VRF instance name or VLAN ID.	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, set this column to 0 and set the Type column to 1.
MacAddress	MAC address.	Column	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of 00-00-00-00-00-00 indicates that no MAC address is specified. Both Ipv4Address and MacAddress must be specified.

IPMAC/Ipv6MacBinding

This table contains IPv6 IP-MAC binding table information.

XML structure

```
<IPMAC>
  <Ipv6MacBinding>
    <IpMacBinding>
      <Ipv6Address></Ipv6Address>
      <Type></Type>
      <Value></Value>
      <MacAddress></MacAddress>
    </IpMacBinding>
  </Ipv6MacBinding>
</IPMAC>
```

IPMAC

IPMAC/Ipv4MacBinding

This table contains IPv4 IP-MAC binding table information.

XML structure

```
<IPMAC>
  <Ipv4MacBinding>
    <IpMacBinding>
      <Ipv4Address></Ipv4Address>
      <Type></Type>
      <Value></Value>
      <MacAddress></MacAddress>
      <TotalCount></TotalCount>
    </IpMacBinding>
  </Ipv4MacBinding>
</IPMAC>
```

Table description

Item	Description
Feature name	IPMAC
Table name	Ipv4MacBinding
Table type	Multi-instance table
Row name	IpMacBinding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	The value of 0.0.0.0 indicates that no IPv4 address is specified. Both Ipv4Address and MacAddress must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Where the IP-MAC binding entry takes effect.	Index	Enumeration: • 0—On a VRF instance. • 1—On a VLAN.	When the Type column is 0, the binding takes effect on a VPN instance. When the Type column is 1, the binding takes effect on a VLAN.
Value	VRF instance name or VLAN ID.	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, set this column to 0 and set the Type column to 1.
MacAddress	MAC address.	Column	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of 00-00-00-00-00-00 indicates that no MAC address is specified. Both Ipv4Address and MacAddress must be specified.
TotalCount	Total number of IP-MAC binding entries.	N/A	Unsigned integer	The number of queried IP-MAC binding entries or the total number of IP-MAC binding entries.

IPMAC/Ipv6MacBinding

This table contains IPv6 IP-MAC binding table information.

XML structure

```
<IPMAC>
  <Ipv6MacBinding>
    <IpMacBinding>
      <Ipv6Address></Ipv6Address>
      <Type></Type>
      <Value></Value>
      <MacAddress></MacAddress>
      <TotalCount></TotalCount>
    </IpMacBinding>
  </Ipv6MacBinding>
</IPMAC>
```

Table description

Item	Description
Feature name	IPMAC
Table name	Ipv6MacBinding

Table type	Multi-instance table
Row name	IpMacBinding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	Both Ipv6Address and MacAddress must be specified.
Type	Where the IP-MAC binding entry takes effect.	Index	Enumeration: • 0—On a VRF instance. • 1—On a VLAN.	When the Type column is 1, the binding takes effect on a VPN instance. When the Type column is 2, the binding takes effect on a VLAN.
Value	VRF instance name or VLAN ID.	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, set this column to 0 and set the Type column to 1.
MacAddress	MAC address.	Column	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of 00-00-00-00-00-00 indicates that no MAC address is specified. Both Ipv6Address and MacAddress must be specified.
TotalCount	Total number of IP-MAC binding entries.	N/A	Unsigned integer	The number of queried IP-MAC binding entries or the total number of IP-MAC binding entries.

IPMAC/IpMacBindingSwitch

This table controls the status of the IP-MAC binding feature.

XML structure

```
<IPMAC>
  <IpMacBindingSwitch>
    <Enable></Enable>
  </IpMacBindingSwitch>
</IPMAC>
```

Table description

Item	Description
Feature name	IPMAC

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultAction	Action for packets that do not match any IP-MAC binding entries.	N/A	numeration: • 0—Permit. • 1—Deny.	N/A

IPMAC/InterfaceSwitch

This table contains the interfaces enabled with the IP-MAC binding feature.

XML structure

```
<IPMAC>
  <InterfaceSwitch>
    <Interfaces>
      <IfIndex></IfIndex>
    </Interfaces>
  </InterfaceSwitch>
</IPMAC>
```

Table description

Item	Description
Feature name	IPMAC
Table name	InterfaceSwitch
Table type	Multi-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface on whitch the IP-MAC binding feature is enabled.	Index	Unsigned integer	This column can only be the index of layer 3 interface, layer 3 subinterface, layer 3 Eth-Trunk interface and VLANIF interface

IPMAC/Specification

This table contains the specification information of the IP-MAC binding feature.

XML structure

```
<IPMAC>
  <Specification>
    <GlobalEnable></GlobalEnable>
  </Specification>
</IPMAC>
```

Table description

Item	Description
Feature name	IPMAC
Table name	Specification
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalEnable	Whether to support the global enable function..	N/A	Boolean: • true. • false(default).	N/A

</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	RemoteBackupGroup
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RemoteBackupGrpEnable	Whether enable the remote-backup group.	N/A	Boolean: • true—YES • false—NO(default).	N/A
BackupEnable	Whether enable hot backup.	N/A	Boolean: • true—YES • false—NO(default).	N/A
BackupMode	Remote-backup group mode.	N/A	Enumeration: • 0—active/standy(default) • 1—dual/active.	N/A
BackupRole	Remote-backup group role.	N/A	Enumeration: • 0—master(default) • 1—standy.	N/A
DelayUpTimer	Device delay up	N/A	Unsigned integer. Value range: 0 to 50. Default: 1.	The unit is minutes.
AutoSynEnable	Whether enable the switch of auto-synchronized configuration.	N/A	Boolean: • true—YES • false—NO(default).	N/A
ConfigCheckEnable	Whether enable the switch of checking configuration.	N/A	Boolean: • true—YES • false—NO(default).	N/A
ConfigCheckTimer	Check configuration timer	N/A	Unsigned integer. Value range: 1 to 168. Default: 24	The unit is hours.
BackupDataChannel	Backup data channel	N/A	Members include: • BackupInterface.	N/A
BackupInterface	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIp	Source ip address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
PeerIp	Peer ip address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SourceIpv6	Source ipv6 address	N/A	String, dotted decimal.	Example:2018::1
PeerIpv6	Peer ipv6 address	N/A	String, dotted decimal.	Example:2019::1
PeerPort	Peer Port	N/A	Unsigned integer. Value range: 1024 to 65535.	NA
KeepaliveInterval	Keepalive interval	N/A	Unsigned integer. Value range: 1 to 60. Default: 1	The unit is seconds.
KeepaliveCount	Keepalive count	N/A	Unsigned integer. Value range: 1 to 255. Default: 4	If the probe message is not received for 4 consecutive times,the connection is considered disconnected.
DnsBackupEnable	Whether to enable DNS session backup	N/A	Boolean: • true—YES(default). • false—NO.	NA
HttpBackupEnable	Whether to enable HTTP session backup	N/A	Boolean: • true—YES(default). • false—NO.	NA

RBM/TrackVlans

This table contains information about the tracked VLAN of a remote-backup group.

XML structure

```
<RBM>
  <TrackVlans>
    <Vlans>
      <VlanID></VlanID>
    </Vlans>
  </TrackVlans>
</RBM>
```

Table description

Item	Description
Feature name	RBM

Item	Description
Table name	TrackVlans
Table type	Multi-instance table
Row name	Vlans
Restrictions	VlanID And Interface can only choose one
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanID	VLAN tracked by the remote-backup group.	Index	Unsigned integer. Value range: 1 to 4094.	N/A

RBM/TrackInterfaces

This table contains information about the tracked interface of a remote backup group.

XML structure

```
<RBM>
  <TrackInterfaces>
    <Interfaces>
      <Interface></Interface>
    </Interfaces>
  </TrackInterfaces>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	TrackInterfaces
Table type	Multi-instance table
Row name	Interfaces
Restrictions	Interface And VlanID can only choose one
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface tracked by the remote-backup group.	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

RBM/TrackItems

This table contains information about the track entry associated with a remote-backup group.

XML structure

```
<RBM>
  <TrackItems>
    <Items>
      <TrackID></TrackID>
    </Items>
  </TrackItems>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	TrackItems
Table type	Multi-instance table
Row name	Items
Restrictions	Remote-backup group module associates up to 64 track items
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackID	Associates the track entry with the	Index	Unsigned integer. Value range: 1 to 1024.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	remote-backup group.			

RBM/AdjustRoutingCost

This table contains information about cost adjustment of routing protocols.

XML structure

```
<RBM>
  <AdjustRoutingCost>
    <RoutingCost>
      <RoutingPro></RoutingPro>
      <OperationType></OperationType>
      <CostValue></CostValue>
    </RoutingCost>
  </AdjustRoutingCost>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	AdjustRoutingCost
Table type	Multi-instance table
Row name	RoutingCost
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoutingPro	Specify a routing protocol	Index	Enumeration: • 1—OSPF • 2—OSPFv3 • 4—BGP • 8—ISIS	N/A
OperationType	Specify an operation type, which is set or add.	N/A	Enumeration: • 0—set • 1—add	Set means specifying an absolute cost. Add means specifying an incremental cost.

Column name	Column description	Column type	Data type and restrictions	Remarks
CostValue	Specify the incremental cost value	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

RBM/SwitchoverVrrp

This table contains information about swithover of single vrrp.

XML structure

```
<RBM>
  <SwitchoverVrrp>
    <Vrrps>
      <vrid></vrid>
      <IpVersion></IpVersion>
    </Vrrps>
  </SwitchoverVrrp>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	SwitchoverVrrp
Table type	Multi-instance table
Row name	Vrrps
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Vrid	Specify a virtual router identifier	Index	Enumeration: Unsigned integer. Value range: 1 to 255	N/A
IpVersion	Specify IP version.	Index	Enumeration: • 2—IPv4 • 10—IPv6	

RBM/ConfigurationSyncModule

This table contains information about module's sync switch of configuration.

XML structure

```
<RBM>
  <ConfigurationSyncModule>
    <RouteStatic></RouteStatic>
  </ConfigurationSyncModule>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	ConfigurationSyncModule
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RouteStatic	Configuration of static routing.	N/A	Boolean: • true—YES. • false—NO(default).

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface tracked by the remote-backup group.	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfStatus	Tracked interface status	N/A	Enumeration: • 0—DOWN. • 1—UP.	N/A

RBM/TrackItems

This table contains information about the track entry associated with a remote-backup group.

XML structure

```
<RBM>
  <TrackItems>
    <Items>
      <TrackID></TrackID>
      <TrackStatus></TrackStatus>
    </Items>
  </TrackItems>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	TrackItems
Table type	Multi-instance table
Row name	Items

Item	Description
Restrictions	Remote-backup group module associates up to 64 track items

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackID	Associates the track entry with the remote-backup group.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackStatus	Tracked item status	N/A	Enumeration: • 0—Not ready. • 1—Positive. • 2—Negative.	N/A

RBM/AdjustRoutingCost

This table contains information about cost adjustment of routing protocols.

XML structure

```
<RBM>
  <AdjustRoutingCost>
    <RoutingCost>
      <RoutingPro></RoutingPro>
      <OperationType></OperationType>
      <CostValue></CostValue>
    </RoutingCost>
  </AdjustRoutingCost>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	AdjustRoutingCost
Table type	Multi-instance table
Row name	RoutingCost
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoutingPro	Specify a routing protocol	Index	Enumeration: • 1—OSPF • 2—OSPFv3 • 4—BGP • 8—ISIS	N/A
OperationType	Specify an operation type, which is set or add.	N/A	Enumeration: • 0—set • 1—add	Set means specifying an absolute cost. Add means specifying an incremental cost.
CostValue	Specify the incremental cost value	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

RBM/Status

This table contains status information about the remote backup group.

XML structure

```
<RBM>
  <Status>
    <BackupMode></BackupMode>
    <BackupRole></BackupRole>
    <RunStatus></RunStatus>
    <HelloStatus></HelloStatus>
    <DelayUpTimer></DelayUpTimer>
    <SessionBackupStatus></SessionBackupStatus>
    <ConfigBackupStatus></ConfigBackupStatus>
    <ConfigCheck>
      <ConfigCheckResult></ConfigCheckResult>
      <LastCheckTime></LastCheckTime>
    </ConfigCheck>
    <SwitchRunningTime></SwitchRunningTime>
    <DelayUpRemainTime></DelayUpRemainTime>
  </Status>
<RBM>
```

Table description

Item	Description
Feature name	RBM

Item	Description
Table name	Status
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupMode	Remote backup group mode.	N/A	Enumeration: • 0—active/standy. • 1—dual/active. • 2—single device.	N/A
BackupRole	Remote-backup group role.	N/A	Enumeration: • 0—master • 1—standy • 2—initial	Initial means no configuration
RunStatus	Device running status	N/A	Enumeration: • 0—active • 1—standby. • 2—initial	N/A
HelloStatus	Heartbeat connection status	N/A	Boolean: • true—connect • false—disconnect.	N/A
DelayUpTimer	Switchback delay	N/A	Unsigned integer. Value range: 0 to 50.	The unit is minutes.
SessionBackupStatus	Session backup status	N/A	Enumeration: • 0—disable • 1—real-time backup • 2—batch backup	N/A
ConfigBackupStatus	Configuration backup status	N/A	Enumeration: • 0—disable • 1—real-time backup • 2—batch backup	N/A
ConfigCheck	Configuration check	Data structure.	Members include: • ConfigCheckResult. • LastCheckTime.	N/A
ConfigCheckResult	Configuration result	N/A	Enumeration: • 0—not checked • 1—checking	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—consistent • 3—inconsistent	
LastCheckTime	Most recent configuration check time	N/A	DateTime.	Example: 2020-05-12T 13:36:28.
SwitchRunningTime	Device-role state keeps running time	N/A	Unsigned integer.	The unit is seconds.
DelayUpRemainTime	Switchover countdown	N/A	Unsigned integer.	The unit is seconds.

RBM/ConfigCheckResults

This table contains information about the configuration checking results of a remote-backup group.

XML structure

```
<RBM>
  <ConfigCheckResults>
    <CheckResults>
      <ModuleName></ModuleName>
      <Result></Result>
    </CheckResults>
  </ConfigCheckResults>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	ConfigCheckResults
Table type	Multi-instance table
Row name	CheckResult
Restrictions	NONE

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModuleName	RBM configuration	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	checking module name.			
Result	RBM configuration checking result is consistent or not	N/A	Boolean: • true—YES. • false—NO.	N/A

RBM/RunStateSwitchInfos

This table contains information about the device role switchover of a remote-backup group.

XML structure

```
<RBM>
  <RunStateSwitchInfos>
    <SwitchInfo>
      <SwitchID></SwitchID>
      <Swithtime></Swithtime>
      <SwithContent></SwithContent>
      <SwithReason></SwithReason>
    </SwitchInfo>
  </RunStateSwitchInfos>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	RunStateSwitchInfos
Table type	Multi-instance table
Row name	SwitchInfo
Restrictions	NONE

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SwitchID	State switchover information ID	Index	Unsigned integer. Value range: 1 to 50.	
Swithtime	State switchover time	N/A	DateTime.	Example: 2020-05-12 13:36:28.
SwithContent	State switchover	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	content		• 0—Init to Active. • 1—Init to Standby. • 2—Active to Init. • 3—Standby to Init. • 4—Active to Standby. • 5—Standby to Active.	
SwithReason	State switchover reason	N/A	String, case sensitive. Length: 1 to 511 characters.	Reasons such as: • Local device rebooted. • Peer device rebooted. • Interface status changed. • Health status changed. • Switchover request cmd. • Track entry status changed. • SecBlade Number changed. • Keepalive connection established. • Keepalive connection broken. • Config changed.

RBM/SwitchoverVrrp

This table contains information about swithover of single vrrp.

XML structure

```
<RBM>
  <SwitchoverVrrp>
    <Vrrps>
      <Vrid></Vrid>
      <IpVersion></IpVersion>
    </Vrrps>
  </SwitchoverVrrp>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	SwitchoverVrrp
Table type	Multi-instance table
Row name	Vrrps
Restrictions	NONE

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Vrid	Virtual router identifier	N/A	Unsigned integer. Value range: 1 to 255.	
IpVersion	Specify IP version.	Index	Enumeration: • 2—IPv4 • 10—IPv6	

RBM/ConfigurationSyncModule

This table contains information about module's sync switch of configuration.

XML structure

```
<RBM>
  <ConfigurationSyncModule>
    <RouteStatic></RouteStatic>
  </ConfigurationSyncModule>
</RBM>
```

Table description

Item	Description
Feature name	RBM
Table name	ConfigurationSyncModule
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RouteStatic	Configuration of static routing.	N/A	Boolean: • true—YES. • false—NO.

SCD/DetectPolicyList

This table contains information about server connection detection (SCD) policies.

XML structure

```
<SCD>
  <DetectPolicyList>
    <DetectPolicy>
      <PolicyName></PolicyName>
      <ServerIPAddress></ServerIPAddress>
      <SendLog></SendLog>
      <PolicyEnable></PolicyEnable>
    </DetectPolicy>
  </DetectPolicyList>
</SCD>
```

Table description

Item	Description
Feature name	SCD
Table name	DetectPolicyList
Table type	Multi-instance table
Row name	DetectPolicy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	SCD policy name	Index	String, case-insensitive. Length: 1 to 63 characters.	Required. Policy name can not contain

				the word default as prefix when create a new policy. Modification is not allowed.
ServerIPAddress	Server IP address	N/A	String, dotted decimal notation.	Required. Example: 1.1.1.1.
SendLog	Whether to enable logging for server connection detection	N/A	Boolean: • **true**—Enable (default) • false—Disable	Optional.
PolicyEnable	Whether to enable the SCD policy	N/A	Boolean: • **true**—Enable (default) • **false**—Disable	Optional.

SCD/DetectRuleList

This table contains information about rules of an SCD policy

XML structure

```
<SCD>
  <DetectRuleList>
    <DetectRule>
      <PolicyName></PolicyName>
      <ServerIPAddress></ServerIPAddress>
      <RuleID></RuleID>
      <AutoLearnFlag></AutoLearnFlag>
      <DestIPAddress></DestIPAddress>
      <TCPPortRange></TCPPortRange>
      <UDPPortRange></UDPPortRange>
      <ICMP></ICMP>
    </DetectRule>
  </DetectRuleList>
</SCD>
```

Table description

Item	Description
Feature name	SCD
Table name	DetectRuleList
Table type	Multi-instance table
Row name	DetectRule
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	SCD policy name.	Index	String, case-insensitive. Length: 1 to 63 characters.	Required. Allowed to set empty value when AutoLearnFlag column is true.
ServerIPAddress	Server IP address.	Index	String, dotted decimal notation.	Required. Example: 1.1.1.1.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 1 to 65535.	Required. You must set this column to 0 when you create a new row. And if you set this column to 0, the device automatically assigns the rule an ID.
AutoLearnFlag	Whether configuration is from autolearn record	N/A	Boolean: • **true**—Configuration is from autolearn • **false**—Configuration is not from autolearn (default)	N/A

DestIPAddress	Destination IP address of the rule.	N/A	String, dotted decimal notation.	Required. Example: 1.1.1.1. Dest IP must be different in rules of the same policy. Rules of different policies can have the same destination IP address.
TCPPortRange	Port ranges of TCP protocol.	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535. Items range: 0 to 20.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You must set at least one protocol.
UDPPortRange	Port ranges of UDP protocol.	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535. Items range: 0 to 20.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You must set at least one protocol.
ICMP	ICMP protocol.	N/A	Boolean: • **true**—Enabled • **false**—Disabled (default)	You must set at least one protocol.

SCD/ServerAutoLearn

This table contains the information of the server automatic learning feature.

XML structure

```
<SCD>
  <ServerAutoLearn>
    <ServerList>
      <ServerName></ServerName>
    </ServerList>
    <TimeType></TimeType>
    <LearnStatus></LearnStatus>
  </ServerAutoLearn>
</SCD>
```

Table description

      <Port></Port>
    </Record>
  </AutoLearnRecords>
</SCD>
```

Table description

Item	Description
Feature name	SCD
Table name	AutoLearnRecords
Table type	Single-instance table
Row name	Record
Restrictions	
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RecordNumber	Total number of auto-learn records.	N/A	Unsigned integer. Value range: 0 to 100000.	N/A
ServerIPAddress	Server IP address of the record.	N/A	String, dotted decimal notation.	N/A
Position	Record the number of pagination	Index	Unsigned integer. Value range:0 to 200	N/A
DestIPAddress	Destination IP address of the record.	N/A	String, dotted decimal notation.	N/A
Protocol	Protocol information of the record.	N/A	Enumeration: • **1**—TCP • 2—UDP • 3—ICMP	N/A
Port	Port information of the record.	N/A	Unsigned integer. • Value range: 1 to 65535.	This column is available only when the Protocol column is TCP or UDP.

SCD/ServerAutoLearnBatch

This table contains the bulk information of the server automatic learning feature.

XML structure

```
<SCD>
  <ServerAutoLearnBatch>
    <AutoLearn>
      <SeqNum></SeqNum>
      <ServerList>
```

```
        <ServerName></ServerName>
      </ServerList>
      <TimeType></TimeType>
      <LearnStatus></LearnStatus>
      <Percent></Percent>
      <IsIncrement></IsIncrement>
    <AutoLearn>
  </ServerAutoLearnBatch>
</SCD>
```

Table description

Item	Description
Feature name	SCD
Table name	ServerAutoLearnBatch
Table type	Single-instance table
Row name	AutoLearn
Restrictions	
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
ServerList	IPv4 object group name list.	Data structure	Members include: • ServerName	You must select one or more object groups to start auto learn.
ServerName	IPv4 object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	You must select one or more object groups to start auto learn.
TimeType	Learning interval	N/A	Enumeration: • 1—1 hour	You must select a learning time interval to start

			• 2—12 hours • 3—24 hours • 4—1 week	autolearn.
LearnStatus	Whether automatic learning is started	N/A	Enumeration: • 1— • 2—12 hours • 3—24 hours • 4—1 week	N/A
Percent	Auto learning complete percentage.	N/A	Unassigned integer. • Value range: 0 to 100.	N/A
IsIncrement	Is Increment	N/A	Enumeration: • 1—The only distribution • 2—the previous one in batch distribution 3—the last one in batch distribution	N/A

SCD/AutoLearnApplyBatch

This table contains the bulk information about SCD automatic learning application.

XML structure

```
<SCD>
  <AutoLearnApplyBatch>
    <LearnApply>
      <SeqNum></SeqNum>
      <ServerList>
        <ServerName></ServerName>
      </ServerList>
      <TimeType></TimeType>
      <IsIncrement></IsIncrement>
    <LearnApply>
  </AutoLearnApplyBatch>
</SCD>
```

Table description

Item	Description

</LB>
```

Table description

Item	Description
Feature name	LB
Table name	Log
Table type	Single-instance table
Row name	N/A
Restrictions	Only log can be gotten by this table.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaseEnable	Enable the base log of LB.	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
NatEnable	Enable the NAT log of LB.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
BandwidthBusyEnable	Enable the bandwidth busy log of LB.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
ScheduleEnable	Enable logging for packet types and DNS domain names.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

LB/SNATPools

This table contains LB SNAT pool information.

XML structure

```
<LB>
  <SNATPools>
    <SNATPool>
      <SNATPoolName></SNATPoolName>
      <Description></Description>
    </SNATPool>
  </SNATPools>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPools
Table type	Multi-instance table
Row name	SNATPool
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SNATPoolName	Name of SNAT pool	Index	String. Case-insensitive. Length: 1 to 63 characters.	N/A.
Description	SNAT pool description.	N/A	String: Case-sensitive Length: No more than 127 characters	N/A

LB/SNATPoolsIpv4Infos

This table contains information about IPv4 addresses in an LB SNAT pool.

XML structure

```
<LB>
  <SNATPoolsIpv4Infos>
    <SNATPoolsIpv4Info>
      <Name></Name>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
    </SNATPoolsIpv4Info>
  </SNATPoolsIpv4Infos>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPoolsIpv4Infos
Table type	Multi-instance table
Row name	SNATPoolsIpv4Info
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of SNAT pool	Index	String.Case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4AddressStart	Start IP address	Index	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses,

				multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	End IP address	Index	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.

LB/SNATPoolsIpv6Infos

This table contains information about IPv6 addresses in an LB SNAT pool.

XML structure

```
<LB>
  <SNATPoolsIpv6Infos>
    <SNATPoolsIpv6Info>
      <Name></Name>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SNATPoolsIpv6Info>
  </SNATPoolsIpv6Infos>
</LB>
```

Table description

Item	Description
Feature name	LB
Table name	SNATPoolsIpv6Infos
Table type	Multi-instance table
Row name	SNATPoolsIpv6Info
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of SNAT pool	Index	String.Case-insensitive. Length: 1 to 63 characters.	N/A
Ipv6AddressStart	Start IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.

LB/SnatArpInterfaces

This table contains information about SNAT interfaces.

XML structure

```
<LB>
  <SnatArpInterfaces>
    <SnatArpInterface>
      <SnatName></SnatName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </SnatArpInterface>
  </SnatArpInterfaces>
</LB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteLinks
Table type	Multi-instance table
Row name	SmartRouteILink
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfaceName	Name of the interface.	N/A	String, case-insensitive. Length: 1 to 47 characters. By default, no interface name is	N/A

			specified.	
GatewayAddr	Gateway IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
GatewayIPv6Addr	Gateway IPv6 address	N/A	String, dotted decimal notation.	Example: 2::2.
NoIPv4RouteEnable	Whether Gateway IPv4 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
NoIPv6RouteEnable	Whether Gateway IPv6 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A

LLB/SmartRouteParameter

This table contains basic information.about smart-route

XML structure

    <PersistPriorBusyEnable></PersistPriorBusyEnable>
  </SmartRouteParameter>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteParameters
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PersistType	Sticky method of smart-route	N/A	Enumeration: • 0—None. • 1—Destination IP stickiness. (default) • 2—Source IP stickiness. • 3—Source IP and destination IP stickiness.	N/A
PersistTime out	Timeout time of the sticky of smart-route.	N/A	Unsigned integer. Value range: The value takes is in the range of 1 to 604800. Unit: second. By default, the value is 300 .	N/A
PersistIPv4 SrcMask	IPv4 mask of source for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when PersistType is Source IP stickiness.(2) or Source IP and destination IP stickiness.(3).
PersistIPv4 DestMask	IPv4 mask of destination for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 24.	The column can only be configured when PersistType is Destination IP stickiness.(1) or Source IP and destination IP stickiness.(3).

PersistIPv6 SrcPreFix	IPv6 prefix of source for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column can only be configured when PersistType is Source IP stickiness.(2) or Source IP and destination IP stickiness.(3).
PersistIPv6 DestPreFix	IPv6 prefix of destination for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 64.	The column can only be configured when PersistType is Destination IP stickiness.(1) or Source IP and destination IP stickiness.(3).
PersistPrior BusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A

LLB/SmartRoutePolicies

This table contains information.about smart-route policy

XML structure

```
<LLB>
  <SmartRoutePolicies>
    <SmartRoutePolicy>
      <PolicyName></PolicyName>
      <BeforePolicyName></BeforePolicyName>

      <BusyProtectEnable></BusyProtectEnable>
      <LinksPredictor></LinksPredictor>
      </SmartRoutePolicy>
  </SmartRoutePolicies>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRoutePolicies
Table type	Muti-instance table
Row name	SmartRoutePolicy
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
BeforePolicyName	Name of the smart route policy that the row will be inserted after.	N/A	String, case-insensitive. Length: 1 to 63 characters.	BeforePolicyNamemust be an existing smart route policy. By default, indicates the row will be inserted at last.
Type	Type of the smart route policy.	N/A	Enumeration: • 0—IPv4. • 1—IPv6	When a smart route policy is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the smart route policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the smart route policy.	N/A	Enumeration: • 0—Predictor out interface(default). • 1—Forward all.	When ForwardType changes from Predictor out interface(0) to Forward all.(1) , scheduleLinks will be delete
Fallback	Fallback action when schedule out-interface failed.	N/A	Enumeration: • 0—Drop (default). • 1—Match next smart route policy	N/A
PolicyEnable	Enable the smart route policy.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
LinksPredictor	Predictor algorithm for smart route to select a link to forward packet.	N/A	Enumeration: • 0—Round-robin (default). • 1—Random. • 2—Least-connection . • 3—Hash source address. • 4—Hash source address and port. • 5—Hash destination address. • 7—Inbound	N/A

			bandwidth. • 8—Outbound bandwidth. • 10—Max inbound bandwidth. • 11—Max outbound bandwidth.	

LLB/SmartRouteSourceIPRules

This table contains information about smart-Route policy source ip match rules.

XML structure

```
<LLB>
  <SmartRouteSourceIPRules>
    <SmartRouteSourceIPRule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <RuleType></RuleType>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SmartRouteSourceIPRule>
  </SmartRouteSourceIPRules>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteSourceIPRules
Table type	Multi-instance table
Row name	SmartRouteSourceIPRules
Restrictions	Only SmartRoute policy source ip match rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleName	Name of the smart route policy match rule.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleType	Method of the source ip match rule.	N/A	Enumeration: • 0—IP Any. • 1—IPv4 subnet. • 2—IPv4 range.. • 3—IPv6 subnet. • 4—IPv6 range.	N/A
Ipv4Address	Match rule of IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the RuleType is IPv4 subnet (1).
Ipv4PrefixLength	Mask length of the IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when the RuleType is IPv4 subnet (1). And Ipv4Address is configured
Ipv4AddressStart	The start IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	This column can be configured only when the RuleType is IPv4 range (2). Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	The end IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	Ipv4AddressStart and Ipv4AddressEnd should be configured together. Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

Column name	Column description	Column type	Data type and restrictions	Remarks
				If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv6Address	Match rule of IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the RuleType is IPv6 subnet (3).
Ipv6PrefixLength	Prefix length of the IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when the RuleType is IPv6 subnet (3) And Ipv6Address is configured
Ipv6AddressStart	Start IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	This column can be configured only when the type is IPv6 range (4). Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Ipv6AddressStart and Ipv6AddressEnd should be configured together. Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.

LLB/SmartRouteDestRules

This table contains information about smart-Route policy match rules.

XML structure

```
<LLB>
  <SmartRouteDestRules>
```

```
    <SmartRouteDestRule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <RuleType></RuleType>
      <RuleType></RuleType>
       <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6Address></Ipv6Address>
       <Ipv6PrefixLength></Ipv6PrefixLength>
       <Ipv6AddressStart></Ipv6AddressStart>
       <Ipv6AddressEnd></Ipv6AddressEnd>
       <ISPName></ISPName>
    </SmartRouteDestRule>
  </SmartRouteDestRules>
</LLB>
```

Table description

Item	Description

Row name	SmartRouteDestRule
Restrictions	Only SmartRoute policy match destination rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleName	Name of the smart route policy match rule.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleType	Type of the match rule.	N/A	Enumeration: • 0—IP Any. • 1—IPv4 subnet. • 2—IPv4 range..	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 3—IPv6 subnet. • 4—IPv6 range. • 5—ISP.	
Ipv4Address	Match rule of IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the RuleType is IPv4 subnet (1).
Ipv4PrefixLength	Mask length of the IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when the RuleType is IPv4 subnet (1). And Ipv4Address is configured
Ipv4AddressStart	The start IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	This column can be configured only when the RuleType is IPv4 range (2). Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	The end IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	Ipv4AddressStart and Ipv4AddressEnd should be configured together. Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv6Address	Match rule of IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the RuleType is IPv6 subnet (3).
Ipv6PrefixLength	Prefix length of the IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when the RuleType is IPv6 subnet (3) And

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ipv6Address is configured
Ipv6AddressStart	Start IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	This column can be configured only when the type is IPv6 range (4). Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Ipv6AddressStart and Ipv6AddressEnd should be configured together. Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
ISPName	Name of the ISP	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ISP name is specified.	This column can be configured only when the RuleType is ISP(5)

LLB/SmartRouteInterfaceRules

This table contains information about smart-Route policy match rules.

XML structure

```
<LLB>
  <SmartRouteInterfaceRules>
    <SmartRouteInterfaceRule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <InterfaceName></InterfaceName>

  </SmartRouteInterfaceRules>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteInterfaceRules
Table type	Multi-instance table
Row name	SmartRouteInterfaceRule
Restrictions	Only SmartRoute policy match source interface rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleName	Name of the smart route policy match rule.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the RuleType is Interface (6)

LLB/SmartRouteScheduleLinks

This table contains information about smart-Route policy schedule links.

XML structure

```
<LLB>
  <SmartRouteScheduleLinks>
    <SmartRouteScheduleLink>
      <PolicyName></PolicyName>
      <InterfaceName></InterfaceName>
      <Weight></Weight>
    </SmartRouteScheduleLink>
  </SmartRouteScheduleLinks>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteScheduleLinks
Table type	Multi-instance table
Row name	SmartRouteScheduleLink
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
InterfaceName	Name of the interface.	Index	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	N/A
Weight	Weight of the link.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

LLB/SmartRouteLinkProbes

This table contains information about link Probe that only uses NQA template.

XML structure

```
<LLB>
  <SmartRouteLinkProbes>
    <SmartRouteLinkProbe>
      <InterfaceName></InterfaceName>
      <ProbeName></ProbeName>
    </SmartRouteLinkProbe>
  </SmartRouteLinkProbes>
</LLB>
```

Row name	Ipv4ISPAddressGroup
Restrictions	Only manual IPv4 ISP can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	The value must be equal to the summation of the address and the mask. Example:1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range:1 to 32.	N/A

LLB/Ipv6ISPAddressGroups

This table contains information about IPv6 ISP address groups.

XML structure

```
<LLB>
  <Ipv6ISPAddressGroups>
    <Ipv6ISPAddressGroup>
      <Name></Name>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </Ipv6ISPAddressGroup>
  </Ipv6ISPAddressGroups>
</LLB>
```

      <OutBandwidthBusyRecoverRatio></OutBandwidthBusyRecoverRatio>
    </SmartRouteLink>
  </SmartRouteLinks>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteLinks
Table type	Multi-instance table
Row name	SmartRouteILink
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters.	N/A
GatewayAddr	Gateway IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.

GatewayIPv6Addr	Gateway IPv6 address	N/A	String, dotted decimal notation.	Example: 2::2.
NoIPv4RouteEnable	Whether Gateway IPv4 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
NoIPv6RouteEnable	Whether Gateway IPv6 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A

LLB/SmartRouteParameter

This table contains basic information about smart-route

XML structure

```
<LLB>
  <SmartRouteParameter>
      <PersistType></PersistType>
      <PersistTimeout></PersistTimeout>
      <PersistIPv4SrcMask></PersistIPv4SrcMask>

      <PersistIPv6SrcPreFix></PersistIPv6SrcPreFix>
      <PersistIPv6DestPreFix></PersistIPv6DestPreFix>
      <PersistPriorBusyEnable></PersistPriorBusyEnable>
  </SmartRouteParameter>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRouteParameters
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PersistType	Sticky method of smart-route	Index	Enumeration: • 0—None. • 1—Destination IP stickiness. • 2—Source IP stickiness. • 3—Source IP and destination IP stickiness.	N/A
PersistTime out	Timeout time of the sticky of smart-route.	N/A	Unsigned integer. Value range: The value takes is in the range of 1 to 604800. Unit: second. .	The column can only be configured when PersistType is not None.(0)
PersistIPv4 SrcMask	IPv4 mask of source for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32.	The column can only be configured when PersistType is Source IP stickiness.(2) or Source IP and destination IP stickiness.(3).
PersistIPv4 DestMask	IPv4 mask of destination for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32.	The column can only be configured when PersistType is Destination IP stickiness.(1) or Source IP and destination IP stickiness.(3).
PersistIPv6 SrcPreFix	IPv6 prefix of source for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128.	The column can only be configured when PersistType is Source IP stickiness.(2) or Source IP and destination IP stickiness.(3).
PersistIPv6 DestPreFix	IPv6 prefix of destination for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128.	The column can only be configured when PersistType is Destination IP stickiness.(1) or Source IP and destination IP

				stickiness.(3).
PersistPrior BusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable. • 1—Enable .	The column can only be configured when PersistType is not None.(0)

LLB/SmartRoutePolicies

This table contains information about smart-route policy

XML structure

```
<LLB>
  <SmartRoutePolicies>
      <SmartRoutePolicy>
      <PolicyName></PolicyName>
      <BeforePolicyName></BeforePolicyName>
      <Type></Type>

      <ForwardType></ForwardType>
      <Fallback></Fallback>
      <PolicyEnable></PolicyEnable>
      <BusyProtectEnable></BusyProtectEnable>
      <LinksPredictor></LinksPredictor>
      <IfActiveNum></IfActiveNum>
      <IfBusyNum></IfBusyNum>
      <IfFailedNum></IfFailedNum>
      </SmartRoutePolicy>
  </SmartRoutePolicies>
</LLB>
```

Table description

Item	Description
Feature name	LLB
Table name	SmartRoutePolicies
Table type	Muti-instance table
Row name	SmartRoutePolicy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route	Index	String, case-insensitive. Length: 1 to 63	N/A

	policy		characters.	
BeforePolicyName	Name of the smart route policy that the row will be inserted after.	N/A	String, case-insensitive. Length: 1 to 63 characters.	BeforePolicyName must be an existing smart route policy.
Type	Type of the smart route policy.	N/A	Enumeration: • 0—IPv4. • 1—IPv6	When a smart route policy is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the smart route policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the smart route policy.	N/A	Enumeration: • 0—Predictor out interface. • 1—Forward all.	N/A
Fallback	Fallback action when schedule out-interface failed.	N/A	Enumeration: • 0—Drop . • 1—Match next smart route policy	N/A
PolicyEnable	Enable the smart route policy.	N/A	Enumeration: • 0—Disable . • 1—Enable.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable . • 1—Enable.	N/A
LinksPredictor	Predictor algorithm for smart route to select a link to forward packet.	N/A	Enumeration: • 0—Round-robin . • 1—Random. • 2—Least-connection . • 3—Hash source address. • 4—Hash source address and port. • 5—Hash destination address. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 10—Max inbound bandwidth. • 11—Max outbound bandwidth.	N/A
IfActiveNum	Number of active schedule interface.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
IfBusyNum	Number of busy schedule	N/A	Unsigned integer.	N/A

	interface.		Value range: 0 to 65535.	
IfFailedNum	Number of failed schedule interface.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

LLB/SmartRouteSourceIPRules

This table contains information about smart-Route policy source ip match rules.

XML structure

```
<LLB>
  <SmartRouteSourceIPRules>
    <SmartRouteSourceIPRule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <RuleType></RuleType>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SmartRouteSourceIPRule>
  </SmartRouteSourceIPRules>
</LLB>
```

Table description

Table description

Item	Description
Feature name	LLB
Table name	SmartRoutePolicySummaries
Table type	Multi-instance table
Row name	SmartRoutePolicySummary
Restrictions	Only summaries of smart route policy can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the smart route policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PolicyType	Type of the smart route policy.	N/A	Enumeration: • 0—IPv4. • 1—IPv6	N/A
Description	Description for the smart route policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the smart route policy.	N/A	Enumeration: • 0—Predictor out interface(default). • 1—Forward all.	When ForwardType changes from Predictor out interface(0) to Forward all.(1) , scheduleLinks will be delete
Fallback	Fallback action when schedule out-interface failed.	N/A	Enumeration: • 0—Drop . • 1—Match next smart route policy	N/A
PolicyEnable	Enable the smart route	N/A	Enumeration: • 0—Disable .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy.		• 1—Enable.	
BusyProtectEnable	Enable link protection.	N/A	Enumeration: • 0—Disable . • 1—Enable.	N/A
LinksPredictor	Predictor algorithm for smart route to select a link to forward packet.	N/A	Enumeration: • 0—Round-robin . • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 9—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max outbound bandwidth. • 12—link-quality • 13—best-link-quality	N/A
HitCount	Hit times of smart route policy	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
TotalCnt	Total number of smart route policies.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MatchRuleList	The list of smart route policy match rules	Data structure	Members include: • RuleName. • Direction. • RuleType. • Ipv4Address. • Ipv4PrefixLength. • Ipv4AddressStart. • Ipv4AddressEnd. • Ipv6Address. • Ipv6PrefixLength. • Ipv6AddressStart. • Ipv6AddressEnd. • ISPName. • InterfaceName.	N/A
RuleName	Name of the smart route policy match rule.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Direction	Direction of the match rule.	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 0—Source direction. • 1—Destination direction.	
RuleType	Type of the match rule.	N/A	Enumeration: • 0—IP Any. • 1—IPv4 subnet. • 2—IPv4 range.. • 3—IPv6 subnet. • 4—IPv6 range. • 5—ISP. • 6—Interface.	N/A
Ipv4Address	Match rule of IPv4.	N/A	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	Mask length of the IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv4AddressStart	The start IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	N/A
Ipv4AddressEnd	The end IPv4 adress of range IPv4 match rule.	N/A	IPv4: String, dotted decimal notation.	N/A
Ipv6Address	Match rule of IPv6.	N/A	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Prefix length of the IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
Ipv6AddressStart	Start IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
Ipv6AddressEnd	End IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
ISPName	Name of the ISP	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters.	N/A
ScheduleLink	The list of Schedule Links	N/A	Members include: • ScheduleIfName. • ScheduleIfState.	N/A
ScheduleIfName	Name of the Schedule interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters.	N/A
ScheduleIfState	Status of the Schedule interface.	N/A	Enumeration: • 0—Active. • 1—Busy. • 2—Failed.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfActiveNum	Number of active schedule interface.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
IfBusyNum	Number of busy schedule interface.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
IfFailedNum	Number of failed schedule interface.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Table description

Item	Description
Feature name	LLB

Table name	SmartRouteLinkSummaries
Table type	Multi-instance table
Row name	SmartRouteLinkSummary
Restrictions	Only summaries of smart route link can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfaceName	Name of the interface.	Index	String, case-insensitive. Length: 1 to 47 characters.	N/A
GatewayAddr	Gateway IPv4 address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
GatewayIPv6Addr	Gateway IPv6 address	N/A	String, dotted decimal notation.	Example: 2::2.
NoIPv4RouteEnable	Whether Gateway IPv4 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
NoIPv6RouteEnable	Whether Gateway IPv6 no route is enabled	N/A	Boolean: • true—enable no-route • false—disable no-route	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
TotalCnt	Total number of smart route links	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ProbeList	The list of probe	Data structur	Members include: • ProbeName.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
		e	• ProbeTargetType. • DestIpv4Address. • DestIpv6Address	
ProbeName	Probe method for the interface	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProbeTarget Type	Type of Probe Target.	N/A	Enumeration: • 0—None • 1—Specified IP Address • 2—Specified IPv6 Address	N/A
DestIpv4Address	Destination IPv4 address for probe	N/A	String. Dotted decimal notation.	This column can be configured only when the ProbeTargetType is Specified IP Address (1) Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
DestIpv6Address	Destination IPv6 address for probe	N/A	Hexadecimal string, colon-separated.	This column can be configured only when the ProbeTargetType is Specified IPv6 Address (2) Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.

Table description

Item	Description
Feature name	SLB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP virtual servers can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 80.	N/A
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
InsertXFFHeader	Enable insert header of X-Forwarded_For.	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 1 to 31 characters.	The null string indicates the label is not configured.
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConn	Parameter	N/A	String,	The null string indicates the label

Column name	Column description	Column type	Data type and restrictions	Remarks
ectParameter	profile whose type is OneConnect for the virtual server.		case-insensitive. Length: 1 to 63 characters.	is not configured.
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	HTTPSVirtualServers
Table type	Multi-instance table
Row name	HTTPSVirtualServer
Restrictions	Only HTTPS virtual servers can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 443.	N/A
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
InsertXFFHeader	Enable insert header of X-Forwarded_For.	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 1 to 31 characters.	The null string indicates the label is not configured.
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	TCPProxyVirtualServers
Table type	Multi-instance table
Row name	TCPProxyVirtualServer
Restrictions	Only TCP-Proxy virtual server can be c gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber List	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 1 to 65535.Items range: 1 to 32. When a virtual server is created, the column must be specified.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit.

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
IShellFileName	Name of the IShell File	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			2^{32}-1. Unit : KB/s.	
RateLimitIn Bandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOu tBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroup ID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	SSLVirtualServers
Table type	Multi-instance table
Row name	SSLVirtualServer
Restrictions	Only SSL virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 443.	
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
IShellFileName	Name of the IShell File	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 1 to 31 characters.	The null string indicates the label is not configured.
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
RateLimitCo	Maximum	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
nnection	connection rate limit.		Value range: 0 to 2^{32}-1. Unit: cps.	
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	SIPUDPVirtualServers
Table type	Multi-instance table
Row name	SIPUDPVirtualServer
Restrictions	Only SIP-UDP virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, no IPv6 address is specified.	addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 5060.	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	VServerSummaries
Table type	Multi-instance table
Row name	VServerSummary

Restrictions	Only summaries of virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the virtual server.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—UDP. • 3—HTTP.7—RADIUS. • 8—SIP-UDP. • 9—SIP-TCP. • 11—TCPL7. • 12—HTTPS. • 13—SSL.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PortNumberList	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535. By default, the value is 0. Items range: 1 to 32.	
DefaultServicePool	Name of the default service pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Protection Policy	Name of the protection policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPProxyParameter ClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPProxyParameter ServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
InsertXFFHeader	Enable insert header of X-Forwarded_For.	N/A	Enumeration: • 0—Disable. • 1—Enable (default).	N/A
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			IPToS is specified.	
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
LimitRuleNumber	The number of virtual server quote limit rules.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
State	State of the virtual server.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
SSLServerPolicyList	SSL Server policy list for the virtual server.	Data structure	Members include: • SchedulePolicy.	Members in VariableList can be configured repeatedly by group.
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
SchedulePolicyList	Schedule policy list for the virtual server.	Data structure	Members include: • SchedulePolicy.	N/A
Schedule	Name of the schedule	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	policy.		case-insensitive. Length: 1 to 63 characters.	
ModifyPolicyList	Modify policy list for the virtual server.	Data structure	Members include: ModifyPolicy.	N/A
ModifyPolicy	Name of the modify policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

```

Table description

Item	Description
Feature name	SLB
Table name	VServerLimitRules

Table type	Multi-instance table
Row name	VServerLimitRule
Restrictions	Only virtual server limit rule can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the limit rule name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterRuleName	Name of the limit rule that the row will be inserted before.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterRuleName must be an existing rule. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	By default, indicates the row will be inserted at last.
Type	Type of the limit rule.	N/A	Enumeration: • 0—any • 1—perSrc.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Ipv4AddressStart	Start IP address	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other

Column name	Column description	Column type	Data type and restrictions	Remarks
				cannot be configured.
Ipv4AddressEnd	End IP address	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv6AddressStart	Start IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

SLB/VServerSSLServerPolicies

This table contains information about Virtual Server SSL server policy

XML structure

```
<SLB>
  <VServerSSLServerPolicies>
    <VServerSSLServerPolicy>
      <VirtualServerName></VirtualServerName>
      <SSLServerPolicy></SSLServerPolicy>    </VServerSSLServerPolicy>
  </VServerSSLServerPolicies>
</SLB>
```

    </ServicePool>
  </ServicePools>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ServicePools
Table type	Multi-instance table
Row name	ServicePool
Restrictions	Only service pool can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the service pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of theservice pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
State	State of the service pool.	N/A	Enumeration: • 0—Unavailable. • 1—Available.	N/A
Predictor	Predictor algorithm for LB to select a service host to serve a client request.	N/A	Enumeration: • 0—Round-robin. • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 7—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max Outbound bandwidth. • 12—Least time. • 13—Dynamic round-robin. • 14—Hash HTTP. • 15—CARP HTTP. • 16—CARP source address. • 17—CARP source port. • 18—CARP destination address. • 19—Least-connection member. • 20—Least time member.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to128.	N/A
SelectHostMinNumber	Minimum number of the active service host in the service pool.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectHostMaxNumber	Maximum number of the active service host in the service pool.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the service pool	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	slow online.		• 0—Disable. • 1—Enable.	
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any service host fails in a service poo.	N/A	Enumeration: • 0—Keep. • 1—Reset. • 2—Reschedule.	N/A
ProbeSuccessCriteria	The condition that service host is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
TotalServiceHost	Total number of service hosts in the service poo.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ActiveServiceHost	Active number of service hosts in the service poo.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
BusyAction	Busy protection	N/A	Enumeration: • 0—Drop(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policies for server nodes		• 1—Enqueue. • 2—Force.	
QueueLength	Queue length for aging	N/A	Unsigned integer. Value range: 1 to 100000. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
QueueTimeout	Node aging time	N/A	Unsigned integer. Value range: 0 to 60. Unit: second. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
SnatEnable	Enable the Snat.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DnatEnable	Enable the Dnat.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
TotalCnt	Total number of probe template entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/ServicePoolProbes

This table contains information about Service Pool Probe that only uses NQA template.

XML structure

```
<SLB>
  <ServicePoolProbes>
    <ServicePoolProbe>
      <PoolName></PoolName>
      <Probe></Probe>
    </ServicePoolProbe>

Table description

Item	Description
Feature name	SLB
Table name	RSTProbeTemplates
Table type	Multi-instance table
Row name	RSTProbeTemplate
Restrictions	Only RST probe template can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the RST probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
PacketLimit	Packet limit of RST probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 1000000.	N/A.
ProtectAction	Protection action of RST probe template.	N/A	Enumeration: • 0—Busy (default). • 1—Auto-shutdown.	N/A
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	The busy type protection action is valid.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value	The busy type protection action is valid and value 0 means keep retrying.

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 0	
RecoverTimeInterval	Auto recover time interval	N/A	Unsigned integer. Value range: 0 to 15300. Unit:minute. By default, the value is 0.	N/A

SLB/ZeroWindowProbeTemplates

This table contains information about Zero Window probe template.

XML structure

```
<SLB>
  <ZeroWindowProbeTemplates>
    <ZeroWindowProbeTemplate>
      <Name></Name>

```

Table description

Item	Description
Feature name	SLB
Table name	ServiceHosts
Table type	Multi-instance table
Row name	ServiceHost
Restrictions	Only Service Host can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the Service Host.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the Service Host.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Weight	Weight of the Service Host.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
State	State of the real server.	N/A	Enumeration: • 0—Unavailable. • 1—Available. • 2—Disable. • 3—Offline. • 4—Probe-failed. • 8—Busy. • 9—Unknown. • 10 — Auto-shutdown	N/A
ServiceState	ServiceState for the Service Host.	N/A	Enumeration: • 0—Online(default). • 1—Slowline. • 2—Offline	N/A
TotalCnt	Total number of probe template entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/ServiceHostProbes

This table contains information about Servicel Host Probe that only uses NQA template.

Table description

Item	Description
Feature name	SLB
Table name	SchedulePolicySummaries
Table type	Multi-instance table
Row name	SchedulePolicySummary
Restrictions	Only schedule summary can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the Schedule policy summaries.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the Schedule policy	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	summaries.			
Type	Type of the Schedule policy match rules.	N/A	Enumeration: • 0—TCPL7. • 1—TCP. • 2—UDP. • 3—SIPTCP. • 4—SIPUDP. • 5—IP. • 6—SSL. • 7—HTTPS. • 8—HTTP. • 10—RADIUS.	N/A
MatchMode	The rule matched Schedule policy.	N/A	Enumeration: • 0—Match any (default). • 1—Match all.	N/A
ForwardType	Forward mode of the Schedule policy.	N/A	Enumeration: • 1—Drop. • 2—Fin close. • 3—Rst close. • 4—Forward all. • 5—Service Pool. • 6—Response.	N/A
Fallback	Fallback action when service host select failed.	N/A	Enumeration: • 0—None (default). • 1—Match next rule. • 2—Response. • 3—Fin close. • 4—Rst close. • 5—HTTP Content.	N/A
ServicePool	Name of the Service Pool for the Schedule policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When the column is configured, ForwardType becomes Service Pool (3).
TotalCnt	Total number of Schedule policies.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MatchRuleList	The list of Schedule policy match rules	Data structure	Members include: • ID. • Type. • SrcIpv4Address. • SrcIpv4PrefixLength. • SrcIpv4AddressStart. • SrcIpv4AddressEnd. • SrcIpv6Address. • SrcIpv6PrefixLength. • SrcIpv6AddressStart.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• SrcIpv6AddressEnd. • InterfaceName. • ContentOffset. • ContentExpression. • CookieName. • CookieValue. • HeaderName. • HeaderValue. • URI. • Method. • ExtType. • Version. • PayloadPattern. • Not. • CaseSensitive. • AttributeType. • AttributeExpression	
RuleName	Name of the Schedule policy match rule.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the Schedule policy.	N/A	Enumeration: • 0—Source IPv4. • 1—Source range IPv4. • 2—Source IPv6. • 3—Source range IPv6. • 4—Interface. • 5—Content. • 6—Cookie. • 7—Header. • 8—URI. • 9—Method. • 10—Version. • 11—Payload • 12—RADIUS	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
SrcIpv4AddressStart	The start IPv4 adress of Source range IPv4 match rule.	N/A	String. Dotted decimal notation.	N/A
SrcIpv4AddressEnd	The end IPv4 adress of	N/A	String. Dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Source range IPv4 match rule.			
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	N/A
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
SrcIpv6AddressStart	The start IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
SrcIpv6AddressEnd	The end IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	N/A
BodyExpression	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	N/A
BodyOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	N/A
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	N/A
CookiePattern	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	N/A
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
HeaderPattern	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	N/A
URI	Regular expression matched the	N/A	String. Length: 0 to 255	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	URI.		characters.	
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	N/A
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • **0**—Nonuser-defined (default). **1**—User-defined.	N/A
Version	The version of HTTP.	N/A	Enumeration: • **0**—1.0. **1—1.1.**	N/A
PayloadPattern	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	N/A
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	N/A
AttributeType	Type of attribute	N/A	Unsigned integer. Value range: 1 to 255. By default, no AttributeType is specified.	N/A
AttributePattern	Regular expression matched the attribute.	N/A	String. Length: 1 to 255 characters.	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/HTTPSchedulePolicies

Restrictions	Only http Schedule policies can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The Name of HTTP Schedule Policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchMode	The rule matched policy.	N/A	Enumeration: • 0—Match any (default). • 1—Match all.	N/A
ForwardType	Forward mode of the policy.	N/A	Enumeration: • 1—Drop (default). • 3—Service pool. • 9—Response.	When ForwardType changes from Service pool (3) to drop (1) or response (9), service pool becomes default value.
Fallback	Fallback action when real server select failed.	N/A	Enumeration: • 1—Match next schedule policy.	The column can be configured when ForwardType is Service pool (3) or there is no

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Response. • 3—Fin close (default). • 4—Rst close.	ForwardType column.
ServicePool	Name of the Service pool for the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column can be configured when ForwardType is Service pool (3) or there is no ForwardType column. When the column is configured, ForwardType becomes Service pool (3).
ResponseFile Name	Full path and name of the file for the action response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Response (9). The column must start witch device name.
ZipFileWorkp ath	Work path of the zip file for the response.	N/A	String. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Response (9). If the column is not '/', it must start with /, and cannot end with /. The null string indicates the label is not configured.
ResponseZip File	Full path and name of the zip file for the response. Example: • flash:/lb/1. html chassis3#slot1 #flash:/lb/1.ht ml	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9). The column cannot be configured when ZipFileWorkpath is not configured.
ResponsePre Content	Name of the predefined content for response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType

Column name	Column description	Column type	Data type and restrictions	Remarks
				becomes Resposne (9).
FallbackResponseRawFile	Full path and name of the raw file for the fallback action response. Example: • flash:/lb/1.html chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
FallbackPreContent	Name of the predefined content file for fallback.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
TCPDropType	Type of closing TCP connection	N/A	Enumeration: • 0—Fin close(default). • 1—Rst close	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A

  </TCPProxySchedulePolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	TCPProxySchedulePolicies

Table type	Multi-instance table
Row name	TCPProxySchedulePolicy
Restrictions	Only TCP-Proxy http Schedule policies can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The name of TCP proxy scheduling policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchMode	The rule matched policy.	N/A	Enumeration: • 0—Match any(default). • 1—Match all.	N/A
ForwardType	Forward mode of the TCP Schedule Policy.	N/A	Enumeration: • 1—Drop (default). • 3—Service Pool.	When ForwardType changes from service pool (3) to drop (1), Service pool become default value.
Fallback	Fallback action when Service pool select failed.	N/A	Enumeration: • 1—Match next schedule policy. • 3—Fin close (default). • 4—Rst close.	N/A
TCPDropType	Type of closing TCP connection	N/A	Enumeration: • 0—Fin close(default). • 1—Rst close.	N/A
ServicePool	Name of the Service pool for the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column can be configured when ForwardType is Service Pool (3) or there is no ForwardType column. When the column is configured, ForwardType becomes Service Pool (3).

SLB/SSLSchedulePolicies

This table contains information about SSL Schedule policies.

RuleName	Name of the match rule.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source range IPv4. • 2—Source IPv6. • 3—Source range IPv6. • 4—Interface. • 5—Content. • 6—Cookie. • 7—Header. • 8—URL. • 9—Method. • 10—Version. • 11—Payload • 12—RADIUS	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
SrcIpv4PrefixLength	Mask length of the source	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IPv4 address.		Value range: 0 to 32. By default, the value is 32.	
SrcIpv4AddressStart	The start IPv4 adress of Source range IPv4 match rule.	Index	IPv4: String, dotted decimal notation.	N/A
SrcIpv4AddressEnd	The end IPv4 adress of Source range IPv4 match rule.	Index	IPv4: String, dotted decimal notation.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	N/A
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
SrcIpv6AddressStart	Start IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	N/A
SrcIpv6AddressEnd	End IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	N/A
BodyExpression	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	N/A
BodyOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	N/A
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	N/A
CookiePattern	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	N/A
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
HeaderPattern	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	N/A
URI	Regular	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	expression matched the URI.		Length: 0 to 255 characters.	
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	N/A
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • **0**—Nonuser-defined (default). • **1**—User-defined.	N/A
Version	The version of HTTP.	N/A	Enumeration: • **0**—1.0. • **1—1.1.**	N/A
PayloadPattern	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	N/A
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	N/A
AttributeType	Type of attribute	N/A	Unsigned integer. Value range: 1 to 255. • By default, no AttributeType is specified.	N/A
AttributePattern	Regular expression matched the attribute.	N/A	String. Length: 1 to 255 characters.	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/HTTPContents

SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
SrcIpv4AddressStart	The start IPv4 adress of Source range IPv4 match rule.	N/A	String. • Dotted decimal notation.	N/A
SrcIpv4AddressEnd	The end IPv4 adress of Source range IPv4 match rule.	N/A	String. Dotted decimal notation.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	N/A
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
SrcIpv6AddressStart	The start IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
SrcIpv6AddressEnd	The end IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	N/A
BodyExpression	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	N/A
BodyOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			zero.	
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	N/A
CookiePattern	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	N/A
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
HeaderPattern	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	N/A
URI	Regular expression matched the URI.	N/A	String. Length: 0 to 255 characters.	N/A
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	N/A
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • **0**—Nonuser-defined (default). **1**—User-defined.	N/A
Version	The version of HTTP.	N/A	Enumeration: • **0**—1.0. **1—1.1.**	N/A
PayloadPattern	Regular expression matched the payload content.	N/A	String. • Length: 0 to 255 characters	N/A
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/HTTPModifyPolicies

This table contains information about the HTTP modify policy.

XML structure

```
<SLB>
  <HTTPModifyPolicies>
    <HTTPModifyPolicy>
      <Name></Name>
      <Description></Description>
      <ModifyPerRequest></ModifyPerRequest>
      <MatchMode></MatchMode>
    <HTTPModifyPolicy>
  </HTTPModifyPolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPModifyPolicies
Table type	Multi-instance table
Row name	HTTPModifyPolicy
Restrictions	Only L7 HTTP modify policy can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the HTTP modify policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the HTTP modify policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ModifyPerRequest	Enable modify the HTTP header of every HTTP request or response.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
MatchMode	Match mode	N/A	Enumeration: • 0—Match Any (default). 1—Match All.	N/A

SLB/ModifyPolicyMatchRules

This table contains information about Modify policy match rules.

XML structure

```
<SLB>
  <ModifyPolicyMatchRules>

  </HTTPModPolicyRewriteHeaders>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPModPolicyRewriteHeaders
Table type	Multi-instance table
Row name	HTTPModPolicyRewriteHeader
Restrictions	Only HTTP mod policy rewrite headers can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the modify policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the header process.	Index	Enumeration: • 0—Header Delete. • 1—Header Insert. • 2—Header Rewrite.	N/A
Direction	Process direction.	Index	Enumeration: • 0—Request and Response. • 1—Request. • 2—Response.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HeaderName	Name of the header.	Index	String, case-insensitive. Length: 1 to 63 characters.	HeaderName cannot contain any one of characters following: 0 to 31 and 127 to 255 in the ASCII table, character as "(" ")" "<" ">" "@" "," ";" ":" "\" """ "/" "[" "]" "?" "=" "{" "}" SP HT.
HeaderValue	Header value that method of Header Insert process.	N/A	String. Length: 0 to 255 characters.	This column has validity in Header Insert process. You cannot configure this column if the type is not Header Insert. Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address. %pd: destination port. %sis: source IPv4 address or source IPv6 address of server. %sps: source port of server. %sid: destination IPv4 address or IPv6 address of server. %spd: destination port of server. %{x509v}: the version of certificate %{x509issuer}: the issuer of certificate %{x509before}: the vaild time of certificate(invaild before this time) %{x509after}: the vaild time of certificate(invaild after this time) %{x509hash}: the MD5 hash of certificate %{x509snum}: the serial number of certificate %{x509sigalgo}: the signature algorithm of certificate %{x509sub}: the subject of certificate %{x509spktype}: the subject public key type of certificate %{x509spk}: the subject

Column name	Column description	Column type	Data type and restrictions	Remarks
				public key of certificate %{x509spkRSA}: the number of subject public key bits of certificate %{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
HeaderExpress	Header value that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	This column can only be configured when the type is Header Rewrite (2).
Replace	Replaced string that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	This column can only be configured when the type is Header Rewrite (2). Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address %pd: destination port. %sis: source IPv4 address or source IPv6 address of server. %sps: source port of server. %sid: destination IPv4 address or IPv6 address of server. %spd: destination port of server. %{x509v}: the version of certificate %{x509issuer}: the issuer of certificate %{x509before}: the vaild time of certificate(invaild before this time)

Column name	Column description	Column type	Data type and restrictions	Remarks
				%{x509after}: the vaild time of certificate(invaild after this time) %{x509hash}: the MD5 hash of certificate %{x509snum}: the serial number of certificate %{x509sigalgo}: the signature algorithm of certificate %{x509sub}: the subject of certificate %{x509spktype}: the subject public key type of certificate %{x509spk}: the subject public key of certificate %{x509spkRSA}: the number of subject public key bits of certificate %{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. 2—Base64	Encode
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/HTTPModPolicyRewriteBodies

This table contains information about HTTP modify policy rewrite cbodies.

XML structure

```
<SLB>
  <HTTPModPolicyRewriteCBodies>
    <HTTPModPolicyRewriteCBody>
      <PolicyName></PolicyName>
      <RewriteValue></RewriteValue>
      <ReplaceValue></ReplaceValue>
    </HTTPModPolicyRewriteBody>
  </HTTPModPolicyRewriteBodies>
</SLB>
```

</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPParameters
Table type	Multi-instance table
Row name	HTTPParameter
Restrictions	Only HTTP parameter profile can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerConnectionReuse	Enable connections to persist and be reused by multiple client connections.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
HeaderMaxParseLength	Maximum number of bytes to parse for cookies, HTTP headers, and URL.	N/A	Unsigned integer. Value range: 1 to 65535. By default, 4096 is configured.	N/A
ContentMaxParseLength	Maximum number of bytes to parse for HTTP content.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 4096.	N/A
ExceedLength	Processing method for HTTP requests or responses that exceed the maximum parse length.	N/A	Enumeration: • 0—Keep (default). • 1—Drop.	N/A
CookieEncryptName	Name of the cookie that excepted to be encrypted.	N/A	String.Length: 1 to 63 characters.	CookieEncryptName and CookiePassword are mutually dependent and both of them should be set in a single message.
CookieCipherPassword	Specify an cookie key in encrypted form.	N/A	String. Length: 1 to 73 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or CookieSimplePassword, but not both.
CookieSimplePassword	Specify an cookie key in plaintext form.	N/A	String. Length: 1 to 31 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or CookieSimplePassword, but not both.
ExceedLength	Processing method for HTTP	N/A	Enumeration: • 0—Keep (default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	requests or responses that exceed the maximum parse length.		• 1—Drop.	

SLB/HTTPCompressionParameters

This table contains information about HTTP compression parameter profile.

	parameter profile.		Length: 1 to 63 characters.	
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RequestVersion	Enable compress the HTTP response of version 1.0.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9 By default, 1 is configured.	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip (default). • 2—Deflate.	N/A
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, 1024 is configured.	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB(default). • 16—16KB. • 32—32KB. • 64—64KB.	N/A
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB(default). • 32—32KB.	N/A
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DeleteAcceptEncoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A

SLB/OneConnectParameters

This table contains information about the OneConnect parameter profile.

XML structure

```
<SLB>
  <OneConnectParameters>
    <OneConnectParameter>
      <Name></Name>
      <Description></Description>
      <MaxReuse></MaxReuse>
      <IdleTime></IdleTime>
      <IPv4SourceMask></IPv4SourceMask>
      <IPv6SourcePrefix></IPv6SourcePrefix>
    </OneConnectParameter>
  </OneConnectParameters>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	OneConnectParameters
Table type	Multi-instance table
Row name	OneConnectParameter
Restrictions	Only OneConnect parameter profile can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	N/A
MaxReuse	Maximum reuse number	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the number is 1000.	N/A
IdleTime	Idle connection	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	expiration time		4294967295. By default, the time length is 86400.	
IPv4Source Mask	IPv4 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 0.	N/A
IPv6Source Prefix	IPv6 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 0.	N/A

SLB/ParameterSummaries

This table contains summary information about parameter profile.

XML structure

```
<SLB>
  <ParameterSummaries>
    <ParameterSummary>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <TotalCnt></TotalCnt>
    </ParameterSummary>
  </ParameterSummaries>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ParameterSummaries
Table type	Multi-instance table
Row name	ParameterSummary
Restrictions	Only parameter profile summary information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of parameter profile.	N/A	Enumeration: • 0—TCP-Proxy. • 1—HTTP. • 2—HTTP Compression Parameter. • 3—oneconnect. • 6—MySQL.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TotalCnt	Total number of parameter profile entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/PersistenceSummaries

This table contains summary information about persistence.

XML structure

```
<SLB>
  <PersistenceSummaries>
    <PersistenceSummary>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <TotalCnt></TotalCnt>
    </PersistenceSummary>
  </PersistenceSummaries>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	PersistenceSummaries
Table type	Multi-instance table

Row name	PersistenceSummary
Restrictions	Only Persistence summary information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the persistence.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Stickiness method of persistence.	N/A	Enumeration: • 1—Address-Port. • 2—HTTP-Content. • 3—HTTP-Body. • 4—HTTP-Cookie. • 5—HTTP-Header.6—SSL. • 7—Radius. • 8—SIP. • 9—HTTP-Passive. • 10—UDP-passive. • 11—TCP-Payload. • 12—UDP-Payload	N/A
Description	Description information for the persistence.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TotalCnt	Total number of sticky group entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/AddressPortPersistences

This table contains information about address-port persistences.

XML structure

```
<SLB>
  <AddressPortPersistences>
    <AddressPortPersistence>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>

      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv6PrefixLength></Ipv6PrefixLength>
```

```
      <PriorBusyEnable></PriorBusyEnable>
      <EffectiveScope></EffectiveScope>
    </AddressPortPersistence>
  </AddressPortPersistences>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	AddressPortPersistences
Table type	Multi-instance table
Row name	AddressPortPersistence
Restrictions	Only address-port persistencescan be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the persistence.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the persistence.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the persistence.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second. By default, the value is 60s . 0 indicates the sticky entry will nerver age out.	N/A
MethodType	Sticky method of the address-port persistence.	N/A	Enumeration: • .1—Source IP stickiness (default). • 2—Source IP port stickiness. • 3—Destination IP stickiness. • 4—Destination IP port stickiness. • 5—Source IP and destination IP stickiness. • 6—Source IP port and destination IP port stickiness.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength	IPv4 mask for IPv4 persistence method.	N/A	Unsigned integer. Value range: 0 to 32.	The column can only be configured when Ipv4MethodType is not none (0).
Ipv6PrefixLength	IPv6 prefix for IPv6 persistence method.	N/A	Unsigned integer. Value range: 0 to 128.	The column can only be configured when Ipv6MethodType is not none (0).
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A
EffectiveScope	Effective scopeof persistence entries	N/A	Enumeration: • 0—Pool(default). • 1—VirtualServerIP. 2—Global	N/A

SLB/RADIUSPersistences

This table contains information about RADIUS persistences.

XML structure

```
<SLB>
  <RADIUSPersistences>
    <RADIUSPersistence>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <AttributeCode></AttributeCode>
      <PriorBusyEnable></PriorBusyEnable>
      <EffectiveScope></EffectiveScope>

      <CookiePath></CookiePath>
    </HTTPCookiePersistence>
  </HTTPCookiePersistences>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPCookiePersistences
Table type	Multi-instance table
Row name	HTTPCookiePersistence
Restrictions	Only HTTP cookie persistence can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	persistence.		Length: 1 to 63 characters.	
Description	Description for the persistence.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the persistence.	N/A	Unsigned integer. Value range: 0 to 31536000. Unit: second. By default, the value is 86400s.	N/A
Type	Sticky method of HTTP cookie persistence.	N/A	Enumeration: • 1—Cookie insert stickiness (default). • 2—Cookie rewrite stickiness • 3—Cookie get stickiness	Only when the type is cookie rewrite (3), configurations of offset, length, start and end can be configured.
CookieName	Name of the cookie.	N/A	String. Length: 0 to 63 characters.	When Type is rewrite (3), this column must be configured. Characters 0~31and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" "," ";" ":" "\" """" "/" "[" "]" "?" "=" "{" "}" SP HT are not supported either.
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A
Offset	Offset to the first byte of the HTTP cookie.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	N/A
Length	Length of the HTTP cookie.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for the HTTP cookie persistences.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP cookie persistences.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
CheckAll	Enable the check option for an HTTP cookie type persistence.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A
HTTPOnly	HTTP cookie attribute for HTTP only.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	This column can be configured only when the type is Cookie insert stickiness(1) or Cookie rewrite stickiness(2).
Secure	HTTP cookie attribute for secure.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	This column can be configured only when the type is Cookie insert stickiness(1) or Cookie rewrite stickiness(2).
CookieDomain	HTTP cookie attribute for domain.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Cookie insert stickiness(1).
CookiePath	HTTP cookie attribute for path.	N/A	String. Length: 1 to 255 characters.	This column can be configured only when the type is Cookie insert stickiness(1).
Range	Range of persistence entries	N/A	Enumeration: • 0—Pool(default). • 1—VirtualServerIP. • 2—Global	This column can be configured only when the type is Cookie get stickiness(3).

SLB/HTTPBodyPersistences

This table contains information about HTTP payload persistences.

XML structure

```
<SLB>
  <HTTPBodyPersistences>
    <HTTPPayloadSPersistence

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky method group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PktActionType	Action type of packet direction.	Index	Enumeration: • 0—Get. • 1—Match.	N/A
MethodName	Name of method.	Index	String, case-insensitive. Length: 1 to 63 characters.	One type of action max support four methods.
MethodType	Sticky method of HTTP passive sticky group.	N/A	Enumeration: • 0—None. • 1—Header method. • 2—Content method.	N/A
HeaderType	Sticky method of HTTP passive sticky group.	N/A	Enumeration: • 0—None. • 1—URL stickiness. • 2—Name stickiness.	N/A
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
Length	Length of the HTTP header or	N/A	Unsigned integer. Value range: 0 to 1000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	content value.			
Start	Beginning pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/UDPPassivePersistences

This table contains information about UDP passive persistences.

XML structure

```
<SLB>
  <UDPPassivePersistences>
    <UDPPassivePersistence
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <GetOffset></GetOffset>
      <GetLength></GetLength>
      <GetStart></GetStart>
      <GetEnd></GetEnd>
      <MatchOffset></MatchOffset>
      <MatchLength></MatchLength>
      <MatchStart></MatchStart>
      <MatchEnd></MatchEnd>
      <PriorBusyEnable></PriorBusyEnable>
    </UDPPassivePersistence>
  </UDPPassivePersistences>
</SLB>
```

Table description

Item	Description
Feature name	SLB

Table name	UDPPassivePersistences
Table type	Multi-instance table
Row name	UDPPassivePersistence
Restrictions	Only UDP passive Persistences information can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description information for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 0 to31536000. Unit: second.	N/A
GetOffset	Offset to the first byte of the UDP payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
GetLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
GetStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
GetEnd	Ending pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchOffset	Offset to the first byte of the UDP payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
MatchLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
MatchStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchEnd	Ending pattern for the UDP payload	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	stickiness.			
PriorBusyEnable	Prior to busy action.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

SLB/TCPPayloadPersistences

This table contains information about TCP payload persistences.

XML structure

```
<SLB>
  <TCPPayloadPersistences>
    <TCPPayloadPersistence>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <Offset></Offset>
      <Length></Length>
      <Start></Start>
      <End></End>
      <PriorBusyEnable></PriorBusyEnable>
    </TCPPayloadPersistence>
  </TCPPayloadPersistences>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	TCPPayloadPersistences
Table type	Multi-instance table
Row name	TCPPayloadPersistence
Restrictions	Only TCP payload persistences can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description information for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second.	N/A
Offset	Offset to the first byte of the TCP payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the TCP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for the TCP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the TCP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
PriorBusyEnable	Prior to busy action.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

SLB/VServerArpInterfaces

This table contains information about virtual server interfaces.

XML structure

```
<SLB>
  <VServerArpInterfaces>
    <VServerArpInterface>
      <VServerName></VServerName>
      <IfList>
      <IfIndex></IfIndex>
      </IfList>
    </VServerArpInterface>
```

```
  </VServerArpInterfaces>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	VServerArpInterfaces
Table type	Multi-instance table
Row name	VServerArpInterface
Restrictions	Only virtual server interfaces can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: • IfIndex.	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

SLB/HTTPCompressionParameters

This table contains information about HTTP compression parameter profile.

XML structure

```
<SLB>
  <HTTPCompressionParameters>
    <HTTPCompressionParameter>
      <Name></Name>
      <Level></Level>
      <Description></Description>
      <PreferMethod></PreferMethod>
      <ContentLengthThreshold></ContentLengthThreshold>
      <InsertVary></InsertVary>
      <RequestVersion></RequestVersion>
```

```
      <DeleteAcceptEncoding></DeleteAcceptEncoding>
      <MemorySize></MemorySize>
      <WindowSize></WindowSize>
    </HTTPCompressionParameter>
  </HTTPCompressionParameters>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPCompressionParameters
Table type	Multi-instance table
Row name	HTTPCompressionParameter
Restrictions	Only HTTP compression parameter profile can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip. • 2—Deflate	N/A
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1.	N/A
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
RequestVersion	Enable compress the HTTP	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	response of version 1.0.			
DeleteAcceptEncoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB. • 32—32KB. • 64—64KB.	N/A
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB. • 32—32KB.	N/A

SLB/HTTPCompressionParameterRules

This table contains information about HTTP compression parameter rule.

XML structure

```
<SLB>
  <HTTPCompressionParameterRules>
    <HTTPCompressionParameterRule>
      <Name></Name>
      <RuleName></RuleName>
      <AfterRuleName></AfterRuleName>
      <MoveTopOrBottom></MoveTopOrBottom>
      <Type></Type>
      <FilterType></FilterType>
      <Expression></Expression>    </HTTPCompressionParameterRule>
  </HTTPCompressionParameterRules>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPCompressionParameterRules
Table type	Multi-instance table
Row name	HTTPCompressionParameterRule
Restrictions	Only HTTP compression parameter rule can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the match rule.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterRuleName	Name of the limit rule that the row will be inserted after.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterRuleName and MoveTopOrBottom can not configure together. AfterRuleName must be an existing rule. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	AfterRuleName and MoveTopOrBottom can not configure together. By default, indicates the row will be inserted at last.
Type	Type of the rule.	N/A	Enumeration: • **0**—Permit. • **1**—Deny.	N/A
FilterType	Filter type of the rule.	N/A	Enumeration: • **0**—URL. • **1**—Content.	N/A.
Expression	Regular expression matched the filter type.	N/A	String. Length: 0 to 255 characters.	N/A

SLB/ProtectionPolicies

This table contains information about protection policies.

XML structure

```
<SLB>
  <ProtectionPolicies>
    <ProtectionPolicy>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <Warning></Warning>
      <Drop></Drop>
      <Verify></Verify>
      <TotalCnt></TotalCnt>
    </ProtectionPolicy>
  </ProtectionPolicies>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ProtectionPolicies
Table type	Multi-instance table
Row name	ProtectionPolicy
Restrictions	Only protection policies can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the protection policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the protection policy.	N/A	Enumeration: • 0—HTTP	When a protection policy is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the protection policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
Warning	Enable warning action of the protection policy.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A
Drop	Enable drop action of the protection policy.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	This column cannot be configged with Verify together.
Verify	Enable verify action of the protection policy	N/A	• 0—Not configured. • 1—Insert header(default). • 2—Inject JS.	This column cannot be configged with Drop together.
TotalCnt	Total number of Protection policy entries.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/HTTPProtectionPolicyRules

This table contains information about HTTP protection policy rules.

XML structure

```
<SLB>
  <HTTPProtectionPolicyRules>
    <HTTPProtectionPolicyRule>
      <Name></Name>
      <RuleName></RuleName>
      <AfterRuleName></AfterRuleName>
      <MoveTopOrBottom></MoveTopOrBottom>
      <URL></URL>     <CaseSensitive></CaseSensitive>
      <StatTime></StatTime>
      <IPReqThreshold></IPReqThreshold>
      <JsidReqThreshold></JsidReqThreshold>
      <CookieName></CookieName>
    <HTTPProtectionPolicyRule>
  </HTTPProtectionPolicyRules>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPProtectionPolicyRules

Table type	Multi-instance table
Row name	HTTPProtectionPolicyRule
Restrictions	Only protection policy rules can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the protection policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the protection policy rule	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterRuleName	Name of the limit rule that the row will be inserted after.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterRuleName and MoveTopOrBottom can not configure together. AfterRuleName must be an existing rule. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	AfterRuleName and MoveTopOrBottom can not configure together. By default, indicates the row will be inserted at last.
URL	Regular expression of the protection URL.	N/A	String. Length: 1 to 255 characters.	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A
StatTime	Statistical duration	N/A	Unsigned integer. Value range: 1 to 900.	N/A
IPReqThreshold	IP threshold of triggering protection	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
JsidReqThreshold	Jsessionid threshold of triggering protection	N/A	Unsigned integer. Value range:1 to 4294967295.	This column and CookieName must be configured together.
CookieName	Cookie name of the Jsessionid	N/A	String. Length: 0 to 63 characters.	This column and Jsid-ReqThreshold must be configured together.

SLB/VirtualServerSumStats

This table contains information about total virtual servers sum stats.

XML structure

```
<SLB>
  <VirtualServerSumStats>
    <VirtualServerSumStat>

Item	Description
Feature name	SLB
Table name	VirtualServerStats
Table type	Multi-instance table
Row name	VirtualServerStat
Restrictions	Only stats of virtual server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
TotalConnections	Total connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnections	Max connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ClientSidePKTsIn	Number of packets that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ClientSidePKTsOut	Number of packets that the virtual server sent to	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	client.			
DroppedPackets	Number of packets that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ClientSideBytesIn	Number of bytes that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
ClientSideBytesOut	Number of bytes that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Dropped Responses	Number of responses that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
InBandwidth	Inbound Bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the virtual	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.		Unit: KB/s.	
InMaxBandwidth	Inbound Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxConnectionsTime	Time when the virtual server received the maximum number of connections.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxConnectionPerSeTime	Time when the virtual server received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxBandwidthTime	Maximum bandwidth time of the virtual server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the virtual server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OutMaxBandwidthTime	Outbound maximum bandwidth time of the virtual server.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ClientSidePKTsPerSecIn	Number of packets per second that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
ClientSidePKTsPerSecOut	Number of packets per second that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
Type	Type of the virtualserver.	N/A	Enumeration: • 0—IP. • 1—TCP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—UDP. • 3—HTTP. • **7**—RADIUS. • 8—SIP-UDP. • 9—SIP-TCP. • 13—HTTPS. • 14—TCPL7. • 15—SSL	
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
IPProtocol	The protocol type of IP address.	N/A	Enumeration: • 1—IPv4. • 2—IPv6. • 3—IP Both.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
State	State of the virtual server.	N/A	Enumeration: • 0—Active. • 1—Warn • 2—Failure • 3—Forbidden	N/A
PolicyNumber	The number of policy for the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
PortNumberList	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535. By default, the value is 0. Items range: 1 to 32.	Example: 1,2,3,5-8,10-20.
TotalServicePoolNumber	Total number of service pool for the virtual	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.		2^{32}-1.	
ActiveServicePoolNumber	Activenumber of service pool for the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
WarnServicePoolNumber	Warn number of service pool for the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
OfflineServicePoolNumber	Offline number of service pool for the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
FailureServicePoolNumber	Failure number of service pool for the virtual server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
HttpRequestPerSec	Http request per second that all service pools received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
SSLConnectionsPerSec	SSL connections per second for the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
SSLActiveConnections	SSL active connections for the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
SSLInBandwidth	SSL inbound bandwidth for thl virtual server received .	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
SSLOutBandwidth	SSL outbound bandwidth for the virtual server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Table description

Item	Description
Feature name	SLB
Table name	MatchSchedulePolicyStats
Table type	Multi-instance table

Row name	MatchSchedulePolicyStat
Restrictions	Only match policy of virtual server can be gotten by this table..

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
PolicyName	Schedule policy name of vitual server .	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server. pools received.	N/A	Enumeration: • 0—IP. • 1—TCP. • 2—UDP. • 3—HTTP. • **7**—RADIUS. • 8—SIP-UDP. • 9—SIP-TCP. • 11—TCPL7. • 12—HTTPS. • 13—SSL.	N/A
ServicePoolName	Schedule service pool name of vitual server .	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
AbnormalCountRate	Per second match sechude policy that without active pool	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the service pools received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ActiveConnections	Active connections that the service pools received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MatchRuleList	The list of match schedule	Data structure	Members include: • ID.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy match rules		• Type. • SrcIpv4Address. • SrcIpv4PrefixLength. • SrcIpv4AddressStart. • SrcIpv4AddressEnd. • SrcIpv6Address. • SrcIpv6PrefixLength. • SrcIpv6AddressStart. • SrcIpv6AddressEnd. • InterfaceName. • ContentOffset. • ContentExpression. • CookieName. • CookieValue. • HeaderName. • HeaderValue. • URI. • Method. • ExtType. • Version. • PayloadPattern. • Not. • CaseSensitive. • AttributeType. AttributeExpression	
RuleName	Name of the Schedule policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleType	Type of the Schedule policy.	N/A	Enumeration: • 0—Source IPv4. • 1—Source range IPv4. • 2—Source IPv6. • 3—Source range IPv6. • 4—Interface. • 5—Content. • 6—Cookie. • 7—Header. • 8—URI. • 9—Method. • 10—Version. • 11—Payload	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			12—RADIUS	
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
SrcIpv4AddressStart	The start IPv4 adress of Source range IPv4 match rule.	N/A	String. Dotted decimal notation.	N/A
SrcIpv4AddressEnd	The end IPv4 adress of Source range IPv4 match rule.	N/A	String. Dotted decimal notation.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	N/A
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
SrcIpv6AddressStart	The start IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
SrcIpv6AddressEnd	The end IPv6 adress of Source range IPv6 match rule.	N/A	Hexadecimal string, colon-separated.	N/A
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	N/A
BodyPattern	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BodyOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	N/A
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	N/A
CookiePattern	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	N/A
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
HeaderPattern	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	N/A
URI	Regular expression matched the URI.	N/A	String. Length: 0 to 255 characters.	N/A
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	N/A
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • **0**—Nonuser-defined (default). **1**—User-defined.	N/A
Version	The version of HTTP.	N/A	Enumeration: • **0**—1.0. **1—1.1.**	N/A
PayloadPattern	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	N/A
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) 1—Matching condition is opposite	N/A
AttributeType	Type of attribute	N/A	Unsigned integer. Value range: 1 to 255. By default, no	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			AttributeType is specified.	
AttributePattern	Regular expression matched the attribute.	N/A	String. Length: 1 to 255 characters.	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case sensitive. 1—Case insensitive(default).	N/A

Table description

Item	Description
Feature name	SLB
Table name	ServicePoolStats
Table type	Multi-instance table
Row name	ServicePoolStat
Restrictions	Only stats of real server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the service pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
TotalConnections	Total connections that the service pool received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the service pool received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the service pool received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the service pool received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSidePKTsOut	Number of packets that the service pool sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPackets	Number of packets that the server farm dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSideBytesIn	Number of bytes that the	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	service pool received from device.		2^{64}-1. Unit: Byte.	
ServerSideBytesOut	Number of bytes that the service pool sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the service pool received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the service pool dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the service pool sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the service pool dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Predictor	Predictor algorithm for LB to select a service host to serve a client request.	N/A	Enumeration: • 0—Round-robin. • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 7—Max bandwidth. • 10—Max	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			inbound bandwidth. • 11—Max Outbound bandwidth. • 12—Least time. • 13—Dynamic round-robin. • 14—Hash HTTP. • 15—CARP HTTP. • 16—CARP source address. • 17—CARP source port. • 18—CARP destination address. • 19—Least-connection member. 20—Least time member.	
State	Status of the service pool.	N/A	Enumeration: • 0—Active. • 1—Warn. • 2—Offline • 3—Failure	
TotalPoolMember	Total member number of the service pool.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ActivePoolMember	Active member number of the service pool.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
BusyPoolMember	Busy member number of the service pool.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
OfflinePool Member	Offline member number of the service pool.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
FailurePool Member	Failure member number of the service pool.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InBandwidth	Inbound bandwidth of thel service pools.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound bandwidth of the service	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	pools.		Unit: KB/s.	
HttpRequestPerSec	Http request per second that service pool.received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Item	Description
Feature name	SLB
Table name	ServicePoolMemberStats
Table type	Multi-instance table
Row name	ServicePoolMemberStat
Restrictions	Only stats of server farm member can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	Name of the service pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node name member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
TotalConne	Total	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ctions	connections that the server farm member received.		Value range: 0 to 2^{64}-1.	
ActiveConnections	Active connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnections	Max connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSidePKTsOut	Number of packets that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPackets	Number of packets that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSideBytesIn	Number of bytes that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
ServerSideBytesOut	Number of bytes that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: KB/s.	
MaxBandwidth	Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
Dropped Requests	Number of requests that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
SentResponses	Number of responses that the server farm member sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
InBandwidth	Inbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
RstPackets	RST packets	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxRstPackets	Maximum number of RST packets	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RstProtectRetryTimes	RST protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxRstProtectRetryTimes	Maximum RST protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ZeroWindowPackets	Zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
MaxZeroWindowPackets	Maximum number of zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
ZeroWindowProtectRetryTimes	Zero-window protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxZeroWindowProtectRetryTimes	Maximum zero-window protection times	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
AbnormalURLTimes	Times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxAbnormalURLTimes	Maximum times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnectionsTime	Time when the server farm member received the maximum number of connections.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxConnectionPerSeTime	Time when the server farm member received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxBandwidthTime	Maximum bandwidth time of the server farm member.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the server farm	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	member.			
OutMaxBandwidthTime	Outbound maximum bandwidth time of the server farm member.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ServerSidePKTsPerSecIn	Number of packets per second that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
ServerSidePKTsPerSecOut	Number of packets per second that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
State	State of the service pool member.	N/A	Enumeration: • 0—Available. • 1—busy2—Offline • 3—Failed	N/A
IPProtocol	The protocol type of IP address.	N/A	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
HttpRequestPerSec	Http request per second that service pool member received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/ServiceHostStats

This table contains stat information about service host.

XML structure

```
<SLB>

Table description

Item	Description
Feature name	SLB
Table name	ServiceHostsStats
Table type	Multi-instance table
Row name	ServiceHostsStat
Restrictions	Only stats of real server can be gotten by this table.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the service host	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
TotalConnections	Total connections that the service host received.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ActiveConnections	Active connections that the service host received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
MaxConnections	Max connections that the r service host received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
ConnectionsPerSec	Connections per second that the real server received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the service host received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the service host received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSidePKTsOut	Number of packets that the service host sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedPackets	Number of packets that the service host dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
ServerSideBytesIn	Number of bytes that the service host received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: Byte.	N/A
ServerSideBytesOut	Number of bytes that the service host	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sent.		Unit: Byte.	
Bandwidth	Bandwidth of the service host.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the service host received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedRequests	Number of requests that the service host dropped.	N/A	Unsigned integer. Value range: 0 to2^{64}-1.	N/A
SentResponses	Number of responses that the service host sent to device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
DroppedResponses	Number of responses that the service host dropped.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A
InBandwidth	Inbound Bandwidth of the service host.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the service host.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the service host.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the service host.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: KB/s.	N/A
MaxConnectionsTime	Time when the service host received the maximum number of connections.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxConnectionPerSeTime	Time when the service host received the maximum number of connections per second.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
MaxBandwidthTime	Maximum bandwidth time of the service host.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InMaxBandwidthTime	Inbound maximum bandwidth time of the service host.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OutMaxBandwidthTime	Outbound maximum bandwidth time of the service host.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ServerSidePKTsPerSecIn	Number of packets per second that the service host received from device.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
ServerSidePKTsPerSecOut	Number of packets per second that the service host sent.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1. Unit: pps.	N/A
TotalCnt	The number of total virtual servers.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
HttpRequestPerSec	Http request per second that service host received.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

SLB/ClientSumStats

This table contains information about client sum stats.

XML structure

```
<SLB>
  <ClientSumStats>
    <ClientSumStat>
      <ClientList>
        <ClientIpv4Address></ClientIpv4Address>
        <Ipv4PrefixLength></Ipv4PrefixLength>
        <Connections></Connections>
      </ClientList>
    </ClientSumStat>
  </ClientSumStats>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ClientSumStats
Table type	Multi-instance table
Row name	ClientSumStat
Restrictions	Total of client static can be gotten by this table..

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientList	list of the client.	Data structure	Client static.	N/A
ClientIpv4Address	Client IP address.	N/A	String. Dotted decimal notation.	Example: 1.1.0.0.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Connections	Total connections of the Client.	N/A	Unsigned integer. Value range: 0 to 2^{64}-1.	N/A

SLB/IShellFiles

This table contains information about ishell files.

XML structure

```
<SLB>
  <IShellFiles>
    <IShellFile>
      <FileName></FileName>
      <Content></Content>
    </IShellFile >
  </IShellFiles>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	IShellFiles
Table type	Multi-instance table
Row name	IShellFile
Restrictions	Only ishell file can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	The Name of the Ishell file.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Content	The Content information of the Ishell file.	N/A	Length: The sum of Header and Body 255 is less than 16384 characters.	The null string indicates the label is not configured.

Table description

Item	Description
Feature name	SLB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP virtual servers can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 80.	N/A
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable (default). 1—Enable.	N/A
InsertXFFHeader	Enable insert header of X-Forwarded_For.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DefaultSe	Name of the	N/A	String,	The null string indicates the label

Column name	Column description	Column type	Data type and restrictions	Remarks
rvicePool	default serice pool.		case-insensitive. Length: 1 to 63 characters.	is not configured.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). 1—Enable.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 1 to 31 characters.	The null string indicates the label is not configured.
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression	N/A	String, case-insensitive. Length: 1 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for the virtual server.		characters.	
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table type	Multi-instance table
Row name	HTTPSVirtualServer
Restrictions	Only HTTPS virtual servers can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 63 characters.	
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumberList	Port of virtual server.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 443.	N/A
RebalancePerRequest	Enable implement load balancing for each HTTP request.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
InsertXFFHeader	Enable insert header of X-Forwarded_For.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 1 to 31	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPProtectionPolicy	Name of the HTTP protection policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	TCPProxyVirtualServers
Table type	Multi-instance table
Row name	TCPProxyVirtualServer
Restrictions	Only TCP-Proxy virtual server can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber List	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Items range: 1 to 32. When a virtual server is created, the column must be specified.	
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
IShellFileName	Name of the IShell File	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
TCPProxyParameterClientSide	Client-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPProxyParameterServerSide	Server-side TCP proxy parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: cps.	
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

PortNumberList	List of port numbers	N/A	Number string. It is a comma-separated list	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit.

Column name	Column description	Column type	Data type and restrictions	Remarks
			of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. Value range: 0 to 65535. By default, the value is 0. Items range: 1 to 32.	
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: • 0—Disable . • 1—Enable (default).	N/A
DefaultServicePool	Name of the default serice pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
IShellFileName	Name of the IShell File	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SnatMode	The mode of SNAT	N/A	Enumeration: • 0—None (default). • 1—Snat-pool. • 2—Auto-map. ~~3—Tcp-option.~~	Tcp-option is NOT supported in V9 NO.1 version, it will be supported in V9 NO.2 version.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Persistence	Name of the persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupPersistence	Name of the backup persistence.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default persistence is not configured.
IPToS	ToS number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IP packet sent to server.		Value range: 0 to 255. By default, no IPToS is specified.	
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit : KB/s.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TrafficGroupID	Identifier of the cluster traffic group	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Table description

Item	Description
Feature name	SLB
Table name	VServerLimitRules
Table type	Multi-instance table
Row name	VServerLimitRule
Restrictions	Only virtual server limit rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the limit rule name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterRuleName	Name of the limit rule that the row will be inserted before.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterRuleName and MoveTopOrBottom can not configure together AfterRuleName must be an existing rule. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	AfterRuleName and MoveTopOrBottom can not configure together. By default, indicates the row will be inserted at last.

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the limit rule.	N/A	Enumeration: • 0—any • 1—perSrc.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Ipv4AddressStart	Start IP address	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	End IP address	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv6AddressStart	Start IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address	N/A	IPv6: Hexadecimal string, colon-separated.	Example: 2::2. Loopback address,

Column name	Column description	Column type	Data type and restrictions	Remarks
				multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

Table description

Item	Description
Feature name	SLB
Table name	VServerSchedulePolicies
Table type	Multi-instance table
Row name	VServerSchedulePolicie
Restrictions	Only schedule policie can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the schedule policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterPolicyName	Name of the schedule policy that the row will be inserted before.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterPolicyName and MoveTopOrBottom can not configure together. AfterPolicyName must be an existing policy. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	AfterPolicyName and MoveTopOrBottom can not configure together. By default, indicates the row will be inserted at last.

SLB/VServerModifyPolicies

This table contains information about virtual server quote modify policy.

XML structure

```
<SLB>
  <VServerModifyPolicies>
    <VServerModifyPolicy>
      <VirtualServerName></VirtualServerName>
      <ModifyPolicyName></ModifyPolicyName>
    </VServerModifyPolicy>
  </VServerModifyPolicies>
```

      <DnatEnable></DnatEnable>
    </ServicePool>
  </ServicePools>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	ServicePools
Table type	Multi-instance table
Row name	ServicePool
Restrictions	Only service pool can be gotten by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the service pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of theservice pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a service host to serve a client request.	N/A	Enumeration: • 0—Round-robin. • 1—Random. • 2—Least-connection. • 3—Hash source address. • 4—Hash source port. • 5—Hash destination address. • 6—Bandwidth. • 7—Inbound bandwidth. • 8—Outbound bandwidth. • 7—Max bandwidth. • 10—Max inbound bandwidth. • 11—Max Outbound bandwidth. • 12—Least time. • 13—Dynamic round-robin.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 14—Hash HTTP. • 15—CARP HTTP. • 16—CARP source address. • 17—CARP source port. • 18—CARP destination address. • 19—Least-connection member. • 20—Least time member.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to128.	N/A
SelectHostMinNumber	Minimum number of the active service host in the service pool.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectHostMaxNumber	Maximum number of the active service host in the service pool.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the service pool slow online.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any service host fails in a service poo.	N/A	Enumeration: • 0—Keep. • 1—Reset. • 2—Reschedule.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeSuccessCriteria	The condition that service host is available through probes.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
BusyAction	Busy protection policies for server nodes	N/A	Enumeration: • 0—Drop(default). • 1—Enqueue. • 2—Force.	N/A
QueueLength	Queue length for aging	N/A	Unsigned integer. Value range: 1 to 100000. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
QueueTimeout	Node aging time	N/A	Unsigned integer. Value range: 0 to 60. Unit: second. By default, the column is not configured.	The column can only be configured when the BusyAction enque (1).
SnatEnable	Enable the Snat.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DnatEnable	Enable the Dnat.	N/A	Enumeration: • 0—Disable. • 1—Enable(defau	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			lt).	

SLB/ServicePoolProbes

This table contains information about Service Pool Probe that only uses NQA template.

XML structure

```
<SLB>
  <ServicePoolProbes>
    <ServicePoolProbe>
      <PoolName></PoolName>
      <Probe></Probe>
    </ServicePoolProbe>
  </ServicePoolProbes>
</SLB>
```

Table description

Item	Description

</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	SPoolGenerateHostAndMembers PoolMembers
Table type	Multi-instance table
Row name	SPoolGenerateHostAndMember
Restrictions	Only service pool generate host and member can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	Name of the service pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Ipv4Addr	Start IPv4	N/A	String.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
essStart	address.		Dotted decimal notation. By default, no Ipv4Address is specified.	Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. Ipv4Address and Ipv6Address can not configure together. When Ipv4AddressEnd is not configged, Ipv4AddressStart means one IPv4 address, otherwise it means the start address of an IPv4 range.
Ipv4AddressEnd	End IPv4 address.	N/A	String. Dotted decimal notation. By default, no Ipv4Address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. Ipv4Address and Ipv6Address can not configure together. This column cannot be configged when Ipv4AddressStart is not configged.
Ipv6AddressStart	Start IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no Ipv6Address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. Ipv4Address and Ipv6Address can not configure together. When Ipv6AddressEnd is not configged, Ipv6AddressStart means one IPv6 address, otherwise it means the start address of an IPv6 range.
Ipv6AddressEnd	End IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no Ipv6Address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. Ipv6Address and Ipv6Address can not configure together. This column cannot be configged when Ipv6AddressStart is not configged.
Weight	Weight of the service pool member.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the service pool member.	N/A	Unsigned integer. Value range: 1 to 8.	N/A

SLB/ServicePoolMembers

This table contains information about service pool member.

XML structure

```
<SLB>
  <ServicePoolMembers>
    <ServicePoolMember>
      <PoolName></PoolName>
      <NodeName></NodeName>
      <PortNumber></PortNumber>
      <Description></Description>

Ipv4Address	IPv4 address.	N/A	String.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Dotted decimal notation. By default, no Ipv4Address is specified.	Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. Ipv4Address an Ipv6Address can not configure together.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no Ipv6Address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. Ipv4Address an Ipv6Address can not configure together.
Weight	Weight of the Service Host.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to 2^{32}-1. By default, the value is 0 which indicates that probe success criteria is all.	N/A
ServiceState	ServiceState for the Service Host.	N/A	Enumeration: • 0—Online(default). • 1—Slow online. • 2—Offline	N/A

SLB/ServiceHostProbes

This table contains information about Servicel Host Probe that only uses NQA template.

XML structure

```
<SLB>
  <ServiceHostProbes>
    <ServiceHostProbe>
      <ServiceHost></ServiceHost>
      <Probe></Probe>
    </ServiceHostProbe>
  </ServiceHostProbes>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPSchedulePolicies
Table type	Multi-instance table
Row name	HTTPSchedulePolicy
Restrictions	Only http Schedule policies can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The Name of HTTP Schedule Policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchMode	The rule matched policy.	N/A	Enumeration: • 0—Match any(default). • 1—Match all.	N/A
ForwardType	Forward mode of the policy.	N/A	Enumeration:	When ForwardType changes from Service

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 1—Drop (default). • 3—Service pool. • 9—Response.	pool (3) to drop (1) or response (9), service pool becomes default value.
Fallback	Fallback action when real server select failed.	N/A	Enumeration: • • 1—Match next schedule policy. • 2—Response. • 3—Fin close (default). • 4—Rst close.	The column can be configured when ForwardType is Service pool (3) or there is no ForwardType column.
ServicePool	Name of the Service pool for the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column can be configured when ForwardType is Service pool (3) or there is no ForwardType column. When the column is configured, ForwardType becomes Service pool (3).
ResponseFile Name	Full path and name of the file for the action response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Response (9). The column must start witch device name.
ZipFileWorkp ath	Work path of the zip file for the response.	N/A	String. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Response (9). If the column is not '/', it must start with /, and cannot end with /. The null string indicates the label is not configured.
ResponseZip File	Full path and name of the zip file for the response. Example: • flash:/lb/1.html chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9). The column cannot be configured when

Column name	Column description	Column type	Data type and restrictions	Remarks
				ZipFileWorkpath is not configured.
ResponsePreContent	Name of the predefined content for response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when ForwardType is Response (9) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9).
FallbackResponseRawFile	Full path and name of the raw file for the fallback action response. Example: • flash:/lb/1.html chassis3#slot1#flash:/lb/1.html	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
FallbackPreContent	Name of the predefined content file for fallback.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
TCPDropType	Type of closing TCP connection	N/A	Enumeration: • 0—Fin close(default). • 1—Rst close	The column can be configured when ForwardType is Response (1) or there is no ForwardType column. When the column is configured, ForwardType becomes Resposne (9).
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The column can be configured when ForwardType is Service pool (3) or there is no ForwardType column.

ForwardType	Forward mode of the IP Schedule policy.	N/A	Enumeration: • 1—Drop (default). • 2—Forward all. • 3—Service Pool.	When ForwardType changes from service pool (3) to drop (1) or forward all (2), Service pool become default value.
Fallback	Fallback action when Service pool select failed.	N/A	Enumeration: • 0—Drop (default). • 1—Match next schedule policy. •	The column can be configured when ForwardType is Service Pool (3).
ServicePool	Name of the Service pool for the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column can be configured when ForwardType is Service Pool (3) or there is no ForwardType column. When the column is configured, ForwardType becomes Service Pool (3).

SLB/SchedulePolicyMatchRules

This table contains information about Schedule policy match rules.

Table description

Item	Description
Feature name	SLB
Table name	SchedulePolicyMatchRules
Table type	Multi-instance table
Row name	SchedulePolicyMatchRule
Restrictions	Only Schedule policy match rules can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	SchedulePolicyMatchRule.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
RuleName	Name of the match rule.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the match rule.	N/A	Enumeration: • 0—Source IPv4. • 1—Source range IPv4. • 2—Source IPv6. • 3—Source range IPv6. • 4—Interface. • 5—Content. • 6—Cookie. • 7—Header. • 8—URI. • 9—Method. • 10—Version. • 11—Payload. • 12—RADIUS.	Only HTTP and HTTPS type schedule policies support Content(5), Cookie(6), Header(7), URI(8), Method(9), Version(10). Only TCPL7 and SSL type schedule policies support Payload(11). Only RADIUS type schedule policy supports RADIUS(12).
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.
SrcIpv4AddressStart	The start IPv4 adress of Source range IPv4 match rule.	Index	IPv4: String, dotted decimal notation.	This column can be configured only when the type is Source range IPv4(1). Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
SrcIpv4AddressEnd	The end IPv4 adress of Source range IPv4 match rule.	Index	IPv4: String, dotted decimal notation.	SrcIpv4AddressStart and SrcIpv4AddressEnd should be configured together. Example: 1.1.1.1. Loopback addresses, multicast addresses,

Column name	Column description	Column type	Data type and restrictions	Remarks
				broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6 (2).
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
SrcIpv6AddressStart	Start IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	This column can be configured only when the type is Source range IPv6 (3). Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
SrcIpv6AddressEnd	End IPv6 address	Index	IPv6: Hexadecimal string, colon-separated.	SrcIpv6AddressStart and SrcIpv6AddressEnd should be configured together. Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (4).
BodyExpression	Regular expression matched the	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Content (5).

Column name	Column description	Column type	Data type and restrictions	Remarks
	content.			
BodyOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	This column can be configured only when ContentExpression is configured.
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Cookie (6).
CookiePattern	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when CookieName is configured.
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is HTTP Header (7).
HeaderPattern	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when HeaderName is configured.
URI	Regular expression matched the URI.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is URI (8).
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Method (9).When the ExtType is Nonuser-defined (0), Method can only be configured one of these methods: GET, CONNECT, DELETE, HEAD, OPTIONS, TRACE, PUT, AND POST.
ExtType	Identification of the type for user-defined.	N/A	Enumeration: • **0**—Nonuser-defined (default). • **1**—User-defined.	N/A
Version	The version of HTTP.	N/A	Enumeration: • **0**—1.0. • **1—1.1.**	N/A
PayloadPattern	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	This column can be configured only when the type is payload (11).
Not	Whether the matching condition is opposite	N/A	Enumeration: • 0—Matching condition is not opposite (default) • 1—Matching condition is opposite	This column can be configured only when PayloadExpression is configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
AttributeType	Type of attribute	N/A	Unsigned integer. Value range: 1 to 255. By default, no AttributeType is specified.	This column can be configured only when the type is RADIUS (12).
AttributePattern	Regular expression matched the attribute.	N/A	String. Length: 1 to 255 characters.	This column can be configured only when the type is RADIUS (12).
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	This column can be configured only when the type is cookie(6)、header(7)、URI(8)、payload(11).

SLB/HTTPContents

This table contains information about HTTP content.

XML structure

```

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the modify policy.	Index	String, case-insensitive. • Length: 1 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP header.	Index	String. Length: 1 to 63 characters.	N/A
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A
ClearPort	HTTP port of Location for rewriting redirection message.	Index	Unsigned integer. Value range: 1 to 65535.	This column can only be configured when LocationURL is configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
SSLPort	SSL port of the LB device.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 443.	This column can only be configured when LocationURL is configured.

SLB/TCPProxyParameters

This table contains information about TCP parameter profile.

XML structure

```
<SLB>
  <TCPProxyParameters>
    <TCPProxyParameter>
      <Name></Name>
      <Description></Description>
      <WindowSize></WindowSize>
      <TimeWaitTime></TimeWaitTime>
      <IdleTimeout></IdleTimeout>
      <MSS></MSS>
      <SynRetransTime></SynRetransTime>
      <KeepAliveTime></KeepAliveTime>
      <KeepAliveInterval></KeepAliveInterval>
      <KeepAliveCount></KeepAliveCount>
      <FinWait1Time></FinWait1Time>
      <FinWait2Time></FinWait2Time>
    </TCPProxyParameter>
  </TCPProxyParameters>
</SLB>
```

Table description

Item	Description
Feature name	LB
Table name	TCPProxyParameters
Table type	Multi-instance table
Row name	TCPProxyParameter
Restrictions	Only TCP proxy parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
WindowSize	Starting value of the receive window size.	N/A	Unsigned integer. Value range: 8192 to 65535. By default, 65535 is configured.	N/A
TimeWaitTime	The time of TCP time-wait	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 2 is configured.	N/A
IdleTimeout	Timeout time of idle connections.	N/A	Unsigned integer. Value range: 10 to 86400. Unit: second.	The 0 indicates the label is not configured.
MSS	Maximum segment size of TCP segments.	N/A	Unsigned integer. Value range: 128 to 1460.	The 0 indicates the label is not configured.
SynRetransTime	Timeout time for syn retransmission	N/A	Unsigned integer. Value range: 1 to 75. Unit: second. By default, 10 is configured.	N/A
KeepAliveTime	Timeout time of keep-alive	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 1800 is configured.	N/A
KeepAliveInterval	Interval time of keep-alive retransmission	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 10 is configured.	N/A
KeepAliveCount	Number of times of	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	keep-alive retransmission		65535. By default, 3 is configured.	
FinWait1Time	Timeout time of FIN-WAIT1	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A
FinWait2Time	Timeout time of FIN-WAIT2	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A

SLB/HTTPParameters

This table contains information about HTTP parameter profile.

XML structure

```
<SLB>
  <HTTPParameters>
    <HTTPParameter>
      <Name></Name>
      <Description></Description>
      <ServerConnectionReuse></ServerConnectionReuse>

      <ContentMaxParseLength></ContentMaxParseLength>
      <CookieEncryptName></CookieEncryptName>
      <CookieCipherPassword></CookieCipherPassword>
      <CookieSimplePassword></CookieSimplePassword>
      <ExceedLength></ExceedLength>
    </HTTPParameter>
  </HTTPParameters>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPParameters
Table type	Multi-instance table
Row name	HTTPParameter

Restrictions	Only HTTP parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ServerConnectionReuse	Enable connections to persist and be reused by multiple client connections.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
HeaderMaxParseLength	Maximum number of bytes to parse for cookies, HTTP headers, and URL.	N/A	Unsigned integer. Value range: 1 to 65535. By default, 4096 is configured.	N/A
ContentMaxParseLength	Maximum number of bytes to parse for HTTP content.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 4096.	N/A
ExceedLength	Processing method for HTTP requests or responses that exceed the maximum parse length.	N/A	Enumeration: • 0—Keep (default). • 1—Drop.	N/A
CookieEncryptName	Name of the cookie that excepted to be encrypted.	N/A	String.Length: 1 to 63 characters.	CookieEncryptName and CookiePassword are mutually dependent and both of them should be set in a single message.
CookieCipherPassword	Specify an cookie key in encrypted form.	N/A	String. Length: 1 to 73 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or

Column name	Column description	Column type	Data type and restrictions	Remarks
				CookieSimplePassword, but not both.
CookieSimplePassword	Specify an cookie key in plaintext form.	N/A	String. Length: 1 to 31 characters.	This column must be configured together with CookieEncryptName; Configure CookieCipherPassword or CookieSimplePassword, but not both.
ExceedLength	Processing method for HTTP requests or responses that exceed the maximum parse length.	N/A	Enumeration: • 0—Keep (default). • 1—Drop.	N/A

SLB/HTTPCompressionParameters

This table contains information about HTTP compression parameter profile.

XML structure

```
<SLB>
  <HTTPCompressionParameters>
    <HTTPCompressionParameter>
      <Name></Name>
      <Description></Description>

Table name	HTTPCompressionParameters
Table type	Multi-instance table
Row name	HTTPCompressionParameter
Restrictions	Only HTTP compression parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RequestVersion	Enable compress the HTTP response of version 1.0.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9 By default, 1 is configured.	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip (default). • 2—Deflate.	N/A
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, 1024 is configured.	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB(default). • 16—16KB. • 32—32KB. • 64—64KB.	N/A
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 32—32KB.	
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
DeleteAccept Encoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A

SLB/OneConnectParameters

This table contains information about the OneConnect parameter profile.

XML structure

```
<SLB>
  <OneConnectParameters>
    <OneConnectParameter>
      <Name></Name>
      <Description></Description>
      <MaxReuse></MaxReuse>

</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPCookiePersistences
Table type	Multi-instance table
Row name	HTTPCookiePersistence
Restrictions	Only HTTP cookie persistences can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 0 to 31536000. Unit: second. By default, the value is 86400s.	N/A
Type	Sticky method of HTTP cookie sticky group.	N/A	Enumeration: • 1—Cookie insert persistence (default). • 2—Cookie rewrite stickiness • 3—Cookie get stickiness	Only when the type is cookie rewrite (3), configurations of offset, length, start and end can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
CookieName	Name of the cookie.	N/A	String. Length: 0 to 63 characters.	When Type is rewrite (3), this column must be configured. Characters 0~31and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" "," "." ";" ":" "\" """ "/" "[" "]" "?" "=" "{" "}" SP HT are not supported either.
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A
Offset	Offset to the first byte of the HTTP cookie.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	N/A
Length	Length of the HTTP cookie.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for the HTTP cookie stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP cookie stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
CheckAll	Enable the check option for an HTTP cookie type persistence group.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A
HTTPOnly	HTTP cookie attribute for HTTP only.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	This column can be configured only when the type is Cookie insert stickiness(1) or Cookie rewrite stickiness(2).
Secure	HTTP cookie attribute for secure.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	This column can be configured only when the type is Cookie insert stickiness(1) or Cookie rewrite stickiness(2).
CookieDomain	HTTP cookie attribute for domain.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Cookie insert

Column name	Column description	Column type	Data type and restrictions	Remarks
				stickiness(1).
CookiePath	HTTP cookie attribute for path.	N/A	String. Length: 1 to 255 characters.	This column can be configured only when the type is Cookie insert stickiness(1).
Range	Range of sticky entries	N/A	Enumeration: • 0—Pool(default). • 1—VirtualServerIP. • 2—Global	This column can be configured only when the type is Cookie get stickiness(3).

SLB/HTTPContentPersistences

Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second. By default, the value is 60s . 0 indicates the sticky entry will nerver age out.	N/A
Offset	Offset to the first byte of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	N/A
Length	Length of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for the	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	HTTP content stickiness.			
End	Ending pattern for the HTTP content stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

SLB/HTTPHeaderPersistences

This table contains information about HTTP header persistences.

XML structure

```
<SLB>
  <HTTPHeaderPersistences>
    <HTTPHeaderPersistence>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <Type></Type>
      <HeaderName></HeaderName>
      <Offset></Offset>
      <Length></Length>
      <Start></Start>
      <End></End>
      <CaseSensitive></CaseSensitive>
      <PriorBusyEnable></PriorBusyEnable>
    </HTTPHeaderPersistence>
  </HTTPHeaderPersistences>
</SLB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPHeaderPersistences
Table type	Multi-instance table
Row name	HTTPHeaderPersistence
Restrictions	Only HTTP header persistences can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: The value takes 0 or is in the range of 10 to 604800. Unit: second. By default, the value is 60s. 0 indicates the sticky entry will nerver age out.	N/A
Type	Sticky method of HTTP header sticky group.	N/A	Enumeration: • 1—URL stickiness. • 2—Host stickiness (default) • 3—Method stickiness • 4—Version stickiness • 5—Name stickiness	Only when the type is URL stickiness (1) or host stickiness (2) or name stickiness (5) , configurations of offset, length, start, and end can be configured.
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When Type is method stickiness (3), this column must be configured. Characters 0~31and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" "," ";" ":" "\" """" "/" "[" "]" "?" "=" "{" "}" SP HT are not supported either.
Offset	Offset to the first byte of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	N/A
Length	Length of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
CaseSensitive	Whether the payload content expression is case	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	insensitive			
End	Ending pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
PriorBusyEnable	Prior to busy action	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

SLB/SSLPersistences

This table contains information about SSL persistences.

XML structure

```
<SLB>

  </HTTPPassivePersistenceMethods>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	HTTPPassiveStickyMethodGroups
Table type	Multi-instance table
Row name	HTTPPassiveStickyMethodGroup
Restrictions	Only HTTP passive sticky group method can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky method group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PktActionType	Action type of.	Index	Enumeration: • 0—Get. • 1—Match.	N/A
MethodName	Name of method.	Index	String, case-insensitive. Length: 1 to 63 characters.	One type of action max support four methods.
MethodType	Sticky method of HTTP passive sticky group.	N/A	Enumeration: • 0—None (default). • 1—Header method. • 2—Content method.	Only when the MethodType is Header method (1), configurations of HeaderType,HeaderName can be configured.
HeaderType	Header type of HTTP passive sticky group.	N/A	Enumeration: • 0—None (default). • 1—URL stickiness. • 2—Name stickiness.	Only when the MethodType is Header method (1), HeaderType and, HeaderName can be configured. When the PktActionType(2),this column can be 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When MethodType is header method, this column must be configured. Characters 0~31and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" "," ";" ":" "\" """ "/" "[" "]" "?" "=" "{" "}" SP HT are not supported either.
Length	Length of the HTTP header or content value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is configured, the other cannot be configured.
Start	Beginning pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP passive stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
CaseSensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: • 0—Case insensitive (default). • 1—Case sensitive.	N/A

SLB/UDPPassivePersistences

This table contains information about UDP passive persistences.

XML structure

```
<SLB>
  <UDPPassivePersistences>
    <UDPPassivePersistence>
      <Name></Name>
      <Description></Description>

      <GetStart></GetStart>
      <GetEnd></GetEnd>
      <MatchOffset></MatchOffset>
      <MatchLength></MatchLength>
      <MatchStart></MatchStart>
      <MatchEnd></MatchEnd>
      <PriorBusyEnable></PriorBusyEnable>
```

```
    </UDPPassivePersistence>
  </UDPPassivePersistences>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	UDPPassivePersistences
Table type	Multi-instance table
Row name	UDPPassivePersistence
Restrictions	Only UDP passive persistencescan be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 0 to 31536000. Unit: second. By default, the value is 86400s.	N/A
GetOffset	Offset to the first byte of the UDP payload.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	N/A
GetLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	If one of Length and End is configured, the other cannot be configured.
GetStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
GetEnd	Ending pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchOffset	Offset to the first byte of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	UDP payload.		Value range: 0 to 1000. By default, 0 is configured.	
MatchLength	Length of the UDP payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	If one of Length and End is configured, the other cannot be configured.
MatchStart	Beginning pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MatchEnd	Ending pattern for the UDP payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
PriorBusyEnable	Stickiness-over-busyness.	N/A	Enumeration: • 0—Disable(default). • 1—Enable.	N/A

SLB/VServerArpInterfaces

This table contains information about virtual server interfaces.

XML structure

```
<SLB>
  <VServerArpInterfaces>
    <VServerArpInterface>
      <VServerName></VServerName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>

  </VServerArpInterfaces>
</SLB>
```

Table description

Item	Description
Feature name	SLB
Table name	VServerArpInterfaces
Table type	Multi-instance table
Row name	VServerArpInterface
Restrictions	Only virtual server interfaces can be gotten by this table.
Support for row creation and	Yes

deletion	

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: • IfIndex.	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

SLB/HTTPCompressionParameters

This table contains information about HTTP compression parameter profile.

XML structure

```
<SLB>
  <HTTPCompressionParameters>
    <HTTPCompressionParameter>
      <Name></Name>
      <Level></Level>
      <Description></Description>

      <ContentLengthThreshold></ContentLengthThreshold>
      <InsertVary></InsertVary>
      <RequestVersion></RequestVersion>
      <DeleteAcceptEncoding></DeleteAcceptEncoding>
      <MemorySize></MemorySize>
      <WindowSize></WindowSize>
    </HTTPCompressionParameter>
  </HTTPCompressionParameters>
</SLB>
```

Table description

Item	Description
Feature name	SLB

Table name	HTTPCompressionParameters
Table type	Multi-instance table
Row name	HTTPCompressionParameter
Restrictions	Only HTTP compression parameter profile can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Level	Level of compress packet.	N/A	Unsigned integer: Value range: 1 to 9 By default, 1 is configured.	N/A
PreferMethod	Prefer method of compression	N/A	Enumeration: • 1—Gzip (default). • 2—Deflate.	N/A
ContentLengthThreshold	Minimum number of bytes to compress the response packet.	N/A	Unsigned integer. Value range: 1 to 2^{32}-1. By default, 1024 is configured.	N/A
InsertVary	Enable insert vary header in HTTP response packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
RequestVersion	Enable compress the HTTP response of version 1.0.	N/A	Enumeration: • 0—Disable (default). • 1—Enable.	N/A
DeleteAcceptEncoding	Enable delete accept-encoding header in HTTP request packet.	N/A	Enumeration: • 0—Disable. • 1—Enable(default).	N/A
MemorySize	Memory size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB(default). • 16—16KB.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 32—32KB. • 64—64KB.	
WindowSize	Window size of compression.	N/A	Enumeration: • 1—1KB. • 2—2KB. • 4—4KB. • 8—8KB. • 16—16KB(default). • 32—32KB.	N/A

SLB/HTTPCompressionParameterRules

This table contains information about HTTP compression parameter rule.

XML structure

```
<SLB>
  <HTTPCompressionParameterRules>
    <HTTPCompressionParameterRule>
      <Name></Name>
      <RuleName></RuleName>
      <AfterRuleName></AfterRuleName>
      <MoveTopOrBottom></MoveTopOrBottom>
      <Type></Type>
      <FilterType></FilterType>
      <Expression></Expression>
    </HTTPCompressionParameterRule>
  </HTTPCompressionParameterRules>
</SLB>
```

Table description

Item	Description
Feature name	LB
Table name	HTTPCompressionParameterRules
Table type	Multi-instance table
Row name	HTTPCompressionParameterRule
Restrictions	Only HTTP compression parameter rule can be configured by this table.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the match rule.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AfterRuleName	Name of the limit rule that the row will be inserted after.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AfterRuleName and MoveTopOrBottom can not configure together. AfterRuleName must be an existing rule. By default, indicates the row will be inserted at last.
MoveTopOrBottom	The position that want to move.	N/A	Enumeration: • 0—Move none. • 1—Move top. • 2—Move bottom.	AfterRuleName and MoveTopOrBottom can not configure together. By default, indicates the row will be inserted at last.
Type	Type of the rule.	N/A	Enumeration: • 0—Permit. • 1—Deny.	N/A
FilterType	Filter type of the rule.	N/A	Enumeration: • 0—URL. • 1—Content.	N/A.
Expression	Regular expression matched the filter type.	N/A	String. Length: 0 to 255 characters.	N/A

SLB/ProtectionPolicies

This table contains information about protection policies.

XML structure

```
<SLB>
  <ProtectionPolicies>
    <ProtectionPolicy>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <Warning></Warning>
      <Drop></Drop>
```

```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientName	VAM client name	Index	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).
AdvpnDomain	ADVPN domain for a VAM client	N/A	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
Enable	Whether the VAM client is enabled	N/A	Boolean: • true—Enabled • false—Disabled	N/A
DumbTime	The dumb time interval	N/A	Unsigned integer Value range: 10 to 600 The default value is 120	N/A
PreSharedKey	The pre-shared key	Data structure	Members include: • Type • Value	N/A
Type	The form of pre-shared key	N/A	Enumeration: • 1—simple • 2—cipher	N/A
Value	The pre-shared key	N/A	String	The plaintext key is a case-sensitive string of 1 to 31 characters. The ciphertext key is a case-sensitive string of 1 to 73 characters.
Retry	The parameters for resending request packet	Data structure	Members include: • Interval • Count	N/A
Interval	The time interval of resending packets	N/A	Unsigned integer Value range: 3 to 30 The default is 5 seconds	N/A
Count	The number of resent packets	N/A	Unsigned integer Value range: 1 to 6 The default is 3	N/A
Authentication	The parameters for authentication	Data structure	Members include: • Username • PasswordType • Password	N/A
Username	The user name	N/A	String Length: 1 to 253	Cannot contains slashes (/), back slashes (\), colons (:), asterisks (*), question marks (?), left angle brackets (<), right angle brackets (>), quotation marks ("),

Column name	Column description	Column type	Data type and restrictions	Remarks
				vertical bars (|), and at signs (@).
PasswordType	The type of the password	N/A	Enumeration: • 1—simple • 2—cipher	N/A
Password	The value of the password	N/A	String	The plaintext password is a case-sensitive string of 1 to 63 characters. The ciphertext password is a case-sensitive string of 1 to 117 characters.

VamcServerCfg

This table is used to configure the VAM servers with which VAM clients register.

XML structure

```
<ADVPN>
  <VamcServerCfg>
    <VamcServer>
      <ClientName></ClientName>
      <PriServer>
        <AddressType></AddressType>
        <Address></Address>
        <Port></Port>
      </PriServer>
      <SecServer>
        <AddressType></AddressType>
        <Address></Address>
        <Port></Port>
      </SecServer>
    </VamcServer>
  </VamcServerCfg>
</ADVPN>
```

Table description

Table name	VamcServerCfg
Table type	Multi-instance table
Row name	VamcServer

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientName	The client name	Index	String. Length: 1 to 63 characters.	Case-insensitive and contains only letters, digits, and dots (.).
PriServer	The primary server	Data structure	Members include: • AddressType • Address • Port	N/A
AddressType	The type of the primary server address	N/A	Enumeration: • 1—IPv4 • 2—IPv6 • 3—Host	Must not be empty.
Address	The host name or IP address of the primary VAM server.	N/A	String	IPv4 address. IPv6 address. Hostname can contains letters, digits, hyphens (-), and underscores (_).
Port	The listening port of the server	N/A	Unsigned integer Value range: 1025 to 65535 The default value is 18000	N/A
SecServer	The secondary server	Data structure	Members include: • AddressType • Address • Port	N/A
AddressType	The type of the secondary server address	N/A	Enumeration: • 1—IPv4 • 2—IPv6 • 3—Host	Must not be empty.
Address	The host name or IP address of the secondary VAM server.	N/A	String	IPv4 address. IPv6 address. Hostname can contains letters, digits, hyphens (-), and underscores (_).
Port	The listening port of the server	N/A	Unsigned integer Value range: 1025 to 65535 The default value is 18000	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientName	VAM client name	Index	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	The type of the server	Index	Enumeration: • **0**—Primary server • **1**—Secondary server	N/A
IPVersion	The type of the private address under the ADVPN tunnel	Index	Enumeration: • **0**—IPv4 • **1**—IPv6	N/A
EnableStatus	Whether the VAM client is enabled	N/A	Boolean: • true—Enabled • false—Disabled	N/A
DomainName	ADVPN domain for a VAM client	N/A	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
ServerHost	The host name of VAM server	N/A	String Length: 1 to 253 characters	Hostname can contains letters, digits, hyphens (-), and underscores (_).
ServerAddress	The VAM server host	N/A	String.	IPv4 address IPv6 address
PrivateAddress	Private address that the VAM client has registered with the VAM server.	N/A	String.	IPv4 address IPv6 address
TunnelID	Tunnel ID	N/A	Unsigned integer	N/A
FsmState	Current state of the VAM client FSM	N/A	Enumeration: • **0**—Offline • **1**—Init1 • **2**—Init2 • **3**—Reg • 4—Online1 • 5—Online2 • 6—Dumb	N/A
ClientType	VAM client type	N/A	Enumeration: • 0—Unknown • **1**—Spoke • **2**—Hub	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HoldingTime	Duration that the VAM client has been in the current state	N/A	Unsigned integer	Unit: seconds
EncryptionAlg	Negotiated encryption algorithm	N/A	Enumeration: • 0—Unknown • **1**—None • **2**—DES • **3**—3DES • 4—AES-CBC-128 • 5—AES-CBC-192 • 6—AES-CBC-256 • 7—AES-CTR-128 • 8—AES-CTR-192 • 9—AES-CTR-256	N/A
AuthenticationAlg	Negotiated authentication algorithm	N/A	Enumeration: • 0—Unknown • **1**—None • **2**—HMAC-MD5-96 • **3**—HMAC-MD5 • 4—HMAC-SHA1-96 • 5—HMAC-SHA1 • 6—HMAC-SHA2-256 • 7—HMAC-AES-XCBC-MAC	N/A
KeepaliveInterval	The keepalive interval	N/A	Unsigned integer Value range: 5 to 65535	Unit: second
KeepaliveCount	The maximum number of keepalive retries	N/A	Unsigned integer Value range: 1 to 6	N/A
HubsNum	Number of hubs on the VAM server	N/A	Unsigned integer	N/A

IPv4ShortcutStats

This table displays IPv4 spoke-to-spoke tunnel establishment rule statistics for VAM clients.

XML structure

```
<ADVPN>
  <IPv4ShortcutStats>
    <IPv4Shortcut>
      <ClientName></ClientName>
      <DomainName></DomainName>
      <ClientType></ClientType>
      <RuleNumber></RuleNumber>

VAMS

EnableAllDomains

This table is used to enable the VAM server for all ADVPN domains.

XML structure

```
<VAMS>
  <EnableAllDomains>
    <Enable></Enable>
  </EnableAllDomains>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	EnableAllDomains
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable the VAM server for all ADVPN domains	N/A	Boolean: • true—Enable • false—Disable	Must not be empty.

ResetAllAddressMapInfo

This table is used to clear all private-public address mapping information registered by VAM clients on the VAM server, by specifying the IP version of private addresses.

XML structure

```
<VAMS>
  <ResetAllAddressMapInfo>
    <Reset>
      <IPVersion></IPVersion>
    </Reset>
```

```
  </ResetAllAddressMapInfo>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	ResetAllAddressMapInfo
Table type	Single-instance table
Row name	Reset
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	The IP version of private addresses	N/A	Enumeration: • 4—IPv4 • 6—IPv6	Must not be empty.

ResetAddressMapInfo

This table is used to clear IPv4 private-public address mapping information registered by VAM clients on the VAM server.

XML structure

```
<VAMS>
  <ResetAddressMapInfo>
    <Reset>
      <IPVersion></IPVersion>
      <AdvpnDomainName></AdvpnDomainName>
      <PrivateAddress></PrivateAddress>
    </Reset>
  </ResetAddressMapInfo>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	AdvpnDomains
Table type	Multi-instance table
Row name	AdvpnDomain
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name.	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthenAlgList	The algorithms for VAM protocol packet authentication	Data structure	Members include: • AuthenAlgItem	AuthenAlgItem: the maxOccurs is 5.
AuthenAlgItem	The algorithm for VAM protocol packet authentication	N/A	Enumeration: • 1—NONE • 3—MD5 • 5—SHA-1 • 6—SHA-256 • 7—AES-XCBC-MAC	N/A
AuthenMethod	Authentication mode that the VAM server uses to authenticate clients	N/A	Members include: • Method • ISPName	N/A
Method	Authentication method	N/A	Enumeration: • 1—None • 2—PAP • 3—CHAP	The default value is 3. If the value is 1, the ISPName will be ignored.
ISPName	ISP domain for authentication	N/A	String Length: 1 to 255 characters The default is empty	Case-insensitive and can't contain \, |, /, :, *, ?, ", <, > and @.
EncryptAlgList	The algorithms for VAM protocol packet encryption	Data structure	Members include: • EncryptAlgItem	EncryptAlgItem: the maxOccurs is 9.
EncryptAlgItem	The algorithm for VAM protocol packet encryption	N/A	Enumeration: • 1—NONE • 2—DES-CBC • 3—3DES-CBC • 4—AES-CBC-128 • 5—AES-CBC-192 • 6—AES-CBC-256 • 7—AES-CTR-128 • 8—AES-CTR-192 • 9—AES-CTR-256	N/A
Keepalive	The parameters of keep-alive packet	Data structure	Members include: • Interval • Retry	N/A
Interval	The keepalive interval	N/A	Unsigned integer Value range: 5 to 65535 The default value is 180	Unit: second.
RetryTime	The maximum number of keepalive retries	N/A	Unsigned integer Value range: 1 to 6 The default value is 3	N/A
RetryInterval	The time interval for the server	N/A	Unsigned integer Value range: 3 to 30	Unit: second.

Column name	Column description	Column type	Data type and restrictions	Remarks
	resending request packet		The default value is 5	
PreSharedKey	The pre-shared key	Data structure	Members include: • Type • Value	N/A
Type	The form of pre-shared key	N/A	Enumeration: • 1—simple • 2—cipher	If the Value is empty, the Type will be ignored.
Value	The pre-shared key	N/A	String The default value is empty	The plaintext key is a case-sensitive string of 1 to 31 characters. The ciphertext key is a case-sensitive string of 1 to 73 characters.
Enable	Whether the ADVPN domain is enabled.	N/A	Boolean: • true—Enable • false—Disable	The default value is false.

HubGroups

This table is used to configure hub groups on the VAM server.

XML structure

```
<VAMS>
  <HubGroups>
    <HubGroup>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <DomainID></DomainID>
      <IPv4Shortcut>
        <AclMode></AclMode>
        <AclNum></AclNum>
        <AclName></AclName>
      </IPv4Shortcut>
      <IPv6Shortcut>
        <AclMode></AclMode>
        <AclNum></AclNum>
        <AclName></AclName>
      </IPv6Shortcut>
    </HubGroup>
  </HubGroups>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	HubGroups
Table type	Multi-instance table
Row name	HubGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.
IPv4Shortcut	ACL to control establishing IPv4 spoke-to-spoke tunnels	Data structure	Members include: • AclMode • AclNum • AclName	N/A
AclMode	ACL mode	N/A	Enumeration: • 0—None • 1—ByNumber • 2—ByName • 3—All	The default value is 0, which means not specifing the IPv4 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv4 basic ACLs. 3000 to 3999 for IPv4 advanced ACLs.
AclName	ACL Name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be “all”.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Shortcut	ACL to control establishing IPv6 spoke-to-spoke tunnels	Data structure	Members include: • AclMode • AclNum • AclName	N/A
AclMode	ACL mode	N/A	Enumeration: • 0—None • 1—Number • 2—Name • 3—All	The default value is 0, which means not specifing the IPv4 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv6 basic ACLs. 3000 to 3999 for IPv6 advanced ACLs.
AclName	ACL Name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be “all”.

IPv4Hubs

This table is used to configure the private IPv4 address of hubs on the VAM server.

XML structure

```
<VAMS>
  <IPv4Hubs>
    <IPv4Hub>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <PrivateAddress></PrivateAddress>
      <DomainID></DomainID>
      <PublicAddress>
        <IPVersion></IPVersion>
        <IPAddress></IPAddress>
      </PublicAddress>
      <AdvpnPort></AdvpnPort>
      <LinkProtocol></LinkProtocol>
      <RegPublicAddress>
        <RegIPVersion></RegIPVersion>
        <RegIPAddress></RegIPAddress>
      </RegPublicAddress>
```

```
    <RegAdvpnPort></RegAdvpnPort>
   </IPv4Hub>
  </IPv4Hubs>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	IPv4Hubs
Table type	Multi-instance table
Row name	IPv4Hub
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
PrivateAddress	The private IPv4 address of the hub	Index	IPv4 address	Must be an unicast address.
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.
PublicAddress	The public address of the hub	Data structure	Members include: • IPVersion • IPAddress	Use IPVersion to specify the IP version of the public address: IPv4, IPv6. Use IPAddress to store the public address. If you are not specify the public address, you can not specify the “PublicAddress” tag , the sub-tag “IPVersion” and “IPAddress”.
IPVersion	IP version of the public address	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If IPVersion is 4, the IPAddress is an IPv4 address If IPVersion is 6, the IPAddress is an IPv6

				address.
IPAddress	Public IP address	N/A	String. The default is empty.	IPv4 Address IPv6 Address
AdvpnPort	The ADVPN port number of the hub	N/A	Unsigned integer Value range: 1025 to 65535	If you are not specify the ADVPN port number, you can not specify the “AdvpnPort” tag.
LinkProtocol	Link protocol of the hub	N/A	Enumeration: • 1—GRE • 2—UDP • 3—GRE with IPsec protection • 4—UDP with IPsec protection	As a best practice, specify the link protocol of the hub.
RegPublicAddress	Public address of the hub before NAT	Data structure	Members include: • RegIPVersion • RegIPAddress	Use RegIPVersion to specify the IP version (Ipv4 or Ipv6) of the public address before NAT. Use RegIPAddress to specify the public address before NAT. If the public address before NAT is not needed, do not specify RegPublicAddress, RegIPVersion, or RegIPAddress.
RegIPVersion	IP version of the public address before NAT	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If RegIPVersion is 4, the RegIPAddress is an IPv4 address If RegIPVersion is 6, the RegIPAddress is an IPv6 address.
RegIPAddress	Public IP address before NAT	N/A	IPv4:String,dotted decimal notation. IPv6: Hexadecimal string,colon-separated. The default is empty.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
RegAdvpnPort	ADVPN port number of the hub before NAT	N/A	Unsigned integer Value range: 1025 to 65535	If the ADVPN port number before NAT is not needed, do not specify RegAdvpnPort.

IPv6Hubs

This table is used to configure the private IPv6 address of hubs on the VAM server.

XML structure

```
<VAMS>
  <IPv6Hubs>
    <IPv6Hub>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <PrivateAddress></PrivateAddress>
      <DomainID></DomainID>
      <PublicAddress>
        <IPVersion></IPVersion>
        <IPAddress></IPAddress>
      </PublicAddress>
      <AdvpnPort></AdvpnPort>
      <LinkProtocol></LinkProtocol>
      <RegPublicAddress>
        <RegIPVersion></RegIPVersion>
        <RegIPAddress></RegIPAddress>
      </RegPublicAddress>
      <RegAdvpnPort></RegAdvpnPort>
      <LinkLocalAddress></LinkLocalAddress>
    </IPv6Hub>
  </IPv6Hubs>
</VAMS>
```

Table description

Item	Description
Feature name	VAMS
Table name	IPv6Hubs
Table type	Multi-instance table
Row name	IPv6Hub

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
PrivateAddress	The private IPv6 address of the hub	Index	IPv6 address	Must be a global unicast address.
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when create an ADVPN domain.
PublicAddress	The public address of the hub	Data structure	Members include: • IPVersion • IPAddress	Use IPVersion to specify the IP version of the public address: IPv4, IPv6. Use IPAddress to store the public address. If users are not specify the public address, you can not specify the “PublicAddress” tag , the sub-tag “IPVersion” and “IPAddress”.
IPVersion	IP version of public address	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If IPVersion is 4, the IPAddress is an IPv4 address If IPVersion is 6, the IPAddress is an IPv6 address.
IPAddress	Public IP address	N/A	String. The default is empty.	IPv4 Address IPv6 Address
AdvpnPort	The ADVPN port number of the hub	N/A	Unsigned integer Value range: 1025 to 65535	If you are not specify the ADVPN port number, you can not specify the “AdvpnPort” tag.
LinkProtocol	Link protocol of the hub	N/A	Enumeration: • 1—GRE • 2—UDP • 3—GRE with IPsec protection • 4—UDP with IPsec protection	As a best practice, specify the the link protocol of the hub
RegPublicAddress	Public address of the hub before NAT	Data structure	Members include: • RegIPVersion • RegIPAddress	Use RegIPVersion to specify the IP version (Ipv4 or Ipv6) of the public address before NAT. Use RegIPAddress to specify the public address before NAT. If the public address before NAT is not needed,do not specify RegPublicAddress,RegIPVersion, or RegIPAddress.

Column name	Column description	Column type	Data type and restrictions	Remarks
RegIPVersion	IP version of the public address before NAT	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If RegIPVersion is 4, the RegIPAddress is an IPv4 address If RegIPVersion is 6, the RegIPAddress is an IPv6 address.
RegIPAddress	Public IP address before NAT	N/A	IPv4:String,dotted decimal notation. IPv6:Hexadecimal string,colon-separated. The default is empty.	IPv4 example: 1.1.1.1. IPv6 Address: 1:2:3:4:5:6:7:8
RegAdvpnPort	ADVPN port number of the hub before NAT	N/A	Unsigned integer Value range: 1025 to 65535	If the ADVPN port number before NAT is not needed,not specify RegAdvpnPort.
LinkLocalAddress	IPv6 link local address of the hub	N/A	String. The default is empty.	IPv6 Address

IPv4Spokes

This table is used to configure the private IPv4 address range of spokes on the VAM server.

XML structure

```
<VAMS>
  <IPv4Spokes>
    <IPv4Spoke>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <StartIPv4Address></StartIPv4Address>

Keepalive	The parameters of keep-alive packet	Data structure	Members include: • Interval • Retry	N/A
Interval	The keepalive interval	N/A	Unsigned integer Value range: 5 to 65535 The default value is 180	Unit: second.
RetryTime	The maximum number of keepalive retries	N/A	Unsigned integer Value range: 1 to 6 The default value is 3	N/A
RetryInterval	The time interval for the server resending request packet	N/A	Unsigned integer Value range: 3 to 30 The default value is 5	Unit: second.
PreSharedKey	The pre-shared key	Data structure	Members include: • Type • Value	N/A
Type	The form of pre-shared key	N/A	Enumeration: • 1—simple • 2—cipher	This column will not return to user.
Value	The pre-shared key	N/A	String	This column will not return to user.
Enable	The status of advpn domain	N/A	Boolean: • true—Enabled • false—Disabled	The default value is false.

DomainStats

This table displays the ADVPN domain statistics.

XML structure

```

Table description

Item	Description
Feature name	VAMS
Table name	IPv4Hubs
Table type	Multi-instance table
Row name	IPv4Hub
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
PrivateAddress	The private IPv4 address of the hub	Index	IPv4 address	Must be an unicast address.
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when create an ADVPN domain.
PublicAddress	The public address of the hub	Data structure	Members include: • IPVersion	If users are not specify the public address, this tag and

			• IPAddress	its sub-tags will not display to user.
IPVersion	IP version of public address	N/A	Enumeration: • 4—IPv4 • 6—IPv6	Use IPVersion to display the IP version of the public address. If IPVersion is 4, the IPAddress is an IPv4 address. If IPVersion is 6, the IPAddress is an IPv6 address.
IPAddress	Public IP address	N/A	String. The default is empty.	IPv4 Address IPv6 Address
AdvpnPort	The ADVPN port number of the hub	N/A	Unsigned integer Value range: 1025 to 65535	If users are not specify the ADVPN port number, the VAM server uses the port number registered by the hub.
LinkProtocol	Link protocol of the hub	N/A	Enumeration: • 1—GRE • 2—UDP • 3—GRE with IPsec protection • 4—UDP with IPsec protection	As a best practice, specify the link protocol of the hub.
RegPublicAddress	Public address of the hub before NAT	Data structure	Members include: • RegIPVersion • RegIPAddress	Use RegIPVersion to specify the IP version (Ipv4 or Ipv6) of the public address before NAT. Use RegIPAddress to specify the public address before NAT. If the public address before NAT is not needed, do not specify RegPublicAddress, RegIPVersion, or RegIPAddress.

RegIPVersion	IP version of the public address before NAT	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If RegIPVersion is 4, the RegIPAddress is an IPv4 address If RegIPVersion is 6, the RegIPAddress is an IPv6 address.
RegIPAddres s	Public IP address before NAT	N/A	IPv4:String,dotted decimal notation. IPv6: Hexadecimal string,colon-separated. The default is empty.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
RegAdvpnPor t	ADVPN port number of the hub before NAT	N/A	Unsigned integer Value range: 1025 to 65535	If the ADVPN port number before NAT is not needed, do not specify RegAdvpnPort.

IPv6Hubs

This table displays the private IPv6 address configuration of hubs on the VAM server.

XML structure

```
<VAMS>
<IPv6Hubs>
    <IPv6Hub>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>

Row name	IPv6Hub
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
PrivateAddress	The private IPv6 address of the hub	Index	IPv6 address	Must be a global unicast address.
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when create an ADVPN domain.
PublicAddress	The public address of the hub	Data structure	Members include: • IPVersion • IPAddress	If users are not specify the public address, this tag and its sub-tags will not display to user.
IPVersion	IP version of public address	N/A	Enumeration: • 4—IPv4 • 6—IPv6	Use IPVersion to display the IP version of the public address. If IPVersion is 4, the IPAddress is an IPv4 address. If IPVersion

Column name	Column description	Column type	Data type and restrictions	Remarks
				is 6, the IPAddress is an IPv6 address.
IPAddress	Public IP address	N/A	String. The default is empty.	IPv4 Address IPv6 Address
AdvpnPort	The ADVPN port number of the hub	N/A	Unsigned integer Value range: 1025 to 65535	If users are not specify the ADVPN port number, the VAM server uses the port number registered by the hub.
LinkProtocol	Link protocol of the hub	N/A	Enumeration: • 1—GRE • 2—UDP • 3—GRE with IPsec protection • 4—UDP with IPsec protection	As a best practice, specify the the link protocol of the hub
RegPublicAddress	The public address of the hub before NAT	Data structure	Members include: • RegIPVersion • RegIPAddress	Use RegIPVersion to specify the IP version(Ipv4 or Ipv6) of the public address before NAT. Use RegIPAddress to specify the public address before NAT. If the public address before NAT is not needed,do not specify RegPublicAddress,RegIPVersion, or RegIPAddress.
RegIPVersion	IP version of the public address before NAT	N/A	Enumeration: • 4—IPv4 • 6—IPv6	If RegIPVersion is 4, the RegIPAddress is an IPv4 address If RegIPVersion is 6, the RegIPAddress is an IPv6 address.
RegIPAddress	Public IP address before	N/A	IPv4:String,dotted decimal notation.	Pv4 example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	NAT		IPv6:Hexadecimal string,colon-separated. The default is empty.	IPv6 Address: 1:2:3:4:5:6:7:8
RegAdvpnPort	ADVPN port number of the hub before NAT	N/A	Unsigned integer Value range: 1025 to 65535	If the ADVPN port number before NAT is not needed,not specify RegAdvpnPort.
LinkLocalAddress	IPv6 link local address of the hub	N/A	String. The default is empty.	IPv6 Address

IPv4Spokes

This table displays the private IPv4 address range configuration of spokes on the VAM server.

XML structure

```
<VAMS>
  <IPv4Spokes>
    <IPv4Spoke>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <StartIPv4Address></StartIPv4Address>

VBR/PE/SetConfiguration

This table contains PEX local forwarding capability information on a PEX.

XML structure

```
<VBR>
  <PE>
    <SetConfiguration>
      <LocalForwarding></LocalForwarding>
      <ShutdownIfWhenOffline></ShutdownIfWhenOffline>
    </SetConfiguration>
  </PE>
</VBR>
```

Table description

Item	Description
Feature name	VBR
Table name	SetConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalForwarding	Whether PEX local forwarding capability is enabled	N/A	Boolean: • **true**. • **false** (default).	N/A
ShutdownIfWhenOffline	Whether all user-side ports will be shut down when the PEX is offline	N/A	Boolean: • **true**. • **false** (default).	N/A

VBR/PE/Configuration

This table manages configuration for PEXs.

XML structure

```
<VBR>
  <PE>
    <Configuration>
      <Save/>
      <Recover>
        <Associate></Associate>
        <Name></Name>
      </Recover>
    </Configuration>
  </PE>
</VBR>
```

Responsed XML structure

```

  <PE>
    <Configuration>
      <Name></Name>
    </Configuration>
  </PE>
</VBR>
```

Table description

Item	Description
Feature name	VBR
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Associate	Virtual chassis number or slot number of a PEX	N/A	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
Name	Configuration file	N/A	String.	The file name is in the

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 1 to 255 characters.	format of pex_*peid*.cfg. The *peid* argument represents the virtual chassis number or slot number of the PEX. For example: pex_100.cfg.

Responsed columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Configuration file name	N/A	String. Length: 1 to 255 characters.	The configuration file name is pex.cfg. This object responds to the save operation.

VBR/CB/UpgradePEXs

This table contains PEX upgrade information on PEX.

XML structure

```
<VBR>
  <CB>
    <UpgradePEXs>
      <Server></Server>
      <FtpUserName></FtpUserName>
      <Password></Password>
      <IPEFile></IPEFile>
      <PEXDeviceList></PEXDeviceList>
      <Patch>
        <PatchFile></PatchFile>
        <Action></Action>
      </Patch>
      <DeleteIPEFile></DeleteIPEFile>
    </UpgradePEXs>
  </CB>
</VBR>
```

Table description

Item	Description
Feature name	VBR
Table name	UpgradePEXs

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Server	IP address of the FTP server.	N/A	String, dotted decimal notation.	N/A
FtpUserName	User's name of the FTP server entered by user.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Password	password of the FtpUserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
IPEFile	Name of an .ipe image pckage file in the system.	N/A	String. Length: 1 to 127 characters.	N/A
PEXDeviceList	List of PEX device that user selected for upgrade.	N/A	Number string. It is a comma-separated list of PEX items. An item can be an individual PEX ID or a PEX ID range. Use a hyphen (-) to separate the start and end PEXs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 100,102,103,105-108,110-120.
PatchFile	Name of a patch image pckage file in the system.	N/A	String. Length: 1 to 127 characters.	"patch" means this is a patch image file.
Action	Specify which action to handle the patch image file.	N/A	Enumeration: • **1**—activate. • **2**—deactivate.	Action of "activate" will update the patch image file that the user selected, "deactivate" will unload the selected patch file.
DeleteIPEFile	Whether delete the .ipe image package file after decompress it.	N/A	Boolean: • true • false	Optional column, if not specify default is false.

        <Tier></Tier>
        <Parent></Parent>
        <DeviceMAC></DeviceMAC>
      </CascadePort>
    </CascadePorts>
  </CB>
</VBR>
```

Table description

Item	Description
Feature name	VBR
Table name	CascadePorts
Table type	Multi-instance table
Row name	CascadePort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Aggregate interface index.	index	Unsigned integer.	Some versions support interface name. For more information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Group	PEX group ID.	N/A	Unsigned integer.	If this column has a valid value, the PEX connection capability of the aggregate interface is enabled. In other situations, the PEX connection capability of the aggregate interface is not enabled.
Associate	Associated virtual chassis number or slot number of the PEX port.	N/A	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
Member	Member Interfaces of CascadePort	Data structure	Member: • Local • Neighbour	Multi-instance
Local	Local Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Neighbour	Neighbour Interface name	N/A	String. Length: 2 to 47 characters.	N/A
LocalForwarding	Whether PEX local forwarding capability is enabled.	N/A	Boolean: • **true**—Enabled. • **false**—Not enabled.	N/A
ShutdownIfWhenPEOffline	Whether all user-side ports on the PEX will be shut down when the PEX is offline.	N/A	Boolean: • **true**—Shut down. • **false**—Not shut down.	N/A
Tier	Tier of the PEX	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Parent	Parent node of current PEX node	N/A	Unsigned integer.	If this column has an invalid value 0XFFFF, then current PEX's parent is CB. In other situations, this column's value is the ID of PEX.
DeviceMAC	PEX Device's bridge MAC address	N/A	String. Format: HH-HH-HH-HH-HH-HH	N/A

VBR/CB/ExtendPorts

This table contains extendport list of the PEX.

XML structure

```
<VBR>
  <CB>
    <ExtendPorts>
      <ExtendPort>
        <AssociateID></AssociateID>
        <IfIndex></IfIndex>
        <PortInfo>
          <Chassis></Chassis>
          <Slot></Slot>
          <SubSlot></SubSlot>
        </PortInfo>
      </ExtendPort>
    </ExtendPorts>
  </CB>
</VBR>
```

Table description

Item	Description
Feature name	VBR
Table name	ExtendPorts
Table type	Multi-instance table
Row name	ExtendPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AssociateID	Associated virtual chassis number or slot number of the PEX .	index	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
IfIndex	ExtendPort IfIndex	index	Unsigned integer.	N/A
Chassis	Chassis ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 65535.
Slot	Slot ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no subslot number, return 0.

VBR/CB/UpstreamPorts

This table contains upstreamports on the PEX.

XML structure

```
<VBR>
  <CB>
    <UpstreamPorts>
      <UpstreamPort>
        <AssociateID></AssociateID>
        <IfIndex></IfIndex>

Column name	Column description	Column type	Data type and restrictions	Remarks
				XML API Configuration
MacAddress	MAC address	index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
PeerInterface	Neighbor interface name	index	String. Length: 1 to 47 characters.	
Role	Neighbor role	N/A	Enumeration: • 1—spine. • 2—leaf. • 3—access. • 4—computer. • 5—aggr.	
LocalInterface	Interface name	N/A	String. Length: 1 to 47 characters.	
SystemName	System name	N/A	String. Length: 0 to 255 characters.	0 denotes Null.
PeerIP	Neighbor management address.	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
LoopbackIP	Neighbor Loopback0 address.	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
Loopback1IP	Neighbor Loopback1 address.	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.

VCF/Role

This table contains VCF role name information.

XML structure

```
<VCF>
  <Role>
    <Name></Name>
  </Role>
</VCF>
```

Table description

Item	Description
Feature name	VCF
Table name	Role
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Role name	N/A	String: • access • leaf • spine • aggr	

VCF/Underlay

This table contains VCF underlay information.

XML structure

```
<VCF>
  <Underlay>
    <PauseStatus></PauseStatus>
    <Completion></Completion>
    <Maddr></Maddr>
    <Mask></Mask>
    <Mac></Mac>
    <StandByMac></StandByMac>
    <StandByMac2></StandByMac2>
    <SN></SN>
    <Execution></Execution>
  </Underlay>
</VCF>
```

Table description

Item	Description
Feature name	VCF
Table name	Underlay
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PauseStatus	Underlay pause status	N/A	Boolean: • true—pause • false—running	
Completion	Underlay completon	N/A	Boolean: • true—completion • false—incompletion	If Vlan-interface4094 or Vsi-interface4094 have ipv4, completion status will be set true.
Maddr	Management address	N/A	Unsigned integer. Length: 32 bits.	Vlan-interface4094 or Vsi-interface4094 ipAdress.
Mask	Management address Mask	N/A	Unsigned integer. Length: 32 bits.	Vlan-interface4094 or Vsi-interface4094 mask .
Mac	Briage MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
StandByMac	Standby Original Briage MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated	StandByMac default 00-00-00-00-00-00. If irf mode,”StandByMac” means standby original Briage Mac .Example: 00-0c-af-e3-5d-c1.
StandByMac2	Briage MAC of local standby MPU on a subordinate member	N/A	Six groups of two hexadecimal digits, hyphen-separated	StandByMac2 default 00-00-00-00-00-00. If irf mode,”StandByMac2” means Briage MAC of local standby MPU on a subordinate member .Example: 00-0c-af-e3-5d-c1. Note that, after switchover occured, the bridge MAC of device may be that of previous local active MPU or local standby MPU on the previous subordinate member.
SN	Device serial number	N/A	String	
Execution	Finished phase	N/A	String	Example: 1.0.1,1.0,2, means, Underlay has finished phase: 1.0.1, 1.0.2

VCF/UnderlayParam

This table contains VCF underlay parameter information.

XML structure

```
<VCF>
  <UnderlayParam>
    <username></username>
     <password></password>
</VCF>
```

Table description

Item	Description
Feature name	VCF

Table description

Item	Description
Feature name	VLAN
Table name	BatchVlans
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Data type and restrictions	Remarks
CreateVlanList	List of VLANs to create	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma	Example: 2,3,5-8,10-20.

Column name	Column description	Data type and restrictions	Remarks
		or hyphen, or include any whitespace characters.	
DestoryVlanList	List of VLANs to delete	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 2,3,5-8,10-20.

Responsed columns

Column name	Column description	Data type and restrictions	Remarks
CreateVlanList	List of VLANs that have been created successfully	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 2,3,5-8,10-20. Responsed only when CreateVlanList is submitted.
DestoryVlanList	List of VLANs that have been deleted successfully	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 2,3,5-8,10-20. Responsed only when DestoryVlanList is submitted.

VLAN

VLAN/VLANs

This table contains basic VLAN information.

XML structure

```
<VLAN>
  <VLANs>
    <VLANID>
      <ID></ID>
      <Description></Description>
      <Name></Name>
      <AccessPortList></AccessPortList>
      <Ipv4>
        <Ipv4Address></Ipv4Address>
        <Ipv4Mask></Ipv4Mask>
      </Ipv4>
      <BroadcastSuppression>
        <ConfigValue></ConfigValue>
        <Unit></Unit>
      </BroadcastSuppression>
    </VLANID>
  </VLANs>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLANID
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	VLAN description	N/A	String. Length: 1 to 255 characters. Default: **VLAN** *vlan-id*. The *vlan id* argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	Example: VLAN 0001.
Name	VLAN name	N/A	String. Length: 1 to 32 characters. Default: **VLAN** *vlan-id*. The *vlan id* argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	Example: VLAN 0001.
AccessPortList	Access port list of the VLAN	N/A	Number string. It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a VLAN does not have an access port list.	Example: 1,2,3,5-8,10-20. Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: • Ipv4Address. • Ipv4Mask.	You must configure both the IP address and mask if the operation is **merge**, **create**, or **replace**. You can configure only the IP address if the operation is **delete** or **remove**.
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the **merge**, **create**, or **replace** operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 55.255.255.0.
BroadcastSuppr	BroadcastSu	Data structure	Members include:	

Column name	Column description	Column type	Data type and restrictions	Remarks
ession	ppression of a VLAN		• ConfigValue. • Unit	
ConfigValue	Config broadcast suppression value of a VLAN	N/A	Unsigned integer. Value range: • ratio: 0 to 100 • pps: 0 to 1.4881 * the maximum rate. • kbps: 0 to the maximum rate	Only support config one unit at the same time
Unit	Broadcast suppression unit	N/A	Enumeration: • **1**—ratio • **2**—pps • **3**—kbps	The Value of Each type can config see ConfigValue

VLAN/AccessInterfaces

This table contains information about Access ports.

XML structure

```
<VLAN>
  <AccessInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <PVID></PVID>
    </Interface>
  </AccessInterfaces>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	AccessInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in *Ifmgr NETCONF XML API Configuration Reference*.
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

VLAN/TrunkInterfaces

This table contains information about Trunk ports.

XML structure

```
<VLAN>
  <TrunkInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <PermitVlanList></PermitVlanList>
      <PVID></PVID>
    </Interface>
  </TrunkInterfaces>
</VLAN>
```

Table description

Item	**Description**
Feature name	VLAN
Table name	TrunkInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in *Ifmgr NETCONF XML API Configuration Reference*.
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<PermitVlanList base:incremental="true ">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

VLAN/HybridInterfaces

This table contains information about Hybrid ports.

XML structure

```
<VLAN>
  <HybridInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
      <PVID></PVID>
    </Interface>
  </HybridInterfaces>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	HybridInterfaces

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in *Ifmgr NETCONF XML API Configuration Reference*.
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. Do not specify a VLAN both in this column and the **TaggedVlanList** column. The item is permitted to incremental edit. You can sign the flag like “<UntaggedVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a port is not assigned to any VLANs as a tagged member.	Example: 1,2,3,5-8,10-20. Do not specify a VLAN both in this column and the **UntaggedVlanList** column. The item is permitted to incremental edit. You can sign the flag like “<TaggedVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

VLAN/QinQ

This table contains QinQ information of all ports.

XML structure

```
<VLAN>
  <QinQ>
    <ServiceTPID></ServiceTPID>
    <CustomerTPID></CustomerTPID>
  </QinQ>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	QinQ
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTPID	TPID value in the service VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType values listed in Table 1.
CustomerTPID	TPID value in the customer VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType values listed in Table 1.

Table 1 Reserved EtherType values

Protocol type	Value
ARP	2054
PUP	512
RARP	32821
IP	2048
IPv6	34525
PPPoE	34915/34916
MPLS	34887/34888

IPX/SPX	33079
IS-IS	32768
LACP	34825
LLDP	35020
802.1X	34958
802.1ag	35074
Cluster	34983
Reserved	65533/65534/65535

VLAN/QinQPorts

This table contains QinQ information for a port.

XML structure

```
<VLAN>
  <QinQPorts>
    <Interface>
      <IfIndex></IfIndex>
      <QinQ></QinQ>
      <ServiceTPID></ServiceTPID>
      <CustomerTPID></CustomerTPID>
      <TransVlanList></TransVlanList>
    </Interface>
  </QinQPorts>
</VLAN>
```

Table description

Item	Description

OuterStartVlan	Start VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
OuterEndVlan	End VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
InnerStartVlan	Start VLAN of the inner vlan for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerEndVlan	End VLAN of the inner VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
NestedVlan	Nest VLAN for two-to-three VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

VLAN/VoiceInfo

This table contains voice VLAN information.

XML structure

```
<VLAN>
  <VoiceInfo>
```

```
    <AgingTime></AgingTime>
    <LLDPTrack></LLDPTrack>
    <Mode></Mode>
  </VoiceInfo>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoiceInfo
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Voice VLAN aging time.	N/A	Unsigned integer, in minutes. Value range: 5 to 43200 minutes.	By default, the aging time is 1440 minutes.
LLDPTrack	Whether LLDP is enabled for automatic IP phone discovery.	N/A	Boolean: • **true** • **false**	N/A
Mode	Voice VLAN security mode.	N/A	Enumeration: • **1—Security.** • 2—**Normal.**	By default, the voice VLAN security mode is enabled.

VLAN/VoiceOUI

This table contains voice VLAN OUI address information.

XML structure

```
<VLAN>
  <VoiceOUI>
    <OUI>
      <Address></Address>
      <Mask></Mask>
      <Description></Description>
    </OUI>
  </VoiceOUI>
```

```
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoiceOUI
Table type	Multi-instance table
Row name	OUI
Restrictions	This table does not support replace operations.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Source MAC address of voice traffic	Index	Six groups of two hexadecimal digits, hyphen-separated.	For example, 12-34-12-34-12-34.
Mask	Valid length of the OUI address by a mask.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	The mask contains consecutive 1s and 0s. For example, FF-FF-00-00-00-00.
Description	OUI address description.	N/A	Case-sensitive string of 1 to 30 characters.	N/A

VLAN/VoicePorts

This table contains voice VLAN information for a port.

XML structure

```
<VLAN>
  <VoicePorts>
    <Interface>
      <IfIndex></IfIndex>
      <Vlan></Vlan>
      <Mode></Mode>
      <QoS>
        <Trust></Trust>
        <CoS></CoS>
        <DSCP></DSCP>
      </QoS>
    </Interface>
  </VoicePorts>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoicePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in *Ifmgr NETCONF XML API Configuration Reference*.
Vlan	Voice VLAN ID on the port.	N/A	Unsigned integer. Value range: 2 to 4094	Valid only on a hybrid or trunk port operating in automatic voice VLAN assignment mode.
Mode	Voice VLAN assignment mode on the port:.	N/A	Enumeration: • **1**—Automatic. • **2**—Manual.	By default, a port operates in automatic voice VLAN assignment mode.
QoS	QoS information of voice VLAN on the port.	N/A	Include: • **Trust.** • **CoS.** • **DSCP.**	N/A
Trust	Whether the Qos priority settings is trusted for incoming voice VLAN packets.	N/A	Boolean: • **true** • **false**	When a port trusts the QoS priority settings in incoming voice VLAN packets, the port does not modify their CoS and DSCP values.
CoS	CoS value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 7	Valid only when the Trust label above is false. The value is 6

Column name	Column description	Column type	Data type and restrictions	Remarks
				by default.
DSCP	DSCP value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 63	Valid only when the Trust label above is false,. The value is 46 by default.

VLAN/MACPorts

This table contains MAC-based VLAN information for a port.

XML structure

```
<VLAN>
  <MACPorts>
    <Interface>
      <IfIndex></IfIndex>
      <MACVlanEnable></MACVlanEnable>
      <MACVlanTriggerEnable></MACVlanTriggerEnable>
    </Interface>
  </MACPorts>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	MACPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only ports where MAC-based VLAN can be configured are included. Some versions support interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MACVlanEnable	MAC-based vlan enable on the port.	N/A	Enumeration: • **1**—Disable. • **2**—Enable.	N/A
MACVlanTrigger Enable	MAC-based vlan Trigger enable on the port.	N/A	Enumeration: • **1**—Disable. • **2**—Enable.	N/A

VLAN/VLANGroups

This table contains information about VLAN groups.

XML structure

```
<VLAN>
  <VLANGroups>
    <VLANGroup>
      <GroupName></GroupName>
      <VlanList></VlanList>
    </VLANGroup>
  </VLANGroups>
</VLAN>
```

Table description

Item	**Description**
Feature name	VLAN
Table name	VLANGroups
Table type	Multi-instance table
Row name	VLANGroup
Restrictions	N/A
Support for row creation and deletion	YES

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	VLAN group name	Index	String.	Case sensitive. The

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	first character must be a letter.
VlanList	VLAN list	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<VlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

```

Table description

Item	Description
Feature name	VLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLANID
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Description	VLAN description	N/A	String. Length: 1 to 255 characters.	N/A
Name	VLAN name	N/A	String. Length: 1 to 32 characters.	N/A
RouteIfIndex	VLAN interface index	N/A	Unsigned integer.	This column is not displayed if the VLAN interface does not exist. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
UntaggedPortList	List of ports that are assigned to the VLAN as untagged VLAN members	N/A	Number string. It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table. These ports forward traffic with the VLAN tag removed.
TaggedPortList	List of ports that are assigned to the VLAN as tagged VLAN members	N/A	Number string. It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table. These ports forward traffic without removing the VLAN tag.
AccessPortList	Access port list of the	N/A	Number string.	Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
	VLAN		It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a VLAN does not have an access port list.	1,2,3,5-8,10-20. Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: • Ipv4Address. • Ipv4Mask.	You must configure both the IP address and mask if the operation is **merge**, **create**, or **replace**. You can configure only the IP address if the operation is **delete** or **remove**.
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the **merge**, **create**, or **replace** operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 55.255.255.0.
Shared	Whether the VLAN is shared	N/A	Boolean: • true • false	N/A
BroadcastSuppression	BroadcastSuppression of a VLAN	Data structure	Members include: • ConfigValue. • ActualValue • Unit	
ConfigValue	Config broadcast suppression value of a VLAN	N/A	Unsigned integer. Value range: • ratio: 0 to 100 • pps: 0 to 1.4881 * the maximum rate. • kbps: 0 to the maximum rate	Only support config one unit at the same time
ActualValue	Actual broadcast suppression value of a VLAN	N/A	Unsigned integer. Value range: • **ratio: 0 to 100**	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• pps: 0 to 1.4881 * the maximum rate. kbps: 0 to the maximum rate	
Unit	Broadcast suppression unit	N/A	Enumeration: • **1**—ratio • **2**—pps • **3**—kbps	The Value of Each type can config see ConfigValue

VLAN/Interfaces

This table contains VLAN information for a port.

XML structure

```
<VLAN>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Name></Name>
      <LinkType></LinkType>
      <PVID></PVID>

QinQ	Whether QinQ is enabled on the port.	N/A	Boolean: • **true** • **false**	N/A
ServiceTPID	The TPID value in the service VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CustomerTPID	The TPID value in the customer VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TransVlanList	List of transparent VLANs on the port.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. This VLANs cannot exist in CustomerOuterVlan on table VLAN/VLANMapping.

VLAN/QinQCapabilities

This table contains QinQ capabilities information.

XML structure

```
<VLAN>
  <QinQCapabilities>
    <GlobalServiceTPID></GlobalServiceTPID>
    <GlobalCustomerTPID></GlobalCustomerTPID>
    <QinQState></QinQState>
    <ServiceTPID></ServiceTPID>
    <CustomerTPID></CustomerTPID>
    <TransVlan></TransVlan>
```

```
  </QinQCapabilities>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	QinQCapabilities
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalServiceTPID	Whether service TPID for all interfaces can be configured.	N/A	Boolean: • **true** • **false**	N/A
GlobalCustomerTPID	Whether customer TPID for all interfaces can be configured.	N/A	Boolean: • **true** • **false**	N/A
QinQState	Whether QinQ state can be configured on ports.	N/A	Boolean: • **true** • **false**	N/A
ServiceTPID	Whether service TPID can be configured on ports.	N/A	Boolean: • **true** • **false**	N/A
CustomerTPID	Whether customer TPID can be configured on ports.	N/A	Boolean: • **true** • **false**	N/A
TransVlan	Whether transparent VLAN can be configured on ports.	N/A	Boolean: • **true** • **false**	N/A

VLAN/VLANnetworkNto1mapping

This table contains network-side many-to-one VLAN mapping information.

XML structure

```
<VLAN>
  <VLANnetworkNto1mapping>
```

```
    <Interface>
      <IfIndex></IfIndex>
      <NNI></NNI>
    </Interface>
  </VLANnetworkNto1mapping>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VLANnetworkNto1mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
NNI	Whether the network-side interface for many-to-one VLAN mapping is enabled on the port.	N/A	Boolean: • **true** • **false**	N/A

VLAN/VLAN1to1mapping

This table contains one-to-one VLAN mapping information.

XML structure

```
<VLAN>
  <VLAN1to1mapping>
    <Interface>
      <IfIndex></IfIndex>
```

```
      <OriginalVlan></OriginalVlan>
      <TranslatedVlan></TranslatedVlan>
    </Interface>
  </VLAN1to1mapping>
</VLAN>
```

Table description

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
OuterStartVlan	Start VLAN of ther outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
OuterEndVlan	End VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
InnerStartVlan	Start VLAN of the inner vlan for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerEndVlan	End VLAN of the inner VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
NestedVlan	Nest VLAN for two-to-three VLAN mapping .	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

VLAN/VoiceInfo

This table contains voice VLAN basic information.

XML structure

```
<VLAN>
  <VoiceInfo>
    <AgingTime></AgingTime>
    <LLDPTrack></LLDPTrack>
    <Mode></Mode>
    <CurNum></CurNum>
  </VoiceInfo>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoiceInfo
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Voice VLAN aging time.	N/A	Unsigned integer, in minutes. Value range: 5 to 43200 minutes.	By default, the aging time is 1440 minutes.
LLDPTrack	Whether LLDP is enabled for automatic IP phone discovery.	N/A	Boolean: • **true** • **false**	N/A
Mode	Voice VLAN security mode.	N/A	Enumeration: • **1—Security** • 2—**Normal**	By default, the voice VLAN security mode is enabled.
CurNum	Number of existing voice VLANs.	N/A	Unsigned integer.	N/A

VLAN/VoiceOUI

This table contains voice VLAN OUI address information.

XML structure

```
<VLAN>
  <VoiceOUI>
    <OUI>
      <Address></Address>
      <Mask></Mask>
      <Description></Description>
    </OUI>
  </VoiceOUI>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoiceOUI
Table type	Multi-instance table
Row name	OUI
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Source MAC address of voice traffic	Index	Six groups of two hexadecimal digits, hyphen-separated.	For example, 1234-1234-1234.
Mask	Valid length of the OUI address by a mask.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	The mask contains consecutive 1s and 0s. For example, FFFF-0000-0000.
Description	OUI address description.	N/A	Case-sensitive string of 1 to 30 characters.	N/A

VLAN/VoicePorts

This table contains voice VLAN information for a port.

XML structure

```
<VLAN>
  <VoicePorts>
    <Interface>
      <IfIndex></IfIndex>
      <Vlan></Vlan>
      <Mode></Mode>
      <QoS>
        <Trust></Trust>
        <CoS></CoS>
        <DSCP></DSCP>
      </QoS>
    </Interface>
  </VoicePorts>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VoicePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only includes ports where voice VLAN can be configured. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Vlan	Voice VLAN ID on the port.	N/A	Unsigned integer. Value range: 2 to 4094	Valid only on a hybrid or trunk port operating in automatic voice VLAN assignment mode.
Mode	Voice VLAN assignment mode on the port:.	N/A	Enumeration: • **1**—Automatic. • **2**—Manual.	By default, a port operates in automatic voice VLAN assignment mode.
QoS	QoS information of voice VLAN on the port.	N/A	Include: • **Trust.** • **CoS.** • **DSCP.**	N/A
Trust	Whether the Qos priority settings is trusted for incoming voice VLAN packets.	N/A	Boolean: • **true** • **false**	When a port trusts the QoS priority settings in incoming voice VLAN packets, the port does not modify their CoS and DSCP values.

Column name	Column description	Column type	Data type and restrictions	Remarks
CoS	CoS value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 7	Valid only when the Trust label above is false. The value is 6 by default.
DSCP	The DSCP values for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 63	Valid only when the Trust label above is false. The value is 46 by default.

VLAN/MACPorts

This table contains MAC-based VLAN information for a port.

XML structure

```
<VLAN>
  <MACPorts>
    <Interface>
      <IfIndex></IfIndex>
      <MACVlanEnable></MACVlanEnable>
      <MACVlanTriggerEnable></MACVlanTriggerEnable>
    </Interface>
  </MACPorts>
</VLAN>
```

Table description

Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only ports where MAC-based VLAN can be configured are included. Some versions support interface name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
MacVlanEnable	MAC-based vlan enable on the port.	N/A	Enumeration: • **1**—Disable. • **2**—Enable.	N/A
MACVlanTrigger Enable	MAC-based vlan Trigger enable on the port.	N/A	Enumeration: • **1**—Disable. • **2**—Enable.	N/A

VLAN/VLANGroups

This table contains information about VLAN groups.

XML structure

```
<VLAN>
  <VLANGroups>
    <VLANGroup>
      <GroupName></GroupName>
      <VlanList></VlanList>
    </VLANGroup>
  </VLANGroups>
</VLAN>
```

Table description

Item	Description
Feature name	VLAN
Table name	VLANGroups
Table type	Multi-instance table
Row name	VLANGroup
Restrictions	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	VLAN group name	Index	String. Length: 1 to 31 characters.	Case sensitive. The first character must be a letter.
VlanList	VLAN list	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<VlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

Vlan

Vlan/Vlans

Message	Explanation
Please set the link type of the port to access first. 请先把接口链路类型改成Access。	During executing merge operation for vlan type of interfaces info table, please set the link type of the port to access first. 在对接口信息表的 vlan type 进行 Merge 操作时，请先把接口链路类型改成 Access。
The VLAN doesn't support the operation. 该VLAN不支持当前操作。	During executing merge operation for vlan type of interfaces info table, the VLAN doesn't support it. 在对接口信息表的 vlan type 进行 Merge 操作时，该 VLAN 不支持当前操作。
Can't change the link type of %s because it is not an access port. 不能更改%s的链路类型因为它当前不是Access端口。	During executing merge operation for vlan type of interfaces info table, it can't change the link type because it is not an access port. 在对接口信息表的 vlan type 进行 Merge 操作时，不能更改该端口的链路类型因为它当前不是 Access 端口。
Failed to configure some VLANs. 部分VLAN设置失败。	During executing set operation for adding vlan for port by vlan list, it failed to configure some VLANs. 根据 vlanlist 对端口进行添加 vlan ，部分 VLAN 设置失败。
Can't assign ports to or remove ports from the default VLAN. 不能向缺省VLAN添加或者删除端口。	During executing merge operation for port range of vlan info table, it can't assign ports to or remove ports from the default VLAN. 对 vlan 信息表的 portrange 字段进行 merge 操作时，不能向缺省 VLAN 添加或者删除端口。
Invalid IP address or subnet mask. 无效IP地址或子网掩码。	During executing merge operation for IpInfo of vlan info table, the IP address or subnet mask is invalid. 对 vlan 信息表的 portrange 字段进行 merge 操作时，无效 IP 地址或子网掩码。
The IP address you entered is in the same subnet as the IP address of another interface. 不同接口的IP地址不能在相同网段。	暂未引用

The VLAN name already exists. VLAN名称已经存在。	During executing merge operation for vlan name of vlan info table, it already exists. 对 vlan 信息表的 VlanName 字段进行 merge 操作时，VLAN 名称已经存在。
Cannot use the default name of another VLAN. 不能配置成其它VLAN的默认VLAN名称。	During executing merge operation for vlan name of vlan info table, it cannot use the default name of another VLAN. 对 vlan 信息表的 VlanName 字段进行 merge 操作时，不能配置成其它 VLAN 的默认 VLAN 名称。
The port %u doesn't exist. 端口%u不存在。	During executing merge operation for port range of vlan info table, the port doesn't exist. 对 vlan 信息表的 portrange 字段进行 merge 操作时，该端口不存在。
The port %u is not an access port. 端口%u不是一个Access端口。	During executing merge operation for port range of vlan info table, the port is not an access port. 对 vlan 信息表的 portrange 字段进行 merge 操作时，该端口不是一个 Access 端口。
Allocated VLANs can't be set as the port PVID. 已经被分配的VLAN不能设置成端口PVID。	During executing merge operation for port range of vlan info table, allocated VLANs can't be set as the port PVID. 对 vlan 信息表的 portrange 字段进行 merge 操作时，已经被分配的 VLAN 不能设置成端口 PVID。
Maximum number of addresses on the interface already reached. 接口下的已配置的地址数达到上限。	During executing merge operation for IpInfo of vlan info table, the maximum number of addresses on the interface already reached. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，接口下的已配置的地址数达到上限。
Please configure the primary address first. 请先配置主地址。	During executing merge operation for IpInfo of vlan info table, please configure the primary address first. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，请先配置主地址。
Please delete secondary addresses first. 请先删除从地址。	During executing merge operation for IpInfo of vlan info table, please delete secondary addresses first. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，请先删除从地址。
Address types don't match. IP地址类型不匹配。	During executing merge operation for IpInfo of vlan info table, address types don't match.

	对 vlan 信息表的 IpInfo 字段进行 merge 操作时，IP 地址类型不匹配。
The IP address doesn't exist. 该IP地址不存在。	During executing merge operation for IpInfo of vlan info table, the IP address doesn't exist. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，该 IP 地址不存在。
Operation failed. 操作失败。	During executing merge operation for IpInfo of vlan info table, the operation failed. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，操作失败。
This IP address has been assigned to another MDC. 该IP地址已经分配给其它MDC。	During executing merge operation for IpInfo of vlan info table, this IP address has been assigned to another MDC. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，该 IP 地址已经分配给其它 MDC。
Can't change a primary IP address to a secondary IP address. 不能直接将主地址转成从地址。	During executing merge operation for IpInfo of vlan info table, it can't change a primary IP address to a secondary IP address. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，不能直接将主地址转成从地址。
This address conflicts with the IP address of another interface. 与其他接口地址冲突。	During executing merge operation for IpInfo of vlan info table, this address conflicts with the IP address of another interface. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，与其他接口地址冲突。
Operation is not supported. 操作不支持。	During executing set operation for voice-vlan qos, the operation is not supported. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时，操作不支持。
The VLAN doesn't exist. 该VLAN不存在。	During executing merge operation for vlans table, the VLAN doesn't exist. 在对 vlans 信息表进行 Merge 操作时，该 VLAN 不存在。
MAC VLAN can be enabled on only hybrid ports. MAC VLAN 功能仅支持在 Hybrid 端口上配置。	During executing set operation for mac ports table, MAC VLAN can be enabled on only hybrid ports. 在对 mac ports 表进行设置操作时，MAC VLAN 功能仅支持在 Hybrid 端口上配置。
Please disable MAC VLAN trigger first.	During executing set operation for mac ports table,

请先关闭端口上的 MAC VLAN 动态触发功能。	Please disable MAC VLAN trigger first. 在对 mac ports 表进行设置操作时，请先关闭端口上的 MAC VLAN 动态触发功能。
Operation is not supported. 端口不支持开启 MAC VLAN 功能。	During executing set operation for mac ports table, Operation is not supported. 在对 mac ports 表进行设置操作时，端口不支持开启 MAC VLAN 功能。
Cannot delete the system default VLAN. 无法删除系统默认 VLAN。	During executing set operation for vlans table, the system default VLAN cannot be deleted. 在对 VLAN 表进行设置操作时，不能删除系统默认 VLAN。
Please specify the ROLT interface of its member ports. 请同时输入 OLT 成员端口对应的 OLT 冗余接口。	During executing AccessPortList operation for vlans table, cannot specify only the OLT member ports. 在对 VLAN 表进行 AccessPortList 操作时，不能只输入 OLT 成员接口。

Vlan/AccessInterfaces

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	During executing merge operation for PVID of AccessInterfaces table, the VLAN doesn't exist. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，该 VLAN 不存在。
This is not a hybrid port. 不是一个Hybrid端口。	During executing merge operation for PVID of AccessInterfaces table, this is not a hybrid port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Hybrid 端口。
This is not a trunk port. 不是一个Trunk端口。	During executing merge operation for PVID of AccessInterfaces table, this is not a trunk port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Trunk 端口。
This is not an access port. 不是一个Access端口。	During executing merge operation for PVID of AccessInterfaces table, this is not an access port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Access 端口。
The VLAN doesn't exist.	During executing merge operation for PVID of

该VLAN不存在。	AccessInterfaces table, the VLAN doesn't exist. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，该 VLAN 不存在。
The operation failed because the OLT interface is a member port of an ROLT interface. 操作失败，该接口已经是 OLT 冗余口的成员端口。	During executing set operation for interfaces table, the operation failed because the OLT interface is a member port of an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，该接口已经是 OLT 冗余口成员端口。
The operation failed because the OLT interface is joining or leaving an ROLT interface. 操作失败，接口正在加入或退出 OLT 冗余口。	During executing set operation for interfaces table, the operation failed because the OLT interface is joining or leaving an ROLT interface. 在对接口信息表进行 set 操作时，操作失败，接口正在加入或退出 OLT 冗余口。

Vlan/VoiceInfo

Message	Explanation
Can't change the port mode because the port is assigned to the voice VLAN. 端口已加入语音VLAN，不能切换端口模式。	During executing set operation for mode of voice info table, it can't change the port mode because the port is assigned to the voice VLAN. 在对 Voice 信息表的 mode 进行设置操作时，该端口已加入语音 VLAN，故不能切换端口模式。
Can't change the port mode because the access port is enabled with the voice VLAN feature. Access端口已使能语音VLAN，不能切换端口模式。	During executing set operation for mode of voice info table, it can't change the port mode because the access port is enabled with the voice VLAN feature. 在对 Voice 信息表的 mode 进行设置操作时，Access 端口已使能语音 VLAN，不能切换端口模式。
Can't change the voice VLAN mode to security, because some ports in the VLAN don't support this mode. 不能更改语音VLAN为安全模式，因为一些端口不支持语音VLAN安全模式。	During executing set operation for mode of voice info table, it can't change the voice VLAN mode to security, because some ports in the VLAN don't support this mode. 在对 Voice 信息表的 mode 进行设置操作时，不能更改语音 VLAN 为安全模式，因为一些端口不支持语音 VLAN 安全模式。
Please create the VLAN first. 请先创建该VLAN。	During executing set operation for voice info table, please create the VLAN first. 在对 Voice 信息表进行设置操作时，请先创建该 VLAN。

Vlan/VoiceOUI

Message	Explanation
Invalid MAC address. MAC地址不合法。	During executing set operation for address of voiceOUI table, the MAC address is invalid. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，MAC 地址不合法。
Invalid OUI mask. OUI掩码错误。	During executing set operation for address of voiceOUI table, the OUI mask is invalid. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，OUI 掩码错误。
Maximum number of OUI addresses already reached. 已到达OUI上限。	暂未引用
The OUI address already exists. 本OUI地址已存在。	During executing set operation for address of voiceOUI table, the OUI address already exists. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，本 OUI 地址已存在。
Not enough resources available. 资源不足。	During executing set operation for address of voiceOUI table, no enough resources are available. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，资源不足。

Vlan/VoicePorts

Message	Explanation
The VLAN is not a voice VLAN. 本VLAN不是语音VLAN。	During executing set operation for voice port table, the VLAN is not a voice VLAN. 在对 Voice port 信息表的进行设置操作时，本 VLAN 不是语音 VLAN。
Another voice VLAN has been enabled on this port. 本端口已经使能了另外一个语音VLAN。	During executing set operation for voice port table, another voice VLAN has been enabled on this port. 在对 Voice port 信息表的进行设置操作时，本端口已经使能了另外一个语音 VLAN。
Trunk and hybrid ports that are in automatic mode and enabled with the	During executing set operation for voice port table, trunk and hybrid ports that are in automatic mode

voice VLAN feature can't be added to or removed from the voice VLAN manually. 自动模式下，已使能了语音VLAN的Trunk或Hybrid端口不能手动加入、退出语音VLAN。	and enabled with the voice VLAN feature can't be added to or removed from the voice VLAN manually. 在对 Voice port 信息表的进行设置操作时，在自动模式下已使能了语音 VLAN 的 Trunk 或 Hybrid 端口不能手动加入、退出语音 VLAN。
Can't delete the voice VLAN. 语音VLAN不能删除。	暂未引用
Can't change the link type of trunk or hybrid ports that are enabled with the voice VLAN feature. 使能了语音VLAN的Trunk或Hybrid端口不能切换链路类型。	During executing set operation for vlan port table, it can't change the link type of trunk or hybrid ports that are enabled with the voice VLAN feature. 在对 Voice port 信息表的进行设置操作时，使能了语音 VLAN 的 Trunk 或 Hybrid 端口不能切换链路类型。
Can't configure QoS settings on ports that are enabled with the voice VLAN feature. 使能了语音VLAN的端口不能设置QoS参数。	During executing set operation for voice port table, it can't configure QoS settings on ports that are enabled with the voice VLAN feature. 在对 Voice port 信息表的进行设置操作时，使能了语音 VLAN 的端口不能设置 QoS 参数。
Can't configure nonstatic VLANs as voice VLANs. 非静态VLAN不能配置为语音VLAN。	During executing set operation for voice port table, it can't configure nonstatic VLANs as voice VLANs. 在对 Voice port 信息表的进行设置操作时，非静态 VLAN 不能配置为语音 VLAN。
Parameter settings conflict. 参数配置冲突。	During executing set operation for voice port table, parameter settings conflict. 在对 voice port 信息表的 VLANID 进行 Merge 操作时，参数配置冲突。
Can't enable the automatic mode on an access port. Access端口不能配置为自动模式。	During executing set operation for voice port table, it can't enable the automatic mode on an access port. 在对 voice port 信息表进行设置操作时，Access 端口不能配置为自动模式。
Can't enable the voice VLAN feature on trunk or hybrid ports that are operating in automatic mode and have been assigned to voice VLANs. 自动模式下，已加入语音VLAN的Trunk或Hybrid端口不能使能语音VLAN。	During executing set operation for voice port table, it can't enable the voice VLAN feature on trunk or hybrid ports that are operating in automatic mode and have been assigned to voice VLANs. 在对 voice port 信息表进行设置操作时，在自动模式下已加入语音 VLAN 的 Trunk 或 Hybrid 端口不能使能语音 VLAN。
Can't configure the system default VLAN as a voice VLAN.	During executing set operation for voice port table, it can't configure the system default VLAN as a voice

默认VLAN不能配置为语音VLAN。	VLAN. 在对 voice port 信息表进行设置操作时，默认 VLAN 不能配置为语音 VLAN。
Super VLANs don't support the configuration. Super VLAN不支持该配置。	During executing set operation for voice port table, super VLANs don't support the configuration. 在对 voice port 信息表进行设置操作时，Super VLAN 不支持该配置。
Can't configure protocol-based VLANs as voice VLANs. 协议VLAN不能配置为语音VLAN。	During executing set operation for voice port table, can't configure protocol-based VLANs as voice VLANs. 在对 voice port 信息表进行设置操作时，协议 VLAN 不能配置为语音 VLAN。

Vlan/VLANMapping

Message	Explanation
Can't enable network-side many-to-one VLAN mapping on the port, because user-side many-to-one VLAN mapping has been enabled. 接口已经配置了用户侧N:1 VLAN映射，不能再配置网络侧N:1 VLAN映射。	During executing set operation for VLAN Mapping table, can't enable network-side many-to-one VLAN mapping on the port, because user-side many-to-one VLAN mapping has been enabled. 在对 VLAN Mapping 映射表的进行设置操作时，接口已经配置了用户侧 N:1 VLAN 映射，不能再配置网络侧 N:1 VLAN 映射。
Can't enable user-side many-to-one VLAN mapping on the port, because network-side many-to-one VLAN mapping has been enabled. 接口已经配置了网络侧 N:1 VLAN 映射，不能再配置用户侧 N:1 VLAN 映射。	During executing set operation for VLAN Mapping table, can't enable user-side many-to-one VLAN mapping on the port, because network-side many-to-one VLAN mapping has been enabled. 在对 VLAN Mapping 映射表的进行设置操作时，接口已经配置了网络侧 N:1 VLAN 映射，不能再配置用户侧 N:1 VLAN 映射。
The input translated or nested VLANs conflict with existing VLAN mapping entries on the interface. 配置的转换后 VLAN 或添加的外层 VLAN 与接口已有 VLAN 映射表项冲突。	During executing set operation for VLAN Mapping table, the input translated or nested VLANs conflict with existing VLAN mapping entries on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，配置的转换后 VLAN 或添加的外层 VLAN 与接口已有 VLAN 映射表项冲突。
The input original VLANs conflict with existing VLAN mapping entries on the interface. 配置的原始 VLAN 与接口已有 VLAN 映射表项	During executing set operation for VLAN Mapping table, the input original VLANs conflict with existing VLAN mapping entries on the interface.

冲突。	在对 VLAN Mapping 映射表的进行设置操作时，配置的原始 VLAN 与接口已有 VLAN 映射表项冲突。
The VLAN mapping configuration conflicts with QinQ transparent VLAN configuration on the interface. VLAN 映射的配置与接口上 QinQ 透传 VLAN 的配置冲突。	During executing set operation for VLAN Mapping table, the VLAN mapping configuration conflicts with QinQ transparent VLAN configuration on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，VLAN 映射的配置与接口上 QinQ 透传 VLAN 的配置冲突。
The configuration conflicts with QinQ configuration. 配置与接口上 QinQ 的配置冲突。	During executing set operation for VLAN Mapping table, the configuration conflicts with QinQ configuration. 在对 VLAN Mapping 映射表的进行设置操作时，配置与接口上 QinQ 的配置冲突。
Failed to remove VLAN mapping configuration from the interface. Please make sure the removed VLANs are in the configured VLAN range. 取消 VLAN 映射的配置失败，请检查指定的 VLAN 范围。	During executing set operation for VLAN Mapping table, failed to remove VLAN mapping configuration from the interface. Please make sure the removed VLANs are in the configured VLAN range. 在对 VLAN Mapping 映射表的进行设置操作时，取消 VLAN 映射的配置失败，请检查指定的 VLAN 范围。
Configuration failed because of conflicts. 存在冲突，配置失败。	During executing set operation for VLAN Mapping table, configuration failed because of conflicts. 在对 VLAN Mapping 映射表的进行设置操作时，存在冲突，配置失败。
The operation is not supported on the port. 不支持本操作。	During executing set operation for VLAN Mapping table, the operation is not supported on the port. 在对 VLAN Mapping 映射表的进行设置操作时，不支持本操作。
Not enough resources for the operation on the interface. 硬件资源不足，配置失败。	During executing set operation for VLAN Mapping table, Not enough resources for the operation on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，硬件资源不足，配置失败。
Can't execute the command multiple times on the interface. To modify the configuration, first remove the original configuration. 不支持多次执行本命令，请先取消原有配置后重新执行。	During executing set operation for VLAN Mapping table, can't execute the command multiple times on the interface. To modify the configuration, first remove the original configuration. 在对 VLAN Mapping 映射表的进行设置操作时，不支持多次执行本命令，请先取消原有配置后重新执行。
To modify the two-to-three VLAN mapping, first remove the original configuration. 接口上已经存在指定内、外层 VLAN ID 的 2:3 VLAN 映射表项，请先取消原有配置后重新执	During executing set operation for VLAN Mapping table, first remove the original configuration when to modify the two-to-three VLAN mapping.

行。	在对 VLAN Mapping 映射表的进行设置操作时，接口上已经存在指定内、外层 VLAN ID 的 2:3 VLAN 映射表项，请先取消原有配置后重新执行。
Can't configure both two-to-three VLAN mapping and two-to-two VLAN mapping for the same double-tagged packets on the interface. 对于同一报文，不允许同时配置 2:2 VLAN 映射和 2:3 VLAN 映射。	During executing set operation for VLAN Mapping table, can't configure both two-to-three VLAN mapping and two-to-two VLAN mapping for the same double-tagged packets on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，对于同一报文，不允许同时配置 2:2 VLAN 映射和 2:3 VLAN 映射。
Configuration failed on the interface. 配置失败。	During executing set operation for VLAN Mapping table, configuration failed on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，配置失败。
Cannot map VLAN to itself. 不能映射成自己。	During executing set operation for VLAN Mapping table, cannot map VLAN to itself. 在对 VLAN Mapping 映射表的进行设置操作时，不能映射成自己。
The end VLAN ID must be equal to or greater than the start VLAN ID. 指定 VLAN 列表时，VLAN 范围的结束值必须大于等于起始值。	During executing check operation for VLAN range list , the end VLAN ID must be equal to or greater than the start VLAN ID. 在对 VLAN range list 列表的进行检查操作时, VLAN 范围的结束值必须大于等于起始值。
The input original VLAN range(s) overlapped. 输入的原始 VLAN 叠套了。	During executing check operation for CVLAN range cross , the input original VLAN range(s) overlapped. 对 CVLAN range cross 的进行检查操作时，输入的原始 VLAN 叠套了。
Please input both the inner and outer VLAN IDs. 请同时输入为 Untagged 报文添加的外层 VLAN ID 和内层 VLAN ID。	During executing set operation for VLAN Mapping 0To2 table, please input both the inner and outer VLAN IDs. 在对 VLAN Mapping 0To2 table 映射表的进行设置操作时，请同时输入为 Untagged 报文添加的外层 VLAN ID 和内层 VLAN ID。
Invalid interface name or interface index. 无效的接口名称或接口索引。	暂未引用
This operation is not supported on the interface. 接口不支持本操作。	During executing set operation for VLAN Mapping 2To3 table, this operation is not supported on the interface. 在对 VLAN Mapping 2To3 table 映射表的进行设置操作时，接口不支持本操作。

Can't configure both an original outer VLAN ID range and an original inner VLAN ID range for the two-to-three VLAN mapping. 配置 2:3 映射时，原始内层 VLAN 和原始外层 VLAN 不允许都指定为 VLAN 列表。	During executing set operation for VLAN Mapping 2To3 table, can't configure both an original outer VLAN ID range and an original inner VLAN ID range for the two-to-three VLAN mapping. 在对 VLAN Mapping 2To3 table 映射表的进行设置操作时,原始内层 VLAN 和原始外层 VLAN 不允许都指定为 VLAN 列表。
Please input the original outer VLAN ID, the original inner VLAN ID, the translated outer VLAN ID, and the translated inner VLAN ID. 配置 2:2VLAN 映射时，请同时输入原始外层 VLAN ID、内层 VLAN ID 和转换后的外层 VLAN ID、内层 VLAN ID。	During executing set operation for VLAN Mapping 2To2 table, please input the original outer VLAN ID, the original inner VLAN ID, the translated outer VLAN ID, and the translated inner VLAN ID. 在对 VLAN Mapping 2To2 table 映射表的进行设置操作时,请同时输入原始外层 VLAN ID、内层 VLAN ID 和转换后的外层 VLAN ID、内层 VLAN ID。
Please input the translated VLAN ID or nested VLAN ID. 请输入转换后 VLAN 或添加的外层 VLAN。	During executing set operation for VLAN Mapping 1To1 or 1To2 table, please input the translated VLAN ID or nested VLAN ID. 在对 VLAN Mapping 1To2 或者 1To2 table 映射表的进行设置操作时，请输入转换后 VLAN 或添加的外层 VLAN。
Please input the original outer VLAN ID or VLAN ID range, original inner VLAN ID or VLAN ID range, and the nested VLAN ID. 配置 2:3 VLAN 映射时，请同时输入原始外层 VLAN ID 或 VLAN 列表、原始内层 VLAN ID 或 VLAN 列表和添加的 VLAN ID。	During executing set operation for VLAN Mapping 2To3 table, please input the original outer VLAN ID or VLAN ID range, original inner VLAN ID or VLAN ID range, and the nested VLAN ID. 在对 VLAN Mapping 2To3 table 映射表的进行设置操作时，请同时输入原始外层 VLAN ID 或 VLAN 列表、原始内层 VLAN ID 或 VLAN 列表和添加的 VLAN ID。
Please input the original VLAN ID or VLAN ID range, and the translated VLAN ID. 配置用户侧 N:1 VLAN 映射时，请同时输入原始 VLAN ID 或 VLAN 列表和转换后 VLAN ID。	During executing set operation for VLAN Mapping NTo1 table, please input the original VLAN ID or VLAN ID range, and the translated VLAN ID. 在对 VLAN Mapping NTo1 table 映射表的进行设置操作时，请同时输入原始 VLAN ID 或 VLAN 列表和转换后 VLAN ID。
Please specify both the TranslatedOuterVlan label and the TranslatedInnerVlan label, or specify none of them. 请同时指定 TranslatedOuterVlan 标签和 TranslatedInnerVlan 标签，或同时都不指定这两个标签。	During executing set operation for VLAN Mapping 2To2 table, please specify both the TranslatedOuterVlan label and the TranslatedInnerVlan label, or specify none of them. 在对 VLAN Mapping 2To2 table 映射表的进行设置操作时,请同时指定 TranslatedOuterVlan 标签和 TranslatedInnerVlan 标签，或同时都不指定这两个标签。

Please specify both the ServiceOuterVlan label and the ServiceInnerVlan label, or specify none of them. 请同时指定 ServiceOuterVlan 标签和 ServiceInnerVlan。	During executing set operation for VLAN Mapping 0To2 table, please specify both the ServiceOuterVlan label and the ServiceInnerVlan label, or specify none of them. 在对 VLAN Mapping 0To2 table 映射表的进行设置操作时，请同时指定 ServiceOuterVlan 标签 ServiceInnerVlan
The configuration conflicts with two-to-two VLAN mapping on the port. 配置与接口上 2:2 VLAN 映射的配置冲突。	During executing set operation for VLAN Mapping 2To2 table,the configuration conflicts with two-to-two VLAN mapping on the port. 在对 VLAN Mapping 2To2 table 映射表的进行设置操作时，配置与接口上 2:2 VLAN 映射的配置冲突。
The configuration conflicts with network-side many-to-one VLAN mapping on the port. 配置与接口上网络侧 N:1 VLAN 映射的配置冲突。	During executing set operation for VLAN Mapping NTo1 table, the configuration conflicts with network-side many-to-one VLAN mapping on the port. 在对 VLAN Mapping NTo1 table 映射表的进行设置操作时，配置与接口上网络侧 N:1 VLAN 映射的配置冲突。

Vlan/QinQ

Message	**Explanation**
Failed to set Ethernet-type on the port because QinQ has been enabled. 接口已开启 QinQ 功能，不能再配置 VLAN Tag 的 TPID 值。	During executing set operation for QinQ table, failed to set Ethernet-type on the port because QinQ has been enabled. 在对 QinQ 表的进行设置操作时，接口已开启 QinQ 功能，不能再配置 VLAN Tag 的 TPID 值。
Failed to enable QinQ on the port because the Ethernet-type setting has been configured. 接口已配置 VLAN Tag 的 TPID 值，不能再开启 QinQ 功能。	During executing set operation for QinQ table, failed to enable QinQ on the port because the Ethernet-type setting has been configured. 在对 QinQ 表的进行设置操作时，接口已配置 VLAN Tag 的 TPID 值，不能再开启 QinQ 功能。
The input inner VLAN conflicts with existing VLAN mappings on the interface. 输入的内层 VLAN 与接口已有 VLAN 映射表项冲突。	During executing set operation for QinQ table, the input inner VLAN conflicts with existing VLAN mappings on the interface. 在对 QinQ 表的进行设置操作时，输入的内层 VLAN 与接口已有 VLAN 映射表项冲突。
Please first remove VLAN mapping	During executing set operation for QinQ table, Please

configuration from the port. 请先清除接口上的 VLAN 映射配置。	first remove VLAN mapping configuration from the port. 在对 QinQ 表的进行设置操作时，请先清除接口上的 VLAN 映射配置。
The transparent VLANs conflict with VLAN mapping configuration on the port. QinQ 透传 VLAN 的配置与接口上 VLAN 映射的配置冲突。	During executing set operation for QinQ table, the transparent VLANs conflict with VLAN mapping configuration on the port. 在对 QinQ 表的进行设置操作时，QinQ 透传 VLAN 的配置与接口上 VLAN 映射的配置冲突。

Feature name	VOICE
Table name	VoipRegisterPools
Table type	Multi-instance table
Row name	VoipRegisterPool
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Pool tag.	Index	Non-negative integer. Value range: 1 to 200.	N/A
Priority	Priority level	N/A	Non-negative integer. Value range: 0 to 10.	Default 0

Column name	Column description	Column type	Data type and restrictions	Remarks
UAId	UA Id.	Data structure	Members include: • Ip. • Mac. • Network. • NetworkMaskLen.	Choose one of IP, Mac and network.
Ip	UA ip.	N/A	IPv4: String, dotted decimal notation.	N/A
Mac	UA Mac	N/A	MAC address in the H-H-H format.	Example: 0011-0011-0011.
Network	UA network	N/A	IPv4: String, dotted decimal notation.	N/A
NetworkMaskLen	UA network mask len	N/A	Non-negative integer. Value range: 0 to 32.	N/A
AuthenticateUserInfo	configure authenticate user info	Data structure	Members include: • UserName. • Password.	N/A
UserName	configure user name for authenticate	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Password	configure user password for authenticate	N/A	String, case-sensitive. Length: 1 to 16 characters.	N/A

VOICE/VoipRegisterPools/PoolNumberCfgs

This table contains VOICE VoipRegisterPools/PoolNumberCfgs.

XML structure

```
Please refer to the XML structure of VoipRegisterPools
```

Table description

Item	Description
Feature name	VOICE
Table name	PoolNumberCfgs
Table type	Multi-instance table
Row name	PoolNumberCfg
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Number tag.	Index	Non-negative integer. Value range: 1 to 10.	N/A
VoipNumber	number template	N/A	String, case-insensitive. Length: 1 to 31 characters.	The number template allowed to register is a string of 1 ~ 31 characters, with the value range of digits 0 ~ 9 and $,$ can only be configured in the last digit of the number,
DN	DN tag	N/A	Non-negative integer. Value range: 1 to 200.	Select one of number and dn

VOICE/ ImsApplicationServers

This table contains IMS application servers for voice assistant.

XML structure

```
<VOICE>
  <ImsApplicationServers>
    <ImsApplicationServer>

      <Port></Port>
      <OptionsKeepAliveEnable></OptionsKeepAliveEnable>
      <UpInterval></UpInterval>
      <DownInterval></DownInterval>
      <Retry></Retry>
    </ImsApplicationServer>
  </ImsApplicationServers>
</VOICE>
```

Table description

Item	Description
Feature name	VOICE
Table name	ImsApplicationServers

Item	Description
Table type	Multi-instance table
Row name	ImsApplicationServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Application server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
Address	IP address of the application server	N/A	IPv4: String, dotted decimal notation.	N/A
DnsName	Domain name of the application server	N/A	String, case-insensitive. Length: 1 to 253 characters.	The domain name can include letters, digits, hyphens (-), underscores (_), and dots (.).
Port	Port number of the application server	N/A	Non-negative integer. Value range: 1 to 65535.	Default: 5060.
OptionsKeepAliveEnable	Whether to enable the keepalive detection function of the application server	N/A	Boolean: • **true**—Enabled • **false**—Disabled (default).	N/A
UpInterval	Keepalive interval for sending OPTIONS messages when the application server is available	N/A	Non-negative integer. Value range: 5 to 1200, in seconds.	Default: 60.
DownInterval	Keepalive interval for sending OPTIONS messages when the application server is unavailable	N/A	Non-negative integer. Value range: 5 to 1200, in seconds.	Default: 30.

Column name	Column description	Column type	Data type and restrictions	Remarks
Retry	Retry count for OPTIONS keepalive retransmission	N/A	Non-negative integer. Value range: 1 to 10.	Default: 5.

  </SignalingLDPs>
</VPLS>
```

Table description

Item	Description
Feature name	VPLS
Table name	SignalingLDPs
Table type	Multi-instance table
Row name	SignalingLDP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create SignalingLDPs.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: • Type. • Time.	The member of Type must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Revertive member. Revertive type.	N/A	Enumeration: • 1—Never. • 2—WTR.	This member must be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec.	Only works and must be specified when the revertive type is WTR.
PwRedundancy Mode	PW redundancy mode	N/A	Enumeration: • 0—slave (default). • 1—Master. • 2—Independent.	N/A

Table type	Multi-instance table
Row name	LDPPeer
Restrictions	This column cannot be modified.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create VPLSPeers.
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Hub	Hub spoke attribute for the PW	N/A	Boolean: • true—Hub. • false—Spoke(default).	You must first enable the VSI with the hub-spoke capability. This column cannot be modified.
SplitHorizon	Split horizon forwarding for the PW	N/A	Boolean: • true—Enabled(default). • false—Disabled.	This column cannot be modified.
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	This column cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 126 characters.	This column cannot be modified.
Statistics	Statistics for the PW	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this command depends on the device model.
AdminPWInterface	AC interface associated with the admin PW	N/A	Unsigned integer.	Only Support for loopback interface.For relevant information, see the XSD document of your product.
Esi	ESI name	N/A	String. Length: 1 to 31 characters. The string must start with a letter(a-z or A-Z).	This column cannot be modified.
TrafficPolicing	PW CAR information	Subtable	N/A	Reference the table CAR/TrafficPolicing.
EtreeMode	E-tree mode	N/A	Enumeration: • 1—compatible • 2—optimized .	N/A
BFDSession	BFDSession configuration	Subtable	N/A	Support for this column depends on the device model.
EtreeLeaf	Configure the PW as a leaf in the E-TREE network	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A
MacLimit	MacLimit configuration	Subtable	N/A	Support for this column depends on the device model.

VPLS/LDPPeers/BFDSession

This table contains BFD Session information of VPLS using LDP signaling.

XML structure

```
<VPLS>
  <LDPPeers>
    <LDPPeer>
      <VsiName></VsiName>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <BFDSession>
```

```
        <LocalDiscriminator></LocalDiscriminator>
        <RemoteDiscriminator></RemoteDiscriminator>
      </BFDSession>
    </LDPPeer>
  </LDPPeers>
</VPLS>
```

Table name	VpnTarget
Table type	Multi-instance table
Row name	VpnTarget
Restrictions	You must enable L2VPN globally first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create the Vsi and the AutoDiscovery first.
RouteTargetType	Route target type	Index	Enumeration: • **1**—Import • **2**—Export	N/A
RouteTarget	Route target	Index	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A

VPLS/AutoDiscoverys/SignalingProtocolLDP

This table contains information about Signaling Protocol LDP of AutoDiscovery.

XML structure

```
<VPLS>
  <AutoDiscoverys>
    <AutoDiscovery>
      <SignalingProtocolLDP>
        <VplsID></VplsID>
      </SignalingProtocolLDP>
    </AutoDiscovery>
  </AutoDiscoverys>
</VPLS>
```

Table description

Item	Description
Feature name	VPLS
Table name	SignalingProtocolLDP
Table type	Singal-instance table
Row name	N/A
Restrictions	You must enable L2VPN globally first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create the Vsi and the AutoDiscovery first.
VplsID	VPLS ID	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	Cannot be modified after creation.The SignalingProtocol must be LDP.

VPLS/AutoDiscoverys/SignalingProtocolBGP

This table contains information about Signaling Protocol BGP of AutoDiscovery.

XML structure

```
<VPLS>
  <AutoDiscoverys>
    <AutoDiscovery>
      <SignalingProtocolBGP>
        <ADSite>
          <SiteID></SiteID>
          <Range></Range>
          <DefaultOffset></DefaultOffset>
        </ADSite>
      </SignalingProtocolBGP>
    </AutoDiscovery>
  </AutoDiscoverys>
</VPLS>
```

PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
ForwardAction	Action mode	N/A	Enumeration: • 0—Forward(default) • 1—Discard	N/A
AlarmEnable	Whether enable alarm	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MacMaximum	The maximum of MAC	N/A	Unsigned integer. The value range varies by device model.	N/A

VPLS/StaticBackupPeers

This table contains PW backup peer information of VPLS using static signaling.

XML structure

```
<VPLS>
  <StaticBackupPeers>
    <StaticBackupPeer>
      <VsiName></VsiName>
      <MainPeerAddr></MainPeerAddr>
      <MainPWID></MainPWID>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <InLabel></InLabel>
      <OutLabel></OutLabel>
      <Hub></Hub>
      <SplitHorizon></SplitHorizon>
      <PWClass></PWClass>
      <TunnelPolicy></TunnelPolicy>
      <Statistics></Statistics>
      <EtreeMode></EtreeMode>
      <BFDSession>
        <LocalDiscriminator></LocalDiscriminator>
        <RemoteDiscriminator></RemoteDiscriminator>
      </BFDSession>
```

```
      <EtreeLeaf></EtreeLeaf>
    </StaticBackupPeer>
  </StaticBackupPeers>
</VPLS>
```

Table description

Item	Description
Feature name	VPLS
Table name	StaticBackupPeers
Table type	Multi-instance table
Row name	StaticBackupPeer
Restrictions	This column cannot be modified.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MainPeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
MainPWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A.
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
Hub	Hub spoke attribute for the PW	N/A	Boolean: • true—Hub. • false—Spoke(default).	You must first enable the VSI with the hub-spoke capability.
SplitHorizon	Split horizon forwarding for the PW	N/A	Boolean: • true—Enabled(default). • false—Disabled.	N/A
PWClass	PW class related to the PW	N/A	String. Length: 1 to 126 characters.	N/A
TunnelPolicy	Tunnel policy related to the	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PW		Length: 1 to 126 characters.	
Statistics	PW Statistics	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this command depends on the device model.
EtreeMode	E-tree mode	N/A	Enumeration: • 1—compatible • 2—optimized .	N/A
BFDSession	BFDSession configuration	Subtable	N/A	Support for this column depends on the device model.
EtreeLeaf	Configure the PW as a leaf in the E-TREE network	N/A	Boolean: • true—Enabled. • false—Disabled(default).	N/A

VPLS/StaticBackupPeers/BFDSession

This table contains BFD Session information of VPLS using LDP signaling.

XML structure

```
<VPLS>
  <StaticBackupPeers>
    <StaticBackupPeer>
      <VsiName></VsiName>
      <MainPeerAddr></MainPeerAddr>
      <MainPWID></MainPWID>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <BFDSession>
        <LocalDiscriminator></LocalDiscriminator>
        <RemoteDiscriminator></RemoteDiscriminator>
      </BFDSession>
    </StaticBackupPeer>
  </StaticBackupPeers>
</VPLS>
```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Protocol	Signaling protocol.	N/A	Enumeration: • 1—STATIC • 2—LDP	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A

OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
MTU	MTU	N/A	Unsigned integer.	N/A
TunnelGroupID	Tunnel group ID.	N/A	Unsigned integer(64).	N/A
TunnelNHLFEIDs	List of Tunnel NHLFE IDs	N/A	Members include: • TunnelNHLFEID	N/A
TunnelNHLFEID	Tunnel NHLFE ID	N/A	Unsigned integer.	Repeat supported.
IsMainPW	Is main PW or not.	N/A	Boolean: • true—Main PW. • false—Backup PW.	N/A
HubSpoke	Hub spoke capability.	N/A	Enumeration: • 0—None • 1—Hub • 2—Spoke	N/A
SplitHorizon	Split horizon forwarding for the PW	N/A	Boolean: • true—Enabled(default). • false—Disabled.	N/A.
ControlWord	Whether using control word.	N/A	Boolean: • true—Enabled • false—Disabled.	N/A
PWType	PW type.	N/A	Enumeration: • 0—Unknown • 1—FR_DLCI_MARTINI • 2—ATM_AAL5_SDU_VCC • 3—ATM_CELL_TRANSPORT • 4—VLAN • 5—ETHERNET • 6—HDLC • 7—PPP • 8—CESOM • 9—ATM_CELL_VCC • 10—ATM_CELL_VPC • 11—IP_INTERWORKING • 12—ATM_CELL_1TO1_VCC • 13—ATM_CELL_1TO1_VPC • 14—ATM_AAL5_PDU_VCC • 15—FR_PORT • 16—CEP • 17—TDM_SATOP_E1 • 18—TDM_SATOP_T1 • 19—TDM_SATOP_E3 • 20—TDM_SATOP_T3 • 21—TDM_CESOPSN_BASIC	N/A

			• 22—TDMoIP_AAL1_Mode • 23—TDM_CESOPSN_WITH_CAS • 24—TDMoIP_AAL2_Mode • 25—FR_DLCI	
LinkID	Link ID of the PW	N/A	Unsigned integer.	N/A
State	State of the PW	N/A	Enumeration: • 1—UP • 2—Down • 3—Blocked • 4—Defect • 5—Idle • 6—Duplicate	N/A
InputStatistics	Input statistcs	N/A	Members include: • Octets • Packets • Errors • Discards	N/A
OutputStatistics	Output statistics	N/A	Members include: • Octets • Packets • Errors • Discards	N/A
Octets	Packet octets	N/A	Unsigned integer(64).	N/A
Packets	Packet number	N/A	Unsigned integer(64).	N/A
Errors	Error packet number	N/A	Unsigned integer(64).	N/A
Discards	Discarded packet number	N/A	Unsigned integer(64).	N/A

VPLS/Etree

This table contains Etree information of VPLS.

XML structure

```
<VPLS>
   <VsiName></VsiName>
   <Etree>
     <EtreeType></EtreeType>
     <EtreeVlan>
         <RootVlanID></RootVlanID>
         <LeafVlanID></LeafVlanID>
     </EtreeVlan>
   </Etree>
</VPLS>
```

Table description

Item	Description
Feature name	VPLS
Table name	Etree
Table type	Multi-instance table
Row name	Etree
Restrictions	This column cannot be modified.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create
EtreeType	Etree Type	Index	Enumeration: • 1—Static. • 2—Dynamic	N/A
RootVlanID	Root vlan ID	N/A	Unsigned integer.	N/A
LeafVlanID	Leaf vlan ID	N/A	Unsigned integer.	N/A

VPLS/AutoDiscoverys

This table contains information about AutoDiscoverys.

XML structure

```
<VPLS>
  <AutoDiscoverys>
    <AutoDiscovery>

```

Table description

Item	Description
Feature name	VPWS
Table name	Connections
Table type	Multi-instance table
Row name	Connection
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	N/A
Interworking	Interworking for a cross-connect	N/A	Enumeration: • 1—None(default). • 2—IPV4.	Support for this command depends on the device model.
MTU	MTU	N/A	Unsigned integer. Value range: The value range varies by device model. Default: 1500 bytes.	N/A
ArpSuppression	ARP flooding suppression	N/A	Boolean: true—Enabled. false—Disabled(default).	Support for this command depends on the device model.
DualReceive	Dual receive function for PW redundancy	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this command depends on the device model.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: • Type. • Time.	The member of Type must be specified.
Type	Revertive member. Revertive type.	N/A	Enumeration: • 1—Never. • 2—WTR.	This member must be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec. Default: 0 sec.	Only works when the revertive type is WTR.

Column name	Column description	Column type	Data type and restrictions	Remarks
PwRedundancyMode	PW redundancy mode	N/A	Enumeration: • 0—slave (default). • 1—Master. • 2—Independent.	N/A
SRv6Locator	Attributes of segment-routing ipv6 locator	N/A	Members include: • LocatorName • AutoSid.	N/A
LocatorName	Locator Name	N/A	String. Length: 1 to 31 characters.	You must and only need specify this column when you remove or delete the Locator, and the AutoSid column is ignored
Dx2lLocatorName	Dx2lLocatorName	N/A	String. Length: 1 to 31 characters.	N/A
AutoSid	Auto Sid	N/A	Boolean: • true—Enabled (default). • false—Disabled.	The column is available when the value of LocatorName is specifid
DiffServMode	DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode • TrustType	N/A
IngressMode	DiffServ mode in the inbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
ServiceClass	Service class value	N/A	Enumeration: • 0—be • 1—af1. • 2—af2. • 3—af3. • 4—af4. • 5—ef. • 6—cs6. • 7—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
TrustType	Trusted protocol type	N/A	Enumeration: • 2—Inner-dot1p. • 3—DSCP.	Use this column only when the value for the EgressMode column is 3.
CCC	ccc	Subtable	N/A	N/A

VPWS/Connections/CCC

This table contains information about CCC.

XML structure

```
<VPWS>
  <XCGName></XCGName>
  <ConnectionName></ConnectionName>
  <CCC>
    <InLabel></InLabel>
    <OutLabel></OutLabel>
    <NextHop></NextHop>
    <OutInterface></OutInterface>
    <PWClass></PWClass>
  </CCC>
</VPWS>
```

Table description

Item	Description
Feature name	VPWS
Table name	Connections
Table type	Multi-instance table
Row name	Connection
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	This member must be specified. This column cannot be modified.
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	This member must be specified. This column cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
NextHop	Specify the nexthop	N/A	String, dotted decimal notation.	Support for this command depends on the device model.
OutInterface	Interface name	N/A	String Length: 1 to 20 characters.	N/A
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	This column cannot be modified.

VPWS/LDPPeers

This table contains PW peer information of VPWS using LDP signaling.

XML structure

Table description

Item	Description
Feature name	VPWS
Table name	BFDSession
Table type	Singal-instance table
Restrictions	This column cannot be modified.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	You must create the connection first.
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
LocalDiscriminator	Local discriminator	N/A	Unsigned integer. Value range: 1 to 32768	N/A
RemoteDiscriminator	Remote discriminator	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A

VPWS/L3Interfaces

This table contains information about ACs for Layer 3 Ethernet interfaces.

XML structure

```
<VPWS>
  <L3Interfaces>
    <L3Interface>
      <IfIndex></IfIndex>
      <XCGName></XCGName>
      <ConnectionName></ConnectionName>
      <AccessMode></AccessMode>
      <L2splicing></L2splicing>
      <AcStatistics></AcStatistics>
      <BypassAcs>
        <BypassAc>
          <PeerAddr></PeerAddr>
          <PWID></PWID>
          <TunnelPolicy></TunnelPolicy>
          <PWClass></PWClass>
        </BypassAc>
      </BypassAcs>
    </L3Interface>
  </L3Interfaces>
</VPWS>
```

Table description

Item	Description
Feature name	VPWS
Table name	L3Interfaces
Table type	Multi-instance table
Row name	L3Interface
Restrictions	This table supports only layer 3 Ethernet interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
XCGName	XCG Name	N/A	String. Length: 1 to 31 characters.	You must create the XCG first. You must specify this column when the operation is create, merge or replace. Can not be modified after creation.
ConnectionName	Connection Name	N/A	String. Length: 1 to 20 characters.	You must create the connection first. You must specify this column when the operation is create, merge or replace. Can not be modified after creation.
AccessMode	Access mode of the AC	N/A	Enumeration: • **1**—VLAN.	By default, the value is 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—Ethernet.	Cannot be modified after creation. For VLAN interfaces, the default access mode is VLAN. For other Layer 3 interfaces, the default access mode is Ethernet.For Layer 3 subinterfaces, the default access mode is VLAN.
L2-splicing	Whether to splice an LDP PW and an EVPN VPWS over SRv6 PW	N/A	Boolean: • true. • false (default).	Cannot be modified after creation.
AcStatistics	Whether statistics function is enabled	N/A	Boolean: • true. false (default).	Deleting or removing XCGName and ConnectionName will delete this member
BypassAcs	Sublist	N/A	N/A	N/A

VPWS/L3Interfaces/BypassAcs

This table contains Bypass Acs information of VPWS.

XML structure

```
<VPWS>
  <L3Interfaces>
    <L3Interface>
      <BypassAcs>
        <BypassAc>
          <PeerAddr></PeerAddr>

Table description

Item	Description
Feature name	VPWS
Table name	Connections
Table type	Multi-instance table

Row name	Connection
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	N/A
Interworking	Interworking for a cross-connect	N/A	Enumeration: • 1—None(default). • 2—IPV4.	Support for this command depends on the device model.
MTU	MTU	N/A	Unsigned integer. Value range: The value range varies by device model. Default: 1500 bytes.	N/A
ArpSuppression	ARP flooding suppression	N/A	Boolean: true—Enabled. false—Disabled(default).	Support for this command depends on the device model.
DualReceive	Dual receive function for PW redundancy	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this command depends on the device model.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: • Type. • Time.	The member of Type must be specified.
Type	Revertive member. Revertive type.	N/A	Enumeration: • 1—Never. • 2—WTR.	This member must be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec. Default: 0 sec.	Only works when the revertive type is WTR.
PwRedundancyMode	PW redundancy mode	N/A	Enumeration: • 0—slave (default). • 1—Master. • 2—Independent.	N/A
SRv6Locator	Attributes of segment-routing ipv6 locator	N/A	Members include: • LocatorName • AutoSid.	N/A
LocatorName	Locator Name	N/A	String.	You must and only need specify this

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	column when you remove or delete the Locator, and the AutoSid column is ignored
Dx2lLocatorName	Dx2lLocatorName	N/A	String. Length: 1 to 31 characters.	N/A
AutoSid	Auto Sid	N/A	Boolean: • true—Enabled. • false—Disabled.	The column is available when the value of `LocatorName` is specifid
DiffServMode	DiffServ mode configuration	Data structure	Members include: • IngressMode • ServiceClass • EgressMode • TrustType	N/A
IngressMode	DiffServ mode in the inbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
ServiceClass	Service class value	N/A	Enumeration: • 0—be • 1—af1. • 2—af2. • 3—af3. • 4—af4. • 5—ef. • 6—cs6. • 7—cs7.	N/A
EgressMode	DiffServ mode in the outbound direction	N/A	Enumeration: • 1—Uniform. • 2—Pipe. • 3—Short-pipe.	N/A
TrustType	Trusted protocol type	N/A	Enumeration: • 2—Inner-dot1p. • 3—DSCPp.	Use this column only when the value for the EgressMode column is 3.
CCC	ccc	Subtable	N/A	N/A

VPWS/Connections /CCC

This table contains information about CCC.

XML structure

```
<VPWS>
    <XCGName></XCGName>
```

```

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	You must create the connection first.
LocalServiceID	Local service ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
RemoteServiceID	Remote service ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 126 characters.	This column cannot be modified.
DefaultColor	Default color value	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
SegmentRouting	Segment routing configuration	Data structure	Members include: • SegmentRoutingIteration • TrackBFD	N/A
SegmentRoutingIteration	Segment Routing Iteration	N/A	Enumeration: • **0**—No segment routing iteration.1—Best effort. • 2—Traffic engineering. • 3—Traffic engineering and best effort, traffic engineering preferred	This column cannot be modified.
TrackBFD	Track BFD	N/A	Boolean: • true. • false.	This column takes effect only when SegmentRoutingIteration includes Traffic engineering

VPWS/StaticSRv6Peers

This table contains SRv6 peer information of VPWS using static-srv6 signaling.

XML structure

```

  </VRRPOper>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPOper
Table type	Multi-instance table
Row name	Operation
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
PriorityConfig	Priority of the virtual router	N/A	Unsigned integer. Value range: 1 to 254. Default: 100.	A larger value indicates a higher priority.
AuthTypeConfig	Authentication type	N/A	Enumeration: • 1—Simple authentication. • 2—MD5 authentication.	By default, no authentication is specified for VRRP. IPv6 VRRP does not support authentication configuration. Both AuthTypeConfig and AuthKey must be configured for the merge, create, replace, delete and remove operations.
AuthKey	Authentication key	N/A	String, case-sensitive. Length: 1 to 8 characters.	Only plaintext password is supported. AuthKey cannot be configured when no AuthTypeConfig is configured.
AdverInterval	Advertisement interval	N/A	Unsigned integer. Value range: 10 to 4095. Default: 100.	The unit is centiseconds.
PreemptMode	Preemption mode	N/A	Enumeration: • **1**—Preemptive mode. • **2**—Non-preemptive mode. Default: Preemptive mode	For the merge, create, and replace operations, configure the preemptive mode and the preemption delay, or configure the non-preemptive mode without the preemption delay. Both the preempt mode and preemption delay must be configured for the delete and remove operations.
PreemptDelay	Preemption delay	N/A	Unsigned integer. Value range: 0 to 180000. Default: 0.	The unit is centiseconds. The default value is 0, which means to preempt immediately.
BackupArp	ARP entry backup function	N/A	Boolean: • true. • false (default).	Enable ARP entry backup for an VRRP backup group.

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Configure an VRRP group as a master group.	N/A	String, case-sensitive. Length: 1 to 20 characters.	Only one name and follow name can be issued.
FollowName	Configure an VRRP group to follow the specified master group.	N/A	String, case-sensitive. Length: 1 to 20 characters.	Only one name and follow name can be issued.
IgnoreInterfaceDown	Ignore interface down events	N/A	Boolean: • true. • false (default).	Enable VRRP to ignore interface physical state down events. IgnoreInterfaceDown and SourceInterface cannot be used together when the address is ipv6.
Shutdown	Disable an VRRP group	N/A	Boolean: • true • false(default). .	Used to disable the specified VRRP group.
SourceInterface	Specify source interface for an VRRP group	N/A	Unsigned integer.	The VRRP group uses the specified source interface to send and receive VRRP messages instead of using the interface where the VRRP group resides.IgnoreInterfaceDown and SourceInterface cannot be used together when the address is ipv6.
Ipv4PacketSendMode	Set the packet sending mode for IPv4 VRRPv3	N/A	Enumeration: • **0**—v3-only**.** • **1**—v2-only**.** • **2**—v2v3-both**.** Default: v3-only**.**	By default, a router configured with IPv4 VRRPv3 sends only VRRPv3 packets.
CopyToMember	Enable the aggregation member port to copy and send ARP/ND packets	N/A	Boolean: • true • false(default).	N/A

VRRP/VRRPAssoIpAddress

This table contains information about VRRP-RBM association information..

XML structure

```
<VRRP>
  <VRRPAssoIpAddress>
    <AssoIpAddr>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <IpAddress></IpAddress>
```

```
      <PrefixLength></PrefixLength>
      <LinkLocal></LinkLocal>
      <Group></Group>
    </AssoIpAddr>
  </VRRPAssoIpAddress>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPAssoIpAddress
Table type	Multi-instance table
Row name	AssoIpAddr
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IpAddress	VRRP virtual IP address	Index	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
PrefixLength	Mask length or prefix length	N/A	Unsigned integer. Value range: 1 to 128.	For an IPv4 address, the value range is 1 to 32, and the default is 32. For an IPv6 address, the value range is 1 to 128, and the default is 128.
LinkLocal	Whether to specify a link-local address as the virtual IPv6	N/A	Boolean: • **true**. • **false**.	For the merge, create, and replace operations, you cannot configure the LinkLocal keyword when the VRRP virtual IP

Column name	Column description	Column type	Data type and restrictions	Remarks
	address.			address is an IPv4 address. You must configure the LinkLocal keyword when the VRRP virtual IP address is an IPv6 address. When the IPv6 address is a link-local address, set the value to **true**. Otherwise, set the value to **false**. For the delete and remove operations, the LinkLocal keyword cannot be configured.
Group	Group type	N/A	Enumeration: • 0—Not associated with RBM. • 1—Associate the VRRP group with RBM by adding the router to the active group. • 2—Associate the VRRP group with RBM by adding the router to the standby group.	The state of the RBM-associated virtual router is determined by RBM. Whether this column is supported depends on the device model.

VRRP/VRRPTrack

This table contains VRRP-Track association information.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
TrackID	Track entry number	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackMode	Track mode	Index	Enumeration: • **1**—Switchover. • **2**—Prioriry reduced. • **3**—forwarding switchover • **4**—Weight reduced	The priority reduced mode reduces the priority of local router when the track entry switches to Negative state. The switchover mode enables the local router in backup state to take over as the master immediately when the track entry switches to Negative state.
ReducePriority	Value of reduced priority	N/A	Unsigned integer. Value range: 1 to 255.	ReducePriority cannot be configured when TrackMode is switchover. The default value is 10 when TrackMode is priority reduced.
ReduceWeight	Reduce the weight of all	N/A	Unsigned integer. Value range: 1 to 255.	The weight of all virtual forwarders is reduced by

Column name	Column description	Column type	Data type and restrictions	Remarks
	VFs on the router in the VRRP group by the specified value		Default: 30	the specified value when the state of the specified track entry changes to Negative.
MemberIp	Member IP	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.

VRRP/VRRPCluster

This table contains information about VRRP and cluster traffic group association information.

XML structure

```
<VRRP>
  <VRRPCluster>
    <Cluster>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <TrafficGroupID></TrafficGroupID>
    </Cluster>
  </VRRPCluster>
</VRRP>
```

  </VRRPInterface>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	Only supported on Layer 3 interfaces

Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	IPv4 VRRP control VLAN configuration takes effect on only Layer 3 Ethernet subinterfaces and aggregate subinterfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
Ipv4Dot1QVLANID	VLAN ID of the outermost layer.	N/A	Unsigned integer. Value range: 1 to 4094.	For the delete and remove operations, if you configure the outer VLAN ID, you must also configure the inner VLAN ID.
Ipv4SecondDot1QVLANID	VLAN ID of the second outermost layer.	N/A	Unsigned integer. Value range: 1 to 4094.	For the merge, create, and replace operations, you must configure both the outer VLAN ID and inner VLAN ID.
Ipv4Version	IPv4 VRRP version.	N/A	Enumeration: • **2**—VRRPv2. • **3**—VRRPv3. Default: VRRPv3.	N/A
Ipv4RecoverDelay	Delay time for the IPv4 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0,which means to recover immediately.
Ipv4CheckTtl	Enable TTL check for IPv4 VRRP packets	N/A	Boolean: • true (default). • false.	By default, TTL check for IPv4 VRRP packets is enabled.
Ipv6Dot1QVLANID	Specify an IPv6 VRRP control VLAN by its VLAN ID (outermost layer)	N/A	Unsigned integer. Value range: 1 to 4094.	By default, no IPv6 VRRP control VLANs are specified. If the ambiguous termination-enabled interface supports transmitting broadcasts/multicasts, the master sends IPv6 VRRP advertisements within all VLANs whose packets are terminated by the interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6SecondDot1QVLANID	Specify an IPv6 VRRP control VLAN by its VLAN ID (second outermost layer)	N/A	Unsigned integer. Value range: 1 to 4094.	If this parameter is not specified, an IPv6 VRRP control VLAN is specified for the ambiguous Dot1q termination-enabled subinterface.
Ipv6RecoverDelay	Delay time for the IPv6 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0,which means to recover immediately.

VRRP/Base

This table contains VRRP basic information.

XML structure

```

    <Ipv6SendNd></Ipv6SendNd>
    <Ipv6SendNdInterval></Ipv6SendNdInterval>
    <Ipv6SendNdEnhance></Ipv6SendNdEnhance>
  </Base>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Mode	Configure the working mode of IPv4 VRRP.	N/A	Enumeration: • 1—Standard mode (default). • 2—Load balancing. • 3—Version-8.	After an IPv4 VRRP backup group is created, you can still modify the working mode of IPv4 VRRP.
Ipv4Dscp	DSCP value for VRRP packets.	N/A	Unsigned integer. Value range: 0 to 63. Default: 48.	The larger the DSCP value, the higher the priority of the packet.
Ipv4SendArp	Enable periodic sending of gratuitous ARP packets for IPv4 VRRP	N/A	Boolean: • true. • false (default).	N/A
Ipv4SendArpInterval	Set the sending interval of gratuitous ARP packets.	N/A	Unsigned integer. Value range: 30 to 1200. Default: 120.	N/A
Ipv4SendArpEnhance	Enable enhance the function of sending gratuitous ARP packets	N/A	Boolean: • true. • false(default).	N/A
Ipv6Mode	Configure the working mode of IPv6 VRRP.	N/A	Enumeration: • 1—Standard mode (default). • 2—Load balancing.	In load balancing mode, the virtual IPv6 address of the backup group and the IPv6 address of the interface cannot be the same.
Ipv6Dscp	DSCP value for IPv6 VRRP packets.	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.	The larger the DSCP value, the higher the priority of the packet.
Ipv6SendNd	Enable periodic sending of ND packets for IPv6 VRRP	N/A	Boolean: • true. • false(default).	N/A
Ipv6SendNdInterval	Set the sending interval of ND packets.	N/A	Unsigned integer. Value range: 30 to 1200. Default: 120.	N/A
Ipv6SendNdEnhance	Enable enhance the function of sending ND packets	N/A	Boolean: • true. • false(default).	N/A

Table description

Item	Description
Feature name	VRRP
Table name	VRRPOper
Table type	Multi-instance table

Item	Description
Row name	Operation
Restrictions	Only supported on Layer 3 interfaces

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IfName	Interface name	N/A	String Length: 2 to 47 characters	N/A
OperState	Virtual router state	N/A	Enumeration: • 0—Inactive. • 1—Initialize. • 2—Backup. • 3—Master.	N/A
PriorityConfig	Configured priority of the virtual router	N/A	Unsigned integer. Value range: 1 to 254.	A larger value indicates a higher priority.
PriorityRun	Running priority of the virtual router	N/A	Unsigned integer. Value range: 0 to 255.	The larger value indicates higher priority.
IPAddressCount	Count of associated addresses	N/A	Unsigned integer. Value range: 0 to 16.	N/A
MasterIpAddress	IP address of the master	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthTypeConfig	Configured authentication type	N/A	Enumeration: • 0—No authentication. • 1—Simple authentication. • 2—MD5 authentication.	N/A
AuthTypeRun	Running authentication type	N/A	Enumeration: • 0—No authentication. • 1—Simple authentication. • 2—MD5 authentication. • 3—Not supported.	The value is 3 for VRRPv3
AdverInterval	Advertisement interval	N/A	Unsigned integer. Value range: 10 to 4095.	The unit is centiseconds.
PreemptMode	Preemption mode	N/A	Enumeration: • 1—Preemptive mode. • 2—Non-preemptive mode. Default: Preemptive mode.	N/A
PreemptDelay	Preemption delay	N/A	Unsigned integer. Value range: 0 to 180000.	The unit is centiseconds. The default value is 0, which means to preempt immediately. If PreemptMode is non-preemptive mode, this value cannot be obtained.
BackupArp	ARP entry backup function	N/A	Boolean: • true. • false	Enable ARP entry backup for an VRRP backup group.
Name	Configure an VRRP group as a master group.	N/A	String, case-sensitive. Length: 1 to 20 characters.	Only one name and follow name can be issued.
FollowName	Configure an VRRP group to follow the specified master group.	N/A	String, case-sensitive. Length: 1 to 20 characters.	Only one name and follow name can be issued.
IgnoreInterfaceDown	Ignore interface down events	N/A	Boolean: • true. • false	Enable VRRP to ignore interface physical state down events. IgnoreInterfaceDown and SourceInterface cannot be used together when the address is ipv6.

Column name	Column description	Column type	Data type and restrictions	Remarks
Shutdown	Disable an VRRP group	N/A	Boolean: • true • false.	N/A
SourceInterface	Specify source interface for an VRRP group	N/A	Unsigned integer.	The VRRP group uses the specified source interface to send and receive VRRP messages instead of using the interface where the VRRP group resides. IgnoreInterfaceDown and SourceInterface cannot be used together when the address is ipv6.
SourceInterfaceName	Source interface name of an VRRP group	N/A	String Length: 2 to 47 characters	N/A
WeightRun	Current weight	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Ipv4PacketSendMode	Set the packet sending mode for IPv4 VRRPv3	N/A	Enumeration: • 0—v3-only. • 1—v2-only. • 2—v2v3-both.	By default, a router configured with IPv4 VRRPv3 sends only VRRPv3 packets.
CopyToMember	Enable the aggregation member port to copy and send ARP/ND packets	N/A	Boolean: • true • false	N/A

VRRP/VRRPAssoIpAddress

This table contains information about VRRP-RBM association information.

XML structure

```
<VRRP>
  <VRRPAssoIpAddress>
    <AssoIpAddr>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <IpAddress></IpAddress>
      <PrefixLength></PrefixLength>
      <IfName></IfName>
```

```
      <LinkLocal></LinkLocal>
      <Group></Group>
    </AssoIpAddr>
  </VRRPAssoIpAddress>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPAssoIpAddress
Table type	Multi-instance table
Row name	AssoIpAddr
Restrictions	Only supported on Layer 3 interfaces

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IpAddress	Virtual IP address	Index	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
PrefixLength	Mask length or prefix length	N/A	Unsigned integer. Value range: 1 to 128.	For an IPv4 address, the value range is 1 to 32, and the default is 32. For an IPv6 address, the value range is 1 to 128, and the default is 128.
IfName	Interface name	N/A	String Length: 2 to 47 characters	NA

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkLocal	Whether to specify a link-local address as the virtual IPv6 address.	N/A	Boolean: • **true**. • **false**.	If IpAddress is IPv4 address, this value cannot be obtained.
Group	Group type	N/A	Enumeration: • 0—Not associated with RBM. • 1—Associate the VRRP group with RBM by adding the router to the active group. • 2—Associate the VRRP group with RBM by adding the router to the standby group.	The state of the RBM-associated virtual router is determined by RBM. This value is always 0 if the device does not support this column.

VRRP/VRRPTrack

This table contains VRRP-Track association information.

XML structure

```
<VRRP>
  <VRRPTrack>
    <Track>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <TrackID></TrackID>
      <TrackMode></TrackMode>
      <IfName></IfName>

    </Interface>
  </VRRPInterface>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	Only supported on Layer 3 interfaces

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	IPv4 VRRP control VLAN configuration takes effect on only Layer 3 Ethernet subinterfaces and aggregate subinterfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
IfName	Interface name	N/A	String Length: 2 to 47 characters	N/A
Ipv4Dot1QVLANID	VLAN ID of the outermost layer.	N/A	Unsigned integer. Value range: 1 to 4094.	This value cannot be obtained if it's not configured.
Ipv4SecondDot1QVLANID	VLAN ID of the second outermost layer.	N/A	Unsigned integer. Value range: 1 to 4094.	This value cannot be obtained if it's not configured.
Ipv4Version	IPv4 VRRP version.	N/A	Enumeration: • **2**—VRRPv2. • 3—VRRPv3.	N/A
Ipv4RecoverDelay	Delay time for the IPv4 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds.	The unit is seconds. The default value is 0,which means to recover immediately.
Ipv4CheckTtl	Enable TTL check for IPv4 VRRP packets	N/A	Boolean: • true • false.	By default, TTL check for IPv4 VRRP packets is enabled.
Ipv6Dot1QVLANID	Specify an IPv6 VRRP control VLAN by its VLAN ID (outermost layer)	N/A	Unsigned integer. Value range: 1 to 4094.	By default, no IPv6 VRRP control VLANs are specified. If the ambiguous termination-enabled interface supports transmitting broadcasts/multicasts, the master sends IPv6 VRRP advertisements within all VLANs whose packets are terminated by the interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6SecondDot1QVLANID	Specify an IPv6 VRRP control VLAN by its VLAN ID (second outermost layer)	N/A	Unsigned integer. Value range: 1 to 4094.	If this parameter is not specified, an IPv6 VRRP control VLAN is specified for the ambiguous Dot1q termination-enabled subinterface.
Ipv6RecoverDelay	Delay time for the IPv6 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds.	The unit is seconds. The default value is 0,which means to recover immediately.

VRRP/VRRPSpecification

This table contains VRRP specification information.

VRRP/VRRPVf

This table contains VRRP VF information.

XML structure

```
<VRRP>
  <VRRPVf>
    <Vf>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <IfName></IfName>
      <Forwarder>
        <VfID></VfID>
        <State></State>
        <VirtualMac></VirtualMac>
        <OwnerID></OwnerID>
```

```
      <Priority></Priority>
      <ActiveVf></ActiveVf>
    </Forwarder>
  </Vf>
 </VRRPVf>
</VRRP>
```

Table description

Item	Description
Feature name	VRRP
Table name	VRRPVf
Table type	Multi-instance table
Row name	Vf
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: • **0**—IPv4. • **1**—IPv6.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IfName	Interface name	N/A	String Length: 2 to 47 characters	N/A
Forwarder	Forwarder information	Data structure	Members include: • VfID • State • VirtualMac • OwnerID • Priority • ActiveVf	Forwarder group can be repeated multiple times.
VfID	VF ID	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	VF state	N/A	Enumeration: • **0**—Init • **1**—Listen • **2**—Active	N/A
VirtualMac	Virtual MAC address of the VF	N/A	String Value range: 0 to 15.	N/A
OwnerID	Real MAC address of the VF owner	N/A	String Value range: 0 to 15.	N/A
Priority	VF priority	N/A	String Value range: 0 to 255.	Set the priority of the router in the IPv4 VRRP group.
ActiveVf	IP address of the interface where the AVF resides	N/A	String Value range: 0 to 15.	If the current VF is the AVF, this parameter displays local.

VRRP

VRRP/VRRPOper

Message	Explanation
Maximum number of VRRP groups on the device already reached. 设备上存在的备份组数目已经达到上限。	Maximum number of VRRP groups on the device already reached. For more information, see product manuals.
Maximum number of VRRP groups on the interface already reached. 接口上存在的备份组数目已经达到上限。	Maximum number of VRRP groups on the interface already reached. For more information, see product manuals.
Invalid IP address. 非法的IPv4地址。	Only class A, class B, and class C addresses are available.
Invalid IPv6 address. 非法的IPv6地址。	The VRRP virtual IPv6 address cannot be all 0s or loopback address.
Configuration items don't meet the requirements. 不符合配置要求。	**1.** Cannot set new configurations without non-index column. **2.** Preempt mode and preempt delay have to be configured together.
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range. For more information, see product manuals.
Authkey can't include backslashes (\). 认证字中不能有转义字符。	Please change your authkey, and do not include '\'.
VRRP4 is not configured. VRRP4未配置。	VRRP4 service has not been started.
VRRP6 is not configured. VRRP6未配置。	VRRP6 service has not been started.
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only routed ports are available.
The master VRRP group can't follow any other VRRP groups. Master VRRP备份组不能再跟随其他VRRP备份组。	The master VRRP group can't follow any other VRRP groups.
Can't assign a master group name to a subordinate group. 无法将主组名称分配给下属组。	Can't assign a master group name to a subordinate group.
Can't configure the SourceInterface and IgnoreInterfaceDown attribute at the same time in IPv6 mode. 在IPv6模式下不能同时配置SourceInterface和IgnoreInterfaceDown属性。	Can't configure the SourceInterface and IgnoreInterfaceDown attribute at the same time in IPv6 mode.

VRRP/VRRPAssoIpAddress

Message	Explanation
The virtual address has already been assigned to the VRRP group. 虚拟地址已经在备份组中存在。	Cannot assign same virtual address for different VRRP groups.
Maximum number of virtual addresses assigned to the VRRP group already reached. 备份组中配置的虚拟地址个数已经达到上限。	The maximum number of virtual address of VRRP groups is 16 in common scenarios, and it is 4096 in the RBM scenario.
Please delete all other virtual IPv6 addresses before deleting the link-local address. 在删除链路本地地址前请先删除该备份组的其他所有虚拟地址。	Please delete all other virtual IPv6 addresses before deleting the link-local address.
The first assigned virtual IPv6 address must be a link-local address. 第一个指定的虚拟IPv6地址必须是链路本地地址。	Please assign link-local IPv6 address first.
Specify the link-local option when configuring a virtual link-local address. 当配置虚拟链路本地地址时须指定link-local关键字。	Specify the link-local option when configuring a virtual link-local address.
The link-local option can't be specified. 不需要link-local关键字。	Do not specify the link-local option whten configuring a non-link-local address.
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range.For more information,please referrence to product manuals.
Configuration items don't meet the requirements. 不符合配置要求。	The linklocal column must be specified when configure IPv6 addresses.
Can't associate a virtual router with RBM in load balancing mode. 负载均衡模式VRRP下不允许将备份组与RBM模块关联。	You can associate a virtual router with RBM only in normal mode. 只有工作在标准模式下的VRRP备份组支持与RBM模块关联。
Can't switch to load balancing mode for an RBM-associated virtual router. 存在RBM关联备份组时，不允许切换到负载均衡VRRP模式。	To set VRRP to work in load balancing mode, first delete all virtual routers associated with RBM. 如果VRRP备份组已经关联了RBM，如果要将VRRP备份组切换为负载均衡模式，需要先删除所有RBM关联备份组。
Can't configure the RBM attribute for an existing virtual router. 如果VRRP备份组已存在，不允许关联RBM属性。	You can associate a virtual router with RBM only when creating the virtual router. 仅允许在备份组创建时增加关联RBM属性。
Can't remove the RBM attribute for a virtual router. 不允许取消VRRP备份组与RBM关联。	To cancel the association with RBM, first delete the virtual router. 如果一个VRRP备份组已经关联RBM，不允许取消与RBM关联。需要先删除整个VRRP备份组。
Can't modify the RBM attribute for a virtual router. 不允许修改VRRP备份组与RBM关联。	To modify the association with RBM, first delete the virtual router. 如果一个VRRP备份组已经关联RBM，不允许修改RBM关联方式。需要先删除整个VRRP备份组。
Can't associate RBM with a virtual router that has already been associated with Track. 如果VRRP备份组已经关联Track，不能再关联	Can't associate a virtual router with RBM if the virtual router has been associated with Track. 如果一个VRRP备份组已经关联Track，则不允许再关联RBM。

RBM。	
Can't associate Track with a virtual router that has already been associated with RBM. 如果VRRP备份组已经关联RBM，不能再关联Track。	Can't associate a virtual router with Track if the virtual router has been associated with RBM. 如果一个VRRP备份组已经关联RBM，则不允许再关联Track。
This device model doesn’t support configure RBM attribute for VRRP. 设备不支持“VRRP备份组支持RBM”功能。	The device doesn't support the RBM option. 设备不支持RBM选项。
Can't modify the mask or prefix length for the virtual addresses that have been configured. 不允许修改备份组已有虚拟IP地址的掩码或者前缀长度。	Can't modify the mask or prefix length for the virtual addresses that have been configured. 不允许修改备份组已有虚拟IP地址的掩码或者前缀长度。
Invalid IPv4 address mask length. 无效的IPv4地址掩码长度。	Invalid IPv4 address mask length. 无效的IPv4地址掩码长度。
Invalid IPv6 address prefix length. 无效的IPv6地址前缀长度。	Invalid IPv6 address prefix length. 无效的IPv6地址前缀长度。

VRRP/VRRPTrack

Message	Explanation
Maximum number of associated track entries already reached. 关联的Track项数目已经达到上限。	The maximum number of track entries of VRRP groups is 8.
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range.For more information,please referrence to product manuals.
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only route ports are available.

VRRP/VRRPCluster

Message	Explanation
Can't associate a VRRP group with both HA group and cluster traffic group. 同一VRRP组不能同时关联RBM组和RBM集群。	Can't associate a VRRP group with both HA group and cluster traffic group. 如果需要关联RBM集群，需要先删除关联RBM组。
Can't associate both subordinate group and cluster traffic group with a virtual router. 同一VRRP组不能同时关联管理备份组和RBM集群。	Can't associate both subordinate group and cluster traffic group with a virtual router. 如果需要关联RBM集群，需要先删除关联管理备份组。

VRRP/VRRPInterface

Message	Explanation
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only route ports are available.
Configuration items don't meet the requirements. 不符合配置要求。	**1.** Cannot configure second dot1q without dot1q. **2.** Cannot remove dot1q without second dot1q.
Neither VRRP4 nor VRRP6 is configured. VRRP4和VRRP6都未配置。	Neither VRRP4 nor VRRP6 is configured.

VRRP/Base

Message	Explanation
When Ipv4SendArpInterval is issued, Ipv4SendArp must be delivered at the same time, and Ipv4SendArp is true.For the delete operation, just delete ipv4sendArp. 若是set操作下发Ipv4SendArpInterval时必须同时下发Ipv4SendArp，且Ipv4SendArp值为true。若是delete操作，只需要删除Ipv4SendArp即可。	When Ipv4SendArpInterval is issued, Ipv4SendArp must be delivered at the same time, and Ipv4SendArp is true.For the delete operation, just delete ipv4sendArp. 若是set操作下发Ipv4SendArpInterval时必须同时下发Ipv4SendArp，且Ipv4SendArp值为true。若是delete操作，只需要删除Ipv4SendArp即可。
When Ipv6SendNdInterval is issued, Ipv6SendNd must be delivered at the same time, and Ipv6SendNd is true.For the delete operation, just delete ipv6sendNd. 若是set操作下发Ipv6SendNdInterval时必须同时下发Ipv6SendNd，且Ipv6SendNd值为true。若是delete操作，只需要删除Ipv6SendNd即可。	When Ipv6SendNdInterval is issued, Ipv6SendNd must be delivered at the same time, and Ipv6SendNd is true.For the delete operation, just delete ipv6sendNd. 若是set操作下发Ipv6SendNdInterval时必须同时下发Ipv6SendNd，且Ipv6SendNd值为true。若是delete操作，只需要删除Ipv6SendNd即可。

```

Table description

Item	Description
Feature name	VSCAN
Table name	Vscan
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timestamp	Date and time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TargetType	Host IP address version	N/A	Enumeration: • **1**—IPv4.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—IPv6.	
TargetStartHost	Address of the start host	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
TargetEndHost	Address of the end host	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
TcpPortList	TCP port range	N/A	Port range string, port value range: 1 to 65535.	Example: 1,30,100-200
UdpPortList	UDP port range	N/A	Port range string, port value range: 1 to 65535.	Example: 1,30,100-200
Brute	Weak password scanning setting	Data structure	Members include: • Service • Mode • User • Password	N/A
Service	Service type	N/A	Enumeration: • 1—FTP. • 2—SQL Server. • 3—HTTP. • 4—MySQL. • 5—SSH.	HTTP service supports only IPv4.
Mode	Password type	N/A	Enumeration: • 1—Password dictionary. • 2—Custom password. • 3—Password dictionary and custom password.	N/A
User	User-defined username	N/A	String, case-sensitive. Length: 1 to 60 characters.	Supports up to 10 usernames.
Password	User-defined password	N/A	String, case-sensitive. Length: 1 to 31 characters.	Supports up to 50 passwords.

VSCAN/ChangeLog

This table is used to modify VSCAN logs.

XML structure

```
<VSCAN>
  <ChangeLog>
    <Timestamp></Timestamp>
    <IP></IP>
    <Protocol></Protocol>
```

```
    <Port></Port>

    <RuleID></RuleID>
    <RuleName></RuleName>
    <Performaction></Performaction>
    <NewRuleID></NewRuleID>
    <NewRuleName></NewRuleName>
    <RuleCreationtime></RuleCreationtime>
    <SrcZoneNameList>
      <ZoneNameItem></ZoneNameItem>
    </SrcZoneNameList>
    <SrcAddrNameList>
      <AddrNameItem></AddrNameItem>
    </SrcAddrNameList>
  </ChangeLog>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	ChangeLog
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timestamp	Date and time	Index	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
IP	IP address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Protocol	Protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	Example: TCP, UDP, ICMP.
Port	Port number	Index	Port range string, port value range: 1 to 65535.	N/A
Status	Port status	Index	Enumeration: • 1—Open.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service name	Index	String, case-insensitive. Length: 1 to 63 characters.	Example: ftp,http.
Ruleversion	Rule version	Index	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
RuleID	Rule ID	Index	Unsigned integer. Value range: 0 to 65534.	N/A
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
Performaction	Action for detected risks	N/A	Enumeration: • **1**—Disable port. • **2**—IPS protection. • **3**—WAF protection. • **4**—IPS and WAF protection.	N/A
NewRuleID	New rule ID	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
NewRuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
RuleCreationtime	Date and time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
SrcZoneNameList	Name of the source security zone list	Data structure	Members include: • ZoneNameItem	N/A
ZoneNameItem	Name of the source security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.	A maximum of 7 source security zones are supported in a security zone list.
SrcAddrNameList	Name of the source address list	Data structure	Members include: • AddrNameItem	N/A
AddrNameItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 127 characters.	A maximum of 7 source address names are supported in a source address list.

VSCAN/StopVscanning

This table contains the stop operation for vulnerability scanning.

XML structure

```
<VSCAN>
  <StopVscanning>
```

```
    <Stop></Stop>
  </StopVscanning>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	StopVscanning
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stop	Stop vulnerability scanning	N/A	This column must be empty.	Required.

VSCAN/StartStopScan

This table is used to start or stop the scan operation for asset discovery immediately.

XML structure

```
<VSCAN>
  <StartStopScan>
    <Enable></Enable>
  </StartStopScan>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	StartConfigScan
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Start or stop scan action	N/A	Boolean: • **true**—Start scan. • **false**—Stop scan.	Required.

      <Hour></Hour>
    </ScanSchedule>
  </Config>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	Config
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None
Support for row creation and deletion	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	IP type	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
Type	Address type	N/A	Enumeration: • **1**—Subnet. • **2**—Range.	N/A
SubnetAddress	Address of the host	N/A	IPv4 address. IPv6 address.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
MaskLen	IPv4 or IPv6 address mask	N/A	Unsigned integer. IPv4 value range: 1 to 32. IPv6 value range: 112 to 128.	N/A
StartAddress	Address of the start host	N/A	IPv4 address. IPv6 address.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
EndAddress	Address of the end host	N/A	IPv4 address. IPv6 address.	IPv4 example: 1.1.1.1. IPv6 example: 1::1. IPv6 example: 1:2:3:4:5:6:7:8.
TcpPortList	TCP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100,200.
UdpPortList	UDP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100,200.
EnableBrute	Enable weak password scanning	N/A	Boolean: • **true**. • **false**—default.	N/A
Service	Service type	N/A	Enumeration: • **1**—FTP. • **2**—SQL Server. • **3**—HTTP. • **4**—MySQL. • **5**—SSH.	N/A
Mode	Password type	N/A	Enumeration: • **1**—Password dictionary. • **2**—Custom password. • **3**—Password dictionary and custom password.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
User	User-defined username	N/A	String, case-sensitive. Length: 1 to 60 characters.	Supports up to 10 usernames.
Password	User-defined password	N/A	String, case-sensitive. Length: 1 to 31 characters.	Supports up to 50 passwords.
AutoScan	Whether to enable automatic scanning	N/A	Boolean: • true. • false—default.	N/A
Type	Period type	N/A	Enumeration: • **1**—Week. • **2**—Day. • **3**—Hour.	N/A
Week	By week	N/A	Enumeration: • **1**—Monday. • **2**—Tuesday. • **3**—Wednesday. • **4**—Thursday. • **5**—Friday. • **6**—Saturday. • **7**—Sunday.	N/A
Clock	By day	N/A	Time. Format: HH:MM:00.	Example:17:28:00.
Hour	By fixed hours	N/A	Unsigned integer. Value range: 1 to 12	N/A

  </GetPercent>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	GetPercent
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percent	VSCAN percentage	N/A	Unsigned integer. Value range: 1 to 100.	N/A
TargetType	Host IP address version	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Targets	VSCAN target host address	N/A	String. Length: 1 to 127 characters.	IPv4 example: 1.1.1.1 or 1.1.1.1-1.1.1.100 IPv6 example: 1:2:3:4:5:6:7:8 or 10::1-10::9.
TcpPortList	TCP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100-200
UdpPortList	UDP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100-200
Timestamp	Date and time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Brute	Weak password scanning setting	Data structure	Members include: • Service • Mode • User • Password	N/A
Service	Service type	N/A	Enumeration: • 1—FTP. • 2—SQL Server. • 3—HTTP. • 4—MySQL. • 5—SSH.	HTTP service supports only IPv4.
Mode	Password type	N/A	Enumeration: • 1—Password dictionary. • 2—Custom password. • 3—Password dictionary and custom password.	N/A
User	User-defined username	N/A	String, case-sensitive. Length: 1 to 60 characters.	N/A
Password	User-defined password	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

VSCAN/GetPortList

This table contains port information.

XML structure

```
<VSCAN>
  <GetPortList>
    <Port></Port>
  </GetPortList>
```

```
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	GetPortList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Port information	N/A	String, case-insensitive. Length: 1 to 64 characters. Format: protocol=xxx, portid=xxx,srvname=xxx	Example: protocol=TCP,portid=80,srvname=HTTP

VSCAN/GetBruteServicesList

This table contains brute services list.

XML structure

```
<VSCAN>
  <GetBruteServicesList>
    <Service></Service>
  </GetBruteServicesList>
</VSCAN>
```

Table description

Item	Description
Feature name	VSCAN
Table name	GetBruteServicesList
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service information	N/A	String Format: service=xxx, serviceid=xxx	Example: service=FTP,serviced=1 service=SQL Server,serviced=2 service=HTTP,serviced=3 service=MySQL,serviced=4 service=SSH,serviced=5

VSCAN/GetScanState

This table is used to get assert discovery scan information.

XML structure

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	IP type	N/A	Enumeration: • **1**—IPv4. • **2**—IPv6.	N/A
Type	Address type	N/A	Enumeration: • **1**—Subnet. • **2**—Range.	N/A
SubnetAddress	Address of the host	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
MaskLen	IPv4 or IPv6 address mask	N/A	Unsigned integer. IPv4 value range: 1 to 32. IPv6 value range: 112 to 128.	N/A
StartAddress	Address of the start host	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
EndAddress	Address of the end host	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
TcpPortList	TCP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100,200.
UdpPortList	UDP port range	N/A	Port range string. Value range: 1 to 65535.	Example: 1,30,100,200.
EnableBrute	Enable weak password scanning	N/A	Boolean: • true. • false.	N/A
Service	Service type	N/A	Enumeration: • **1**—FTP. • **2**—SQL Server. • **3**—HTTP. • **4**—MySQL. • **5**—SSH.	Example: 1,3,4,5
Mode	Password type	N/A	Enumeration: • **1**—Password dictionary.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **2**—Custom password. • **3**—Password dictionary and custom password.	
User	User-defined username	N/A	String, case-sensitive. Length: 1 to 60 characters.	N/A
Password	User-defined password	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
AutoScan	Auto scan	N/A	Boolean: • true. • false.	N/A
Type	Period type	N/A	Enumeration: • **1**—Week. • **2**—Day. • **3**—Hour.	N/A
Week	By week	N/A	Enumeration: • **1**—Monday. • **2**—Tuesday. • **3**—Wednesday. • **4**—Thursday. • **5**—Friday. • **6**—Saturday. • **7**—Sunday.	N/A
Clock	By day	N/A	Time. Format: HH:MM:00.	Example:17:28:00.
Hour	By fixed hours	N/A	Unsigned integer. Value range: 1 to 12	N/A

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceName	Instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
BackupMode	Mode	N/A	Enumeration: • 0—Hot (default) • 1—Warm • 2—Hot dual-active	N/A
BackupId	Specify backup ID for a VSRP instance	Data structure	Members include: • Id • PeerName	N/A
Id	Backup ID of a VSRP instance	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
PeerName	VSRP group name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
BackupRouteAdvertise	Route advertisement for the backup	Data structure	Members include: • RouteAdvertise • MasterCost • BackupCost	N/A
RouteAdvertise	Whether to enable route advertisement for the backup	N/A	Boolean: • **true** • **false** (default)	N/A
MasterCost	Route cost for the master	N/A	Unsigned integer. Value range: 0 to 4261412863. Default: 10.	N/A
BackupCost	Route cost for the backup	N/A	Unsigned integer. Value range: 1 to 4261412864. Default: 20.	N/A
Bind	Binding configuration	Data structure	Members include: • IfIndex • STrunkId	N/A

			• VrrpType • VrId	
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in *Ifmgr NETCONF XML API Configuration Reference*.
STrunkId	S-Trunk ID	N/A	Unsigned integer. Value range: 1 to 128.	N/A
VrrpType	VRRP type	N/A	Enumeration: • 0—ipv4 • 1—ipv6	N/A
VrId	VRID	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Nas	NAS configuration	Data structure	Members include: • Id • AddressType • IpAddress • Port	N/A
Id	Logical host name	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
AddressType	Address type	N/A	Enumeration: • 0—ipv4	N/A
IpAddress	Logical unicast IP address	N/A	String, dotted decimal notation.	N/A
Port	Logical interface index	N/A	String. Length: 2 to 47 characters.	N/A
TrafficBackup	Traffic backup	Data	Members include:	N/A

		structure	• Interval • Threshold	
Interval	Traffic backup interval	N/A	Unsigned integer. Value range: 0 to 1440 minutes. Default: 10 minutes.	N/A
Threshold	Traffic threshold	N/A	Unsigned integer. Value range: 0 to 100000 MB. Default: 50 MB.	N/A

Vsys/VsysInformations

This table contains basic parameters for configuring vSystems.

XML structure

```
<Vsys>
  <VsysInformations>
    <VsysInformation>
      <VsysName></VsysName>
      <VsysID></VsysID>
      <Description></Description>
    </VsysInformation>
  </VsysInformations>
</Vsys>
```

Table description

Item	Description
Feature name	Vsys
Table name	VsysInformations
Table type	Multi-instance table
Row name	VsysInformation
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsysName	vSystem name	Index	String, case sensitive. Length: 1 to 31 characters.	The name of the default vSystem is **Admin**.
VsysID	vSystem ID	N/A	Unsigned integer.	To have the system assign the lowest ID among the available IDs to the vSystem, set this column to 0.
Description	vSystem description	N/A	String, case sensitive. Length: 1 to 255 characters.	N/A

Vsys/AllocationInterfaces

This table contains physical interfaces allocated to vSystems.

XML structure

```
<Vsys>
  <AllocationInterfaces>
    <AllocationInterface>
      <VsysName></VsysName>
      <InterfaceList>
        <Interface></Interface>
      </InterfaceList>
    </AllocationInterface>
  </AllocationInterfaces>
</Vsys>
```

Table description

Item	Description

Row name	AllocationVlan
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
VsysName	vSystem name	Index	String, case sensitive. Length: 1 to 31 characters.
VlanList	VLAN list	Data structure	Members include: • Vlan.
Vlan	VLAN ID	N/A	Unsigned integer.

Vsys/Resource/Throughputs

This table contains throughput limits for vSystems.

XML structure

```
<Vsys>
 <Resources>
    <Throughputs>
      <Throughput>
       <VsysName></VsysName>
```

```
      <ThroughputValue>
        <Unit></Unit>
        <Value></Value>
      </ThroughputValue>
    </Throughput>
  </Throughputs>
 </Resources>
</Vsys>
```

Table description

Item	Description
Feature name	Vsys
Table name	Throughputs
Table type	Multi-instance table
Row name	Throughput
Restrictions	Only the default vSystem supports.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsysName	vSystem name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
ThroughputValue	Maximum throughput	Data structure	Members include: • Unit. • Value.	The throughput limits for vSystems by default.
Unit	Measurement unit	N/A	Enumeration: • 1—kbps • 2—pps	This column is required,
Value	Throughput value	N/A	Unsigned integer. Value range: 1000 to 100000000.	This column is required,

Vsys/Resource/SecpPolicyRules

This table contains security policy rule limits for vSystems.

XML structure

```
<Vsys>
  <Resources>
    <SecpPolicyRules>
```

```
      <SecpPolicyRule>
        <VsysName></VsysName>
        <Max></Max>
      </SecpPolicyRule>
    </SecpPolicyRules>
</Resources>
</Vsys>
```

Table description

Item	Description
Feature name	Vsys
Table name	SecpPolicyRules

VXLAN

VXLAN/Base

This table contains information about global VXLAN functions.

XML structure

```
<VXLAN>
  <Base>
    <RmtMacLearn></RmtMacLearn>
    <RmtArpLearn></RmtArpLearn>
    <RmtNdLearn></RmtNdLearn>
    <LocMacNtf></LocMacNtf>
    <ReservedVxlanID></ReservedVxlanID>
    <EvpnMultihomingAdvertise></EvpnMultihomingAdvertise>
    <EvpnMultihomingTimerDFDelay></EvpnMultihomingTimerDFDelay>
    <EvpnArpMobilitySuppression></EvpnArpMobilitySuppression>
    <VlanBased></VlanBased>
    <EvpnARPMobility>
      <DetectTime></DetectTime>
      <MoveTimes></MoveTimes>
      <SuppressionTime></SuppressionTime>
    </EvpnARPMobility>
  </Base>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RmtMacLearn	Remote MAC address	N/A	Boolean: • **true**—Enabled(default).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	learning function		• **false**—Disabled.	
RmtArpLearn	Remote ARP learning function	N/A	Boolean: • **true**—Enabled(default). • **false**—Disabled.	You must enable L2VPN feature globally at first.
RmtNdLearn	Remote ND learning function	N/A	Boolean: • **true**—Enabled(default). • **false**—Disabled.	You must enable L2VPN feature globally at first.
LocMacNtf	Local MAC address report function	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	N/A
ReservedVxlanID	Reserved VXLAN ID	N/A	Unsigned integer, Value range: 0 to 16777215.	You must enable L2VPN feature globally at first. You must specify this column for tunnel BFD. The value must be different from that of VxlanID column in VXLANs table. The available value can be get from the NextVxlanID column in Base table.
EvpnMultihomingAdvertise	EVPN multihoming route advertisement	N/A	Boolean: • **true**—Enabled (default). • **false**—Disabled.	You must enable L2VPN feature globally at first.
EvpnMultihomingTimerDFDelay	EVPN multihoming DF election delay	N/A	Unsigned integer, Value range: 1 to 1200.	The default value for this column is 3. You must enable L2VPN feature globally at first.
EvpnArpMobilitySuppression	EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must enable L2VPN feature globally at first.
VlanBased	VLAN-based VXLAN assignment.	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must remove all VLAN-to-VXLAN mappings before you disable VLAN-based VXLAN assignment.
EvpnARPMobility	Attributes of ARP mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
SuppressionTime	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnArpMobilitySuppression column is true.

VXLAN/VXLANs

This table contains information about VXLAN configurations.

XML structure

```
<VXLAN>
  <VXLANs>
    <Vxlan>
      <VxlanID></VxlanID>
      <VsiName></VsiName>
      <Ipv4Group>
        <GroupAddr></GroupAddr>
        <SrcAddr></SrcAddr>
      </Ipv4Group>
      <TunnelAll></TunnelAll>
    </Vxlan>
  </VXLANs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VXLANs
Table type	Multi-instance table
Row name	Vxlan
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID	Index	Unsigned integer, Value range: 0-16777215.	N/A
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create VXLANs. You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove. Can not be modified after creation.
Ipv4Group	VXLAN multicast group structure	Data structure	Members include: • GroupAddr. • SrcAddr.	You must specify both the GroupAddr and SrcAddr when the operation is merge, create or replace.
GroupAddr	IPv4 multicast address	N/A	String, dotted decimal notation.	Example: 224.1.1.1.
SrcAddr	IPv4 source address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
TunnelAll	All tunnels	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	If you assign VXLAN tunnels to a VXLAN one by one, you cannot remove all the VXLAN tunnels by using this column.

VXLAN/Tunnels

This table contains information about tunnels associated with VXLANs.

XML structure

```
<VXLAN>
  <Tunnels>
    <Tunnel>
      <VxlanID></VxlanID>
      <TunnelID></TunnelID>
      <FloodingProxy></FloodingProxy>
      <RelayAgent></RelayAgent>
    </Tunnel>
```

```
  </Tunnels>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID	Index	Unsigned integer, Value range:0-16777215.	You must create a VXLAN first before you merge, replace or create tunnels.
TunnelID	Tunnel ID	Index	Unsigned integer.	You must create a tunnel first before you merge, replace or create tunnels.
FloodingProxy	Flooding proxy	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default).	Can’t be modified after creation.
RelayAgent	Relay agent	N/A	Enumeration: • **0**—Disabled(default). • **1**—PPPoE. • **2**—IPoE. • **3**—The combination of the two type above.	Support for this column depends on the device model.

VXLAN/RmtMACs

This table contains information about remote MAC addresses of each VXLAN.

XML structure

```
<VXLAN>
  <RmtMACs>
    <MAC>
      <VsiName></VsiName>
```

```
      <MacAddr></MacAddr>
      <TunnelID></TunnelID>
    </MAC>
  </RmtMACs>
</VXLAN>
```

Table type	Multi-instance table
Row name	MAC
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create MACs.
MacAddr	Remote MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated. The value must be unicast address.	Example: 00-0c-af-e3-5d-c0.
TunnelID	Tunnel ID	N/A	Unsigned integer	You must create a tunnel first before you merge, replace or create MACs. You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove.

VXLAN/Allocations

This table contains VXLAN allocate information in context.

XML structure

```
<VXLAN>
  <Allocations>
    <Allocation>
      <ContextID></ContextID>
      <Vxlan></Vxlan>
    </Allocation>
  </Allocations>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	Allocations
Table type	Multi-instance table
Row name	Allocation
Restrictions	You must enable global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context ID	Index	Unsigned integer.	N/A
Vxlan	VXLAN ID list	N/A	Numeric string separated by commas and a maximum of one minus sign. The string cannot contain blank spaces or end with a comma or minus sign. Such as: 1,3,5,8,10-20	N/A

VXLAN/EvpnVxlanEncaps

This table contains information about EVPN with VXLAN encapsulation.

XML structure

```
<VXLAN>
  <EvpnVxlanEncaps>
    <VxlanEncap>

Table description

Item	Description
Feature name	VXLAN
Table name	EvpnVxlanEncaps
Table type	Multi-instance table
Row name	VxlanEncap
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
bRDAuto	RD Auto	N/A	Boolean: • **true**—Enabled. • **false**—Disabled(default)	N/A
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A
bIrtAuto	Import route target	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default)	N/A
bErtAuto	Export route target	N/A	Boolean: • **true**—Enabled. • **false—**Disabled(default)	N/A
bMacAdvertise	MAC advertise	N/A	Boolean: • **true**—Enabled(default) • **false—**Disabled	N/A
bArpMacLearn	ARP MAC learning	N/A	Boolean: • **true**—Enabled(default) • **false—**Disabled	N/A
NdMacLearn	ND MAC learning	N/A	Boolean: • **true**—Enabled(default) • **false—**Disabled	N/A
MappingVni	Mapping VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	Support for this column depends on the device model.
MappingVniBasedSmet	Whether to reoriginate SMET routes based on VXLAN mapping settings	N/A	Boolean: • **true**—Yes. • **false**—No (default).	N/A
ArpAdvertise	ARP advertisement	N/A	Boolean: • **true**—Enabled(default) • **false**—Disabled	N/A
RDAutoType	Automatic RD generation type	N/A	Enumeration: • **0**—VXLAN ID-based (default). • **1**—Router ID-based.	Available for an automatically generated RD.

UMR	Unknown MAC Route	N/A	Enumeration: • **1—**send enable**.** • **2—**receive enable**.** • **3**—send and receive enable. • **4**—send and detail-suppressed enable. • **5**—send and detail-suppressed and receive enable.	This column cannot be modified.
UMRSendFlag	Unknown MAC route send flag	N/A	Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. • 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	You must first enable the L2VPN feature globally.
EvpnMACMobility	Attributes of MAC mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime.	N/A
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacM

				obilitySuppression column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.
EvpnNDMobilitySuppression	Status of EVPN ND mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnNDMobility	Attributes of ND mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A
DetectTime	ND mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
MoveTimes	ND move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
SuppressionTi	ND mobility	N/A	Unsigned integer.	The default

me	suppression time		Value range: 0 and 120 to 3600, in seconds.	value for this column is 0 (permanent). Use this column only when the value for the EvpnNdMobilitySuppression column is true.
EvpnArpMobilitySuppression	Status of EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnArpMobility	Attributes of ARP mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
SuppressionTime	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent).

				Use this column only when the value for the EvpnArpMobilitySuppression column is true.

VXLAN/EvpnVxlanRTs

This table contains information about EVPN route target associated with VXLANs.

XML structure

```
<VXLAN>
  <EvpnVxlanRTs>
    <VxlanRT>
      <VsiName></VsiName>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </VxlanRT>
  </EvpnVxlanRTs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	EvpnVxlanRTs
Table type	Multi-instance table
Row name	VxlanRT
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A You must create a VSI and enable EVPN encapsulation vxlan first before you merge, replace or create VXLAN RTs, and the

				RT is not auto in table EvpnVxlanEncaps.
RTType	Route target type	Index	Enumeration: • **1**—Import • **2**—Export	N/A
RTEntry	Route target	Index	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A

VXLAN/VRFs

This table contains VNIs associated with VPN instances.

XML structure

```
<VXLAN>
  <VRFs>
    <VRF>
      <VRF></VRF>
      <VNI></VNI>
    </VRF>
  </VRFs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	configured only in the public instance. This column must be empty.
VNI	Layer 3 VNI for the tenant	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			16777215.	

VXLAN/VLANs

This table contains information about VLAN configurations.

XML structure

```
<VXLAN>
  <VLANs>
    <VLAN>
      <VlanID></VlanID>
      <VxlanID></VxlanID>
      <Statistics></Statistics>
    </VLAN>
  </VLANs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
VxlanID	Map the VLAN to a VXLAN	N/A	Unsigned integer, Value range:0-16777215.	You must first enable VLAN-based VXLAN assignment.
Statistics	Whether statistics function is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

VXLAN/VtepGroups

This table contains information about VtepGroups configurations.

XML structure

```
<VXLAN>
  <VtepGroups>
    <VtepGroup>
      <GroupIp></GroupIp>
      <RemoteIp></RemoteIp>
    </VtepGroup>
  </VtepGroups>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VtepGroups
Table type	Multi-instance table
Row name	VtepGroup
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIp	VTEP index	Index	String, dotted decimal notation.	Example: 1.1.1.1. You must specify both the GroupIp and RemoteIp when the operation is merge, create or replace.
RemoteIp	Remote Ip Address	N/A	String, dotted decimal notation.	Example: 2.2.2.2. This column must be specified, and repetitions are allowed for this column.

Table description

Item	Description
Feature name	VXLAN
Table name	EvpnVxlanEncaps
Table type	Multi-instance table
Row name	VxlanEncap
Restrictions	You must enabled global L2VPN feature at first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
bRDAuto	RD Auto	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A
bIrtAuto	Import route rarget	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
bErtAuto	Export route rarget	N/A	Boolean: • **true**—Enabled.	N/A

			• **false**—Disabled.	
bMacAdvertise	MAC advertise	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
bArpMacLearn	ARP MAC learning	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
NdMacLearn	ND MAC learning	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MappingVni	Mapping VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
MappingVniBasedSmet	Whether to reoriginate SMET routes based on VXLAN mapping settings.	MappingVniBasedSmet	Whether to reoriginate SMET routes based on VXLAN mapping settings.	MappingVniBasedSmet
ArpAdvertise	ARP advertisement	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
RDAutoType	Automatic RD generation type	N/A	Enumeration: • **0**—VXLAN ID-based. • **1**—Router ID-based.	Available for an automatically generated RD.
UMR	Unknown MAC Route	N/A	Enumeration: • **1—**send enable**.** • **2—**receive enable**.** • **3**—send and receive enable. • **4**—send and detail-suppressed enable. • **5**—send and detail-suppressed and receive enable.	This column cannot be modified.
UMRSendFlag	Unknown MAC route send flag	N/A	• Enumeration: • 1—Force-static flag. • 2—Detail-suppressed flag. • 3—Force-static flag and detail-suppressed flags.	Use this column only when the value for the UMR column is 1 or 3.
UMRRecvFlag	Unknown MAC route receive flag	N/A	Enumeration: 1—Ignore-static flag.	Use this column only when the value for the UMR column is 2 or 3.
EvpnMacMobilitySuppression	Status of EVPN MAC mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnMACMobility	Attributes of MAC mobility event	Data structure	Members include: • DetectTime.	N/A

	suppression		• MoveTimes. • SuppressionTime. • BlackholeDupMac	
DetectTime	MAC mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
MoveTimes	MAC move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnMacMobilitySuppression column is true.
SuppressionTime	MAC mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnMacMobilitySuppression column is true.
BlackholeDupMac	Whether to set the MAC as a black hole address	N/A	Boolean: • **true**—Enabled. • **false**—Disabled	Use this column only when the value for the EvpnMacMobilitySuppression column is true.
EvpnNDMobilitySuppression	Status of EVPN ND mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnNDMobility	Attributes of ND mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A
DetectTime	ND mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
MoveTimes	ND move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnNdMobilitySuppression column is true.
SuppressionTime	ND mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnNdMobilitySuppression column is true.

EvpnArpMobilitySuppression	Status of EVPN ARP mobility event suppression	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	You must first enable the L2VPN feature globally.
EvpnArpMobility	Attributes of ARP mobility event suppression	Data structure	Members include: • DetectTime. • MoveTimes. • SuppressionTime**.**	N/A
DetectTime	ARP mobility detection cycle	N/A	Unsigned integer. Value range: 60 to 900, in seconds.	The default value for this column is 180 seconds. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
MoveTimes	ARP move threshold in a detection cycle	N/A	Unsigned integer. Value range: 3 to 10.	The default value for this column is 5. Use this column only when the value for the EvpnArpMobilitySuppression column is true.
SuppressionTime	ARP mobility suppression time	N/A	Unsigned integer. Value range: 0 and 120 to 3600, in seconds.	The default value for this column is 0 (permanent). Use this column only when the value for the EvpnArpMobilitySuppression column is true.

VXLAN/EvpnVxlanRTs

This table contains information about EVPN route target associated with VXLANs.

XML structure

```
<VXLAN>
  <EvpnVxlanRTs>
    <VxlanRT>
      <VsiName></VsiName>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </VxlanRT>
  </EvpnVxlanRTs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN

Item	Description
Table name	EvpnVxlanRTs
Table type	Multi-instance table
Row name	VxlanRT
Restrictions	You must enabled global L2VPN feature at first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
RTType	Route target type	Index	Enumeration: • 1—Import • 2—Export	N/A
RTEntry	VPN target	Index	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A

VXLAN/VRFs

This table contains VNIs associated with VPN instances.

XML structure

```
<VXLAN>
  <VRFs>
    <VRF>
      <VRF></VRF>
      <VNI></VNI>
    </VRF>
  </VRFs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	You must enable L2VPN globally first.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	This column must be empty.
VNI	Layer 3VNI for the tenant	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A

VXLAN/EvpnESs

This table contains EVPN Ethernet segment information.

XML structure

```
<VXLAN>
  <EvpnESs>
    <EvpnES>
      <Esi></Esi>
      <VLANID></VLANID>
      <VxlanID></VxlanID>
      <SelfAddr></SelfAddr>
      <MemberGroup>
        <MemberAddr></MemberAddr>
        <bDF></bDF>
      </MemberGroup>
    </EvpnES>
  </EvpnESs>
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	EvpnESs
Table type	Multi-instance table
Row name	EvpnES
Restrictions	You must first enable the L2VPN feature globally.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Esi	Ethernet segment identifier	Index	Five groups of four hexadecimal digits, hyphen-separated.	Example: 0011.2233.4455.6677.8899 The value of an ESI starts with 00 and cannot be all 0s.
VLANID	VLAN mapped to the Ethernet segment	Index	Unsigned integer.	If multiple VLANs are mapped to the Ethernet segment, this value is the lowest VLAN ID. The value of this column also indicates AC types: • 2147483649 for tagged ACs. • 2147483650 for untagged ACs. • 0 for the others.
VxlanID	Mapped VXLAN ID	N/A	Unsigned integer.	N/A
SelfAddr	Local IP address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
GroupMember	Ethernet segment group membership	Data structure	Members include: • MemberAddr. • bDF.	Multiple Ethernet segment group members can exist.
MemberAddr	Member IP address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
bDF	Designated forwarder role	N/A	Boolean: • **true**—DF. • **false**—Not DF.	N/A

VXLAN/VLANs

This table contains information about VLAN configurations.

XML structure

```
<VXLAN>
  <VLANs>
    <VLAN>
      <VlanID></VlanID>
      <VxlanID></VxlanID>
      <Statistics></Statistics>
    </VLAN>
  </VLANs>
```

```
</VXLAN>
```

Table description

Item	Description
Feature name	VXLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	You must enable L2VPN globally first.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
VxlanID	Map the VLAN to a VXLAN	N/A	Unsigned integer, Value range:0-16777215.	You must first enable VLAN-based VXLAN assignment.
Statistics	Whether statistics function is enabled	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A

VXLAN/VtepGroups

This table contains information about VtepGroups configurations.

XML structure

```
<VXLAN>
  <VtepGroups>
    <VtepGroup>
      <GroupIp></GroupIp>
      <RemoteIp></RemoteIp>
    </VtepGroup>
  </VtepGroups>
</VXLAN>

```

Table description

Item	Description
Feature name	WAAS
Table name	WAASStatus
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CongestionWindow	Congestion window size	N/A	Unsigned integer. Value range: 1 to 10. Default: 2.	N/A
ReceiveBuffer	The receive buffer size	N/A	Unsigned integer. Value range: 32 to 16384 Default: 64.	The unit is KB.
KeepAliveStatus	Whether to send keepalive packet	N/A	Boolean: • true (default) • false	
DREStatus	Whether to use DRE optimize	N/A	Boolean: • true (default) • false	
LZStatus	Whether to use LZ optimize	N/A	Boolean: • true (default) • false	
BlackListStatus	Whether to enable denylist		Boolean: • true • false (default)	
BlacklistHoldTime	The hold time of denylist		Unsigned integer. Value range: 1 to 10080 Default: 5.	
CongestionMethod	TCP congestion control method to use		Unsigned integer. Value range: 0 and 3. • 0: RENO • 1: BIC (default) • 2: BBRv1 • 3: BBRv2	
ConnectLimit	Maximum number of connections		Unsigned integer. Value range: 1000 to 4294967295. Default: 10000.	

Column name	Column description	Column type	Data type and restrictions	Remarks
CompressNumber	Number of logs to be compressed	N/A	Unsigned integer. Value range: 2 to 20 Default: 5	To set the number of logs to be compressed, you must also enable log compression.
CompressStatus	Whether to enable log compression or decompression	N/A	Enumeration. • 0: Both disabled (default) • 1: Compress • 2: Decompress	N/A
TCPCompressNumber	Number of TCP packets to be compressed	N/A	Unsigned integer. Value range: 2 to 20 Default: 5	To set the number of logs to be compressed, you must also enable TCP packet compression.
TCPCompressStatus	Whether to enable TCP packet compression or decompression	N/A	Enumeration. • 0: Both disabled (default) • 1: Compress • 2: Decompress	N/A
ConnectWaitTime	Maximum waiting time of connections	N/A	Unsigned integer. Value range: 1 to 75 seconds.	N/A

WAAS/Classes

Table description

Item	Description
Feature name	WAAS
Table name	ClassMatchCriterion
Table type	Multi-instance table
Row name	MatchCriterion
Restrictions	Only index column is supported when a match criterion is deleted.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class Name	index	String. Length: 1 to 63 characters.	N/A
MatchID	The identifier of the match criterion	index	Unsigned integer. Value range: 1 to 65535	N/A
MatchType	Match Type	N/A	Unsigned integer. 1:Match the source ip address 2:Match the destination ip address 3:Match any 4: Match the source and destination IP addresses 5: Match ACL rules	N/A
IPType	The Match	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	criterion is for IPv4 or IPv6		2: IPv4 10:IPv6	
ProtocolType	Protocol type of the match criterion	N/A	Unsigned integer. 6: TCP 17: UDP	N/A
Ipv4Address	Ipv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4Address and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv4Address is configured as the source information.
Ipv4PrefixLength	Ipv4 prefix length	N/A	Unsigned integer. Value range: 0 to 32 Default: 32	Ipv4PrefixLength and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv4PrefixLength is configured as the source information.
Ipv6Address	The Ipv6 address of the match rule	N/A	Hexadecimalstring,colon-separated.	Example: 2:2::2:2. Ipv6Address and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv6Address is configured as the source information.
Ipv6PrefixLength	Ipv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128	Ipv6PrefixLength and

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 128	AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv6PrefixLength is configured as the source information.
PortList	The port list of the match criterion	N/A	String.	PortList and PortOMSName cannot be configured at the same time. When MatchType is 4, PortList is configured as the source information.
AddressOMSName	Name of the address object group	N/A	String. Length: 1 to 63 characters.	AddressOMSName and Ipv4Prefix cannot be configured at the same time. When MatchType is 4, AddressOMSName is configured as the source information.
PortOMSName	Name of the port address group	N/A	String. Length: 1 to 63 characters.	PortOMSName and PortList cannot be configured at the same time. When MatchType is 4, PortOMAName is configured as the source information.
Ipv4Address2	IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only when

Column name	Column description	Column type	Data type and restrictions	Remarks
				MatchType is 4, Ipv4Address2 can be configured as the destination information. Ipv4Address2 and AddressOMSName 2 cannot be configured at the same time.
Ipv4PrefixLen gth2	IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32	Only when MatchType is 4, Ipv4PrefixLength2 can be configured as the destination information. Ipv4PrefixLength2 And AddressOMSName 2 cannot be configured at the same time.
Ipv6Address2	IPv6 address	N/A	String, dotted decimal notation.	Example:2:2::2:2. Only when MatchType is 4, Ipv6Address2 can be configured as the destination information. Ipv6Address2 and AddressOMSName 2 cannot be configured at the same time.
Ipv6PrefixLen gth2	IPv6 mask length	N/A	Unsigned integer. Value range: 0 to 128	Only when MatchType is 4, Ipv6PrefixLength2 can be configured as the destination

Column name	Column description	Column type	Data type and restrictions	Remarks
				information. Ipv6PrefixLength2 And AddressOMSName 2 cannot be configured at the same time.
PortList2	The port list of the match criterion	N/A	String.	Only when MatchType is 4, PortList2 can be configured as the destination information. PortList2 and PortOMSName2 cannot be configured at the same time.
AddressOMS Name2	Name of the address object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, AddressOMSName 2 can be configured as the destination information. AddressOMSName 2 and Ipv4Address2 cannot be configured at the same time.
PortOMSNam e2	Name of the port object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, PortOMSName2 can be configured as the destination information. PortOMSName2 and PortList2 cannot be configured at the

Column name	Column description	Column type	Data type and restrictions	Remarks
				same time.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
ACLName	ACL name	N/A	String. Length: 1 to 63 characters.	N/A

WAAS/RTPClassMatchCriterion

This table contains information about WAAS RTP class match criterion settings.

XML structure

```

```

Table description

Item	Description
Feature name	WAAS
Table name	RTPClassMatchCriterion
Table type	Multi-instance table
Row name	MatchCriterion
Restrictions	Only index column is supported when a match criterion is deleted.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class name	index	String. Length: 1 to 63 characters.	N/A
MatchID	Match criterion ID	index	Unsigned integer. Value range: 1 to 65535	N/A
MatchType	Match type	N/A	Unsigned integer. 1: Match the source IP address 2: Match the destination IP address 3: Match any 4: Match the source and destination IP addresses	N/A
IPType	IP version of the match criterion	N/A	Unsigned integer. 2: IPv4 10: IPv6	N/A
ProtocolType	Protocol type of the match criterion	N/A	Unsigned integer. 17: UDP	N/A
Ipv4Address	IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4Address and

Column name	Column description	Column type	Data type and restrictions	Remarks
				AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv4Address is configured as the source information.
Ipv4PrefixLength	IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32 Default: 32	Ipv4PrefixLength and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv4PrefixLength is configured as the source information.
Ipv6Address	The IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
Ipv6PrefixLength	IPv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128 Default: 128	
PortList	The port list of the match criterion	N/A	String.	PortList and PortOMSName cannot be configured at the same time. When MatchType is 4, PortList is configured as the source information.
AddressOMSName	Name of the address object group	N/A	String. Length: 1 to 63 characters.	AddressOMSName and Ipv4Prefix cannot be configured at the same time.

Column name	Column description	Column type	Data type and restrictions	Remarks
				When MatchType is 4, AddressOMSName is configured as the source information.
PortOMSName	Name of the port address group	N/A	String. Length: 1 to 63 characters.	PortOMSName and PortList cannot be configured at the same time. When MatchType is 4, PortOMAName is configured as the source information.
Ipv4Address2	IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only when MatchType is 4, Ipv4Address2 can be configured as the destination information. Ipv4Address2 and AddressOMSName 2 cannot be configured at the same time.
Ipv4PrefixLength2	IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32	Only when MatchType is 4, Ipv4PrefixLength2 can be configured as the destination information. Ipv4PrefixLength2 And AddressOMSName 2 cannot be configured at the same time.
PortList2	The port list of	N/A	String.	Only when

Column name	Column description	Column type	Data type and restrictions	Remarks
	the match criterion			MatchType is 4, PortList2 can be configured as the destination information. PortList2 and PortOMSName2 cannot be configured at the same time.
AddressOMSName2	Name of the address object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, AddressOMSName2 can be configured as the destination information. AddressOMSName2 and Ipv4Address2 cannot be configured at the same time.
PortOMSName2	Name of the port object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, PortOMSName2 can be configured as the destination information. PortOMSName2 and PortList2 cannot be configured at the same time.

WAAS/PolicyInformation

This table contains information about WAAS policy information settings.

XML structure

```
<WAAS>
  <PolicyInformation>
    <Information>
      <PolicyName></PolicyName>
      <ClassName></ClassName>

      <DecodeTimeout></DecodeTimeout>
      <BlockSize></BlockSize>
      <SampleInterval></SampleInterval>
      <ProbeAgingTime></ProbeAgingTime>
      <LossRecoveryType></LossRecoveryType>
    </Information>
  </PolicyInformation>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	PolicyInformation
Table type	Multi-instance table
Row name	Information
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	index	String. Length: 1 to 63 characters.	
ClassName	Class Name	index	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OptAction	The optimize action	N/A	Unsigned integer. Value range: 0 to 10 0: No optimize action (default) 1:TFO 2:DRE 3:TFO and DRE 4:LZ 5:TFO and LZ 6:DRE and LZ 7:TFO and DRE and LZ 8:By Pass 9:Packet-Dup 10:FEC	N/A
BeforeClass	Insert a class before this class.	N/A	String. Length: 1 to 63 characters.	When this class is deleted, the class before it is moved to the end.
PacketLossRate	The packet loss ratio	N/A	Unsigned integer. Value range: 1 to 50 Default: 35	N/A
EncodeTimeout	The encode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms Default: 500 ms	N/A
DecodeTimeout	The decode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms Default: 800 ms	N/A
BlockSize	The number of packets to encode	N/A	Unsigned integer. Value range: 1 to 150 Default: 20	N/A
SampleInterval	Sampling interval value	N/A	Unsigned integer. Value range: 1 to 1000 ms Default: 100 ms	N/A
ProbeAgingTime	Probe aging time	N/A	Unsigned integer. Value range: 0 to 60 seconds	The value 0 means no aging.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 1 second	
LossRecovery Type	FEC type	N/A	Unsigned integer. 0: determined-fec (default) 1: adaptive-fec	N/A

WAAS/PolicyRTPInformation

This table contains information about RTP settings in a WAAS policy.

XML structure

```
<WAAS>
  <PolicyRTPInformation>
    <Information>
      <PolicyName></PolicyName>
      <ClassName></ClassName>
      <OptAction></OptAction>

      <LossRecoveryType></LossRecoveryType>
    </Information>
  </PolicyRTPInformation>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	PolicyRTPInformation
Table type	Multi-instance table
Row name	Information
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	index	String.	PolicyName
ClassName	Class name	index	String. Length: 1 to 63 characters.	N/A
OptAction	The optimization action	N/A	Unsigned integer. RTP optimization 0: No optimization (default) 1: FEC optimization	N/A
BeforeClass	Insert a class before this class.	N/A	String.	When this class is deleted, the class before it is moved to the end.
PacketLossRate	The packet loss ratio	N/A	Unsigned integer. Value range: 1 to 50 Default: 35	N/A
EncodeTimeout	The encode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms Default: 500 ms	N/A
DecodeTimeout	The decode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms Default: 800 ms	N/A
BlockSize	The number of packets to encode	N/A	Unsigned integer. Value range: 1 to 150 Default: 20	N/A
SampleInterval	Sampling interval value	N/A	Unsigned integer. Value range: 1 to 1000 ms Default: 100 ms	N/A
ProbeAgingTime	Probe aging time	N/A	Unsigned integer. Value range: 0 to 60 seconds Default: 1 second	The value 0 means no aging.

Column name	Column description	Column type	Data type and restrictions	Remarks
LossRecovery Type	FEC type	N/A	Unsigned integer. 0: determined-fec (default) 1: adaptive-fec	N/A

WAAS/PolicyInInterfaces

This table contains information about WAAS policyInInterfaces settings.

XML structure

```
<WAAS>
  <PolicyInInterfaces>
    <PolicyInInterface>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </PolicyInInterface>
  </PolicyInInterfaces>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	PolicyInInterfaces
Table type	Multi-instance table
Row name	PolicyInInterface
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifIndex	Which interface is to bind was	index	Unsigned integer.	Some versions support interface

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy			name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy Name	N/A	String. Length: 1 to 63 characters.	

WAAS/WAASAsymmetric

This table contains information about WAAS asymmetric settings.

XML structure

```
<WAAS>
  <WAASAsymmetric>
    <Asymmetric>
    </Asymmetric>
  </WAASAsymmetric>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASAsymmetric
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Asymmetric	Whether to enable asymmetric mode.	N/A	Boolean: • **true** • **false**(default)	N/A

WAAS/WAASDRE

This table contains information about WAAS DRE settings.

XML structure

```
<WAAS>
  <WAASDRE>
    <Agingtime></Agingtime>
    <OffStep></OffStep>
  </WAASDRE>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASDRE
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Agingtime	Aging time of DRE cache	N/A	Unsigned integer. Value range: 10 to 60	Unit: Minutes

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: No Aging	
OffStep	DRE match offset step	N/A	Unsigned integer. Value range: 1 to 4 • 1: Normal (default) • 2: General • 3: Fast • 4: Fastest	N/A

WAAS/WAASLogCompress

This table contains information about WAAS UDP log compression settings.

XML structure

```
<WAAS>
  <WAASLogCompress>
    <LogCompress>
      <Ipv4Address></Ipv4Address>
      <Port></Port>
    </LogCompress>
  </WAASLogCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASLogCompress
Table type	Multi-instance table
Row name	LogCompress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	Destination IPv4 address of logs	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Port	Destination port of logs	N/A	Unsigned integer. Value range: 1 to 65535	N/A

WAAS/WAASTcpCompress

This table contains information about WAAS Tcp packet compression settings.

XML structure

```
<WAAS>
  <WAASTcpCompress>
    <TcpCompress>
      <Ipv4Address></Ipv4Address>
      <Port></Port>
    </TcpCompress>
  </WAASTcpCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASTcpCompress
Table type	Multi-instance table
Row name	TcpCompress
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	Destination IPv4 address of logs	index	String, dotted decimal notation.	Example: 1.1.1.1.
Port	Destination port of logs	index	Unsigned integer. Value range: 1 to 65535	N/A

WAAS/WAASLZCompress

This table contains information about WAAS LZ compression settings.

XML structure

```
<WAAS>
  <WAASLZCompress>
    <LZCompress>
      <AddressType></AddressType>
      <ProtocolType></ProtocolType>
      <AddressOMSName></AddressOMSName>
      <PortOMSName></PortOMSName>
      <ACLNumber></ACLNumber>
      <ACLName></ACLName>
    </LZCompress>
  </WAASLZCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASLZCompress

```

Table description

Item	Description
Feature name	WAAS
Table name	WAASStatus
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CongestionWindow	Congestion window size	N/A	Unsigned integer. Value range: 1 to 10. Default: 2.	N/A
ReceiveBuffer	The receive buffer size	N/A	Unsigned integer. Value range: 32 to 16384 Default: 64.	The unit is KB.
KeepAliveStatus	Whether to send keepalive packet	N/A	Boolean: • true • false	
DREStatus	Whether to use DRE optimize	N/A	Boolean: • true • false	
LZStatus	Whether to use LZ optimize	N/A	Boolean: • true • false	
BlackListStatus	Whether to enable denylist		Boolean: • true • false	
BlacklistHoldTime	The hold time of denylist		Unsigned integer. Value range: 1 to 10080 Default: 5.	
CongestionMethod	TCP congestion control method to use		Unsigned integer. Value range: 0 and 3. • 0: RENO • 1: BIC • 2: BBRv1 • 3: BBRv2	
ConnectLimit	Maximum number of connections		Unsigned integer. Value range: 1000 to 4294967295. Default: 10000.	

Column name	Column description	Column type	Data type and restrictions	Remarks
CompressNumber	Number of logs to be compressed	N/A	Unsigned integer. Value range: 2 to 20 Default: 5	To set the number of logs to be compressed, you must also enable log compression.
CompressStatus	Whether to enable log compression or decompression	N/A	Enumeration. • 0: Both disabled • 1: Compress • 2: Decompress	N/A
TCPCompressNumber	Number of TCP packets to be compressed	N/A	Unsigned integer. Value range: 2 to 20 Default: 5	To set the number of logs to be compressed, you must also enable TCP packet compression.
TCPCompressStatus	Whether to enable tcp packet compression or decompression	N/A	Enumeration. • 0: Both disabled • 1: Compress • 2: Decompress	N/A
ConnectWaitTime	Maximum waiting time of connections	N/A	Unsigned integer. Value range: 0 to 75 seconds.	0 means not configured.

Table name	ClassMatchCriterion
Table type	Multi-instance table
Row name	MatchCriterion
Restrictions	Only index column is supported when a match criterion is deleted.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Class Name	index	String. Length: 1 to 63 characters.	N/A
MatchID	The identify of the match criterion	index	Unsigned integer. Value range: 1 to 65535	N/A
MatchType	Match Type	N/A	Unsigned integer. 1:Match the source ip address 2:Match the destination ip address 3:Match any 4: Match the source and destination IP addresses 5: Match ACL rules	N/A
IPType	The Match criterion is for IPv4 or IPv6	N/A	Unsigned integer. 2: IPv4 10:IPv6	N/A
ProtocolType	Protocol type of the match criterion	N/A	Unsigned integer. 6:TCP 17: UDP	N/A
Ipv4Address	Ipv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4Address and AddressOMSName

Column name	Column description	Column type	Data type and restrictions	Remarks
				cannot be configured at the same time. When MatchType is 4, Ipv4Address is configured as the source information.
Ipv4PrefixLength	Ipv4 prefix length	N/A	Unsigned integer. Value range: 0 to 32	Ipv4PrefixLength and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv4PrefixLength is configured as the source information.
Ipv6Address	The Ipv6 address of the match rule	N/A	Hexadecimalstring,colon-separated.	Example: 2:2::2:2. Ipv6Address and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv6Address is configured as the source information.
Ipv6PrefixLength	Ipv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128	Ipv6PrefixLength and AddressOMSName cannot be configured at the same time. When MatchType is 4, Ipv6PrefixLength is configured as the source information.
PortList	The port list of	N/A	String.	PortList and

Column name	Column description	Column type	Data type and restrictions	Remarks
	the match criterion			PortOMSName cannot be configured at the same time. When MatchType is 4, PortList is configured as the source information.
AddressOMSName	Name of the address object group	N/A	String. Length: 1 to 63 characters.	AddressOMSName and Ipv4Prefix cannot be configured at the same time. When MatchType is 4, AddressOMSName is configured as the source information.
PortOMSName	Name of the port object group	N/A	String. Length: 1 to 63 characters.	PortOMSName and PortList cannot be configured at the same time. When MatchType is 4, PortOMAName is configured as the source information.
Ipv4Address2	IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only when MatchType is 4, Ipv4Address2 can be configured as the destination information. Ipv4Address2 and AddressOMSName 2 cannot be configured at the same time.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength2	IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32	Only when MatchType is 4, Ipv4PrefixLength2 can be configured as the destination information. Ipv4PrefixLength2 And AddressOMSName2 cannot be configured at the same time.
Ipv6Address2	IPv6 address	N/A	String, dotted decimal notation.	Example:2:2::2:2. Only when MatchType is 4, Ipv6Address2 can be configured as the destination information. Ipv6Address2 and AddressOMSName2 cannot be configured at the same time.
Ipv6PrefixLength2	IPv6 prefix length	N/A	Unsigned integer. Value range: 0 to 128	Only when MatchType is 4, Ipv6PrefixLength2 can be configured as the destination information. Ipv6PrefixLength2 And AddressOMSName2 cannot be configured at the same time.
PortList2	The port list of the match	N/A	String.	Only when MatchType is 4,

Column name	Column description	Column type	Data type and restrictions	Remarks
	criterion			PortList2 can be configured as the destination information. PortList2 and PortOMSName2 cannot be configured at the same time.
AddressOMSName2	Name of the address object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, AddressOMSName2 can be configured as the destination information. AddressOMSName2 and Ipv4Address2 cannot be configured at the same time.
PortOMSName2	Name of the port object group	N/A	String. Length: 1 to 63 characters.	Only when MatchType is 4, PortOMSName2 can be configured as the destination information. PortOMSName2 and PortList2 cannot be configured at the same time.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
ACLName	ACL name	N/A	String. Length: 1 to 63 characters.	N/A

WAAS/RTPClassMatchCriterion

This table contains information about WAAS RTP class match criterion settings.

XML structure

      <LossRecoveryType></LossRecoveryType>
    </Information>
  </PolicyInformation>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS

Table name	PolicyInformation
Table type	Multi-instance table
Row name	Information
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	index	String. Length: 1 to 63 characters.	
ClassName	Class Name	index	String. Length: 1 to 63 characters.	N/A
OptAction	The optimize action	N/A	Unsigned integer. Value range: 0 to 10 0: No optimize action (default) 1:TFO 2:DRE 3:TFO and DRE 4:LZ 5:TFO and LZ 6:DRE and LZ 7:TFO and DRE and LZ 8:By Pass 9:Packet-Dup 10:FEC	N/A
BeforeClass	Insert a class before this class.	N/A	String. Length: 1 to 63 characters.	When this class is deleted, the class before it is moved to the end.
PacketLossRate	The packet loss ratio	N/A	Unsigned integer. Value range: 1 to 50 Default: 35	N/A
EncodeTimeout	The encode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 500 ms	
DecodeTimeout	The decode timeout value	N/A	Unsigned integer. Value range: 30 to 1000 ms Default:800ms	N/A
BlockSize	The number of packets to encode	N/A	Unsigned integer. Value range: 1 to 150 Default: 20	N/A
SampleInterval	Sampling interval value	N/A	Unsigned integer. Value range: 1 to 1000 ms Default: 100 ms	N/A
ProbeAgingTime	Probe aging time	N/A	Unsigned integer. Value range: 0 to 60 seconds Default: 1 second	The value 0 means no aging.
LossRecoveryType	FEC type	N/A	Unsigned integer. 0: determined-fec (default) 1: adaptive-fec	N/A

WAAS/PolicyRTPInformation

This table contains information about RTP settings in a WAAS policy.

XML structure

Table description

Item	Description
Feature name	WAAS
Table name	IPv4SessionInfo
Table type	Single-instance table
Row name	IPv4Session
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID	index	Unsigned integer. Value range: 0 to 65534.	N/A
PeerID	Bridge MAC address of the peer device	index	String.	Example:0886-3f18-0100
SourceIPv4	The source IPv4 address	index	String. dotted decimal notation.	Example: 1.1.1.1.
SourcePort	The source port	index	Unsigned short. Value range: 1 to 65535.	N/A
DestinationIPv4	The destination IPv4 address	index	String. dotted decimal notation.	Example: 1.1.1.1.
DestinationPort	The destination port	index	Unsigned short. Value range: 1 to 65535.	N/A
StartTime	Start time	N/A	String.	N/A
LANInterface	The interface name of LAN side	N/A	String. Length: 0 to 24 characters.	N/A
WANInterface	The interface name of WAN side	N/A	String. Length: 0 to 24 characters.	N/A
ConfiguredPolicy	The configured policy	N/A	Unsigned integer. Value range: 1 to 7.	N/A
NegotiatePolicy	The negotiated policy	N/A	Unsigned integer. Value range: 1 to 7.	N/A
LToWOriginal	Original bytes from LAN side to WAN side	N/A	Unsigned integer.	N/A
LToWOptimized	Optimized bytes from LAN side	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface to WAN side interface			
WToLOriginal	Original bytes from WAN side interface to LAN side interface	N/A	Unsigned integer.	N/A
WToLOptimized	Optimized bytes from WAN side interface to LAN side interface	N/A	Unsigned integer.	N/A
LZEncodeInputBytesNum	The number of input bytes on the encoding end for LZ compression	N/A	Unsigned integer.	N/A
LZEncodeOutputBytesNum	The number of output bytes on the encoding end for LZ compression	N/A	Unsigned integer.	N/A
LZEncodeByPassBytesNum	The number of bypass bytes on the encoding end for LZ compression	N/A	Unsigned integer.	N/A
LZEncodeSpaceSaved	Space saved on the encoding end for LZ compression	N/A	Integer.	N/A
LZEncodeAverageLatency	Average latency on the encoding end for LZ compression	N/A	Unsigned integer.	N/A
LZDecodeInputBytesNum	The number of input bytes on the decoding end for LZ	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	compression			
LZDecodeOutputBytesNum	The number of output bytes on the decoding end for LZ compression	N/A	Unsigned integer.	N/A
LZDecodeByPassBytesNum	The number of bypass bytes on the decoding end for LZ compression	N/A	Unsigned integer.	N/A
LZDecodeSpaceSaved	Space saved on the decoding end for LZ compression	N/A	Integer.	N/A
LZDecodeAverageLatency	Average latency on the decoding end for LZ compression	N/A	Unsigned integer.	N/A
DREEncodeInputBytesNum	The number of input bytes on the encoding end for DRE	N/A	Unsigned integer.	N/A
DREEncodeOutputBytesNum	The number of output bytes on the encoding end for DRE	N/A	Unsigned integer.	N/A
DREEncodeByPassBytesNum	The number of bypass bytes on the encoding end for DRE	N/A	Unsigned integer.	N/A
DREEncodeSpaceSaved	Space saved on the encoding end for DRE	N/A	Integer.	N/A
DREEncodeAverageLatenc	Average latency on the encoding	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
y	end for DRE			
DREDecodeInputBytesNum	The number of input bytes on the decoding end for DRE	N/A	Unsigned integer.	N/A
DREDecodeOutputBytesNum	The number of output bytes on the decoding end for DRE	N/A	Unsigned integer.	N/A
DREDecodeByPassBytesNum	The number of bypass bytes on the decoding end for DRE	N/A	Unsigned integer.	N/A
DREDecodeSpaceSaved	Space saved on the decoding end for DRE	N/A	Integer.	N/A
DREChunkMiss	Cumulative times of chunk miss for DRE	N/A	Unsigned integer.	N/A
DRECollision	Cumulative times of collision for DRE	N/A	Unsigned integer.	N/A
DREDecodeAverageLatency	Average latency on the decoding end for DRE	N/A	Unsigned integer.	N/A

Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Asymmetric	Whether to enable asymmetric mode.	N/A	Boolean: • **true** • **false**(default)	N/A

WAAS/WAASDRE

This table contains information about WAAS DRE settings.

XML structure

```
<WAAS>
  <WAASDRE>
    <Agingtime></Agingtime>
    <OffStep></OffStep>
  </WAASDRE>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASDRE
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Agingtime	Aging time of DRE cache	N/A	Unsigned integer. Value range: 10 to 60 Default: No Aging	Units: Minute
OffStep	DRE match offset step	N/A	Unsigned integer. Value range: 1 to 4 • 1: Normal (default) • 2: General • 3: Fast • 4: Fastest	N/A

WAAS/WAASLogCompress

This table contains information about WAAS UDP log compression settings.

XML structure

```
<WAAS>
  <WAASLogCompress>
    <LogCompress>
      <Ipv4Address></Ipv4Address>
      <Port></Port>
    </LogCompress>
  </WAASLogCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASLogCompress
Table type	Multi-instance table
Row name	LogCompress
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	Destination IPv4 address of logs	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Port	Destination port of logs	N/A	Unsigned integer. Value range: 1 to 65535	N/A

WAAS/WAASTcpCompress

This table contains information about WAAS Tcp packet compression settings.

XML structure

```
<WAAS>
  <WAASTcpCompress>
    <TcpCompress>
```

```
      <Ipv4Address></Ipv4Address>
      <Port></Port>
    </TcpCompress>
  </WAASTcpCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASTcpCompress
Table type	Multi-instance table
Row name	TcpCompress
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	Destination IPv4 address of logs	index	String, dotted decimal notation.	Example: 1.1.1.1.
Port	Destination port of logs	index	Unsigned integer. Value range: 1 to 65535	N/A

WAAS/WAASLZCompress

This table contains information about WAAS LZ compression settings.

XML structure

```
<WAAS>
  <WAASLZCompress>
    <LZCompress>
      <AddressType></AddressType>
      <ProtocolType></ProtocolType>
      <AddressOMSName></AddressOMSName>
      <PortOMSName></PortOMSName>
```

```
      <ACLNumber></ACLNumber>
      <ACLName></ACLName>
    </LZCompress>
  </WAASLZCompress>
</WAAS>
```

Table description

Item	Description
Feature name	WAAS
Table name	WAASLZCompress
Table type	Multi-instance table
Row name	LZCompress
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	IP version	index	Unsigned integer. 2: IPv4	N/A
ProtocolType	Protocol type	index	Unsigned integer. 1: TCP 2: UDP	N/A
AddressOMSName	Name of the address object group	N/A	String. Length: 1 to 63 characters.	N/A
PortOMSName	Name of the port object group	N/A	String. Length: 1 to 63 characters.	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
ACLName	ACL name	N/A	String. Length: 1 to 63 characters.	N/A

WAF/SignatureManualUpgrade

This table contains information about WAF signature manual upgrade.

XML structure

```
<WAF>
  <SignatureManualUpgrade>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrade>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	SignatureManualUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the upgrade signature file	N/A	String, case-insensitive. For a remote file, Length: 1 to 255 characters. For a local file, Length: 1 to 127 characters.	URL
Location	Location of the file	N/A	Enumeration: • **0**—Local • **1**—Remote	If Location is set to 0, the device deletes the signature file when the signature library update is completed.

WAF/SignatureAutoUpgradeNow

This table contains information about immediate WAF signature auto upgrading.

XML structure

```
<WAF>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</WAF>
```

</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the WAF policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be **default**.
FilterDirection	Traffic direction to which the WAF signature applies	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2—**Both**.**	N/A
FilterSeverity	Severity level of the WAF signature	N/A	Unsigned integer: • **1**—Low. • **2**—Medium. • **4**—High. • **8—**Critical**.**	To specify multiple severity levels, set the value to the sum of the severity level IDs. For example, set the value to 3 to specify severity levels low (1) and medium (2).
FilterAction	Default action of the WAF signature	N/A	Unsigned integer: • **1**—Block. • **2**—Drop. • **4**—Permit. • **8—**Reset**.**	To specify multiple actions, set the value to the sum of the action IDs. For example, set the value to 3 to specify actions block (1) and drop (2).
ProtectTarget	List of protected targets	Data structure	Members include: • TargetId. • SubTargetId.	N/A
TargetId	ID of the protected target	N/A	Unsigned integer.	A protected target list can contain an unlimited number of protected targets obtained from the WAF signature file.
SubTargetId	ID of the protected subtarget	N/A	Unsigned integer.	A protected target list can contain an unlimited number of subtargets.
ProtectCategory	List of attack categories	Data structure	Members include: • CategroyId. • SubCategoryId.	N/A
CategoryId	ID of the attack category	N/A	Unsigned integer.	An attack category list can contain an unlimited number of attack categories.
SubCategoryId	ID of the attack subcategory	N/A	Unsigned integer.	An attack category can contain an unlimited number of subcategories obtained from the WAF signature file.
Action	Action applied to matching	N/A	Enumeration: • **0**—Block.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	packets		• **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect. • **5—**Default**.**	
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A

WAF/PolicyOnProfile

This table contains information about the WAF policy applied to a DPI application profile.

XML structure

```
<WAF>
  <PolicyOnProfile>
    <profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </profile>
  </PolicyOnProfile>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	PolicyOnProfile
Table type	Multi-instance table
Row name	profile
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the DPI	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	application profile		Length: 1 to 100 characters.	
PolicyName	Name of the WAF policy applied to the DPI application profile	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

WAF/WebSite

This table contains information about website in a WAF policy.

XML structure

```
<WAF>
  <WebSites>
    <WebSite>
      <PolicyName></PolicyName>
      <Name></Name>
      <IP></IP>
      <DomainName></DomainName/>
      <Port></Port/>
    <WebSite>
  </WebSites>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	WebSites
Table type	Multi-instance table
Row name	WebSite
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the WAF policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be **default**.
Name	Name of the	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	website		Length: 1 to 63 characters.	
IP	IP address of website	N/A	String, case insensitive Length: 1 to 46 characters	N/A
DomainName	DomainName of the website	N/A	String, case insensitive Length: 1 to 255 characters	N/A
Port	Port of website	N/A	Unsigned integer.	N/A

WAF/PolicyExceptionSigs

This table contains information about exception signatures in a WAF policy..

XML structure

```
<WAF>
  <PolicyExceptionSigs>
    <PolicyExceptionSig>
      <PolicyName></PolicyName>
      <Userdefined></Userdefined>
      <SigID></SigID>
      <Enabled></Enabled>
      <Action></Action>
      <Logging></Logging>
      <Capture></Capture>
    </PolicyExceptionSig>
  </PolicyExceptionSigs>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	PolicyExceptionSigs
Table type	Multi-instance table
Row name	PolicyExceptionSig
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	WAF policy		Length: 1 to 63 characters.	
Userdefined	Whether or not the WAF signature is user defined	Index	Boolean: • true. • false.	N/A
SigID	ID of the WAF signature	Index	Unsigned integer. Value range: 1 to 4294967295.	The value is obtained from the WAF signature file.
Enabled	Whether or not the WAF signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the WAF signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect. • **5**—Default.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A

WAF/SignatureAutoUpgrade

This table contains WAF signature library auto update settings.

XML structure

```
<WAF>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</WAF>
```

Table description

Item	Description
Feature name	WAF

Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not WAF signature library auto update is enabled	N/A	Boolean: • true. • false (default).	N/A
StartTime	Time when WAF signature library auto update starts	N/A	Time Format: HH:MM:SS	By default, WAF signature library auto update starts at 02:00:00 every day.
Type	Whether WAF signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: • **0**—Weekly. • **1**—Daily.	By default, WAF signature library auto update occurs on a daily basis.
Day	Days of the week on which WAF signature library auto update occurs	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only **Type** is set to **0**.

WAF/ActionDefaultParameters

This table contains WAF action parameter settings.

XML structure

```
<WAF>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration: • **1**—Block. • **2**—Capture. • **3**—Logging. • **4**—Redirect. • **5**—Mail.	N/A
ParameterName	Parameter name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The WAF action parameters are defined in the DIM module.

</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the WAF policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value can be **default**.
FilterDirection	Traffic direction to which the WAF signature applies	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2—**Both.	N/A
FilterSeverity	Severity level of the WAF signature	N/A	Unsigned integer: • **1**—Low. • **2**—Medium. • **4**—High. • **8—**Critical**.**	To specify multiple severity levels, set the value to the sum of the severity level IDs. For example, set the value to 3 to specify severity levels low (1) and medium (2).
FilterAction	Default action of the WAF signature	N/A	Unsigned integer: • **1**—Block. • **2**—Drop. • **4**—Permit. • **8—**Reset.	To specify multiple actions, set the value to the sum of the action IDs. For example, set the value to 3 to specify actions block (1) and drop (2).
ProtectTarget	List of protected targets	Data structure	Members include: • TargetId. • SubTargetId.	N/A
TargetId	ID of the protected target	N/A	Unsigned integer.	A protected target list can contain an unlimited number of protected targets obtained from the WAF signature file.
SubTargetId	ID of the protected subtarget	N/A	Unsigned integer.	A protected target list can contain an unlimited number of subtargets.
ProtectCategory	List of attack categories	Data structure	Members include: • CategroyId. • SubCategoryId.	N/A
CategoryId	ID of the attack category	N/A	Unsigned integer.	An attack category list can contain an unlimited number of attack categories.
SubCategoryId	ID of the attack subcategory	N/A	Unsigned integer.	An attack category can contain an unlimited number of subcategories obtained from the WAF signature file.
Action	Action applied to	N/A	Enumeration:	N/A

	matching packets.		• **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect. • **5—**Default.	
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A

WAF/PolicyOnProfile

This table contains information about the WAF policy applied to a DPI application profile.

XML structure

```
<WAF>
  <PolicyOnProfile>
    <profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </profile>
  </PolicyOnProfile>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	PolicyOnProfile
Table type	Multi-instance table
Row name	profile
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the DPI application profile	Index	String, case-insensitive. Length: 1 to 100 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the WAF policy applied to the DPI application profile	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

WAF/WebSite

This table contains information about WebSite in a WAF policy.

XML structure

```
<WAF>
  <WebSites>
    <WebSite>
      <PolicyName></PolicyName>
      <Name></Name>
      <IP></IP>
      <DomainName></DomainName/>
      <Port></Port/>
    <WebSite>
  </WebSites>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	WebSites
Table type	Multi-instance table
Row name	WebSite
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the WAF policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value can be **default**.
Name	Name of the website	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IP	IP address of the website	N/A	String, case insensitive Length: 1 to 46 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	DomainName of the website	N/A	String, case insensitive Length: 1 to 255 characters	N/A
Port	Port of the website	N/A	Unsigned integer.	N/A

WAF/ProtectTarget

This table contains protected target information obtained from the WAF signature file.

XML structure

```
<WAF>
  <ProtectTarget>
    <Target>
      <TargetId></TargetId>
      <TargetName></TargetName>
      <ProtectSubTarget>
        <SubTargetId></SubTargetId>
        <SubTargetName></SubTargetName>
      </ProtectSubTarget>
    </Target>
  </ProtectTarget>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	ProtectTarget
Table type	Multi-instance table
Row name	Target
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetId	ID of the protected target	Index	Unsigned integer.	N/A
TargetName	Name of the protected target	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtectSubTarget	List of subtargets contained in the protected target	Data structure	Members include: • SubProtectionId. • SubProtectionName.	A protected target can contain an unlimited number of subtargets.
SubTargetId	ID of the subtarget	N/A	Unsigned integer.	N/A
SubTargetName	Name of the subtarget	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

WAF/ProtectCategory

This table contains protected category information obtained from the WAF signature file.

XML structure

```
<WAF>
  <ProtectCategory>
    <Category>
      <CategoryId></CategoryId>
      <CategoryName></CategoryName>
      <ProtectSubCategory>
        <SubCategoryId></SubCategoryId>
        <SubCategoryName></SubCategoryName>
      </ProtectSubCategory>
    </Category>
  </ProtectCategory>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	ProtectCategory
Table type	Multi-instance table
Row name	Category
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryId	ID of the attack category	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name of attack category	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProtectSubCategory	List of attack subcategories contained in the attack category	Data structure	Members include: • SubCategoryId. • SubCategoryName.	An attack category can contain an unlimited number of attack subcategories.
SubCategoryId	ID of the attack subcategroy	N/A	Unsigned integer.	N/A
SubCategory Name	Name of the attack subcategory	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

WAF/Signatures

This table contains the WAF signature information.

XML structure

```
<WAF>
  <Signatures>
    <Signature>

Table description

Item	Description
Feature name	WAF
Table name	Signatures
Table type	Multi-instance table
Row name	Signature
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SigID	ID of the signature	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the WAF signature file.
UserDefined	Whether or not the WAF signature is user defined	N/A	Boolean: • true. • false.	N/A
SigName	Name of the signature	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value is obtained from the WAF signature file.
SigDescription	Description of the signature	N/A	String, case-insensitive. Length: 1 to 1023 characters.	The value is obtained from the WAF signature file.
PublishTime	Time when the signature was published	N/A	String, case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the WAF signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the WAF signature file.
Protection	Protected target of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
SubProtection	Protected subtarget of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
Severity	Severity level of the signature	N/A	Enumeration: • **1**—Critical. • **2**—High. • **3**—Medium.	The value is obtained from the WAF signature file.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **4**—Low.	
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2**—Both.	The value is obtained from the WAF signature file.
Category	Attack category of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
CVEList	CVE list	Data structure	Members include: • CVE.	N/A
CVE	CVE ID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
BIDList	BID list	Data structure	Members include: • BID.	N/A
BID	BID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
MSList	MS list	Data structure	Members include: • MS.	N/A
MS	MS of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
Enabled	Whether or not the WAF signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the WAF signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit. • **3**—Reset. • **4**—Redirect.	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A
Solution	Solution to the attack	N/A	String, case-insensitive. Length: 1 to 511 characters.	The value is obtained from the WAF signature file.
AttackFunction	Subcategory of the signature	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

WAF/PolicyExceptionSigs

This table contains information about exception signatures in a WAF policy.

XML structure

```
<WAF>
  <PolicyExceptionSigs>
    <PolicyExceptionSig>

Table type	MultiSingle-instance table
Row name	SignaturePage
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of the current user	Index	Unsigned integer.	N/A
Position	Position of the signature on the entire signature list.	Index	Unsigned integer.	N/A
TotalCount	Total number of signatures	N/A	Unsigned integer.	If the query function is used, the total number of signatures in the query results is displayed.
SigID	ID of the signature	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the WAF signature file.
SigName	Name of the signature	N/A	String: case-insensitive. Length: 1 to 127 characters.	The value is obtained from the WAF signature file.
UserDefined	Whether or not the WAF signature is user defined	N/A	Boolean: • true. • false.	N/A
SigDescription	Description of the signature	N/A	String: case-insensitive. Length: 1 to 1023 characters.	The value is obtained from the WAF signature file.

Column name	Column description	Column type	Data type and restrictions	Remarks
PublishTime	Time when the signature was published	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the WAF signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the WAF signature file.
Protection	Protected target of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
SubProtection	Protected subtarget	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
Severity	Severity level of the signature	N/A	Enumeration: • **1**—Critical. • **2**—High. • **3**—Medium. • **4**—Low.	The value is obtained from the WAF signature file.
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: • **0**—Client to server. • **1**—Server to client. • **2**—Both.	The value is obtained from the WAF signature file.
Category	Attack category of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the WAF signature file.
CVEList	CVE List	Data structure	Members include: • CVE.	N/A
CVE	CVE-ID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
BIDList	BID list	Data structure	Members include: • BID.	N/A
BID	BID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
MSList	MS list	Data structure	Members include: • MS.	N/A
MS	MS of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the WAF signature file.
Enabled	Whether or not the signature is enabled	N/A	Boolean: • true. • false.	N/A
Action	Action to take on packets matching the signature	N/A	Enumeration: • **0**—Block. • **1**—Drop. • **2**—Permit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **3**—Reset. • **4**—Redirect.	
Logging	Whether or not to log the matching packets	N/A	Boolean: • true. • false.	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: • true. • false.	N/A
Solution	Solution to the attack	N/A	String: case-insensitive. Length: 1 to 511 characters.	The value is obtained from the WAF signature file.
AttackFunction	Subcategory of the signature	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A

WAF/SignatureFileInfos

This table contains WAF signature file information.

XML structure

```
<WAF>
  <SignatureFileInfos>
    <FileInfo>
      <FileStatus></FileStatus>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Description></Description>
    </FileInfo>
  </SignatureFileInfos>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	SignatureFileInfos
Table type	MultiSingle-instance table
Row name	FileInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileStatus	Status of the WAF signature file	Index	Enumeration: • **1**—Current. • **2**—Last. • **3**—Factory default.	N/A
Version	Version of the WAF signature file	N/A	String, case-insensitive. Length: 1 to 31 characters.	Example: 1.0.36.
PublishedTime	Time when the signature file was published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	The local time zone is used.
Description	Description of the WAF signature file	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

WAF/SignatureAutoUpgrade

This table contains WAF signature library auto update settings.

XML structure

```
<WAF>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not WAF signature library auto update is enabled	N/A	Boolean: • true. • false (default).	N/A
StartTime	Time when WAF signature library auto update starts	N/A	Time. Format: HH:MM:SS.	By default, WAF signature library auto update starts at 02:00:00 every day.
Type	Whether WAF signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: • **0**—Weekly. • **1**—Daily.	By default, WAF signature library auto update occurs on a daily basis.
Day	Days of the week on which WAF signature library auto update occurs	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only **Type** is set to **0**.

WAF/SignatureUpgradePercentage

This table contains the WAF signature library update progress information.

XML structure

```
<WAF>
  <SignatureUpgradePercentage>
    <Percentage/>
    <ErrorCode/>
  </SignatureUpgradePercentage>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	SignatureUpgradePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Progress of the signature library update operation, in percentages	N/A	Unsigned integer. Value range: 0 to 100.	Any value outside the valid range indicates that an error has occurred.
ErrorCode	Used to describe the error information in the upgrade process	N/A	Enumeration: • **0**—success. • **1**—License check error. • **2**—SigFile check error. • **3**—Server connect error. • **4**—Space not enough.	N/A

WAF/ActionDefaultParameters

This table contains WAF action parameter settings.

XML structure

```
<WAF>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</WAF>
```

Table description

Item	Description
Feature name	WAF
Table name	ActionDefaultParameters
Table type	MultiSingle-instance table
Row name	ActionDefaultParameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• **1**—Block. • **2**—Capture. • **3**—Logging. • **4**—Redirect. • **5**—Mail.	
ParameterName	Parameter name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The WAF action parameters are defined in the DIM module.

Row name	WebServer
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of a remote Web authentication server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddress	IPv4 address of the remote Web authentication server	N/A	String, dotted decimal notation. Default is not configured.	N/A
IPv6Address	IPv6 address of the remote Web authentication server	N/A	String, dotted decimal notation. Default is not configured.	N/A
Url	URL of the remote Web authentication server	N/A	String. Length: 1 to 256 characters. Default is not configured.	N/A
TrackId	Track ID for the Web authentication server URL	N/A	Unsigned integer. Value range: 1 to 1024.	The column could be defined only when the Url exists.
ServerType	Type of the remote Web authentication server	N/A	Enumeration: OAuth.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UrlUnescapeChars	Special characters that are not escaped in the redirect URL	N/A	String. Length: 1 to 16 characters. Default: Not configured.	N/A

WebAuth/UrlParams

This table contains information about parameters in the URL of a Web authentication server.

XML structure

```
<WebAuth>
  <UrlParams>
    <UrlParam>
      <ServerName></ServerName>
      <ParamName></ParamName>
      <ParamType></ParamType>
      <SelfDefValue></SelfDefValue>
    </UrlParam>
  </UrlParams>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	UrlParams
Table type	Multi-instance table
Row name	UrlParam
Restrictions	Row creation is allowed only when the web-server exists.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of a Web authentication server	Index	String. case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ParamName	Parameter name of the URL	Index	String. Length: 1 to 32 characters.	The column configures the parameter name carried in the redirect URL.
ParamType	Parameter type	N/A	Enumeration: • **0**—source-address. • **1**—source-mac. • **2**—original-url. • **3**—selfdefine.	The column must be defined.
SelfDefValue	User-defined parameter	N/A	String. Legth: 1 to 256 Characters. Default is not configured.	The column takes effect when ParamType is selfdefine.

WebAuth/Interfaces

This table contains Web authentication configuration on an interface.

XML structure

```
<WebAuth>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>

      <MaxAuthFailUser></MaxAuthFailUser>
      <AuthFailVlan></AuthFailVlan>
      <OfflineDetectInterval></OfflineDetectInterval>
      <MultiVLAN></MultiVLAN>
      <ApplySecondaryServer></ApplySecondaryServer>
      <ApplyMacTriggerServer></ApplyMacTriggerServer>
      <MacVlanEnable></MacVlanEnable>
      <AuthServerUnReachEscape></AuthServerUnReachEscape>
    </Interface>
  </Interfaces>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in *Ifmgr NETCONF XML API Configuration Reference*.
AuthEnable	Enables the Web authentication function	N/A	Boolean: • **true**—Yes. • **false**—No (default).	You cannot enable both Web authentication and port security on an interface.
ApplyServer	Applies a Web authentication server	N/A	String. case-insensitive. Length: 1 to 32 characters. Default is not configured.	N/A
ApplyDomain	Applies an IPv4 authentication domain	N/A	String, Length: 1 to 255. Default is not configured.	N/A
MaxUser	Maximum number of users on the interface	N/A	Unsigned integer.	The value range depends on the device model.
MaxPreAuthUser	Maximum number of preauth-domain users on the interface	N/A	Unsigned integer.	The value range depends on the device model
MaxAuthFailUser	Maximum number of auth-fail-domain users on the	N/A	Unsigned integer.	The value range depends on the device model

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface			
AuthFailVlan	VLAN for users that failed authentication	N/A	Unsigned integer. Value range: 1 to 4094. Default Value is not configured.	N/A
OfflineDetectInterval	Online user detection interval	N/A	Unsigned integer Value range: 60 to 65535 seconds. Default is not configured.	N/A
MultiVLAN	Allows authenticated users in multiple VLANs on this interface	N/A	Enumeration: • **0**—Single VLAN (default). • **1**—Multiple VLAN.	N/A
ApplySecondaryServer	Applies a secondary Web authentication server	N/A	String. case-insensitive. Length: 1 to 32 characters. Default is not configured.	N/A
ApplyMacTriggerServer	Applies a MAC-trigger server	N/A	String. case-insensitive. Length: 1 to 32 characters. Default is not configured.	N/A
MacVlanEnable	Enables MAC-based VLAN for Web authentication users	N/A	Boolean: • **true**—Enabled. • **false**—Disabled (default).	N/A
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0**—Disables online users to bypass offline detection when all authentication servers are unavailable. • **1**—Enables online users to bypass offline detection and stay online when all authentication servers are unavailable.	N/A

WebAuth/FreeIPs

This table contains free IP configuration of Web authentication.

XML structure

```
<WebAuth>
  <FreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </FreeIPs>
```

```
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	FreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IP address used in EAD assistance feature	Index	String, dotted decimal notation.	N/A
IPv4Mask	IP address mask	Index	IPv4 mask.	N/A

WebAuth/ProxyPorts

This table contains Web proxy configuration for Web authentication.

XML structure

```
<WebAuth>
  <ProxyPorts>
    <ProxyPort>
      <PortNumber></PortNumber>
      <ProxyType></ProxyType>
    </ProxyPort>
  </ProxyPorts>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	ProxyPorts
Table type	Multi-instance table
Row name	ProxyPort

Item	Description
Restrictions	No.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	TCP port number	Index	Unsigned integer. Value range: 1 to 65535 (except 80 and 443). Default is not configured.	N/A
ProxyType	Proxy type	N/A	Enumeration: • **0**—HTTP (default). • **1**—HTTPS.	N/A

WebAuth/FreeHosts

This table contains Web authentication-free host configuration.

XML structure

```
<WebAuth>
  <FreeHosts>
    <FreeHost>
      <HostName></HostName>
    </FreeHost>
  </FreeHosts>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	FreeHosts
Table type	Multi-instance table
Row name	FreeHost
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of a Web authentication-free host	Index	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), and underscores (_). It cannot· contain asterisks (*).

WebAuth/Common

This table contains Web authentication global parameters.

XML structure

```
<WebAuth>
  <Common>
    <TempEntryAging></TempEntryAging>
  </Common>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
TempEntryAging	Aging timer for the temporary MAC address entries	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. Default: 60 seconds.

      <ServerType></ServerType>
      <UrlUnescapeChars></UrlUnescapeChars>
    </WebServer>
  </WebServers>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	WebServers
Table type	Multi-instance table
Row name	WebServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of a local Web authentication server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPAddress	IPv4 address of the local Web authentication server	N/A	String, dotted decimal notation. Default is not configured.	N/A
Port	Port of the local Web authentication server	N/A	Unsigned integer. Value range: 1-65535. Default is not configured.	The column must be defined when the IPAddress exists.
Url	URL of the local Web authentication serverr	N/A	String. Length: 1 to 256 characters. Default is not configured.	N/A
IPv6Address	IPv6 address of the local Web authentication server	N/A	String, dotted decimal notation. Default is not configured.	N/A
IPv6Port	IPv6 port of the local Web authentication server	N/A	Unsigned integer. Value range: 1-65535. Default is not configured.	The column must be defined when the IPv6Address exists.
RedirectWaitTime	Redirection wait time	N/A	Unsigned integer. Value range: 1 to 90. Default is 5.	N/A
ServerType	Type of a local Web authentication server	N/A	Enumeration: **1**—OAuth.	N/A
UrlUnescapeChars	Special characters that are not escaped in the redirect URL	N/A	String. Length: 1 to 16 characters. Default: Not configured.	N/A

WebAuth/WebRemoteServers

This table contains information about remote Web authentication servers.

XML structure

```
<WebAuth>
  <WebRemoteServers>
    <WebRemoteServer>
      <ServerName></ServerName>
      <IPAddress></IPAddress>
```

```
      <IPv6Address></IPv6Address>

      <State></State>
     <UrlUnescapeChars></UrlUnescapeChars>
    </WebRemoteServer>
  </WebRemoteServers>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	WebRemoteServers
Table type	Multi-instance table
Row name	WebServer
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of a remote Web authentication server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddress	IPv4 address of the remote Web authentication server server	N/A	String, dotted decimal notation.	N/A
IPv6Address	IPv6 address of the remote Web authentication server	N/A	String, dotted decimal notation.	N/A
Url	URL of the remote Web authentication server	N/A	String. Length: 1 to 256 characters.	N/A
TrackId	Track ID for the Web authentication server URL	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
State	State of the Web authentication server	N/A	Enumeration: • **0**—Active. • **1**—Blocked.	The column must be defined when the Url exists.
ServerType	Type of the remote Web authentication server	N/A	Enumeration: OAuth.	N/A
UrlUnescapeChar	Special characters	N/A	String.	N/A

Column name	Column description	Colu mn type	Data type and restrictions	Remarks
s	that are not escaped in the redirect URL		Length: 1 to 16 characters. Default: Not configured.	

WebAuth/UrlParams

This table contains information about URL parameters.

XML structure

```
<WebAuth>
  <UrlParams>
    <UrlParam>
      <ServerName></ServerName>
      <ParamName></ParamName>
      <ParamType></ParamType>
      <SelfDefValue></SelfDefValue>
    </UrlParam>
  </UrlParams>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	UrlParams
Table type	Multi-instance table
Row name	UrlParam
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of a Web authentication server	Index	String. case-insensitive. Length: 1 to 32 characters.	N/A
ParamName	Parameter name of the URL	Index	String. Length: 1 to 32 characters.	The column configures the parameter name carried in the redirect URL.

Column name	Column description	Column type	Data type and restrictions	Remarks
ParamType	Parameter type	N/A	Enumeration: • **0**—source-address. • **1**—source-mac. • **2**—original-url. • **3**—selfdefine.	The column must be defined.
SelfDefValue	User-defined parameter	N/A	String. Length: 1 to 256 characters. Default is not configured.	The column takes effect when ParamType is selfdefine.

WebAuth/Interfaces

This table contains Web authentication configuration on an interface.

XML structure

```
<WebAuth>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <AuthEnable></AuthEnable>
      <ApplyServer></ApplyServer>

      <MaxAuthFailUser></MaxAuthFailUser>
      <AuthFailVlan></AuthFailVlan>
      <OfflineDetectInterval></OfflineDetectInterval>
      <OnlineUserNum></OnlineUserNum>
      <MultiVLAN></MultiVLAN>
      <ApplySecondaryServer></ApplySecondaryServer>
      <ApplyMacTriggerServer></ApplyMacTriggerServer>
      <MacVlanEnable></MacVlanEnable>
      <AuthServerUnReachEscape></AuthServerUnReachEscape>
    </Interface>
  </Interfaces>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	Interfaces

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	No.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ifindex	Interface index	Index	Unsigned integer.	Some versions supports interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see ‘‘Appendix’’ in Ifmgr NETCONF XML API Configuration Reference.
AuthEnable	Enables the Web authentication function	N/A	Boolean: • **true**—Yes. • **false**—No	You cannot enable both Web authentication and port security on an interface.
ApplyServer	Applies a Web authentication server	N/A	String. case-insensitive. • Length: 1 to 32 characters.	N/A
ApplyDomain	Applies an IPv4 authentication domain	N/A	String, case-insensitive. • Length: 1 to 255.	N/A
MaxUser	Maximum number of users on the interface	N/A	Unsigned integer.	N/A
MaxPreAuthUser	Maximum number of preauth-domain users on the interface	N/A	Unsigned integer.	N/A
MaxAuthFailUser	Maximum number of auth-fail-domain users on the interface	N/A	Unsigned integer.	N/A
AuthFailVlan	VLAN for users that failed authentication	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
OfflineDetectInterval	Online user detection interval	N/A	Unsigned integer Value range: 60 to 65535 seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OnlineUserNum	Allows authenticated users in multiple VLANs on this interface	N/A	Unsigned integer.	N/A
MultiVLAN	Applies a secondary Web authentication server	N/A	Enumeration: • **0**—Single VLAN • **1**—Multiple VLAN.	N/A
ApplySecondaryServer	Enables the Web authentication function	N/A	String. case-insensitive. Length: 1 to 32 characters. Default is not configured.	N/A
ApplyMacTriggerServer	Applies a MAC-trigger server	N/A	String. case-insensitive. Length: 1 to 32 characters. Default is not configured.	N/A
MacVlanEnable	Enables MAC-based VLAN for Web authentication users	N/A	Boolean: • **true**—Enabled. **false**—Disabled (default).	N/A
AuthServerUnReachEscape	Whether online users can bypass offline detection when all authentication servers are unavailable	N/A	Enumeration: • **0**—Disables online users to bypass offline detection when all authentication servers are unavailable. **1**—Enables online users to bypass offline detection and stay online when all authentication servers are unavailable.	N/A

WebAuth/FreeIPs

This table contains free IP configuration of Web authentication.

XML structure

```
<WebAuth>
  <FreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </FreeIPs>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	FreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	No.

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IP address used in EAD assistance feature	Index	String, dotted decimal notation.	N/A
IPv4Mask	IP address mask	Index	IPv4 mask.	N/A

WebAuth/ProxyPorts

This table contains Web proxy configuration for Web authentication.

XML structure

```
<WebAuth>
  <ProxyPorts>
    <ProxyPort>
      <PortNumber></PortNumber>
      <ProxyType></ProxyType>
    </ProxyPort>
  </ProxyPorts>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	ProxyPorts
Table type	Multi-instance table
Row name	ProxyPort
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	TCP port number	Index	Unsigned integer. Value range: 1 to 65535 (except 80 and 443).	N/A
ProxyType	Proxy type	N/A	Enumeration: • **0**—HTTP • **1**—HTTPS.	N/A

WebAuth/OnlineUsers

This table contains online Web authentication user information.

XML structure

```
<WebAuth>
  <OnlineUsers>
    <OnlineUser>
      <AccessInterface></AccessInterface>
      <UserMac></UserMac>
      <UserName></UserName>
      <InitVlan></InitVlan>
      <AuthVlan></AuthVlan>
      <AuthAcl></AuthAcl>
      <AuthUserProfile></AuthUserProfile>
      <AuthMicroSegmentID></AuthMicroSegmentID>
      <DrniNasIpType></DrniNasIpType>
      <DrniUserState></DrniUserState>
      <MLagNasIpType></MLagNasIpType>
      <MLagUserState></MLagUserState>
    </OnlineUser>
  </OnlineUsers>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	OnlineUsers
Table type	Multi-instance table
Row name	OnlineUser
Restrictions	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AccessInterface	Access interface of an online user	Index	Unsigned integer.	Some versions supports interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see ''Appendix'' in Ifmgr NETCONF XML API Configuration Reference.
UserMac	MAC address of the user	Index	MAC address in the HH-HH-HH-HH-HH-HH format.	N/A
UserName	User name	N/A	String.	N/A
InitVlan	Initiate VLAN of the user	N/A	Unsigned integer.	N/A
AuthVlan	Authorization VLAN of the user	N/A	Unsigned integer.	N/A
AuthAcl	Authorization ACL of the user	N/A	Unsigned integer.	N/A
AuthUserProfile	Authorization user profile of the user	N/A	String.	N/A
AuthMicroSegmentID	Microsegment ID assigned to the user	N/A	Unsigned integer. Value range: 1 to 65535	N/A
DrniNasIpType	In DRNI networking, the nas ip address type used for user authentication on DR interface	N/A	Enumeration: • **1**—Local. • **2**—Peer.	N/A
DrniUserState	User status on DR interface in DRNI network	N/A	Enumeration: • **0**—Inactive. • **1**—Active.	N/A
MLagNasIpType	In MLAG networking, the nas ip address type used for user authentication on MLAG interface	N/A	Enumeration: • “Local”. • “Peer”.	N/A
MLagUserState	User status on MLAG	N/A	Enumeration: • “Inactive”.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface in MLAG network		• “Active”.	

WebAuth/FreeHosts

This table contains Web authentication-free host configuration.

XML structure

```
<WebAuth>
  <FreeHosts>
    <FreeHost>
      <HostName></HostName>
    </FreeHost>
  </FreeHosts>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	FreeHosts
Table type	Multi-instance table
Row name	FreeHost
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of a Web authentication-free host	Index	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), and underscores (_). It cannot contain asterisks (*).

WebAuth/Common

This table contains Web authentication global parameters.

XML structure

```
<WebAuth>
  <Common>
    <TempEntryAging></TempEntryAging>
  </Common>
</WebAuth>
```

Table description

Item	Description
Feature name	WebAuth
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
TempEntryAging	Aging timer for the temporary MAC address entries	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.

WebAuth event stream

WevAuth event stream description.

WebAuth event

This event is used to report information about a Web server for remote Web authentication, including the server state.

XML structure for event subscription

```
<WebAuthServerState>
</WebAuthServerState>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>WEBAUTH</stream>
    <filter type="subtree">
      < WebAuthServerState xmlns="http://www.h3c.com/netconf/event:1.0/WEBAUTH:1.0">
      </WebAuthServerState>
    </filter>
  </create-subscription>
</rpc>
```

Table description

Item	Description
Event stream name	WEBAUTH
Event name	WebAuthServerState
Event namespace	http://www.h3c.com/netconf/event:1.0/WEBAUTH:1.0
Support for extended query	No

XML structure for event report

```
<WebAuthServerState>
  <ServerState>
     <ServerName></ServerName>
     <IPv4Address></IPv4Address>
     <IPv6Address></IPv6Address>
     <Url></Url >
     <State></State>
  </ServerState>
</WebAuthServerState>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-07-05T10:24:36</eventTime>
  <WebAuthServerState xmlns="http://www.h3c.com/netconf/event:1.0/WEBAUTH:1.0">
  <ServerState>
     <ServerName>user</ServerName>
     <IPv4Address>192.168.0.112</IPv4Address>
     <IPv6Address>1::2</IPv6Address>
     <Url>http://192.168.0.112:8080/portal/</Url >
     <State>Active</State>
  </ServerState>
</WebAuthServerState>
```

Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
ServerName	Name of the remot Web authentication server	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPv4Address	IPv4 address of the remote Web authentication server	N/A	IPv4: String, dotted decimal notation.	This column represents an IPv4 address. For example, 1.0.0.1.
IPv6Address	IPv6 address of the remote Web authentication server	N/A	IPv6: Hexadecimal string, colon-separated	This column represents an IPv6 address. For example, 2001:12::1:2.
Url	URL of the remote Web authentication server	Index	String, case-sensitive. Length: 1 to 256 characters.	N/A
State	State of the remote Web authentication server	N/A	String: • Active. • Blocked.	N/A

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65535.	If the device is not a distributed device operating in IRF mode, set this column to 65535.
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65535.	If the device is a centralized device or centralized IRF device in standalone mode, set this column to 65535.
Enable	Whether Web caching is enabled for HTTP data	N/A	Boolean: • **true**—Web caching is enabled for HTTP data. • **false**—Web caching is disabled for HTTP data (default).	N/A
PortNumber	Web caching listening port number for HTTP data	N/A	Unsigned integer. Value range: 1 to 65535. Default value: 80.	N/A
HttpsEnable	Whether Web caching is enabled for HTTPS data	N/A	Boolean: • **true**—Web caching is enabled for HTTPS data. • **false**—Web caching is disabled for HTTPS data (default).	N/A
HttpsPortNu	Web caching	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
mber	listening port number for HTTPS data		Value range: 1 to 65535. Default value: 443.	
FileDir	Web cache directory	N/A	String, case sensitive. Length: 0 to 255 characters. Default: no value is specified.	The Web cache directory string must start with the storage medium location information.
DataType	Types of the webpage files to be cached	N/A	String, case sensitive. Length: 1 to 127 characters. File types available: • apk. • bmp. • doc. • docx. • gif. • gzip. • ipa. • jar. • jpg. • jpeg. • mp4. • pdf. • png. • ppt. • pptx. • rar. • swf. • tar. • txt. • xls. • xlsx. • zip. Default: no value is	To specify multiple file types, use spaces as the delimiter, for example, apk bmp doc. You must specify all the file types at the same time.

Column name	Column description	Column type	Data type and restrictions	Remarks
			specified.	
CacheLimit	Maximum total size for Web cache files, in GB	N/A	Unsigned integer. Value range: 1 to 4095. Default value: 4.	N/A
DestIpv4ObjectGroup	Name of the IPv4 address object group used to specify the Web servers whose Web contents are to be cached	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
SrcIpv4ObjectGroup	Name of the IPv4 address object group used to specify the clients to be serviced	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
DestIpv6ObjectGroup	Name of the IPv6 address object group used to specify the Web servers whose Web contents are to be cached	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
SrcIpv6ObjectGroup	Name of the IPv6 address object group used to specify the clients to be serviced	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
CachedFileList	List of files to be cached	Data Structure	Members include: FileName	N/A
FileName	File name, which contains the extension but does not contain the path information	N/A	String, case sensitive. Length: 1 to 127 characters. Default: No file name is specified.	A maximum of 20 file names are supported in CachedFileList.

Column name	Column description	Column type	Data type and restrictions	Remarks
CachedExtensionNameList	List of file extension names	Data Structure	Members include: ExtensionName	N/A
ExtensionName	File extension name to be cached	N/A	String, case sensitive. Length: 1 to 16 characters. Default: No file extension names are specified.	A maximum of 64 file extension names are supported

WebCache/ListenPorts

This table contains Web caching listening port information.

MacAddress	Client MAC address.	N/A	MAC address. Example: 00-0c-af-e3-5d-c0.	When MacAddress is empty, all client will be reset.

WLANClient/SetDynamicBlackList

This table contains information about dynamic blacklist settings.

XML structure

```
<WLANClient>
  <SetDynamicBlackList>
    <DynamicBlackList>
      <MacAddress> </MacAddress>
      <Ipv4Address> </Ipv4Address>
      <Ipv6Address> </Ipv6Address>
      <ApName> </ApName>
```

```
        <RadioId></RadioId>
        <LifeTime></LifeTime>
      </DynamicBlackList>
    </SetDynamicBlackList>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	SetDynamicBlackList
Table type	Multi-instance table
Row name	DynamicBlackList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	N/A	MAC address. Example: 00-0c-af-e3-5d-c0.	You can specify a client by only one of the three attributes: MAC address, IPv4 address, and IPv6 address.
Ipv4Address	Client IPv4 address.	N/A	IPv4: String, dotted decimal notation. Example, 1.0.0.1	You can specify a client by only one of the three attributes: MAC address, IPv4 address, and IPv6 address.
Ipv6Address	Client IPv6 address.	N/A	IPv6: Hexadecimal string, colon-separated. Example, 2001:12::1:2.	You can specify a client by only one of the three attributes: MAC address, IPv4 address, and IPv6 address.
ApName	AP name.	N/A	String, case-insensitive. Length: 1 to 64 characters.	N/A
RadioId	Radio ID.	N/A	Unsigned char. Value range: 1 to 4.	N/A
LifeTime	Aging time of a blacklist entry.	N/A	Unsiged integer. Value range:1 to 3600 seconds.	N/A

WLANClient/UserCtrlInfo

This table information about user control settings.

XML structure

```
<WLANClient>
  <UserCtrlInfo>
    <ClientCtrlInfo>
      <MacAddress></MacAddress>

WLANClient

WLANClient/ClientOption

This table contains client optimization information.

XML structure

```
<WLANClient>
  <ClientOption>
    <Option>
      <ApName></ApName>
      <RadioId></RadioId>
      <Reject>
        <Status></Status>
        <Rssi></Rssi>
      </Reject>
    </Option>
  </ClientOption>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ClientOption
Table type	Multi-instance table
Row name	Option
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier	Index	Unsigned char. Value range: 1 to 4
Reject	weak-signal client rejection	Data structure	Members include:

Column name	Column description	Column type	Data type and restrictions
	information		Status Rssi
Status	Status of weak-signal client access rejection		Enumeration: 0: Disable. 1: Enable 2: Inherit.
Rssi	RSSI threshold for weak-signal client access rejection		Unsigned integer. Value range: 5 to 100. Default value is 10.

WLANClient/ServiceTemplates

This table contains service template information.

XML structure

```
<WLANClient>
  <ServiceTemplates>
    <Template>
      <Name></Name>
      <SSID></SSID>
      <DefaultVlan></DefaultVlan>
      <HideSsid></HideSsid>
      <MaxClientCnt></MaxClientCnt>
      <Enable></Enable>
      <ForwardingLocation></ForwardingLocation>
      <LocalForwardVlanList></LocalForwardVlanList>
      <PolicyForwarding></PolicyForwarding>
      <PolicyName></PolicyName>
      <AssociationLocation></AssociationLocation>
      <AuthenticationLocation></AuthenticationLocation>
      <QuikAssociation></QuikAssociation>
      <HotspotPolicyNum></HotspotPolicyNum>
      <UserIsolation></UserIsolation>
      <Description></Description>
      <UrlRedirect></UrlRedirect>
      <Ipv4ArpLearning></Ipv4ArpLearning>
      <Ipv4DhcpLearning></ Ipv4DhcpLearning >
      <Ipv6DhcpLearning></Ipv6DhcpLearning>
      <Ipv6DhcpVlanList></Ipv6DhcpVlanList>
      <Ipv6NdLearning></Ipv6NdLearning>
      <Ipv6NdVlanList></Ipv6NdVlanList>
      <IpVerifySource></IpVerifySource>
```

```
    <Ipv6VerifySource></Ip6VerifySource>
    <AddressSecurityStatus></AddressSecurityStatus>
    <Failpermit>
      <FailpermitStatus></FailpermitStatus>
      <KeepOnline></KeepOnline>
      <UrlUserLogoff></UrlUserLogoff>
    <Failpermit>
    <FailpermitTemplate></FailpermitTemplate>
    <WPA3Switch></WPA3Switch>
    <BTMStatus></BTMStatus>    </Template>
  </ServiceTemplates>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceTemplates
Table type	Multi-instance table
Row name	ServiceTemplate
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name	Index	String, letter, number or '-', '[',']','/','-'. The length is 1 to 63.
SSID	Identifier of service set.		String, the length is 1 to 32.
DefaultVlan	DefaultVlan.		Unsinged integer. Value range: 1 to 4094. The default value is 1.
HideSsid	Hiding status of SSID		Boolean: • true—enabled. • false—disabled, default value.
MaxClientCnt	Maximum clients of the BSS.		Unsinged integer. Value range: 1 to 2007. The default value is 0.
Enable	Status of service template.		Boolean: true or 1 : enabled. false or 0 : disabled. The default value is false.
ForwardingLocation	Client forwarding location.		Enumeration:. • 4—On AP • 2—On AC

Column name	Column description	Column type	Data type and restrictions
			• 8—Hybrid AC • 16—Hybrid AP Default value is 2.
LocalForwardVlanList	Client local forwarding vlan list.		VlanRange
PolicyForwarding	Status of policy forwarding.		Boolean: • true—Enabled. • false—Disabled. Default value is false.
PolicyName	Name of policy forwarding.		String, letter, number or '_'. The length is 1 to 31.
AssociationLocation	Client association location.		Enumeration: • 4—On AP • 2—On AC Default value is 2.
AuthenticationLocation	Client authentication location.		Enumeration: • 1—On MAC • 2—On AC • 4—On AP Default value is 2.
QuikAssociation	Status of quik association.		Boolean: • true—Enabled. • false—Disabled. Default value is false.
HotspotPolicyNum	Hotspot policy number		Unsinged integer.Value range:1 to 32.
UserIsolation	Status of user isolation.		Boolean: • true—Enabled. • false—Disabled. Default value is false.
Description	Description of service template.		Text. The length is 1 to 64.
UrlRedirect	Status of url redirect		Boolean: • true • false
Ipv4ArpLearning	Status of ipv4 arp learning		Boolean: • true false
Ipv4dhcpLearning	Status of IPv4 DHCP learning		Boolean: • true • false Default: true.
Ipv6DhcpLearning	Status of IPv6 DHCP learning.		Boolean: • true • false

Column name	Column description	Column type	Data type and restrictions
			Default: false.
Ipv6DhcpVlanList	List of VLANs for IPv6 DHCP learning.		VlanRange. Value range: 1 to 4094. For example,1,3,5-10.
Ipv6NdLearning	Status of IPv6 ND learning.		Boolean: • true • false Default: false.
Ipv6NdVlanList	List of VLANs for IPv6 ND learning.		VlanRange. Value range:1 to 4094. For example,1,3,5-10.
IpVerifySource	Client verification by source IPv4 address.		Boolean: • true—Yes. • false—No. Default: false.
Ipv6VerifySource	Client verification by source IPv6 address.		Boolean: • true—Yes. • false—No. Default: false.
AddressSecurityStatus	Address security status.		Boolean: • true—Yes. • false—No. Default: false.
Failpermit	Fail permit info		Members include: • FailpermitStatus • KeepOnline • UrlUserLogoff
FailpermitStatus	Enabling status of fail permit		Boolean: • true • false Default:false
KeepOnline	Whether existing users stay online		Boolean: • true • false Default:false
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs and have not passed authentication when a fail-permit event occurs		Boolean: • true • false Default:false
FailpermitTempl	Whether the service template is a fail-permit		Boolean:

Column name	Column description	Column type	Data type and restrictions
ate	template.		• true • false Default:false
WPA3Switch	WPA3 switch		Enumeration: 0 : disable 1 : mandatory 2 : optional 3: enterprise Default: 0
BTMStatus	Status of btm.		Boolean: • true • false Default: false.

WLANClient/ServiceBindings

This table contains service template binding information.

XML structure

```
<WLANClient>
  <ServiceBindings>
    <Binding>
      <ApName></ApName>
      <RadioId></RadioId>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
      <NasID></NasID>
      <NasPortID></NasPortID>
      <HideSsid></HideSsid>
    </Binding>
  </ServiceBindings>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None

Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.
Vlan	VLAN.		Unsinged integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: • **true**—enabled. • **false**—**disabled.** **Default value is false**.

WLANClient/APGroupServiceBindings

This table contains service template binding information of AP group radios.

XML structure

```
<WLANClient>
  <APGroupServiceBindings>
    <Binding>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
```

```
      <NasID></NasID>
      <NasPortID></NasPortID>
      <HideSsid></HideSsid>
    </Binding>
  </APGroupServiceBindings>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APGroupServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group	Index	String, lowercase. Length: 1 to 31 characters.
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.
Vlan	VLAN.		Unsinged integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of		Boolean: • **true**—enabled.

Column name	Column description	Column type	Data type and restrictions
	service set in beacon frames		• **false—disabled.** **Default value is false**.

WLANClient/ServiceSecurity

This table contains security information about a service template.

XML structure

```
<WLANClient>
  <ServiceSecurity>
    <Security>
      <Name></Name>
      <WpaIeSelected></WpaIeSelected>
      <RsnIeSelected></RsnIeSelected>
      <TkipSelected></TkipSelected>
      <CcmpSelected></CcmpSelected>
      <Wep40Selected></Wep40Selected>
      <Wep104Selected></Wep104Selected>
      <Wep128Selected></Wep128Selected>
      <WepMode></WepMode>
      <AkmMode></AkmMode>
      <PskInputMode></PskInputMode>
      <PskPassPhraseKey></PskPassPhraseKey>
      <PskRawKey></PskRawKey>
      <PtkLifeTime></PtkLifeTime>
      <GtkUpdateEnable></GtkUpdateEnable>
      <GtkUpdateMode></GtkUpdateMode>
      <GtkUpdateTime></GtkUpdateTime>
      <GtkPacketNumber></GtkPacketNumber>
      <ClientOffUpdateGtk></ClientOffUpdateGtk>
      <TkipCmTime></TkipCmTime>
      <GcmpSelected></GcmpSelected>
    </Security>
  </ServiceSecurity>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceSecurity
Table type	Multi-instance table
Row name	Security

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Service template name.	Index	String. Length: 1 to 63 The string can contain letters, digits, and special characters -, [,], /, and _.	N/A
WpaIeSelected	Whether WPA IE is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
RsnIeSelected	Whether RSN IE is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
TkipSelected	Whether the cipher suite is TKIP.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
CcmpSelected	Whether the cipher suite is CCMP.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep40Selected	Whether the cipher suite is WEP40.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep104Selected	Whether the cipher suite is WEP104.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep128Selected	Whether the cipher suite is WEP128.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
WepMode	WEP mode.		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			0: Static. 1: Dynamic. The default value is 0.	
AkmMode	AKM mode.		Enumeration. 1: 802.1X. 2: PSK.	N/A
PskInputMode	PSK input mode.		Enumeration. 1: Pass-phrase. 2: Raw-key.	N/A
PskPassPhraseKey	Pre-shared key.		String.	A PSK is a string of 8-63 alphanumeric characters.
PskRawKey	Raw key.		String	A PSK is a string of 64 hex characters.
PtkLifeTime	PTK lifetime.		Unsigned integer. Unit: Second. Value range: 180 to 604800. The default value is 43200.	N/A
GtkUpdateEnable	Whether GTK update is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
GtkUpdateMode	GTK update mode.		Enumeration. 1: Time-based. 2: Packet quantity-based.	N/A
GtkUpdateTime	GTK update interval.		Unsinged integer. Unit: Second. Value range: 180 to 604800. The default value is 86400.	N/A
GtkPacketNumber	GTK update packet quantity threshold.		Unsigned integer. Value range: 5000 to 4294967295. The default value is 10000000.	N/A
ClientOffUpdateGtk	Whether to update GTK when a client goes offline.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
TkipCmTime	TKIP MIC failure hold time.		Unsigned integer. Unit: Second. Value range: 0 to 3600. The default value is 0 and the AP does not	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			take any countermeasures.	
GcmpSelected	Whether the cipher suite is GCMP		Boolean: • true—Yes. • false—No. Default: false.	

WLANClient/ServiceWepKey

This table contains security wep key information of service template.

XML structure

```
<WLANClient>
  <ServiceWepKey>
    <WepKey>
      <ServiceName></ServiceName>
      <WepKeyId></WepKeyId>
      <CipherSuite></CipherSuite>
      <KeyInputType></KeyInputType>
      <Wep40PassPhraseKey></Wep40PassPhraseKey>
      <Wep40RawKey></Wep40RawKey>
      <Wep104PassPhraseKey></Wep104PassPhraseKey>
      <Wep104RawKey></Wep104RawKey>
      <Wep128PassPhraseKey></Wep128PassPhraseKey>
      <Wep128RawKey></Wep128RawKey>
      <IsSelected></IsSelected>
    </WepKey>
  </ServiceWepKey>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceWepKey
Table type	Multi-instance table
Row name	WepKey
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceName	Service template name	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.	N/A
WepKeyId	WEP key ID	Index	Enumeration. Value range: 1 to 4.	N/A
CipherSuite	WEP cipher suite.		Enumeration. 1 : wep40. 5 : wep104. 7 : wep128.	N/A
KeyInputType	Key Type		Enumeration. 1 : PassPhrase. 2 : RawKey	N/A
Wep40PassPhraseKey	Wep40 key in pass-phrase		String.	The key is 5 alphanumeric characters.
Wep40RawKey	Wep40 key in raw		String.	The key is 10 hex characters.
Wep104PassPhraseKey	Wep104 key in pass-phrase		String.	The key is 13 alphanumeric characters.
Wep104RawKey	Wep104 key in raw		String.	The key is 26 hex characters.
Wep128PassPhraseKey	Wep128 key in pass-phrase		String.	The key is 16 alphanumeric characters.
Wep128RawKey	Wep128 key in raw		String.	The key is 32 hex characters.
IsSelected	Is this wep key Selected.		Boolean. Ture or 1 : selected. False or 0 : no selected. The default value is false.	N/A

WLANClient/RadioWmm

This table contains radio WMM information.

XML structure

```
<WLANClient>
  <RadioWmm>
    <Wmm>
      <ApName></ApName>
```

```
      <RadioId></RadioId>
      <Enable></Enable>
      <SvpMapAc></SvpMapAc>
      <CacPolicy></CacPolicy>
      <CacUserNum></CacUserNum>
      <CacChannelUtilization></CacChannelUtilization>
    </Wmm>
  </RadioWmm>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RadioWmm
Table type	Multi-instance table
Row name	Wmm
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
Enable	WMM status of radio		Boolean. true or 1 : enabled False or 0 : disabled The default value is true.
SvpMapAc	Access category of SVP		Enumeration 2 : vi 3 : vo
CacPolicy	CAC policy		Enumeration. 1 : channel utilization. 2 : based on client number. The default value is 2.
CacUserNum	CAC client number		Unsigned integer. Value range is 0 to 124.

Column name	Column description	Column type	Data type and restrictions
	threshold		The default value is 20.
CacChannel Utilization	CAC channel utilization threshold.		Unsigned integer. Unit is percent. Value range is 0 to 100. The default value is 65.

WLANClient/ClientEdca

This table contains client EDCA information.

XML structure

```
<WLANClient>
  <ClientEdca>
    <Edca>
      <ApName></ApName>
      <RadioId></RadioId>
      <AccessCategory></AccessCategory>
      <Aifsn></Aifsn>
      <TxOpLimit></TxOpLimit>
      <Ecwmin></Ecwmin>
      <Ecwmax></Ecwmax>
      <CacEnable></CacEnable>
    </Edca>
  </ClientEdca>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ClientEdca
Table type	Multi-instance table
Row name	Edca
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.	N/A
RadioId	Radio identifier.	Index	Unsigned char. Value range is 1 to 4	N/A
AccessCategory	Access category.	Index	Enumeration. 0 : be. 1 : bk. 2 : vi 3 : vo	N/A
Aifsn	Arbitration Inter Frame Spacing Number		Unsigned integer. Value range is 2 to 15, and is restricted by chipset.	N/A
TxOpLimit	Transmission oppurtunity limit		Unsigned number. Value range is 0 to 65535. Unit is millisecond.	N/A
Ecwmin	Exponent form of CWmin		Unsigned integer. Value range is 1 to 15.	N/A
Ecwmax	Exponent form of CWmax		Unsigned integer. Value range is 1 to 15.	N/A
CacEnable	Whether CAC is enabled.		Boolean. true or 1 : enabled. False or 0 : disabled. The default value is false.	When ac is vi or vo, Cac can be configured.

WLANClient/MobilityRole

This table contains mobility role information.

XML structure

```
<WLANClient>
  <MobilityRole>
    <Role></Role>
    <MAIPv4Address></MAIPv4Address>
    <MAIPv6Address></MAIPv6Address>
  </MobilityRole>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityRole
Table type	single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Role	Mobility role of the device.		Enumeration. 0 : not configured, default value. 1 : ma 2 : mc
MAIPv4Address	IPv4 address of mobility agent.		Ipv4Address
MAIPv6Address	IPv6 address of mobility agent.		Ipv6Address 若Ipv4和Ipv6同时存在下，则Ipv6有效

WLANClient/MobilityGroups

This table contains mobility group information.

XML structure

```
<WLANClient>
  <MobilityGroups>
    <MobilityGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <SourceIpv4Address></SourceIpv4Address>
      <SourceIpv6Address></SourceIpv6Address>
      <Enable></Enable>
    </MobilityGroup>
  </MobilityGroups>
```

```
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityGroups
Table type	Multi-instance table
Row name	MobilityGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4 10 : IPv6
SourceIpv4 Address	Source IPv4 address		Ipv4Address
SourceIpv6 Address	Source IPv6 address		Ipv6Address
Enable	Status of mobility group.		Boolean. true or 1 : enabled. False or 0 : disabled. The default value is false.

WLANClient/MobilityIPv4Members

This table contains mobility group IPv4 member information.

XML structure

```
<WLANClient>
  <MobilityIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
```

```
    </Member>
  </MobilityIPv4Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.

WLANClient/MobilityIPv6Members

This table contains mobility group IPv6 member information.

XML structure

```
<WLANClient>
  <MobilityIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
    </Member>
  </MobilityIPv6Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient

Table name	MobilityIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.

WLANClient/MobilityPeerGroups

This table contains mobility peer group information.

XML structure

```
<WLANClient>
  <MobilityPeerGroups>
    <MobilityPeerGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <Enable></Enable>
    </MobilityPeerGroup>
  </MobilityPeerGroups>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityPeerGroups
Table type	Multi-instance table
Row name	MobilityPeerGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4 10 : IPv6
Enable	Status of mobility peer group.		Boolean. true or 1: enabled. False or 0 : disabled. The default value is false.

WLANClient/PeerGroupIPv4Members

This table contains mobility peer group IPv4 member information.

XML structure

```
<WLANClient>
  <PeerGroupIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
    </Member>
  </PeerGroupIPv4Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.

WLANClient/PeerGroupIPv6Members

This table contains mobility peer group IPv6 member information.

XML structure

```
<WLANClient>
  <PeerGroupIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
    </Member>
  </PeerGroupIPv6Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.

WLANClient/Layer2Authentication

This table contains WLAN access security's authenticating configurations in service template.

XML structure

```
<WLANClient>
  <Layer2Authentication>
    <Authentication>
      <ServiceTemplateName></ServiceTemplateName>
      <AuthenticationMode></AuthenticationMode>
      <IntrusionProtectionEnable></IntrusionProtectionEnable>
      <IntrusionProtectionOperation></IntrusionProtectionOperation>
      <TemporaryServiceStopTimer></TemporaryServiceStopTimer>
      <TemporaryBlockTimer></TemporaryBlockTimer>
      <IgnoreAuthorization></IgnoreAuthorization>
      <AuthorizationFailOffline></AuthorizationFailOffline>
      <Dot1xHandshakeEnable></Dot1xHandshakeEnable>
      <Dot1xSecurityHandshakeEnable></Dot1xSecurityHandshakeEnable>

      <Dot1xMaxUserCount></Dot1xMaxUserCount>
      <MACAuthenticationDomain></MACAuthenticationDomain>
      <MACAuthenticationMaxUserCount></MACAuthenticationMaxUserCount>
      <FailVLAN></FailVLAN>
      <IgnoreAuthentication></IgnoreAuthentication>
    </Authentication>
  </Layer2Authentication>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	Layer2Authentication
Table type	Multi-instance table
Row name	Authentication
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.	N/A
AuthenticationMode	Authentication mode of the service template	N/A	Enumeration: 0 : bypass. 1 : mac authentication 2 : mac then dot1x authentication 3 : dot1x authentication 4 : dot1x then mac authentication 5 : oui then dot1x	Default status is bypass.
IntrusionProtectionEnable	Enable Intrusion Protection of the Service Template	N/A	Boolean: • true • false	Default status is false.
IntrusionProtectionOperation	Operation mode when intrusion detected	N/A	Enumeration: 0 : temporary block mac. 1 : emporary stop the service 2 : stop service	N/A
TemporaryServiceStopTimer	Period value of temporarily stop service	N/A	Unsigned integer Value range is 10 to 300.	Default value is 20 s.
TemporaryBlockTimer	Period value of temporarily block user mac	N/A	Unsigned integer Value range is 60 to 300.	Default value is 180 s.
IgnoreAuthorization	Ignore all authorization information set by server.	N/A	Boolean: • true • false	Default status is false.
AuthorizationFailOffline	Users are offline if the authorizing failed.	N/A	Boolean: • true • false	Default status is false
Dot1xHandshakeEnable	Enable handshake feature of dot1x	N/A	Boolean: • true • false	Default status is false
Dot1xSecurityHandshakeEnable	Enable secure handshake feature ofdot1x	N/A	Boolean: • true • false	Default status is false，and handshake feature should be enabled first.
Dot1xReauthenticationEnable	Enable re-authentication feature of dot1x	N/A	Boolean: • true • false	Default status is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1xMandatoryDomain	Mandatory domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	No default value.
Dot1xMaxUserCount	Max dot1x user numbers for a bss bound to this service template	N/A	Unsigned integer Value range is 1 to 4096.	Default value is 4096.
MACAuthenticationDomain	Domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	N/A
MACAuthenticationMaxUserCount	Max MAC authentication user numbers for a bss bound to this service template	N/A	Unsigned integer Value range is 1 to 4096.	N/A
FailVLAN	VLAN used	N/A	Unsigned integer Value range: 1 to 4094.	No default value
IgnoreAuthentication	Whether to ignore authentication failures	N/A	Boolean: • true • false	Default status is false.

WLANClient/APs

This table contains AP configuration information.

XML structure

```
<WLANClient>
  <APs>
    <AP>
      <Name></Name>
      <IdleTime></IdleTime>
      <KeepAliveTime></KeepAliveTime>

```

Table description

Item	Description
Feature name	WLANClient
Table name	APs
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
IdleTime	Station Idle time	N/A	Unsigned integer. Value range: 60s to 86400s. The default value is 3600s.	N/A
KeepAliveTime	Keeping alive time of staion	N/A	Unsigned integer. Value range: 3s to 1800s. The default value is 300s, which means disabled.	N/A
BandNaviStatus	Band navigation status	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).	Effective only when global BandNaviStatus is enabled.

Column name	Column description	Column type	Data type and restrictions	Remarks
BProbeReply24G	2.4G broadcast probe reply	Data structure	Members include: • Status24G • Threshold24G	N/A
Status24G	Broadcast probe reply status	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).	N/A
Threshold24G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A
BProbeReply5G	5G broadcast probe reply	Data structure	Members include: • Status5G • Threshold5G	N/A
Status5G	Broadcast probe reply status	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).	N/A
Threshold5G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A
Overload5GSsidHide	Enabling the overloaded 5 GHz radios to hide the SSID in beacon frames	Data structure	Members include: • SsidHideStatus • SessionValue • GapValue • ForceLogoff	N/A
SsidHideStatus	Whether the overloaded 5 GHz radios are enabled to hide the SSID in beacon frames	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).	N/A
SessionValue	Session threshold	N/A	Unsigned integer. Value range: 1 to 120. The default value is 5.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GapValue	Session gap	N/A	Unsigned integer. Value range: 1 to 24. The default value is 4.	N/A
ForceLogoff	Whether half of the clients associated with the target 5 GHz radio are forced to log off	N/A	Boolean: • true—enabled. • false—disabled. Default value is false.	N/A
RadioLoadBalanceNavStauts	Radio load balancing band navigation feature status	N/A	Boolean. • true—enabled. • false—disabled. Default value is true.	N/A
LoadBalanceIntensity	Radio load balancing band navigation intensity	N/A	Enumeration. • 0—weak. • 1—strong. Default value is 0.	N/A

WLANClient/APGroup

This table contains AP group configuration information.

XML structure

```
<WLANClient>
  <APGroup>
    <Group>
      <Name></Name>
      <BandNaviStatus></BandNaviStatus>
      <BProbeReply24G>
        <Status24G></Status24G>

      <RadioLoadBalanceNavStauts></RadioLoadBalanceNavStauts>
      <LoadBalanceIntensity></LoadBalanceIntensity>
    </Group>
  </APGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
BandNaviStatus	Band navigation status	N/A	Boolean. • false—disabled • true—enabled (default)	Effective only when global BandNaviStatus is enabled.
BProbeReply24G	2.4G broadcast probe reply	Data structure	Members include: • Status24G • Threshold24G	N/A
Status24G	Broadcast probe reply status	N/A	Boolean. • false—disabled • true—enabled (default)	N/A
Threshold24G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BProbeReply5G	5G broadcast probe reply	Data structure	Members include: • Status5G • Threshold5G	N/A
Status5G	Broadcast probe reply status	N/A	Boolean. • false—disabled • true—enabled (default)	N/A
Threshold5G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A
Overload5GSsidHide	Enabling the overloaded 5 GHz radios to hide the SSID in beacon frames	Data structure	Members include: • SsidHideStatus • SessionValue • GapValue • ForceLogoff	N/A
SsidHideStatus	Whether overloaded 5 GHz radios are enabled to hide the SSID in beacon frames	N/A	Boolean. • false—disabled • true—enabled Default value is true.	N/A
SessionValue	Session threshold	N/A	Unsigned integer. Value range: 1 to 120. The default value is 5.	N/A
GapValue	Session gap	N/A	Unsigned integer. Value range: 1 to 24. The default value is 4.	N/A
ForceLogoff	Whether half of the clients associated with the target 5 GHz radio are forced to log off	N/A	Boolean: • true—enabled. • false—disabled. Default value is false.	N/A
NasID	NAS-ID of the AP group	N/A	String, Length: 1 to 63 cahracters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioLoadBalanceNavStauts	Radio load balancing band navigation feature status	N/A	Boolean. • true—Enabled. • false—Disabled.	N/A
LoadBalanceIntensity	Radio load balancing band navigation intensity	N/A	Enumeration. • 0—Weak. • 1—Strong. Default value is 0.	N/A

WLANClient/BandNavigation

This table contains band navigation information.

XML structure

```
<WLANClient>
  <BandNavigation>
    <GlobalStatus></GlobalStatus>
    <AgingTime></AgingTime>
    <DenialCnt></DenialCnt>
    <Session></Session>
    <Gap></Gap>
    <Threshold></Threshold>
  </BandNavigation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	BandNavigation
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
GlobalStatus	Global status of band navigation	N/A	Boolean. • false—disabled(default). • true—enabled.
AgingTime	Client information aging time	N/A	Unsigned integer. Unit is second. Value range: 10 to 600. The default value is 180.
DenialCnt	Maximum number of denials for 5 GHz association requests	N/A	Unsigned integer. Value range: 1 to 10.The default value is 0.
Session	Client number threshold for the 5 GHz radio	N/A	Unsigned integer. Value range: 2 to 255.
Gap	Threshold for the session gap between the current 5 GHz radio and the radio that has the fewest clients	N/A	Unsigned integer. Value range: 1 to 8. The default value is 4.
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 5 to 100.The default value is 15.

WLANClient/LoadBalance

This table contains load balancing information.

XML structure

```
<WLANClient>
  <LoadBalance>
    <Status></Status>
    <Mode></Mode>
    <Bandwidth></Bandwidth>
    <BandwidthGap></BandwidthGap>
    <Session></Session>
    <SessionGap></SessionGap>
    <Traffic></Traffic>
    <TrafficGap></TrafficGap>
    <DenialNum></DenialNum>
    <Threshold></Threshold>
  </LoadBalance>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	WLAN load balancing status	N/A	Boolean. • false—disabled(default). • true—enabled.	N/A
Mode	Load balancing mode	N/A	Enumeration: • **1**—session-mode(default). • **2**—traffic-mode. • **3**—bandwidth-mode.	N/A
Session	Session threshold in number of clients	N/A	Unsigned integer. Value range:1 to 120. The default value is 20.	This column can be configured only when the Mode is session-mode (1).To delete value just input Mode label.
Session Gap	Session gap threshold	N/A	Unsigned integer. Value range:1 to 12. The default value is 4.	This column cannot be configured if the Session is not configured. To delete value just input Mode label.
Bandwidth	Bandwidth threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 500. The default value is 40.	This column can be configured only when the Mode is bandwidth-mode (3). To delete value just input Mode label.
Bandwidth Gap	Bandwidth gap threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 200. The default value is 20.	This column cannot be configured if the Bandwidth is not configured. To delete value just input Mode label.
Traffic	Traffic threshold	N/A	Unsigned integer. Unit is percent. Value range:1 to 80. The default value is 30.	This column can be configured only when the Mode is traffic -mode (2). To delete value just input Mode label.

Column name	Column description	Column type	Data type and restrictions	Remarks
TrafficGap	Traffic gap threshold	N/A	Unsigned integer. Unit is percent. Value range:10 to 40. The default value is 20.	This column cannot be configured if theTraffic is not configured. To delete value just input Mode label.
DenialNum	Maximum number of denials for association requests	N/A	Unsigned integer. Value range:2 to 10.The default value is 10.	N/A
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range:5 to 100.The default value is 25.	N/A

WLANClient/LoadBalanceGroup

This table contains load balancing group information.

XML structure

```
<WLANClient>
  <LoadBalanceGroup>
    <Group>
      <GroupId></GroupId>
      <GroupDescription></GroupDescription>
    </Group>
  </LoadBalanceGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalanceGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.
GroupDescription	Description for the load balancing group	N/A	String, case-sensitive. Length: 1 to 64 characters.

WLANClient/RadioInLBGroup

This table contains radio information of radios in the load balancing group.

XML structure

```
<WLANClient>
  <RadioInLBGroup>
    <Radio>
      <GroupId></GroupId>
      <ApName></ApName>
      <RadioId></RadioId>
    </Radio>
  </RadioInLBGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RadioInLBGroup
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 64 characters.
RadioId	Radio identifier	Index	Unsigned integer. Value range: 1 to 31

WLANClient/WhiteList

This table contains information of white list.

XML structure

```
<WLANClient>
  <WhiteList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </WhiteList>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WhiteList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	• MAC address.	Example: 00-0c-af-e3-5d-c0.

WLANClient/StaticBlackList

This table contains information of static black list.

XML structure

```
<WLANClient>
  <StaticBlackList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </StaticBlackList>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	StaticBlackList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	• MAC address.	Example: 00-0c-af-e3-5d-c0.

WLANClient/DynamicBlackListCfg

This table contains configuration of dynamic black list.

XML structure

```
<WLANClient>
  <DynamicBlackListCfg>
    <LifeTime></LifeTime>
  </DynamicBlackListCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	DynamicBlackListCfg

Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LifeTime	Global life time of dynamic black list.		Unsinged integer. Value range:1 to 3600.Unit is second.

WLANClient/pmfConfiguration

This table contains Protected management frames information.

XML structure

```
<WLANClient>
  <PmfConfiguration>
    <Information>
      <ServiceTemplateName></ServiceTemplateName>
      <KeyDerivation></KeyDerivation>
      <PmfSwitch></PmfSwitch>
      <ComeBackTime></ComeBackTime>
      <RetryCnt></RetryCnt>
      <RetryTime></RetryTime>
    </Information>
  </PmfConfiguration >
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PmfConfiguration
Table type	Multi-instance table
Row name	Information
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-',lowercase.The length is 1 to 63.
KeyDerivation	Key derivation		Enumeration: 1 : SHA1 2 : SHA256 3: SHA1 and SHA256 The default value is 1.
PmfSwitch	Pmf function switch		Enumeration: 0 : disable 1 : optional 2 : mandatory The default value is 0
ComeBackTime	Association comeback interval		Unsinged int.The value range is 1 to 20. Unit is second. The default value is 1 (s)
RetryCnt	Maximum number of SA query request retransmission		Unsinged int.The value range is 1 to 16. The default value is 4.
RetryTime	Retry interval for SA query response		Unsinged int.The value range is 100 to 500. Unit is millisecond. The default value is 200 (ms) .

WLANClient/FtConfiguration

This table contains FT configuration information.

XML structure

```
<WLANClient>
  <FtConfiguration>
    <Configuration>
      <ServiceTemplateName></ServiceTemplateName>
      <Enable></Enable>
      <Method></Method>
      <ReassocTime></ReassocTime>
    </Configuration>
  </FtConfiguration>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	FtConfiguration
Table type	Multi-instance table
Row name	Configuration
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-',lowercase.The length is 1 to 63.
Enable	Status of fast BSS transition protocol.		Boolean: • **true**—enabled. • **false**—**disabled.** The default value is false.
Method	Fast BSS transition method.		Unsinged char. 0:over-the-air; 1:over-the-ds. The default value is 0.
ReassocTime	Reassociation timeout.		Unsinged int. The value range is 1 to 100. The default value is 20.Unit is second.

WLANClient/Layer2AccessControl

This table contains Layer 2 access control information.

XML structure

```
<WLANClient>
  <Layer2AccessControl>
    <AccessControl>
      <ServiceTemplateName></ServiceTemplateName>
      <AclNum></AclNum>
      <PermitRemoteAP></PermitRemoteAP>
    </AccessControl>
  </Layer2AccessControl>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	Layer2AccessControl
Table type	Multi-instance table
Row name	AccessControl
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name	Index	String, lowercase. Length: 1 to 63 characters.
AclNum	ACL number	N/A	Unsigned integer Value range: 4000 to 4999.
PermitRemoteAP	Allow permit statements to take effect on remote APs	N/A	Boolean: • true—enabled. • false—disabled. The default value is false.

WLANClient/Wrlb5GOverLoad

This table contains wrlb 5g overload information.

XML structure

```
<WLANClient>
  <Wrlb5GOverLoad>
    <Wrlb5GOverLoadStatus></Wrlb5GOverLoadStatus>
    <SessionValue></SessionValue>
    <GapsValue></GapsValue>
  </Wrlb5GOverLoad>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient

Table name	Wrlb5GOverLoad
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Wrlb5GOverLoadStatus	Status of wrlb 5g overload.		Boolean: • true—enabled. • false—disabled. The default value is true.
SessionValue	Client number threshold between the 5 GHz radios.		Unsigned integer. Value range: 1 to 120. The default value is 40.
GapsValue	Threshold for the session gap between the current 5 GHz radio and other 5 GHz radio that has the fewest clients.		Unsigned integer. Value range: 1 to 24. The default value is 10.

WLANClient/WciaAp

This table contains wlan client inspect analysis configuration information of AP

XML structure

```
<WLANClient>
  <WciaAp>
    <AP>
      <Name></Name>
      <InspectSwitch></InspectSwitch>
    </AP>
  </WciaAp>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WciaAp
Table type	Multi-instance table

Row name	AP
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
InspectSwitch	Set wlan client inspect analysis switch	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).	N/A

WLANClient/WciaApGroup

This table contains wlan client inspect analysis configuration of AP groups

XML structure

```
<WLANClient>
  <WciaApGroup>
    <Group>
      <Name></Name>
      <InspectSwitch></InspectSwitch>
    </Group>
  </WciaApGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WciaApGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
InspectSwitch	Set wlan client inspect analysis switch	N/A	Enumeration. • 0—disabled. • 1—enabled.	N/A

WLANClient/VipClientGroup

This table contains VIP client group information.

XML structure

```
<WLANClient>
  <VipClientGroup>
    <MacList>
      <MacAddress></MacAddress>
      <Level></Level>
    </MacList>
  </VipClientGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientGroup
Table type	Multi-instance table
Row name	MacList
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
MacAddress	Client MAC address.	Index	MAC address.
Level	VIP client level.	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range: 1 to 2 Default value is 1

WLANClient/VipClientGroupCfg

This table contains VIP client group configuration information.

XML structure

```
<WLANClient>
  <VipClientGroupCfg>
    <ReportInterval></ReportInterval>
    <InBoundInfo>
      <InBoundMode></InBoundMode>
      <InBoundMin></InBoundMin>
      <InBoundMax></InBoundMax>
      <InBoundCir></InBoundCir>
    </InBoundInfo>
    <OutBoundInfo>
      <OutBoundMode></OutBoundMode>
      <OutBoundMin></OutBoundMin>
      <OutBoundMax></OutBoundMax>
      <OutBoundCir></OutBoundCir>
    </OutBoundInfo>
  </VipClientGroupCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientGroupCfg
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
ReportInterval	Interval at which AP report client information to the AC.	N/A	Unsigned integer. Value range: 10 to 120.
InBoundInfo	Inbound QoS information for non-VIP clients.	Data structure	Members include: • InBoundMode. • InBoundMin. • InBoundMax. • InBoundCir.
InBoundMode	Rate limit mode for inbound traffic of non-VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
InBoundMin	Minimum limited rate for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundMax	Maximum limited rate for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundCir	CIR for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundInfo	Outbound QoS information for non-VIP clients.	Data structure	Members include: • OutBoundMode. • OutBoundMin. • OutBoundMax. • OutBoundCir.
OutBoundMode	Rate limit mode for outbound traffic of non-VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
OutBoundMin	Minimum limited rate for for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundMax	Maximum limited rate for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundCir	CIR for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.

WLANClient/VipClientRateLimitCfg

This table contains information about VIP client rate limit configurations.

XML structure

```
<WLANClient>
```

```
  <VipClientRateLimitCfg>
    <Level></Level>
    <InBoundInfo>
      <InBoundMode></InBoundMode>
      <InBoundMin></InBoundMin>
      <InBoundMax></InBoundMax>
      <InBoundCir></InBoundCir>
    </InBoundInfo>
    <OutBoundInfo>
      <OutBoundMode></OutBoundMode>
      <OutBoundMin></OutBoundMin>
      <OutBoundMax></OutBoundMax>
      <OutBoundCir></OutBoundCir>
    </OutBoundInfo>
  </VipClientRateLimitCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientRateLimitCfg
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
Level	VIP client level.	Index	Unsigned integer. Value range: 2.
InBoundInfo	Inbound QoS information for VIP clients.	Data structure	Members include: • InBoundMode. • InBoundMin. • InBoundMax. • InBoundCir.
InBoundMode	Rate limit mode for inbound traffic of VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
InBoundMin	Minimum limited rate for inbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundMax	Maximum limited rate for	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	inbound traffic of VIP clients.		Value range: 16 to 1700000.
InBoundCir	CIR for inbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutboundInfo	Outbound QoS information for VIP clients.	Data structure	Members include: • OutBoundMode. • OutBoundMin. • OutBoundMax. • OutBoundCir.
OutBoundMode	Rate limit mode for outbound traffic of VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
OutBoundMin	Minimum limited rate for for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundMax	Maximum limited rate for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundCir	CIR for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.

WLANClient/PermitSsid

This table contains permit ssid configuration information for a user profile.

XML structure

```
<WLANClient>
  <PermitSsid>
    <SSIDList>
      <UserProfileName></UserProfileName>
      <SSID></SSID>
    </SSIDList>
  </PermitSsid>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PermitSsid
Table type	Multi-instance table
Row name	SSIDList

Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
UserProfileName	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.
SSID	Identifier of service set.	Index	String, the length is 1 to 32.

WLANClient/RoamingCenter

This table contains client roaming center information.

XML structure

```
<WLANClient>
  <RoamingCenter>
    <Ipv4Address></Ipv4Address>
    <Status></Status>
    <Port></Port>
    <ResponseTimeout></ResponseTimeout>
    <Retry></Retry>
    <Ipv4CacheAgingTime></Ipv4CacheAgingTime>
    <Ipv6CacheAgingTime></Ipv6CacheAgingTime>
  </RoamingCenter>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RoamingCenter
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Ipv4Address	IPv4 address for communication with the WLAN roaming center.		IPv4: String, dotted decimal notation.
Status	Whether the client roaming center feature is enabled.		Boolean: • true • false Default: false.
Port	Port for communication with the WLAN roaming center.		Unsigned integer. Value range: 1 to 65534.
ResponseTimeout	Packets response timeout.		Unsigned integer. Value range:1 to 10, in seconds. Default: 3.
Retry	Maximum number of packet retransmission attempts.		Unsigned integer. Value range:1 to 10. Default: 5.
Ipv4CacheAgingTime	Aging time of IPv4 address security entries.		Unsigned integer. Value range:600 to 86400. Default: 14400.
Ipv6CacheAgingTime	Aging time of IPv6 address security entries.		Unsigned integer. Value range:600 to 1296000. Default: 604800.

WLANClient/RadioWnm

This table contains radio WNM information.

XML structure

```
<WLANClient>
  <RadioWnm>
    <Wnm>
      <ApName></ApName>
      <RadioId></RadioId>
      <AntiSticky>
        <Status></Status>
        <Rssi></Rssi>
        <Interval></Interval>
        <Forced></Forced>
      </AntiSticky>
    </Wnm>
  </RadioWnm>
</WLANClient>
```

Table description

Feature name	WLANClient
Table name	RadioWnm
Table type	Multi-instance table
Row name	Wnm
Restrictions	None
Support for row creation and deletion	No
Feature name	WLANClient

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name.	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4.
AntiSticky	weak-signal client co-roaming information.	Data structure	Members include: Status. Rssi. Interval. Forced.
Status	Status of weak-signal client co-roaming.		Enumeration. • 0—disabled. • 1—enabled. • 2—inherit(default).
Rssi	RSSI threshold for weak-signal client co-roaming.		Unsigned integer. Value range: 5 to 100. Default value is 20.
Interval	Interval of weak-signal detection for client co-roaming.		Unsigned integer. Value range: 1 to 10. Default value is 3.
Forced	Status of weak-signal client co-roaming for not support 11v.		Boolean: • true • false Default: false.

WLANClient

WLANClient/ClientOption

This table contains client optimization information.

XML structure

```
<WLANClient>
  <ClientOption>
    <Option>
      <ApName></ApName>
      <RadioId></RadioId>
      <Reject>
        <Status></Status>
        <Rssi></Rssi>
      </Reject>
    </Option>
  </ClientOption>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ClientOption
Table type	Multi-instance table
Row name	Option
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier	Index	Unsigned char. Value range: 1 to 4
Reject	weak-signal client rejection information	Data structure	Members include: Status Rssi

Column name	Column description	Column type	Data type and restrictions
Status	Status of weak-signal client access rejection		Enumeration: 0: Disable. 1: Enable 2: Inherit.
Rssi	RSSI threshold for weak-signal client access rejection		Unsigned integer. Value range: 5 to 100.

WLANClient/APAssociations

This table contains AP association information.

XML structure

```
<WLANClient>
  <APAssociations>
    <Association>
      <Name></Name>
      <Total></Total>
      <Reassociation></Reassociation>
      <Failure></Failure>
      <Rejection></Rejection>
      <Exception></Exception>
      <Current></Current>
    </Association>
  </APAssociations>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APAssociations
Table type	Multi-instance table
Row name	Association
Restrictions	None

Columns

Column name	Column description	Colum n type	Data type and restrictions
Name	AP name	Index	String, lowercase.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 63 characters.
Total	Total associations		Unsigned integer
Reassociation	Reassociations		Unsigned integer
Failure	Association failures		Unsigned integer
Rejection	Rejections of association		Unsigned integer
Exception	Exceptional associations		Unsigned integer
Current	Current associations		Unsigned integer

WLANClient/ServiceTemplates

This table contains service template information.

XML structure

```
<WLANClient>
  <ServiceTemplates>
    <Template>
      <Name></Name>
      <SSID></SSID>
      <DefaultVlan></DefaultVlan>
      <HideSsid></HideSsid>
      <MaxClientCnt></MaxClientCnt>
      <Enable></Enable>
      <ForwardingLocation></ForwardingLocation>
      <LocalForwardVlanList></LocalForwardVlanList>
      <PolicyForwarding></PolicyForwarding>
      <PolicyName></PolicyName>
      <AssociationLocation></AssociationLocation>
      <AuthenticationLocation></AuthenticationLocation>
      <QuikAssociation></QuikAssociation>
      <HotspotPolicyNum></HotspotPolicyNum>
      <UserIsolation></UserIsolation>
      <Description></Description>
      <UrlRedirect></UrlRedirect>
      <Ipv4ArpLearning></Ipv4ArpLearning>
      <Ipv4DhcpLearning></ Ipv4DhcpLearning >
      <Ipv6DhcpLearning></Ipv6DhcpLearning>
      <Ipv6DhcpVlanList></Ipv6DhcpVlanList>
```

```
    <Ipv6NdLearning></Ipv6NdLearning>
    <Ipv6NdVlanList></Ipv6NdVlanList>
    <IpVerifySource></IpVerifySource>
    <Ipv6VerifySource></Ip6VerifySource>
    <AddressSecurityStatus></AddressSecurityStatus>
    <Failpermit>
      <FailpermitStatus></FailpermitStatus>
      <KeepOnline></KeepOnline>
      <UrlUserLogoff></UrlUserLogoff>
    <Failpermit>
    <FailpermitTemplate></FailpermitTemplate>
    <WPA3Switch></WPA3Switch>
    <BTMStatus></BTMStatus>    </Template>
  </ServiceTemplates>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name	Index	String, letter, number or '-'，'[','],'/','-'. The length is 1 to 63.
SSID	Identifier of service set.		String, the length is 1 to 32.
DefaultVlan	Default VLAN		Unsinged integer. Value range: 1 to 4094. Default: 1.
HideSsid	Hiding status of SSID		Boolean: • true—enabled. • false—disabled, default value. Default: false.
MaxClientCnt	Maximum clients of the BSS.		Unsinged integer. Value range: 1 to 2007. Default: 0. Value 0 indicates that the number is not restricted.
Enable	Status of service template.		Boolean: • true—enabled.

Column name	Column description	Column type	Data type and restrictions
			• false—disabled, default value.
ForwardingLocation	Client forwarding location.		Enumeration:. • 4—On AP • 2—On AC • 8—Hybrid AC • 16—Hybrid AP Default: 2.
LocalForwardVlanList	Client local forwarding VLAN list.		VlanRange
PolicyForwarding	Status of policy forwarding.		Boolean: • true—Enabled. • false—Disabled. Default: false.
PolicyName	Name of policy forwarding.		String, letter, number or '_'. The length is 1 to 31.
Association Location	Client association location.		Enumeration: • 4—On AP • 2—On AC Default: 2.
AuthenticationLocation	Client authentication location.		Enumeration: • 1—On MAC • 2—On AC • 4—On AP Default: 2.
QuikAssociation	Status of quick association.		Boolean: • true—Enabled. • false—Disabled. Default: false.
HotspotPolicyNum	Hotspot policy number.		Unsinged integer.Value range:1 to 32.
UserIsolation	Status of user isolation.		Boolean: • true—Enabled. • false—Disabled. Default: false.
Description	Description of service template.		Text. The length is 1 to 64.
UrlRedirect	Status of URL redirection		Boolean: • true • false
Ipv4ArpLearning	Status of IPv4 ARP learning		Boolean: • true false
Ipv4dhcpLearning	Status of IPv4 DHCP learning.		Boolean: • true false

Column name	Column description	Column type	Data type and restrictions
Ipv6DhcpLearning	Status of IPv6 DHCP learning.		Boolean: • true false
Ipv6DhcpVlanList	List of VLANs for IPv6 DHCP learning.		VlanRange. Value range: 1 to 4094. For example, 1,3,5-10.
Ipv6NdLearning	Status of IPv6 ND learning.		Boolean: • true false
Ipv6NdVlanList	List of VLANs for IPv6 ND learning.		VlanRange, Value range: 1 to 4094. For example, 1,3,5-10.
IpVerifySource	Client verification by source IPv4 address.		Boolean: • true—Yes. false—No.
Ipv6VerifySource	Client verification by source IPv6 address.		Boolean: • true—Yes. false—No.
AddressSecurityStatus	Address security status.		Boolean: • true—Yes. false—No.
Failpermit	Fail permit info		Members include: • FailpermitStatus • KeepOnline • UrlUserLogoff
FailpermitStatus	Enabling status of fail permit		Boolean: • true • false
KeepOnline	Whether existing users stay online		Boolean: • true • false
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs and have not passed authentication when a fail-permit event occurs		Boolean: • true • false
FailpermitTemplate	Whether the service template is a fail-permit template.		Boolean: • true • false

Column name	Column description	Column type	Data type and restrictions
WPA3Switch	WPA3 switch		Enumeration: 0 : disable 1 : mandatory 2 : optional 3: enterprise
BTMStatus	Status of btm.		Boolean: • true • false

WLANClient/ServiceBindings

This table contains service template binding information.

XML structure

```
<WLANClient>
  <ServiceBindings>
    <Binding>
      <ApName></ApName>
      <RadioId></RadioId>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
      <NasID></NasID>
      <NasPortID></NasPortID>
      <HideSsid></HideSsid>
      <RadioMode></RadioMode>
    </Binding>
  </ServiceBindings>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.
Vlan	VLAN.		Unsinged integer. Value range: 1 to 4094.
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: • **true**—enabled. • **false**—**disabled.** **Default value is false**.
RadioMode	Radio mode.		Unsinged integer.

WLANClient/APGroupServiceBindings

This table contains service template binding information of AP group radios.

XML structure

```
<WLANClient>
  <APGroupServiceBindings>
    <Binding>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
      <NasID></NasID>
      <NasPortID></NasPortID>
      <HideSsid></HideSsid>
```

```
    <RadioMode></RadioMode>    </Binding>
  </APGroupServiceBindings>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APGroupServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group	Index	String, lowercase. Length: 1 to 31 characters.
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.
Vlan	VLAN.		Unsinged integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: • **true**—enabled. • **false—disabled.** **Default value is false**.
RadioMode	Radio mode.		Unsinged integer.

WLANClient/ServiceConnections

This table contains service template connection information.

XML structure

```
<WLANClient>
  <ServiceConnections>
    <Connection>
      <Name></Name>
      <ApName></ApName>
      <RadioId></RadioId>
    </Connection>
  </ServiceConnections>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceConnections
Table type	Multi-instance table
Row name	Connection
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63.
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4

WLANClient/ServiceHistoryStatisticDay

This table contains service template information of day statistics.

XML structure

```
<WLANClient>
  <ServiceHistoryStatisticDay>
    <ServiceHistoryStatistic>
      <STName></STName>
      <RecordTime></RecordTime>
      <SSID></SSID>
      <InOctets></InOctets>
      <OutOctets></OutOctets>
    <ServiceHistoryStatistic>
  </ServiceHistoryStatisticDay>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceHistoryStatisticDay
Table type	Multi-instance table
Row name	ServiceHistoryStatistic
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
STName	Service template name.	Index	String, letter, number or '-', '[','],'/','-'. The length is 1 to 63..	N/A
RecordTime	The date of the record flow.	Index	Format: YYYY-MM-DDTHH:MM:SS.	N/A
SSID	Identifier of service set.	N/A	String, the length is 1 to 32.	N/A
InOctets	Enter the bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to 2^{64} - 1.	N/A
OutOctets	The bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to 2^{64} - 1.	N/A

WLANClient/ServiceSecurity

This table contains security information about a service template.

XML structure

```
<WLANClient>
  <ServiceSecurity>
    <Security>

Table description

Item	Description
Feature name	WLANClient
Table name	ServiceSecurity
Table type	Multi-instance table
Row name	Security
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Service template name.	Index	String. Length: 1 to 63 The string can contain letters, digits, and special characters -, [,], /, and _.	N/A
WpaIeSelected	Whether WPA IE is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
RsnIeSelected	Whether RSN IE is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
TkipSelected	Whether the cipher suite is TKIP.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
CcmpSelected	Whether the cipher suite is CCMP.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep40Selected	Whether the cipher suite is WEP40.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep104Selected	Whether the cipher suite is WEP104.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
Wep128Selected	Whether the cipher suite is WEP128.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
WepMode	WEP mode.		Enumeration. 0: Static. 1: Dynamic. The default value is 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AkmMode	AKM mode.		Enumeration. 1: 802.1X. 2: PSK.	N/A
PskInputMode	PSK input mode.		Enumeration. 1: Pass-phrase. 2: Raw-key.	N/A
PskPassPhraseKey	Pre-shared key.		String.	A PSK is a string of 8-63 alphanumeric characters.
PskRawKey	Raw key.		String	A PSK is a string of 64 hex characters.
PtkLifeTime	PTK lifetime.		Unsigned integer. Unit: Second. Value range: 180 to 604800. The default value is 43200.	N/A
GtkUpdateEnable	Whether GTK update is enabled.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
GtkUpdateMode	GTK update mode.		Enumeration. 1: Time-based. 2: Packet quantity-based.	N/A
GtkUpdateTime	GTK update interval.		Unsinged integer. Unit: Second. Value range: 180 to 604800. The default value is 86400.	N/A
GtkPacketNumber	GTK update packet quantity threshold.		Unsigned integer. Value range: 5000 to 4294967295. The default value is 10000000.	N/A
ClientOffUpdateGtk	Whether to update GTK when a client goes offline.		Boolean: • true—Yes. • false—No. The default value is false.	N/A
TkipCmTime	TKIP MIC failure hold time.		Unsigned integer. Unit: Second. Value range: 0 to 3600. The default value is 0 and the AP does not take any countermeasures.	N/A
PskDigest	Pre-shared key digest.		String.	A PSK digest is a string of 32 alphanumeric characters.

Column name	Column description	Column type	Data type and restrictions	Remarks
GcmpSelected	Whether the cipher suite is GCMP		Boolean: • true—Yes. • false—No.	

WLANClient/ServiceWepKey

This table contains security wep key information of service template.

XML structure

```
<WLANClient>

DropVoFrames	Dropped voice frames		Unsigned integer64	N/A
DropVoBytes	Dropped voice bytes		Unsigned integer64	N/A

WLANClient/RadioWmm

This table contains radio WMM information.

XML structure

```
<WLANClient>
  <RadioWmm>
    <Wmm>
      <ApName></ApName>
      <RadioId></RadioId>
      <Enable></Enable>
      <SvpMapAc></SvpMapAc>
      <CacPolicy></CacPolicy>
      <CacUserNum></CacUserNum>
      <CacChannelUtilization></CacChannelUtilization>
    </Wmm>
  </RadioWmm>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RadioWmm
Table type	Multi-instance table
Row name	Wmm

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
Enable	WMM status of radio		Boolean: • true—enable. • false—disable, The default value is false.
SvpMapAc	Access category of SVP		Enumeration. 2 : vi 3 : vo
CacPolicy	CAC policy		Enumeration. 1 : channel utilization. 2 : based on client number. The default value is 2.
CacUserNum	CAC client number threshold		Unsigned integer. Value range is 0 to 124. The default value is 20.
CacChlUtlValue	CAC channel utilization threshold.		Unsigned integer. Unit is percent.Value range is 0 to 100. The default value is 65.

WLANClient/ClientEdca

This table contains client EDCA information.

XML structure

```
<WLANClient>
  <ClientEdca>
    <Edca>
      <ApName></ApName>
      <RadioId></RadioId>
      <AccessCategory></AccessCategory>
      <Aifsn></Aifsn>
```

```
      <TxOpLimit></TxOpLimit>
      <Ecwmin></Ecwmin>
      <Ecwmax></Ecwmax>
      <CacEnable></CacEnable>
    </Edca>
  </ClientEdca>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ClientEdca
Table type	Multi-instance table
Row name	Edca
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.	N/A
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4	N/A
AccessCategory	Access category.	Index	Enumeration. 0 : be. 1 : bk. 2 : vi 3 : vo	N/A
Aifsn	Arbitration Inter Frame Spacing Number		Unsigned integer. Value range is 2 to 15, and is restricted by chipset.	N/A
TxOpLimit	Transmission oppurtunity limit		Unsigned number. Value range is 0 to 65535. Unit is millisecond.	N/A
Ecwmin	Exponent form of CWmin		Unsigned integer. Value range is 1 to 15.	N/A
Ecwmax	Exponent form of CWmax		Unsigned integer. Value range is 1 to 15.	N/A
CacEnable	Whether CAC is enabled.		Boolean: • true—enable.	When ac is vi or vo, Cac can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			• false—disable, The default value is false.	

WLANClient/StationWmmInformation

This table contains station WMM information.

XML structure

```
<WLANClient>
  <StationWmmInformation>
    <Wmm>
      <MacAddress></MacAddress>
      <SSID></SSID>
      <QoSMode></QoSMode>
    </Wmm>
  </StationWmmInformation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	StationWmmInformation
Table type	Multi-instance table
Row name	Wmm
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
SSID	SSID		String	N/A
QoSMode	QoS mode		0 : doesn't support any qos mode 1 : support mode WMM 2 : support mode 11e 3 : support mode WMM	N/A

			and 11e	

WLANClient/MobilityRole

This table contains mobility role information.

XML structure

```
<WLANClient>
  <MobilityRole>
    <Role></Role>
    <MAIPv4Address></MAIPv4Address>
    <MAIPv6Address></MAIPv6Address>
  </MobilityRole></WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityRole
Table type	single-instance table
Row name	Noe
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Role	Mobility role of the device.		Enumeration. 0 : not configured, default value. 1 : ma 2 : mc
MAIPv4Address	IPv4 address of mobility agent.		Ipv4Address
MAIPv6Address	IPv6 address of mobility agent.		Ipv6Address 若Ipv4和Ipv6同时存在下，则Ipv6有效

WLANClient/MobilityGroups

This table contains mobility group information.

XML structure

```
<WLANClient>
  <MobilityGroups>
    <MobilityGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <SourceIpv4Address></SourceIpv4Address>
      <SourceIpv6Address></SourceIpv6Address>
      <Enable></Enable>
    </MobilityGroup>
  </MobilityGroups>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityGroups
Table type	Multi-instance table
Row name	MobilityGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4. 10 : IPv6
SourceIpv4 Address	Source IPv4 address		Ipv4Address
SourceIpv6 Address	Source IPv6 address		Ipv6Address
Enable	Status of mobility group.		Boolean: • true—enable. • false—disable,

Column name	Column description	Column type	Data type and restrictions
			The default value is false.

WLANClient/MobilityIPv4Members

This table contains mobility group IPv4 member information.

XML structure

```
<WLANClient>
  <MobilityIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
      <Status></Status>
      <UpTime></UpTime>
    </Member>
  </MobilityIPv4Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.
Status	Mobility Status		Enumeration. 1 : up 2 : dowm

Column name	Column description	Column type	Data type and restrictions
UpTime	Online Time		Unsigned integer.

WLANClient/MobilityIPv6Members

This table contains mobility group IPv6 member information.

XML structure

```
<WLANClient>
  <MobilityIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
      <Status></Status>
      <UpTime></UpTime>
    </Member>
  </MobilityIPv6Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.
Status	Mobility Status		Enumeration. 1 : up 2 : down
UpTime	Online Time		Unsigned integer.

WLANClient/RoamInStation

This table contains station roam in information.

XML structure

```
<WLANClient>
  <RoamInStation>
    <Station>
      <MacAddress></MacAddress>
      <BssID></BssID>
      <VlanID></VlanID>
      <OnlineTime></OnlineTime>
      <HomeAcIpv4></HomeAcIpv4>
      <HomeAcIpv6></HomeAcIpv6>
    </Station>
  </RoamInStation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RoamInStation
Table type	Multi-instance table
Row name	Station
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
BssID	BSS ID		MAC address	N/A
VlanID	VLAN-ID		Unsigned integer 1 to 4094	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
HomeAcIpv4	Home AC IPv4		String	N/A
HomeAcIpv6	Home AC Ipv6		String	N/A

WLANClient/RoamOutStation

This table contains station roam out information.

XML structure

```
<WLANClient>  <RoamOutStation>
    <RoamOutStaInfo>
      <MacAddress></MacAddress>
      <BssID></BssID>
      <VlanID></VlanID>
      <OnlineTime></OnlineTime>
      <ForeignAcIpv4></ForeignAcIpv4>
      <ForeignAcIpv6></ForeignAcIpv6>
    </RoamOutStaInfo>
  </RoamOutStation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RoamOutStation
Table type	Multi-instance table
Row name	RoamOutStaInfo
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
BssID	BSS ID		MAC address	N/A
VlanID	VLAN-ID		Unsigned integer 1 to 4094	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
HomeAcIpv4	Foreign AC Ipv4		String	N/A
ForeignAcIpv6	Foreign AC Ipv6		String	N/A

WLANClient/StationRoamTrack

This table contains station roaming track information.

XML structure

```
<WLANClient>
  <StationRoamTrack>
    <RoamTrack>
      <MacAddress></MacAddress>
      <TrackCnt></TrackCnt>
      <BssId></BssId>
      <OnlineTime></OnlineTime>
      <AcIpv4Addr></AcIpv4Addr>
      <AcIpv6Addr></AcIpv6Addr>
      <RadioMode></RadioMode>
    </RoamTrack>
  </StationRoamTrack>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	StationRoamTrack
Table type	Multi-instance table
Row name	RoamTrack
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address of the station	Index	MAC address	N/A
TrackCnt	Track count	Index	Unsigned integer	N/A
BssId	BSS ID		MAC address	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
AcIpv4Addr	IPv4 address of the AC		String	N/A
AcIpv6Addr	IPv6 address of the AC		String	N/A

RadioMode	Radio mode		Unsigned integer	N/A

WLANClient/MobilityPeerGroups

This table contains mobility peer group information.

XML structure

```
<WLANClient>
  <MobilityPeerGroups>
    <MobilityPeerGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <Enable></Enable>
    </MobilityPeerGroup>
  </MobilityPeerGroups>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	MobilityPeerGroups
Table type	Multi-instance table
Row name	MobilityPeerGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4. 10 : IPv6
Enable	Status of mobility peer group.		Boolean: • true—enable. • false—disable, The default value is false.

WLANClient/PeerGroupIPv4Members

This table contains mobility peer group IPv4 member information.

XML structure

```
<WLANClient>
  <PeerGroupIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
    </Member>
  </PeerGroupIPv4Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.

WLANClient/PeerGroupIPv6Members

This table contains mobility peer group IPv6 member information.

XML structure

```
<WLANClient>
  <PeerGroupIPv6Members>
    <Member>
      <GroupName></GroupName>
```

```
      <MemberIpv6Address></MemberIpv6Address>
    </Member>
  </PeerGroupIPv6Members>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PeegGroupIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

Columns

Column name	Column description	Colum n type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.

WLANClient/Layer2Authentication

This table contains WLAN access security's authenticating configurations in service template.

XML structure

```
<WLANClient>
  <Layer2Authentication>
    <Authentication>
      <ServiceTemplateName></ServiceTemplateName>
      <AuthenticationMode></AuthenticationMode>
      <IntrusionProtectionEnable></IntrusionProtectionEnable>
      <IntrusionProtectionOperation></IntrusionProtectionOperation>
      <TemporaryServiceStopTimer></TemporaryServiceStopTimer>
      <TemporaryBlockTimer></TemporaryBlockTimer>
      <IgnoreAuthorization></IgnoreAuthorization>
      <AuthorizationFailOffline></AuthorizationFailOffline>
      <Dot1xHandshakeEnable></Dot1xHandshakeEnable>
      <Dot1xSecurityHandshakeEnable></Dot1xSecurityHandshakeEnable>
```

```
      <Dot1xReauthenticationEnable></Dot1xReauthenticationEnable>
      <Dot1xMandatoryDomain></Dot1xMandatoryDomain>
      <Dot1xMaxUserCount></Dot1xMaxUserCount>
      <MACAuthenticationDomain></MACAuthenticationDomain>
      <MACAuthenticationMaxUserCount></MACAuthenticationMaxUserCount>
      <FailVLAN></FailVLAN>
      <IgnoreAuthentication></IgnoreAuthentication>
    </Authentication>
  </Layer2Authentication>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	Layer2Authentication
Table type	Multi-instance table
Row name	Authentication
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[',']','/','-'. The length is 1 to 63.	N/A
AuthenticationMode	Authentication mode of the service template	N/A	Enumeration: 0 : bypass. 1 : mac authentication 2 : mac then dot1x authentication 3 : dot1x authentication 4 : dot1x then mac authentication 5 : oui then dot1x	N/A
IntrusionProtectionEnable	Enable Intrusion Protection of the Service Template	N/A	Boolean: • true • false	N/A
IntrusionProtectionOperation	Operation mode when intrusion detected	N/A	Enumeration: 0 : temporary block mac. 1 : temporary stop the service 2 : stop service	N/A
TemporaryS	Period value of	N/A	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
erviceStopTimer	temporarily stop service		Value range: 10 to 300.	
TemporaryBlockTimer	Period value of temporarily block user mac	N/A	Unsigned integer Value range: 60 to 300.	N/A
IgnoreAuthorization	Ignore all authorization information set by server.	N/A	Boolean: • true • false	N/A
AuthorizationFailOffline	Users are offline if the authorizing failed.	N/A	Boolean: • true • false	N/A
Dot1xHandshakeEnable	Enable handshake feature of dot1x	N/A	Boolean: • true • false	N/A
Dot1xSecurityHandshakeEnable	Enable secure handshake feature ofdot1x	N/A	Boolean: • true • false	N/A
Dot1xReauthenticationEnable	Enable re-authentication feature of dot1x	N/A	Boolean: • true • false	N/A
Dot1xMandatoryDomain	Mandatory domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	N/A
Dot1xMaxUserCount	Max dot1x user numbers for a bss bound to this service template	N/A	Unsigned integer Value range: 1 to 4096.	N/A
MACAuthenticationDomain	Domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	N/A
MACAuthenticationMaxUserCount	Max MAC authentication user numbers for a bss bound to this service template	N/A	Unsigned integer Value range: 1 to 4096.	N/A
FailVLAN	VLAN used	N/A	Unsigned integer Value range: 1 to 4094.	No default value
IgnoreAuthentication	Whether to ignore authentication failures	N/A	Boolean: • true • false	N/A

WLANClient/StationLayer2Authentication

This table contains wlan authenticated station's connection information.

XML structure

```
<WLANClient>
  <StationLayer2Authentication>
    <Information>
      <MACAddress></MACAddress>
      <AuthenDomain></AuthenDomain>
      <AuthenMode></AuthenMode>
      <AuthenMethod></AuthenMethod>
      <AuthorACLIndex></AuthorACLIndex>
      <AuthorUserProfile></AuthorUserProfile>
    </Information>
  </StationLayer2Authentication>
</WLANClient>
```

Table description

Item	Description
Feature name	WLAS
Table name	StationLayer2Authentication
Table type	Multi-instance table
Row name	Information
Restrictions	None.

Columns

Column name	Column description	Column type	Data type and restrictions
MACAddress	Station MAC address	Index	MAC address
AuthenDomain	Domain of the user.	N/A	String, case-insensitive. Length: 1 to 255 characters.
AuthenMode	Authentication Mode.	N/A	Enumeration: 0 : BYPASS. 1 : MAC authentication. 2 : Dot1X. 3 : OUI.

Column name	Column description	Column type	Data type and restrictions
AuthenMethod	Authentication Method of Dot1X user.	N/A	Enumeration: 1 : Chap. 2 : PAP. 3 : EAP
AuthorACLIndex	Authorization ACL group index allocated by the server.	N/A	Unsigned integer.
AuthorUserProfile	Authorization User Profile name allocated by the server.	N/A	String Length: 1 to 31 characters.

WLANClient/APs

This table contains AP configuration information.

XML structure

```
<WLANClient>
  <APs>
    <AP>
      <Name></Name>
      <IdleTime></IdleTime>
      <KeepAliveTime></KeepAliveTime>
      <BandNaviStatus></BandNaviStatus>
      <BProbeReply24G>
        <Status24G></Status24G>
        <Threshold24G></Threshold24G>
      </BProbeReply24G>
      <BProbeReply5G>
        <Status5G></Status5G>
        <Threshold5G></Threshold5G>
      </BProbeReply5G>
      <Overload5GSsidHide>
        <SsidHideStatus></SsidHideStatus>
        <SessionValue></SessionValue>
        <GapValue></GapValue>
        <ForceLogoff></ForceLogoff>
      </Overload5GSsidHide>
      <RadioLoadBalanceNavStauts></RadioLoadBalanceNavStauts>
      <LoadBalanceIntensity></LoadBalanceIntensity>
    </AP>
  </APs>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APs
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
IdleTime	Station Idle time	N/A	Unsigned integer. Value range: 60s to 86400s.	N/A
KeepAliveTime	Keeping alive time of staion	N/A	Unsigned integer. Value range: 3s to 1800s.	N/A
BandNaviStatus	Band navigation status	N/A	Enumeration. • 0—Disabled • 1—Enabled • 2—Inherit	Effective only when global BandNaviStatus is enabled.
BProbeReply24G	2.4G broadcast probe reply	Data structure	Members include: • Status24G • Threshold24G	N/A
Status24G	Broadcast probe reply status	N/A	Enumeration. • 0—Disabled. • 1—Enabled. • 2—Inherit(default).	N/A
Threshold24G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BProbeReply5G	5G broadcast probe reply	Data structure	Members include: • Status5G • Threshold5G	N/A
Status5G	Broadcast probe reply status	N/A	Enumeration. • 0—Disabled. • 1—Enabled. • 2—Inherit(default).	N/A
Threshold5G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A
Overload5GSsidHide	Enabling the overloaded 5 GHz radios to hide the SSID in beacon frames	Data structure	Members include: • SsidHideStatus • SessionValue • GapValue • ForceLogoff	N/A
SsidHideStatus	Whether overloaded 5 GHz radios are enabled to hide the SSID in beacon frames	N/A	Enumeration. • 0—Disabled. • 1—Enabled. • 2—Inherit(default).	N/A
SessionValue	Session threshold	N/A	Unsigned integer. Value range: 1 to 120. The default value is 5.	N/A
GapValue	Session gap	N/A	Unsigned integer. Value range: 1 to 24. The default value is 4.	N/A
ForceLogoff	Whether half of the clients associated with the target 5 GHz radio are forced to log off	N/A	Boolean: • true—Enabled. • false—Disabled. Default value is false.	N/A
RadioLoadBalanceNavStauts	Radio load balancing band navigation feature status	N/A	Boolean. • true—Enabled. • false—Disabled.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadBalanceIntensity	Radio load balancing band navigation intensity	N/A	Enumeration. • 0—Weak. • 1—Strong. Default value is 0.	N/A

WLANClient/APGroup

This table contains AP group configuration information.

XML structure

```
<WLANClient>
  <APGroup>
    <Group>
      <Name></Name>
      <BandNaviStatus></BandNaviStatus>
      <BProbeReply24G>
        <Status24G></Status24G>
        <Threshold24G></Threshold24G>
      </BProbeReply24G>
      <BProbeReply5G>
        <Status5G></Status5G>
        <Threshold5G></Threshold5G>
      </BProbeReply5G>
      <Overload5GSsidHide>
        <SsidHideStatus></SsidHideStatus>
        <SessionValue></SessionValue>
        <GapValue></GapValue>
        <ForceLogoff></ForceLogoff>
      </Overload5GSsidHide>
      <NasID></NasID>
      <RadioLoadBalanceNavStauts></RadioLoadBalanceNavStauts>
      <LoadBalanceIntensity></LoadBalanceIntensity>
    </Group>
  </APGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APGroup

Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
BandNaviStatus	Band navigation status	N/A	Boolean. • false—disabled. • true—enabled.	Effective only when global BandNaviStatus is enabled.
BProbeReply24G	2.4G broadcast probe reply	Data structure	Members include: • Status24G • Threshold24G	N/A
Status24G	Broadcast probe reply status	N/A	Boolean. • false—disabled • true—enabled	N/A
Threshold24G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A
BProbeReply5G	5G broadcast probe reply	Data structure	Members include: • Status5G • Threshold5G	N/A
Status5G	Broadcast probe reply status	N/A	Boolean. • false—disabled • true—enabled	N/A
Threshold5G	Broadcast probe reply RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Overload5GSsidHide	Enabling the overloaded 5 GHz radios to hide the SSID in beacon frames	Data structure	Members include: • SsidHideStatus • SessionValue • GapValue • ForceLogoff	N/A
SsidHideStatus	Whether overloaded 5 GHz radios are enabled to hide the SSID in beacon frames	N/A	Boolean. • false—disabled • true—enabled Default value is true.	N/A
SessionValue	Session threshold	N/A	Unsigned integer. Value range: 1 to 120. The default value is 5.	N/A
GapValue	Session gap	N/A	Unsigned integer. Value range: 1 to 24. The default value is 4.	N/A
ForceLogoff	Whether half of the clients associated with the target 5 GHz radio are forced to log off	N/A	Boolean: • true—enabled. • false—disabled. Default value is false.	N/A
NasID	NAS-ID of the AP Group.	N/A	String, Length: 1 to 63 characters	N/A
RadioLoadBalanceNavStauts	Radio load balancing band navigation feature status	N/A	Boolean. • true—Enabled. • false—Disabled.	N/A
LoadBalanceIntensity	Radio load balancing band navigation intensity	N/A	Enumeration. • 0—Weak. • 1—Strong. Default value is 0.	N/A

WLANClient/BandNavigation

This table contains band navigation information.

XML structure

```
<WLANClient>
  <BandNavigation>
    <GlobalStatus></GlobalStatus>
    <AgingTime></AgingTime>
    <DenialCnt></DenialCnt>
    <Session></Session>
    <Gap></Gap>
    <Threshold></Threshold>
  </BandNavigation>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	BandNavigation
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GlobalStatus	Global status of band navigation	N/A	Boolean. • false—disabled. • true—enabled.
AgingTime	Client information aging time	N/A	Unsigned integer. Unit is second. Value range: 10 to 600.
DenialCnt	Maximum number of denials for 5 GHz association requests	N/A	Unsigned integer. Value range: 1 to 10.
Session	Client number threshold for the 5 GHz radio	N/A	Unsigned integer. Value range: 2 to 255.
Gap	Threshold for the session gap between the current 5 GHz radio and the radio that has the fewest clients	N/A	Unsigned integer. Value range: 1 to 8.
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 5 to 100.

WLANClient/LoadBalance

This table contains load balancing information.

XML structure

```
<WLANClient>
  <LoadBalance>
    <Status></Status>
    <Mode></Mode>
    <Bandwidth></Bandwidth>
    <BandwidthGap></BandwidthGap>
    <Session></Session>
    <SessionGap></SessionGap>
    <Traffic></Traffic>
    <TrafficGap></TrafficGap>
    <DenialNum></DenialNum>
    <Threshold></Threshold>
  </LoadBalance>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	WLAN load balancing status	N/A	Boolean. • false—disabled. • true—enabled.	N/A
Mode	Load balancing mode	N/A	Enumeration. • 1—session-mode. • 2—traffic-mode. • 3—bandwidth-mode.	N/A
Session	Session threshold in number of clients	N/A	Unsigned integer. Value range:1 to 120.	This column can be configured only when the Mode is session-mode (1).

Column name	Column description	Column type	Data type and restrictions	Remarks
Session Gap	Session gap threshold	N/A	Unsigned integer. Value range:1 to 12.	This column cannot be configured if the Session is not configured.
Bandwidth	Bandwidth threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 500.	This column can be configured only when the Mode is bandwidth-mode (3).
Bandwidth Gap	Bandwidth gap threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 200.	This column cannot be configured if the Bandwidth is not configured.
Traffic	Traffic threshold	N/A	Unsigned integer. Unit is percent. Value range:1 to 80.	This column can be configured only when the Mode is traffic -mode (2).
TrafficGap	Traffic gap threshold	N/A	Unsigned integer. Unit is percent. Value range:10 to 40.	This column cannot be configured if the Traffic is not configured.
DenialNum	Maximum number of denials for association requests	N/A	Unsigned integer. Value range:2 to 10.	N/A
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range:5 to 100.	N/A

WLANClient/LoadBalanceGroup

This table contains load balancing group information.

XML structure

```
<WLANClient>
  <LoadBalanceGroup>
    <Group>
      <GroupId></GroupId>
      <GroupDescription></GroupDescription>
    </Group>
  </LoadBalanceGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient

Table name	LoadBalanceGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsignedinteger. Value range: 1 to 65535.
GroupDescription	Description for the load balancing group	N/A	String, case-sensitive. Length: 1 to 64 characters.

WLANClient/RadioInLBGroup

This table contains radio information of radios in the load balancing group.

XML structure

```
<WLANClient>
  <RadioInLBGroup>
    <Radio>
      <GroupId></GroupId>
      <ApName></ApName>
      <RadioId></RadioId>
    </Radio>
  </RadioInLBGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RadioInLBGroup
Table type	Multi-instance table
Row name	Radio
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.
ApName	AP name	Index	String, lowercase. Length: 1 to 64 characters.
RadioId	Radio identifier	Index	Unsigned integer. Value range:1 to 31

WLANClient/APStations

This table contains information about clients associated with an AP.

XML structure

```
<WLANClient>
  <APStations>
    <APStation>
      <ApName></ApName>
      <MacAddress></MacAddress>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <UpTime></UpTime>
    </APStation>
  </APStations>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APStations
Table type	Multi-instance table
Row name	APStation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks

ApName	AP name	Index	String	Length: 1 to 64 characters.
MacAddress	MAC address of the client	Index	MAC address	N/A
Ipv4Address	IPv4 address of the client		IPv4 address.	N/A
Ipv6Address	IPv6 address of the client		IPv6 address.	N/A
UpTime	Uptime		Integer	N/A

WLANClient/APStationsNum

This table contains the number of clients associated with an AP.

XML structure

```
<WLANClient>
  <APStationsNum>
    <StationNum>
      <ApName></ApName>
      <StaNum></StaNum>
    </StationNum>
  </APStationsNum>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	APStationsNum
Table type	Multi-instance table
Row name	StationNum
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String	Length: 1 to 64 characters.
StaNum	Number of clients associated with the AP		Integer	N/A

WLANClient/WhiteList

This table contains information of white list.

XML structure

```
<WLANClient>
  <WhiteList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </WhiteList>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WhiteList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	• MAC address.	Example: 00-0c-af-e3-5d-c0.

WLANClient/StaticBlackList

This table contains information of static black list.

XML structure

```
<WLANClient>
  <StaticBlackList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </StaticBlackList>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	StaticBlackList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	• MAC address.	Example: 00-0c-af-e3-5d-c0.

WLANClient/DynamicBlackListCfg

This table contains configuration of dynamic black list.

XML structure

```
<WLANClient>
  <DynamicBlackListCfg>
    <LifeTime></LifeTime>
  </DynamicBlackListCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	DynamicBlackListCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
LifeTime	Global life time of dynamic black list.		Unsinged integer. Value range:1 to 3600.Unit is second.

WLANClient/pmfConfiguration

This table contains Protected management frames information.

XML structure

```
<WLANClient>
  <PmfConfiguration>
    <Information>
      <ServiceTemplateName></ServiceTemplateName>
      <KeyDerivation></KeyDerivation>
      <PmfSwitch></PmfSwitch>
      <ComeBackTime></ComeBackTime>
      <RetryCnt></RetryCnt>
      <RetryTime></RetryTime>
    </Information>
  </PmfConfiguration >
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PmfConfiguration
Table type	Multi-instance table
Row name	Information
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[',']','/','-',lowercase.The length is 1 to 63.
KeyDerivation	Key derivation		Enumeration:

Column name	Column description	Column type	Data type and restrictions
			1 : SHA1 2 : SHA256 3: SHA1 and SHA256 The default value is 1.
PmfSwitch	Pmf function switch		Enumeration: 0 : disable 1 : optional 2 : mandatory The default value is 0
ComeBackTime	Association comeback interval		Unsinged int.The value range is 1 to 20. Unit is second. The default value is 1 (s)
RetryCnt	Maximum number of SA query request retransmission		Unsinged int.The value range is 1 to 16. The default value is 4.
RetryTime	Retry interval for SA query response		Unsinged int.The value range is 100 to 500. Unit is millisecond. The default value is 200 (ms) .

WLANClient/FtConfiguration

This table contains FT configuration information.

XML structure

```
<WLANClient>
  <FtConfiguration>
    <Configuration>
      <ServiceTemplateName></ServiceTemplateName>
      <Enable></Enable>
      <Method></Method>
      <ReassocTime></ReassocTime>
    </Configuration>
  </FtConfiguration>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	FtConfiguration
Table type	Multi-instance table
Row name	Configuration

Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[',']','/','-',lowercase.The length is 1 to 63.
Enable	Status of fast BSS transition protocol.		Boolean: • **true**—enabled. • **false**—**disabled.** The default value is false.
Method	Fast BSS transition method.		Unsinged char. 0:over-the-air; 1:over-the-ds. The default value is 0.
ReassocTime	Reassociation timeout.		Unsinged int. The value range is 1 to 100. The default value is 20.Unit is second.

WLANClient/Layer2AccessControl

This table contains Layer 2 access control ACL information..

XML structure

```
<WLANClient>
  <Layer2AccessControl>
    <AccessControl>
      <ServiceTemplateName></ServiceTemplateName>
      <AclNum></AclNum>
      <PermitRemoteAP></PermitRemoteAP>
    </AccessControl>
  </Layer2AccessControl>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	Layer2AccessControl
Table type	Multi-instance table

Item	Description
Row name	AccessControl
Restrictions	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name	Index	String, lowercase. Length: 1 to 63 characters.
AclNum	ACL number	N/A	Unsigned integer Value range: 4000 to 4999.
PermitRemoteAP	Allow permit statements to take effect on remote APs	N/A	Boolean: • true—enabled. • false—disabled.

WLANClient/Wrlb5GOverLoad

This table contains wrlb 5g overload information.

XML structure

```
<WLANClient>
  <Wrlb5GOverLoad>
    <Wrlb5GOverLoadStatus></Wrlb5GOverLoadStatus>
    <SessionValue></SessionValue>
    <GapsValue></GapsValue>
  </Wrlb5GOverLoad>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	Wrlb5GOverLoad
Table type	Single-instance table
Row name	N/A
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Wrlb5GOverLoadStatus	Status of wrlb 5g overload.		Boolean: • true—enabled. • false—disabled. The default value is true.
SessionValue	Client number threshold between the 5 GHz radios.		Unsigned integer. Value range: 1 to 120. The default value is 40.
GapsValue	Threshold for the session gap between the current 5 GHz radio and other 5 GHz radio that has the fewest clients.		Unsigned integer. Value range: 1 to 24. The default value is 10.

WLANClient/WciaAp

This table contains wlan client inspect analysis configuration information of AP.

XML structure

```
<WLANClient>
  <WciaAp>
    <AP>
      <Name></Name>
      <InspectSwitch></InspectSwitch>
    </AP>
  </WciaAp>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WciaAp
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
InspectSwitch	Set wlan client inspect analysis switch	N/A	Enumeration. • 0—disabled. • 1—enabled. • 2—inherit.	N/A

WLANClient/WciaApGroup

This table contains wlan client inspect analysis configuration of AP groups.

XML structure

```
<WLANClient>
  <WciaApGroup>
    <Group>
```

```
      <Name></Name>
      <InspectSwitch></InspectSwitch>
    </Group>
  </WciaApGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	WciaApGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
InspectSwitch	Set wlan client inspect analysis switch	N/A	Enumeration. • 0—disabled. • 1—enabled.	N/A

WLANClient/VipClientGroup

This table contains VIP client group information.

XML structure

```
<WLANClient>
  <VipClientGroup>
    <MacList>
      <MacAddress></MacAddress>
      <Level></Level>
    </MacList>
  </VipClientGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientGroup
Table type	Multi-instance table
Row name	MacList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
MacAddress	Client MAC address.	Index	MAC address.
Level	VIP client level.	N/A	Unsigned integer. Value range: 1 to 2

WLANClient/VipClientGroupCfg

This table contains VIP client group configuration information.

XML structure

```
<WLANClient>
  <VipClientGroupCfg>
    <ReportInterval></ReportInterval>
    <InBoundInfo>
      <InBoundMode></InBoundMode>
      <InBoundMin></InBoundMin>
      <InBoundMax></InBoundMax>
      <InBoundCir></InBoundCir>
    </InBoundInfo>
    <OutBoundInfo>
      <OutBoundMode></OutBoundMode>
      <OutBoundMin></OutBoundMin>
      <OutBoundMax></OutBoundMax>
      <OutBoundCir></OutBoundCir>
    </OutBoundInfo>
  </VipClientGroupCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientGroupCfg
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ReportInterval	Interval at which AP report client information to the AC.	N/A	Unsigned integer. Value range: 10 to 120.
InBoundInfo	Inbound QoS information for non-VIP clients.	Data structure	Members include: • InBoundMode. • InBoundMin. • InBoundMax. • InBoundCir.
InBoundMode	Rate limit mode for inbound traffic of non-VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
InBoundMin	Minimum limited rate for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundMax	Maximum limited rate for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundCir	CIR for inbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundInfo	Outbound QoS information for non-VIP clients.	Data structure	Members include: • OutBoundMode. • OutBoundMin. • OutBoundMax. • OutBoundCir.
OutBoundMode	Rate limit mode for outbound traffic of non-VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
OutBoundMin	Minimum limited rate for for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundMax	Maximum limited rate for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.

Column name	Column description	Column type	Data type and restrictions
OutBoundCir	CIR for outbound traffic of non-VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.

WLANClient/VipClientRateLimitCfg

This table contains information about VIP client rate limit configurations.

XML structure

```
<WLANClient>
  <VipClientRateLimitCfg>
    <Level></Level>
    <InBoundInfo>
      <InBoundMode></InBoundMode>
      <InBoundMin></InBoundMin>
      <InBoundMax></InBoundMax>
      <InBoundCir></InBoundCir>
    </InBoundInfo>
    <OutBoundInfo>
      <OutBoundMode></OutBoundMode>
      <OutBoundMin></OutBoundMin>
      <OutBoundMax></OutBoundMax>
      <OutBoundCir></OutBoundCir>
    </OutBoundInfo>
  </VipClientRateLimitCfg>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	VipClientRateLimitCfg
Table type	Multi-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
Level	VIP client level.	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
			Value range:2.
InBoundInfo	Inbound QoS information for VIP clients.	Data structure	Members include: • InBoundMode. • InBoundMin. • InBoundMax. • InBoundCir.
InBoundMode	Rate limit mode for inbound traffic of VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
InBoundMin	Minimum limited rate for inbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundMax	Maximum limited rate for inbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
InBoundCir	CIR for inbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundInfo	Outbound QoS information for VIP clients.	Data structure	Members include: • OutBoundMode. • OutBoundMin. • OutBoundMax. • OutBoundCir.
OutBoundMode	Rate limit mode for outbound traffic of VIP clients.	N/A	Enumeration: • **2**—Dynamic. • **3**—Static.
OutBoundMin	Minimum limited rate for for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundMax	Maximum limited rate for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.
OutBoundCir	CIR for outbound traffic of VIP clients.	N/A	Unsigned integer. Value range: 16 to 1700000.

WLANClient/OneClientHistoryRecord

This table contains history record information about a client online and offline.

XML structure

```
<WLANClient>
  <OneClientHistoryRecord>
    <HistoryRecord>
      <ClientMac></ClientMac>
      <OnOfflineTime></OnOfflineTime>
```

```
      <OnOfflineTimeString></OnOfflineTimeString>
      <RadioID></RadioID>
      <ApName></ApName>
      <ClientState></ClientState>
      <Ssid></Ssid>
      <Reason></Reason>
    </HistoryRecord>
  </OneClientHistoryRecord>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	OneClientHistoryRecord
Table type	Multi-instance table
Row name	HistoryRecord
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientMac	Client Mac Address	Index	MAC address	N/A
OnOfflineTime	Station online or offline time	Index	Integer	N/A
OnOfflineTimeString	Station online or offline time		String	N/A
RadioID	Radio ID		Integer	N/A
ApName	AP name		String	N/A
ClientState	Client state		Enumeration. 0 : online 1 : offline 2 : online failed 3 : client reconnect	N/A
Ssid	SSID		String	N/A
Reason	Client offline reason		Unsigned integer	N/A

WLANClient/ClientOfflineReasonHelpInfo

This table contains client offline reason help information.

XML structure

```
<WLANClient>
  <ClientOfflineReasonHelpInfo>
    <HelpInformation>
      <Reason></Reason>
      <HelpInfo></HelpInfo>
    </HelpInformation>
  </ClientOfflineReasonHelpInfo>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	ClientOfflineReasonHelpInfo
Table type	Multi-instance table
Row name	HelpInformation
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reason	Client offline reason	Index	Unsigned integer	N/A
HelpInfo	Client offline reson help information		String	The length is 1 to 4096.

WLANClient/PermitSsid

This table contains permit ssid configuration information for a user profile.

XML structure

```
<WLANClient>
  <PermitSsid>
    <SSIDList>
      <UserProfileName></UserProfileName>
      <SSID></SSID>
     </SSIDList>
  </PermitSsid>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	PermitSsid
Table type	Multi-instance table
Row name	SSIDList
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
UserProfile Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.
SSID	Identifier of service set.	Index	String, the length is 1 to 32.

WLANClient/RoamingCenter

This table contains client roaming center information.

XML structure

```
<WLANClient>
  <RoamingCenter>
    <Ipv4Address></Ipv4Address>
    <Status></Status>
    <Port></Port>
    <ResponseTimeout></ResponseTimeout>
    <Retry></Retry>
    <Ipv4CacheAgingTime></Ipv4CacheAgingTime>
    <Ipv6CacheAgingTime></Ipv6CacheAgingTime>
  </RoamingCenter>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RoamingCenter

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
Ipv4Address	IPv4 address for communication with the WLAN roaming center.		IPv4: String, dotted decimal notation.
Status	Whether the client roaming center feature is enabled.		Boolean: • true • false
Port	Port for communication with the WLAN roaming center.		Unsigned integer. Value range: 1 to 65534.
ResponseTimeout	Packets response timeout.		Unsigned integer. Value range:1 to 10, in seconds.
Retry	Maximum number of packet retransmission attempts.		Unsigned integer. Value range:1 to 10.
Ipv4CacheAgingTime	Aging time of IPv4 address security entries.		Unsigned integer. Value range:600 to 86400.
Ipv6CacheAgingTime	Aging time of IPv6 address security entries.		Unsigned integer. Value range:600 to 1296000.

WLANClient/RadioWnm

This table contains radio WNM information.

XML structure

```
<WLANClient>
  <RadioWnm>
    <Wnm>
      <ApName></ApName>
      <RadioId></RadioId>
      <AntiSticky>
        <Status></Status>
        <Rssi></Rssi>
        <Interval></Interval>
        <Forced></Forced>
      </AntiSticky>
    </Wnm>
```

```
  </RadioWnm>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANClient
Table name	RadioWnm
Table type	Multi-instance table
Row name	Wnm
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name.	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. • Value range: 1 to 4.
AntiSticky	weak-signal client co-roaming information.	Data structure	Members include: Status. Rssi. Interval. Forced.
Status	Status of weak-signal client co-roaming.		Enumeration. • 0—disabled. • 1—enabled. • 2—inherit.
Rssi	RSSI threshold for weak-signal client co-roaming.		Unsigned integer. Value range: 5 to 100.
Interval	Interval of weak-signal detection for client co-roaming.		Unsigned integer. Value range: 1 to 10.
Forced	Status of weak-signal client co-roaming for not support 11v.		Boolean. • true. • false.

  </AntiBMCOfFATAP>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	AntiBMCOfFATAP
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
DefaultAction	Default action		Enumeration. • 2—deny. • 0—permit. Default value is permit.
ProIPv6	The way of process IPv6 multicast packets.		Enumeration. • 2—deny. • 0—continue. Default value is continue.
NetworkType	The type of the network.		Enumeration. • 0—ipv4-simple. • 1—disabled. • 2—ipv4-simple. • 3—ipv6-simple. • 4—ipv4-and-ipv6-simple. Default value is ipv4-simple.
BCRateLimitPPS	Configure the packet rate of broadcast packets.		Unsigned integer. Value range: 1 to 1410000.
BCRateLimitStataus	Limit the rate of broadcast packets.		Enumeration. • 1—enabled. • 0—disable. Default value is disable.
MCRateLimitPPS	Configure the packet rate of multicast packets.		Unsigned integer. Value range: 1 to 1410000.
MCRateLimitStataus	Limit the rate of multicast packets.		Enumeration. • 1—enabled. • 0—disable. Default value is disable.

WLANFW/ArpAttackProtect

This table contains ARP attack protect information.

XML structure

```
<WLANFW>
  <ArpAttackProtect>
    <AttackSuppressionEnable></AttackSuppressionEnable>
    <AttackSuppressionThreshold></AttackSuppressionThreshold>
    <AttackSuppressionBlockTime></AttackSuppressionBlockTime>
    <GatewayArpReplyEnable></GatewayArpReplyEnable>
    <GatewayArpReplyCount></GatewayArpReplyCount>
  </ArpAttackProtect>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AttackSuppressionEnable	ARP attack suppresion	N/A	Enumeration: • 1—enable • 0—disable(default)	N/A
AttackSuppressionThreshold	The threshold of ARP attack suppression entries	N/A	Unsigned integer. Value range: 2 to 4096.	The default value of AttackSuppressionThreshold is 10.
AttackSuppressionBlockTime	The block time of ARP attack suppression entries.	N/A	Unsigned integer. Value range: 10 to 6000.	The default value of AttackSuppressionBlockTime is 60.
GatewayArpReplyEnable	AP reply the arp of the gateway.	N/A	Enumeration: • 1—enable • 0—disable(default).	N/A
GatewayArpReplyCount	The packet count AP reply the arp of the gateway.	N/A	Unsigned integer. Value range: 1 to 4096.	The default value of GatewayArpReplyCount is 10.

WLANFW/ IsovlanApGroup

This table contains vlan isolation information of AP group.

XML structure

```
<WLANFW>

  <IsovlanApGroup>

    <APGroup>

      <GroupName></GroupName>

      <Vlan></Vlan>

      <PermitMacList></PermitMacList>

      <IsovlanEnable></IsovlanEnable>

      <PermitUnicast></PermitUnicast>

    </APGroup>

  </IsovlanApGroup>

</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	IsovlanApGroup
Table type	Multi-instance table
Row name	APGroup
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
Vlan	Vlan id.	Index	Unsigned short. Value range: 1 to 4094.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PermitMacList	Permit mac list	Column	String, lowercase. Length: 14 to 240 characters	Example: “000c-afe3-5dc0, 000c-afe3-5dc1.”
IsovlanEnable	Vlan isolation enable	Column	Boolean: • true—enable. • false—disable. Default value is disable.	N/A
PermitUnicast	Permit unicast	Column	Boolean: • true—enable. • false—disable. Default value is disable.	Must be used with IsovlanEnable column.

WLANFW/IsovlanPermitBroadcastApGroup

This table contains vlan isolation permit broadcast information of AP group.

XML structure

```
<WLANFW>
  <IsovlanPermitBroadcastApGroup>
    <APGroup>
      <GroupName></GroupName>
      <PermitBroadcast></PermitBroadcast>
    </APGroup>
  </IsovlanPermitBroadcastApGroup>
</WLANFW>

WLANFW

WLANFW/AntiBMCAp

This table contains broadcast and multicast packet control information of AP.

XML structure

```
<WLANFW>
  <AntiBMCOfAP>
    <AP>
      <ApName></ApName>
      <DefaultAction></DefaultAction>
      <ProIPv6></ProIPv6>
      <NetworkType></NetworkType>
      <BCRateLimitPPS></BCRateLimitPPS>
      <BCRateLimitStataus></BCRateLimitStataus>
      <MCRateLimitPPS></MCRateLimitPPS>
      <MCRateLimitStataus></MCRateLimitStataus>
    </AP>
  </AntiBMCOfAP>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	AntiBMCOfAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String. Length: 1 to 63 characters.
DefaultAction	Default action		Enumeration. • 2—deny.

Column name	Column description	Column type	Data type and restrictions
			• 1—permit. • 0—inherit.
ProIPv6	The way of process IPv6 multicast packets.		Enumeration. • 2—deny. • 1—continue. • 0—inherit.
NetworkType	The type of the network.		Enumeration. • 0—inherit • 1—disabled. • 2—ipv4-simple. • 3—ipv6-simple. • 4—ipv4-and-ipv6-simple.
BCRateLimitPPS	Configure the packet rate of broadcast packets.		Unsigned integer. Value range: 1 to 1410000.
BCRateLimitStataus	Limit the rate of broadcast packets.		Enumeration. • 2—disabled. • 1—enabled. • 0—inherit.
MCRateLimitPPS	Configure the packet rate of multicast packets.		Unsigned integer. Value range: 1 to 1410000.
MCRateLimitStataus	Limit the rate of multicast packets.		Enumeration. • 2—disabled. • 1—enabled. • 0—inherit.

WLANFW/AntiBMCApGroup

This table contains broadcast and multicast packet control information of AP group.

XML structure

```
<WLANClient>
  <AntiBMCOfAPGroup>
    <APGroup>
      <ApGroupName></ApGroupName>
      <DefaultAction></DefaultAction>
      <ProIPv6></ProIPv6>
      <NetworkType></NetworkType>
```

```
      <BCRateLimitPPS></BCRateLimitPPS>
      <BCRateLimitStataus></BCRateLimitStataus>
      <MCRateLimitPPS></MCRateLimitPPS>
      <MCRateLimitStataus></MCRateLimitStataus>
    </APGroup>
  </AntiBMCOfAPGroup>
</WLANClient>
```

Table description

Item	Description
Feature name	WLANFW
Table name	AntiBMCOfAPGroup
Table type	Multi-instance table
Row name	APGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
ApGroupName	AP group	Index	String. Length: 1 to 31 characters.
DefaultAction	Default action		Enumeration. • 2—deny. • 0—permit.
ProIPv6	The way of process IPv6 multicast packets.		Enumeration. • 2—deny. • 0—continue.
NetworkType	The type of the network.		Enumeration. • 0—disable. • 2—ipv4-simple. • 4—ipv4-and-ipv6-simple.
BCRateLimitPPS	Configure the packet rate of broadcast packets.		Unsigned integer. Value range: 1 to 1410000.
BCRateLimitStataus	Limit the rate of broadcast packets.		Enumeration. • 0—disable. • 1—enabled.
MCRateLimi	Configure the		Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
tPPS	packet rate of multicast packets.		Value range: 1 to 1410000.
MCRateLimitStataus	Limit the rate of multicast packets.		Enumeration. • 0—disable. • 1—enabled.

WLANFW/AntiBMCFATAp

This table contains broadcast and multicast packet control information of FAT AP .

XML structure

```
<WLANFW>
  <AntiBMCOfFATAP>
    <DefaultAction></DefaultAction>
    <ProIPv6></ProIPv6>
    <NetworkType></NetworkType>
    <BCRateLimitPPS></BCRateLimitPPS>
    <BCRateLimitStataus></BCRateLimitStataus>
    <MCRateLimitPPS></MCRateLimitPPS>
    <MCRateLimitStataus></MCRateLimitStataus>
  </AntiBMCOfFATAP>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	AntiBMCOfFATAP
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
DefaultAction	Default action		Enumeration. • 2—deny.

Column name	Column description	Column type	Data type and restrictions
			• 0—permit.
ProIPv6	The way of process IPv6 multicast packets.		Enumeration. • 2—deny. • 0—continue.
NetworkType	The type of the network.		Enumeration. • 0—ipv4-simple. • 1—disabled. • 2—ipv4-simple. • 3—ipv6-simple. • 4—ipv4-and-ipv6-simple.
BCRateLimitPPS	Configure the packet rate of broadcast packets.		Unsigned integer. Value range: 1 to 1410000.
BCRateLimitStataus	Limit the rate of broadcast packets.		Enumeration. • 1—enabled. • 0—disable.
MCRateLimitPPS	Configure the packet rate of multicast packets.		Unsigned integer. Value range: 1 to 1410000.
MCRateLimitStataus	Limit the rate of multicast packets.		Enumeration. • 1—enabled. • 0—disable.

WLANFW/ArpAttackProtect

This table contains ARP attack protect information.

XML structure

```
<WLANFW>
  <ArpAttackProtect>
    <AttackSuppressionEnable></AttackSuppressionEnable>
    <AttackSuppressionThreshold></AttackSuppressionThreshold>
    <AttackSuppressionBlockTime></AttackSuppressionBlockTime>
    <GatewayArpReplyEnable></GatewayArpReplyEnable>
    <GatewayArpReplyCount></GatewayArpReplyCount>
  </ArpAttackProtect>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
AttackSuppressionEnable	ARP attack suppresion	N/A	Enumeration: • 1—enable • 0—disable
AttackSuppressionThreshold	The threshold of ARP attack suppression entries	N/A	Unsigned integer. Value range: 2 to 4096.
AttackSuppressionBlockTime	The block time of ARP attack suppression entries.	N/A	Unsigned integer. Value range: 10 to 6000.
GatewayArpReplyEnable	AP reply the arp of the gateway.	N/A	Enumeration: • 1—enable • 0—disable
GatewayArpReplyCount	The packet count AP reply the arp of the gateway.	N/A	Unsigned integer. Value range: 1 to 4096.

WLANFW/ IsovlanApGroup

This table contains vlan isolation information of AP group.

XML structure

```
<WLANFW>

  <IsovlanApGroup>

    <APGroup>

      <GroupName></GroupName>
```

```
      <Vlan></Vlan>

      <PermitMacList></PermitMacList>

      <IsovlanEnable></IsovlanEnable>

      <PermitUnicast></PermitUnicast>

    </APGroup>

  </IsovlanApGroup>

</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	IsovlanApGroup
Table type	Multi-instance table
Row name	APGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
Vlan	Vlan id.	Index	Unsigned short. Value range: 1 to 4094.	N/A
PermitMacList	Mac list to permit.		String, lowercase.	Example: “000c-afe3-5dc0, 000c-afe3-5dc1.”
IsovlanEnable	Vlan isolation enable		Boolean: • true—enable. • false—disable.	N/A
PermitUnicast	Permit unicast		Boolean: • true—enable. • false—disable.	Must be used with IsovlanEnable column.

WLANFW/IsovlanPermitBroadcastApGroup

This table contains vlan isolation permit broadcast information of AP group.

XML structure

```
<WLANFW>
  <IsovlanPermitBroadcastApGroup>
    <APGroup>
      <GroupName></GroupName>
      <PermitBroadcast></PermitBroadcast>
    </APGroup>
  </IsovlanPermitBroadcastApGroup>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	IsovlanPermitBroadcastApGroup
Table type	Multi-instance table
Row name	APGroup
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.
PermitBroadcast	Permit broadcast		Boolean: • true—enable. • false—disable.

WLANFW/Isovlan

This table contains vlan isolation information in system view.

XML structure

```
<WLANFW>

  <Isovlan>

    <Vlan>
```

```
      <VlanID></VlanID>

      <PermitMacList></PermitMacList>

      <IsovlanEnable></IsovlanEnable>

      <PermitUnicast></PermitUnicast>

      <PermitBmcIpv4Acl></PermitBmcIpv4Acl>

      <PermitBmcIpv6Acl></PermitBmcIpv6Acl>

    </Vlan>

  </Isovlan>

</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	Isovlan
Table type	Multi-instance table
Row name	Vlan
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanID	Vlan id.	Index	Unsigned short. Value range: 1 to 4094.	N/A
PermitMacList	Permit mac list		String, lowercase.	Example: “000c-afe3-5dc0, 000c-afe3-5dc1.”
IsovlanEnable	Vlan isolation enable		Boolean: • true—enable. • false—disable.	N/A
PermitUnicast	Permit unicast		Boolean: • true—enable. • false—disable.	Must be used with IsovlanEnable column.
PermitBmcIpv4Acl	IPV4 ACL number of Permitt bmc.		Unsigned short. Value range: 3000 to 3999. Invalid value:4294967295	

Column name	Column description	Column type	Data type and restrictions	Remarks
PermitBmcIpv6Acl	IPV6 ACL number of Permitt bmc.		Unsigned short. Value range: 3000 to 3999 Invalid value:4294967295	

WLANFW/IsovlanPermitBroadcast

This table contains vlan isolation permit broadcast information in system view.

XML structure

```
<WLANFW>
  <IsovlanPermitBroadcast>
    <PermitBroadcast></PermitBroadcast>
  </IsovlanPermitBroadcast>
</WLANFW>
```

Table description

Item	Description
Feature name	WLANFW
Table name	IsovlanPermitBroadcastApGroup

WlanMesh

WlanMesh/Profile

This table contains mesh profile information.

XML structure

```
<WlanMesh>
  <Profile>
    <ProfileEntry>
      <ProfileIndex></ProfileIndex>
      <MeshID></MeshID>
      <KeepAlive></KeepAlive>
      <AKMMode></AKMMode>
      <SimpleKey></SimpleKey>
      <ProfileEnable></ProfileEnable>
    </ProfileEntry>
  </Profile>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	Profile
Table type	Multi-instance table
Row name	ProfileEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileIndex	Mesh profile number	Index	Unsigned integer. Value range: 1 to 32.
MeshID	Mesh ID for the mesh profile	N/A	String. Length: 1 to 32 characters.
KeepAlive	Mesh link keepalive interval	N/A	Unsigned integer. Value range: 1 to 1800.

Column name	Column description	Column type	Data type and restrictions
AKMMode	SAE mode	N/A	Enumeration: • **1**—Enabled. • **2**—Disabled.
SimpleKey	Plain text string	N/A	String. Length: 8 to 63 characters.
ProfileEnable	Mesh profile enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

WlanMesh/Policy

This table contains mesh policy information.

XML structure

```
<WlanMesh>
  <Policy>
    <PolicyEntry>
      <PolicyName></PolicyName>
      <PolicyEnable></PolicyEnable>
      <MlspEnable></MlspEnable>
      <MlspMode></MlspMode>
      <TransmitLevel></TransmitLevel>
      <ProbRequestInterval></ProbRequestInterval>
      <LinkHoldRSSI></LinkHoldRSSI>
      <WaveGuideHoldRSSI></WaveGuideHoldRSSI>
      <TransMissionMethod></TransMissionMethod>
      <WaveGuideSwitch></WaveGuideSwitch>
      <LinkHoldTime></LinkHoldTime>
      <SwitchMargin></SwitchMargin>
      <LinkSaturationRSSI></LinkSaturationRSSI>
      <MaxLinkNum></MaxLinkNum>
      <MlspOptimize></MlspOptimize>
      <LinkOptimizeThreshold></LinkOptimizeThreshold>
      <MlspLog></MlspLog>
      <MlspLogInterval></MlspLogInterval>
      <TempLinkEnable></TempLinkEnable>
      <ActiveKeepaliveCount></ActiveKeepaliveCount>
      <LinkEstablishThreshold></LinkEstablishThreshold>
    </PolicyEntry>
  </Policy>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	Policy
Table type	Multi-instance table
Row name	PolicyEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	N/A
PolicyEnable	Mesh policy enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MlspEnable	MLSP enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
MlspMode	MLSP mode	N/A	Unsigned integer. Value range: 0 to 1.	Only available for fat APs.
TransmitLevel	Keepalive packet limit	N/A	Unsigned integer. Value range: 0 to 4.	Only available for ACs.
ProbRequestInterval	Probe request interval	N/A	Unsigned integer. Value range: 100 to 8191.	N/A
LinkHoldRSSI	Mesh link hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	N/A
WaveGuideHoldRSSI	Waveguide hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	Only available for fat APs.
TransMissionMethod	Transmission method	N/A	Unsigned integer. Value range: 0 to 1.	Only available for ACs.
WaveGuideSwitch	Fast waveguide switch state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkHoldTime	Mesh link hold time	N/A	Unsigned integer. Value range: 1000 to 20000.	Only available for fat APs.
SwitchMargin	Mesh link switch threshold	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkSaturationRSSI	Mesh link saturation RSSI	N/A	Unsigned integer. Value range: 30 to 150.	N/A
MaxLinkNum	Maximum number of links that an MP can form	N/A	Unsigned integer. Value range: 1 to 8.	N/A
MlspOptimize	MLSP optimization state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
LinkOptimizeThreshold	Mesh link optimization threshold	N/A	Unsigned integer. Value range: 30 to 120.	Only available for fat APs.
MlspLog	MLSP logging enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
MlspLogInterval	MLSP logging interval	N/A	Unsigned integer. Value range: 500 to 4000.	Only available for fat APs.
TempLinkEnable	Temporary link enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for ACs.
ActiveKeepaliveCount	Mesh link active keepalive packet limit	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkEstablishThreshold	Mesh link establishment threshold	N/A	Unsigned integer. Value range: 1 to 100.	N/A

WlanMesh/ MLSPProxy

This table contains MLSP proxy information.

XML structure

```
<WlanMesh>
  <MLSPProxy>
    <MLSPProxyEntry>
      <PolicyName></PolicyName>
      <ProxyMac></ProxyMac>
```

```
      <VlanID></VlanID>
      <IPAddress></IPAddress>
    </MLSPProxyEntry>
  </MLSPProxy>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	MLSPProxy
Table type	Multi-instance table
Row name	MLSPProxyEntry
Restrictions	The table is applicable only to fat APs and MLSP must be enabled first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ProxyMac	Proxy MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	It cannot be an all zero address or broadcast address or multicast address, 00-0c-af-e3-5d-c0 for example.
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
IPAddress	IP address	N/A	String. Dotted decimal notation.	It cannot be an all zero address or broadcast address or multicast address, 192.168.0.1 for example.

WlanMesh/RadioCfg

This table contains radio configuration information.

XML structure

```
<WlanMesh>
  <RadioCfg>
```

```
    <Radio>
      <ApName></ApName>
      <RadioId></RadioId>
      <RadioType></RadioType>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </Radio>
  </RadioCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	RadioCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
RadioType	Radio type	N/A	Enumeration: • **1**—802.11b. • **2**—802.11a. • **3**—802.11g. • **4**—802.11n(2.4GHz). • **5**—802.11n(5GHz). • **6**—802.11ac(2.4GHz). • **7**—802.11ac(5GHz).	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

WlanMesh/APCfg

This table contains AP configuration information.

XML structure

```
<WlanMesh>
  <APCfg>
    <CfgInfo>
      <ApName></ApName>
      <PortalEnable></PortalEnable>
    </CfgInfo>
  </APCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	APCfg
Table type	Multi-instance table
Row name	CfgInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
PortalEnable	Portal service enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A

WlanMesh/ WDSPeerMac

This table contains WDS peer MAC information.

XML structure

```
<WlanMesh>
  <WDSPeerMac>
    <PeerMacEntry>
      <ApName></ApName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </PeerMacEntry>
  </WDSPeerMac>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	WDSPeerMac
Table type	Multi-instance table
Row name	PeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP's MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

WlanMesh/APGroupRadioCfg

This table contains radio configuration information for an AP group.

XML structure

```
<WlanMesh>
  <APGroupRadioCfg>
    <GroupRadio>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </GroupRadio>
  </APGroupRadioCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupRadioCfg
Table type	Multi-instance table
Row name	GroupRadio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

WlanMesh/APGroupAPCfg

This table contains AP group configuration information.

XML structure

```
<WlanMesh>
  <APGroupAPCfg>
    <GroupCfgInfo>
      <GroupName></GroupName>
      <PortalEnable></PortalEnable>
    </GroupCfgInfo>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

WlanMesh/GlobalCfg

This table contains global configuration information.

XML structure

```
<WlanMesh>
  <GlobalCfg>
    <PeerConfig></PeerConfig>
    <PortalEnable></PortalEnable>
  </GlobalCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	GlobalCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
PeerConfig	Mesh peer configuration state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
PortalEnable	Portal service enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

WlanMesh/APMeshIF

This table contains AP mesh interface configuration information.

XML structure

```
<WlanMesh>
  <APMeshIF>
    <APMeshIFEntry>
      <ApName></ApName>
      <MeshIFNum></MeshIFNum>
      <LinkType></LinkType>
      <PVID></PVID>
```

```
      <PermitVlanList></PermitVlanList>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
    </APMeshIFEntry>
  </APMeshIF>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	APMeshIF
Table type	Multi-instance table
Row name	APMeshIFEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
MeshIFNum	Mesh interface Nnmber	Index	Unsigned integer. Value range: 0 to 1023.	
LinkType	VLAN type of an interface	N/A	Enumeration: • **1**—Access (default). • **2**—Trunk. • **3**—Hybrid.	Applicable to only Layer 2 interfaces.
PVID	Port VLAN ID (PVID) of an interface	N/A	Unsigned integer. Value range: 1 to 4094.	Applicable to only Layer 2 interfaces.
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like “<PermitVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

Column name	Column description	Column type	Data type and restrictions	Remarks
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. Do not specify a VLAN both in this column and the **TaggedVlanList** column. The item is permitted to incremental edit. You can sign the flag like “<UntaggedVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a port is not assigned to any VLANs as a tagged member.	Example: 1,2,3,5-8,10-20. Do not specify a VLAN both in this column and the **UntaggedVlanList** column. The item is permitted to incremental edit. You can sign the flag like “<TaggedVlanList base:incremental="true">”. If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

WlanMesh/GroupMeshIF

This table contains AP group mesh interface configuration information.

XML structure

```
<WlanMesh>
  <GroupMeshIF>
    <GroupMeshIFEntry>
      <GroupName></GroupName >
      <MeshIFNum></MeshIFNum>
      <LinkType></LinkType>
      <PVID></PVID>
      <PermitVlanList></PermitVlanList>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
    </GroupMeshIFEntry >
  </GroupMeshIF>
</WlanMesh>
```

Table description

      <IsKeyConfig></IsKeyConfig>
      <ProfileEnable></ProfileEnable>
    </ProfileEntry>
  </Profile>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	Profile
Table type	Multi-instance table
Row name	ProfileEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions
ProfileIndex	Mesh profile number	Index	Unsigned integer. Value range: 1 to 32.

Column name	Column description	Column type	Data type and restrictions
MeshID	Mesh ID for the mesh profile	N/A	String. Length: 1 to 32 characters.
KeepAlive	Mesh link keepalive interval	N/A	Unsigned integer. Value range: 1 to 1800.
AKMMode	SAE mode	N/A	Enumeration: • **1**—Enabled. • **2**—Disabled.
SimpleKey	Plain text string	N/A	String. Length: 8 to 63 characters.
IsKeyConfig	SimpleKey configuration state	N/A	Boolean: • **true**—The simpleKey has been configured. • **false**—The simpleKey is not configured.
ProfileEnable	Mesh profile enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

WlanMesh/Policy

This table contains mesh policy information.

XML structure

```
<WlanMesh>
  <Policy>
    <PolicyEntry>
      <PolicyName></PolicyName>
      <PolicyEnable></PolicyEnable>
      <MlspEnable></MlspEnable>

      <WaveGuideHoldRSSI></WaveGuideHoldRSSI>
      <TransMissionMethod></TransMissionMethod>
      <WaveGuideSwitch></WaveGuideSwitch>
      <LinkHoldTime></LinkHoldTime>
      <SwitchMargin></SwitchMargin>
      <LinkSaturationRSSI></LinkSaturationRSSI>
      <MaxLinkNum></MaxLinkNum>
      <MlspOptimize></MlspOptimize>
      <LinkOptimizeThreshold></LinkOptimizeThreshold>
      <MlspLog></MlspLog>
```

```
      <MlspLogInterval></MlspLogInterval>
      <TempLinkEnable></TempLinkEnable>
      <ActiveKeepaliveCount></ActiveKeepaliveCount>
      <LinkEstablishThreshold></LinkEstablishThreshold>
    </PolicyEntry>
  </Policy>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	Policy
Table type	Multi-instance table
Row name	PolicyEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	N/A
PolicyEnable	Mesh policy enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	N/A
MlspEnable	MLSP enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
MlspMode	MLSP mode	N/A	Unsigned integer. Value range: 0 to 1.	Only available for fat APs.
TransmitLevel	Keepalive packet limit	N/A	Unsigned integer. Value range: 0 to 4.	Only available for ACs.
ProbRequestInterval	Probe request interval	N/A	Unsigned integer. Value range: 100 to 8191.	N/A
LinkHoldRSSI	Mesh link hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	N/A
WaveGuideHoldRSSI	Waveguide hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	Only available for fat APs.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransMissionMethod	Transmission method	N/A	Unsigned integer. Value range: 0 to 1.	Only available for ACs.
WaveGuideSwitch	Fast waveguide switch state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
LinkHoldTime	Mesh link hold time	N/A	Unsigned integer. Value range: 1000 to 20000.	Only available for fat APs.
SwitchMargin	Mesh link switch threshold	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkSaturationRSSI	Mesh link saturation RSSI	N/A	Unsigned integer. Value range: 30 to 150.	N/A
MaxLinkNum	Maximum number of links that an MP can form	N/A	Unsigned integer. Value range: 1 to 8.	N/A
MlspOptimize	MLSP optimization state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
LinkOptimizeThreshold	Mesh link optimization threshold	N/A	Unsigned integer. Value range: 30 to 120.	Only available for fat APs.
MlspLog	MLSP logging enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for fat APs.
MlspLogInterval	MLSP logging interval	N/A	Unsigned integer. Value range: 500 to 4000.	Only available for fat APs.
TempLinkEnable	Temporary link enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.	Only available for ACs.
ActiveKeepaliveCount	Mesh link active keepalive packet limit	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkEstablishThreshold	Mesh link establishment threshold	N/A	Unsigned integer. Value range: 1 to 100.	N/A

WlanMesh/ MLSPProxy

This table contains MLSP proxy information.

XML structure

```
<WlanMesh>
```

```
  <MLSPProxy>
    <MLSPProxyEntry>
      <PolicyName></PolicyName>
      <ProxyMac></ProxyMac>
      <VlanID></VlanID>
      <IPAddress></IPAddress>
    </MLSPProxyEntry>
  </MLSPProxy>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	MLSPProxy
Table type	Multi-instance table
Row name	MLSPProxyEntry
Restrictions	The table is applicable only to fat APs and MLSP must be enabled first.
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ProxyMac	Proxy MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	It cannot be an all zero address or broadcast address or multicast address, 00-0c-af-e3-5d-c0 for example.
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
IPAddress	IP address	N/A	String. Dotted decimal notation.	It cannot be an all zero address or broadcast address or multicast address, 192.168.0.1 for example.

WlanMesh/RadioCfg

This table contains radio configuration information.

XML structure

```
<WlanMesh>
  <RadioCfg>
    <Radio>
      <ApName></ApName>
      <RadioId></RadioId>
      <RadioType></RadioType>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </Radio>
  </RadioCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	RadioCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
RadioType	Radio type	N/A	Enumeration: • **1**—802.11b. • **2**—802.11a. • **3**—802.11g. • **4**—802.11n(2.4GHz). • **5**—802.11n(5GHz). • **6**—802.11ac(2.4GHz). • **7**—802.11ac(5GHz). • **8**—802.11ax(2.4GHz). • **9**—802.11ax(5GHz).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

WlanMesh/APCfg

This table contains AP configuration information.

XML structure

```
<WlanMesh>
  <APCfg>
    <CfgInfo>
      <ApName></ApName>
      <PortalEnable></PortalEnable>
    </CfgInfo>
  </APCfg>
</WlanMesh>
```

Table description

Item	Description

RadioID	Radio ID	N/A	Unsigned integer.
RadioType	Radio mode	N/A	Enumeration: • 1—802.11b. • 2—802.11a. • 3—802.11g. • 4—802.11n(2.4GHz). • 5—802.11n(5GHz). • 6—802.11ac(2.4GHz). • 7—802.11ac(5GHz). • 8—802.11ax(2.4GHz). • 9—802.11ax(5GHz).
LocalMeshID	Local mesh ID	N/A	String. Length: 1 to 32 characters.
NbrMeshID	Peer mesh ID	N/A	String. Length: 1 to 32 characters.
BSSID	Base service set ID	N/A	MAC address. Six groups of two hexadecimal digits, hyphen-separated.
PeerMac	Peer MAC address	N/A	MAC address. Six groups of two hexadecimal digits, hyphen-separated.
IfIndex	Interface index	N/A	Unsigned integer.
Status	Link status	N/A	Enumeration: • **1**—Active. • **2**—Standby.
Channel	Radio channel	N/A	Unsigned integer.
Age	Link aging timer	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
RSSI	Link RSSI	N/A	Unsigned integer.
SNR	Signal noise ratio	N/A	Unsigned integer.

WlanMesh/APMeshIF

This table contains mesh interface information for an AP.

XML structure

```
<WlanMesh>
  <APMeshIF>
    <APMeshIFEntry>
      <ApName></ApName>
      <MeshIFNum></MeshIFNum>
      <MeshIFName></MeshIFName>
      <LinkType></LinkType>
      <PVID></PVID>
      <PermitVlanList></PermitVlanList>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
    </APMeshIFEntry>
  </APMeshIF>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	APMeshIF
Table type	Multi-instance table
Row name	APMeshIFEntry
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	N/A
MeshIFNum	Mesh interface number	Index	Unsigned integer: Value range: 0 to 1023	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MeshIFName	Mesh interface name	N/A	String. Length: 1 to 47 characters.	N/A
LinkType	Mesh interface type	N/A	Unsigned integer. • **1**—Access. • **2**—Trunk. • **3**—Hybrid.	N/A
PVID	Mesh interface PVID	N/A	Unsigned integer. Value range: 1 to 4094	N/A
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a port is not assigned to any VLANs as a tagged member.	N/A

WlanMesh/GroupMeshIF

This table contains mesh interface information for an AP group.

XML structure

```
<WlanMesh>
  <GroupMeshIF>
    <GroupMeshIFEntry>
      <GroupName></GroupName>
      <MeshIFNum></MeshIFNum>
      <MeshIFName></MeshIFName>
      <LinkType></LinkType>
      <PVID></PVID>
      <PermitVlanList></PermitVlanList>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
    </GroupMeshIFEntry>
  </GroupMeshIF>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	GroupMeshIF
Table type	Multi-instance table
Row name	GroupMeshIFEntry
Restrictions	Support only for AC

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.
MeshIFNum	Mesh interface number	Index	Unsigned integer. Value range: 0 to 1023
MeshIFName	Mesh interface name	N/A	String. Length: 1 to 47 characters.
LinkType	Mesh interface type	N/A	Unsigned integer. • **1**—Access. • **2**—Trunk. • **3**—Hybrid.
PVID	Mesh interface PVID	N/A	Unsigned integer. Value range: 1 to 4094

Column name	Column description	Column type	Data type and restrictions
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a port is not assigned to any VLANs as a tagged member.

WlanMesh/APGroupRadioCfg

This table contains radio configuration information for an AP group.

XML structure

```
<WlanMesh>
  <APGroupRadioCfg>
    <GroupRadio>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </GroupRadio>
  </APGroupRadioCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh

Item	Description
Table name	APGroupRadioCfg
Table type	Multi-instance table
Row name	GroupRadio
Restrictions	Applicable only to ACs

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31.	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

WlanMesh/APGroupAPCfg

This table contains AP configuration information for an AP group.

XML structure

```
<WlanMesh>
  <APGroupAPCfg>
    <GroupCfgInfo>
      <GroupName></GroupName>
      <PortalEnable></PortalEnable>
    </GroupCfgInfo>
  </APGroupAPCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh

Item	Description
Table name	APGroupAPCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	Support only for AC

Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.
PortalEnable	Portal service enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

WlanMesh/APGroupWDSPeerMac

This table contains WDS peer MAC address information for an AP group.

XML structure

```
<WlanMesh>
  <APGroupWDSPeerMac>
    <GroupPeerMacEntry>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </GroupPeerMacEntry>
  </APGroupWDSPeerMac>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupWDSPeerMac
Table type	Multi-instance table
Row name	GroupPeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

WlanMesh/GlobalCfg

This table contains global configuration information.

XML structure

```
<WlanMesh>
  <GlobalCfg>
    <PeerConfig></PeerConfig>
    <PortalEnable></PortalEnable>
  </GlobalCfg>
</WlanMesh>
```

Table description

Item	Description
Feature name	WlanMesh
Table name	GlobalCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions
PeerConfig	Mesh peer configuration state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.
PortalEnable	Portal service enabling state	N/A	Boolean: • **true**—Enabled. • **false**—Disabled.

WLOC

WLOC/AeroScout

This table contains AeroScout of AP protocol related parameters information.

XML structure

```
<WLOC>
  <AeroScout>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <VersionID></VersionID>
      <EngineDetectionMode></EngineDetectionMode>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <TimeStamp></TimeStamp>
      <ReportMode></ReportMode>
      <MulticastAddress></MulticastAddress>
    </AP>
  </AeroScout>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	AeroScout
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the	N/A	Enumeration: • 1—enable	N/A

	AeroScout protocol		• 2—disable	
VersionID	Specify the AeroScout version ID	N/A	Enumeration: • 2—V2 • 3—V3	N/A
EngineDetectionMode	Specify the AeroScout engine address mode	N/A	Enumeration: • 1—static • 2—dynamic	N/A
EngineAddress	Specify a locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together.Example: 1.1.1.1.
EnginePort	Specify a locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TimeStamp	Configure the timestamp field in MU reports	N/A	Enumeration: • 1—absolute • 2—relative	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

WLOC/BLE

This table contains BLE of AP protocol related parameters information.

XML structure

```
<WLOC>
  <BLE>
    <AP>
      <ApName></ApName>

      <CmdPasswdCipher></CmdPasswdCipher>
      <RealTimeReportStatus></RealTimeReportStatus>
      <RealTimeReportPrefix></RealTimeReportPrefix>
      <RealTimeReportInterval></RealTimeReportInterval>
      <RealTimeReportEngineAddress></RealTimeReportEngineAddress>
      <RealTimeReportEnginePort></RealTimeReportEnginePort>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
    </AP>
  </BLE>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	BLE
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: • 1—enable • 2—disable	N/A
AgingTime	Specify a neighbor aging time for BLE location	N/A	Unsigned integer Value range:60 to 3600.	N/A
EngineAddress	Specify the locating server IP address to which the AP sends packets, this column must	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.

	configure with EnginePort			
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 86400.	N/A
RssiThresholdStatus	Configure Rssi-Threadhold status	N/A	Enumeration: • 1—enable • 2—dsable	N/A
RssiThreshold	Specify the Rssi-Threadhold value	N/A	Unsigned integer. Value range: 5 to 255.	N/A
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CmdPasswd Simple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswd Cipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of real-time wireless locating	N/A	Enumeration: • 1—enable • 2—disable	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example:1.1.1.1.
RealTimeReportEnginePort	Specify the locating server	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.

	port to which the AP sends packets, this column must configure with EngineAddress			
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight	N/A

WLOC/CUPID

This table contains CUPID of AP protocol related parameters information.

XML structure

```
<WLOC>
  <CUPID>
    <AP>
      <ApName></ApName>

ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
ClientRateLimitStatus	Limit the rate for clients to send locating packets to the AP status	N/A	Enumeration: • 1—enable • 2—disable	N/A
ClientRateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 1 to 1300000.	N/A
ClientRateLimitCbs	Configure the committed burst size, this column must configure with ClientRateLimitCir	N/A	Unsigned integer. Value range: 80 to 130000000.	Optional parameter
DilutionStatus	Configure dilution for locating packets	N/A	Enumeration: • 1—enable • 2—disable	N/A
DilutionFactor	Configure the dilution factor, this column must configure with DilutionTimeout	N/A	Unsigned integer. Value range: 1 to 10000.	DilutionFactor and DilutionTimeout must set together.
DilutionTimeout	Configure the dilution timeout,	N/A	Unsigned integer. Value range: 1 to 60.	DilutionFactor and DilutionTimeout must

	this column must configure with DilutionFactor			set together.
IgnoreBeaconStatus	Ignore beacon frames	N/A	Enumeration: • 1—enable • 2—disable	N/A
RateLimitStatus	Limit the rate for sending locating packets	N/A	Enumeration: • 1—enable • 2—disable	N/A
RateLimitCir	Configure the committed information rate, this column must configure with RateLimitCbs	N/A	Unsigned integer. Value range: 8 to 1300000.	N/A
RateLimitCbs	Configure the committed burst size, this column must configure with RateLimitCir	N/A	Unsigned integer. Value range: 500 to 130000000.	Optional parameter
RssiStatus	Specify the Rssi-Threadhold value	N/A	Enumeration: • 1—enable • 2—disable	N/A
RssiThreshold	Specify the Rssi-Threadhold value	N/A	Unsigned integer. Value range: 5 to 100.	N/A
IgnoreApFrameStatus	Ignore Ap frames	N/A	Enumeration: • 1—enable • 2—disable	N/A
KeepAliveStatus	Configure wireless location keepalive	N/A	Enumeration: • 1—enable • 2—disable	N/A

Table description

Item	Description
Feature name	WLOC
Table name	CommonConfOfGlobal
Table type	Single-instance table
Row name	None

Restrictions	None
Support for row creation and deletion	No

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientRateLimitStatus	Limit the rate for clients to send locating packets to AP	N/A	Enumeration: • 1—enable • 2—disable(default)	N/A
ClientRateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 1 to 1300000.	N/A
ClientRateLimitCbs	Configure the committed burst size, this column must configure with ClientRatelimitCir	N/A	Unsigned integer. Value range: 80 to 130000000.	Optional parameter
DilutionStatus	Dilution for locating packets	N/A	Enumeration: • 1—enable • 2—disable(default)	N/A
DilutionFactor	Configure the dilution factor, this column must configure with DilutionTimeout	N/A	Unsigned integer. Value range: 1 to 10000.	DilutionFactor and DilutionTimeout must set together.
DilutionTimeout	Configure the dilution timeout, this column must configure with DilutionFactor	N/A	Unsigned integer. Value range: 1 to 60.	DilutionFactor and DilutionTimeout must set together.
IgnoreBeaconStatus	Ignore beacon frames	N/A	Enumeration: • 1—enable • 2—disable(default)	N/A
RateLimitStatus	Limit the rate for sending locating packets	N/A	Enumeration: • 1—enable • 2—disable(default)	N/A
RateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 8 to 1300000.	N/A
RateLimitCbs	Configure the committed burst size, this column must configure with RatelimitCir	N/A	Unsigned integer. Value range: 500 to 130000000.	Optional parameter
RssiStatus	Configure rssi-threadhold status	N/A	Enumeration: • 1—enable • 2—disable(default)	N/A
RssiThreshol	Specify the	N/A	Unsigned integer.	N/A

d	rssi-threadhold value		Value range: 5 to 100. Default:5.	
IgnoreApFrameStatus	Ignore Ap frames	N/A	Enumeration: • 1—enable • 2—disable	N/A
KeepAliveStatus	Configure wireless location keepalive	N/A	Enumeration: • 1—enable • 2—disable	N/A

WLOC/RadioConf

This table contains Radio related parameters information.

XML structure

```
<WLOC>
  <RadioConf>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <RadioStatus></RadioStatus>
      <ModeMu></ModeMu>
      <ModeTag></ModeTag>
    </Radio>
  </RadioConf>
</WLOC>
```

Table description

Item	Description

WLOC

WLOC/AeroScout

This table contains AeroScout of AP protocol related parameters information.

XML structure

```
<WLOC>
  <AeroScout>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <VersionID></VersionID>
      <EngineDetectionMode></EngineDetectionMode>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <TimeStamp></TimeStamp>
      <ReportMode></ReportMode>
      <MulticastAddress></MulticastAddress>
    </AP>
  </AeroScout>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	AeroScout
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the AeroScout protocol	N/A	Enumeration: • 0—inherit • 1—enable	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			• 2—disable	
VersionID	Specify the AeroScout version ID	N/A	Enumeration: • 0—inherit • 2—V2 • 3—V3	N/A
EngineDetectionMode	Specify the AeroScout engine address mode	N/A	Enumeration: • 0—inherit • 1—static • 2—dynamic	N/A
EngineAddress	Specify the locating server IP address to which the AP sends packets	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
TimeStamp	Configure the timestamp field in MU reports	N/A	Enumeration: • 0—inherit • 1—absolute • 2—relative	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 0—inherit • 1—local • 2—central	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

WLOC/BLE

This table contains BLE of AP protocol related parameters information.

XML structure

```
<WLOC>

      <RealTimeReportInterval></RealTimeReportInterval>
      <RealTimeReportEngineAddress></RealTimeReportEngineAddress>
      <RealTimeReportEnginePort></RealTimeReportEnginePort>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
    </AP>
  </BLE>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	BLE
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
AgingTime	Specify a neighbour aging time for BLE location	N/A	Unsigned integer. Value range:0 or 60 to 3600.	Zero means inherited.
EngineAddress	Specify the locating server IP address to which the AP sends packets	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 86400.	N/A
RssiThresholdStatus	Specify the Rssi-Threadhold status	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
RssiThreshold	Specify the RSSI threshold value	N/A	Unsigned integer. Value range: 0 or 5 to 255.	Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
CmdPasswdSimple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswdCipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of Real-time wireless locating	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
RealTimeReportEnginePort	Specify the locating server port to which the	N/A	Unsigned integer. Value range: .0 to 65535.	EngineAddress and EnginePort must set together.

Column name	Column description	Column type	Data type and restrictions	Remarks
	AP sends packets, this column must configure with EngineAddress			Zero means inherited.
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 0—inherit • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 0—inherit • 1—general • 2—lightweight	N/A

WLOC/CUPID

This table contains CUPID of AP protocol related parameters information.

XML structure

```
<WLOC>
  <CUPID>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the Cupid protocol	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
ReportStatus	Specify the stauts client list report	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 10.	Zero means inherited.
UnassociateReportStatus	Unassociated report to the server	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
UnassoMeasStatus	Unassociated measurement report to the server	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 0—inherit • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 0—inherit • 1—general • 2—lightweight	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalCalculate	Participate in local calculating	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A

WLOC/FingerPrint

This table contains FingerPrint of AP protocol related parameters information.

XML structure

```
<WLOC>
  <FingerPrint>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <RawFrameStatus><RawFrameStatus>
      <MuReportStatus></MuReportStatus>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
      <MulticastAddress></MulticastAddress>
    </AP>
  </FingerPrint>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	FingerPrint
Table type	Multi-instance table
Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wireless locating through the FingerPrint protocol	N/A	Enumeration: • 0—inherited • 1—enable • 2—disable	N/A
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. If it is 0, it means inherited
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
RawFrameStatus	Specify the status of report raw frame information	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
MuReportStatus	Specify the status of report MU information	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 0—inherit • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 0—inherit • 1—general • 2—lightweight • 3—cupid-hybrid	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

WLOC/CommonConf

This table contains CommonConf of AP protocol related parameters information.

Row name	AP
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
ClientRateLimitStatus	Limit the rate for clients to send locating packets to the AP status	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
ClientRateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 0 to 1300000.	Zero means inherited.
ClientRateLimitCbs	Configure the committed burst size	N/A	Unsigned integer. Value range:0 or 80 to 130000000.	Optional parameter Zero means inherited.
DilutionStatus	Configure	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	dilution for locating packets		• 0—inherit • 1—enable • 2—disable	
DilutionFactor	Configure the dilution factor	N/A	Unsigned integer. Value range: 0 to 10000.	DilutionFactor and DilutionTimeout must set together. Zero means inherited.
DilutionTimeout	Configure the dilution timeout	N/A	Unsigned integer. Value range: 0 to 60.	DilutionFactor and DilutionTimeout must set together. Zero means inherited.
IgnoreBeaconStatus	Ignore beacon frames	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
RateLimitStatus	Limit the rate for sending locating packets	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
RateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 0 or 8 to 1300000.	Zero means inherited.
RateLimitCbs	Configure the committed burst size	N/A	Unsigned integer. Value range: 0 or 500 to 130000000.	Optional parameter Zero means inherited.
RssiStatus	Specify the Rssi-Threadhold status	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
RssiThreshold	Set the RSSI threshold	N/A	Unsigned integer. Value range: 0 or 5 to 100.	Zero means inherited.
IgnoreApFrameStatus	Ignore AP frames	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
KeepAliveStatus	Configure wireless location keepalive	N/A	Enumeration: • 1—enable • 2—disable	N/A

WLOC/AeroScoutOfApgroup

    <ReportMode></ReportMode>
    <ReportFormat></ReportFormat>
    <LocalCalculate></LocalCalculate>
  </CUPIDOfGlobal>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	CUPIDOfGlobal
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wireless locating	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	through the Cupid protocol		• 1—enable • 2—disable	
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ReportStatus	Specify the stauts of client list report	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 10.	N/A
UnassociateReportStatus	Unassociated report to the server	N/A	Enumeration: • 1—enable • 2—disable	N/A
UnassoMeasStatus	Unassociated measurement report to the server	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight	N/A
LocalCalculate	Participate in local calculating	N/A	Enumeration: • 1—enable • 2—disable	N/A

WLOC/FingerPrintOfGlobal

This table contains FingerPrint of Global protocol related parameters information.

XML structure

```
<WLOC>
  <FingerPrintOfGlobal>
    <Status></Status>
    <EngineAddress></EngineAddress>
    <EnginePort></EnginePort>
```

```
    <VendorPort></VendorPort>
    <RawFrameStatus><RawFrameStatus>
    <MuReportStatus></MuReportStatus>
    <ReportMode></ReportMode>
    <ReportFormat></ReportFormat>
    <MulticastAddress></MulticastAddress>
  </FingerPrintOfGlobal>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	FingerPrintOfGlobal
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wireless locating through the FingerPrint protocol	N/A	Enumeration: • 1—enable • 2—disable	N/A
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RawFrameStatus	Specify the status of report raw frame information	N/A	Enumeration: • 1—enable • 2—disable	N/A
MuReportStatus	Specify the status of report MU information	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight • 3—cupid-hybrid	N/A
MulticastAddr ess	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

WLOC/CommonConfOfGlobal

This table contains CommonConf of Global protocol related parameters information.

XML structure

```
<WLOC>
  <CommonConfOfGlobal>
    <ClientRateLimitStatus></ClientRateLimitStatus>
    <ClientRateLimitCir></ClientRateLimitCir>
    <ClientRateLimitCbs></ClientRateLimitCbs>
    <DilutionStatus></DilutionStatus>
    <DilutionFactor></DilutionFactor>
    <DilutionTimeout></DilutionTimeout>
    <IgnoreBeaconStatus></IgnoreBeaconStatus>
    <RateLimitStatus></RateLimitStatus>

    <RateLimitCbs></RateLimitCbs>
    <RssiStatus></RssiStatus>
    <RssiThreshold></RssiThreshold>
    <IgnoreApFrameStatus></IgnoreApFrameStatus>
    <KeepAliveStatus></KeepAliveStatus>
  </CommonConfOfGlobal>
</WLOC>
```

Table description

Item	Description
Feature name	WLOC
Table name	CommonConfOfGlobal
Table type	Single-instance table
Row name	None
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientRateLimitStatus	Limit the rate for clients to send locating packets to the AP status	N/A	Enumeration: • 1—enable • 2—disable	N/A
ClientRateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 1 to 1300000.	N/A
ClientRateLimitCbs	Configure the committed burst size	N/A	Unsigned integer. Value range: 80 to 130000000.	Optional parameter
DilutionStatus	Configure dilution for locating packets	N/A	Enumeration: • 1—enable • 2—disable	N/A
DilutionFactor	Configure the dilution factor	N/A	Unsigned integer. Value range: 1 to 10000.	DilutionFactor and DilutionTimeout must set together.
DilutionTimeout	Configure the dilution timeout	N/A	Unsigned integer. Value range: 1 to 60.	DilutionFactor and DilutionTimeout must set together.
IgnoreBeaconStatus	Ignore beacon frames	N/A	Enumeration: • 1—enable • 2—disable	N/A
RateLimitStatus	Limit the rate for sending locating packets	N/A	Enumeration: • 1—enable • 2—disable	N/A
RateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 8 to 1300000.	N/A
RateLimitCbs	Configure the committed burst size	N/A	Unsigned integer. Value range: 500 to 130000000.	Optional parameter
RssiStatus	Specify the Rssi-Threadhold status	N/A	Enumeration: • 1—enable • 2—disable	N/A
RssiThreshold	Set the RSSI threshold	N/A	Unsigned integer. Value range: 5 to 100.	N/A
IgnoreApFrameStatus	Ignore AP frames	N/A	Enumeration: • 0—inherit • 1—enable • 2—disable	N/A
KeepAliveStatus	Configure wireless location keepalive	N/A	Enumeration: • 1—enable • 2—disable	N/A

WLOC/RadioConf

This table contains Radio related parameters information.

XML structure

```
<WLOC>
  <RadioConf>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <RadioStatus></RadioStatus>

WRED

WRED/DefDropParameter

This table contains information about default WRED drop parameters.

XML structure

```
<WRED>
  <DefDropParameter>
    <Parameter>
      <QueueID></QueueID>
      <DropLevel></DropLevel>
      <LowLimit></LowLimit>
      <HighLimit></HighLimit>
      <DiscardProbability></DiscardProbability>
    </Parameter>
  </DefDropParameter>
</WRED>
```

Table description

Item	Description
Feature name	WRED
Table name	DefDropParameter
Table type	Multi-instance table
Row name	Parameter
Restrictions	None

Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
QueueID	Queue ID	Index	Unsigned integer.	N/A
DropLevel	Packet drop level	Index	Unsigned integer.	N/A
LowLimit	Queue length low limit	N/A	Unsigned integer.	N/A
HighLimit	Queue length high limit	N/A	Unsigned integer.	N/A
DiscardProbability	Packet discard probability	N/A	Unsigned integer.	N/A

WRED/DefWeightingConstant

This table contains information about the default WRED weighting constant parameter.

XML structure

```
<WRED>
  <DefWeightingConstant>
    <Queue>
      <QueueID></QueueID>
      <WeightingConstant></WeightingConstant>
    </Queue>

WRED

WRED/QueueProfiles

Message	Explanation
The value of upper limit must be greater than low limit. 队列平均长度的上限值必须大于下限值。	During executing create or merge or replace operation, The value of upper limit must be greater than low limit. 执行create、merge或replace操作时，队列平均长度的上限值必须大于下限值。
The number of the queue wred profile has reached the maximum. 队列WRED模板的数量已达到最大值。	During executing create or merge or replace operation, The number of the queue wred profile has reached the maximum. 执行create、merge或replace操作时，队列WRED模板的数量已达到最大值。
Can’t delete the queue wred profile applied by the interface. 不能删除已经被应用在接口上的队列WRED模板。	During executing delete or move operation, Can’t delete the queue wred profile applied by the interface. 执行delete或move操作时，不能删除已经被应用在接口上的队列WRED模板。

WRED/IfApplyProfile

Message	Explanation
The interface WRED configuration conflicts with the WRED table. 接口下，应用WRED表和为队列应用队列WRED模板冲突。	During executing create or merge or replace operation, The value of upper limit must be greater than low limit. 执行create、merge或replace操作时，接口下应用WRED表和为队列应用队列WRED模板冲突。
The queue wred profile doesn’t exist. 指定的队列WRED模板不存在。	During executing create or merge or replace operation, The value of upper limit must be greater than low limit. 指定的队列WRED模板不存在。

WRED/FabricGlbApplyTable

Message	Explanation
Another WRED table has already been applied. Please view the current configuration. 全局网板应用WRED表和指定槽位网板应用WRED表冲突。	During a create, merge, or replace operation, the global WRED table configuration conflicts with the WRED table applied to a slot. 执行create、merge或replace操作时，全局网板应用WRED表和指定槽位网板应用WRED表冲突。

WRED/FabricSlotApplyTable

Message	Explanation
Another WRED table has already been applied. Please view the current configuration.	During a create, merge, or replace operation, the global WRED table configuration conflicts with the WRED table applied to a slot.

全局网板应用WRED表和指定槽位网板应用WRED表冲突。	执行create、merge或replace操作时，全局网板应用WRED表和指定槽位网板应用WRED表冲突。
